THE PHANTOM

Discreet Beyond A Shadow of A Doubt

When you can't compromise good looks for performance, specify the Phantom.

The Phantom is a uniquely designed, concealed sprinkler. It was developed exclusively to blend the need for architectural sensitivity with the demand for a dependable and cost efficient fire protection system. The sprinkler is virtually invisible in the ceiling,

hidden behind a cover plate easily installed flush with the ceiling tile.

And, Phantom cover plates are available in four standard and four deluxe finishes to complement every decor.

Specify the Phantom for your next project...it's discreet beyond a shadow of a doubt!

Let Your Imagination Go

A 1

Where Your Budget Won't

A complete play center may be beyond your budget right now. Don't settle for a swing here, a sandbox there. Creative Playground's modular design allows you to add exciting equipment as you add budget.

And every new module makes it **all** new again for the children.

Safe, sturdy, pressure-treated pine takes the punishment the kids can give it and all the stuff Midwestern winters can throw at

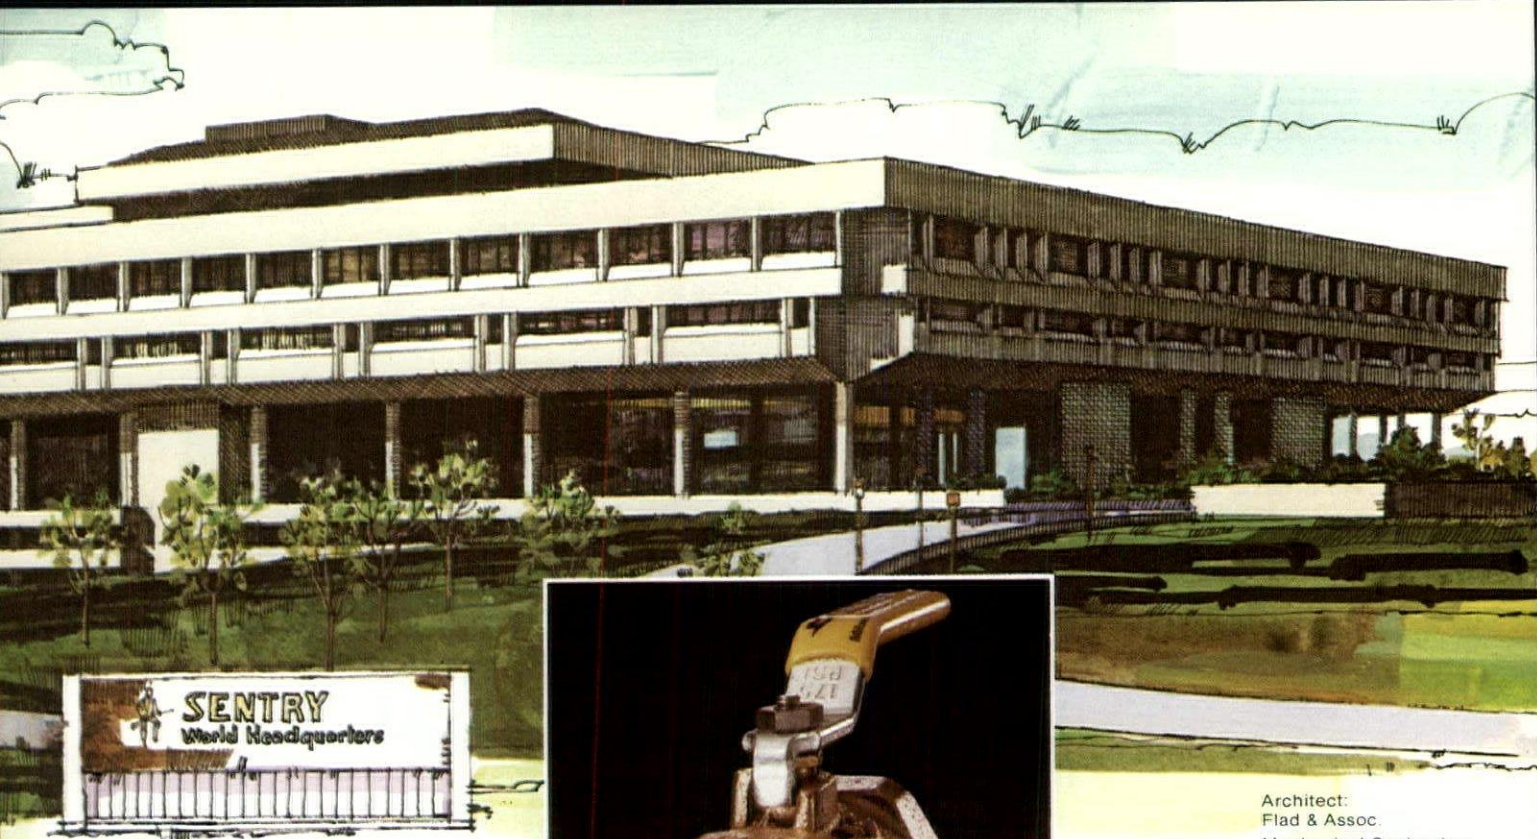

it. Time- and pleasure- proven by our seven years of experience.

The cost is low too. More often than not our bid is the lowest—or very, very competitive. And because we're close to you, shipping costs are less.

So, let your imagination go where your budget won't. Ask us to help you develop a play center plan to be completed (and paid for) over the next several years. Call us now. We're right in your own backyard.

Sentry Insurance World Headquarters—protected by Butterball® butterfly valves.

At the new Sentry Insurance World Headquarters complex, Butterball butterfly valves were specified in both the heating/ventilating and fire protection systems.

In a broad range of applications, Butterball is revolutionizing the valve industry in sizes from 1/4" through 2". Because it provides all the advantages of ball, gate and globe valves with none of their drawbacks. And usually at lower costs. Its patented butterfly

design offers full-port flow...seals of DuPont Viton® for positive shut-off. quarter turn open/close...flow contr in either direction...no traps...and excellent throttling/balancing.

Proven in service around the world, Butterball comes in a wide range of models—U/L listed, FM approved, Fed. Spec. WW-V-1967—and a choice of ends. Available in bronze or 316 stainless steel it is compatible with hundreds of chemicals & corrosive

fluids...and *all* models feature a disc and blow-out proof stem of stainless steel.

For immediate delivery, or Butterball® Data Kit, write: Milwaukee Valve Co., Inc., 2375 South Burrell St., Milwaukee, WI 53207. Or call (414) 744-5240.

WATER REGULATORS MONEY MAKERS

For dependable water pressure regulation make the Cash Connection! Cash-Acme Water Regulators automatically reduce water pressure and thus regulate water flow. This means money saved by our customers through reduced water bills, less hot water used and prolonged life of faucets, valves and fixtures. The EHR is a particularly efficient pressure regulator for high rise buildings, while EB72 is a compact, economical, household regulator.

Cash offers a line of 24 money-saving water pressure regulators. For more information write us for Cash Bulletins CC-4a and REG-5f.

PRESIDENT'S MESSAGE

A 5

As the 1981 President of the Wisconsin Society of Architects, it's my pleasure to greet you with best wishes for the New Year. The WSA embarks on the challenges of 1981 with an overriding commitment to responding to matters of challenge and interest to the architectural community and construction industry in the year to come.

A small example of the commitment of the WSA towards the profession of architecture and the construction industry is this first edition of the WSA CONSTRUCTION INDUSTRY HANDBOOK. We are especially pleased that this HANDBOOK is being circulated not only to WSA members, but to numerous Wisconsin contractors. We are hopeful that the wealth of information contained in this HANDBOOK, including names and addresses of all WSA members, a listing of Wisconsin architectural firms in which a WSA member is a principal, key directories, and important references to other agencies will be of assistance to our members and others in the construction industry.

I strongly feel that communications is extremely important. Whether such communications be between an architect and a client, an architect and an allied professional, or an association and the multiple publics it responds to makes no difference. This HANDBOOK is presented to you as one small cog in this communications process.

Elsewhere in this HANDBOOK you will find an itemization of many of the areas of service and communications which make up the WSA. A continued priority of the WSA is to communicate to members and nonmembers alike the multiple areas of WSA activity and programming in order that architects and other allied professionals can recognize and **use** the WSA as a tool towards design excellence, professionalism, influencing public policy, and broadening the public's awareness of Architecture and the Built environment.

It is my hope that during 1981 the WSA can broaden the public's awareness of Architecture and its effect and benefit to the built environment. To WSA Mem-

bers who read this message . . . I challenge you to be visible and vocal in furthering this public awareness and to consider the WSA as an extension of your professionalism. In this regard, please feel free to call upon the Officers, Directors, Membership, and Staff of the WSA for assistance. To nonmembers who have occasion to read this message . . . recognize that we, as architects, are both proud of and challenged by our impact and influence on daily life. Understand our commitment towards communications and our willingness to relate with you as best we can.

On behalf of the Executive Committee of the WSA we thank the advertisers for making this publication possible and challenge all of you to utilize the various resources of the WSA as they best fit your needs and serve the public good.

A handwritten signature in cursive script, reading "Walter E. Zoller".

Wisconsin Society of Architects Construction Industry Handbook

First Edition, February 1981

The WSA Construction Industry Handbook is published as the February issue of the Wisconsin Architect as a reference handbook for all readers on matters pertaining to the Wisconsin Society of Architects, as well as hard-to-find reference material for architects and others involved in the construction industry. A special recognition to WSA President Walter Zoller for his efforts in advocating the preparation of this Handbook.

The initial circulation of the Handbook is to all members of the Wisconsin Society of Architects of the American Institute of Architects (WSA). Additionally, copies of the Handbook have been sent to all members of the Associated General Contractors who maintain membership in Wisconsin.

Your comments and suggestions are appreciated with reference to other individuals or organizations that should receive copies of this Handbook next year, as well as revisions or changes in content that you feel are appropriate.

One last word. Please continue to refer to the advertising portion of the Handbook when looking for products or services. Without this support the Wisconsin Architect and this Handbook would not be possible.

NOTICE: WSA cannot be responsible for materials that have been rendered obsolete or revised since this *Handbook* went to press.

WHO'S WHO IN WSA

Go Straight To Cronstroms When Your Designs Call For Curves

B 2

Lake Superior Maritime Museum, Architect: Architectural Resources, Inc., Hibbing, MN; Army Corps of Engineers

Even though energy efficiency is the watchword in public buildings today, that doesn't mean you have to shackle yourself to time worn designs. Instead, consider the benefits of Cronstroms CTS thermal barrier system. Its energy-saving design eliminates metal-to-metal contact in curved or straight designs. And that means no frost or condensation, even at temperatures of -30°F . Of course, that's something you'd expect

from Cronstroms. Cronstroms was the **first** to develop this thermal break system 14 years ago.

You'd also expect to find unusual applications of the CTS system. You will.

At the Lake Superior Maritime Museum located on Minnesota's waterfront in Duluth, a location buffeted by winter's bone-chilling gale force winds, the architect specified Cronstroms CTS thermal barrier energy saving walls and windows for a new addition linking two sections. Notice the bent mullions of the upper section.

You'll find another distinctive CTS design at First Federal Savings and Loan where curved mullions frame the glass entry doors.

Over 50 Years

Now FABCON has a brick finish panel - **FABBRICK™**

Fabcon introduces a whole new way to get the look and feel of brick—at a fraction of the cost and time of old-fashioned brick and block construction. It's called Fabbrick™. This latest Fabcon insulated panel is an exclusive design, based on a unique patent-applied-for manufacturing process. Good-looking as it is, Fabbrick™ still offers all the features that have made Fabcon prestressed precast insulated sandwich panels famous. Fast construction. Durability and low maintenance. Thermal efficiency. Sound and fire resistance.

Give your next building the distinctive look of Fabbrick™. Call Gary Janisch, vice president marketing, for all the details.

Look what's on the drawing board for tomorrow.

Yes, it's natural gas. Efficient, dependable natural gas. There's a good supply of proved reserves for the present and vast untapped reserves for the future.

Conservation by all customers has been responsible for a great portion of the gas that is now available. Conservation by customers means that we can have more natural gas longer into the future while we develop other types of gas energy — such as coal gasification.

If you have questions or need information, contact us. Wisconsin Natural Gas, 233 Lake Avenue, Racine, Wisconsin 53403, (414) 637-7681. We have the complete natural gas story including availability, cost and conservation measures.

RECYCLE YOUR BUILDING

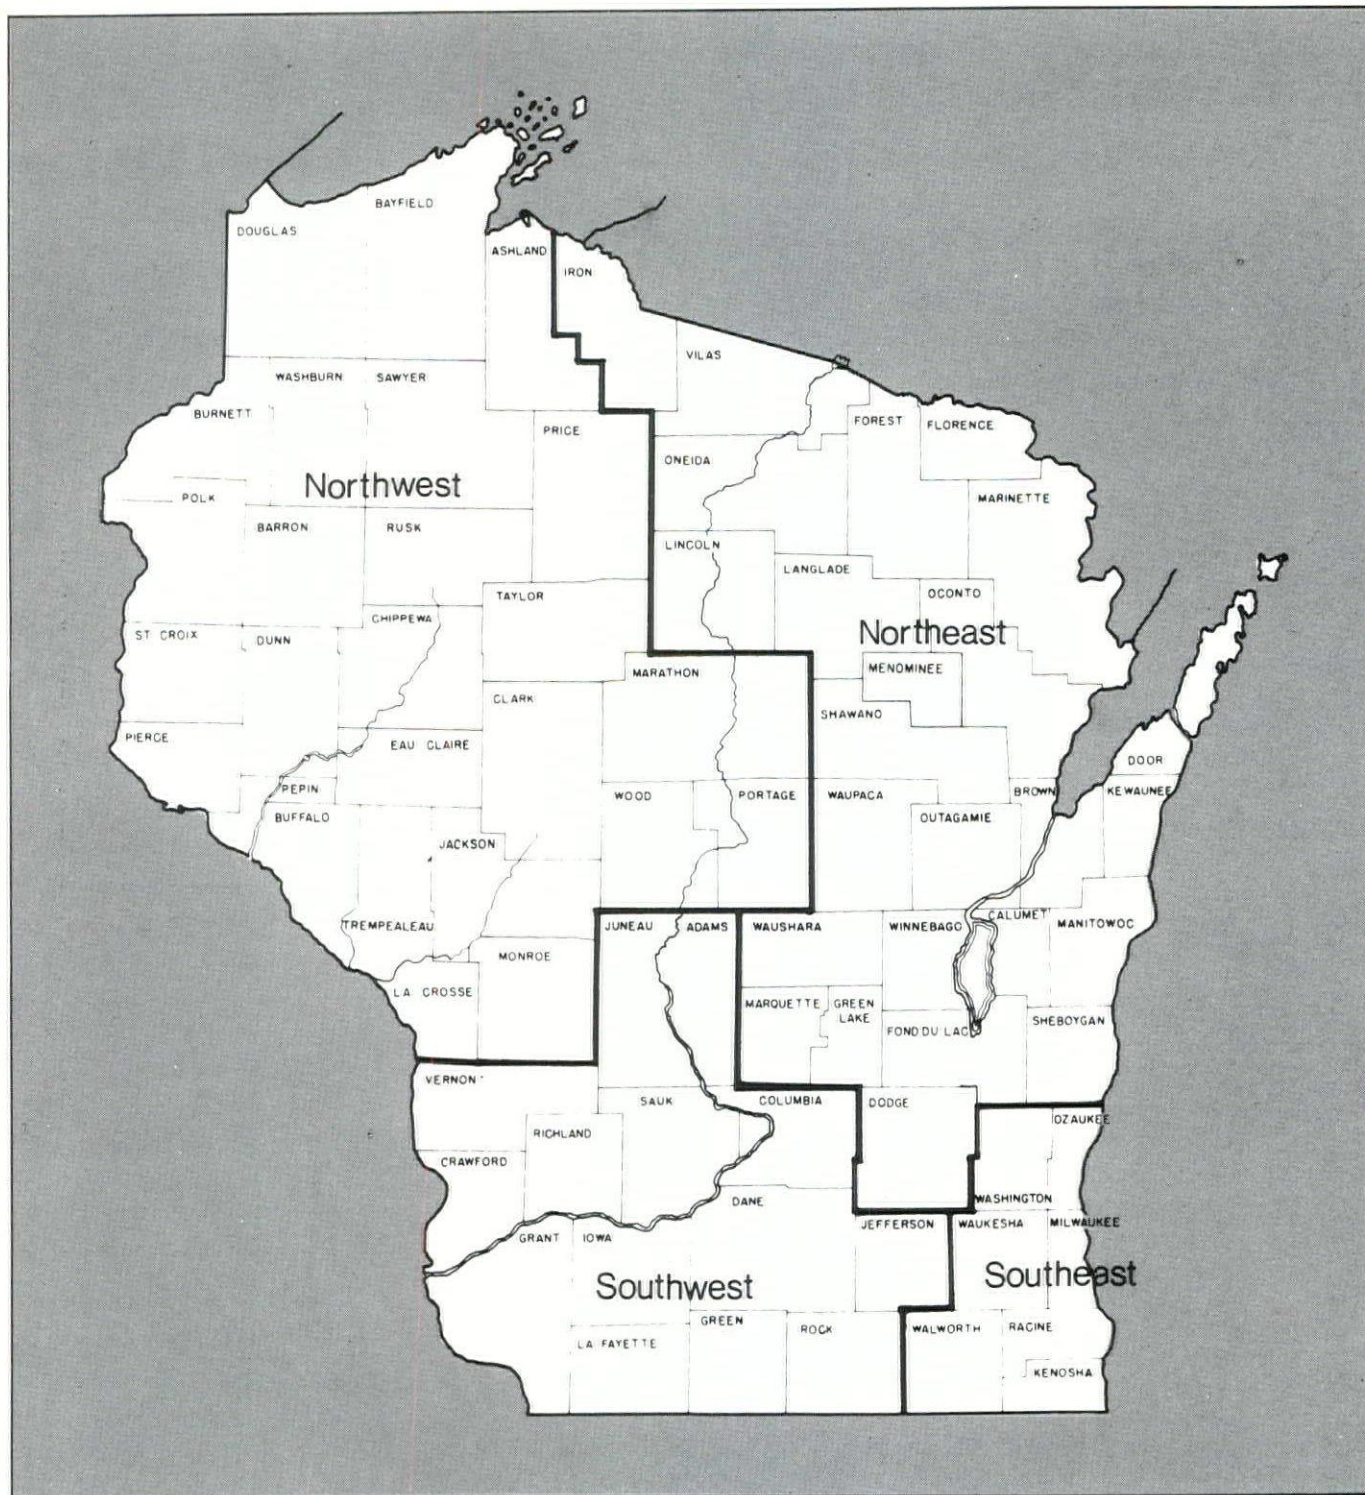

Renovation of existing buildings has become a highly feasible alternative to new construction. Conventional building products such as block, brick, and glass have little insulating value. Energy experts agree that loss of heat and cooling energy through these materials greatly adds to building operating costs. For this reason, the multi-windowed factories of the past are obviously extinct. Because insulated wall panels are available in a wide variety of profiles, they provide an effective tool for the architect or owner to give older buildings a new, modern, fresh appearance while answering today's increased energy conservation requirements. As an added benefit, initial cost for metal wall panels is lower than many other resurfacing materials.

- 1 Conserve Energy** - Reduce heating and cooling operating costs. (Save previous fuels)
- 2 Lifetime Maintenance Free** - No more windows to repair.
- 3 Beautify Your Old Building** - Improve total appearance of existing buildings.
- 4 Increase Safety** - Eliminate the risk of employees' injury from flying rocks and glass.
- 5 Tax Credits** - Recycling your old building could qualify your business for tax credits.

The Boat Store, Massapequa, L.I., NY

Library, St. Francis, MN

THE DO-ANYTHING BUILDING. WITH ROOM FOR IMAGINATION.

From a boat shop on Long Island to a library in Minnesota or an open picnic pavillion, people just keep thinking of great new things to make from our GameTime wood buildings and shelters.

Just start with a basic octagonal or rectangular unit, add interior or exterior wall panels, window and door units—plus a little imagination—and you can have exactly the building you've had in mind.

All GameTime buildings are designed with energy efficiency as a priority concern. A variety of optional insulation packages lets you meet the maximum requirements for any section of the country, any climate.

An ideal combination of prefabricated construction and versatile design, GameTime build-

ings and shelters (choose from more than 30 models) offer attractive, rustic styling at an economical price.

On-site construction can be completed quickly with a minimum of manpower. GameTime buildings and shelters are designed to last through years of use.

If you have a great plan that's ready to take shape, find out more about GameTime buildings and shelters. Available exclusively through your GameTime representative.

Write or call for free brochure.

Our elevators will never hold you up.

On the construction site time is money. Your deadlines are critical. So when we design, engineer and install a Dover elevator system, our watchword is, "Get the job done."

We maintain 24,000 square feet of warehousing under roof for inspection and storage of all elevator components prior to field delivery. You'll never have to wait for back-ordered parts or overdue shipments. Our materials will arrive on time, undamaged by outdoor storage and exposure to the elements. And all of our work is computer scheduled to integrate our timing with that of other contractors.

This sort of professionalism has made our contracting organization one of the largest in the country. It's backed by a management team with over 57 years' elevator experience. When you need to get the job done, you can count on us. Our elevators will never hold you up.

The American Institute of Architects may bestow a fellowship for achievement in architecture on members who have notably contributed to the advancement of the profession through outstanding accomplishments in one or more areas of design, science of construction, literature, education, service to the profession, public service, historic preservation, research, urban design, government, industry, or architectural practice.

A fellowship in the American Institute of Architects is so distinctive an honor that its bestowal is a serious responsibility. For this reason, the Institute requires that the achievements of each nominee for the honor be carefully considered by the nominators and by the Jury of Fellows which awards the honor. The nomination for advancement to fellowship is made by members who know the nominee well. The Jury of Fellows, consisting of six distinguished members of the Institute, studies and evaluates the achievements of each nominee under consideration. The Jury is not permitted to deny an advancement until the denial has been voted upon at three separate annual meetings.

The Jury of Fellows may obtain its own evidence of the standing and achievements of a nominee, by written communication or otherwise. The Jury must rely largely on the representations made to it by members who have had close association with the nominee. For that reason, the greater responsibility for merited advancement lies with the nominators, sponsor, and references of the nominee. The nominators should feel certain that the nominee's achievements have sufficient distinction to make them notable contributions to the advancement of the profession.

WSA Executive Committee 1981 Schedule

The WSA Executive Committee has established a tentative schedule of its meeting dates and locations for 1981. Committee meetings normally convene at 10:00 a.m. and are completed by mid-afternoon, with a break for lunch. The meetings are open to all members. Should you be interested in attending an Executive Committee meeting, or joining the Executive Committee for lunch, **please contact the WSA office to confirm the meeting date and place**, and to make a lunch reservation. The Committee welcomes your input and participation.

DATE	CHAPTER/CITY LOCATION
March 12, 1981	Northwest-Wausau Wausau Club
April 9, 1981	Southwest-Madison WSA Office (Primary Officers Only)
May 14, 1981	Southeast-Delafield Red Circle Inn
June 11, 1981	Southwest-Madison WSA Office
July 9-11, 1981	Northwest-Rice Lake Isle of Happy Days
August 13, 1981	Southeast-Milwaukee Pfister
September 10, 1981	Northeast-Mishicott Fox-Hills
October 9, 1981	Northwest-Wisconsin Rapids Mead Inn (Fall Workshop 10/10/81)
November 12, 1981	Southwest-Madison CUNA
December 10, 1981	Southeast-Milwaukee Villa Terrace

NOTE: Unless otherwise announced, the Primary Officers will meet the evening prior to each Executive Committee meeting.

Important Information for Architects on GAS SERVICE

The Public Service Commission of Wisconsin has approved Wisconsin Gas Company's request to offer natural gas service to commercial and industrial firms.

This authorization allows the acceptance of liberally expanded service to new customers and additional amounts of natural gas to existing customers.

If your clients are planning a new building or plant, desire to convert their present facility, or are expanding . . . contact your Wisconsin Gas commercial or industrial representative for specific information to assist you in meeting their needs for natural gas service.

HERE'S THE KIND OF SOPHISTICATED COMPUTER OPERATOR WE REQUIRED TO RUN OUR COMPUTER SYSTEMS.

Investing in a business computer can be scary enough for a small or medium sized business without thinking about investing in someone to run it. That's why when we designed our Computer System we made it so simple that a kid could practically run it.

Suggesting that an 8-year old could handle our computer may be an overdramatization of how easy it is to operate, but the personnel you have on hand will be able to use it without any difficulty. Use it for cash management, sales performance figures, accounting data, inventory information, custom orders and more. Everything you need to grow. And lightning fast.

Add the sophistication of a computer to your business without adding special talent.

Get the Hahn Computer System. Backed by Fortune 500 computer vendors with installations and factory service centers nationwide.

Architectural Secretaries Association

B 18

(Back Row: Sandra Devorak, Secretary, Lee Glaeser, President; Front Row: Minerva Kannass, Past President, Carole Hopp, Treasurer.)

OBJECTIVES:

To organize and unite architectural secretaries, as well as secretaries in related fields, to advance the educational and professional standards of the secretary and other support personnel.

To provide national programs to advance the knowledge and capabilities of the membership and contribute to the improvement of administrative methods and materials used in architectural offices.

To assist in the organization of new chapters.

To maintain liaison with the AIA and other professional organizations.

BENEFITS:

Membership in ASA provides the opportunity to:

- ... become a better member of the architect's team through your own educational, professional and personal development.
- ... contribute to the development of improved methods and materials used daily in your office.
- ... become familiar with AIA programs and services, and other allied professional associations.

AFFILIATION WITH AIA:

On January 1, 1980 ASA became officially affiliated with AIA on both National and local levels. AIA provides ASA space, publicity, support and invitations to its appropriate programs and social events at National Conventions.

Many local AIA and ASA chapters enjoy a close relationship, sharing programs of mutual interest as well as other forms of assistance and support.

CURRENT PROGRAMS:

Development of future supplements for the Architectural Secretaries Handbook.

Completion of a certification program for professional architectural secretaries.

Development of several seminars of interest to both secretaries and architectural personnel in the small design office.

JOINING ASA:

At present there is only one ASA chapter in the State of Wisconsin and that is in Milwaukee. This chapter would welcome new members and/or the opportunity to assist in starting chapters elsewhere in the state.

Contact: Lee Glaeser, Architecture 360, Inc., 2011 E. Capitol Drive, Milwaukee, WI 53211, 414-962-9800 or, Carole Hopp, Shepherd/Legan/Aldrian, 11600 W. North Avenue, Milwaukee, WI 53222, 414-771-7474.

We've made energy communications a function of telephone communications.

B 22

If you think the telephone is only for helping people communicate, you haven't heard about Wisconsin Telephone's Dimension* PBX phone system with Energy Communications Service (ECS).

This Bell System development combines internal telephone service and energy control into a single, integrated system.

One communications system is cheaper than two. Dimension/ECS is a major construction cost saver. Since ECS utilizes internal Dimension system phone lines to communicate between its central Energy Console and typical energy-consuming devices, construction costs are substantially reduced. ECS is a part of the telecommunications system, so the total cost is only a fraction of having a separate energy management system.

Savings on fuel and utility costs. Construction costs are only part of the savings of Dimension/ECS. The system can also be counted on to reduce fuel and utility bills by 10 to 20 percent over the life of a building. In some

retrofit applications, the system has actually paid for itself in less than one year.

Complete energy control. Dimension/ECS gives building managers control over typical energy-consuming equipment: air handling units, water heaters, elevators, generators, lights, refrigeration equipment, fans and more. It can be programmed to meet the specific needs and energy saving strategies of a building through on-off patterns, cycling, temperature and speed control and peak load reductions.

Advanced phone communications as well. Dimension/ECS also provides some important phone communications advantages: Speed Calling, automatic callback, guard reporting, paging . . . and many other features that can be tailored to the type of building being considered.

The Bell System Dimension/ECS. It's proving that telephone communications is a lot more than meets the ear. For details, call Richard Kaul, Wisconsin Telephone Account Executive for architects and engineers. Call toll-free at 1-800-242-6252.

The knowledge business

WISCONSIN ARCHITECTS FOUNDATION

BUILDING A BETTER WISCONSIN THROUGH ARCHITECTURAL EDUCATION

The Wisconsin Architects Foundation (WAF) was created in 1954 for the purpose of supporting Architectural Education in Wisconsin, principally through scholarships and grants. To date, over \$58,000 has been distributed to 127 students.

In recent years, the WAF contributions to Scholarships have been exclusively to UW - Milwaukee students. With greater financial resources, the WAF would be able to support Wisconsin students at other institutions as well as offering grants and prizes for programs that relate to the improvement of the practice and profession of Architecture in Wisconsin.

The WAF currently has invested funds totalling approximately \$50,000. The WAF has adopted a goal of doubling this endowment within the next eight months. To meet this goal members of the WAF will be contacting numerous individuals and corporations who relate with architects, soliciting their donations to increase the endowment fund. Additionally, the WAF will be seeking annual Members or Contributing Members.

The advertisement pictured above will be appearing monthly in the Wisconsin Architect. The members of the WAF encourage your contributions, either by way of annual membership or donation to the endowment fund. Tax deductible contributions and membership are an act of participation in support of the strength and vitality of the Architectural Profession in Wisconsin.

Within the next several months the WAF will contact all Wisconsin Architects, along with numerous other individuals and corporations who support and appreciate architecture. You can help by undertaking your annual membership and endowment donation to the WAF. You can

additionally help by impressing upon those in related professions and industry of the vitality and benefits of the WAF.

For further information, contact current members of the WAF or our Executive Secretary, Eric Englund.

Electricity isn't part of the oil-import problem.

It's part of the solution.

Our insatiable demand for oil is demonstrating some basic economic principles.

Because domestic oil supplies are not meeting demand, foreign suppliers find themselves in a seller's market. As a result, they can increase prices without effective retaliation from buyers, and they're proceeding to do just that.

What's the answer? Common sense.

If there are no feasible alternatives to oil distillates for personal and commercial transportation, it would seem logical that transportation should be our primary use of oil products. All other present uses of oil should be shifted to some other fuel as rapidly as possible.

For example, it needn't be used to generate electricity.

The basic advantage of electricity is that it can be made from nearly any form of energy that contains enough power to drive a generator. And electric generation can be doubled in 15 years if we don't restrict

more use of coal and nuclear fuel.

You can heat and cool with electricity, illuminate and communicate, mine, manufacture and process. And even now we are beginning to transport ourselves and our goods electrically. So if you're thinking of building or expanding your business, think electrically.

Talk over your plans and needs with a qualified electrical contractor. It makes good common sense to do so.

ELECTRICITY.

**We can make it from almost anything.
And use it for almost everything.**

WISCONSIN
SOCIETY OF
ARCHITECTS

MEMBERSHIP

Membership Information

REGULAR MEMBERS are architects who are legal residents of and have been licensed or registered by any state, the District of Columbia or any U.S. Territory.

ASSOCIATE MEMBERS are persons who are legal residents of Wisconsin and are employed in a professional or technical capacity under the supervision of a licensed architect directly related to the practice of architecture; or are employed in circumstances recognized by licensing boards as constituting credits towards architectural licensing.

PROFESSIONAL AFFILIATES (State members only) are non-architects, registered to practice their professions where such requirements exist with established professional reputations. Professional Affiliates may include engineers, planners, landscape architects, sculptors, muralist and other artists, professionals in government, education, industry, research, and journalism, and other professionals whose work is related to the practice of architecture.

STUDENT AFFILIATE (State members only) are undergraduate or post-graduate students of architectural schools or secondary school students within the territory of the WSA.

3rd year or more AIA member pays total amount

DUES NOTES

The AIA Regular Member is also responsible to the Institute for supplemental dues beginning on January 1 of the year following admission based upon the number of registered architects in the firm (both employees and employers as of January 2) at the rate of \$160.00 each. The firm will be given a credit of \$90.00 against its supplemental dues obligation for each such registered architect who is an AIA member.

Invoices for national and state dues will be mailed in December.

Members who have not paid WSA dues by July 31 shall be in default and shall be so notified. Members still in default as of September 31 shall be terminated.

For more information or request for applications contact:

Benefits of Membership in WSA

1. **Work.** Whether you are an employee or an employer, WSA helps you get work by means of job listing, referral, "how to" seminars and cassettes, etc.
2. **Marketing Information.** You get no place without this today. WSA organizes seminars, makes available printed material, cassettes, inserts information in the Wisconsin Architect.
3. **Firsthand News** affecting the practice of architecture by means of committee reports, Hotline, Wisconsin Architect, etc.
4. **State Agencies' Contracts** are updated with the help of WSA representation. Some past inequities have been corrected.
5. **AE Selection** by means of bids is an invitation to disaster. You know it. Does your prospective client know it? Get the background and current information on this development.
6. **Insurance Rates.** Maybe your premium or your exposure can be reduced. WSA has committees working on this, information and advice to give you.
7. **An Eye On Legislation** affecting zoning, planning, professional registration, taxes, procurement of services and other matters of interest to the profession and the construction industry.
8. **Legislative Relief.** WSA has an active legislative committee and minuteman program.
9. **An Eye On Building Codes.** Committees have been working at state and national levels to improve regulations affecting buildings.
10. **Continuing Education** programs on all of the timely subjects, like marketing, energy conservation, production efficiency, etc.
11. **Library** of architectural books is available on loan at no charge. Cassettes and slides on a wide range of important subjects are available at no charge.
12. **Exchange Of Ideas, Exploration** of mutual technical and professional problems at local and state meetings.
13. **Learning By Association** with other architects and distinguished non-architect guests. Every person you talk to at local or state meetings is an expert on something.
14. **You Become Part Of** effort to maintain and improve high ethical and technical standards. For instance, a lot of discussion is taking place now on the new revision of the AIA Standards of Professional Practice (the "Code of Ethics"). Why don't you get in on this?
15. **A Forum** for presentation of viewpoints. You play a part in establishing the standards of the profession by expressing your opinion at local and state meetings.
16. **Participation On Committees.** You can be on a local, state or national committee almost for the asking. This could be very broadening and very instructive.
17. **Common Front** presented on issues important to the profession. Witness WSA activity against competitive bidding.
18. **Contract Forms** and other documents. These are sold by WSA to members — with same-day service.
19. **Hotline** and other communications which keep members up to date on numerous important matters. For instance, a synopsis of senate and assembly bills which are of interest to us are included after a review by a committee and attorney.
20. **The Wisconsin Society of Architects, Construction Industry Handbook**, issued yearly, is a reference for valuable information not found elsewhere. Look through the latest issue and discover its great value.
21. **Public Relations** program in Wisconsin newspapers and our own magazine, *The WISCONSIN ARCHITECT*, distributed to important people outside the profession. This educates the public, upholds the image of the architect.
22. **Status And Prestige** enhanced by membership in local chapter, WSA and AIA. This translates into personal satisfaction and better respect by the community.
23. **Information Service** on such professional matters as state laws (proposed and enacted), document forms, state administrative structure, licensing, sources for other needed information.
24. **Job Bank**, for employees searching for employers and vice versa.

COMMERCIAL PRODUCTS CATALOG

DELTA-DELEX WASHERLESS FAUCETS

In 1953, Delta introduced its first washerless faucet. It took a while for people to get used to our unique single-handle design. But through the use of aggressive marketing and advertising, and word of mouth, we've built a reputation as "America's Favorite Washerless Faucet."

We've taken our more than 25 years of experience in solving home plumbing problems, and used it to develop a line of commercial/institutional faucets and products. They're designed to give the commercial builder, remodeler and specifier the time and money saving advantages of lower maintenance and fewer call-backs.

Look through this catalog at some of the models in our growing line of commercial/institutional faucets, and see how well Delta faucets fit into your design as well as your budget.

JUST WHAT I'M LOOKING FOR.

Please rush me your Commercial Products Catalog so I can specify America's favorite washerless faucet for my commercial and institutional building projects. After all, I wouldn't want a leaky faucet in my home, so why would I want one anywhere else?

WSA-AIA State Organization

The Wisconsin Society of Architects of the American Institute of Architects (WSA) with over 650 members is the state component of the national organization representing architects and related professionals in the state of Wisconsin. Members from private firms, corporations, industry, government, and education join together to maintain and represent excellence in architecture, the profession and to the public. This is accomplished through the many programs the WSA offers its members.

WSA membership offers many different opportunities for education and career development. The WSA is striving to help in advancing each individual's architectural skills, professional understanding and career opportunities.

With offices located in Madison, WSA is directed by an Executive Committee which sets priorities of the organization and initiates new programs. The Executive Committee consists of 17 representatives from the state's four local chapters. The president and vice-president of each chapter automatically are members of the Executive Committee. Five Directors-At-Large are elected by the state membership from the local

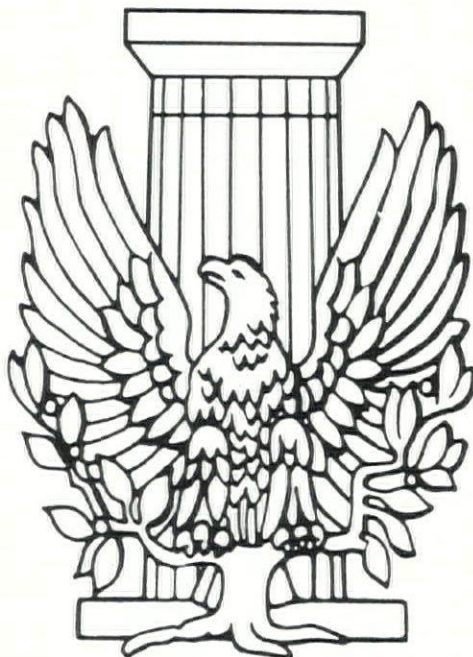

chapters through an at-large election. The four primary officers of the Executive Committee are selected by the Executive Committee itself — from the membership roster of the WSA.

There are in excess of 45 standing commissions, committees, and short-term task forces which recommend and execute policies, plans and produce programs. Membership on these state groups is drawn from the WSA membership.

When professional architectural expertise is needed by national, state, or local government bodies, members are nominated from the WSA to serve on such committees.

A full time staff headed by an Executive Director, located in Madison, handles day to day operations and is available to all Wisconsin members as a liaison to the AIA and as an information center.

The WSA is composed of four chapters, each having its own Executive Committee and accompanying committees and programs pertinent to its part of Wisconsin and its communities. Emphasis of the chapters is on participation and special events tailored to their needs through local meetings and seminars. All members have the opportunity to affect the direction of their profession and produce progress in many areas.

What is the American Institute of Architects?

The American Institute of Architects (AIA) is the national professional society of the architectural profession in the United States. It has over 36,000 members who are licensed architects.

The AIA's national headquarters and staff are located in Washington, D.C. It has 50 regions and 250 component chapters across the nation, and a number of Women's Architectural Leagues. Student chapters are active at many colleges and universities.

The professional society has three major missions:

1. to maintain and improve the competence of today's practitioners,
2. to create a sufficient supply of well-trained practitioners for tomorrow, and
3. to represent the Institute before professional and industry groups, government, and the public so that good design is encouraged by law and demanded by the community.

Institute programs are financed through members' dues and include a continuing concern with architectural design, structure, and materials; business and production aspects of architectural practice; architectural education and research; urban design; public affairs; governmental affairs; inter-professional and industry relations; and other subjects of interest and importance to the AIA's membership and to the public.

The AIA's programs and activities are guided by its officers, directors, committees, and members, and are carried out by its members and staff at the national, regional, and local levels.

THE AIA'S BEGINNINGS

The American Institute of Architects was founded in 1857 by a

small group of architects who met in New York City, in a building near Trinity Church on Broadway, to explore ways of improving their profession.

They had much to do. By all accounts, architecture was at a low ebb, and really did not exist as a profession in this country. Until the middle of the 19th century, according to one writer, architecture in the United States was "the trade of carpenter-builders and the game of gentlemen-amateurs".

The architects who met near Trinity Church wanted to improve their public status and do something about the unbridled competition between architects which then prevailed. The result of their meeting was a resolution to form a professional society. Richard Upjohn, architect of Trinity Church, was elected president of the new organization.

Raising the ethics, standards and competence of the architectural profession was no easy task for the founders of the Institute. There were no architectural schools and few books. Adult education for young practitioners was unknown. But, the new organization overcame these problems one by one, and soon the AIA was issuing technical publications. It later added standard documents on such important matters as contracts and owner-architect agreements. In 1913, the first issue of *The AIA Journal* was published.

In 1899, the AIA moved to Washington, D.C., occupying the historic Octagon House, which it subsequently purchased. Built starting in 1798 and completed in 1800, the Octagon served as the temporary White House after the British burned the presidential mansion in the War of 1812. The Octagon was the AIA's national office until after World War II when the Institute moved

to a new headquarters building behind the Octagon House. The Octagon was then opened to the public and has since been designated a National Historic Landmark.

In 1969, additional restoration was undertaken.

THE AIA TODAY

Membership in the AIA is open to every licensed architect who is a citizen of the United States and can satisfy his local AIA chapter and the Institute's Committee on Membership that he has the necessary professional qualifications.

The Institute is vitally concerned with architectural education and training. Professional schooling of architects begins with five or six years of study in an accredited school or college of architecture. Then, three years of internship in an architect's office are required. It is now mandatory that architects take rigorous written examinations to be licensed or registered to practice in all states and territories. The National Council of Architectural Registration Boards serves as a clearing house for state licensing boards in this regard. In 1940, the AIA helped to organize the National Architectural Accrediting Board. Today, there are 63 schools of architecture in the United States accredited by NAAB. Most architectural schools have AIA student chapters. There is close cooperation between the AIA and the faculties of the colleges and schools which are members of the Association of Collegiate Schools of Architecture.

Members of the Institute may be recognized by the use of the letters "AIA" after their names. The letters "FAIA" after an architect's name signify that he is a Fellow of the AIA, an honor bestowed for achievement.

COLORLINE[®]

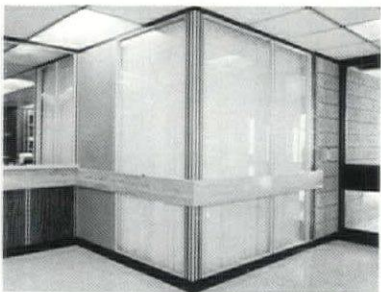

MOVABLE PARTITION SYSTEMS

Whatever Your Partition Needs...COLORLINE MOVABLE PARTITION SYSTEMS can meet them.

COLORLINE[®] 3.75 nef

This MOVABLE PARTITION SYSTEM is designed to meet the demands of modern architectural requirements of smooth, clean, uninterrupted lines. This unique wall system totally conceals all studs, screwheads, rivets, and other miscellaneous fastening devices. Featuring the highest sound transmission control rating in the industry.

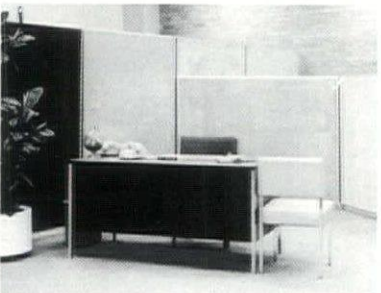

COLORLINE[®] 2.75

The modular construction of this system permits interchanging of four foot panels for future rearrangement of offices. Finished aluminum components available in satin and bronze gives a designer appearance by the built-in recess groove at each post.

COLORLINE[®] 1.75

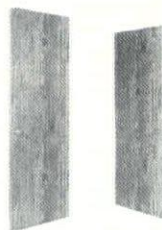

This system creates personal work areas for individual privacy. May be installed by your own personnel. Available in full height, cornice high, and glazed rail applications.

COLORLINE[®] II

A completely new, free standing partition system that adds a new dimension to open office landscape planning.

COLORLINE[®] DOORS

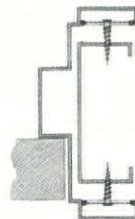

Available in two types of 1 3/4 inch thick pre-finished vinyl or low maintenance laminated plastic.

HARDWARE

Offering Schlage "A" series, general purpose, locksets, and latchsets... The quality standard accepted by architects and builders the world over.

DOOR FRAMES

Pre-finished steel door frames feature concealed fasteners and reversible installation taking either right hand or left hand doors. Used with 3.75 NEF system or with permanent drywall partitions.

COLORLINE[®] DECORATIVE CARPET AND VINYL COVERINGS

You can count on full availability of these coverings, because they are Colorline's own line!

EXCELLENCE IN MASONRY

ARCHITECT: Py-Vavra Architects-Engineers, Inc.

PROJECT: National Savings & Loan Association
Wauwatosa, Wisconsin

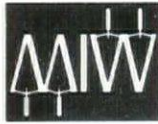

Sponsored by:

MASONRY INSTITUTE OF WISCONSIN, INC.

4300 W. Brown Deer Road, Milwaukee, WI 53223

Masonry Institute of Wisconsin

NORBERT J. HYNE
Executive Vice President

TO: MEMBERS OF WISCONSIN SOCIETY OF ARCHITECTS
AMERICAN INSTITUTE OF ARCHITECTS

We are pleased to announce that the National Savings & Loan Association is one of eight projects selected for "Excellence in Masonry". A representative from Py-Vavra Architects-Engineers, Inc. describes the project as follows:

"National Savings & Loan Association approached us with the desire to create a new corporate headquarters which would project an image of a strong substantial organization whose growth the last few years has been very aggressive. The building also had to be flexible enough in plan to allow for attractive tenant spaces and provide expansion space for the savings & loan and one or two major tenants.

The building was to be located at a prominent intersection of Mayfair Road for a sophisticated client, quite experienced in building construction and function. Therefore, the decision was made to proceed with a very positive statement in the highly successful and well developed Mayfair area. A warm, humanscaled architecturally sculptured exterior became a goal in the design. Brick was selected to achieve these criteria early in the design process.

Additionally, brick was an ideal material, capable of adapting to the forms evolving as the design progressed for the exterior. Brick elements could be shop fabricated where tolerances are much more easily controlled; then field erected quite rapidly.

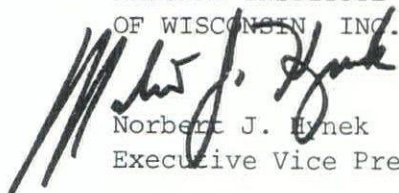

This construction technique was possible in large part because of the skills and talents of the masons who were holding tolerances more exacting than conventional construction so that the prefabricated elements, conventional masonry panels, and substructure would mesh together easily on the site. The system was successful and the masons are to be congratulated.

The board of directors, with Robert A. Geiswinkler, President, is to be recognized for their effective participation in the total team effort.

Congratulations to Py-Vavra Architects-Engineers, Inc. for "Excellence in Masonry".

Very truly yours,

MASONRY INSTITUTE
OF WISCONSIN, INC.

Motorola car telephone keeps success in hand.

The Pulsar II

Give yourself a competitive edge.

Use Pulsar car telephone like your regular phone. Make driving time productive. Keep in touch with office, home, clients. Handle emergencies quickly. Be in even better control.

Advanced Automatic Touch System

Easy-to-use push-button direct dialing means speed, safety. Store 10 frequently dialed numbers. Call them with a single push of a button. Many features.

MOTOROLA

Communications and Electronics Inc.

ENERGY CONSERVATION

Insulated Precast Concrete Wall Panels may be the solution to today's stricter building code requirements for Energy Conservation.

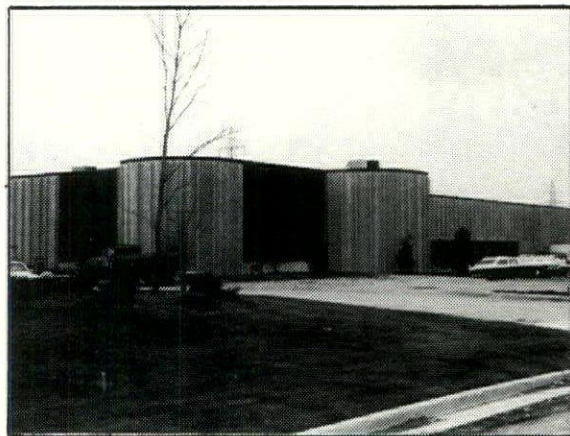

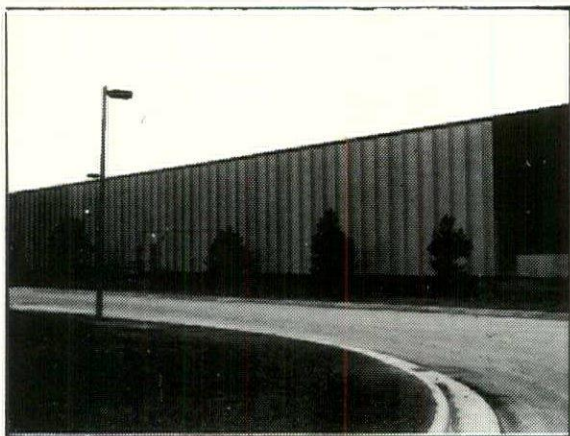

At J. W. PETERS & SONS we have successfully produced insulated Wall Panels since 1968. The thickness of the rigid insulation, cast between two layers of concrete,

can result in "U" values of .19, .10 or whatever your requirements may dictate. We offer a variety of exterior finishes from form finish to exposed aggregate. All this in either a load-bearing or non load-bearing Wall System! Pictured here is a sample of our "Energy Efficient" Wall Panels:

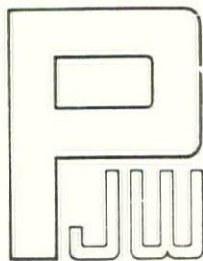

Owner: Trammel Crow Company; Milwaukee, Wisconsin

Architect: Wilson, Jenkins & Associates; Des Plaines, Illinois

General Contractor: The Lee Corporation; Indianapolis, Indiana

Give us a call, Our years of experience may be the solution to your next Energy Conservation problem!

Serving the Construction Industry since 1940.

SEE US AT THE SAWDUST SALOON 1981 W.G.A. CON.V.

Winter 1979. Over 200 roofs collapsed in Illinois and Wisconsin.

Not one of them was a precast concrete roof.

Snow loads have always been a major consideration for construction in the Midwest. The severe snowfall during the winter of 1979 dramatically brought this to light. In Wisconsin and Illinois alone more than 200 roofs collapsed.

According to a report by the Structural Engineers Association of Illinois (SEAOI) several different types of roof material were involved in the failures.

But, not one of the roofs that collapsed was a Spancrete precast concrete roof.

Why?

Spancrete precast roof systems are a series of hollowcore planks grouted together to form a unified structural deck. Through the lateral distribution of live loads individual members support each other. When one is overloaded the members on either side also share part of the load. Because of this method of construction, precast roof systems

survived the dramatic snow loads of 1979 while others failed.

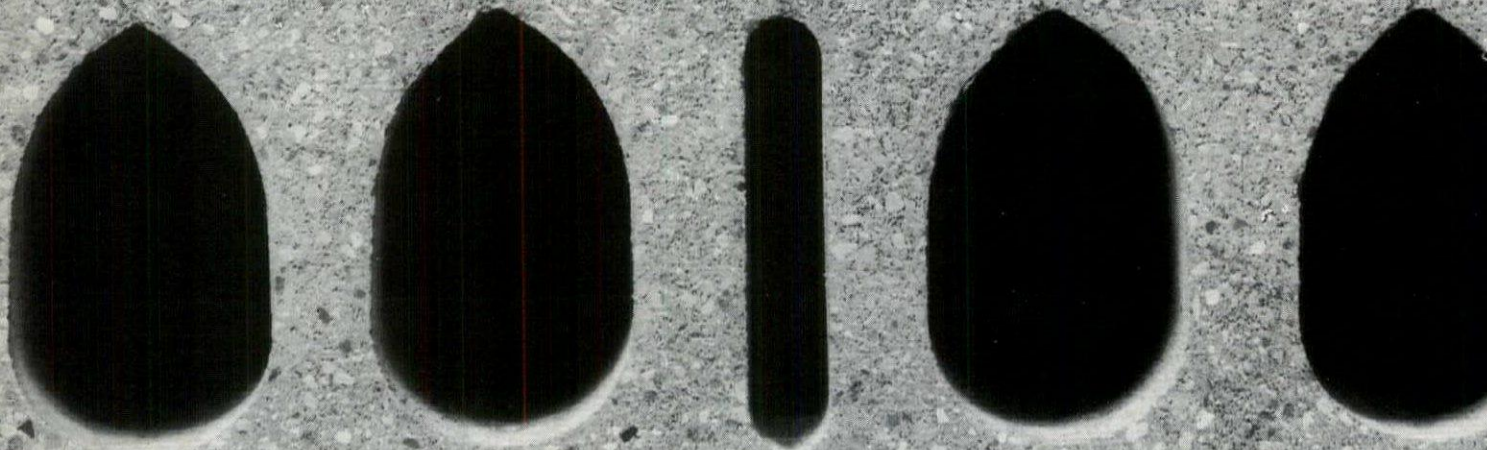

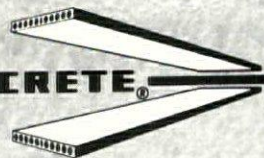

Spancrete Industries has been in the precast concrete business since 1953. We've engineered and erected thousands of precast roof systems. Before your next job, give us a call. We can give you the engineering and pricing information to help you specify a roof system that defies the Midwest winters. A Spancrete roof system.

SOCIETY OF
ARCHITECTS

 DIRECTORIES

1981 DIRECTORY OF ARCHITECTURAL FIRMS

INTRODUCTION

If you are contemplating the construction of a building, be it a small porch addition to a home or a multi-million dollar medical school, your first step should be to contact an architect who is the single professional who is equipped through training and experience to guide you through the entire building process. The roster that follows this article has been developed to provide you with an alphabetical listing of architectural firms in Wisconsin who have at least one principal who is a member of the Wisconsin Society of Architects and affiliated with the American Institute of Architects. Only those firms that completed the necessary questionnaire are listed.

In recent years the economics of construction have changed the context with which construction is undertaken. Inflation, high interest rates, fluctuations in labor and materials supplies, and other factors have all increased the cost and complexity of new building construction. Architects, as leaders of the building profession, have responded to these problems with innovative approaches in the delivery of their services. This article attempts to provide an overview of the important features of the three major delivery processes now available in procuring architectural services. It is important to note that the discussions of these different approaches are simplified.

No matter which approach is followed, the owner should draw on an architect's expertise early in

the planning process. An architect can help develop the program, define the building requirements, minimize costs, expedite construction, provide innovative design input, and coordinate the entire building process in order to provide the owner with the most economical building in the least amount of time. Architects are also well equipped by training and experience to provide guidance on which project delivery approach is best suited to the project's needs. This choice can be a major factor in determining the cost and quality of the project.

DESIGN — BID — BUILD

This is the traditional method used in a vast majority of buildings. The architect is retained to prepare detailed design and construction documents. When the final design and construction documents are approved by the owner, they become the format for soliciting contractor's bids and awarding a construction contract. During the construction process, the architect acts as the owner's agent, administering the construction contract and monitoring the progress and quality of the contractor's work as provided by the contract between the owner and the architect.

This approach has numerous advantages including:

- 1) It is a reasonably straightforward and administratively simple process.
- 2) It maximizes the owner's involvement in decisions pertaining to the project.
- 3) It provides a firm cost figure prior to the beginning of construction.
- 4) During the construction process it insures that the owner's interests are looked after by a knowledgeable professional.
- 5) While there are admittedly numerous variations to this approach, its use is most generally accepted and basic.
- 6) Through the process of time, standard form contracts, procedures, and court decisions have evolved which provide specific guidance to the use of this process.

CONSTRUCTION MANAGEMENT

In its simplest form, Construction Management is a specialty service where the owner pays a fee to a construction manager for managing the project. This service is most often in addition to contracting with an architect. Different versions of Construction Management occur which can provide confusion to those who are new or not familiar with the changing building industry. Some architectural firms include construction management (CM) among their professional services. Others add it only when projects are complex. Either way, in some situations an experienced construc-

tion manager can provide the designer with detailed cost information specific to the project on cost, labor and market conditions, availability and delivery schedules for equipment and materials, and construction technologies. The owner usually contracts with both the architect and the CM, allowing all three parties to work together in a team approach, permitting the owner control in design and construction quality and giving the owner assurance for adherence to budget and time scheduling.

DESIGN-BUILD

In the two delivery approaches previously discussed, the architect normally maintains its separate identity and its role as the owner's agent. In design-build, this is not the case. Instead, the architect is part of a firm or partnership that both designs and constructs the projects. The intent in this kind of delivery system is that the owner develops a single-point responsibility i.e. a single entity responsible to the owner for design, construction, time scheduling, and a guaranteed maximum price. Since in many instances the design-build entity is required to maintain a guaranteed maximum price in

changing costs markets, the owner's program and control may have to be tailored to enable the design-build team to build and buy at a cost which is within the guaranteed maximum price. One of the primary distinctive characteristics of a design-build approach is that the architect designing the project is a part of the design-build firm, as opposed to the architects traditional responsibilities acting solely as the owner's agent.

SELECTING THE BEST APPROACH

Not all of these delivery approaches are suitable for every project. The choice between these approaches, and between the many possible variations to each approach, is best made with the guidance of an architect. The architect's familiarity with local construction practices, market conditions, and the owner's specific requirements, priorities and constraints can provide the best guidance regarding the delivery approach to be used.

In working with your architect multiple variables will be identified which will determine the best delivery approach. Considerations of cost, occupancy date,

design control, construction quality, financing, etc. all should be taken into account in determining with your architect the best approach for the project.

We encourage your review of the following roster to provide you with architectural firms who should be contacted in the early stages of planning in order to assist you with some of these decisions. The itemization of services shown on the attached roster reflects recent work. A particular firm may offer professional services in other fields which have not been listed by virtue of their education, experience and staff. The WSA makes no warranty or representation regarding the competence or specialization of architects or firms identified in this directory.

Three good reasons for selecting Weil-McLain

THE CHOICE — Choose from a complete line of oil, atmospheric gas, and combination gas/oil boilers, from 187,800 to 6,060,900 BRU/Hr.

THE FLEXIBILITY — Match any job requirement with a choice of factory-tested packages, factory-assembled sections or individual sections.

THE QUALITY — Only Weil-McLain has such quality features as flame-retention oil burners, asbestos rope seal, short draw rods, multiple tankless water heaters, forced draft firing and, of course, cast iron construction.

Choice, flexibility, and quality . . . three good reasons for contacting your nearest Weil-McLain distributor.

\$3⁷⁵
an hour or less.

Including software.

You get three full-screen CRT's, 120-lines-per-minute printer, file capacity equal to 7 million characters of IBM-formatted disks.

Plus your choice of five software packages among these nine: billing, accounts receivable, inventory, payroll, accounts payable, general ledger, sales accounting, job management and purchase orders.

Plus the ability to add word processing, communications, cash registers, hard disks and more!

Plus—free—"Just Ask"... the CADO report writer that lets you create special management reports in simple English.

All in one business computer.
All for \$3.75 an hour* lease purchase!
(Even less with fewer CRT's).

Call CADO or your nearby CADO Representative listed below and ask for your free 12-page, four-color brochure. Learn why—at \$3.75 an hour—you can't beat the system!

Elastizell takes the "con" out of lightweight concrete

Misconception #1

Lightweight insulating concrete roof decks are "wet."

—**not true with Elastizell!**

Elastizell insulating concrete requires only 5 gallons of water per sack of cement—like regular concrete. This is only one-fourth as much as required in vermiculite aggregate concrete.

Misconception #2

Insulating concrete roof decks require extensive venting.

—**not true with Elastizell!**

Elastizell insulating concrete contains 29 times less water to dissipate than vermiculite aggregate concrete (after roofing is applied)—so little, that no underside venting is needed.

Misconception #3

Insulating concrete roof decks absorb large amounts of water.

—**not true with Elastizell!**

Elastizell insulating concrete's unique structure of discrete air cells (made with pure Portland cement) *resists* water. There is no water-absorbing aggregate, such as vermiculite.

Misconception #4

Insulating concrete roof decks are too costly.

—**not true with Elastizell!**

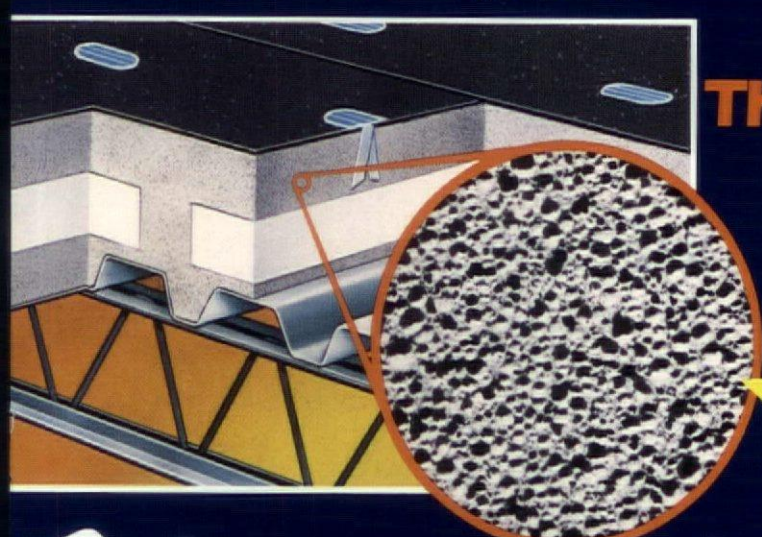

The Elastizell System utilizes less costly materials and requires less labor for installation. Check it out.

The Elastizell Advantage

Elastizell concrete's *unique matrix cell structure* outperforms other insulating decks—and makes vermiculite aggregate concrete obsolete!

Specify the Elastizell Advantage
in your next project!

Enlarged photographic crosssection
exposing the matrix structure of
discrete air cells.

Elastizell[®]
CORPORATION OF AMERICA

For information call:
(313) 761-6900

267 Collingwood, Ann Arbor, Michigan 48103

January, 1981

To: Wisconsin Architects

Subject: ELASTIZELL Insulating Concrete Roof Decks

Gentleman:

We are the certified ELASTIZELL insulating concrete roof deck applicator for the state of Wisconsin. We have been applying ELASTIZELL concrete in the Wisconsin market for over 15 years. Our equipment and procedures have been approved by the Elastizell Corporation of America.

The ELASTIZELL insulating concrete roof deck system is well recognized throughout the country by your fellow architects, specification writers, engineers, general contractors, roofing contractors, and roofing manufacturers.

We would like the opportunity to quote your projects either as a specified product or an approved alternate for new construction as well as re-roofing applications. In re-roofing we can often eliminate the need for ripping off the existing roof yet still provide slope-to-drain, additional insulation, and a solid base for the roofing without overloading the structure.

Our literature appears in Sweet's Catalog. Please call or write us for a personal visit and/or additional information. Thank you for your consideration.

Sincerely,

ELASTIZELL OF WISCONSIN, Inc.

Ray Munch
President

Viking MAGNETITE Windows

Patent Pending

TWICE AS
EFFECTIVE AS ALUMINUM
STORM WINDOWS . . .

at a fraction of the cost!

The Viking Magnetite window is a revolutionary new inside storm window that attaches magnetically and seals the cold out just like your refrigerator door seals the cold in. The Magnetite double-glazed insulating system far surpasses traditional storm windows, doubling the resistance to conductive heat loss and eliminating air infiltration.

The Magnetite is easily installed on any type of existing windows with or without old storm windows.

State Agency Offices In Milwaukee And Madison

The experience acquired while pursuing our profession includes many practices to which we automatically respond as the occasion demands. We quickly learn the need to investigate the probable agency of government having jurisdiction over the vari-

ous classification of projects with immediate reference to such laws and regulations which are applicable.

Approvals from these agencies do not in every case eliminate the need for compliance with other

regulations which may still govern, particularly where these are more drastic in nature. Zoning Laws and private deed restrictions may very well supersede some of the regulations imposed by State Agencies even though the building lies within the scope of their authority.

Federal Agencies Contracting for Architectural Services

SUMMARY: HOW TO GET FEDERAL WORK

The Federal law requires that for every A/E project with fees in excess of \$10,000, a notice must be advertised under Section "R" in the Commerce Business Daily (CBD), published by the U.S. Department of Commerce and obtainable by writing the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402, Tel. 202 - 783-3238.

For almost every project two Standard Forms (S.F. 254 Architect/Engineer and Related Services Questionnaire and S.F. 255 Architect/Engineer and Related Services Questionnaire for a Specific Project) must be submitted.

The S.F. 254 can be submitted on an annual basis, once to each Federal agency office. These agencies maintain an active file for each submitting firm and will "pull" the S.F. 254 when you respond to a specific project announcement.

The material which follows includes the name of the Federal Agency and the appropriate national office contact and/or the contact for our region or state. For further descriptions, budgets, publications, etc., see *The Federal Marketplace: Are You Prepared?* published by The American Institute of Architects.

Accredited Schools of Architecture—U.S.

**And First Professional Degrees
Conferred on Completion of their Curricula in Architecture
Issued by the National Architectural Accrediting Board**

The National Architectural Accrediting Board was established in 1940 by joint action of the American Institute of Architects, the Association of Collegiate Schools of Architecture, and the National Council of Architectural Registration Boards. It produces and maintains a current List of Accredited Programs in Architecture in the United States and its jurisdictions, with the general objective that a well integrated and coordinated program of architectural education be developed which will be national in scope and afford opportunity for architectural schools with widely varying resources and operating conditions.

The List of Accredited Programs is subject to annual revision and is valid only until the next list is issued.

ARCHITECTS KNOW...

Specifying carpet can be a tough job when considering all the options and choices.

COMMERCIAL CARPET DIGEST helps you keep up with pertinent developments that give you background needed for your carpet selections. Fast reading, informative with facts helpful to the architect, C.C.D. will save you time and add to your carpet expertise.

COMMERCIAL CARPET DIGEST is an outgrowth of consulting and informational services we provide on carpet. Representing commercial carpet mills to the architect/specifier is our full time business. If you need answers to your floor covering questions, please give us a call. Sample copies of C.C.D. available upon request.

Executive Office Operations

1. **Eric Englund.** Executive Director. Manages Headquarters office. Implements policies of the Board of Directors. Responsible for maintaining operations within budget set by the Board. Coordinates committee activities. Lobbyist. Edits all publications of the Society, including Wisconsin Architect, Hotline and other materials. Coordinates convention activities. Acts as liaison with State Government, and the legislature, all groups in the Construction Industry, the AIA, and the news media.

2. **Karen Linley.** Executive Secretary. Assistant to the Executive Director. Manages all financial records and accounts of WSA. Dues collection. Assists as needed with convention planning and implementation, fall workshop, other special events. Membership secretary. In charge of master information records. Schedules all mailings.

3. **Sue Rosenbloom.** Secretary to the Executive Director and Girl Friday. In charge of inventorying, purchasing, selling, billing and mailing of all AIA documents and codes. Processes Newsletters, Addenda and all Executive Director's Correspondence. Handles employment service, library and multiple miscellaneous problems.

In addition, our Executive Office acts as the CIA for the architectural profession, the construction industry and the general public.

Architects usually call with questions on ethics, documents, application for license in another state, renewal of license, supplemental dues, questions on insurance, etc. And we're always on the phone helping someone to locate a job in an architectural office, or assisting an architect in finding someone to fill a vacancy.

A great many calls come in from all segments of the construction industry and legal profession inquiring about codes, documents and legislation.

Innumerable calls are received from the general public — prospective clients in need of architectural services seeking

guidelines as to how to go about retaining an architect. What do they do? and What do they charge? are the most frequent questions asked by the unsophisticated callers.

While the great majority of calls formerly came from individuals seeking architectural services on a very small scale (a residence, an addition to an existing building), more and more calls are now being received from prospective clients with considerably larger projects in mind, i.e., a library, an educational building, a municipal complex. We use all of these instances as opportunities to educate the public on the true nature and value of architectural services, advising them on the best method of selection, etc.

No matter what the need — call us. We'll do our best to fill it.

Getting Into Architecture

If you're reading this section, you're already pretty sure you want to be an architect.

If you know that much, there is probably a lot more you want to know. It all boils down to one question: What are you letting yourself in for?

The quick answer is hard work, long hours, a fair amount of frustration, and — if you can get it all together — real satisfaction. Because with the right mix of talents and personality, there can be no satisfaction quite like the satisfaction of coming up with a beautiful solution for a complex problem.

That's what architecture really is — creative problem-solving. The problems involve a lot of complicated input — physical and psychological needs of the user, legal and economic constraints, practical and aesthetic considerations. Developing a design solution that meets all those needs as well as the essential challenge to the architect.

Architecture offers career opportunities across the board — for men, women, whites, minorities, there aren't any barriers to the person with ability and determination. (Many schools of architecture are making special efforts to recruit women and members of minorities, and a lot of firms are particularly eager to hire female and minority graduates.) And the field includes both professional roles for full-fledged architects, which we'll discuss in a moment, and para-professional specialties for individuals who qualify as architectural technicians.

Technicians are becoming more and more important to the profession. They perform such tasks as writing specifications, estimating costs, building presentation models, operating computers.

Preparing for a technician role usually involves a two-year program, offered in various forms by community colleges and other schools around the country.

Entrance requirements, curricula and other details vary from state to state and school to school, so check them out locally.

For more information, you might want to read a pamphlet called "A Program for Architectural Technicians' Training," put out by the AIA Department of Education and Research.

If you want to go the professional route, however, you need to know what's involved: What does it take to be an architect?

The thing that will define you as a professional architect is a registration certificate, which allows you to practice the profession legally in the state or states where you are registered.

Your registration certificate tells the world that you completed architectural school and spent important time as an intern-architect (or gained an equivalent education by spending more years on the job), and then passed a stiff comprehensive exam designed to measure your professional judgment and ability. Because your work as an architect will directly affect the public health, safety, and welfare, your registration is a necessary assurance that you have the ability and knowledge required to practice the profession responsibly.

AFTER REGISTRATION, WHAT?

Most people picture an architect at a drawing board, drawing. Many architects do draw, at least part of the time. But even those architects who are deeply involved in building design must spend some of their time away from the drawing board. And the higher the architect rises in the firm, or the larger the firm grows, the more time the architect spends making presentations, dealing with clients, picking the best way through the intricacies of budgets and building codes and coordinating and managing the work of others.

As a profession, architecture offers a multitude of possibilities. Architects can be found working for government agencies, institutions, and corporations where they coordinate the work of other architects and manage sizeable building programs. They can be found working in real estate development and construction management, or putting their experience and ability to work in volunteer programs like ACTION or many Community Design Centers in American cities.

Many architects will tend to specialize in a particular type of building or a particular aspect of architecture; some will build entire careers on such specialties. Others discover they would rather teach architecture than practice; or they may combine the two; some move into architectural research or history. And with the arrival of the computer, many architects have found a whole new area open to them.

GETTING THERE

Nobody ever said it was easy to become an architect. It takes several years of study in a college or university offering a professional program in architecture; a period of internship during which you build professional judgment by dealing with real, as opposed to academic, problems; and that rigorous registration examination mentioned earlier. If you're in high school now, it's not too early to start preparing; if you've already finished college, it's not too late.

HIGH SCHOOL

If you are in high school, this is the time to do the groundwork. To get ready for studying architecture in college, you'll want to spend time on the basics — communications, mathematics, social sciences and scientific reasoning (physics and chemistry courses are good). On top of that, keep in mind that your college years are going to be filled with design and technical courses; it's a good idea to

get in as many humanities courses — languages, history and the like — as you can during high school. If you can, try and work in elective courses in art and business. You might even take a drafting course, but be careful with this one. Most high school drafting courses are brief technical courses providing you with a beginner's skill on the boards and not much more. Don't get the idea that drafting is architecture. At times drafting can be dull, but it is only a tool that architects use.

You can also use your summer vacations to good advantage. Try to land a job related to the practice of architecture or the construction of buildings, even if it's just a slot in the mailroom of an architectural firm or a job on a construction site. Your aim, of course, is to learn something about the profession of architecture and the building of buildings, and seeing it close up — maybe even getting your hands dirty in construction — is a good way to do that. And in the bargain, you may be able to pick up some useful experience.

CHECKING OUT SCHOOLS OF ARCHITECTURE

While you're at it, start checking out architectural schools. There are about a hundred of them in the U.S. and Canada, and choosing the one best suited for you is going to take a little doing. You'll want to consider each school's emphasis, the specific architectural program it offers, its location, cost and the availability of financial assistance, the resources of the school as related to your interests, and — might as well be realistic about it — your chances of being accepted.

There is some help available. A list of accredited schools of architecture is available from the American Institute of Architects or the National Architectural Accrediting Board. These accredited schools offer established and well-regarded programs that

make applying for registration just that much easier. Catalogs from the schools can give you a good idea of educational philosophies, programs, and admission policies. Visits to schools you consider the best help fill out the picture. And you'll want to talk to friends, recent architectural graduates, and practicing architects; they'll have some good advice.

The Association of Collegiate Schools of Architecture publishes a number of documents you will probably find useful. Among them is a book entitled *Architectural Schools of North America*, which has a statistical review of ACSA member-schools — including all the accredited schools plus others, many of which are new and won't be eligible for accreditation until they graduate a class. Incidentally, that first class will be considered as accredited. The book outlines the types of programs the schools offer, their enrollments, tuitions and the general approach of each school.

It's important to know how a school approaches architecture, because you need to find a school that matches your particular aims. And don't worry if you can't decide on anything more specific than wanting to be an architect. Many schools have quite flexible programs, and you can discover the options and make the choices as you go along.

Getting into the architectural school of your choice depends on your basic intelligence and your interests in and out of school. Admissions officers look at your whole record and try to judge the chances of your success in architectural school. Very few architectural schools are legally required to accept anyone who qualifies for college entrance; nearly all are quite selective. Many do require College Boards Scholastic Aptitude Tests; but so far there doesn't seem to be a really effective aptitude test specifically for architecture.

STARTING YOUR PROFESSIONAL EDUCATION

Although each school of architecture has a different special curriculum thrust, most of the basics are similar. Since the core of architecture is that complex design and problem-solving process, the core of most architectural curricula is a continuous series of design courses, or studios. You'll have one of these studios nearly every semester you're in architectural school, and because you're learning about other facets of architecture and design as the years go by, and since you put it all together in the design process, each design studio is generally more complicated than the one preceding it. You'll begin with small individual building design projects and end up handling large-scale single- or multi-building complexes in dense urban situations. Some of the other subjects you'll probably be studying (either as courses or integrated in design studios) are structural systems (principally heating, cooling, and mechanical systems), architectural history and theory, basic design and graphics, freehand drawing, architectural materials, professional practice techniques and processes, contract law, site planning and urban design. You might take elective courses in landscape and botany, city planning, psychology and sociology, computer applications, business, and so on and on.

The schools are all structured somewhat differently, too, although most fall generally into two different formats.

One is the traditional five-year program leading to a Bachelor of Architecture as the first professional degree. In these schools, you enter the architecture program directly and work your way through a curriculum which is typically structured, yet has a degree of flexibility to allow elective courses. In some schools there might be two or three (or more) basic "paths" through the curriculum, allowing you to focus

Getting Into Architecture *(continued)*

on a particular design, technology or management-oriented facet of architecture. The five-year programs generally relate directly to today's expanded practice roles, and if that's what you know and want, the five-year program is the most direct way of getting there.

The other basic format is a six-year program leading to a Master of Architecture as the first professional degree. This is popular with a lot of students because of its greater flexibility and wider range of options. It is particularly good for entering students who might not be certain they want a career in architecture, but who want to find out what it's like while checking out other possibilities.

What makes this possible is the way most six-year programs are set up. They generally conform to a 2+2+2 format, in which the first two years are devoted to general university requirements and introductory architectural courses. The second two years provide a fundamental grounding in architecture and, usually, an appropriate exposure to related environmental design fields. At the end of four years, most schools award a non-professional bachelor's degree in art, science, or environmental design. The final two graduate years usually allow a wide variety of in-depth options, some oriented toward professional activity, others toward research. In some progressive schools, you can pretty much design your own program. You may want to fully develop skills that will make you immediately useful in architectural practice. Most students take this approach, but a growing number are in joint degree programs and research programs relating architecture to other fields. This kind of specialization is leading to a new breed of architects involved in a broad range of multidisciplinary professional activities.

Most six-year programs are flexible enough to allow students to transfer in at various points. Most transfer stu-

dents are junior- and community-college graduates entering at the third year level, occasionally with a few credit deficiencies which need to be made up. Some, however, are students who have a bachelor's degree in another field. They can enter at the graduate level, but usually have a substantial number of deficiencies which may mean an extra year or more of study. For these students, the extra time usually doesn't matter; they have decided they want a career in architecture no matter what it takes. If you're such a special case, you'll have to write to the schools that interest you to find out just how they can help you put together a course of study which will give you a first-rate architectural education.

Combining architectural study with the college work you have done if you already have a bachelor's degree can lead to some interesting combinations and some interesting careers. Think of the possibilities in a combination of business administration and architecture, or sociology and architecture, or psychology and architecture. Some colleges and universities have set up programs that make just such combinations possible.

While you are in school, you will find it valuable to join the local chapter of the Associated Student Chapters of the AIA. This is a good way to broaden your architectural knowledge by sharing information and ideas with your peers, and by joining them in seminars, lectures, and workshops. It's also fun.

INTERNSHIP

Your five or six years in architectural school will earn you a professional degree in architecture, usually a Bachelor of Architecture or a Master of Architecture degree. And then you'll find out just why graduation is also referred to as commencement. No matter how long and hard you feel you have worked, you're only just beginning. You still have up to three years

of internship between you and the registration exam.

This period of internship is important. It's important because it is required for taking the registration exam, but also to give you a chance to gain real-world experience and develop the judgment and sense of responsibility that is the mark of a professional of any kind. Through internship, you will have the opportunity to develop that important habit of continued learning. For an architect, learning must be a life-long process which does not stop at the end of the formal education period. You will also be able to round out and expand knowledge relevant to the practice of architecture.

Professionals are currently working on ways to improve this internship period and thus give you a further boost toward your objective of becoming a highly skilled and capable architect. A new internship program being designed will make it possible for you to have direct access to the best possible advice and continuing education resources the profession has to offer while you're in the internship years.

As an intern-architect in this new program, you'll be responsible for making your own decisions about your career objectives and your related strengths and weaknesses. The new program will mean you will be able to concentrate on converting your weaknesses to strengths through a combination of on-the-job learning, continuing education, and other professional development activity.

All of these experiences, together with those acquired during your formal education period, will be recorded in a development record which you will maintain throughout this entire period. Principally, the development record will serve as a guide for you, as you make your own choices and decisions in acquiring the exposures and experiences in nearly all aspects of the practice of architecture. At the end of internship, the portfolio will aid greatly

when you are being considered by a registration board for examination and licensure.

And along the way, your "professional advisor" (who will be assigned to help you through your internship years) will help you evaluate your portfolio and tell you what's missing. Your advisor will also give you advice on overall career options, immediate job opportunities, continuing education and other available learning opportunities, and anything else you feel you need. This includes advice on preparing for the licensing exam. The preparation is your responsibility, and it involves getting as much experience as possible, filling in gaps or correcting your weaknesses by taking formal continuing education courses, plus a good bit of plain old-fashioned cramming as the exam draws near.

You'll hear a lot more about this new internship program in the near future. It might also include the creation of local and national organizations especially for intern-architects, offering strong peer group linkages and additional programs and activities.

EXAMINATION

One thing you will find helpful as you approach the registration exam is a book called the "NCARB Test Guide." Published jointly by the National Council of Architectural Registration Boards and Architectural Record Books, this handbook for candidates gives a detailed look at just what the Professional Exam is like.

What it's like, is hard. It's a two-day, four-part exam that is graded by machines; you either pass it or you don't.

With that grim note out of the way, let's look at the exam a little closer. It is a standard exam prepared by NCARB; although the same exam is used in every state, only the state in which you take it can grant your registration. Through NCARB, how-

ever, you can gain reciprocity — that is, you can obtain a license in other states because you had the right preliminary education and experience qualifications and you passed the exam and received the license in the first state. States have reciprocal registration agreements through NCARB. This way you won't spend your entire professional life taking registration exams.

The Professional Registration Exam is not a test of academic knowledge. NCARB assumes you have all that if you have an accredited architectural degree. Instead, the Professional Exam is designed to test your ability to put that knowledge to work and actually make decisions.

The exam is given in four sessions spread over two days, for a total of 16 hours of examination. These sessions cover four specific areas: environmental analysis, building programming, design and technology, and construction. The exam tests your ability to make strategic decisions on major environmental issues or projects; to synthesize basic general knowledge; to exercise environmental value judgment; to understand the architect's responsibilities to the public, the client, and the profession.

There are a few specific eligibility requirements. Applicants for the Professional Exam must be of good character, at least 21 years old, hold an accredited first professional degree in architecture and have three years experience behind them.

There is an additional NCARB examination which precedes the Professional Exam for all others, including everyone from graduates of non-accredited architectural programs to those who have no formal education beyond high school. It is known as the NCARB Equivalency Exam, and unlike the Professional Exam, it is a test of academic knowledge. It is designed to test technical and academic knowledge in the field of architecture which is equivalent to what one would have

learned in architectural school — architectural history, theory and principles of planning; construction theory, structural design, environmental systems; and architectural design and site planning. It is given in three parts over two days in twenty hours of evaluation.

Check with your state architectural registration board for more specific information on which exams you must take and pass before registration can occur.

ON TOWARD PRACTICE

So there you are: diploma on one wall, registration certificate on the other, and a large collection of knowledge, ideas and skills ready to be put to work. You've already found out about the hard work and long hours, experienced some of the frustrations, and most important, tasted some of the satisfaction of being an architect.

As a full-fledged professional, you will find it useful to become a corporate member of the AIA. AIA is the professional organization for architects in this country, and it provides its members with a wide range of practice aids, continuing education programs and technical information. AIA membership is a way to keep abreast of current trends, share knowledge and experience with other architects, and help your chosen profession make its voice heard on national, state and local issues.

Although architecture has its good times and bad times as the nation's economy fluctuates, the future is generally good. The statisticians have concluded that the last thirty years of this century will bring as much construction as the world has already seen. And on top of that, graduates, interns and registered architects are moving into so many new ways to use their architectural training, and architecture itself has taken on such a broad meaning, that the profession's long-term prospects are favorable.

Getting Into Architecture (continued)

All of which means that there is a lot more of everything — hard work, long hours and satisfaction — yet to come.

MORE QUESTIONS?

The following organizations can provide detailed information on what's involved in launching a career in architecture. Don't hesitate to get in touch with them.

RELATED ORGANIZATIONS

National Architectural Accrediting Board, Inc. (NAAB)

Association of Collegiate Schools of Architecture (ACSA)

National Council of Architectural Registration Boards (NCARB)

Association of Student Chapters/AIA (ASC/AIA)

These organizations, as well as the AIA, are located at 1735 New York Ave., NW, Washington, DC 20006.

SOME OF THEIR PUBLICATIONS

Current List of Accredited Programs in Architecture — issued each year by NAAB. Single copy free. Quantity prices: first 10 copies — 25¢ each; additional 10¢ each. Order from NAAB prepaid.

Architectural Schools in North America — issued by ACSA. Detailed statistics and descriptive profiles on nearly 100 schools in the U.S. and Canada. Prices: single copy — \$3; quantities of 10 or more — \$2.50 each, 1973 edition. Order from ACSA, prepaid.

Life Experiences in Environmental Design — issued by ACSA. Contains 22 frank interviews with people who are currently studying in the environmental design disciplines or who have recently entered the field. Prices: single copy — \$4; quantities of 10 or more — \$3.50 each. Order from ACSA, prepaid.

Facts About NCARB — questions and answers about the purposes of the organization, the examinations it administers, and other services it offers. Single copy free from NCARB.

NCARB Circular of Information No. 1 — (Incl. Appendix A, Table of Equivalents)

NCARB Circular of Information No. 4 — "Subject Matter Outline — Equivalency Examination"

Test Guide — (new edition published each May; cost varies yearly. Published by Architectural Record Books and NCARB.)

MORE USEFUL READING

The following books are available through AIA Publication Sales:

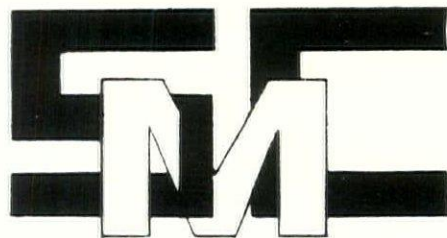

Architects Handbook of Professional Practice, Vols. 1 and 2. Includes samples of important AIA Documents plus 21 chapters covering various aspects of the profession and a glossary of construction industry terms, in ring binders. Catalog Number M104. Retail \$25.00

Comprehensive Architectural Services edited by W. Dudley Hunt, Jr., FAIA. Covers all facets of the professional requirements, responsibilities, and involvement of architects in professional capacity and conduct of business. Catalog Number M105. Retail \$12.50

Creating the Human Environment, an AIA Committee on the Future of the Profession report. Examines the hazards — and the opportunities — architects will face in creating the environment of the future. Outlines social influences, effects of technological improvements on the physical environment, and imperative changes for the professional. Catalog Number M106A. Retail \$4.95

Urban Design: The Architecture of Towns and Cities by Paul D. Spreiregen, AIA. An exploration and explanation of design and layout of communities, interrelating commercial and industrial development with residential and institutional areas. Sketches accompany the text on every page. Catalog Number M116. Retail \$17.50

Does Your Retirement Plan Make You Money?

Or does it Cost You Money?

Professional pension planning is an on going thing. With changing tax laws and a fluctuating economy, pension plans can lose their full growth potential. To make sure that your plan matures to its greatest value, put it in the hands of specialists.

T. J. Gasman Co. is a group of professional pension and financial planners working every day to design and keep your pension plan working for you.

A totally independent firm:
• Pension & Profit Sharing Consultants
• Estate Planning
• Investment Funding

WHY OVER 500 REGISTERED ARCHITECTS CARRY THIS CARD!

These are challenging times for any profession — times when you need the active, aggressive support of your national, state, and local architectural organization to give you the professional edge you need to advance and grow. As a member of the Wisconsin Society of Architects of the American Institute of Architects you receive many valuable benefits. Among them:

- **WSA ANNUAL CONVENTION** — Sponsored each Spring and offering architects quality programs and products exposition, many of which qualify for Continuing Education Units.
- **AN ORGANIZED LOBBYING EFFORT** — Working in Madison to insure Wisconsin architects have a voice in design and construction problems and issues presented to the Wisconsin Legislature.
- **MEMBER BENEFIT PLANS** — The AIA offers comprehensive life and health insurance plans for architects, their firms, and their families at attractive rates. In addition, members can receive practice management tips at seminars sponsored by the WSA or AIA.
- **GRASSROOTS POLITICAL ACTION** — Developed through the WSA, architects act as Minutemen and meet with their legislative representatives to discuss issues of importance to their profession.
- **WISCONSIN ARCHITECTS FOUNDATION** — A charitable, educational and scientific foundation devoted to education of students and the general public regarding architecture.
- **DOCUMENTS SALES** — A central clearing house for the sale of all AIA documents and publications, members receiving a reduced rate. Access to this clearing house is by a toll free WATS line (1-800-362-3912).
- **SEMINARS AND WORKSHOPS** — Sponsored by the WSA, these programs are typically reflective of needs defined by the membership, speaking on topical issues and problems.
- **MISCELLANEOUS** — Professional Practice Library facilities; firm roster; salary survey; DILHR code watchdog; Honor Awards program; inter-professional liaison with contractors, engineers, lawyers, etc.; DOSFM liaison; Construction Industry Handbook; Architectural Careers Information and slide/tape show; Architectural Referral by building types.

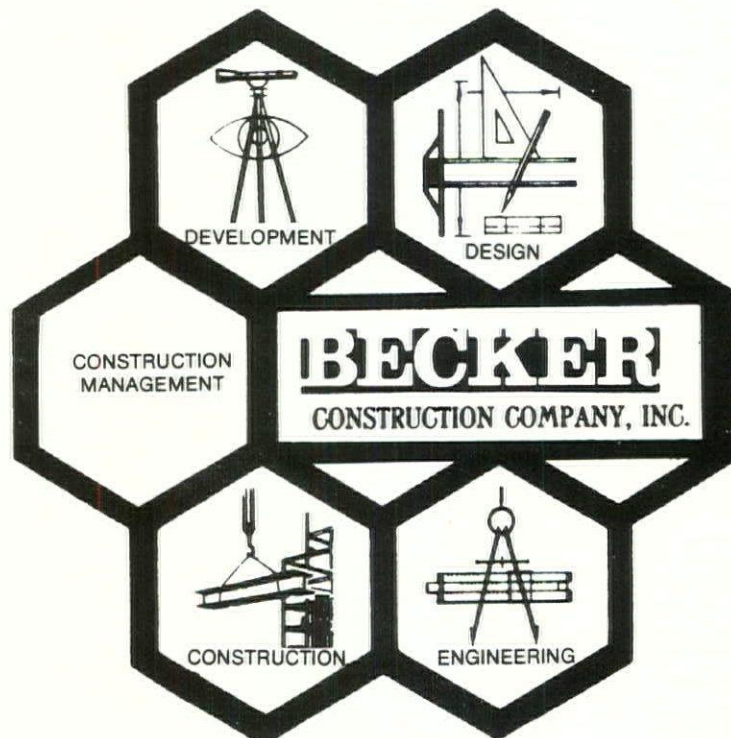

FOR MORE INFORMATION REGARDING MEMBERSHIP IN THE WSA/AIA, CALL THE WSA OFFICE AT 257-8477 (MADISON ONLY) OR 1-800-362-3912.

Movies And Slides Available To Members

The WSA office maintains a circulating file of 16 mm movies and slide programs which are available for Chapter programming, service clubs, school groups, etc. The materials currently available in the WSA office are supplemented by substantial resources available from AIA. Refer to the "Yellow Pages Index" of the AIA Journal of August, 1980 for a full listing (30 pages) of AIA resources.

A brief description of slides and movies available through the WSA office includes the following:

1. A CHILD WENT FORTH — a 28 minute, 16 mm film production of the urban school, produced by AIA Educational Facilities Laboratory, and the U.S. Office of Education.
2. THE BEST WE CAN DO — a 16 mm color motion picture on suburbia, produced by the AIA.

3. RIGHT OF WAY — a 16 mm film production concerning highways, produced by the AIA.

4. THE NOISY LANDSCAPE — a 16 mm color film production concerning signs, produced by the AIA.

5. CONVERSATIONS WITH AN ARCHITECT — a 16 mm sound movie, produced by AIA, supplemented by a two page brochure.

6. DOWNTOWNS FOR PEOPLE — a 16 mm, 25 minute color film concerning American downtowns, supplemented by a four page flyer.

7. NO TIME FOR UGLINESS — a 16 mm color film, produced by the AIA, and supplemented by a 21 page brochure dealing with an appraisal of the American city.

8. DESIGNING A BETTER TOMORROW — a 16 mm sound production produced by the AIA.

9. ARCHITECTURE, USA — a 16 mm production good only for showing to school children, not to clubs, etc.

10. AIA CAREER AWARENESS PACKAGE — an 80 slide presentation dealing with careers in architecture, prepared by the Association of Student Chapters of the AIA.

Just contact the WSA office and we will provide you with any of these materials for your use. Your only obligation will be to return the materials to the WSA within a reasonable time and pay the return postage.

Should you be aware of similar types of materials that should be made available to members or those interested in the profession, please contact the WSA office.

WSA Cassette Library

The WSA has established a library of tape cassettes for use by its members. At your request, the requested cassettes will be shipped to you for your use, with the condition that they be returned within 14 days. Your only expense will be the cost of the return postage.

We are interested in increasing the cassettes which we have on file. Should you have any cassettes which you would like to donate or to provide to us in order that we can make a duplicate copy, please contact Karen at the WSA office.

The following is an alphabetical list of cassette tapes which are available for your use:

ARCHITECTS AS LAND DEVELOPERS: by Carl Tschappat

CHAPTER 63: A portion of the UW-Extension 1980 Wisconsin Administrative Code Seminar dealing with BEPS.

CONSTRUCTION CONTRACTS: by Justin Sweet

DOING BUSINESS WITH THE STATE: The 8/13/80 program sponsored by the WSA (4 volume).

EXPANDING YOUR PRACTICE THROUGH ENERGY DESIGN: Two Volumes

HETTLER'S LUNCHEON: Dr. Bill Hettler's 1980 WSA convention presentation on "Your Lifestyle - Healthy?"

NEW MARKETS AND METHODS: From the Library of Architectural Cassettes.

OFFICE, PARTNERSHIP, CONSULTANT AND ARCHITECT CONTRACTS: by Justin Sweet

OPPORTUNITIES IN CORRECTIONAL ARCHITECTURE: Two volume cassette series from the Library of Architectural Cassettes.

DR. JOHN OTT: Two volume series of the presentation made by Dr. John Ott at the 1980 WSA convention on "The Effect of Artificial Light".

PLANNED APPROACH TO ARCHITECTURAL PRACTICE

SELLING ARCHITECTURAL SERVICES: Two volume series prepared through the Library of Architectural Cassettes.

The Brochure: A Checklist

Michael C. McAneny, AIA

The design of a marketing brochure is a continuing concern for most architectural firms. Most find changes in the scope or direction of their work, increasing diversification or specialization of their practice, their need to keep a brochure current and, of course, their costs associated with producing such a sales tool are all major factors which render the brochure an ongoing area of interest.

The following is a checklist of items, in no particular order, which should prevent the omission of an area deemed important in the preparation of a brochure.

1. **Biographies of Principal(s).** Short resumes of the education, honors received, registration, professional experience, etc. of the firm's key personnel.
2. **Biographies of Staff.** Very brief resumes of professional staff, usually limited to educational and registration qualifications.
3. **Photographs of Principals, Staff or Office.** Range from individual photographs of principals to group shots of professional staff, most often with a section of the office in the background.
4. **History of Firm.** Range from brief summaries, citing key events, to lengthy more detailed descriptions of the firm's past experience and organization.
5. **Client List(s).** A list of past or continuing clients, usually limited to company or corporate names in non-residential work. Frequently arranged by specialty or type of client, i.e., commercial, institutional, government, restoration, housing, interiors.
6. **Prior Client List.** A list of clients for whom services were performed before the firm was organized. Usually limited to the experience of principals in prior professional associations.
7. **Reference List.** A list of those persons, most frequently past or continuing clients, who can be counted upon to speak well of the firm's work. Frequently accompanied by the person's company and title.
8. **Project List(s).** A list of projects accomplished by the firm. As with client lists, frequently arranged by specialty or type. Most listing include the project's location, construction cost and date of completion.
9. **Photographs of Work.** Photographs, predominantly black and white for reasons of cost and the desire to de-emphasize color statements, of all or selected completed projects. Frequently accompanied with descriptive information such as reduced floor plans or sections. Some photographs are printed and bound while others are loose and interchangeable.
10. **Flexible Emphasis.** While overall format of brochure remains constant, interchangeable project lists and photographs allow brochure to be adapted to the particular interests of a prospective client.
11. **Specialist Emphasis.** Strongly states, through photographs, lists, history, philosophy, etc., that firm specializes in only one type of work. Work areas seen were viomedical, church and interior design.
12. **Statement of Philosophy.** A description, usually brief, of the firm's subjective attitudes towards architecture, shelter, design, client relations, etc.
13. **Problem-Solution Format.** A format incorporating a brief statement of the client's program, the problems it or the site presented, the theoretical solutions developed by the firm and the completed project.
14. **Developmental Sketches.** Preliminary sketches or drawing intended to display the firm's problem solving or conceptual techniques.
15. **Photographs of Models or Renderings.** Predominantly black and white, photographs of models or renderings of work not yet complete or "on the shelf".
16. **Recent Awards.** A list of awards received by the firm such as AIA design awards, Good Neighbor awards, competition awards, etc. Jury comments are frequently included.
17. **Press Clippings.** Reprints or copies of newspaper or magazine articles which favorably publicize the firm or its projects.
18. **Letters of Commendation.** Copies of letters from satisfied clients, public officials, etc., which could influence a prospective client in his selection process.
19. **Work In-Progress List.** A list and description of projects in pre-construction phases.
20. **Question and Answer Format.** An approach under which the firm answers hypothetical questions posed by a prospective client concerning design philosophy, project management, past project experience, etc.
21. **Financial Reference.** The identification of a party or parties who will vouch for the financial stability of the firm.
22. **Service Emphasis.** An approach which emphasizes basic services rendered, with examples, rather than completed projects.
23. **Project Flow Chart.** A graphic representation of how a typical project progresses through a firm from its inception to its completion.
24. **Consultant List.** A list of consultants the firm has worked with or regularly employs. Frequently included were structural, mechanical, electrical, civil and site engineers, landscape architects, estimators, acoustical specialists, traffic engineers, food service specialists and library planners.
25. **Bulletin Approach.** Most frequently with larger firms, a form of update which tells of new projects, recent awards, or staff promotions. Typically a mailed supplement to the main brochure.
26. **Physical Format.** None larger than 8½" x 11". Most bound in some manner (i.e., 3-ring, comb, staple). Some were fold-out with pockets for either current or specially directed projects. One contained in a file folder with name of firm printed on tab.

Note: Mr. McAneny is a member of the Editorial Board of Architecture New Jersey.

Wisconsin Architectural Archive Report

by Orval Lilyquist

Since the article about the Wisconsin Architectural Archive appeared in the January 1980 issue of the **Wisconsin Architects** a number of important events have taken place at the Archive. We should start with the fact that both the Milwaukee Public Library and Mr. Thomas Eschweiler received awards from the Milwaukee Art Commission in appreciation of their contribution in preserving the artistic heritage of the Milwaukee community for their efforts in establishing, promoting and maintaining the Wisconsin Architectural Archive. Not only has the local community expressed its appreciation and interest but the Archive is receiving an increasing number of requests for material from many areas around the country. Some are interested in knowing how we got started and what our techniques are for processing architectural materials; other inquiries have been concerned with particular architects and buildings. Some of these requests have come from as far away as Colorado and Washington, DC.

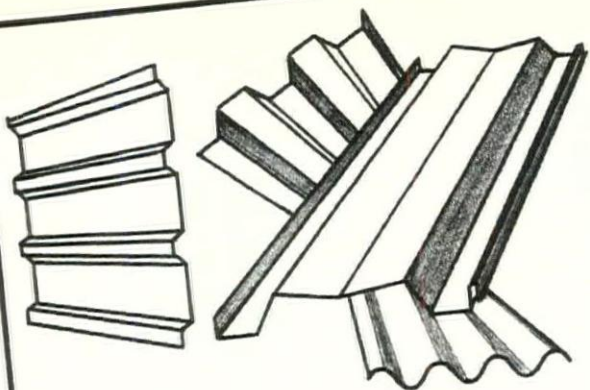

It is gratifying to report that more and more Wisconsin architects are becoming aware of the Archive and are cooperating with us. The following collections have now been processed to the point where they are ready for use: The Eschweiler Collection, the Dick and Bauer Collection, the Alfred Siewart Collection and the Mark Pfaller, Sr. Collection. Partially processed are: The Kirchoff and Rose Collection,

and the Herbst and Kuenzli Collection. Also in the Archive awaiting processing are collections from Brust and Zimmerman, Roger Sutherland and Maynard Meyer. There has not only been an increase in the number of collections deposited, but an increase in reference use by architects, students and historians. We are also beginning to establish exchange programs with the other archives. The Milwaukee Art Center's Prairie Archives and the Wisconsin Architectural Archive have been exchanging materials which better fit each others collections. We are now in the process of working out a duplicating plan with the Chicago Art Institute for material that each has that might be of interest to the other.

An exciting event scheduled for this November is the meeting of the Midwest Archives Conference in Milwaukee. This group of distinguished archivists, historians and librarians will meet for three days in Milwaukee November 6, 7 and 8. One session will be devoted to architectural archives and Russell Zimmerman and I will appear on that program. Alan K. Lathrop of the Northwest Architectural Archive with the University of Minnesota who was so helpful to us when the Wisconsin Architectural Archive got underway and Mrs. Shirley McArthur of the Milwaukee Northpoint South Historic District will also participate. The meeting itself will be held in the Milwaukee Public Library near the Archive and there will be a

tour of the facility afterwards. The Milwaukee Public Library and the Wisconsin Architectural Archive will also co-sponsor a reception at the library for the conference attendees. To further mark this occasion a number of drawings of Milwaukee motion picture theaters will be featured in a balcony exhibit at the Milwaukee Public Library.

It would be misleading to imply that all is well with the Archive. Candor demands that we also relate some of our problems and these, of course, are financial. It has been explained previously that the Milwaukee Public Library provides only the space for the facility and the services of a student intern. The Wisconsin Architectural Archive Board is responsible for raising funds to support the work of the Archive. It urgently needs the support of all Wisconsin architects and the allied trades in helping raise funds so that the Archive can embark on more ambitious programs of processing collections both in-house and yet to come. Architects, builders, students, preservationists and urban historians have found the Archive extremely useful. It will become even more so when other collections are given and **accessed**. Processing takes money and while all sources of revenue are being pursued by the Wisconsin Architectural Archive Board, we very much need the expression of financial support of the architectural community so that we can go to others and ask for their support.

Management Aids from AIA

PUBLICATIONS ON STREAM

Prices where indicated are retail (non-member) prices. To obtain AIA member prices and order publications, contact NJSA.

Architect's Handbook of Professional Practice, parts updated periodically (1M104, \$30.00) and **Supplement Service** (4P102, \$8.00 per year). A current compendium of practice information in two volumes. Includes 21 chapters, a glossary of construction industry terms, and samples of documents in series A, B, C, D, E and G. Chapters and documents are also available individually. Supplement service updates supplied three times per year.

Architectural Graphic Standards, 1970 (3M103, \$50.50). The reference guide of sizes, dimensions and details for all building materials and equipment for every type of building.

Architectural Secretaries Handbook, first published 1975 (4M131, \$12.50). An educational tool for the secretary in architecture and in related design disciplines.

Compensation Guidelines for Architectural and Engineering Services, Second edition revised, 1978 (2M188, \$12.50). The authoritative book on cost-based compensation, completely rewritten for better comprehension and greater comprehensiveness. Detailed procedures for determining scope of services and compensation based on costs of providing professional services.

Architect/Engineer Supplement to Compensation Guidelines, 1978 (2M188A, \$2.00). A discussion of issues that arise when negotiating with the client, intended for in-house use by the architect/engineer.

Owner-Architect Agreement Forms (B161 and B162) embody Compensation Guidelines concepts.

Worksheet Forms are also available.

Your Architect's Compensation, 1978 (\$0.75). A booklet designed to provide answers to owners' questions about

the cost-based approach to paying their architects.

Comprehensive Architectural Services, 1965 (3M105, \$15.95). A study of the many facets of comprehensive professional services as they were emerging a decade ago, many of which are currently valid.

Construction Bonds and Insurance Guide, 1973 (2M163, \$8.00). Reference on bonds and insurance related to construction projects, with glossary of insurance terms and suggested check-list.

Current Techniques in Architectural Practice, 1976 (2M701, \$25.00). A cohesive overview of architectural practice, with emphasis on management. This fundamental and unique reference for all design professionals includes carefully selected graphics to complement the text and annotated bibliographies for every chapter.

Development Building: The Team Approach, 1972 (2M135, \$15.00). A guide to project development, presenting a new market opportunity for many design professionals.

Documents. Over 100 agreement, general conditions, accounting and other working forms and informational material as management aids forming the backbone of professional practice. Documents are available for selection from the following series:

- A - Owner-Contractor
- B - Owner-Architect
- C - Architect-Consultant
- D - Architect-Industry
- E - Architect-Producer
- F - Architects' Accounting Forms
- G - Architects' Office and Project Forms

Economics of Architectural Practice, 1968 (2M114, \$6.00). A study of the cost of architectural services, including office administration, profits and project costs. Provides useful cost and income data as background for the practitioner.

Emerging Techniques II: Architectural Programming, 1968 (2RP102, \$5.00).

A collection of programming techniques which is a useful aid to practitioners in improving the overall quality of their service to the ultimate building user.

Financial Management for Architectural Firms, 1970 (2M108, \$12.00). Management and accounting procedures emphasizing efficient overall firm management. Includes examples of forms and reports.

Financing Real Estate Development, 1974 (3M168, \$21.50). Designed to assist design professionals in understanding the crucial role of real estate financing in the development process. (Temporarily out of print.)

Life Cycle Cost Analysis: A Guide for Architects, 1977 (2M708, \$10.00). Primer describes a straightforward and usable technique for considering all relevant economic consequences of design decisions. The first of two publications.

Personnel Practices Handbook, Second Edition, 1978 (2M138, \$10.00). General goals for developing mutually satisfying employer/employee relationships in the architectural profession.

Professional Construction Management and Project Administration, Second Edition, 1976 (3M121, \$17.50). A look at these new professional services and who provides them.

Profit Planning in Architectural Practice, 1968 (2M113, \$5.00). A valuable management tool which describes techniques for planning financial objectives and realistic compensation for architectural services.

Project Checklist, 1973 (1D200, \$1.50). A comprehensive and sequential list of the steps to be taken by the architect on a project, as required by and implied in the traditional owner-architect agreement forms.

Project Delivery Approaches: An AIA Guide, 1976 (4M702, \$2.50). An introductory guide to the nucleus and framework for responsive and creative approaches to project delivery.

Uniform Construction Index: A System of Formats for Specifications, Data Filing, Cost Analysis, and Project Filing. 1972 (2K103, \$10.00). Comprehensive formats for design and construction information and communication. The first three are interrelated and are in 16 divisions.

SERVICES ON STREAM

AIA Computer-based Financial Management Service. Operational accounting and control system based on "Financial Management for Architectural Firms." The output reports are delivered to subscribers either by mail or teleprocessing. For details, contact the administrators, Harper and Shuman Inc., 1278 Massachusetts Avenue, Cambridge, MA 02138.

Masterspec. A national, automated master specification system, with emphasis on content. Can be used manually or via computer, and it is applicable to any size firm. For details, contact Production Systems for Architects and Engineers Inc., 1735 New York Avenue, N.W., Washington, DC 20006.

CONTINUING EDUCATION OPPORTUNITIES ON STREAM

Audio-Tape Cassettes. Representative Audio-Tape Cassettes include:

- Architect as Land Developer
- Computer Applications in Architectural Practice
- Construction Contracts
- Designing Your Brochure as an Aid in Marketing Your Services
- Management of Time
- New Markets and Methods
- Office, Partnership, Consultant, and Architect Contracts
- Selling Architectural Services
- Selling Architectural Services II

To obtain these and other cassettes, contact AIA Headquarters.

Self-help Guides and Correspondence Courses. Representative are the following:

- Achieving Results with Words

Land Development Game Seminar
Marketing Architectural Services
Mini-Guides:

- Collaboration or Competition
- Conflict Management
- Delphi Method
- Diagnosing Organizational Problems
- Improving Effectiveness
- Improving the Quality of Meetings
- Learning Styles and Environments
- Managing and Profiting from Cost-based Compensation
- Motivation Styles and Climate

These and others are available from AIA Headquarters.

Training Laboratories. The following are representative training laboratories available:

- Advanced Land Development for Architects
- Architect and the Law
- Architect as Land Developer
- Business Management:
 - Problem-Solving for the Architect/Manager
- Computer-based Financial Management for Architectural Firms
- Construction Management
- Effective Human Management for Architectural Firms
- Expanding the Architectural Market
- Financial Analysis of Building Projects
- Financial Management for Profit and Growth in Small Architectural Firms
- Gaining the "Yes" Vote at the Loan Committee
- How to Improve Production Procedures
- Improving Organizational Management in Architectural Firms
- Managing and Profiting from Cost-based Compensation
- Marketing Architectural Services:
 - The Human Element
- New Markets and Methods:
 - Continuing and Expanding Services
- Planning Interview Strategies
- Reducing Vulnerability through Improved Practice
- Selling Professional Services

Contact AIA Chapter Office for more information and scheduling.

PUBLICATIONS IN PRESS

Standardized Accounting for Architects. An all-new book which is an integral part of the AIA Financial Management System. It spells out uniform manual accounting procedures specially designed for small and medium-size offices and contains interrelated accounting forms compatible with those of the AIA Computer-based Financial Management Service.

Life Cycle Cost Analysis: Applications and Resources, Vol. II. Will provide examples of use of life cycle cost analysis complementing Volume I.

PUBLICATION IN DEVELOPMENT

Financial Management Handbook. The "umbrella" component of the AIA Financial Management System. This book will encompass basic theories and applications appropriate to design professionals, and it will examine profit planning and the interrelationships of accounting reports and active financial controls.

SERVICES IN DEVELOPMENT

AIA Time Data Bank. An information-sharing service designed to supply detailed, accurate personnel time records on many varied projects as an aid to firms wishing to consult the experience of others when estimating time requirements for designated professional services in connection with computation of cost-based compensation.

Market Forecast Reports. Based on a pilot project in Missouri, this is conceived as an information-sharing service designed to indicate market trends for architectural services.

OTHER MANAGEMENT AIDS TO BE IDENTIFIED

These may include publications and related continuing education services on subjects such as:

- Programming
- Current production techniques
- Project managers' manual
- Small office notebook
- Market development

Energy Management Material

Energy conservation check list applicable to industrial, commercial and institutional buildings:

LIGHTING

1. Turn off lights when not in use.
2. Use timers to control lighting cycles.
3. Mark panels and switches so guards can monitor lighting.
4. Turn off parking lot lights after last shift.
5. Restrict parking to specific lots so lights can be kept off in unused lots.
6. Install photoswitches on lights that remain on at night.
7. Put timed shut-off switches on lights in transformer rooms and similar closed-off areas.
8. Turn off all electrical signs.
9. De-energize some light fixtures.
10. Use lower wattage light bulbs.
11. Replace incandescent fixtures with fluorescent.
12. Replace incandescent bulbs with self-ballasting mercury or sodium bulbs.
13. Clean light fixtures on regular basis.
14. Reduce lighting in material storage areas except where required for production and security needs.
15. Reduce lighting in all corridors, etc.
16. Make maximum use of sunlight for heating and lighting purposes by opening blinds or drapes on bright days.

PROCESS RELATED

1. Turn off process exhausts when not in use.
2. Schedule work so process exhausts are used less.
3. Improve efficiency of exhaust systems by redesigning hoods.
4. Cut down on process use of hot water (rinses, etc.).

5. Check hot water systems for leaking valves and faucets.

6. Use plastic spheres for insulation on hot liquids in open top tanks.

7. Determine efficient "hold" temperatures on process tanks during overnight and weekend periods.

8. Reduce temperature of processing fluids (e.g., use of cooler water in industrial washers).

9. Shut down gas burners in process equipment versus idling burners when not in use.

10. Survey air tools and spray equipment; upgrade to reduce usage of compressed air.

11. Eliminate compressed air leaks.

12. Turn off machinery, test equipment ovens, etc., when not in use.

13. Unplug all small electrical tools such as soldering irons when not in use.

14. Replace oversized motors with ones of proper size.

HEATING/AIR-CONDITIONING

1. Turn down heat during day to 65°-68° (depends on system).

2. Turn down heat at night and on weekends to 60° (depends on system).

3. Turn down heat in unused areas to 50° or below.

4. Use minimum heat in warehouses and storage areas.

5. Segregate special operations that require more heating or cooling than surrounding areas.

6. Keep doors closed to unheated or uncooled areas such as corridors.

7. Keep heaters clear of obstructions.

8. Seal thermostats to prevent individual adjustments by unauthorized personnel.

9. Install timers to control heating cycle.

10. Shut off chiller during winter months if possible.

11. Close loading dock doors when not in use.

12. Use dock curtains when unloading trucks.

13. Use air curtains at doors that must remain open.

14. Make maximum use of sunlight for heating and lighting.

15. Inspect and repair insulation, weather stripping and caulking.

16. Install additional insulation — especially on ceilings.

17. Investigate more or better pipe and duct insulation in unheated areas.

18. Install storm windows or cover with plastic.

19. Install insulating glass in windows.

20. Consider Infra-Red or other spot heaters in small work areas where general heating can be reduced.

21. Clean heating and cooling heat-exchanger coils and fans on a regular basis.

22. Replace inefficient boilers with new more efficient units.

23. Use small automatic steam generators/hot water boilers at remote locations requiring steam/hot water.

24. Clean boilers more frequently.

25. Adjust burners regularly for maximum efficiency.

26. Preheat combustion air with flue gas.

27. Check steam traps, lines, regulators and valves regularly for leakage.

28. Reduce make-up air during day.

29. Eliminate all make-up air at night.

30. Seal ventilation controls to prevent unauthorized adjustments.

31. Turn on ventilation only when required.

32. Use heat recovery units on exhausts.

33. Clean or replace air filters on a regular basis.

34. Supply colder make-up air to laboratory hoods.

CONVERSION FACTORS

1 watt = 3,413 BTU
1 KW = 3,413 BTU
10 KW = 1 H.P. (Boiler)
745 Watts = 1 H.P. (Motor)
1 Gal. Oil = 140,000 BTU
1 Lb. Coal = 12,000 BTU
1 Cu. ft. of Natural Gas = 1,000 BTU
1 Cu. ft. of Propane Gas = 2,300 BTU
1 Lb. of Propane Gas = 19,900 BTU
Equivalent direct radiation (EDR) = 240 BTU/H
1 Ton refrigeration = 12,000 BTU/H or approximately 1 H.P.

HANDY FORMULA

1 kwh will raise the temperature of 4.1 gallons of water 100°F, at 100% efficiency.

CONNECTED LOAD REQUIRED TO HEAT WATER:

$$\frac{\text{Gallons} \times 8.34 \times \text{degree F rise}}{3413 \times \text{time in hours} \times \text{efficiency of system}}$$

MONTHLY ELECTRICAL CONSUMPTION:

$$\frac{\text{Gallons of hot water used} \times 8.34 \times \text{average degree F rise}}{3413 \times \text{efficiency of system}}$$

COMMONLY USED UNITS

1 BHP = 34.5 lbs. of steam (from and at 212°F)
1 BHP = 29.6 lbs. of steam (100 lb. gauge pressure and 60° feed water temp.)
1 BHP = 30.0 lbs. of steam (10 lb. gauge pressure and 60° feed water temp.)
1 BHP = 33,472 BTU/hr.
1 BHP = 139 sq. ft. of steam radiation
1 BHP = 223 sq. ft. of hot water radiation
1 sq. ft. E.D.R. (steam) = 240 BTU/hr.
1 lb. of steam (from and at 212°F) = 970.2 BTU
1 lb. of steam (10 lb. gauge - feed water 60°) = 1,131 BTU
1 Therm = 100,000 BTU/hr.
1 gal./hr. burner needed for 85,000 BTU at the register for warm air heating.
1 gal./hr. burner is approximate size for 18 sq. ft. of boiler heating surface.
1 gal./hr. burner is approximate size for 8 to 9 tons of coal/season.
1 Kw heater will heat 7.4 gallons of oil/hr. 100°F.
1 Kw hour = 3,413 BTU
1 Mechanical HP = 550 ft. lbs./sec.
1 Mechanical HP = 33,000 ft. lbs./min.
1 Mechanical HP = 745.7 watts
1 Mechanical HP = 42.4 BTU/min.

$$\text{Brake HP of a Pump} = \frac{\text{GPM} \times \text{Head in feet}}{3,960 \times .60 \text{ (estimated eff.)}}$$

$$\text{Brake HP of AC Motor} = \frac{V \times A \times \text{P.F.} \times K \times 1.34 \times \text{Motor Eff.}}{1,000}$$

when K = 1 for single phase
2 for 2Ø, 4 wire
1.732 for 3Ø

$$\text{Fan BHP} = \frac{\text{CFM} \times \text{Pressure (inches)}}{6,346 \times .70 \text{ (estimated eff.)}}$$

VENTILATION

$$Q = \frac{L \times W \times H}{T}$$

Q = Quantity of Air in Cu. Ft. per Min.
L = Length of Space in Feet
W = Width of Space in Feet
H = Height of Space in Feet
T = Time in Minutes per Air Change

TEMPERATURE

C = 5/9(F - 32)
F = 9/5(C) + 32

The Wisconsin Architect

A Look at 1981

Magazine Themes for the Coming Year

1981 will be an exciting year for the *Wisconsin Architect*.

The Editorial Board has selected magazine themes for the coming year (listed below), and once again invites you to enhance the quality and scope of the magazine by submitting your projects and articles. This is a rare opportunity to share your work and ideas with other professionals in the field. In addition, your published article can be purchased in quantity, separately from the magazine, to use as a marketing tool. Additional copies of the *Wisconsin Architect* are also available.

To have your article considered for publication in the *Wisconsin Architect*, mail copy, and photos or drawings if available to: Editor, The *Wisconsin Architect*, 615 East Washington Avenue, Madison, WI 53703. Photos are encouraged, provided they are black and white glossy, and clear. Photos should be accompanied by a brief description of the project, and the design goals. The deadline for receipt of articles is the first day of the month prior to the month of publication.

APRIL

LANDSCAPE ARCHITECTURE (INTERIOR & EXTERIOR)

Stories, articles, and pictures of projects featuring landscape architecture, educational requirements for same, and how landscape architecture affects the building environment.

JULY

SINGLE FAMILY RESIDENCES & CONDOMINIUMS

Examples of single family residence, as well as articles pertaining to design and construction of single and multiple family homes.

SEPTEMBER

CONTRACTORS AND OTHER BUILDING TRADE ORGANIZATIONS

Information pertaining to contractors and other professions involved in the construction team.

MAY

HEALTH CARE

Stories, articles, and pictures of projects within the health care field.

AUGUST

ENERGY ISSUE

An update on current energy issues, projects, etc., their analysis and suggested architectural solutions.

DECEMBER

RESTORATION, ADAPT OF REUSE, PRESERVATION

Projects using creative techniques to restore, preserve, and adapt well-designed older buildings both interior and exterior.

ALUCOBOND™ GREAT FLAT OUT AND TAKES ALL THE CURVES

Alucobond™—amazing composite building/decorating material—comes to Chicagoland through Jones & Brown.

Alucobond material brings together the best of all worlds in convenience and versatility. Lightweight, shapeable by bending and folding. It won't ripple, buckle or bulge. Use flat for a clean, smooth look; wrap around corners and curves for truly graceful lines.

Alucobond material is a thermoplastic core sandwiched between two sheets of aluminum. Panel sizes up to

5' x 28'; thicknesses of 3, 4 and 6 millimeters. Jones & Brown offers it in six siliconized polyester resin colors and four anodized finishes.

**JONES & BROWN
COMPANY, INC.**
