WISCONSIN ARCHITECT serves the design and construction industry in Wisconsin with circulation to Architects, Engineers, General Contractors, Business and Interior Designers, Landscape Architects, Certified Planners, Developers, Specifiers, Construction Managers, Builders, Manufacturers, and Suppliers. Wisconsin Architect is the official publication of the Wisconsin Society of Architects/A.I.A., published by Wisconsin Architect, Inc. Address all editorial and advertising inquiries to: Editor, Wisconsin Architect, 321 S. Hamilton St., Madison, WI 53703; phone 608/257-8477. Wisconsin Architect and the WSA disclaim liability for statements by the editors, contributors, and advertisers.

The Winning Combination *Brick & Concrete*

Your two best investments from Tews Company Inc.

A Brick Home means:

- Elegant beauty & durability
- Natural insulation for lower heating & air conditioning bills
- Reduced fire insurance costs
- Greater resale value
- Maintenance Free

A Concrete Driveway and Patio means:

- It's permanent. Built to last.
- It's beautiful & uniquely designed using low chert or colored aggregates
- It adds to the value of your home
- It's Maintenance Free

Every day is **TEWS** day for all your building material needs.

Welcome to the 1991 edition of the annual "WSA Construction Industry Handbook." Keep it handy. You will find it to be an invaluable reference source throughout the year on matters pertaining to the Wisconsin Society of Architects.

Your comments

and suggestions

are welcomed...

This year's edition, our eleventh, contains updated directories of WSA members and WSA member-owned firms plus background on legislative issues of interest to Wisconsin's architectural profession. In addition to nearly 1,100 WSA members, the WSA Handbook is distributed to over 1,500 other design and construction industry leaders across the state, including consulting engineers, interior designers, general contractors and landscape architects. It also is distributed throughout the year to public and private owners interested in selecting an architect for their building projects.

For 1991, upcoming issues of Wisconsin Architect magazine will include special features on commercial, residential, public, cultural, health, recreational, interior architecture, landscape architecture and restoration projects. Future issues also will feature a WSA Convention preview and the projects selected to receive 1991 WSA Design Awards.

Your comments and suggestions regarding the magazine are welcomed. We encourage all WSA members to submit projects for publication plus articles on topics of interest to the profession.

*Peter J. Schuyler, AIA, Chair
Editorial Advisory Board*

Service.

Wisconsin Bell public phones are an easy way to give your customers that extra measure of service that keeps them happy. And keeps you profitable.

Your public phone is routinely serviced, collected and maintained for you at no cost. In fact, Wisconsin Bell has provided dependable, reliable service to its public telephone agents for over 100 years.

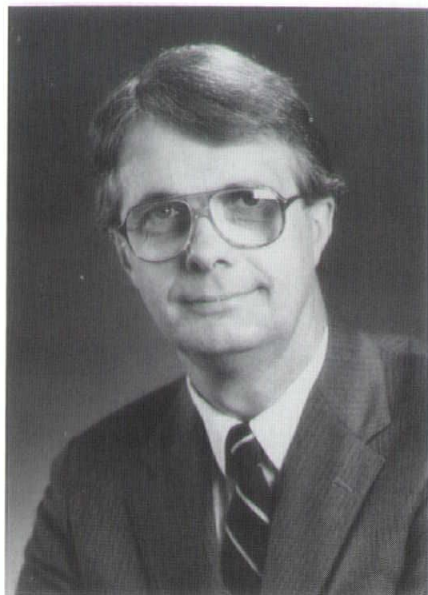

Service they can count on. Service you can count on. It's what Wisconsin Bell public telephones are all about.

Wisconsin Bell. We're everything you want in a public telephone. For more information about Wisconsin Bell public telephones, call **1-800-924-2772**.

AN AMERITECH COMPANY

President's Message

As we begin 1991, the Board of Directors of the Wisconsin Society of Architects and all members across the state can look forward to a continuation of excellent programs, leadership development opportunities and peer interaction. During recent years, the WSA has experienced significant membership growth and has now passed the 1,000-member mark.

Our activities at the local Chapter and state Society levels have produced significant results. The enthusiastic support of and participation by members in Chapter programs and special activities have been outstanding. Chapter programs, Architecture Week events and committee activities have provided professional growth opportunities for members and, of equal importance, have elevated the visibility and image of the profession. Each activity has provided high quality public relations and has helped to improve the credibility of all architects in the eyes of the public and the private sector.

At the state level, the WSA's Qualification Based Selection (QBS) program has continued to grow. We have seen significant improvement in the analysis of selection criteria by hundreds of public sector clients across the state. The WSA liaison committees with DILHR, DSFM, DRL and DPI have continued to provide valuable input into the legislative and administrative decision-making process. WSA involvement in state legislative concerns affecting the profession continues to grow. Joint efforts with allied professional groups have helped give us a greater voice in state government issues.

The practice of architecture has undergone dramatic changes during the past two decades, and I am sure that change will continue to occur at an increasing rate during the 1990s. Activities mentioned above and major events such as the annual statewide Convention and Fall Workshop provide excellent opportunities for all members to gain insight into emerging trends and new tools. As we participate in these activities, each of us finds that the pressures and challenges that we face individually on a daily basis are really common to all of us.

During 1991, the WSA Board of Directors will continue to build on the successful programs of recent years. Our Board meetings will be held at numerous locations around Wisconsin. We will invite key community leaders from the locale in which the meetings are held to join us at our meetings. Our purpose will be twofold: 1) allow Board members to meet these

leaders while learning of significant local activities and concerns, and 2) provide opportunities for WSA input and exposure into the decision-making processes. We will work to show that architects can participate in a wide variety of leadership roles to determine and implement policy. All of us can contribute to building on the credibility of our profession. By participating on local building boards, community committees and in elected positions, we collectively provide a strong voice in directing our future.

I ask that each of you initiate an "Adopt-A-Legislator" program this year. Support a candidate of your choice. Work on committees to plan and direct policy. Your leadership as private citizens and as architects will greatly benefit the profession.

The WSA is your organization. You will receive from the WSA in direct proportion to that which you put into the WSA. Our Executive Director, support staff and the Board of Directors are eager to work with you. We look forward to your continued enthusiastic critique and participation.

Richard W. Eschner, AIA
President
Wisconsin Society of Architects

New brochure pictures contoured designs for the 90's.

As fashions, trends and styles change, so must the look of the retail center. To keep pace and design centers for the 90's and beyond, retail planners have found the fresh style of Floclad not only highly visible, but consistent with the streamlined aesthetics that have attracted the eye of the consumer.

Binkley Floclad offers smooth flowing lines and contours which project a contemporary, energetic look. It can unify the appearance of large malls, a collective group of stores in a regional shopping complex, or consolidate the image of a neighborhood strip center. Floclad is also being used by large chain operations to project a modern image that is consistent from location to location.

Floclad is a flexible system too. It can be used in long continuous runs, individual sections and corner transitions are made with simple or compound mitered corners. Floclad's contoured shape with horizontal embosses produce a structural superiority that eliminates expensive intermediate supports on nearly design sections with a radius as large as 8' 6".

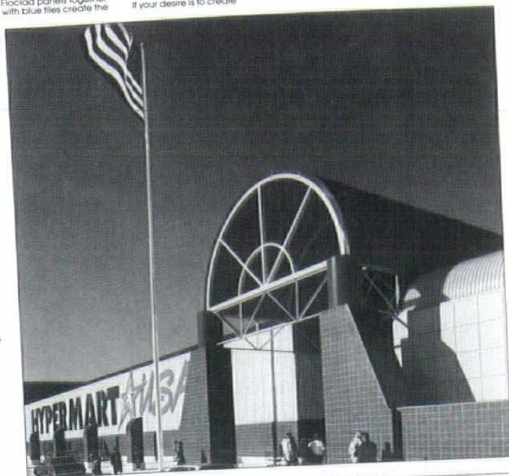

The retail centers pictured show a variety of colors, looks and corner detailing. Note the use of the horizontal

panels with the mitered corner on the tan and beige center.

Bright yellow curved Floclad panels together with blue tiles create the

dynamic archway for the new hypermart (T.M.) stores, a visual spectacle illustrating the design capabilities of Floclad. If your desire is to create

higher visibility leading to higher consumer awareness, patronage and satisfied tenants, consider Binkley Floclad for your centers.

BINKLEY

Regardless of the size and shape of your retail center, now you can incorporate the contemporary look of the 90's by contouring it with a Binkley Floclad wall and roof system.

Floclad is an exciting new look that permits your center to become as much a part of your image as your logo.

The custom design possibilities include mitered and molded corners, vertical or horizontal ribs, metallic finishes or bold bright colors.

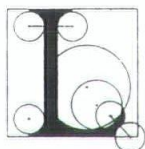

Dynamic, yet cost effective. Floclad is structurally superior, requiring minimum framing. It installs fast. And with Binkley's Single-Source Program, you can get design-fabrication-installation all under one roof.

Floclad: when you want to stand apart.

**LANGE BROS.
WOODWORK Co. Inc.**
QUALITY ARCHITECTURAL WOODWORK
SINCE 1932

For over 50 years, Lange Bros. Woodwork has built and maintained a reputation of excellence within the millwork industry. By producing work of the highest quality, Lange Bros. has sought to exceed the standards set for architectural millwork.

Trained in Germany in the craft of their father, our founders established Lange Bros. with a concern for quality and craftsmanship. This European tradition continues today with the involvement of the third and fourth generations.

Our highly skilled craftsmen represent literally hundreds of years of experience. Millwork projects manufactured in our facilities can be seen in schools, universities, churches, libraries, hospitals, accounting and law firms, office buildings, recreation facilities, homes, and restaurants in the Midwest and in other regions of our country.

We have the skill and the resources to provide you with premium quality millwork and our craftsmen look forward to working with you on your next project.

For, when it comes to wood, our only limitation is the imagination.

Sincerely,

John Lange, Jr.

Limitless design directions. From one core concept.

With Spancrete, you can cast your thoughts in any design direction you choose.

Stretch, shape and mold Spancrete into
arches, cantilevers, angles, openings and other architectural forms.

Carry the weight of manufacturing, warehousing
or storage with minimum floor depths and subfloor support.

And span broad, open spaces freely without load-bearing beams, columns or walls.

Precast, prestressed Spancrete panels and planks
open up endless design and construction possibilities. With rapid, all-weather
erection. Low-maintenance durability. Attractive surface treatments. Efficient
energy conservation. Built-in fire resistance. Convenient, "just-in-time"
delivery. Minimum sound transmission. And the controlled
quality of a plant-produced material.

Spancrete. The core of design diversity.

Enhance with Tile From Butler Tile Sales

While IAC ceramic tile is priced comparably to most higher grades of vinyl, carpet and wood, it's far more durable, and a lot less trouble. There's no stripping, waxing, sealing, or buffing — ever. And because it's made by IAC, it resists stains, acids and other corrosive substances. In fact, IAC has more than three times the abrasion resistance of current industry standards — as well as nearly twice the breaking strength and almost five times the bonding strength of standard tile.

Tile of Distinction Ceramic Tile Showroom

• Serving Wisconsin builders, architects, and interior designers for 35 years • Hundreds of samples on display • Experienced design consultants available to assist you • Fast delivery of hundreds of different tiles from our warehouse

240 FEET OF 2x10 OR

160 FEET OF G-P WOOD I BEAM™

WHICH WILL YOU ASK FOR?

Take your basic 20' x 16' floor. Holding it up would take 50% *more* 2 x 10s than G-P Wood I Beams. That's because G-P Wood I Beams have more load-bearing capacity per pound than dimensional lumber (and even many other I joists). In many cases you can frame 24" o.c. instead of 16" o.c. Thus, you save time and labor on installation, and *that* saves you money.

JOIST SPACING*

JOISTS	12"	16"	19.2"	24"
2x10 SYP #2	18'-0"	16'-5"	15'-5"	14'-0"
WI 43-9.25" (G-P Wood I Beams)	21'-5"	19'-4"	18'-0"	16'-7"

*From "Span Tables for Joists and Rafters" (NFPA), and "Southern Pine Maximum Spans for Joists and Rafters" (SFPA).

The patented flange-web joint construction of G-P Wood I Beams creates a greater bonding surface than on other wooden I

joists, so the joint has excellent strength and stability. The wider flange provides more nailing and gluing surface. So installation is easier, and the need for cross-bracing (and the cost and labor involved) is reduced. Best of all, your floor is stiffer, sturdier, and less likely to squeak.

G-P Wood I Beams could save you time, labor and money, *and* improve the quality of your work. Which tells you why you *should* be asking for it.

The Tantalizing Art of Illusion

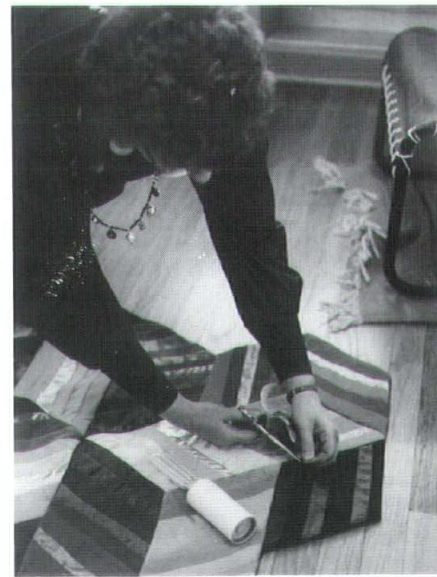

To view the work of this Madison fiber artist is an adventure for the mind. Joyce Marquess Carey cuts small swatches of fabric and, by use of shape and color, slyly contrives to make her flat wall hangings seemingly spring from the wall in three dimensions. The pieces vary from crisp architectural images to rounded rolls and folds.

In the words of the artist, "The viewer is invited to solve visual riddles in which edges, corners, and whole planes seem to shift forward and back in imaginary spaces." Many of her ideas come from looking out of windows, while traveling and at home, noticing the play of light and shadow on objects all around us. She uses luxurious fabrics in rich, bright colors—metallic brocades, lame, velvet, and satin. Some corduroy and wool might be mixed in for contrast of shiny and matte textures. The small segments of fabric are stitched together on an industrial sewing machine as if piecing a quilt. No quilting is done, but embroidery is sometimes added.

An early interest in knitting led to university classes in order to learn how to make her own patterns. This led to weaving, from which the artist learned a great deal. Eventually Carey found this medium too time consuming. Her creative ideas needed to expand to larger finished works which could be completed in a reasonable amount of time. So was born her quilt-like technique.

Joyce Carey holds three university degrees, including Master of Fine Arts, University of Wisconsin-Milwaukee. In 1973 she began as lecturer on the Madison campus and worked up to full Professor of Textile Design in 1988. The following year she resigned from the University of Wisconsin to work full time in her studio. She has participated in many juried and invitational exhibitions all around the country and in Japan, written a variety of articles on weaving and fiber-art, conducted workshops and presented lectures to special groups. More than forty of her creative hangings are now in private collections or were com-

Left, top: Detail of "Chicago Suburbs." The artwork contains 11 panels and is 21 feet long. Left, middle: Work on the industrial sewing machine. Left, bottom: "San Camillo Cross"

in San Camillo Residential Community in Wauwatosa. Middle, bottom: Cutting strips of fabric. Middle right: Adding the finishing touches.

missioned for public buildings, including the University of Alaska at Juneau.

Her specialty is extremely large pieces for large spaces. Her design technique makes them read well from a distance and her unique system of hanging makes them practical. A piece 12 feet by 25 feet might easily weigh 30 to 40 pounds. The cost of these will vary from 100 to 150 dollars per square foot.

A full size paper model of the work is provided for exact placement on the wall, eliminating the need of handling the piece itself. She cuts a backing of one quarter inch plywood, which gets bolted to wall studs, and edges the sections with hook and loop tape which match perfectly with a similar edging of tape on the completed wall hanging. From a scaffolding, the art work is easily hung and this method results in handling the weight so it will not buckle or fold with time. The artist is present for most hangings. Otherwise she

sends specific instructions.

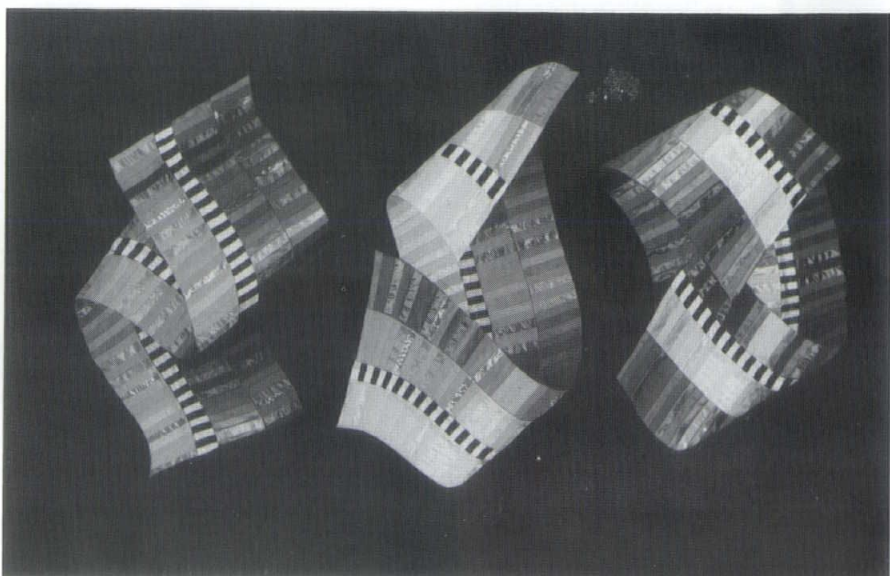

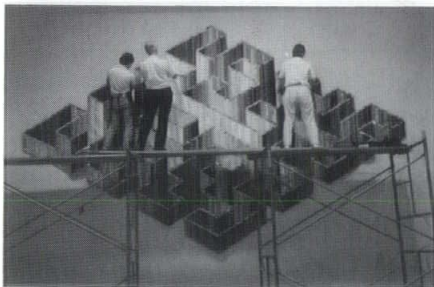

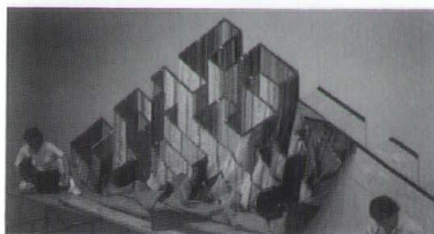

At this point in her career, Carey usually creates commissioned pieces for a specific wall. This gives greater satisfaction than creating for a show or gallery. She usually works with architects and interior designers and gets to meet some of the people who will be living with the piece she creates.

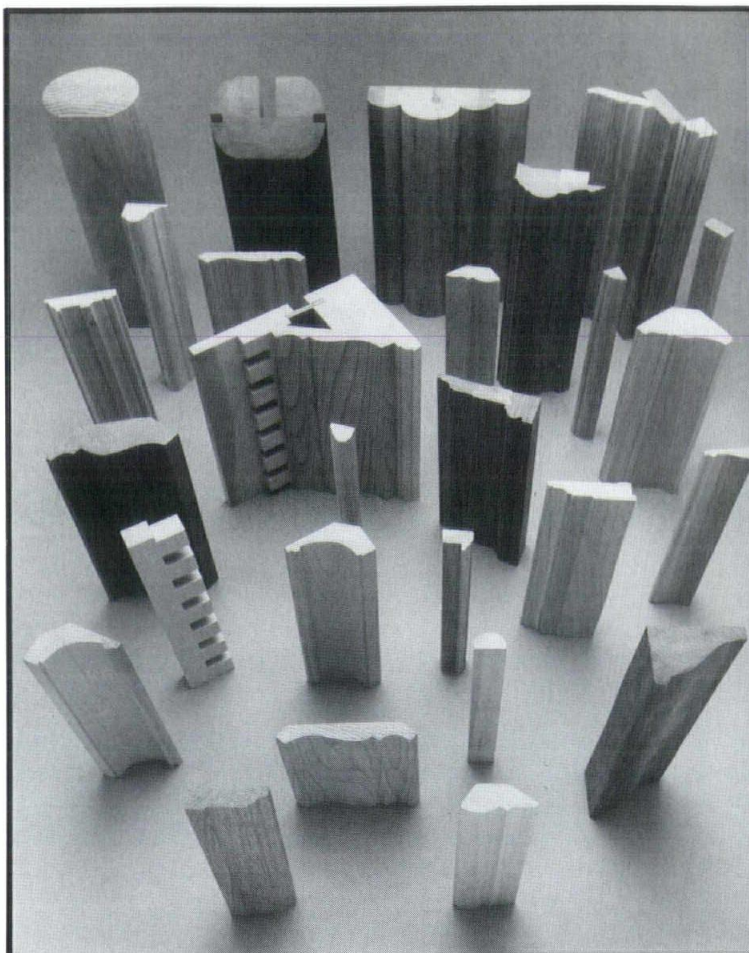

Her first public commission was creating three pieces for the prison in Portage, all based on "escape." They were titled "Evergreen," suggesting northwoods; "October," bird migration; and "Reverse Staircase," getting in and then out. **WA**

Overlay photography: Dave Gelotte

All other photography: Joyce Marquess Carey and Cheryl Seurinck.

Right: Hanging the artwork is a project in itself. This work, titled "Earl Grey's Garden," is in the Dean Medical Center in Madison. Bottom left: Ms. Carey at work on a current project. Bottom right: "Glad Rags." Text overlay: "Ribbon," (8' by 14'), currently hanging at the University of Alaska at Juneau.

STEVENS

CONSTRUCTION CORP.

YOUR BUILDING PARTNER SINCE 1952

EXPERIENCE

Performance • Innovation • Satisfaction

You can expect all this and more when you choose Stevens Construction Corp. for your next construction, renovation, addition or remodeling project. We have the expertise, equipment and manpower to complete your job, no matter how large or small, on schedule and within budget. A majority of our business comes from repeat and customer-referred clientele. In a recent survey of Stevens Construction Corp. clients conducted by an independent consulting firm, we found that 95% of our clients, both owners and architects, would use us again for their building needs. Equally important, that same percentage also indicated that they would recommend Stevens to a colleague. They know they can count on us for optimum service and project outcome. Let us put 40 years of experience to work for you.

DIVERSITY

Diversity is the key to our success. We understand that no two projects are the same. By remaining versatile and flexible, we are better able to accommodate a diversified range of construction requirements. Our professional crews work throughout the midwest on the construction of single and multi-level facilities and are sensitive to the needs of the community and the people who will own and utilize them.

PROJECT EXPERIENCE

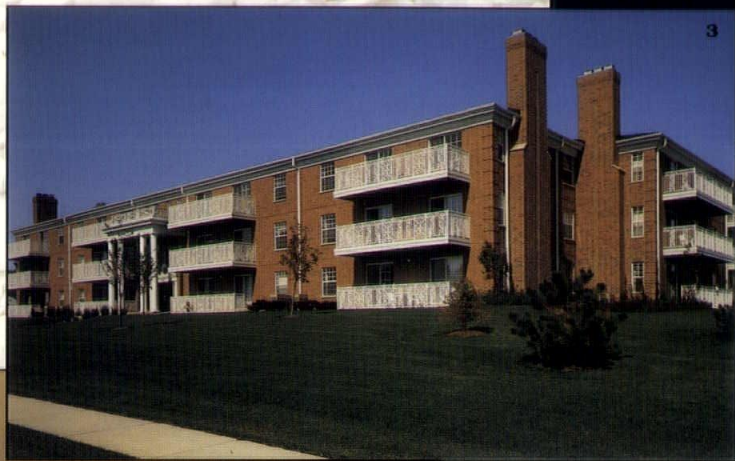

Our project experience includes:

- Commercial/Office
- Retail
- Industrial
- Educational
- Institutional
- Recreation and Hospitality
- Historic Preservation
- Healthcare
- Handicapped Housing
- Nursing Homes
- Elderly Housing
- Multi-Family Residential
- Hotel/Motel
- Parking Structures

STATE-OF-THE-ART CAPABILITIES

TECHNOLOGY

The innovative professional management staff at Stevens takes advantage of the changing technology in the construction industry by utilizing computerized project management, cost estimating, scheduling and cost control systems. We offer on-going training to our staff to stay abreast of this technology. Our experience, equipment and highly-trained, professional staff will see your next construction project through all phases of development from our offices in Milwaukee and Madison, Wisconsin, as well as field offices throughout the Midwest as required. We perform concrete and carpentry services using our own people and resources. Stevens' extensive inventory of tools and equipment is readily available to get the job done.

SERVICES

In all of these relationships, our services include:

- Budgeting
- Conceptual Estimating
- Site Development
- Subcontractor Bidding/Negotiating
- Value Engineering
- Scheduling
- Team Coordination
- Project Management
- Project Supervision
- Post Construction Evaluation

PARTNERSHIPS

We work in partnership with our clients as:

General Contractors: Under a negotiated or competitive bid contract, Stevens takes your project through all phases of construction into occupancy.

Construction Managers: We provide budget and schedule control as well as management of all subcontractors and full time on-site supervision by seasoned professionals to direct all phases of the construction process.

Design/Build Contractors: Together with a qualified architect, we provide a complete project that meets your needs for a guaranteed price.

8. DeSoto House Hotel
Galena, Illinois

When asked in a recent survey to identify the strengths of Stevens Construction Corp., our clients responded:

- "Performance, performance, performance"
- "Good people, quality work"
- "Honest, flexible, trustworthy"
- "Competitive pricing, open to communication"
- "Superior one-on-one relationships"
- "Adherence to budgets, fairness with changes"
- "Quality, cooperation, fairness"

PROFESSIONAL CONSTRUCTION CONSULTATION

CLIENT-CENTERED COMMITMENT

Understanding the clients' needs and working with a focused direction to meet them are essential to the expedient and successful completion of every building project. The only way to accomplish this is to ask the right questions and do a lot of listening. In fact, our past experience with our diverse client base tells us that they look for five key ingredients when selecting a general contractor or construction management firm:

- Quality Reputation
- On-time Performance
- Full Time On-site Management
- Similar Project Experience
- A Fair Price from an Established Firm

These are the things we deliver on every project.

TEAM PLAYERS

Stevens follows the team approach regardless of the project size. By offering a full range of services, we are able to carefully direct each job through all stages of development. This results in meeting our client's objectives and satisfying their needs. Stevens assigns a highly qualified project manager and a principal to every client. Our people give their full commitment to the client from start to finish.

SATISFACTION

Our growth over the past 40 years is no accident. It is built on solid relationships with our clients and other professionals in the construction industry. Stevens cares about its clients and strives to develop lasting friendships from every building partnership.

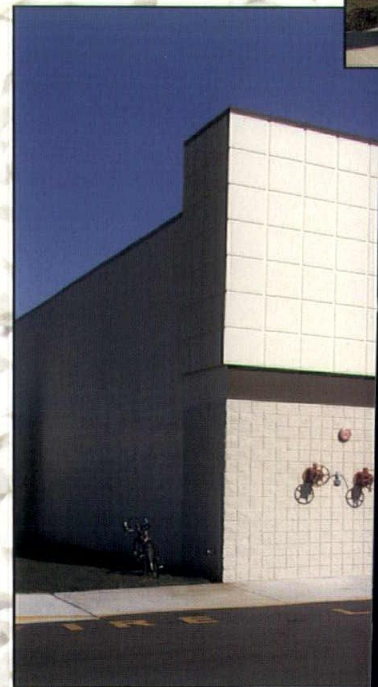

Stevens has delivered millions of square feet of satisfaction.

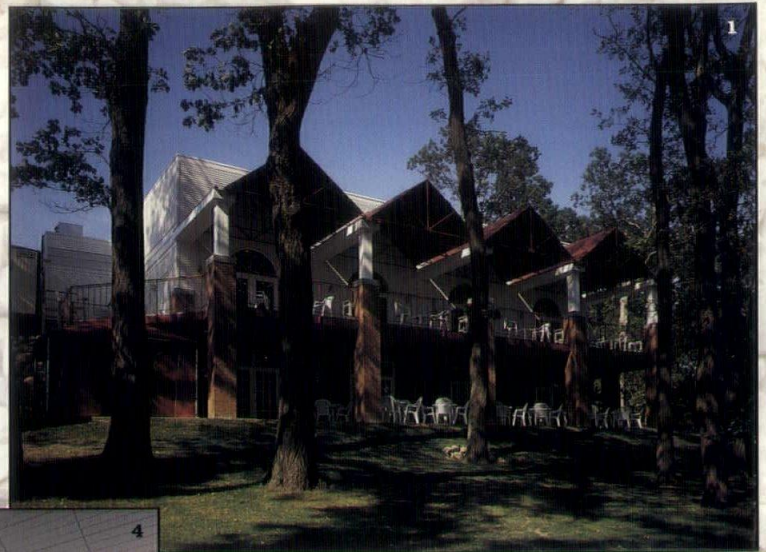

REPUTATION

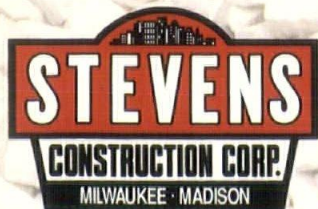

Our reputation speaks for itself. Stevens Construction Corp. has been a respected name in the industry since 1952. Our name is synonymous with quality, on-time performance and service. Your next construction project deserves the best. Please give us a call for a professional construction consultation, competitive bid or on-site inspection.

1991 Legislative Recommendations

The following provides a summary of the major state legislative issues of interest to members of the Wisconsin Society of Architects during the 1991 session.

Statute of Repose

The WSA's top legislative priority is the adoption of a new and improved statute of repose for the design and construction industry in Wisconsin. As a result of a Wisconsin Supreme Court opinion in February 1989, Wisconsin is *one of only five states* that does not have a statute of repose that establishes a definite time period for bringing actions against architects and others involved in the design and construction of improvements to real property. Prior to the 1989 Supreme Court ruling, Wisconsin statutes required that actions be brought within six years of substantial completion of a building project. The WSA, along with a coalition of other design and construction industry groups, supports legislation that establishes a ten-year statute of repose period and clarifies that projects completed prior to its enactment are covered by the new law. A 1987 study found that 95% of all claimants who received indemnity payments were injured within nine years of the completion of construction. Claims filed after nine or ten years of substantial completion typically result in no payment to the plaintiff but substantial legal fees for both the plaintiff and the defendant.

Liability-Law Reform

The WSA supports legislative proposals to restore balance and fairness to Wisconsin's civil justice system. The present concept of "joint and several liability" can impose a substantial and inequitable burden on individuals and firms with "deep pockets" regardless of their relative degree of fault in causing injury. For example, the joint and several liability provision in existing state law can require a defendant found to be only 5% negligent to pay 100% of the damages awarded. Because of the significant and substantial cost of professional liability coverage, a growing percentage of architectural firms have been forced to "go bare" and practice without insurance. The WSA and other professional and business groups support legislation that would limit the liability of those found responsible for an injury to their proportionate share of responsibility.

Affordable Housing

The WSA is committed to working with government, industry, community-based organizations and others in the design and construction industry to develop creative solutions to the problems of homelessness and affordable housing. Architects have consistently supported national policies aimed at expanding housing opportunities for the ill-housed, homeless and those with low incomes. With the significant cutback in federal housing funds, it is critical that public-private initiatives be encouraged at the state and local levels to address the availability and affordability of adequate housing for persons of low and moderate income.

Procurement of Architectural Services

The WSA supports the selection of architects for public building project based on qualifications and competence. Public buildings are a vital part of the fabric of every community and should meet the highest standards of design and construction. To achieve this goal, state and local government procurement policies should make quality design a key criterion in the selection of an architect. A qualifications-based selection process provides the most cost-efficient procurement possible for architectural services, and the resulting design is likely to be less expensive to build, operate and maintain. The WSA supports the present state administrative rules pertaining to the selection of architects for state building projects. Over the past five years, the WSA has assisted hundreds of local governments and school districts in Wisconsin establish a similar qualifications-based selection process for professional architectural services.

State Building Code

The WSA supports a statewide building code that provides a fair and equal standard for building design and the opportunity for active participation and input by architects and other professionals in its formulation. Architects seek consistency in the development, adoption, interpretation, enforcement and application of building codes, but at the same time recognize that codes must have flexibility to accommodate new materials, technologies and design solutions. The WSA supports the present administrative-rule making process that encourages broad public and professional input in the development of building codes and is opposed to special interest legislative proposals that seek specific technical code provisions to be adopted as part of state statutes rather than administrative rules.

School Facilities

The WSA supports legislative and administrative initiatives to improve the safety and educational environment of Wisconsin's school buildings. Increased attention has been focused on the safety and overall condition of Wisconsin's aging school facilities. Many older schools have been well maintained and meet minimum life-safety standards. Many others, however, require immediate attention and/or replacement. The WSA supported the adoption of minimum life-safety codes for older school buildings. The WSA supports legislative proposals that would assist local districts in meeting these new safety standards and in creating environments that support the educational needs of kids today and in the future.

Sales Tax on Professional Services

The WSA remains strongly opposed to legislative proposals that would expand Wisconsin's 5% state sales tax to architectural and other professional services. Periodically, proposals surface to expand the sales tax base in order to fund new state "property tax relief" initiatives or to help solve a projected state budget deficit. Given the state's present budget situation and the interest in reducing property taxes, proposals to expand the sales tax to professional services are likely to be introduced during the 1991 legislative session. In addition to being counter-productive in terms of Wisconsin's present economic development efforts and goals, a sales tax on professional services would create serious inequities and complex administration and enforcement problems. One state, for example, recently imposed its sales tax on architectural services only to repeal the tax within a year because of administrative difficulties.

Energy

Architects in Wisconsin and across the country recognize the continuing need to increase the energy efficiency of the built environment through energy-conscious design and planning. With close to 40% of the nation's energy supply consumed by buildings, the inefficient use of finite energy resources has critical environmental, economic and social consequences. Aware that a balanced national energy policy is required, the WSA supports proposals that would assist and encourage the implementation of comprehensive programs to reduce energy waste in new and existing state and local government facilities in Wisconsin.

The legislative recommendations and concerns outlined in this summary reflect the major public policy issues that Wisconsin architects have addressed in the past and will continue to address in the future. Many of the recommendations are broad in scope and are of interest to many other organizations and Wisconsin citizens. For example, the proposed new statute of repose is supported by a broad-based coalition of design professional and construction industry groups.

For additional information or background on these and other legislative issues being considered during the current legislative session, please contact the WSA office in Madison.

Statute of Repose

As architects, we design buildings that hopefully will be used for a long period of time. However, architects only affect these building projects while under contract with the owners to provide professional services. Many architects carry errors and omissions insurance to protect themselves from claims made for injuries, real or perceived, that may arise as a result of their involvement on a particular project. But, should an architect remain liable for claims that can be made during the entire life of a structure?

An important factor affecting the liability exposure of Wisconsin architects and others in the construction industry are state laws that establish the specific time periods during which actions may be brought against those involved in the design and construction of improvements to real property. "Statutes of limitations" and "statutes of repose" are laws that require someone who believes they have been injured to bring action against the allegedly responsible party within a certain period of time.

Wisconsin presently is one of only five states without a statute of repose or statute of limitations that protects architects from being sued after a finite number of years following substantial completion of a building project. In February 1989, the Wisconsin Supreme Court struck down the state's existing statute of limitations for the design and construction industry. The WSA anticipated such an unfavorable opinion and has been working with a consortium of interested organizations during recent legislative sessions for the adoption of new legislation to

strengthen and improve Wisconsin's statute of limitations law. Unfortunately, these legislative proposals never made their way out of Senate and Assembly committees to be voted upon by the full Legislature.

A new statute of repose proposal for the design and construction industry is being drafted for introduction early in the 1991 session of the Wisconsin Legislature. State Senator Marvin Roshell of Chippewa Falls has agreed to sponsor this legislation. Representatives of Wisconsin's design and construction industry organizations have been meeting to plan our strategy to get this important legislation adopted. All these groups agree that getting a new statute of repose on the books is the number one legislative priority for the current session.

Your grassroots contact with your own State Senator and State Representative is critical to the success of our proposal. Call and write your legislators and make them aware that passing a new statute of repose for the design and construction industry is critically important to the architects, engineers, contractors, building material manufacturers and others involved in the construction industry in your district. If they indicate support for the legislation, ask if they would like to sign on as a sponsor and get this information to the WSA office. Working together, we can make a new statute of repose a reality.

Background

Statutes of limitations and statutes of repose are the oldest and probably the most fundamental statutory remedy for architects' liability problems. The two terms are often used interchangeably, but differ in terms of the exact point in time when the limitations "clock" begins to "tick."

Typically, a statute of limitations begins to toll at the time of actual injury or when a cause of action is discovered or should have been discovered. For civil actions, statutes of limitations are usually fairly short-term, in the range of three to six years. However, in reference to the design and construction of a building, an injury or discovery of a cause of action can occur at any time, effectively leaving the architect liable for damages for the entire life of a structure.

A statute of repose, on the other hand, sets a specific time, such as the date of substantial completion of a building project, to start the statutory clock ticking. When the statute of repose clock runs out of time, all legal action for deficiencies in design or personal injury are barred. These types of state laws allow architects, and their insurance companies, to determine the point in time when their liability for a particular project will actually come to an end.

Forty-five states and the District of Columbia have statutes of repose, or laws interpreted as such, currently in effect. The repose period ranges from four to fifteen years, with the most frequent statute of repose period being ten years from the date of substantial completion. Wisconsin, Alabama, Alaska, Utah and Vermont are the only states without such statutory protection for the design and construction industry.

Rationale

For decades, courts have recognized the prerogative of legislative bodies to establish time periods (statutes of limitations or repose) within which lawsuits can be commenced. The rationale for all such state statutes is the balancing of the interests of potential plaintiffs in bringing suits for their injuries with the interests of potential defendants in certainty and finality in the administration of their affairs, i.e. to be free from suit after a reasonable period of time.

The need to balance these competing interests is particularly compelling in the context of a construction project. The useful life of an improvement to real property can extend for centuries, leaving the architect and the architect's estate with virtually unlimited liability. Architects, as professionals registered by the State of Wisconsin, are not allowed to shield themselves behind a "corporate veil." This means that we place our personal assets and those of our heirs on the line whenever we provide professional services, and that exposure can last the life of a building.

The necessary extended record keeping involved all contract documents, shop drawings, change orders and other documentation establishing the liability among many players (owner, architect, engineer, general contractor, subcontractors, material suppliers, etc.) is an excessive and perhaps impossible burden. Further, after the owner's acceptance of the project, all maintenance and subsequent improvements are beyond the control of all the other parties to the initial construction. Architects can not prevent building owners from making alterations

that, years later, may be determined to be unsafe or defective and appear to be part of the original improvements.

Statutes that limit the liability exposure of architects are in the best interest of both the profession and the public at large. With no time limit on an architect's liability, insurance companies, if they can offer coverage at all, must charge higher premiums. In addition, the public suffers from clogged courts and from architecture which reflects that caution necessitated by unlimited liability.

Statistically, numerous studies have demonstrated that these statutes do not unfairly limit the interests of plaintiffs. For example, a 1987 study found that *all* claimants who received indemnity payments were injured within eleven years of the completion of construction and 95% within nine years. Claims filed after ten years of substantial completion typically result in no payment to the plaintiff, substantial legal fees for both the plaintiff and the defendant, and an increased caseload on an already over-burdened court system.

To paraphrase one state supreme court opinion, there comes a time when architects ought to be reasonably secure that the slate has been wiped clean of ancient obligations. We should not have to be called on to resist a claim when, with the passage of time, evidence has been lost, memories have faded and witnesses have disappeared.

Wisconsin

Over the last several decades, the Wisconsin Legislature has enacted two statutes of repose for the design and construction industry. In 1975, the then existing statute was declared unconstitutional by

the Wisconsin Supreme Court. In response to this decision, the Wisconsin design and construction industry lobbied in support of a new statute that was passed and signed into law in 1976. The new law required that actions for injuries arising from the design and construction process must be brought within six years of substantial completion.

However, the Wisconsin Supreme Court subsequently ruled that this statute only applied to projects completed after 1976. In other words, any project completed prior to the adoption of this law did not benefit from the requirement that actions be brought within six years of the date of substantial completion. These pre-1976 projects only had the benefit of statutes that require lawsuits to be brought within three years after the time of personal injury or within six years of discovery if only property damage is involved.

In its February 1989 opinion in *Funk v. Woolin Silo & Equipment, Inc.*, the Wisconsin Supreme Court ruled that the entire statute, section 893.89, *Wisconsin Statutes*, was unconstitutional. According to the Court, the legislation adopted in 1976 failed to correct all the constitutional deficiencies identified by the Court when it struck down the previous law.

As a result, there currently is *no* statute of limitation for the Wisconsin design and construction industry other than that which requires actions to be brought within

either three or six years of the time of discovery, depending on whether personal injury or only property damage is involved. In its most recent opinion, however, the Court indicated that legislation could be drafted that would meet the constitutional issues involved.

Action

As in past sessions of the Wisconsin Legislature, the WSA is working with a consortium of design and construction industry organizations for the adoption of a new and improved statute of repose. At present, our new proposal is being drafted by legislative attorneys. Plans are to have it ready for introduction in the Legislature by early March.

Key provisions of the proposed legislation would:

- Establish a statute of repose period of ten years from the date of substantial completion of a construction project. Legal actions against architects and others involved in improvements to real property would be barred after a project has been completed for ten years.
- Within this ten-year statute of repose period, establish a three-year statute of limitations requiring that legal action be brought within three years after a person discovers or should have discovered an act or omission.
- Include appropriate language and classifications to enable the new statute to withstand future constitutional challenges.
- Clarify that the legislation applies to projects completed prior to the date of enactment of the new statute so that they, too, benefit from a ten-year statute of repose period and three-year discovery rule.

Your support for this statute of repose legislation is important. Stay in contact with your state legislators and encourage them to support this bill when it is introduced.

Please contact the WSA office for further details about this proposed legislation. . 1-800-ARCHITECT or 608-257-8477.

EDITOR: The author is Chair of the WSA Legislative Committee and has testified in support of similar legislation introduced in previous sessions.

The Ubiquitous Computer

Has the computer taken over the world yet? Sometimes it seems it has. They are everywhere. Personal computers are designed to plug into ordinary house wiring and work. But mainframe computers are required to serve many terminals, to perform many functions. Much more complex are these applications. Uihlein Electric was an early leader in sophisticated computer installations . . . and continues to be through constant up-dating and honing of skills.

Wouldn't you have confidence in a company so dedicated to self-improvement?
Call us, won't you?

Who Are Those Guys?

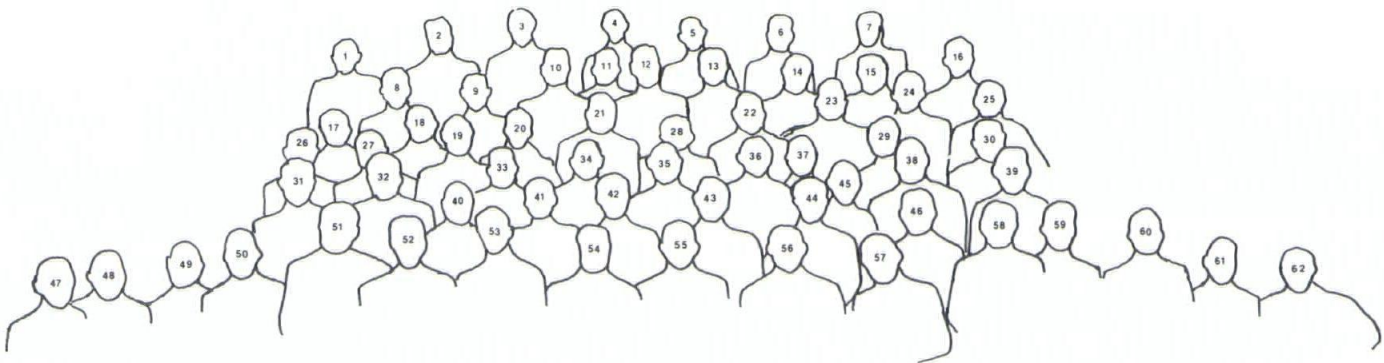

Fifty years ago, in 1941, sixty-two architects gathered on the steps of the Wisconsin State Capitol building to pose for a photo during the 10th Annual Convention of the Wisconsin Society of Architects (at that time, the State Association of Wisconsin Architects). Half a century later, the capitol building looks the same,

but can you identify the architects?

Dust off your photo albums and yearbooks, because whoever is able to identify the greatest number of the architects pictured here has a chance to win a fabulous prize at the 1991 WSA Convention, May 7 & 8, at the Olympia Village in Oconomowoc.

Here are eight names to get you started: Ellis J. Potter (4), Louis Siberz (13), Fritz Von Grossman (38), Edward J. Law (48), Julius Sandstedt (51), Paul E. Nystrom (53), Edgar Berners (55), and Allen Strang (59). If you can identify any others, please send them to Bill Babcock at the WSA office, 321 S. Hamilton St., Madison, WI 53703.

Shaping Today's World For Tomorrow

Building to stand the test of time:

At Westra Construction that means facilitating design, engineering and construction services based on quality. It is our belief in quality and service that will stand the test of time; the keystone to Westra's own success for more than 40 years.

- Design/Build
- Negotiated General
- Competitive Bid
- Construction Management

Construction is a dynamic business of shaping today's world for tomorrow. As children grow and mature, the elements of their community affect and shape their lives. The presence of prosperous and active business, institutions and organizations contribute to the quality of life enjoyed by all.

At Westra Construction Inc. we build the facilities that house business, institutions and organizations for future generations!

WSA Membership Directory

The Wisconsin Society of Architects (WSA) is the statewide component of The American Institute of Architects. The over 1000 individual members of the WSA include registered architects who are AIA members, individuals working towards becoming licensed as architects who are Associate members of the AIA, Professional Affiliate members who are not architects but may be registered to practice their professions where such requirements exist, and Student members. The WSA is composed of four Wisconsin Chapters, and each member is assigned to one of the local Chapters.

The following WSA Membership Directory is divided into four sections corresponding to the membership categories: AIA Members, Associate Members, Professional Affiliate Members and Student Members. Within the AIA Members category, Emeritus members are designated by AIA-E and Fellows of The American Institute of Architects by FAIA.

The WSA Membership Directory includes the following information for each member: name, firm name, mailing address and work phone number. In addition, the local Wisconsin Chapter is indicated for each member: Southwest (SW), Southeast (SE), Northwest (NW) and Northeast (NE).

Our Copyright Makes Your Copy Wrong... And Illegal

Making copies of blank AIA Documents is a good way to get into trouble. Besides, it's wrong and illegal. The AIA Documents are updated periodically to reflect the interests of everyone in the construction industry. Copying AIA Documents violates copyright law and increases your liability for damages and misunderstandings if an outdated version is used. We have the current AIA Documents in stock; order your supply today. It's the best way to keep your copies right... and our copyright.

Small Change Could Cost You Big Dollars

Copying blank AIA Documents is illegal... and dangerous. The AIA Documents are revised periodically to reflect current case law and the ever-changing practices within the construction industry. Copying an outdated AIA Document—with even a *small* change—increases your liability and the possibility that you'll pay big dollars to settle a dispute. Don't take chances; order your current AIA Documents from us today.

—From "Shaping The City" by Roger K. Lewis, FAIA

Avoid Costly Misunderstandings.

Use AIA Documents.

Make sure you and all the members of the building team have legally sound agreements that pinpoint responsibilities from design through completed construction. There are more than 140 AIA contracts and forms that clarify your rights and those of the client, the contractor, and the consultant, and can help with construction project management. Contact us for further details.

WSA Firm Directory

Wisconsin architects have won many important awards and have been selected for major commissions across the country. They have served thousands of clients, large and small, throughout Wisconsin with skill and dedication.

If you need the professional services of a qualified architect, you will find a suitable firm in this Directory. If you aren't sure you need an architect, any of the firms listed will welcome the opportunity to meet with you for professional advice and recommendations.

The WSA Firm Directory includes the following information on each firm: firm name, address, phone

number, county, principals of firm, number of registered architects and total employees, and a description of the firm's practice. The information contained in the Directory was provided by the firms as part of an annual survey of WSA members. To be listed in the WSA Firm Directory, one of the firm's principals/partners must be a registered architect and a member of the WSA/AIA.

You are encouraged to keep this Directory handy for reference throughout the year and to contact the firms listed for further information about their practice and the professional services they provide.

ANI-ARCHITECTURE NETWORK INC.

110 King Street
Madison, WI 53703
608-251-7517
FAX 608-255-1764
County: Dane

Arlan Kay, AIA
Noble E. Rose, AIA

Registered Architects: 4
Total Employees: 7

Description of Practice:

ANI/Architecture Inc. is a network of specialized firms, including: • Rose Associates/Architects—libraries, institutional and industrial; • Arlan Kay & Associates—restoration and renovation, churches and worship, developTer services, construction and management.

HELMUT AJANGO ARCHITECT

108 N. Main Street
Fort Atkinson, WI 53538-1827
414-563-4320
FAX 414-563-5545
County: Jefferson

Helmut Ajango, AIA

Registered Architects: 2
Total Employees: 6

Description of Practice:

Building types break down as 25% residential (apartments, homes), 15% restaurants, 30% churches, 20% restoration and interior design, and 10% offices. The firm has practiced in Wisconsin for 25 years and has received honors for its designs. The principal architect has a degree in art, architecture and architectural engineering and the firm strives to carefully and imaginatively combine all three. Of all the different building types, the firm enjoys the churches the most, feeling it is this building type that generally strives for more imagination than some others and wishes it to be built for the least cost, giving the architect the greatest challenge.

JOSEPH W. ALBERT III ARCHITECT, PLANNER

2718 S. Shore Dr.
Milwaukee, WI 53207
414-744-8899
County: Milwaukee

Joseph W. Albert III, AIA

414-351-8498
FAX 414-351-8421
County: Milwaukee

Gene Eggert, AIA

Registered Architects: 1
Total Employees: 5

Description of Practice:

Architectural Designs is a full-service firm specializing in all phases of architectural design, facilities management, and construction administration for corporations, multi-tenant users, school facilities, retail, restaurant and custom residential. We are most proud of our ability to provide comprehensive services based upon the ability to listen to and understand the needs of the people who will use the space. By using extensive, hands-on construction experience and a thorough understanding of architectural design, we consistently provide clients with responsive solutions to complex problems resulting in satisfied clients and quality architecture. We strongly believe that exterior and interior architecture should be treated as one. This theory, combining careful coordination with proven construction practices, has provided a solid reputation and the ongoing ability to access and obtain new and rewarding projects.

ARCHITECTURE 360 A/E, INC.

2011 E. Capitol Drive
Shorewood, WI 53211

Total Employees: 10

Description of Practice:

Design II, Ltd. has numerous areas of concentration due to being awarded a high number of church projects, fast food restaurants, motels, government buildings and housing facilities. The firm remains popular with church communities and city/county governments due to their manageability of budgets and their accompanying restrictions. Major fast food franchises ranking in the top five in the nation utilize the firm based on their vast experience, and capabilities with functional and contemporary design. Design II, Ltd. has met the challenge of matching original architecture for church facilities which displays quality appreciation for historic preservation. In conclusion, Design II, Ltd. is an attractive choice because of abilities concerning functional design, feasible time schedules and budget guidelines.

414-251-2101
FAX 414-251-4774
County: Waukesha

Ted R. Haag, AIA

Registered Architects: 1
Total Employees: 4

Description of Practice:

Haag Design Associates is entering its fourteenth year as a full service architectural, engineering and construction management firm. Our successful integration of the architectural engineering design disciplines along with our "hands-on" experience in construction management has had a positive impact on all of our past projects. Our past experience includes commercial, food service, light industrial, medical, religious, hotel, multi-family, and adaptive reuse projects. Our success will always be dependent on our clients and the success of their projects. We will continue our efforts in maintaining a positive interaction between the owner/architect/contractor team so as to "turn-over" a mutually successful project.

Total Employees: 16

Description of Practice:

Founded in 1980, Kubala Washatko Architects, Inc. provides a wide range of planning, architectural, interior design and construction management services to an international clientele. We do not impose a style on our clients' projects. Rather, each project is analyzed for its unique characteristics by a design team including the owner/developer, the architect, and the construction team. Members of our firm contribute experience gleaned from travel abroad, varied professional work experience and hands-on construction of buildings. Our award winning designs include healthcare facilities, offices, commercial buildings, educational/recreational facilities, municipal and campus masterplans, religious structures, historic preservation and adaptive reuse, galleries, hotels, restaurants, and landscape design.

Valentine J. Schute, Jr., AIA
Tim P. Larson, AIA

Registered Architects: 3
Total Employees: 8

Description of Practice:

Continuous involvement is the philosophy of our firm. The partners take an active role in each project, from planning and design to construction. Our clients are part of the design team. Instead of guessing what they want, we ask them what they want and what their needs are. Then we solve their problem, not ours. This philosophy has proved successful for projects that range from schools, libraries and churches to corporate headquarters and financial institutions to private homes to extensive restoration/renovation work.

The company offers complete architectural, engineering, landscape architecture, master planning services and award winning interior design. Pro-active to the changing needs of clients nationwide, the Zimmerman Design Group's skilled professionals actualize a project's full potential in direct response to client needs.

Copying Documents Isn't Just Illegal,

It's Dumb.

You can get into a lot of trouble by copying blank AIA Documents. For starters, it is illegal to reproduce copyrighted material. On top of that, the language in an old Document can be out of date and not reflect current case law and practice within the complex construction industry... and then there's the potential increase in your liability as a result of errors or omissions which can result in your paying big dollars to settle a dispute. It's just not worth it; in fact, it's dumb.

Order your current AIA Documents today. Contact us for details.

Architects and Archetypes

What we have here is a failure to communicate

She steps onto the elevator, and it begins its swift climb up the exterior of the gleaming edifice. She strains to catch her breath in her rush toward the sky. The majestic panorama of New York City unfolds at her feet. The music swells. Her chest swells. She swoons. Grabbing a rail to steady herself, she looks skyward. A figure looms overhead. It is Gary Cooper, standing at the peak of the tallest building in the world, a building which he, and he alone, created. Braced against the gale-force winds that whip here, so high above the city, Cooper peers fearlessly over the edge at the woman rising to meet him. A trace of a smile forms at the edge of his lips.

THE END

This is the final scene in *The Fountainhead*, a movie unlike any other you've seen. For this reason: its hero is an architect. *The Fountainhead* is adapted from the Ayn Rand novel of the same name, but the screenplay waters down Rand's neo-Nietzschean vision. The result is a simplistic morality tale in which Howard Roark, idealist and architect, risks it all—his career, his art, his integrity, and the woman he loves—as he squares off against Big Business. A popular movie theme, but the problem is that Howard Roark is not the kind of hero, and certainly not the Gary Cooper, that the audience expected to see in 1949.

Cooper is angry, unbending, domineering—a sort of Dale Carnegie poster child—a monomegalomaniacal know-it-all who blows up his own building project rather than allow “public-housing bureaucrats” to mess with his Modernist vision. This was too unsettling for Gary Cooper fans, who were expecting more of the Lou Gehrig/Sgt. York approach.

And they expressed their disappointment at the box office. The film—described as “the most bizarre movie in Cooper’s filmography”—bombed. A *Screenland* critic said: If you like deep thinking, hidden meanings, plus pure modern architecture, then *Fountainhead* is something for which you have been waiting a long time.”

Well, we have been waiting a long time, and not for deep thinking and hidden meanings. What this country needs is a good, solid movie about an architect. *The Fountainhead* wasn't it. We're still waiting.

Look at it this way. We can spot a cop at fifty yards, even an undercover cop. We know lawyers are crafty, and that doctors play

golf. We know newspaper reporters are nosey and TV reporters are nosey but have bigger hair.

How do we know all these things? Because we've seen the movie.

From *Beverly Hills Cop* and *Perry Mason* and *Ben Casey* and *Wall Street* and *An Officer and a Gentleman* and thousands of other cinematic sources, we know what it means to be a career officer or stand-up comic; we know everything we need to know about people who practice medicine, law, law enforcement, journalism, and business; we know how they look and talk and think and act, and we have a pretty good idea how they do their jobs.

After a lifetime of soaking up Hollywood's hits, the average person could, with a bit of encouragement and daring, fake a simple appendectomy, cross-examine a murder witness, or stake out a crack house.

But ask non-architects to design a fast food outlet or health club or even a simple Greek Revival residence. They wouldn't know where to begin. For that matter, even architects aren't sure how an architect is supposed to behave in public.

Except for a handful of gratuitous references, moviemakers haven't given us a clue. This is why students are into MBAs and out of math and science. This is why architects' kids don't ask their parents to speak on Career Day. This is why even the lowliest public defender gets a better table than most architects. Because the images of architects that float in our collective unconscious are scrambled and muddy, odd creatures jerry-built from snatches of dialogue and ghostly, half-

remembered characterizations.

Look at the flimsy foundation we're stuck with. Everyone knows that Elyse Keaton, the mom of *Family Ties*, is an architect. But the quietly perky Meredith Baxter-Birney portrayal, reminiscent of a glass of warm, carbonated milk, is unlikely to win the hearts and minds of the younger generation.

Or how about *Me and Him* (1989), a film which bounced from theaters to video stores in about four nonoseconds. What's it about? Well, there's this architect, see, and one day, his...well, part of his anatomy...a male part of his anatomy...well, it talks to him. OK, this is breakthrough stuff. But is this the break through for architects we've been waiting for? I don't think so.

Tom Selleck was an architect in *Three Men and a Baby* (1987), and it's possible that the heart-throb hunk could have made the leap from P.I. to architect as hero from this platform. But here again, Tom's efforts at the drawing table were completely subordinated to some nonsense about a baby on the doorstep.

In 1981, Norman Mailer appeared as architect Stanford White in *Ragtime*. Just minutes into the picture, Mailer, drunk and wearing a laurel wreath on his head, is shot point blank in the head, fatally wounding White, and seriously wounding Mailer's acting career. Needless to say, this cameo did little for architecture.

Paul Newman played an architect in *Towering Inferno* (1974). You'd think that kind of star-power combined with a high rise in a lead role would result in some kind of powerful architectural statement. Indeed, had there been an Oscar that year for Best Endangered Structure, the high-rise would cer-

tainly have walked away with it. But it turns out *Towering Inferno* isn't about architecture. It isn't even about Paul Newman. It's about stuff blowing up.

Which is still better than what goes on in *Strangers When We Meet* (1960). Midway through this potboiler, architect Kirk Douglas is offered a huge amount of money to design a whole city in Hawaii, and he doesn't even tell his wife. Predictably, the couple hits some monster matrimonial potholes down the road—after all, one just doesn't design a whole city and not tell one's wife—and once again, the thought processes of an architect are called into question.

At any rate, the real star of *Strangers When We Meet* turns out to be the rambling, hilltop home Kirk is building for Ernie Kovacs. The house was criticized for its "wooden" acting, but still got better reviews than anyone else in the movie.

Things actually started going awry way back in 1911 with the publication of *Phantom of the Opera*. Erik, the title phantom and misguided monster-with-a-heart-of-gold, sets up housekeeping in the labyrinthine substructure of the Paris Opera House. As conceived by Gaston Leroux, Erik is a sort of Renaissance monster, formally trained as a composer, Persian sorcerer, and architect. While Erik may not be the best role model, he is at least a romantic and somewhat sympathetic character despite a penchant for dropping chandeliers on people. At least he doesn't talk to parts of his body, like that architect in *Me and Him*.

But Erik's career as an architect was doomed. When the *Phantom of the Opera* made the leap from book to screen in countless incarnations through the years, pro-

ducers chose to ignore his architectural bent in favor of his musical talents. Of course, they left the chandelier in.

Reginald Denny's work as Henry L. Simms is certainly the classiest portrayal of an architect on screen. Simms is architect to Cary Grant and Myrna Loy in *Mr. Blandings Builds His Dream House*. Simms is gracious, dignified, and unflappable, with a pleasant British accent. His mere presence produces a calming effect on loony clients and unscrupulous builders alike. Simms is the guy you'd want to do your house.

Some people will argue that the best role model for an architect was Yul Brynner in *The Ten Commandments* (1956). There is no question that the Brynner character is forceful and dynamic, but most agree that the title Architect/Pharaoh gave Brynner an unfair advantage, and those pyramids would have taken a lot longer if Brynner had been just an architect.

Finally, there's Mike Brady of *The Brady Bunch* (1969-74), our warmest image of an architect.¹ Unfortunately, his portrayal is also symptomatic of the Hollywood non-attitude, another example of an architect sacrificed on the altar of expediency.

Mike Brady is a widower who marries a widow and becomes the father of a typical merged family of the 70s—three boys and three girls. No matter what fate casts before the Bradys, whether trials and tribulations associated with going steady, or family camping, or who gets to use the bathroom first, father Mike is always there. True, we hardly ever got to see him actually *working* as an architect. But we always knew he was an architect—hardworking, sensible, caring—and that was comforting.

Suddenly, however, the idyll ended. The show was cancelled, and the state was set for a typical Hollywood betrayal.

When, after a three-year hiatus the Bradys were resurrected on *The Brady Bunch Hour* in January, 1977, the Bradys are living in a California beachfront condo. The family is starring in its own TV variety show. And, worst of all, Mike Brady has abandoned his career in architecture to manage the family TV fortunes.

It is a tribute to the American viewing public that this metamorphosis from architect to mogul proved unacceptable and unviable. *The Brady Bunch Hour* lasted only a few months.² But the damage had already been done. Millions of American children growing up in the seventies were convinced that the primary function of architecture is to provide a stepping stone to a career in show business.

Obviously, if we are ever going to have a positive, unified vision of the architect, it's going to take a blockbuster. And it's not that hard to imagine. How about this: *Building Buddies*, a movie that teams Tom Cruise (as Frank Lloyd Wright) with Tom Hanks (as Buckminster Fuller). There are minor script details that would have to be worked out, like how to present that famous gunfight in the lobby of the Hyatt Regency O'Hare between the Whites and the Grays. And Hollywood would want to punch up the scenes dealing with Wright's early years, you know, when he was racing stock cars. But if the deal-makers can pull it all together, then we would finally have that silver screen portrayal of architects for which we have been waiting a long time. **WA**

EDITOR: This article was reprinted from Template, the magazine of Engineering Systems and Solutions. Template is produced by Xerox Engineering Systems.

Footnotes:

¹Steve Douglas (Fred MacMurray), contrary to popular belief, was not an architect on *My Three Sons* (1960-72). Bill Davis (Brian Keith) was not an architect on *Family Affair* (1966-71). Both men played consulting engineers. Douglas specialized in aviation, but Davis made more money, enough to be able to afford Sebastian Cabot as a butler, while the Douglas household only had Bub, who was, after all, family. When Bub left the show, they claimed he'd taken a trip to Iceland. He hadn't. He was dead.

²While the show lasted only a short time, negative effects haunt us to this day. A group called the Water Follies Swimmers made regular appearances on *The Brady Bunch Hour*, leading to a brief revival of water ballet a la Esther Williams. This phenomenon soon died out, but a mutation has survived in Olympic synchronized swimming as we know it today. The damage done to millions of impressionable young minds is incalculable.

Quotes

Lon Chaney,
Phantom of the Opera,
1925—

"Feast your eyes! Glut your soul on my accursed ugliness!"

Henry L. Simms—

"In the first place, you've got the second floor twice as big as the first floor. Perhaps what you need is not so much a house but a series of private bungalows each with two closets and a private bath."

Mrs. Blandings—

"I refuse to endanger the health of my children in a house with less than four bathrooms."

Howard Roark—

"I don't give or ask for help."

"I don't build in order to have clients. I have clients in order to build."

"No building is unimportant. I'll build for any man, anywhere. So long as I build my way."

"A building has integrity just like a man. And just as seldom."

Mike Brady on hydraulics and the Grand Canyon—

"Just think of it. Thousands of years of constantly running water did all that!"

Mike Brady on education—

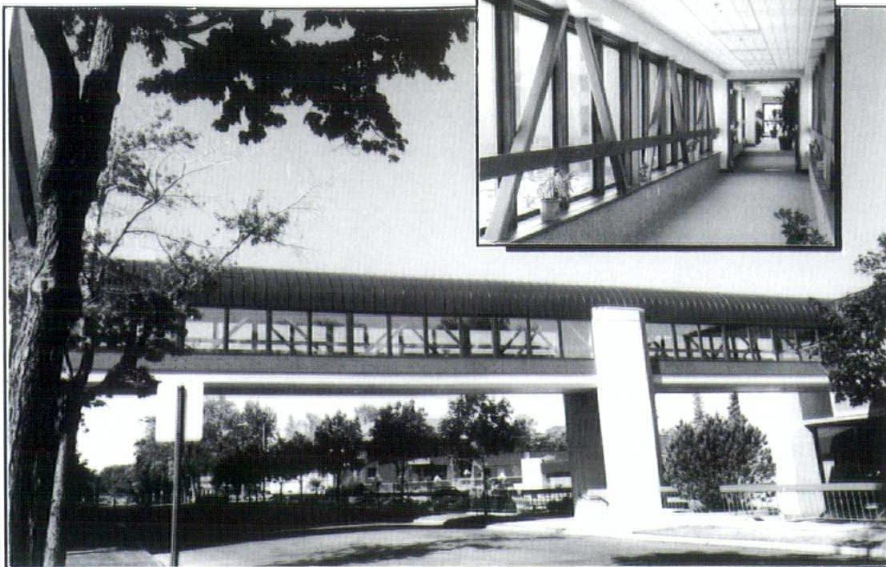

"Let me ask you, Greg. How do you plan to do all this and go to college at the same time?"

Steve Douglas on education—

"Rob, you haven't changed your mind about going to college, have you?"

Steve Douglas on carburetors—

"See this thing that moves when I do this? That's called a butterfly. And before you ask me why, I don't know."

**Doctors' Park Office Complex at Bellin Hospital
Green Bay**

Architect: Wallace & Bates

Contractor: Hougard Construction

Window choice was especially important in this job application, a skywalk system which connects Doctors' Park Office Complex to the hospital. The units are special sizes which were created to line up the glass with the structural supports for the skywalk.

The project includes 221 Pella clad windows, and three sliding glass doors. Low E glazing provides increased R-value.

Fellowship Nominations

Apart from the AIA Gold Medal, being advanced to the College of Fellows is the highest honor The American Institute of Architects can bestow on its members. Fellows of the AIA may use the initials FAIA following their names to symbolize the esteem in which they are held by their peers. Of the approximately 51,000 AIA members, only about 1,800 are members of the College of Fellows.

The Wisconsin Society of Architects is fortunate to have 19 Fellows among its membership. These individuals comprise the WSA Fellowship Committee. The Fellowship Committee meets several times each year to identify Fellowship candidates and to assist candidates develop their nomination portfolio. The following are the WSA members who are Fellows, with the year of their advancement indicated in parentheses:

Edgar H. Berners, FAIA (1951)
Ronald Gene Bowen, FAIA (1988)
Joseph H. Flad, FAIA (1969)
Paul H. Graven, FAIA (1978)
John P. Jacoby, FAIA (1976)
David T. Kahler, FAIA (1983)
David E. Lawson, FAIA (1985)
Willis C. Leenhouts, FAIA (1975)
Maynard W. Meyer, FAIA (1972)
Gordon D. Orr, Jr., FAIA (1979)
Mark A. Pfaller, FAIA (1972)
Leonard H. Reinke, FAIA (1979)
Nathaniel W. Sample, FAIA (1974)
George A.D. Schuett, FAIA (1977)
Wayne E. Spangler, FAIA (1987)
Allen J. Strang, FAIA (1967)
Fritz Von Grossman, FAIA (1965)
William P. Wenzler, FAIA (1971)
Rodney Wright, FAIA (1981)

To bring to the attention of the National Jury of Fellows those architects who are deserving of such recognition and to focus this attention with a professional nomination treatise is a serious endeavor. The following informa-

tion should help to explain the qualifications of a candidate, the techniques of nominating and guidelines for preparing a nomination.

Qualifications

Fellowship is first of all an architectural honor bestowed on an architect who has made significant contributions to the advancement of the profession in the areas of design, science or construction, literature, education, service to the profession, public service, historic preservation, research, urban design, government or industry or architectural practice.

Special care should be taken in writing the nomination digest to emphasize the relationship of the notable accomplishments to the advancement of the profession of architecture.

The following are qualifications for a Fellowship candidate:

1. Must have completed 10 years of AIA membership prior to nomination.
2. Significant accomplishments while in office are important. Quantity of AIA offices held is not of itself important.
3. Significant service and accomplishments which are related to architecture, such as planning commissions and art commissions, may support an architect's nomination. Multiplicity of civic and community service is not noteworthy for Fellowship.
4. Longevity is not a qualifying attribute, nor is popularity, personality, industry and success. A history of practice in which the nominee trained young professional employees to advance the profession through membership and activity in AIA components would have value; likewise, architects recognized by their peers as mentors would be significant.
5. Design excellence recognized by the profession with Honor Awards

or publication can qualify. Consistent excellence of design is worthy of award whether small or large, whether prominence made the work known or whether distinguished work is developed in a modest environment.

6. Nominators should be convinced that the nominee's achievements are truly distinctive.
7. National recognition, visibility or service, through not a stated requirement, is more and more becoming important for selection of nominees for Fellowship.
8. Advancement to Fellowship in the AIA is a national honor. If the architect's achievements are significant in the local community or state but not at the national level, means should be sought to give such accomplishments recognition in the architect's community.

Notable accomplishments are required for a nomination, but an architect whose nomination is to receive favorable consideration by the jury must have support of good references who know and respect the candidate and their work. References should be preferably selected from well-known Fellows in the Institute and from widely spread geographical locations.

Nomination

There are several recognized methods to nominate:

1. A Chapter or State organization can nominate.
2. Five Fellows can nominate.
3. Ten members of the AIA can nominate.

Most important to a good nomination is the selection of the proper sponsor. The sponsor should be an architect who knows the candidate's achievements, is a very good writer, has an understanding of the significance of the honor and has the time to commit to the preparation of a nomination. The

commitment of time and interest is important.

References should be selected by sponsor and candidate as carefully as possible to have persons who are familiar with specifics of the nomination treatise and who can be expected to give good support. Sponsors should contact each reference and obtain permission to list him/her as reference. It is a good idea to give each reference a copy of the nomination and explain which part should be supported when called on by the Jury of Fellows to respond.

The WSA Fellowship Committee, as an advisory group, offers its service to assist sponsors and candidates in the preparation of the nomination documents. The committee will review a first draft of a nomination, counsel with the sponsor and offer suggestions for the final documents.

Guidelines

The following guidelines are offered to help in the preparation of a nomination:

1. Write or call the AIA for Portfolio for AIA Fellowship.
2. Read Document 501, "Principle Underlying Advancement to Fellowship."
3. Consult with architect who is considered as a deserving candidate.
4. Select a sponsor.
5. Determine nominating method and have nominee collect pertinent biographical data, such as schooling, work history, etc.
6. Prepare first draft of nomination.
7. If advice and assistance is desired, contact a member of the WSA Fellowship Committee. This should be done as early as possible.
8. Early, along with preparation of the first draft of the nomination, obtain professional quality photographs of nominee's archi-

tectural work for inclusion in nomination documents.

9. In preparing nominations, always describe the nominee as an architect and clearly connect that their accomplishments are primarily due to their architectural ability.

10. Always place AIA or FAIA following any architect's name included in the nomination, especially the nominee.

Some modifications since 1989 have been made in the program as follows:

- While not mandatory, nomination categories should be limited to two.
- Reference letters will not be mailed from the AIA office in Washington; sponsors will be required to contact references using the printed letter provided in the Fellowship portfolio.
- The component is given the responsibility of appointing a sponsor.
- Projects submitted for consideration in the design category are limited to those for which the nominee was solely or largely responsible.
- A new presentation format has been established. In lieu of using duplicate portfolios, submissions should be presented in triplicate, using three-ring binders and index that will be provided by the AIA.

This new format will be phased in, although all resubmissions are encouraged to use the new format. First-time nominees are required to use the new format. It is advisable to send the binders by certified mail, return receipt requested, in order that you will have a record of delivery.

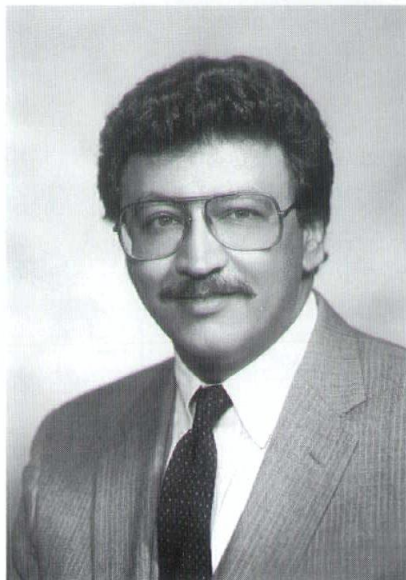

For further advice and assistance, contact the WSA office or a member of the WSA Fellowship Committee.

EDITOR: The author is the Chairman of the WSA Fellowship Committee and was advanced to Fellowship in 1987. It is gratefully acknowledged that the information about Fellowship nominations was drawn from a recent article in the New Jersey Society of Architects newsletter.

Case History

EMPIRE BANK, SPRINGFIELD, MO

When Empire Bank decided to build a new corporate center, they wanted it to be an asset to their image and the community's architecture.

Its triangular shape called for a flat exterior and sharp details. Only Alucobond material met all their requirements.

Alucobond® 22,000 sq. ft. of 4 mm
Material: Champagne Metallic

Attachment Method: Four-side, dry-seal wider
gasket system. No exposed silicone sealant.

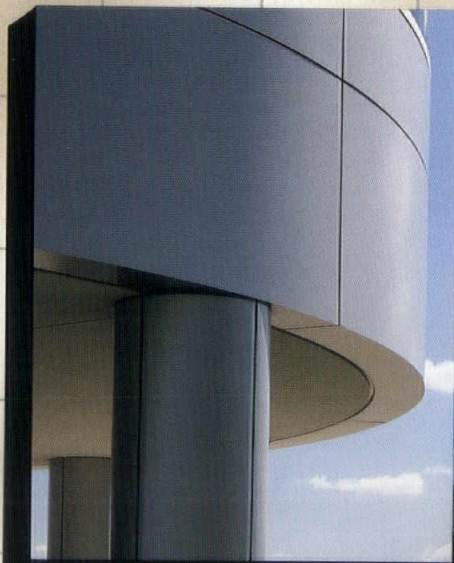

Date Started: September, 1989

Date Completed: April, 1990

Distributor: Midwest Metal Fabricators,
Inc., New Haven, MO

Owner/Developer: Empire Bank,
Springfield, MO

Architect: Spencer/McWilliams
Architects, Inc., Springfield, MO
General Contractor: Killian Construction
Company, Springfield, MO

EMPIRE BANK

The bank management wanted the new three-story corporate center to portray the bank's growth and its commitment to the community. After all, the building site was perched on a high profile location. And the triangular design would receive maximum viewing from all angles. No wonder the choice of building material was crucial.

"High-tech elegance" was the desired look. Alucobond material or aluminum plate systems were the choices. The owner and architect toured Dallas-based projects that had used one or the other. Afterwards, they agreed—only Alucobond exhibited all the characteristics they needed: flatter exterior appearance, sharper details, curves, angles and column covers and no fastener or stiffener read-thru.

DENNIS R. SPENCER, SPENCER/McWILLIAMS ARCHITECTS, INC.:

"We were attempting to make an architectural statement of 'exception' in a rapidly growing commercial area of brick boxes. Midwest Metal Fabricators'-Alucobond dry joint system gave us a product that met the various shapes required on the exterior skin, while providing a rich reflective metallic sheen, complementing our flush glass windowbands."

The distributor took pride in his recommendation of Alucobond. The material gave the owner and architect the look they desired while giving the designers the easy fabrication methods they needed.

DENNIS HETZEL, MIDWEST METAL FABRICATORS, INC.:

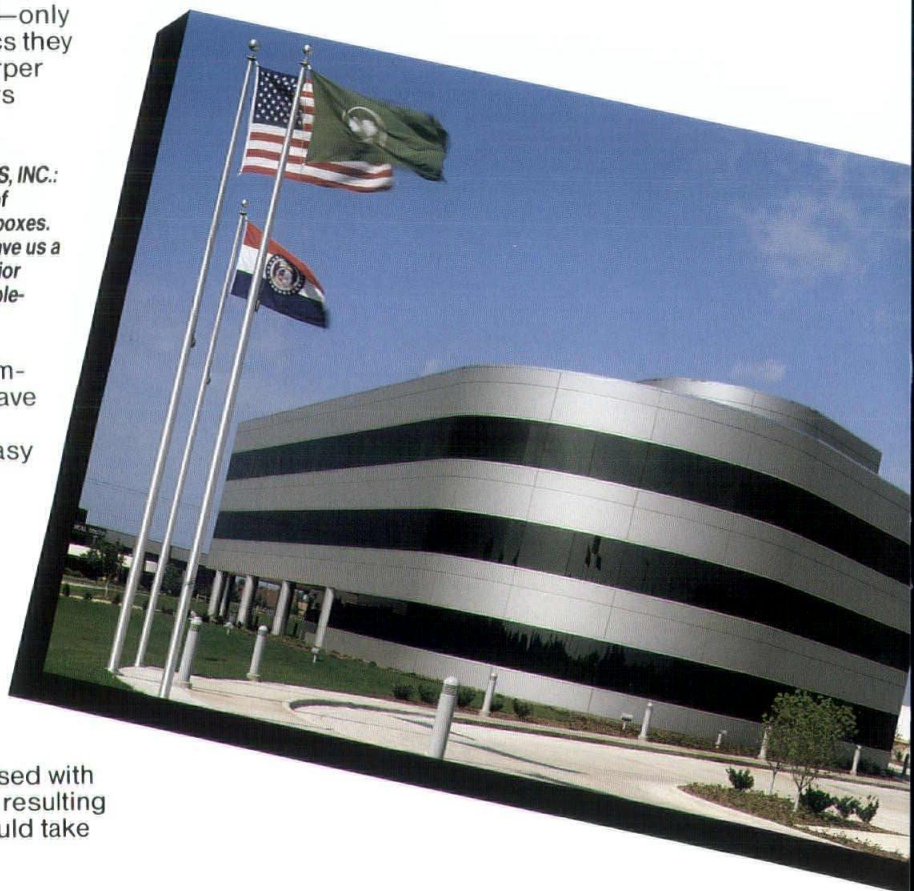

"From the beginning the owner and architect were looking for a building material that expressed elegance and a look to the future. The statement in design expressed a new image and yet a firm commitment to the growth of the regional community. Alucobond gave the designers the material and design flexibility required to express these desires and turn them into reality. We're very proud of this accomplishment."

The construction company was pleased with the value of Alucobond material and the resulting quality of their work. It was a job they could take to the bank—in more ways than one.

WILLIAM F. KILLIAN, KILLIAN CONSTRUCTION CO.: *"In negotiating this project with the owner, we sold ourselves on the cost of our service and the quality of our construction projects. In turn, we expected the same from Midwest Metal Fabricators, Inc. Alucobond satisfied these requirements and more."*

Thanks to Alucobond material, Empire was able to send out the kind of bank statement everyone could cash in on.

For more information about Alucobond material, call 800-626-3365. And create your own case history with the unique look of Alucobond material.

Are You a Player or a Victim?

There are players and there are victims in the legislative process. The players determine legislative policy, while the victims live with the results of the players' activities. Only those who play have a chance to win.

Political realities have changed, and unless you change with them you are going to be left behind. Those who are part of an interest group must be involved. Having the best lobbyists is no longer good enough. The individuals of that interest group must be involved.

Our society is made up of highly competitive special interest groups. Everyone has something to gain or lose in each piece of legislation, and they must be involved in it because they will be affected by it. "Special interest group" is no longer a pejorative term; it is neutral. Special interest groups have to play a key role in the political process.

The group with the least amount of influence in how government works includes are those who don't vote. The next group, with the second least influence on legislative policy, includes are those who do nothing other than vote. Those who organize and compete on behalf of their own interest through their own involvement are most effective.

Those with something else to do and who don't get involved will feel the effect of those who don't have something else to do. There is strength in numbers. Get involved on your own behalf or be assured that someone else with their own interest will affect your future. Your own future is inseparably affected by the future of your profession.

What can you do? Follow your legislators' voting. Attend meetings held by your legislators. Use every opportunity to communicate your interests and concerns. Successful political campaigns need a variety of volunteer skills. Keep informed by reading your association's newsletter. Participate in political action committees (PACs). Help elect legislators who share your interests and concerns.

You can affect the political process, but only as a serious player. Allow anyone else to translate your message, and you live by their communication. Reality has changed. Only if architects are involved will architects have a positive influence on the decision makers.

Contributions are integral to the process, but not the driving force. The relationship between individuals and their lawmakers is the key factor. However, both contributions and volunteer involvement are important.

Only through the actions of individuals does any one group have any power. No one can afford to not take the time to be involved. The more time you take, the more effective you can be. You have to change the perception of your profession. You really don't have an option. Architects are the last in the group of professionals to understand that they must be involved in the political process. There's a level for everyone to play.

You need to be seen as a part of the organized group and as an asset to the legislator. Help the lawmaker get re-elected. Making a contribution is a critical ingredient in the process. Hold a fundraiser or serve as a volunteer. Have your legislator tour one of your building sites. Show them what it is that architects do, how your contribution is important to the process. Then it won't be an

abstract idea for them. Develop a close personal relationship with your legislators. Get to know their career and have them know yours. Meet with them in person. Have visibility.

A well written personal letter is very good if the lawmaker knows the constituent. Those are the people who have meaning to the lawmaker. Tell them you're an architect and writing on a specific piece of legislation. Use the bill number and title. Tell them where it is...in committee or up for vote by the Assembly or Senate. Close by telling the lawmaker specifically what you want them to do. Keep the letter short and to the point...one page only! Never cover more than one viewpoint on one piece of legislation in one letter or you will dilute the impact. Stress why it is important in your own district.

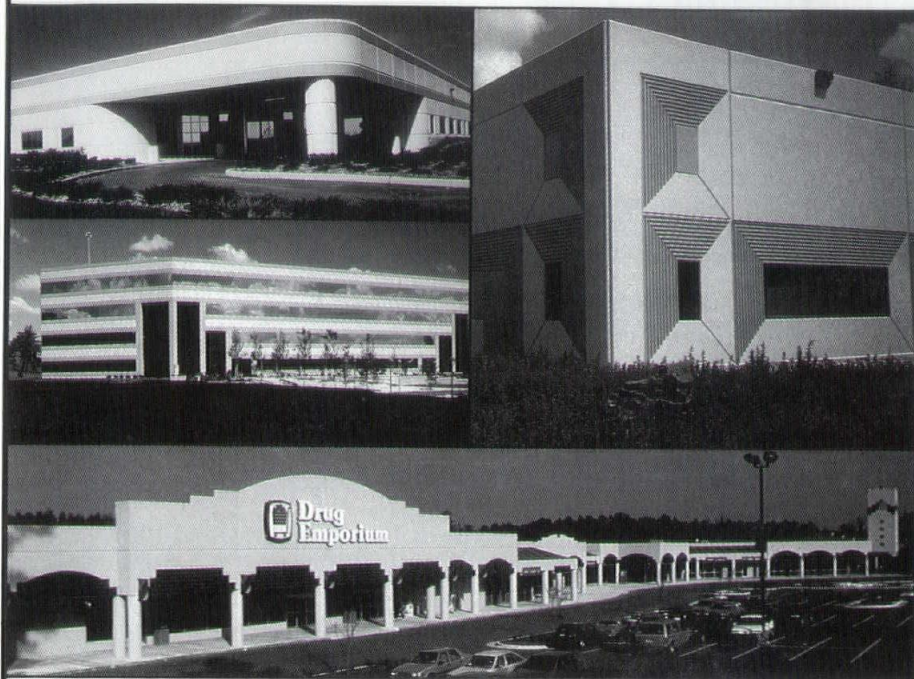

Write them and thank them if they've voted your way, stating that they have shown a true understanding and expressed an intelligent vote. If they voted the wrong way, write and tell them. Never threaten or be rude. Do not threaten that you won't vote for them again. Express your disappointment, but stress that you will be back. Put your letter in layman's language that they will understand.

PACs can get things done you can't do on your own. If you don't encourage your legislators, somebody else will. Support your profession's PAC and make contributions directly to the legislator on your own. PACs give you access; give you an opportunity to state your case. Contributions do not buy a lawmaker's vote. PACs give you political credibility. When people contribute to a PAC, they're much more likely to be involved because they follow their money.

Remember, keep your eye on the objective. Be a player...or be a victim!

EDITOR: The author is the president of the Washington-based public affairs consulting firm Michael E. Dunn & Associates. He presented a Political Education Workshop, sponsored by The American Institute of Architects, at a recent Southeast Chapter/WSA meeting in Milwaukee. Become a "player" by contributing to the WSA/PAC and signing up as a WSA Legislative Minute person.

Tilt-Up Concrete Buildings

Giving you more than beautiful savings

Tilt-Up Concrete offers all the advantages you've come to expect from concrete walls — durability, low maintenance, energy savings, fire resistance, low insurance premiums and lasting value.

As a bonus, Tilt-Up Concrete buildings feature rapid forming, casting and panel erection for

exceptionally, economical construction.

Discover the many benefits of Tilt-Up Concrete buildings. Call Wisconsin Ready Mixed Concrete Association at 1-800-242-6298 for details.

Power Plots

Master Blue Print is proud to announce the opening of **MASTERPLOT**, Wisconsin's First Statewide Plotting Service Network for the CADD and Graphics Environment

MASTERPLOT

Quality

MasterPlot offers the only laser plotting service in Wisconsin. Bond paper, vellum or film plotting is available at a crisp 400 DPI resolution. Or enhance your presentation with our brilliant color plotting service.

Convenience

MasterPlot links Wisconsin and the World via a 24 hour high speed modem network. Pick up and delivery service assures fast turnaround. And if you need extra fast service, use MasterPlot's while-you-wait service in Madison, Milwaukee, and Appleton.

Flexibility

Options are almost limitless. Plot color or monochrome on your choice of media. Virtually any file format is accepted. Then, when your plotting is completed, use MasterPlot's full reprographic follow-up services.

For more information, call the Master Blue Print store near you - toll free!

1991 WSA Convention

The 1991 WSA Convention will be held May 7 & 8, 1991 at the Olympia Village in Oconomowoc. The theme for this year's conference is **DIALOGUE**. It will initiate an ongoing dialogue on architecture, design excellence and the competitive environment in which architects practice.

Featured speakers, including Michael Rotondi, AIA, Stephen Grabow and Stuart Rose, AIA, and professional development seminars will present different perspectives and demand your active participation.

The WSA Convention Committee, chaired by John Horky, AIA, has been working night and day to put together an exciting program of renowned speakers, informative seminars, entertaining special events and an exceptional exhibition of design and construction industry products and services. You won't want to miss this year's WSA Convention! Reserve May 7th & 8th on your calendar and plan to participate in the fun and excitement.

WSA Golden Award

The fifth WSA Golden Award has been awarded to Leonard H. Reinke, FAIA, of Oshkosh. In accordance with previously adopted rules and procedures, Len was named the recipient of the 1991 Golden Award by the WSA Board of Directors at its December meeting in Milwaukee.

The Golden Award is the highest honor the WSA can bestow on one of its members. Its purpose is to recognize an individual architect who has performed most distinguished leadership and service to the WSA over an extended period of time and has advanced the cause of the profession in providing an inspiration to his/her fellow practitioners.

(l-r) Jay McLean, AIA; Len Reinke, FAIA; and Frank Dropsho, AIA.

The WSA Golden Award will be formally presented to Len at the 1991 WSA Convention to be held May 7 & 8, 1991, at the Olympia Village in Oconomowoc. In recognition of his contributions to the WSA and the profession of architecture, Len joins an elite group of previous WSA Golden Award recipients that includes David E. Lawson, FAIA; Paul H. Graven, FAIA; Mark A. Pfaller, FAIA; and Wayne E. Spangler, FAIA. Congratulations, Len!

Legislative Affairs

There is no shortage of legislative issues and proposals that could have a direct impact on the practice of architecture in Wisconsin. A review of the WSA's 1991 state legislative recommendations is included elsewhere in this issue of *Wisconsin Architect*. These recommendations address a number of important issues including the adoption of a new statute of repose within which actions can be brought against architects and others involved in the design and construction of buildings, the restoration of balance and fairness in Wisconsin's civil justice system through appropriate liability-law reforms, opposition to proposals that would impose the state sales tax on professional services, and participation by architects in the development of state building codes.

The WSA Legislative Committee meets regularly in Madison to monitor, discuss and influence

state legislation and administrative rules that affect the architectural profession and your practice. WSA members are encouraged to contact the WSA office if you are aware of any proposed or existing legislation that should be addressed by the Legislative Committee. Your input is vital to the success of the WSA's legislative efforts.

The WSA Legislative Minute-person program, established over a decade ago, involves using members as direct, grassroots contacts with state legislators. It's easy to participate in the program. Just call the WSA office and request a sign-up form. Complete and return the form and, presto, you're a WSA Legislative Minute-person. The WSA Legislative Committee will provide you with background information on legislative issues of high priority and advise you when it's important to contact your legislators on specific issues.

IDP

Attention Associate and Student members! You should be aware that as of January 1, 1993 you will need an IDP record or an equivalent record documenting your experience in 14 specific training areas to become licensed as an architect in Wisconsin. It is important that you begin immediately, if you haven't done so already, to determine how you will document your experience if you will need to comply with this new licensing requirement.

Architects and educators, please help spread the word about this new IDP requirement to interns working with your firm, architectural students and others who may be affected by it.

The following information is reprinted from a guide on implementing IDP in the office. We hope it is helpful in assisting spon-

sors and advisors to better assist intern-architects. For additional information on IDP, contact the WSA office or write to: IDP, The American Institute of Architects, 1735 New York Ave., NW, Washington, DC 20006 or call (202) 626-7348.

The Intern-architect Development Program (IDP) involves architectural interns, educators, practitioners and professional organizations in a comprehensive program which contributes to the development of competent architects who can provide exemplary services. To effectively implement IDP within your office, it is essential that you first gain a thorough understanding of the program by reviewing *IDP Guidelines*, which explains the program's purpose, objectives, organization, resources and procedures.

IDP is an intern-driven program. Intern-architects in your firm are responsible for gaining comprehensive experience that will satisfy the program's training requirements, for documenting that experience for your review and verification, for seeking the guidance of other knowledgeable professionals and for pursuing additional opportunities for training and supplementary education both within and outside the office. However, the program's ability to assist interns with their responsibilities depends heavily upon the support they receive from practitioners.

As sponsors or advisors, you are the professionals who provide interns with guidance concerning daily training and long-range career plans. This direct contact makes you an essential component of IDP.

This guide is intended to assist you in your role(s) by summarizing the specific responsibilities of sponsor and advisor, and by presenting guidelines for effectively implementing IDP in your office.

The *sponsor* is the individual (usually a registered architect) who directly supervises the intern's work. The sponsor is expected to:

- provide reasonable opportunities for the intern to gain exposure in IDP's 14 training areas (see *IDP Guidelines*, Appendix J);
- suggest opportunities for the intern to demonstrate expanded capabilities;
- encourage intern participation in seminars and other supplementary education activities;
- meet regularly with the intern to review and assess progress and to verify (by signature) the intern's documentation of training activities;
- confer informally with the intern's advisor about the progress being made; and
- be a good listener and a constructive motivator.

It should be emphasized that the sponsor is **not** responsible for record-keeping. Interns are solely responsible for the periodic documentation of their experience.

The *advisor* is a registered architect, usually outside the intern's firm, with whom the intern meets for guidance and an independent evaluation of progress. The professional advisor is expected to:

- be familiar with *IDP Guidelines* and with state registration requirements;

- meet with each intern at least every four months (either individually or a small group) to review progress, suggest professional development opportunities, acknowledge (by signature) the intern's periodic documentation and respond creatively to the intern's other professional needs; and
- meet with the intern's sponsor, when advisable, to discuss the intern's progress.

For many offices, participating in IDP can be as simple as periodically reviewing the intern's record-keeping. Other offices may wish to become more involved in helping their employees prepare for registration and practice. This section offers guidelines for organizing an in-house IDP program or incorporating IDP into existing office procedures.

Here are step-by-step recommendations for getting started.

1. Review *IDP Guidelines* and other program literature.

2. Develop an office IDP policy that includes consideration of;
- sponsor assignments;
 - regular record-keeping review and verification;
 - periodic advisement of intern progress;
 - a system for intern work assignments that will support comprehensive exposure to the 14 IDP training areas (the minimum exposures may be gained through observation as well as participation);
 - supplementary education opportunities; and
 - non-compensated training activities.

3. Hold an IDP orientation session for interns, sponsors and principals. It is important that all participants be familiar with the

firm's IDP policy and with their roles. Large firms may wish to identify an in-house IDP contact to orient new staff and coordinate office support.

4. Schedule periodic reviews:

- monthly: sponsors meet with interns to review progress and make appropriate adjustments to the intern's project/firm responsibilities;
- every four months: sponsors certify record-keeping forms for interns maintaining NCARB/IDP Council records; and when advisable, sponsors discuss interns' progress with advisors.

5. Assist interns in locating advisors. State or local AIA components with active IDP programs can make these assignments.

6. Organize in-house professional development seminars based on the *IDP Seminar Series Syllabus* and *AIA SupEdGuides*.

7. Maintain an office file of IDP resources.

8. Coordinate your in-house activities with the local AIA chapter. Small firms may wish to pool resources to provide supplementary education seminars or support component programs.

NCARB Exam

The National Council of Architectural Registration Boards (NCARB) has approved an examination plan that mandates transition over the next five years from the current paper-and-pencil examination format to computerized examinations for applicants for architectural registration in the United States and Canada. The plan calls for the current Architect Registration Examination (ARE) to be administered for the next four years, while test development and delivery systems for the com-

puterized exam are refined. The new computerized test is expected to be ready for implementation in 1995.

In 1988, architecture became the first profession to implement computerized testing for professional registration on a national basis when NCARB offered certain divisions of the ARE in a computer-administered format, the C/ARE. These limited field tests have proven conclusively that this testing methodology is valid, reliable and fair, according to NCARB Executive Director Samuel T. Balen, FAIA. "Computerized testing offers many advantages, such as more frequent opportunities to take the exam and faster reporting of an applicant's pass/fail status. More importantly, however, is that this methodology still provides the assurance that this country's architects have been appropriately tested and are qualified to protect the public's health, safety and welfare," Balen said.

The only part of the ARE that is not scheduled to be administered in a computerized format in 1995 is the 12-hour Division C: Building Design Examination. NCARB will continue to make available the Building Design exam in its current paper-and-pencil format twice a year, in June and December.

It is anticipated that research and development in computerized simulations technology will eventually be adapted to assess an applicant's building design abilities.

NCARB also recently announced dates for the Architect Registration Examination (ARE) through 1994. NCARB offers the entire eight-division exam each June and offers Division B: Site Design-Graphic along with Division C: Building Design each December.

Future exam dates are as follows: 1991 — June 17-20 and December 10-11, 1992 — June 15-18 and December 14-15, 1993 — June 14-17 and December 6-7 and 1994 — June 20-23 and December 12-13.

Candidates wishing to apply for the ARE in Wisconsin should contact LGR Examinations at 1-800-847-7171 and ask for an application for the Wisconsin exam. LGR administers the ARE for the Wisconsin Department of Regulation and Licensing. NCARB announced in November that the price of each section of the exam will increase by \$10, effective with the June 1991 exam. The total cost for all sections will be \$390.

Young Architects

Earlier this year, Dean Robert Greenstreet suggested that the WSA and the School of Architecture and Urban Planning at UWM work together to establish a "Young Architects Club." The purpose of the club would be to encourage students in inner city schools to pursue careers in architecture.

The program would include establishing events for club members that provide interested high school students with opportunities to find out more about architecture as a career path and to introduce them to practitioners and architecture students who can advise them on the best way to approach an education in the profession. A wide range of possible events was suggested, including office tours, computers in architecture programs, inviting club members to the WSA Convention,

a minority careers day and numerous other activities.

The WSA Board of Directors was very much intrigued by the idea, and WSA President Richard Eschner, AIA, was the first to volunteer to help put together a schedule of club activities and events. If you are interested in helping to establish a Young Architects Club for inner city youths, please step forward and contact Dean Greenstreet at (414) 229-4016 or the WSA office.

Long-Range Plan

As emphasized by the featured speakers at the WSA Fall Workshop, it is vital for firms to develop a long-range strategic plan to effectively meet the challenges facing the profession in the future. Similarly, the WSA Board of Directors has recognized the importance of long-range planning in order to maintain and improve the quality of WSA programs and services within the limited financial resources available.

In 1990, the WSA Board of Directors reviewed and discussed in detail seven major WSA program areas in relation to three separate five-year budget projections. The following summarizes the goals and priorities identified in the 1990 WSA Long-Range Plan Report.:

Magazine

- Continue publishing *Wisconsin Architect* magazine six times per year.
- Within existing financial resources, strive to improve magazine by adding color to an additional issue beginning in 1991 and publishing an annual feature article focusing on a particular city/region beginning in 1992.

Meetings

- Continue to support and nurture the success of the annual WSA Convention.
- Explore alternative locations for the Convention and incorporate additional continuing education/professional development programs into Convention schedule.
- Invite key area public officials and business leaders to address the WSA Board of Directors at regularly scheduled meetings.

Government Affairs

- Strengthen government affairs activities by encouraging increased member involvement and participation on local government committees, in state legislative election campaigns and in WSA legislative activities such as the Legislative Minute-person program.
- Implement an "Adopt-A-Legislator" program for grassroots member contacts by start of next session of State Legislature in 1991.

QBS

- Further development of membership awareness and endorsement of Qualification Based Selection (QBS program for public owners.
- Continue to explore alternative sources of revenue and evaluate the effectiveness of QBS program.
- Anticipate and plan for potential changes in the operation of the WSA's QBS program resulting from national QBS initiatives and involvement of Wisconsin consulting engineers.

Chapters

- Promote and support efforts to increase member participation in

Chapter programs and improve communications with members.

- Serve as a clearinghouse and resource for ideas for Chapter programs and speakers.

Public Awareness

- Encourage architects to get involved in community affairs and otherwise help increase the public's awareness and appreciation of architects and architecture.
- Establish an advisory group of firm principals and marketing staff to identify ways to improve public relations and public awareness programs.

Design Awards

- Continue annual Design Awards program with its Honor Awards Banquet.
- Establish criteria and program for 25-Year Award in 1991, with first such award to be presented in 1992.

The WSA Board of Directors plans to continue its long-range planning efforts on an annual basis, with issues to be discussed identified on an ongoing basis at regular meetings. Your input is important. If there are issues that you feel should be addressed by the WSA Board of Directors as part of its long-range planning process, contact a Board member, bring it up at a local Chapter meeting, or call the WSA office.

Liability Claims

Here's a little bit of good news regarding professional liability. The Office of Professional Liability Research reports that, based on the claims experience of A/E firms insured in the CNA/Schinnerer program, the frequency of claims declined from 42 claims per 100 insured firms in 1983 to 29.4 claims per 100 firms in 1988.

That's a significant drop and cause for "cautious optimism,"

according to the research group. The pessimists out there may be tempted to point out that insured firms still have about a 30% chance of having a claim filed against them alleging negligence. The claims statistics also do not reflect the apparently growing number of firms, particularly smaller firms, that have decided to "go bare" and provide professional services without insurance coverage.

In any case, a one-in-three chance of being sued is still better than the nearly 50-50 chance of the early 1980s. The frequency of claims directly impacts a design firm's profitability because, in terms of time or dollars, a claim consumes the resources of a firm resulting in direct out-of-pocket expenses and lost billable hours.

According to the report, some of the factors that contributed to the drop in the frequency of claims include:

- A/E's are paying closer attention to contract language and, in some cases, are willing to walk away from unreasonable contracts.
- As premiums and deductibles have increased, A/E's have become more involved in loss prevention and risk management programs to protect their dollars.
- Firms are doing a better job of project and client selection.

In terms of claim severity, the average payment per claim increased from \$60,000 in 1976 to \$160,000 in 1983. Some more good news is that the severity of claims appears to have leveled off based on statistics for the five-year period beginning in 1984.

People & Places

The WSA Board of Directors has awarded a Citation for Distinguished Service to the profession of architecture to Gordon D. Orr, Jr., FAIA, Madison. The WSA Citation was awarded in recognition and appreciation of Gordon's many efforts and contributions in support of historic preservation.

What do Henry Kanazawa, AIA, Madison, and Edgar Berners, FAIA, Green Bay, have in common? Give up? Well, both have recently been approved for Emeritus membership in the AIA. Congratulations!

Mark F. Pfaller II, AIA, has joined Warner-Heisler & Associates, Inc., as a partner and vice president of the firm's Architectural Design Department. Mark's new address is 2441 N. Dousman Street, Milwaukee, WI 53212; phone: (414) 263-5563.

Kenton Peters, AIA, was named recently by *Madison* magazine as one of the city's 50 most influential persons. According to the magazine, Kenton "has long been one of the more visionary (and vocal) architects in Madison, albeit a bit frustrated when it came to Downtown."

Thomas Mudrovich, AIA, has been named Director of Architectural Services at Becher-Hoppe, Inc., Architects and Engineers in Wausau. Tom also will become a member of the firm's management team. Associate member, and former WAF scholarship recipient, Jeff Musson also has joined the Architectural Department at Becher-Hoppe. Tom and Jeff can be reached at 330 Fourth Street, Wausau, WI 54402, (715) 845-8000.

Thomas G. Olson, AIA, has been named director of architectural disciplines for Foth & Van Dyke's Architectural Disciplines and Services Group. Prior to joining Foth & Van Dyke, Olson was owner and vice president of Sauter-Seaborne Architects/Engineers, Ltd. in Appleton. You can reach him at 2737 S. Ridge Road, Green Bay, WI 54307, (414) 497-2500.

Paul W. Wagner, AIA, is now working from a Madison office for Taliesin Associated Architects. You can find Paul at 3407 Circle Close, Madison, WI 53705, (608) 233-4551. This is the office of William Kaeser, AIA Emeritus.

The WSA was recognized in the Milwaukee Habitat for Humanity newsletter "Partners" for donating \$2,250 to Habitat International for the 15th Anniversary building blitz. The donation was made possible by the Southeast Chapter's fundraising dinner featuring Millard Fuller, founder of Habitat International.

The Madison Art Center has announced that it will be bringing the national traveling exhibition, *Frank Lloyd Wright: In the Realm of Ideas*, to Madison May 4 - August 4, 1991. The exhibition examines Wright's revolutionary architectural concepts through the use of text panels, photographs, scale models, original drawings, Wright-designed decorative objects and a specially produced media presentation.

The Seth Peterson cottage, designed by Frank Lloyd Wright in 1958 and located in Wisconsin's Mirror Lake State Park, is under going renovation by the Seth

Peterson Conservancy. The Department of Natural Resources, which owns the property, plans to rent out the cottage to vacationers year-round, as well as make it available for tours. Just 880 square feet, the cottage is Wright's smallest residence with one 8-by-12 bedroom, an open living and dining area featuring an open-hearth fireplace, a small kitchen resembling a ship's galley and a flagstone patio with lake views. Peterson never lived in the house. Distressed over financial problems and jilted by his finance, he hung himself at age 24 before the house was finished. A wealthy Milwaukee widow bought the cottage and put on the finishing touches. Those interested in renting or helping to restore the cottage can call the Wisconsin Department of Natural Resources at (414) 263-8500.

The annual "Wright-Plus" housewalk sponsored by the Frank Lloyd Wright Home and Studio Foundation in Oak Park, Illinois, is scheduled for Saturday, May 18, 1991. Reservations are required. For information or tickets, write the Foundation at 951 Chicago Ave., Oak Park, IL 60302, or call (708) 848-1500 after March 1st.

Frederick C. Steinhaus, AIA, Sheboygan, died last August at the age of 86. He moved back to Sheboygan in 1904 to work with Edgar Stubenrauch, and this association later led to the formation of the Stubenrauch Associates, Inc. He designed many important facilities and was widely respected as a storehouse of knowledge about local architecture, having developed architec-

tural walking tours for area school children. Fred Steinhaus' leadership and commitment to the profession will be missed.

Ellis J. Potter, AIA, Madison, died last September at the age of 100. He moved to Madison in 1916 to join the James Law architectural firm and became a partner in Law, Law, Potter and Nystrom in 1925. During his career, he designed scores of buildings in Madison and across the state until his retirement in 1967. He is survived by his son, James T. Potter, AIA, Madison. Ellis Potter helped shape Wisconsin's architectural heritage during this century and will be solely missed by the many architects who were inspired by him.

George J. Hoffer, Jr., AIA, Appleton, died of a heart attack in November at the age of 37. He joined Miller Wagner Coenen, Inc., in 1984 and became a partner in the firm in 1988. George Hoffer will be remembered fondly by his peers and associates.

Richard D. Michael, AIA, Eau Claire, died in December at the age of 55. A kind and thoughtful man, his career touched many lives. He was extremely active in AIA affairs, having served on the WSA Board of Directors, as an officer of the Northwest Chapter, and most recently as Chair of the Chapter's Membership Committee. Dick Michael's commitment to his profession was an inspiration to many architects. He will be missed by his many friends and colleagues.

MONARCH
TILE MANUFACTURING INC.

HERE IN ITS SIMPLEST FORM IS A MARVIN WINDOWS CATALOG.

Most window manufacturers make just a few standard shapes and sizes. Marvin offers you thousands to choose from. With everything from authentic divided lites to Round Tops.

All Marvin windows are constructed of fine-grained Ponderosa pine. This wood was chosen for its excellent insulating properties and the way it accepts a stain-and-varnish or paint finish.

A variety of glazing options are available, including insulating glass and special energy-saving Low E glass. So

heating and cooling costs are significantly reduced. What's more, Marvin windows are carefully weatherstripped to eliminate drafts and further reduce energy loss.

And you don't have to wait a long time to have your windows made to order. Delivery is usually within three weeks from the time they receive the order.

Call or stop in today for complete details on Marvin Windows.

Be Confident Your Walls Are Going Up Plumb and True.

With Igloo™ stay-in-place concrete forms you needn't worry. Igloo forms interlock, like giant Lego building blocks, to form walls that are plumb, straight and level. Adjustable in two inch increments, dimensional errors are easy to locate and correct. You can rest easy knowing your foundation is being built to plan.

Use Igloo forms above grade as well as below. The high density EPS provides a stable substrate for stucco-type finishes, or any wall covering. Nearly four inches of insulation provide a factor close to R-18. And you can choose the original ten inch form or pour solid concrete walls with the new variable width form.

IGLOO™ Concrete Forms (414) 632-6898

Cure For The Common Window Pain.

HEAT MIRROR™ stops 99.5% of fabric-fading ultraviolet radiation. It's absolutely transparent to let in maximum light, yet reflects heat back to its source. Your homeowners stay warmer in winter, cooler in summer.

Specially coated film between twin sealed air spaces doesn't restrict light, but holds back heat. It actually insulates up to R-4.5, **better than any other type of window.** All of our sunrooms, patio rooms and windows are available with HEAT MIRROR glass. Call us now. Don't settle for the common pane; switch to the wonder window. **Four Seasons Remodeling & Design Group**
