

Successful Building Contractors Know . . .

IT PAYS TO FEATURE THE LEADER CELOTEX BUILDING PRODUCTS

AVAILABLE NOW!

CELOTEX 1/2" BUILDING BOARD

This is the famous Celotex standard Building Board—a rigid 1/2" cane fibre product. Use it wherever a strong, rigid, lightweight board with insulating properties is required. It is smooth ivory-coated on one side—back is natural. And it is Ferox-Processed against dry rot and termites. Made in sizes 4 feet wide by 6, 7, 8, 9, 10 and 12 feet long.

AVAILABLE NOW!

CELOTEX ROCK-WOOL BATTS FOR HOME INSULATION

It's never too late to insulate homes—both for fuel savings now and for greater summer comfort later. Celotex Rock Wool Batts provide insulation of proved efficiency at moderate cost—but with fine profits to you. They are fireproof and come in full stud thickness. Can be applied between attic floor joists or between the rafters. Celotex Rock Wool is also available for "blow-in" application. Easier FHA financing is available to your prospects.

in full stud thickness. Can be applied between attic floor joists or between the rafters. Celotex Rock Wool is also available for "blow-in" application. Easier FHA financing is available to your prospects.

CELOTEX
REG. U. S. PAT. OFF.
BUILDING PRODUCTS

The Name "CELOTEX" Has Customer Acceptance . . . Builds Confidence in You and the Job . . . Helps to Bring You More Contracts and Profits.

NEW-HOME prospects never question the use of Celotex products. Over 20 years of consistent advertising has registered these facts about Celotex—

- Celotex is the only manufacturer of cane fibre building boards in this country.
- the long, tough interlocking cane fibres give these boards great strength and insulating value.
- only Celotex cane fibre insulation board products are protected against termites and dry rot by the exclusive, patented Ferox Process.

Today, Celotex continues its leadership by offering you a complete line of building products under one famous name that new-home prospects accept in full confidence. Meanwhile, Celotex maintains its high quality standards by continuing research and steady improvements in manufacture. Use Celotex Products. See your Celotex Dealer.

AVAILABLE NOW!

CELO-SIDING...THE MULTIPLE-FUNCTION MATERIAL THAT DOES 3 JOBS...SIDING...SHEATHING...INSULATION

Ideal for farm buildings, factories, machine shops, warehouses and general buildings. Combines siding, sheathing and insulation in one rigid, weather-resistant, easily applied material. Applied direct to studding. Celotex Siding saves critical lumber, time and labor. Exterior side mineral surfaced . . . bufftone or green. Two thicknesses—3/8" and 7/8". Sizes: 3/8" in 4' x 8' and 7/8" in 4' x 8' and 4' x 10' with square edges; 7/8" in 2' x 8' with T&G joints on long edges. Recommend 7/8" for greater strength and insulation value; 3/8" for lighter, lower cost construction.

AVAILABLE NOW!

CELO-ROK WALLBOARD AND WEATHER-PROOF SIDING

Celo-Rok gypsum wallboards meet the rigid Celotex tests for quality. They are fire-resistant—won't warp, expand or contract. Their light weight makes them easy to handle, easy to work with, yet they are durable and strong. They take any standard type of decoration. Available in square, recessed or beveled edges—3/8" or 1/2" thick. Square edge also available in 1/4" thickness. All are 4 feet wide, made in 4, 5, 6, 7, 8, 9, 10, 11 and 12 ft. lengths.

Celo-Rok Weather Proof Siding is a fire-resistant gypsum board—a single structural material which will serve in place of both sheathing and siding. Both surfaces and all edges are treated with a weather-proofing compound. Exterior side is finished in green and requires no painting. Available in 1" thickness with ship-lapped long edges and 1/2" thickness with T&G long edges—24 inches wide, in 6, 8, 9, and 10 foot lengths.

ALSO AVAILABLE!

Celotex Asphalted Building Board	Celotex Insulating Sheathing	
Celotex Insulating Lath	Celotex Insulating Interior Finishes	Cemesto
Celotex Roof Insulation	Celotex Triple Sealed Shingles	
Celotex Triple Sealed Roll Roofing	Celo-Rok Plasters	Celo-Rok Anchor Lath
Celo-Rok Sheathing	Flexcell Expansion Joint	

THE CELOTEX CORPORATION • CHICAGO 3, ILLINOIS

Published monthly by Simmons-Boardman Publishing Corporation, 195 W. Adams St., Chicago 3, Ill. Subscription price, United States, Possessions, Canada and Mexico, 1 year \$2.00; 3 years \$5.00; foreign countries: 1 year, \$3.00; 3 years \$8.00. Single copies 25 cents. Entered as second-class matter Oct. 11, 1910, at the Post Office at Chicago, Illinois, under the act of March 3, 1879, with additional entry as second-class matter at Mount Morris, Illinois. Address communications to 195 W. Adams St., Chicago 3, Illinois.

New, fast method of Floor Construction

THREE TYPES

TYPE A. Two channels with top and bottom plate which, with service cover, form a two-cell box beam shape when interlocked with adjacent section. 16" width, 3" to 9" depth elements of sections in combinations of 18 to 10 gage.

TYPE B. One flat surface and two channel-type ribs. Flat side up or down, inside or outside. 16" width, depth 3" to 9" elements of sections in combinations of 18 to 10 gage. As with Type A, permits easy application of wood, concrete or other materials for floors, walls or roofs.

TYPE C. Panels set horizontally or vertically for walls. Normally filled with insulation at the factory. Corrosion-resistant metal can be used for outside sheet. Walls can be covered, inside or outside. 2" and 3" depth, 16" width. Gages vary according to application requirements. Readily framed for windows.

The illustration above shows a way to build floors with new speed and economy. It employs the "Type A" Fenestra Building Panel as the main structural element, with the upper surface covered with a cemented-down, wood-finished floor ... the under surface left exposed as a painted paneled ceiling.

Fenestra Panels permit great savings in field labor. Panels are interlocked. Type A panels have an open channel in which service facilities can be laid speedily. Then the service cover is interlocked into place.

The three types of Fenestra Building Panels shown at the left provide—with their many possible variations of length and gage—great flexibility of building design. Further information will be found in Sweet's Architectural File for 1945. In the meantime, mail the coupon for our descriptive folder.

MAKE SURE YOUR NEW HOME
NEVER CAN "CHOKE"
ITSELF...
...on your good money!

● One of the most expensive mistakes you can make, when buying or building a new home, is to get a *skimpy* chimney—no matter what kind of fuel you plan to burn. For a chimney that's *too small* chokes off your choice of ever using any except the *most expensive* fuels. And these may become even more costly in the years ahead.

If, on the other hand, your home has an *adequate* chimney, a chimney big enough to handle all fuels equally well, you'll be free at any time to burn any fuel you choose—including the most dependable and economical of all—Bituminous Coal!

It may surprise you to learn that the extra cost of such a chimney amounts to only about \$16 for the average 7-room house! And burning Bituminous Coal can save enough money to pay a good slice of your taxes or interest. No wonder 4 out of every 7 homes in the U. S. heat with Bituminous Coal!

Your architect or builder will tell you that a chimney adequate for burning Bituminous Coal is also efficient for any other fuel you ever might choose. Talk it over with him—it will pay you to do so!

AN ADEQUATE CHIMNEY is your assurance that you'll always be free to choose any heating fuel you desire --including money-saving Bituminous Coal, of which America has a 3,000-year supply! And, when used with a modern coal stoker, dependable Bituminous Coal is not only smokeless, clean, and "automatic"—but also gives the most uniform heat of any fuel.

BITUMINOUS COAL INSTITUTE, 60 EAST 42ND STREET, NEW YORK 17, N. Y.

TIME Subscriber
2-90-LL-954-306

— Mrs. John M. Hagerty, owns this seaside house at Cohasset Beach, which has been selected by the editors of *Architectural Forum* as one of the recently constructed U. S. homes most likely to influence new trends.

Presenting THE SHOW-ROOM HOMES *of the Nation*

WHERE WILL your prospects first see the building products you want them to want... being used... and enjoyed... and explained? In the homes of families they admire, look up to and wish they could copy!

Of course *all* TIME-readers don't own homes like Mrs. Hagerty's. But by and large the more than a million readers of TIME do own the modern or traditional, sumptuous or simple, *show-room homes of the nation!*

For with twice the average U. S. income, TIME's million alert, progressive families can afford to own more homes and better homes... and to live in the best parts of their towns. These are the families that customarily buy the *custom-built homes which set the home-building pace for America!*

P.S. According to surveys made among test-groups of TIME families in seven large cities, 180,000 TIME families are already planning to build; 109,000 more, to remodel!

GATEWAY TO THE BUILDING MARKET

Do These Facts Surprise You?

Two out of every three homes today
have cracked walls and ceilings

One home owner in every four says
cracked plaster needs attention

THESSE FIGURES are not ours. They were revealed in a nation-wide survey made by the Reader-Consumer Panel of American Home Magazine.

If they surprise you, it's time to take serious notice *now* of the large number of Upson wall and ceiling jobs you can sell and install when material restrictions are lifted.

For, what other type of job will you have a chance to sell to one home owner in every four?

UPSON

P A C E M A K E R I N C R A C K P R O O F P A N E L S

With Upson Panels, ceilings can be treated in a score of ways to lend charm and dignity to the room.

Application is simple and profitable. The finished job is beautiful to look at—and permanently *crackproof!* Upson Kuver-Krak Panels, 1/4" thick, are made of the only material produced specifically for *re-covering* cracked plaster.

Consult your lumber dealer or write us for details on how you can begin. The Upson Co., Lockport, N. Y.

AMERICAN BUILDER

FOUNDED—1879

VOL. 67

MARCH

NO. 3

To the Editor

From the Philippines

To the Editor: Keeping up on "what's what" in the building industry has given me little trouble, thanks to your splendid articles in *American Builder*.

My copies, sent to me each month by father (Reichert & Juel, Gen. Contractors, Waterloo, Iowa) have kept me sufficiently informed on the latest developments, requirements, restrictions, interpretations, etc.

I feel that when we get home I can take up where we left off with a reasonable amount of intelligence into the post-war era.—M. REICHERT, F.P.O., San Francisco, Calif.

Resents rash

To the Editor: As an architect and member of the industry for nearly 35 years and with considerable knowledge of its difficulties and admitted lack of automobile line production methods, but also with full knowledge of the sincere efforts of architects, contractors, builders and manufacturers, and producers to reduce costs, I resent the "rash of newspaper stories" promoted by N.H.A.'s publicity experts, and agree thoroughly with you that what N.H.A. lacks is a realistic knowledge of basic conditions—or do they? Depends on their bureaucratic motives.—GEORGE J. HAAS, A.I.A., Great Lakes Steel Corp., Miami, Florida.

Reprint popular

To the Editor: May I take this opportunity to congratulate you on the special reprint from the Chicago convention issue featuring the prize winning designs for the National Association of Home Builders. That was a splendid idea and just the sort of thing that we would expect you and your associates to produce.—L. C. HART, Johns-Manville Sales Corporation, New York, N.Y.

Those 14 layers

To the Editor: How does National Housing Agency arrive at 14 individual layers in the exterior wall of a modern frame house?

We are continually studying various construction methods with a view of simplifying and standardizing the various parts and supplying the material prefitted and partly assembled as far as it is practical to do so.

Completely set up material such as cabinets, stair work, and other parts would save time on the job, but the cost of crating and shipping, with a consequent danger of damage in transit, more than offsets these savings.

Many old abuses which crept into the various millwork items are gradually eliminated. For example the Colonial door had been made in about 50 different layouts, and an effort is now being made to get all manufacturers to standardize on one so that regardless of where a jobber buys his material his stock will always match up.—C. A. IHRCKE, Farley & Loetscher Mfg. Co., Dubuque, Iowa.

For next few years

To the Editor: Your last number has just come into my hands and I'm confident this is just the publication I'm going to need for the next few years. I'm convinced its contribution will be invaluable.—M. ORR, McMinnville, Ohio.

Essential users qualified to purchase new trucks are urged to place their orders promptly. See your Chevrolet dealer now!

BUY MORE WAR BONDS—HELP SPEED THE VICTORY

POWER. Every 1945 model heavy-duty Chevrolet truck is powered by the high-torque Load-Master engine—designed and built for truck use exclusively. Here is an engine that can exert its maximum pulling power at low engine speed (1000 to 1900 r.p.m.) and over a wide range of road speeds (from 2 m.p.h. in low gear to 32 m.p.h. in high, with single-speed rear axle).

EQUIPMENT. Every 1945 model heavy-duty Chevrolet truck carries many items of equipment that increase efficiency and reliability—including oil-bath air cleaner, heavy-duty extra-capacity radiator, 10-leaf rear springs with special auxiliary (helper) springs, and side-member plates on chassis frame. All models have dual rear wheels. Special heavy-duty front springs and special axles are obtainable in numerous combinations. Of the seven chassis combinations, two are equipped with special extra-capacity single-speed rear axle, three with two-speed rear axle. A special oversize front axle (4500-pound rating) is used in the heaviest truck of each wheelbase—134½ and 160 inches.

"The greatest advance in building I can remember"

says E. E. Olson,
concerning the

Approved Insulite Wall of Protection

E. E. OLSON, prominent Chicago contractor, has been engaged in the building of homes for many years.

"I started as an apprentice carpenter when I was sixteen years old," Mr. Olson says. "My grandfather taught me the carpenter's trade.

"I've seen many new developments in building come and go. But I consider the Approved Insulite Wall of Protection the greatest advance in sound construction that I've encountered.

"When you stop to consider that this wall gives the home owner not only a stronger structure, but an insulated structure as well, with protection against moisture condensation, I think most contractors will agree with me. I've built over 200 homes in late years, and I sell them with confidence, knowing that I never receive a complaint from a home built with the Insulite Wall of Protection."

Send coupon below for free "Scientific Facts" booklet.

Drop siding is applied directly over Bildrite Sheathing on one-story structures. Start nailing at corners and nail on studs. Sheath up to window openings. Fit in smaller pieces at ends and around openings.

A snug, even fit around openings is important. The vapor barrier on Sealed Graylite Lok-Joint Lath functions more efficiently when care is taken to avoid "leaks" where vapor can enter into the wall space.

DOUBLE INSULATION *plus* VAPOR CONTROL

That's What the Approved Insulite Wall of Protection Gives You

On the outer-walls, Insulite Bildrite Sheathing builds a wind-proofed, weather-tight wall of high insulation efficiency, superior bracing strength, and a wall free from open cracks or knots.

On the inner-walls, Insulite Sealed Lok-Joint Lath builds a second wall of insulation, a strong, rigid plastering surface. Lath marks are eliminated, plaster cracks reduced to a minimum.

Sealed Lok-Joint Lath, with asphalt barrier against the studs, retards vapor travel. Bildrite Sheathing, being permeable to vapor, permits what little vapor escapes the barrier to pass towards the outside.

JUST LIKE *Two* ENGINEERS

HONEYWELL

Moduflow RESET METHOD

*H*ERE'S a new sales feature you can use for your home building after the war . . . The Honeywell Moduflow Reset Method accomplishes, automatically, what would manually require the services of two engineers — one watching the thermometer and ordering heat and the other setting the limit control which determines the amount of heat to be delivered.

measures the rate of this loss and automatically sets the limit control to cause the burner to increase or decrease the boiler or furnace bonnet temperature to balance the heat lost from the room. The result, with the Moduflow Reset Method, is even room temperature without overheating or underheating. The booklet offered in the coupon shows you the many advantages of Moduflow Control and points out how you can prepare for this outstanding home heating development. We suggest you send for it.

Actually, the Moduflow Reset Method supplies exactly the proper amount of heat to offset the loss from the room. The thermostat

BETTER LIVING REQUIRES BETTER WIRING IN TOMORROW'S HOMES

This perspective of a combination kitchen-laundry shows the extent to which electrical servants will be used in tomorrow's homes. It also indicates the better wiring needed to provide ample current for these servants.

Here are four basic requirements for better wiring:

1. Plenty of circuits and outlets.
2. Wire of ample size.
3. Modern circuit protection.
4. Wiring devices and workmanship of highest quality.

To assist you in planning better wiring, Westinghouse has a Better Homes Department staffed with consultants. Contact your nearest Westinghouse distributor or district office, or write to Westinghouse Electric & Mfg. Co., P. O. Box 868, Pittsburgh 30, Pa.

J-91512

FREE! "Electrical Living in 194X", Professional Edition—This 62-page book graphically demonstrates, with illustrations, perspectives and diagrams, how better wiring should be planned. Send for this book; also for "Manual of Better Home Wiring" which gives wiring requirements and specifications.

Laucks Construction Glues for engineering with wood

Prefabricated by Timber Structures, Inc.

HERE'S one more example of how ingenuity working with the new properties of truly modern construction glue . . . weather-proof, fungus-proof, and stronger than the wood itself . . . combined to do a better, more functional building job.

This is a plywood 3-unit silo, each unit with a capacity of 90 tons of ensilage . . . 28 feet high, 14 feet in diameter. Three-ply exterior grade plywood forms the inner "skin" of the silo. The structural strength is derived from the 3-ply prefabricated hoop straps, 2" x 4", laminated with Laucks construction glues. Another innovation is the flat, over-all roof

with the silos resting on a common triangular concrete footing. The three individual units are combined to form one building with approximately 144 sq. ft. of usable protected floor space.

This silo is superior to the old-style "leaning towers of Pisa," because the plywood-and-glue construction is not only stronger, but more rigid, and because the plywood does not shrink away from the straps.

Whether it's prefabricated housing, laminated arches or beams, stressed-cover construction, or dry-built walls . . . investigate the achievements and new

potentialities of glues in these and other applications. Come to "America's Glue Headquarters," the world's largest manufacturers of industrial glues . . .

LOOK AT *THIS* RECORD!

3000 SQ. FT. OF RADIATION HEATED FOR \$480 PER YEAR

The way to do a *better* job of heating *cheaper* is to install a B & G Monoflo Forced Hot Water System—and here, in proof, is another bit of air-tight evidence:

In this northern Wisconsin Monoflo installation, the church and detached parish house are heated by 3006 sq. ft. of radiation, divided into three zones. Two zones handle the church, while the parish house is on the third zone. The boiler is stoker-fired, with thermostatically controlled B & G Boosters keeping room temperature at the desired degree.

At only \$480 per year for heating the buildings seven days a week, the operating cost of this system is amazingly low!

The economy of forced hot water heating is perfectly understandable when operating principles are examined. The most common cause of high heating cost is inability to closely control the heat supply. B & G Forced Hot Water Heating, because of its ability to *automatically and continuously* balance the heat output with the heat loss, never wastes fuel by delivering unwanted heat.

B & G Equipment now available for modernization

Any steam or hot water system can be quickly converted to B & G Forced Hot Water Heating. Materials have been released—a huge market is waiting. Get in now on this profit opportunity.

Better heating for the small home

This attractive residence is equipped with a B & G Monoflo Forced Hot Water Heating System, selected for its ability to provide luxurious comfort at low cost. The house is one unit of a complete village development on Long Island, New York.

HOT WATER EVERY HOUR OF THE DAY... WINTER AND SUMMER

This is a plus value of B & G Forced Hot Water Heating! A B & G Water Heater, installed on the same boiler that heats the house, furnishes a virtually limitless supply of hot water for all household uses. Not only in winter, but in summer as well—and at insignificant cost.

The Wheeler, Osgood Company
Tacoma, Washington

Gentlemen:
Several months ago we furnished millwork for 500 units of War Housing, for which our contract required us to furnish door openings completely assembled at our Mill.

Wheeler, Osgood Company supplied the nearly 4000 doors for this work, which were fitted to net size and machined for hardware at your factory. The variations in net sizes, due to job conditions and machining for several different types of locks and latches, made the door schedule quite complicated. We were very much pleased with your promptness and accuracy in filling this order; the service of your Company in handling the prefitting and machining was a great help to us in meeting deliveries required by the construction schedule.

Yours very truly,
CAMPBELL COAL COMPANY

2 OUT OF 3 Postwar Homes

WILL BE BUILT OR BOUGHT BY FAMILIES WITH CHILDREN

$\frac{2}{3}$ of the postwar homes will be built or bought by America's Biggest Home-Building Market—families with children. This fact was established by a recent nationwide survey made by the War Production Board Office of Civilian Requirements.

Parents will be America's biggest, most active and keenly interested market in the home building field of tomorrow!

And PARENTS' MAGAZINE is the only major publication whose growing circulation is concentrated exclusively in this vastly promising consumer group—America's Biggest Home-

Building Market. For more than 18 years it has strongly influenced the pattern-of-living of America's outstanding parents—and the upbringing of their children.

PARENTS' MAGAZINE's 725,000 readers depend on its monthly counsel to help shape their postwar housing plans. Month after month, it devotes more editorial space to BUILDING than any other women's, general or weekly magazine. That is how PARENTS' MAGAZINE creates a receptive preconditioned readership for your services and products. You can reach this important audience in the pages of PARENTS' MAGAZINE every month.

Please judge floors by "TEST TUBE" standards

Some things you can see with the naked eye. You can *see* the sparkling beauty of Kentile floors. Kentile is laid tile by tile and you normally combine 15 tile sizes, each one available in 44 colors. Even within the limited range of wartime colors and sizes the possibilities are marvelous. You can also *see* that the colors go through to the back—can't rub off. You can *see* that alterations are always possible tile by tile without disturbing the rest of the floor. And you can *see* how Kentile wears by observing the floors in Rockefeller Center, the Pentagon Building or Woolworth, A & P and Walgreen stores. Their maintenance men will tell you, too, how quickly anyone can clean Kentile floors by simple mopping. But we say "Please ask about the *unseen* factors." We can list below only a few "test tube" standards for floors. To be really informed, write for the Kentile catalogue. It's sent without obligating you any way, shows the Kentile color range and some pattern possibilities, and tells you the standards that determine maximum durability, usability, beauty and economy. Write David E. Kennedy, Inc., 61 Second Ave., Brooklyn 15, N. Y.

Kentile is so alkali and moisture resistant it can be laid right on concrete in direct contact with earth and below grade.

Kentile eliminates grease problems because in areas where oils or fats fall you can use matching GREASEPROOF Kentile.

Kentile bears 1000 lb. rolling loads without denting or cracking.

Kentile edges are micromatic square so that the tiles are seal-set together—an absolutely firm, bonded floor covering.

Kentile colors are structurally component parts of the tiles through and through to the back—can't "wear off."

And . . . Kentile invites "price testing" too. You won't find any durable floor that costs less.

1 Complete Source of Supply

**TRUSCON IS THE WORLD'S LARGEST PEACETIME
MANUFACTURER OF STEEL BUILDING PRODUCTS**

Dependable Source of Service

**TRUSCON HAS CONVENIENT WAREHOUSE BRANCHES
AND DEALERS EVERYWHERE**

Large Source of Business

**TRUSCON EXPERIENCE AND PRODUCTS WILL
HELP MEET CONSTRUCTION REQUIREMENTS**

Concentrate all your purchases and dealings with one dependable source of steel building products—line up with Truscon building products for your greatest opportunity to develop building business in the postwar market. There will be great and widely varied building activity, and this complete Truscon line of steel building products, available through our many Dealers and

warehouses, will help you meet its requirements.

The Truscon items noted "available now" can be secured in limited quantities. As quickly as our war production schedules permit, we will supply additional products, and ultimately the entire line. Start your postwar planning with Truscon Steel Building Products now!

TRUSCON SWING AND SLIDE DOORS

Truscon swing and slide doors are adaptable for use in basements, rear entrances, boiler rooms, fire exits and similar places in residences, hotels, apartments, schools, churches, shops, warehouses, factories, filling stations and stores. They are durably made for heavy usage. Swing Type Doors can be furnished with heavily reinforced pressed steel door frames, prepared for standard hardware.

Not Available Now

TRUSCON COAL
CHUTE DOORS

"Break-proof," weathertight and thief-proof. No castings used. Door and frame made entirely of heavy pressed steel. Truscon Coal Chute Doors are complete with positive spring latch, slotted hinges, and formed lugs. Two sizes.

Not Available Now

TRUSCON STEEL

TRUSCON STEEL BUILDING MATERIALS

Welded Steel Fabric

Truscon Welded Steel Fabric is made in various sizes for concrete reinforcing in all types of structures, and highways. Each joint is electrically-welded for permanence.

Available Now

Reinforcing Bars

Truscon Steel Reinforcing Bars for concrete are special rolled sections of high grade steel, with a series of cross ribs so designed as to secure maximum grip on the concrete.

Available Now

Formed Steel Lintels

Truscon Formed Steel Lintel design includes continuous horizontal ribs which greatly increase the strength of the heavy gauge steel.

Available Now

TRUSCON RESIDENTIAL STEEL WINDOWS

Truscon Residence Casements

Made in a wide range of types and sizes, to meet practically every requirement for distinctive window designs and arrangements. They incorporate all the latest advantages of construction and easy operation. Bonderized, and baked-on priming coat of paint.

Not Available Now

Storm Sash and Screens

Standardized low cost combination storm sash and screens for Truscon residential windows. Storm sash comes in two panels to permit easy installation or removal. Lower panel can be opened for controlled ventilation. Screen is interchangeable with lower panel for summer use.

Not Available Now

Truscon Residential Double-Hung Windows

Galvanized and bonderized steel with a baked-on priming coat of paint, guaranteed spring balances, factory installed weatherstripping, and attractive hardware. Shipped assembled and adjusted.

Not Available Now

TRUSCON BASEMENT WINDOWS

Made of heavy, hot-rolled sections. Bonderized. Baked-on priming coat of paint. Easy operation. Weather-tightness assured by continuous double contact around entire window. Windows open in. Furnished complete with all hardware. Steel frame screens will also be available.

Not Available Now

TRUSCON COMMERCIAL STEEL WINDOWS

Truscon Pivoted Windows

Adaptable to all types of industrial and similar buildings. Easy to open and close. Come in a wide range of sizes.

Not Available Now

Truscon Utility Windows

Popular for use in garages, shops, stores, basements, etc. Ventilator opens in.

Not Available Now

Security Windows

For store buildings, warehouses and types of buildings where adequate ventilation and protection are factors.

Not Available Now

Commercial Projected Windows

Used widely in buildings where appearance, shading and screening convenience, and low cost are required.

Not Available Now

TRUSCON METAL LATH AND ACCESSORIES

Truscon Doublemesh Herringbone Lath

A plaster saving lath, designed for a perfect mechanical bond. Sheets are unusually rigid, allowing wider spacing of supports.

Available Now

Truscon Diamond Lath

A flat lath, uniformly expanded throughout the entire sheet. Its use is almost universal. Adaptable for practically all classes of work.

Available Now

Truscon Rib Lath

A 3/8" and 1/2" lath used for concrete reinforcing and miscellaneous fire-resistant construction.

Not Available Now

Truscon Metal Lath Accessories

Expanded corner bead illustrated. Every type of metal lath accessory available in the Truscon line.

Have you heard the news?

ALUMINUM WINDOWS

will soon be available*
FOR LOW-COST HOMES

*Upon the lifting of Government restrictions on residential building, a complete line of these modern aluminum windows in stock sizes—9 double-hung and 8 casement—will be warehoused and distributed nationally by your regular suppliers.

IF YOU were at the National Builders Show in Chicago, you know what a sensation these new aluminum windows were. Builders from every section of the country voted them the "HIT" of the show.

To you who were unable to attend there's a real treat in store. Just think—fine quality, aluminum windows of excellent design and superior workmanship *at prices you'd expect to pay for any good window.*

These new ALWINCO aluminum windows offer both you and the home buyer many outstanding features. Most important, they add real sales appeal to any home you build. Investigate today. Write on your business letterhead for a copy of our new descriptive booklet "A Better Sales Outlook."

Exclusive dealerships are still open in several localities.

THE ALUMINUM WINDOW CORPORATION

Subsidiary of General Bronze Corporation

34-21 Tenth Street

Long Island City 1, N. Y.

Beneath the surface a lasting framework of steel

From the exterior, the built-in quality of this attractive terrace cannot be seen. Yet beneath the surface is a steel framework that denotes a progressive architect and builder, alert to the advantages of new materials and the sales value of permanence, fire-safety, rigidity and imperviousness to dry-rot.

These qualities—to the home builder, home buyer or investor—are as salable as grace and beauty of design. They are attainable without sacrifice of originality or economy, through the designed efficiency of standardized Stran-Steel framing systems, new and improved.

Light in weight, rust-proofed, and featuring a patented nailing groove for the simple attachment of collateral materials, Stran-Steel members provide an ideal material to work with. Architects and builders who have an eye for practical values are thinking in terms of Stran-Steel.

On and Off the Record

by **STRUCTOR**

TO FOREIGN SHORES—Serious and perplexing is the present question: how much of our scarce materials shall be sent abroad for rebuilding war-torn Europe?

Orders have already been placed for 30,000 prefab houses for England. Additional thousands are going to France. This will take an immense volume of lumber and other scarce materials.

MILLIONS OF FEET—Vast quantities of building materials are already moving abroad under lend-lease. For example, orders for 190,000,000 square feet of insulating board have been placed for the first three-quarters of 1945. Equally vast orders for asphalt roofing are being placed by British and French purchasing commissions, to be paid for by U.S. Treasury procurement. Manufacturers, well aware of the pressing need of their American customers, would decidedly prefer not to fill these orders.

GOOD REASONS, WE HOPE—

There must be sound reasons for sending these vast quantities of materials abroad. The plight of our British and French Allies is bad. London alone has millions of damaged or completely destroyed homes, with thousands of people still living in subways and other temporary shelters. The prefab units to be shipped to England are temporary shelter. Still it's hard for American building men to see scarce products going abroad.

LUMBER PROBLEM—Lumber is, of course, so scarce that any that is sent abroad really hurts. Many predict that the lumber scarcity will continue for a number of years. My own observation is that when the European war ends there should be no reason why Russia, Finland, and Canada should not be able to supply foreign markets.

The United States will have plenty of trouble supplying lumber for its Pacific war. Rebuilding the Philippines alone is going to take plenty.

\$18,000 CHICKEN COOP—A chap in Chicago, where they do things on a big scale, has been charged by

W.P.B. with building an \$18,000 home and four-car garage on a permit to remodel his chicken coop. I have long wondered how so many de luxe building projects seem to have gotten by W.P.B. Apparently W.P.B. figured this case stretched the \$200 maximum just a little too far. The geft who performed this remarkable expansion feat is now liable to one year in jail or \$10,000 fine or both. He has a date with the judge soon.

DEPARTMENT OF HOUSING—

C.I.O.'s R. J. Thomas bearded the builders in their den, so to speak, at the recent N.A.H.B. convention and talked tough about the need for low cost and subsidized housing. He made headline news with his recommendation for a Federal Department of Housing and Community Development, to be headed by a new cabinet member.

This idea of a Department of Housing has been broached before, and has both good and bad points. On the good side, it would put housing into the national picture in a big way commensurate with the size and importance of this industry. On the bad side, it might mean putting the government still further into bureaucratic controls that are widely feared and resented.

NEW PRESIDENT—Joseph E. Merrion, N.A.H.B.'s new president, is rapidly becoming a national figure, and already is having trouble attending all the conferences, making all the speeches and seeing all the people that this job requires. Only a man with plenty of zip, which he has, could do it.

Merrion has been in the home building business in Chicago for 22 years and for 2 years was president of the Chicago Metropolitan Home Builders Association. He has four children one of whom, Ned, age 19, was wounded in France in December and is now in an Army hospital in England.

MYSTERIOUS FOUNDATIONS—

At least one builder we know is an optimist. During the recent cold spell our eagle-eyed scout reported a large crew working like mad putting in foundations for some 50 houses.

Whether these are H-1, H-2, or merely post-war has not been stated. It may be that they could fit in one or all of these classifications. If the green light on private construction should come next spring he will be in a nice spot to get going early.

BUILDING PUBLICITY—Never before has interest in home building been so great. The recent N.A.H.B. convention showed this. As further evidence, Sumner Rider and Paul Keister who handled N.A.H.B. publicity campaign to debunk the "miracle home" have just opened a new office in New York City under the name of Rider & Keister. They will handle various building accounts.

CONSISTENT—Dorothy Rosenman, the smart and energetic head of the National Committee on Housing, Inc., made an effective presentation before the Taft Sub-Committee on housing. She favors a permanent committee on housing. This indicates a unanimity of view point in the Rosenman household since her husband, Samuel I. Rosenman, is generally credited with being the creator of the National Housing Administration set-up.

STRATOSPHERIC PLANNERS—

In one of his stimulating talks, retiring N.A.H.B. President Bob Gerholz used a phrase I think is worth repeating. "Builders will not stand idly by," he declared, "and see themselves stymied by stratospheric planners."

TOUGH ON BOXES—A well known Illinois builder I talked to recently described how he was engaged in building both war housing and ammunition boxes at the same time. The funny part about it, he told me, is that Uncle Sam is a lot tougher on box building than on home building. The lumber in boxes is far superior to that allowed in houses.

BUILDING LEADS—The building industry led all others as tops in post-war investment possibilities in a recent poll by a New York brokerage house. Railroads ranked a close second and auto industry third, but investment people put the building industry right up at the top.

CYNICAL NOTE—While driving along a Chicago highway recently we noticed a big sign on a public housing project stating that the architects were Skidmore Owings & Merrill. This happens to be the architectural firm that at the same time was designing the convention layout for the National Association of Home Builders, whose private enterprise ideas are, we trust, by now well known.

INSELBRIC

The Product That Built an Industry *Accepts the Challenge*

Only ten years ago, when INSELBRIC was first introduced to the American Public, the going was tough—many were skeptical. It required vision, courage, and perseverance to fight the long, uphill battle for trade and consumer acceptance.

But because INSELBRIC was more than just an idea or a new product—because it filled a long felt basic and essential need, it has grown in popularity until today it has earned an enviable position in the building material field.

INSELBRIC is truly "a product that built an industry"—a multi-million dollar industry which has already provided a livelihood for thousands and better homes for thousands more. Despite the advent of increasing competition (which we welcome) INSELBRIC has steadily increased in demand until today it is acclaimed from coast to coast as the nation's first choice in insulated brick design siding.

But, leadership in every field of human endeavor carries with it its own reward—and its own challenge! Those of us who make and distribute INSELBRIC know that today, more than ever before, only true values will keep us at the top.

INSELBRIC earned its leadership by being first and best. We are proud of our product—and proud of the industry which it built. In product and in policies, we shall always endeavor to maintain the high standards that have made our present position possible. That is why—

WE ACCEPT THE CHALLENGE OF LEADERSHIP!

**Good Business
 Opportunity for
 Some Men You May
 Know...**

Among your acquaintances there are probably several men who would be interested in the splendid business opportunity that lies ahead for the local Authorized Crawford Door Dealer.

These may be ex-servicemen looking for a business opportunity which will provide a good living right now and much more when the postwar building program gets going. Some of these men could start in at once supplying doors which can be bought on priority.

Or, they may be mechanics, carpenters, roofers or handymen who are in essential war work now and who want to get set with a really sound project they can start to cash in on as soon as they are released.

To all of these men, the local Crawford Door Dealership offers a splendid business opportunity. Others in this activity are averaging \$100 a week; go-getters average \$150 a week and each of them enjoys the independence of being his own boss and running his own permanent business.

Any man of good character and habits who can use the ordinary installation tools can, with our help, build himself a good business right in his own locality.

If you know such men, you will be doing them a favor by bringing this ad to their attention. Their inquiries should be addressed direct to Crawford Door Company, 405 St. Jean Avenue, Detroit 14, Michigan.

PUT "SELL" INTO POSTWAR HOMES!

Most everyone who is thinking of buying a new home in postwar has two "musts" on his list . . . a *modern recreation room and modern heating* (surveys show most prefer gas).

In national advertising, the Bryant pup is telling *your* prospects how Bryant equipment will give the dependable, economical, automatic operation they want in gas heating . . . how Bryant's compact units not only help make space for that recreation room, but how their style and beauty also harmonize with

the surroundings of modern homes.

In postwar, Bryant—always in the forefront with improved gas heating—will offer you a still greater selection of units, including new-idea equipment to add new sales appeal to everything from small bungalow to large residence.

You will find Bryant advertising your ally and the Bryant distributor a good man to know if you plan to put "sell" into your postwar homes!

Reports On His Experience With Coleman Oil Heater Line:

“Because Of Past Experience, Coleman Oil Heaters Will Have An Important Place In Our Post-War Picture!”

“In our post-war planning, we’ve made a complete analysis of the various appliances which we sold prewar. The record puts Coleman in an important place in our appliance picture. In 1936, we placed our first order for three Coleman Oil Heaters. In 1937, our sales were beyond all expectations, and continued to increase each year, until, in 1941, we sold considerably over 200 Coleman Oil Heaters. Our service expense has been lower per

dollar volume than on any other appliance sold, and oil heaters have proven to be one of our most profitable items. With Coleman, we have created an untold amount of good will with our trade.”

Coleman franchise dealers are being appointed now by America’s leading distributors for post-war sales of these Coleman Heating Appliance lines: Oil Heaters; GAS, OIL and LP-gas Floor Furnaces, Water Heaters, and Central

Heat Plants. This franchise is awarded to aggressive dealers who can qualify and handle the volume of Coleman business they can easily develop. Write us for the name of your Coleman distributor, who can tell you the complete story of the Coleman opportunity in the waiting billion-dollar home-heating market. Coleman Lamp and Stove Co., Dept. AB-28X, Wichita 1, Kansas.

ATTENTION

Lumber and Hardware
Dealers of America:

What is our "q"?

Our "q" today, as always, is **QUALITY** ---
QUALITY in every phase of our business life.

We must all concede that in a world at
peace, competition will be keener than ever be-
fore. We must also concede that the general
public will demand a better home, a better car,
and more conveniences, but there will be an even
greater demand for better service --- and these
demands will be met, if not by you and me, then
by the fellow that has made better preparation.

You, no doubt, are making your post-war
plans now --- **WE ARE**. Our machines are turning
out tools of war without skipping a beat, but
those of us who shape the policies of the
Macklanburg-Duncan Company are planning a bigger,
finer, more merchandisable line of products than
ever before along with **QUALITY** service.

Yes, we believe our "q" now is **QUALITY** ---
QUALITY with a capital "q".

Very truly yours,
MACKLANBURG-DUNCAN COMPANY

You'll sell more homes, and have 'em ready to move into, in less time, if you do business with the Viking contractor-dealer.

Now, and more and more in the postwar period, home seekers want automatic heating. Many of the better homes buyers demand year 'round air conditioning, too.

Viking Completely Fills Requirements

Whether you use oil, coal or gas, Viking can supply you with the most modern equipment to satisfy the demands of tomorrow's buyers. From water heaters, space heaters and floor furnaces, to Central heating boilers, furnaces and year 'round air conditioning plants Viking offers dependable and efficient units of the most advanced design.

No Installation Delays

Under the Viking distribution plan of

supplying contractor-dealers through strategically located Wholesale Distributors Viking heating, cooling and air conditioning equipment gets to the building site when you want it. The same trucks that carry the installation materials to the job get the major units there too. No divided responsibility, no misunderstandings—no costly delays.

Viking Modern Equipment and Viking service both help you to quicker sales and better profits.

PROMPT SHIPMENTS, STARTING IMMEDIATELY! That is the surprising good news — prompt shipments — on rated orders for Dexter-Tubular 5-Pin Tumbler Cylinder Locks. Choice of either dead bolt or spring night latch. Keyed alike and master keyed locks take a little longer.

These are exceedingly fine locks — cylinder plugs, cases, pins, and keys are solid brass. Their rugged, dependable quality is squarely backed by the written Dexter Lifetime Warranty.

The "bore-in" installation is the feature of Dexter-Tubular that interests contractors and builders. Only a few round holes are required, no deep mortising. Through the savings effected during installation, over-all costs are reduced. In all, Dexter-Tubulars are a quality product, their application means savings, and they are available now.

There is a Dexter dealer in most communities where you may inspect the full line of Dexter-Tubular locks and latches. Write for complete information and the name of the dealer nearest to you.

You'll Save up to 55 Minutes on Every Opening with FACTRI-FIT Douglas Fir Doors

Write for our new catalog showing the complete line of Douglas fir interior doors, TRU-FIT entrance doors, and new specialty items. It is yours for the asking.

Yes—when Douglas fir interior doors are ordered FACTRI-FIT they reach the job **ready to hang**. They're pre-fit, trimmed, gained and bored or mortised. That eliminates up to four "on-the-job" operations—saves more than enough to cover the slight additional FACTRI-FIT cost. And because the machining is done at the mill by high-speed precision tools, you know the job will be **right**.

Remember, too, that Douglas fir doors are featured in modern, attractive three-panel designs ideally adaptable to all types of building. They're manufactured of Douglas fir—the wood made durable by nature—assuring your client a lifetime of satisfactory service.

Douglas fir interior doors may be ordered FACTRI-FIT for a limited number of essential jobs **right now**. When war needs lessen, of course, they will be immediately available for all civilian building.

FACTRI-FIT

FEATURES

1

FACTRI-FIT doors are pre-fit at the mill, trimmed to exact size, ready to hang without sawing or fitting.

2

FACTRI-FIT doors may be ordered completely machined at your option—gained, bored or mortised by high-speed precision tools.

3

FACTRI-FIT doors (like all Douglas Fir Doors) are edge grade-marked for ease in ordering, specifying and supplying.

4

FACTRI-FIT doors are scuff-stripped to protect the precision-cut corners during handling and shipping.

NOTICE: Douglas Fir Interior Doors are manufactured three ways:

- 1—STANDARD—Purposely made oversize for fitting to inexact openings.
- 2—PRE-FIT—Trimmed to size, ready to hang.
- 3—FACTRI-FIT—Prefit, gained, and bored or mortised.

THESE 5 FEATURES SAVE 15 MINUTES EVERY HOUR!

MONARCH UNI-POINT RADIAL SAW

EVEN as your hand pivots at the wrist, so the Monarch **UNI-POINT** Radial Saw always pivots and enters the lumber at the same point in the table, regardless of the crosscut angle, whether vertical, horizontal, or compound miter. That is what is meant by the phrase "one-point cutting" which so many builders are talking about and enjoying. It makes possible tremendous savings in time and effort, with absolute accuracy always.

Here are just five of these time-consuming operator-motions which the **UNI-POINT** design eliminates:

1. You can change angle without waiting for saw blade to stop. No "idle time" man-hours on the cost sheet. Simply pivot, snap lock, and start cutting at the new angle.
2. No long arm to swing or adjust to different angle positions on table, or to get in your way. **UNI-POINT** saw is always at same point and telescoping ram gives operator physical freedom from machine obstructions.
3. Stops or gauges need not be moved for different angle cuts as in the case of radial saws which cut at different points in table.
4. No need to reset material to conform with angle changes.
5. No need to replace a cut-up guide fence. **UNI-POINT** fences do not get cut because saw always enters at same point. Safer, too!

SIMPLICITY and skill in the design of the **UNI-POINT** saw enables operator to increase production in many other ways. Often two or more operations may be combined in one. Different attachments permit many other wood-working operations with this versatile machine.

If you would keep in step with production cutting which is here to stay, send at once for our new illustrated Catalog 60. It contains many examples of how **UNI-POINT** saves time and manpower. Your imagination and experience will no doubt suggest many other short cuts to lower production costs.

The Old, Slow, Costly Way. Saw enters work at different point for every angle.

THE NEW, **UNI-POINT**, Efficient Way. Saw enters work at same point regardless of angle. Saves 20% or more per man-hour.

The Trend to Planned Kitchens is Growing

... MAKE THE MOST OF IT!

MORE than seven out of ten postwar homes will cost \$3,000 or over," predicts the United States Chamber of Commerce. That price range is assurance that the modern home of tomorrow will include an all-electric kitchen. The ultra-modern bathroom captured the fancy of the American housewife in the building boom after the last war. Today she is well aware that her home is only as modern as its kitchen.

Over 30,000 Inquiries a Month

Each month thousands of prospects send for the Hotpoint Planning Guide "Your Next Kitchen" . . . proof

of the interest in, and consumer preference for, the planned electric kitchen. Hotpoint's hard-bitting advertising campaign urges the purchase of war bonds now for postwar building.

Building Boom in Sight

Victory will find America with a pent-up purchasing power of over a hundred billion dollars. The new home market is unlimited . . . plan now to take advantage of it. Design and build homes with modern functional kitchens. They will speed turnover and reduce financial costs in speculative building. Remodeling homes and replacing old, worn

appliances with a complete, all-electric kitchen is also a profitable market.

Write Us Today

Hotpoint's expert staff of kitchen designers is ready to offer you suggestions on any kitchen planning or construction problems. Write for details of "Hotpoint Kitchen Planning Service."

The house with "BLACK EYES" needs new screens of LUMITE

● No more unsightly "black eyes" that disfigure sills and sidewalls as a result of rusty or corroded window screens. For LUMITE, the new plastic screen cloth, woven from Saran,* defies the elements!

When LUMITE is used, there's no necessity for constant repainting of tell-tale streaks and splotches. LUMITE does not rust or corrode, nor is it affected by acid fumes, salt air, rain, snow, heat or cold. Furthermore, LUMITE plastic screen cloth itself never needs painting. A wipe-off with a damp cloth restores its fresh, new look immediately.

As for durability, the tensile strength runs as high as 50,000 pounds per square inch, gives sturdy resistance against dents and bulges. LUMITE simply *can't wear out* through natural causes!

Tested every day, under every condition, by the Armed Forces, LUMITE offers a great new "proven" product for postwar building. We can't ship any LUMITE until after the war, but we'll gladly send samples and information.

*A product of the Dow Chemical Co.

**TESTED IN WAR
READY FOR PEACE**

Not just a postwar dream product... millions of feet of LUMITE are now in actual use, protecting the Armed Forces against disease-carrying insects.

- ★ Will not rust or corrode... long-lasting
- ★ Non-staining... no streaking of sills or sidewalls
- ★ Strong, resilient... no dents or bulges
- ★ Unaffected by fumes or salt air
- ★ Non-inflammable
- ★ Will be competitively priced

Creating new convenience in the bathroom

NEW bathroom convenience requires fixtures and fittings of the most practical modern design coupled with recognized quality—to fit in with the Builder's foresighted provision for beauty, comfort, freedom of movement, and orderly, handy storage of all the "movables."

The bathroom illustrated has the new Kohler Gramercy lavatory with roomy shelf back and built-in fittings. The Cosmopolitan recess bench bath is equipped with a shower controlled by the Triton mixer, latest and most advanced device for

controlling water flow and temperature. The close-coupled Wellworth closet is good looking, superbly practical, yet moderately priced.

Kohler quality, backed by 72 years of manufacturing experience, is unfailingly maintained because all Kohler fixtures are manufactured at one point, where unity of supervision is constant and complete.

Kohler will gladly provide information on fixtures and fittings now available. Write: Kohler Co., Dept. AB-3, Kohler, Wisconsin. Established 1873.

THEY DIDN'T NEED WINDOWS ON GUADALCANAL...

but they did need landing mats!

And they got them when they were most needed. In three years time Ceco has turned out millions of feet. Ceco landing mats have seen service on every continent . . . on every front.

This is another story of Ceco engineering skill. For landing mats are interchangeable, cut to the same exact pattern, and manufactured with closely engineered tolerances. As precisely, for example, as the New Ceco Intermediate Casement which will be available when the war ends.

This new Ceco window is of special interest to builders of hospitals and monumental type buildings. For like all Ceco Steel Windows it is *precision built . . . durable . . . beautiful*. A *precision engineered* window.

You'll specify Ceco, here's why! 1. *Ceco Steel Windows* have extra tight *all-weather seal*. 2. Always fit . . . no sticking, warping or swelling. 3. Far greater light area, let more sun in, easier to see out. 4. Controlled ventilation. 5. Use more steel, last the *lifetime* of your building. 6. Bonderized, a special protective coating against rusting. 7. *All these advantages at no premium cost.*

Ceco's line of Steel Windows includes Light and Intermediate Casements, Basement Windows, Architectural Projected, Commercial Projected and Pivoted Windows, Continuous Windows, Security and Utility Windows, Mechanical Operators, etc.

IN (AKES THE BIG DIFFERENCE IN **CECO** CONSTRUCTION PRODUCTS

CONTRACTOR SAVES BOTH TIME AND LABOR

with Duraplastic Cement for Concrete Dome

Sewage disposal plant, Hibbing, Minn. To place the Duraplastic concrete for the second dome required only half the men and a third less time than on first dome, made with regular cement. Roberts & Schaefer Co., designers; J. C. Taylor, architect; Charles Foster, consulting engineer; E. W. Coons Co., Inc., contractor.

WHILE only recently announced, six years of gratifying field performance are back of Atlas Duraplastic, the new air-entraining portland cement that makes better concrete at no extra cost. Since 1939 it has been used for over 2½ million sq. yds. of paving and for a variety of building jobs throughout the country.

Because it makes concrete more workable, reduces segregation and bleeding, and spreads, screeds and finishes more easily, Duraplastic cement sometimes saves both time and money, as illustrated by the following example.

At the Hibbing, Minn., sewage disposal plant two trickling filters are covered with thin-shell concrete domes of similar dimensions. The contractor states that the thin shells (3½" to 6") and the heavy reinforcing required great care in placing the concrete.

ON THE FIRST DOME, built with regular cement, he used 28 men, additional foremen, and three days to place the concrete;

ON THE SECOND DOME, constructed with Duraplastic cement, there was considerably less segregation of the aggregate and improved plasticity. As a result, 13 men did the job of placing in two days.

Atlas Duraplastic cement complies with ASTM specifications, sells at the same price as regular cement, and makes better concrete at no extra cost.

Send for booklet on Duraplastic cement. Write to Technical Service Bureau, Universal Atlas Cement Company (United States Steel Corporation Subsidiary), 135 East 42nd Street, New York 17, N. Y. Offices: New York, Chicago, Albany, Boston, Philadelphia, Pittsburgh, Cleveland, Minneapolis, Duluth, St. Louis, Kansas City, Des Moines, Birmingham, Waco.

Looking Ahead

THERE'S no better time than now for looking ahead to what industry will offer the home-builder of tomorrow—or for laying by a nest-egg of War Bonds to finance your home when you build it after Victory!

- ● Amazing developments for the future home owner will come out of America's vast war experience. Defoe's Housing Division, for example, is developing a method of producing factory-built homes, that have individuality of design—plus the economy of volume production.
- ● You may plan a Defoe house of any size—kitchen complete with labor-saving equipment,

living room, dining room, bath rooms, and bed rooms that contain built-in electric outlets, closets, bookcases, shelves, doors and drawers. And, if you wish, you may finish the exterior according to your own architect's or builder's plans.

- ● Today, of course, all of America's building facilities—including Defoe's—are concentrated on production for Victory. But when the Axis is defeated, large-scale production of these scientifically designed homes will be a major part of Defoe's postwar contribution to better American living standards and full employment.

Whether you build Bombers or Farm Houses . . .

..... **your product can be improved with a Kimpreg* Surface**

A revolutionary new alloy-like material is achieved by fusing to plywood's surface a cured plastic skin of KIMPREG. This resultant material is not a plywood in the ordinary sense, not a conventional plastic laminate. It is a brand new, better structural medium with countless applications in many products—including, very probably, those you plan for post-war production.

With KIMPREG, plywood is converted into an improved substance which can be machined, formed and fastened like ordinary wood—yet has a plastic's smooth, tough surface and beautiful, permanent, paintless finish.

KIMPREG adds the following advantages to plywood: 1) increases durability and flexural strength; 2) provides resistance to moisture and vapor; 3) armor-plates

against extreme abrasion; 4) prevents surface checks; 5) diminishes grain-raising effects; 6) makes the material scuffproof, splinterproof, snag-resistant; 7) affords a stainproof, washable, "wipe clean" surface; 8) creates resistance to chemical action, decay, temperature-extremes, fire, vermin, and mold. Moreover, it is warm to the touch, does not have the chill "feel" of metal surfaces.

Today all KIMPREG is required for military needs, ranging from airborne "prefab" huts to glass-smooth tables for packing parachutes without snagging. Hence, the wartime color of KIMPREG is a soldierly olive-drab. Post-war, however, it will be offered in a variety of appealing hues.

Now is the time to investigate the possibilities of KIMPREG-surfaced materials for your peacetime requirements.

When that
air castle
settles to
earth

● It's fun to build castles in the air. Today millions of people are buying war bonds to pay for that dream home of the future. After the war, when that air castle settles to earth, the dreams will have to be tempered by practical reality.

No building plan will be complete or satisfactory unless it provides for certain important essentials. For instance—adequate and intelligent ventilation. Write for full details.

Q. Will a clean, odor-free kitchen be a "must"?
A. *Definitely!* No woman would go on being a willing slave to grease, grime, heat and odors if she knew a way out. That's where a Victron Ventilator comes in — to provide cool, clean comfort for the housewife in the room where she spends the greater part of her time.

Q. What's the answer to bathroom "droopiness"?
A. Let a Victron Ventilator carry away the steam before it has a chance to settle. Continual circulation of air will keep the bathroom sparkling and fragrant. Gone are the days when it was necessary to open a window and risk a draft or get all steamed up while bathing. The Victron Ventilating Fan assures a well-ventilated, even-temperated bathroom. Never again need hubby's shave suffer from the annoyance of a fogged-up mirror, for the Victron Ventilating Fan instantly whisks away the steam and moisture.

Q. Will guests continue to be hidden from view by an unwelcome smoke screen?
A. Not if the host and hostess are smart people who planned ahead. Intelligent planners are insisting on Victron Ventilators in their recreation rooms. With a flip of the wrist these clever home-owners will keep the atmosphere clear and the party bright with magic Victron Ventilation.

***Mason Pat. Off is the ec

Here's an idea with wide appeal for the huge post-war remodeling market . . . just the sort of practical and attractive idea you can use to help a home-owner make up his mind. It's a bedroom and bath for the unfinished attic—"twins" in construction and in decoration. And an ideal job for Masonite* Presdwoods, the versatile building materials made from exploded wood fiber. They go up quickly and easily over bare rafters (or old plaster), producing easy-to-paint-and-clean walls, ceilings, built-in furniture—and even flooring.

You can create the most up-to-date bathroom interiors with Masonite Presdwoods. They are available in a ready-to-paint smooth surface or in custom finishes of gleaming baked-on enamel in a variety of designs and colors. They resist moisture, scrubbing, hard wear-and-tear . . . and you can rest your mind about cracking or splintering—these hardboards are grainless. Let us send you complete data. Write Masonite Corporation, Dept. AB-3, 111 W. Washington Street, Chicago 2, Illinois.

POST-WAR PREFERENCE POINTS TO... PLYWOOD

● Here's the ball and stair-well of an all-plywood, dri-bit home, designed by Julius Gregory, New York architect.

Notice how the Bayott Weldwood walls combine the striking beauty that the public will demand in post-war homes with the advantages of dri-wall construction . . . in one durable Weldwood Hardwood Panel.

The public will demand modestly priced post-war homes with beautiful, unusual interiors.

You will be able to meet this demand . . . by building with Weldwood Plywood.

There's the advantage of dri-wall construction with its speed and, consequently, lower labor costs. Houses are ready for occupancy quicker, too.

You can obtain striking interior effects with Weldwood Hardwood Plywoods. Mahogany, Walnut, Oak, Birch . . . variety that enables you to offer color and style for every

taste at a cost all your customers can afford.

For walls you want to paint or paper, economical Weldwood Utility Panels give you a permanently smooth hardwood undersurface . . . free from grain-raise and checking.

No worry about future trouble, either. *Weldwood Plywood Panels are guaranteed for the life of any structure in which they are used.*

Be sure you're ready to capitalize on the tremendous public acceptance for Weldwood when post-war building begins. More information is yours for the asking.

Plastics and Wood
Welded for Good

Waterproof Weldwood, so marked, is bonded with phenol formaldehyde synthetic resin. Other types of water-resistant Weldwood are manufactured with extended urea resins and other approved bonding agents.

THE MENGEL FLUSH DOOR

Light . . . Strong . . . Permanently beautiful. Matches perfectly with Weldwood Walls.

WELDWOOD Plywood

Weldwood Plywood and Plywood Products are manufactured and marketed by

UNITED STATES PLYWOOD CORPORATION THE MENGEL COMPANY

New York, N. Y.

Incorporated
Louisville, Ky.

Distributing units in Boston, Brooklyn, Chicago, Cincinnati, Cleveland, Detroit, High Point, Los Angeles, Newark, New York, Oakland, Philadelphia, Pittsburgh, Rochester, San Francisco, Seattle. Also U.S.-Mengel Plywoods, Inc., distributing units at Atlanta, Jacksonville, Louisville, New Orleans. Send inquiries to nearest point.

HERE'S WHY YOUR CUSTOMERS

WILL WANT WELDWOOD:

STRUCTURAL ADVANTAGES

Dri-wall construction cuts building time as much as six weeks . . . eliminates dangers of warping, swelling and cracking in sash and woodwork due to the tons of water in plaster walls. All standard grades of Douglas Fir plywood are made in Weldwood's giant West Coast plants.

DECORATIVE FEATURES

Weldwood . . . in genuine mahogany, walnut, oak, knotty pine, figured gum, birch and Weldtex (striated Weldwood) . . . achieves the warmth and beauty of wood-paneled rooms at unbelievably low cost. Modern streamlined production has made this possible.

Inexpensive Weldwood Utility Panels, with satin-smooth hardwood faces, provide ideal wall surfaces for paper or paint . . . never show checking or grain-raise.

ECONOMY

Final results balanced against investment show Weldwood Plywood construction to give far more value per dollar than old-fashioned materials.

Because Weldwood can be installed rapidly . . . inside and out . . . building time is cut down, with resultant savings in labor cost.

DURABILITY

Weldwood Plywood Panels are crack-proof and are guaranteed for the life of the building. Weldwood walls are permanent walls, requiring no upkeep.

SPECIFY STREAMLINE COPPER PIPE FOR THE ARTERIES OF THE POST-WAR HOME

When specifying or installing a plumbing or heating piping system, the following leading questions concerning the arteries of the building should be of paramount importance. You should be able to answer them with a positive "yes".

Will the piping system continue to give peak service year after year for the life of the building?

Will the modern fixtures in the bathroom, kitchen and laundry be adequately supplied with a full flow of water?

Will the radiators maintain their maximum efficiency in heating every room in the house?

Will it be free from leaks, particularly in concealed places behind the walls and between floors and ceilings?

Will it be forever free from internal clogging due to rust?

Will it actually add to the resale value of the property?

If the answer to any of these questions is **NO**—then you are not installing the piping system

that will give you the utmost for the money expended, but if you wish to answer all these questions with a positive **YES**—then your choice will be genuine **STREAMLINE** Copper Pipe and **STREAMLINE** Fittings and you will specify and accept nothing else.

A **STREAMLINE** piping system offers the greatest possible resistance to rust and leaking water. It provides a lifetime, trouble-free, plumbing or heating system that, with the possible exception of extremely abnormal water conditions, will outlast the building in which it is installed. Plan on specifying and installing **STREAMLINE** Copper Pipe and Fittings for your postwar construction—or for replacement.

- ① Hangers have roller bearings for easy operation, fibre wheels for silence. Can't be derailed.
- ② Power springs are over-size. ③ Channel iron arms transmit spring power through a smooth arc.
- ④ Automatic brake stops door at full open or closed position. ⑤ "Automatic opener" starts door upward as latch is released. ⑥ Steel weather strip keeps weather out; simplifies and speeds up installation by locating holes for bolts and lag screws.

WHY  OVER-THE-TOP[®] DOOR EQUIPMENT WILL LEAD THE "OVER-HEAD" FIELD

The selling advantages that put "Over-the-Top" Door Equipment out in front of the over-head door field in the years before civilian goods manufacturing restrictions were in force, will assure this unique product the same envied position when the war is won. Why? Because "Over-the-Top" is not a rich man's toy, nor is it a poor man's "make-do". Its unusual simplicity of construction and operation intrigues everyone . . . makes possible over-head door convenience at a popular price. "Over-the-Top" equipment works with equal ease on standard stock doors (joined together with angle irons and bolts furnished) or on architecturally designed one piece doors. For full information on this revolutionary home convenience, write —

TO GIVE YOUR HOUSES EXTRA APPEAL
 "Open" the walls with GLASS

AFTER
 BEFORE

Here's a good thought to keep in mind as you plan your postwar houses.

Rooms that are flooded with cheerful sunshine . . . rooms with an exciting view of the outdoors . . . have the extra appeal that leads to quicker sales and satisfied owners.

The pictures above illustrate the point. Same room . . . but compare this room for beauty and appeal, before and after the walls were "opened" to daylight and view—with glass.

In some climates, large windows have presented a problem of heat loss on coldest days. But that problem has now been answered by Libbey-Owens-Ford's amazing new Thermopane, the windowpane that insulates.

Thermopane is described briefly at right. But if you want all the facts . . . the sizes, weights and types of glass in which Thermopane can be fabricated . . . insulation values . . . how to install Thermopane, write for copies of our illustrated Thermopane book and our new Technical Data Sheets by Don Graf. Libbey-Owens-Ford Glass Company, 1135 Nicholas Bldg., Toledo 3, Ohio.

Thermopane . . . the windowpane that insulates
 Makes big windows practical in any climate

Thermopane provides effective insulation because a dehydrated layer of air is hermetically-sealed between its two panes of glass. Thanks to the patented Bondermetic Seal, used to prevent dirt and moisture infiltration, there are only two glass surfaces to clean.

This double-glass windowpane fits into a modified sash, just like a single pane of regular glass . . . stays in all year. It's a modern, practical way to provide the benefits of bigger windows, with assurance of winter comfort and heating economy.

LIBBEY • OWENS • FORD

a Great Name in **GLASS**

USE "PENNVERNON" ... not just "Window Glass"

GOOD FOR BIG JOBS . . .

. . . OR LITTLE ONES

FOR QUALITY WINDOW GLASS, Pennvernon was chosen for this important industrial building. The freedom from distortion and the brilliant surface finish fit Pennvernon Window Glass for exacting jobs like this.

PENNVERNON WINDOW GLASS also gives the final touch of quality and good looks to the windows of modest homes like this.

For big buildings or small, use Pennvernon... the window glass that has made a name for itself!

A Trouble-Free Easier-to-Install Overhead Door

READY for production the moment war restrictions are lifted is an *improved* self-energizing, overhead-type CRAW-FIR-DOR. It will be more durable, more trouble free, easier to install and operate. Two important factors will make this true: (1)—The Crawford Door Company, maker of Craw-Fir-Dor hardware, has gained valuable precision experience through war-time manufacture of parts for fighting planes. (2)—An extensive research program has thoroughly explored the Craw-Fir-Dor operating principle, improving mechanical detail.

Craw-Fir-Dor can be specified now for early postwar building. Production plans are fully developed and the improved Craw-Fir-Dor will be ready within weeks after the "go-ahead" is given.

For special residential or industrial installations, write: Crawford Door Company, Detroit, Michigan, maker of a complete line of sectional, overhead-type doors.

With an authorized capital of \$1,000,000, Precision-Built Homes Corporation becomes the largest single corporate organization in the country devoted exclusively to the promotion of housing construction.

Under a broad program of expansion, the company will promote the Precision-Built System of Construction by: (1) merchandising Precision-Built Homes directly through selected department and furniture stores, as well as to operative builders, lumber dealers, contractors, realtors, insurance companies, lending institutions, prefabricators, industrial companies for employees, and through the export market; (2) licensing Precision-Builders to set up fabricating

plants in major centers to service department and furniture store customers, and other outlets for Precision-Built Homes. It is planned to blanket the country with non-competitive fabricating plants, operating on a 75-mile radius.

Precision-Built Homes Corporation will continue the intensive research and study—originated nine years ago by Homasote Company—whereby it has become possible to apply mass production methods to conventional construction, without sacrificing flexibility of design. Licensees are ready to start large-scale homebuilding—just as soon as wartime restrictions permit. Precision-Built Homes Corporation invites inquiries on all phases of its activities.

PRECISION-BUILT HOMES CORPORATION . . . TRENTON 3. NEW JERSEY

BASIC
Plumbing data
TO HELP YOU PLAN

FOR the homes you are planning to build, you want to know right now the exact sizes and dimensions of plumbing fixtures that will be available after the war. Crane Co. has prepared a basic data book which brings you this vital information. With this book you can plan the sanitary facilities in perfect safety, as all essential planning data on the Crane post-war line are given.

This booklet does not attempt to show Crane's future line which is being developed right now and will include a wide range of fixtures to meet the needs of every type of structure. When this line is introduced, you will find many new designs and improvements that have been developed by Crane designers and Crane engineers. At the same time you are assured of the sturdy reliability and the same high regard for quality that you have a right to expect from equipment carrying the name Crane.

A copy of the Crane Data Book will be sent on request.

PRODUCTS AVAILABLE NOW

The plumbing fixtures shown here are typical of the quality Crane equipment available for today's modernization and essential new construction.

BASIC ENGLISH...AGE OF FLYING AND TOMORROW'S LUXURIES

1. Bridging The Gap between the scientist's language and layman's is part of our editorial mission. Therefore, Willis N. Carrier, (center) Board Chairman, Carrier Corp., and L. N. Hunter, Research Head, National Radiator Co. test House Beautiful's Editor Ralph Bailey's vocabulary, so he can gratify, in simple basic English the public's curiosity about what makes air-conditioning tick.

2. Flying High yourself is the only way to determine how the predicted age of Private Planes will affect people's homes and community living. So Editor-in-Chief Elizabeth Gordon took a flying course. And for her down-to-earth conclusions on the subject, read "Will You Fly Your Own Plane After The War?" in the March House Beautiful.

3. Complete Coverage of the Post-War picture takes in plans for Post-War fabrics and fabric finishes. And here's Marion Gough, Chairman of House Beautiful's Post-War Textile Committee, previewing the subject with Albert C. Woodruff, Vice-President, Banco, Inc. Read her article "You Are Going To Need A New Definition Of The Word 'IMPRACTICAL'" in the March House Beautiful.

4. Trend-Spotter House Beautiful foresees a wider market for luxury goods because of increased war incomes. Finding out what Retail Stores intend doing about the matter, takes House Beautiful Editor Sara Little to John Brennan, Ad Manager of Georg Jensen, Inc. Here they discuss that store's Post-War plans for serving the larger market for luxury items.

HOUSE BEAUTIFUL is the magazine that interprets your market for you! It's FIRST in the home field... the must magazine for those who make it their business to know their business.

Just 4 Lag Screws Needed to Install the **BERRY** Aluminum Overhead

GARAGE DOOR

*No Tracks,
No Weights,
No Exposed Springs*

The simple, positive operating mechanism is completely inclosed in a single compact unit mounted out of the way on the back of the door. The door is furnished with all hardware attached, ready for installation.

THE Berry Aluminum Overhead Door is without question the easiest-to-install overhead door on the market! Insert four lag screws and hang the door. Attach the lock, striker plate, and weatherstrip—and the job is complete! No overhead tracks, braces, girders, or weights to clutter up the interior of the garage. No exposed springs or levers to pinch fingers or tear clothing.

In spite of the fact that this is probably the lightest overhead door on the market, reinforced, aircraft-type all-metal construction provides a permanently rigid structure and eliminates any possibility of sagging or buckling.

Surprisingly low in price, the Berry Door meets the requirements of even the most modest home.

Orders are now being accepted for postwar delivery.

Complete Franchises Available. Write on Your Letterhead for Complete Information

BERRY DOOR COMPANY BIRMINGHAM, MICHIGAN

Simple, clean-cut design harmonizes perfectly with any architectural scheme, and adds beauty and distinction to the building.

DESIGNED AND ILLUSTRATED BY BRIGGS DESIGN RESEARCH DEPARTMENT

"Family Foursome...that's our new bathroom!"

"The tub-shower alcove has plenty of room for disrobing, with ample space for towels and robe hooks."

"By pulling the curtain, I convert the entrance foyer into an attractive dressing room."

BUY WAR BONDS

Copyright 1944, Briggs Mfg. Co.

"...and the toilet compartment may be closed off entirely by drawing the central curtain."

This bathroom was a sensation at the Exposition of the National Association of Home Builders of the U. S. A., Chicago, January 15-20, 1945.

"The lavatory compartment becomes a second private dressing room with folding seat; and mirrors on all walls."

By the simple magic of compartments and a graceful curtain in three sections, hung from a track in the ceiling, we achieve new flexibility and usefulness for the family bathroom. The privacy and added wall-space assured by this arrangement make separate facilities available to as many as four members of the family at the same time. Equipped throughout with formed metal plumbing fixtures originated and developed by Briggs, this is the last word in postwar planning for the most-used room in every home.

people who could identify a manufacturer of insulation named Johns-Manville

and furthermore

75%

*of all insulated houses are insulated with rock wool**

**According to a report of "The American Home" Reader Consumer Panel issued August, 1944.*

And remember! Johns-Manville Rock Wool Home Insulation is **FIREPROOF**—not just fire-resistant! Of mineral composition, it will even withstand the fury of the blow torch! Only *mineral* insulating material like J-M Rock Wool can provide such permanent fire protection.

Johns - Manville

YOUR BEST SEASON TO SELL WOOL HOME INSULATION

Here are Five Reasons Why:

- 1 **28% of heating season lies ahead.** This has been a bitter winter. But it is by no means over. There are still many weeks of cold weather ahead.

- 2 **Fuel stocks are low.** Individual fuel resources are getting low. People are more conscious than ever of the need to conserve their fuel—make it last.

- 3 **Chilly spring days make home owners receptive to comfort appeal.** Not only is J-M Home Insulation needed for fuel saving, but comfort is just as important during the chilly, raw days of spring as it is during midwinter weather, or hot summer days just ahead.

- 4 **Most home improvements are made in the spring!** Many home owners give their houses an annual spring checkup—doing things they have put off in cold weather. Insulating their homes is one of the most important improvements they can make.

- 5 **Home owners who delay, risk product shortage.** Those who postpone buying insulation now may be unable to get it promptly later on. By fall the demand will again be greater than the supply.

Get these sales helps today!

At left is the latest eye-catching Johns-Manville colorful window display. Life-size figure causes people to stop and look. At right are J-M Home Insulation sales literature, direct mail pieces, and special newspaper advertisements. All the material you need for a big spring selling season. See your J-M representative or write Johns-Manville, 22 E. 40th St., New York 16, N. Y.

Building Materials

An ELECTRONIC "extra" for the Garage that can sell an Entire House!

Every builder knows how often an inexpensive "extra" can turn "lookers" into enthusiastic buyers. With a woman it may be something special in the kitchen that makes her say, "This is the house I want!", with a man something special in the basement . . . But here's an exciting modern electronic "extra" that will sell them both — an Avco Automatic Door Operator on the garage!

What is it? An Electronic device that gives the modest householder the convenience and protection of a private doorman!

How does it work? The householder drives up in his car, presses a control button on the dashboard . . . and the Avco Automatic Door Operator goes to work . . . it opens the garage doors, turns on the garage lights, (and for a slight additional cost) the yard floodlights and the lights in the entrance to the house! He drives in and parks, goes into the house, presses another control button and the Avco Automatic Door Operator closes and locks the garage doors and turns off garage, yard, and entrance lights *automatically*. The process is simply reversed when the householder is going out.

AVCO Automatic
DOOR OPERATORS
THE HORTON MANUFACTURING
DIVISION
The Aviation Corporation,

THE SALES IMPACT of this ultra-modern convenience will be plain to every builder and architect . . . The Avco Automatic Door Operator gives reliable service every day of the year at low cost . . . can be simply attached to any type garage door. We'll be glad to send you full details on request.

Builders' News Review

Latest Washington developments—News of the National Association of Home Builders and Local Associations

Private Building, Industry, Bank Groups Appear Before Taft Housing Sub-committee

GROUPS representing all segments of the private building industry took the chair before the Taft Sub-committee on housing in February. Representatives that appeared included President Joseph E. Merrion, of the National Association of Home Builders; President Eric Johnston of the U. S. Chamber of Commerce; Herbert U. Nelson, Executive Secretary of the National Association of Real Estate Boards; H. R. Northup, Secretary-manager of the National Retail Lumber Dealers Association; Douglas Whitlock, President, and Irving W. Clark, Residential Committee Chairman, of Producers' Council; and Morton Bodfish, Executive Vice-president of U. S. Savings and Loan League.

Agree on Many Points

The plans offered to the Taft Sub-committee, which will make recommendations on Housing and Urban Redevelopment to the George Committee on Post-war Economic Policy and Planning, were in substantial agreement on many points. Prime among these was the proposal that as soon as possible the Federal Housing Adminis-

tration and Federal Home Loan Bank Administration be shaken loose from the National Housing Agency and restored to the Federal Loan Agency.

Another point of agreement was that temporary public housing must be disposed of promptly, and preferably under auspices of the Treasury Department. On the matter of future public housing, the industry representatives concurred that this was a local and not a federal problem.

Merrion Testifies

President Joseph E. Merrion, of N.A.H.B., told the committee it was the aim of the builders he represented to provide adequate housing in a decent environment for every American citizen. He pointed to the current drive of N. A. H. B. members to build 50,000 units for Negroes in 1945 in order to meet the needs of this new market. (For more on Merrion's testimony see Cortright's column, page 77.)

Herbert U. Nelson, Executive Vice-president of N.A.R.E.B., stressed the need for aid in relief from the local and federal tax load, the elimination of use-

(Continued to page 124)

Portland Builders Sponsor Contractors' License Law

The Portland Home Builders Association is strongly backing Oregon Senate Bill No. 146, recently introduced, which calls for licensing of all contractors within the state.

The bill calls for a board of active contractors, three general and two "sub," who shall have authority to issue licenses to all contractors of four years experience; or to members of the armed forces upon discharge who have had one year such experience prior to entering the service. A ten dollar initial licensing fee is waived.

Can Sue Contractors Only

An interesting feature of the bill, which would affect all work over \$200, is a provision making it impossible to sue anyone for failure to perform contractor's services without first proving that the defendant was a licensed contractor.

N.A.H.B. Members to Build Homes for Negroes

From all parts of the country N.A.H.B. members have indicated their eagerness to construct homes for negroes during 1945, according to the results of a survey just completed by N.A.H.B.

The replies came in response to a letter to all local associations from Don Loftus' Emergency Committee on Housing for Negroes, pointing out an urgent request by N.H.A. for 50,000 such units to be built by private enterprise. Priorities are available and it is indicated that financing may be handled under Title VI.

Detroit Heads List

Detroit, with a promise to build 5000, topped all other cities. An early sampling of replies, which totalled more than thirty thousand units promised, indicated that most builders envision development of small communities as the best way to satisfy the need. Many negro families, builders report, have accumulated enough savings over the war period to make substantial down payments and, from inquiries received, appear eager to satisfy their desire for home ownership.

Union Proposes Specific 10-year Housing Program

The American Federation of Labor has ready for submission to Congress a 10 year housing program, calling for the creation of 10,000,000 new homes and provision of 19,000,000 jobs, to start immediately on cessation of hostilities. No estimate on its cost has been offered.

Price control continuation is urged until supply meets demand, and the group also suggested a five-man board to direct "the program's over-all policy."

Financing Changes Sought

Amendments to present F.H.A. insurance requirements are necessary, according to the union, to stretch amortization over 32 years, reduce interest rates, permit moratoriums on payments during unemployment periods and set high minimum construction standards.

STERLING H. ALBERT, until recently assistant to Frank W. Cortright at N.A.H.B., has become research director and assistant business manager of American Builder, Robert H. Morris, business manager, announced. Albert majored in commerce and economics for his B.A. at University of Wisconsin. Active in home building and financing, he served a period in underwriting and administration with F.H.A. and was later with N.H.A. before he left the government to join N.A.H.B.

"Prefab" Manufacturer Appointing Dealers

Wingfoot Homes, Inc., a subsidiary of Goodyear, plans post-war to distribute its 4-room prefabricated houses through real estate dealers, building supply houses, and lumber companies, among other outlets.

Now in production for war workers only, the homes post-war will retail for \$2000. Post-war plans call for each house to have heating equipment, range, ice-box and hot water heater, and some built-in furniture. The company will not finance home purchases.

The Company's plant at Litchfield Park, Arizona, will entertain inquiries from those interested in and capable of handling the post-war product.

F.P.H.A. Ready to Ship "Prefabs" to France

Complete with assembly instructions (in French), with drawings of every crate and panel, some 5000 prefabricated barracks are scheduled to be shipped to France by March 31st. Contracted for under arrangements between the French Government and America's Foreign Economic Administration, the 20 by 48 buildings erected under supervision of N.H.A. are intended to house 150,000 French war workers repairing German-damaged dock areas.

N.H.A. says that lumber substitutes were used wherever possible, and that a substantial saving was effected by using wall board for inside and outside wall coverings.

JOSEPH B. HAVERSTICK, elected Regional Vice-president of N.A.H.B. (Region VII), operates in Dayton, Ohio, as a partner and general manager of J. N. Haverstick & Sons, a residential construction firm founded by his father and himself in 1936. A graduate of the local high school, "Joe" attended Dayton University and took courses in Civil Engineering. Active in the formation of Montgomery County Builders Association, he was also Treasurer and Director of the National Home Builders' Association and was a leading spirit in its merger with the National Home Builders Association. He has been a Director of N.A.H.B. since that time, and is also President of the Montgomery County Builders Association.

Greater Cleveland Assn. Names 1945 Slate

Hugh Selby, recent prize-winner in N.A.H.B.'s home-design contest, has been elected president of the Home Builders Association of Greater Cleveland for 1945. Chosen to serve with Mr. Selby were Alex A. Treuhart, Vice-president; Leonard Merrick, Treasurer; Alex Brusino, Secretary.

The Association's Board of Trustees, in addition to the officers includes Elmer DeFogie, Maurice Fishman, George Goudreau, Leonard Gunderson, Ray Hummer, Benton Lefton, W. B. Marquard, and Nicholas Molnar.

An "inaugural party" for the new officers was part of the Association's regular meeting at the Hotel Cleveland in January.

Aluminum Kitchens Promised

The Aluminum Company of America has announced plans for a post-war line of aluminum kitchen furniture to supplement the kitchen utensil line of its subsidiary, Aluminum Cooking Utensil Company. Facilities used will be those of the vast Aluminum Chair plant in Youngstown, now making bomber seats.

Chicago Association Tops in Membership

With a net gain of 170 members during 1944, the Chicago Metropolitan Home Builders Association now tops all other "locals" of N.A.H.B. in number of members. The new recruits bring the windy city's total to 545 builders in good standing and "rarin' to go" on Chicago's post-war building program.

The Association also has arranged for its members to be luncheon guests at the well-known "Builders Club," Builders Building, 228 North LaSalle St., where a daily "Home Builders Table" will be set up.

Gone to War—Million and One-Half Homes!

Recently released figures indicate that more than 18 billion board feet of lumber have been purchased for purposes connected with the war during the four years from September, 1940 to September, 1944. Purchased mostly through the Central Procuring Agency on behalf of Army, Navy and all other war agencies, it is estimated that enough lumber has gone to war—not to return—to construct one and one-half million six-room houses.

Commerce Dept. Predicts: "No Revolution in Post-war Home Building"

In an article in February "Domestic Commerce." A. H. Vallin, of the Commerce Department's Construction Unit, declares that the post-war home will much resemble its pre-war neighbor, inside as well as outside. It will be built, however, of better and more lasting materials, be more comfortable in all seasons, be easier to maintain, and less costly over a period of time to own.

Most of the new materials expected to come into use, the article points out, will be readily adaptable to existing structures, and will not call for too great financial outlay on the part of home owners.

New Materials Listed

Among the new materials listed by the department are a plastic-resin-impregnated board, now available only to the military, whose post-war possibilities include floors, wall paneling and house furnishings. It is light in weight, can stand great strain, washable, and not affected by oils, gasoline or acids. Another is wood treated with a newly-discovered chemical agent which gives to ordinary wood an entire new range of uses.

Home Mortgage Recordings Show Gain Over 1943

Mortgage recordings in the nation reached \$4,610,600,000 in 1944, according to the Federal Home Loan Bank Administration. This figure, a gain of 19 per cent over 1943, the high year since the depths of the depression, was especially significant in view of the continued decline in the non-farm home building, and points a warning finger, according to real estate economists, at a very real danger, due to shortages now existent in the home market.

For the same period, foreclosures continued their eleven-year downward trend. In 1944, a drop of 32 per cent below 1943 was recorded, with only 17,500 properties going under the hammer.

N. H. A. to Have "Foreign Gov't Liaison Man"

Charles S. Ascher, Regional Representative of Region II, N.H.A., will devote half his time henceforth to directing that agency's Division of Urban Studies, in Washington, it is announced.

He will replace Jacob Crane, who has just returned from a survey of English housing, and will henceforth be the agency's liaison man with foreign governments.

Trend for Separate Bath, Lavatory Seen

The trend is growing, according to reports in building circles, in favor of separation of the bathroom from the lavatory. Many builders, feeling that costs of additional wall partitions for separate lavatory are comparatively negligible, are planning separation of the two units in post-war homes, even in the low-cost field.

Blandford Plugs Permanent Over-all Housing Agency

"It is my feeling that in housing, industries, labor and communities can better do the job on the big scale and the high quality scale that American resources require, if they ask for and obtain co-ordinated and well-executed governmental assistance," John B. Blandford, Jr., N.H.A. Administrator declared in a recent speech before the Atlanta Chamber of Commerce's Housing Committee.

While calling for "maximum reliance" upon private enterprise to achieve the nation's housing goals—which his agency has set at 12,600,000 new units in the first ten post-war years—the N.H.A. head, whose inner cabinet hasn't a "private houser" in it, reiterated his belief that the goal could be reached only with governmental assistance.

Assuming a post-war national income of \$125 billion, in terms of present prices, he declared that N.H.A.'s survey indicated one-third of the new dwellings must rent for less than \$30 per month. Technical research and lower costs must be the "long-range" approach to tapping the new low-cost market for millions of families who want homes but can't afford them, in his opinion. He suggested, however, an earlier start "by a new formula of assistance which focuses on the responsible home builder and his problems of financing and his resources of production."

Marshall Field Store Features House Models

The models of the six first prize designs shown at N.A.H.B. convention have been on display at the famous Marshall Field store in Chicago for three weeks with much interest shown.

HON. HATTON SUMMERS, Congressman from Texas, confers with **Grover A. Godfrey**, Executive Secretary, Home Builders Association of Dallas. Mr. Summers has been of assistance to home builders in their problems with O.P.A., and is much interested in the plans of the local association for a greater post-war Dallas.

Byrd Bill Calls for Control of Government Corporations

Senate Bill No. 469, introduced by Senator Byrd, of Virginia, calls for a stricter financial control by Congress of Government corporations.

The bill declares it to be "the policy of the Congress to bring Government corporations and their transactions and operations under annual scrutiny by the Congress and provide current financial control thereof." Specifically named are the Federal Public Housing Authority (or United States Housing Authority), including public housing projects financed from appropriated funds and operations thereof; Defense Homes Corporation; Federal Savings and Loan Insurance Corporation; Home Owners' Loan Corporation; and United States Housing Corporation.

The National Housing Agency, which has access to Lanham Act funds for its operation, is not included by name in the bill.

A further provision in the proposed legislation forbids future creation of such corporations by any officer or agency of the Federal Government, without direct Congressional sanction.

Urges Separation of F.H.A.

In the House, H. R. No. 1994, offered by Representative Crawford of California, calls for removal of the Federal Loan Agency from the Department of Commerce. Of particular interest to builders is a clause in this latter measure removing F.H.A. and the Federal Home Loan Bank Board from N.H.A. jurisdiction, as provided in the President's Executive Order 9070, of February 24th, 1942, and placing these agencies under jurisdiction of the Federal Loan Agency.

Cafritz Urges F.H.A. Approval of "Modern" Homes

Morris Cafritz, well-known Washington, D. C. builder and developer, has urged that F.H.A. sponsor a "functional modern building code," based on its experience in war-time construction with new materials, new uses for old materials, and improved construction techniques. Though strongly opposed to control by government architects of home design, he does feel that the "modern," especially in the field of new materials and methods, has much to commend it, and should be given proper consideration in the matter of securing government insurance.

Deluxe Design Portfolio Proposed by Builders

Many builders have proposed that a deluxe design portfolio be made up from the fifty best house designs submitted in the N.A.H.B. competition. Now under consideration by Chicago Metropolitan Home Builders, you are invited to write them or *American Builder* if you are interested in securing a copy of such an excellent sales tool for post-war building programs.

Dallas Assn. Sponsors Open Forum on "Dallas Plan"

The active Home Builders Association of Dallas (the nearest thing to perpetual motion we know in the building field) was sponsor for an open forum for builders and their friends on January 23rd. The subject was the "Dallas Master Plan," recognized widely in this country as the ideal example of scientific projection of municipal expansion. Principal speaker at the forum was Harland Bartholomew, Director of the Plan, who was introduced by President Hugh E. Prather, of the Home Builders group. An interesting and spirited forum discussion followed, under the direction of Wiley Roberts, moderator.

On February 1st, the Dallas group met in joint luncheon session with that city's Real Estate Board, and listened to a set of six snappy reports on the Chicago Home-Building Conference. Scheduled speakers included Harwood Smith, Cooper Drury, Carl Brown, Ballard Birgher, E. L. Bale, and Roland E. Pelt, all members of the association designated to "bring the Chicago conference to Dallas."

Builders Sponsor "Home for G.I. Joe" Booklet

American Home Builders Syndicate of Cleveland has issued an attractive booklet titled: A New Home Now For G. I. Joe, for the benefit of all veterans in that area interested in acquiring a new home. Compact in form, the publication covers the matter of priorities, financing, limitations on price, term of loan, monthly payments and prepayments, foreclosure possibilities, and procedure. It does not neglect to warn against "over-obligation" on the part of the veteran, stresses the desirability of hiring a reputable builder, and points out the help that such a contractor can be. The booklet is copyrighted by E. J. Raden, 4235 Mayfair Road, Cleveland.

Cortright's Column

By Frank W. Cortright

Executive Vice-President, National Association of Home Builders of the United States

Merrion before Taft Committee—Following a special meeting of the Executive Committee of N.A.H.B. held to study the replies to the recent questionnaire, policy was established and the formal statement completed. The introductory paragraphs are as follows:

"I am a practical home builder. I come before you as the President of the National Association of Home Builders of the U. S. which is composed of thousands of small businessmen like myself who have been building the great bulk of the housing units in this country. They in turn speak for the other thousands of people associated with them in the construction of homes down to the smallest carpenter and the builder who presently constructs two or three houses a year. Like the farmers, we who produce shelter have no great concentration of production or of power. The building of houses is primarily a series of small operations.

"But we and our predecessors in the home building industry have provided the thirty-seven million homes that now house the American people. In the opinion of experts—in and out of the government—this housing is, for the most part, good. It is a better job of housing than has been done in any other country of the world. There is no question that a certain number of these housing units, impressive in number but small in percentage, were built to a very low standard. There is no question that age, obsolescence, population movements in cities and the encroachment of destructive elements has made similar large volumes of housing inadequate and in some cases unfit for human habitation. The interruption of the normal complement of building during the depression and again under the restrictions of war years has built up a need that in itself is enough to strain the resources of any industry. A large part of supplying this over-all demand may well be said to be the builders' job. He willingly accepts that responsibility.

"Our membership is composed of individual home builders in 46 states and of the membership of Affiliated Local Home Builders' organizations in more than 80 cities throughout the country. It is estimated that at least 80 per cent of the individuals and firms that are currently engaged in the private home building business are included in our membership. Established on a national scale, we are the spearhead through which the activities of the many component parts of the housing industry reach their culmination. Because we initiate to a great extent the home building of the country, and because we are accustomed to viewing all of the many contributing factors to the creation of a home in their proper relationship, we feel that a large part of the responsibility for the future housing of America is ours. We are fully aware that there must be a vigorous analysis of the assets of this industry and a long range, statesmanlike regard for the whole public interest.

"Before the outbreak of war, it became apparent that an immense housing program would be necessary to house the immigrant war workers to operate new war plants and shipyards. It also became apparent that with some assistance from a new F.H.A. mortgage insurance procedure private enterprise could do the major part of the construction. Our association therefore established

(Continued to page 116)

The first ad in National Gypsum's new campaign to create pride of home ownership—and to urge home building and remodeling as soon as restrictions are lifted. These ads appear in **TIME**, **NEWSWEEK** and **BUSINESS WEEK**.

"IT'S LIKE THE THRILL OF YOUR FIRST BABY!"

THERE are some thrills in life that are hard to beat. Your first baby for example. And ranking high among thrills comes the thrill of moving into your own house. You'll know better what we mean when you see the modern home the building industry is planning for you for after the war. Inside and out, it will be designed and built for the happy carefree family life we're all looking forward to.

One of the major contributions to new homes, and to modernized homes, too, will be the postwar line of Gold Bond products made by the National Gypsum Company. A full line of 152 related wall, ceiling, and insulation materials—all improved and engineered to keep pace with modern living—guaranteed under the one well-known name... Gold Bond.

If you are planning on building or buying a new home—or remodeling an old one—consult the building experts

in your community, the architect, the contractor and the lumber and building material-dealer. They can advise you best how to get a real thrill out of your postwar living by the right kind of planning and the choice of the right materials. And when they suggest Gold Bond building materials, you'll know you'll be getting the best. National Gypsum Company, Buffalo 2, N. Y.

AMERICAN BUILDER

Editorial

The goal: Maximum home building

WITH the aid of leaders in government and business, Congress is attempting to formulate a long range program for housing and the home building industry of this nation.

The millions of men who gain their livelihood through building are deeply concerned with what Congress determines. More than that, the whole welfare of the nation is involved because of the job-making potentials of construction as well as the need for better homes by millions of citizens.

Persuasion better than coercion

Several cardinal principles must be considered in formulating this long term housing program. Without question the first of these, in which all forward-thinking building men agree, is that maximum production of good homes is a primary objective. One might phrase it as a "superabundance of good homes." That is the objective toward which we should all bend our efforts.

It is in the achieving of this goal that opinions differ. A first point here can be simply stated as being: *Persuasion and help on the part of government will do more to achieve the goal of maximum production than coercion, competition or control.*

This same private home building industry that constructed 937,000 dwelling units in 1925, and 619,000 units in 1941 can provide the 1,200,000 houses a year that National Housing Agency's statistical experts say are needed.

But maximum production of the kind called for to rehouse America will require the enlistment and willing action of hundreds of thousands of building men who have been led to understand, believe in and vigorously support such a program.

No government agency which itself attempts to build houses or to force or coerce action, or is administered by men who do not understand the problems and difficulties of the individual private builder, will ever achieve such a program.

Need vision and leadership

Public housing as such is not the answer to maximum production of homes. But *help, stimulation, leadership and vision* on the part of a government agency can do very much indeed. It is very possible that a Federal Department of Building headed by a man of cabinet rank could do such a job. The building industry in a sense is comparable with agriculture in the hugeness of its make-up and in the disorganized, scattered nature of its

operations. Just as the Department of Agriculture serves the public by aiding, encouraging, and stimulating production of farm products, so a department of housing might benefit the public by stimulating in a broad way the maximum production of good homes in all price classes, and for negroes as well as whites.

We hasten to add, however, that the Department of Agriculture does not aid and encourage private production of farm products by itself embarking on huge collectivist farm growing programs. Neither do we feel a department of building should itself produce the housing.

Congress is today studying and working towards a long range program for housing. It should not rush into this matter. It should thoroughly consider the uses of long term credit and other devices to aid and encourage low cost building, and homes for rent as well as sale. There is much it could do through research and education if these were directed by well informed men who have a practical understanding of the building industry and who are not committed to any preconceived ideas of social reform.

Rents and costs vary

The building industry has often been pilloried because of the misuse of figures. Some say its costs are "too high." By what standard? And in what areas? Regions make vast differences.

Take these two simple examples: The average urban monthly rent paid in New York State is \$41; in the District of Columbia, \$53; in Illinois, \$33. Those are the average rents paid in 1940 as reported by the U. S. Housing Census. These represent the economic cost of housing and taxes in those areas; they are a practical appraisal of housing costs.

Now in certain Southern states the average urban monthly rents in 1940 were as follows: Mississippi, \$16.26; Arkansas, \$16.75; Alabama, \$16.85. Rural rents in Arkansas averaged \$7.44 per month.

Certainly it is not fair to condemn the city builder in New York or Illinois for failing to produce houses at the rent levels of Arkansas. Yet such figures, and similar ones on family incomes, are frequently used to prove that private building has failed; so the government should step in!

Let us have *facts* in facing and planning the building future, and not rush into a program based on false assumptions.

"Took Your Tip—Sold 15 Homes to Veterans"

FIRST FLOOR PLAN

BASEMENT PLAN

IN November *American Builder* pointed out the opportunity and responsibility of building homes for returning veterans," Charles H. Cress, chairman of the board of Green Valley Homes, Lombard, Ill., says in a recent letter, parts of which follow:

"We took your tip. Today we have fifteen contracts closed. Just as I write this letter the fifth priority shows up in the morning mail," the letter continues.

"We followed your advice point for point. In your December issue you showed how we were proceeding and reproduced our first newspaper advertisement addressed to veterans.

"Now we are glad to co-operate with *American Builder* with the material for another story which will help other builders to profit by our experience," Cress' letter reads.

The principal knowledge needed by a builder launching a building program for honorably discharged veterans is a thorough understanding of the procedure he has to go through to secure priorities and approval of the veteran for borrowing his down-payment, if required.

H. Viktor Hoyer, president of Green Valley Homes, Inc., prepared the following statement after his personal experience in going through the ropes on the fifteen veterans' cases he has closed. He also had received priorities on five of the deals at press time. From here on Hoyer is quoted:

"The method of processing applications for veterans' homes, under

the 'H-3' Program, is, as follows:
 "The veteran prepares certification of eligibility form No. 1800 of the Veterans Administration in duplicate, which is handled either by the builder through the lending institution or directly by the veteran through the lending institution. It is taking approximately 3 weeks to obtain Veterans Administration certification of this form.

"Simultaneously, the preparation of form W.P.B. No. 2896, formerly PD-105 is prepared in triplicate, which is the application the veteran makes for priority and authority to erect a home. This form is encumbered with the customary red tape as follows:

"A single copy of the plan of the house must be furnished with W.P.B. No. 2896. After submitting it to the W.P.B. department of the F.H.A., we have found that it takes about 2 weeks to process and at that time 2 instruments are issued.

Notify utility companies

"The first instrument is the tentative approval of the application and the second is a letter notifying the utility companies that a priority may be issued upon their certification that the building in question can be serviced by the utility companies within the existing standards of the W.P.B. These existing standards are, briefly:

"That the gas company may extend a gas main together with the service pipe into the building for a distance of not more than 1,000 feet, and

"Second, that the electric company may extend their main together with the service drop into the building for a distance of not more than 500 feet, provided, however, that if a transformer must be installed at

(Continued to page 132)

STORIES which appeared in Chicago Daily Tribune brought many veterans to Green Valley seeking new homes such as the one shown.

FUTURE VETERAN. Sgt. Gustav Hoffman, of New York City, relaxes outside dormer-hipped house he built for himself in Italy. Hoffman is reading how the G. I. bill will help him get a real home when he leaves the army.

Plan Two G. I. Bill Dwellings for Lombard

Lombard will be the location of the first homes to be erected in the Chicago area by veterans under the G. I. Bill of Rights. Charles H. Cress, president of Green Valley Homes, Inc., yesterday said plans had been drawn and necessary steps almost completed for two returned service men to build homes in Lombard.

Ernest L. Darsey, of Elmhurst, who was in the army two years, and now is an engineer with Columbia Broadcasting system, has bought a 75 by 165 foot lot at 133 E. Morning-side av., Lombard, for \$1,800 and will build a two bedroom brick house, with garage attached, to cost \$7,500. Darsey is getting an \$1,860 down payment loan thru the veterans' bureau. He is getting the balance thru an FHA insured loan. At the same time he will get priorities for his home.

Build What They Please.

Under H-3 housing regulations of the national housing agency, set up for veterans, they may build what they please provided they can obtain noncritical materials.

Richard Kufer, of Lombard, who was in the army 14 months and now works in the Dodge-Chicago plant, bought a 50x160 foot lot at S. Stewart av., Lombard, for \$1,200. He will build a brick house to cost \$7,200.

Other Applications Made.

Three other veterans have made home building applications, Cress and we are expecting more.

G. I. JOES PLAN 3 MORE HOMES FOR LOMBARD

Three more homes to be built in Lombard by veterans under the G. I. bill of rights were announced yesterday. Last week two projects were announced. All are being designed and will be built by Green Valley Homes, Inc., of Lombard. These are the first G. I. homes planned.

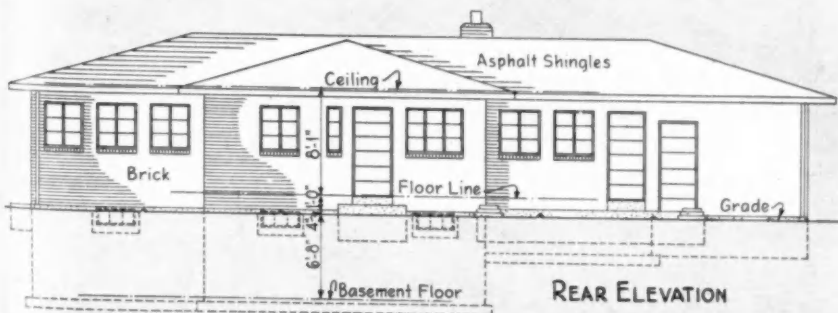

The residence above will be the home of Robert W. Hathaway, 4433 Carroll av., cost accountant with the Meyercord company. It will be built on a 75 by 145 foot lot at 245 W. Willow st., in the 118 acre development of Green Valley Homes. The owner will supply \$800 cash, borrow \$2,000 thru the veterans bureau, and the \$8,000 balance from the Madison-Crawford National bank with an FHA insured loan.

The house, designed by H. Viktor Hoyer, president of Green Valley Homes, will have a...

STEPS YOU TAKE

Building for Veterans

1. ADVERTISE to veterans that they can secure priorities for new homes now.
2. STUDY the procedure presented in this article. It works perfectly for the builder who has already run the gauntlet of regulations.
3. ANALYZE each case carefully. Sell the veteran only what he can afford or the deal will be rejected.
4. START building as soon as possible and you will attract more veterans.

THREE typical Ramsey Estate designs pre-sold for early building; each of these designs is promoted in an attractive brochure.

Please Deliver—Two Thousand Homes!

The Klines, father and son team, have orders on the books for that many houses on their three New Jersey estate projects

ORDERS on hand for homes to be built; two thousand. And each backed by sufficient cash in the till to constitute a down payment!

That is the pleasant post-war prospect that faces B. J. and Morton Kline, well-known and successful home builders in the metropolitan New York area, and promises to make their days (and nights) hectic when the green light is flashed on for civilian construction.

This father and son team, whose Ramsey Country Club Estates is one of the showplaces of northern New Jersey's wooded lake districts (*American Builder*, July 1941), is continuing its past practice of buying up large old estates on which there exist, or may be easily created, most of the facilities for pleasant vacation as well as year-round living. Ramapo Mountain Lakes, their latest acquisition, is a rolling wooded tract of 800 acres in Oakland, New Jersey, with convenient commuting facilities to New York City, as well as industrial and commercial centers in the Garden State. It includes two lakes, many bridle paths, tennis courts, and several large residences which will be turned into clubhouses, recreational and community buildings.

Already Sold 600 "Vacation" Homes

"We have found it practical and profitable," Morton Kline says, "to offer vacation facilities, and opportunities for summer and winter sports, to home owners. They are quick to see the pleasure—and the savings to themselves—in this sort of home ownership, with the chance it affords for week-end and vacation enjoyment at home, elimination of the need to pack youngsters off to summer camps, and so on. In our Ramapo Mountain Lakes project, we expect to build some summer homes, of course, in the price range of \$2500 to \$4000, but the bulk of our building will be year-round homes costing \$5000 and up. We have laid out the project to embrace 1300 homes in all, and have already received down payments on more than 600."

The majority of the homes to be constructed will be on quarter-acre plots or larger, with a minimum lot size of 7500 square feet. More than 150 of the 800 acres in the estate will be reserved for community uses, including

bathing beaches, boating and fishing facilities, tennis courts, bridle paths, community and recreational buildings. The Klines will follow their past practice of maintaining these community facilities for several years, after which they will be deeded over to an association, made up of the home owners on the tract, who will own and maintain them thenceforth.

According to Mr. Morton Kline, the type of home to be built in Ramapo Mountain Lakes will be similar to the best pre-war homes built in their other developments at Ramsey Country Club Estates and Lake Hiawatha, and shown on these pages. The organization has sold all remaining lots in these latter developments, and these orders make up the balance of its two thousand customers.

"We are always on the lookout for new materials and methods," Mr. Kline pointed out, "and are the first to use them when they have been tested and found to be an improvement over what we have used in the past. But we definitely do not anticipate any radical changes in exterior design and we do not plan to promote any, for the reason that we don't feel they would secure customer acceptance."

The Klines have always used and intend to continue using nationally advertised and proven products. Specifications in the homes pictured include:

FOUNDATIONS—Ready-Mix poured solid concrete foundations, completely waterproofed.

FLOORING—Heavy red or white oak selected double floors.

ROOFING—Black or multi-colored genuine slate roofs.

HEATING—Gas or oil-fired automatic steam, hot water or air conditioned heating.

INSULATION—Johns-Manville Rockwool insulation.

RANGES—Tappan gas ranges.

HARDWARE—All hardware by Schlage.

PLUMBING—Standard Sanitary plumbing fixtures, colors optional. Copper tubing.

ELECTRIC FIXTURES—Lightolier.

OPPOSITE PAGE: Plans for three designs above provide features that are found to be in demand by buyers of future homes.

How Bohannon Developed a Better Post-war Industrial Home

Second of two articles on this builder's successful project near San Francisco shows planning of homes and community

**YOUR
POSTWAR
HOME**
Now

**San Lorenzo
VILLAGE**

**A COMPLETELY NEW
EAST BAY COMMUNITY
DESIGNED FOR
OUTDOOR LIVING**

SALES brochure features both the individual houses and complete facilities of the development including business and play areas.

THE theme of San Lorenzo Village is Indoor-Outdoor Living which is so adaptable to the California climate. The orientation of all houses and lots are so planned that the patio is adjacent and convenient to both living room and kitchen. Appeal is largely to families with children, facilities for which constitute the greatest shortage in the crowded East Bay industrial area of San Francisco.

"There is," states Builder David D. Bohannon, "increasing evidence to show the immediate and direct effect of living environment upon work incentive. Good homes keep men satisfied and on the job, thereby increasing production; while bad housing induces dissatisfaction and heavy labor turnover, thus slowing production down. I used this evidence to prove that the incentive which our attractive, comfortable homes would give to workers to stay on the job and in-

crease production, would more than offset the additional materials required to build such homes. And I also pointed out and emphasized the fact that, after Victory instead of a 'shanty town' in which most people wouldn't even want to be seen, we would have an attractive modern community where people would be glad and proud to live and bring up their families."

Incidentally, Bohannon foresees, following the War and as a correlative of increasing decentralization of industry, a country-wide development of fully-integrated communities, such as San Lorenzo Village, attaching themselves to decentralized industrial plants. This would be a modern American adaptation of the old practice so prevalent in England and France among farmers. All owned

David D. Bohannon says: "In new development, I urge careful master planning on a community scale. The building of 500 to more than 1300 homes at a time in a single project under the pressure of war-time urgency, has given us an opportunity to develop production techniques that would normally not be used in a moderate building program. A number of builders can cooperate in such a program or an individual builder can acquire a block or a unit of property that will be a part of the planned community."

YARD is planned for recreation and gardening. Concrete slab is poured for addition of attached garage to living room wing.

Pattern for Housing Areas

and worked individual farms but had their homes in the adjoining village—at first, probably, for reasons of protection, but later because of the social, economic and cultural advantages of community living.

In this connection, Bohannon cites the fact that the Chrysler Corporation and the National Automotives Fibre Company have both purchased tracts of land near San Lorenzo Village for location of post-war plants; and points out that workers in these plants will undoubtedly want the kind of durable, attractive homes which San Lorenzo Village provides.

As in Westwood and Rollingwood, other Bohannon war-time developed planned communities, all San Lorenzo Village houses feature the separate entrance for the "guest bedroom." Here a war worker, working the night shift, for instance, can go in and out without disturbing the family. This also serves as a financial stabilizer for the community, being a possible source of additional income.

Commenting on his latest achievement, San Lorenzo Village, Bohannon told *American Builder*:

"As the result of our previous experiences in war housing, and of extensive research and architectural planning, we selected a single floor plan that combined the best living conveniences and comforts possible within the 1,000 square feet of area permitted for 3-bedroom homes; plans are shown on following pages. To this we added a concrete slab for a desirable future garage; the garage itself being prohibited during the war period. We obtained the variety and diversified architecture required in an attractive community by skillful and ingenious handling of roof elevations, exterior finishes, spacings, setbacks

and color. The effect is pleasing and harmonious, with sufficiently dissimilar individual homes to meet individual tastes and to be interesting.

"In keeping with the policy established for other Bohannon planned communities, the quality of construction in San Lorenzo Village is considerably higher than F.H.A. requirements, and affords a reasonable

preview of what may be expected in the post-war housing market within this price class. As I stated earlier, in planning San Lorenzo Village our objective was to create a permanent community that would achieve and hold through the years a high degree of public acceptance. That was our objective, and I believe we have fully attained it."

L-SHAPED living-dining room has big window areas for plenty of light and air; simple fireplace detail is modern, effective. See following pages for plans. →

BELOW: Super-market under construction in shopping district which has stores, movie, bank, etc., grouped around central parking.

Basement Forms Speed Work and Save on

AS YET there are no prefabricated basements on the market. However, many time- and cost-saving ideas on basement construction have come out of war experience where it was possible to duplicate operations on the basic plan. During the past year a number of these have been presented in *American Builder*; here is another successful method as worked out by Lee Dellinger, project manager, and John W. Williams, construction superintendent, for the Victory Housing Corporation of Utah.

This war housing firm, headed by William K. Barr, has had wide experience on Title VI projects in Utah, Colorado and Wyoming. Both conventional and prefabricated houses have been built. The one pictured here was a 48-unit job near Ogden; full concrete basements and 2-inch cavity walls of brick and cinder block back-up were used.

It will be noted that with this system the form lumber runs vertical and that forming studs are eliminated by using a spread whaler, which forms the slot for the bolts used instead of wire. The forms include the forming for the footings as well as for the walls, thereby eliminating the necessity for two separate conventional operations.

Mr. Dellinger reports: "This one item alone, we feel, justifies the forms as a labor saver. However, the ease with which we are able to pull the form from one hole and place it for another pour all in one operation is the big savings. And, of course, there is a minimum of waste in lumber, because the forms are used over and over."

The inside forms are made in two pieces, the split coming vertically to form the spacer or expander for easy removal. This expander joint is 2 inches wide and is covered with sheet metal. Once the bolts are released, after the pour, the forms can be lifted out with a boom without any prying, or danger of cracking the concrete. The outside forms also are formed in two pieces with the joint horizontal. This is done so that the cellar frames may be placed on the inside form and also the reinforcing steel may be placed with minimum of labor as shown in View 1 below.

The project had three floor plans and nine different exteriors to eliminate the duplication of any house within the block. Slack W. Winburn, well-known Salt Lake City architect, designed the houses.

1 Inside forms in place and lower half of outside forms being bolted to them. Note above, basement window frame.

2 Inside forms removed; outside forms still in place carry special removable bracket serving as runway scaffold.

FORMS stripped and moved to next pour; backfill being completed. Floor joists were used for runways during pouring.

4 MASONS follow along without delay, laying up brick with block back-up. Note progress on next house at left. **5**

More Designs from Contest

AMERICAN BUILDER'S editors are selecting designs of unusual merit from among those submitted in the N.A.H.B. design competition for presentation to its readers.

The farm house shown on this page won an honorable mention award. Entered by Carrothers and Braun of Oak Park, Ill., it was designed by Architects Braun and Del Bianco, who won several awards.

Service entrance permits farmers to wash up and change clothes before tracking through the house. The general use room can serve for sewing, ironing, and a storage for work clothes and light tools.

Dining space is provided in kitchen for winter when work is light. Dining room serves for summer season's expended help.

On next page is the design for a suburban home, entered by Joseph W. Davin, of Whatley, Davin and Co., Jacksonville, Florida. It arrived too late to be judged. Special study was given to planning the kitchen area, conveniently flanked on one side by the breakfast room and on the other by the servant's room and bath. Both bedrooms enjoy the luxury of private baths. Storage space fairly floods this house. Note two closets in bedrooms.

FOUR of the apartment buildings in Buchman's rental project; note set-back as in plot plan. At right, typical plans of these one- and two-

Post-War Rental Units for the Small Bu

HERE'S a way to build rental units post-war on those scattered lots you own or can pick up in your city or town.

Did you know—comparatively few pre-war builders cashed in on the knowledge if they had it—that it is possible to get F.H.A. insurance on rental dwellings, up to four families per unit, under Title II? With the re-

turn of peace-time building, and a rental market estimated at 25 to 35 per cent of all newly created housing units, this method offers a vehicle under which the small or average builder can get into rental housing, to be held for his own investment or to be sold to other investors when completed.

Charles Buchman, of Albany, New York, built a number of these rental units pre-war, insured then under Title II, and held them for his own investment. He plans some more when peace comes, for he feels that returning servicemen and women, the normal increase of families, and the thousands of people in his area who are just naturally renters, will be attracted to neat, well-built apartments like those shown on these pages.

The group of Buchman's pictured here was completed in 1942 in Delmar, a small town just outside of Albany. It comprises five structures of four units each, and was built on an irregularly shaped lot in a fine residential district. Where land is available, such structures may be put

up singly or in groups, since each carries its own mortgage arrangements and is a legal entity in itself. The attractive design and layout, plus the high type of tenants attracted to such projects, make the apartments an asset to almost any residential neighborhood.

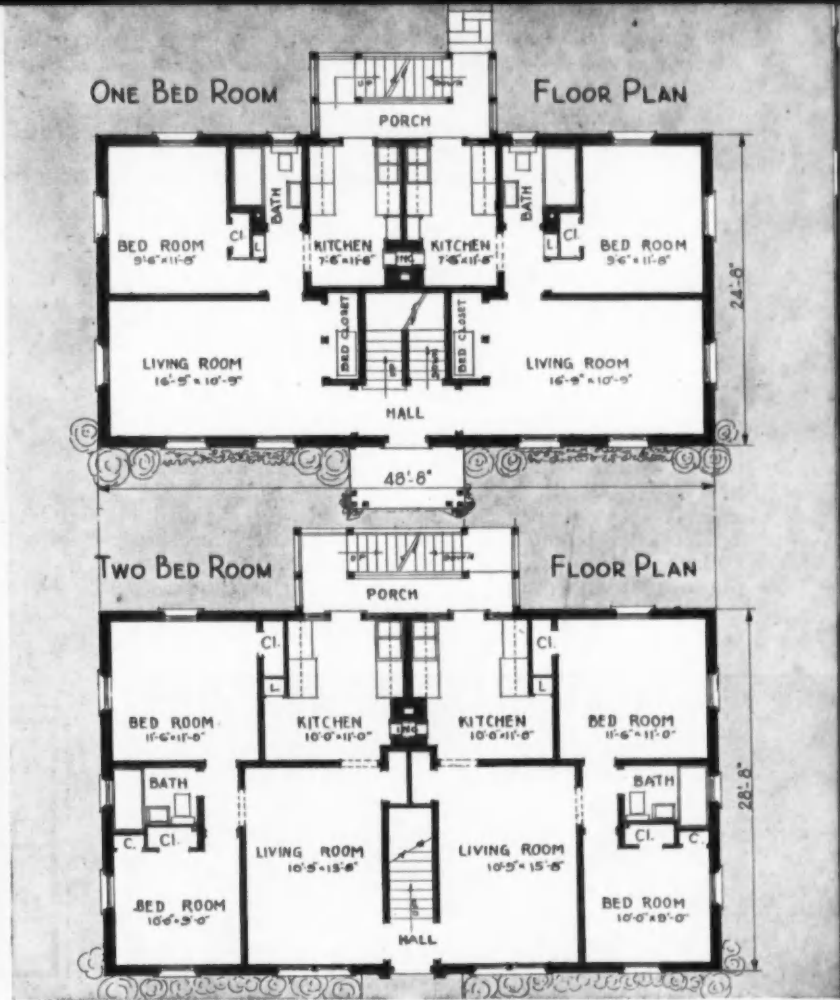

Buchman's rentals on the buildings pictured run from \$50 to \$65 per apartment, and his mortgage is \$12,000 on each four-family unit, based on an F.H.A. valuation of \$15,000. The apartments have never suffered a vacancy since their completion.

Features That Keep Tenants

Features of the Buchman project are full cellars which contain incinerator, heating boiler, domestic hot water tank, laundry trays for common use, and individual storage rooms; further storage space in the attic, reached by a scuttle from the second floor hall; facilities for each tenant to regulate his own heat by thermostat control of individual heating circuits; ample garages on the rear of the lot; con-

PLOT plan shows how builder, with F.H.A. assistants, placed units to fit irregular sites.

and two-bedroom 4-unit structures.

Builder

Charles Buchman of Albany built — and held — rental housing pre-war and intends to repeat post-war

crete walks, crushed stone drives, and rear yards lawned for recreational purposes; secondary entrances on the rear for service passageways.

An outline of Buchman's specifications includes concrete footings, 12" concrete block walls, steel columns and wood girders. His exterior walls are of selected common brick veneer on wood frame, with insulating board sheathing. 2" x 8" and 2" x 10" No. 1 common fir, 16' o.c. is called for on his floor framing, while his finish flooring is 25/32 select oak over sub-flooring. Standard thickness slate is used for his roofs over a roof framing 2" x 8" No. 1 common fir, 20' o.c. Interior finishes are paint over 1/2" plaster on 3/8" gypsum lath. Stairs

are oak treads with white pine risers, while the bathrooms are done in ceramic tile, and Pabco linoleum is used in the kitchens.

Metal kitchen cabinets are G.E., and linoleum countertop kitchen cabinets are featured, along with Miami steel medicine cabinets. For his plumbing, Buchman uses Briggs white fixtures, with a Camel Water Saver closet. The heating plant in each structure is Electrol forced, two-pipe

hot water system with oil-fired boiler and four individual circuits, U.S. Gypsum insulating plaster board is used, along with 4" rockwool in attic floors. Each house has its own incinerator, while Kelvinator refrigerators and ranges are furnished with each apartment.

The very probable rental market makes such apartment projects as Buchman's a very salable item post-

(Continued to page 136)

AMERICAN BUILDER TECHNICAL SECTION

NATIONAL HOMES FOUNDATION shows how to continue home building with proven products and a minimum of critical materials.

94

No Strain on Critical War Needs Using Gypsum

HERE are two new, sturdy, light-weight, space saving, non-bearing partitions that, except for floor and ceiling runners and a few moldings, practically eliminate critical lumber and steel.

The 1½" laminated gypsum wallboard partitions are made of three plies of standard gypsum wallboard laminated (at the mill) to form T and G edges. Panels are 2 feet wide and

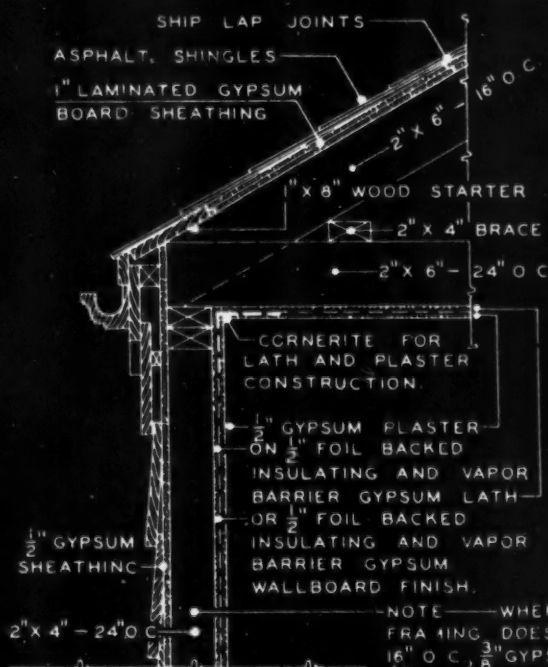

8, 9 and 10 feet long. The ceiling height units are set in place between floor and ceiling runners and secured by available wood trim. The panels are available with beveled edges requiring no further joint treatment, or they may be had with square or recessed edges. With recessed edges, the standard perforated tape joint system may be used.

In the two inch solid studless gyp-

sum lath and plaster partitions, ⅜" or ½" gypsum lath in full ceiling-high lengths is erected vertically. The gypsum lath is inserted in the slot of floor runners and flexed into the ceiling runner slot. 2"x4" horizontal temporary braces are erected on one side of the partition after which it is plastered on each side to bring the over-all partition thickness to 2 inches. Details on the next page.

1" laminated gypsum board roof sheathing under asphalt shingles combined with ⅜" fireproof gypsum sheathing in the walls protects against exterior fires, and foil-backed gypsum lath or wallboard provides insulation, vapor barrier, protects from fires.

Several additional new gypsum products are shown in the exterior wall and roof section on this page.

New Materials and New Planning Will Lift the Face of

Modernization of existing stores and shops as well as a big program of new commercial jobs will be started as soon as building restrictions are lifted.

OWNERS and occupants of commercial structures are again looking ahead to the days of competitive selling. Once more retail business will be seeking to attract customers new and old; the physical appearance and convenience of the premises will be an important factor in the post-war success of any commercial enterprise. Sensing the importance of this market, manufacturers of building materials and equipment for stores and service shops have been planning new and

ABOVE: Architect Gardner A. Dailey uses an "air curtain" to screen the entrance in his version of a future grocery store; modern display windows allow view into interior.

OPPOSITE: Post-war hardware store by Holabird and Root, architectural firm, features a well-lighted front designed for extensive use of both plate and structural type glass.

of Main Street

improved products. Likewise the efficiency of such buildings has been put through the test tube of planning. New display methods, new lighting and more attractive streamlined exteriors are now coming off the drafting boards.

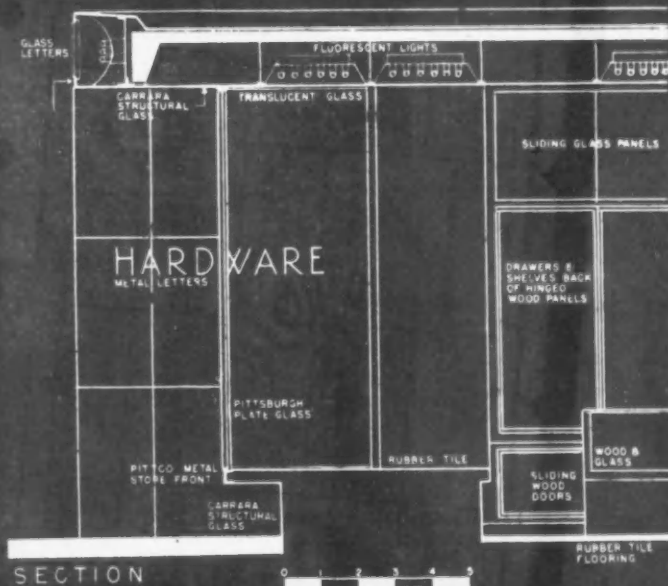

The Pittsburgh Plate Glass Co., for instance, has felt that the continuing trend toward more glass in stores warranted a new design approach and accordingly they commissioned 21 leading architectural firms to work up conceptions of the

post-war form of various types of retail establishments. Results ranged from beauty parlors and theaters to filling stations, candy shops, etc. Two of these design suggestions are reproduced below.

Some of the noteworthy features that will virtually compel customers to come into the place of business because of its new attractiveness include the elimination of all high bulkheads, incongruous window display areas and other obstructions which now stand between the store interior and the customer passing by. In fact the interior of this new type store will be an extension of the exterior set off from the sidewalk

by a wall of invisible glass.

Since entire fronts of stores will be revamped, not only single story buildings, but also multiple floor units, the task of ripping out the existing construction and replacing it will be a task in itself of no insignificant nature. The entire interior will, of course, require almost complete renovation to keep in step with building progress. Inside the store, solid partitions will give way to highly transparent glass panels, permitting full display of all merchandise and creating additional sales and display space. Glass will afford endless opportunities for individual and unique treatments.

HANDY NOTEBOOK WORK SHEETS

American Builder JOB HELPS Prepared by Don Graf

Builders' short cuts, time savers and how-to-do-it ideas for use in office or on the job. A continuing editorial feature appearing monthly. Sheets or notebooks are not for sale or available in any other form.

HOW TO REINFORCE CONCRETE LINTELS

AMERICAN BUILDER HANDY NOTEBOOK WORK SHEETS

Openings more than 4'-0" wide

In monolithic concrete walls, 2 rods $\frac{3}{8}$ " dia. placed to provide 1" of concrete below them, will carry ordinary loads on spans up to 4'-0". Diagonal rods should be placed at a 45° angle at each corner of the opening, as shown.

For openings between 4' and 8' wide, the rods should be bent up at about the quarter-points of the span. For openings 8' to 12' wide, a straight rod should be added at the bottom.

HOW TO ESTIMATE MAPLE FLOORING

AMERICAN BUILDER HANDY NOTEBOOK WORK SHEETS

Net Sq. Ft. of Floor	BOARD FEET TO ORDER			
	Nominal Size of Flooring			
	$\frac{1}{2}$ " x $3\frac{1}{4}$ " $\frac{3}{8}$ " x $3\frac{1}{4}$ " $\frac{3}{8}$ " x $3\frac{1}{4}$ "	$\frac{3}{8}$ " x $2\frac{1}{4}$ "	$\frac{1}{2}$ " x $2\frac{1}{2}$ " $\frac{3}{8}$ " x $2\frac{1}{2}$ " $\frac{3}{8}$ " x $2\frac{1}{2}$ "	$\frac{1}{2}$ " x $3\frac{1}{2}$ " $\frac{3}{8}$ " x $3\frac{1}{2}$ " $\frac{3}{8}$ " x $3\frac{1}{2}$ "
1	1.3	1.3	1.3	1.2
2	2.6	2.6	2.5	2.4
3	3.9	3.9	3.8	3.6
4	5.2	5.2	5.0	4.8
5	6.5	6.4	6.3	6.0
6	7.8	7.7	7.6	7.3
7	9.1	9.0	8.8	8.5
8	10.4	10.3	10.1	9.7
9	11.7	11.6	11.3	10.9
10	13	13	13	12
20	26	26	25	24
30	39	39	38	36
40	52	52	50	48
50	65	64	63	60
60	78	77	76	73
70	91	90	88	85
80	104	103	101	97
90	117	116	113	109
100	130	129	126	121
200	260	257	252	242
300	391	386	378	362
400	521	515	504	483
500	651	642	630	604
600	781	772	756	725
700	911	900	882	845
800	1,042	1,029	1,008	966
900	1,172	1,158	1,134	1,087
1000	1,302	1,286	1,260	1,208

The table figures read in BOARD FEET required, not in square feet. Five percent has been allowed for waste, cutting and matching. EXAMPLE: To cover 830 sq. ft. of actual floor area, you need to order 1008 + 38 = 1046 board ft. of $\frac{1}{2}$ " x $2\frac{1}{2}$ " maple flooring.

HOW TO PLAN DRIVEWAYS

AMERICAN BUILDER HANDY NOTEBOOK WORK SHEETS

It would be short-sighted indeed to lay out a driveway using the smaller dimensions shown here which allow only for smaller cars. Unless absolutely impossible, the larger figures should always be used. Driveway shown permits driving in to either garage location, exit requiring one backing up to face the car to the street.

How-To-Do-It Pointers

How To Dimension a Linen Closet

UTILITY is the basis upon which a linen closet should be planned and built. The dimensions are important because certain types of linen are stacked together and they vary in size so that waste space occurs unless some thought is given to the subject. The illustration shows a typical closet which covers average conditions, although the distances between shelves can vary to fit individual cases. Although the sketch shows no ventilation, there should be an opening at the bottom of the door and one at the top, or other means for circulation of air.

How to Know Types of Doors

INTERIOR and exterior doors are made in many styles and types of construction. They are identified by their size, system of paneling and construction. The stiles are either solid or built up of several pieces of lumber machined and glued together and covered with veneer on the exposed surfaces. These stiles and rails are moulded in any one of several forms to receive the panels of the door.

Doors are made of any one of several kinds of wood, but pine and fir are most frequently used. Exterior doors are generally made of solid pine in standard paneling and glass-light sizes. Veneered outside doors are made in so many styles that it is best to refer to a mill catalog for a complete description. Modern glues developed during the war make veneered doors as impervious to weather as solid doors.

How to Build Minimum-Size Telephone Niche

GOOD post-war houses will have facilities built into them for adequate use of telephones throughout the house. To this end, all Bell Telephone offices will respond, through their Architects' and Builders' Service, without charge, and consult in regard to planning telephone outlets, including service entrance information and the use of protector for cabinets where the service terminates in finished basement living quarters or recreation room. The niche illustrated shows minimum dimensions and location of outlet. In a normal 2 by 4 studded wall, the shelf will project.

How to Build and Nail Frame Corner

RECENTLY How-To-Do-It Pointers showed three ways to build up frame house corners. Another method has come in from Omer Moore, Toalatin, Oregon, and the illustration shows how it is done. He has used it for 30 years, his letter says, and so far he has never had a corner crack in the plaster. This method, like all others, produces a four-inch wall with proper nailing surfaces on the inside for lath or wallboard, and on the outside for sheathing. Notice the directions in which the nails are driven and their locations.

How to Know Doors by Sticker Moulds

MODERN designs, both exterior and interior insofar as doors are concerned, embrace both the austere features of flush panels and the gracefully moulded stiles and rails with inset panels. The three drawings on this page show tried and true moulding designs that will always be in demand. The ovolo B, and the ovolo A are neat patterns for flat veneered panels. Sizes of the cuts vary with manufacturers but the basic design is always the same. Widths of stiles and rails vary and are listed below. Remodeling and rehabilitation jobs—and there will be many of them at good profits—call for the matching of door mouldings as well as types and arrangement of panels. Interior architecture is as important as exterior, and the existing trim and doors in a house set the background for choosing mouldings by name.

How to Recognize the B and C Mouldings

ANOTHER widely accepted pattern of door moulding is the bead and cove pattern. It has a more sophisticated, as well as decorative reputation, and it is generally used in combination with raised panels. The double sticking of the moulding and the semi-raised panel makes a popular combination. In the space just below, which shows the most common of all, the O.G. or Ogee moulding, there is a list of stile and rail dimensions as well as standard door sizes.

Doors are the major part of any interior architecture. Walls are flat surfaces, but doors open and close and have mouldings on them to break the surface unless, of course, the door is a flat panel, and, even then, there is the door frame to outline the door opening.

How to Know Standard Sizes and Thicknesses

STANDARD OVER-ALL SIZES

2'6" x 6'6"	2'10" x 6'10"
2'8" x 6'8"	2'8" x 7'0"
3'0" x 6'8"	3'0" x 7'0"

Interior doors go down in size to 2'0" x 6'8"

Casement doors, or two doors to fit a wide opening, vary in size each from 2'0" for a 4' opening, to 2'8" for a 5'4" opening. There are eight normal sizes usually carried in stock.

STANDARD THICKNESSES

1 3/8" (1 5/16")	1 3/4" (1 11/16")
Width of stiles—4 11/16" to 4 7/8"	
Width of bottom rail—9 1/2" to 9 3/4"	
Width of top rail—approx.—4 11/16"	

Another

Chimney Details and Fireplace Construction are Important for Safety

By R. J. Alexander

INCLUDED in the plate on the opposite page are many practical details showing approved methods of constructing chimneys and open fireplaces. The chimney details on the left portion of the plate take you from the chimney top, through the second floor or any floor, to the bottom clean-out door. Both roof flashing and saddle are shown, as well as methods of increasing or decreasing the width of a chimney by varying the size of the void between the two flues.

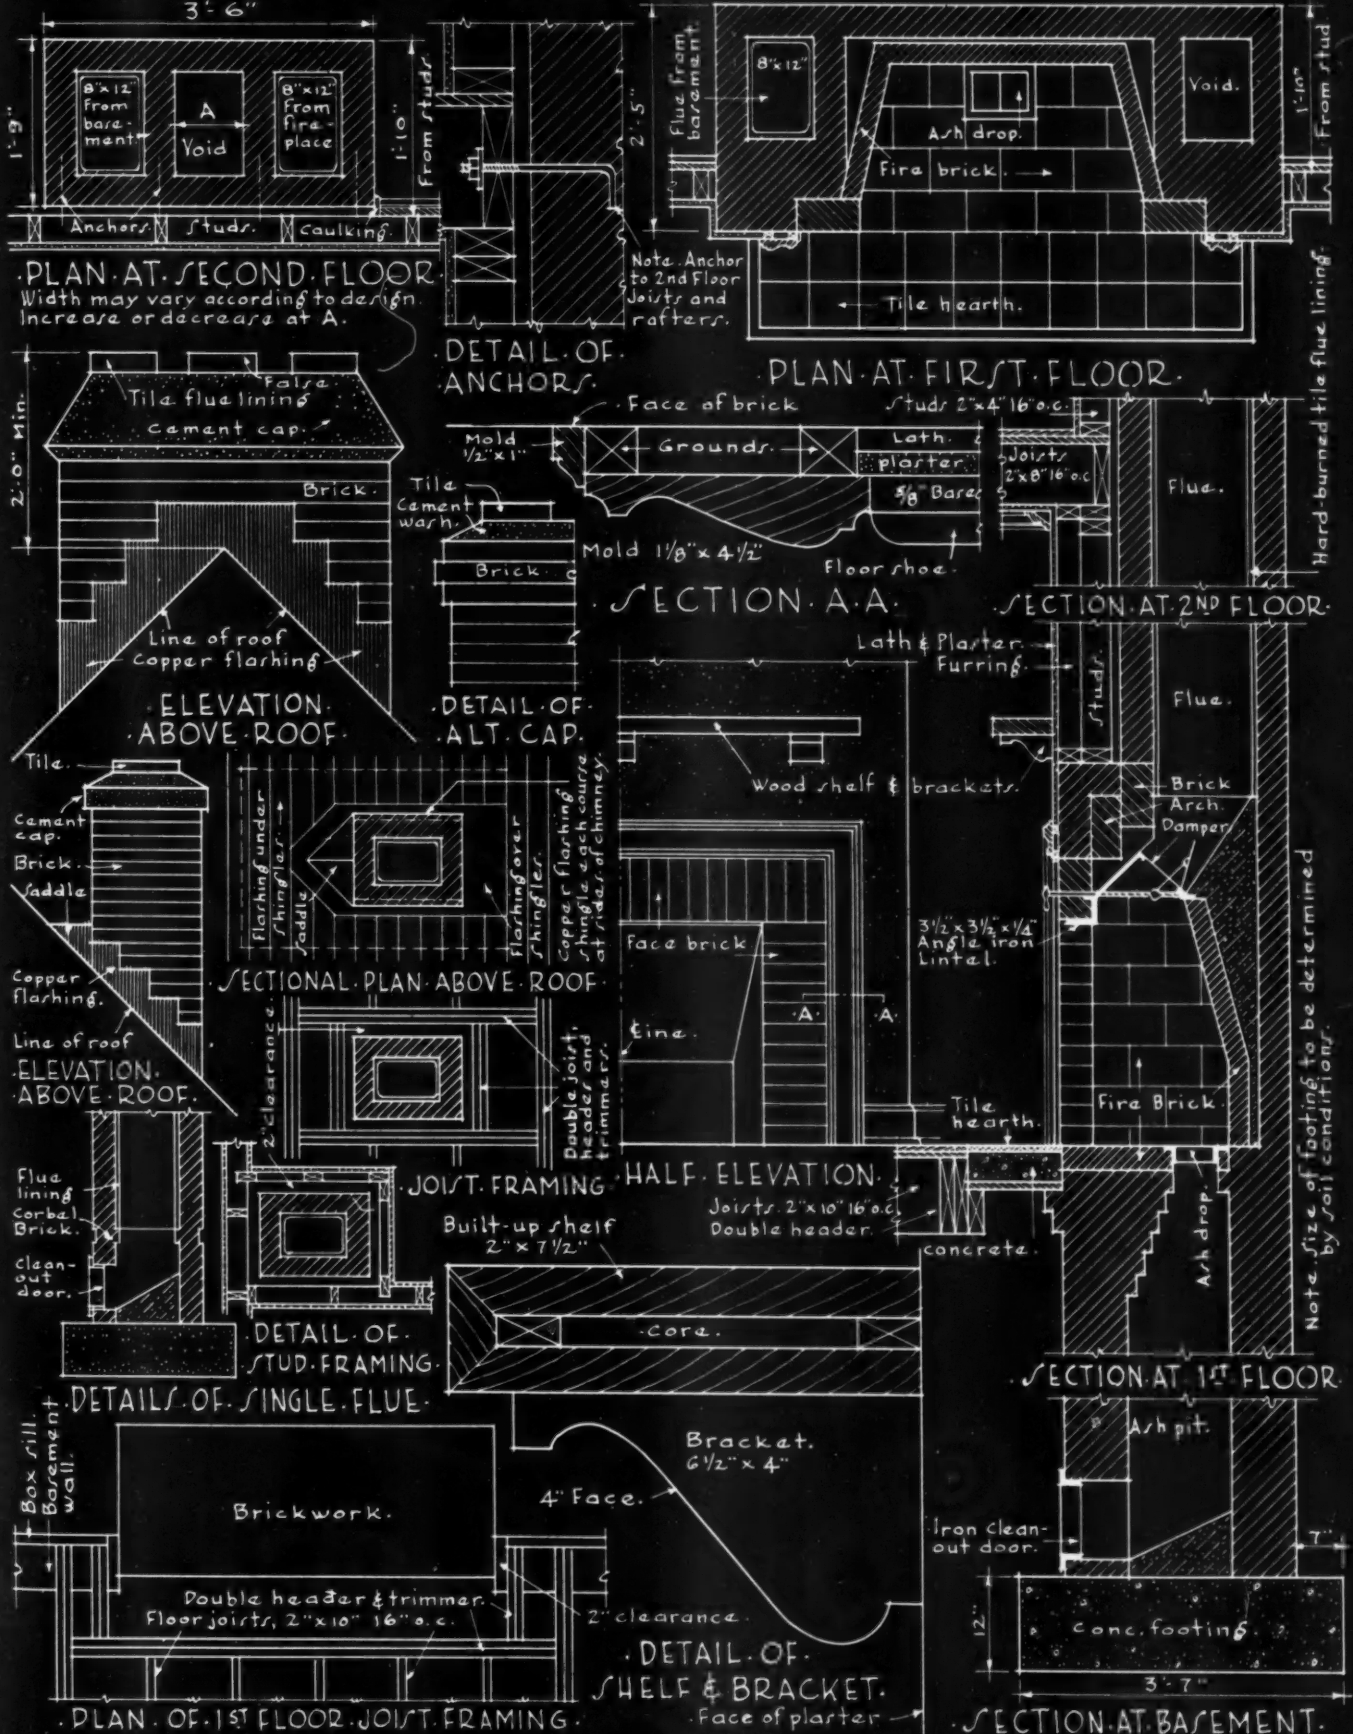

Particular attention should be paid to framing around chimneys and to avoid having any combustible materials coming into contact with the chimney. Flue linings are always recommended. The details of the fireplace construction are obvious, although opinions may vary, especially if a fireplace form is used.

Technical Education by the University of New York State Leads in Vocational Training

THE illustrations and information on this page are printed in cooperation with the Vocational Educational department of the University of the State of New York. Because there will be an unparalleled amount of home building after the war, and because the need for craftsmen will be so great, similar how-to-do-it shorts giving fundamental information on house building will be published from time to time, and some of the material will continue to come from the monographs published by the New York State Educational Department.

Army engineers and Navy Seabees have been doing wonderful jobs around the world in all kinds of construction work, as we all know and appreciate. However, much of the construction work has been quite different than the normal kind used in building a house. These items are, we hope, helpful to returning servicemen.

"Inside-Outside" Is the Consumer Market Today

A study of insulation, types of heating, double-paned windows, orientation for interior as well as exterior satisfaction, and downright home comfort for the owner will assure "black-ink" results.

LIVING ROOM interiors necessarily must include features which make the room itself completely enjoyable when inclement weather dictates staying indoors.

GLAZED sliding doors at the rear of the living room make the covered porch and garden terrace actually part of the house. Features like this are sound sales points not to be overlooked in designing.

CLIMATE does dictate, to a certain extent, the number of days that indoor-outdoor living is practical. However, by taking advantage of up-to-date building and equipment ideas, the one-story type of house can be as practical in Boston as it is in Los Angeles, and the outdoors equally enjoyed with a blanket of snow or a flood of summer sunshine.

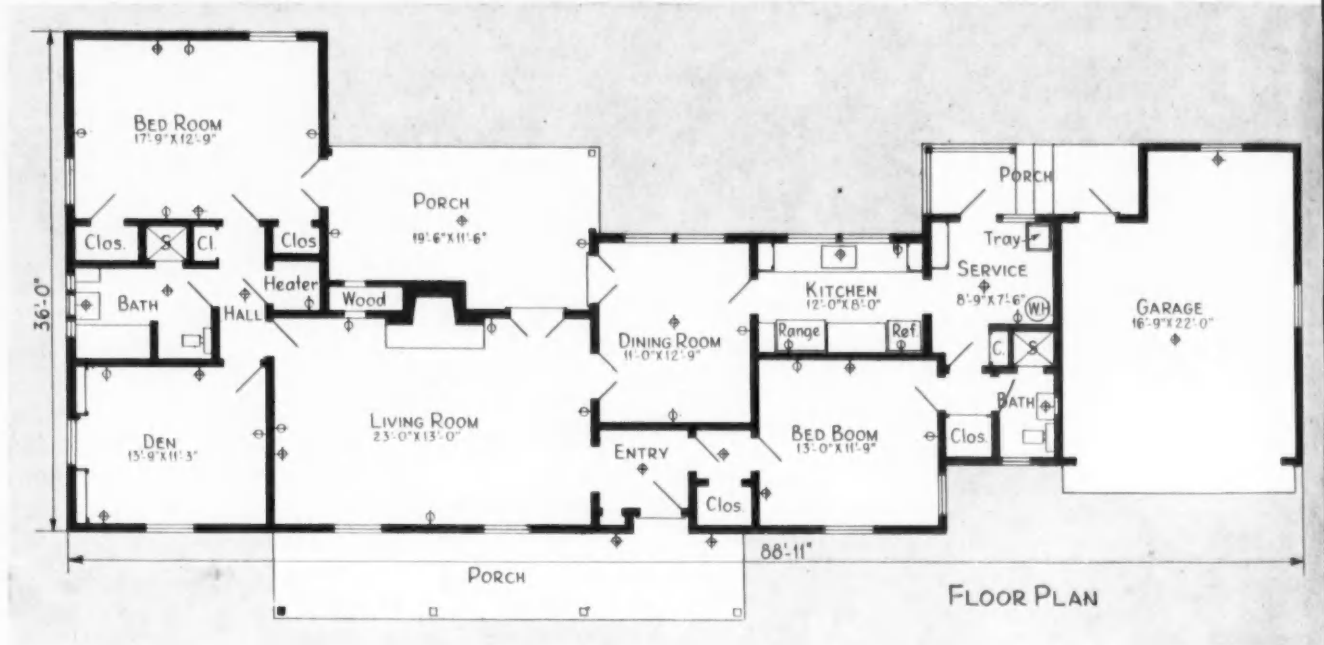

COMPLETE living facilities, so far as floor plan arrangement is concerned, are engineered into this house. Three bedrooms and three baths, plus non-interfering traffic lanes throughout the house attest to a high degree of planning.

Two Houses by Builder Kinsey Show Trend of Future Building

EXPANSIVE living is in prospect for many American families when the necessary war-time building restrictions are lifted. Families will be fed up with small rooms and crowded quarters; and the "miracle house," that many are planning for, is not so much a collection of gadgets as it is an orderly arrangement of good big cheerful rooms with plenty of daylight. "Style"

will be dictated by utility and downright common sense. Two recent homes by the active North Hollywood California builder, Kersey Kinsey, illustrate this trend. The first is a wide-flung ranch-style house of seven rooms, two baths and a double garage. The home was built for Mr. and Mrs. Edward Churchill. The other

A BROADER style of home with frontage of eighty-nine feet, illustrated below, is typically "Ranch House." Above is the floor plan which shows a well-thought-out arrangement of rooms for this type of house which has such a broad appeal during these times.

and offers a lot of comfort both indoors and outdoors
in a 5-room layout on a narrow lot.

Both are basementless houses, built on level lots. The
Churchill home is sided with wide shingles and is a
typical example of the present popular trend that is
by no means confined to the Southwest. The other, built
for Mrs. Essie B. Walling, is the standard wire-reinforced
stucco on paper on a braced wood frame. Both designs
make effective use of front and back porches to open
these homes to outdoor living. Comfort and livability
were the objectives sought, and gained, by this builder
for his clients in these two well-executed home designs.

Progressive Building Methods Boost F

NEW EFFICIENCY buildings at Issaquah Farm, viewed from highway with milk house and milking parlor in foreground.

Maurice Jackson pioneers revolutionary type plywood silo, curved rafter cow stable and milking-parlor milk house at his Issaquah Farm, Washington; E. J. Beardsley, designing engineer and contractor

ABOVE are three silos, each 14' in diameter by 28' high—90-ton capacity. They are erected as a triangular group on a concrete mat, and are roofed over with a single large roof.

LEADING dairy farmers and barn builders of Western Washington have been following with close attention the current developments on the Maurice Jackson farm at Issaquah, Washington. There Jackson, a prominent Seattle insurance man and a graduate in animal husbandry at Idaho State College, is exercising his interest in dairying by giving a practical test to the no-haymow system of farm building and dairy feeding.

He has a beautiful yet practical layout of buildings for a 60-cow herd to supply a part of the nearby Seattle milk market. The milking-parlor plan of management is provided for, with the cows going to the milking machine stalls, four at a time.

The cow barn, size 36 by 134 feet has concrete-block side walls and a Gothic roof supported by 70 curved laminated rafters designed and fabricated by Timber Structures, Inc., using $\frac{3}{4}$ inch Douglas fir strips and Laucks structural glue. Starline Co. stanchions, carriers and roof ventilators are used. The three big silos, specially constructed, carry the entire feed ration without need for overhead hay storage.

Maurice Jackson determined to try

COW BARN under construction, showing curved laminated rafters on two foot centers.

out a new idea in silo construction at the same time he was testing the all-silo feed ration plan. Through the U. S. Dept. of Agriculture he was given priorities to go ahead. The three silos are walled together with short connecting sections to form a large central feed room serving as a "throw-

down" space for all three of them. The construction of these silos is a 3-ply exterior grade Douglas fir plywood $\frac{3}{8}$ " thick applied with nails and bolts to the inside of prefabricated circular ribs of laminated wood, 44 feet in inside circumference, and 2" by 2" in cross section. Vertical

posts, $3\frac{1}{2}$ " by 4" spacer blocks midway between, combine with the heavy doorposts (6" by 8") to give a strong frame. The circular ribs are spaced 12 inches apart for the first 8 feet of height and then 16 inches up to within 4 feet of the plate. This is a very strong and permanent type of

DAIRY STABLE completed and in use, a remarkably well-ventilated and lighted pavilion for cow feeding with no hay-mow fire hazard above.

Contractor E. J. Beardsley of Seattle and Bellevue, Washington, reports that his gang of 4 men using a movable center staging set up the curved roof rafters for the barn in 12 hours.

TO LEFT is milking parlor where the cows are pneumatically milked four at a time, 32 cows per hour. Floor plan and construction details below.

This general type of farm building construction is being watched with great interest, not only in the state of Washington, but all over the country by both builders and dairy men.

CLOSE UP of side-wall construction showing the glued-up laminated barn rafters.

THE present trend in dairy barn construction points toward the use of silos in place of haymows. Three plywood-lined rib silos on the Issaquah Farm are 14 by 28 feet and are connected and roofed to form a feed room. Still to be built is an overhead carrier track from silos through center of barn.

Finer Homes Through Lower Monthly Payments

A plan to lift the quality of all post-war homes through long amortization and temporary assistance to families of low incomes, proposed by Associate Editor John E. McNamara.

LET'S get busy and show how these two things can be done: (1) How America can accelerate home building as rapidly for a peace-time battle against unemployment as airplane production was skyrocketed to win a war. (2) Adopt and fight for a plan to enable every family with an income over \$1500—many with as little as \$1,000—to get possession of what will be a "miracle" home to that family.

Let's adopt a real answer now and let Congress know we have an answer. Here is such an answer. If you like it, let us know. If you don't and feel you have a better one, let us have it in the next mail. The plan follows:

(1) Extend amortization to 40 years. (2) Down payment of 5 per cent on all houses to \$7500. (3) 10 per cent down payment on houses from \$7500 to \$10,000. (4) Monthly maintenance fee of 1/12 of 1 per cent compulsory. (5) Life insurance on mortgagor compulsory (group rate). (6) Federal assistance to families with income of less than \$1500 per year of 1/2 of interest and amortization (on an interest rate of no more than 4 per cent). Remove this assistance when family income rises by \$500 per year. (7) Federal assistance to families with incomes from \$1500 to \$2500 per year of 1/4 of interest and amortization until income rises by \$500 per year. (8) Fire and hazard insurance (already compulsory) reduced to wholesale group rate where it should be. (9) No foreclosures. Houses sold on contract with title remaining with mortgagee until debt is paid off. Mortgagee must protect buyer's equity and account to F.H.A. (10) all loans insured by F.H.A. All assistance payments paid by F.H.A. to mortgagees out of funds appropriated by Congress for encouraging home ownership.

A \$6,000 HOUSE

**Here's How this Plan Works
Including maintenance and life insurance
for family making less than \$1500.**

**5 per cent down payment \$300
(closing fees included in debt).**

Monthly payment:

Interest and amortization	\$23.82
F.H.A. Insurance (estimated)	1.35
Fire & Hazard Insurance (estimated)	1.25
Life Insurance (estimated)	.75
Maintenance reserve	4.75
	\$31.92
Less temporary gov't. assistance	11.91
	\$20.01
Plus full local taxes (estimated)	10.00
	\$30.01

With life insurance and maintenance included, this house could be bought under F.H.A. credit requirements by a family with income of slightly less than \$1500 per year. Under present system a family could qualify only if making at least \$2300 a year.

CATALOGS and HOW-TO-DO-IT INFORMATION

114—CUTTING BUILDING COSTS—is the aim of the Fred W. Wappat Company on Chautauqua Lake in New York State. Their portable electric hand saws and their radial guide for use with the saws are described in an attractive leaflet which will be interesting to any builder as well as lumber dealer.

115—HERE'S A FAIR OFFER—from the Aluminum Window Corp. of Long Island City. They will send any builder (who doesn't have one) a copy of their colorful catalog about aluminum windows for moderately-priced houses. The book has photos of homes, drawings of how the windows are installed, and detail specifications.

116—INTERESTING DEVELOPMENTS ARRIVE DAILY—and one of them is explained in a new booklet published by the National Cotton Council of America, Memphis, Tenn. It has to do with house insulation made of cotton, and it is to be remembered that all future houses will be insulated in one way or another. So, in this booklet, is pertinent information.

117—LASTING PROTECTION MEANS PREVENTION—of the deteriorating action of elements upon susceptible building materials. To this end, the Angier Corp. of Framingham, Mass., have just issued three leaflets that are packed full of useful information, and tell you, for instance, not only *why* but *how* to keep insulation dry, as well as good flashing protection at all parts of a house.

118—MUCH TALKED ABOUT RESIN—glue is in-

terestingly and thoroughly explained in a new booklet issued by the Plaskon Division of Libbey-Owens-Ford Glass Co., Toledo. These resin glues are almost "something new under the sun" because of their versatility. This is an important subject with which to be familiar.

119—FUNCTIONAL ROOF DESIGNS—is the title of a series of single sheets describing the future uses to which roofs can be put. Multiple-dwelling roofs, as well as factory, store, school, hospital and other roofs, are illustrated and described by outstanding architects in the several fields of construction.

120—STEEL BUILDING PANELS—are now being announced by the Detroit Steel Products Co., Detroit. The panels, for framing and covering material in a single unit, are thoroughly described in a new 12-page booklet, with illustrations and tables of properties for load and span. This is a new trend to keep watching.

ORNAMENTAL METALS *add BEAUTY plus UTILITY!*

As you plan now to build new structures or to remodel old ones consider the many ways ornamental metals can help you add a keynote of distinctive beauty.

Whether the building be large or small, the number of ways you can use ornamental metals is almost unlimited. For instance, aluminum windows, steel stairs, bronze and wrought iron decorations can all be used to good advantage in both residential and commercial buildings.

Ornamental metals — both ferrous and

non-ferrous — offer you a wide choice of materials, qualities, colors and characteristics to select from. Use them for all types of exterior and interior decorations. Use them, too, for utilitarian purposes — to add extra strength and serviceability to your buildings.

The fabricators of ornamental metals are anxious to work with you in the "get ready" period before tomorrow's peacetime building. For Directory of Leading Architectural Metal Fabricators, write today. Address Dept. B-3.

Barcol OVERdoor FOR RESIDENCE GARAGES

What a beauty! We wish we could sell Barcol OVERdoors like that, for good-looking new homes like that, so they could be opened and closed so easily by pretty girls like that — but naturally we can't until our vital war work is done and restrictions are lifted. In the meantime, YOU CAN PLAN on Barcol OVERdoors for after the war with full assurance that you will get all the outstanding Barcol features — tailored twin-torsion counterbalancing springs, self-latching bolts, roller-crank closing action that means easy operation without sticking, and continuous vertical track brackets for safety and strength. Be sure our data sheets are where you can find them. If you haven't any, write!

the Washington office and staff, and since November, 1941, we have met with all interested agencies of government to clarify priority procedures, to assist in preparing the FHA Title insurance provision, to present the problems of the builders to government, and to act in a liaison capacity between government and home builders in the field," Merrion said.

For the transition period the N.A.H.B. President urged an early enlargement of the H-2 program for those areas in which it would not interfere with war production. He stressed the importance of the most efficient utilization of all war housing, and the advisability of lifting L-41 immediately upon the fall of Germany. Suggesting that next in importance to war housing, the most urgent need is for adequate housing for Negroes, he stated that recent pledges from fifty cities to construct 50,000 units for rental and sale had been secured.

N.A.H.B.'s long-range housing program to assure adequate housing in a decent environment for every American family was presented. Predicated upon there being no public housing program to prevent private builders operating in the low-cost field, the following long-range plan to house the low income group can be accomplished:

1. An unprecedented volume of new housing at the lowest possible sales and rental levels. This can be accelerated by lowering site assembly costs, by lowering the cost of materials, by research, by constantly improved design, by closer co-operation with labor, the modernization of building codes, through improved financing procedures, and by better planned subdivisions and communities.

2. The strict enforcement of present health and safety codes and the promulgation of new ones to the end that substandard structures are either demolished or rehabilitated into good, safe and sanitary homes.

3. An educational campaign to insure adequate property maintenance and better housekeeping.

4. The encouragement of home ownership among the great masses of our people.

5. The rebuilding of the worn-out areas of our cities, conforming with a comprehensive city plan which will insure the most logical use of the redeveloped area, by the enactment of legislation to create redevelopment agencies with powers of eminent domain for the acquisition of land in blighted areas, the demolition of unsound structures, and the subsequent sale or lease for redevelopment.

6. Aid to individuals and families unable to pay economic rents, through local public welfare agencies receiving their funds from local, state or federal governments.

(Continued to page 118)

A HOME IS NO BETTER THAN ITS HEATING PLANT!

When post-war home building becomes an actuality, America's millions are sure to depend more and more upon architect and builder for specification or recommendation of heating equipment. That will put more responsibility on your shoulders, for a home is no better than its heating plant. But if, in planning tomorrow's homes, you choose Round Oak equipment—constantly improved during 74 years—you can be confident of superior heating and home-owner satisfaction. For every unit in this famous line of modern air conditioning, or gravity systems, is designed and built to meet the most rigid requirements in its classification—for quality, ease of installation, heating efficiency, fuel economy, and dependability.

You can figure Estimates Right-

...the First Time!

● You know you're right with a Printing Calculator because it *prints* every figure you need in your estimate.

Here, for example, is the Printing Calculator's tape on an estimate of concrete for foundation walls. The outside perimeter is 136' with walls 10" wide and 8' deep.

With 10 inches being .8333 of a foot, $136 \times .8333 \times 8 = 906.64$ cubic feet. Computing the dimensions of four corners (22.22) and five 3x2 windows (25), and deducting these totals leaves 859.42 cubic feet. This is divided by 27 to find the estimate of 31.83 cubic yards.

Check the tape... right the first time, with errors nipped and time saved!

The Printing Calculator is the ONLY machine that *prints* as it multiplies, divides, subtracts and adds. It figures estimates, payrolls, percentages, statistics, billing and all other work for builders throughout the country.

They say it benefits them by cutting time, errors and costs. Let it benefit YOU. Phone your nearest Remington Rand office *today* for a demonstration.

Deliveries according to WPB regulations.

Write to us at Buffalo 5, N.Y., for the free booklet TOPS, which tells about the all-purpose Printing Calculator.

BUY, KEEP WAR BONDS

Remington Rand Automatic Printing CALCULATOR

(Continued from page 116)

It was urged that temporary public war housing be disposed of in accordance with the terms of the Lanham Act. It was suggested that all such housing be definitely labeled now as to which of it is "permanent" and which is "temporary." Surveys should be made to determine where the occupants will go, project sites replanned to permit private enterprise redevelopment for permanent housing, and arrangements made for disposition of materials and equipment salvaged. All permanent public war housing, it was advocated, should be sold by competitive bidding to private enterprise interests.

Suggests N.H.A. be terminated at the earliest possible moment. Governed by the response to a questionnaire sampling the opinions of builders throughout the country, it was urged that the Federal Housing Administration be returned to its original independent status. A surprisingly high percentage of returns indicated that a Department of Housing with cabinet structure would not be entirely unacceptable. Answering the question as to what should be done with F.H.A. if it cannot be returned to an independent status, 50 per cent suggested that it should be under a Federal Loan Agency, 25 per cent under a Department of Housing and 25 per cent under N.H.A.

Metropolitan Detroit, a notable exception, approved the continuance of N.H.A. under certain specific conditions. Because it represents the thinking of a minority of our key men, the Detroit Association and the Montgomery County Builders Association, we reproduce in part a report by William J. Guinan, Executive Director of the Builders Association of Metropolitan Detroit.

"Post-war continuation of N.H.A. as the co-ordinating and supervising agency in the housing field... does not appear debatable to any student of the home building industry. The only question is its form, status and administrator. On the basis of his report, and his record, we would endorse Mr. Blanford without hesitation... More than any national public official we have ever known, he has been vigorously diligent in acquiring the practical and technical knowledge necessary."

"Given the job to boss the multiple Federal bureaus in one of the most chaotic periods of our history, and compelled to make decisions which made a fair compromise between necessity and desirability: between extreme left and extreme right schools of thought, he has, on the whole, done a pretty creditable job.

"We believe the post-war N.H.A. should have at least, the prestige, influence and authority of an Executive Department. That the Administrator should have a seat in the Cabinet. However, we believe that great benefit would flow from the appointment of a seven-person

(Continued to page 120)

Colossus plans a home

MEET the American giant who has right now, in the bank, ready for spending, some 12½ billion dollars . . . who enjoyed last year an income of close to 28 billion dollars.

The American Farmer!

Come peace, he'll be ready and eager to buy all the things that wartime conditions have denied him. Especially, a new home!

A new survey* of the nation's better-able-to-buy farm families, just completed for Country Gentleman, reveals that 17% plan to build all-new homes—and almost ¾ of these have already set aside the funds. 72% plan to repair or remodel their present homes. 74% expect to repair or build other farm structures. And 68% intend to spend an average of \$271 on household appliances. When you consider what this all means in terms of plumbing, wiring, paint, glass, wallpaper, hardware, fixtures and a hundred-odd other home-making items, you get a glimpse of a colossal consumer market that is absolutely vital to postwar employment and prosperity.

Maybe colossal is too puny a word to describe this giant who is going to have a better home. For, in addition, he is the purchasing agent for six million farm businesses while supplying the wherewithal to satisfy all the other needs and wants of his family of 30,000,000 people.

Is it any wonder we keep reminding you: *The biggest farm market in all history lies ahead!*

*Full report available to any responsible executive requesting it on company letterhead. Address Country Gentleman, Independence Square, Phila. 5, Pa.

What business can ignore the farmer's strength?

YOUR "G.I. JOE" WOULD CALL IT "JUSTIFIED EXPENSE ON THE HOME FRONT" . . . BUT HE'D EXPECT HIS MONEY'S WORTH BECAUSE JOE'S A PRACTICAL GUY AND HE GETS RESULTS!

HE'D WANT TO KNOW . . . "HOW GOOD IS IT?"

And our answer would be, "A ROOF IS AS GOOD AS THE MATERIAL, DESIGN, AND WORKMANSHIP THAT GO INTO IT."

Money, manpower and materials to maintain dependable service in roofs are justified when you specify ABESTO COLD PROCESS ROOFING MATERIALS. Used with any standard brand roll roofing Abesto makes a new protection that will give many more years of efficient service.

There are several plans for the roof that needs repair that you, as designers and builders, know in general. We'd like you to see the specific ABESTO PROCESS for these general plans.

Abesto materials plus Abesto Cold Process design make good workmanship simple and easy . . . so the combination of Abesto materials, Abesto Cold Process, with that good workmanship will give a roof that "G.I. JOE" would okeh as **justified expense!**

Write for our free specification sheets which show the various types of construction for which Abesto is used.

(Continued from page 118)

Advisory Commission, which would provide the Administrator's own Housing Cabinet. The members of this Cabinet would represent the general public interest, the construction industry, and organized labor. It might also be advisable to have members who would represent the interests and needs of state and city governments. This department, to be effective, must have *complete authority* over all Federal housing agencies.

"The authorization for, and the formation of this post-war agency, is the first vitally important task, which is the necessary prelude to all post-war planning in the housing field. Mr. Blandford's report ties all the loose parts together, and provides a firm foundation upon which to build a truly great social and economic housing structure," said the report.

Reaffirming N.A.H.B.'s uncompromising opposition to public housing a substantial part of its policy statement to the Taft Committee was devoted to developing a position that it is not a proper function of government to own and operate housing. Agreeing that the slums must be eliminated, and all Americans provided with decent shelter, it was argued that private industry must be encouraged to do this job. "Our Association is opposed to public housing," President Merrion stated, "not only because it will eventually destroy the entire building industry—dealers, financing institutions, and builders, but because it is the first step in the socialization of our country—the destruction of our democratic free enterprise system. Like many evils, a first step and a small dose is appealing and popular. Only by fully recognizing the social, political and industrial disaster which will come with its growth can one properly gauge the eventual result."

Exhaustion of Title VI funds seriously delays housing program. As has been the case in the past the National Housing Agency and the Federal Housing Administration have again failed to anticipate the continuing needs for insurance authorization. Many large projects are now being held up. Much of the fault this time lies in the fact that F.H.A. resisted requesting further Title VI authorization from the Congress. Builders, particularly those of the Northwest and West Coast, have flooded their Congressmen, the National Housing Administrator and the Federal Housing Commissioner with telegrams appealing for action.

As reported in the past, the matter has been delayed in the Budget Bureau and will not be cleared until early next week. From there it will have to go to the Banking and Currency Committees of both Houses. Immediate action is expected in the Senate. On the House side, N.A.H.B. will make a forceful argument before the Banking and Currency Committee. It is hoped that the entire procedure can be accomplished within the next two or three weeks.

Stanley Levels are accurately and sturdily designed for dependable service on the many and urgent wartime projects in the shop and out on the construction job.

Only straight grain stock, properly seasoned and kiln dried, is used in Stanley Wood Levels. A special process seals the wood against moisture and prevents it from warping. All glasses are carefully inspected and tested.

When reconstruction begins, you can again replace all your war-worn tools with new Stanley Tools in their familiar attractive designs and finishes.

SHINGLES and ROOFING

Take a tip
from the Navy!

**Quonset Navy Hut
insulated with
KIMSUL***

Official U. S. Navy Photo

In freezing arctic wastelands, and in the heat of the tropics, the Navy's famous Quonset huts provide welcome shelter to thousands of men, and protect vast quantities of supplies from the elements. These huts, insulated with KIMSUL, to protect against heat and cold, are the most widely-used prefabricated houses on earth. Prefabricated, easily transported and quickly constructed, these structures serve as barracks, administration buildings, hospitals, work-shops and warehouses.

The advantages which make this insulation best for the Navy's use are highly desirable in insulating homes, too. The low cost of KIMSUL is important. So is the remarkable speed and ease with which it can be installed. And KIMSUL

is one of the best heat-stoppers known. Its *k* factor is 0.27.

This is the ONLY many-layer insulation. Its construction is scientifically superior to that of loose "bulk insulations", and to blankets with only one or two plies. Why? Because you get uniform coverage over every inch of insulated area. The density doesn't vary; hence, there are no heat-leaks through unprotected spots.

Furthermore, KIMSUL, unlike other insulations, cannot sift or settle. Rows of strong stitching hold the blanket's shape permanently, prevent sagging. KIMSUL stays put, and stays RIGHT, for the life of the structure in which it is installed.

Take a tip from the Navy—specify KIMSUL insulation.

For complete technical data on KIMSUL Insulation refer to Sweet's 1945 Catalog or write Kimberly-Clark Corporation, Neenah, Wisconsin

WRAP THE
POSTWAR HOME
IN A KIMSUL
BLANKET

*KIMSUL (trade-mark) means Kimberly-Clark Insulation

LOAD FACTOR COMPARISON

The chart below shows relative weights of cotton and seven other insulating materials. These tests proved cotton to be by far the lightest of all commercial insulation.

_____	This is Cotton Insulation's Weight
_____	IT IS 40% LIGHTER THAN NO. 1
_____	IT IS 70% LIGHTER THAN NO. 2
_____	IT IS 75% LIGHTER THAN NO. 3
_____	IT IS 80% LIGHTER THAN NO. 4
_____	IT IS 83% LIGHTER THAN NO. 5
_____	IT IS 90% LIGHTER THAN NO. 6
_____	IT IS 94% LIGHTER THAN NO. 7

HANDLES EASILY

One person can insulate an attic in a few hours, or experienced applicators are available to install Cotton Insulation.

SIMPLE TO INSTALL

To lay it flat, just unroll it like a rug. For upright installations, you simply clip it on. Not abrasive. Harmless to skin and clothing.

MAXIMUM INSULATION

Exceeds other materials 4% to 36% in insulating effectiveness. Can cut fuel bills up to 30%.

LIGHT IN WEIGHT

With 20% to 25% less bulk required, Cotton Insulation represents a structural load factor 40% to 90% less than the same thickness of other materials.

WILL NOT BURN

Even a blowtorch at 1800° will not make it burn. Nor will freezing affect it. Does not attract vermin.

WILL NOT PACK DOWN

It stays fluffed and efficient with permanent resiliency. Neither age nor vibration will pack it down.

MADE TO GOV'T STANDARDS

Production is government inspected. FHA and FPMA approved. No priorities needed.

SEND FOR THIS BOOK TODAY!

In this book you will find the full amazing story of Cotton Insulation and a full detailed account of government tests. Every architect, contractor, builder, and dealer can benefit by it.

Cotton Insulation truly is the featherweight "champ"

So light is Cotton Insulation that a thousand square feet weighs but 219 pounds. Each square foot which supports it carries *less than 4 ounces of weight.*

Yet this feather-light weight is but one of the many advantages of Cotton Insulation. In insulating value it exceeds any other commercial insulation.

Cotton is no longer the insulation of tomorrow. It is the insulation of *today.* Wherever building materials are sold, it can be purchased. No priorities are required. One man can install it - just unroll it like a rug. It's truly the "champ" of the insulation field.

Private Industry Taft Testimony—

(Continued from page 75)

less, wasteful and "racket" code requirements, a unanimity of government agency regulations on building, elimination of uneconomic union labor policies, and congressional assurance now that rent control will be lifted at the earliest practical moment.

By way of "incentives" Nelson suggested a reduction of tax rates on personal or corporation income put into new construction post-war, and a use of the "offset" system in taxation under which local taxes paid could, up to a certain per cent, be offset against federal tax liability. These, he declared, plus establishment of a free market subject only to sound city planning and minimum standards for safety and health, would materially assist the home-building and real estate industry generally to play its vital role in the post-war economy.

Secretary-Manager H. R. Northup, of N.R.L.D.A., pointed out that the widely scattered nature of the home-building industry and its subdivision into many highly competitive units has made for progress and stimulated competition. This was in refutation, Mr. Northup declared, of recent statements by government agencies before the committee that the industry had neither the drive nor the funds for scientific research and technological progress.

Producers' Council Recommends

Northup issued also a strong recommendation that temporary housing not be used for farm utility buildings or barracks for temporary farm labor, stating that it was questionable if the farmer would receive as much value per dollar that way as he would by investment in adequately designed and constructed new buildings. For the first time in decades, he stated, the farmer has the money to re-establish a *sound* farm plant. All-frame temporary construction should, in his opinion, be torn down and the salvageable materials moved to the market through normal trade channels.

Douglas Whitlock, Producers' Council President, sug-
(Continued to page 126)

**Planned in advance
means built in for good**

Built-in telephone facilities in tomorrow's homes should be planned right from the start. After construction it may be impossible to install conduit in the walls—to carry concealed wires to convenient outlets.

Today, due to wartime conditions, many people must wait for telephone service. But the day will come when telephones will again be available for all. Prepare for it now:

- 1 Select in advance convenient locations for telephone outlets and mark them on your plans. Your telephone company will be glad to assist you.
- 2 Include rigid, flexible or thin-wall conduit during construction.

BELL TELEPHONE SYSTEM

Now... Pittco Metal offers two outstanding lines

PITTCO DE LUXE

Imaginative planning has made Pittco Store Front Metal artistically as well as functionally suitable for every store front need. This Pittco De Luxe awning bar gives operating mechanism and awning roll adequate protection from weather. It is designed to harmonize with any combination of shapes in the De Luxe line. The extruded method of manufacture gives it the sturdy strength, clean, sharp contours and perfect color and finish which are characteristic of Pittco De Luxe Store Front Metal. And these distinctive features explain the constant use of Pittco De Luxe on those jobs where high quality is demanded. The bars, mouldings and sash of the De Luxe line combine to make store fronts impressive and appealing.

PITTCO PREMIER

Although lighter in weight than Pittco De Luxe, the new Pittco Premier line embodies the same imaginative styling and painstaking craftsmanship which has made the De Luxe line so popular. In the Premier line architects will find that the perfect harmony between units makes it possible to create a wide variety of pleasing and attractive store fronts. The Pittco Premier construction can be set more quickly and easily than any other metal construction. All setting operations are carried on from the outside and the procedure is so simple that a substantial savings in setting time is effected. Pittco Premier is styled to provide a shallower reveal for show windows than is given by the De Luxe line. Being light in weight and moderately priced, Pittco Premier is the ideal choice for jobs which require quality metal at an economical price.

(Continued from page 124)

gested a National Committee on Construction Research to serve the industry in much the same manner as the National Advisory Committee for Aeronautics serves the aviation field.

There should be no new public housing in the reconversion period, he declared, if the materials for it would result in holding up the private building industry. He pointed out that before any new public housing was authorized at all, a realistic study must be made to establish a real need, perhaps by means such as those recommended in the Council's "Local Housing Inventories" plan. If needed, a decision must be made as to the kind of housing to be built, with proper attention paid to the cost factors. Urban rehabilitation, while necessary, must proceed only when it is certain that sufficient housing quarters are available to house the ousted, and the cleared land must be utilized in the best possible interests of the area, and not necessarily for new housing.

The Council's residential committee chairman, Irving W. Clark, outlined proposals for financing aids. These comprised F.H.A. 90 per cent insurance on loans up to \$6300, equal treatment for new and existing construction, an end to Title VI (and firm commitments to operative builders) post-war; legislation allowing direct investment in rental housing by insurance companies and other holders of trust funds. He advocated also removal of Regulation W (governing amounts that may be borrowed, and time of repayment, on certain loans in the field), and mortgage practice changes, under adequate protection which would allow home owners to secure additional advances for major repairs, replacements and modernization without refinancing.

Bodfish Against Super-agency

Morton Bodfish, Executive Vice-president of the United States Savings and Loan League, stressed the fact that need for more facts about the housing market was at community level and warned against the danger of all segments of the building field turning to the Federal Government, lest eventual complete control might be taken over by the government.

7 Reasons for using Type AC Circuit Breaker LOAD CENTERS

1. Individual circuit breaker units in 15, 20, 25, 35 and 50 ampere capacities for 120 volt AC single or double pole service.
2. Automatic thermal trip on overload and speedy magnetic disconnect on short circuit for double protection.
3. Only two handle positions — ON and OFF. No intermediate position.
4. Sizes to meet your requirements, 2 to 16 branches.
5. Solderless terminal connectors, ample wiring space and knockouts makes installation easy.
6. Two cabinet widths, 7 1/2" and 9" in surface and flush mounting makes every job fit.
7. Attractive pearl grey cover carries eye appeal and customer appeal, too.

COMETS cut quicker

(Continued from page 126)

He placed his organization on record as against the "super-agency," and in support quoted, from N.H.A. Administrator Blandford:

"There is hazard in the super department. It produces at the administrative top a diluted knowledge of organization operations, and correspondingly an ineffective point of appeal or contact with community and private enterprise groups concerned with the functions of the agency. The super department thus tends to break down into a system of virtually independent bureaus theoretically reporting to one top man, creating the semblance of responsibility without real responsibility, the pretense of efficiency without real efficiency, and an outward show of unity without real unity."

Bodfish also pointed out that N.H.A. was presently financed, to the tune of \$125,000, by agencies formerly under the Federal Home Loan Bank Board, and that N.H.A.'s policy-making officials were concerned "with promoting a permanent public housing program entirely inconsistent with and dangerous to the private credit service objectives for which our institutions are established." He recommended that all materials in the post-war period be allocated for private home building and not for government housing or large projects until fully adequate materials and labor are available for all purposes.

U. S. Chamber Recommends

Eric A. Johnston, on behalf of the U. S. Chamber of Commerce, Construction and Civic Development Committee, gave it as his opinion that the war organization of the Federal government's housing activities was not suitable for permanent peace-time operations when neither the program of housing to be built by private builders nor the building of war housing by the government will be necessary.

He recommended also that the matter of disposing of temporary war housing, publicly financed, be turned over to the Treasury Department for action. Future public housing, if needed, should be a matter for determination of and action by local governments, in his opinion.

Simple Suggestions for More Attractive Wall Design Treatments with Douglas Fir Plywood

No. 3 of a Series

Many and varied are the wall design treatments possible with beautifully - grained Douglas fir plywood. Advertisements 1 and 2 of this series* detailed two methods of using panels placed horizontally. In the rendering below—that of a smart, modern, shop interior—vertical panel arrangement predominates. Standard 4 x 8 panels are used vertically with the wainscoting placed horizontally; the unusual design effect is achieved by vertical V-grooves, carried through from floor to ceiling.

In all cases, one basic rule applies: start at the openings with vertical joints and divide the plain wall spaces in an orderly pattern, as in detail A and C. Place vertical joints at each side of top and bottom of window and at top of door openings, as in detail A, C, E, and G. If the width of the door or window opening is over four

feet, however, do not hesitate to place the panels horizontally as in detail E—for combinations of vertical and horizontal arrangements may be used in the same room with pleasing effect. Nine and ten foot lengths are available to assist in solving special problems.

The most satisfactory method of applying special patterns (or patterns made up of small panels) is to sheath with 5/16" or 3/8" Plyscord placed horizontally and apply the finish panels as desired.

DOUGLAS FIR PLYWOOD ASSOCIATION
Tacoma 2, Washington

CAN PLYWOOD BE SPECIFIED NOW FOR POSTWAR USE?

The increased capacity of the industry will make MORE Douglas fir plywood available THAN EVER BEFORE, as soon as the needs of the armed services lessen or war restrictions are lifted. There will be no reconversion delays; the same types and grades of Douglas fir plywood that are now being made will flow immediately into peace-time building and construction.

AS FUEL (MRS) EVERYTHING NIA

**EACH GUARANTEED FIREPLACE
SPEEDS A SALE**

 There's a fast-growing popular demand for the guaranteed advantages of the Bennett *Fresh-Aire* Fireplace because this unit fills an acute and long felt need. Architects and builders know that every fireplace exhausts 200 cu. ft. of air per minute from a building. They realize that in tightly constructed buildings this air must be replaced to avoid partial vacuum, downdraft, smoke. Bennett's proved answer to this problem is the *Fresh-Aire Unit*, which draws air from outdoors, warms it and distributes it evenly. Result **GUARANTEED**—no smoke, but a generous supply of warm, fresh air to make home owners comfortable.

BENNETT
Fresh-Aire
FIREPLACES

Camps, cottages and buildings of more "open" construction present a different problem. Here, as the fireplace exhausts 200 cu. ft. of air per minute, cold air, seeping in to fill the vacuum, forms a cold zone which would be beyond the heating limits of an ordinary fireplace. But Bennett *Recirculating Unit* warms the air in the room and circulates it to other parts of the building.

THE SAFETY SPARK CURTAIN

"It's a
**MONEY
MAKER**
for me"

"Yes, during depression days as well as in war time, my American floor sander has been a steady money-maker. Private homes and factories have kept me busy... and on top of that I've had a lot of war work. Yes, I'm busy."

This is but a single instance... the experience of one enthusiastic owner.

Throughout America, however, his experience can be multiplied many, many times. Contractors everywhere find that American floor sanding machines make profits for them that consistently exceed their original expectations.

Why not start planning now for larger profits? You can be ready when the new building market opens up.

We shall be happy to send you complete descriptive literature on all models. Just write us—no obligation.

FLOOR SURFACING MACHINE CO.
511 SOUTH SAINT CLAIR ST.
TOLEDO, OHIO

Here's Why
Speedmatic

ELECTRIC HANDSAWS
LEAD
THE POWER-SAW
FIELD . . .

ONE-HAND SAWING

The perfect balance, grip on top, and wide shoe, resting on the stock, not the waste piece—make SPEEDMATIC perfect for one-hand sawing! other hand is free to steady operator or hold stock.

FASTER CUTTING

Helical Gear Drive increases efficiency 11%! Abolishing the old Worm-and-Gear Drive has reduced frictional resistance in power transmission, giving faster, cleaner cuts, and a minimum chance of a stalled motor.

PERFECT BALANCE

The hand grasp in line with center of weight! Operation is free of the forces that ordinarily place twist and strain on wrist and fore-arm. Fatigue-free operation!

LIGHT WEIGHT

Strong, extremely light aluminum housing makes the most powerful saw in the field also the easiest to move about! Housing gives complete protection to mechanism.

ACCURATE

The wider shoe, resting on the stock, makes SPEEDMATIC easier to guide. Center of tilt at base assures true angular cutting—no need for allowances in layout!

SAFE

Trailer guard that cannot stick from dust and pitch automatically closes after cut! Better balance—wider shoe—one-hand sawing—all make SPEEDMATIC safer!

Looking Ahead . . .

to Greater Home Comfort with **SISALKRAFT**

- OVER SHEATHING
- BENEATH ROOFING
- UNDER FLOORS
- AROUND WINDOW AND DOOR OPENINGS
- OVER FINISHED FLOORS AND STAIRS

Millions of Americans now living in fox holes will want dependable protection from wind and moisture in their postwar homes. War has given them a new appreciation of protecting their homes against the elements.

They can't look through a wall after it's built — but they can feel cold air and moisture coming through — causing discomfort — wasting fuel.

On their war jobs millions of future home owners have used SISALKRAFT to protect war shipments from dirt, weather and wind. They know it is tear-resistant and waterproof—that it is the building paper they want in their new homes.

SISALKRAFT can be applied over the sheathing, as flashing around window and door openings, under floors and under the roofing. Installed over the studs before lathing, SISALKRAFT provides an effective moisture barrier.

You can use SISALKRAFT to help sell the homes you build. You can demonstrate its toughness by putting a piece in the hands of your prospective buyers — and asking them to test it by tearing. Look ahead — plan ahead — with SISALKRAFT.

Your local lumber dealer has complete information on SISALKRAFT. Ask him for descriptive folders, roll widths and prices. Or write direct.

Took Your Tip—Sold Veterans—

(Continued from page 81)

the time the extension of the line is made, there then must be at least 3 connections which have been approved under 3 separate priority approvals.

It is then necessary to make duplicate copies of the second instrument which in turn must be delivered to the utility companies together with a plot plan showing the lot dimensions, the house dimensions and the location of the house on the lot. They then proceed with their investigations to determine that the above conditions can be complied with and upon finding that they can, they issue form No. 3348 which is delivered to the builder. After all of these are in the builder's hands, he then delivers them to the W.P.B., who in turn will issue the final priority and authorization to build together with the allotment numbers and preference ratings applying to this type of construction.

"It may be noted here that neither of these first two operations have any bearing on the other, that is, the priority is issued without any relation to the method of financing and the eligibility certification is merely the process of the Veterans Administration allotting that portion of the loan that the veteran has applied for, of the total that the veteran may obtain under the G. I. Bill of Rights.

"If a priority is obtained, the building could be erected immediately by the builder providing the builder has some other means of financing the purchase price of the property for the veteran and not have to depend upon the Veterans Bureau and F. H. A. guarantees.

There are dozens of profitable INDUSTRIAL USES FOR TEMLOK

Armstrong's Temlok Insulation Board makes tight clean walls for foremen's offices, labs and test rooms, halls and corridors. As a lining for exterior walls, it insulates against heat and cold. Temlok is quick and easy to erect and can be reused for temporary partitions.

These are only a few of the uses for Temlok in factories and warehouses—jobs that can be sold right now, under current restrictions. Because Temlok boards are big—4' wide and 7' to 12' long—because they're light and easy to saw and nail, Temlok jobs go up fast with minimum labor. Temlok is not only good thermal insulation; it also helps prevent transmission of noise. Temlok can be left unfinished, or it can be painted.

Selling Temlok now not only adds to your current volume—it will promote future business. For full details, samples, and literature, write today to Armstrong Cork Company, 1603 Ross St., Lancaster, Pennsylvania.

**HERE'S THE FURNACE FOR
THOSE WHO DEMAND
PERFORMANCE PLUS!**

It will pay the contractor or architect who places the personal comfort and convenience of his clients first to seriously consider J&C heating equipment when planning furnace installations.

Just look at these many advantages of J&C heating equipment which mean performance plus and complete satisfaction:

J&C gravity furnaces, in sizes from 20" up, assure economical heating without sacrificing efficiency. The J&C (Bertossa) forced air unit burns either oil, gas, or coal—an important consideration in a changing fuel market. J&C units, in sizes from 135,000 to 2,800,000 BTU's, are built for either mechanical or hand firing.

Jackson & Church Co. also manufactures complete winter air-conditioning units with blower, humidifier, and air filters designed in a compact unit.

Now that our military commitments have been largely met, J&C heating equipment is available to you. Write us today for the name of your local dealer.

All J&C heating and air conditioning equipment is backed by the engineering skill, experience, and industrial integrity of Jackson & Church Co., founded in 1881.

JACKSON & CHURCH COMPANY
SAGINAW, MICHIGAN

(Continued from page 132)

"Following the approval of either or both of these applications, a home may then be contracted for and it may be for one to be built or for one already built. This contract must then accompany Veterans Administration forms 1801, 1802, 1803 and 1806, prepared by and filed through the lending institution for the completion of the application for the loan guaranteed by the Veterans Administration.

"Simultaneously, applications to the F. H. A. will have to be made in the customary manner, which will then provide the balance of the funds to pay the total purchase price. Where a building and loan assn. is making the loan for the payment of the construction cost of the home, the F. H. A. application procedure is eliminated and the building and loan assn.'s own procedure for applicants will have to be observed."

Here's a
**PLUS
 ITEM**
 FOR YOUR BUSINESS

THERE'S a profitable demand for ORANGEBURG PIPE existing right now in today's market—not to mention the enormous demand that will be created by postwar building activity.

You'll find ORANGEBURG PIPE an ideal item to diversify your sales—to replace business lost through low lumber inventories and wartime shortages of other materials. Easy for you to stock and deliver because of its light weight and long lengths. Less loss from breakage. Easy to sell because of its many advantages in installation and service.

ORANGEBURG PIPE with TAPERWELD JOINTS is the modern pipe for house-to-sewer connections, conductor pipe, downspouts, and tight-line drainage. Permanent, watertight joints prevent infiltration and entry of root growth.

ORANGEBURG PERFORATED PIPE is specially designed for septic tank filter beds, farm and muckland drainage, foundation drains. Snap couplings keep pipe in line.

**BIG DEMAND FROM NATIONAL
 CONSUMER ADVERTISING**

ORANGEBURG PIPE is consistently advertised in such leading magazines as The American Home, Better Homes and Gardens, Pathfinder, Farm Journal, Successful Farming and in many sectional publications including Rural New Yorker, New England Homestead, Pacific Northwest Trio and others.

Promote Crawford and Hackathorn

ROBERT Hackathorn has been appointed vice-president and assistant to the vice-president and general manager in charge of administrative operations, the board of directors of the Crawford Door Company, Detroit, Mich., announced recently.

The board also announced the appointment of David Crawford as vice-president and plant manager in charge of manufacturing. E. H. Hahn, vice-president and general manager, signed an announcement to friends of the company.

Why This Proposition Should Interest Alert Building Contractors

First, because the experienced building contractor is the man best qualified to do a thorough job of termite control. A thorough job of termite control involves construction knowledge, and usually demands some structural changes and modifications . . . and is a job of substantial size and substantial profit.

The ANTIMITE system of termite control is a national system that is applied by only authorized operators. It is a complete and thorough system that has national reputation and a background of more than a quarter century.

ANTIMITE has representation in many localities. But we are expanding our operation, and in consequence are looking for representatives in many more localities. The representative selected is given exclusive right in his community. He receives our full cooperation in proven business getting plans and instructions in the ANTIMITE system. No investment is required. It is a franchise that is valuable and profitable in itself, and that leads to new contacts and increased construction work.

We are inviting inquiries from building contractors who see the prestige and profit for them in becoming the local ANTIMITE representative. A proven record of integrity and progressiveness is required. If you are interested and can meet these requirements, communicate immediately with the address below.

**ANTIMITE
A NATIONAL SYSTEM OF
TERMITE CONTROL**

More attractive interiors at no greater cost

More than any other door, the Paine Rezo adds pleasing beauty to rooms while giving practical and economical help to the contractor-builder. To you, this accurately, prefitted door means easy hanging and faster finishing. It means, too, long, satisfactory service, for beneath its appealing flush surface is the greatest construction job in the entire door industry. The patented Rezo air cell combines light weight with rigid strength, prevents swelling, and minimizes warping. And this leading door adds to your reputation as a designer—for it gives the impression of larger, lighter rooms laid-out for more gracious living. No wonder over one million have already been installed everywhere. Write today for factual bulletin.

A STEEL TAPE WITH A CLAW!

The average tape rule has a blade tip that merely serves to prevent the tape from sliding into the case. Theoretically it is supposed to catch and hold the edge of the object measured—but it doesn't. The tip of the Streamline, however, is $\frac{7}{16}$ " long—a real claw that actually serves the purpose for which it was designed.

But this unusual tip is just one of STREAMLINE's outstanding features. Note the Lever Lock, to hold the reading when making inside measurements. Note the smooth action of the blade in its frictionless channel. Note the beautiful chrome case finish and simple construction, making it easy to insert spare blade when needed.

STREAMLINE has proved to precision-conscious craftsmen, mechanics and engineers that it's just as quick—just as easy to be 100% accurate.

For fast action, use the coupon!

1/4" Mall Drill—a handy, compact, light-weight (3 lb.), cool-running drill for drilling in wood, metal and plastics. Made to order for close quarters. Ruggedly constructed with steel alloy gears and extra long brushes for long service. Commutator is easily accessible for servicing. Brushes can be replaced without dismantling drill. Available for 110-volt A.C. or D.C., also 220-volt A.C. or D.C.

Mall Saw—2 powerful electric models: model 85 has 8 1/2" blade and 2 3/4" cutting capacity for cross cutting and ripping rough or dressed lumber, making bevel cuts up to 45 degrees and other sawing. Model 120 has 12" blade and 4 1/2" cutting capacity for extensive sawing and ripping of heavy lumber and timbers.

Both models operate an abrasive wheel for cutting non-ferrous metal, cutting and scoring tile, stone and concrete.

Mall Plane—(Electrically driven) is 10 times faster than a hand propelled jack plane yet does a smoother, accurate job. The operator simply guides the plane across the work—plane makes cuts up to 1/8" by 2 1/2" wide in both pine and hardwood. Cutter is under constant control. Depth of cut easily varied 0" to 1/8" by simply turning handle. Full ball bearing mounted.

**Building Contractor
Is the Man
To Stop This**

ARMY OF TERMITES

Termite destruction is a serious menace in practically every section of the country. The annual termite damage runs into millions and millions of dollars. And the fact is that termite control is not a job for the amateur. It is a job for the experienced, responsible building contractor. A thorough job of termite control demands a thorough knowledge of construction; for some construction modification is almost invariably necessary. An experienced building contractor can do a good job of termite control . . . at a good price and at a good profit.

TERRATOX

The Wood Treating Chemicals Company is a leader in the field of wood preservation and wood control. It is out of this exceptional knowledge and experience that TERRATOX has been developed. The base of TERRATOX is Pentachlorophenol, an active agent recommended by the U.S. Dept. of Agri. (and is highly effective against powder-post beetle, decay and fungus attack). TERRATOX comes in both water and oil solutions to meet varying needs. It is in concentrated form for high effectiveness and economical use. Properly used, TERRATOX not only does a highly effective immediate job of termite control, but its protective effect extends over a period of many years.

SEND FOR BULLETINS . . . sent to architects, building contractors and lumber dealers; full description and prices of TERRATOX . . . and full and easily followed descriptions of the "what" and "how" of a thorough termite control job.

ALPHABETICAL INDEX TO ADVERTISERS, MARCH, 1945

BIG REASONS
for KINNEAR
DURABILITY
AND
EFFICIENCY

1. The heavy duty power unit that goes instantly into operation when you touch the control button, assures time-saving operation. Remote control switches may be located at any point, saving steps and heat.

2. The interlocking steel slats—originated 46 years ago by Kinnear—are flexible and rugged. Many are still giving carefree service after 20, 30 and 40 years of continuous use.

In addition to these advantages the Kinnear Steel Rolling Door opens out of the way; saves wall and floor space, clears ground obstructions and when closed, provides an all-metal barricade. They are individually built to fit the opening—any size—for all old and new buildings. Write to The Kinnear Mfg. Co. Factory: 1560-80 Fields Ave., Columbus 16, Ohio.

BETTER VALUE for
Tomorrow's Homeowners

You can give tomorrow's homeowners enduring quality with stock-design doors, windows, frames and woodwork of Ponderosa Pine—and Ponderosa Pine helps to maintain home values through the years while adding charm and distinction.

For full information, write Ponderosa Pine Woodwork, Dept. MAB-3, 111 West Washington Street, Chicago 2, Illinois.

ESTIMATING
That **CLICKS**

A course of instruction for home study has been prepared by a General Contractor with more than 40 years experience. It teaches by a self correcting method, with special instruction if needed, a System of Estimating used by thousands of successful estimators and general contractors for more than 25 years.

This is strictly a course in cost estimating using full scale drawings, and specifications. The instruction covers each successive step that must be taken to prepare an estimate, complete in every detail, for bidding on lump sum contracts. Sold on a money back guarantee basis. STOP 50° SLOW UP IN SPRING CONCRETE

By Using

SOLVAY CALCIUM CHLORIDE

At temperatures 50°F. or lower the development of strength in concrete is seriously slowed up—which in turn holds up finishing and increases operation costs. The addition of Solvay Calcium Chloride to concrete mix offsets the dangerous effects of low temperatures by accelerating set and increasing early strength. This means: (1) Quicker finishing and release of forms, (2) Quicker use of finished concrete, (3) Stronger, safer concrete.

Write for free booklet "Calcium Chloride and Portland Cement." Address Dept. 34-3.

ANOTHER JOB for that speedy CARTER LOCK MORTISER

The Stanley Carter Lock Mortiser saves time for busy craftsmen — cuts a finished, perfectly centered mortise in just 30 seconds — quickly clamped on and easily adjusted — operates from any light socket.

It is easily adapted to other slotting jobs — notably the cutting of letter slots. The lock mortiser is mounted on a 2 x 4 and clamped in correct position on the door. When it is required to cut the mortise on an angle, simply bevel the under side of the 2 x 4 where it fits against the door. Once adjusted it can go from door to door on any production operation.

Send for complete information on Stanley Carter Time-Saving Tools. Stanley Electric Tools, Dept. C, 133 Elm Street, New Britain, Conn.

CARTER STANLEY TOOLS

Put **HOMELITE** **PORTABLE** **POWER**

back of your Post-War Building Drive

Just figure it this way. The day is coming when you'll have plenty of building to do. And the more you do . . . the more quickly and efficiently you do it . . . the bigger your profits will be.

So plan to build the quicker and better way . . . the electric way . . . with power tools operated by a portable Homelite gasoline-engine-driven Generator.

This easy-to-carry generator eliminates your power problems. Just set it up anywhere and get it going. It will give you all the power you need to operate saws, drills, sanders and many other time-saving electric tools.

Plan now. By the time the building boom starts, there will be plenty of Homelite Generators available.
