HOW TO BE SURE

of getting the finest and cheapest kind of automatic oil heat

Oil is best burned in a

GENERAL @ ELECTRIC OIL FURNACE

- Before General Electric engineers ever began designing the G-E Oil Furnace, they set up specifications for ideal oil heating—14 points of vital importance to every home owner—a standard against which every oil heating device could be measured. These are listed here so that you may use them as your own check list. Not one of them can you afford to do without; not one is missing from the G-E Oil Furnace.
 - DEPENDABILITY: Built-in automatic controls which regulate every feature of operation.
 - ECONOMY: Burns low-cost oil by means of an entirely new principle of atomization. Effects a saving from 20 to 50 per cent in fuel bills.
 - CONTINUOUS HOT WATER: Built-in water heater provides ample year-round supply for all purposes.
 - FREEDOM FROM ATTENTION: Completely automatic, sealed-in, self-oiling mechanism.
 - COMFORT: Famous G-E Thermal Control with electric clock automatically changes from day to night temperature at selected times, operates to maintain even temperatures at all times.
 - CLEANLINESS: No smoke, soot, odor or dust. No exposed oily parts.
 - QUIETNESS: Only one rotating element, and that sealed in steel. No roar.
 - SAFETY: Arc-welded steel boiler, every operation feature under automatic safety control.
 - 9. LONG LIFE: Lifetime boiler, self-oiling mechanism.
- COMPACTNESS: Mechanism on top. Controls built in. Occupies less than two square yards of floor space.
- 11. EASILY SERVICED: Parts sealed against tampering but readily accessible. Any feature quickly removable.
- ATTRACTIVE APPEARANCE: Beautifully designed steel shell, finished in gray and black lacquer with chromium trim, stainless steel base.
- 13. UNDIVIDED RESPONSIBILITY: Every part made and guaranteed by G-E.
- 14. BACKED BY QUALIFIED AND RELIABLE MAN-UFACTURER. Product of General Electric.

The complete facts, which have shown thousands of home owners the way to better heating at lower cost, are told in an interesting booklet. Mail the coupon for a free copy today.

"The Car that has Everything"

.. the AMAZING TRUTH comes of

...What a thrill - to discover that Monel Metal equipment costs so much less than you thought

AND what a joyful feeling – when you realize that you can actually afford to make your kitchen modern – with the most beautiful equipment ever designed.

"But just what is this surprising truth about Monel Metal prices?" you ask. Our answer is that Monel Metal prices never were half as high as most people thought. And they're lower than ever today.

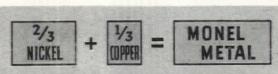

For example – that Magic Chef range in the iliustration above. It is brilliantly topped off with gleaming Monel Metal – yet it costs no more than many ranges with old-

style tops.

Next consider that handsome sink and cabinet unit. A combination to make any kitchen feel proud and prosperous. It's yours — for only \$105.50. That one price includes a five-foot Monel Metal sink, steel base-cabinet with four drawers and two storage bins - everything but the faucet.

Finally, we should like to point out that Monel Metal-topped tables cost very little more (often cost less) than old-fashioned models. In fact, they start at \$10.00.

Please understand that anything made of Monel Metal is *not* a plated or coated affair. It is one solid piece of rust-proof metal — crack-proof, chip-proof, accident-proof. That is why these lovely surfaces remain smooth and easy

From nickel, Monel Metal inherits many of its finest qualities — its strength and beauty, its ability to withstand rust and corrosion. Nickel is a common denominator of white metals — the whitening, brightening, strengthening partner is scores of useful alloys. If you use metals in any way, you will profit by remembering that the addition of Nickel means a big increase in toughness, strength and beauty. And extra years of service.

to clean throughou of service.

The Whitehead M ucts Co. of New now offers home by modernizers a con

of Monel Metal Sinks and meta cabinets. They are built to meet standard of quality — and designed easy for the kitchen planner to ge units in harmonizing designs. Fo information write to the manuf. Whitehead Metal Products Co. of I Inc., 304 Hudson St., New York, N.

AMERICAN COLONIAL

Colonial has again become the decoration news of the day, influenced by the Williamsburg restoration, Mt. Vernon, and Monticello. The sitting room, opposite, by McCutcheon's, is done in colors taken from Raleigh Tavern. The dining room below and the living room on this page, Mt. Vernon adaptations by Lord & Taylor

RICHARD PEFFERLE

THE real Colonial style that we can call our The real Colonial style that he call 1727—the Middle Georgian Period in England. We originated styles from that time on to the end of the 18th century that are quite our own. The South, Louisiana in particular, was influenced by the French styles, whereas New York and the Middle States were influenced by the Dutch. New England borrowed from all the periods. There were numerous and expert cabinetmakers from 1700 to 1776 and their products were eagerly bought up by prosperous settlers. Generally oak, elm, walnut, maple, pine, and ash were the woods most favored. Mahogany was a favorite finish or stain over these native woods.

We find America in 1700 was very fashionconscious and decorative styles appeared here almost at the same time as in England and on the Continent. Society centered around representatives of the crown and there were many handsomely decorated houses with superb architecture and gracious proportions.

In Maryland and Virginia lived the aristocrats, the landed gentry, who supported themselves in generous style from their agricultural bounty. Here it was that a taste for all things English flourished most prolifically. Hence, the furniture styles followed closely Hepplewhite, Sheraton, Chippendale and Adam, and later the Regency of Thomas Hope. Isaac Ware writes, "The decoration of an American room is of three kinds; first, where it is coated with a plastic material shaped into ornamental details; second, covered by wainscot; and third, where hung with silks, tapestries or paper." Two of these ways of decoration were found in England—the wainscoting being typically American. Wallpaper of excellent design appeared in rolls the same time in America as in England, about 1790. But before that, as early as 1754, wallpaper was sold to the wealthy (being the class able to afford it) in panels.

The colonists brought over chests, which they first used as seats. Later they were raised from the floor on trestles, and still later on chests of drawers, as chairs were made-hence, the cheston-chest for which Connecticut was famous. The Hadley type with drawers was much copied in later years.

The merchants of Holland brought Chinese furniture and from it the lacquering of chests and other pieces came into fashion.

The beautiful architecture of our Colonial houses was modeled upon that of Inigo Jones. Many mantels, doors, cornices, dadoes, and other detail show great originality of design, introducing such native and amusing details as the tobacco leaf, the oak leaf, the acorn, the cornstalk, the eagle, the stars and stripes, the Indian, and wheat details of which the designer Inigo Jones knew but little. The Southern states loved the grand manner of Palladio, and today you see those old plantations still

magnificent even in their decay. They have an air of grandeur but rarely achieved today. The Northern states favored, because of the climate, smaller rooms, lower ceilings, and thicker walls with smaller windows, as protection against winter. Great fireplaces in which whole oxen could be roasted were not an uncommon sight.

In 1738 the discoveries made in Pompeii and Herculaneum greatly impressed the colonists. Classic pillars of chaste detail and proportions upheld porches on almost every home. Pillars appeared on sideboards and bureaus. This classic revival expressed itself in England as the George III Period, or the English Regency. Duncan Phyfe, perhaps our best known American cabinetmaker, created many pieces after pure Regency lines.

Much Colonial furniture is both amusing and colorful, showing peasant characteristics, such as the Dutch dower chests from Pennsylvania gay with stiff floral bouquets, and the strange and quaint furniture made by the Hessians who settled in Pennsylvania after

the Revolution.

We should all be proud indeed that George Washington, in addition to being an excellent president, was a man of extraordinary good taste in furniture and decoration. Some of the furniture to be seen in Mt. Vernon he imported from England, and the rest is composed of fine Sheraton, Chippendale, and

A Federal wallpaper in swan and fruit design, and rich burgundy rug are used for the fan sitting room, another of Lord & Taylor's American Colonial rooms. The strongly pattern black floral chintz on the barrel chair and the little footstool is interesting against patterned wallpaper. Pier cabinet bookcases, the sofa and the portrait make for charac

F. M. Dema

The master bedroom in the American Colonial House at Lord and Taylor's. Wallpaper, light gray diamond pattern; draperies, soft green and rust chintz with white chintz valance; four-poster bed with dotted swiss canopy and candlewick spread, a copy of Washington's; blue leather wing chair; and short Hepplewhite sofa. Green glass vases lend color to mantel

Hepplewhite designs by American cabinetmakers. He was immensely proud of the rich silk hangings, the Aubusson rug the King of France gave him, and the other fine furnishings that made Mt. Vernon a veritable palace.

Thomas Jefferson also loved fine furniture. He favored, like Washington, the later more elegant English types. Monticello, which he designed himself, is one of the most interesting of our historic houses, and certainly one of the most unusual in plan.

The plans for the new American-Colonial House at Lord & Taylor's began with the question, "What furniture style does the majority of people like best?" From almost everyone came the answer—"American-Colonial." And so, they evolved six rooms patterned after such superb examples of fine architecture and decoration as Mt. Vernon, Monticello, and the rooms of the American Wing of the Metropolitan. The recent completion of the Williamsburg, West Virginia, buildings, with the original wall colors and the identical plans and architecture of the originals, had as well a strong influence on this new Colonial revival.

The classic design of the entrance door came

from an old house in North Woburn, Mass chusetts. The living room borrows from seve sources, the cornice is the same design as th in the Gadby Tavern ballroom at the Met politan, the mantel is similar to one in the ea parlor at Mt. Vernon. The floor is of wi maple planks, almost natural in color a richly waxed. The photograph shows a f Sheraton sofa in soft blue green striped sat an original antique in fine condition. Oppos is a handsome wing chair in Chinese pattern chintz, a drum table of a rare Duncan Phy design, and an American Hepplewhite chair ivory damask. The crystal candelabra on t mantel is a glittering reminder of Colon days. The eagle bulls-eye mirror completes t effect. The draperies are of rose damask w a classic wreath design. The richly ornament poles from which they hang are copied fro originals in the Charleston, West Virgin Museum, that were imported by a wealthy co ton planter from France. The walls are paint a light blue green, very similar to the man color of the Gadby Tavern room. The panel dado, the mantel, the door trim, and cornice a cream-white.

On the walls of the dining room are hur wallpaper panels of a set designed by the French artist Dufour, and aptly named "Scen America." The coloring is rich and varie showing Natural Bridge, Westpoint Paract the Port of Albany, and richly dressed Negro and Indians as Dufour imagined them. If hurricane lighting fixture is copied from an oone in a Southern plantation house. The goldedamask drapes are of an authentic treatment of about 1820. The buffet is copied from the original at Mt. Vernon; likewise the chain and serving table. The table is Duncan Physical Paracterists of the property of the proper

NATURALISTIC rock garden and waterfall

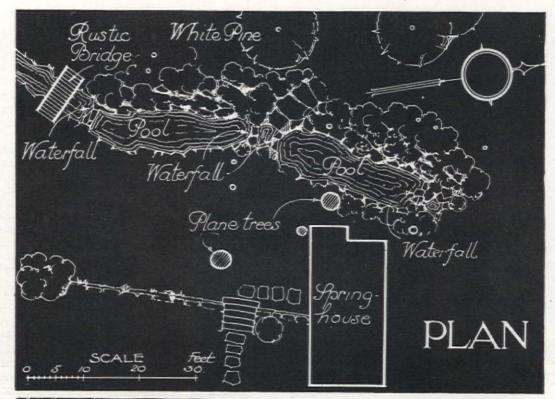

HENRY DEARDEN

r how fortunate you are to have such a delightful rocky stream." Such is the r comment of visitors when shown this arden. When it is explained that every-is artificial it is sometimes difficult to ce them. The word artificial needs some retation. The rocks are real rocks; the f sunlight on the moving water and the g leaves of the overhanging trees are ural as in "a sequestered glade where a ain streamlet has its birth." But except e trees everything has been created; rock has been transported from a disand even the water flows from a maniron pipe!

re are two types of rock garden. The type is one in which it is desired to grow plants, and therefore must have an ance of sunshine. The natural habitat ine plants is on the lower slopes of the mountains above the tree line. It is imle to grow such plants successfully une shade of trees. The other type of rock n resembles a series of outcrops of rock roodland glade. There are hundreds of s which flourish in such a situation. g the native American flowers are many prefer a semi-shaded position and, if permits, a collection of ferns may be led. An explanation of what was done s place will be the best instruction for o go and do something like it.

this site the trees were naturally a most tant consideration and necessitated the ion of the second type of rock garden. of the trees were removed but some of wer limbs were cut off so as to allow a more sunlight to filter through. In both nny and the shady type of rock garden bination of water with the rocks adds lerably to the appearance but it is parrly desirable in the shady type. In this ular case the situation and slope of the d made the addition of water almost ial. In fact, one of the reasons for the ruction of the garden was that some old ad ties which supported the banks of a had rotted and the banks were falling was decided to remove the old ties and ort the banks by means of stones. From he idea of the rock garden grew.

e ditch was made many years ago to care of the overflow from an old spring-The overflow however was a mere e, hardly enough to keep the bottom of litch wet. Fortunately another supply available. A one and one quarter inch nized iron pipe was laid to the tip end e ditch and stones laid in such a manner the water issuing from the iron pipe had ppearance of a natural spring. Immediafterwards the water was made to le over a series of rocks in the form of erfall. But even with this addition to the supply the amount of water would be icient unless it was conserved; and this done by making a series of dams, thus ing small pools of water. At each dam,

Close-up of one of the small waterfalls, above. Below: one of the higher waterfalls

stones were laid to give the appearance of a waterfall. The position of each dam was mined by the size of the pool required behin dam. For this purpose a line level was used. useful instrument consists of a spirit level us an ordinary line. It can be obtained for fifty

at any hardware store.

Concrete is the best material with which to struct the dams and it is also the easiest to At each dam a trench nine inches wide an tending two feet into the bank at each side dug to a depth of eighteen inches below the tom of the stream. As there was a good de clay in the soil this was sufficient to keep bac water. Had the soil been more porous it v have been necessary to go even deeper and v Rough boarding was used for the form. I held in position by stakes three inches by inches, sharpened and driven into the gre Across the top of the two sets of boards v make the form, pieces of wood two inches by inch were nailed, about twelve inches apar keep the top of the form at the right width a prevent spreading. Where the trench was dug the banks of the ditch no form was necessary concrete being dumped into the trench.

At the top waterfall which is nearly five high, rough concrete steps were formed as a dation for the rockwork. The steps were of ur height and width. What a builder would cal "riser" varied from six inches to eighteen in and in the same way the "tread" varied twelve inches to two feet. In a larger waterf adds interest to form a little pool half way of the waterfall. This is easily accomplished if o the treads is made three or four feet wide and

pool built on this wide step.

When the concrete work was completed actual rockwork was put in. As an even slope the side of a roof is not the best shape for a turesque rock garden, a certain amount of gra to the banks was necessary to vary the slope add variety. To protect the banks the whole le of the stream on both sides was lined with r This was done in such a manner that a wall effect was avoided. Every portion of the conwork for the dams was completely hidden though cement was used to make every ston the little waterfall secure, this cement was out of sight as much as possible and where posed was scratched with a stick to camouflag The security of the stones is an important p otherwise children when playing might disle them and cause an accident

If possible use large rocks, for a large which takes two men to handle looks quite s when in its final position. It is almost imposto have rocks too large and it is often easier to an interesting effect with half a dozen large st

Make your own background!

Written and drawn by Walter Buehr

THE word "mural" suggests to most people either the wall spaces of Rockefeller Center or the wealth of a Vanderbilt. The impression that pictorial wall decoration is suitable only for vast halls of baronial splendor, amid an atmosphere of marble billars and pipe organs, and that such decoration involves the outlay of staggering sums, has without doubt obbed many people in moderate circumstances of an extremely interesting phase of home decoration.

In the first place one must disabuse his mind of the idea that a mural must always portray a group of lighty clothed figures with a far-away look in their eyes, holding up horns of plenty, baskets of assorted gardensass, or edgy looking gears. The home mural can include practically every subject of contemporary life, and should, as a matter of fact, in its subject matter express something of the tastes, interests, and background of the owner. A garden lover would be interested in some sort of floral decoration, or perhaps a representation of a well-loved corner of his garden. The sportsman might be best satisfied with a photo mural of his own star boat winning a spirited race. or of the landing of a record trout from his favorite pool. The traveler would be able to look up from his morning coffee and see across the room, re-created, his first unforgettable view of Capri or Lake Louise. The subject possibilities are as endless as the tastes of the individual, and almost everything has some pictorial possibilities. The first important question, "What," having been answered, the next to suggest itself is "Where?" The mural does not have to be limited to the large spaces of a "great hall;" it can be made to fit into all sorts of unexpected corners. The illustrations show some interesting uses pictorial decoration of walls can be put to.

The sketch at the top shows a pergola built into an angle of two blank walls, perhaps in a city back yard. The walls, if of brick, may be plastered smooth to the height of the pergola top and then decorated in

glowing colors. Sketch in circle shows two enthusiastic amateurs at work. Having chosen a watercolor of a scene dear to their honeymoon memories they have squared it off with light chalk marks which can later be rubbed off without damaging the picture. The wall space to be decorated is then also ruled into squares-the same number as in the picture but of course proportionately larger. It is then compar-

atively easy to copy the sketch square by square; this is the method used by billboard painters who reproduce easily small sketches on the enormous advertising billboards. The home owner with a little skill in painting could easily do his own mural; its very lack of finish would impart a freshness and spirit reminiscent of the folk art now so popular. If, however, the sight of crayon or paint brush brings on a feeling of complete helplessness known to the trade as "Can't-draw-astraight-lineitis" there is a life saving suggestion brought out by the depression. All over the country PWA art commissions have been employing artists in need, and very good artists, too, to paint murals for various public buildings of our cities and villages. These skilled men have been glad to tide them-

selves over the depression for something under forty dollars a week and materials. It should therefore be possible to get in touch with a painter through the relief organizations who could do a fine decoration for a little more than the cost of a good scenic wallpaper.

The next sketch shows a cool outdoor country dining terrace brought into a city apartment. The walls consist of a series of white painted shutters reaching from floor to ceiling with an opening left in the center of one wall for the mural. The built out shutters enable one to treat this space as a shadow box with indirect lighting at the top and sides. The owner of this room, who couldn't bear to leave her Connecticut summer home garden behind decided to bring it with her to town, which she did by projecting a good photograph of a favorite garden corner, by means of a post card projector, on the white wall and tracing the outlines, afterward filling them in with color. Another method would be to have a photo mural enlargement made of the photograph, printed in sepia, or soft gray, and mounted on the wall. These can be made by any of the numerous photo mural companies listed in the telephone book.

Another outside use for murals is embodied in the decorated window frame, a suggestion borrowed from Bavaria, where every farm house wall is an art gallery, above each window a religious scene or perhaps an incident from a well-known fairy tale. As a background for a tea-terrace, such a window as this, with the subject of the decoration suggested by some activity of the owner

would be unique.

The bane of the decorator, both professional and amateur, is the long, narrow hall. What anguish has been suffered over what to do with those endless stretches of wall, to dissipate that Holland tunnel feeling. In the next sketch is shown one solution of the problem. First, a rail is built out from the wall, six inches wide, and paneled solidly to the floor. A false beam of the same width runs along the ceiling line, upheld by slender pillars at intervals, as shown in the sketch. Concealed in the false beam are indirect lights which illuminate the mural. Along the rail, on painted tin trays is a row of potted flowers and plants, artificial, if there is no sunlight in the hall. The owner of this hall decided to use a particularly [Please turn to page 49]

SIDER today's furniture scene with that sisting as short a time ago as the late nd an exciting contrast presents itself. 's picture is a stimulating one. Good and enormous progress in design are on every hand. Furniture of authentic oure design, and lasting pride is now ble to everyone. Mass production, folg more and more the principles involved omobile manufacture, has come into its nd has made it possible for the smallest to be in good taste.

posing you were the average bride in ite '20s. You started to furnish your Three-piece upholstered suites, usually achine-made tapestries or other drab s, for the living room-great, elephanpieces of furniture without charm or Little tables whose only mark of fication was that of wood-walnut rs, mahogany, oak-scarcely any of marked by authenticity of line or good . Dining room and bedroom suites in escript designs, often too heavily carved achines, in woods that often were on arish side because of their finish. This picture is that offered to the bride of 0s. Unless she could afford to buy from ost exclusive furniture houses, or sought ecorator with cabinetmaker affiliations, s the type of furniture which she bought se she had to.

This picture, looking so dismal now, is in marked contrast with today's story. Let's now take a walk through the furniture department of any store that you respect. You will find the trends and progress clearly defined. First of all, you will notice that the furniture falls into two great classifications: the traditional types, which are reproductions of fine old pieces, often modified and simplified to suit our tastes today; and good simple modern.

How did this big surge toward fine design in furniture come about so quickly? Ordinarily such progress, and the quick acceptance which has marked it, would take years. It is always interesting to look behind the scenes to discover the reasons for things.

In the '20s, when all America was flush with golden dreams, people were prosperous. We had no time for cultural expression or the development of it. We simply looked to the past and borrowed, or turned out the endless nondescript furniture forms that existed then, and let it go at that. This decade ended. Manufacturers were alarmed when they found a public, once accepting everything the machines turned out without question, now grown critical and conservative, a public that shopped around and considered their purchases before they bought; a suddenly discriminating public that had become hard to please. A murmur of complaints was heard in furniture departments. The public began to be interested in tradition; something that represented the solidity of the past which would give their homes the assurance they needed in trying days. It noticed the limited

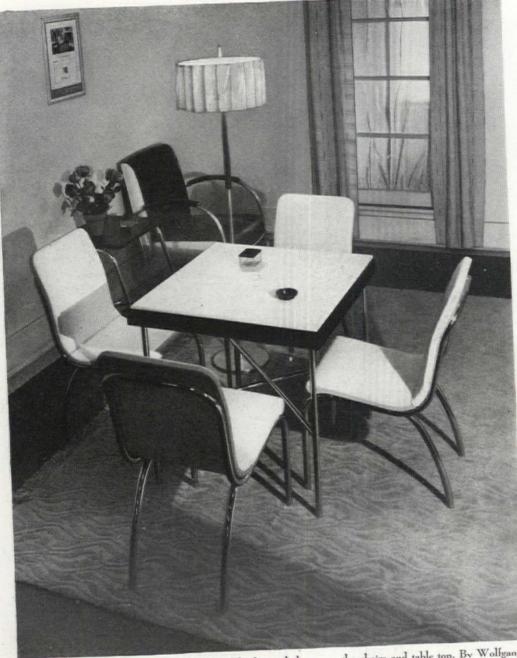

stocks of good reproductions, the lack of uniform, fine finishes, the difficulty in making selections to form room ensembles, or complete room schemes.

There is an interesting trade story bearing out this point. A Fifth Avenue store of fine reputation, tired of hearing such complaints, worked out a series of reproduction pieces in Early American maple with a Southern furniture manufacturer. It was considered almost in the light of a gamble. Would the public really appreciate them? Such a venture costs thousands of dollars. However, the venture proved an immediate success.

This was in 1930. In a year every representative store in America had its Early American section. Other manufacturers had adopted the plan. Hundreds of model rooms blossomed out in it. For the first time, the American of average means and even on a very limited budget, was able to buy furniture of fine old authentic lines, in good, coördinated finishes, piece by piece if necessary

like open-stock china patterns.

This immediate acceptance on the part of the public of these well-designed pieces encouraged other manufacturers to look over other historic periods for possible development. They looked about for men, who were not merely furniture draftsmen, but whose experience had made them keen market analysists; a combination of æsthete, architect, artist, and business man. So the day of the individual designer in the furniture field dawned. Today such names as Donald Deskey, Gilbert Rohde, Wolfgang Hoffman, Russel Wright, and Herman De Vries are

A Card table grouping in metal with simulated-leather upholstery on the chairs and table top. By Wolfgang Hoffman for the Howell Co. Charming bedroom group designed by Donald Deskey. intimately linked with furniture appear over the country at the present time.

All of this has taken place, roughly ing, in the space of five years! Toda possible to be a "fan" of any furniture and gratify it. Besides the virile, ambe-Early American group, to which the designer has contributed even a great plicity of his own, in many instance is a newer group the designs for whi from such native peoples as the Scandi or the Pennsylvania Dutch or the Ca Missions-colorful pieces, often with decorations or bits of fine carving ha far back as the Viking days-work with fabrics and antiqued leathers in l with their type. Whole room schemes built of these, or pieces used in comb with the Early American types. A families in one block can use these sty each achieve remarkable individuality

A second important type is the group. While it seems only yesterday "modernistic" period existed, that strange, skyscraper bookcases, and ex ated furniture forms, the black and silve we are actually a long way from it. modern furniture design ranks as a period in its own right. While this de closely linked with European forms, An designers here too have left their star that American Modern might well b

Version of Early American chair designs retains its primitive quality through mellowe and hand-rubbed finishes, and yet have scaled for today's comfort requirement Herman de Vries for Sikes Co. Inc. The illustrated above from Statton Furnitur

ed our own. Even the most sincere tradilists are swinging over to this new type odern. It is frank, direct, and simple, and e last two or three years has developed n and grace. Simple woods are being used: y-colored maple, sycamore, ash, walnut, l, oak; woods indiginous to our own try. Enameled surfaces have been added, ningle with the wood pieces to give further n in room schemes. There is a sophistimodern for more formal living, and more a provincial modern is entering the , planned for small, suburban houses, but lly charming in city apartments where a informal spirit is desired. The upholstered s too have something of their own to say. r simple, clean-cut lines, as tailored as a Street suit, as chaste as a piece of sculphave without a doubt influenced the on of all upholstered pieces of good form ing today. This one contribution alone is ed noteworthy.

ne simplification of furniture forms, which cidedly an influence of modern design, and h you are seeing even in Early American iture, has affected all the other popular ods. Two years ago "classic modern" was oduced. The forms here were derived from classic periods which developed in 19th ury France and England. Modern designers ped these designs of all extra ornament. ceful lines held sway but it was too "stylfor most tastes and did not last. More y, you are beginning to see the great lish periods of the 18th century affected by simplification of form. The heavy carved iture of Tudor England, Spain, and Italy is being reduced to more chaste, less bulky ns. Poorly-wrought machine carving which existed in these forms with great abunte is being done away with. It is not honest igh for our tastes today.

ith this sweeping trend toward simplificaof all furniture forms has come a need

w: Simplicity of design and scaling to modern needs guishes this smart grouping in walnut and enamel sination. Note the efficient storage spaces provided. gned by two important young designers for Amodec

It was designed by Gilbert Rohde for Herman Miller Furniture Co.

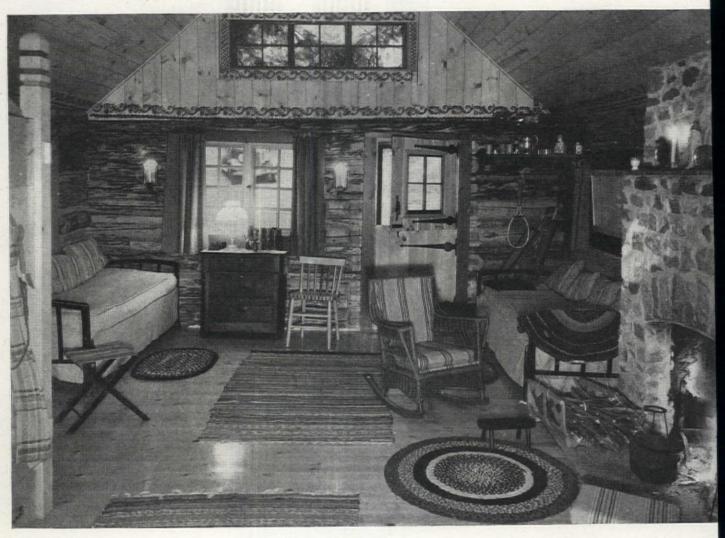

for more color, interesting fabrics, greater coördination in our room schemes. Unessential hangovers from the past are being discarded and America is on the verge of having more charming homes than it has ever known in its entire history.

There is no mystery today in the term "interior decoration" because the public is beginning to understand the different furniture forms

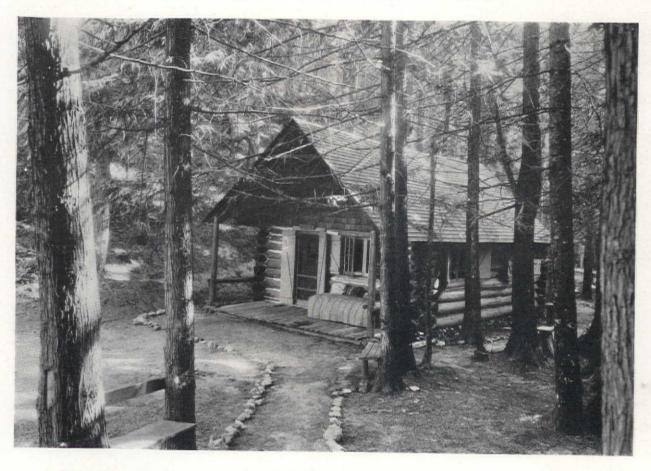

[Please turn to page 59]

The main room was truly designed for living—with a large native stone fireplace, double-deck bed and other comfortable and colorful furnishings, and a corner adequately equipped for kitchen needs yet not conspicuous

INGEBORG LODGE

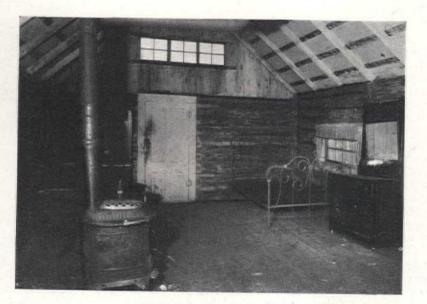

The Scandinavian retreat of Katherine Jensen, near Moscow, Idaho

PPENED this way—as I was walking bugh the woods of the near-by mountain after a busy day in the office, the narrow rought me in full view of an old log. The setting was nature's own and if a pe architect had designed the spot it not have been a more alluring retreat. I spellbound, quite overcome with the which the natural forces had shaped e-acre plot. Cedars, pines, and tamarack

shade in abundance and in front of the cabin was ng, irregular open area, overed and bathed in sundrook made its way over nd tree stumps through a proved later, an ideal ground. Chipmunks and vied with one another in to attract the intruder.

sit to the cabin soon conone of the possibilities for ling. It had been built years ago from native ogs. They were in a fine of preservation, although parts of the building the devastating marks of For many years I had hoped for a location, in such as this, where I slip away and enjoy the s out-of-doors.

nt into consultation with versity architect and the economics art instructor. Their enthusiasm was all that was needed to start negotiations for ownership. It happened that a year previous to this visit I had spent several months in the Scandinavian countries and had been particularly impressed with Swedish art and architecture. It was soon decided that the place would lend itself admirably to this type of construction. Seven advanced students in art in the Home Economics Department of the University of Idaho

Quite in contrast to the barren looking interior with nondescript furnishings are the views of the interior with their Swedish motifs

and their instructor went into a huddle: They came out with the proposition that the project of plans for remodeling and furnishing be made their responsibility. The problems under consideration were many: more light must be admitted to the now dark and gloomy interior; the floor and ceiling must be replaced, preferably with knotty native pine; the back porch must be re-designed for a dining and sunroom; there must be sleeping accommodations for at

least half a dozen people; and a kitchen improvised. The cost of remodeling had to be limited to about five hundred dollars. With these stipulations in mind the university group went to work.

One girl searched every available source for ideas for Swedish bunks which it had been decided were to be included. Her idea was to have comfortable double beds, both upper and lower deck. The child of her imagination was ideally executed. Not only did she design the beds in true Scandinavian form, but she included two commodious drawers next to the floor for storing bedding, and left enough space for the building of a fine, spacious clothes closet.

Another girl designed the barn doors which when open half way permit the breeze from the canyon to flow freely through the house. When closed, additional

The outdoor fireplace completes Ingeborg Lodge. In a small clearing of pines has been constructed a large grill for steaks, coffee, and all the appetizing things one enjoys eating outdoors

light is admitted through their small window panes. The hand-wrought hinges and other accessories were also included in her project. They were made by the local blacksmith. Several girls assembled Swedish textiles and worked out a border design for the windows. The same design was applied and painted in a border around the room above the logs. The colors were the characteristic peasant onesblue, yellow, green, and red. The native stone used in the fireplace was also typical of this foreign influence. The fireplace was designed not only to add cheer, but to heat the place comfortably. This was accomplished by means of a Heatilator. No hot water tank was necessary for the large iron kettle which steams on the hearth is never without hot water when the four-foot logs are crackling in the fireplace.

When one steps into the living room one is not conscious of the kitchen, although there really is one. The working space was cleverly planned so that a large table, when not in use, serves as a door for the cupboards. In front of the gasoline stove is placed a large screen, attractively decorated in peasant designs. Behind its panels also the change of wearing apparel frequently takes place.

One girl's problem was to rejuvenate furniture and furnishings. The dining room chairs and table used in the sunroom were painted a yellow green, set off with stripes of blue, orange, green, and red. Gay colored striped awning material was used for upholstering and the window curtains and bedspreads were made of tomato red monk's cloth. A regular imported homespun was made into draw curtains for the bunks. Additional sleeping space was cleverly provided by the girl who designed twin beds and covered them with tailored monk's cloth spreads. The sets of cushions were done in quadruplets. A shower of braided and rag rugs added the finishing touches, although one must not forget the imported bed warmer, the Swedish nut cracker, the cricket on the hearth, the Swedish kettle used for kindling wood, and the dishes of vari-colored bettle ware. When night falls, candle light in abundance makes one conscious of the characteristic soft glow so different from the glaring light of the electric lamp. The Victrola, half of which has been made into a dressing table, has found a home at last.

What used to be called the "lean to" developed into one of the most inviting additions to the cabin. The old floor was replaced by large squares of soft red tile with a cellar concealed under one of them. The room was latticed and screened. Adjustable glass windows were made so that they will slip out of sight in the day time and keep out the breezes and rain in stormy weather. One of the joys is the drainage system, with a tiny little sink unobtrusively placed in a corner near a table. This table serves as a buffet and also conceals two large reservoirs from which the water can be drawn from concealed faucets and also con-

ceals a large tin container for supplies. little sunshiney annex is an all-purpose with even a day bed for napping, and her afternoon coffee can be enjoyed in true sunshines dinavian style.

A summer home without an out-of-door place would be an aggravation. The fire designed for this purpose was constructed the fire box of an old furnace and bricke to a convenient height for cooking. A heavy grill accommodates steaks, frying coffee pot, and what not. Before the dinn announced, guests can usually be found h through the woods, stretching out on the g reclining in the hammock or glider, or per on one of the many rustic seats in the After dinner a pilgrimage follows to the freshing spring which has been enclosed in l like Rebecca's well, and then there is a at the improvised shower bath. Here a storage tank has been placed on top of wood shed. A part of the shed serves as bath where the shower, which was a disca dish washer spray, operates perfectly and water is allowed to escape through a cor tion with the drainage system.

As one is about to take his leave by wa the stone bordered walks and over the r bridge, he looks back and is conscious of att tions unobserved heretofore—the quaint ch of the robin's egg blue shutters and the shi with the name Ingeborg Lodge, hanging the front door of our little Swedish cabir

Our readers may remember that last year we crusaded against using discards in otherwise beautiful, simple log cabin and summer homes. It gives us great satisfaction to be able to give this proof of how lovely a log cabin can be when not cluttered up with left-overs and discards!

ade the simple but comfortable and riate interiors that you see here.

Old Norwegian Farmhouses as models for American mountain or lake camps SIGRID TANG

Among the Scandinavian countries Norway is the one which has the wildest and most beautiful. mountain scenery. Its old peasant farms can furnish many an inspiration for American camps, both as to architecture and interior furnishings.

Because of the physical conditions of the country the farms are often lying rather apart of each other, each forming a world of its own. In former days a single farm was nearly like a small village, there being sometimes thirty to forty houses on it, and each house had its special function.

One was used only for summertime, another only for winter, a third particularly for festival occasions, and so on. The living-houses were usually gathered round one square yard and the out-buildings around another. Placing the houses like this, makes it easier to get from house to house, and these courtyards were often planted with trees to shelter the buildings from the weather. And often a walk of trees also lead from the highway up to the farm.

There were passages with richly carved posts added laterally to the house. In front of the doors were small porches, and one of the buildings used to have a bell-tower, where the bell was rung for the meals. And after the people began to be christened, we find that the biggest farms sometimes had a private chapel. An important building also was the bathhouse with the large stone-built oven, which after being heated intensely, was splashed with

water, in order to pr plenty of steam. Her ple used to take a s bath, lying on w shelves along the whipping each other birch rods, and after jumping into the sne cold water to harden selves. This custom is about to come back a

Most of the Norwhouses in the countrilog-houses that bein natural building main our country where areas are covered woods. The old houses built mostly of very round logs which had dried for a long time

sun and the open air, and that is why ma them have been so well preserved through dreds of years.

The houses of old were long and low nicely placed on the ground; the people di know the use of dynamite. Those houses unpainted, and having become weathered, fitted admirably to the surroundings, their turf-covered roofs. Of one story, the only one to three rooms each. Later on,

grew bigger and taller, people thinking practical to gather as much as possible one and the same roof. But then, of here were fewer buildings on the farms, dest Norwegian peasant's houses, still erved, date as far back as 1300. These owever, have an unbroken tradition of 00 years behind them. They show a eal and solid building culture, and this on has developed naturally through tries. These people did not only build selves, but also for the generations to d they had a sensitive feeling for shape portions.

st part of the 19th century, however, iod of bad taste, with us as well as with untries. Many bad building fashions e from abroad, and ugly manufactured ere spread all over the country. And r the most remote parts of our country ld way of house building was almost on of disappearing. Not until lately have ants been trying to get back to the atand practical way in which their ansed to build their homes. But now our rchitects are also very much interested d peasant's style of ours, using it often lding country houses or summer cabins speople-of course in a somewhat moday. They think those old houses to be quately fitted and quite up-to-date in ctical simplicity.

try to tell a little more about the conof these old houses and their mode of decoration, if perhaps some Americans so be interested in adapting them for

untain or lake camps.

y times the houses of the common peasthose of the chief—and even of the ng—were all alike, differing only in size costliness of furniture and furnishings, even the king and nobility of Norway days were peasants—the population g only of peasants—that is freeholders

dest living houses were called arestover tover, and the largest room—hallen—ng, open fireplace in the center of the ey had no windows at all, only an opener roof with a movable shutter for the escape and the daylight to come in uses were one story, and had generally a room, the entire width of the building smaller ones at one end of the house. It deteraced floors, and the thresholds as

a rule were high and the doorways very that it was rather difficult to step in likely in order to prevent enemies from r suddenly into the house. There were also quite small openings in the walis, from to watch enemies.

Near to the fireplace was placed the long and massive table, while the beformed a part of the walls. Just opposite entrance door was the High Seat for the of the house. In those days the women of partake of the meals together with the But later on the housewife got her seat opposite end of the table, and that is spractice with us.

On the walls hung weapons, such as lances, axes, coats of mail, shields, and the lange hall there used a bed, and in the two side rooms were been on festival occasions—as for instance the heathen jol at Christmas time—the bear emoved from the big room, the table longer and the walls covered with colorate textile hangings, and cushions play all the seats. In their spare time the sused to weave the most artistic textile for the did it in freehand and from imaging only, taking the pictorial patterns from remembrances of the saga—and later of the Bible.

In some places of the country the viscoured only the lower parts of the sooty with sand, while higher up on the walls the custom to paint ornaments with a mof pulverized chalk and water, which proa rather interesting effect against the shining tiers of beams.

On the long table were placed silver-modrinking-horns and beautifully carve painted wooden wassail bowls and richly mented candlesticks of wrought iron or work, and that sort of thing.

There was a wide opening between the and the two smaller rooms at the end house to let in the light and warmth. And these rooms was a half-loft with a poladder leading up to it, where the young used to sleep. This half-loft is a favorite in our cottages of today.

In later centuries the peasants in some of our country used to build a whole ro the top of the house instead of this ha with a staircase on the outside leading outer corridor upstairs, with a door troom. This was the so-called "ladys between the young daughters of the hous to sleep. Only a few buildings of this kindeen preserved through time. They are "ramloft" buildings and form the transit the two-story houses, which little by lit came the usual type in the country throu 17th and 18th centuries.

Some of these houses had open, outsic sages with posts in both stories, while had no passages at all. The houses con being built after the old scheme with one room and two smaller ones in each stor now of course the big room also must get ceiling instead of the former sloping, log eople also began wainscoting the main ng of the farm, and this, together with ss windows, made the houses look more and less solid than before. They also painting the houses on the outside, the color being red or white, the outbuild-early always red. More and more tiled ed roofs came into favor. But thus the ouses were not any longer intimately in g with the surroundings. On the con-they were in contrast to them.

m the 14th to the 16th century they built mey hearth of stone or masonry in one of the room, and nearly every room had lace of its own. Later on came the stoves,

ne open fireplace has been eside them, in the towns as s in the country, and is of always to be found in our cottages.

addition to the above menchanges the peasant houses ad wooden floors, which on ening before holidays were d white and strewn with er twigs. Most farmhouses painted floors, but this old n is still sometimes kept by in remote mountain valleys townspeople in their summer es in the mountains.

very long table and benches the walls were still used, but ligh Seat was always placed a window. And the interior ed several pieces of new fur-, such as different types of nairs and cupboards and cabbuilt in the room. There was rner-cabin and the big cabin o sections with an open space en them and some hanging es, and the big grandfather's reaching nearly from floor ling. Near to the hearth was for the farmer and his wife, the old folks slept in the side s, and the children upstairs. Norwegian country beds in old used to be very short and broad, and were built usually vay into the wall often with ster overhead and curtains nd and with a few steps leadup to them. Sometimes they shut up with doors and had oards built below them.

ve: Interior at Storstu-At right: the attractive ng room in the Sätergan Weaving School and st House. Both photos Swedish State Railways posite page, bottom: A sant's room from Telek in Norway, now in the ional Museum of Bygdoy

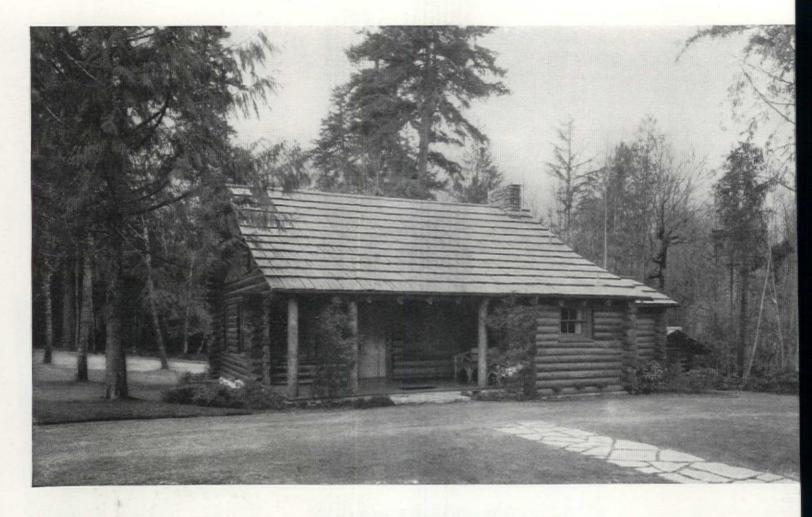

All the furniture was made by the peasants themselves, and especially from the last part of the 17th century to the middle of the 19th it used to be richly carved and painted with beautiful colored flower decorations-and so were often the walls and the ceiling too. This was done by special rural artists, the Norwegian peasants being from the earliest times gifted with great artistic powers and a keen feeling for colors. We are trying to copy these old decorations in our modern cottages, but we are not always so fortunate in our results.

The hearth of the big hall was the gatheringplace of the family and the servants in the long evenings of fall and winter. Here was the cooking place, and here they worked at all sorts of domestic industry. Later on, when building and the art of interior decoration among the peasants was greatly influenced by the towns, the furniture no longer formed a part of the walls. Everything was arranged in a freer way, and they got a special kitchen into which all the furniture of the old sitting room little by little has been banished-such as the flower-painted cupboards, the plate-racks, the many old decorated things of wood, pewter, iron, brass, and copper. The large country kitchen is now very often the gathering place, where family and servants dine together in

A CABIN IN THE WEST The all-year cabin of Mr. C. M. Austin, near Bremerton, Wash.

CABIN in the West today is a far cry from A the cabin of the early pioneers and the contrast is made clear without reliance on memory. Many of the old cabins are still standing, the crudest of crude shelters, and while few of the builders of today can, or do, put into the newer dwellings in the woods all the improvements and conveniences that are available, occasionally there is one that combines the charm of the rustic house in a rustic setting with many of the things that contribute to ease of living.

Such a house has just been built near Bremerton, Washington, in the Puget Sound country. The site chosen was on cut-over timber land. Those who have seen sections where the lumberman has been, need not be told that the ground was thick with deeprooted stumps of giant trees that, interspersed with the second growth timber, stood

charred and quite ragged, while under foot was a tangled mat of brush and down timber, left behind as waste by the hurrying lumberjacks. Stumping and clearing the ground entailed much labor and the use of many boxes of dynamite; grading and landscaping the site took more labor and skill to achieve the setting for the all-yeararound log cabin that had been quite clearly conceived.

The plans called for, first, a generous sized living room, where was to be found a broad hearth and a deep fireplace. Next, two or three bedrooms, a bath, an electrically equipped kitchen, and above all plenty of stow space and as many veniences as possible. How that was wo out is best shown by the accompan pictures of the exterior and interior, the day the cabin was first occupied.

The living room, 16 x 28 feet, is panele knotted hemlock. The overhead beam Douglas fir are left exposed and the flo laid with fir planks of varying width, hit miss. Surrounding the fireplace are boards, many of them. Those directly the fireplace give room for books; thos either side, twenty-four inches deep, for h ier things. Their hinges are H-shaped they, as well as door hinges and latches, rons and fire set, are hand wrought on the In both the kitchen and on the service p are more cupboards and shelves and of co an electric stove, a kitchen sink, laundry icebox, and plenty of outlets for electr cooking gadgets.

The second floor extends only over the ing room but even so, space was found f bedroom, 13 x 16 feet, a sewing room, 10 feet, and a full-sized linen closet. The kno hemlock paneling used throughout the floor was replaced upstairs with knotted dar. Both are native woods and both h developed a soft and clear finish after be treated with two coats of boiled linseed

and then rubbed with wax.

A basement was built under one third the house, to give room for a hot water nace, burning coal or wood, a small hot wa heater for use in summer and storage for f including a winter's supply of firewo

SETTLERS' CABIN

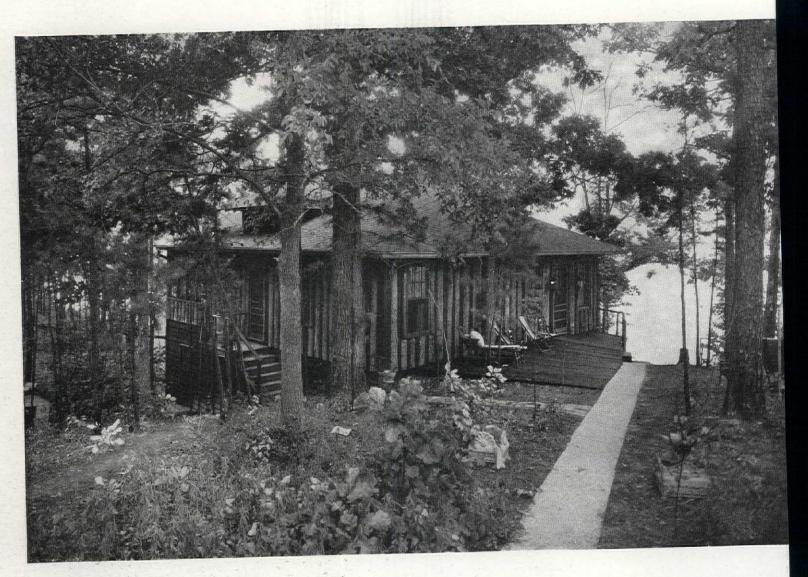

an interesting adventure in thinking things through

BRADFORD UPDIKE EDDY

rdéd as an exciting adventure. That it an elementary exercise in architecture expoint very much less common. The mplicity of the project obscures the ental problems of design which are so in a more pretentious scheme. Yet the actors of veracity, utility, and good to involved in the erection of even the t and least expensive of summer shelwas a recognition of this latter truth sobered our enthusiasm and made us the limitations of location and purat should determine ultimately the decour cabin.

oached in this spirit, our first step was lysis of the site, a study yielding so nteresting results that we found it wise them under two general classifications. rst, which we called geographical, d up the physical conditions. Of course, we were already proudly aware that we owned a little heavily wooded island some two hundred feet from the northern shore of a small lake in the foothills of the White Mountains. We had also purchased a small piece of land on this northern shore, directly back of the island, and a right of way through the woods to the main road, thus giving access from the road to the shore. A little study, however, revealed that our island—long, narrow, and shaped somewhat like an hourglass—had at the front, or southern end, an ideal location for a cabin. We also learned how pleasantly a path could be laid out from this site to the back of the island, where a footbridge could easily be built over marsh and water to our small bit of property on the mainland. It was at this point, too, that our slightly estatic admiration of lovely views of lake and mountains was subordinated to the more practical

SHADY BOREEN

~a little bit of Greland beside a Louisiana lake

DORRIS VALLETTE HANDS

NCE upon a time, as all good stories go, a little girl sat at her Irish grandmother's knee and listened with round eyed wonder to the tales of a "bonnie cot" in Erin that nestled on a shady bluff overhanging the blue waters of Listervarden. Now this little girl was quite sure that nothing in the whole world could ever be more beautiful than Shady Boreen of which she had heard so much.

"Boreen" is the Irish pet name for home. She made up her mind then and there that some day she too would have a shady boreen all her own. Ma-Da, made goose quivers run up and down her back when she told of Fin Maghule, the Irish giant, and of the old drunk (usquabae) of her village, for the Irish are great story tellers, but the little girl, born in the red clay hills of North Louisiana, treasured only her word pictures of Shady Boreen.

Today, that same little girl, a grandmother herself, of the young and sprightly type, will tell you that she heartily agrees with Omar, the tentmaker, that "Heaven is the vision of fulfilled desire." She has her Shady Boreen; it is the vision of her heart's desire, carried through childhood and youth, created by herself in the maturity of her womanhood to be the joy and comfort of her ripening age.

FLOOR PLAN

Plan by I. Cheshire Peyton

True, it is cuddled on a Louisiana bluff that hangs over picturesque Cross Lake, but the waters of Listervarden could have been no bluer and the breezes of Ireland could have soughed no sweeter through virgin pines, nor could anything in the old country have been more beautiful than this new Shady Boreen fashioned out of a dream.

Now when one sets about earnestly to make visions come true, as did Mrs. William A. Mabry, material must be used of a far different character from the stuff that dreams are

made o'. Mrs. Mabry brought all of he of practical common sense to bear up situation at hand.

First she persuaded her husband, whenoted lawyer and extensive landowner North Louisiana territory, to deed he three acres of virgin soil fronting the side of Cross Lake, from where the considerable of Shreveport gets its water supply. There a number of fishing shacks dotted her there around the lake and Mr. Mabroleasantly convinced that just a crude pensive cabin built upon this lovely spot furnish him delightful recreation aftering day in court. A mere twenty minutes from his handsome city home and he find perfect relaxation in a fisherman's dise, all his own.

So much for the first step in Mrs. M plan. Now for the second—the abundatergy with which this woman of ideas dowed came into play.

Supervising a couple of Negro labore ground was forced to yield enough nativ for the foundations and the real he Shady Boreen—its broad open fireplac chimney. Then Mrs. Mabry scouted the lyards. She selected every pine board went into the making of her walls and sure a desired rustic effect that would be tically everlasting, she chose magnolia by veneer the pine.

Magnolia bark is well known to Louisi for hardly a home garden is complete w several giant trees of this species. Its glossy, evergreen leaves and exquisite

I BUILD LOG CABIN

CHILSON D. ALDRICH

y life I had wanted one but I thought at I could not afford the time to study icacies and build one, and I couldn't to have a regular architect (even if it yself) ruin a lot of logs in an attempt n one. Anyway few of the log men who ow to wield an axe can read plans and t know an elevation from a cross secvou showed it to them.

been around the North Woods enough tions to realize that when you wanted bin you went out and caught your logs mebody's "back forty." Then you got somebody who hated the fellow who the back forty to help you. You told at when you got the money you would n for it or give him a lift when he to build a cabin. I knew how it was I right and I decided to do it that way. id. The only slip-up in the plan was happened to get hold of the man who the back forty where I had marked the t timber I needed and he suggested that or the logs. He said he would lay them job for me at a goodly price per log. nade it harder but he was a big Scandiand pretended not to understand me told him it was too much so I agreed him for the logs.

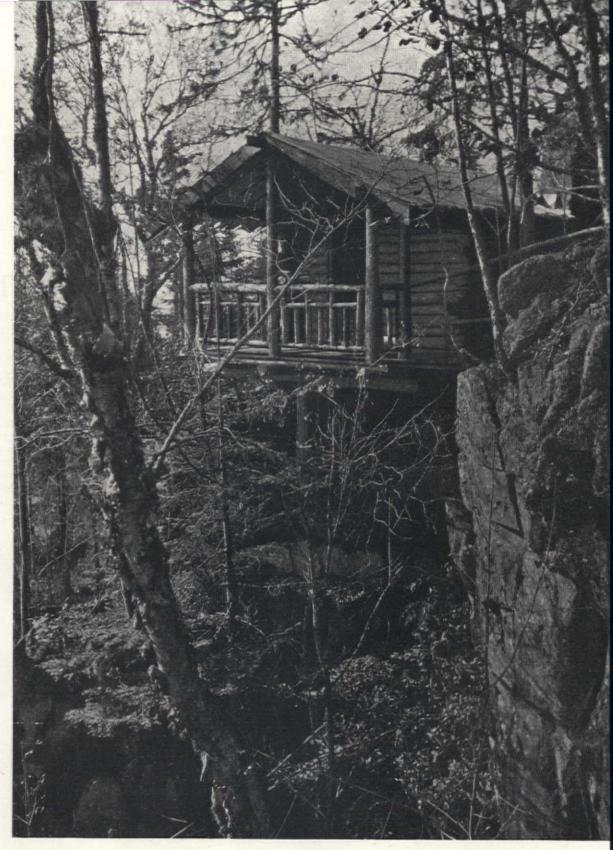

—cash on delivery to get it over with—decided to spread it around the country-at I had stolen the logs from him. All lives believe to this day that this is the that he told the truth. Anyhow, I got s handy to the job and I found another to have me haild.

to help me build. oughout the boundary country-which to us of Minnesota the waterway be-England and America that makes the our state—I had taken note of plenty of built by settlers. Most of them had left rk on the logs and it had come off in s as if it had the mange. So I decided to ny logs assisted by my Scandinavian who felt that it was a waste of time. piled them up, one atop the other, on bund until I needed them—which meant had decided upon the site for the cabin. had to go back to town about that time, quite a while before I got a sight of the gain. When I next took a look, they had all colors, mildewed from the sap that ill in them. Since then I have piled the n skids, off the ground, and separated There was only one thing to do with variegated logs and that was to drawthe logs as I worked them into the build-

found that this made such a nice,

looking job that I have draw-shaved

s ever since in the same way. Even when

The Crow's Nest, a studio built on a rock shelf high above and overlooking Lake Superior

skidded up off the ground, they become too dirty to oil. Another trick that I learned then was that winter-cut logs are less likely to be sap soaked and less apt to check or open up in cracks later on.

Logs are going to check somewhat as they dry, but they don't keep it up indefinitely. So if you can let your logs stand a few months on the skids with bark either scored or clean peeled, much of the checking will be over with by the time you are ready to build. You can then conceal the checked part of the surface, probably, when you place the logs in the building.

While I was making remarks about my discovery of the mildew, my settler friend mooched off to select a site. He picked a neat level spot in a clearing that had been a log

landing in the good old days. It was a swell site in just enough of a depression to make a natural drain. He couldn't understand why I turned it down and chose a slight knoll. His argument was that it's harder to tote a pail of water up hill. My argument was that I'd rather get water that way until the law of gravity was repealed and then it wouldn't matter anyhow.

Another set-to occurred when I refused to place the cabin according to the points of the compass. Every log cabin settler squares his building by the compass. Maybe because he wants to plant a windbreak straight across the north side. Anyhow I staked my cabin out according to the views I wanted which Ole thought was "crezzy-like" and said so frankly.

FIELDSTONE in New Jersey

NEWTON W. SHEPPARD, ARCHITECT

The home of Mr. and Mrs. Walter W. B Somerville, N. J.

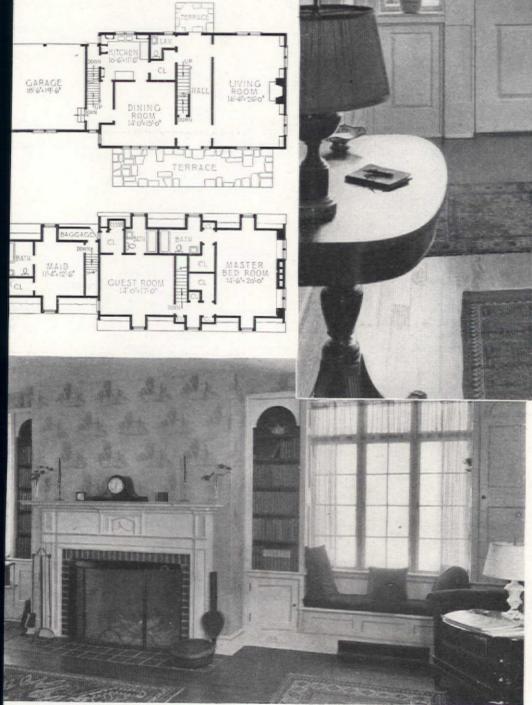

Plands is a house that in its now nearly two of existence is fast becoming a very real parlandscape. Its owners looked long and careful fore they acquired the land, a high plateau owing friendly valleys, with views in every dinext they selected an architect with a symunderstanding of that particular type of cide, and a knowledge of architecture traditional that part of the state. Thirdly, they analyze own desires and requirements in a home ver fully, and went ahead. The result is the well-difieldstone house in the photographs.

The fieldstone was brought from Warren (in near-by Pennsylvania, a material partisuitable to the landscape. In a degree it dete the style or house, modified Colonial. To from standing too high or an already high larchitect planned a long sloping roof with windows, an attached garage wing a step lebring the house down to the ground, and fin green planting around the flagged terrace to the ground up. Thus the house nestles quietly a real part of the scene.

The owners, Mr. and Mrs. Walter W. Bott mined to have all possible "modern improve in their new house. Therefore they ordered burning heating system, air conditioning, electric kitchen. Also, they spent a great thought on the conveniences in living they had

inted, submitted these to the architect, and the sult is a remarkably complete, livable home. The house is built on a central hall plan. This III, running straight through the house, has a le Colonial entrance at either end, so that one ters from the driveway at the back or from the rrace in front. On one side of the hall is the large ring room with a fireplace and large windows for lobstructed views in three directions. On the her side, near the most-used entrance door is lavatory and a combination passageway to the tchen and hall closet, big enough to hold overats and raincoats and galoshes and all the t-of-door clothing one needs in the country, eyond is the pleasant dining room, with another cture window looking out over the valley.

The kitchen is an example of extremely intelgent planning. Cupboards are placed where they e most convenient, and there are plenty of them; ere are corner shelves for electrical appliances se toasters, percolators, and waffle irons, usually

F. M. Demares

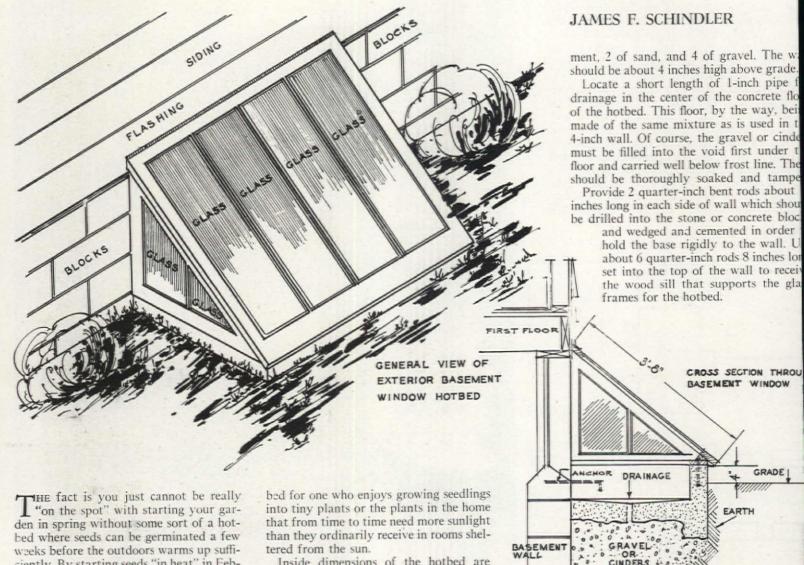

One of the outstanding features of the living room is the fireplace, simple in line, flanked n either side by spacious windows with accompanying window seats and book shelves There is something extremely hospitable about a hall that runs straight through the house, from the driveway entrance on one side, to the terrace entrance on the other. Not only that, but by having solid doors well surrounded with glass provides a place for growing plants and ivy in wintertime

hard to place out of the way; and a large built-in bin for vegetables.

The second floor is equally well planned. The master bedroom has two large closets, and in addition, a third, cedar lined, for extra blankets used in that room. In another part of the house is a large cedar-lined closet for general storage.

The basement extends under the entire house, and every bit of it is planned for use. There is a large lounge room, with fireplace, in addition to the utility rooms. These include the furnace room, pump room, a laundry, and a large wire-enclosed closet, with hanging shelves, for preserves.

A basement window for a hotbed

The fact is you just cannot be really "on the spot" with starting your garden in spring without some sort of a hotbed where seeds can be germinated a few weeks before the outdoors warms up sufficiently. By starting seeds "in heat" in February you will be ready. A hotbed is in the last analysis a bottomless box with glass top with which heat is introduced, as by fermenting manure or the more convenient electric cable. But often the actual cellar heat of the dwelling can be used

in a very practical way.

Such a hotbed can be built in almost every type of house that has two, three, or more courses of concrete blocks or stone above the grade of the house. It is inexpensive and simple to build, becomes a permanent part of the basement and house and does not detract from the appearance of the exterior.

It should be located on the side of the house that gets the most sun during the day and built and framed around the basement window to allow for circulation of warm air from the basement to the hotbed. It is very easy to clean and it is easy also to arrange plants from the basement proper making a very useful hot-

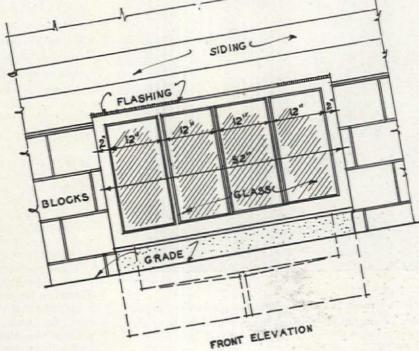

Inside dimensions of the hotbed are 3 feet 8 inches long and 2 feet 4 inches wide. The box part of the hotbed is enclosed with a 4-inch thick wall of concrete poured into a form, mixed with 1 part ce-

If you are handy at woodworking yo can make the sash for the hotbed but i you question your ability in this it wil be better to have them made at a wood working shop at very little expense Make sure that the side sash are accurately scribed to the irregularity of the wall and filled with oakum to preven the cold weather coming in.

GARRY GRAVEL OR

Score the top sash so that a piece of copper or tin can be used to flash i and make it water tight and the flashing to be set under the siding as shown in the cross section. Thoroughly putty and paint the wood sashinside and out.

The basement window can be taker out permanently and if additional house protection is desired a heavy wire frame window can be set into the opening where the basement sash was located. The wire frame to be opened only when access to the hotbed is wanted. This frame then will not interfere with the warm basement air circulating into the hotbed.

Handy Man around the house

AVENER

HAD the great good fortune to find an old house in e country that had never been tampered with. It ast as it had been built a hundred years or more less, unaffected, straight forward. The home of farmers, it told the tale of a hard struggle for existested from the acres surrounding it. There had money for improvements. It was bare of orna-

on and rich in rude, primitive charm.

nake a job of it," said the contractor, "we have to almost everything. None of the doors match-rip out! The floors are different heights-tear them all el the sills and put new Colonial type baseboards and some ceiling molding and a regular banister tairs!

ere aghast. Betray our little house into a "modern

?" "We shall think it over," we politely told the or who was estimating on the job. into our lives and our house came Fred Hogencamp, nan around the house. He came to cut the grass. It morning after our first night in the house. A high d blown all night and I had heard noises.

said Fred, "would be Till Hendricks spookin"

Not given to artifice our handy man never "took" to the telephone, and so to house it he built a cabinet spacious enough to hold the directories too. The maple dresser below is his original design

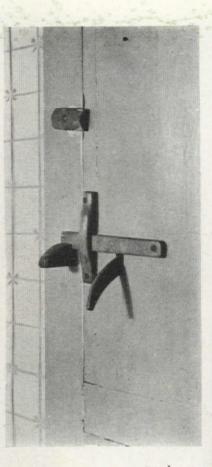

about. Tell you what, if you change the doors around she won't bother you no more. Haunts can't haunt when you change the doors about on 'emthey get lost.'

When I returned (after the receipt of a postal saying "Come on home. Doors all switched,") there on every door, to replace the ugly brown china door knobs, were hand-made wooden latches, carved from rock maple brought down from our mountain wood lot. Those latches made Fred our man and our delight in them made us Fred's people, and thus

we have been for sixteen years.

The dining room is a long narrow room, so Fred built us a long table that seats ten comfortably. The top (ordered from the lumber company) is of cypress, a light colored wood that blandly takes its constant soap and water scrubbing. The trestle is pine from the mountain, mortised and woodenpegged together. The corner cupboard was also built by Fred and is a clever piece of work as it is just crude enough to "tie" with the door.

The maple dresser is an original of Fred's. He found the wide pine boards beneath layers of wallpaper lining a clothes closet. It seemed criminal to leave them there, unheralded, unsung. So out they

All the ugly brown china door knobs were replaced by hand-made wooden latches, carved from rock maple. The hand-made stair rail spindles were copied from the ladder-back chair below, left

F. M. Demarest

The long table which seats ten comfortably especially designed for our long, narrow din room. The corner cupboard, too, is hand-market

came and, beyond telling Fred that I war something in which to keep files of old ma zines, he did the rest.

The armchair beneath the stairs was the spiration for the stair rail. It also is of r maple. Fred did most of it with his penknif

An old-fashioned man, not given to article he never "took" to the telephone. To this he refuses to touch it. I came home one aftern to find it ringing madly and he, at a good so distance, shouting, "She ain't home I tell Shut up! She ain't home." He hated the si of it and before we knew it we were posses of a telephone "cubbinet" where the telephore imprisoned from sight, reposes on a shelf about the directories. He hammered out the hinges his little forge from some part of an old cat think personally that of all the things he done, that telephone box has afforded him greatest personal satisfaction.

It is still a sincere little house, still crude; most everything in it is out of line, the sa "out of drawing" that makes a face charm permeates the whole house. Thanks to Frechas lost nothing by the changes we have ma Fred, the country man of simple taste, has known country house in simple taste.

The nine Willards

who made clocks

MILLICENT STOW

an epidemic that prevailed in Grafton, Massachusetts, at that time.

When Simon Willard went to Roxbury he opened a shop in Washington Street that he occupied until his retirement in 1839, a period of over fifty years. Simon married again in 1788 and lived, worked, and raised a family of eleven children in his combination shop and home in Washington Street.

Simon Willard had not lived long in Roxbury when his inventive mind asserted itself. In 1784 he received the exclusive privilege of making and selling clock jacks by act of the General Court of Massachusetts. This privilege was approved by John Hancock and extended for five years. A clock jack was a utensil for turning roasting meat hung on a peg or hook in front of an open fire. The meat was hung on a hook at the end of a chain and the machinery was wound up and the meat was cooked while it rotated slowly. Until Simon Willard made his clock jacks those in use had been imported from England and were usually heavy and cumbersome. Willard improved the English model by making his lighter and more compact and the works that ran it were much like those used in a watch. He also enclosed his jack in a fine brass case. Apparently Simon Willard did not make many of his clock jacks because few are known to exist and at that time somebody invented the tin kitchen to use before the fire and this proved more convenient for fireplace cooking.

While living in Grafton, Simon Willard made shelf clocks but when he began his business in Roxbury he made tall case, church, or turret clocks, gallery clocks and did general repair work of all kinds. In the summer when business was dull Willard peddled his clocks about the country. He seldom advertised in the newspapers; about his only publicity was his printed form that is found in some of his clocks, usually inside the door.

In 1801 Simon Willard invented a clock, or timepiece as he called it, that was a great improvement over all types of clocks then in use. It is the clock that we now know as the banjo clock. Probably Willard never even heard it called by that name.

BOUT the middle of the eighteenth century a farmer named Ben-nin Willard and his wife lived Grafton, Massachusetts. To this uple were born twelve children tween the years of 1739 and 1766. ur of the sons became clockmakers Benjamin, born in 1740; Simon, rn in 1753; Ephraim, born in 55; and Aaron; born in 1757. obably the best known memrs of this famous family were mon and Aaron.

Benjamin, the oldest of the clockakers, was a wanderer and little known of his life. His clocks bear s name and place of manufacture Grafton, Lexington, and Roxry. He died in Baltimore in 1803 it apparently did not make clocks that city. As far as known, Benmin Willard specialized in tall case ocks only.

Simon Willard showed his genius r clockmaking at an early age. He as apprenticed to a clockmaker amed Morris at twelve years, and thirteen had made a tall case riking clock wholly by hand.

Simon Willard remained in Grafn until some time before 1780 when moved to Roxbury. He married annah Willard in 1776 and his wife nd small son died in 1777 during

His patent for this popular clock was granted in 1802 and, because he never protected himself against infringements, nearly every clockmaker of his day and ever since copied his design in appearance at least.

The Willard Patent Timepiece, or banjo clock, became popular at once. It could be fastened to the wall and was not damaged as easily as a shelf clock that was often knocked off the mantel. It was good to look at, the construction was simple, and it was a perfect timekeeper. In fact this type of clock has never been improved upon since Simon Willard first made it.

While in Washington in 1801 to show how to run a clock that he made for the United States Senate, Simon Willard met Thomas Jefferson and they became friends. The Senate clock was burned when the British destroyed the Capitol in 1814. Thomas Jefferson ordered a clock from Willard for the turret of the University of Virginia, at Charlottesville. Jefferson drew the plans and specifications for the clock and Willard said that they were so complete that when he put the clock in place everything fitted to a sixteenth of an inch. One of Simon Willard's most prized possessions was a silver mounted cane given to him by Thomas Jefferson.

For many years Simon Willard had complete charge of the clocks of Harvard College. He presented two fine clocks to the college that are in use today. He also made many of the steeple clocks for New England churches.

Like many a genius, Simon Willard died a

poor man. He retired from business in 1839 with only five hundred dollars to show for his years of honest work. If he had demanded royalty from those who copied his work he would have been a rich man. Perhaps if he had settled in Boston instead of Roxbury he would have made more money but he did not want to pay high rent and preferred to live and work in a sim-

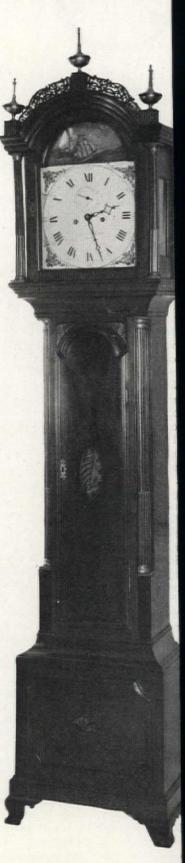

Simon Willard was proud of his work and the reputation that he made for himself. Perhaps his achievements were not appreciated in his time as they are today. Everyone who knows his clocks recognizes the expert craftsmanship that went into them and anyone fortunate enough to own one of Simon Willard's clocks has reason to be proud of it.

At eighty Simon Willard was able to read without glasses and his hearing was unimpaired. He lived until he was ninety-five years old, quietly dying while he slept.

Simon Willard made three kinds of timepieces or banjo clocks. The simplest style was made of mahogany, with a brass bezel and brass side arms, but without painted glasses, bracket, or base piece. Sometimes the mahogany case was delicately inlaid. The second type had a mahogany case, with brass bezel and side arms, with painted glasses but without base piece. This was the most popular style. The third design was the most elaborate and was called

the "Presentation Timepiece." This style was made of mahogany, enameled white, with a gilt beading and polished brass bezel and side arms. The glass doors were finely painted. The top ornaments of his banjo clocks were usually acorns or balls. Only the elaborate presentation model had an eagle. Pr entation models were used gifts and nearly every bride Willard's time had one of th clocks in her new home. Cost eighty dollars, they were a l ury. We wonder what Willa and some of his clients wor think if they knew what so

PARENTS make boy problems

How many of these time-worn fetishes do you use on your own son when he wants information? Do you say, "You wouldn't understand that if I told you." Do you smugly think "There's nothing bothering my boy," or hat "Experience is the best teacher?" Read what Mr. Rogers, who has devoted thirty years to boy building, has to say about the effect of these fetishes on boys

parents begin to worry and wonder in the world has come over William all dden?" Or they shrug their shoulders esignation as if to suggest that every youngster had to go through the boy

or another become problems for the

n phase every so often. He doesn't have that, unless he is a boy with a parent n. He may have parents who don't know find out what is going on in his mind. nay have a father and mother who just m for granted. His parents may be too upied to bother about him when he is g on thin cakes of ice from infancy h adolescence—and beyond. They may easier to indulge than correct him. Or, yet, his mother may be the kind who efore company, "Roger, for heaven sake ticking your pen-knife into the sofa!" turning to the visitors continue in his ce, "That boy! Always up to some devil-What do you think he did yesterday?" on with a recital of Roger's mis-deeds, obvious amusement of the guests and en gratification of Roger, who naturally himself one better for the next story. rule, however, as long as a boy is growysically in a normal manner he is left by

ents to his own devices until he gets into

kind of trouble. Then he is a problem.

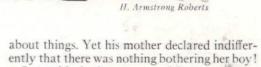

Then it is too late to counteract bad habits. I have learned, from tracing back innumerable boy problems, that most of them incubate from comparatively insignificant happenings in childhood. They are little things that might occur in any boy's life, as he emerges from babyhood into that vast, untried country which lies between him and manhood. Practically every boy problem I have encountered could have been avoided had the boy not been afflicted with a parent problem at a crucial mo-

ment. It is a hideous phenomena indeed that a small fear, or a bit of misinformation can ferment and seethe and grow in a boy's mind to such grotesque proportions that it blockades his normal train of thought. He worries over this until he becomes abnormal. Then he is a problem to be studied carefully.

There are almost countless sources of these blockades, of course, but in normal boys the great majority of difficulties can be traced back to a few time-worn fetishes of parents. I am going to cite several. Any open-minded mother or father, I am sure, will find a family skeleton

There's nothing bothering my boy," a mother told me not long ago. But Bill and I soon got well enough acquainted so that he opened up to me. This boy, "not bothered by anything," was like a steam engine with the safety valve fastened down. He was so filled with fears, perplexing notions, and curiosities that he was ready to blow up any time.

W HY didn't you talk things over with your dad?" I asked him. Bill said he couldn't. He was afraid to ask about things that were taboo in the family conversation. He didn't know anyone else to talk to so he had kept his secret perplexities bottled up inside. He brooded over them until they monopolized his mental processes. The only outward manifestation of Bill's problem was the fact that he was backward in class. He couldn't concentrate -never got his lessons. No wonder! There wasn't any room in Bill's mind for lessons. It was crammed with fears and jumbled notions

Secret blockades are caused in many ways. The most prevalent is fear, particularly fear of punishment which makes a boy deceptive. Another is curiosity about sex or life. Little tikes eight years old get to wondering about these matters. They pick up misinformation, or half-truths, and become absorbed with morbid curiosities that drive them to do queer things. The idea of inferiority is another common cause of hidden troubles. Likewise physical handicaps such as stuttering, left-handedness, or lameness may be a source of confusion.

W HY look for troubles?" a father asked me. "They'll come soon enough." That's a typical parent attitude. The answer is, look for them so that you can head them off before they become serious. If you wait until a boy goes berserk in some way you have a real problem on your hands and your boy may have wasted months or even years in a blind alley.

I remember one boy whose obsessions broke out inexplicably in a cruel, destructive streak. He used to break windows for no apparent reason and throw rocks at pets. I gained his confidence and ferreted out the cause. It grew out of an idea that his father disliked him. His dad, it developed, had been unduly harsh with him on several occasions, and the boy had brooded over it until he longed to "get even with the world." That urge led him to perpetrate cruel and destructive acts. Actually, the father was fond of his son. By working on them both I brought about a mutual understanding and the boy's urge to destroy property and punish dumb animals disappeared. But he had lost months of mental progress stewing over imaginary wrongs.

How few parents can open the door to their boys' confidence! There are generally three reasons for this. It may be a sincere desire not to intrude into a youngster's privacy-not to delve into his innermost thoughts. Or it may be that the boy and his parents are incompatible.

[Please turn to page 47]

ants and Moles: PLANT RECIPE

Notes

COAL ASHES: Make good drainage material for flats, seed beds, coldframes, hotbeds, and flower pots.

STERILIZE SOIL by heating in oven before using.

SEEDLINGS will grow straight if a piece of white cardboard is placed behind the plants so the light from the window will be reflected.

DAMPING OFF can be controlled by slowly pouring 1½ pints or lbs. formaldehyde over 8½ lbs. of finely ground charcoal. Mix thoroughly. Use ½ lb. dust to 1 bushel of soil, and water immediately.

ANTS: Make small holes in infected area 10" deep and 7" apart. Into each hole put 1 tablespoonful carbon bi-sulphide and cover immediately with soil.

OLD WINDOW SCREEN is good for protecting open seed beds from driving rains.

Gourds make a fine cover for old barns, fences and back porches. Sow seed as early as possible and place a shovelful of rotted cow manure under each 2' of seed row. Keep moist and feed liquid manure. Give vines a trellis or strong twine to climb on as soon as tendrils appear.

ACID SOIL can be had by using aluminum sulphate (4 lbs. per 100 sq. ft.) and soak into the soil.

ALKALINE SOIL can be had by adding ground limestone dug into the soil.

PRICKING OFF means transplanting seedling from seed bed to flats, usually spacing the plants 1" apart.

CUT-WORM POISON

1 tsp. Paris green

1 qt. bran

1 cup water and

1 tsp. molasses mixed

Moisten the bran with the water and molasses and spread around plants just before dusk.

ERADICATING MOLES: Carbon bi-sulphide is poured on absorbent cotton. Make small hole in run, place cotton in run and cover hole. Do this every 4 feet of the run. Leave 24 hrs., then tamp.

Long Stem Annuals for Cutting Are: Larkspur, Marigold, Penstemon, Salpiglossis, Scabiosa, Antirrhinum, Zinnias, Sweet Peas, Gypsophila, Cosmos, China Asters, Calliopsis, Nigella, Centaurea, Mignonette, Gomphrena, Poppies, and Helichrysum.

*Marigolds

1 pk. Guinea Gold ½ pail peat moss ½ pail sand 1 pail garden loam

Mix peat moss, sand and loam. Place in flat, level, and make rows 2" apart. Sow seed March 1st. Cover 1/4" with sifted mixture. Keep moist. Place flat in coldframe until plants are 2" high. Transplant to garden.

*** Golden Flower of the Incas

1 pk. Tithonia speciosa Hotbed Bean pole stakes

Plant seed 1/4" deep in a prepared hotbed, March 1st. When danger of frost is past, transplant to sheltered position. As plants grow taller, stake to protect from winds.

****Onapdragon

1 pk. mixed seed

1 seed box

1 pail sand

½ pail peat moss ½ pail garden loam

1 cloth

Fill seed box with soil mixture, level, and water. Scatter seed on surface and press into soil. Cover with damp cloth. When plants appear, remove cloth and place seed box in shade a few days. Keep temperature cool. When plants are large enough, transplant to a sunny location in sandy soil plus well-rotted cow manure. Dust with sulphur, for rust.

- *Calendulas, Zinnias, Larkspurs, Salpiglossis, Ageratum, Browallia, Asters, Corn Flowers, Cosmos Cynoglossum, Strawflowers, Scarlet Flax, Sweet Alyssum, Annual Phlox, Scabiosas, Blue Lace Flower, Verbenas, can be started by this method.
- **Poppies can be started this way.
- *** Seven Week Stocks can be started this way.
- **** Choice Petunias can be started this way.

Morning Glories

1 pk. Heavenly Blue 1 pan warm water Clipping shears

Snip off end of each seed with clipping shears, being careful not to injure germ Soak seed over night in warm water. Plan directly into ground as soon as frost is gone Cover 1/2" with light soil.

Mignonette

l pk. Mignonette (garden var.) l tablespoonful of sand

Prepare ground using bone meal and shredded manure. Mix seed with sand; sow early in April in a moist location that gets sunshine in the morning only. Make severa successive sowings, and when buds appear feed liquid manure. Do not cover seeds.

Sweet Peas

4 ounces seed 1 pan warm-water Shredded manure Prepared plant food Twine, pea brush or bamboo

Dig trench 18" deep. Place 8" shredded manure and compost in bottom of trench Add garden loam enriched with two ounces of a plant food to every yard of trench. Soak seed 24 hrs. in warm water. Sow March 1st 2" apart in rows 6" apart. Cover with ½" of soil. A gently sloping hill in full sunlight is an ideal location. When plants appear stake at once with twine, pea brush or bamboo.

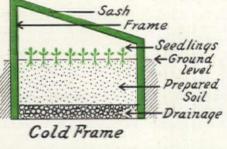

Gomphrena aurea superba

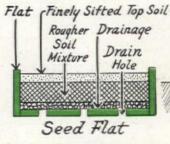

1 pk. seed Coldframe

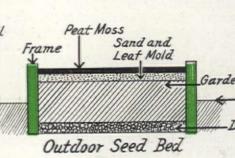

Sow seed March 1st in rows 2" apart and cover 1/4" with soil in coldframe. Keep moist until seedlings appear. Transplant to garden spot after all danger of frost is past. A new Annual with deep golden-orange flower heads that dry like Strawflowers.

Unusual Annuals: Arctotis speciosa (Giant many colored daisies); Hibiscus trionum (Trailing Hollyhock); Nicandra physaloides (Sky blue flowers, white throat); Nolana (mixed, Flower from Chili in many shades of blue); Oenothera rosea (Pink Evening Primrose).

Designed by RUTH H. LEE

The AMERICAN HOME

****Blue Poppy of Thibet

1 pk. Meconopsis baileyii

seed box

1 pane of glass 1/2 pail leaf mold Sphagnum moss

½ pail sand 3" flower pots

Mix sand and leaf mold and fill seed box. In December, press seed into the surface of soil. Cover with pane of glass. Place in shade. When plants appear, remove glass. When 2nd leaf appears, transplant to 3" flower pots filled with acid loam, leaf mold and 2 tablespoonfuls of sharp sand. Imbed the flower pots in wet sphagnum moss in a shaded window. Plant outdoors in May in acid leaf mold in a sheltered cool location with perfect drainage. (Not likely to thrive in the East.)

Columbine

1 pk. Aquilegia chrysantha 1 flat

½ pail peat moss ½ pail garden loam

Mix soil and peat moss. Fill flat and level. Water thoroughly. Sow seed Aug. 1st and broadcast it over entire surface. Sift 1/4" covering of peat moss and soil over seed. Place in shade until seed germinates.

**Gentiana sino-ornata

1 pk. seed

1/2 pail peat moss

pail leaf mold

1/2 pail sand

Mix peat moss, leaf mold and sand in sunny, moist spot where soil is acid. Press seed into leveled surface and water with a fine spray. Never allow the soil to dry out. Sow in

LORE and LEGEND of spi

GRACE MYLES MAN

CLOVES are flowers! They were used extensively by the ancients and we find the earliest record of them in a Chinese manuscript dating from B. C. 266. It appears that an emperor of that period was offended by the wine-laden breath of a courtier and ordered him to hold cloves in his mouth in order that his breath might be perfumed while in the august presence. I am told that this custom survives to today. Cloves were used by the Persians, Greeks, and Romans as the base of many of their love philters. The de-

lightful custom of using pomanders and scent balls, with cloves as the chief ingredient, died out over a century ago. There is no reason why it cannot be revived and here is a recipe used in London when Beau Brummel trod the strand. "Take a small, thin skinned orange and cover it as closely as possible with whole dried cloves. When the cloves are all stuck in firmly, roll the ball in powdered orris root (get this in any drug store), then in ground cinnamon. Wrap in waxed paper and let stand for about a week before using. You will find it delightful to use in closets.

PEPPER is the most ancient and noble of spices. It was well known by the Greeks in the fourth century B.C. and was used as a staple commodity of trade between India and Europe even before that time. During the Middle Ages pepper was the most valued spice and was frequently used in the payment of taxes and tributes. When Rome was besieged by Alaric the Goth, the ransom of the city was set at five thousand pounds of gold, thirty thousand pounds of silver, and three thousand pounds of pepper. The pepper was the most difficult to pay. Pepper is first mentioned in England in the year 978 when traders were required to pay tribute to the city in which they were doing business by giving pepper. About the same time landlords were charging a rent tax of one pound of pepper a year. Our labor troubles might be said to date from what was perhaps, the first labor union in the world. In 1154 the most important and influential English guild was formed, the "Gild of Pepperers."

VANILLA is one of the few native American spices. The Aztecs used it to flavor their chocolate, long before the discovery of America. This pleasant custom was adopted by the Spaniards and was introduced into Europe about 1510. The bean was used as a perfume for several centuries before its culinary value was discovered and considered important.

CAPSICUM is interesting, although little used. Like vanilla, it was a spice indigenous to the Americas. The first mention of capsicum is found in the *Journal* of Chanca, a physician in the fleet of Columbus on his second voyage. Chanca relates that the Indians ate a root called age (yams) which they seasoned with a spice called agi (capsicum). Agi is still the Spanish for this spice.

SAFFRON, a spice rarely used nowadays, was something special to the Egyptians. They called it "The Blood of Thoth," and used it in all their religious ceremonies. It is a plant that has always been dedicated to the sun from the very beginning of our knowledge of it. A very ancient Greek book uses saffron in a lotion for making the hair yellow. The Babylonians prized it highly as a perfume and cosmetic. Solomon thought it rather good (see Songs of Solomon, Chap. 4, Verse 12-5), and Paracelsus, most famous of physicians, used this spice in the concoction of every one of his medicines. Here is a spice whose pungent flavor and coloring qualities would be a pleasing addition to many dishes but do we use it? We do not! Why not try it the next time you prepare your favorite curry or fish sauce?

CARDAMON was a spice known to the Indians and Arabs of early times. It is first mentioned about the eighth century B. C. in Sanskrit manuscripts. It is still in use in the East where it is chewed as a candy. The flavor is very pungent and the reader is advised not to experiment. Grains of paradise is a variety of cardamon of fairly recent origin. This spice did not become known until 1214 A. D. when it was first imported into Europe.

In the beginning spices were not used as condiments or preserve but as drugs from which medicines might be prepared. The trade was actually the drug trade. We can realize how important was played by spices in empire building when we learn that in or obtain the drugs or spices used so extensively in European medic was necessary to maintain commerce with every part of the learn that world. The search for a short route to India in an endeavor to reast spice ports more quickly, led to the discovery of America. History of battles and sudden death caused by the greedy desire of nativexeel each other in the spice trade.

GINGER was the earliest Oriental spice known to Europe. The name ginger is derived from the Sanskrit, Zingeher. Marco Polo was the first traveler to have a glimpse of the growing ginger plant and the fact is duly noted in his Journal of 1280 A. D. Ginger has never been met with in its wild state and has been cultivated as long as it has been known to man. It is mentioned frequently in the Talmud and other ancient books, being generally referred to as a medicine. Ginger has three first cousins-tumeric, zedoary, and galangal. Tumeric combines the properties of a spice and a dye. It was valued by the Romans for its coloring properties as early as 77 A. D. Marco

Polo mentions it in 1280 but confuses it with saffron, perhaps be they were used interchangeably. Zedoary is a forgotten spice. A fa condiment of medieval times, it has dropped out of use almost pletely. It still may be found in use as a drug and perfume but or the remote Eastern countries. Galangal was a Chinese spice po about 869 A. D. European countries used it extensively as a drug culinary spice. Galangal is still used in Russia as a medicine and a voring in a liquor known as nastoika, but it is unknown elsewhere.

NUTMEG AND MACE may be said to be comparatively mobecause they do not appear to have been known in Europe until the Twelfth Century A. D. They are first mentioned about 1195 whe nutmeg was used to fumigate the streets. The spice was very coabout one pound costing as much as three sheep and using it as a san measure was only indulged in when some high and mighty person was expected to visit the town. Nutmegs were strewn about the stand burnt in piles at the intersections. It was a good idea when dements of sanitation were lacking. Later on many pharmacists remended nutmeg as a cure for insomnia and this may be related to fact that modern chemists have discovered mace to contain a substance called myristicin.

ALLSPICE OR PIMENTO is of the same genus as the tree. It was imported into Europe about the year 1601 from the Indies and was first used as a substitute for cardamon.

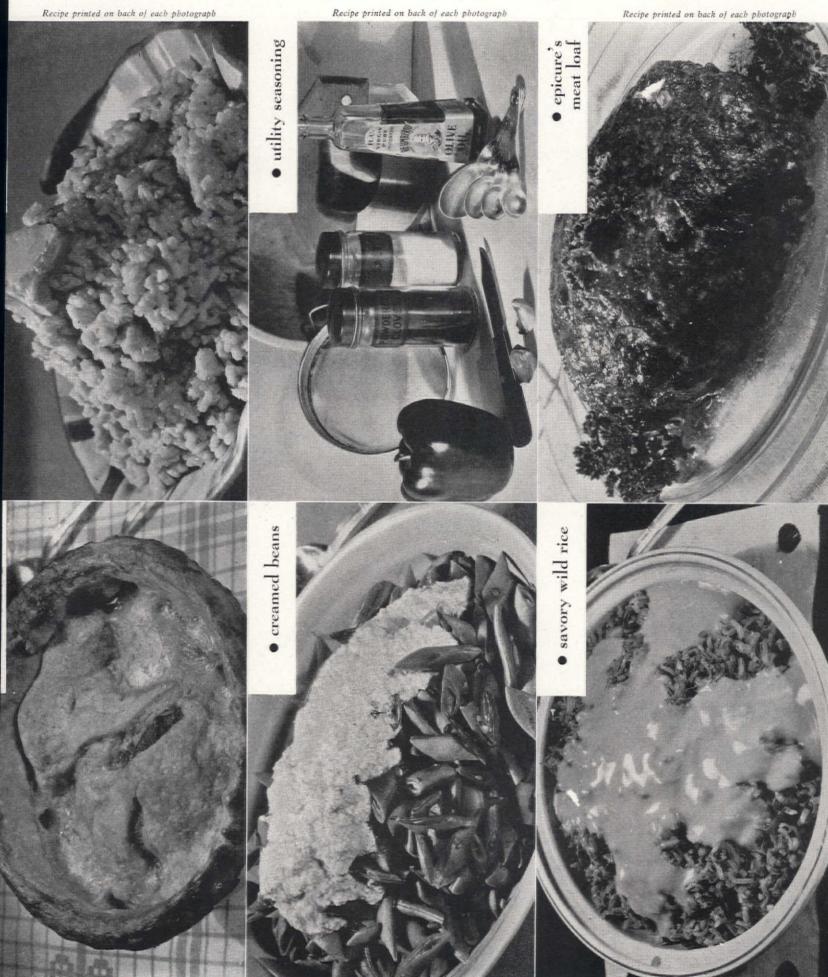

CINNAMON. That used in United States is in reality cassia, the difference is so slight that we sider them as one. This spice was popular with the Biblical ladie easy virtue. They used it, in comb tion with aloes and myrrh to s their bodies and burn outside thouses (see Book of Proverbs, C. 7, Verse 17). The Romans dediction among to Mercury and burnt this temples but neglected to tell with it is a good prophylactic and was as such by the ancients. The mochousewife uses cinnamon on toast in applesauce as a general rule pays no further attention to it.

Sauce and spice

After browsing through innumerable cook books, old and new, I have come to the conclusion that spice has never been elevated to its proper place in the American kitchen. True—recipes timidly call for a dash of this or a bit of that, but never does a dish rest solely on the merits of its proper seasoning.—GRACE MYLES MANNEY

Sauce and spice

We know the high value placed on spices by our ancestors, mainly because of their ability in disguising the flavors of meats which had been kept, perhaps for weeks, during a time when refrigerating facilities were lacking and the only methods of preservation known were drying and smoking. - GRACE MYLES MANNEY

America's Favorite Pick-me-up

ONE OF THE

OW-PUNCHERS started this famous old American custom back in the 80's. They drank the thirst-quenching juice of "canned tomatoes" direct from the tin. Today, cultured Heinz Tomato Juice replaces the coarser beverage of pioneer days. Everywhere its fine "August flavor" ranks it first as a mealtime pick-me-up or an "in-between" refresher.

Consider the things Heinz does to help the tomato hold popular sway. We cross-breed finest seeds to beget tomatoes finer still. We raise the plants tenderly in greenhouses, then transplant them to sunny fields. When the tomatoes are ripe, to catch their fresh goodness, they are picked, washed, pressed and the juice sealed in tins and bottles, all within a few hours!

Here then is pure, fresh-tomato goodness, luscious and wholesome, imprisoned for you a few hours from the growing plant. Drink Heinz Tomato Juice freely, morning, noon and night. Your grocer has it on his shelves.

© 1936 H. J. Heinz Co

sip - and you'll have a new idea of how a pineapple juice should taste!

Natural juice, of course. Just pure, unsweetened pineapple juice. But talk about flavor! This juice has it. All the fresh, refreshing goodness of pineapples right from the field.

Need we say more? Just think of all the other DEL MONTE Products you've tried-and liked! Didn't you always find you were getting something really extra in flavor? A food or drink that

was instantly "tops" with you and your family.

Well, DEL MONTE Pineapple Juice will confirm your good judgment all over again.

Why not see your grocer today? Ask him about DEL MONTE Pineapple Juice. He should have plenty now. And keep plenty on hand yourself! For mark our words, the family is going to want itand want it often!

Many grocers have it now more will have it soon

ys and I started out with on of the stars, the moon, I finally animals. Finally, fellows opened up. They fed with all sorts of topsyleas. Their minds were with filthy suggestive talk picked up on the street. They wanted to ask someone about it, but were afraid to approach either their father or mother. They had been made to feel this was something to lie low about, to discuss only in whispers out of adult earshot. I persuaded them to talk to their father. He was dumfounded.

"Listen here," he said to them. "You're too young to understand these things. If I catch you boys talking like that any more I'll whip you."

It seems incredible, doesn't it? But I have known not only one parent, but hundreds of them to take that attitude with small boys. Threaten to whip them for demanding an answer to the most fundamental question in the world! They not only add to the child's morbid curiosity but they close the door tightly against further confidences.

I would never force sex information on a boy if he were not interested. But I would never assume that he was disinterested just because he did not ask questions. I would want to know what was going on in his mind. Boys are naturally secretive creatures. There is still much of the primitive in a boy, barely covered by the veneer of civilization. His forebears came of age when they were but fourteen. Many a modern youth feels primitive urges stirring in him by that time. Help him to keep them under control by letting him know, long before they raise their head, what it is all about.

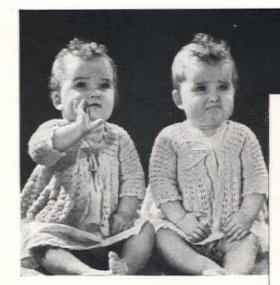

It takes much fortitude, common sense and a lively sense of humor to see a boy through his first "girl craze." As a rule about all you can do at this time is to offer a standby service in case he needs it.

"I keep my eyes open and my mouth closed during this ordeal," one mother said to me.

A wise woman she was, too. For the temptation is to josh a lad until he becomes surly or drawn into his shell. Like a rash, this girl fever has got to come out and with only a normal amount of fussing the patient is pretty sure to recover.

On the other hand there are mothers who feel it their duty to push a boy into social contacts with girls to develop certain graces. This is bad business. Social instincts ripen in boys at different ages. The time for a chap "to get used to girls" is when he begins to feel a natural interest in them. Then he seeks their company of his own accord. Forcing him to "go out with girls" before he is ready may arouse primitive instincts prematurely, before he has the mental balance to handle them. Generally speaking, the longer you can de-lay the social instinct, without using unnatural means to submerge it, the better it is for him.

"A good whipping will change his mind," I have heard stern parents say of the obstinate boy.

• "Oo-hoo, Mother!
Come right away—
Sister's getting all
fixed for a big cry.
And you know how
catching it is! If she
cries, I'm going to,
too—'cause she's my
own twin and I feel
so sorry!"

o "See here—this woolly sweater's making her a little bit prickly. How well I know the feeling! Wouldn't a few shakes of our slick, smooth Johnson's Baby Powder be just the thing?"

• "Some for me, too? Oh, how nice! I just love to feel that soft, slippery powder going all tickly down my neck. Let's not have it just at bath-time — let's have it often! Then we'd never cry!"

• "I'm Johnson's Baby Powder...the best caretaker for babies' tender skins! My silky smoothness wards off chafes and rashes—for I'm made of finest Italian talc. No gritty particles and no orris-root...Try Johnson's Baby Soap, Baby Cream and Baby Oil, too."

Banish "Tattle-Tale Gray"

with FELS-NAPTHA SOAP!

The idea that you can change character habits by whipping a boy is preposterous. You may make a boy conform to your wishes for the sake of avoiding further punishment. Or you may force him to truckle down to you. But the whipping in itself will not change his mind nor remold his habits.

The dangers of whipping are these. You may make the boy more deceptive. He becomes clever at avoiding detection. If he feels he was punished unfairly it will rankle and grow into an obsession like that of the boy who became cruel and destructive. You may break his will completely with too severe punishment, and make a coward of him. You may lose his confidence forever.

Understand I do not say a boy should never be whipped, because there are situations which call for an immediate demonstration of authority. But always talk with him before and after punishment—before, to make him see that it is the last resort; afterwards, to let him know you are still his friend.

Changing a boy's mind is a matter of substituting one idea for another, or replacing a bad idea with a good one.

One of the most troublesome boys I had was forever getting into mischief because time hung heavily on his hands. I succeeded in interesting him in rock collecting. We took long hikes together, looking for rocks. Thus I absorbed all of his spare time—and, I confess, a lot of mine, too. But we got to be great buddies, able to talk over anything, and his problems vanished.

"He'll outgrow that habit in time," is the very opposite of the foregoing fetish. It is such an easy way out when parents are either too busy or too lazy to help build or remodel his habits. It is likewise the attitude of the too lenient, tender-hearted parent.

If mothers and fathers realized how early in life habits become fixed they would not leave it to chance. It amounts to leaving your boy's future to chance for, as I say over and over again, a boy's character, in the final analysis, is only the sum total of his habits, good and bad. Scientists tell us that no impression made upon the brain tissue is ever completely wiped out. Bad tendencies can be eradicated only when your boy is young and his habits have not become fixed.

As he grows up the average boy learns at school and from association that selfishness, deception, poor sportsmanship, and certain other anti-social traits do not pay. Some boys never learn that, hence our annual crop of young criminals. But a normal boy in a good environment will outgrow his primitive instincts to that extent,

What he will not outgrow, without definite corrective steps, are the purely personal habits. Lazi-

ness, for example. Let come firmly fixed in yo you will have decreased tial achievements ofte as fifty per cent. All his pay in terms of earning hopes, and accomplish realized. Hundreds of t met men who were definicapped throughout the mannerisms and traits whave been corrected in by a few weeks of interforming.

"Experience is a god is another adage that popular fallacy in boy is first cousin to the feti fathers that they shou boy "try everything or him alone; he won't go

very mother knows how differtwo brothers can be. Outwardhey may both be the exact ge of their father. Inwardly may be as far apart as the s. I will never forget the deep I received as a child when my

father took my brother for a walk across a long railroad trestle, but refused point-blank to take me. I felt sure he disliked me and favored my brother. I brooded over that discrimination for weeks and it was not until years later that I got up the courage to ask him about it. He explained that he had left me behind because he could have taken care of only one child if a train had come along while they were crossing the trestle. He chose my brother because I was so nervous and excitable that he feared the experience would be bad for me. That's all there was to it. Yet think of the agony I would have been spared if he had only explained at the time. But it never occurred to him that an explanation was necessary.

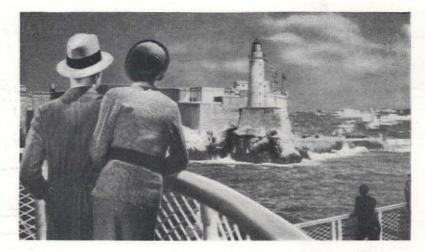

So, with the best of intentions, we go on blindly, complicating the lives of our youngsters. With a quarter of a century head-start, roughly speaking, parents ought to have the advantage over their children. Yet you would be surprised, perhaps, at the number of boys who have taken me into their confidence and confessed, in private, that they were being troubled with parent-problems!

effective photograph taken on a pre-depression trip to Majorca. This picture enlarged by photomural was a charming reminder of a lovely island vacation, and called forth great admiration from every

Last, but by no means least, is the ever-present problem of the basement games room. For the 'handy man" there is as much pleasure in building and decorating this room as, later, in its use. The sketch shown here suggests a games room with a very salty flavor. Let the Lord of the Basement go to his favorite illustrated book of the sea, and either by the chalked square method, the post card projector or the photo mural. or, yes, free-hand for that matter, produce such scenes of swashbuckling adventure as to keep him happy through the long winter evenings. The room shown here has a built-up poop-rail, set out a few inches from the wall to suggest the quarter deck of a ship, and strips of real canvas hanging from cleats in the ceiling, with reefpoints dangling, carry the illusion of sails towering overhead. Shrouds of real manila rope, rove through blocks and slanting up, presumably to the cross-jack, but in reality only to another cleat in the ceiling will satisfy the realist as to the presence of rigging.

How a Man of 40 Can Retire in 15 Years

I makes no difference if your carefully laid plans for saving have been upset during the past few years. It makes no difference if you are worth half as much today as you were then. Now, by following a simple, definite Retirement Income Plan, you can arrange to quit work forever fifteen years from today with a monthly income guaranteed to you Not only that, but if you should die before that time, we would pay your wife a monthly income as long as she lives. Or, if you should be totally disabled for six months or more, you would not be expected to pay any premiums that fell due while you were disabled, and you would receive a regular monthly disability income besides.

\$200 a Month beginning at age 55

Suppose you decide that you want to be able to retire on \$200 a month beginning at age 55. Here is what you can get: 1. A check for \$200 when you reach 55 and a check for \$200 every month thereafter as long as you live.

This important benefit is available alone; but if you are insurable, your Plan can also include:

2. A life income for your wife if you die before retirement age.

3. A monthly disability income for yourself if, before age 55, total disability stops your earning power for 6 months or more.

This Retirement Income Plan is guaranteed by the Phoenix Mutual, a company with over half a billion dollars of insurance in force and a record

of more than 75 years of public service. If you want to retire some day, and are willing to lay aside a portion of your income every month, you can have freedom from money worries. You can have all PHOENIX

the joys of recreation or travel when the time comes at which every man warts them most.

The Plan is not limited to men. Similar plans are available to women. It is not limited to persons of 40. You may be older or younger. The income is not fired to \$200 a month. It can be nore or less. And you can retire ac any of the following ages that you wish: 55, 60, 65, or 70.

What does it cost? When we know your exact age, we shall be glad to tell you In the long run, the Plan will probably cost nothing, because, in most cases, every cent and more comes back to you at retirement age.

Write your date of birth in the coupon below and mail it today. You will receive, without cost or obligation, a copy of the interesting illustrated booklet shown at the left. It tells all

> about the Plan. Send for your copy now The coupon is fo your con-

It's a brand-new way to make Royal Bak-ing Powder biscuits—with sweet potatoes. They're mixed in a jiffy. Serve them with tender chicken in golden gravy and you have a flavor combination that's an un-usual treat.

Chicken Fricassee with **Sweet Potato Biscuits**

2 teaspoons salt 6 tablespoons flour ½ cup cold water 1 5-lb. fowl 6 cups boiling water 1 onion, sliced

1 onion, sliced ½ cup cold water Cook fowl whole in boiling water with sliced onion until tender. Add salt when half done. Take fowl from broth; remove skin; take out bones, leaving chicken in fairly large pieces. Thicken gravy with flour rubbed to a smooth paste with cold water. Bring to a boil; add chicken meat, Serve with Sweet Potato Biscuits laid on top of gravy. Serves 6.

Sweet Potato Biscuits

34 cup mashed sweet potato cup milk tablespoons melted butter

11/4 cups flour 4 teaspoons R teaspoons Royal Baking Powder 1 tablespoon sugar 1/2 teaspoon salt

Mix sweet potato, milk and butter. Add remaining ingredients, sifted together, to make soft dough. Turn out on floured board; toss lightly until outside looks smooth. Roll out ½ inch thick; cut with floured biscuit cutter. Place on greased pan. Bake in hot oven at 450° F. about 15 minutes.

FREE-NEW COOK BOOK! Write to: Royal Baking Powder, Product of Standard Brands Inc., 691 Washington Street, New York, Dept. 82.

George Washington luncheon-bridge

BEATRICE CLARK CAMPBELL

Whether you lean toward the W cherry tree, hatchet, and procrastination, of George or the dignity, charm, and grace of living associated with Mount Vernon, Washington's birthday offers the hostess a myriad of ideas for entertaining. Why not give that luncheon-bridge you have been putting off? Did I hear you groan and murmur something about having no maid? Just check off the many mechanical aids you have in your own home that to Martha Washington would have seemed fantastic! Are you convinced now that you're a very fortunate person? Very well here we go!

Invitations: Why not be modern and use your telephone for the invitations. This simplifies matters and you are certain of your guests. You'd rather send invitations? Very well, cut hatchets from red and brown drawing paper, write the invitation on the back and send in envelopes made of the red.

Tallies: Attractive tallies may be made at home. Copies of framed miniatures are easily made, using tiny jar rubbers painted black as the frame, pasting Cellophane on the back to resemble the glass, next comes a circle of white upon which a tiny silhouette of George or Martha Washington has been done in black. The score is kept on the back and also serve as favors.

Prizes: A pair of candlesticks, hand dipped candles, silhouettes of the Washington's, pictures of Mount Vernon or any of the numerous Washington pictures would make suitable prizes when wrapped in white and tied with tri-colored ribbon with artificial cherries jauntily perched in the bow.

Table Decoration: Red, white, and blue form the keynote of the table. Nothing could be lovelier than white damask, or lace with its hint of mahogany beneath. Red and white carnations in a gleaming silver bowl or one of transparent blue, boutonnière place cards of carnations tied with tri-colored ribbon, and ritz-blue stemware complete the picture. Your glassware is crystal you say? Very well then your blue note will be introduced by blue Cellophane ruffsaround the stems of the goblets and sherbets. Easily done isn't it?

Cabin fireplaces that really do "work" BERT POPOWSKI

"TET's come out for Thanksgiving Land see how it works," suggested Billy as he hauled away at the pulley rope which hoisted the last bucketful of mortar. I patted the last stone into place, slid down the roof, and threw the trowel into the creek.

"Fine," I agreed. So, when Thanksgiving Day neared, we packed the car with plenty of blankets and "grub" and set out for the Hills cabin. We weren't dubious-oh no; the plentiful supply of blankets and nourishment was only in case we got caught by an early snowstorm and had to stay longer than the three days we had allowed ourselves.

Two years of planning had finally materialized into a log cabin—with fireplace. Warned by various owners of "civilized" fireplaces that the contraptions never worked, I had spent considerable time inspecting various commercial fireplace units. Since they were sold under a guarantee of satisfaction I felt reasonably certain that I could depend on their measurements being correct.

The first requirement I set for my fireplace was that it work; none of this pantomime suitable for accompaniment to that popular song "Smoke Gets In Your Eyes" for me. Next, I wanted it to produce more than the radiant heat coming from the fire itself. The final requirement was that the excess heat could be controlled at will, especially during those days when a fire was ornamental and not a necessity.

Ordinarily, the heat of any open fire goes right out in all directions in straight lines (radiant heat the scientists call it) exactly like light. And, like light, it loses intensity inversely as the square of the distance it traverses. That means that if you get a certain amount of heat on a given area one foot away from the blaze, that same area would receive only one sixteenth as much heat if held four feet away from the fire.

The result is an occurrence well illustrated by the old sourdough who lathered only one side of his face at a time when indulging in his monthly shave. His explanation was that before he got around to the side away from the fire his lather would be frozen solid. Well, maybe that's a trifle far-fetched, but it illustrates my point.

Radiant heat, since it tra straight lines, cannot hea place that is around the As a result it sheds its warn a comparatively small por the room in which the firer located. Any other heat sl it is negligible and cannot pended on, particularly in

Furthermore, to many owners, fireplace success sma magic because the comparelementary knowledge that essary to its success is in the of a few builders. They na prefer to make a good th it-at a price. Many homeconsider the fireplace a surv the Stone Age, and as such i of necessity be a crude an efficient method of heating quently this is true, though i

All these factors have give fireplace a black eye in its rel with the general public. As sult I determined to inves thoroughly the possibilities of places before I invested in so as a single firebrick.

As I didn't care for an type of commercial unit, I combined the measurement proportions of three of the designing a home-made uni has given satisfaction ever This combination firebrick sheetiron fireplace has prov self a source of consistent sat tion and pleasure, with co thrown in for good measure.

Correct proportion is the note of fireplace construction is of all heating units. Give fire too much draft and not er flue capacity and it smokes verse the order and you have that burns fiercely, to the depletion of fuel and consecutive deflation of pocketbook.

I found that a ratio of 8 in firebox opening to flue right. The vagaries of wea which prevent perfect perf ance, can be further nul by the installation of a bu damper.

Since flue lining canno bought in every size, it is be learn the various commercial

Johns-Manville Steeltex Lath prevents plaster from falling and reduces maintenance to a minimum

IF you are thinking of building a new home, it should mean money in your pocket to send for the book shown below!

Among other things, it pictures and describes in detail a new type of steel plaster lath, Johns-Manville STEEL-TEX. As a plaster base it is far superior to the old type of lath, because it reduces plaster cracking to an absolute minimum. And it adds permanence, strength and fire resistance to your walls.

Don't wait—investigate today this new way to protect yourself against unsightly lath marks and future repair bills for cracked walls and ceilings.

There will be no expensive maintenance bills for cracked plaster when walls of your home are built with Johns-Manville Steeltex.

and work back from one of them to get the correct size for the firebox opening. If the size of firebox opening produced by your first figures does not please you, you can tear them up, select the next size of flue, and work out another.

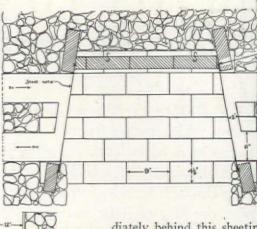

I chose a flue size of 8½ by 13 inches and worked back until I had a firebox opening 24 inches high by 37 inches wide. This size, I felt, would make use of firewood of goodly size and yet be small enough so a small kindling fire wouldn't be lost within its maw.

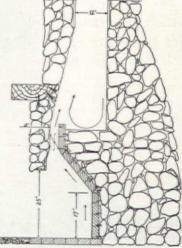

Since the average length of my fuel would be about 24 inches, I made the back of the firebox enough larger (30 inches) so the occasional larger piece of wood would not be an embarrassment. Then, too, it is so convenient to have the firebox large enough so a fire can be pushed against the back wall and banked there whenever necessary.

The depth of the firebox was sufficient to prevent any slight shifting of the fuel from endangering the cabin floor. Of course andirons hold most of it, but an occasional ember can so easily break away and roll into the room. How disastrous such an occurrence proves may well be determined by the additional two or three inches of depth that is built into the firebox.

Each side wall of the fireplace

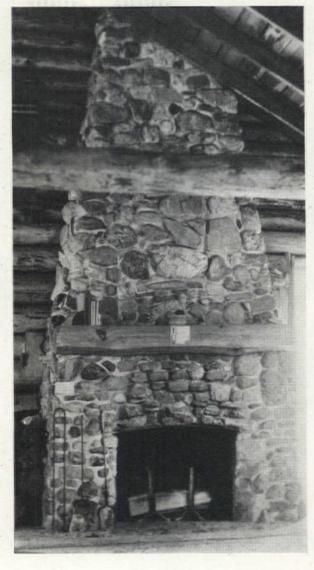

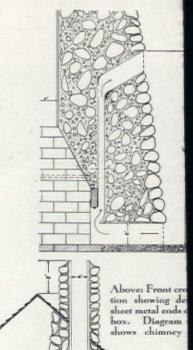

was formed almost entirely of a single piece of sheetiron, fitted into flanges of the same material to allow for expansion of the metal under heat. The flat area immediately behind this sheetire boxed in with field rock an tar to form a hot-air ch one end of which terminate cold air intake at floor lev the other emptied into the some six feet higher.

Each hot air duct was may by the use of a home-made form boxes, around which forced concrete was poured. this had set solidly, the form knocked out, reassembled, a duct on the other side of the place built up to an equal I. The inside of each length painted, as finished, with a proof paint to seal it for against humidity changes a terioration.

The cold air intake was inally left open but after a f of pack rats had made fro of its protection during ous ence I changed it. A confewith a blacksmith resulted closely woven grill of light rods welded onto a frame

screws in this frame allowed to be put in and remove convenience in retrieving ar which small members of the ily drop in.

The hot air outlet was a with a damper attachment so when a fire exceeded the deco

Rust-free Water from pipes of Copper or Brass

THOUSANDS upon thousands of homeowners are enjoying rust-free, trouble-free service provided by water pipe of durable Brass or Copper. And so can you . . . at a cost far less than you would imagine!

Rustless Plumbing Not Expensive

The total cost of Anaconda Brass Pipe and Brass Fittings for the average six-room home is only about \$75. Remember that labor, not included in the above figure, is the same regardless of whether lifetime brass or rustable pipe is used.

For the same house, the cost of Anaconda Copper Tube and Fittings is even less! A complete installation costs very little more than one of rustable pipe.

Whether Brass pipe or Copper tube (both are rustless), be sure the name ANACONDA is stamped at frequent intervals in every length.

12 Ways to Save Money

This interesting free booklet, "Copper, Brass and Bronze in the Home," gives you 12 suggestions for building or remodeling which will save money and add years of life to your home. Write for it today.

COPPER ANACONDA BRASS

proportions demanded by a midsummer morning, the volume of heat could be controlled. In cold weather this wide open damper invited circulation of heated air.

Despite the cost of the sheet metal sides and their fittings, the cost of the completed firebox was below the cost estimated if it had been built entirely of firebrick, inwhich case the circulating air heating portion of it would have been impossible.

The accompanying drawings illustrate the actual measurements of my fireplace, with details indicated where necessary.

Ordinarily, masons who build fireplaces advise a ratio of 3 to 1 between the width of the front opening and that of the back of the firebox, the point being made that the sharply outward facing sides act as reflectors in throwing more heat into the room. Since I wasn't depending on radiant heat but on the circulation of heated air, I built my firebox more deeply and squarely and it was able to accommodate a wider range of fuel sizes.

Masonry fireplaces urge the use of a very short back wall, again to aid in the reflection of heat into the room. My back wall rose three fourths of the height of the front opening, and helped give the impression of spaciousness above the fire. I dare say a fire burns better if it is relieved of the oppression of a load of masonry continuously hanging over its head.

The throat of a fireplace must be below the lowest edge of the wind shelf. Once past the throat, it must do a complete about-face if it is to come out into the room, a condition that is only possible if the flue is not drawing properly.

Occasionally a blow-back of smoke is experienced when a fire is first lighted. The explanation and remedy are both simple. The column of air in the flue is motionless and naturally resists being set in immediate motion. If a lighted twist of newspaper is held in the throat for a few moments, it starts a column of warm air climbing upward and leads the way for the smoke arising from the freshly kindled fire.

The foundation and firebox of any fireplace must be built of fireresisting material. The standard material for this purpose is firebrick, and the binding material is fireclay. By doing a little close figuring I was able to make the base of my firebox come out to 26 firebricks. Incidentally, firebrick varies in size from ordinary brick, being 9 inches long, 4½ wide and 25% inches thick,

The sheet metal plates were installed as shown by the detailed drawings. The front and back edges of each plate were held in place by a flange of sheet metal which allowed for expansion of the metal when heated. Bolts ran into

to All Parts of the Room

"WE have used our Heatilator all winter," writes one owner living in Illinois, "and it is a perfect success. It does not smoke and circulates a good heat from the registers. It will heat two rooms comfortably in very cold weather without the aid of the furnace. It certainly does all you say it does, and we are well pleased with our fireplace."

Saves Fuel

The Heatilator Fireplace takes the heat ordinarily wasted up the chimney and circulates it to every corner of the room and to adjoining rooms. The Heatilator is a steel heating chamber hidden in the fireplace. Cold air is drawn from the floor into this heating chamber, warmed, then returned to the room.

By providing living comfort during cool spring and fall weather, the Heatilator cuts weeks off the furnace-heating season and dollars off your fuel bills. In mild climates and for summer homes and camps, it is the only heating equipment required.

Will Not Smoke

The Heatilator is a correctly proportioned metal form around which the masonry is easily built. Smokeless operation is assured. Complete from floor to flue, it greatly simplifies construction—saves materials and labor. Does not limit mantel design or type of masonry used.

NEW LOW PRICES make the cost of the completed Heatilator Fireplace but little more than ordinary construction. Heatilators are stocked in principal cities for quick delivery. Write for details. State if building new fireplace or rebuilding old.

the masonry and held the fast through the help of a iron cross piece, and a nut

The top of each plate was underlapped by fire-resistir (not firebrick) to a depth inches and no smoke ever the sharp angle thus forward

Firebrick, set on edge, the back wall of the fire fact, with the exception sheet metal area, it formed the inside area directly expected the heat. In the interest of omy the inside of the heating was faced with fire-resisting which is quite sufficient purpose.

The fireclay mortar co small packages, ready to m the procedure will stand a of caution. Contrary to brickwork, the seams betw these bricks, whether fire b fire-resisting brick, should small as possible. A wide s fireclay will burn out, ever necessitating repairs, while seam will probably outla builder.

All of the brick walling be anchored to the masonry backs it up, with short pid baling wire, bent into an end of each of these and pieces goes between the brick the other of course meshes it concrete. This reinforcing begin at the top edge of the tom layer of brick and a every alternate brick should fastened.

Since my fireplace was b boulder and specimen roc opening around the firebo made of granite, which is r clined to crack on expost heat. Petrified wood is anoth cellent material to use, whi cabin builder who does not either of these at his disposuse traprock.

Any geologist will tell yo igneous rocks (rocks formed an original molten state) excellent fire-resisting qua Without geologic experienc fire test is recommended folecting rocks that are to be posed to fire heat. If they being left in a brisk woo without cracking or peeling will usually serve to face the box. Elsewhere about the fire fire-resisting rock is not nece

The interior of the fire should be kept as smooth as sible in order that little edd the smoke stream shall not track its ready exit. Special should also be given to the ing of the neck of the firepla that it tapers gradually to exact flue size.

The flue is set directly of end of the neck and is seal place with fireclay of a stiffer sistency than that used in the box. This stiff mixture of fir is also used in leveling up and sealing the individual pieces of

lining. Care in this respect prevents cracks in the finished masonry at the points where flue lining joints

Proper draft requires that no angle in the flue should be sharper than 60 degrees, if any angle is to be used. A flue that rises perpendicularly above the fireplace is, of course, preferable.

Although every cabin I had seen had its chimney stack on the outside of the building, I chose to put mine inside the log wall. The reason was obvious. In cold weather the warm stones, padded with a bit of heavy blanketing, make the world's coziest fireplace seat. Then, too, the amount of heat that is lost to the outside air is not inconsiderable, when the stack is built outside. My air heating flues could have been arranged equally well in either case.

Where the chimney stack rose through the roof I used galvanized tin flashing to help shed the water from around the masonry. If left in direct contact with masonry, wood rots rapidly. I placed the piece below the chimney stack first to give runoff water the best chance to make its way down the roof.

The two pieces running down the slope of the roof were put on next, being bent to follow the contour of the shingles. The piece at the top of the masonry was put on last and all were nailed down with shingle nails. All pieces were large enough to protrude at least six inches outside the finished ma-sonry. The use of sheet copper for flashing, fastened with copper nails, is recommended where price is no object.

In order that currents of air, deflected by the roof slope, shall not cause the fireplace to smoke. the flue should be extended two feet or more above any roof ridge on the building. Many a home-owner, bothered by the continual back-firing of his fireplace, could correct his trouble by extending his chimney stack. As a further precaution, the last four to six inches of mortar should be shaped in a curve to deflect air currents upward and create better draft.

While standing in the doorway of the cabin one black, rainy night. I saw the sky torn by deadly fire as a lightning bolt struck a huge pine less than a hundred yards away. The next morning I looked at the tree and found it split from crown to roots.

I had been looking for suitable material from which to build a mantelpiece, and this seemed like the answer to my search. Permission to fell the tree was readily obtained, and a sound seven-foot section of it was sawed out. The lightning bolt had roughly quartered the trunk at this point and a little careful work with a hand axe prepared two surfaces for the plane. The rest of the trunk was

This Crane bathroom includes a Corwith vitreous china lavatory, Maurcionia closet, and Corwith bath with Refreshor shower.

This can be your Crane Bathroom!

It cost its owner only \$410 complete

'HIS Crane bathroom in the home of Edwin F. McNichols, 5605 South Sangamon St., Chicago, replaced a room that was old-fashioned, inconvenient.

For only \$410 complete, new composition tile walls were put in, a new rubber tile floor was laid, and handsome Crane fixtures were installed. This cost included all plumbing work, carpentry, decorating, and the accessories-shower curtain, soap dishes, towel bars, medicine cabinet, and even the Venetian blind! It's a bathroom as appropriate for the new home as for the one being modern-

Imagine this Crane bathroom in your home-bright, clean as a china dish, convenient and modern! Note how the water closet design has been refined to eliminate any unsightly flush connection! The lavatory, bath, shower-all have advantages you will appreciate. And they are all available at such a modest cost! Three years to pay, too, if you likeunder the Crane Finance Plan, at government rates. No money down! A \$410 bathroom would cost only \$13.09 a month!

Quality In Every Hidden Fitting

And in addition to this sparkling beauty and delightful convenience, you have the comforting assurance that underneath it all is Crane quality-in every pipe, valve and fitting. The "working parts" in plumbing are vital. Be sure they are as fine and dependable as the fixtures.

There's no reason, now, for delaying the modernization of your bathroom. Call in your architect or a licensed plumbing and heating contractor to help you plan it. The contractor will give you complete estimates and make all financial arrangements.

With modernization made so easy. you can have, too, that downstairs guest lavatory you've always wanted, or a new Crane kitchen cabinet sink, or a new Crane heating system that reduces the cost of heating your home. All available on the Crane Finance Plan, at government rates.

To Help You Plan

If you are interested in a new bathroom, kitchen or heating system, we'll be glad to send interesting, illustrated literature which will greatly help you in your planning. To get the literature best suited to your requirements, please check the coupon below and mail today.

* Prices slightly higher, Denver and West.

WHITNEY

Whitney Maple for Canadian market made by Andrew Malcolm Furniture Company, Ltd. Listowel, Ontario sawed into fire-wood lengths and was the focal point of many a hearthside gathering.

When I first tried to plane this long slab I found that it was insufficiently seasoned and after repeatedly gumming up the plane with the resiny wood I gave up. The log was roughly fitted in place, however, and two long stones were left jutting out of the masonry above it to help hold it in place.

When we made our Thanksgiving excursion, a half day was devoted to planing the log, now thoroughly seasoned, and fitting it in place. Several spikes were driven into its mortar edge, and with the help of several strands of reinforcing were left protruding from the original masonry, and a small batch of fresh concrete poured in place behind it the mantel was securely anchored.

The front edge and top were planed, sanded, and finished with linseed oil and varnish to give full display to the curlicues of grain about the several knots in the wood.

A study of this tree was a study in electrical conduction. Since it was the largest tree in the group, the lightning was attracted by its rainwet top. Some twenty feet down a woodpecker had once built himself a home and repeated rains had rotted the heart of the tree for the next fifteen feet, where it became sound again.

The lightning bolt followed the water trail down the trunk, into the woodpecker hole and down fifteen feet of mostly rotten heartwood. Here it was blocked, but its tremendous voltage blasted the tree trunk wide open, exploding six-foot pieces of bark.

A final word of caution before you kindle your first fire in any freshly built fireplace. Allow at least two weeks for the masonry to dry out before subjecting it to fire heat. If it is not thoroughly seasoned you may find cracks developing where you least want them and in the case of this type of fireplace those cracks may lead smoke into your air-circulating ducts and thus into your room.

After I was six feet above the hearth I built a small punkwood fire in the fireplace each day to help season the masonry. The lining flue had been erected, wired fast, and sealed fast in its joints before this, and the lazily rising smoke from its top encouraged me to work with leisurely care in completing my chimney stack.

The thick smoke arising from such a fire is a splendid indicator as to how well the fireplace draws. I was especially interested in seeing how much more uniformly it rose after so slight a change as the addition of the curved surface at the very top of the masonry. Truly, "it is proving the use of the little things that repays one for the care expended in their making."

WISS KITCHEN SHEARS are great time savers when it comes to cutting up vegetables, fish, poultry, opening bottles, cutting bacon, "chopping up" parsley, nut meats, etc. Surprisingly handy for unscrewing tight jar tops, popping caps off bottles, cracking nuts, and what not.

Colorful handles to match your kitchen; red, blue, ivory, green, yellow. At most cutlery counters, \$1.00 a pair. In rust-resisting Chromium Plate, \$1.50.

Don't deprive yourself of these wonderfully convenient shears. Sent POSTPAID upon receipt of price, if your dealer doesn't carry them.

MANICURE SCISSORS

WISS Manicure Scissors have delicate, needlesharp blades and cut so beautifully they're a joy to use. The model shown above is one of the most popular, 3" long, \$1.00 a pair. 3\%4" long, \$1.50. (Slightly higher west of the Rockies and in Canada).

The nine Willards who made clocks

[Continued from page 38]

of these very clocks have during the last few years.

The third brother and maker was Ephraim. H shadowy figure and little is of him. In 1777 he was wo Medford, Mass. In 1798 E Willard was living in R Later he is known to ha making clocks in New Yo 1833. It is supposed that I Willard made nothing but clocks but it seems strange he were working when his Simon was making banje that he did not make th Every other clockmaker period seems to have tried the banjo clock.

The fourth brother, Aar the business man of the family. He left Grafton ar to Roxbury just as his Simon did. They did no together and each had h shop. Simon peddled his north of Boston and Aaron to the south of Boston. Aar a factory and worked on a tity basis. He employed as as thirty men in his factory time and made shelf, ta banjo, gallery, and reg clocks. Aaron Willard retire business in 1823, sixteen before his brother Simon. his son, Aaron, Jr., to ca his work.

Simon Willard's Fan

Simon Willard had two Simon, Jr., and Benjamin lard. Aaron Willard had o Aaron, Jr. This is the secon eration of the Willards.

Simon, Jr., was born in R in 1795 and inherited mucl father's mechanical abilit was also a better busine than his father. He learned t clocks from his father but lowed the trade only occasi Although Simon, Jr.'s nar pears on the dials of many he never made them. Sime entered West Point and gra from there in 1815. He re from the service in 1815 an into the crockery business b not successful in it. He wer with his father in the cloc for two years and then w New York where he learn make chronometers and w with D. Eggert. In eighteen r he had mastered the trad went back to Boston where tablished his own busines account books show that he repaired many chronometer by the famous Boston sh firms, In 1832, Simon Willa made an astronomical cloc

is still in use in the Harvard Observatory. Simon, Jr., died in 1874.

Benjamin F. Willard, the second son of Simon Willard, also learned his trade from his father. He never went into business for himself but worked for his father or other clockmakers. He also made a fine astronomical clock that won a gold medal. He invented and patented a revolving light for lighthouses, and one of these was in use at Boston Light for many years. He died in 1847.

Aaron Willard, Jr., was born in 1783 and learned his trade from his father, Aaron. He made clocks by himself and carried on his father's work when he retired. Aaron, Jr., retired from business in 1850.

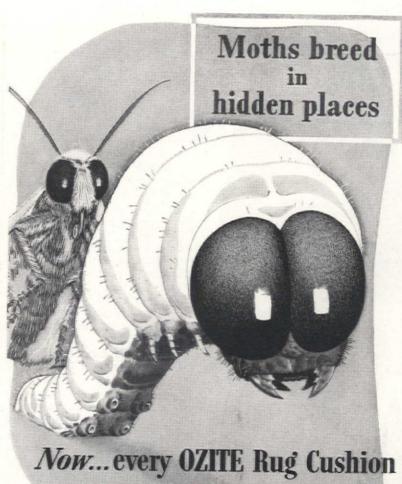

The two other clockmakers by the name of Willard were only distantly connected with the other craftsmen. They all had the same ancestor, Major Simon Willard, who founded Concord, Mass., and fought in King Philip's War. These two brothers, Philander J. and Alexander T. Willard, made clocks in Ashburnham and Ashby, Mass. They used the same shop but each put his name on his own work. Their clocks were never unusual but they compared favorably with the clocks of many of the Connecticut and Massachusetts makers of their time.

Many people believe that all banjo clocks were made by Simon Willard. Unfortunately this is not true. Even when the phrase, "S. Willard's Patent" appears on a clock it does not prove that it is the work of Simon himself. Although he patented his design, it was copied by many contemporary clockmakers. There were many good copies, it is true, but there were also some very poor ones. If you have a clock that you believe was made by Simon Willard and it has no mark consult some clock expert before you accept it as an original. Simon and Aaron Willard made fine clocks and their work is as distinctive to one who knows the workmanship as brass and gold.

American design for American homes

[Continued from page 17]

or periods. In remote farm houses, suburban cottages, or sophisticated apartments in large cities, the names of furniture designers and periods are beginning to be discussed glibly. Magazines and newspaper articles have done much to foster this. Fundamentals in home decoration are given in many intermediary schools. Women are seeking out this knowledge themselves through reading and studying. It is a culture fast

carries an **Insured Guaranty** against

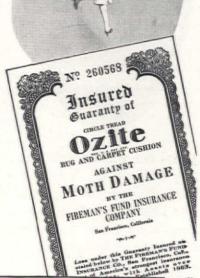

MOTH DAMAGE to the cushion!

NOW CIRCLE TREAD OZITE has the most positive moth protection known-a great new feature that alone would make you insist on genuine Ozite.

You get an Insured Guaranty Certificate with each CIRCLE TREAD OZITE Cushion, which means that your cushion is actually insured against moth damage under our policy with the Fireman's Fund Insurance Co. This is possible because CIRCLE TREAD OZITE is treated with a patented solution that kills moth worms. The mothproofing is permanently effective. Since CIRCLE TREAD OZITE is the only rug cushion so treatedisn't it important to get the genuine?

CIRCLE TREAD OZITE is softer than ever before because it's "spring-felted"; its adhesive center prevents lumping; "ozonizing" renders the cushion odorless. These features, and the mothproof guaranty, are found only in CIRCLE TREAD OZITE. Look for the name on every square yard. Guaranteed to satisfy.

3 weights, in all sizes for rugs and carpets

FOLKS far older than little Mary often say much the same thing. For telephoning is almost like a visit face-to-face. There's no more personal, satisfying way to keep friendships alive and family circles unbroken by distance.

Try it when somebody's traveling, away at school, or ill and lonely . . . when there are babies, birthdays, or anniversaries. It costs so little. After 7 P. M., 3-minute, station-to-station calls* to most points cost about 35c for 75 miles, 50c for 150 miles.

*Where you will talk with any one who answers, rather than with a specified person.

developing in America, which American designers foresaw only a few years ago, and which manufacturers have been fostering ever since.

The brief biographies of these new designers, which follows, is just as important to 1936 furniture collectors as are the names of Duncan Phyfe or Chippendale to our ancestors. Mid-Westerners take note—and take first place in our roll-call of modern designers.

Biographies of furniture designer

Bernard G. Bruening, III, of Indiana, comes by this affix naturally, for he is of the third generation of designers, all of that name. While he is probably the youngest of all the designers of furniture, being in his early twenties, already he has gained a reputation among professionals for his outstanding work in designing a large group of Scandinavian folk furniture interpretations. This is his first major work; he shows every promise of continuing in importance, so that his name should be watched. In designing the above mentioned group, he was ably assisted by a veteran in furniture work, Rolla Von Gundy, who was responsible for years of research in this particularly lucrative and interesting design field. Mr. Bruening is a native of Indiana.

Donald Deskey, of Minnesota. His name is always mentioned whenever there is any discussion of modern designers. He is a pioneer in this field in America. Ten years ago he saw modern much as it is today: as a simple, direct form. Even in the hectic "modernistic" days, he persevered with this vision. He is believed to be the first modern designer whose work entered into mass production. He believes good modern design must lack "dating"; its form must last through ups-and-downs of this new period.

Mr. Deskey was born in Minnesota, studied at the University of California, California School of Fine Arts, and in art schools in Chicago and Paris. For several years after this he worked in the building trades as an engineer and architect. His designs are strongly marked by the engineer-architect point of view.

The interior of Radio City Music Hall, Rockefeller Center, New York, and his pioneering work in metal furniture are also among his achievements.

Herman De Vries, of Holland, has been working with wood ever since he was six years old. He was born in Holland, the son of a builder of wooden ships, for whom he worked as a lad, learning at an early age the intricacies of wood working and construction. When a young man, he studied architecture, designing, and paint-

In BUILDING new homes—and remodeling old ones—you can have low cost, yet luxurious-looking modern wall and ceiling effects by including Genuine Masonite Products in your plans.

Genuine Masonite STRUCTURAL Insulation is an insulating board, recommended for upper side walls and ceilings. Deadens sounds. Conserves heat in winter. Keeps it out in summer. If you plan to air-condition, Masonite Insulation is the first step in the process, and it costs no more to have it than to be without it.

Genuine Masonite TEMPERED PRESDwood is a hard board, recommended for wainscoting. It has a marblesmooth surface that is easy to keep clean. Is used with many ultra-modern decorative devices.

Genuine Masonite TEMPRTILE is a scored hard board, similar to PRESDWOOD, which, when enameled, produces realistic tile-effect walls in bathrooms and kitchens. Will not curl or crack.

Masonite Products provide economies that soon absorb their cost. They possess tremendous structural strength. They are made of wood, without glue or artificial binder. Grainless and moisture-resisting. Easy to saw into any size or shape. Can be applied by regular carpenter. They are a beautiful warm-brown color, which, except TEMPRTILE, needs no further decoration. Or they can be

varnished, painted or enameled by regular painter. Mail coupon below for free samples and information.

ing in Holland. Twenty-five ago he came to America an tled in Chicago, where he many years working with i tant contract, decorating furniture manufacturing fir a designer of furniture. He operated his own furniture fa for five years. For the pas years he has been responsib the furniture designs of the Furniture Co. and the H. T. man Mfg. Co. It is gen conceded that Mr. De responsible for the early sin cation of the Early Am furniture styles, which wh simple virile style in its own gained a modern note th Mr. De Vries' touch.

Mr. De Vries considers habove all a craftsman, but before this he believes tha function of a piece of fur comes before the design and that the design must make the piece of furniture that not serves its function well, have strong and graceful at the time.

Wolfgang Hoffman, of V Visitors to the Chicago W Fair in 1933 are already far with Wolfgang Hoffman's for it was he who designe complete interior for the Lu Industries House, Mr. Hof whose work is entirely in the ern field, comes by this nat for he was born into the heart of the modern design ment-in Vienna, Austria studied under Professor Hoffman, founder of the ment, and spent two years office. He also came unde influence of Professors St and Frank.

Early in 1925, Mr. Ho arrived in New York. He w first with the late Joseph U after which he opened his studios for the purpose of cr contemporary interiors and trial designs. His early includes the Little Carnegie house. Early in the '30s, Hoffman found himself we in pewter and other meta which his accessories gained praise that some of them permanent display at the I politan Museum of Art. At ent he is devoting all of his to the designing of metal fur for the Howell Co.

Frances McClure, of Cold is one of the very few w designer-stylists in the furfield. She hails from the I Mountain country in Cold although she received a good tion of her schooling in Ea As a young woman her I became the study of furnitum which she gained quite a conseur's reputation in that world. Because of this she herself acting as a style conator in home furnishings at

T FIREPLACE CORP.

& Taylor, her first real business experience. She is usually given credit for having been an important influence in the launching of Early American furniture in its present commercial form. She is also one of the first, if not the first, to adapt the "classic modern" style, a decorator's favorite, to commercial uses. For the last few years she has been acting as designer-stylist for the Statton Furniture Co.

Gilbert Robde, of New York, is one of the few native New Yorkers in the furniture design field. As a young man, which he still is, he studied painting at the Art Student's League, New York, but he soon convinced himself that there were enough painters in the world. Having an engineering turn of mind, he found himself in advertising illustration work, which eventually led him into the field of furniture design seven years ago. He is also considered one of the pioneers in American modern design. His name is now linked with the furniture produced by Herman Miller and Kroehler Mfg. Co. He has also designed metal, reed, and rattan furniture, piano cases, wallpaper, baby carriages, lamps, and rugs.

Russel Wright, of Obio, has the distinction of having been born a descendant of two signers of the Declaration of Independence. His actual birthplace was Lebannon, Ohio. At Princeton University he became active in the theatre in stage design, and spent his summers with little theatres at resorts in the vicinity of New York. His work here attracted the notice of Norman Bel Geddes, who made him his assistant in the Paris production of Jeanne d'Arc.

When he returned to New York, he worked in the Theatre Guild, starting his own workshop for the making of stage props. From this beginning he found himself doing special jobs for decorators. This led him into his present work as an individual designer. His work in aluminum buffet supper utility pieces has been so meritorious that it has been shown in several art museums. He is now devoting much of his time to furniture design. The entire aspect of the home interests Mr. Wright. He believes America is on the road toward making the whole house a definite contribution to living, just as it has influenced the world with its skyscrapers and bathroom and kitchen design and engineering.

In July he introduced at the Grand Rapids furniture market a large group of ensembled furniture pieces in modern design strongly touched by a provincial feeling. This was done for Conant Ball Mfg. Co. Besides his work in furniture and metals, he has designed rugs, lamps, decorative accessories, and fabrics.

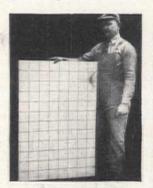

Before-and-after photographs of the home of Wm. Ferguson, Richmond, Va. Re-sided with Colonial Timbertex Siding.

REMARKABLE wood-textured Asbestos-A Cement Shingle for the sidewalls of old homes or new has been developed by Ruberoid. The name is Eternit Timbertex. This amazing building product has all the charm of the choicest cypress texture, but is rotproof, fire-proof, termite-defying, and never requires paint or stain to prolong its life.

The natural wood beauty of Eternit Timbertex Siding Shingles is further enhanced by the soft, rich colors of silver gray, cypress brown, and silver green. These colors are not merely on the surface. They are built in-an integral part of the material. You never have to paint or stain Timbertex Siding Shingles to prolong their life. Neither fire, rot, nor termites can destroy them. They free you from periodic upkeep expense.

When these siding shingles are applied over weather-worn walls, you have another moneysaving advantage. The dead air space between provides effective insulation, reducing fuel costs, providing new comforts for your family.

Eternit Timbertex Siding Shingles are moderately priced. Their surprisingly low first cost is still further reduced yearly by the savings you make in upkeep expense, fuel economy, etc. For modernizing work, the Ruberoid Easy Payment Plan provides low government rates, with no down payment and as long as three years to pay. Investigate. Mail the coupon.

Let the water DRY your dishes, too!

• Did it ever occur to you that if dishes were washed perfectly clean, they ought to dry clean and shining without wiping? Well, they will ... if you have clean, soft water! That dingy film you see on unwiped dishes is due to mineral salts in the water ... and to the sticky, insoluble curds which these salts form in reaction with soap.

You can't get anything really clean with hard water, no matter how hard you scrub. But conditioned water, which is hard water with the harmful minerals actually removed . . . not merely neutralized with chemicals . . . leaves everything sparkling-clean, uses less soap and takes far less effort. Dirt, bad taste and odor can also be removed from water by Permutit Water Conditioning Equipment.

Conditioned water is marvelous for bathing and shampooing. It is one of the greatest luxuries you can enjoy... and one of the least expensive because a Permutit Water Conditioning installation pays for itself in the many savings it effects.

Write now for the whole story. It's in the free booklet, "The Magic of Wonder-Soft Water."

Shady Boreen

[Continued from page 28]

blooms are a delight to every Southerner's eye and heart, but few know that the aromatic bark has numbers of propensities and adaptabilities of its own. Mrs. Mabry found that she could procure any quantity of it for almost the price of hauling, that it would split perfectly into long easily handled strips, and that these strips laid over the pine would show elusive blues and golds in coloring caught by either the rising or setting sun's rays that would further enchant the outer walls of her dream cot.

Thus each day she supervised its creation. The abundance of native rock was used to entrench her cliff further, to protect it from the whims of the lake which had shown what it could do in a sportive, destructive mood. Picked stones were used for a lily pool, shaped like a split shamrock leaf; others for irregular foot paths and the friendly barbecue pit near the water's edge. The thick growth of slender virgin pines and spreading oaks was left intact. Every axe stroke necessary to clear the space for the cabin (as Mr. Mabry called it) seemed to nick into Mrs. Mabry's heart. She knew that this would never be just a sheltering camp; it would be home, though wisely she kept that part of it to herself.

Four rooms, a broad south east porch, and a comfortable ground floor basement, were soon ready for occupancy. The full length of the living room faced the lake and all the other rooms had their own particular view of the changeful shimmering waters. Upon the broad screened south east porch Mrs. Mabry ingeniously devised a number of beds that, by pulley arrangement, swing back against the wall when not in use and are protected with dark green waterproof curtains. Thus the inevitable guests that find their way to every attractive country place were pro-vided for by this hospitable and designing woman.

Mr. Mabry attended to the building of his wharf and canoe shelter. Each day found his heart becoming more wrapped up in the charm of Shady Boreen. Each week end it seemed harder to tear himself away even for the luxury of his city home. He arranged five acres back of Shady Boreen, across the highway, for a caretaker and determined to keep his own chickens and cows. "A king can fare no better than to feast upon fresh fish, milk, and fowl," he said to Mrs. Mabry who smiled wisely and said nothing. A man must find out for himself what it is he wants, she

thought, but a woman knows.

"insulated window"

FOR YOUR HOME

Insulated walls are one of the marks of a modern home. But do you realize that ordinary windows permit enormous amounts of heat leakage, no matter how tight the wall?

Now, however, you can stop that loss. Curtis has developed an "insulated window." It is the Silentite Window Unit. And with insulated walls, it makes possible a higher degree of heating efficiency than has ever been known before.

Actual laboratory tests have proved that Silentite is five times as weathertight as the ordinary double-hung sash. Yet it isn't tricky or fitted with a lot of gadgets.

Silentite is a good-looking, doublehung sash of wood, home-like and architecturally correct. It always works smoothly and easily, for in Silentite the sash floats in smooth metal slides. Rattling and sticking are unknown to Silentite Windows.

And Silentite is pre-fit at the factory; every part is machined and fit just as are the parts of an automobile. This means lower installation costs and freedom from future repair bills.

Curtis has some mighty interesting facts for you if you're building a new home or remodeling your present house. The coupon below will bring you complete information.

There are never any drafts through these windows, no smudging of curtains.

smudging of curtains.

American Colonial

[Continued from page 10]

The family sitting room walls are papered in a design reproduced from an original found in a 1760 Connecticut house. The mantel is typically Northern Colonial. The desk is a small copy of Washington's. There are no draperies, only ruffled curtains and a rococo brass cornice. The burgundy rug, maple floor, and pleasant furniture lend comfort and charm.

The master bedroom was designed for rest and quiet. The wallpaper is a light gray diamond design, the draperies of soft green and rust chintz with a draped white chintz valance edged with Colonial net-tassel fringe. The mantel is designed after one in the Metropolitan. The four-poster bed with dotted swiss canopy and candlewick spread is a copy of Washington's-also the interesting dressing table. A fine blue leather wing chair and a short Hepplewhite sofa in linen depicting scenes from Washington's life form an attractive fireplace group. The brilliant green Bohemian glass vases and the American oil painting lend color to the mantel.

The guest bedroom has mauve and white striped wallpaper and mauve and butter yellow hydrangea chintz drapes-a large mauve, green, and pink hooked rug, and typical mahogany furniture.

McCutcheon's is showing five rooms in which the wall colors are taken from painted interior woodwork and walls of the restored buildings at Williamsburg, Virginia. These colors are significant from two points of view. First because they express the decorative mood of the moment and are excellent examples of the types of colors which are in high fashion this season. Second because the colors have an historical significance and carry with them associations with the amazing restoration of Colonial Williamsburg.

A representative of McCutcheon's visited Williamsburg and was strongly impressed with the fact that the colors which had been restored in the interiors presented an amazing library of interior decorative colors, a number of which have a special significance today. As a whole the colors used in Williamsburg are much stronger, more vital colors than those used at the present time. Many of them are much too harsh for our use where so much color subtlety is desired. But interestingly enough a number of the colors with their inherent vitality express the docorative feeling of 1935 in a very interesting manner.

McCutcheon's sent representa-

that combines smart beauty with rich

craftsmanship

You will be enchanted with Imperial's new Modern tables! Smart and sophisticated to the nth degree - gloriously fulfilling the needs of contemporary living - these fine creations reflect the very essence of masterly Modern design. Not only do they offer the exceptional utility inseparable from the best Modern, they combine smart beauty with rich craftsmanship, as well - and add infinitely to the joy and comfort

of gracious living.

IN TRADITIONAL as well as in Modern tables, Imperial artistry is unrivalled, and always at your command through leading furniture and department stores. No effort is spared by Imperial craftsmen to build worthily for the proudest homes in America. Insist always upon seeing the significant Green Shield trademark on the tables you buy. It is your unfailing assurance of lasting quality and satisfaction.

Pouring Valuable Nourishment Down the Sink .

Yes, actually throwing away nourishing juices and valuable mineral salts. You see, these precious food elements have dis-solved out of the cauliflower during cooking. And now, when the kettle is drained, down the sink they go! What a pity. For not only are valuable health-building juices lost, but the true flavor of the cauliflower as well.

There is really no excuse for such a waste. There's a way to save the valuable juices. It's by the Patapar method of cooking. Women all over the country are catching on to this new idea.

See what happens when you use Patapar

When you cook cauliflower or other vegetables in Patapar, the
juices are sealed in! There
is no waste of important
mineral salts. They stay
inside the Patapar with
the cauliflower and make
it richer, more nourishing, and extremely delicious.

So, if you want your vegetables to keep their
real true flavor and full nourishment, cook ther
in Patapar. You'll notice the difference the first
time you try it.

You can buy Patapar at most quality stores in
the 10c or 25c package (Recipes and instructions
in each package). Or, if your dealer is sold out,
use the coupon below.

tives to Williamsburg and a careful selection of the significant colors was made: Arrangements were made to secure the cooperation of Colonial Williamsburg, Inc., in reproducing these colors and they have been authenticated by Mrs. Susan Higginson Nash, the color expert in charge of the color research in Williamsburg, as being the identical colors as used in restored Colonial Williamsburg.

The colors which are used for interior painting in the restored buildings are based mainly on existing precedents found in contemporary buildings of the Tidewater Colonial Virginia. In some cases precedents have been found by removing superimposed coats until the original color has been disclosed; in other cases the original colors have survived intact. The colors most frequently used were green, blue, or blue green in a wide range of tones. A thorough search was made for old newspaper advertisements, paint records in import manifests and invoices of the eighteenth century as well as for the actual colors as found on the walls of contemporary buildings. The inventories of the houses were carefully checked to see if these colors were mentioned. (It was the custom in those days to make a careful inventory of the houses and these inventories have been very helpful to the research workers in establishing the contents of the rooms in many details.) Then Mrs. Nash spent many months traveling all over Tidewater Virginia scraping walls, getting down to the original paint and checking the color found there against the colors mentioned in records. After this she made a careful study of the pigments that were known to exist and the manner of mixing paint in those days and established beyond a shadow of a doubt that the colors reproduced in Williamsburg today are the colors of the period.

McCutcheon's felt the need of developing special fabrics to harmonize with the colors used on the walls of the rooms. A careful search through document fabrics and drawings of fabrics of the 18th century was made, designs selected, and color schemes carefully developed. Then a fine cloth was selected and the best printers used to secure the desired effects.

The fabrics used in the houses at Williamsburg were necessarily imported from England and France because there were not adequate looms in this country, nor were there skilled weavers or printers. They were for the most part either glazed or unglazed chintz, though in a few cases damasks were used. In reproducing as nearly as possible the Williamsburg feeling Mc-Cutcheon's went back to original sources for their fabrics, with one exception.

In order to suggest the proper

Men fall for it every time - Old-fashioned

molasses bread

Only real plantation molasses gives the taste they praise

Many a wife has won high praise with the simplest dishes, perfectly prepared. For instance, plump pears, deliciously stewed, served with luscious moist gingerbread.

But remember-when your gingerbread makes its bid for masculine favor—it's only real plantation molasses that gives that rich oldfashioned taste they praise.

Ginger and spices alone won't do it. To get that fine full-bodied flavor, make your next batch with Brer Rabbit Molasses. It's made from carefully selected grades of freshly crushed Louisiana sugar cane.

Gingerbread makes a satisfying dessert. You'll be proud of yours if you follow the wonderful old recipe below!

. And did you ever try molasses in Baked Beans? Just add three tablespoons to the can before heating. That's another treat that will bring you praises.

Great-Grandmother's Gingerbread Recipe (Over 100 years old)

Cream together ½ cup of butter and lard mixed, ½ cup sugar. Add one well-beaten egg, 1 cup Brer Rabbit Molasses. Sift together ½; cups flour, 1½ tsps. soda, 1 tsp. cinnamon, 1 tsp. ginger, ½ tsp. cloves, ½ tsp. salt. Combine with first mixture, adding 1 cup hot water. Beatuntil smooth. Bake in greased shallow pan 40 to 45 min utes in moderate oven utes in moderate oven (350° F.). Makes 15 KABBIT Real Plantation Molasses

A UNIQUE RECIPE SERVICE

When, a little more than a year ago, the Editor of The American Home proposed printing the recipes so that they could be easily filed, she also devised the Menu Maker—an all-steel cabinet in four colors as illustrated which we offer our readers, complete with a card index and a supply of Cellophane envelopes.

The Menu Maker is large enough to hold all your recipes. The Cellophane envelopes permit you to file your recipes with the picture side out and the recipe itself visible on the reverse side, and fit the American Home recipes without extra cutting, allowing of leeway

in case you want to replace the recipe. The envelopes are, of course, washable. The index consists of the classification of all foods as well as for each day of the week, and the use of the American Home Menu Maker permits you to plan your meals for a week in advance with all recipes filed for quick reference.

In short, the Menu Maker is a sensible, workable recipe file that only a practical housewife could have designed from actual experience, and in offering it to our readers we believe it to be the first practical recipe idea ever offered by a magazine.

40,000 SATISFIED USERS

40,000 American Home readers have adopted the American Home Menu Maker and are using it to file the recipes which appear monthly in The American Home. We offer you the Menu Maker in your choice

78 Recipes and Envelopes

For new readers and those who have not been filing the American Home recipes, the Editor recently went through all recipes published in The American Home and selected those she thought worthy of a permanent place in our Menu Maker. In addition she has supplied us with personal favorites from many years' culling and sampling.

We now offer the Editor's Favorite Recipes—78 of them—and Cellophane envelopes to hold them, postpaid for only 50¢. If you have the Menu Maker and want these Favorite Recipes, send only 50¢ in stamps, and if you are ordering the Menu Maker, add 50¢ and get the complete service.

of colors, the complete index, and 50 Cellophane envelopes for only \$1.00. If you live west of the Mississippi, please add 25c to cover additional postage.

position. One of the abins on my place up on h Shore of Superior, for is perched on boulders on of a cliff, with the porch ing a gorge. It looks as if blow away in a high wind stop to consider the ten masonry in the fireplace e it actually a part of the

we started to lay the logs nother wrestle with Ole's how it had always been idn't know a thing about g and he didn't know a out cabinet fitting. I oblaying up the logs with etween wide enough to cat through, and he was out of my mind bepreferred the randome-cut ends to a nice job of traight down making all ners "smoot' and even." we ran out of vocabulary while and the upshot of it we compromised and dea corner lock and lengthping that I have used in t log cabins with success

when it came to considerrs and windows, the old nd I did not see eve to eve. way was the best and o city fallers" didn't know he good old way was to e cabin up like a box and, you put the roof on and urself either inside or out, building over and decide ou wanted the door-also here you needed windows. watched the process. Your wanders around with a logger's chalk in his hand ises in his up and down ic voice:

dere shud be a dure hyar" all, I tank I vant a vindoo and he marks out the obeach with his chalk. Then s his saw and cuts it out. I admit that it gave an origect and that it has been in ong enough not to need any Iler's" fool notions. I knew, custom of making the door ugh so that you had to duck in. There were plenty of s' shacks of logs up along indary with doors three and eet high and no windows. I little diplomacy-though my longest and strongest nd suggested that we ought serve timber. Moreover, I out that I had been foreenough to indicate on my where I felt that doors and vs would do most good. Ole would be sorry if I put in se openings and, as I write t thirty-two degrees below see that there was common n his argument.

anyhow we used my method alling the openings. We used orter logs but let them barge nto the opening where the windows and doors were to be. Then we nailed on a board for a straight edge at the exact line of the opening and sawed it down ready for the frame.

Another thing that I learned from Ole about log cabins was the way to build the gable end. I had wondered often what to do about it after you got up over the plate logs. Ole went ahead with the gable and laid up the logs just as we had been doing-spiking them together, with braces to hold them in place, until we could get the purlins and ridge of the roof in. Then he drew a line down with his chalk to mark the roof angle from peak to plate log and with the adze hewed to this line. Then the ridge-our straightest and strongest and best looking stick-and the purlins parallel to it, were set into this gable end; hollowed into it, in fact. Ole felt I was overlooking a bet in not having "tew-buh-fors" instead of small trees about a third of the size of the wall logs, for my rafters, when I could just as easily have ordered them along with the floor and roof lumber.

I had to admit to Ole that I had never built a fireplace before, though I had designed plenty of them well enough for a clever mason to carry out in further detail. But building one was different especially building one in the woods where conditions are more difficult than those in town. It suited Ole all right because he said all fireplaces smoked, but I knew better. I had put the damper too low down, too near the top of the opening, so that the smoke had no chance to curl over against the front wall after it had hit the angle of the drawn-in rear wall. Instead, it puffed right out into the room on a windy day. I corrected it with a copper hood that a lot of people admire. I don't because I know that it is there to cover up a mistake. But I've never built a fireplace since that smoked. Then another bad break was that I made the flue too small. Under city conditions it might have been large enough but it is a lot better to have your flue too large than too small in a cabin, I've discovered. You can shut it down with the damper -but if it is too small or your chimney is not high enough, it's your hard luck.

Ole showed me several tricks about tying the logs into the fireplace. That is, letting them extend right into the masonry, building the fireplace as the logs go up. Then I brought to life for him an old country idea that he hadn't seen tried over here-building the opening of the fireplace up from the floor a foot or more, throwing the heat further out into the room. Besides, it makes it a lot easier to grill our steaks without breaking

The way to hollow the rafters into the plate logs was one Ole put

Now they're installing a tank of non-rust EVERDUR

In response to wide-spread de-mand for quality equipment, lead-ing manufacturers of range boilers and of automatic water heaters are using Everdur Metalfor non-rust tanks.

12 WAYS TO SAVE MONEY

This interesting free booklet, "Copper, Brass and Bronze in the Home gives you 12 suggestions for building or remodeling which will save money and add years of life to your home. Write for it today.

EVERYBODY wants clean hot water and plenty of it. Nobody wants rusty hot water. In only one way can you have the satisfaction of hot water without the annoyance and expense of rust . . . and that is with a tank made of metal that

Everdur...meaning "ever durable"...is such a metal! Tanks made of this rustless copper-alloy are permanent assurance against all rust troubles. For Everdur cannot rust. Yet it has the strength and toughness of steel!

Each year more and more thrifty homeowners are selecting tanks of this durable metal. Your local dealer or plumbing contractor can supply you with an Everdur storage tank (range boiler), or an automatic heater with a durable, money saving Everdur tank inside.

TREET

over on me and I showed him a trick or two about letting the roofing get its stretch in the sun before being cemented and nailed down to the roof boards. He knew nothing about the swinging casement windows that I insisted upon and I didn't know how to go about making a nail-studded plank door that wouldn't warp. So together we made a good "dure and vindow" team.

My insistence on a skylight, however, nearly lost me my settler as a friend. He felt qualms about tying up with a madman. Having a good roof and then leaving a hole in it to "lat dem vindow oop 'n' doon" was nothing short of insane. "Dem rain vould coom vhoopin' in"-for it would be impossible to make the skylight weather-tight. Cabins were meant to be dark and smoky. But he changed his mind after he saw it work, letting in plenty of light but no rain and clearing the air of smoke. Now he thinks it was his idea originally and puts skylights in all of the cabins he helps to build. "It mek dem lifely," he points out.

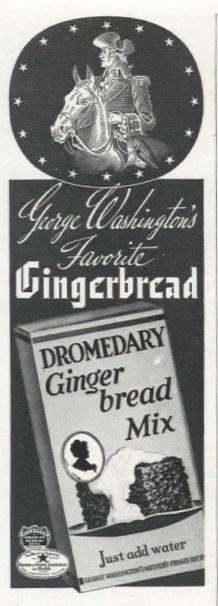

He was a whiz on bunks-after I had persuaded him that they should be made long enough so that your knees wouldn't crowd your chin. In fact, having tried to sleep in other he-male cabins I made up my mind that I would have comfortable beds. So I bought the best springs I could find and had Ole build bunks around them while I figured out fastenings for our removable shutters of boards that would let me zip them on when I left and off when I came back without loss of time. Together we hewed out a table and benches right there on the job and with a couple of stools we were about finished.

Since then I have designed and built a lot of log homes and camps of varying degrees of sophistication. But that first one, in which I still spend as much time as I can sneak away, taught me nearly all the right essentials of a he-male comfortable log cabin.

Lore and legend of spice

[Continued from page 42]

GARLIC is a spice in the strict meaning of the word. The garlic plant has been cultivated for so long that its true origin has never been determined. Legend says that it grew wild on the steppes of Siberia and was there cultivated for the first time by some thoughtless tribe of Nomads. Garlic was abundantly consumed by the early Greeks and Romans and the habit has stayed with their descendants. Modern science has found garlic to contain vitamins B, C, and D but as yet has been unable to find a deodorizing method for it. Used

made from his own mother's private recipe

By special permission of the Washington-Lewis Chapter, Daughters of the American Revolution, Dromedary Gingerbread Mix is based on the 200-year-old private recipe of the Washington family. It is no trouble at all to make. Just add water and bake. We guarantee the most delicious gingerbread you ever tasted—or money back. So try a package. Give your family a treat they will long remember. The Hills Bros. Co., 110 Washington St., New York City, U. S. A.

in small quantities it is und ly an addition to many dis be careful! Like dynamit very potent stuff.

MUSTARD, like pepper ancient spice. It is mention the Bible as an illustrate something quite small white tains tremendous possibility find it used later by Hipporthe compounding of his meaning the name of vanuit, highly esteemed by the Fewho believed it to be an after scorpion bites. As no of seemed to survive a scorpillong enough for the remediapplied, I am unable whether or not it works.

FENNEL is an almost for but very interesting spice. ever used in this country, in it is sometimes served as a as we would serve spinach. tasted this dish my only co may be put in the form of Jim's doleful query-"Is people?" In America, our and rockbound forefather were not without their hu moments, used fennel to reli tedium of an overlong They crunched the hulls their teeth and called it seed." them together. Pass through a fine strainer in order to remove any large particles and keep in a tightly covered container in order to preserve the flavor and perfume. You will find that a pinch added to any dish will give it that extra something sought after by all good

Herbs

Now that a few of the spices have had their stories told let's say a few things about the herb family in which many of the spices are oftentimes included. Almost all the herbs have interesting legends connected with them and are dedicated for some unknown reason to the planets or gods.

SAGE, one of the commonest herbs, has always had a great reputation as a medicine and its name came originally from the Latinsalvo, to save or heal. It is the plant governed by Mars.

MAJORAM is a native of Greece and its name derives from the old Greek word origanum-"joy of the mountains!" It is pleasantly aromatic and is closely related to the mint family. Old books show it to have been used for a wide variety of things, including liniment, toothache, nervousness, and baldness.

PARSLEY is governed by Venus. Now among the most common of herbs, it was once used in wreaths to crown the victors of the Nimean games. Parsley was connected with witchcraft throughout the ages and was frequently found strewn on newly made graves to quiet uneasy souls. Not a very pleasant thought-is it?

SAVORY belongs to the satyrs. It was introduced into Britain by the Romans and was long used as a cure for colic

THYME was used by the Romans as an incense and is a member of the mint family. Old folk tales say that thyme was used to make the bed in the stable at Bethlehem and because of this it is blessed and has many magic prop-

CARAWAY is an eastern herb, its name coming from the Arabic, karawayie. Try mixing a bit of sugar with powdered caraway and sprinkling it on buttered bread. As an accompaniment to gorgonzola cheese it has no equal.

ANISE was used by the ancients to promote appetite. Suspended above the bed it was believed to ward off bad dreams and held in the hand it cured epileptic seizures. Have you ever seen star anise? It is the French badiane and resembles true anise in both odor and

Gorgeous Lemon Pie Filling

EAGLE BRAND LEMON MERINGUE PIE

11/4 cups (1 can) Eagle Brand Sweetened Condensed Milk

1/2 cup lemon juice Crated rind of 1 lemon or 1/4 teaspoon lemon extract

2 eggs 2 tablespoons granulated Baked pie shell (8-inch) Blend together Eagle Brand Sweetened Condensed Milk, lemon juice, grated lemon rind or lemon extract, and egg yolks. (It thickens just as though you were cooking it, to a glorious creamy smoothness!)
Pour into baked pie shell or Unbaked Crumb Crust (See FREE cook book.) Cover with meringue made by bearing egg whites until stiff and adding sugar. Bake until brown in a moderate oven (350° F.). Chill.

· Here's a lemon filling that's always perfect! Never runny. Never too thick. Try it, and you'll never make lemon pie the old way again! • But remember — Evaporated Milk won't — can't — succeed in this recipe. You must use Sweetened Condensed Milk. Just remember the name Eagle Brand.

flavor. This spice is in the form of a five-pointed star about ½ to 1 inch in diameter and because of its unusual shape could be used very effectively in food decoration.

BAY LEAF is the aristocrat of herbs. Under the name of laurel, bay leaves were used to crown the victorious leaders of Rome. Now descended from their high estate, the housewife uses them to flavor soup.

You should find it interesting to experiment with your favorite dishes by adding various spices to them and seeing what happens but until you get around to it why not try a few of my spice favorites?

Settlers' cabin

[Continued from page 27]

considerations of water supply, drainage, and exposures to sunshine and winds.

In the same way, our second classification, which we termed historical, gave us many of the reasons for the fascination of the surrounding country. We had long been familiar with the charm of this partially tamed region, thinking it ideal for camp life. Now we suddenly realized the implications which it conveyed of frontier existence. The rugged mountains, the thick woods verging into quiet intervales, the widely separated farms, all suggested pioneer life. There has actually been little change since the section was first settled. The houses, largely untouched by modern improvements, are often occupied by descendants of the original builders, people whose ingrained passion for hunting, fishing, and out-of-doors activity has come down to them from the vital necessities of every-day living one hundred and fifty years ago. Even our island, never before inhabited, suggested with its great pines and tangled undergrowth, the forest primeval. Thus we began to see that our cabin must take on something of the rugged simplicity, something of the flavor of earlier

This thought promptly brought forth the suggestion of a log cabin, a suggestion even more promptly voted down, for it was our firm determination to have a cabin whose subtle distinction would grow out of the fact that it was different from the many we had seen and read about. This fixed resolution, now that we had estimated the realities of our site, forced us to a discussion of the purposes of the life we proposed to lead in this dwelling about to be. It was easy enough to state that we desired neither logs, stone fireplaces, electric motors, nor flower boxes but our reasons therefore took some time to define. It gradually became clear, however, that

"You'll Appreciate T/N's NON-OVERFLOW CONTROL, TOO"

TED PATENT PENDING

non-overflow

control removes the threat of messiness and possible water damage to floors, ceilings and furnishings. But this is only one of the features. The T/N is quiet and stands independent of the wall. With the tank on the same level as the seat, a wide variety of bathroom layouts is possible. You can place the T/N under a window, a stairway, even in a corner. Perfectly sanitary. T/N's design safeguards against any possible contamination of your water supply. Available in many colors. And though the T/N is the favorite in expensive homes, it is priced for even the most modest of home budgets.

T/N ONE-PIECE WATER CLOSET

We have prepared detailed information, with illustrations, to show you many advantages of the T/N one-piece water closet in ERMODELING and NEW BUILDING. It's yours for the asking.

ERT STUDIOS Des Moines, Iowa

RNIZE your clothes closets with K-Veni-ultra-modern fixtures that keep wearing shapely and neat. K-Veniences make losets roomy, prevent clothes from wrin-tnexpensive, easily installed. Sold by lead-artment and hardware stores.

think, engendered from the moment one motors down the main road and comes to an opening in an old stone wall. This opening is in no sense a gateway but merely the entrance to what seems to be an ancient wood road down which one drives over a carpet of pine needles to a clearing an eighth of a mile away. Here the visitor leaves his motor and proceeds along a short forest trail to a narrow foot bridge, weathered a silver gray. Crossing this bridge and thus gaining access to the island, one finds another trail threading its way between pines and birches. This trail wanders the length of the island until, by following it, one comes to the cabin itself, snuggling low beneath the great trees; quiet and peaceful in sunshine and shadow with the waters of the lake sparkling through countless vistas

in the low undergrowth. Then, as one's attention becomes more completely focussed on the cabin, there arises the feeling that it has stood there a long, long time. Its low, rugged lines hint of the rambling pioneer dwelling. Its coloring, following that of Nature, is soft and blends in completely with the surroundings. The walls and trim are stained bark gray, while the roof and shutters are painted the subdued red brown of the pine

needles which have blown to the ground near by. The deep grooves between each board of the novelty siding somehow suggest old clapboards. The galvanized iron double drain roofing, so necessary a protection against sparks and the weight of winter snows, seems very natural. Even the concrete chim-

ney, properly roughed with wet bricks before it was completely hard, reminds one of the plaster covered chimneys still to be seen in some very old houses. In fact, the careful selection and treatment of these modern materials seems

almost to have enhanced the sense of timeless growth in this weathered cabin in the woods.

Similarly, the interior of the cabin gives forth that sense of plain, unhurried living so associated with the habitations of our forebears. The big living room with its seventeenth century fireplace is reminiscent of the large kitchens of an earlier day, rooms in which the business of living largely took place. The V-groove sheathing, laid vertically on the walls in random widths, and the bare pine floors also contribute to this influence, as do the second-hand farmhouse furnishings, the hinges and andirons made by the local blacksmith, the old gun and the aged map on the wall. Even a casual glance reveals many small ways by which this illusion has been increased. Wherever possible hand whittled wooden buttons and pegs are used to hold doors and windows in place, the few modern pieces of furniture have been

"Iron Fireman... most practical home heating method ever developed"

... says G. L. Tubbs, Pontiac, Mich.

• Mr. Tubbs will tell you that you can have the pleasure of automatic home heat at re-markably low cost, simply by installing an Iron Fireman Automatic Coal The G. L. Tubbs residence. ent furnace or boiler.

Burner in your pres- Iron Fireman installed by Rockwell Coal Co., Pontiac.

Iron Fireman replaced an oil burner at the Tubbs home. Annual fuel cost dropped from \$310 to \$120. Home temperatures were more uniform. The cost of heating hot water was cut two-thirds.

"I think Iron Fireman is without doubt the most practical method of heating ever developed," says Mr. Tubbs. "If more people knew just what an Iron Fireman would do for them you wouldn't be able to install them fast enough. In addition to my home installation, I have an Iron Fireman in a duplex and in my business building, and I am an enthusiastic booster.

An Iron Fireman for you

Why not? It will give you luxurious automatic coal heat and save money at the same time. Burns the smaller, cheaper sizes of coal. Maintains steady, even heat, regardless of weather. Clean and quiet in operation. Built to give years of satisfactory service. Quickly installed in a warm air furnace, hot water, steam, or vapor-vacuum boiler. Easy to pay for on a convenient monthly plan (or an F.H.A. loan).

Write for literature and free fuel survey. Iron Fireman Mfg. Co., Portland, Oregon; Cleveland; Toronto.

Dealers everywhere.

Iron Fireman Automatic Coal Burners are made for residential heating plants and for commercial boilers up to 300 b. h. p.

stained antique maple, the blue willow ware on the kitchen shelf is an inexpensive reproduction of an old pattern. So, as one goes from room to room, noting the sparsity of furnishings, the gray stained walls and ceilings, the bright squash colored kitchen, the old-fashioned blue of the modern bathroom, there is little that is false to the notion of what an old settler might have done.

But, to borrow a phrase from our country neighbors, a "noticin' person" will see a number of features of plan and design which achieve those purposes of economy and ease of living which we had in mind. For instance, despite its sprawling appearance, the plan is very compact. The living room, kitchen, and bath are built around the chimney, thus saving in construction and plumbing costs. In the same way, instead of spending money on porches, the living room and two of the bedrooms are so designed that virtually one wall of each room is filled with large sliding windows hung on weights and dropping into slots especially built for them. Consequently each room is in effect a porch in fair weather. Again, the kitchen is very accessible to the living room but quite separate from the bedrooms, the latter having been placed in what amounts to two units. The guest bedroom is in a small wing at one end of the main portion of the house, while the family bedrooms with bath are in another wing at the opposite end of the house.

Also from the standpoint of care the house is an easy one to manage. There are no motors to get out of order, illumination being provided by lamps and candles, while water is pumped by hand from the well to a tank in the attic, a job surprisingly easy. Then, too, there are no rugs to pick up dirt and the whole place can be brushed out in ten or twelve minutes. There are no pictures or bric-a-brac to care for. The entrance doorways are sufficiently wide to allow passageway for our boat and canoes which are stored in the living room during the winter. There is a metallined box for winter storage of blankets and linen and there is plenty of closet space for orderly daily living. In such ways, by discarding the superfluous comforts and retaining only the essential ones, we have greatly reduced the burden of household chores.

Of course, this comfortable life in a harmonious environment was not accomplished without exercising the negative as well as the positive virtues. We had to learn to say no. There were many times during those busy months of planning and building when it was necessary to prevent unsuitable interpretations of the controlling motif. Indeed, if Settlers' Cabin is now free from many of the errors of impulse and emotion which

IN HANDY SPOUT CANS AND BOTTLES

so often mar a vacation ret is because we took the pa develop a definite, clear-cut standing of what we inten do. We did not add this d feature to the cabin becar thought it charming, amus quaint of itself but because i into our well-reasoned Such exact knowledge of th tations of our plan made it p for us to reject politely kindly but inappropriate tions. Since we knew why not placing either a Japan house or a Swiss chalet aga unreceptive New Hampshire ground, it became easier to offers of Italian pottery, a glass window, and other inco ties which were very gene urged upon us. By the same r ing, our hasty enthusiasm old and the rustic was pr checked and we were spar disastrous results of the mag stinct latent in us all. By ste herence to our preordained s we avoided the inclusion mill stones, plush sofas, old doors or any other bits of age lying loose in the fields we were saved from perpet another of those too co effronteries to a gracious lan for which there is no other than the Scavenger's Pride.

And now, in conclusion, it be explained that when we : to build the cabin we had tively modest sum which we afford to spend and that w the cabin within that figure. our theory that it cost no m build something charming architecturally satisfactory did to build a sort of hit of botch job. We found this true, for we know that our cost no more than others neighborhood of similar size type. It is not a question of more expensive materials of elaborate plans but of sizi the situation in advance, of standing the requirements o taste and good usage and pr ing on a basic motif.

keys. Often they have outside galleries upstairs, and sometimes horns of reindeer or skulls of bears are hanging above the front door. where the date of the building is also to be seen. The most peculiar and picturesque stabburs are to be found in Gudbrandsdal, Hallingdal, and Setesdal.

At the bottom of the house the farmer has all sorts of food supplies, and upstairs is a sort of treasury, with beautifully carved and painted chests full of all sorts of marriage outfits, the bridal cornet of silver and other silver works, the national dresses, etc. On the walls and from the ceiling hang lots of beautiful home-made textile fabrics for beds, walls, and floors, and on tables are lying nicely decorated household furniture for festival occasions. In one of the rooms upstairs there used to be a bed for guests in summertime. And here the guest is supposed to admire the prosperity of the house. When building country houses for townspeople, our modern architects very often put up such a stabbur in order to improve the picturesque effect of the summer home

In later years the state and private people have tried to gather and preserve the old things and buildings still left, and a great many of them are now brought together in big areas in different parts of the country. The biggest and most noted of these museums are The National Museum of Bygdog, in Oslo, and The Collections of Mr. Sandvig at Lillehammer. Every year thousands of tourists with great interest are studying these reproductions of old Norwegian peasant's farms, and a great many architects are finding ideas for their camps here.

A cabin in the west [Continued from page 26]

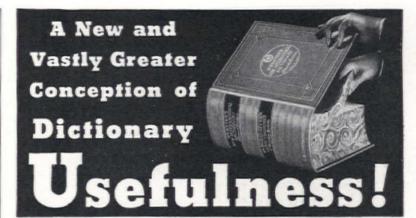

Water was brought from a suburban main one half mile away, and a

septic tank takes care of the waste. In furnishing the house, an effort

was made to select simple material in keeping with the cabin and its surroundings. For that reason as well as for reasons of economy, all of the standing furniture, except some hickory split bottom chairs, are of native maple made locally on "cottage furniture" lines. In the living room rag rugs, made up in a medley of colors, are also a local product. The hangings are of heavy cotton plaid homespun, with yellows, greens, and reds predominating. Lined and hung on wrought iron curtain rods, they may be drawn across the windows to serve the purpose of shades. The glass curtains here and throughout the house are of theatrical gauze, in

natural color, to harmonize with

the paneling.

THAT COLD BE GONE!

Oust it Promptly with This Fourfold Treatment!

BEWARE of a cold—even a slight cold
—and any cold! A cold can quickly
take a serious turn.

What you want to do is treat it promptly and thoroughly. Don't be satisfied with mere palliatives. A cold, being an internal infection, calls for internal treatment. That's common sense. A cold, moreover, calls for a cold treatment and not for a cure-all.

Grove's Laxative Bromo Quinine is what you want for a cold. First of all, it is expressly a cold tablet and not a preparation good for half a dozen other things as well. Secondly, it is internal medication and does four important things.

Fourfold Effect

First, it opens the bowels. Second, it checks the infection in the system. Third, it relieves the headache and fever. Fourth, it tones the system and helps fortify against further attack.

The two downstairs bedrooms, one a yellow room and the other a green, get their coloring from the small pattern calico used in the draw curtains at the windows and in the ruffled and corded bedspreads. Matching solid color is used for the linings of the curtains and bedspreads and in the cording of the latter. Harmonizing lamps and neutral tone rag rugs complete the furnishings.

Of course there are many ways of putting a log house together. In building this cabin, native fir logs, found on the place, were laid on a rubble stone foundation. The ends are notched and the lower side of each log is channeled and grooved so as to fit snugly and smoothly on the log beneath. Chinking is not used and tightness is obtained by good joiner work plus calking between the logs with oakum. Incidentally the oakum serves the added purpose of discouraging the entry of the bugs of all kinds that inhabit the woods.

This type of construction proved to be slow and hence costly. Consequently when the log garage was built near the dwelling, a simpler plan was followed. Here the fir logs were notched and fitted at the ends so as to rest as close together as possible. Before being placed in position a deep score was cut in the top and bottom of each log to control checking. When the walls were up the chinking was applied, a mixture of hard wall plaster, sand, and cement. It sets to a rocklike hardness and gives firmness and security to the building. In both buildings, long iron drift pins bind each adjoining log together. The finished garage with the sharp lines of white chinking between the logs gives so pleasing an effect, equally as satisfactory as that of the house, that the type of construction used in the garage is preferred in view of its lower cost.

The roofs are covered with cedar shakes thirty inches long and five to eight inches in width. These hand-made shingles are nailed to two by fours, which rest on a composition roofing paper laid on shiplap, which in turn is nailed to the log rafters. The eaves are very wide, to shelter the walls from all but hard, driving rains.

It will be noted that all logs used have been peeled. This was done for effect and equally as much as a precaution against borers and other small agents of destruction that nest under old bark. As a further safeguard against damage from this source, a mixture of paradiclora benzine and kerosene was applied with a spray gun. Two coats of boiled linseed oil and one coat of spar varnish were then given as a protection.

With the cabin thus built and equipted, landscaping efforts have been directed towards preserving the natural beauty of the setting in the woods.

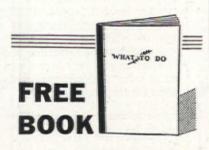

If you have a home workshop, you'll enjoy making the articles for which these plans are the guide. If you haven't a shop, this book of plans, giving full directions, measurements, and tools required, offers you a fine opportunity to start an interesting pastime. Clear, concise, easy to follow.

about funeral costs and practices

Too many people face the arranging of a funeral with no idea of what to do. We have published "What To Do" as a guide to follow in time of need.

Already more than 700,000 families have asked for and received this information. It answers authoritatively all the questions you are likely to ask at time of bereavement—how to choose a funeral director... what a funeral costs and why ...what sort of casket is best, and so forth.

You should have a copy of this booklet to place with your other important papers. Doctors, lawyers, clergymen say "It is the best book ever published on this subject." Send for one or more copies today. No obligation.

Roses in the Sou ED. FIELD

POPULAR fallacies condition the difficulties and experience countered in growing Rose robbed the Southland of glory that should be hers to more extensive cultivation flower.

In those parts of the South zero weather is unknown, it ural for a Rose to grow and its beauty for all those wh stop and admire.

One of the greatest barr rose culture in Dixie has from the fact that few a books are written by South for the South. The most available flower guides tend to be too nical and too weighty for the son who merely wants to roses for cutting, and in mos cultural advice is based on tions not found in the true and treats with difficulties a pense rarely encountered in sections that enjoy ideal climate.

The true state of affairs South is that, given a good several varieties of roses will ish and produce truly go blooms despite semi-neglecignorance on the finer poinculture.

For fifty cents and a little anybody in the South can roses from April until Octol Radiance bush and a dime's of stable manure will turtrick. A sturdy Radiance planted with common sense hold its own with weeds and and survive long arid spells out even a drink of water burst indomitably into his when the weather man final lents and sends a good show

The tedious processes of s ing, dusting, and pruning ar absolutely vital to producti blooms by a Radiant bus course, some of the blossom lost to black spot and insect even hit or miss care will assi least a vase full of blossor regular intervals throughou growing season. It must be a stood, however, that the p who elects to grow roses wi reasonable care must expect new the investment every years or so, for the arduous of existence without help qu drains the vitality of the bush

The first step in the produ of roses is the choice of the of planting. Any piece of gr that is well drained can be it to produce roses, for avoidan "wet feet" is the chief difficul be encountered. Roses prefer soil that retains moisture wit becoming soggy. Where the is sandy, correct conditions be obtained by digging a hole feet across and three deep, fit with two parts clay and one

planning for your garden this com-season do not overlook the greatest I dahlias, TOWER'S EMPIRE, and new introductions. Our Catalog free he asking, ready the end of January. ARRELLA DAHLIA GARDENS Ely Avenue Bronx, New Yor

well-rotted stable manure. In the event of heavy clay soil, the procedure should be reversed with a lighter soil placed over six inches of pea-size cinders to provide drainage. More elaborate beds are necessary for low, soggy areas. Here it is necessary to remove the soil to some depth, laying a bed of cinders for drainage with an outlet vent if possible. The soil to be placed over the cinders does not necessarily have to be rich, it can be made so by the liberal use of stable manure.

The beginner had best consult the nearest neighbor who had enjoyed success with roses before planting, for conditions are never alike at any two points far removed. The confirmed rose-grower is always willing to offer advice and sometimes is eager to furnish a start for the beginner.

Actual planting is very simple. The hole should be half filled with the soil mixture to be used and water poured in. When the dirt settles the rose should be adjusted in the hole, with the roots spread, so that the bud is just below the level of the ground. Dirt is then placed about the roots and settled with water until firmly fixed. Pressure is necessary to assure elimination of air pockets. Dry earth should be dusted over the wet soil to prevent cracking.

Roses may be planted at almost any time in the South, but the period between November first and April first offers the best results. The plants need no protection from Jack Frost in the true South if drainage is sufficient to keep water from standing around the roots, and the ground is always tillable except after heavy rainfall. Transplanting in mid-summer is possible during a lull between periods of excessive heat if shade and liberal moisture are provided.

Choice of varieties offers no difficulty. For the beginner who wants rose flowers without too much trouble, the Radiances and the so-called locally White American Beauty offer foolproof plants that will provide red pink, shell pink, and white blooms in profusion. [The real name of the fine white rose is Frau Karl Druschki, but down South only professional florists call it that way.] These roses bloom all summer long in the South, although the White American Beauty is known to most rosarians as a Hybrid Perpetual that blooms profusely in the spring and again lightly in the fall. In the South this rose blooms profusely on short stems in the spring, continues all summer, and then after a brief pause, bursts into its true glory in the fall, sometimes on stems that reach six feet in length. Kaiserin Augusta Viktoria, white; Sunburst and Lady Hillingdon, yellow; Etoile de Holland and E. G. Hill, red; and Luxembourg,

Garden facts and fancies

LIMATE and weather are two uncertain factors that are likely to appease or worry the gardener without apparent rhyme or reason. Two or three winters ago the Northern Atlantic region was devastated by unprecedented cold and the toll taken of ornamental plants in many gardens, almost all in fact, was beyond the experience and outside the memory of the very oldest inhabitant. Plants that had gained a record of hardiness for well over a hundred years gave lie to the record and gave the gardener plenty to talk about.

This current season, up to the time of writing in December, the East has been marked by extraordinary mildness of weather and tender plants kept blooming and growing almost up to Thanksgiving Day. Perhaps another record in the other extreme! Simultaneously, the Pacific Coast was experiencing unprecedented cold and in that region of "the perfect climate for the gardener" startling things happened: Chrysanthemums this fall were killed before they could open a bloom; grapes were frozen on the vines, and even the apples on the trees suffered alike.

Fall and early winter is a variable quantity with the gardener everywhere. These very vagaries of climate are, after all, the great allure and incentive of interest for the observing gardener who is ever the living embodiment of constant aspiring hope. The thing that happened last year is in fact not likely to happen again next year, and maybe not again in your lifetime; which, after all, is really encouraging and East or West, North or South, the gardener will continue to set out the plants of his choice and sow the seeds of his fancy, bidding defiance to dramatic challenges of weather and climate with the very well founded belief that ninety-nine per cent of his chances will win.

Pruning grapes for fruit

Pruning is just a means to an end. With a grapevine the end is getting grapes; therefore, the pruning must be done accordingly with that objective, unless you want the shade only. Pruning can be done any time between the fall of the leaf and the swelling of the buds in spring, provided always, that it isn't actually freezing at the time.

Remember these points—the grapes are borne on the canes that were grown the previous year. 'The fruit is borne near the base of the shoots of the current season and the shoots are borne on the wood of

the previous year's growth." That is how Professor Gladwin of the New York State Experiment Station expresses it.

A thrifty Concord grapevine should yield about fifteen pounds of grapes. Prune so as to have a sufficient number of branches to carry that yield. Each shoot will bear two or three bunches, weighing from a quarter to a half pound; ergo, fifteen to thirty shoots of last year's growth must be left and everything else pruned away. It is really quite simple.

All said and done, the grape is one of the best standbys for the home garden. It gives generous shade over trellises, it gives abundant fruit, and will grow almost anywhere. Remember also, that new grapes can be planted in the spring; but, if you do plant, get some of the newer, better varieties.

Air conditioning for house plants

The solution to the ailing house plant problem lies in the five and ten cent store in the shape of a little rubber ball with a spray nozzle on it. By spraying their tops every day-though not when the sun is on them or you burn the leaves-you create the much loved moist atmosphere of grandmother's kitchen in which all plants used to do so well!

This may not sound practical where floors and window sills will be ruined by water, and it is just one large nuisance to carry them to the bathroom for their shower. But we have the answer to everything! Get some flat tin baking dishes, paint them to match your woodwork and fill them with pebbles. Keep water in the dishes, and set the pots on the pebbles. Then you may spray their tops and all will be well. Besides this asset a perpetual evaporation will take place around the plants day and night which will create a great happiness among them! This system of moisture will prove quite the cure all to all ailing plants, and will be a positive inspiration to healthy ones. No telling what they will do in gratitude. And incidentally the family will benefit by the added moisture in the air too!

A little indoor forcing

Next warm day when you feel athletic go out into the garden with a shovel or an edger and see if you can pry up a little clump of Lilyof-the-Valley roots. Also if you can locate your Bleedingheart plant cut off a piece of that too. Pot these and keep them in a sunny window. Soon you'll have the scent

Why Some Lawns Breed Worms, Grubs

Often home gardeners are puzzled and annoyed by having their lawns infested with cut worms, grubs, termites and other pests—while certain lawns, perhaps right next door, are free.

In most cases the answer lies in the fertilizer they use. Such organic fertilizers as bone meal, manures and sewage products naturally foster vermin. That's one reason why so many thousands of home gardeners prefer VIGORO. An inorganic plant food, it does not encourage grubs and worms. Nor does it have an offensive odor—and it leaves the lawn a sanitary place for your children to play.

But still more important: Vigoro is a complete plant food. It provides all eleven of the food elements growing things need from the soil, in just-right proportions. (By-product fertilizers supply only two or three.) 4 lbs. of Vigoro per 100 sq. ft. is a square meal

for everything you grow.

HENRY A. DREER

303 Dreer Bldg.

Phila Pa

of the tiny white lilies mingling their charm with the delicate rosy Bleedinghearts.

Hastening the shrub bloom

Apple blossoms on the breakfast table in February? Yes—and not only Apple blossoms! But go out now and cut a few sprays of Forsythia, Wisteria, Pussy Willow, Lilacs, and pears besides. Submerge all these branches in the bath tub despite your husband's protests. After a twenty-four hour soak arrange them in vases in sunny corners about the house. Spray the tops or put them under a gentle bathroom shower every few days.

Soon long panicles of delicately scented Wisteria will drip from boughs previously gray and dull. Apple blossoms will surround the breakfast toast. Your cosy living room will be more cozy because of soft sprays of Pussy Willow about. The scent of Lilacs will invade every room, and you will be held spellbound by a cluster of snow white pear blossoms—white as the snow outside. It is fun—this little pre-view of spring!

A new rose for Portland

Madame Caroline Testout has for many years been identified with Portland, Oregon, as the official flower of the Rose City. It has been a good Rose and planted along the sidewalks of Oregon it earned fame and favor for many years but it is significant, however, that Madame Caroline Testout is no longer considered good enough to continue as the emblem Rose of the city. This fact shows how real Rose progress has been. Times do move and Roses get better and better and as Roses, like other things, get better and better, we must be off with the old and on with the new.

The Rosarians of Portland in coöperation with the Civic authorities are asking for a new Rose that can adequately carry on the tradition already established and there is offered \$1,000 as an award for a new Rose that will fill the requirements. Resistance to mildew and blackspot, and constant ample blooming are the prime requirements; so that it can be planted freely and will have a tendency to grow well even under neglect.

Beating the mealy bug

If your house plants are bothered by horrid tiny white fuzzy bugs that look like bits of cotton caught in the joints of their branches, put one half a teaspoon of nicotine sulphate in a quart of water. (Keep it on a high shelf away from cats and childrenthough it isn't so very deadly when diluted this way.) Spray every day with this solution until the bugs disappear, then continue using fresh water (room temperature) every day and the nicotine sulphate once a week, or sooner if the bugs appear again.

Sowing time indoors

Have you tried Orange Flare Cosmos? It really is the brightest gayest orange you can imagine. A fine healthy plant too. (Be careful not to pull up the young plant before it blooms, for it looks not like Cosmos but like a weed.)

Linger a little over the Zinnia page in your catalogue. There are some grand new varieties. The Picotee Zinnias come in shades of salmon, biscuit, and apricot and are tipped with harmonious contrasting colors-and not a magenta among them! If you want an attractive little ten-inch Zinnia that has alternating yellow and brown petals get Gypsy Girl. Victory (Achievement) also is a beauty. It comes in all the autumn oranges and russets and has quilled petals. The lovely colored Scabiosa flowered Zinnias resemble their namesakes as a row of single petals surround their tufted centers. You can't have too many modern Zinnias! It's time now to sow indoors. The "ruffled" advances in Sweetpeas add a new luciousness to that lovely flower. Best to sow singly in pots indoors and transplant, but otherwise sow in rows in the open.

Naturalistic rock garden and waterfall

[Continued from page 12]

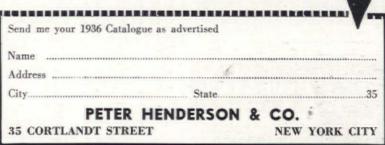

than a truck load of small ones. Except at the sides of the ditch where the water would tend to wash out the banks no attempt was made to make a continuous row of stones. Plenty of space was left for planting and in grouping the stones two or three can often be placed close together and then a good space left without any stones. Stones scattered over the surface at an equidistant spacing do not produce the best effect. All rocks should be firmly imbedded in the soil so that they will not be dislodged if stepped on for weeding or cultivation or washed down by the first heavy storm. The broadest face of the rock should be turned down and no stones turned on edge or stuck on end. Nothing looks more unnatural than a rock garden with a series of rocks imbedded in the ground with the points upward like a miniature Stonehenge. For although in nature one sometimes finds rocks in awkward-looking positions it is the quieter and more common examples of Nature's handiwork which should be emulated. Stones in which the natural bed is kept more or less horizontal will as a rule be more effective.

In planting a rock garden of this type use if possible a few flowering trees and shrubs. Among those which will stand a shaded condition the common white Dogwood is one of the best of the smaller

PETER HENDERSON'S 1936 CATALOGUE

EVERYTHING FOR THE GARDEN is all that the name implies. Its dozens of color plates with hundreds of reproduced photographs make it the most attractive cataloque we have ever issued. In it you will find all of the old favorites together with the best of the new introductions of the year: all of them Henderson's Four-Way Tested Seeds. It offers many special collections of vegetable seeds arranged so as to give a continuous supply of fresh crisp vegetables throughout the summer and collections of flower seeds especially arranged for harmony of color and continuity of bloom. Illustrated in colors on the back cover is the much discussed "American Woman Collection"; the choice of a thousand garden loving women of the best twelve annuals of all time for a small garden. It is the complete garden book and to hundreds of thousands everywhere it is the first sign of coming spring-the key to the garden of your winter dreams.

The Most Beautiful SEED CATALOG

Vaughan's Gardening Illustrated

Jaughan's Gardening Illustrates s world-famed as the outstanding lome garden catalog. Illustrates 240 Hirerott flowers in true color and dists 2164 varieties of annuals, per-minials, roses, water Illies and gladi-color to the color of the c

VAUGHAN'S SEED STORE Dept. 20 Yellow Su 10 W. Randolph St., Chicago 47 Earclay St., Ne

flowering trees. It is beautiful at all seasons of the year. Most of the Viburnums do very well in a semi-shaded condition. Snowberry, Coralberry, and Regel Privet are useful shrubs and all have attractive berries in the fali. If evergreens are needed the Hemlock is a beautiful tree, and several kinds of native Rhododendron and the Mountain Laurel may be used if the soil is not limy.

Among the native wild flowers which were included in this garden the Bloodroot is one of the first to bloom. The beautiful white stars of this plant are so common that we are apt to disregard it. No excuse is needed for the inclusion of the lovely Quaker-ladies or Bluets in the sunnier positions. The Virginia Cowslips make a beautiful display in May with the pink buds turning to a lovely shade of blue when the bell-shaped blossoms open. The common Star of Bethlehem makes a bright show. Several varieties of Violets were not considered too common to be included. In the moister places by the stream side both the native Blue Flag and the European Yellow Iris as well as both the yellow and orange Daylily. The gay blooms of the Cardinal-flower are used to tempt the humming birds while quantities of Forget-me-not and Moneywort are planted at the edge of the water. Both Soloman's Seal and the similar leaved wild Spikenard, sometimes called Soloman's Plume, are used in large groups; the latter plant being particularly beautiful in the fall with its big bunches of bright red berries. Among the more uncommon wild flowers were Trilliums, Dutchman's-breeches, and Lady-slippers. The garden however, is not restricted to American plants entirely. Other plants which seem to fit well into the scheme are English Primroses and Cowslips and the yellow Globeflower. Daffodils and English Wood Hyacinths were the bulbs chiefly relied on. Excepting the bulbs, of course, all the plants mentioned you can plant this spring.

Novelties in the seed lists

[Continued from page 31]

of this type for use in the home. Ranking almost equally, Phlox Gigantea Art Shades and a new Pansy strain marketed as Improved Swiss Giants are among the worth-while introductions for this year.

Either the remarkable new color range or the size of bloom would alone justify Phlox Gigantea as a novelty. The flowers run as large as one and a half inches in diameter, while the colors include sal-

THE DINGEE & CONARD CO.

mon, appleblossom, rose, light blue, pale violet, and mauve, each with cream or white eye, in mix-

The new Improved Swiss Giant Pansies, if my judgment does not deceive me, will create a sensation. Certainly those in the trial gardens at Guadalupe were splendid. The fine rich coloring was remarkable, and the large blooms were not occasional, but consistent throughout the patch

The new Super Giant Imperial type Stock is perhaps a shade more important than some of the remaining new offerings. It is full base branching, with 12-15 spikes to each plant, all equally long stemmed, which makes it very fine for cutting. The huge florets are very double, and 40-50 are open at once on each flower spike. The two varieties now available are Rose Charm, deep rose in color, and Roselight, lighter rose pink.

Originated in Continental Europe, but now generally available here, is a most striking Marigold, Harmony, low growing Dwarf French Double type, fine for border work. Harmony combines the coloring of Golden Ball and Robert Biest, the two most popular varieties of this type, the base color being the rich mahogany brown of Robert Biest and the center of the flower as orange as Golden Ball. The unique color combination makes Harmony a very stunning cut flower, and the fact that it is in the pompom or small-flowered group makes it useful for decoration in even the smallest home.

From England, are two more fine novelties, Cornflower Jubilee Gem and Godetia Kelvedon Glory. Neither will be sold generally in the United States this year, although available through English seedsmen and a few American firms. The Cornflower, which is dark, vivid blue in color, is unusual because of its dwarf habit. It grows only twelve inches tall, permitting its use in many new ways, such as borders, rock gardens, and even for bedding. Godetia Kelvedon Glory is the same type as the popular Sybil Sherwood, but in a new shadeorange salmon, and is quite robust in growth.

Cosmos has come in for much improvement. Orange Flare Cosmos introduced last year is now being backed up by Cosmos Sensation Mixed. If disbudded, this new Cosmos will produce blooms from four to six inches across! White and two shades of pink will be found in the mixture, and separate colors, including red, will we suppose be available in future seasons. Sensation Mixed Cosmos is of the early-blooming type that can be flowered ahead of even the earliest winter season.

Also most worthy is the new chrysanthemum - type Marigold,

LEARN TO BE Charming

Margery Vilkou

America's authority on Charm.

Personal adviser to eminent

Distinguished Tributes

vomen in all walks of life.

RUTHCHATTERTON writes: "Margery Wilson's Charm is all that the title implies and more."

MARY PICKFORD writes: "You are dealing with a subject close to every woman's heart and you have handled it delightfully."

NORMA SHEARER writes: "To capture the elusive spirit of Charm and analyze it for personal cultivation, as you have done, is indeed a boon to all who wish to enhance their power." Charm is the birthright, the natural heritage of every living soul. The expression of it is the only known insurance for happiness. When a woman reflects her innate Charm all else of value follows as naturally as flowers turn to the sun.

A BOOKLET
"THE SMART POINT
OF VIEW"
WITHOUT COST

How much Charm have you? Just what impression do you make? Grade yourself with Margery Wilson's "Charm-Test." This interesting self-analysis chart reveals your various personal qualities by which others' udge you. The "Charm-Test," together with Miss Wilson's Booklet, "The Smart Point of View," will be sent to you without any cost or obligation. This offer is made to acquaint you with the thorough effectiveness of Margery Wilson's personalized training by correspondence.

A FINISHING SCHOOL AT HOME PERSONALIZED TRAINING

In your own home, under the sympathetic guidance of this distinguished teacher, you learn the art of exquisite self-expression—how to walk, how to talk, how to acquire poise and presence, how to project your personality effectively—to enhance your appeal. Through her personalized training by correspondence, Margery Wilson makes tangible for you the elusive elements of Charm and gives you social ease, charming manners, finish, grace—the smart point of view.

To receive the Booklet and the "Charm-Test" write to:

Handmade "CALART" Flowers

Use "Calart" Flowers in your home to brighten sombre corners and instill a friendly note of cheerful color. Their beauty makes any room more livable. The artistic group above (Nerine and Anemone Clematis) is but one of thousands that can be arranged with "Calart" Flowers. When you buy, look for the tiny blue-and-silver "Calart" seal which identifies each blossom.

Ask your dealer for our free booklet showing flower arrangements. If he cannot supply you, write to us direct.

California Artificial Flower Co.
16 Blount Street
PROVIDENCE, R. I.

Dixie Sunshine. The flowers are made up of tiny five-pointed petals that twist and curl, resembling the formation of a Chrysanthemum. The blooms, which are of deep yellow, vary from one to two inches in diameter. Dixie Sunshine is particularly effective in the garden, because its bushes, much larger than those of the ordinary Marigold, are literally covered with its bright blossoms.

Something outstanding in plants suitable for partially shaded spots is now available for those who like or can use, as in the California region, giant Cinerarias. A new strain not only includes a splendid range of colors, but will produce flowers over four inches in diameter.

eter.

In addition to the novelties offered for the first time this year, there are a number of fine annuals that are truly outstanding, but seldom grown. Three, in particular, probably owe their hold on oblivion to their awkward, misleading names. They are: Arctotis Hybrids, Calliopsis Dwarf Marmorata, and Leptosiphon French Hybrids.

Arctotis Hybrids are many times more valuable than the taller and older Arctotis grandis, but are often confused with the latter, and therefore ignored. The Hybrids grow as if they had been bred from a cross between the Transvaal Daisy and the Gazania. They were not, but the habit and flower are similar to the former, and the leaf and color range to the Gazania. The stems are not as long as those of the Transvaal Daisy, but are long enough for effective use as a cut flower.

Dwarf Marmorata Calliopsis with its compact growth and tiny richly colored blooms, outshone a dozen other annuals in a bed that included with its extreme floriferousness eliminates the "leggy" appearance that has handicapped the general run of Calliopsis, and its color range from maroon to mahogany is far richer than that of the typical generally known yellow and brown Calliopsis.

One of the largest seed firms has listed Leptosiphon French Hybrids in its catalog for several years, but it could not be located this year. Correspondence, however, revealed that a new name had been coined in the hopes of bettering sales and it has become Gilia Fairy Stars. These are really attractive enough running the full range of pastel colors, and the plants are not over six inches high. The blooms, which are a quarter of an inch in diameter, are made to order for use in "miniature" bouquets.

And now a few words in review of the introductions of last season. Rust-proof Snapdragons, proved to be life savers to many garden lovers although not as true to color as might have been expected. Most

of the few complaints of a Snapdragons apparently nated in the purchase of from questionable local ditors who undoubtedly dilute rust-proof strains with c non-resistent seeds. This yea colors in Rust-proof Snapd are being offered. Get your from a reputable seed house
