- An architect injects some philosophy in appraising his own library design (p. 11)
- A sales analyst looks at down town and finds that it's "honky tonk and donkey dust" (p. 20)

EUGENE (ORE.) HOSPITAL AND CLINIC ADDITION—a building that's young in heart, constructed with rapid speed on an assembly-line technique utilizing precast concrete T-sections and channel slabs (p. 14). Balzhiser & Seder, architects.

Auditorium of City Hall, Palo Alto, California, is 38'-8" x 77'-8½", framed by four open haunch glulam arches spaced at 15'-6½". Height at wall is 14', at center 20'-1". Architect: Leslie Nichols, Palo Alto; contractor: Ralph Larsen, San Francisco.

For Buildings that
Look Better and Cost Less
Specify Glulam Timber Arches by Timber Structures, Inc.

When a structural material produces a handsome appearance like you see here, it is worth a premium. But the timber arches which provide the structural framing for this public building save substantially in labor costs and make possible the use of relatively light curtain sidewalls. Net result is a more substantial, better looking building at lower total cost. Whatever your needs may be, you should know about the structural units of Timber Structures, Inc. With a background of over a quarter century of experience, and with the industry's most extensive facilities, this pioneer laminator and fabricator can help you design for greater strength, beauty and economy. See your nearest Timber Structures representative, or write for catalog, "Engineering in Wood".

MORE LIGHT PER DOLLAR

Pat. Pend.

with

REVOLUTIONARY NEW SMOOT-HOLMAN

PERFECT VISION

LUMINOUS INDIRECT LUMINAIRE

Using New 800 Milliampere Lamps

Totally new in conception, design, performance. Takes full advantage of the high output of new 800 MA., rapid start lamp. The only indirect luminaire available that *mounts within 12 inches of ceiling without severe light blocking.* Slender lines and open construction pass amazing percentage of upward light back to work surface . . . Gives you *far more light per dollar* than ever thought possible. Louvering effect of fixture subdues ceiling brightness. No pronounced ceiling pattern. Faultless light distribution; its comfort and quality astonishes everyone.

By all means, investigate this exciting new fixture promptly. The more you know about it, the more use you'll find for it. Its possibilities are limitless. Where shall we send your complimentary file of technical data? Kindly mention this publication and our catalog number, PV-288.

Features

- Upward and downward light balanced for best seeing.
- High efficiency.
- Brightness meets ASA school lighting standards.
- Mounts within 12" of ceiling without blocking return light.
- Near perfect visual comfort in any size room.
- High adaptation level yet low brightness and brightness ratios.
- Economical to install.
- Easy to maintain.
- Harmonizes well with modern architecture.
- Extremely flexible in arrangement.

What speculative home builders expect of architects

Guest Editor

EDWARD P. MILLER
Miller Construction Co., Inc.
Tacoma, Washington

I SOMETIMES compare an architect to an opera singer: they have a wonderful artistry and perfect technique, but the end product is very difficult to sell to the general public.

My chief difficulty in using architect-designed homes has been problems of cost and public acceptance.

The average home designed by an architect costs substantially more to build than a plan of the same floor area worked out by the builder. The only assumption that can be drawn from this fact is that the average architect is not sufficiently familiar with the factors which add to the cost of the home without adding materially to the sales potential; or is so overzealous in designing what, to him, may seem a perfect architectural plan, that he will not admit that the economies are necessary.

Two of our most recent display homes, originally designed by a well known architect, were redrawn for our use. We ended up with a larger home at a cost saving in excess of 25% over the original plan. The details eliminated or changed were those which are not generally acceptable to purchasers in this area, or for which the average purchaser is not willing to pay the cost.

If the services of an architect are to be of any material value to a builder, the architect must, first of all, have a very thorough working knowledge of the cost factors involved and keep posted from month to month on those cost items for which the average purchaser is willing to pay, eliminating those which do not add to the sales potential of the home.

Secondly, the architect, if he is to be of help to the builder, must keep informed from month to month of the changing trends, demands and desires of the average purchaser **in his area** and restrain himself from advancing extreme designs or ideas because they are the latest thing architecturally, or because thy are popular in some other part of the country. Our customers buy our homes because they are what they like and want and not because they are popular in Florida.

We often hear a remark among music lovers that we should educate the people to enjoy good music, and among architects that the builder should educate his customers to prefer good architecture. This may be a noble ambition, but we in the home building business do not feel that education is our job. We are content to build the type of home our average customer will like well enough to purchase, preferably perfect architecturally, but if there must be a choice between architectural perfection and customer satisfaction, we will sacrifice the architectural details.

For a number of years, we built architect-designed homes exclusively, but started developing our own plans a few years ago because we were unable to solve the problems facing us with the plans presented.

I believe a big step toward securing better coordination and cooperation between the home builder and architect teams could be achieved by periodic joint meetings at which mutual problems were discussed freely.

From the editor's notebook . . .

GUEST EDITOR: Our December editorial on the architect-speculative builder situation set the stage for the comments of Edward P. Miller, whose firm is developing Skyline Terrace overlooking Puget Sound and the Tacoma Narrows Bridge. His remarks should arouse more than usual interest and possibly the blood pressure of a good many architects. A charter member of the Tacoma Master Builders Association, he says exactly what he thinks and we hope that some of our readers will do likewise in a rebuttal.

• • •

BON VOYAGE: Editors generally take public relations and/or publicity workers pretty much for granted, the result being that thank yous for a job particularly well done are uncommon. We sincerely feel that Miss Dayis Holcomb, as the first full-time executive secretary for the Washington State chapter, AIA, has made a significant contribution in promoting an architect-conscious public in the Seattle area and we want to express our sentiments before she departs for her European travels. The chapter too is to be congratulated for having the foresight in 1953 to set up the executive secretary position as a full-time job. We doubt whether the architects in any other West Coast city practice in such a favorable environment as regards the public attitude toward the profession.

• • •

HOMES OF THE FUTURE: It's that time of year when we're flooded with releases of predictions for the year in particular and the rosy future in general. The prognosticators see these things for our homes: entire bathrooms molded in one piece of a soft modern material like sponge plastic; compact radio-frequency cooking units that will make cooking, as we know it, strictly a hobby; beds that never have to be made, in the form of radio-frequency units that encircle the sleeper; and home laundry equipment in the bedroom wing, near the place where soiled clothes collect—a trend already evident in the West.

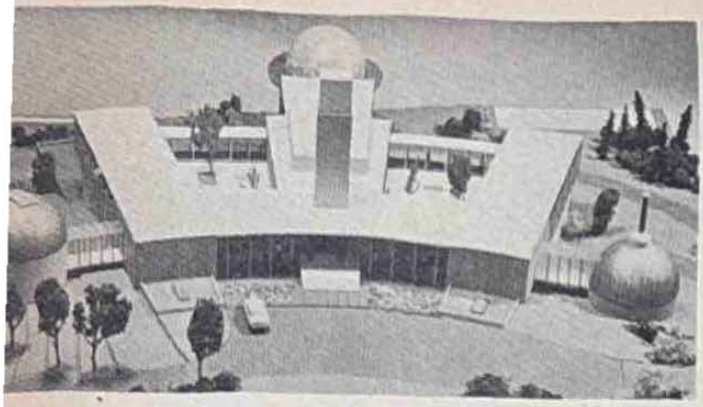
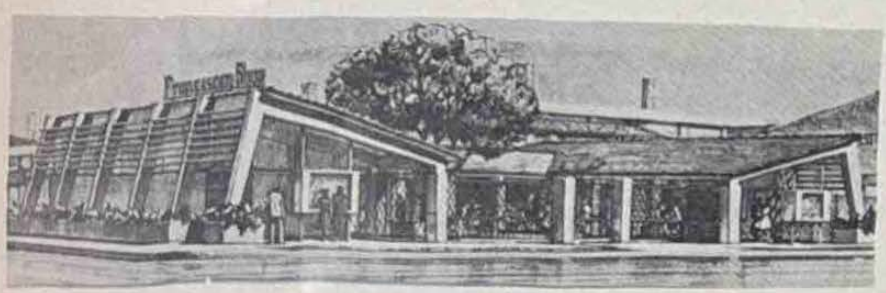
SUBSCRIPTION RATES—Payable in Advance

PACIFIC ARCHITECT AND BUILDER—3rd Saturday each month. $4 one year; $6 two years; $7 three years. Canadian $5, $8, $10. Foreign $6, $10, $13. Single copies, 35c. With CONSTRUCTION NEWS BULLETIN (2nd, 4th, 5th Sat.) $16, $24, $31, in U.S. and Alaska.



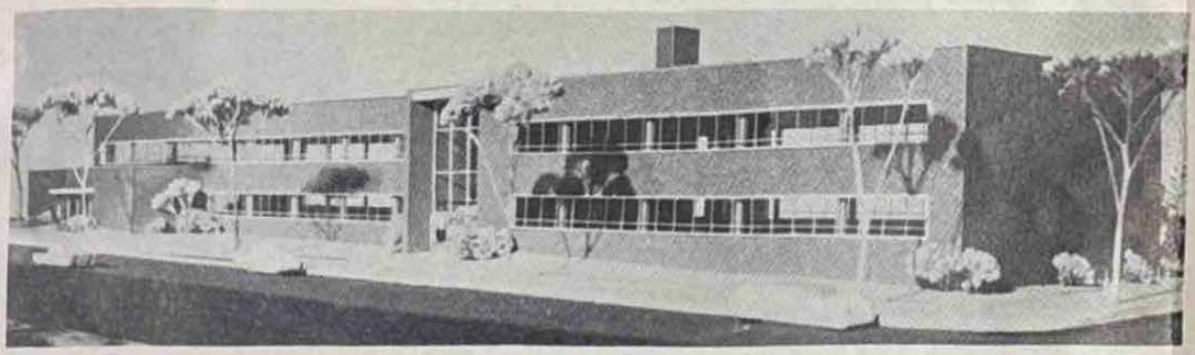
PACIFIC BUILDER AND ENGINEER—1st Saturday each month. $4 one year; $6 two years; $7 three years. Canadian $5, $8, $10. Foreign $6, $10, $13. Single copies 35c.

FOR NORTHWEST BUILDING AND ENGINEERING NEWS EVERY WEEK subscribe to all three (PA&B, PB&E, CNB) $20 one year; $30 two years; $38 three years. FOR FLASH ADVANCE DAILY SERVICE, read Pacific Construction Daily, $75 per year. Rates for U.S. and Alaska.

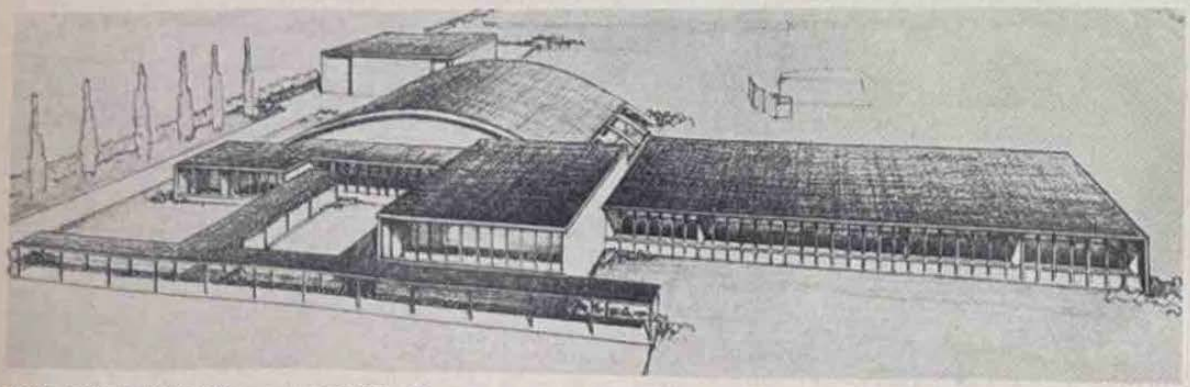


PACIFIC ARCHITECT AND BUILDER is published monthly by Pacific Builder and Engineer, Inc., 2418 Third Ave., Seattle 1, Wash., and is mailed on the third Saturday of each month. Price: $4 per year. Acceptance under P.L.&R. 34.64 authorized.

PERSPECTIVES



by Pacific architects



ARCHITECT'S MODEL of proposed Oregon Museum of Science and Industry which would be located near entrance to Portland's new zoo in West Hills. Preliminary plans for $200,000 science center prepared by Sundeleaf, Hagestad & Peace call for three galleries to be connected by open corridors offering protection from rain. "The architects have provided for maximum flexibility and natural division of subject matter," comments Dr. Sam Diack, president of museum's board of trustees, who heads fund drive.

FRANCISCAN SHOP at Gladding, McBean & Co. factory in Los Angeles is $100,000, 8,000 sq. ft. rustic contemporary with dramatic use of planters and butterfly roof design on bent trusses. Architects J. E. Stanton, AIA, and William Stockwell have utilized company's line of clay products: Lincoln interlocking shingle roof tile, rose Norman brick, clay patio tile, regular and decorative Hermosa glazed ceramic tile, ceramic veneer wainscots.

DOWNTOWN BOISE will be site of two-story Idaho Industrial Administration Building designed for two additional floors. Reinforced concrete structure, estimated at $850,000, will feature face brick and granite exterior. Plans have been prepared by Hummel, Hummel & Jones.

HIGH SCHOOL BUILDING to cost $400,000 will serve seven districts in Kettle Falls, Wash., area. Project will include space for farm shop and vocational agriculture classes, home economics, commercial and music departments, gymnasium and auditorium. Culler, Gale Martell & Norrie of Spokane are architects-engineers.

Building News - Trends - Views

A LOWER PERCENTAGE of the national income is being spent today on school facilities than 20 years ago. This was reported at an executive meeting of the national School Facilities Council of Architects, Educators and Industry in Washington, D.C., last month, attended by William H. Harrison, AIA, of Los Angeles. Harrison, along with Henry Wright, FAIA, also of Los Angeles, is a member of the council's governing board. The three other architects on the board are from the East.

HARRISON

According to Harrison, it was pointed out that school building expenses in the U.S. actually represent only 9% of the cost of education, with 80% going to maintenance, administrative and teaching costs; that reducing certain school facilities to lower the cost of construction as little as 10% frequently decreases teaching effectiveness as much as 50%.

At its December meeting the council, headed by Zephryin A. Marsh, director of school facilities for Minneapolis-Honeywell Regulator Co., formulated plans to organize a series of regional conferences in key areas of the nation. One such meeting will be held in southern California, Harrison says.

SIX WEST COAST BUILDERS were invited to participate in a forum held at the National Housing Center in Washington, D.C., January 17-18, designed to find out the outlook for new home construction in 1956. They were: Earl W. Smith, John Jacobson and Andres Oddstad, California; Dan Narodick and V. O. Stringfellow, Washington; and John La Porte, Oregon.

A NEW METHOD that upgrades "saw-log" plywood formerly suitable only for sheathing has been announced jointly by United States Plywood Corp. and Crown Zellerbach Corp.

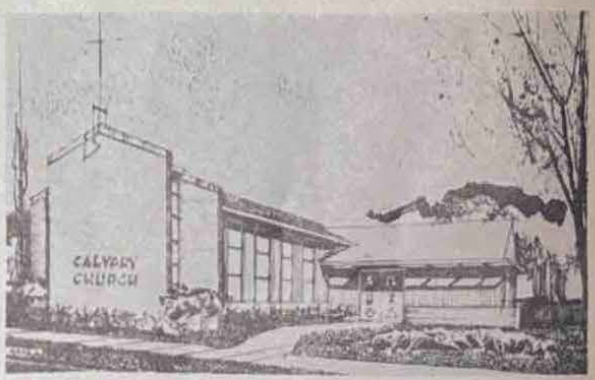
The product is a new panel named Duraply. Defects in sheathing plywood are mechanically and cheaply filled with plastic and the surface coated with Crezon, a resin cellulose plastic sheet which is check-free and has high quality paint finish. Duraply is recommended as siding, for cabinets and for marine uses. Because it utilizes saw-log timber, it will sell for approximately 15% less than present plastic surfaced plywoods while at the same time increasing the veneer yield of the industry.

The revolutionary process was developed in Seattle, where a pilot plant is producing 200,000 sq. ft. per month and where a plant to produce one million square feet per month is being built. Machinery for the process will be made available to all manufacturers.

Spokesmen for the industry foresee an expanding market leading to 2½ million new housing starts per year in the late 1960s and a void of some 600 million square feet of house siding per year to be filled by products such as Duraply.

BUILDING CONTRACTORS in the southern California area will be among the exhibitors at the National Outdoor Living Show scheduled for March 23-April 1 at Pan Pacific Auditorium in Los Angeles. The show will include manufacturers of patio furniture, barbeques, swimming pools, sports and playground equipment.

THE PACIFIC COAST outstrips the rest of the country in number of swimming pools, trailed in order by the mid-South and the East. In its annual national market study, Swimming Pool Age reports that "new construction in 1956 alone will more than triple the total number of pools existing in the U.S. up through the end of 1945." Data gathered in the study refer to permanent installations of 15x30 ft. or larger.



SCHOOL EQUIPMENT DESIGNERS are still in the light bulb stage as far as sound engineering is concerned, a midwestern engineer told persons attending a two-day Institute on Classroom Planning at New York University recently. William R. Torn, senior engineer of DuKane Corp., St. Charles, Ill., advocated multiple speaker hook-ups controlled from the teacher's desk and predicted that future classrooms will be equipped with built-in amplifiers which would replace the individual ones in such pieces of equipment as tape recorders, phonographs, motion picture projectors and radios.

OVERALL ACOUSTICAL VOLUME will approximate a 25% increase during 1956, according to E. S. Graybill, president of the Acoustical Materials Association. He bases his estimate "on the growing architectural acceptance for prefabricated acoustical materials; specifically, the trend for using acoustical products in almost all new office buildings, the present and future established school program, and the anticipated demand for acoustical tile in the residential field."

NEW CONSTRUCTION OUTLAYS—nearly $42.3 billion—in 1955 set a record for the ninth straight year, the Department of Commerce reports. Private residential building for the year reached a new high of $16.6 billion, topping the 1954 record by 23%. Other types of construction hitting new high: shopping and service establishments, churches, private industrial plants, office buildings and public schools.

SEATTLE HAS BEEN NAMED PILOT CITY for Operation Home Improvement, a nationwide campaign to encourage citizens to modernize their homes. The program, which gets underway this month sparked by the U. S. Chamber of Commerce, is private industry's answer to the government's desire to do something about the country's 20 million nonslum homes which have fallen below the standards of today's new residences.

MORE AND MORE BUILDERS not only are employing the services of architects, but are giving them more latitude in their designs. The National Association of Home Builders in a 1956 forecast further states that a good many development builders are employing color experts to work out harmonious schemes for an entire subdivision instead of making the choices themselves more or less on an individual house basis.

PREFABRICATED CHURCH, designed by William M. Cooley, AIA; is being displayed at NAHB convention in Chicago this month. An interdenominational church, it is one of 15 new designs offered by United States Steel Homes to sell from $15,000 to $35,0000. Exterior of 180-seating capacity structure has nail-on brick and battens and stainless steel spire.

If Ben Franklin were in the building business . .

by Bob Karolevitz

BENJAMIN FRANKLIN, America's greatest jack-of-all-trades, was born 250 years ago this month. He was a printer, inventor, statesman, soldier, scientist, writer, postmaster, politician and a few other things during his full and worthwhile life.

Because of his amazing versatility and wide interests, it wouldn't be too great a stretch of the imagination to picture him as an architect, a building contractor or a structural engineer as well. As a matter of fact, we have a good reason for thus portraying Mr. Franklin, and here's why:

From his early childhood, the author of "Poor Richard's Almanac" had a "plan of life." Wherever he went, whatever he did, he worked constantly for self-improvement. With him it wasn't just a New Year's resolution or the turning over of a new leaf; he invented and practiced his own strict formula.

Franklin discovered his "blueprint for success" when he was just a struggling printer in Philadelphia, badly in debt and fighting to keep the wolf from his portals. He thought of himself as a simple man of ordinary ability, but he also believed that he could acquire the essential principles of successful living if only he could find the right method. Having an inventive mind, he devised a system so simple, yet so practical, that anyone could use it.

First he made a list of 13 things he figured he had to do to improve himself. (That was a good move right there as it required a thorough self-analysis.) Then he started at the top of the column, and for one whole week he practiced that point faithfully—letting everything else go along in its regular pattern. It took him 13 weeks to complete the cycle, and then he started all over again.

Now, what's this got to do with the construction business in 1956?

Simply this—the same formula which worked so profitably for Benjamin Franklin can work equally well for architects, builders and engineers. We can all use a little brushing up on various phases of our endeavor, though most of us labor under the illusion that we're positively too busy to worry about any self-improvement nonsense.

But Franklin's formula is too simple and too painless for such excuses. Even if you just half-practice it for a cycle of 13 weeks, you're bound to emerge a more informed and "refreshed" practitioner of your profession. Here's the idea:

Just make out a list of 13 items connected with your work, then give a week's strict attention to each subject in turn. Try this as a sample list:

1. **Future of the business.** Do I encourage young men to careers as architects, engineers and builders? Am I abreast of the times now while still looking farther ahead? Am I satisfied doing things as they were done in "the good old days?"

2. **Bidding.** Am I bidding to make a profit or to get the job? Am I bidding the **wrong** jobs and missing some of the **right** ones? Do I need a review on bid forms and practices?

3. **Personnel management.** Am I a good boss? Could I be responsible for the heavy labor turnover in my operation? Should I read a book on personnel handling?

4. **Housekeeping.** Do I have a place for everything and put everything in its place? Are my files in order? Do I know where the blueprints are for that latest school job?

5. **Mathematics.** When was the last time I looked at a math book? Have I forgotten some short cuts which might help me now? Maybe a refresher course in an adult education class or through university extension work would be the ticket.

6. **Drafting.** Have I kept current with this basic phase of the business since I left the drawing board myself? Do I need a refresher on reading plans and blueprints?

7. **New equipment.** Do I know the latest developments? Am I trying to get by with obsolete machinery? What kind of maintenance program do I have?

8. **New materials.** Am I using the same materials through force of habit when a little searching might uncover something better? Am I slow to accept progress? Do I give salesmen a chance to show me something new?

9. **New techniques.** Is my old-fashioned way the most profitable? What about that excavating trick the guy in Oregon used; should I write him for more details? If I take a little more time for planning and "just plain thinking," could I devise a newer and better system for some particular operation?

10. **Trade publications and professional bulletins.** Do I read the journals of my profession thoroughly for new ideas and new developments? Do I contribute knowledge when I have something to share?

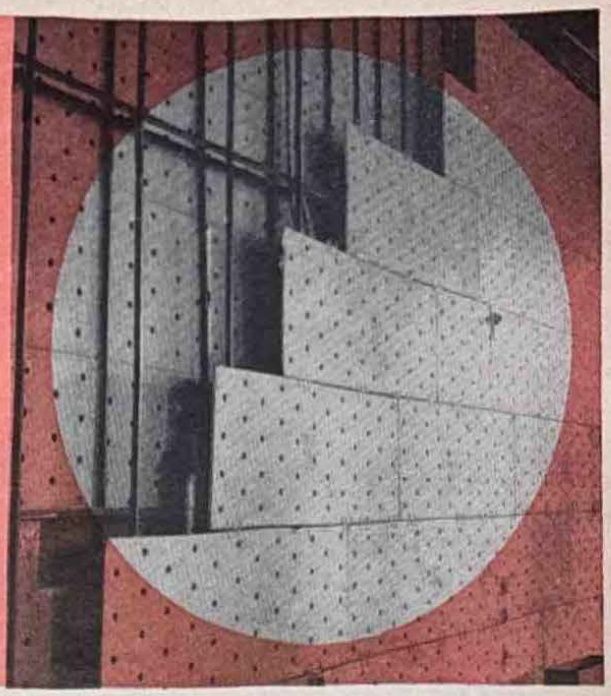
11. **Trade and professional associations.** Have I paid my dues? Have I attended meetings lately to meet associates and to exchange ideas? Do I accept association responsibilities?

12. **Public relations.** Do I have a "public be damned" attitude? How is my phone etiquette? Should I make that talk the Rotarians asked me for?

13. **Community consciousness.** How long has it been since I attended a chamber of commerce meeting? Have I made a new friend lately outside of business circles? When did I last contribute something to the betterment of my community?

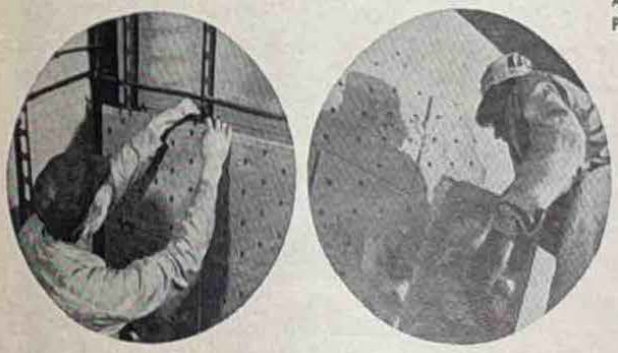
There you have it—a real successful pattern for self-improvement. For a full week become vitally interested in the particular item which appears on the agenda for that period. During the week on public relations, for instance, stop by the library and pick up a book on the subject. That's what Benjamin Franklin would probably be doing if he were in your shoes.

Tuition is pretty cheap in such a personal university. It's not child's play either because one of the most successful men in American history is proof of the pudding.



You've got the formula now, and that's as far as ol' Ben can take you.

FRANKLIN'S OWN LIST



1. Temptrance — Eat not to dullness drink not to elevation.
2. Silence—Speak not but what may benefit others or yourself; avoid trifling conversation.
3. Order—Let all your things have their place; let each part of your business have its time.
4. Resolution—Resolve to perform what you ought; perform without fail what you resolve.
5. Frugality—Make no expense but to do good to others or yourself; i.e., waste nothing.
6. Industry—Lose no time; be always employ'd in something useful; cut off all unnecessary actions.
7. —Sincerity — Use no hurtful deceit; think innocently and justly, and if you speak, speak accordingly.
8. Justice—Wrong none by doing injuries, or omitting the benefits that are your duty.
9. Moderation—Avoid extremes; forbear resenting injuries so much as you think they deserve.
10. Cleanliness—Tolerate no uncleanliness in body, cloaths, or habitation.
11. Tranquility—Be not disturbed at trifles, or at accidents common or unavoidable.
12. Chastity—Rarely use venery but for health or offspring, never to dullness, weakness, or the injury of your own or another's peace or reputation.
13. Humility—Imitate Jesus and Socrates.

Fastest

PARTITION ASSEMBLY

A section of Kaiser Spee-Dee Clip and Gypsum Lath partition assembly. Photo illustrates use of double stud framing for added sound reduction.

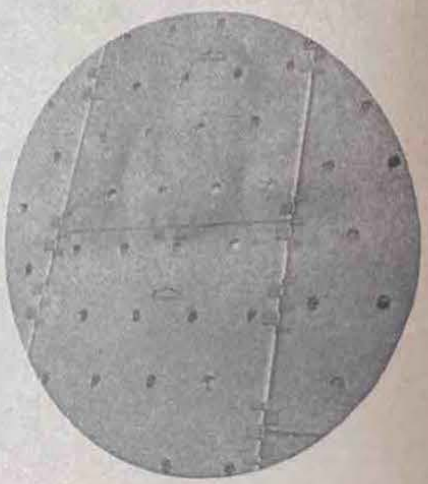
Speed and ease of application puts walls up fast. Single piece clip secures lath to stud, forming smooth rigid base for plastering.

KAISER *Spee-Dee Clip*

LATH AND PLASTER PARTITION SYSTEM

for non-load bearing partitions

- No parts to attach
- No wires to secure — ONE-PIECE CLIP
- No projecting surfaces



SPEED OF ERECTION — Faster than competing systems because of single unit, lock-on assembly.

VERSATILITY — Supporting studs may vary from ¾" channel to 6" pressed steel studs, allowing installation of electrical outlet boxes, conduit, plumbing, heating outlets, etc.

ECONOMY — The partition is light in weight, permitting important structural savings in multi-story buildings; use of gypsum lath saves material costs; speed of erection saves labor costs; requires only two coats of plaster; no lath waste —clip permits locking of adjoining pieces together without necessity of joints falling on studs.

FIRE RESISTANCE — Complies with fire rating requirements for Class A dividing partitions.

FOR CEILINGS TOO with special center clip.

Please write for further information and your copy of the A.I.A. folder giving full description and specifications of KAISER SPEE-DEE CLIP PARTITION SYSTEM.

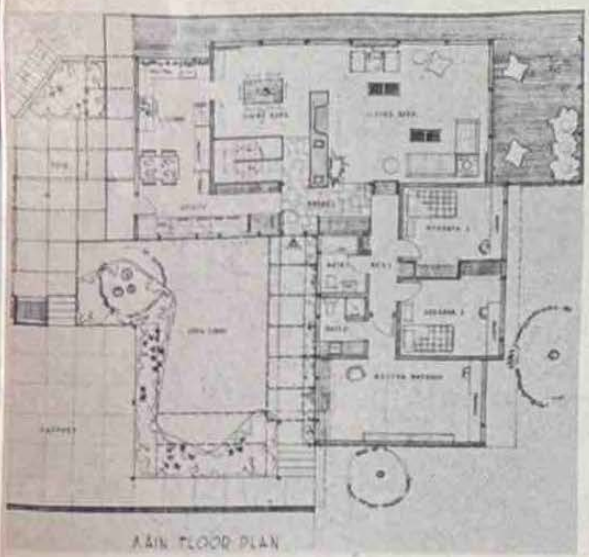
Seattle's 'home of the month' for 1955



WITH LAKE WASHINGTON as its neighbor, this two-level residence for a family of five, including three boys, was judged the best of 12 entered in the 1955 Home of the Month competition co-sponsored by the Washington State chapter, AIA, and the Seattle Times. The jury in making its selection issued the following statement:

"This home was an excellent solution to a very difficult site situation and the jury felt there was a fine airy consistency throughout the design.

"The basic circulation was short and direct. There was a nice openness and extreme livability throughout the house. The jury also commends the very adequate arrangement properly provided where needed.

"This design possessed a dignified simplicity which gave it grace and beauty."

MAIN FLOOR PLAN

OUTLINE SPECIFICATIONS

Type of Construction: Frame.

Exterior Walls: Redwood vertical siding and cedar horizontal siding, stained with Cabot's creosote.

Roof: Flat, built up with tar and marble chips.

Floors: Hardwood on upper level, except vinyl linoleum in kitchen and bathrooms; vinyl asbestos tile on lower level; red slate in entry; 2x4 fir decking on balconies.

Windows: Glass stopped in wood and Tecler aluminum vents.

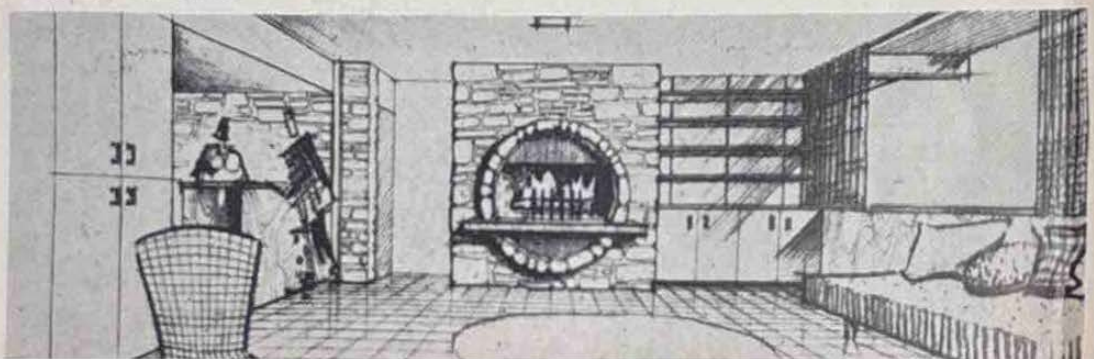
Doors: Glide aluminum sliding and senwood.

Interior Walls: Plasterboard with accents of senwood; Philippine mahogany in master bedroom and recreation room; ceramic tile in master bath.

Ceilings: Plasterboard.

Built-ins: Philippine mahogany cabinets, Formica countertops in kitchen and boys' rooms.

Fireplaces: Utah green sandstone, upper level; imported Italian Vetrum tile with white concrete hearth and planting box, lower level.



Heating System: Forced warm air, oil fired perimeter type.

Total Area: 1937 sq. ft., upper level; 1887 sq. ft. lower level.

Cost per Square Foot: $13.75 (based on 100%, upper level; 75%,; lower level; 33%, carport).

Date of Completion: December 1955.

FOCAL POINT of recreation area is fireplace of imported Italian marble with white concrete hearth. Lower level also includes shop, study, bedroom and bath, storage space and patio.

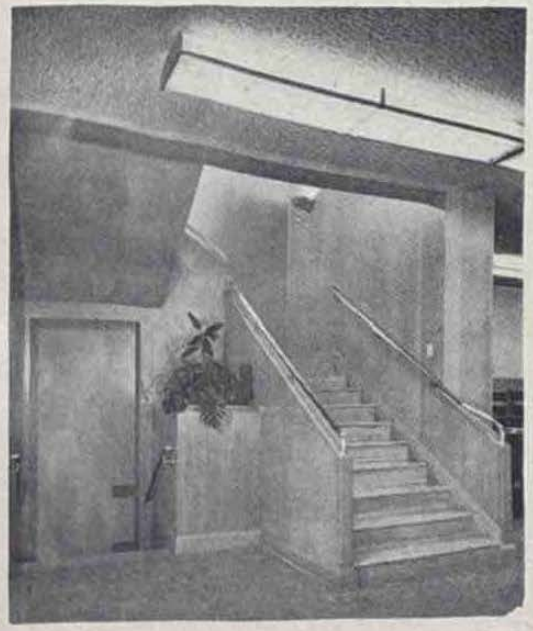
OUR PRESENT civilization owes a considerable debt to the past in literature, science and art.

Because man has been enabled to build a better world upon established foundations that are the outgrowths of centuries, it may well be said that a library, like a temple or a cathedral, is one of the rarest commissions that can come to an architect.

Regardless of individual or specific functions of a library, or even of its size, such a structure should reflect the intellectual advancement of our civilization, not as a massive monument to the past, but as a practical and useful contribution to our future.



It was with these thoughts in mind that we undertook the design of the Library and Administration Building for the College of Medical Evangelists at the Loma Linda campus.

The College of Medical Evangelists was

Photos by Douglas M. Simmonds

COLONNADE connecting administration and library wings forms pleasant outdoor patio in almost constant use by students and faculty alike.

PLANT BOX provides warm touch to library stairway leading to second floor which includes library shown below. Artificial illumination is combined with natural daylighting.

founded more than 50 years ago. Since the end of World War II, the college has made rapid progress on a considerable expansion program. On the 80-acre Loma Linda campus some 15 major projects have been completed, planned or are under construction. The new $326,231 Library and Administration Building, with its 29,498 sq. ft. of usable area is a part of that expansion program.

The design of a single building of two stories capable of housing five floors of library stacks as well as the college administration offices proved a most welcome challenge to me as an architect and to my staff.

Working in close collaboration with college officials, the general contractor and the structural, mechanical and electrical engineers, we placed the site of the new structure in a centrally accessible location near other new or future buildings.

It was our intent to integrate the modern medical library and the administration offices as much as possible into the day-by-day operations of the college church, a museum, various dormitories and the recently completed School of Dentistry.

Adequate parking facilities, a rare and difficult provision in these days of disappearing land, were provided for all of the college projects.

Our design of the library and administration building, which had a per square foot construction cost of $11.06, provides facilities to serve an ever-growing number of medical, dental and nursing students, whose total is now nearing 500. The library also was designed for use by the college faculty and by the staff and employees of the College Loma Linda Hospital and Sanitarium.

It was our firm belief that library buildings, to be most beautiful, must be free from extraneous factors which might disturb the users of the building. We were equally convinced that where quarters are shared by various users, the normal space allocations often are apt to be deranged. Noise and confusion tend to be aggravated; control and supervision are made difficult, and the conditions essential for quiet study and reading often are impossible to achieve.

We eliminated pitfalls such as these by providing an outdoor lobby, or covered passage, which serves separate entrances to the two divergent functions of the building. Thus traffic destined for the administrative portion and library traffic, for all practical purposes, are completely separated.

Constructed on concrete, spread footings, with walls of poured concrete, solid masonry and common and face brick, the library building has completely adequate equipment for comfortable air conditioning and for protection from dust, fumes, vermin and dampness.

A large reading room on the second floor was placed in a position where it would be convenient to the students, yet impractical for use as a thoroughfare to other portions

of the second floor. In addition, the acoustical treatment throughout was highly developed.

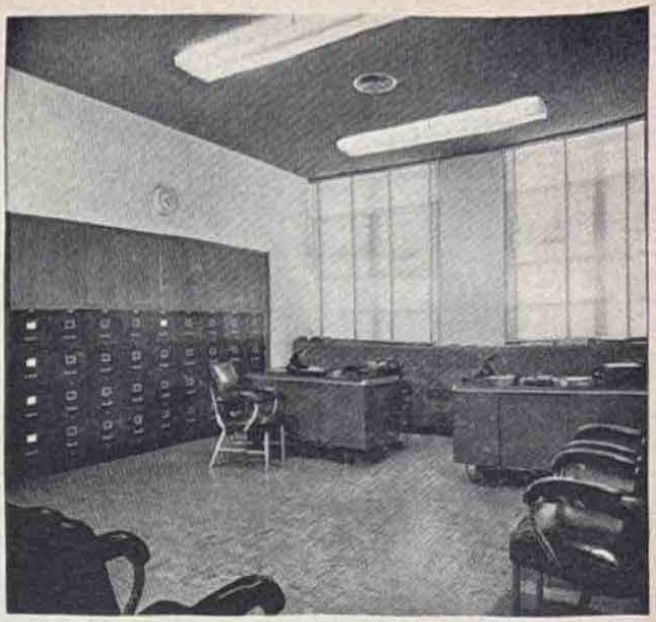
Since reading and study are the raisons d'etre of nearly all libraries, it would seem unnecessary to emphasize the need for adequate illumination. Yet all too often this primary consideration has been overlooked.

We believe that the light provided for reading and for study should equal that required on a drafting board or a jeweler's work bench. With this in mind, artificial illumination throughout was installed according to the most modern efficiency standards.

In addition, designwise, we took full advantage of the sunny southern California climate and provided for an abundance of natural light, particularly in the cheery reading room.

The five floors of stack rooms were placed at the very end of the building to minimize confusion and provide for a maximum of accessibility and service. Convenience for the students and efficiency for the staff were the watchwords here.

Contributing further to the efficiency and the pleasant atmosphere of the library are the spacious working facilities for the all-too-often forgotten library staff. These facilities—desks, cabinets, files, etc.—were designed and placed with the idea of meeting the specific needs of those who use them or who may use them in the future.



We made a particular effort to avoid ostentation, which often is the "curse" of many library structures. We quite deliberately did not include murals, which tend to be gaudy and to attract sightseers, or such elements as friezes, panels and exposed beams, all of which tend to catch dust.

Although they are completely separate units in terms of practical operation, the library and the administrative sections share in common air conditioning, heating and ventilating, storage and rest room facilities. All of these are located in the easily accessible basement, thus negating the additional expense that would have been involved in the design and construction of two separate buildings instead of one.

The administrative portion of the building was designed to accommodate the specific purposes and needs of the administrative staff. Function reigns supreme and the plan reflects the smooth-running organization indispensable to the efficient administration of a specialized college.

As in the interior, exterior ostentation was meticulously avoided. Materials, colors, decorations, etc., were selected with practicability, warmth, service, economy and ease of maintenance in mind, as well as beauty.

In the aesthetic, practical and economic sense, this building to us represents a highly successful solution to the important architectural problem of providing a monument with functional values for the future.

TYPICAL OFFICE in administration wing features Philippine mahogany and oak for all built-in cabinet spaces.

OUTLINE SPECIFICATIONS

Type of Construction: Reinforced concrete on concrete, spread footings.

Exterior Walls: Poured concrete, solid masonary and common and face brick painted, with Philippine mahogany trim.

Roof: Flat, composition built up on wood joists, with fiberglass insulation.

Floors: Concrete on joist and girder beams.

Floor Finish: Armstrong asphalt tile, rubber tile and terrazzo.

Windows: Steel.

Doors: Aluminum frame exterior, wood slab interior.

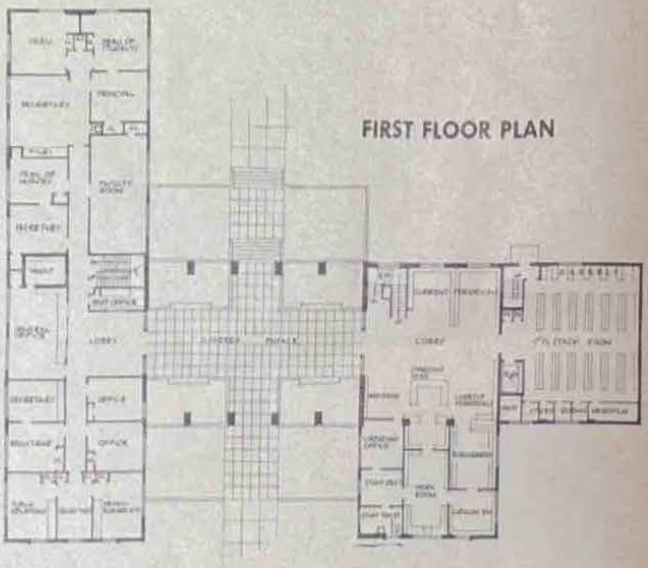
Interior Partitions: Frame and plaster on metal lath.

Interior Finish: Painted plaster with Philippine mahogany and oak trim.

Ceilings: Plaster, hardwall and acoustical spraycoat and tile.

Cabinets: Philippine mahogany and oak.

Heating System: Hot water oil fired units.



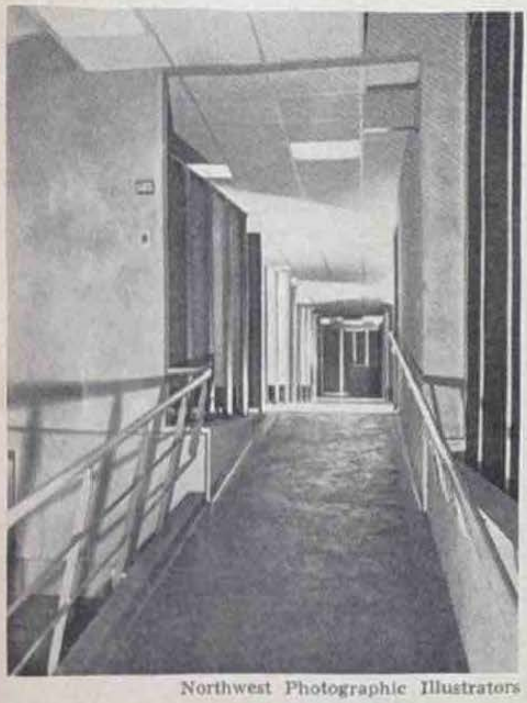
Total Area: 29,498 sq. ft.; 382,497 cu. ft.

Total Cost: $326,231 (construction only).

Cost per Square Foot: $11.06.

Cost per Cubic Foot: $0.85.

Date of Completion: August 1953.



FIRST FLOOR PLAN

Photo by Tom Burns

NEW ADDITION is joined to old building by enclosed concrete ramps. Fireproof structure was designed to accomodate third floor at later date. Doctors' suites are off either side of corridor.

JOHN H. BONEBRAKE, Mechanical Engineer
JOHN M. STEINMULLER JR., General Contractor

FIRST FLOOR DINING ROOM for doctors connects to existing kitchen by ramp, looks out on small planted court. Chalkboard and movie screen are built in and windows equipped with blackout curtains.

WAITING AREA with built-in seating units, nurse's station and storage is provided for each doctor. Screens are ⅝-in. Sheetrock stopped into wood frames and painted.

Photos by Tom Burns

OUTLINE SPECIFICATIONS

Type of Construction: Precast concrete; column footings. Precast Lite-Rock expanded shale concrete. T-section supporting members supplied by Empire Building Material Co.

Exterior Walls: Tilt-up concrete, aluminum and glass curtain.

Roof: Flat, composition on precast Lite-Rock expanded shale concrete slab.

Floors: Precast Lite-Rock expanded shale concrete slab.

Floor Finish: Plastic tile (asbestos).

Windows: Aluminum.

Doors: Steel exterior, wood sliding interior.

Interior Partitions: Plaster on metal and gypsum lath.

Interior Finish: V. G. Douglas fir and aluminum.

Ceilings: Acoustical tile.

Built-ins: Wood cabinets and seating units.

Insulation: Fiberglass board on roof and in walls.

Heating: Base convectors from existing sawdust fired system; heat exchangers for ventilation.

Total Area: 4,500 sq. ft. second floor; 1,000 sq. ft. first floor (will equal second floor when completed).

Total Cost: $70,248 (construction only); $2,400 for draperies and seat cushions.

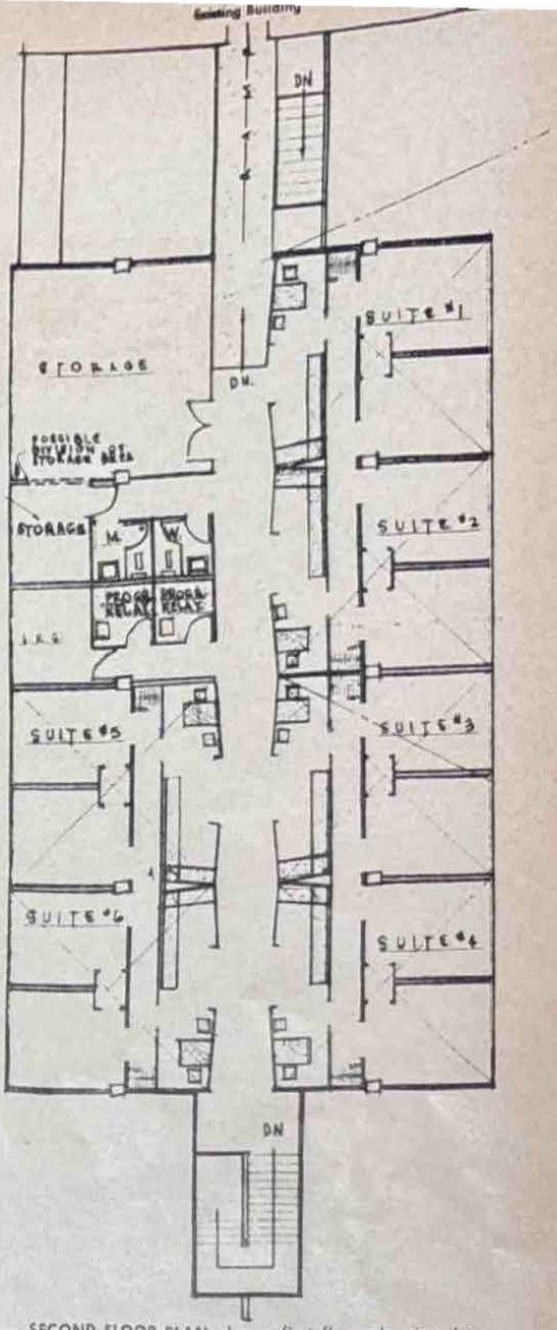
Date of Completion: April 1955.

and looks the part

THE YOUTHFULNESS of the architects is reflected in this unique structure which bears out their philosophy that simplicity, flexibility and durability all can be fully achieved in a building of economic limitations.

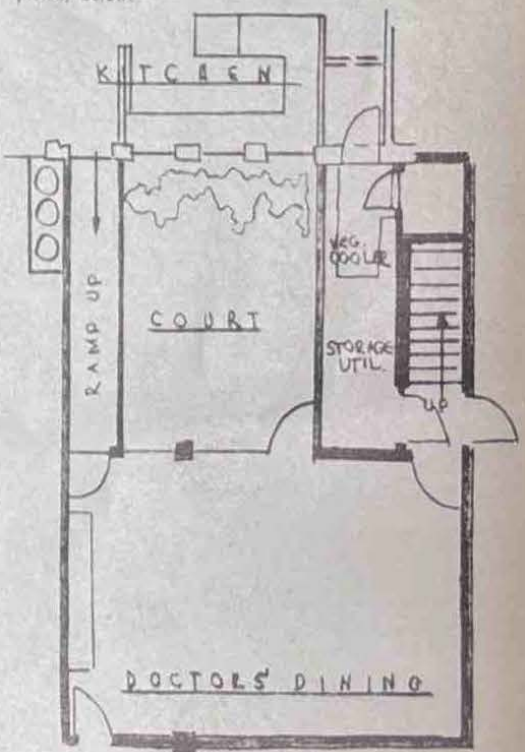
Sited on a city lot adjacent to the existing clinic built during the 1920s, the $70,000 addition houses six doctors' offices, a fluoroscope suite, electrocardiograph suite, dining room and temporary covered parking. The second story is finished, the first story partially so.

The site posed two problems: critical parking and future use. It is problematical that in 15 to 25 years the site may be retail-commercial and any building constructed at this time should be designed without strict adherence to special-purpose criteria.



With that in mind, the architects planned a precast skeleton concrete structure, since this type of construction lends itself to flexibility, vertically and horizontally; is simple in its column members; and is capable of being dissembled, moved and reassembled, since all concrete members were tied by means of welding the projecting steel plates at the point of contact. The building is strictly contemporary in its design, as are the colors and textures used in the exterior and interior trim.

CONSTRUCTION METHODS: Precast construction and assembly-line technique were used to complete the two-story addition with a speed that left sidewalk superintendents gaping in amazement.

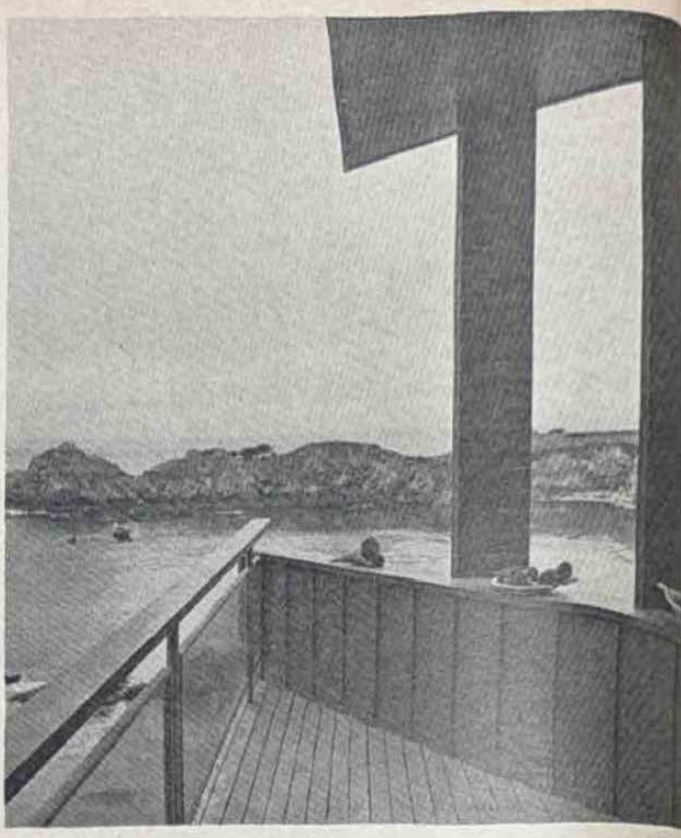


The contractor needed only two days to set all T-sections, struts and precast channel slabs. Reinforced T-sections were cast on the ground and hoisted into place by cranes. Precast concrete struts connected the T-sections, then 17½-ft. long precast channel slabs were set to span T-beams.

Channel slabs form ceilings, floors and roof of the building. A 1½-in. concrete deck topping was poured directly on the channel slab for the second floor and roof.

Lightweight concrete precast members made a speed-up technique feasible. The structural sections were poured with expanded shale concrete. Channel slabs were precast in Portland and trucked to the jobsite on specified delivery schedules.

SECOND FLOOR PLAN above; first floor plan (portion completed) below.



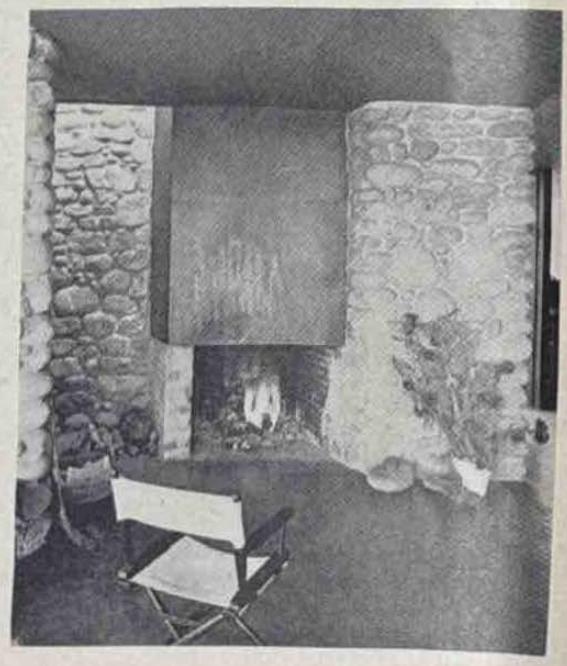
COMPLETE architectural utilization of the drama of a spectacular ocean-front site has been achieved in the design of this diamond shaped house at Yankee Point. With 21,865 cu. ft. of space, it is perched on a cliff which hangs out over the Pacific and a pleasant, sheltered beach below.

The plan provided the owners with adequate room for weekend entertaining of their five grown children and their friends. Baths and dressing rooms took top priority in design consideration, while sleeping facilities were left completely informal and relaxed.

"By using the diamond shape in our plan, we were able to create a major exposure to the south with a view of the sea breaking on the coastal cliffs, while at the same time minimizing the western exposure which is shielded from afternoon glare by tall vertical louvers," explain the architects who won an AIA 1955 Award of Merit for the project.

The stone work is of granite boulders taken from the beach below the house; the exterior finish siding is California redwood board and batten which is repeated inside.

The house rests on a 4-in. concrete slab on grade, with the exception of the cantilevered prow, a 2-in. concrete slab on 2-in. decking supported by steel and wood beams which cantilever from the natural stone wall. The flat, joist roof is supported by stud walls covered with vertical siding and isolated posts in the glassed-in areas.



LARGE BALCONY stretches across southern side of living room. Vertical louvers cut down late afternoon glare of sun.

Diamond shaped beach house is a Pacific gem

Dr. Ernest Nelson Moore Residence
Carmel, California

COPPER HOODED FIREPLACE is surrounded by granite wall of boulders collected from beach below house.

OUTLINE SPECIFICATIONS

Type of Construction: Frame on 4-in. reinforced concrete slab and spread footings; cantilevered area on 2-in. concrete slab on 2-in. decking supported by steel and wood beams.

Exterior Walls: California redwood board and batten with natural finish and redwood trim.

Roof: Flat, composition built up on wood joists supported by stud walls covered with vertical siding and isolated posts in glassed-in areas.

Floors: Concrete slab with steel trowel integral color.

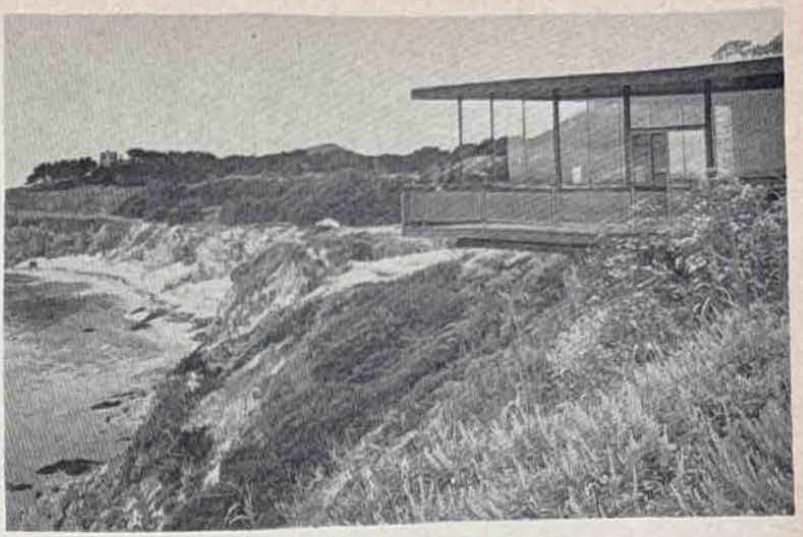
Windows: Wood casement and fixed glass.

Doors: Flush wood doors and Arcadia steel sliding doors.

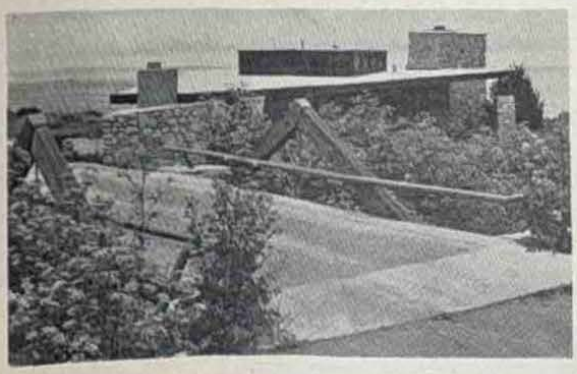
Interior Finish: Vertical California redwood board and batten with redwood trim; redwood plywood.

Built-ins: Hi-Fi in living room; window seat and beds in alcove; bunks in private sleeping area off carport.

Insulation: Rockwool bats in roof and Kimsul blankets in exterior walls.



Heating System: Forced warm air gas furnace.



Total Area: 21,865 cu. ft.; 1,060 sq. ft. (1,600 sq. ft. including carport).

Date of Completion: February 1953.

POINTING TOWARD SEA in diamond shape, beach house has unobstructed view of ocean waves breaking on coastal cliffs near Carmel. Exterior finish blends with native stones of area.

TRIANGULAR TABLE reiterates shape of living room. Long rows of built-in couches are used for seating and sleeping. Floor plan includes carport and completely separated guest room that has its own fireplace. One living room is made possible by twin bath and dressing areas.

Photos by Phil Palmer

VINES CLIMBING from recessed planter in entry are visible from dining room, thanks to translucent glass divider that separates dining room from hall. Divider also gives added light to dining area and helped to cut construction costs.

Room divider can be practical and aesthetic asset

MANY CALIFORNIA tract builders are turning to the use of room dividers as a method of cutting construction costs and adding eye appeal for the prospective buyer. They initially used the divider idea as a "break through" from the kitchen to the dining room.

Architects designing homes for tract builders also learned that they could profit, designwise, from the well-planned and well-built divider utilized to separate rooms or to break up a large room into specific living areas.

The architectural team of Frank B. Hunt and Robert S. Kitchen produced a home in Los Altos for W. F. Sanford where the room divider has become almost a focal point of attention. Faced with the design need to conceal a dining area from a hallway, they used ripple translucent glass, framed in simple wood, to provide a dramatic entryway as well as privacy for the diners.

Builder Ralph Knight constructed the divider with vertical members of 2x3 Douglas fir, with the glass set with ⅜-in. wood stocks which project ⅜ in. beyond the posts.

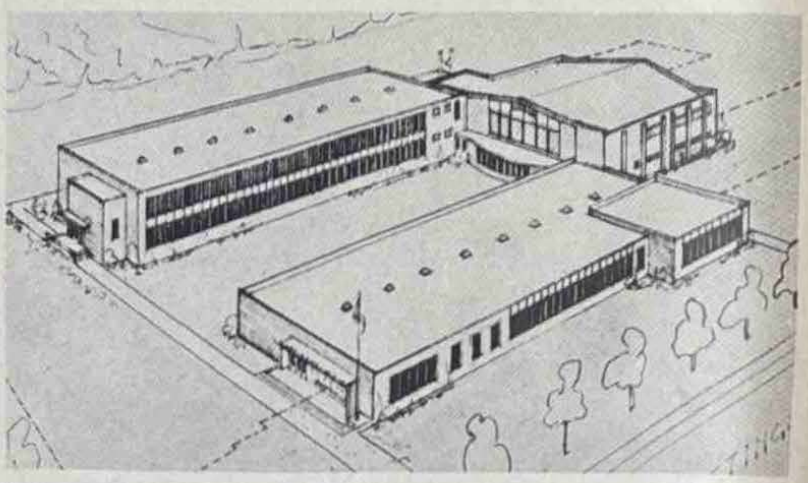
The glass rests on a 4-in. rubber tile base used on the floor in that area of the house. The divider was left open at the top to allow the ceiling line to flow on through the room and to emphasize the feeling of real spaciousness which exists.

To provide vertical stability, the glass screen is attached to a structural post which supports the ceiling. The post and the four vertical wooden members were painted to harmonize with the rest of the house, whose exterior is of redwood board and batten in a ranch style design which the architects call "conservatively modern."

Idaho school district tries pay-as-you go plan

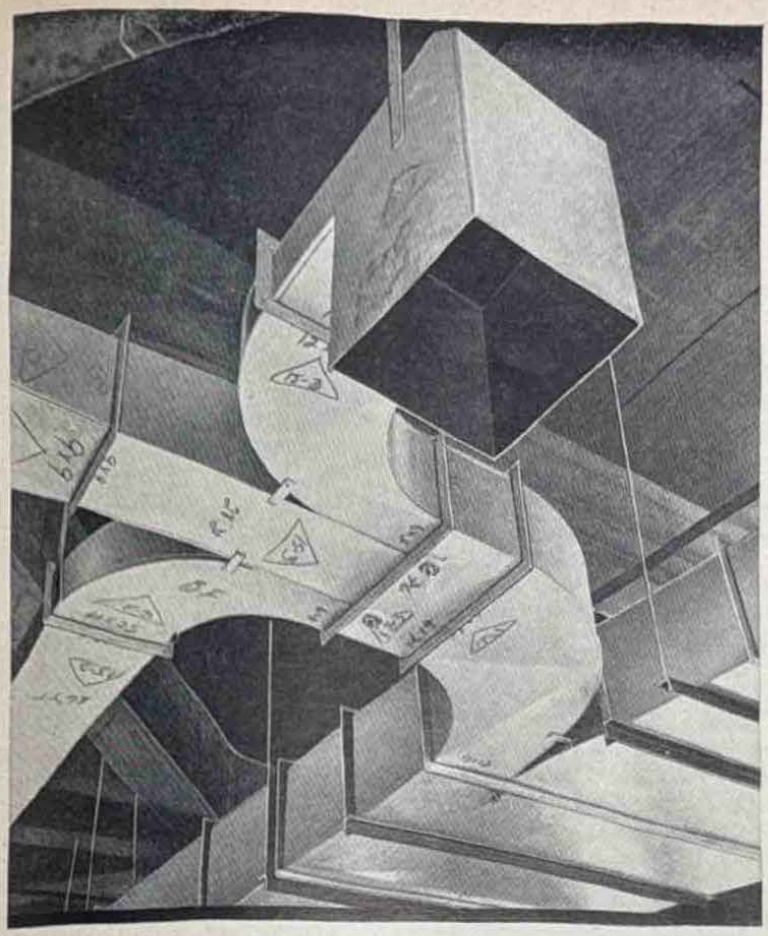
A PAY-AS-YOU-GO PLAN to offset the difficulties of inadequate bonding funds for total school needs has been evolved by Coeur d'Alene school district officials and Benjamin K. Ruehl, AIA, of Spokane.

The problem is being solved by the adoption of what Ruehl terms an ultimate program and site plan preparation along with unit expansion for actual construction for School District 271 high school. The eventual capacity will be 1400 students and the cost about $1½ million including auditorium.



First part of the building, which includes 22 classrooms, was completed in 1954. Another 12 classrooms are to be completed by September 1956 and a gymnasium by January 1957. Busboom & Rauh of Spokane are contractors on this phase of the program.

Third phase of the expansion project includes more classrooms and the vocational department, while the fourth phase will include an auditorium and music units.



Contracts to date have totaled $787,000 and provide for 74,000 sq. ft. of area. Per pupil cost to date is about $900 and it provides all the requirements of a fully accredited high school to house 900 students.

Construction is of solid masonry exterior, steel frame, wood interiors and roof, hardwood finishes, aluminum sash and all fixed equipment and mechanical work is included.

Estimated per square foot cost of the project is $11.28, including the architect's fee. Much of the saving, it was pointed out, has been made possible by elimination of unnecessary frills and a strictly utilitarian design.

PERSPECTIVE shows how $1½ million high school for Coeur d'Alene, Idaho, will look when completed under pay-as-you-go plan.

A unique feature of the Equitable Building's air-conditioning is 1,180 of these air blending units. There is a blender installed in every perimeter office. The units are connected to the central duct system and they act as independent thermostats delivering conditioned air according to an individual's wants.

Pinched inside a space 11½ inches deep–

Steel ductwork stands rigid air-conditioning test

The 25-story Equitable Building is San Francisco's newest skyscraper and the city's first office building to be completely air-conditioned. The Scott Nelson Company, Mechanical Contractors, had a job on their hands fitting a duct shape in the 11½-inch furred ceiling space. The problem was to fabricate ductwork flat and narrow, yet rigid enough to withstand constant vibration and pulsation. Adding frame reinforcement to the duct was only part of the answer. The rest depended on the selection of the right metal sheet.

The job required metal properly ductile to form sharply angled, tight seams; yet rigid enough to prevent seams from cracking or opening under the stress of high velocity airflow. The Scott Nelson Company selected steel . . . USS Galvanized Steel Sheets for the job . . . and report the USS sheets did a perfect job.

What's the matter with down town?

Honky tonk and donkey dust

'If action is not given promptly, the established commercial centers may become ghost areas and commercial graveyards'

by FRANK EMERY COX
Sales Research & Business Development Analyst
The Kawneer Co., Berkeley, Calif.

RECENTLY I visited one of the more modern cities on the Pacific Coast with a population of over 100,000. It was not unlike most of the cities of the country. It is a wealthy community. The per capita income is high. It has grown rapidly while greater growth lies ahead.

Its residential areas will compare with the best in any city in the nation. Its new outlying shopping centers—one in particular—are magnificent, but the retail area of the downtown section, including stores, hotels, restaurants, banks and other business houses, is redolent with the musty, merky atmosphere of decayed grandeur. In the vernacular, the downtown section is "honky tonk and donkey dust." Shabby, run-down, delapidated, unpainted, unwashed, unclean and antiquated, it presents an appearance of degeneration which is entirely out of keeping with the residential section.

To those who pin hopes for the future on the downtown sections of cities such as the one described, it is downright discouraging to approach impressive residential areas, drive through the magnificence of the new shopping centers and then wind up in the seedy, "gone to pot" downtown section.

In the city described, 75% of the residents live in homes that are more modern, better maintained and better equipped than the retail stores, restaurants and business houses of the downtown area. The question arises: Will the citizens whose incomes have jumped sharply and whose standards of living have improved want to shop and do business in a downtown section that can only be described as a "retail slum"?

That the central areas have lost only a small part of their competitive percentage of the community's total retail volume under these circumstances is a testimonial to the economic solidity of down town. It is also evidence that in the increasing population era, people will buy in spite of decadent appearance. But what is going to happen when our economy tightens up? Obviously it would seem that trade will go to the more modern shopping facilities and these, under present conditions, can be found mostly in the suburbs.

One reason why the downtown sections in many of our cities show such degeneration is that in too many instances so-called master plans have been discussed, but seldom have any of them gotten past the blueprint stage. This is not by any means a condemnation of master plans, but is adverse comment on the stagnation that seems to attend most of them. The evidence in so many cities where these plans have been attempted seems to point in the direction that "too big plans" mean too little action. It is quite possible to give down town a new look by simply doing these things:

1) Face-washing the old buildings from top to bottom.
2) Improving the store exteriors.
3) Better housekeeping by the occupants.

Without an appearance of cleanliness and without sight appeal to the shopper, the search for more parking space loses a great deal of its necessity. This does not mean that parking should be neglected nor overlooked. It does mean, however, that parking and downtown modernization must go together. Peripheral freeways, underground or mechanical parking, new plans for public transit and all the other expensive necessities required for the motorist will not function effectively down town so long as that area is dowdy and antiquated as well as non-competitive with the newer outlying districts.

The amazing part of the consideration of the two requirements for the rejuvenation and maintenance of downtown values is that it takes so much less money and time to overcome the run-down appearance than it does to provide parking and to solve the transportation problems. There is no reason, however, why the two pro-

BEFORE: Old Windsor Hotel in Stockton, built in 1891, was white elephant, characteristic of buildings of that era. Note character of tenants. Income was less than enough to pay taxes and insurance.

AFTER: Completely remodeled inside and out, with tenants on long term, percentage leases, building now is profitable investment. Vincent Buckley, San Francisco, was architect; Shepherd & Green, Stockton, contractors.

grams cannot proceed concurrently.

And now for the sake of considering the other part of the "rejuvenation twins," let us look at the parking side of the picture. As we look back on the evolution of transportation and the acceptance of the automobile as the principal means of getting about, we can now trace a chain of relationships between the progress of the automotive industry, retail sales volume, preservation of property values, and the effect that all of these factors are having on our entire basic tax structure to the point where many cities are on the threshold of needing drastic treatment to prevent a serious collapse of their municipal government.

Highway and transportation engineers have provided streets and highways in ever increasing numbers and degree of utility. These are for the purpose, of course, of facilitating motor vehicle traffic. To start an automobile and stop it is not a difficult thing, but to find a place to park it after it is stopped becomes an increasingly perplexing problem. It is quite evident today that there is a direct relationship between the availability of off-street parking facilities and the traffic that enters a business section.

This being the case then, it follows that foot traffic suffers or improves in direct ratio to the amount of off-street parking available. Merchants cannot look on a driver as a prospective purchaser until they get him onto the sidewalk on foot. It is immediately obvious then that there is a direct kinship between foot traffic and sales volume for the apparent reason that if there is no foot traffic, there are no potential customers for trade.

The next link in the chain becomes understandable by virtue of the fact that there is a direct tie between sales volume and the ability of the tenant to pay rent on the premises he occupies. Forging this chain with another link, we then find a relative factor between the ability to pay rent and the return the landlord can obtain on his investment.

Property values these days are more and more being influenced in their appraisal by both commercial appraisers and public assessors through the return on the investment that comes to the owner of the property. As property values go up or down, so taxes are affected, and there is only one conclusion that can be drawn at this point: the relationship between property values and taxes.

When property values decrease, naturally property owners demand lower taxes. This sets up an incipient condition of blight in the area and, once started, this degeneration gains momentum rapidly. Here then is the potential threat to our tax structure because of the high percentage of revenue which the city or other municipal agency obtains from taxes from commercial districts.

Let us take some examples. In one city of 5,000 people in northern California, 52.8% of the total city taxes comes from the business district through real estate taxes, personal property taxes, city sales taxes, business license taxes and others. The city has practically no industrial area, so the commercial district and the residential district share the burden of taxation just about equally.

One case which is significant of what might happen is where the percentage of taxes coming from the commercial area dropped from 28% of the total to 23% of the total. As the revenue from the commercial district decreased, it became necessary to shift the burden to the residential and industrial areas.

There are many individuals who contend that foot traffic in the downtown area can be induced by increased use of public transportation systems. This conclusion, however, seems to be contrary to trends. The use of public transportation to downtown districts has decreased nationally during the last eight years by an approximate 28%, even though the population has increased. In some cities this has been as much as 40%.

This trend in itself sets up a vicious circle by virtue of the fact that the less patronage the public transportation systems receive, the poorer service they are able to render. In some cities it has reached the point where franchises have been abandoned and public transportation has become entirely unavailable. It would seem then that there is no great relief that can be obtained from public transportation facilities to keep the foot traffic at high levels in the downtown areas.

To become hysterical over a dangerous situation is not conducive to developing a solution. Digging huge holes in the ground for three or four levels of parking below the street grade is one way of providing stalls in close proximity to retail districts, but there are many disadvantages. Two of the most important of these are: first, the actual cost of providing stalls on this basis which might run from $2,500 to $3,000 per stall, making it necessary to charge so much for the space occupied by the car per

People prefer to reach for the TELEPHONE

. . . rather than run for it. In other words, they like to have their home wired for telephone outlets wherever they are likely to spend much of their time. In the bedroom, for instance, and the kitchen . . . and especially here in the West where we live outdoors a lot, they want to be able to talk on the patio or even by the barbecue.

Why not take advantage of Pacific Telephone's free Architects and Builders Service. Let us help you plan the kind of telephone facilities every buyer expects to find in his home.

Put built-in telephone facilities in your plans

Pacific Telephone

hour that it discourages shoppers from using them except where necessity commands; and second, this method of providing off-street parking facilities has to do with delays in getting cars in and out which tends to defeat the very purpose for which the facilities are provided.

The use of surface parking only on lots which can be provided within reasonable walking distance of the retail area seems to provide an uneconomic use of the land and necessitates a stall rental rate that tends to discourage use by prospective patrons.

Multi-level garages

It would seem that the use of multi-level garages provides the most adequate answer. In considering these, however, the problem of expense must again be considered; and where the cost per stall approaches the point of more than $1,100, it seems necessary for capital to get a return on the investment by the rental of the stalls at a price that quite often discourages shoppers to the point of diminishing returns, as it benefits the commercial center as a whole.

To provide multi-level garages many developers have constructed unsightly buildings which do not add to the beauty of the city and in many instances are not popular with those who might use them. This means then that the question of design must be given serious consideration. A building that resembles an unfinished, abandoned steel structure does not seem to be the answer. Columns and spandrels should be treated in a fashion that adds to the beauty of the downtown area to keep pace with the attractive design of the competitive perimeter shopping centers. This same truism holds in the case of store buildings and other structures. If this is not done, public opinion can quite often defeat the very end which is desired.

It should be pointed out at this time that a parking stall can be estimated in value in dollars and cents. Many scientifically operated department stores value each stall within 300 ft. of an entrance and under permanent control of the merchant to be worth $10,000 per year in retail sales. Some other lines of business consider stalls worth as much as $30,000 or $40,000 per year in retail sales.

It should be pointed out also that the larger the city, the farther people will walk from where they park their cars. For a city under 50,000 people, it is probably questionable whether there will be much popularity in walking over 350 ft. In a city of 500,000, it could be expected that shoppers would be satisfied to walk as much as 600 ft. if, when they approach the retail stores in the shopping district, they find them as attractive as the newer ones built in the suburban areas.

In San Francisco today a movement is on foot to rehabilitate Market Street. Nondescript tenants there have been permitted to invade what used to be a good retail district. If this tendency is permitted to grow, the underpinning of an erstwhile good retail street will be affected. This same condition applies to Los Angeles, Portland, Seattle, Spokane and even the smaller cities of 5,000 population. Drastic steps must be taken to slow down the degeneration and start the trend the other way.

Much is being done in an attempt to solve these problems, but much more has to be done. A concerted effort on the part of property owners and retail institutions to modernize buildings both inside and out in step with the needs of the times and cooperation between private enterprise and city officials must go forward together to solve the problems of parking.

San Francisco downtown stores sales dropped 4% in 1952, while those in the entire area around San Francisco increased 4%. Using this as an example, if the trend were to continue, it would mean that the major department stores now doing a business of $160 to $170 million a year would find themselves cut back by some $22 million per year in sales, which would be the equivalent to the total sales of any one of the larger department stores.

Urban redevelopment

The new movement which has been encouraged by the federal government's program of urban redevelopment gives evidence of some action which may prove to be the spark to start the general rehabilitation of downtown areas. California has passed enabling legislation making it possible for cities to initiate urban redevelopment programs. It is possible to issue bonds under certain conditions to purchase blighted areas which have been declared a menace. By conforming with certain specifications a boundary of the area can be established and it can be declared subject to condemnation and rehabilitation under certain conditions set up by law. The bonds become a lien against the increased amount of taxes that would develop as a result of improvements and rebuilding. The purpose is not for the city to do this as a public enterprise necessarily, but to invite private capital in for the purpose of participating and taking over the responsibility of the actual reconstruction work.

Los Angeles now has several projects of this nature under consideration. There are many other cities, large and small, in California considering similar plans.

A group of specialists in this type of work with experience in city governmental affairs, construction and planning, has been developed in California to assist communities in this urban redevelopment. The unfortunate part of their situation, however, is that there are so many demands on their time that they cannot keep up with the requests.

Other states are gradually adopting laws similar to that in California which conform with the federal regulations. In many instances joint ventures between private capital, municipal funds and federal aid are being resorted to. In approaching the problem through the means of public urban redevelopment plans, both of the "necessity twins" for rehabilitation can be taken care of, provision of adequate parking and modernization of buildings. It would seem as though this movement is gathering momentum and it is about time, else downtown sections might become so far degenerated that they could not be reclaimed.

It might be possible to summarize the conditions by saying that our parking difficulties and the problem of modernization will never be solved until merchants, landlords, public officials and all others interested recognize the obvious fact that the solution costs money and someone has to pay for it. Solutions will apparently never be obtained as long as motorists are encouraged to consider free parking to be an almost inalienable right and landlords and tenants use the psychology of getting along with what they have, never expecting to spend any money maintaining or improving their buildings.

The relationships of automobiles and off-street parking, foot traffic, sales volume, ability to pay rent, return on investment, property values, and taxes must be considered as a chain and each link must be forged to the point where it will constitute a strong, firm and permanent device that will hold the anchor of downtown property values securely.

If action is not given promptly, the established commercial centers may become ghost areas and commercial graveyards. Better we get rid of undesirable tenants, miserly landlords and reactionary city officials than to lose the commercial core of our cities.

Talks with contractors: the Fox Nailer

by Glenn M. Canaday

THERE'S a gadget on the market called the Fox Nailer that can save you plenty if you have the right job for it. It's particularly applicable to certain types of overhead nailing.

If stripping is to be fastened with 12- or 16-penny nails, the Fox Nailer is definitely in the picture. It isn't the apparent speed of the nailer; it's the ability of a man using it to maintain a steady pace all day long that ups production.

The average carpenter tires after a couple hours of heavy overhead nailing. This is not necessarily true of a specialist who does nothing but apply overhead stripping; however, the average general contractor doesn't have men like this on his payroll, nor are they usually available to him. The nailer makes it possible for a carpenter to install stripping with the speed and ease of the specialist.

I'm not saying the Fox Nailer is the answer to all overhead nailing — it isn't. If only a few hundred linear feet of stripping are involved, if there is much shimming and leveling to be done, or if the stripping consists of 1x2s, 1x3s or 1x4s fastened with 6-penny nails, the job can usually be done more economically by hand.

However, 1x4s applied with 8-penny nails are in the balance, the particular situation determining whether the nailer is justified; 1¼-in. stripping applied with 10- or 12-penny nails is usually a nailer job; 2x2s and 2x4s (usually fastened with 16-penny nails) are made for this gadget.

The Fox Nailer itself is a simple attachment for an air powered riveting hammer. It consists of a plunger extension and a holder for the nail. Each nail is positioned individually by hand. A workable outfit includes a portable type gasoline or electrically driven compressor of the size used to power a production type spray gun, 300 ft. of hose equipped with jiffy connectors, two Chicago Pneumatic Model 1000 hammers, two Fox Nailers and spares, including at least one hammer and an assortment of nailer parts.

On a recent job 2x2 stripping was nailed to joists spaced at 16-in. centers with one 16-penny nail at each bearing. Construction was a dormitory type building with 9-ft. ceilings and rooms grouped on either side of a central hall. The crew was made up of two carpenters nailing, two cutting and handling, and a laborer carrying in stripping, sweeping up and servicing the gasoline powered compressor. Although rooms were small the layout was repetitious. This crew installed 5500 lin. ft. per day, an average of 1100 ft. per man.

On another job, a store building 100x150 ft., the 14-ft. high ceilings were stripped with 1x4s fastened with two 8-penny nails at each bearing to joists spaced 24-in. on centers. The area had a minimum of partitions. Production averaged 640 lin. ft. per man day.

NEW PARTNERSHIPS: R. Evan Kennedy, structural and civil engineer, has been added as a partner to the architectural firm of Edmundson & Kochendoerfer. The firm will be known as Edmundson, Kochendoerfer & Kennedy, architects and engineers, and will continue its offices at 325 Henry Bldg., Portland.

KENNEDY

Kennedy is past president of the Structural Engineers Association of Oregon and past treasurer and a director of both the Oregon Building Congress and Professional Engineers of Oregon.

A committee member of the National Civil Defense Administration, he observed the atomic tests in Nevada last May. He was engineer for the underground Civil Defense Control Center now being built by the City of Portland and is an engineering advisor to the city's Civil Defense Bureau.

Kennedy joined Edmundson & Kochendoerfer in 1952 after being associated with Moffatt, Nichol & Taylor and Cooper & Rose, both engineering firms, and with Barrett & Logan, architects. He is a graduate of the Engineering School at the University of Colorado. During World War II he was in charge of the structural design of some of the blimps made by Goodyear Aircraft Corp.

In Seattle Decker & Christenson, architects, and Charles E. Kitchin, structural engineer, have consolidated their offices under the name of Decker, Christenson & Kitchin, architects and engineers, at 1411 Fourth Ave. Bldg.

Ralf E. Decker, who had been in private practice for nine years, and Waldo B. Christenson, in private practice for five years, formed their partnership in 1950. Both have been active in AIA affairs, with Christenson completing his term as Northwest regional director this spring.

Kitchin has served as consulting structural engineer to Decker & Christenson and other architects for the past four years. He is a member of the National Society of Professional Engineers and the Structural Engineering Association of Washington.

In Great Falls, Mont., David S. Davidson, AIA, and William H. Kuhr have announced the formation of a partnership known as Davidson & Kuhr, architects-engineers. Offices will remain at 104 Fourth St.

Both partners are graduates of Montana State College and World War II veterans.

NEW ASSOCIATES: William E. Dunlap has been elected an associate partner in the San Francisco architectural firm of Skidmore, Owings & Merrill. William J. Watson and Alan S. Robinson have been named as participating associates.

Dunlap served in the firm's Chicago office before he was tranferred to San Francisco in 1951 where he has been chief architect. He was graduated from the Illinois Institute of Technology in 1947.

Watson joined the firm in New York, shifting to San Francisco in 1950. Robinson is project manager for Utah Construction Co. developments.

New associate of the Seattle architectural firm of Wortman & Wilkins is James W. Ellison, who has practiced at 200 Broadway for the past three years. The partners, C. Noel Wortman and Jesse T. Wilkins, will double their present office space as soon as remodeling at 308 Marion Bldg. is completed.

EXPANSION: With the opening of a regional office in Dallas, Texas, the Los Angeles architectural firm of Welton Becket & Associates now has seven branch operations. Charles Gable of Los Angeles will be temporary manager of the new Dallas office, with Alford Peterson, manager of the Kansas City office, replacing Gable in California.

NEW FIRM: R. M. Tracy & Associates have opened an office at 531 First Ave. W. in Seattle. The consulting engineers will specialize in structural design of commercial and industrial type buildings. Tracey is a civil engineering graduate of the University of Washington and has worked for Marshall Barr & Associates in Seattle.

OPENS OFFICE: Ernest Hicks, formerly with architect Kenneth W. Brooks in Spokane, has opened his own office in Coeur d'Alene, Idaho.

PLAN NATIONAL SHRINE: Pereira & Luckman of Los Angeles have been designated coordinating architects-engineers of a planning board selected to formulate a program for the construction in the District of Columbia of a civic auditorium, an Inaugural Hall of Presidents, a music and fine arts center, a mass communications center and correlated facilities. Stanford Research Institute also is represented on the board.

The group will open offices in Washington and will meet monthly to review, discuss and determine the master planning and will simultaneously make a study and recommendation of potential sites.

Board members were appointed by a federal commission recently established by an act of Congress.

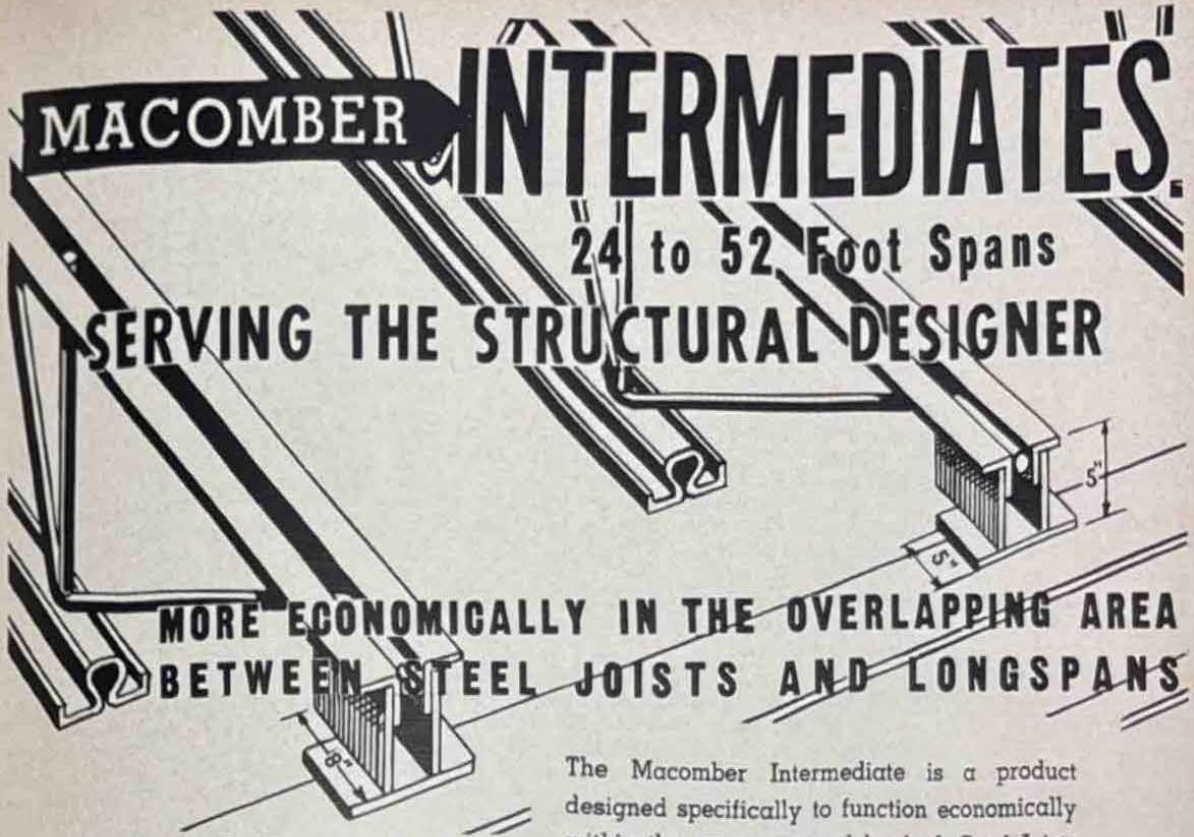
ON THE MOVE: The architectural firm of Bassetti & Morse has moved its offices from 1621 Boren Ave. to 1602 Tower Bldg., Seattle (ELiot 1938).

LOVE AND MARRIAGE (and architecture): Richard Neutra, FAIA, of Los Angeles, addressing an audience of 350 persons at San Francisco's Museum of Art, related good architecture to happy and harmonious marriage.

"Many persons get divorced," he declared, "and don't realize that the architect probably had a good deal to do with their matrimonial troubles. There are not only traffic jams on the bridges and freeways, but there also are traffic jams in front of the bathroom door.

"I know that I have the power to blow up any marriage and that I also can keep people together by the succesful practice of good architecture."

Neutra, who helped to develop metal louvers for buildings, effective use of solid panel doors and indirect lighting, told his listeners that "the trouble with being a pioneer is that at first people tell you your ideas are impossible. Then, when everybody is using them, they say, 'I aways told you so.'"

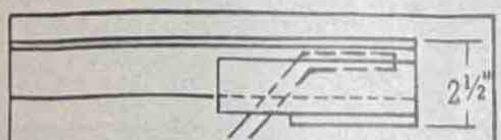


AIA activities

Honor Awards Jury: Two West Coast architects—Paul Thiry, FAIA, of Seattle and George B. Allison, AIA, of Los Angeles—have been named to a five-man jury which will judge the eighth annual AIA Honor Awards competition. Other jurors include Pietro Belluschi, dean of the School of Architecture at Massachusetts Institute of Technology; Eero Saarien

MACOMBER INTERMEDIATES

24 to 52 Foot Spans



SERVING THE STRUCTURAL DESIGNER

MORE ECONOMICALLY IN THE OVERLAPPING AREA BETWEEN STEEL JOISTS AND LONGSPANS

NOT A STEEL JOIST
NOT A LONGSPAN

INTERMEDIATES ARE DESIGNED WITH 2½" DEEP ENDS WHEN USED WITH STEEL JOISTS.

The Macomber Intermediate is a product designed specifically to function economically within the range covered by both Steel Joists and Longspans.

The greatest design efficiency of the Intermediate is apparent in the area of diminishing effectiveness for Steel Joists and Longspans.

In this overlapping area, you have a complete range of Intermediate sizes and spans for the efficient and economical framing of the majority of commercial and industrial layouts.

Keep this Macomber product in mind when you have an area within the 24 to 52 foot range.

Introduced in 1949—INTERMEDIATES had an immediate acceptance. Since then they have gone into every type of industrial and commercial structure from coast to coast.

The bulletin shown opposite with sizes and Load Table is a MUST for every designer's desk drawer. . . . Just write INTERMEDIATE BULLETIN across your letterhead.

of Bloomfield Hills, Mich.; and Donald Nelson of Dallas, Texas.

The jury will travel to Washington, D. C., early in March to pass upon more than 800 entries expected from all over America.

Oregon: The chapter's annual banquet will be held Tuesday, February 28, at Riverside Golf Club, Portland, according to George Dickel, chairman.

Southern California: Container Corporation of America, on the basis of development of the corrugated box in lift-slab construction, received the chapter's annual Craftsmanship Award at a dinner in Los Angeles recently. Thomas Russell headed the awards committee.

Thomas Cass, Container vice president who directed the corrugated division, received the honor from William Balch, who heads the AIA chapter.

Cass said credit should also be given to C. Henning Vagtborg who was the spark plug in driving the corrugated box project to completion; to C. C. Simpson Jr. of Simpson Construction Co. who supplied practical construction ideas; and to J. Edward Martin of Albert C. Martin & Associates, architects-engineers, who was responsible for suggesting the basic idea to Container Corp.

Southwest Washington: A chapter-sponsored exhibit on display this month in the Handforth Gallery of the Tacoma Public Library shows photographic panels of 27 buildings cited in the national AIA 1955 Honor Awards competition. The gallery is open to the public during regular library hours, 9 a.m. to 9 p.m., Monday through Saturday.

Student Chapter: Architectural Forum an organization of Idaho State College architectural students, will affiliate as a student chapter of AIA. President of the group is Donald D. Johnson.

Northern California: In connection with a preview showing of the film "Architecture USA" January 19, the chapter set up a special exhibit at San Francisco's De Young Museum of Art to show civic leaders of the Bay area the work of local architects who have won national awards during the past year.

Seattle AIA chapter gets new executive secretary

New executive secretary of the Washington State chapter, AIA, will be Miss Gwen Myer, replacing Miss Dayis Holcomb who has resigned her position to travel abroad. Miss Myer will assume her duties January 30 in the chapter's Central Building office in downtown Seattle.

MYER

For the past two years Miss Myer has been assistant in the women's department at KOMO-TV. While there she aided in arranging a series of architectural interviews last spring. A 1949 graduate of the University of Washington, she took part in the ex-executive retail training program at Frederick & Nelson for three years as an assistant buyer.

Miss Holcomb, who has served as the chapter's first full-time executive secretary since August 1953, also

Where architects hang their hats

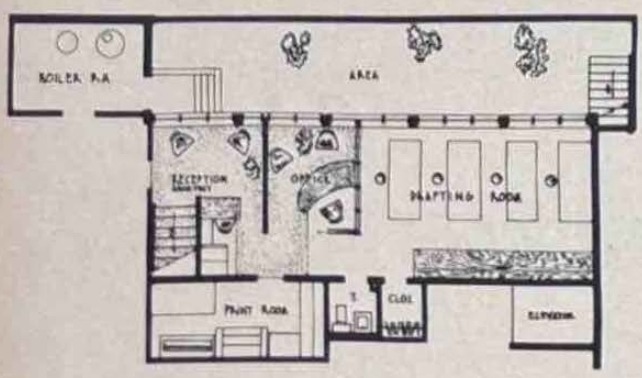
The architects—Gehres D. Weed, AIA, and Robert E. Fehlberg, AIA—occupy the basement floor of the $45,000 Sundelius Building they designed for the owner, an osteopathic physician, who shares the first floor with a dentist and an optometrist. Each office has its own reception room and is entirely independent of each other.

An 8-ft. areaway to the east will provide the necessary light to the basement rooms in the event that a building is constructed in the future where a large public parking lot now exists. Private parking for the doctors and architects is available at the rear.

Exterior walls feature Titan brick with tile back-up; interior walls are of wood studs, metal lath and plaster.

WEED & FEHLBERG

Kalispell, Montana



A wall of rough sawed pine boards, stained driftwood gray, is carried into a private office. The vinyl tile floor is carpeted in both areas. A refrigeration cork wall separates the private office from the drafting room, which has a vinyl asbestos tile floor. Ceilings are of Rockwood tile.

Windows are double glazed with crystal sheet glass, Plexiglass and Corrulux.

Russell Anderson of Kalispell was general contractor.

PRIVATE OFFICE has Rockwood tile ceiling, refrigeration cork wall in wood framing. Other side of room has pine wall carried in from reception area. Desk is made from mahogany door. North or street elevation of building is shown below, with floor plan of basement.

is a Washington graduate. She will depart February 5 for study in France and an indefinite stay on the Continent. As a trustee and executive committee member of Allied Arts of Seattle, she will be given credentials for the purpose of establishing contacts with artists and cultural administrators in major European cities.

✔A Bellevue residence designed by Mithun & Nesland won the Home of the Month 1955 contest co-sponsored by the Washington State chapter and the Seattle Times. The architects were awarded the traveling trophy, a sculptured bird executed by Everett Du Pen of Seattle, while the clients, Mr. and Mrs. A. O. Strandberg, received a check for $500. Thomas E. Clark was the contractor.

Honorable mention awards presented at the January 12 dinner meeting in the Benjamin Franklin Hotel went to Wortman & Wilkins for the Frank Goodman residence on Mercer Island; to John Ridley for the Robert L. Tower residence on Mercer Island; and to James J. Chiarelli for the George E. Willmer residence in West Seattle.

Other architects who participated in the competition were Victor Steinbrueck, Jack N. Bryant, Benjamin F. McAdoo Jr., Young, Richardson, Carleton & Detlie, Albert O. Bumgardner, Gene Zema and Seth M. Fulcher.

Multi-million-dollar shopping centers planned

Construction is expected to begin this year on a number of multimillion dollar shopping and business centers in the Redmond-Kirkland-Bellevue area east of Seattle and Lake Washington.

Over a 10-year period, developers plan to spend some $70 million on the three major projects with the possibility that the final tab may reach $150 million.

Maingate, on a 140-acre tract adjacent to the Redmond city limits, is being planned by Johnston & Campanella of Seattle for Maingate Development Co. It will include retail stores and shops, department stores, restaurants, a theater, auditorium, convention hall, bowling alley and other recreational facilities.

Probably the most interesting feature of this project is the moving sidewalks which will be suspended at the second floor level and will pass through department stores and other multi-storied buildings. Escalators will carry shoppers up to the sidewalks from various locations along the mile-long mall.

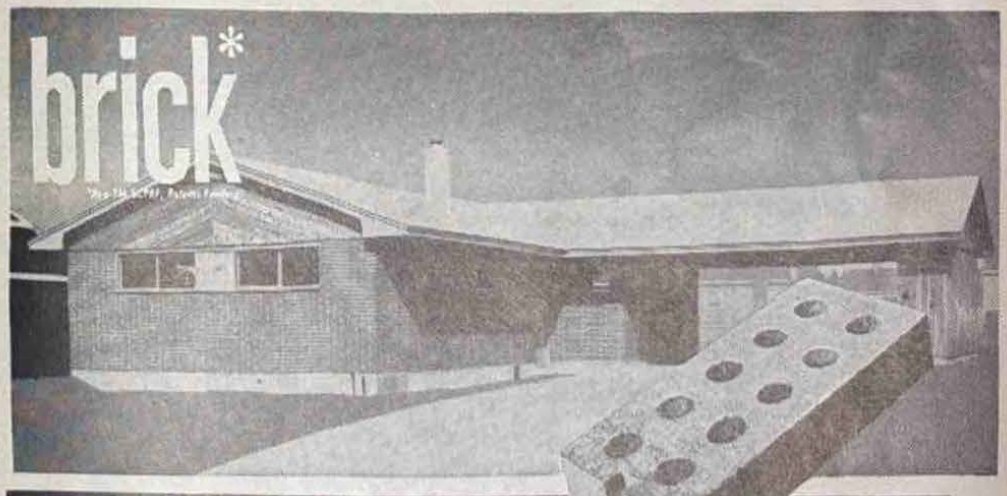
The buildings will be of structural steel and concrete erected by the tilt-up, lift-slab method.

Welton Becket & Associates have been engaged to plan Overlake Park, to be built on a 320-acre tract between Bellevue and Lake Sammamish. Plans call for a 60-acre shopping center and 260 acres of office buildings, clinics, a hospital, municipal buildings, fire station, library, schools and churches.

Stores and shops will open on a landscaped mall with general parking space, while office buildings and hospitals will each have their own parking lots and landscaping. Overlake Park Association and Overlake Professional Estates, Inc., will develop the property. Carey & Kramer are the consulting engineers and Cash Beardsley is consultant on landscaping.

A $10 million shopping center is planned to serve Eastgate homes built by Bell & Valdez.

A BIG STEAL



One of the biggest burglary hauls in San Francisco Bay area history took place last month when a prefabricated but unoccupied three-bedroom house was stolen from its foundations in Pittsburg's Columbia Park housing project.

Friday morning the house was there; Friday evening it was gone—without a clue as to the means of removal or the thieves.

The house was the property of A. J. Hansen, Oakland, who recently acquired it and 22 others from Contra Costa County after officials decided to close the project. The houses were to be moved by Hansen to new locations.

the brick that makes masonry construction comparable in cost to quality frame!

and the latest literature

SELECTION TABLE: Waterloo Register is offering a complete, easy-to-read selection table for determining proper sizes of outlets for commercial buildings.

The six-page table can be obtained as a separate folder or as part of the engineering section of the latest Waterloo catalogs. It is based on actual laboratory tests of the company's four-way directional control grill which features silent flow teardrop design of extruded aluminum louver.

(Item No. 1)

WINDOWS: Thorn factory weatherstripped, fin frame aluminum casement, ranch and rain-shield windows can be installed in seconds with only a hammer.

Each window and integral exterior trim is furnished from the factory in a complete package. The completely assembled rigid frame needs only to be set in the opening, leveled and nailed in position. Weather stripping is optional.

(Item No. 2)

TIMBER CONNECTOR: To obtain tighter-fitting joints in wood roof trusses, Timber Engineering has developed the Teco wedge-fit split-ring timber connectors.

Fitting precisely in conforming grooves, cut with the Teco grooving tool in adjacent faces of joint members, the double-beveled, wedge shaped ring slips into position easily and quickly without crushing the wood fibers at the groove's edge.

With less than 1/32-in. clearance between ring and groove, tighter joints are produced, thus minimizing truss deflection.

(Item No. 3)

FLOOR SCREENS: As attractive, yet economical, room dividers, Tropicraft is marketing a line of woven wood floor screens in a wide variety of pattern and color combinations.

The budget priced line has three basic forms—the free-form of fir or redwood, panels and shoji which combines Oriental and American styling.

(Item No. 4)

ELECTRIC HEATING: Trade-Wind Motorfans has entered the electrical heating field with a line of radiant wall insert heaters designed to combine both radiant and convection heating.

A multi-louvered grill gives unobstructed radiant heating and at the same time accelerates convection heating. A simplified mounting bar assembly makes installation and alignment quick and easy and eliminates headers.

Wattage ranges from 1300 to 1650 using 115 AC volts. A larger model drawing 2000 watts operates on 220 volts.

(Item No. 5)

PLASTIC WALL COVERING: For wear and tear use in hospitals, schools and institutions, L. E. Carpenter offers a smooth surfaced fabric in the Vicrtex vinyl electronically fused line.

Called Dado-Wall, it comes in 14 colors and can be used for either wall covering or upholstery. It will not chip, crack or peel. The smooth, antiqued surface doesn't show marks and is flameproof.

(Item No. 6)

DECORATIVE TILE: For that added touch, Pomona is offering a decorative tile in a shell pattern designed by a California artist, Mary Reynolds.

There are six designs in all which can be used together to form one complete design or in any combination for different effects. Shells are in pink beige, brown and black on a background of white Perma-glaze highlighted by an aqua blue.

(Item No. 7)

DRAFTING DESKS: For efficient and economical work planning, the Modulator line of drafting desks is built around 14 basic models which can be put together and interchanged as wished.

The desk-high steel units have plastic and linoleum work surfaces and aluminum drafting boards. The drawing board is mounted on nylon rollers and is counterbalanced for vertical height adjustment up to 12 in., permitting the draftsman to sit or stand with equal convenience.

(Item No. 8)

MODULAR DRAFTING DESKS

DRAINBOARD CAP: To make kitchen work easier for the housewife, Gladding, McBean has developed a drainboard cap which is ¾ in. high, compared to the usual 1⅛ in.

Of smooth bullnose design, the Nu-Vit cap is just high enough to keep water from dripping on floors and cabinets, but low enough for a clean, modern line.

The cap floats in with the deck mortar bed and is available in 12 colors of heat, scratch and acid-resistant Dura-Glaze. It is 2⅛ in. wide and 6 in. long.

(Item No. 9)

SLIDING GLASS DOOR: For installation in any area regardless of weather conditions, T. V. Walker has developed the Continental series of Capri sliding glass doors, designed especially for 1-in. Thermopane insulating glass.

The Continental features wrap-around glazing eliminating screw-on bead, has a narrow 4-in. profile including jambs and screen doors, and complete curved sill with nearly flush replaceable stainless steel track. The door is adaptable to ¼-in. plate glass.

(Item No. 10)

SKYLIGHT: For immediate ventilation in case of fire, Marco has developed a skylight which opens automatically when fire or excessive heat occurs.

A fuseable link in the Fire-Vent model separates causing the cover section to open and remain open until manually closed. The unit is fabricated of fiberglass reinforced translucent structural panels set in an extruded aluminum frame.

(Item No. 11)

CEILING PANEL: Manufacturers of Tectum roof decks are now offering a 1-in. version of their product as an acoustical ceiling panel. The square edged, wood fiber panels, 24x48 in., have high acoustical properties and also serve as insulation.

They may be installed by mechanical suspension or nailed to furring strips and are recommended for all types of construction.

(Item No. 12)

INSULATION: For insulating surface-poured concrete slabs rapidly and economically, Baldwin-Hill has developed a spun mineral fiber product called Perimsul which retards loss of heat at the edges of the slab.

Because of its resilience, Permisul also serves as an expansion joint between slab and foundation. High compressive strength withstands pressures developed by slab and soil. The ma-

CONCRETE SLAB INSULATION

terial will not attrack vermin or rodents, is impervious to soil acids and moisture and will not support combustion.

It can be readily cut and shaped to fit irregular surfaces.

(Item No. 13)

AIR CONDITIONING: To match the trend towards colorful decorating schemes in both homes and offices, Curtis Manufacturing is offering a series of air conditioning units in pastel color combinations.

The units come in combinations of pink, gray, Firnmist, sandalwood and two shades of blue. Capacities range from 3 to 20 tons.

(Item No. 14)

Latest Handbooks, Manuals and Literature

Yours for the Asking

PINE DIRECTORY: The Western Pine Association's 1956 Directory of Membership, covering 12 states, is now available. It lists 375 mills, their general sales offices, estimated capacity per shift, timber species handled, major products and factory products manufactured.

States incuded in the directory are California, Idaho, Montana, Oregon, Washington, Arizona, Colorado, New Mexico, Nevada, South Dakota, Utah and Wyoming.

(Item No. 15)

STAIR TREADS: Steel, aluminum and stainless grating and stair treads are covered in an illustrated booklet published by Klemp Metal Grating.

The booklet includes a detailed safe load table with conversion factors, panel width constant chart and data on the standard widths and types of steel stair treads most frequently used.

Various types of electro-forged welding gratings are discussed and dimensional sketches and data on riveted grating given.

(Item No. 16)

STORE FRONTS: To assist architects and builders in planning store front installations, National Store Fronts has published a catalog featuring full-size cross sections and construction details in half size.

The material is printed on heavy translucent paper for easy tracing of shapes. Pages are folded accordion style to permit easy folding. A number of new and improved mouldings are included in the catalog, plus charts on bar reinforcement heights.

(Item No. 17)

ARCHITECTURAL STEELS: How special steels can add beauty and permanence is the subject of an eight-page booklet put out by Armco Steel.

Stainless steels, aluminum coated sheet steel and enameling iron are covered in the booklet. Photographs show such installations as doorways, safety box doors, pilasters, mullions and spandrels of stainless steel on modern office buildings, carport roofs and signs.

(Item No. 18)

BUILDING CODE: The National Board of Fire Underwriters has completely revised the Recommended National Building Code for its golden anniversary edition.

Drafted by engineers of the board, the code is prepared and recommended for adoption by communities to protect them from fire hazards. Included in the 16 appendices is a tabulation of fire-resistance ratings of walls, floors and other building parts.

(Item No. 19)

SEALING COMPOUNDS: Application of Presstite tape in a number of major structures is described in several case history bulletins available from the manufacturer.

One describes and pictures use of No. 162 elastic tape as window glazing for the Hall Brothers Building in Kansas City. The other details use of No. 579.6 sealing tape for the Equal Facilities Warehouse at Palmdale, Calif. Located in the heart of the California desert, the building was protected from severe dust problems with 218,625 ft. of the tape.

(Item No. 20)

COMPARTMENTS: Actual color samples of the 20 standard Mills colors are included in the 1956 catalog on metal compartments.

Covering toilet compartments, shower and dressing rooms, shower units and hospital cubicles, the catalog offers detailed drawings of typical layouts, plus specifications and design information.

(Item No. 21)

STEEL BUILDINGS: The complete line of Luria buildings are pictured and described in a 28-page catalog.

Included are the new F buildings, a series of flat roof structures, the A series with clear spans of 100' and over, B series of center column buildings where large clear spans are not required, C series of clear spans with crane runways, and standardized hangars and other airfield facilities.

(Item No. 22)

PIPE: In "Piping Security for the Home," A. M. Byers stresses the high resistance to corrosion and fatigue of wrought iron pipe. The text is brief and to the point. Photographs in the eight-page brochure show typical residential installations in which wrought iron pipe is being used.

(Item No. 23)

CHANNEL SLAB: Safe loads and spans for lightweight expanded shale concrete channel slab are charted in a folder offered by Empire Building Material.

Also included are support details and floor finishes for typical 6- and 8-in. Lite-Rock concrete channel slab.

Channel slab dimensions and suggested specifications are outlined. Illustrations show how precast channel slabs span precast beams to eliminate shoring of a 40-ft.-high roof area over crane bay.

headlining the news

•Portland Home Builders Association has picked Frank D. Evans as president for 1956, succeeding Al Norbraten. Other new officers are Herbert Ketell, first vice president; Vince Raschio, second vice president; and Will Fromme, secretary.

•Home Builders Institute of Los Angeles has picked R. Reese Myers to serve as president in 1956. He succeeds Walter W. Keusder. Other new officer's are Charles W. Getchell, first vice president; George M. Pardee Jr., second vice president; Milton J. Brock Jr., secretary; and John D. Griffith, treasurer.

For the first time in the organization's history, two lifetime members of the board of directors were selected. Honored were H. Cedric Roberts, who has been building homes in the Southland area since 1923, and Lloyd S. Whaley, who entered the field in 1937. Both are charter members of the institute and have served as elected members of the board for the past 10 years.

•Purvis Construction Co. has moved into a new office at E. 5019 Sprague Ave., Yardley, Wash. H. Halvorson, Inc., former occupant of the building, has moved to E. 5218 Sharp Ave.

•G. P. Frazer, manager of the housing division of Utah Construction Co., San Francisco, died December 18 at the age of 62 of a heart ailment. He had been an officer of the firm for five years.

• Seattle chapter, AGC, has elected Donald L. Clark of W. G. Clark Construction Co., Seattle, as president for 1956. He succeeds Paul N. Odegard of Odegard Construction Co., Everett.

Clark follows in the footsteps of his partner and father, W. G. (Bill) Clark, who served as Seattle chapter president in 1941.

Other new officers are vice presidents, Andrew P. Wick of Wick Construction Co. and John C. Boespflug

CLARK

HARPER

of J. C. Boespflug Construction Co.; secretary, Theodore W. Teufel of George E. Teufel Construction Co.; and treasurer, Gordon A. Mowat of A. F. Mowat Construction Co.

The chapter's executive committee has appointed Colton D. Harper as manager. He succeeds the late E. B. Hickok, one of four Pacific Northwest construction officials killed in an airplane crash.

Harper has been assistant manager of the organization for the past five years and previously was an estimator in the general contracting field.

•David D. Bohannon, San Mateo home builder, has been elected 1956 president of the Commonwealth Club of California, a discussion group which has headquarters in San Francisco.

•Associated Home Builders of Sacramento has elected H. J. Harlow Jr., head of Harlow Construction Co., as president. He succeeds John A. Jacobson, president of Jacobson Construction Co.

Other new officers are vice president, John Bristow, partner in Lewis & Bristow building firm; and treasurer, Charles Michael of Michael & Neher Construction Co.

•Oregon Building Congress has elected Clyde Keller Jr., associated with Norris, Beggs & Simpson, as 1956 president. Other new officers are Frank G. Gomersall, vice president; Clarence G. Stohl, secretary; and Clell Harris, treasurer.

At the congress' annual banquet in Portland January 5, the contractor award for high standards of ethics and construction practice was presented to Henry M. Mason of Henry M. Mason Co.

Five candidates for membership in the Guild of Building Handicrafts were honored for outstanding work in their chosen crafts. They are Carl S. Carlson, cement mason; Herman C. Holland, bricklayer; William H. Howard, steamfitter; George E. Rollinson, bricklayer; and James G. Wells, carpenter.

•Tacoma chapter, AGC, has picked Robert F. Shapley for the management post made vacant when Clarence W. Todd was killed in an airplane crash. Shapley has been assistant manager of the Alaska chapter the past two years and from 1946 to 1951 was business representative of the Fairbanks local of the International Laborers Union.

FOR BUILDERS ONLY

The first edition of "Building Business," a four-page publication to be issued every other month by United States Plywood Corp. for the light construction industry, has been mailed to 20,000 builders throughout the country.

"We believe this presentation of news highlights will stimulate builders to refer to their favorite trade publications for additional information on particular subjects," a company spokesman comments.

Builders who want to receive "Building Business" at no cost can do so by writing United States Plywood Corp., 55 W. 44th St., New York 36, N. Y.

UNIQUE MANUFACTURER-SPONSORED PROGRAM designed to give home builders technical information on hot water heating systems has been launched throughout northern California by plumbing and heating division of American-Standard. Series of workshop meetings will be held in spring, with 125 home builders already having participated in sessions at Colma, San Mateo and San Rafael. Pictured at San Rafael workshop are (l. to r.) Claude St. Martin, General Construction Co.; Allen R. Champie, Hallmark Homes; Ed Fadgen, American-Standard representative; Bob and Frank Antonioli, Antonioli & Sons.

•**Eastern Washington Builders chapter, AGC,** has picked Halvor Halvorson, president of H. Halvorson, Inc., to direct chapter activities for 1956. Al Ruud of Ruud Construction Co. is the new vice president and C. E. Hively continues as executive secretary.

•**Tacoma Master Builders** has installed Gordon Korsmo of Korsmo Brother as president for 1956. Other new officers are Howard Wilson, first vice president; Ralph Peltier, second vice president; Robert Good, treasurer; and Herman Sarkowsky, secretary.

Suppliers

• **West Coast Lumbermen's Association** has announced new grading rules for West Coast lumber, Douglas fir, West Coast hemlock, Western red cedar and Sitka spruce which are expected to be in effect within the next 60 days.

Principal change is from grade numbers to grade names to make them more easily understood by the purchaser. No. 1 becomes construction; No. 2, standard; No. 3, utility; and No. 4, economy.

Other minor changes affect fiber stress, skips on the edge, thickness of boards and finish items. The name of the bureau also has been changed to West Coast Lumber Inspection Bureau.

• **Frank Edwards Co.** has been named distributor of Youngstown Kitchens equipment in San Francisco.

• **Architectural Woodwork Institute** has elected C. Albert Carlson of Aaron Carlson, Inc., Minneapolis, as president for 1956. Board members from the West Coast are Roy Erickson, Spokane Woodworking Co.; M. H. Nordquist, Nordquist & Engstrom, Seattle; and John F. Sigurdson, Sigurdson Millwork Co., Ltd., Vancouver, B. C.

• **Kalman Floor Co.** has appointed George Kresa to the post of sales engineering representative in the Los Angeles area for the firm, which specializes in construction of industrial hard-topped granolithic concrete floors.

• **Red Cedar Shingle Bureau** reelected the three top officers of the organization at its 39th annual meeting in Seattle last month. Directing activities for another year are, H. V. Whittall, shingle manufacturer of Vancouver, B. C., president; R. D. Mackie, Aberdeen, Wash., vice president; and Virgil G. Peterson, Seattle, secretary-manager. New members on the board of trustees are Ben Hanich, Everett, Wash., and Melvin Lester, Sweet Home, Ore.

The convention pased a resolution calling for a research program to improve shingle and shake sizes and specifications. Major speaker was Harry H. Steidle, manager of Prefabricated Home Manufacturers' Institute Washington, D. C., who estimated that 10% of all single-family dwellings in the United States by the end of 1955 were prefabricated homes.

• **Kaiser Steel Corp.** announces that Jack J. Carlson has been appointed a vice president and general manager of the Montebello, Calif., fabricating division plant. B. J. Osborne, former general manager of the plant, is now at the Oakland home offices as assistant to the vice president and general manager for consultation in connection with the fabricating division operations.

• **Norris-Thermador Corp.** has consolidated reasearch and development ac-

tivities in a new laboratory on a nine-acre site in East Los Angeles. The building provides 17,000 sq. ft. of laboratory for design and testing of the company's line of pressed steel and vitreous china bathtubs, lavatories, sinks and toilets and electrical cooking, heating and cooling products.

• **Terrazo and Stone Supply Co.** is now King County, Wash., distributor of Wilkeson sandstone, according to H. D. Pierce, manager.

• **Sun Valley Sliding Door Co.** has just completed a new building at Sun Valley, Calif., for offices and warehouse space and plans further expansion this year to increase production facilities. Appropriately enough, aluminum sliding glass doors were used extensively in the new building.

• **Forest Fiber Products Co.** has promoted Hugh M. Lineweaver from sales promotion director to merchandising manager of the Forest Grove, Ore., hardboard manufacturing firm.

• **Smith-Davis Co.** of Los Angeles has established a separate sales organization for the company's multicolor enamel distributed under the trademark Plextone. Heading the new Plextone architectural division is Hal Palmer, a veteran of the firm. William Frick and E. A. Rasmussen have been appointed southwestern and northwestern regional sales managers, respectively.

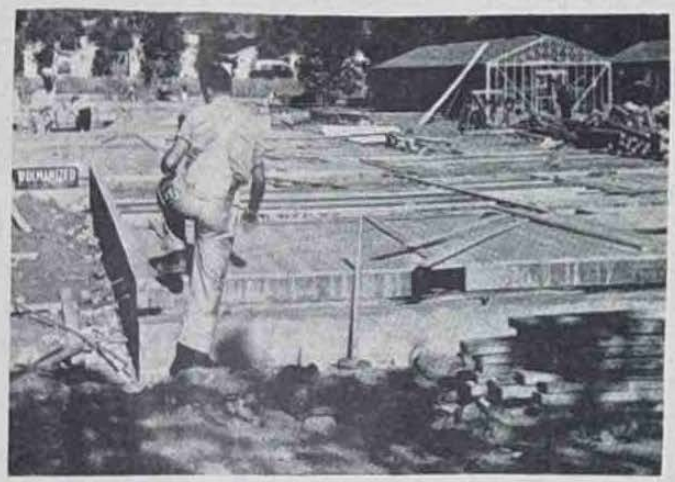
• **Concrete Products Association of Washington** has begun a block testing program to determine standards of size and quality being manufactured in the state. A report on preliminary results was given at the recent 27th annual fall meeting held in Seattle. Other highlights included a discussion on reduced fire insurance premiums for the column block-bond beam system of concrete masonry construction; mix design for concrete culvert pipe; and office management problems.

• **Michael Flynn Manufacturing Co.** has opened a southern California sales office and warehouse in southwestern Los Angeles. Third California branch established by the manufacturer of aluminum windows and allied building products, it will be under the supervision of Tom Fulkerson. Directing sales will be Don Treacy, assisted by E. Ernest Rohr. David M. Minnick will be sales representative for the area.

• **Owens-Illinois Glass Co.** has promoted Keith Conrad to chief engineer Pacific Coast division. Replacing him as chief project engineer at the general research deparment at the company's technical center in Toledo, Ohio, will be Robert R. Denman.

• **National Electric Products Corp.** has a new salesman for the Seattle district office. He is James K. Crowder, who joined the firm in 1952 as stock and order clerk.

• **J. D. Polis Manufacturing Co.** has purchased Blair Pin Bolt Co. of Chicago and Los Angeles and will produce the line of expansion anchors and bolts under the name Bulldog pin bolt drives.



• **A. P. Green Firebrick Co.** of Mexico, Mo., has bought a two-thirds interest in Troy Firebrick Co. of Spokane from Washington Brick and Lime Co., according to Neal R. Fosseen, president of both Northwest firms.

Headed by William S. Lowe, the Green company controls E. J. Bartells Co. of Seattle which distributes firebrick, mortar and refractories. One of the first projects of the reorganized firm will be construction of a plant costing more than $250,000 to replace the one destroyed by fire last July.

James D. Mason, vice president and general manager of Troy, will return to Washington Brick and Lime as chief ceramist in charge of development and quality control for the company's new structural glazed tile division.

"Wolmanized"* Lumber More Than Pays Its Way

Through the years "Wolmanized" lumber more than pays its own way in structures exposed to weather, humidity and condensed moisture, or in contact with the ground, masonry or concrete.

"Wolmanized" Pressure-treated lumber is recognized as the best material for hundreds of applications in building construction where ordinary untreated wood would not be at all practical. "Wolmanized" Lumber Adds Positive Protection.

● HOTEL ADDITION— Missoula, Mont.

Bids to be opened January 31 by Fox & Ballas, architects, Wilma Bldg., Missoula, for the Board of Directors of The Hotel Florence, Herb Jensen, manager, on construction of an addition to the existing hotel. Separate bids on general, mechanical and electrical. Plans with architect.

Estimated cost $400,000. This is second half of a proposed hotel expansion project. The first phase was for a 10-level, 130-car pigeonhole parking garage on which contract has already been let to Pigeonhole Parking Corp., Spokane. The second phase of the project on which bids are now being received involves a two-story addition to the west side of the hotel; 60' deep with a 90' frontage. The motor entrance will be on the first floor with direct access to existing hotel lobby, and to the rear of the entrance will be the parking garage. Offices will be on the second floor of the addition.

POWER LINE— **Eugene, Ore.**

Right of way easements for a power transmission line from the Leaburg powerplant to the site of the proposed Cougar Dam, are being acquired by Eugene Water and Electric board. The board has authorized the spending of up to $95,000 for acquisition of easements, right of way clearing and engineering costs. About $50,000 of this will be needed to purchase timber stumpage from federal lands which lie in the right of way. The line from Leaburg to Cougar Dam will be about 25 miles and will carry power from the Leaburg plant to the dam site while construction is underway, and will later be available to carry power from the generators to Cougar Dam. The line will also serve as one of the links to the Eugene Water and Electric board's proposed Beaver Marsh project on the upper McKenzie River. DC 1-13

● SEWERS— **Hermiston, Ore.**

Bids will be received by the City Council, George Harkenrider, mayor, City Hall, Hermiston, until January 25 for construction of the Jenny Ave. sewer system. Plans with city engineering department. DC 1-13

BRIDGE— Hoquiam, Wash.

Engineering survey report on condition of the Eighth Street Bridge has been presented to the City Council and Anton Paulson, acting city engineer, City Hall, Hoquiam. The engineering firm who submitted the report, Sitts & Hill, 4910 N. 25th, Tacoma, estimated that cost of reconstructing the bridge would be $115,500.

Recommendations included the following: rebuilding approaches with concrete piles and decking, $65,000; grouting scupper holes in center pier and installing pipe valve, $400; replacing 10 treated piles and caps, $1,900; replace key bolts in lower tracks, $50; installing turnbuckles in upstream truss sag rods, $150; sandblasting and painting structural steel, $10,000; repairing steel members, $5,200; replacing timber strippers and deck with steel beams and metal bridge deck, covering with asphalt, $32,800. The report stated that the steel swing span of the bridge is in relatively good condition. Means are now being considered to finance reconsruction of the bridge. DC 1-13

★STEEL SHEET PILING— Ice Harbor Dam, Wash.

Award by Corps of Engineers, Walla Walla District, County-City Airport, Walla Walla, for 2,100 ton new steel sheet piling with miscellaneous fabricating connections and steel bearing piling for proposed Ice Harbor Dam. AWD: Columbia Geneva Steel Corp., 2345 N.W. Nicolai, Portland, $331,000. Delivery dates from May through September. The steel will be used in making the cofferdam cells. Bids will be opened on the first stage cofferdam February 16 (PCD 1-10). DC 1-18

★DUMPTRUCKS— Lakeview, Wash.

Award to Feenaughty Machinery Co., Inc.,

1028 6th Ave. So., Seattle, $28,436, by Pierce County Commissioners, Jack Sonntag, clerk, Courthouse, Tacoma, for two trucks (Bid No. 1933), for Lakeview shops in Lakeview. DM 1-18. Previous report 12-9

● **BRIDGE— Lester, Wash.**

Bids to be opened 2 p. m., P.S.T., February 2, by the Regional Supply Officer, U. S. Forest Service, 729 N.E. Oregon St. (Box 4137), Portland, for construction of a reinforced concrete and steel bridge approximately two miles east of Lester on the Snoqualmie National Forest. Specifications with regional supply office in Portland and from forest supervisor, 415 Federal Bldg., Seattle.

Quantities: 84 yd. concr. cl. 3; 17,500 lbs. reinf. steel; 49,350 lbs. struct. steel; 224' metal safety rail; 40 yd. loose riprap; removal of existing bridge. MG 1-17

■ **WASTE TREATMENT PLANT, PAVING— Larson AFB., Wash.**

Planholders announced for construction of an industrial waste treatment plant and related paving and utilities at Larson AFB. (ENG-45-164-56-24). Bids to be opened 2:30 p. m., January 26, by Corps of Engineers, Walla Walla District, Colonel Myron E. Page, Jr., district engineer, Bldg. 602, City-County Airport, Walla Walla. Completion time 180 calendar days.

PLANHOLDERS: Schmidt Plumbing and Heating Co., 64 West Ridgeway, Hermiston, Ore.; Soule Steel Co., 4100 W. Marginal Way, Seattle; Atlas Equipment Co., Box 811, Spokane; Grant County Plumbing and Heating Co., Box 1567, Moses Lake; The Burhans-Sharpe Co., 1743 1st Ave. S., Seattle; Fairbanks, Morse & Co., Box 336, Yakima; Tomlinson & Buckmaster, Box 12, Warden; Union Iron Works, Box 2135, Spokane; H. Halvorson, Inc., Box 6, Yardley; Ruud Construction, 602 Realty Bldg., Spokane; Sound Construction and Engineering Co., 1300 Aloha, Seattle; Farnes & Martig, Inc., 5741 N.E. Plans on file with City Council for the sewage plant.

DC 1-17

★**LOADING PAD, ROADS— Richland, Wash.**

Award to Hoffman Construction Co., 715 Columbia St., Portland, $22,722, by Atomic Energy Commission, Hanford operations office, Box 550, Richland, for concrete loading pad and roads in one of the plant areas. Completion time 110 days.

Loading pad will be 114'x102' with thickness varying from 6" to 9"; one road will be 225' long and 14' wide; another road will be 250' long and 20' wide. Both resurfaced with asphaltic concrete.

DM 1-13. Previous report 1-6

★**DRILLING WELLS— Richland, Wash.**

Award to R. J. Strasser Drilling Co., 8110 S.E. Sunset Lane, Portland, $50,665, by Atomic Energy Commission, Hanford Operations Office, Box 550, Richland, for drilling 27 wells in three plant areas on Hanford Project. DM 1-18. Previous report 1-12

BULK CARGO LOADER— Seattle, Wash.

Preliminary plans under way by Port of Seattle, M. J. Weber, secretary, 406 Bell St. Terminal, Pier 66, Seattle, for construction

of a new bulk loader, tentatively planned for a site near Ames Terminal, West Waterway, Seattle.

This loader will discharge coal, fertilizer, ore and other cargoes from freighters' holds. It can also put cargo aboard ships. GW 1-13

●SURFACING— Seattle, Wash.

Bids to be opened 9:30 a.m., January 30, by King County Commissioners, D. L. Evans, county road engineer, at 402 County-City Bldg., Seattle, for clearing, grading, draining, crushed stone surfacing .57 mile of S.W. 150th St. (Ambaum Blvd. at 1st Ave. S.) in Burien, King County. Plans with engineer's office, 905 County-City Bldg. $10 deposit. Certified check, cashier's check or bid bond 5%.

Quantities: 12,530 c.y. com. excav.; 354 c.y. struct. excav.; 50 c.y. trench excav.; 20 c.y. gravel backfill; 1,900 c.y. select roadway borrow; 1,000 c.y. crushed stone surfacing pipe; 279', 18" concrete culvert pipe; 158', 18" standard reinforced concrete culvert top course; 1,200 c.y. same base course; 759', 12" concrete culvert pipe; 42', 12" standard reinforced concrete culvert pipe; 51', relay 12" standard reinforced concrete culvert pipe; 12', 24" standard reinforced concrete culvert pipe; adjust 3 catch basins; 2 standard concrete catch basins; 29 sq. yd.; remove existing concrete walks or driveways. DC 1-13

LATERAL SEWERS— Seattle, Wash.

Preliminary plans under way by Hill & Ingman, consulting engineers, 1728 E. Madison, Seattle, for the constuction of lateral sewers for Lake City Sewer District, Claude D. Webster, secretary, 3200 E. 125th, Seattle. GW 1-14

●SAFETY GATES— Seattle, Wash.

Bids to be opened 10 a.m., February 2, by City Council, Paul R. Hendricks, purchasing agent for the furnishing of three safety gates, standard commercial design. Specifications with purchasing department. GW 1-14

●GATE FRAMES, ANCHORAGES— Seattle, Wash.

Bids to be opened 10 a.m., January 31, by City Council, Paul R. Hendricks, purchasing agent, room 511, County-City Bldg., Seattle, for the furnishing of gate frames and anchorages, and stoplog frames and anchorages for outlet works at Gorge High Dam (Spec. No. 1392).

Specifications with city purchasing agent. GW 1-14

●FIXED WHEEL GATES AND FRAME— Seattle, Wash.

Bids to be opened 10 a.m., January 31, by City Council, Paul H. Hendricks, purchasing agent, room 511, County-City Bldg., Seattle, for furnishing a fixed wheel gate and frame for intake structure of Gorge High Dam (Spec. No. 1417). Specifications with purchasing department. GW 1-14

●HOISTS, CONTROLS— Seattle, Wash.

Bids to be opened 10 a.m., February 7, by City Council, Paul R. Hendricks, purchasing agent, room 511, County-City Bldg., Seattle, for hoists, controls and accessories for outlet gates. Specifications with purchasing department.

Furnish two hoists, controls and accessories for outlet gates for Gorge High Dam (Spec. No. 1408). GW 1-14

★PEDESTRIAN UNDERPASSES— Seattle, Wash.

Award to Howard S. Wright Co., Inc., Box 3105, Seattle, $353,000, by Boeing Airplane Co., W. N. Ambur, plant facilities manager, Engineering Bldg., 7752 E. Marginal Way, Seattle, for pedestrian underpasses, one on 16th Ave. S., and two on E. Marginal Way. GW 1-17. Preivous report 12-7

★GRADING— Seattle, Wash.

Award to Fiorito Bros., 1100 Leary Way, Seattle, $159,000, by Boeing Airplane Co., W. N. Ambur, plant facilities manager, Engineering Bldg., 7752 E. Marginal Way, Seattle, for grading approximately 30 acres, bounded by Donovan St., Director St. and the Duwamish River. Plans by Worthington & Skilling, structural engineers, 601 Lloyd Bldg., Seattle.

The award was made on basic proposal No. 1, a balanced cut-and-fill operation at the South Park site, involving approximately 260,000 c.y. of material.

GW 1-17. Previous report 12-10

★FENCING— Seattle, Wash.

Award by (bids received December 22) City Council, Paul R. Hendricks, purchasing agent, room 511, County-City Bldg., Seattle, for furnishing of chain link fencing. AWD: Cyclone Fence Department, American Steel & Wire Division, U. S. Steel Corp., 1150 Fairview Ave. N., Seattle, $1,026. GW 1-17. Previous report 12-21

★WIRE— Seattle, Wash.

Award by (bids received December 6) City Council, Paul R. Hendricks, purchasing agent, room 511, County-City Bldg., Seattle, for 20,000' of wire, 500 MCM single conductor, 600 volt paper insulated, lead covered (Spec. No. 1155). AWD: Bean Electric Co., 924 1st Ave. S., Seattle, $31,626. GW 1-17. Previous report 11-16

★CAPACITOR BANKS— Seattle, Wash.

Award by (bids received December 22) City Council, Paul R. Hendricks, purchasing agent, room 511, County-City Bldg., Seattle, for outdoor stack type capacitor banks (Spec. No. 1407). AWD: General Electric Apparatus Sales Division, Dexter Horton Bldg., Seattle, $295,400.

Furnish two outdoor stack type capacitor banks, 39,000 kvar, 115 kv, 3-phase. GW 1-17. Preivous report 12-10

★CABLE— Seattle, Wash.

Award by (bids received December 29) City Council, Paul R. Hendricks, purchasing agent, room 511, County-City Bldg., Seattle, for furnishing of 550' of submarine cable. AWD: Graybar Electric Co., Occidental and King Sts., Seattle, $1,893. GW 1-17. Previous report 12-15

★VALVES— Seattle, Wash.

Award by (bids received December 28) City Council, Paul R. Hendricks, purchasing agent, room 511, County-City Bldg., Seattle, for the furnishing of gate valves. AWD: Rensselaer Valve Co., 1252 1st Ave. S., Seattle, $4,520, three gate valves, 24". GW 1-17. Previous report 12-10

Bids to be opened 2 p. m., January 26, by U. S. Indian Service, P. J. Van Alstyne, area road engineer, 802 N. 29th, Billings, for grading, graveling and draining 6.8 mi. of the Ashland-North road on the Northern Cheyenne Indian Rserevation, Rosebud County. Bids were opened and rejected on this project September 28.
EE-G 1-17. Previous report 10-1

★WATER MAINS— Billings, Mont.

Award by (bids received January 10) Yellowstone County Commissioners, L. R. Sampson, county surveyor, Courthouse, Billings, for installation water mains in RSID No. 314. AWARD: Walter J. Hoven, 1016 Vaughn Lane, Billings, $14,020. ONLY OTHER BID: Barry O'Leary, Inc., 215 N. 16th St., Billings, $14,490.
EE-M 1-17. Previous report 12-28

●WATER MAINS— Billings, Mont.

Bids to be opened 11 a. m., February 6, by Yellowstone County Commissioners, Courthouse, Billings, in two rural special improvement districts. Plans and specifications may be obtained from Sage Engineers and Land Planners, Inc., 1010 Poly Drive, Billings. Bid bond 10% or certified cashier's check.

Project includes installing 998' of 14" cast iron water mains, with necessary valves and fittings, west from existing main on Colton Blvd. to Rehberg Lane. Estimated cost $5,753. Installing 2,665, of 14" cast iron water main along Colton Blvd., at estimated cost of $14,808.
EE-M 1-18

★WATER SUPPLY AND DISTRIBUTION SYSTEM— Browning, Mont.

Award to O'Conner Construction Co., Route 1, Columbia Falls, $104,630, by Town Council, William Thatch, town clerk, Town Hall, Browning, for construction of a new well three miles west of the city, a new pipeline and laying of pipe to areas not presently serviced. Bids were opened January 5 on a water supply and distribution system for the town. The low bidder on construction of a 500,000-gallon steel storage tank was Pittsburgh-Des Moines Steel Co. Award has been held pending financial arrangements.

Plans by Wenzel & Miller, consulting engineers, 41 Meadowlake Drive, Great Falls. Project involves well and infiltration pipe; installation of cast iron pipe; control vault; foundations for standpipe and chlorinator house; steel standpipe; other appurtenant work. DM 1-14. Previous report 12-28

FIRING-IN BUTT, TAXIWAY— Great Falls, Mont.

Bids to be opened about 2 p.m., February 21 by Corps of Engineers, Walla Walla District, Colonel Myron E. Page, district engineer, Bldg. 602., City-County Airport, Walla Walla, for construction of firing-in butt and taxiway, Malmstrom AFB, Cascade County, Great Falls (ENG-45-164-56-27). Completion time 210 calendar days. MG 1-17

★CHURCH— Medicine Lake, Mont.

Award to Boundary Construction Co., Plentywood, Mont., $40,173, by Union Congregational Church, Ralph Dixon, paster, Medicine Lake. Plans by Vernon Drake, architect, Empire Bldg., Billings. At time of bid opening the church decided to negotiate with the low bidder and reduce costs by eliminating some features. It has now been decided to keep the original plans and raise additional funds.

CASPER - GLENROCK ROAD — Grading, draining, base course surfacing, plantmix base course, plantmix surface course, sand gravel seal coat, three bridges over Elk Horn Creek, each consisting of four-continuous reinforced concrete slab spans, three reinforced concrete culverts and miscellaneous work on 5.268 miles of Casper-Glenrock road, in Natrona County FAP No. FI-89(8).

AWD: Northwestern Engineering Co., Denver, Colo., $568,751. 2ND LOW: Western Paving and Construction Co., Denver, $570,095. 3RD LOW: C. L. Hubner Co., Denver, $581,036.

EVANSTON - SOUTH BEND — Grading, draining, base course surfacing, oil treatment by roadmix method, sand gravel seal

coat, one three-continuous WF girder span bridge over Bear River, miscellaneous work on 6.512 miles of Evanston-South Road in Uintah County FASP No. S-36(4).

AWD: F. R. Knowlton & Son, Layton, Utah, $100,449. 2ND LOW: Carruth & Son, Inc., Evanston, Wyo., $127,608. 3RD LOW: Inland Construction Co., Omaha, Neb., $133,438.

SUSSEX-LINCH ROAD—Grading contract. Grading, draining, base course surfacing, surface treatment (inverted penetration) and miscellaneous work on 5.549 miles of Sussex-Linch Road in Johnson County. FASP No. S-96(1), Grading.

AWD: Boatright-Smith, Rawlins, Wyo., $168,736. 2ND LOW: Big Horn Construction Co., Sheridan, Wyo., $171,344. 3RD LOW: Lichty Construction Co., Casper, Wyo., $174,519.

SUSSEX-LINCH ROAD—Structure contract. One reinforced concrete culvert, one four-continuous reinforced concrete slab span bridge over Coal Creek, one five-continuous reinforced concrete slab span bridge over Carpenter Creek, miscellaneous work on 5.549 miles of Sussex-Linch Road in Johnson County. FASP No. S-96(1), Structure.

AWD: Husman Bros., Inc., Sheridan, Wyo., $62,000. 2ND LOW: N. A. Nelson Construction Co., Sheridan, $71,908. 3RD LOW: Charles M. Smith, Thermopolis, Wyo., $72,584.

MOREHEAD ROAD—Selected material, miscellaneous work on 5.240 miles of Morehead Road in Johnson County. State Project No. SC-CFM 4184.

AWD: Leonard C. Matheson, Gillette, Wyo., $10,776. 2ND LOW: Alfred E. Matheson, Sheridan, $11,025. 3RD LOW: O. W. Lasher, Buffalo, Wyo., $12,915.

WALCOTT—Construction of one cattleguard and standard right of way fence near Saratoga on the Walcott-Saratoga Road in Carbon County. State Project No. 4213.

AWD: Leonard C. Matheson, Gillette, $6,696. ONLY OTHER BID: Cheyenne Constructors, Inc., Cheyenne, $9,100.

STOCKPILING—Crushing and stockpiling crushed gravel surfacing, ¾" max., at various locations in Big Horn and Park Counties. Special State Maintenance Project No. 4218.

AWD: Algred E. Matheson, Sheridan, $26,249. 2ND LOW: Gilpatrick Construction Co., Riverton, Wyo., $27,870. 3RD LOW: W. E. Barling, Inc., Meeteetse, Wyo., $28,142.

STOCKPILING — Crushing, stockpiling crushed gravel surfacing, ⅜" max., at various location in Fremont County. Special State Maintenance Project No. 4219.

AWD: Gilpatrick Construction Co., Riverton, Wyo., $9,400. 2ND LOW: Larsen-Meyer Construction Co., Worland, Wyo., $11,300. 3RD LOW: Don Van Deburg, Jackson, Wyo., $13,300.

STOCKPILING—Crushing and stockpiling crushed gravel surfacing 5.8" max. at various locations in Albany, Goshen, Laramie, Niobrara and Platte Counties. Special State Maintenance Project No. 4240.

AWD: J. A. McPherson & Co., Laramie, $39,265. 2ND LOW: D. W. Hopkins, Wheatland, $40,330. 3RD LOW: Read Construction Co., Cheyenne, $44,612.

TK 1-17. Previous report 1-5

●CRANE— Glendo, Wyo.

Bids to be opened 2 p.m., M.S.T., February 21, by Bureau of Reclamation, L. N. McClellan, chief engineer, Bldg. 53, Denver Federal Center, Denver, Colo., for Glendo Power plant, Glendo Unit, Oregon Trail Division, Missouri River Basin Project, Wyo. (Inv. No. DS-4606).

Furnish one, 100-ton single trolley motor operated traveling crane, delivery fob. cars at shipping point or fob. cars at Glendo Power Plant. GW 1-13

WATER LINE— Jackson, Wyo.

Bids to be called late January or February for installation of new water supply line in Jackson, Wyo., by C. C. Cummins, town clerk, Town Hall, Jackson. Plans are being prepared by Wendell H. Smith, engineer, Preston, Idaho. Estimated cost of project $90,000. MG 1-13. Previous report 12-3

●SEWERS, PAVING— Rawlins, Wyo.

Bids will be opened 8 p.m., January 24 by City Council on storm sewers, curbs, gutters. Plans and specifications with J. T. Banner & Associates, engineers, Garlett Bldg., Laramie. $25 deposit. Bid bond 10%.

Quantities: 47,000' of 12" to 54" storm sewers with appurtenant structures; 15,000 c.y. of street grading; 49,000' of curb and gutter; 15,000 ton crushed gravel base course; 25,000 gallon of M.C. price; 4,500 gallon asphalt (85-100 penetration) for plantmix surfacing; 6,500 ton plantmix surfacing; 20,000 gallon R-C seal; 950 ton stone chips. LY 1-17

UTAH

WATER LINES— Ogden, Utah

Award will not be made for the construction of water distribution lines, Section 3 West, until 40 days after bid opening which was held on January 4, by Weber basin Water Conservancy District, E. J. Fjeldsted, manager, at the district offices, 506 Kiesel Bldg., Ogden. Plans by Templeton & Linke, consulting engineers, 500 Dooly Bldg., Salt Lake City. The low bid was Enoch Smith Sons' Co., 1441 Beck St., Salt Lake City, $511,227. GW 1-12. Previous report 1-10

▲WATER PURIFICATION PLANT No. 2— Ogden, Uah

Bids received January 10 by Weber Basin Water Conservancy District in the Ogden council meeting room, 6th floor, Municipal Bldg., Ogden, for water purification plant No. 2. LOW BID: R. W. Coleman, 3370 Washington Blvd., Ogden, $416,662. OTHER BIDS: Kloepfer Construction Co., 900 E. Center St., Logan, $429,306; Waterfall Construction Co., 1685 Wall Ave., Ogden, $442,810; Wheelwright Construction Co., Box 109, Ogden, $456,513; Enoch Smith & Sons Co., 1441 Beck St., Salt Lake City, $453,028; Hansen-Niederhauser, Inc., 1492 Major St., Salt Lake City, $459,285; Hilton & Carr Construction Co., 922 12th St., Ogden, $479,764; M. Morrin & Son, 251 22nd St., Ogden, $484,627; N. P. Van Valkenburgh, South Gate, Calif., $490,390; Wright Engineering and Construction Co., 51 E. 3900 S. Murray, $491,629.

GH-M 1-18. Previous report 12-31

HIGHWAY— Salt Lake City, Utah

Conversion of 7th E St. into a six-lane arterial highway was approved by the Salt Lake City Commission on recommendation of Roy W. McLeese, city engineer. Approval of the conversion followed a discussion by city officials and the Utah State Road Commission. The city will deed city-owned property lying in the proposed roadway improvement, to the state without cost, with the understanding that the Road Commission will bear the cost of construction of rights-of-way to be obtained on the proposed route. The city will also cooperate with the Road Commission in developing the state highway design of 9th E. from 21st S. to the south city limits when the project is presented to the state legislature. DC 1-13

ALASKA

●MILITARY FACILITIES— Elmendorf AFB, Alaska

Bids to be opened 11 a.m., February 3, A.S.T., by Corps of Engineers, Alaska District, Colonel Carl Y. Farrell, district engineer, Bldg. D-E, Anchorage, for construction of runway and taxiway extensions, multiple outlet hydrant system, hardstands and truck fill stand at Elmendorf AFB (ENG-95-507-56-31). This is readvertisement of Inv. No. 56-1 and new plans and specifications will be issued. Completion time September 1, 1957. Bid bond 20%.

MG 1-17. Previous report 12-29

●INSTALLING GENERATOR SET— Elmendorf AFB., Alaska

Bids to be opened 4 p.m., February 2, by Corps of Engineers, Alaska District, Colonel Carl Y. Farrell, district engineer, room 10, Bldg. D-E, Anchorage, for installing an emergency generator set, furnished by the government, in the communications and telephone building No. 5-900 at Elmendorf AFB. Specifications also may be obtained from the purchasing and requistion section, room 10, District Engineer Building, Elmendorf AFB. Completion time 45 calendar days. MG 1-17

★AIRFIELD LIGHTING— Fort Richardson, Alaska

Award to Peninsula Electric Co., Box 964, Anchorage, $13,740, by Corps of Engineers, purchasing and contracting section, Bryant Army Field, room 2200, APO 949, Seattle, for airfield lighting at Bryant Army Airfield, Fort Richardson.

DM 1-18. Previous report 1-6

Advertisements for Bids

Advertisements reaching us not later than Wednesday noon will appear the same week.

INTERSTATE BRIDGE
BIDS CLOSE 9 A.M., MARCH 1
Portland, Oregon
NOTICE TO CONTRACTORS

Time and Place of Receiving Bids:

Sealed bids for the work described below will be received by the State Highway Commission of the State of Oregon at the Imperial Hotel, Portland, Oregon, at 9:00 a.m., Thursday, March 1, 1956.

Type of Project:

This is a cooperative project to be financed and built under a tri-party agreement between the States of Oregon and Washington, acting through their respective State Highway Commissions, and the Washington Toll Bridge Authority. By authority of this agreement, all matters pertaining to furnishing plans and specifications to bidders and receipt of proposals are being handled by the State Highway Commission of the State of Oregon, address: State Highway Building, Salem, Oregon.

Description of Work:

The work for which bids are to be received consists of the following work on the Pacific Highway in the vicinity of Portland, Multnomah County, Oregon, and Vancouver, Clark County, Washington.

1. New Interstate Bridge over Columbia River—Construct a reinforced concrete and structural steel bridge 3,531'-5⅞" in length with a 40-foot roadway and one 5-foot sidewalk. Principal work consists of construction of 11 main river piers, 1-531-', 7-265' and 2-272' steel thru truss spans and 1-278' vertical lift span, and a 318' RC viaduct.

2. Oregon Slough Bridge—Alter the existing structures over Oregon Slough and Swift Road and widen these structures to accommodate two additional lanes of traffic. Principal work consists of construction of a widened portion of Oregn Slough Bridge, 1,294'-7" in length with a 38-foot roadway, and one 6-foot sidewalk and an approach ramp 133 feet in length with a 26-foot roadway.

3. Performance of miscellaneous and incidental work as required by the plans and specifications.

Quantities:

The work involves the following approximate quantities:

Item	Unit	*Alternate "A"	**Alternate "B"
Interstate Bridge:			
1. Shoring, Cribbing, Etc.	All	All	All
2. Structural Excavation	Cu. Yd.	15,500	20,500
3. Excavation Below Elevations Shown	Cu. Yd.	500	500
4. Furnish Timber Piling	Lin. Ft.	87,700	92,000
5. Furnish Treated Timber Piling	Lin. Ft.	4,200	4,200
6. Furnish Cast-in-Place Concrete Piling	Lin. Ft.	1,300	1,300
7. Drive Timber Piling	Each	1,493	1,699
8. Drive Cast-in-Place Concrete Piling	Each	21	21
9. Seal Concrete	Cu. Yd.	6,700	13,000
10. Class "A" Concrete	Cu. Yd.	14,300	10,500
11. Metal Reinforcement	Lb.	1,600,000	1,700,000
12. Structural Steel (4,700 T.)	All	All	All
13. Metal Handrail	Lin. Ft.	3,870	3,870
14. Bridge Buildings	All	All	All
15. Electrical and Mechanical Equipment	All	All	All
16. Lighting	All	All	All
17. Construction Walkway	All	All	All
18. Engineer's House	All	All	All
Oregon Slough Bridge:			
1. Shoring, Cribbing, Etc.	All	All	All
2. Structural Excavation	Cu. Yd.	2,600	3,400
3. Excavation Below Elevations Shown	Cu. Yd.	100	100
4. Furnish Timber Piling	Lin. Ft.	18,900	16,900
5. Furnish Treated Timber Piling	Lin. Ft.	7,800	7,800
6. Drive Timber Piling	Each	444	430
7. *Seal Concrete **Tremie Concrete	Cu. Yd.	*1,070	**2,350
8. Class "A" Concrete	Cu. Yd.	4,060	3,350
9. Metal Reinforcement	Lb.	576,000	669,000
10. Structural Steel (800 T.)	All	All	All
11. Metal Handrail	Lin. Ft.	1,150	1,150
12. Electrical Conduit	All	All	All
13. Construction Walkway	All	All	All
14. Roadwork	All	All	All
15. Concrete Slab Riprap	Sq. Yd.	160	160
16. Alterations to Existing Structure	All	All	All

* Conventional Poured-in-place pier construction
** Precast "shell-type" pier construction

Wage Rates:

In accordance with the provisions of Chapter 39.12 of the Revised Washington Statutes, the contracting parties hereto have ascertained the general prevailing rates of wages applicable to the work to be done within the State of Washington to be as follows:

Hourly Minimum Wage Rate	Classification
Skilled Labor	
2.83	Cranes (Locomotive, Whirley, Gantry, Hammerhead)
2.83	Clamshell dredge
2.43	Concrete mixer (1 to 5 bag capacity)
2.58	Concrete mixer (5 bag capacity and over)
2.90	Cement Mason
3.07	Ironworker (structural and ornamental
2.87	Ironworker (reinforcing)
2.85	Pilemen, Bridgemen, Wharfbuilders
2.63	Concrete road paver
2.63	Concrete mixer (dual)
2.28	Concrete batch and wet mix (operator)
2.83	Derrick operator (live boom)
2.48	Hoist, single drum
2.78	Hoist, two or more active drums on hoist
2.68	H.D. mechanic or welder
2.78	Piledriver engineer
2.75	Carpenters (Journeymen)
Intermediate Grade Labor	
2.38	Air compressor
2.48	Air compressor (over 1,000 c.f. stationary)
2.58	Drills (churn & core drill)
2.38	Finish machine operator
2.28	Firemen, dredge, floating derrick, retort, shovel
2.63	Generator, plant operator (diesel-electric)
2.73	Mixermobile
2.18	Oiler on all equip.
2.20	Side and end dump truck driver (6 yds and under)
2.25	Side and end dump truck driver (over 6 yds. & incl. 8 yds.)
2.30	Side and end dump truck driver over 8 yds. & incl. 10 yds.)
2.40	Side and end dump truck driver (over 10 yds. & incl 12 yds.)
2.20	Solo flatbed and misc. body trucks 1 ton to & incl. 4 tons)
2.20	Solo flatbed and misc body trucks (over 4 ton & incl. semi-trailer & truck & trailer not to exceed 10 tons)
2.20	Transit mix or wet mix trucks (3 yds. & under)
2.30	Transit mix or wet mix trucks (over 3 yds.)
2.25	Trucks, semi-trailer, and truck & trailer (over 10 tons incl. low bed)
2.20	Tank trucks, 1,600 gallons and under
2.20	Tank trucks, over 1,600 gallons
2.28	Jackhammer & power tool operator (Incl. chipping guns, paving breakers, vibrator operator—other than paving)
2.28	Ribbon setters (head)
2.18	Vibrator operator (paving only, incl sidewalks & curbs)
2.38	Wagon drillers
2.85	Piledrivermen riggers, burnermen & welders
Unskilled Labor	
2.38	Cement hog
2.23	H.D. Mechanic helper
2.20	Concrete buggies (power operated)
2.20	Truck helper (steady)
2.20	Warehousemen (warehouse paris & tool men)
2.18	Batch weighman, broomers, cement buckers; concrete buggymen, puddlers, rodders, rubbers (not fin.), spreaders, curing, sprayman and joint-dowel-tie bar setters
2.18	Car & truck loaders & road pump tenders
2.18	Flagmen (Traffic)
2.28	For strippers (swinging stage)

Rates of wages applicable to the work to be done within the State of Oregon shall comply with Oregon laws.

Prequalification of Bidders:

Prequalification of bidders will be required in accordance with the provisions of Oregon Revised Statutes 279.010 to 279.820, inclusive, and Chapter 47.28.070 of the Revised Washington Statutes.

Plans and Specifications:

Full information for bidders may be obtained at the office of the Oregon State Highway Commission, State Highway Building, Salem, Oregon. Plans and specifications

THE RATE for Advertisements for Bids is 35 cents per line for the first insertion; 25 cents per line for each insertion thereafter.

may be inspected at the same place and may be obtained by elegible bidders upon payment of $2.00 per set.

Plans and specificatins may be inspected at the office of the Associated General Contractors at Portland, Oregon, Seattle, Tacoma and Spokane, Washington, Boise, Idaho, and San Francisco and Los Angeles, California.

The right is reserved to reject any and all proposals or to accept the proposal deemed best for the States of Oregon and Washington.

COUNTY-CITY BUILDING

BIDS CLOSE 10 A.M., FEBRUARY 14

Tacoma, Washington

NOTICE TO CONTRACTORS

Sealed proposal, in duplicate, for the construction of the County-City Building, on Blocks 912, 913, 914, 915, 1012, 1013 and 1014 of the City of Tacoma, Washington, will be received at the office of the Board of Pierce County Commissioners, Room, 206, Pierce County Court House, Tacoma, Washington until ten o'clock A. M. on Tuesday, the Fourteenth day of February, 1956, and will then and there be publicly opened and read aloud. Proposals received after the time designated for opening will not be considered.

Drawings and specifications including Contract Documents, may be examined at the office of the Architect, A. Gordon Lumm, 321 South Eleventh Street, Tacoma, Washington, at the office of the Associated General Contractors, in Tacoma, Seattle and Portland, and may be obtained by prime contractors at the office of the Architect upon deposit of $150.00 for each complete set. Others may purchase drawings and specifications at cost of reproduction.

The full amount of the deposit will be refunded to the prime contractors upon return of the documents, unmutilated and without marks or annotations, up to and including ten (10) days after opening proposals.Unsuccessful bidders who do not return their documents within this period will forfeit their deposits.

Proposals may be separate in 1, 2, and 3 and 4, or combined in 5 below.

1. General Construction 2. Jail Equipment 3. Mechanical Work 4. Electrical Work 5. Overall complete construction of all works of entire project, including Proposals 1, 2, 3 and 4.

Right is reserved by the Owner to make award on each division of the work as listed above or combination thereof as herein provided. All work shall be completed within 700 calendar days.

Each proposal shall be accompanied by a certified check or cashier's check made payable to the Board of Pierce County Commissioners, or a satisfactory Bid Bond executed by the Bidder, in an amount not less than five percent (5) of the amount of the proposal submitted. The check or bid bond shall be given as a guarantee that the bidder will execute the contract, if it be awarded to him, in conformity with the Contract Documents, and will provide surety bond or bonds as specificed therein, within ten (10) days after notification of the award of contract to bidder. Should the successful bidder fail to enter into a contract and furnish a satisfactory Performance Bond within ten (10) days from the date he is notified by the Pierce County Commissioners, the check or bid bond shall be forfeited as liquidated damages.

Attention is called to the fact that not less than the minimum salaries and wages, as set forth in the Specifications, shall be paid on this project.

No bidder may withdraw his Proposal after the hour set for the bid opening or before award of Contract, unless said award is delayed for a period exceeding thirty (30) days.

The Board of Pierce County Commissioners reserves the right to reject any or all Proposals and to waive irregularities or informalities in the bid or in the bidding.

By Order of the Board of Pierce County Commissioners, dated Dec. 30, 1955.

Board of Pierce County Commissioners
By Jack W. Sonntag, Clerk of the Board

Approximate area 6,552 square feet. Plans are available at the office of William Arild Johnson & Associates, 3506 Broadway, Everett.
5345—1-10, 17, 24

REINFORCED CONCRETE BRIDGES, ROCK PRODUCTION, PAVING

BIDS CLOSE 9 A. M., JANUARY 26 AND 27

Portland, Oregon

NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Oregon State Highway Commision in the Queens Room of the Imperial Hotel in Portland, Oregon, at 9:00 a. m. on Thursday, January 26, and at 9:00 a. m. on Friday, January 27, 1956:

BIDS TO BE OPENED AT 9:00 A.M. ON THURSDAY, JANUARY 26

BENTON COUNTY: Alsea Rock Production Project on the Alsea and Alsea-Deadwood Highways, near Alsea. State Project. Requires approx. 13,900 cu. yds. crushed rock in stock piles. (Completion date 7-31-56).

JACKSON COUNTY: McKee Bridge over the Applegate River on the Applegate County Road, approx. 9 mi. south of Ruch. FAP No. S-173(3). 302' reinf. concrete deck girder bridge. Span arrangement: 40'-56'-70'-56'-40'-40'. Involves following approx. quantities: 195 cu. yds. struc. excavation; 568 cu. yds. Class "A" concrete; and 132,000 lbs. metal reinf. (Completion date 11-30-56.)

KLAMATH COUNTY: Little Deschutes River Bridge Widening on the Willamette Highway, 4 mi. west of its junction with The Dalles-California Highway. FAP No. F-184(3). Raise and widen existing 67' (span 19'-29'-19') composite concrete and timber bridge. Involves following approx. quantities: 30 cu. yds. struc. excavation; 400 lin. ft. treated timber piling (16 piling); 60 cu. yds. Class "A" concrete (precast beams, poured in place deck, etc.); 11,500-lbs. metal reinf.; and 2.0 M-FBM treated timber. (Completion date 8-31-56).

KLAMATH COUNTY: Lost River-Hatfield Junction Section of the Klamath Falls-Malin Highway near Merrill. FAP No. S-34(2). 4.02 mi. grading, paving and shoulder oiling. Requires roadbed grading on a per mile basis; approx. 160 cu. yds. concrete curbs; 20,250 cu. yds. crushed rock base and aggregates; 24 tons RC-3 asphalt; 13,500 tons A.C. paving mixture; 810 tons 120-150 asphalt in paving; 58 tons RS-1 asphalt; 60 tons RS-2 asphalt; and 62 tons 150-200 asphalt. (Completion date 9-15-56).

KLAMATH AND LAKE COUNTIES: South Unit, Lapine-Silver Lake Section of the Fremont Highway, about 14 mi. southeast of Lapine. State Project. 26.06 mi. of oiling; also furnishing crushed material in stock pile. Requires approx. 9,500 cu. yds. crushed rock, gravel or cinders; and 700 tons 150-200 asphalt. (Completion date 8-31-56).

LINN COUNTY: Two composite concrete-timber bridges to replace existing timber bridges on county roads near Lebanon. FAP Nos. S-119(3) and S-148(2). Three 21' precast beam spans with poured in place deck, etc., on timber pile bents. Involves following approx quantities: 65 cu. yds. struc. excavation; 1,320 lin. ft. treated timber piling (48 piling); 175 cu. yds. Class "A" concrete; 46,000 lbs. metal reinf.; and 3.0 M-FBM treated timber. (Completion date 6-30-56).

MALHEUR COUNTY: Basque Maintenance Station-McDermitt Section of the I.O.N Highway, about 65 mi. southwest of Jordan Valley. FAP No. FLH-3(15). 15.56 mi. of grading and paving. Requires approx. 66,-500 cu. yds. special borrow excavation; 350 hrs. blade grader work; 4,600 cu. yds. crushed material in shoulders; 35,000 tons A.C. paving mixture; 2,200 tons 120-150 asphalt in paving; 120 tons RS-1 asphalt; and 180 tons RS-2 asphalt. (Completion date 8-31-56).

MULTNOMAH COUNTY: East Parkrose Section of the Columbia River Highway, near Parkrose. State Project. 0.16 mi. of paving. Requires approx. 1,300 cu. yds. crushed base materials; 5 tons RC-3 asphalt; 540 tons A.C. paving mixture; 32 tons 100-120 asphalt in paving; and 3 tons RS-2 asphalt. (Completion date 6-30-56).

MULTNOMAH COUNTY: Ross Island Bridge On-ramp Section of the Pacific Highway East at the east end of the Ross Island Bridge in Portland. State Project. 0.14 mi. grading, paving and roadside improvement. Requires approx. 2,400 cu. yds. excavation; 170 cu. yds. topsoil; 140 cu. yds. concrete in curbs, walks, islands and steps; 1,230 lbs. metal reinf.; 840 cu. yds. crushed base materials; 240 tons A.C. paving mixture; 15 tons 100-120 asphalt in paving; 200 sq. yds. Portland cement concrete paving; reconstruction of sprinkling system; 0.6 acre lawn construction; and replanting existing shrubs. (Completion date 6-30-56).

MULTNOMAH COUNTY: N.E. 21st Avenue Structure over Banfield Expressway in Portland. FAP No. UI-323(17). Remove five south spans of the existing structure and replace with 3 span box girder section. 5352—1-18

ELEMENTARY SCHOOL

BIDS CLOSE 7:30 P.M., JANUARY 28

Bremerton, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Board of Directors, Bremerton School District No. 100-C at the School District office, 16th and Chester, Bremerton, Washington, until 7:30 P.M., Thursday, January 26, 1956, for (A) the general contract, (B) the mechanical contract, (C) the electrical contract, and (D) the movable cabinet contract, separately, for the construction of Naval Avenue Elementary School—Project Wash. 52-C-27-D-X.

BID OPENING—

Bids will be opened publicly at the above stated time and place, and read aloud. Bids received after the time set for opening cannot be considered. Bidders and others properly interested are invited to be present at the bid opening.

BID DOCUMENTS—

Specifications, including bid and contract documents, and drawings may be examined at the office of the architect, Branch & Branch, 2616 East 11th Street, Bremerton, Washington, and at the various plan depositories and may be obtained at the architects's office upon deposit of $25 for each set.

REFUND OF DEPOSITS—

The full amount of deposit for one set of documents will be refunded to bona fide bidders upon return of the documents in good condition to the architect's office at or before the time set for opening bids. Other deposits will be refunded with deductions for the actual cost of reproducing the documents, under the same conditions.

BID GUARANTEE—

Each bond must be accompanied by a certified check, a bank cashier's check, or a bid bond issued by a bonding company licensed to do business in the locality of the project, in an amount not less than 5 per cent of the base bid, plus additive alternates, if any.

WITHDRAWAL OF BIDS—

No bid may be withdrawn after the time set for the opening thereof unless and until award of contract is delayed for a period exceeding sixty days.

OWNER'S RIGHT TO REJECT BIDS—

The right is reserved to reject any or all bids, and to waive informalities.

By order of:

BREMERTON SCHOOL DISTRICT No. 100-C
By ARMIN G. JAHR,
Superintendent.

When You Want Bids —

Architects and public officials charged with responsibility of getting competitive bids on construction projects have found for 53 years that our CONSTRUCTION NEWS publications provide the most effective and economical way through which to advertise for bids.

Year after year, more project are advertised in CONSTRUCTION NEWS BULLETIN, in PACIFIC ARCHITECT AND BUILDER, and in PACIFC BUILDER AND ENGINEER than in any other Northwest publications.

Rates are thirty-five cents per line for the first insertion; twenty-five cents per line for subsequent insertions. Copy received up to Wednesday noon reaches our readers the following Saturday.

PACIFIC ARCHITECT AND BUILDER

CONSTRUCTION NEWS BULLETIN

2nd, 4th and 5th Saturdays

PACIFIC BUILDER & ENGINEER, INC., (MAin 0285) 2418 3RD AVENUE, SEATTLE 1, WASH.

change Bldg., Portland, Oregon. A set of such documents may be procured from the office of the Director at Juneau, Alaska, upon deposit of $25.00, all of which will be refunded upon the return of the plans and specifications in good condition within twenty (20) days from date of bid opening. Each bid must be accompanied by a satisfactory bid security (certified check or bid bond) in an amount not less than 5 per cent of the total bid in dollars and cents. No bid will be withdrawn until thirty days after the scheduled closing time for the receipt of bids. The successful bidder will be required to furnish a performance bond and payment bond, each in the amount of 100 per cent of the contract price. The Government reserves the right to award a contract for the project on the basis of the acceptance of any or all of the alternates, whichever course is in the best interest of the Government.

DESCRIPTION: Project Aaa. 50-A-147, Unit 2, Power Plant, College, Alaska. The project includes the extension of the existing boiler plant and coal handling facilities, foundations for the boilers and stokers, induced draft fans, ash precipitators and auxiliary equipment. Information regarding liquidated damages (if any), payments, etc., is attached or made a part of the specifications. Bids shall be submitted on the forms furnished or copies thereof.

5348—1-21

ELEMENTARY SCHOOL

BIDS CLOSE 8 P.M., JANUARY 31

Tenino, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the undersigned until 8:00 p. m., Tuesday, January 31, 1956, at the office of the Superintendent of Schools, Tenino School District No. 402, Tenino, Thurston County, Washington, for the general contract, including architectural, mechanical and electrical trades for the construction of an elementary school building.

Plans, specifications and contract documents may be obtained by the bidders at the office of William Arild Johnson and Associates, 3506 Broadway Avenue, Everett, Washington.

Each prime contractor will be allowed one set of drawings and specifications upon deposit as follows: Complete plans and specifications—$20.00.

Plan holders who do not enter a bona fide bid and who do not return unmarked and unmutilated plans and specifications prior to bid opening will forfeit their deposits. Additional sets of drawings and specifications may be secured at the cost of printing. Such sets remain the property of the architect and shall be returned.

Each bid shall be accompanied by a certified check, cashier's check, or bid bond made payable to Tenino School District No. 402 in an amount not less than five percent (5%) of the bid plus all alternates. School board directors reserve the right to waive any informalities or irregularities in any bid or in the bidding and may reject any or all bids.

No bidder may withdraw his bid after the hour set for the opening thereof or before award of the contract unless said award is delayed for a period exceeding thirty (30) days.

TENINO SCHOOL DISTRICT No. 402,
Fred Martin,
Clerk of the Board.

COURTHOUSE

BIDS CLOSE 10:30 A. M., FEBRUARY 21

Billings, Montana

NOTICE TO CONTRACTORS

Notice is hereby given that sealed proposals will be received up to 10:30 a. m., Tuesday, February 21, 1956, by the Board of County Commissioners, Yellowstone County, Billings, Montana, at the office of the commissioners in the County Court House, Billings, Montana, for the furnishing of materials and labor for the construction of a court house at the corner of Third Avenue North and 27th Street North, Billings, Montana, for the following:

1. General construction.
2. Mechanical construction.
3. Electrical construction.

All to be in accordance with plans and specifications prepared by Chandler C. Cohagen, architect, 211 Hedden Building, Billings, Montana. Bids will be opened on the third floor of the Chamber of Commerce, February 21, 1956, at 11:00 a. m. Bids shall be made on the printed forms furnished with the specifications. Plans and specifications may be obtained at the office of the architect. Each bid shall be marked on the outside of the opaque envelope with the nature of the proposal and the name of the bidder. Each bidder shall submit, with his proposal, certified check or cash in the amount of ten percent, (10%) of the total amount of his proposal. This security shall be made in favor of the County of Yellowstone as a guarantee that bidder will enter into a contract and furnish a performance bond in the value of one hundred percent (100%), if contract is awarded to him. No bidder may withdraw his bid within fifteen days after the closing time for the receipt of bids. The board reserves the right to reject any and all bids, and to waive informalities.

Signed:
Board of County Commissioners,
Yellowstone County, Montana.
By BEN B. HAGERMAN,
Chairman.

Attest:
CHRIS RUBICH,
County Clerk and Recorder.

Clearing, Draining, Grading, Surfacing, Constructing a Cement Treated Base and Paving with Type I-1 Asphaltic Concrete on 2.535 miles of Primary State Highway No. 1 in Skagit County, CONWAY JCT. T HICKOX ROAD, FAP No. BFI-001-3(Unit 3, involving about 13.4 acres of Clea ing, 152,255 cubic yards of Common Exc vation and Borrow, 18,500 M cubic yar stations of Overhaul, 58,230 tons of Se ected Roadway Borrow, 5,130 tons Crushed Stone Surfacing, 13,116 tons CTB Aggregate, 3,460 barrels of Portlan Cement, 111 tons of Asphalt Cement, 6 cubic yards of Crushed Cover Stone an Mineral Aggregate, 7,610 tons of Asphalt Concrete, 2,328 linear feet of Concre Pipe, 2,334 linear feet of Corrugated Met Pipe, 490 linear feet of Iron Pipe, 2 linear feet of Beam Guard Rail, 18 Meta Guide Posts and other items.

Draining, Grading and Surfacing wit Light Bituminous Surface Treatment o 7.604 miles of a Franklin County Road TAYLOR FLATS ROAD AND FEEDE ROAD 19-18, FAS No. S-1033(3), involving about 25,210 cubic yards of Common Excavation, 49,670 tons of Crushed Stone Surfacing and Crushed Cover Stone, 220 tons of Asphalt Cement, 320 linear feet of Corrugated Metal Pipe, 378 linear feet of Concrete Pipe and other items.

Clearing, Draining, Grading, Surfacing, Paving with Type I-1 Asphaltic Concrete and Constructing a Precast Concrete Bridge on 2.258 miles of a Snohomish County Road, GETCHELL ROAD, FAS No. S-0318(2), involving about 21,740 cubic yards of Common Excavation and Borrow Including Haul, 13,950 cubic yards of Selected Roadway Borrow, 4,550 cubic yards of Crushed Stone Surfacing, 4,18 tons of Asphaltic Concrete, 990 linear feet of Concrete Pipe, 500 linear feet of Treated Timber Piling, 3.4 MBM of Treated Timber and Lumber, 5 Precast Concrete Roadway Units, 42 linear feet of Steel Bridge Railing and other items.

Draining, Grading, Surfacing, Paving with Unfinished Cement Concrete and Type I-1 Asphaltic Concrete and Installing an Illumination System on 1.346 miles of Primary State Highway No. 1 in King County, JCT. PSH. No. 5 VICINITY AND JCT. SSH. No. 1-L VICINITY, a State Project, involving about 4,120 cubic yards of Unclassified Excavation Including Haul, 1,310 cubic yards of Selected Roadway Borrow, 2,6 cubic yards of Crushed Stone Surfacing, Crushed Cover Stone and Mineral Aggregate, 38 tons of Asphalt Cement, 1,91 tons of Asphaltic Concrete, 5,055 square yards of Unfinished Cement Concrete Pavement, 655 linear feet of Precast Traffic Curb, 14,628 linear feet of Extruded Traffic Curb, 1,580 linear feet of Concrete Pipe, a lump sum bid for Installation of Illumination System and other items.

Installing an Illumination System on Primary State Highway No. 1 in Snohomish County, WALNUT STREET INTERCHANGE, a State Project, involving a lump sum bid for the Installation of an Illumination System.

Federal funds have been allocated for items Nos. 1 to 3, inclusive.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland, and the offices of the District Engineers of the Department of Highways where they may be inspected.

E. C. HUNTLEY, Chairman
W. A. BUGGE, Director of Highways.

MACOMBER *Originator of the*

OPEN WEB STEEL JOIST

Announces a great new advance in Structural Framing

The MACOMBER

V-BEAM

STRONGER • LIGHTER • MORE RUGGED

FOR SPANS TO 48 FEET

NAILABLE TOP AND BOTTOM CHORDS

The new Macomber V-BEAM is an advance in floor and roof framing equaled only in importance by the announcement of the original Macomber bar joist.

The Macomber V-BEAM carries more load per pound than any other structural member, with greater reserve strength. Deflections are no more than those of other secondary framing members. Lateral rigidity is appreciably increased.

Architects and Engineers will like the advanced design of the V-BEAM. Contractors will recognize the extra value their money buys.

This is a product worthy of your immediate investigation. Send for your V-BEAM Catalog.

Arislide aluminum sliding windows

They're your best buy by far! Arislide Aluminum Sliding Windows are precision-manufactured in nine popular sizes. Special sizes to your order. Natural aluminum finish, anodized if specified.

- Reduced installation cost: nail-in anchor fin eliminates surrounds or frames.
- Nylon bottom rollers for smooth, quiet operation.
- Complete mohair weather stripping.
- Sliding unit easily removed from inside.
- May be purchased knocked-down or fully assembled.

An architect's report:

WHITE HOUSE CONFERENCE ON EDUCATION

Guest Editor

HENRY L. WRIGHT, FAIA
Los Angeles, California

Because Henry L. Wright was one of two architects who attended the White House Conference on Education, we are especially happy to present his comments on that important meeting. The immediate past president of the California Council of Architects, he was named a fellow of the AIA in 1955. He is a partner in the firm of Kistner, Wright & Wright which has made significant contributions in school planning and design in southern California.—The Editor.

WIDESPREAD INTEREST was aroused throughout the nation last December when President Eisenhower's White House Conference on Education convened in Washington.

Criticism leveled at this remarkable gathering, before, during and after its sessions, came from many quarters. This was to be expected. Not every segment of opinion could have been satisfied and this certainly was not the objective of the conference.

President Eisenhower first announced plans for this meeting in his State-of-the-Union message of January 7, 1954. He urged that each state hold conferences on local and state levels, to terminate in the national meeting. This, he later termed as "the most thorough, widespread and concerted study that the American people have ever made of their educational problems . . ." That it was to review statistics and air opinions gathered and formulated over a period of years was evident. Educators and others throughout the United States are familiar with the problems facing our school system and, in most cases, know the answer, at least in their own bailiwicks.

In my opinion, the great value of this unprecedented assembly was that never before has there gathered together, in one place, at one time, such a representative body to discuss so vital a subject. Every delegate who attended, in addition to those who came as observers, returned to his community pledged to keep the subject of education alive in the public mind and to continue local and regional gatherings to study the problems and to attempt to find solutions.

The big question facing the White House Conference —should the United States government step in to aid the financing of schools when the state or community has done all it is able?—was thoroughly discussed and an overwhelming majority said "yes." However, the type of federal aid the majority wanted was limited to **school construction** on the basis of "demonstrated need." All warned against any "deterrent to state and local initiative." Although the final word on federal aid for school construction has yet to be given, it is indicated that this year a definitive administration-congressional decision will be made.

It was regrettable that of the 2,000 delegates and 400 observers who were present, representing more than 300 national organizations, only **two** were architects. As chairman of the national school building committee of the AIA, I was privileged to participate. Delegates were appointed prior to the convention by state governors and only one representative was permitted from each national group. This considerably narrowed the percentage for architects. However, it points up a problem: that of the architect becoming sufficiently integrated in his local area through his contribution to community betterment, so that he would be a logical choice as a delegate to such conferences.

There was much that school architects could have contributed to this national forum; their professional knowledge would have been invaluable. The grave status of our schools—the overwhelming lack of classrooms and shortage of teachers—is a primary problem that must be faced and solved. Architects everywhere must marshall their resources to aid in this imperative national task.

It is hoped that by May of this year, at the national AIA convention in Los Angeles, substantial information on the federal aid program will be available and that architects will have an opportunity to participate in the local and regional conferences which are succeeding the White House meeting. It is possible that by broadening their community activities, especially with regard to the education of our youth, they will perform an enduring service for our AIA, for our nation and for our children.

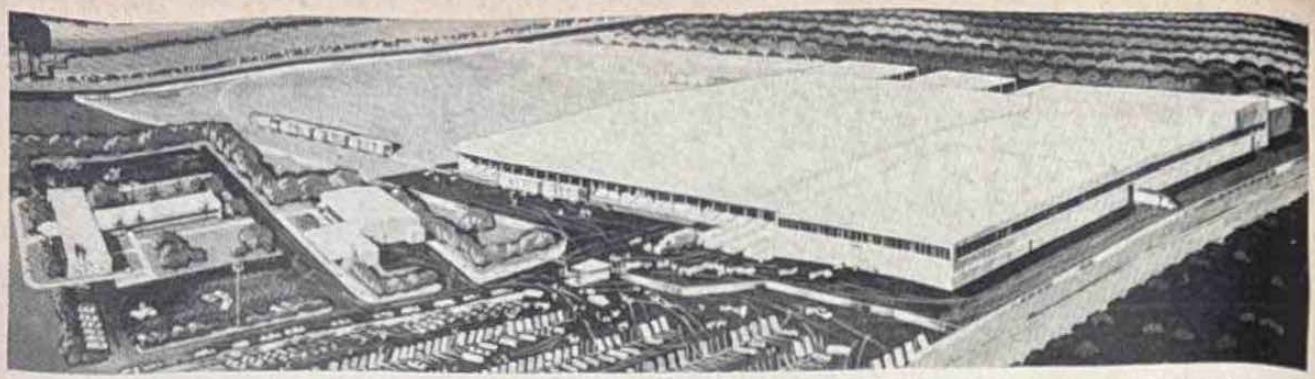
Building and Engineering News of the Pacific Northwest and Alaska 35

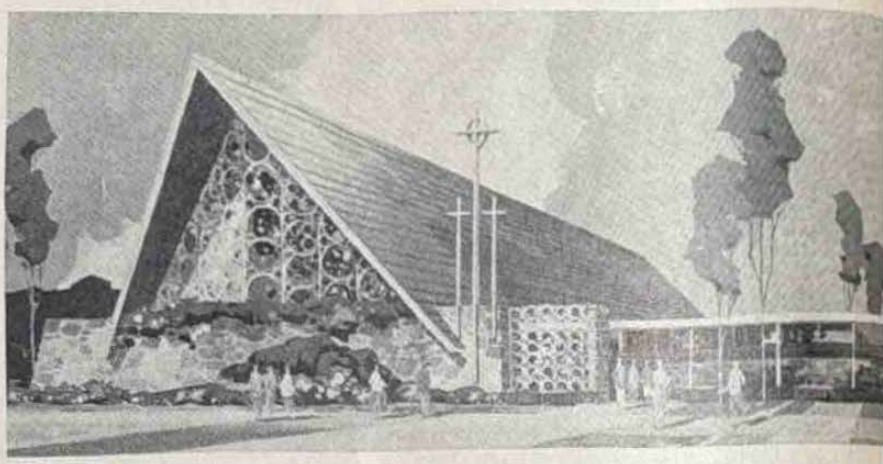


SUBSCRIPTION RATES—Payable in Advance

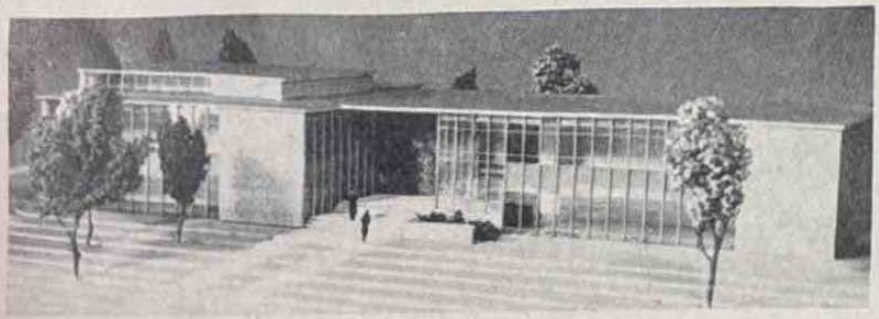
PACIFIC ARCHITECT AND BUILDER—3rd Saturday each month. $4 one year; $6 two years; $7 three years. Canadian $5, $8, $10. Foreign $6, $10, $13. Single copies, 35c. With CONSTRUCTION NEWS BULLETIN (2nd, 4th, 5th Sat.) $16, $24, $31, in U.S. and Alaska.

PACIFIC BUILDER AND ENGINEER—1st Saturday each month. $4 one year; $6 two years; $7 three years. Canadian $5, $8, $10. Foreign $6, $10, $13. Single copies 35c.

FOR NORTHWEST BUILDING AND ENGINEERING NEWS EVERY WEEK subscribe to all three (PA&B, PB&E, CNB) $20 one year; $30 two years; $38 three years. FOR FLASH ADVANCE DAILY SERVICE read Pacific Construction Daily, $75 per year. Rates for U.S. and Alaska.

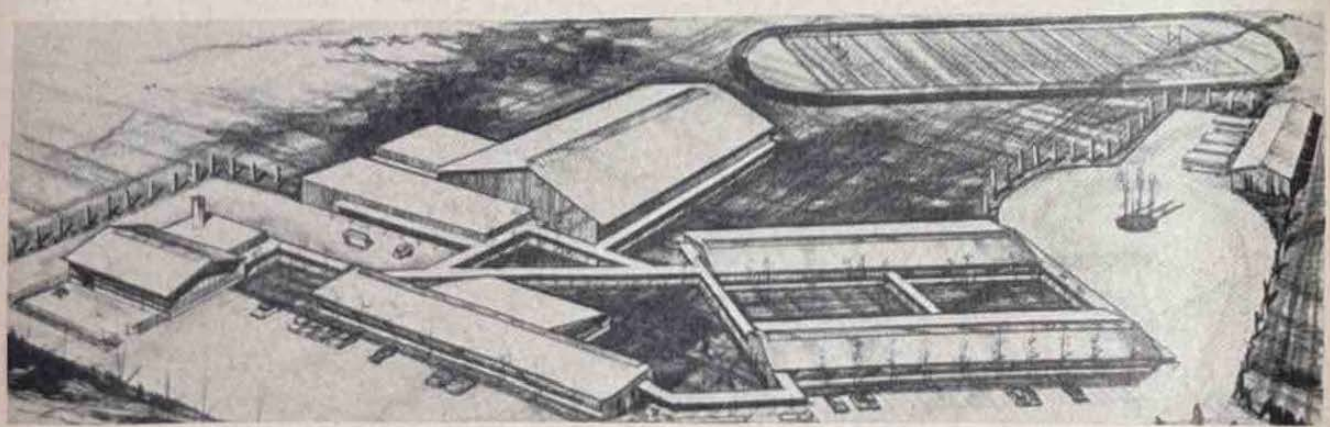


PACIFIC ARCHITECT AND BUILDER is published monthly by Pacific Builder and Engineer, Inc., 2418 Third Ave., Seattle 1, Wash., and is mailed on the third Saturday of each month. Price: $4 per year. Acceptance under P.L.&R. 34.64 authorized.



WHEN COMPLETED in mid-year, $6,500,000 facility for Rheem Automotive Co. on 50-acre site at Fullerton, Calif., will be largest plant in Orange County. Pictured from left are executive office, personnel services and manufacturing buildings, containing more than 400,000 sq. ft., with additional 103,000 sq. ft. in steel storage and dock areas. Plans were drawn by James H. Van Dyke of Los Angeles.

PERSPECTIVES



by Pacific architects

EARLY SCANDINAVIAN LINES, natural woods and stone are combined in $100,000 building for Trinity Lutheran Church in Norwalk, Calif. Architects Armet & Davis of Los Angeles have brought nature into plan through use of glass end walls almost 50 ft. high through which worshippers will see extensive plantings of native trees and shrubs. Decorative metal grille defines entrance to grounds.

MODEL OF COURTHOUSE for Gilliam County at Condon, Ore., which won national design award citation for Morrison & Howard of Klamath Falls. Structural frame of $180,000 building is reinforced concrete, with brick exterior walls, marble entry hall and aluminum spandrels and windows.

ESTIMATED TO COST $1,250,000, construction is scheduled to get underway in May for junior high school building for Everett, (Wash.) School District No. 2. On sloping site, complete educational plant has been designed by William Arild Johnson & Associates.

NEW WOODS FOR PACIFIC COAST HOMES and buildings are being introduced on the market by the Northwest Hardwood Association (for details on its conference in Portland last month, see "Builders and Suppliers.")

Alder, native to the coastal strip from southern Oregon into British Columbia, is rapidly gaining recognition. Up to now regarded as a "weed tree"—fit only for extermination by loggers of the big firs which overshadowed it both literally and figuratively—the alder is winning a place among the fine hardwoods of the nation because of its inherent beauty and wide range of uses.

Here are a few random examples of the progress being made. Weyerhaeuser Timber Co. has set up special machinery to produce alder panels for interior walls that compete with knotty pine and tropical veneers. At Sedro Woolley, Wash., Goodyear Nelson Hardwood Co. is turning out maple flooring in lengths that can rarely be found in the depleted eastern hardwood areas. Oregon Alder-Maple Co. of Willemina is producing millwork for interior trim.

DEMONSTRATION OF A SIRLOIN STEAK broiled in an oven heated solely by the sun was witnessed by 450 builders attending a short course at the University of Illinois last month but they were warned not to throw away the kitchen range or house furnace yet. Hyman A. Steinberg, research assistant professor of architecture of the Small Homes Council said that while solar-house heating is possible, it is a long way from being economical due to the abundance of other fuels available.

ONE OF THE WORST FLOODS in the state's history, followed by an almost continuous period of rain, combined during January to slow northern California's building almost to a standstill. Many builders were compelled to stop much of their outside work because of rain and in numerous areas it was impossible to begin new construction because of mud and flood conditions.

In spite of the bad start, most builders anticipate another volume year for home building in California. The number of starts may be lower than last year but industry spokesmen believe dollar volume will go above that of 1955.

Frank Belgrano, president of Transamerica Corp. in San Francisco, predicts that most of the curtailment will be largely in the low priced field. He expects alterations and additions to boom, creating new markets for home builders.

SOUTHERN CALIFORNIA CONTRACTORS, after a slow return to normal last month following the end of the three-month-long rock, sand and gravel strike, were urged to give school construction priority over other work because "the need for new schools and additional classrooms is reaching a crisis." A Los Angeles school official said the strike has forced the changing of "some critical school opening dates from February to September, while other schools scheduled to open next fall have been delayed until September 1957."

A BROADENED EDUCATIONAL BASE for architectural training is seen by a former professor of architecture at Harvard University who now heads the Inter-American Housing Center, Bogota, Columbia. "This will reflect itself in schools through increased emphasis on the problems of community development and collaboration with sociologists, anthropologists and economists," according to Leonard J. Currie, AIA, who has been lecturing in this country.

"A great many new teachers must be recruited in the next few years," Currie warns, adding that training in teaching methods should not be neglected since good architects are not necessarily good teachers.

A "GUARANTEED TRADE-IN" plan in which persons may buy a contemporary design home with a trade in of their old one has been launched by a major U.S. home builder, Joseph Eichler. A resale broker, Saxe Realty Co. of San Francisco, has been appointed exclusive sales agent for all Eichler developments in Marin and San Mateo counties.

THE AMOUNT OF LUMBER used in home construction has been declining steadily in recent years and will continue to so so, unless the industry goes in for broader research programs, adopts the "cell structure" approach and develops new products and uses. So declared Julius Stulman, head of a Brooklyn lumber firm, appearing as guest lecturer at City College of New York. "As a cell structure lumber lends itself to chemical and electronic treatment," he said. "We might reconstruct the cells so that they could be gathered in a liquid or powder state of known and controlled properties. Then perhaps we could pour the substance into moulds and make finished and semi-finished products in this way."

THE STEEL JOIST INSTITUTE has arranged to conduct periodic unscheduled inspections of its members' plants to determine conformity of manufactured products to standards established by the group. This marks the first time that an association of structural materials manufacturers have adopted such a quality control program.

MODULAR MEASURE, a 20-year-old system that has gained considerable favor in construction of schools and commercial structures, got a shot in the arm in the big untouched field of home building recently. A house planned on the 4-in. measurements was exhibited at the annual convention of National Association of Home Builders in Chicago.

Carrying on an intensive campaign, the American Institute of Architects has succeeded in getting builders and manufacturers of steel and wood windows together to try to agree on standard sized windows, based on modular measure. Should this system be applied to an entire house, estimates of cost savings have run as high as 20%.

SOUTHERN CALIFORNIA BUILDER Fritz B. Burns (center) chats with Dean Francis B. Sayre of the Washington National Cathedral and Presidential Assistant Sherman Adams at Operation Home Improvement luncheon in Washington, D.C. Albert M. Cole, Housing and Home Finance administrator, predicts that 20 million U.S. homes will be repaired or modernized during Home Improvement Year at cost of nearly $20 billion.

METALBESTOS DIVISION
WILLIAM WALLACE COMPANY · BELMONT, CALIF.

Offices in Belmont and Glendale, Calif., Seattle, Denver, Dallas, Des Moines, Blue Springs, Mo., Minneapolis, Chicago, Atlanta, Akron, Louisville, New York, Buffalo, Westbrook, Conn., Richmond, Va.
Stocked by principal jobbers in major cities. Factory warehouses in Atlanta, Dallas, Philadelphia, Des Moines, Chicago, New Orleans.

FIREPROOF STRUCTURE will consist of concrete structural frame, exterior facing primarily of enamel iron insulated panel skin cover with a small amount of brick and aluminum sash and trim. Initial building will have two fingers as shown, each 750 ft. long, with positions for 16 airplanes to load and unload passengers only.

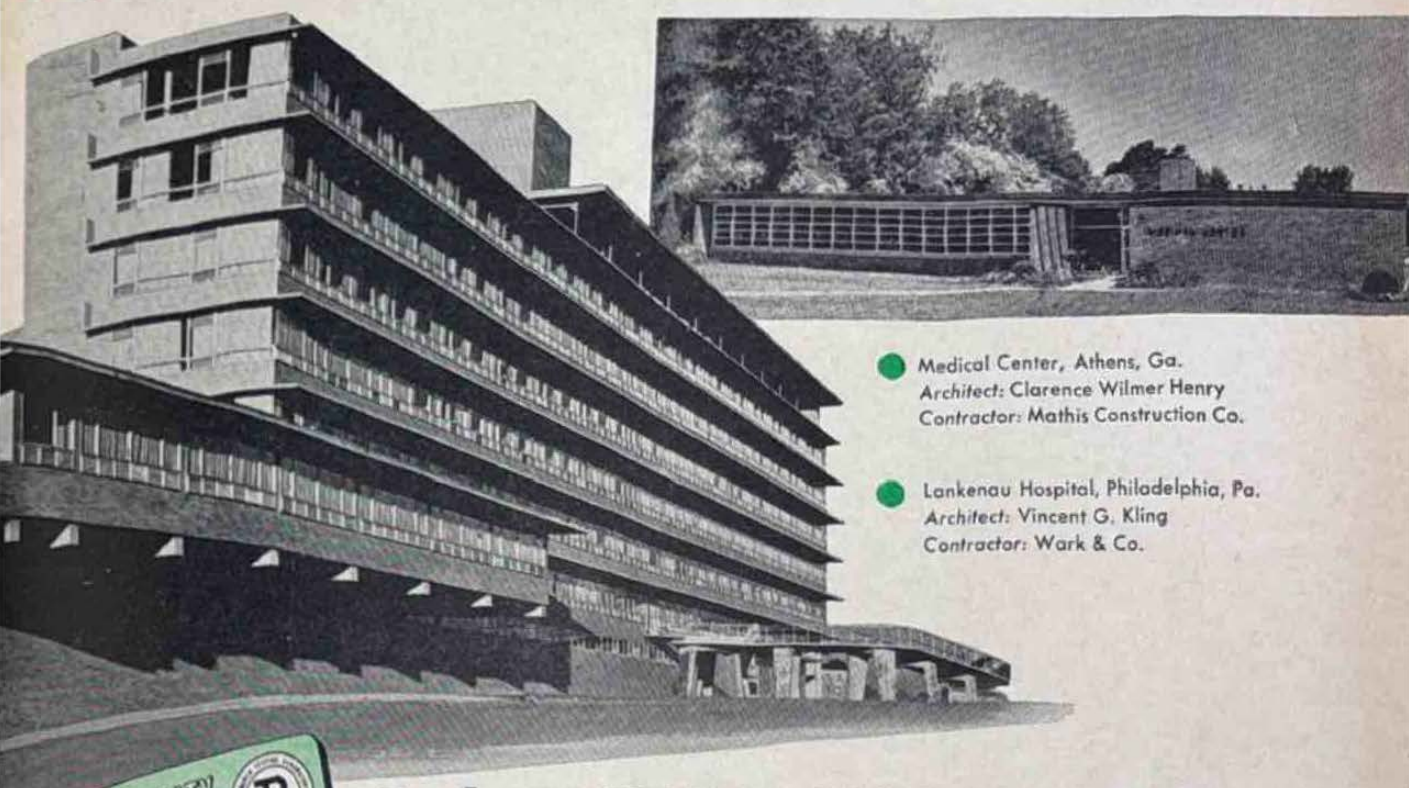
Portland's airport terminal

AFTER FOUR YEARS of planning, construction of Portland's new $3,500,000 International Airport Terminal building is expected to get underway by early July. Some preliminary work such as clearing, filling and grading has been completed, but bids for the building are tentatively scheduled to be advertised in late April, by the Port of Portland, with a bid opening planned for early June.

Working drawings are nearly completed by the architects, Burns, Bear, McNeil & Schneider. Leigh Fisher & Associates, South Bend, Ind., airport consultants, assisted in the planning.

Except for size, the new terminal will be equal to most and better than many terminals in the United States. It has been designed with function foremost in mind. One of its outstanding features is the short passenger walking distance. The ultimate plant of the building and area provides for 34 aircraft gates or berths which occupy a total frontage of a mile. Because of the four fingers, or piers, and the central building location, the average walking distance from the ticket counter to the gates is only some 600 ft. with the nearest eight gates only some 335 ft.

Customers will have no stairs to climb, for seven escalators will be provided. With 625,000 passengers handled in 1955 and a volume of 998,000 expected by 1965, it was necessary to segregate incoming and outgoing passengers.



Outgoing passengers enter the terminal from an elevated roadway, while incoming passengers leave from the lower level after claiming their baggage. Escalators in the fingers, or concourses, take them down to or up from the aircraft loading aprons.

Parking for some 1,500 cars, buses and taxis will be provided. The walkway, which will be covered with a metal roof and enclosed with glass on the south side, takes passengers to a controlled parking lot. Beyond this will be a free parking lot for the public and employees.

The main building is to be 500x112 ft. on two main levels with a mezzanine. Remaining space is in form of a four-story tower, approximately 32x64 ft., to give the control tower its necessary height.

The ground level will be largely operational, occupied by airlines, baggage, freight handling, heating boilers, machinery, etc. On the second or main level will be airline ticket counters, restaurant, 19 roomettes and various other concessions and facilities for the comfort and convenience of travelers and visitors.

Large city HOSPITAL or community MEDICAL CENTER

- Medical Center, Athens, Ga.
  Architect: Clarence Wilmer Henry
  Contractor: Mathis Construction Co.

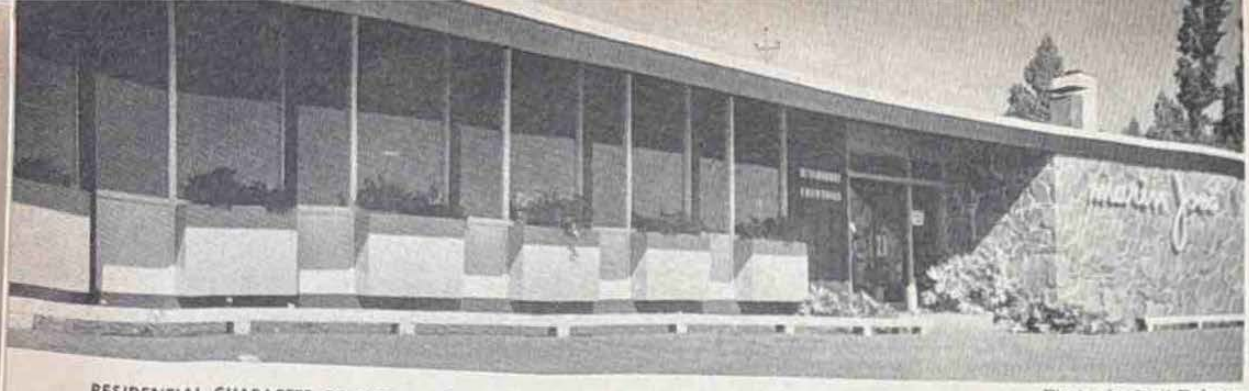
- Lankenau Hospital, Philadelphia, Pa.
  Architect: Vincent G. Kling
  Contractor: Wark & Co.

Reduce MAINTENANCE EXPENSE with *Quality Approved*

ALUMINUM WINDOWS

It doesn't make any difference whether you're building a large 320 bed hospital like the beautiful new Lankenan Hospital shown above or a small, community medical center, you help save important maintenance dollars when you insist on "Quality-Approved" aluminum windows.

Experience has clearly demonstrated that aluminum windows are the only practical, reasonably-priced windows that *never* require painting . . that cannot rust or rot, warp or swell that retain their trim, modern-looking appearance for the life of the building.



"Quality-Approved" aluminum windows are available through many manufacturers in sizes and styles (awning, casement, double-hung, projected and sliding) to fit any design treatment. Only those that carry the "Quality-Approved" Seal have been tested by the independent Pittsburgh Testing Laboratory and approved for quality of materials, construction, strength of sections, and minimum air infiltration.

For our latest Window Specifications Book consult any manufacturer listed below, see Sweet's (16a/ALU) or address Dept. PAB-62

BORMOLINI & SON
General Contractors

Marin Joe's Restaurant
Corte Madera, California

One restaurant is as smar

WHEN Don Pareglio and Adolph Della Santina decided to locate their new restaurant on Highway 101, not far from Corte Madera, they knew that such a suburban site would require more than just good food. The partners set forth this objective: create eye-appeal on an $84,000 budget covering all costs, including furnishings and kitchen equipment.

To accomodate the long, narrow lot fronting the highway, with a 30-ft. setback in the rear, the architect planned a rectangular structure fitted low to the ground; included a slightly pitched plank and beam roof to add an interesting break in the long rectangular lines; and provided a deep cut in the side of the slope to create a pleasant backdrop for green plantings which can be seen from the dining room.

The residential atmosphere dictated the choice of materials such as redwood and natural stone. Even the open kitchen and charcoal broiler were designed to suggest the intimacy and comfort of home, combined with the luxury of dining out. And the colors, browns and tangerine, were selected as being complementary to the type of food served—traditional Italian.

Marin Joe's actually is divided into three sections: lounge, main dining room and a long counter for quicker service where the patrons can watch their meals being prepared in an open-face brick broiler. Over this counter is a partial ceiling of acoustical tile with lights inset to illuminate the cooking area but to prevent glare from flashing in the eyes of customers.

The main dining room, located at the left of the counter section, consists of comfortable leather padded booths. At the end of the counter is an outdoor patio with room for two or three tables. The lounge serves as seating for overflow diners.

OUTLINE SPECIFICATIONS

Type of Construction: Frame and masonry on reinforced concrete footings.

Exterior Walls: California redwood and natural stone.

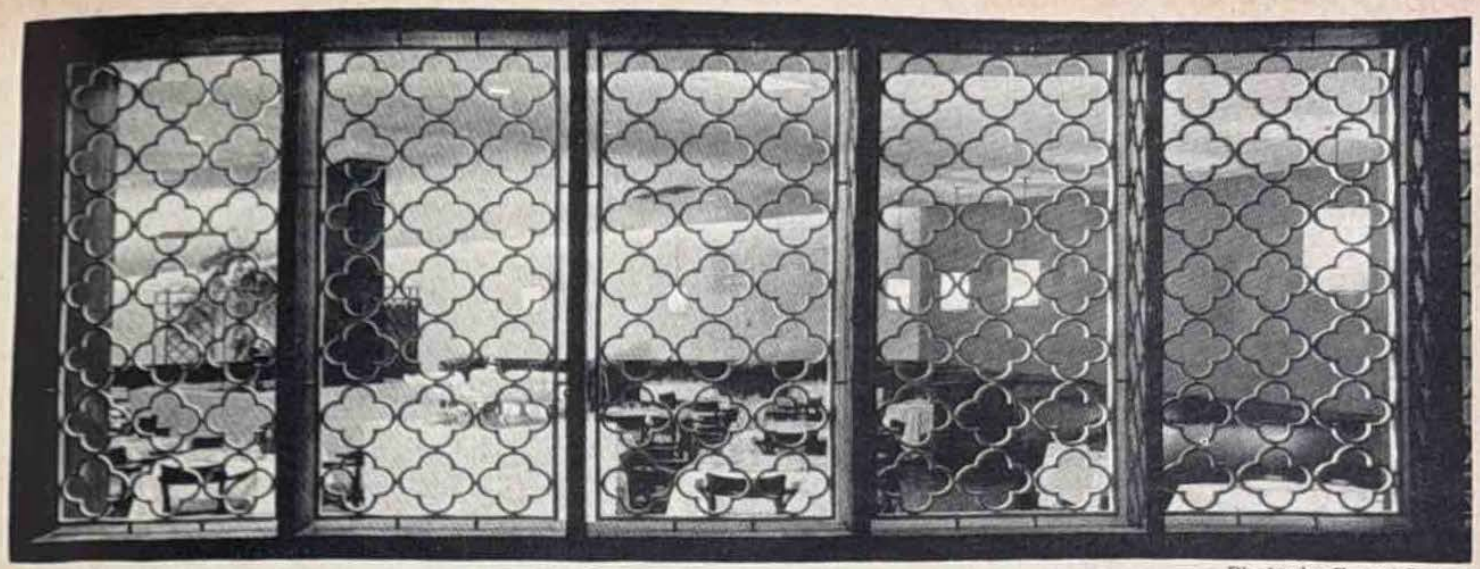
Roof: Pitched; timber beams, plank deck.

Floors: Concrete slab, with asphaltic tile, carpeting in lounge, cement in kitchen area.

Interior Walls: California redwood board and battens and natural stone; plywood in service and utility areas.

Ceilings: Exposed decking; partial ceiling of acoustical tile above counter.

Total Cost: $84,000, including architect's fees, landscaping, furnishings and equipment.



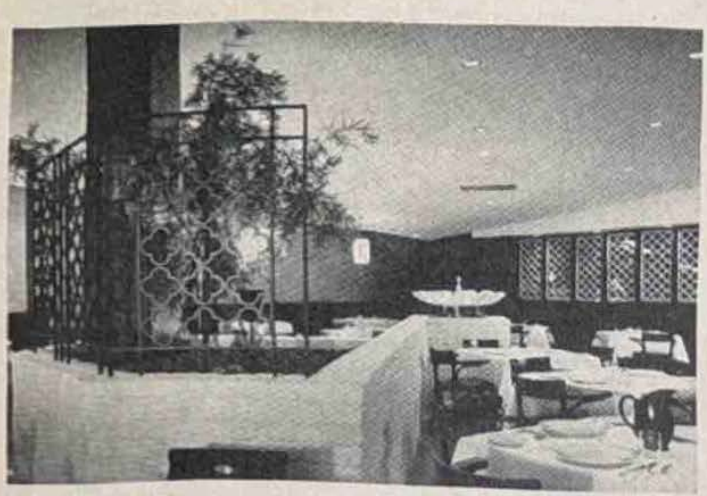
Total Area: 3,800 sq. ft.

REDWOOD is repeated inside; lighting achieves warm, somewhat romantic glow. Dining area at left of counter consists of booths.

CUSTOM-DESIGNED black iron "floating" fireplace dominates lounge, with sofas lining walls. Natural stone wall separates area from dining.

—Photos by Ernest Braun

"A STIMULATING CHALLENGE to prove my theory that restaurants, perhaps more than any other kind of building, have need for what I call the integration of art and architecture," says architect Gaidano.



Grillwork of wrought iron trellis divides lounge from spacious dining room (note in photo below). Materials and forms are at same time contemporary and remindful of classical spirit of another era.

as the other is charming

Fior d'Italia Restaurant
San Francisco, California

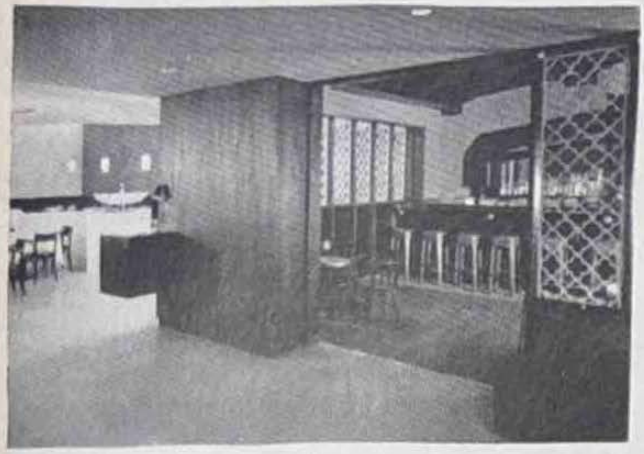
MARIO L. GAIDANO, AIA
Architect

ROYAL SHOWCASE CO.
General Contractor

USED WHITE BRICK creates divider and base for planter. Sculpture by Ray Rice is flower form symbolic of name of restaurant.

EXTERIOR is merely painted and accented with colorful awnings, was not changed structurally.

THE DESIGN of the Fior d'Italia incorporates almost as much of the artist as that of the architect, who was given a $60,000 modernization budget and a "completely free hand" to convert a dilapidated old building into an ultra-modern new home for the 69-year-old restaurant.



"The problem we faced," explains the architect, "was that of retaining most of the traditions so long associated with this famous establishment and at the same time creating a brand new Fior d'Italia with a distinctive and modern atmosphere.

"The structure being modernized was formerly occupied by a ranch style restaurant. It faces San Francisco's colorful Washington Square and St. Peter and Paul Church in the very heart of the city's large Italian colony.

"This meant, of course, that the architectural design should appeal to the people of the area and fit into the 40x90-ft. building with maximum functional utilization of the existing 3,600 sq. ft. of floor space."

The architect achieved his objectives, within the budget by integrating art and architecture into a modern Italian style planned deliberately to retain the old established clientele and to attract a faithful new following.

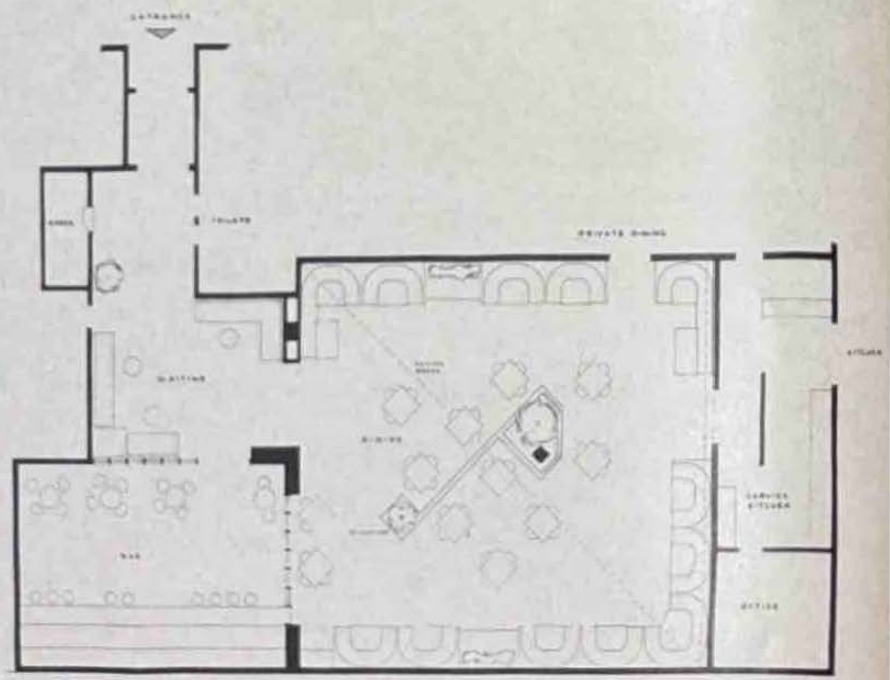
The building into which the restaurant moved

WROUGHT IRON GRILLWORK, functional as well as decorative, separates lounge from dining room and waiting area.

SLOPED CEILING runs diagonally across square room, drops gently to corners to give spacious dining area more intimate feeling.

was on sound footings and foundations and the brick exterior was in perfect condition. The interior, however, was a "big barn of a place" with a high ceiling, no partitions and few structural columns.

The old ceiling was lowered considerably by installation of a sloped, acoustical plaster ceiling. This new ceiling, with its ridge running diagonally across the square room and dropping gently to the corners, helps to create the desired intimate, sheltered feeling.

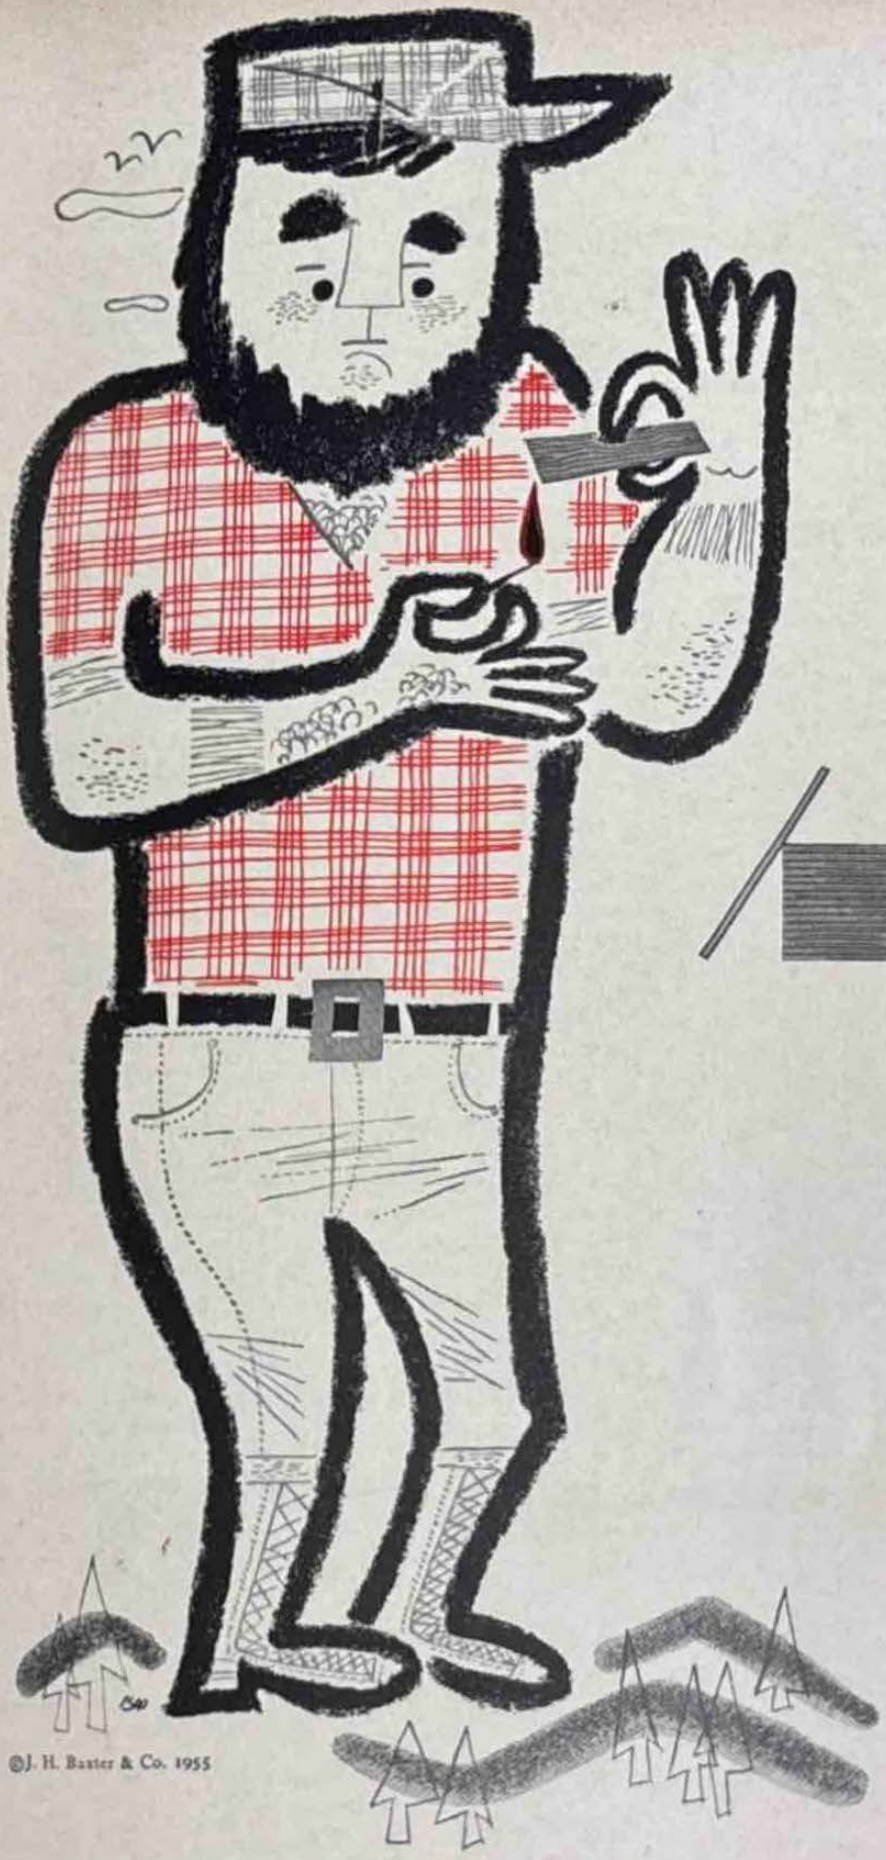


Materials used for the walls, such as brick, burlap and wood, were selected to suggest solidity and naturalness. Colors were chosen to harmonize with the clean, cool whiteness of the brick and the acoustical plaster ceiling.

The quatrefoil design of the cast iron grilles, the chandeliers and the sculpture—in fact, all of the materials and forms—although completely contemporary are somehow reminiscent of the classical spirit of early Italian architecture. Grillwork consists of wrought iron trellis, custom designed and custom manufactured, to divide the lounge from the large and dignified dining room, which is lighted by handsome lanterns hung from the ceiling.

The diner has a choice of alcove accomodations or of tables which are spaced over a wide area to permit a true sense of privacy. The red walls, in contrast with the black leather seats, provide a striking color effect. The finish of the interior walls varies from white used brick to burlap to highly polished wood.

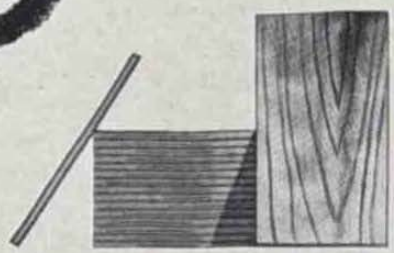
Some architects gain immortality with their names engraved in the stones of structures they design. But this story has an ending that's a bit different. Owners George and Frank Marianetti were so pleased with the results that the choicest item on their menu is Roast Tenderloin of Beef Gaidano, a succulent dish of meat, mushrooms, artichokes and wine sauce.



FLOOR PLAN indicates how architect planned for diners' privacy: either alcoves or tables spaced over wide area.

OUTLINE SPECIFICATIONS

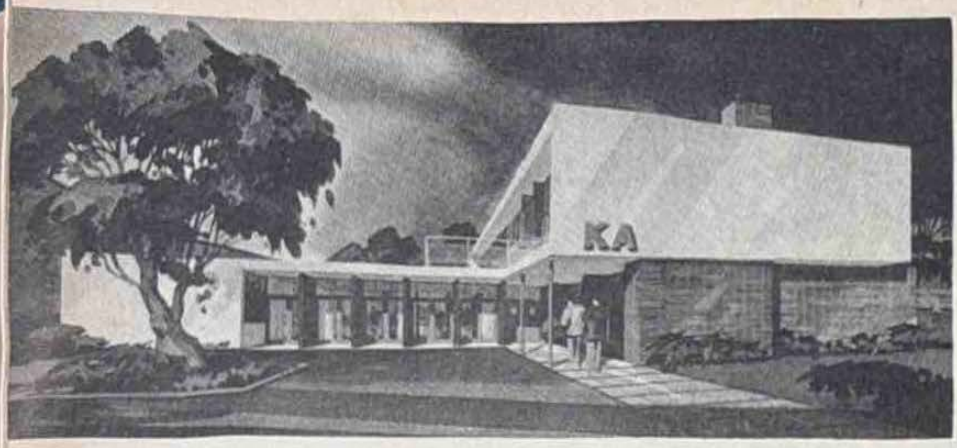
(Remodeling)



Floor Finish: Vinyl plastic.
Interior Wall Finish: White used brick veneer, burlap, wood.
Ceiling: Acoustical plaster.
Heating: Fired hot air gas furnace.
Total Cost: $60,000.
Cost per Square Foot: $16.
Total Area: 3,600 sq. ft.
Date of Completion: February 1955.

©J. H. Baxter & Co. 1955

"Can't get this dad-burned sliver o' wood to burn," rumbled Paul Bunyan to Babe, the Blue Ox. A mountain top trembled and fell, damming up a river. "Babe, what the cuss do you suppose them Baxter folks done to this here piece o' plywood? ✳ She's dry—but she JEST DON'T BURN!"



BAXCO
FIRE-
RETARDANT
PLYWOOD
(Pressure treated with Protexol)

✳ Sorry, Paul, old timer—but even you couldn't get that wood to burn! It's BAXCO's new fire-resistant plywood, pressure treated with Protexol fire retardants and kiln dried after treatment. These are the most effective and widely approved fire retardants. Protexol-Pyresote affords termite and decay protection as well to the treated plywood. Protexol meets all important fire hazard and flame-spread classifications. BAXCO will quote promptly—send your inquiry today.

RECOMMENDED USES: *Partitions . . . Core Stock—Panels and doors . . . Interior trim and finish . . . Barns, stables and stalls . . . Railroad car flooring . . . Ship and Yacht interiors . . . Cabinet work.*

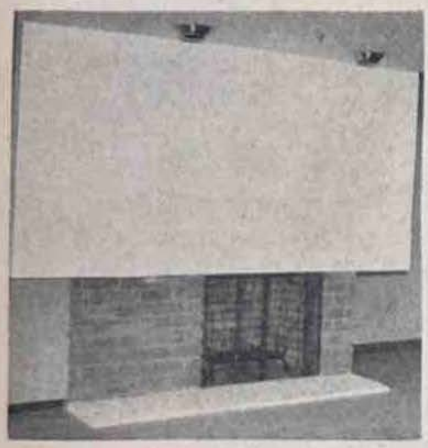
General Contractor

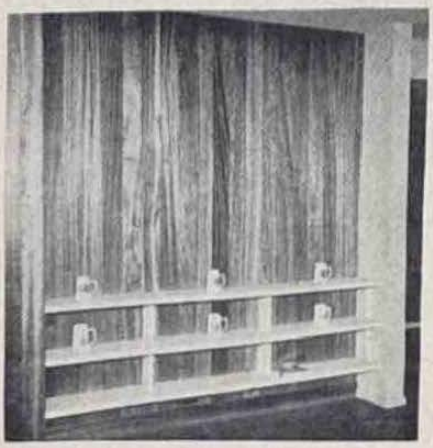
Pledged to economical but good design

COLORFUL STONES in entrance walk, spaced with strips of redwood, blend with turquoise doors for striking effect.



University of Southern California
University Park, Los Angeles

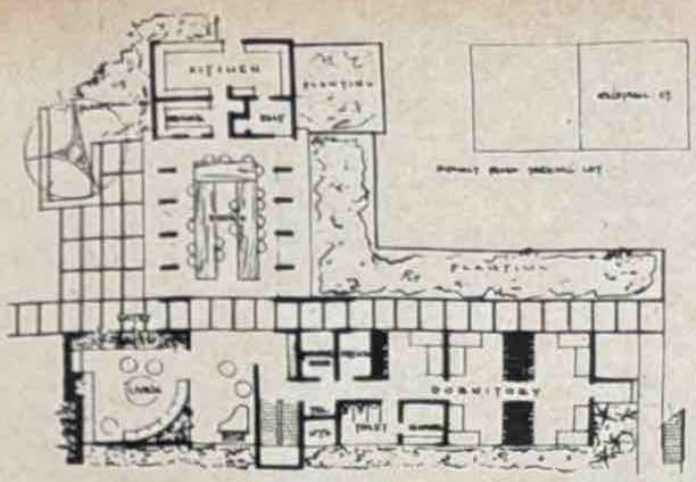
ECONOMY was the watchword when the architects designed two houses for fraternity and sorority row at Southern Cal. The fraternity house is finished; the sorority house, shown on the next page, is nearing completion.



Because of the limited budgets, the strictly functional approach in a few areas resulted in an almost sterile design. But generally speaking the architects in each case planned a practical building constructed along simple, straightforward lines without sacrificing quality. For $10 and $13.40 per square foot, they incorporated such features as built-in desks, wardrobes and bureaus. And in each house the plan is flexible enough to meet future expansion requirements and to allow added touches—shelves, trophy cases and the like—as funds become available.

THE FRATERNITY HOUSE is sited on a flat lot, permitting horizontal emphasis. A large, old camphor tree

BAS RELIEF MURAL is planned for fireplace element. Meanwhile, stark white adds note of drama to chapter lounge room.



BUILDING is so designed that as funds become available, cabinets, built-ins, trophy cases and shelves may be easily added.

WALLS of dormitory section are painted in several bold colors, relieving simple, functional design of rooms.

FIRST FLOOR PLAN

OUTLINE SPECIFICATIONS

Type of Construction: Frame, two-story.
Exterior Walls: Higgins brick veneer, Philippine mahogany paneling, plaster.
Roof: Flat, composition built up.
Floors: Concrete, first floor; wood deck, second; colored concrete and asphalt tile finish.
Windows: Steel casement.
Doors: Philippine mahogany veneer solid core.
Interior Walls: Brick, wood and gypsum lath partitions; brick, Philippine mahogany and plaster finish.
Built-ins: Wooden desks, wardrobes, bureaus, shelves.
Ceilings: Plaster and acoustical tile.
Insulation: Mineral on roof and in sidewalls.
Heating: Forced air gas perimeter duct system in concrete slab floor.
Total Area: 8,000 sq. ft.
Total Cost: $100,000.
Cost per Square Foot: $10.
Date of Completion: January 1955.

on the site was taken into consideration as part of the design element.

Exteriorwise, brick was selected for its warmth and for its relation to the southern tradition of the fraternity; other materials were chosen for their practicality within specific areas. Inside, bright, warm shades of turquoise, rust, white, brown, yellow and sky blue were selected. It was felt that these colors best reflect the active lives of the young residents and compliment the severe structural frame. Turquoise is repeated at the entrance.

The two-story building contains 10 two-man bedrooms and a 10-man dormitory. The dining room accommodates 60, while the kitchen has an automatic dishwasher-dryer, garbage disposal and freezing unit.

Facilities include a combination patio and volleyball court, roof deck for sun bathing, indoor planting area, rooms for chapter meetings, study and game activities and trophy collections. Parking space is provided for 30 cars. Extras include a powder room for feminine visitors and an employees lounge.

Kappa Alpha Theta (Omicron Chapter) Sorority House

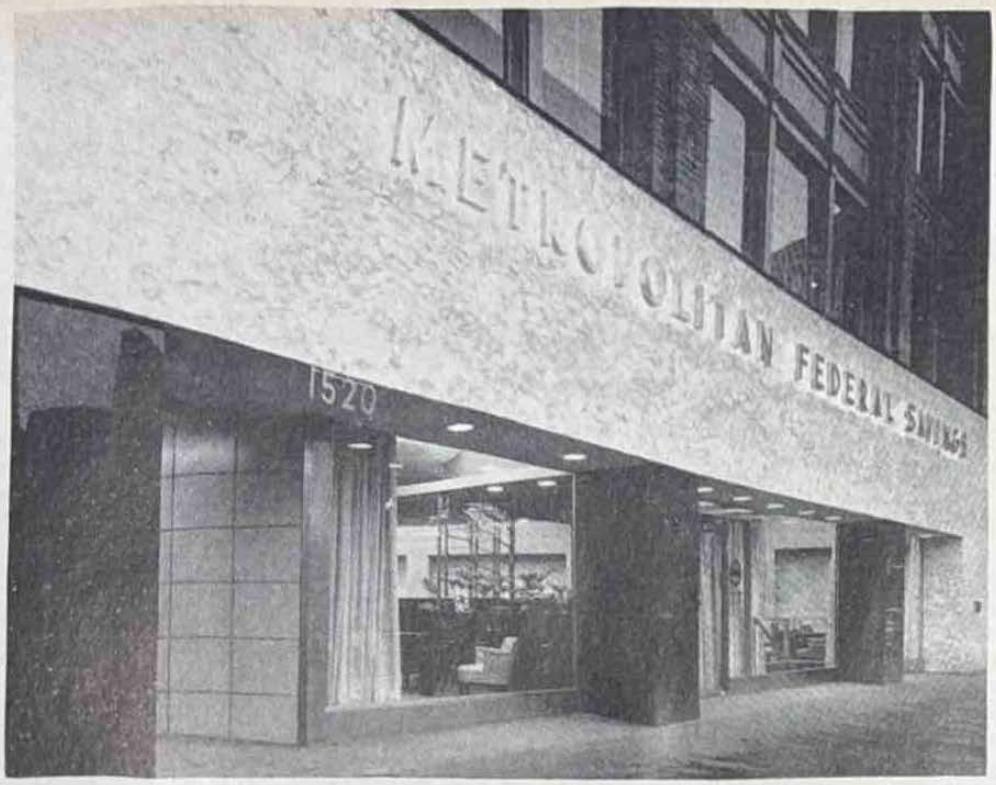
General Contractor

PALOS VERDES STONE FACING lends warm, contemporary feeling.



THE SORORITY HOUSE, limited by the width of the site, is basically a three-story rectangle with extended balconies and indented covered patio areas. The design was developed around simplicity of flow and form to provide a pleasant background for living.

Palos Verdes stone was used as facing three stories high in certain areas because of the warm, contemporary feeling it lends to the structure. Since the Los Angeles city code does not cover the cantilevering of the stone facing 34 ft. high, an unusual construction technique—a "tie" system on a steel frame—was applied to meet the special requirements of an earthquake area.

The house contains 20 two-woman rooms and a dormitory for 10. The housemother's suite is on the second floor. Complete kitchen facilities are included as well as an electric ironer, washer and clothes dryer. A room for beauty care provides hair-drying equipment. The dining room is divided by two folding panels.

Cantilevered fireplaces were designed by the architects, working in conjunction with interior designer Carroll Sagar who coordinated the theme of the decor. Other features are a roof garden, recreation court and extensive parking lot.

Philippine mahogany paneling, aluminum sliding doors and sash, rubber flooring tile and base, light-diffusing hung plastic vinyl ceilings and acoustical tile ceilings have been used in the $200,000 structure, to be completed this month.

ITALIAN WHITE MARBLE and Norwegian emerald pearl granite dramatize simple exterior in downtown Seattle.

Visual delight in the heart of down town

Metropolitan Federal Savings
and Loan Association
Seattle, Washington

LaMONTE J. SHORETT, AIA, Architect

BEVERLY A. TRAVIS, Electrical Engineer
HOWARD S. WRIGHT & CO., INC., Contractor

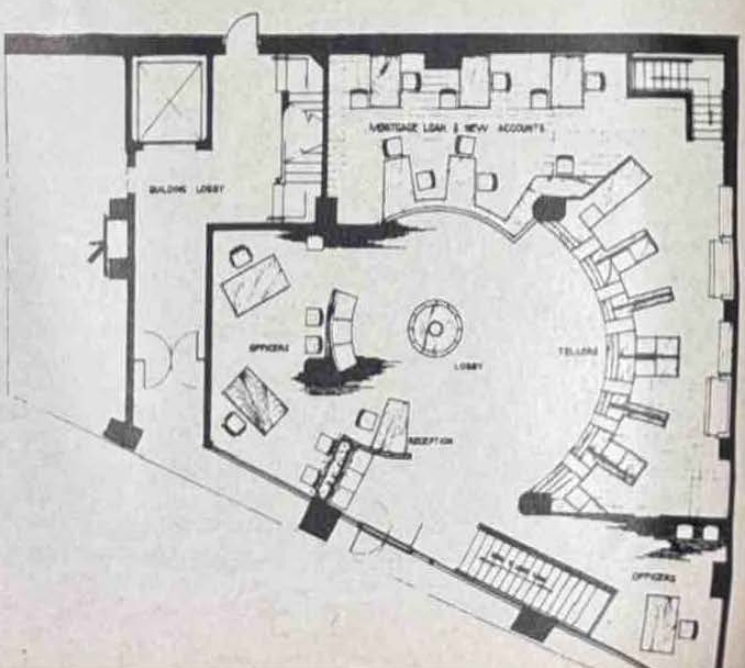
OUTLINE SPECIFICATIONS

Exterior Trim: Italian Cremo white marble, Norwegian emerald pearl granite, bronze supplied by Seattle Bronze Co. and Gladding, McBean terra cotta.

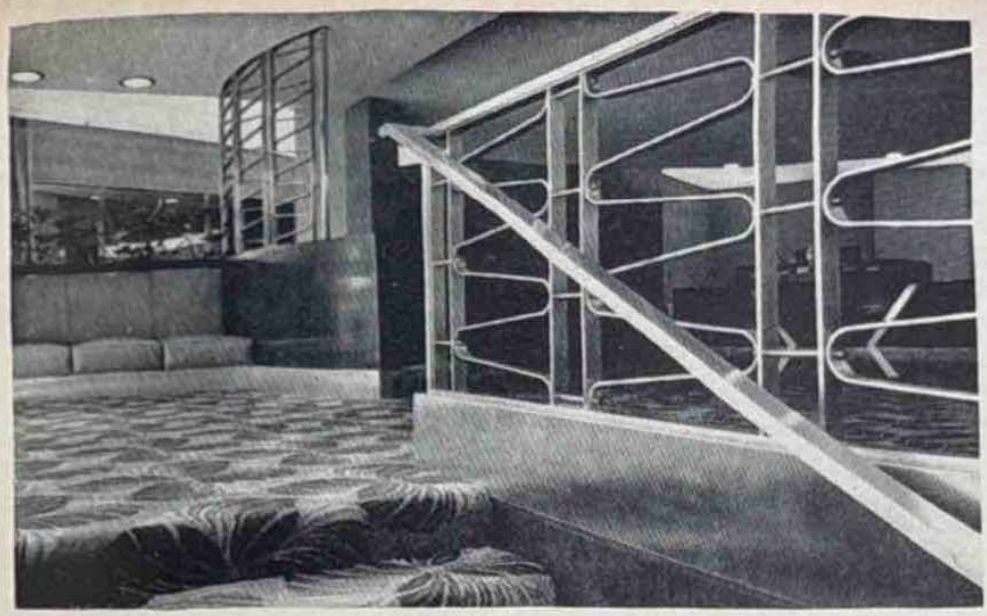
Doors: Herculite.

Floor Finish: Vinyl cork in work area; carpeted in public area; Armstrong asphalt tile in basement.

Ceilings: Inverted saucer of sprayed acoustical plaster in public area; elsewhere Neo-Ray egg-crate suspended system.



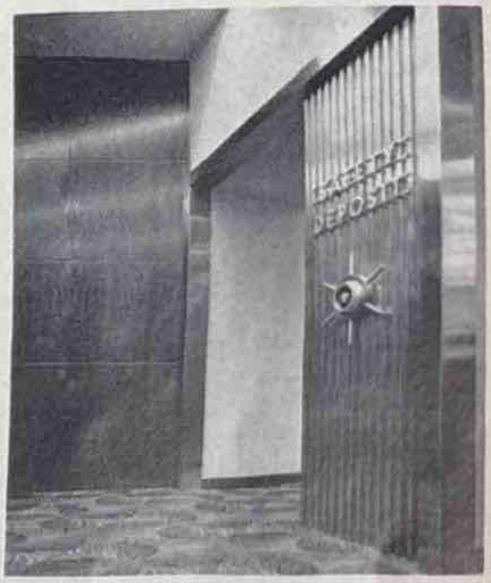
Walls: Plastered and papered, with extensive walnut paneling upstairs and down; wall-to-wall and floor-to-ceiling mirrors in officers' section.



Lighting: Continuous fluorescent tubes providing 150 foot-candles on working surface.

Ventilation: Zoned air conditioning with Worthington self-contained unit.

Total Cost: $230,000, including architect's fee and furnishings.

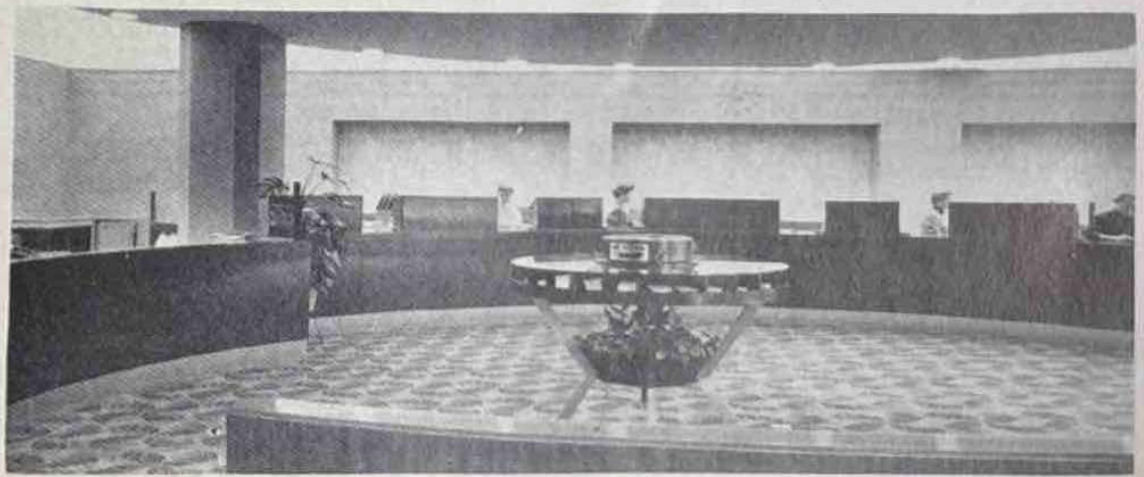


Date of Completion: November 1954.

BRONZE RAILING leads to work area in basement, which also has storage space and coffee shop with self-contained kitchen.

STAINLESS STEEL and bronze lettering which covers column at bottom of stairs is suggestive of vault but safety deposit boxes actually are at further end of passage.

LOCATION PLANNING by the client and the architect has paid off handsomely for the Metropolitan Federal Savings and Loan Association, whose total assets have nearly doubled within 15 months, according to president David T. Young.



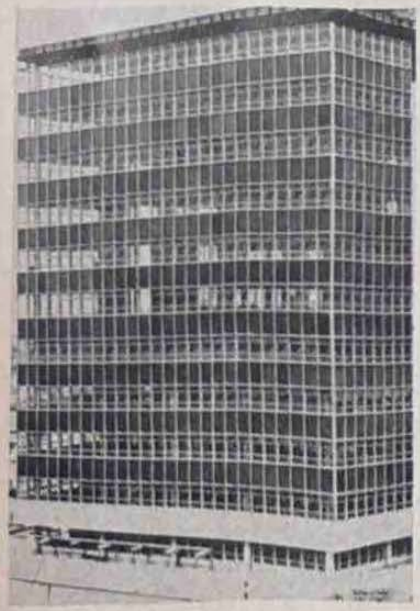
After searching 10 years for a key site, the organization purchased a triangular shaped building in the heart of downtown Seattle and completely gutted that portion which its headquarters would occupy. It was agreed that the simplest architectural form the offices could take would be a sufficient contrast with the generally cluttered-up, gingerbread appearance of the immediate area.

Preliminary plans called for an all-glass front but orientation studies indicated that this would be untenable for office personnel. The sun hits hard from the west, since the wide expanse of the diagonal street offers little protection from the afternoon rays. Consequently the glass line was brought down fairly low, banded with white marble and touched off with granite and bronze to give a dignified yet striking tone to the simple exterior.

Looking through the large expanse of glass, the passer-by sees that the same dignity has been carried inside where fine walnut paneling and bronze trim blend with unusually attractive carpeting and wallpaper. Only one structural column was removed in the circular public area from which the tellers' cages splay out, increasing the work space.

To accomodate new Burroughs Sensimatic machines being used for the first time in the Seattle area, the architect designed a mock-up which later became an actual plywood cage tested by association personnel. The result: a near perfect teller's cage for this highly specialized pre-audit system which has been adopted by other savings and loan groups.

TELLERS' CAGES splay out from circular lobby, increasing work area where it is needed most. Walnut paneling is used extensively here.



Architectural primer for porcelain enamel

'To those architects desiring a new and versatile material for expressing creative imagination, porcelain enamel offers a wide spectrum of colors and variety of textures'

METAL SKIN of Standard Federal Bank Building in Los Angeles consists of blue-gray porcelain enameled iron bonded to thin core of aluminum honeycomb. Panels are 5/8-in. thick and about 3 ft. 8 in. wide and 6 ft. 9 in. high. Three panels are placed side by side to form spandrel about 11 ft. wide. Panels are set in extruded aluminum frames attached to clips to sill-high concrete sprandel ware. Architect: Welton Becket & Associates.

MORE THAN 75,000 FT. of porcelain enameled curtain wall sheathes 12-story First Security Bank Building in Salt Lake City, Utah, ready for occupancy this month. Much of wall consists of shaped vertical ribbing with textured ceramic surface, framing window areas. Spandrels are new type of panel designed to create waffle effect. Color scheme is rust with parts of facade in off-white and gray.

by J. G. TERRY
Development Supervisor
Development Engineering Dept.
Armco Steel Corp.

PORCELAIN ENAMEL is a hard, durable vitreous finish composed of inorganic mineral materials. It is much the same as ordinary glass in properties and color ranges. This material is principally fused to iron or steel.

These finishes have long been familiar on sinks, plumbing ware, kitchen appliances and water heater liners. Vitreous coatings provide excellent protection from corrosion, high temperatures and abrasion. In the past, this material has been limited to these specific fields since most people erroneously believed that it was fragile and could not stand everyday use in industrial service.

Pioneering work by several of the enameling companies, as well as by steel and enamel producers, has indicated that special base metals, especially compounded enamel substances or frits, and special enameling practices have prepared porcelain enamel for the most rigorous corrosive and heat-resisting service. Naturally, the enamel formulations differ and careful selection must be made for each individual application.

However, the material is of such versatility that uses are limited only by the imaginative bonds of the designer. There are few places today where porcelain enamel is not recognized as an excellent material for permanent installation. Not the least reason for this is the little or no maintenance required.

Past applications offer little guidance in planning uses for porcelain enamel in architecture. The shiny opaque white, long associated with the antiseptic cleanliness of the kitchen advertisements, has certainly no recommendation in it to the designer of monumental buildings. But the development of matte finishes and the compounding of pastel additives has opened a new and heretofore unexplored field for porcelain enamels. Architects who have seen these materials recognize that here is a material with an unlimited range of color combinations for use in architecture. It covers a wide range of applications, from facade to interior trim, as well as public areas such as restrooms and those for food preparation.

The reasons why porcelain enamel is an accepted architectural material are many. First, Bureau of Standards tests have demonstrated that special formulations are non-fading even in the most severe atmospheres. Second, the smooth finish is self-cleaning on vertical surfaces because of the washing action of falling rain. The little soil that is not removed in this manner can be easily cleaned with a water wash at five- or ten-year intervals. A third characterstic is the high abrasion resistance of porcelain enamel, which offers protection from scuffing, heavy traffic or harsh abrasive cleansers. And fourth is its excellent resistance to high temperatures. Being inorganic on metal, it will not burn or support combustion.

Thus porcelain enamel on iron or steel offers the architect a color

---

A new concept of metal curtain wall construction is creating widespread interest in the architectural and building fields. Several years ago the Porcelain Enamel Institute commissioned William Lescaze, FAIA, of New York City to investigate the requirements for such walls and to develop recommended designs. Architect Lescaze came up with this definition:

"A curtain wall may be defined as an exterior wall which is non-load-bearing and is supported at each floor by the structural framework of the building. The conventional brick and masonry walls used in steel and concrete framed buildings are curtain walls also but these present certain inherent disadvantages, viz., great weight, considerable thickness, low insulating value, etc."—The Editor.

---

scheme that remains the same year after year with little, if any, cleaning needed to keep the building looking fresh and new. Even in areas of heavy usage and hard wear, such as washrooms, porcelain enameled wall panels and partitions always look clean and attractive.

Porcelain enameled steel panels have been used in the difficult field of remodeling exteriors of obsolete buildings. Here the fresh colors and easy installation make this material of primary consideration to both owner and architect. It is economical too, for there have been a number of jobs where increased rental more than offset the cost of remodeling. And it solves the problem of heavy unsafe cornices and parapets falling on pedestrians and traffic.

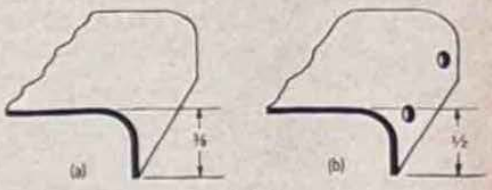
But porcelain enamel today goes far beyond face lifting and renovation work. Its use is increasing by leaps and bounds in the field of monumental buildings. We find the Hilton (Statler) hotel chain building hotels with porcelain enamel curtain walls—at a tremendous saving over conventional masonry. The United Mine Workers are planning a series of hospitals with a rigid budget. Porcelain enameled steel was the only material approaching the cost goal. In schools—a notorious low budget building field—porcelain enamel panels are also finding ready acceptance because of maintenance and initial cost factors.

In this field of monumental buildings a new concept seems to be arising. Architects are using window frames which require no fire resistance rating, and after permit issuance are requesting deviation in applying panels in the sash openings. This plan offers still other advantages. Panels glazed into sash openings will be guaranteed for watertightness the same as windows. Recaulking schedules should be about the same as for glass. Horizontal expansion and deviation can be compensated behind mullion and still covers just as in rough openings.

An interesting yet often overlooked application of porcelain enamel is seen in architectural decoration. Here porcelain enamel on steel offers many unusual architectural effects. Silk screen techniques used by enamelers permit relatively low cost use of color and texture in widely varying designs.

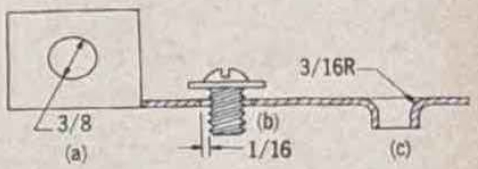
The many architectural aspects of porcelain enamel on steel have prompted questions on how to use this material with regard to design of parts, radii, fabrication and flatness. These questions may continue but need not limit the architect if close working relations are maintained with the enameler during layout and detailing.

Actually, there are only a few simple rules for the architect to follow and the enameler will do the rest. The main points to be remembered are these:



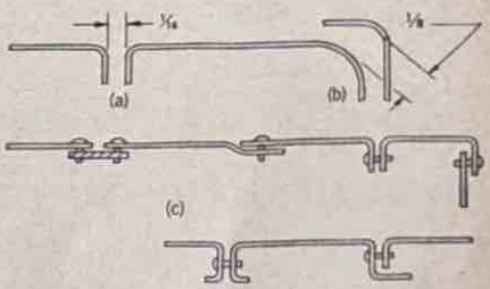
1. **Any corner, bend or edge must have a 1/4-in. minimum radius.**
2. **Depth of flange must be 3/8-in. minimum.**
3. **Holes should be at least 5/16-in. minimum diameter and at least 1/16-in. greater than bolt diameter.**

With these simple precautions, little difficulty should be encountered in obtaining satisfactory work from any commercial enameling shop.

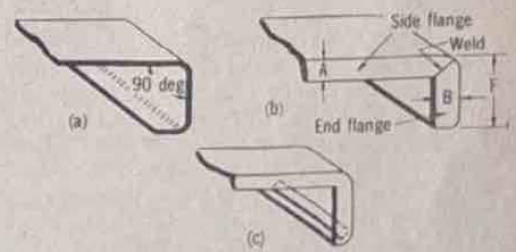


Since porcelain enamel is a kind of glass, reasonable care must be taken to prevent fracture. However, with proper design the rigidity of the metal to which it is fused minimizes this hazard to the point where it may be forgotten. For example, an old and accepted use of porcelain enameled iron is in coal chutes. Here hard knocks and abuse are the rule rather than the exception, and porcelain enameled chutes provide long satisfactory service. Even when coating failures have been reported, there was no undercutting or progressive corrosion damage.

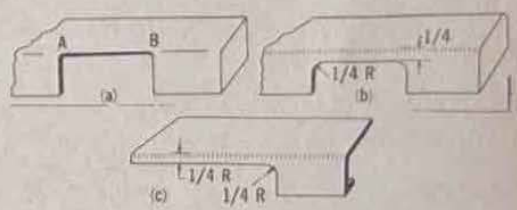
To those architects desiring a new and versatile material for expressing creative imagination, porcelain enamel offers a wide spectrum of colors and variety of textures. The future should see more and more of these effects, often desired, but seldom realized, with the evergrowing use of this material.



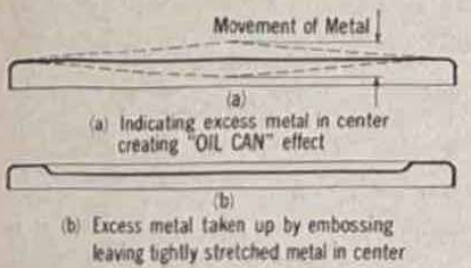
SHEET METAL DESIGN CHART



FLANGE DEPTH must be 3/8-in. minimum (a). If holes are punched in flange, depth should be 1/2-in. or 9/16-in. Radius of curvature for flange should be 1/4-in. minimum. Insufficient radii cause covering troubles and present chipping hazard.

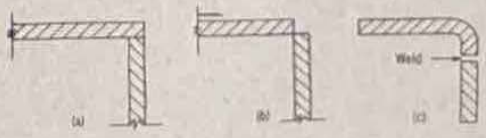


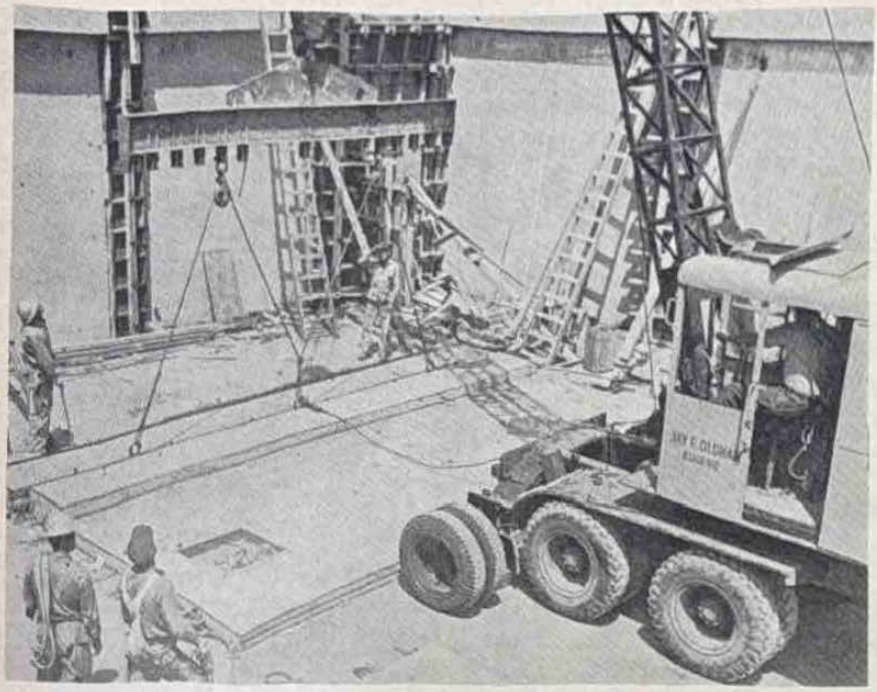
HOLES should be 5/16-in. diameter or larger (a). Hole should be 1/16-in. larger than bolt diameter (b). Extruded holes (c) should have minimum radius of 3/16 in.



ALLOWANCE should be made for enamel thickness in designing assemblies. Use 1/16 in. between mating parts to allow for fabrication deviation and enamel thickness.

PROVIDE FLANGE SUPPORTS if possible. In (b) A equals B equals 1/3 F for best design practice.





CUTOUTS in flanges should be avoided. If needed, (b) shows good practice, (a) and (c) poor practice in which enamel defects may be expected.

EMBOSSING is excellent method of stiffening panels and reducing deformation in enameling. Minimum radii remains same: 1/4 in.

WELD as shown in (b) or (c). In (a) incorrect practice is illustrated.

CRANE CAN MANEUVER with loads up to 20 tons as small dual pneumatic wheels replace conventional outrigger screws. Outriggers devised by Oregon contractor fit three different rigs.

Mobile outriggers increase versatility of crane

THE TILT-UP method of wall construction has appeared for some time to be a half-step ahead of the equipment used to raise tons of pre-poured concrete panels into place.

That was the thought, at least, of Jay F. Oldham, Oregon contractor and heavy equipment expert, who evolved a new method to speed erection of the W. T. Grant Co. store in Eugene and in so doing made his crane equipment more versatile. Oldham placed panels for Hilp & Rhodes, San Francisco, general contractor.

There are 20 panels for the first floor and 10 for the second floor of the project, designed by John Bolles, AIA, of San Francisco.

The large department store building is one of the first major structures in Eugene to utilize the tilt-up method and the first on which the new invention was tried and proven successful.

Oldham's idea: A mobile set of outriggers which permits a truck crane to pick up and walk with up to 20 tons without visible strain. Up to this development, the crane was anchored by immobile outriggers and considerable time lost in jockeying equipment through jerky stages of blocking, shifting and re-blocking to properly place heavy panels.

Made in Jay F. Oldham shops under direction of George McKibben and Oldham, the mobile unit is 12 ft. from outside to outside wheel. It is transported to the job by an accompanying service pickup truck.

Fairly simple in construction, the device consists of a steel axle welded to a plate which is bolted to a plate on the end of the I-beam. Duo wheels add stability and help support the load. Identical alignment permits the same bolts used on the stationary outrigger screws to be used with the mobile unit which attaches readily to any of three varying Thew-Lorain cranes used in Oldham's operations.

An unusual problem confronted contractors when it was found the basement floor elevation was actually 2 ft. below the then existing grade water line. In spite of this, the basement is fully sealed.

To accomplish this, a 2-in. seal was first put down followed by a membrane. A second seal was then laid and reinforcement placed. Atop these layers the 12-in. concrete slab was poured. Both open pit and well points were used to pump the area.

Builder hauls long lumber with tubular steel bar

A unique and effective bar to permit the safe hauling of loads of long lumber on short-bed trucks has been developed by a Denver, Colo., home builder who specializes in custom construction.

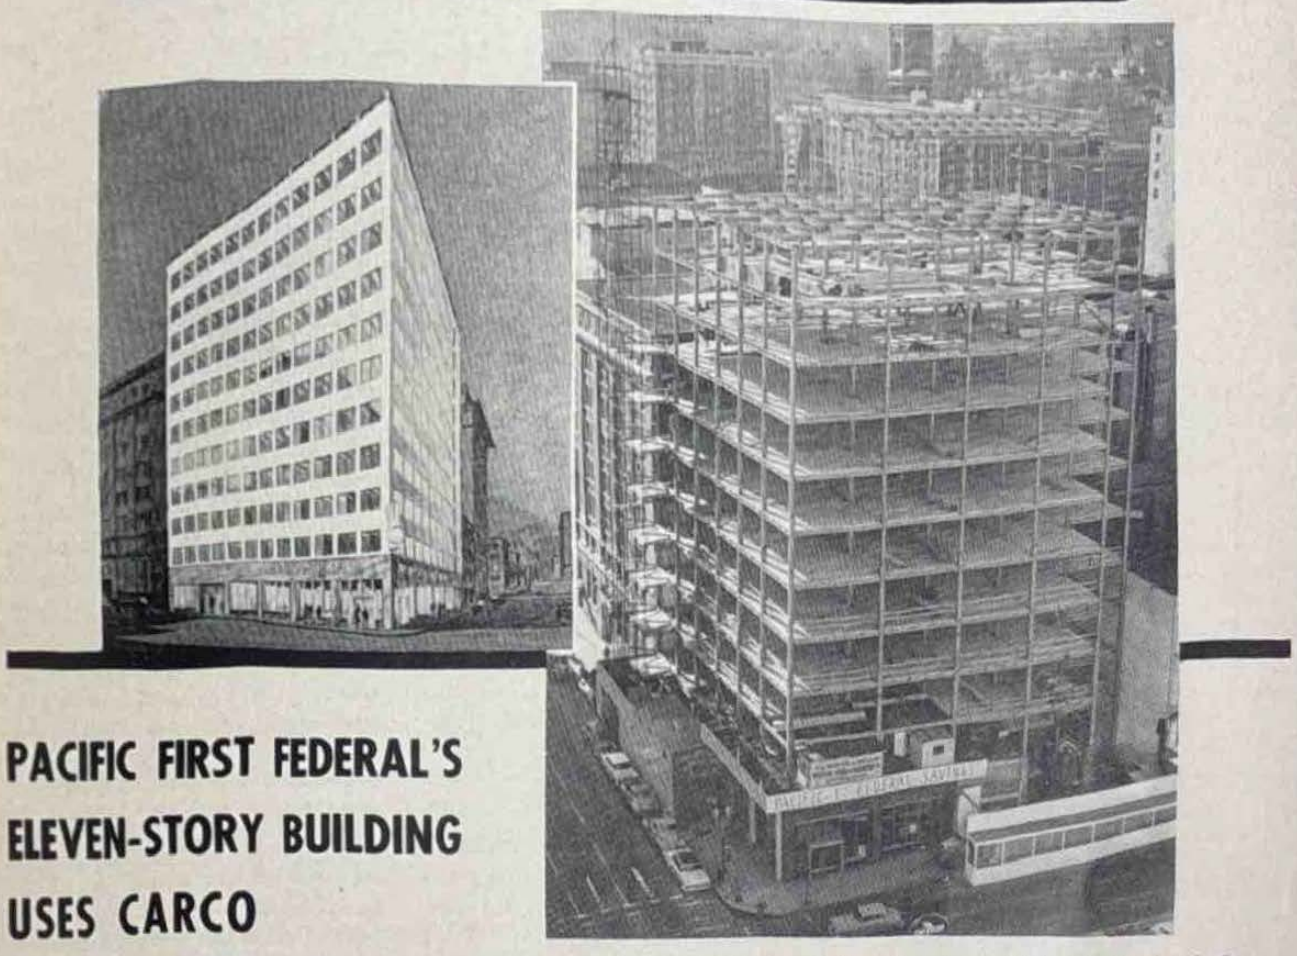
Harry E. Scott's pickup truck serves as his workhorse and the idea for the new gadget came as he was trying to haul 400 fbm. of 18-ft. stock to a jobsite. He lost the load three times in as many blocks and finally had to call in a larger truck to get the material delivered.

The thought occurred to the builder that he could have handled the load if he had a bar across the front of the bed of the truck to restrain the upward motion created by the overhang. The result: Scott's Lock-Tite bar of rugged construction using tubular steel.

Home builders who want additional information concerning the Lock-Tite bar may write Reader Service, Pacific Architect and Builder, 2418 Third Ave., Seattle 1, Wash.

The bar will hold at any position in its operating range and the lock can be released with one hand. Material is loaded beneath the bar. When the truck is loaded, the bar is compressed with foot pressure.

Scott bands light stock at the overhanging end so that it will not feather out when the truck is turned. The lock is designed to permit downward pressure only and it must be released by a trip lever.



The bar is bolted through its frame to the sides of the truck, 6 to 8 in. from the front of the pickup bed. The head frame and bar can be removed in a minute. A friction clutch prevents the lock bar from releasing its downward pressure.

Scott has hauled lumber, timber and irrigation tubing of all kinds, lengths and sizes as well as tubular concrete forms, full length reinforcing rods and 12-ft. drywall.

TUBULAR STEEL Lock-Tite bar is displayed by its inventor. Note bar installed on pickup truck.

ANOTHER EXAMPLE OF CARCO "one stop" STEEL SERVICE

PACIFIC FIRST FEDERAL'S ELEVEN-STORY BUILDING USES CARCO FABRICATED STEEL

Architect: Stanton, Boles, Maguire and Church, Portland, Ore.
Structural Engineers: Cooper and Rose, Portland, Ore.
General Contractor: Hoffman Construction Co., Portland, Ore.

Late in 1956, the Pacific First Federal Savings and Loan Association of Portland, Oregon, will have completed, at a cost of about $2,000,000 their handsome, new building.

Located on a 100' by 100' site at the corner of Yamhill Street and S.W. Sixth Avenue, the new structure is to be eleven stories and basement.

The enlarged quarters of the bank will occupy 70% of the basement and first floor. The remaining area of about 76,500 square feet will be rented.

The lower floor, including the banking facilities, will be trimmed with red and black granite. Above the first floor, the two street fronts and the west wall are to be faced with white marble. The upper eight floors will have identical window spacing. All windows will be double glazed in aluminum frames.

A few of the other features of this modern structure will be complete air conditioning, three high-speed automatic elevators, cellular steel floors for flexibility of electrical services and extensive sound conditioning.

Worthy of note is the fact that the original five story, reinforced concrete building was demolished and the new structure is to be erected while the bank continues to occupy their quarters in the first floor and basement.

Pacific Car fabricated and erected 485 tons of structural steel for the new Pacific First Federal building. High tensile bolts were used to join the steel framing. This type of erection is quiet, fast and economical.

Let Carco help you solve your steel problems regardless of whether your needs are large or small. Remember, Pacific Car offers buyers of structural steel not only the largest fabricating facilities in the Northwest but also a "one-stop" steel service. This means money-saving ideas and suggestions, prompt engineering detail and estimates, fabrication and erection.

THE KAWNEER TOUCH...

THE RESULT OF 50 YEARS OF ARCHITECTURAL COOPERATION

Throughout its 50 year history Kawneer has worked closely with architects in the development of architectural metals. The invention of resilient sash by the *architect-founder* of Kawneer revolutionized store design and retail merchandising. It was the foundation upon which many other architectural products were developed and manufactured over the years. Since the very first installation of Kawneer sash in the Johnson Department Store in Holdredge, Nebraska, in 1906, to the many thousands of modern store fronts and other buildings today with Kawneer doors, sash, trim, windows, metal wall and sun control products, compelling design has been the main consideration.

Pioneer in Aluminum Fabrication

The ability to give architectural metal products a certain "touch" has given Kawneer the opportunity to build products for all types of buildings. For example, Kawneer pioneered the use of aluminum for curtain wall construction and windows. Such notable buildings as the St. Paul Post Office, the Mellon Institute of Industrial Research and Boulder Dam Power House featured the famous Sealair windows and cast aluminum spandrels. Today, outstanding monumental edifices like the new, modern Tishman Building in Los Angeles and the Equitable Life Assurance Building in San Francisco feature metal wall construction by Kawneer. In the 30's, Kawneer was the largest aluminum window manufacturer in the U. S. The famous Sealair name was known as the ideal metal sash for home, office and factory. World War II stopped production of this window, but today it has returned again with outstanding features designed for the architect.

The great diversification of Kawneer architectural products and the company's leadership in the field of store front design, to a great extent, is due to the cooperation between the architectural management of Kawneer and the practicing architect. When it became apparent that World War II was ending, Mr. Lawrence J. Plym, President of the Kawneer Company, engaged a leading architect to help develop Kawneer-advanced store front design theories.

By this time, Kawneer had had experience in working all of the commercial metals—copper, bronze, steel and aluminum. It became apparent that aluminum was the ideal architectural metal because of its attractive appearance, corrosion-resistance, light weight and workability.

New Store Front Concept Created

The ideas that the consultant architect and the Kawneer staff developed have since become criteria for the entire industry. Useless ornamentation, or "rococo" were eliminated. The intrinsic beauty of aluminum was accentuated in simple, functional metal design. The concept of the "open front" was advanced. It was believed that the desired effect of the full vision front would be attained when framed. As a result, many king-size trim-mouldings were introduced into the Kawneer line. The tremendously appealing flush glazing was developed. The result of this cooperation was the "K-47" line of architectural metals that have a professional design character, yet can be purchased out of stock.

Out of the post-war development came a new idea in aluminum facing. This is the product we all know today as ZOURITE. The consultant architect designed the profile of this facing while Kawneer engineers were experimenting with certain types of finishes. Although a regular alumilite finish

was in demand, a group of colors would make this product much more versatile. Many experiments were conducted with lacquers, baked enamels, paints and porcelain. None were quite satisfactory. Then, despite the low melting point of aluminum, Kawneer and DuPont pooled resources and for the first time, applied porcelain enamel to aluminum successfully to a production process. Today, Zourite is available in 10 different colors and a new additional profile has been designed that comes in pastel shades and alumilite. The color and profile combinations give the architect great versatility of design. Since the first Zourite, the use of color in architectural metals has become one of the major design focal points.

The K-47 line of architectural metals brought forth new concepts in store design. As a result of this research, many books were published to assist the architect. Illustrations developed at great expense are still available to act as guideposts.

In Constant Touch with Architects

The interest in new products grew to an enthusiastic pitch as a result of the immediate post-war development. Kawneer's Research and Development Department grew by leaps and bounds. The size necessitated formal working agreements with architectural firms. These firms act as consultants by establishing design criteria for proposed projects. They help in specifying the desired features, functions, size and modular requirements. Throughout the development period, the solutions to these requirements are reviewed by practicing architects.

To round out the development work in relation to the architect's needs, an architect with a heavy background in architectural research is retained on the Kawneer staff. He is concerned with desirable sizes and modular standards. He works with a group of the more prominent architectural firms so that their thought is brought into the design considerations.

Finally, Kawneer makes sure by surveying a large cross section of architectural firms during the formative stage to gather opinions and demands. If you have seen the phrase "Demand-Designed" in regard to a Kawneer product, this survey technique is the reason why.

After 50 years of close cooperation with architects, Kawneer can truthfully claim to have always been in "touch" with the profession and construction industry. Today the line has greatly diversified to include metal wall, flush doors, sun control products and other assemblies for big buildings, little buildings, stores, offices, factories, schools, et al. The organization has grown to include 12 factories and warehouses, over 110 salesmen covering the U. S., Canada and Latin America, and more than 1200 factory-trained dealers. From research to the installed metal, Kawneer devotes itself to the needs of the architect.

HOW YOU BENEFIT TODAY FROM THE KAWNEER TOUCH

- Good workmanship by skilled artisans for better-looking buildings.
- Extensive and modern production and warehouse facilities to insure prompt delivery.
- Research and development section cooperating with architects, to design new products for the construction industry.
- Thoroughly experienced engineers to provide precision products for quick and accurate erection.
- Nationwide company sales force for immediate counsel and service.
- Large factory-trained dealer organization for quality installation to conform to specification and design.

NEW PRODUCTS to commemorate 50th Anniversary

Kawneer maintains an extensive Research and Development program to contribute new products to the construction industry. Very soon, a number of new products will be announced in commemoration of its 50th Anniversary. Look for the announcement in the coming issues of this magazine.

The first truly modern store front with large display windows in Kawneer resilient sash.

The St. Paul Post Office and Customs House features Kawneer windows and spandrels.

The modern Tishman Building in Los Angeles features Kawneer Metal Wall including specially constructed louvers.

The modern store front of today represents the new "open front" concept for greater merchandising effectiveness.

foremost fabricator of aluminum and plastics for the construction, aircraft and appliance industries

West leads nation in housing activity during 1955

Based on a ratio of housing starts to population, western states are leading the nation in housing activity, a survey by the United States Department of Commerce shows.

During 1955, the West, with 139 starts per 10,000 population, was 81% ahead of the second highest southern states and 70% higher than the national average.

The department's year-end resume of the national construction picture points to:

More single-family residences

Shift to larger homes

Higher materials prices

Higher Wages

Large cities continued to gobble up the major share of new housing, with three-fourths of the starts located in metropolitan areas during 1955. As in 1954, Los Angeles led the 10 top metropolitan areas in number of housing units last year and the San Francisco-Oakland area was sixth.

Nationwide, the dollar value of new private home building in 1955 rose to nearly $15 billion, highest since the record year of 1950. The importance of housing to the construction field can be seen in the fact that this $15 billion is 36% of the entire national bill for every type of construction.

More than 1,300,000 privately owned housing units were begun in 1955, a bare 52,000 below the record year of 1950.

Reflecting the strong trend toward home ownership, more one-family houses were put under construction in 1955 than in any previous year. Nine out of 10 dwelling units started were single-family.

Another outstanding trend in the home building field is the shift from smaller to those in the moderate size range and the increasing number of three-bedroom houses.

In other building fields, plant expansion climbed 18% to a record $2.4 billion. Increases were especially substantial in the iron and steel and nonelectrical machinery groups and in the rubber and paper industries. Dollar volume for both store and office buildings rose substantially in 1955.

While most of the office buildings went up in the cities, over half of the stores and gasoline and service stations were scheduled for the fast-growing suburbs.

Substantial advances in the prices of metals and metal products, coupled with wage increases, kept construction costs rising steadily until November of last year when they began to level off at a rate about 5% higher than 1954. More than half of the increases occurred last summer when rising prices for steel, copper and aluminum were reflected in the prices of such products as structural steel shapes, reinforcing bars, pipe, plumbing and heating equipment and metal sash.

In general, the greatest increases occurred in metal products, structural clay products and the hardwoods. Moderate increases of 3% or less were reported for Portland cement, concrete products, paint and paint materials, building board and the major softwoods. Millwork and insulation material prices declined.

Employment also increased in 1955, rising some 4% on a national scale but considerably higher in the Pacific States and in New England. Wage rates continued to advance, the most frequent increase provided in new union contracts being 10 cents.

Fringe benefits also continued to gain in importance.

For the second consecutive year, work stoppages declined.

NONFARM HOUSING STARTS IN RELATION TO POPULATION

	Number of starts per 10,000 population—in relation to total population		Number of 1955 starts per 10,000 population—in relation to population increase between 1954 and 1955

It's better to plan than patch (telephone facilities, that is)

People who are shopping for a new home like to feel that every modern convenience has been built into the house they select. Exposed wires, for example, are a dead give-away that telephone outlets were put into the house rather than planned into it. Yet it costs so little to put built-in telephone facilities in your plans.

Why not take advantage of Pacific Telephone's free Architects and Builders Service. Let us help you plan the kind of telephone facilities every buyer expects to find in his home.

Put built-in telephone facilities in your plans

Pacific Telephone

Building permits hit nearly $200 million

REVERSING the trend of the past few months, dollar volume of building permits in the five western states climbed back up to nearly $200 million for January.

The increases were fairly widespread with slightly more than half of the 116 building permit agencies reporting increases over a year ago.

The $197,528,347 total for January is a 15% increase over a year ago, thus halting a trend begun last October when monthly dollar volume began to slide below the previous year's totals. The January volume, highest since last September, is also a substantial 32% over December of 1955.

On a statewide basis, only Washington reported a decrease from last year, 25%; California was up 23%; Oregon, 15%; Montana, 5%; and Idaho, 82%.

In comparison with December totals, Montana had a 60% drop and Idaho, 59%, but California was up 34%; Oregon, 67%; and Washington, 21%.

Most of the major metropolitan areas reported increases over both January 1955 and December. Los Angeles was up $5¾ million over a year ago; Los Angeles County $5 million; Orange County $7 million; San Francisco $6¾ million; Portland $1¼ million; Spokane $¾ million. King County dropped $2½ million; Seattle was down $2½ million; and Multnomah County was down $½ million.

Dwelling units continued to take the lion's share in metropolitan areas, as shown in the following breakdown of building permits issued by a few major agencies during January:

	DWELLING UNITS	COMMERCIAL & INDUSTRIAL	PUBLIC
Portland	87 ($ 843,475)	20 ($1,812,325)	3 ($ 225,000)
King County	321 ($ 2,947,360)	32 ($ 196,144)	3 ($ 484,342)
Seattle	450 ($ 2,817,640)	136 ($1,497,685)	2 ($ 295,000)
Tacoma	96 ($ 486,725)	30 ($ 507,100)	
Los Ang. Cnty.	2307 ($24,085,309)	931 ($5,598,710)	12 ($ 288,500)
Orange County	1368 ($11,777,608)	65 ($1,153,745)	51 ($3,425,476)

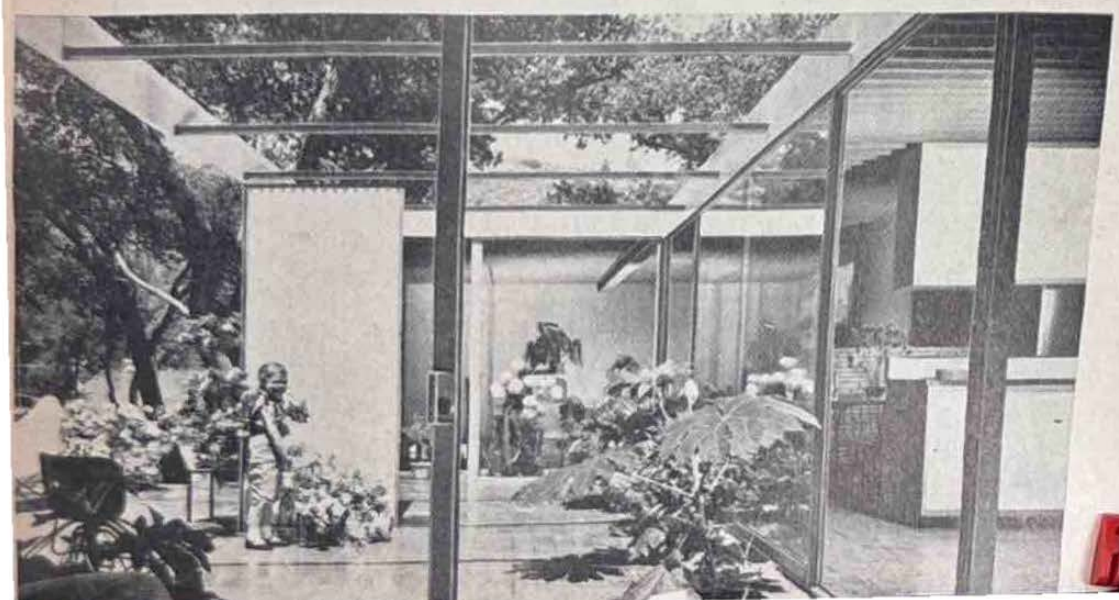
How to stretch a $12,000 home-building budget . . . using steel

It's a familiar story: young couple . . . house hunting . . . small budget . . . big plans. Usually, couples like this must either lower their sights or wait until their savings grow. Usually—but not always. Here is a new home that has everything its owners wanted . . . at a price they could afford: under $12,000.

The couple wanted a small, easy-to-care-for home; but wanted it to be open and big *looking*. They wanted a lot of natural light inside; but their building site was heavily shaded. Above all, they wanted a sturdy, substantial structure; nothing flimsy. Using steel (for frame, siding and roof decking), designer Pierre Koenig delivered all these features: Steel frame needs no inside support, so this home's 1,000 sq. ft. interior is open and uncluttered with conventional bearing walls. Thin, trim steel columns leave large perimeter areas open for steel sliding door frames. Thus, all available sunlight is utilized, giving a light, cheerful atmosphere on a shaded lot.



FRAME AND ROOF UP IN 2 DAYS: The steel framework was cut and joints electrically welded (for clean, smooth joints) at the shop, then transported to the building site for easy erection. With a minimum number of job welds necessary, the framework and 1400 square feet of roof decking were in place in two days.

CORRUGATED STEEL SIDING: The designer saw galvanized corrugated steel sheet as a strong, "different looking" siding material. The steel sheets, painted a light blue, are fastened to the steel channels. The result is a very economical, durable and attractive siding.

SEALED IN CONCRETE SLAB: With the frame in place, and siding fastened, the concrete slab was placed. By so burying the steel at a marked height (see cross-sectional drawing), all details are simplified and everything is waterproof. And it makes for a quick, economical job . . . and solid construction.

There are any number of additional advantages to building with steel. Among them is low upkeep; no problem with termites; no warping and checking. The obvious strength and long life of steel predicts a better loan value and lower insurance rates for this type of home.

T-square talk

about architects • planners • engineers

TO ITALY: Fred Bassetti, AIA, is on a year's leave of absence from the Seattle firm of Bassetti & Morse to serve as architectural consultant on housing to the National Productivity Center of the Italian government in Rome. It is believed his job will be mainly an administrative one, involving from four to eight housing developments, some of which will be experimental.

Bassetti, who with his wife and children sailed for Naples from New York City early this month, is being sponsored by the International Cooperation Administration of the State Department.

NEW OFFICES: Norris M. Gaddis, AIA, has opened an office for the general practice of architecture at 632 Grand Ave., Oakland (TEmplebar 2-6133). He formerly practiced in Eugene where he was on the faculty of the School of Architecture and Allied Arts at the University of Oregon.

Robert F. Rathjen has opened an architectural office at 213 Lake St. S., Kirkland, Wash. (VAndyke 2808). Since graduating from Washington State College, he has worked with the college architect at Pullman; Whitehouse & Price of Spokane; and Naramore, Bain, Brady & Johanson of Seattle. Rathjen has had his own office in Seattle and more recently in Houghton, Wash.

Douglas L. Cuykendall has opened an office at 4114 Arcade Bldg., Seattle (MAin 4777).

NEW PARTNERSHIPS: One of Seattle's oldest architectural firms, Victor N. Jones & Associates, with offices in the Republic Building since 1929, has formed a new partnership under the name of Jones, Lovegren, Helms & Jones. The partners, all AIA members, are Victor N. Jones, Lloyd J. Lovegren, Kenneth C. Helms and Gayne L. Jones.

Prior to 1946 the senior partner and Robert McClelland operated a partnership in the same suite of offices under the name of McClelland & Jones which, in turn was an outgrowth of McClelland, Pinneh & Jones.

Lovegren, who heads the Washington State chapter, AIA, has been associated with the firm since 1945 and previously was identified with the Lake Washington Floating Bridge.

Helms came to Seattle from Illinois for his part in the design of the University of Washington Medical School in 1946 and has been with Jones since.

Gayne L. Jones, the youngest partner, was graduated from Washington State College in 1951.

An associate of the firm, John T. Jacobsen, is on leave in Honolulu.

In Great Falls, Mont., Ray L. Amundson has joined A. L. Bordeleau and James Pannell in the architectural firm of Bordeleau-Pannell & Amundson. The new partner came to Montana from Minnesota in 1950 to join Bordeleau and later became associated with McIver, Hess & Jaugsjaa, with whom he has been engaged up to now.

BRANCH OFFICES: Victor Louis Wulff, AIA, of Spokane has opened a branch office at 507 N. Fourth Ave., Pasco, Wash. The architect's field inspector, Al Raber, is in charge of the Tri-City area operation.

ON THE MOVE: The architectural firm of Rushmore & Woodman has moved to the J. S. Ditty Building at 602 104th St., Bellevue, Wash.

Another Bellevue architect, Warren Huntington Smith, has gone to Holland as an exchange student.

SEMINARS IN SEATTLE

A six-week series of seminars on architectural practices will get underway this month in Seattle and continue through March at the new headquarters building of the Mountain Pacific chapter, AGC. Designed particularly as preparation for individual practice, the sessions will be sponsored by the Washington State chapter, AIA, but open to nonmembers. Merrill S. Rich is seminar chairman. Dates and subjects follow.

February 20: Estimating Construction Costs.

February 27: Use of Paint, Stain, Plastics.

March 5: Use of Wall Materials —Masonry, Plaster, Acoustical.

March 12: Use of Aluminum and Steel Windows, Curtain Window Walls.

March 19: Job Inspection—What to Look for.

March 26: Seattle's New Building and Zoning Codes.

SHARE OFFICES: Robert Germaine Thompson, AIA, and Robert L. Tidball, structural and mechanical engineer, are now sharing offices at 7404 S.W. Macadam Ave., Portland.

Thompson for six years was with the architectural firm of Dougan & Heims. Prior to that he was with Annand & Kennedy; assistant naval architect at Albina Engine & Machine Works; and with Graham Smith, architect, at Eugene.

Before opening his own firm in 1946, Tidball served in the Navy and was in the power design section of the Corps of Engineers.

DIED: Thorkel M. Haaland, 45, assistant professor of architectural engineering at Washington State College died January 15 following a heart attack. A native of Tacoma, he had been at the Pullman campus since 1949.

Fred Wilbur Howard of Burlingame, Calif., nationally known structural engineer, died January 27 after a long illness at the age of 71.

PRIZE-WINNERS: Three West Coast projects are in the prize money in the $25,000 porcelain enamel design competition sponsored by Ferro Corp. of Cleveland. Honorable mention awards of $500 each have gone to Bassetti & Morse of Seattle for a community youth center and to Falk & Booth of San Francisco and to Charles A. Metcalf, Roland H. Lane and Mark L. Pence of Seattle for elementary schools.

SPEAKERS: Victor Gruen, one of three designers to plan Detroit's new 110-acre downtown area, described the realities of city redevelopment January 31 to a meeting of the San Francisco Planning and Housing Association. The Los Angeles architect referred to the project as "the invention of a new type of residential community aimed at attracting back into the city the involuntary suburbanites who have to live in the suburbs even if they hate to mow lawns, because they can find no satisfactory city dwelling."

Two Seattle architects, Marvin R. Patterson, chairman of the Northwest regional AIA committee on research, and Edward J. Baar, AIA, will discuss color when the SCPI Pacific Northwest Brick & Tile Association holds its annual meeting in Seattle's Construction Center March 2.

AIA activities

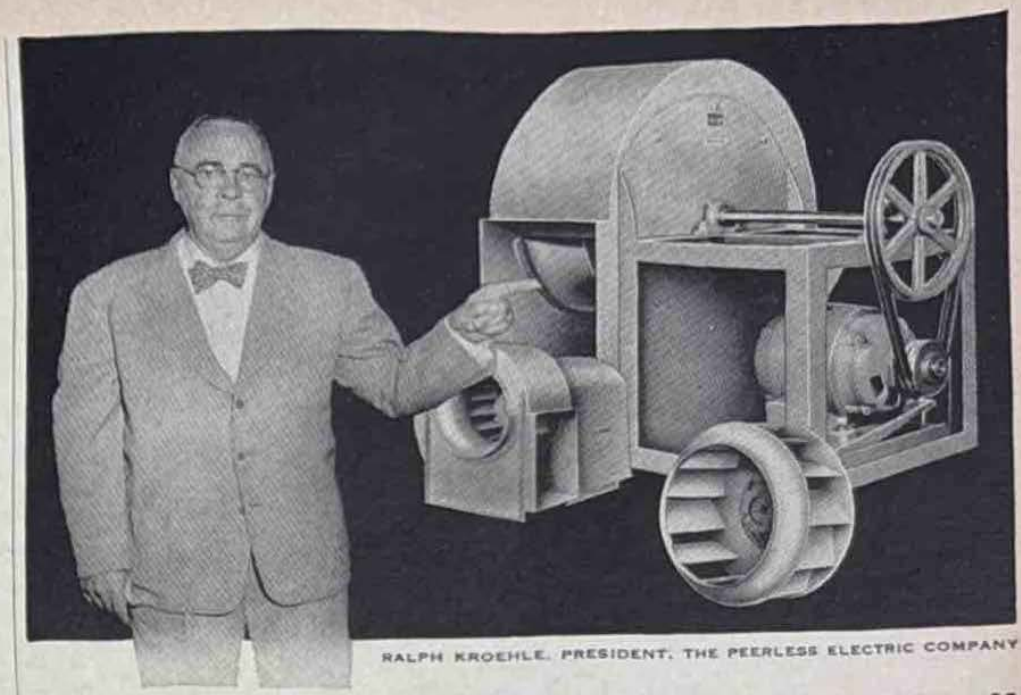
Southern California: Paul Robinson Hunter is the new president of the chapter which will host the national AIA convention in Los Angeles at the Biltmore Hotel May 15-18. Stanley R. Gould has been named vice president; John Aleck Murrey, secretary; and Graham Latta, treasurer.

Directors are Stewart S. Granger, three years; George Vernon Russell, two; and C. M. Deasy and William Glenn Balch, one.

Oregon: New officers will be honored at the annual banquet scheduled for Tuesday evening, February 28, at Riverside Golf and Country Club, Portland. They are: Donald W. Edmundson, president; Earl P. Newberry, secretary; Charles Gilman Davis, treasurer.

Dr. O. Meredith Wilson, president of the University of Oregon, will be the principal speaker, using the topic, "The Architect in Contemporary Society."

The officers will be installed at the regular meeting February 21 by Waldo Christenson of Seattle, Northwest regional director. In addition to the officers, the new executive committee will be composed of Donald J. Stewart, retiring president, and two holdover directors: Holman J. Barnes and H. Abbott Lawrence.



Montana: At their midwinter meeting in Helena February 4, 30 architects recommended that a committee meet with engineers to discuss a proposed licensing law. Sigvald Berg, as arrangements committee chairman, was in charge of the all-day session.

Among the speakers were James M. Tindall, executive assistant to the state superintendent of public instruction, who spoke on the state school consultant and the federal school building law as it relates to Montana.

The next chapter meeting is scheduled for Bozeman in May.

San Joaquin: New officers of the chapter, which maintains headquarters in Fresno, are Phillip S. Buckingham, president; Allen Y. Yew, vice president; James J. Nargis, secretary; Paul C. Shattuck, treasurer; and William G. Hyberg, David H. Horn and Alastair Simpson, directors. Simpson and Buckingham were named as delegates to the California Council of Architects.

Southwestern Oregon: Thomas Balzhiser of Eugene will serve another year as chapter president. Other officers are Cleo Jenkins, Corvallis, vice president; Alan G. Seder, Eugene, secretary-treasurer; and Robert Fischer, Grants Pass, and Chris Jeppsen, Corvallis, directors.

RALPH KROEHLE, PRESIDENT, THE PEERLESS ELECTRIC COMPANY

"...THE BEST BLOWER ENGINEERING..."

● Peerless engineers work under orders to give every fan and blower "the best possible engineering." Our engineering standards now meet or exceed all industry codes. The reason is simple.

COMPLETE ENGINEERING— Peerless builds its own motors and job matches them to meet blower requirements. They have the advantage of being one complete unit, tested thoroughly for motor characteristics, speed and drive alignment.

HEAVY CONSTRUCTION— Peerless frames and housings are better and of heavier construction than any competitive products. Construction is all-welded. The result is a vibration-free unit.

NAFM STANDARDS— Peerless Backward Curve Belt Drive Utility Blowers in sizes from 12½" to 36½" meet all NAFM recommendations. They have self-limiting horsepower characteristics and dynamically balanced wheels with matched spun cones. There is nothing in the air stream. Operation is exceptionally quiet.

CERTIFIED RATINGS
AUTHORIZED BY
NAFM

PERFORMANCE DATA— Complete data on Peerless fans and blowers is cataloged for easy reference. Bulletin SDA-160 shows all fans and forward curve blowers. Bulletin SDA-200 gives all data on backward curve blowers (NAFM) from 12½" to 36½". Write for your file copy. Dimension prints are available on request.

Materials – Products – Tools

and the latest literature

PLYWOOD PANEL: A quality panel made from saw-log plywood filled with plastic and coated with Crezon, a resin cellulose plastic sheet, has been developed by United States Plywood and Crown Zellerbach.

Trade-named Duraply, it will sell for considerably less than plastic surfaced plywoods now available. Other features include check-free surface, excellent paint finish, wear and moisture resistance and easiness to work with ordinary wood-working tools.

Duraply panels are available in 4x8-ft., 4x9-ft. and 4x10-ft. panels of varying thicknesses with Crezon bonded to one or both sides. It is recommended for both exterior and interior applications.

(Item No. 1)

PERSPECTIVES: A new system of perspective drawing providing photographic accuracy, yet simple and fast in the representation of a subject on a plane surface has been developed by a Seattle firm, Perspective, Inc.

The system uses a series of printed grids and the firm is now offering basic sets of seven grids in three different sizes for both exterior and interior rendering, plus a selector chart for determining which grid and grid position to use for the viewing angle desired.

(Item No. 2)

BUILDING BLOCK: A lightweight building block designed by Empire Building Material for use in firewalls has been tested and granted a four-hour rating by Underwriters Laboratory Inc.

The new fire block is an 8x8x16 expanded shale unit with 1⅝-in face shell, one square end and weighing only slightly more than the conventional Lite-Rock block.

(Item No. 3)

SCHOOL FURNITURE: To resist the sometimes destructive impulses of kindergarten and lower grade pupils, National School Furniture is marketing a line of furniture with plastic laminated surfaces both exterior and interior. Matched units can be used in a wide variety of combinations and groupings.

(Item No. 4)

FLUORESCENT LIGHTING: For commercial installations, Electro Silv-A-King has developed an addition to the Skylouver series featuring a thinner, lighter feeling through use of a ½-in. Poly-cube polystyrene louver basket providing 45x45-degree shielding.

The appearance of a one-piece louver basket bottom is achieved in each 4-ft. Skylouver because there is no visible supporting bar for the louver. This series is designed for either pendent or flush mounting and can be continuous row mounted without additional parts.

(Item No. 5)

FOLDING DOOR: New type concealed spring connectors ensure quiet operation of the latest model Rolscreen

SILENT FOLDING DOOR

wood folding door. Panels fit closely together so that doors fold to a compact stack only 2 in. or less for each foot of opening width. Nylon rollers also have been added.

(Item No. 6)

DRAFTING TOOLS: A tray for tools that keeps them off the drawing board, yet within easy reach is being marketed by Draftray.

This is a partitioned tray attached to an adjustable arm which clamps to the edge of the drawing board. It provides orderly space for draftsman's tools and can be adjusted to correspond with all angles of the drawing board.

(Item No. 7)

WALL PANEL: For greater economy in light gage metal, curtain wall construction, Detroit Steel Products has added a field assembled wall panel to its Fenestra line.

Designated Type FA, panel components can be shipped to the jobsite where erection and fabrication take place at the same time. A quick and easy assembly method of erection produces a panel 24 in. wide and 3¼ in. deep. Wet, slow curing materials are eliminated.

(Item No. 8)

EXHIBIT MATERIAL: A rubber-like material for display and exhibit backgrounds so lifelike it has to be touched to be believed is being marketed under the trade name Texture-Flex.

Originally developed for Broadway and TV productions, the material duplicates such items as weathered wood planking and shingles, fieldstone, cut stone, old brick, herringbone brick, flagstone and tree bark.

Light in weight, it may be stapled to vertical or horizontal surfaces and when not in use can be rolled or folded for storage in a small area.

(Item No. 9)

CERAMIC TILE: Mosiac Tile has announced addition of Bluegrass Green quarry tile to its line. The tile was developed to provide a subtle color that would harmonize with other tile shades and afford a neutral background for furniture and furnishings in homes and institutional and commercial buildings.

Like other colors in the line it completely permeates the tile and can neither fade nor wear off.

(Item No. 10)

TRANSLUCENT PANELS: Two specialized panels have been added to the Alsynite line of translucent fiberglass products, one for residential use and one for commercial applications.

The residential Fiesta is available in eight colors and features Filtron 25, a new heat-blocking formula said to reduce light and heat, and armor plate surface for longer life and wear.

Industry panels also have the armor plate surface, plus improved color stability and equalized light transmission.

(Item No. 11)

SLIDING GLASS DOORS: Latest in the Ador line of all-aluminum sliding glass doors is a unit specifically designed and priced for multiple housing construction.

It is available as a single or double sliding unit which can be stacked as a three or four-panel door through addition of extra threshold and header sections. Other features include Alumilite finish and full weatherstripping.

(Item No. 12)

DRAIN PIPE: For sewer and drain application, Carlon Products has designed a lightweight plastic pipe which is moisture and corrosion proof, easy to carry and install.

One man can install 100 ft. of Carlon pipe in 40 minutes using a saw and a can of quick-setting cement. An out-

standing feature of the pipe is its ability to return to original form after being compressed up to 75% of its normal diameter.

(Item No. 13)

PAINT: Three different colored paints can be sprayed simultaneously from a single spray gun with Glid-Tex, a lacquer coating made by Glidden.

No special spray equipment is necessary. Glid-Tex, which comes in a combination of yellow, gray and white is sprayed directly on the base coat and covers approximately 30% of the background color.

(Item No. 14)

COVE MOLDING: A vinyl acoustical tile molding installed by simply pressing it into place has been introduced by A. Z. Bogert. The molding is held firmly by its own tension.

No painting, nailing, adhesive, puttying, retouching or wood ground is needed. Furnished in a natural, soft-finish white, the molding can be painted if desired.

(Item No. 15)

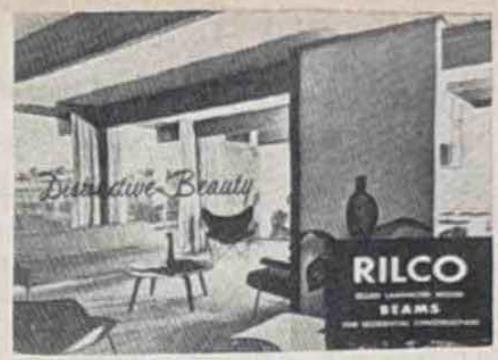
Latest Handbooks, Manuals and Literature

Yours for the Asking

INSULATION: To help architects, engineers and builders solve insulation problems, Infra Insulation has published a 48-page manual called "Heat Flow by Radiation in Buildings."

The manual was written by Alexander Schwartz, president of the company and an expert in the field of heat and vapor flow.

Included are the newest installation techniques for insulating wood joists and studs, steel beams and trusses, ducts, pipes and masonry walls. The manual is liberally illustrated with charts, diagrams, tables and photographs.



(Item No. 16)

HOME ECONOMICS: Many valuable suggestions for designing a home economics department can be found in a 24-page booklet put out by the National Electrical Manufacturers Association.

Called "Planning the Modern Home Economics Department," the booklet is printed in blueprint blue and white and includes actual floor plans from 16 schools plus a number of basic floor plans. It should be helpful in discussions with school boards.

(Item No. 17)

LAMINATED BEAMS: How exposed beam construction for homes provides economy and facilitates open planning is the theme of a Rilco brochure

LAMINATED BEAMS

entitled "Distinctive Beauty."

The four-page brochure contains photographs, drawings and floor plans illustrating use of laminated beams in residential construction. Suggested application data also are given.

(Item No. 18)

SHOPPING CENTERS: Suggested uses for architectural porcelain in shopping centers are depicted in a four-page folder published by Davidson Enamel Products. The folder includes detail drawings, condensed specifications and descriptions of facing panels and double-wall panels.

(Item No. 19)

CENTRAL HEATING: Iron Fireman has published two brochures on its Select-Temp heating system featuring a thermostat in every room.

One concentrates on the home building field and describes units available and features which appeal to home buyers. The other discusses the advantages of this combined steam and forced warm air heating for motels.

(Item No. 20)

WOOD TRIM: Special moldings and trim, both interior and exterior, are covered in the latest technical bulletin offered by the Architectural Woodwork Institute. This is the eighth in a highly popular series.

Drawings of recent installations are included in the brochure.

(Item No. 21)

CEDAR SHINGLES: Five novel ideas for applying cedar shingles on roofs are described in a booklet offered by the Red Cedar Shingle Bureau.

The unusual designs are accomplished by applying extra courses of shingles at regular or irregular intervals on the roof. The bureau calls the designs Ocean Wave, Dutch Weave, Thatch, Pyramid and Serrated.

(Item No. 22)

SLIDING WINDOWS: A brochure by Steelbilt places emphasis on weather-sealing improvements on steel frames for horizontal sliding windows and a complete curtain wall system.

The brochure covers the bottom roller, top roller-hung and dual-glaze Steelbilt frame types. Photographs of the recently completed Colorado A & M dormitories illustrate the curtain wall system which expands the top roller-hung windows into a complete grid system.

(Item No. 23)

ELECTRIC PANELBOARDS: Some 20 pages of engineering data pertinent to panelboard installation and selection is included in a 75-page catalog published by Federal Pacific Electric.

Data include information on transformer connections for distribution voltages, relevant National Electrical Code and Underwriters' Laboratories requirements and circuit breaker characteristics.

Photographs, drawings, diagrams and specifications describe features and construction of each panelboard and aid in their application.

(Item No. 24)

FURRED CEILINGS: Tables on size and spacing of cross furring, types and weights of metal lath and fire resistive ratings are included in "Furred Metal Lath Ceilings," latest technical bulletin in a series offered by the Metal Lath Manufacturers Association.

Details and specifications related to furred ceilings under steel, concrete and wood joists are featured.

Builders and Suppliers

headlining the news

• **Taft-Mercer Construction Products, Inc.,** is the new name of Taft Construction Products, Inc., which was formed three years ago in Seattle. Robert T. Mercer, a registered engineer who was formerly an executive of Mercer Steel Co. in Portland, is vice president and treasurer of the reorganized company. B. A. Taft heads the firm which supplies standardized materials for custom-designed buildings.

• **Associated Home Builders, Inc., of San Francisco** has named William Blackfield, president; Richard H. Mesak, vice president; Rollin E. Meyer Jr., secretary; and M. Douglass Couch, treasurer.

• **SCPI Pacific Northwest Brick and Tile Association** will hold its annual meeting March 2 in the Construction Center, Seattle. Among the speakers will be Robert B. Taylor, director of research, Structural Clay Products Research Foundation, Geneva, Ill., who will discuss the industry's multi-million-dollar research program. The all-day program will end with an informal dinner at the Seattle Yacht Club.

• **Utah Construction Co.,** which is engaged in building a vast development of homes and shopping centers at Moraga, has named Edmund W. Littlefield executive vice president. C. W. Davis and Frank M. Keller have been made vice presidents.

• **Portland Concrete Pipe and Products Co.** has admitted George H. Ehlen to partnership in the manufacturing firm. Ehlen, who has been with the company 17 years, is a director of both the Oregon Building Congress and the Associated Concrete Products Manufacturers. He joins Floyd L. Martin and Hugh P. Ford in the partnership.

• **Northwest Hardwood Association** members attending an all-day conference in Portland January 21 were told that they can develop a thriving industry similar to that which exists in eastern United States.

"West Coast woods compare favorably with the second growth hardwood of the East," according to Jack R. Pfeiffer, research specialist at Oregon Forest Products Laboratory. "We have adequate resources and due to existing, as well as increasing, population trends in western United States, an ever-growing market is provided," he said.

Washington, Oregon and California were represented among the 81 participants in the conference, presided over by E. J. Nist of Seattle Box Co., association president. Harry O. Mitchell, secretary-manager, has an office at 3253 Commodore Way, Seattle.

• **Portland Home Builders Association** will sponsor the seventh annual Home Show March 23-April 1 at the Pacific International Exposition Building. Al Learman will manage the event.

• **Concrete Products Association of Washington** will hold its annual spring meeting in Seattle's Construction Center March 15-17. In addition to general sessions, the block manufacturers will convene Thursday afternoon, while the pipe manufacturers will meet Saturday morning. An informal dinner-dance is set for Friday evening.

• **The Bland Simmons Co.,** 4350 S.W. 86th Ave., Portland, has been named exclusive representative in Oregon and Washington for Sunwarm, Inc., manufacturer of ceiling heating cable and electrical wall heaters.

• **Calaveras Cement Co.** has appointed Harold A. Lovegreen assistant sales manager with headquarters in its San Francisco office. Lovegreen joined the firm in February 1953 and until recently was stationed in Los Angeles as white cement sales representative for southern California, western Nevada, Arizona and Utah.

• **Reynolds Metals Co.** has promoted and transferred two Northwest sales executives. John Clearwater, former aluminum conductor sales representative in Idaho, Montana, Washington Oregon and northern Wyoming, has been transferred from Portland to Seattle where he replaces Richard N. Peters as Northwest division sales manager. Peters, who has headed the sales force in that area for the past two years, is now division sales manager in San Francisco.

SPECIAL TRUCK facilitates making of rapid repairs on building jobs around San Diego area for M. N. Golden Construction Co. Truck holds parts and tools, even welding equipment. Mechanic checks with central office by means of radio telephone.

• **W. P. Fuller & Co.** has elected W. P. Fuller Brawner, formerly vice president, to head the San Francisco firm. He succeeds his brother, A. H. Brawner, who was named chairman of the board.

BRAWNER

Upon graduating from Princeton University in 1924, the new president entered the company as a trainee. He was placed in charge of production in 1936 and elected treasurer in the same year.

Brawner currently serves on the board of the Bank of California, is a director of Emporium-Capwell Co. and president of the board of trustees of Mills College. He is a past president of the San Francisco Chamber of Commerce.

• **Central Equipment and Hardware Co.** of Yakima has changed its name to Dopps & Banks. Company personnel will remain the same.

• **E. F. Herbel,** general credit manager of Pomona Tile Manufacturing Co., has been elected to the board of directors of the Building Material Dealers' Credit Association for a three-year term.

• **B. M. Heede, Inc.,** of Long Island City, N. Y., has opened an office at 260 Kearny St., San Francisco, to assist the industry in problems related to slipform construction and to rent its Concretor hydraulic lifting equipment. While grain elevators and other storage structures have long been recognized as slipform projects, the field is being widened by Heede to include such jobs as apartment and industrial buildings.

• **Superior Portland Cement, Inc.,** of Seattle has named the following

officers: Ned H. Nelson, executive vice president; Jack H. McGoldrick, secretary; P. R. Barrett, assistant secretary; H. E. Thompson, treasurer and assistant secretary; and F. W. Bailey, assistant treasurer. Thomas Balmer, McGoldrick and Nelson were elected to the executive committee.

The company reported net earnings of $1,048,000 for 1955, compared with $914,000 in 1954.

• **Harold E. Parker** of Martinez, who has been constructing homes in the San Francisco Bay area for the past five years, is the new president of the General Contractors Association of Contra Costa County. Other officers: Frederick C. Kracke, reelected executive vice president; John Osmundsen, vice president; Kermit L. Lincoln, secretary-treasurer.

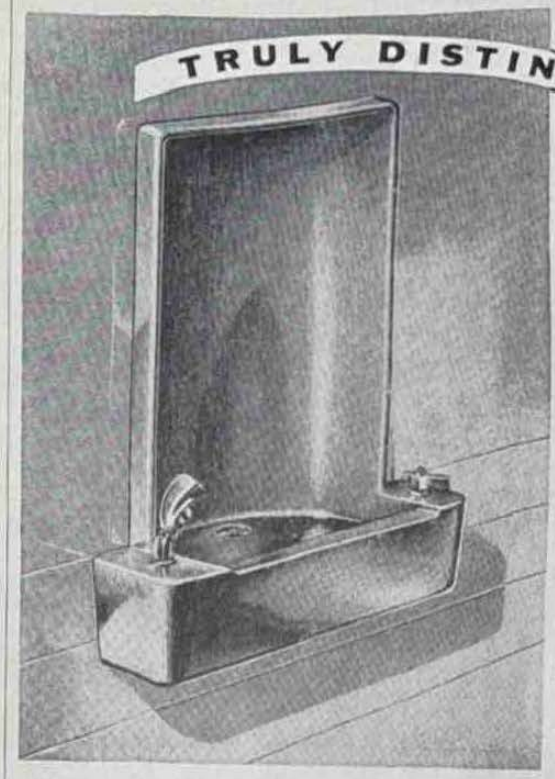
• **Consolidated Machinery and Supply Co., Ltd.**, Los Angeles, has announced several new management appointments. Jim Davidson has been named vice president and general manager. He previously headed the gasoline engine driven power tools division of Mall Tool Co.

Russell Eagles has been promoted to assistant general manager; Wiley Wickman has been named sales manager; and Don Malcham has been named Northwest regional sales manager.

• **The Long-Bell Lumber Co.** has promoted C. L. (Connie) Anderson to the position of general manager of the Vernonia, Ore., division. Anderson, a veteran lumberman, has been assistant general manager since 1953.

• **All-Brite Fluorescent Fixtures of California** has begun a 40,000 sq. ft. addition to the modern 66,000 sq. ft. plant in South San Francisco completed only five months ago.

• **F. J. Hearty & Co.**, Los Angeles, has been named southern California sales representative for Union Asbestos and Rubber Co.'s heating and air conditioning products. Hearty's territory will be south of the San Luis Obispo, Kern and San Bernardino county lines.



• **Georgia-Pacific Plywood Co.** has elected Robert B. Pamplin of Portland to the board of directors. Pamplin is financial vice president and secretary of the company.

• **H. K. Porter Co., Inc.**, has purchased two firms, Henry Disston & Sons, Inc., manufacturer of saws and other tools, and Carlson & Sullivan, Inc., producer of steel rules and measures at Monrovia, Calif. Both companies will be operated as the Henry Disston Division of Porter under the general managership of Lawrence L. Garber, a Porter vice president. In addition to the main plant at Pittsburgh, Disston had five plants, including one at Seattle.

• **Sliding Glass Door and Window Institute**, an organization of 19 southern California firms, has installed Herbert Shull as president. He succeeds Charles Morearty. Other new officers are Frank B. Miller, vice president; Murrell Spence, secretary; Lawrence Bourland, treasurer.

• **Weber Showcase and Fixture Co., Inc.**, of Los Angeles has purchased the entire manufacturing facilities of the Grand Rapids Store Equipment Corp. in Grand Rapids, Mich. The plant will be used to manufacture Weber equipment. Portland, Ore., facilities were not involved in the transfer and will continue to operate as an entity of the Grand Rapids store equipment firm.

• **Kieruliff & Co.**, of Maywood, Calif., has been appointed southern California distributor for the Sonic Servant, a combination radio and home

TRULY DISTINCTIVE IN STAINLESS STEEL...

HAWS

SEMI-RECESSED WALL FOUNTAIN

MODEL No. 73

Smartly designed, extraordinarily convenient is this *entirely new* HAWS Semi-recessed Fountain that takes up little space in corridor or room and has drinking fountain head and operating lever handle accessibly located opposite one another on the top platform. An access panel in wall is NOT required for this fountain and all fittings are accessible from under bowl.

Write today for full details of this handsome fixture that will lend grace to your most exactingly designed public building, office building, school, hospital or restaurant.

HAWS DRINKING FAUCET CO.

1443 FOURTH STREET (Since 1909) BERKELEY 10, CALIFORNIA

intercom system manufactured by Sonic Specialties, Inc.

• **Sylvania Electric Products, Inc.**, has named Charles A. Dickinson special representative for national lighting accounts covering the western region: California, Oregon, Washington, Idaho, Montana, Nevada, Utah and Arizona. Dickinson was Seattle district sales manager for the lighting division for 10 years and more recently handled similar duties in respect to TV sets and radios in the Northwest.

• **Utility Appliance Corp.** has just completed a 105,000 sq. ft. addition to its plant in Los Angeles, featuring a completely conveyorized paint and metal-finishing system for parts for air conditioners, forced air furnaces and other equipment manufactured there.

• **Anaconda Aluminum Co.** has revealed that the firm is considering establishing a plant in the Spokane, Wash., perimeter to make alumina from domestic clays. A pilot plant will be built first to test commercial feasibility of the clay reduction process. The company now produces alumina from imported bauxite ores.

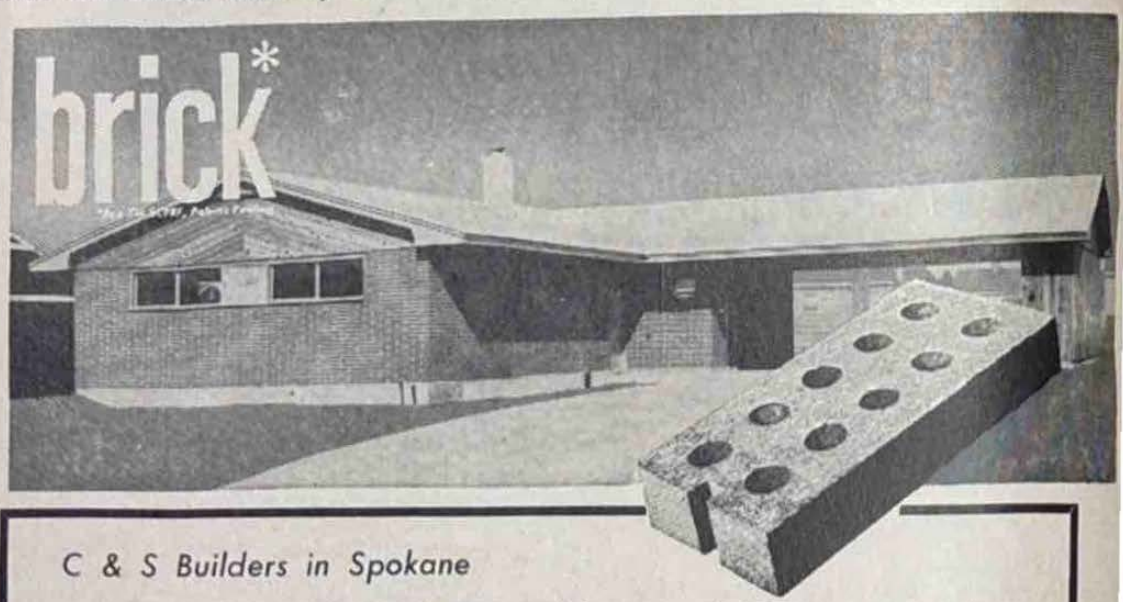
• **Wanke Panel Co.** of Portland and **Lundgren Dealers Supply Co.** of Tacoma are the first in a network of distributors being established on the West Coast for Fine Wood hardwood panels manufactured by Dulaney Plywood Corp. Cruver Sales Co. of Tacoma is in charge of handling arrangements for distributorships for the Kentucky firm.

• **Adams-Rite Manufacturing Co.** of Glendale, Calif., has appointed John W. Cervenka as general sales manager of its builders hardware division.

• **General Electric** has picked Richard C. Schey of Birmingham, Mich., to manage the Northwestern district office of the construction materials division in Seattle. He succeeds William W. Bryan, who has been transferred to the manager's post at the division's Pacific district office in Los Angeles.

• **Douglas Fir Plywood Association** members met recently in Portland to honor E. W. Daniels, chairman of the management committee, who is stepping down after 17 years in the post. Daniels was presented with a 26-ft. pleasure boat and a complete set of fishing equipment.

He is a former president and still active with Harbor Plywood Corp. of Aberdeen, Wash., and has been in forest products work since the early 1920s. Succeeding him as chairman is Arnold Koutonen, plywood manager for St. Paul & Tacoma Lumber Co., who is also a veteran of many years in the industry.



• **Armstrong Cork Co.'s** floor division has inaugurated a consulting service for architects, decorators and builders in the institutional, commercial and mass home building fields. To introduce the architectural-builder consultants program, the company sponsored a closed circuit telecast in color on February 3 on a network of 54 TV stations. First western city to have the service is Los Angeles, with others planned for a later date.

• **Washington Steel Products, Inc.**, Tacoma manufacturer of cabinet and builders hardware, has acquired the capital stock of three Northwest hardware distributing firms; Washington Hardware Co. of Tacoma, Northwest Builders Hardware Co. of Seattle and Oregon-Washington Hardware Co. of Portland.

• **Rheem Manufacturing Co.** and **Richmond Radiator Co.** have merged, subject to stockholders approval. Richmond, one of the country's oldest producers of plumbing fixtures, will be maintained as a separate operating division of Rheem.

●GASOLINE MOTORS— Portland, Ore.

Bids to be opened 2 p.m., February 21, by city purchasing agent, Gentry W. Yates, room 208, City Hall, Portland, for furnishing two gasoline motors and installing in fire equipment. Certified check or bid bond 10%. WB 2-14

●LUMBER— Portland, Ore.

Bids to be opened 9:30 a.m., P.S.T., February 21, by lumber branch of Corps of Engineers, Colonel Jackson Graham, district engineer, 628 Pittock Block, Portland, for approximately 892,000 fbm. lumber, softwood, for various destinations (ENG-35-026-56-126). WB 2-15

●LUMBER— Portland, Ore.

Bids to be opened 9:30 a.m., P.S.T., February 23, by lumber branch of Corps of Engi-

neers, Colonel Jackson Graham, district engineer, 628 Pittock Block, Portland, for 8,000,000 fbm lumber, softwood, for export (ENG-35-026-56-128). WB 2-15

●LUMBER— Portland, Ore.

Bids to be opened 9:30 a.m., P.S.T., February 24, by lumber branch of Corps of Engineers, Colonel Jackson Graham, district engineer, 628 Pittock Block, Portland, for approximately 307,000 fbm. lumber, softwood, for various destinations (ENG-35-026-56-130). WB 2-15

●CATTLE GUARDS— Portland, Ore.

Bids to be opened 11 a.m., March 1, by U.S. Forest Service, Frank Walisch, regional supply officer, 729 N.E. Oregon St., room 18, Portland, for 64 steel cattle guards, fob. bidder's plant. WB 2-15

●RECONSTRUCT BRIDGE— Rainbow, Ore.

Bids to be opened 2 p.m., March 1, by U.S. Forest Service, Frank Walisch, regional supply officer, 729 N.E. Oregon St., room 18, P.O. Box 4137, Portland, for reconstruction of Elbow Grade Bridge, approximately 11 mi. south of Rainbow, Ore., Willamette National Forest. Plans with supply officer, or from Willamette National Forest, supervisor, Post Office Bldg., Eugene, Oregon.

Project includes approximately 4,300 lbs. structural steel; 4.9 mbm. treated timber; raising, shoring and bracing existing bridge; removal of top chord and knee brace members; installation of bulkhead plank. WB 2-15

★CONTROL TOWERS— Sand Island, Ore.

Award to Gilpin Construction Co., 4850 N.W. Front Ave., Portland, $12,333, by Corps of Engineers, Portland District, Colonel Jackson Graham, district engineer, 628 Pittock Block, Portland, for construction of four horizontal control towers at mouth of Columbia River, near Sand Island, Ore. (CIVENG-35-026-56-129). WB 2-14. Previous report 2-9

●TIMBER BRIDGE— Seaside, Ore.

Bids to be opened 5 p.m., P.S.T., February 27, by City Council, Robert T. Urie, auditor' City Hall, for construction of a 140' long treated timber bridge on creosoted piling, approach fills with paving, drainage pipe and other minor appurtenances. Specifications with city auditor. $5 deposit. Certified check or bid bond 5%.

Quantities: 1,320' piling in place; 22 MFBM untreated lumber in place; 26.6 MFBM treated lumber in place; 1,730 sq. yd. oil mat; 80 c.y. crushed rock; 60 ton asphaltic concrete; 3,700 c.y. embankment. DC 2-14

●TRANSFORMER— Seufert, Ore.

Bids to be opened 2 p.m., March 20, by Corps of Engineers, Portland District, Colonel Jackson Graham, district engineer, 628 Pittock Block, Portland, for delivery fob. railroad cars at Seufert, Ore., of one type OW, three-phase, 3750 kva transformer (CIVENG-35-026-56-144). Bid bond 20%. Delivery time not later than March 1, 1957. MG 2-11. Previous report 2-10

FILTRATION PLANT— Silverton, Ore.

A bond issue of $200,000 for construction of filtration plant and pipeline will be placed on the ballot for the November 6 election. Project includes necessary pipeline from water source on Abiqua Creek. J. W. Cunningham, consulting engineer, Portland Trade Bldg., Portland, has been retained by R. E. Borland, city manager, to draw up the specifications. TW-M 2-15

★MOORING DOCK PIERS— The Dalles Dam, Ore.

Award to Gilpin Construction Co., 4850 N.W. Front St., Portland, $42,521, by Corps of Engineers, Portland District, Colonel Jackson Graham, district engineer, 628 Pittock Block, Portland, for construction of mooring dock piers for oil trainsfer line barges, Oregon Shore, at The Dalles Dam Project (CIVENG-35-026-56-117). WB 2-10. Previous report 1-24

●SIDEWALKS— The Dalles, Ore.

Bids to be opened 5 p.m., February 20, by City Council, J. Julian Baget, clerk, City Hall, The Dalles, for construction of various sidewalks designated as 1955 Sidewalk Program. Plans with city engineer. $20 deposit. Certified check, cashier's check or bid bond 5%.

Quantities: 1,705 c.y. unclassified excavation; 86,300 sq. yd. new sidewalks. DC 2-14

●CONTROL, TELEPHONE CABLE— The Dalles, Ore.

Bids to be opened 2 p.m., March 13, by Corps of Engineers, Portland District, Colonel Jackson Graham, district engineer, 628 Pittock Block, Portland, for the manufacturing, testing and delivery to The Dalles Dam, control and telephone cable (CIVENG-35-026-56-143). Completion time January 1, 1957.

Project includes the following: 7,300' of control cable, 12 conductor No. 19/22 AWG; 2,000' of telephone cable, 11 pair No. 19 AWG, solid; 7,300' of telephone cable, 51 pair No. 19 AWG, solid copper, paper insulated, lead sheath, polycloroprene outer jacket. MG 2-14. Previous report 2-9

SEWER, DISPOSAL PLANT— Tigard, Ore.

Thomas Smithson, consulting engineer, 10154 S.W. Parkway, Cedar Hills, Beaverton, retained by Tigard Sanitary District, J. O. Johnson, attorney, Failing Bldg., Portland, for preliminary engineering survey of proposed sewer system and sewage disposal plant. Survey to be complete about March, and bond election contemplated in May. WB 2-2. Previous report 12-23

★CONCRETE STEPS— Tillamook, Ore.

Award to Tittle Construction Co., Box 229, Tillamook, $782, by Department of Finance and Administration, 1225 Ferry St., Salem, for repairing concrete steps in front of the Armory in Tillamook (Bid No. S-304-56). Bids were opened in Salem, January 31. TW-M 2-15. Previous report 1-24

PELTON DAM— Warm Springs, Ore.

Plans and specifications will be available about February 10 by Portland General Electric Co., Fred G. Hodge, purchasing agent, 410 Maegly-Tichner Bldg., 610 S.W. Broadway, Portland, for construction of Pelton Dam. Bids to be opened in March. $50 deposit.

Pelton Hyroelectric Development located about 10 road miles west of Madras, Jefferson County, Ore. General contract will cover construction of a 180' high concrete arch dam and spillway, powerhouse, rockfill regulating dam and related concrete spillway and appurtenant works. The turbines, generators and certain other major apparatus and equipment will be furnished by the owner. WB 2-4. Previous report 1-6

●WATER LINES, HEATING SYSTEM— Warrenton, Ore.

Bids to be opened 10:30 a.m., February 27, by Lt. Col. William H. Adams, purchasing and contracting officer, Oregon National Guard, 504 State Office Building, Salem, for three separate contracts on the water system at Camp Clatsop, Warrenton. Plans with Colonel Adams' office.

Project involves installation of hot water storage tanks in the kitchens; replacing water lines; installation of hot water heating system in the bath houses. DC 2-14

★DREDGING— Winchester Bay, Ore.

Award to H. G. Palmberg, Box 991, Astoria, $36,310, by Corps of Engineers, Portland District, Colonel Jackson Graham, district engineer, 628 Pittock Block, Portland, for dredging in Winchester Bay, on the left bank of the Umpqua River about two miles above its mouth (CIVENG-35-026-56-110). WB 2-14. Previous report 2-9

Up to the minute news on all types of building and engineering construction in the states of Oregon, Washington, Idaho, Montana, Wyoming, Utah and in Alaska, will be found in these columns.

WASHINGTON

●STEAM LINE REPAIR— Aberdeen, Wash.

Bids to be opened 2 p.m., P.S.T., March 6, by 13th Naval District, Bureau of Yards and Docks, Rear Admiral R. H. Meade, chief of bureau, room 100, Bldg 232, U.S. Naval Station, Seattle, for replacing steam line at the Naval and Marine Corps Reserve Training Center, Aberdeen (NOy-90558; Spec. No. 49237). Specifications with Naval Department, Seattle. $10 deposit. Bid bond 20%.

The work includes the removal of portions of the existing underground steam piping and the provision of a new reinforced concrete pipe trench and new steam and return piping. GW 2-10

DIKE— Aberdeen, Wash.

Bids will be called about April 1 by Department of Game, John Biggs, director, 509 Fairview Ave. North, Seattle, for diking the first 100 acres of the 750 acre property along the Johns River, near Aberdeen. Plans are under way by J. H. Lyon, chief engineer, 509 Fairview Ave. North, Seattle.

Dike is expected to be 8' wide and will extend 2' higher than original dike. MG 2-15

PAVING— Anacortes, Wash.

Cost estimates are now being determined by the city engineering department, City Hall, Anacortes, on a proposed paving project for streets in the city's business district and the first fire limits area. A second plan is also being considered for paving the remainder of all city streets. Preliminary costs show that asphalt paving would be about $1,500 per block for paving and curbs, not including intersections or roadbed preparation. Project could be paid by general obligation bond issue of $200,000. Chairman of the Community Action Committee is Rufus Fox, City Hall, Anacortes. JD 2-4. Previous report 1-12

SEWERS— Bellevue, Wash.

Cost estimates and financing plans are under way by Bellevue Sewer District to include most of the east shore of Lake Washington in the Bellevue proposed trunk sewer line. Contracts are being prepared calling for Mercer Island, Lake Hills and other districts and proposed developments to bear proportionate shares of the costs. The plans are to be ready for submission before March 1.

Estimated cost of project, $2,750,000. The Bellevue plans include a disposal plant at Black River Junction, effluent to be dumped into the Duwamish and out into salt water; a trunk sewer line from Houghton south to Renton. The plans, by serving most of the Overlake area, would eliminate nearly all of the pollution threat to Lake Washington. DC 2-7

●CLEARING, GRADING, DRAINING— Bellevue, Wash.

Bids to be opened 9:30 a.m., February 27, by King County Commissioners, room 402, County-City Bldg., Seattle, for clearing, grading, draining and resurfacing one mile of Lake Washington Blvd., P.S.H. No. 2, to 108 Ave. S.E., Bellevue. Plans with D. L. Evans, country road engineer, 905 County-City Bldg., Seattle. $10 deposit. Certified check, cashier's check or bid bond 5%.

Quantities: clearing and grubbing; 3,423 c.y. common exca., incl. haul; 21 c.y. struct. excav.; 998 ton cr. stone surf. base course; 711 ton cr. stone surf. top course; 1,376 ton asph. concr. type 1-1 cl. L level course; 1,027 ton asph. cocnr. type 1-1 cl. C wear course; 18' of 18" standard reinf. concr. culv. pipe; 45' of 12" standard reinf. concr. culv. pipe; 39' of 12" concr. culv. pipe; catch basins and miscellaneous items. GW 2-10

●PORTABLE SHREDDER— Bellingham, Wash.

Bids to be opened 5 p.m., February 20, by City Council, Alfred B. Loop, clerk, City Hall, Bellingham, for furnishing the city with a portable Royer shredder with a 30 to 50 c.y. capacity. Plans and specifications

may be obtained from the office of City Comptroller, or from Park Department Office, City Hall, Bellingham. Bid bond 5%.

Machine will be used for sewage purposes and is to have four pneumatic tires, air cooled engine with clutch.

JD-M 2-15. Previous report 2-9

● ASPHALTIC CONCRETE— Bremerton, Wash.

▲STATE HIGHWAY PROJECTS— Olympia, Wash.

Bids received February 14 by Washington State Highway Commission, W. A. Bugge, director, Transportation Bldg., Olympia, on highway construction projects.

MESA TO ADAMS COUNTY LINE—Clearing, draining, grading, surfacing with light bituminous surface treatment on 11.860 mile SSH. No. 11-G, Franklin County, FAP. No. F-045-1(4).

LOW BIDS: F. R. Hewett Co., Box 36, Parkwater Station, Spokane, $446,815; Frank G. Baulne, Inc., Box 84, Yardley, $460,858; Newport Construction Co., 703 N.E. Halsey, Portland, $476,888.

EAGLE CREEK TO JORSTED CREEK—Clearing, draining, grading, surfacing and paving with type F plantmix on 2.937 mile PSH. No. 9, Mason County, FAP. No. F-907-5(2).

LOW BIDS: Northwest Construction Co., 3930 6th Ave. N.W., Seattle, $461,992; J. N. Conley, 4332 N.E. Royal Court, Portland, $463,050; J. P. Surace Construction Co., 3238 Seaview Ave., Seattle, $467,788.

CRAZY RAPIDS TO MALOTT—Draining, grading, ballasting on 10.624 mile PSH No. 10, Okanogan County, FAP No. F-209-2(9).

LOW BID: C. E. Oneal, Box 270, Ellensburg, $108,837. ONLY OTHER BID: J. W. Hardison, Box 48, Yakima, $126,461.

PSH No. 9 INTERCHANGE, R-LINE PARKWAY OVERCROSSING — Reinforced concrete box girder bridge on PSH No. 1, Thurston County, FAP No. BIN-001-2(35) Unit 2.

LOW BIDS: Troy T. Burnham Co., 18666 Beverly Road, Seattle, $87,312; Anderson Bridge Construction Co., 4130 S. Adams, Tacoma, $91,733; N. Fiorito Co., Inc., 844 W. 48th, Seattle, $93,780.

C.M. ST. P. AND P. RAILROAD OVERCROSSING-TANNER — Reinforced concrete box girder bridge on 0.038 mile PSH No. 2, King County, FAP No. BING-002-1(11).

LOW BIDS: Allen R. Anderson, 3819 10th N.W., Seattle, $66,239; N. Fiorito Co., Inc., Seattle, $74,707; Wilson & Simpson, Box 1070, Port Angeles, $74,725.

SOUTH PRAIRIE CREEK BRIDGE No. 5-E/11—Clearing, draining, grading, surfacing, paving with type I-1 asphaltic concrete and constructing reinforced concrete box girder bridge on 0.447 mile of SSH No. 5-E, Pierce County, FAS No. S-0239(1).

LOW BIDS: Sawyer Construction Co., Route 3, Box 298, Tacoma, $83,334; Woodworth & Co., Inc., 1200 E. D St., Tacoma, $88,269; Troy T. Burnham Co., Seattle, $94,858.

SWAUK CREEK EAST—Clearing, draining, grading, surfacing, constructing a cement treated base and paving with type I-1 asphaltic concrete on 0.916 mile PSH No. 3, Kittitas County, a state project.

LOW BID: Russell-Gillette Co., Box G, Cle Elum, $81,860. ONLY OTHER BIDR: J. W. Hardison, Box 48, Yakima, $94,906.

NORTH 175TH AND RONALD WAY INTERSECTION AND MEADOWDALE ROAD INTERSECTION—Draining, grading, surfacing with light bituminous surface treatment, paving with unfinished cement concrete and type I-1 asphaltic concrete and installation of two illumination systems on 0.869 mile PSH No. 1, King and Snohomish counties, a state project.

LOW BID: Associated Sand and Gravel Co., 2508 Colby Ave., Everett, $79,269; Washington Asphalt Co., 309 W. 39th, Seattle, $80,866; Northwest Construction Co., Seattle, $84,013.

TANNER VICINITY—Roadway embankment from common borrow on 0.108 mile of PSH. No. 2, King County, a state project.

LOW BID: H. Kathman, 12054 23rd N.W., Seattle, $17,200; Erickson Paving Co., Route 2, Box 2155, Bellevue, $17,481; Northwest Construction Co., Seattle, $17,843.

EVERSON VICINITY—Stockpiling crushed stone surfacing, sand and mineral aggregates on State Highways Nos. 1, 1-A, 1-B, Whatcom County, a state project.

LOW BID: Lake City Gravel and Materials, Inc., 10728 Bothell Way, Seattle, $23,200; Wilder Construction Co., 1840 State, Bellingham, $26,410.

McKENNA VICINITY—Stockpiling crushed stone surfacing and crushed screenings on SSH. No. 5-J, Pierce County, a state project. Involves about 12,500 ton crushed materials.

LOW BIDS: J. Arlie Bryant, Spokane, $20,000; Sjoboen Bros., 3205 Hoadley, Olympia, $20,400; Lake City Gravel and Materials, Seattle, $22,250.

MERCER ISLAND VICINITY—Install illumination system on PSH. No. 2, King County, a state project.

LOW BIDS: Northwest Engineering Electric Co., 616 6th S., Seattle, $19,915; Rochat Electric Co., 4636 N. Williams Ave., Portland, $22,500; Donald M. Close Co., Seattle, $23,695.

Project includes removing existing guide pier and dolphin on the southeast side of the bridge and the construction of approximately 204' of new guide pier and two dolphins. MG 2-15

●PAVING, CURBING, GRADING— Spokane, Wash.

Bids to be opened 9:30 a.m., March 1, by City Council, Arthur Meehan, commissioner of Public Works, City Hall, Spokane, for paving and necessary curbing and grading of Jefferson St. from Rowan Ave. to Queen Anne Ave., with sidewalk in front of Lots 8, 9, 10, 11, Block 1, North Monroe Addition. Bid bond $953.50.

Quantities: 561 c.y. unclassified excavation; 69 c.y. excavation for catch basin connection; 1,611' concrete curbing; 161 sq. yd. concrete sidewalks; 24 sq. yd. concrete driveways; 175' of 8" sewer pipe; 4,523 sq. yd. paving with 4" asphaltic concrete.

EM-M 2-15

GAS PIPELINE— Tacoma, Wash.

Construction will start in April and be completed about September by Washington Natural Gas Co., Seattle, a 32-mile natural gas pipeline from Sumner to Tacoma. Bids will be called during March, according to Bernard T. Poor, vice president of the gas company.

The program calls for 10 miles of 16" pipe in the city and 6" to 8" spurs for industrial customers. Welded steel pipe wrapped with fiberglass over a tar coating will be used for all installations. The supply main will connect the city with a metering station on the main pipeline for natural gas from Mexico to the northwest. Extension of the distribution system in the Tacoma area from new and existing mains will cost about $450,000 and bring Fort Lewis, Dupont and Olympia areas into it. Approximately $8,000,000 will be spent by the company on construction in anticipation of the arrival of natural gas to this region in late summer.

DC 2-4

★PIPING— Tacoma, Wash.

Award to Erickson Paving Co., Rt. 2, Box 2155, Bellevue, $177,320, by Board of Contracts and Awards, Frank H. Backstrom, chairman, room 404, City Hall, Tacoma, on clearing and piping for the 1,000,000-gallon McMillin No. 2 reservoir.

CITY PARK— Wenatchee, Wash.

Chester Murray, engineer, City Hall, Wenatchee, will draw the specifications for the proposed city park in Wenatchee. Ten acres have been purchased by the city on Pearl St., north of Springwater, and bids will probably be called in the spring of 1957. George Knauss, City Hall, Wenatchee, is superintendent of parks.

MG 2-2. Previous report 12-5

ROCKY REACH DAM— Wenatchee, Wash.

(Estimated cost $200,000,000)

Economic feasibility study under way by R. W. Beck & Associates, consulting engineers, Tower Bldg., Seattle, on Rocky Reach hydroelectric project on the Columbia River near Wenatchee. The Chelan County PUD, Kirby Billingsley, Doneen Bldg., Wenatchee, is sponsoring the project and will use part of the power generated; Puget Sound Power & Light Co. will buy, under contract, the remaining portion.

Subsurface investigations were conducted by Pioneer Drillers, 216 E. 68th St., Tacoma (see DCR 5-17-55).

Present plans for the project call for a concrete gravity dam with 750' gated spillway. Intake and powerhouse sections will be about 1,080' long; reservoir created by dam will extend approximately 43 miles upstream from the project site. The completed installation will provide about 630,000 kw of electrical energy.

●PAVEMENT REPAIRS— Whidbey Island, Wash.

Bids to be opened 2 p. m., P.S.T., March 6, by 13th Naval District, Bureau of Yards and Docks, Rear Admiral R. H. Meads, chief of bureau, room 100, Bldg. 232, U. S. Naval Station, Seattle, for pavement repairs at the Outlying Field, Quillayute, Naval Air Station, Whidbey Island, Oak Harbor (NBy-90560; Spec. No. 49239).

Work consists of resealing the joints in concrete pavement which includes the removal of the existing sealing compound; cleaning of the grooves at joints; the application of weed killer solution; and the replacement of the sealer. GW 2-14

STREETS, ROADS— Yakima, Wash.

Bids to be called between now and early spring on grading, draining, clearing, and light bituminous surface treatment on county roads by Yakima County Commissioners, Courthouse, Yakima. Plans are with Harold Sweet, county engineer, Old Courthouse, Yakima. Projects range from $2,000 to $253,000.

Largest job is the Tieton Reservoir Road, estimated $253,000. The La Rue Road surfacing will cost about $58,500 and Tecumsah Road surfacing about $78,000. IG 2-2

CLEARING, DRAINING, BITUMINOUS TREATMENT— Yakima, Wash.

Working drawings are under way and bid call expected early spring for grading, clearing, draining, ballasting and surfacing with a light bituminous treatment approximately 5.25 mi. of South 16th Ave., Yakima. Estimated cost $99,750. Harold Sweet, engineer, Old Court House Bldg., Yakima, is drawing up the specifications. IG-M 2-7

★TURBINE— Yakima, Wash.

Award to Baldwin-Lima-Hamilton Corp., Philadelphia, Pa., $222,000, by Bureau of Reclamation, L. N. McClellan, Bldg., 53, Denver Federal Center, Denver, Colo., for turbine at Roza Power Plant, Yakima (Inv. No. DS-4537). MG 2-11. Previous report 12-8

IDAHO

SEWERS— Alameda, Idaho

Final plans under way by Robert M. Nelson, engineer, 619 Grove, Boise, for the City Council, Alameda, on a sewer improvement district estimated to cost about $50,000. The general area involved includes these streets: Cedar, Alameda, Richland, Moreland and the south end of Pershing. Plans have been waiting approval by Pocatello's city commission of an easement grant to allow Alameda access to Portneuf River for a sewage disposal line. The Alameda council has agreed to lay water lines from Chapel and Meadowbrook to Willard and Chapel and in return North Pocatello will construct a bridge across the canal. DC 2-9

●PIER REPAIRS— Bayview, Idaho

Bids to be opened 2 p. m., P.S.T., March 6, by 13th Naval District, Bureau of Yards and Docks, Rear Admiral R. H. Meade, chief of bureau, room 100, Bldg. 232, U. S. Naval Station, Seattle, Wash., for repairs of a craneway pier at David Taylor Model Basin Field Station, Bayview (NBy-1904; Specification No. 1904/56).

The work includes the removal of existing timber caps of a craneway pier and replacing them with government furnished caps. The work involves carpentry and providing temporary supports to the structure during the process of replacement. GW 2-14

●SEWERS— Caldwell, Idaho

Bids to be opened 8 p.m., March 5, by City Council, City Hall, Caldwell, for construction of interceptor sewers for the city in conjunction with a sewage treatment plant. Plans and specifications may be obtained from Cornell, Howland, Hayes & Merryfield, consulting engineers, 222 Idaho Bldg., Boise, and 1600 Western Ave., Corvallis, Ore., or at the office of the City Engineer' Caldwell. $25 deposit. Bid bond 5%.

The work contemplated consists of the construction of a system of interceptor sewers to conduct wastes from an existing sanitary sewer system to the site of a sewage treatment plant proposed by the City of Caldwell and includes minor extensions and modifications of the existing sewer system. Quantities: furnishing and placing 24,700' of concrete sewer pipe ranging from 6" to 42"; construction of an outfall structure; one control manhole; 75 standard manholes; 10 special manholes; 3 railroad undercrossings; one highway undercrossing; 6 drain ditch and stream undercrossings. Alternate proposals are requested for concrete bell and spigot pipe for rubber gasket and for cement mortar or asphaltic joists.

■SEWAGE TREATMENT PLANT— Caldwell, Idaho

Planholders announced for sewage treatment plant at Caldwell. Bids to be opened 8 p. m., March 5, by City Council, City Hall, Caldwell. Plans with Cornell, Howland, Hayes & Merryfield, constulting engineers, 222 Idaho Bldg., Boise, Idaho, or 1600 Western Ave., Corvallis, Ore. $40 deposit. Bid bond 5%.

Planholders: Babbitt Construction Co., Box 508, Pocatello; Intermountain Co., 1322 Grove St., Boise; C. B. Lauch Construction Co., Box 2559, Boise; McCurry Electric, 510 Main St., Caldwell; Murry Burns Plumbing and Heating, 2801 Warm Springs Ave., Boise.
MG 2-15. Previous report 2-4

RESERVOIR— Craigmont, Idaho

Bids to be opened about March 22 by City Council, Village Hall, Craigmont, for new water supply reservoir. Plans by Wesley H. Grow and Associates, consulting engineers, Weisgerber Bldg., Lewiston.

Quantities include 850 c.y. trench excavation and backfill; 13 c.y. sand backfill; 2,300' of 8" asbestos cement pressure pipe with alternate on steel pipe; 20.5 c.y. reinforced concrete base for water tank; 100,000 gallons redwood tank in place; one deep well turbine pump complete in place with piping and controls, capacity 95 gpm.
MG 2-15. Previous report 12-15

AIRFIELD— Downey, Idaho

Construction of the proposed Hyde Memorial Air Field in Downey will be by volunteer labor. The air strip, which will be built on 20 acres of land one-half mile east of Downey, will be a community project.
GW 2-15. Previous report 12-17

WATER WELLS— Idaho Falls, Idaho
(Estimated cost $38,000)

Bids to be opened about February 29 by Atomic Energy Commission, K. W. Grundmeyer, acting director, contract and administration division, Idaho Operations Office, 550 2nd St. (Box 1221), Idaho Falls, for drilling, casing and testing two water production wells at the National Reactor Testing Station, one to be in the A1W area, approximately 10 mi. north of the Central Facilities Area, and one in the MTR area, approximately four mi. northwest of the Central Facilities Area (Inv. No. AT (10-1)-813).

The work requires drilling, casing, gravel packing between the wall of the hole and the casing, constructing concrete pump foundations, and testing with pumping units. The pumping unit for testing will be furnished by the government. Drilled holes will be a minimum of 26" in diam. and the casings 20" outside diam. The estimated depth of the well at the A1W site is 540' and at the MTR site 600'; however drilling equipment should be capable of drilling to depths of 750' in any formation. GW 2-15

■RESERVOIR COVER— Lewiston, Idaho

Planholders announced for a reservoir cover. Bids to be opened February 20 by City Council, City Hall, Lewiston. Plans and specifications with Richard Lowrie, city engineer, City Hall.

Planholders: Bert Conklin, 817 3rd St., Lewiston; Kenaston and Huntley, 811 11th Ave., Lewiston; Chicago Bridge and Iron Co., 1318 4th Ave., Seattle; Potlatch Yards, 1826 Main St., Lewiston; Madison Lumber Co., 824 "D" St., Lewiston; Ted Pope, 2045 Riverside Drive, Clarkston; Esser and Roach, Genesee; Timberib Building Co., 820 Stewart, Lewiston; General Machinery Co., E. 3500 Riverside Drive, Spokane; Victor Kashevarof, 702 Preston, Lewiston; Northwest Erectors, Inc., Box 4223, Spokane; George Meacham, 2107 12th Ave., Lewiston; Don St. Marie, 111 W. 19th Ave., Lewiston.

Bids to be opened 10 a.m., February 20, by City Council, City Hall, Cheyenne, for furnishing 500,000 gallons of MC0 to MC4 road oil and RC 1-2-3-4-5 asphalt, per gallon fob. Cheyenne.
DC 2-10

● **STATE HIGHWAY PROJECTS— Cheyenne, Wyo.**

Bids to be opened 9:30 a.m., February 21, by the Wyoming State Highway Commission, State Office Bldg., Cheyenne, on highway construction projects.

GILLETTE-MOORCROFT ROAD—Grading Contract. Grading, draining, selected material surfacing and miscellaneous work on 5.175 mile of Gillette-Moorcroft road, Crook County. FAP No. IN-120(11) Unit 1.

Quantities: 341,300 c.y. excavation; 200,200 c.y. mile haul; 8,165 M gallon watering; about 2,991' corrugated metal pipe.

DONKEY, WELL CREEKS BRIDGE—Structure Contract. One four-continuous reinforced concrete slab span bridge over Well Creek; one five-continuous reinforced concrete slab span bridge over Donkey Creek; grading berms and fills adjacent to the abutments; miscellaneous work on Gillette-Moorcroft Road, Crook County. FAP No. IN-120(11), Unit.

Quantities: 3,700 c.y. excavation; 110 M gallon watering; 351.1 c.y. class A concrete; 92,750 lb. reinforcing steel; 15,640 lb. structural steel.

BASIN - MANDERSON ROAD—Grading Contract. Grading, draining, miscellaneous work on 9.446 mile and base course surfacing and surface treatment on 0.881 mile of north end and 1.306 mile of south end of Basin-Manderson Road, Big Horn County. FAP No. F-161(6).

Quantities: 744,400 c.y. excavation; 1,500,000 c.y. station overhaul; 230,000 c.y. mile haul; 53,400 ton selected material surfacing type 1; 19,410 M gal. watering; 172 ton asphaltic material.

BIG HORN BRIDGES—Structure Contract. Five continuous reinforced concrete slab spans over Elk Creek, three continuous reinforced concrete slab spans over Big Horn Canal, two rigid frame culverts and three reinforced concrete culverts on 9.466 mile of Basin-Manderson Road, Big Horn County. FAP No. F-161(6).

Quantities: 1,655.3 c.y. concrete; 285,700 lb. reinforcing steel; 13,040 lb. structural steel; 462' cast in place concrete piles; 876 c.y. structure excavation.

LARAMIE-FORT COLLINS ROAD—Plantmix surface course, sand and gravel seal coat, miscellaneous work on 13.531 mile Laramie-Fort Collins Road, Albany County. FAP No. F-192(8).

Quantities: 40,900 ton plantmix surface course; 2,300 ton crushed sand and gravel; 3,572 ton asphaltic material; 140 M gal. watering.

WASHAKIE - HOT SPRINGS — Plantmix surface course, sand and gravel seal coat on 4.838 miles of section 1 and 5.456 mile of section 2 on the Worland-Thermopolis road; grading, draining, base course surfacing on 0.717 mile and plantmix surface course, stone chip seal coat on 5.663 miles Hamilton Dome Road; stone chip seal coat on 10.318 mile Owl Creek Road in Washakie and Hot Springs Counties.

Quantities: 63,300 c.y. excavation; 108,300 c.y. station overhaul; 530 c.y. mile haul; 2,800 ton selected material surfacing, type 1; 1,900 M gal. watering; 3,275 ton asphaltic material; 20.4 c.y. class C concrete.

DOUGLAS-COLD SPRINGS ROAD—Base course surfacing, plantmix surface course, sand gravel seal coat on 10.338 mile of Douglas-Cold Springs Road, Converse County. FASP No. S-49(8).

Quantities: 105,000 ton plantmix surface course; 1,015 ton asphaltic material.

MEDICINE BOW—Grading Contract. Grading, draining, base course surfacing, surface treatment (inverted penetration type) on 7.583 mile of Medicine Bow-North Road, Carbon County. FASP No. S-50(11).

Quantities: 650,000 c.y. excavation; 213,-800 c.y. mi. haul; 2,773' standard reinforced concrete pipe; 47,300 ton crushed gravel base course; 2,500 on crushed gravel surfacing; 440 ton asphaltic material; 21 c.y. class C concrete; 1,100 lb. reinforcing steel; 17,080 lb. structural steel.

LONE TREE CREEK—Structure Contract. One five-continuous reinforced concrete slab span bridge over Lone Tree Creek; one reinforced culvert on Medicine Bow-North Road, Carbon County. FASP No. S-50(11).

Quantities: 10,000 c.y. excavation; 300 M gal. watering; 180 c.y. structure excavation; 63,240 lb. reinforcing steel; 9,610 lb. structural steel; 347.6 c.y. concrete.

LOVELL-EMBLEM ROAD — Base course surfacing, surface treatment (inverted penetration type) on 5.879 mile of Lovell-Emblem Road, Big Horn County. FASP No. S-90(3).

Quantities: 470 M gal. watering; 300 ton asphaltic material; 1,750 ton crushed gravel surfacing.

CHUGWATER - EAST — Plantmix surface course, sand and gravel seal coat on 9.304 mile of Chugwater-East Road, Platte County. FASP No. S-94(4).

Quantities: 9,800 ton plantmix surface course; 1,070 crushed sand and gravel; 41,400 T mi. haul; 740 ton asphaltic material.

GILLETTE-BROADUS—Base Course surfacing, plantmix surface course, sand and gravel seal coat on 23.891 mile Gillette-Broadus Road, Campbell County. FASP No. S-263(9).

Quantities: 39,700 crushed gravel base course; 27,000 ton plantmix surface course; 2,950 ton crushed sand and gravel; 378,000 T mi. haul; 3,360 ton asphaltic material.

DM 2-15

●CRANE— Glendo, Wyo.

Bids opening extended from February 21 to 2 p.m., M.S.T., March 13, by Bureau of Reclamation, L. N. McClellan, chief engineer, Bldg. 53, Denver Federal Center, Denver, Colo., for a 100-ton traveling crane for Glendo Power Plant, Oregon Trail Division, Glendo unit, Wyoming, Missouri River Basin Project (Inv. No. DS-4606).

Birch & Sons, Green Construction Co., Morrison-Knudsen Co., Inc., and McLaughlin, (joint venture) Central Bldg., Seattle, $6,204,563; Guy F. Atkinson, 345 Skinner Bldg., Seattle, $7,045,235. SCHEDULE B—Truckfill stand—LOW BID: S. Birch & Sons, Green Construction Co., Morrison-Knudsen Co., Inc., and McLaughlin, $132,890. OTHER BIDS: Guy F. Atkinson, $146,350; M-B Contracting Co., $154,000; Pacific Alaska Contracting Co., Inc., 1515 Center, Tacoma, $160,000; S. Macri Construction Co., Box 938, Anchorage, $177,-160; S. S. Mullen, Inc., 621th 9th Ave. N., Seattle, $202,602. SCHEDULE C—Hydrant refuelling system—LOW BID: M-B Contracting Co., $2,050,000. OTHER BIDS: Pacific Alaska Contracting Co., Inc., $2,181,749; S. S. Mullen, Inc., $2,396,000; S. Birch & Sons, Green Construction Co., Morrison-Knudsen Co., Inc., and McLaughlin, $2,551,623; Guy F. Atkinson, $2,757,050. SCHEDULE D—Tank unloading and fuel lines—LOW BID: Pacific Alaska Contracting Co., $671,421. OTHER BIDS: Guy F. Atkinson, $699,200; M-B Contracting Co., $754,000; S. Birch & Sons, Green Construction Co., Morrison-Knudsen Co., Inc., and McLaughlin, $784,954; S. Macri Construction Co., $796,003; S. S. Mullen, $818,386. All the above are basic bids. Guy F. Atkinson and M-B Contracting, all or none ayard. S. Birch & Sons, Green Construction Co., Morrison-Knudsen Co., Inc., and McLaughlin, (a) If awarded schedules A and C, deduct $217,000 from schedule D; (b) if awarded schedules A and D, deduct $47,-000 from schedule C; (c) will not accept schedule B alone. GW 2-15

POWER, WATER FACILITIES— Ketchikan, Alaska

Bond election to be held February 21 on proposed $1,650,000 bond issue which would finance expansion of power and water facilities in city. A sum of $150,000 of the bonds would provide matching funds for an Alaskan Public Works water improvement. The power project would involve improvements to the city's hydroelectric system. Plans for the latter are under way by R. W. Beck & Associates, consulting engineers, Tower Bldg., Seattle. DC 2-2

HYDROELECTRIC DAMS— Juneau, Alaska

Georgia-Pacific Alaska Co., Juneau, received a three-year preliminary permit from the federal power commission for a proposed hydroelectric project on Lemon Creek about 10 miles north of Juneau. The company is a subsidiary of Georgia-Pacific Plywood Co.

Plans call for two dams with total installed capacity of 6,700 hp. The power would be used for operating of a newsprint or pulp mill. DC 2-4

WELL— Juneau, Alaska

Preliminary plans awaiting approval of Alaska Public Works, James W. Huston, director, Box 1181, Juneau, for a community well and a building to house a pumping installation in the communities of Kwethluk, Hooper Bay, Chevak and Amiak. Engineer to be furnished by Alaska Health Department, Juneau. Well to be constructed by force account. This will be a $50,000 project, $25,000 from Alaska Rural Development Board and matching fund from Interior Department. JU G 2-14

DIKE— Wrangell, Alaska

Preliminary plans awaiting approval of Alaska Public Works, James W. Huston, director, Box 1181. Juneau for a dike in Wrangell for tidelands fill on the business front. Plans by city engineer. Construction will be by force account. The dike will be log cribbing. JU-G 2-11

Bureau of Reclamation Lists 35 Major Projects . . .

. . . Scheduled for Bid Call Within Next Three Months

Thirty-five major construction projects will be among bid invitations issued by the Bureau of Reclamation during February, March and April. The work includes canals, laterals, drains, wasteways, several substation additions, various pumping plants, access roads, housing and miscellaneous items. Additional information may be obtained from L. N. McClellan, chief engineer, Building 53, Denver Federal Center, Denver, Colo., by referring to the title and number of each item.

BID CALLS EXPECTED IN FEBRUARY

AQUEDUCT, Davis (2-1)—Weber Basin Project, Utah. Near Salt Lake City. Earthwork and structures for 6.5 miles of precast concrete pipeline, including turnouts, manholes, air valves and blow-offs.

Quantities: 32,000' of furnishing and laying 21" to 60" precast non-cylinder, cylinder and modified prestressed concrete pipe. Completion time 600 days.

Bids to be called by the chief engineer, Denver, Colo.

CANAL, LATERAL, Hanover-Bluff (2-2)—Missouri River Basin Project, Wyo. Near Worland, Wyo. Earthwork and structures for about 20 miles of 90 cfs. to 10 cfs. capacity main canal and 17 miles of 20 cfs. to 3 cfs. capacity laterals.

Quantities: 390,000 c.y. common excavation; 1,800 c.y. concrete in structures; 15,000' furnish and lay 18" to 48" precast concrete pipe. Completion time 400 days.

Bids to be called by the chief engineer, Denver.

LATERALS, Block 46, Part 1 (2-3)—Columbia Basin Project, Wash. Near Othello, Wash. Constructing 27.8 miles of laterals, 7.8 miles of wasteways and drains and 0.25 mile of pipeline.

Quantities: 145,000 c.y. excavation for laterals, wasteways, drains; 30,000 c.y. excavation from borrow; 25,000 miles c.y. overhaul; 1,050 c.y. concrete in structures; 9,000' furnish, lay 12" to 48" precast concrete culvert pipe. Completion time 450 days.

Bids to be called by the project manager, Ephrata.

LATERALS, Block 18, Part 4 (2-4)—Columbia Basin Project, Wash. Near Connell, Wash. Earthwork, structures for about 12 miles of 53 cfs. to 3 cfs. capacity unlined laterals, drains, wasteways.

Quantities: 115,000 c.y. excavation for laterals; 800 c.y. concrete in structures; 5,700' furnish and lay 15" to 48" precast concrete pipe. Completion time 250 days.

Bids to be called by the chief engineer, Denver.

LATERAL LINING, Laterals 128 and 147 (2-6)—Kendrick Project, Wyo. Near Casper, Wyo. Earthwork for about 2,900' of compacted earth lining on three reaches of existing laterals.

Quantities: 2,700 c.y. subgrade excavation; 2,900 c.y. earth lining; 9,000 miles c.y. overhaul; 1,500 c.y. excavation for final lateral section. Completion time 60 days.

Bids to be called by the project manager, Casper.

DRAIN, Block 11 (2-8)—Columbia Basin Project, Wash. South of Othello, Wash. Constructing about 2.5 miles of open and closed drains. Completion time to be determined.

Bids to be called by the project manager, Ephrata.

DRAINS (2-9)—Sun River Project, Mont. Near Fairfield, Mont. Constructing about 8,000' of open drains. Involves 50,000 c.y. excavation. Completion time 90 days.

Bids to be called by project manager, Great Falls.

WASTEWAY DIVERSION, Block 19 (2-11)—Columbia Basin Project, Wash. Ten miles west of Mesa, Wash. Constructing dike and about 1.25 miles of lateral for diversion of water from wasteway.

Bids to be called by project manager, Ephrata.

PUMPING PLANTS, Bridgeport Bar (2-13)—Chief Joseph Dam Project, Wash. Bridgeport, Wash. Constructing two pumping plant, furnishing, installing all mechanical, electrical equipment, a 13.8 kv tap line from pumping plants to Douglas County PUD line, pipe for discharge lines and pressure distribution system, and 100,000-gallon steel water tank. The river pumping plant has two motor-driven units of 2,000 gpm. capacity each. The water inlet consists of a perforated metal collection pipe with gravel filler and a metal inlet pipe to the pumping plant. The booster plant is a flat reinforced concrete pad with two motor-driven units of 200 gpm. capacity.

Quantities: 600 c.y. excavation; 8,000 c.y. backfill; 5,500 c.y. compact backfill; 170 c.y. concrete; 190' furnish and lay 30" to 36" asbestos bonded corrugated metal pipe; 2,300' furnish and lay 8" asbestos-cement pipe. Completion time 360 days.

Bids to be called by chief engineer, Denver.

PUMPING PLANT, Ontario-Nyssa (2-14)—Oyhee Project, Ore. Nyssa, Ore. Constructing the Ontario-Nyssa pumping plant which is to be an indoor type plant with four electrically-driven horizontal pumping units, upstream of and adjoining the existing Owyhee Ditch pumping plant. The south wall of the Owyhee Ditch pumping plant will be removed to permit use of its service area and traveling crane for the new plant. The new plant will have a reinfoced concrete substructure and the superstructure will consist of a steel frame with concrete block walls. The contract will include installation of electrical equipment and discharge pipes.

Quantities: 2,100 c.y. excavation; 525 c.y. concrete; 35,000 lb. furnish and erect structural steel. Completion time 373 days.

Bids to be called by chief engineer, Denver.

TRANSMISSION LINE, Alcova-Fremont (2-16)—Missouri River Basin Project, Wyo. From Alcova to Fremont, Wyo. Constructing an eight-mile 115 kv wood pole, H-frame, transmission line. Completion time 240 days.

Bids to be called by chief engineer, Denver.

SUBSTATION ADDITIONS, Bairoil (2-18)—Kendrick Project, Wyo. Bairoil, Wyo. Constructing concrete footings, furnishing and erecting structural steel and installing 34.5 kv current and potential transformers and switching equipment, major items of which will be government furnished. Completion time 60 days.

Bids to be called by regional director, Denver.

WELLS, Blocks 89, 18 and 14 (2-21)—Columbia Basin Project, Wash. Near Ephrata and Mesa, Wash. Drilling and casing observation wells about 50' deep using 1.5" standard casing.

Bids to be called by project manager, Ephrata.

ACCESS ROAD, Basin Substation (2-22)—Missouri River Basin Project, Wyo. Near Basin, Wyo. Constructing 2.3 miles of 16' width access road with sand and gravel surfacing and furnishing and installing 21" to 42" corrugated metal pipe culverts in 10 different locations. Completion time 120 days.

Bids to be called by project manager, Cody.

HOUSING, Blocks 89, 47, 14 (2-26)—Columbia Basin Project, Wash. Near Moses Lake, Othello and Mesa, Wash. Constructing seven two-bedroom houses with basements and garages, and one concrete block, 10-truck garage.

Bids to be called by project manager, Ephrata.

ROOF REPLACING, Alcova Dam (2-27)—Kendrick Project, Wyo. About 30 miles southwest of Casper, Wyo. Furnishing materials and performing work for replacing about 2,200 sq. ft. of five-ply built-up asphalt-saturated felt roofing.

Quantities: 2,200 sq. ft. to remove existing five-ply built-up roofing; 370' remove and replace cants; 2,200 sq. ft. furnish and apply five-ply built-up roofing. Completion time 90 days.

Bids to be called by project manager, Casper.

BID CALLS EXPECTED IN MARCH AND APRIL

DIVERSION DAM (2-30)—Weber Basin Project, Utah. Constructing the gated reinforced concrete Slaterville Diversion Dam, two canal headworks structures and two earthfill dikes on Ogden River at Ogden.

Chief engineer, Denver, will issue invitations.

SIPHON (2-33)—Rogue River Basin Project, Ore. Removing a 44" wood pipe siphon and constructing a 48" precast concrete pressure pipe or steel cylinder pipe siphon about 1,860' long. Medford Canal, near Medford.

Chief engineer, Denver, will issue invitations.

LATERALS (2-36) — Minidoka Project, Idaho. Earthwork and structures for laterals from Group 7 wells, Unit B, North Side Pumping division, near Minidoka.

Regional director, Boise, to issue invitations.

LATERALS (2-37) — Yakima Project, Wash. Work will consist of four miles of open laterals, structures, and 17 miles of 20 cfs. to 3 cfs. capacity pipe laterals. All materials to be furnished by the contractor. Near Kennewick. Chief engineer, Denver, to issue invitations.

LATERALS (2-38)—Columbia Basin Project, Wash. Earthwork and structures for about 12 miles of 340 cfs. capacity unlined laterals and wasteways with 18' to 2' bottom widths. Block 18, Part 1, near Connell.

Chief engineer, Denver, to issue invitations.

LATERALS (2-39)—Columbia Basin Project, Wash. Earthwork and structures for about 15 miles of 245 cfs. to 3 cfs. capacity unlined laterals and wasteways with 18' to 2' bottom widths. Block 18, Part 2, near Connell.

Chief engineer, Denver to issue invitations.

LATERALS (2-40)—Columbia Basin Project, Wash. Earthwork and structures for about 50 miles of unlined laterals varying in bottom width from 12' to 2'. Block 71 south of Quincy.

Chief engineer, Denver, to issue invitations.

LATERALS, PUMP DISCHARGE LINE, DIKES (2-41) — Columbia Basin Project, Wash. Constructing about 1.25 miles of unlined lateral with 20' bottom width, an earth dike and about two miles of 36" to 54" precast concrete pressure pipe pump discharge line. South of Quincy.

Chief engineer, Denver, to issue invitations.

PUMPING PLANT (2-43)—Michaud Flat Project, Idaho. Constructing the American Falls pumping plant will include a concrete and structural steel building housing four electric motor driven pumps of 126 cfs. total capacity, a switchyard adjacent to the building, and a 6,000' discharge pipe, surge tank, discharge structure. Near American Falls.

Bids to be called by chief engineer, Denver.

SUBSTATION ADDITIONS (2-48)—Missouri River Basin Project, Wyo. Constructing Lingle substation additions. The project involves grading and fencing the site, placing concrete foundations, furnishing and erecting steel structures, installing a 115/34.5 kv transformer and associated electrical equipment, major items of which will be government furnished. Near Lingle.

Bids to be called by chief engineer, Denver.

SWITCHYARD ADDITIONS (2-50)—Missouri River Basin Project, Wyo. Constructing additions to the Alcova Switchyard which involves concrete foundations, furnishing and erecting minor steel supporting structures, installing a 115 kv circuit breaker and associated electrical equipment, major items of which will be government furnished. At Alcova Power Plant.

Bids to be called by chief engineer, Denver.

WELLS (2-51) — Michaud Flats Project, Idaho. Drilling and casing seven water supply wells in Area 6, near American Falls. Regional director, Boise, to issue invitations.

WELL MODIFICATION (2-52) — North Platte Project, Wyo. Modifying the Guernsey government community water supply well. Project includes deepening the well, adding 700' of 3" pipe. Near Gurensey. Project manager, Casper, to issue invitations.

WELL COMPLETION (2-53) — Minidoka Project, Idaho. Installing pumping equipment, constructing electrical facilities and miscellaneous completion work for four relift pumping plants, Unit A, North Side pumping division, near Hazelton. Regional director, Boise, to issue invitations.

WELL COMPLETION (5-54) — Minidoka Project, Idaho. Installing pumping units, constructing substations and miscellaneous completion work for Group 4 wells, Unit B, North Side pumping division, near Rupert. Regional director, Boise, to issue invitations.

HIGHWAY RELOCATION (2-55) — Missouri River Basin Project, Wyo. Relocating four miles and improving 4.3 miles of Wyoming State Highway U.S. 87, north of Glendo. Bids to be called by chief engineer, Denver.

ROAD RELOCATION (2-56) — Missouri River Basin Project, Wyo. Relocating five miles of Platte County roads to Meadowdale. Chief engineer, Denver, will issue invitations.

HOUSING (5-57)—North Platte Project, Wyo. Moving two houses from Lingle to Guernsey Government community, near Guernsey. Bids to be called by project manager, Casper.

HOUSING (5-58)—Kendrick Project, Wyo. Constructing a two-bedroom residence without basement at Seminoe Dam Government community near Sinclair. Regional director, Denver, to issue invitations.

ROAD EQUIPMENT

BIDS CLOSE 10:00 A.M., FEBRUARY 23

Yakima, Wash.

ADVERTISEMENT FOR BIDS

Notice is hereby given that the Board of County Commissioners of Yakima County, Washington, will, pursuant to law, open bids in the office of said Board, Room 107, Courthouse, Yakima, Washington, at 10:30 A.M. on Thursday the 23rd day of February, 1956, for the purchase of: (1) Asphalt Distributor Trailer Mounted; (1) Motor Patrol Grader; (1) 2½ Ton Truck Chassis & cab; (2) 1½ Ton Truck Chassis and Cab; (4) 2 Ton Truck Chassis & cab; (4) Dump Beds and Hoists (for 2 ton Trucks); and (1) Crane (for mounting on 2½ Ton Truck) specifications for which are on file in the office of the Purchasing Agent.

NOTICE OF SALE FOR CASH OR TRADE-IN OF YAKIMA COUNTY USED EQUIPMENT.

Pursuant to law, notice is hereby given that Yakima County will sell or trade-in on the purchase of new equipment the following described used equipment, to-wit;

1946 No. 12 Caterpillar Motor Patrol Grader, Serial No. 7T1834, County Motor Grader No. 10 (Road Department)

County Truck No. 19 1950 Ford 1½ Ton Truck, Motor No. 97HT249602.

County Truck No. 32 1947 Ford 1½ Ton Truck, Motor No. 1492190.

County Truck No. 35 1947 Ford 1½ Ton Truck, Motor No. 1477745.

County Truck No. 14 1931 Model A Ford 1 Ton Truck, Chassis & Cab Motor No. AA3969480.

County Truck No. 25 1947 Ford 1½ Ton Truck, Chassis & Cab Motor No. 1456894.

County Truck No. 29 1950 Chevrolet 2 Ton Truck, Chassis & Cab & Bed, Motor No. HEA 129911

County Truck No. 36 1947 Ford 1½ Ton Truck, Chassis & Cab, Motor No. 1492389.

The above described used equipment will be sold for cash or traded in on the purchase of new equipment on the same day and hour that bids on above mentioned new equipment are received and opened in the office of the Board of County Commissioners of Yakima County, Washington. Any bidder on the new equipment may include in his offer to sell, his offer to accept the used equipment as a part payment on the purchase price of the new equipment, setting forth the amount of said allowance. The Board reserves the right to reject any or all bids. Bids shall be sealed and plainly marked "Bids—Road Equipment" and addressed to Yakima County Purchasing Agent, Room 105, Courthouse, Yakima, Washington.

Dated this 3rd day of February, 1956.

Harold Purdin

County Auditor and Ex-Officia Clerk of the Board.

STEEL BRIDGE SALE

BIDS CLOSE 10:30 A.M., MARCH 1

Portland, Oregon

NOTICE TO CONTRACTORS

SEALED BIDS will be received by the Board of County Commissioners of Multnomah County, Room 504, County Court House, Portland, Oregon, until 10:30 A.M. March 1, 1956 and then opened for furnishing proposals for purchase of existing steel superstructure, machinery and electrical equipment in the Morrison bridge over Willamette River in Portland, Oregon.

Specifications are on file with the County Clerk of Multnomah County, and copies thereof may be obtained at the office of the Purchasing Agent, 504 County Court House.

No bid will be received or considered by the Board of County Commissioners or any officer of such county unless the bid contains a statement of the bidder as a part of his bid that he will covenant, and it will be a condition of his bond, that in performing his contract he will pay and cause to be paid not less than the prevailing rate of wages as of the date of his bid in such county per hour, per day and per week for and to each and every workman who may be employed in and about the performance of his contract.

No proposal will be considered unless accompanied by a check payable to the Board of County Commissioners of Multnomah County, certified by a responsible bank, or in lieu thereow, a surety bond for an amount equal to ten per cent of the aggregate proposal. The successful bidder shall furnish a bond satisfactory to the Board in the full amount of the contract. The right is reserved to reject any and all bids. John W. West, Purchasing Agent.

5370—2-11

INTERSTATE BRIDGE
BIDS CLOSE 9 A.M., MARCH 1
Portland, Oregon
NOTICE TO CONTRACTORS

Time and Place of Receiving Bids:

Sealed bids for the work described below will be received by the State Highway Commission of the State of Oregon at the Imperial Hotel, Portland, Oregon, at 9:00 a.m., Thursday, March 1, 1956.

Type of Project:

This is a cooperative project to be financed and built under a tri-party agreement between the States of Oregon and Washington, acting through their respective State Highway Commissions, and the Washington Toll Bridge Authority. By authority of this agreement, all matters pertaining to furnishing plans and specifications to bidders and receipt of proposals are being handled by the State Highway Commission of the State of Oregon, address: State Highway Building, Salem, Oregon.

Description of Work:

The work for which bids are to be received consists of the following work on the Pacific Highway in the vicinity of Portland, Multnomah County, Oregon, and Vancouver, Clark County, Washington.

1. New Interstate Bridge over Columbia River—Construct a reinforced concrete and structural steel bridge 3,531'-5½" in length with a 40-foot roadway and one 5-foot sidewalk. Principal work consists of construction of 11 main river piers, 1-531-', 7-265' and 2-272' steel thru truss spans and 1-278' vertical lift span, and a 318' RC viaduct.

2. Oregon Slough Bridge—Alter the existing structures over Oregon Slough and Swift Road and widen these structures to accommodate two additional lanes of traffic. Principal work consists of construction of a widened portion of Oregn Slough Bridge, 1,294'-7" in length with a 38-foot roadway, and one 6-foot sidewalk and an approach ramp 133 feet in length with a 26-foot roadway.

3. Performance of miscellaneous and incidental work as required by the plans and specifications.

Quantities:

The work involves the following approximate quantities:

Item	Unit	*Alternate "A"	**Alternate B"
Interstate Bridge:			
1. Shoring, Cribbing, Etc.	All	All	All
2. Structural Excavation	Cu. Yd.	15,500	20,500
3. Excavation Below Elevations Shown	Cu. Yd.	500	500
4. Furnish Timber Piling	Lin. Ft.	87,700	92,000
5. Furnish Treated Timber Piling	Lin. Ft.	4,200	4,200
6. Furnish Cast-in-Place Concrete Piling	Lin. Ft.	1,300	1,300
7. Drive Timber Piling	Each	1,493	1,699
8. Drive Cast-in-Place Concrete Piling	Each	21	21
9. Seal Concrete	Cu. Yd.	6,700	13,000
10. Class "A" Concrete	Cu. Yd.	14,300	10,500
11. Metal Reinforcement	Lb.	1,600,000	1,700,000
12. Structural Steel (4,700 T.)	All	All	All
13. Metal Handrail	Lin. Ft.	3,870	3,870
14. Bridge Buildings	All	All	All
15. Electrical and Mechanical Equipment	All	All	All
16. Lighting	All	All	All
17. Construction Walkway	All	All	All
18. Engineer's House	All	All	All
Oregon Slough Bridge:			
1. Shoring, Cribbing, Etc.	All	All	All
2. Structural Excavation	Cu. Yd.	2,600	3,400
3. Excavation Below Elevations Shown	Cu. Yd.	100	100
4. Furnish Timber Piling	Lin. Ft.	18,900	16,900
5. Furnish Treated Timber Piling	Lin. Ft.	7,800	7,800
6. Drive Timber Piling	Each	444	430
7. *Seal Concrete **Tremie Concrete	Cu. Yd.	*1,070	**2,350
8. Class "A" Concrete	Cu. Yd.	4,060	3,350
9. Metal Reinforcement	Lb.	576,000	669,000
10. Structural Steel (800 T.)	All	All	All
11. Metal Handrail	Lin. Ft.	1,150	1,150
12. Electrical Conduit	All	All	All
13. Construction Walkway	All	All	All
14. Roadwork	All	All	All
15. Concrete Slab Riprap	Sq. Yd.	160	160
16. Alterations to Existing Structure	All	All	All

* Conventional Poured-in-place pier construction
** Precast "shell-type" pier construction

Wage Rates:

In accordance with the provisions of Chapter 39.12 of the Revised Washington Statutes, the contracting parties hereto have ascertained the general prevailing rates of wages applicable to the work to be done within the State of Washington to be as follows:

Hourly Minimum Wage Rate	Classification
	Skilled Labor
2.83	Cranes (Locomotive, Whirley, Gantry, Hammerhead)
2.83	Clamshell dredge
2.43	Concrete mixer (1 to 5 bag capacity)
2.58	Concrete mixer (5 bag capacity and over)
2.90	Cement Mason
3.07	Ironworker (structural and ornamental
2.87	Ironworker (reinforcing)
2.85	Pilemen, Bridgemen, Wharfbuilders
2.63	Concrete road paver
2.63	Concrete mixer (dual)
2.28	Concrete batch and wet mix (operator)
2.83	Derrick operator (live boom)
2.48	Hoist, single drum
2.78	Hoist, two or more active drums on hoist
2.68	H.D. mechanic or welder
2.78	Piledriver engineer
2.75	Carpenters (Journeymen)
	Intermediate Grade Labor
2.38	Air compressor
2.48	Air compressor (over 1,000 c.f. stationary)
2.58	Drills (churn & core drill)
2.38	Finish machine operator
2.28	Firemen, dredge, floating derrick, retort, shovel
2.63	Generator, plant operator (diesel-electric)
2.73	Mixermobile
2.18	Oiler on all equip.
2.20	Side and end dump truck driver (6 yds and under)
2.25	Side and end dump truck driver (over 6 yds. & incl. 8 yds.)
2.30	Side and end dump truck driver over 8 yds. & incl. 10 yds.)
2.40	Side and end dump truck driver (over 10 yds. & incl. 12 yds.)
2.20	Solo flatbed and misc. body trucks 1 ton to & incl. 4 tons)
2.20	Solo flatbed and misc body trucks (over 4 ton & incl. semi-trailer & truck & trailer not to exceed 10 tons)
2.20	Transit mix or wet mix trucks (3 yds. & under)
2.30	Transit mix or wet mix trucks (over 3 yds.)
2.25	Trucks, semi-trailer, and truck & trailer (over 10 tons incl. low bed)
2.20	Tank trucks, 1,600 gallons and under
2.20	Tank trucks, over 1,600 gallons
2.28	Jackhammer & power tool operator (Incl. chipping guns, paving breakers, vibrator operator—other than paving)
2.28	Ribbon setters (head)
2.18	Vibrator operator (paving only, incl. sidewalks & curbs)
2.38	Wagon drillers
2.85	Piledrivermen riggers, burnermen & welders
	Unskilled labor
2.38	Cement hog
2.23	H.D. Mechanic helper
2.20	Concrete buggies (power operated)
2.20	Truck helper (steady)
2.20	Warehousemen (warehouse parts & tool men)
2.18	Batch weighman, broomers, cement buckers; concrete buggymen, puddlers, rodders, rubbers (not fin.), spreaders; curing, sprayman and joint-dowel-tie bar setters
2.18	Car & truck loaders & road pump tenders
2.18	Flagmen (Traffic)
2.28	For strippers (swinging stage)

Rates of wages applicable to the work to be done within the State of Oregon shall comply with Oregon laws.

Prequalification of Bidders:

Prequalification of bidders will be required in accordance with the provisions of Oregon Revised Statutes 279.010 to 279.024, inclusive, and Chapter 47.28.070 of the Revised Washington Statutes.

Plans and Specifications:

Full information for bidders may be obtained at the office of the Oregon State Highway Commission, State Highway Building, Salem, Oregon. Plans and specifications may be inspected at the same place and may be obtained by elegible bidders upon payment of $2.00 per set.

Plans and specificatins may be inspected at the office of the Associated General Contractors at Portland, Oregon, Seattle, Tacoma and Spokane, Washington, Boise, Idaho, and San Francisco and Los Angeles, California.

The right is reserved to reject any and all proposals or to accept the proposal deemed best for the States of Oregon and Washington.

SCHOOL ADDITION
BIDS CLOSE 8 P. M., FEBRUARY 28
Silverdale, Washington
NOTICE TO CONTRACTORS

Sealed bids are invited by Central Kitsap School District No. 401, for the construction of an Addition to Tracyton Elementary School at Tracyton, Washington, until 8:00 p. m., Tuesday, February 28, 1956.

Bids received by this time at the office of the Superintendent of School, Silverdale High School Administration Building, Silverdale, Washington, will then and there be publicly opened and read aloud. Bids received after the time fixed for opening cannot be considered.

Separate bids will be received for the following contracts:

(a) General Construction;
(b) Plumbing, Heating and Ventilating;
(c) Electrical Work.

Specifications, including contract documents and drawings, may be examined at the office of the Superintendent of Schools, Silverdale, Washington, and at the office of Jensen & Mills, Architects, 308 South Tacoma Avenue, Tacoma, Washington, and may be obtained by bidders at the office of Jensen and Mills, Architects, 308 South Tacoma Avenue, Tacoma, Washington, upon deposit of $10.00 for each set.

The full amount of the deposit for one set of documents will be refunded to actual bidders upon return of the documents, unmutilated and without marks or annotations, within ten (10) days after the time set for opening bids. Other deposits will be refunded, with deduction for the actual cost of reproducing the drawings, under the same conditions.

Each bid must be accompanied by a certified check, or cashier's check or bid bond as surety, in an amount not less than 5% of the largest bid, made payable to Silverdale School District No. 401.

The right is reserved to reject any or all bids and to waive informalities. No bidder may withdraw his bid after the time set for the opening thereof, unless the award of contract is delayed for a period exceeding thirty (30) days.

By order of:
CENTRAL KITSAP SCHOOL DISTRICT No. 401,
Silverdale, Washington.

Seattle, Washington
NOTICE TO CONTRACTORS

Sealed bids are hereby invited for the construction of an eight-place hangar, including earthwork, paving, utilities and miscellaneous items of work at Moses Lake Flight Center, Larson Air Force Base, Grant County, Washington, for the Boeing Airplane Company, Seattle Division.

The work includes but is not limited to the following:

(1) 8-place hangar structure, complete.
(2) Excavation, fill, grading and subgrade preparation.
(3) Concrete hangar apron and yard paving
(4) Asphaltic concrete parking area, road, and fire lanes.
(5) Drainage; storm and sanitary.
(6) Modifications to fire protection reservoir.
(7) Domestic and fire protection water lines.
(8) Air piping from existing Service Building.
(9) Steam generating unit and accessory work in existing Service Building, and steam supply and return lines for the hangar.
(10) Electrical distribution and communications systems.
(11) Modifications to existing Service Building.
(12) Oxygen storage facility.
(13) Underground gasoline storage tank at existing Oil Storage Building.
(14) Blast fence.
(15) Gun Firing Facility.
(16) Runway Threshold Lighting.
(17) Taxiway Revisions.

This contract will constitute a sub-contract under a prime contract between Boeing Airplane Company and the United States Government.

Bid, Performance and Payment bonds will be required.

Not more than three (3) sets of contract

documents may be obtained by each general contractor bidder, whether a single firm or joint venture on or about February 6, 1956. Subcontractors may obtain one (1) set only of complete documents or one (1) set only of partial documents pre-assembled for certain major sub-contract phases of the work. A deposit of one hundred dollars ($100.00) in the form of a certified check will be required on each complete or partial set upon application at the offices of Naramore, Bain, Brady and Johanson, Architects and Engineers, 904 Seventh Avenue, Seattle 4, Washington. Deposits will be refunded upon return of document sets in good condition to the offices of the Architect-Engineer within two (2) weeks following opening of bids.

Complete sets of bid documents will be available for inspection by prospective bidders at the following locations:

Naramore, Bain, Brady & Johanson, 904 Seventh Avenue, Seattle 4, Washington.
Naramore, Bain, Brady & Johanson, Moses Lake Flight Center, Moses Lake, Washington.
Associated General Contractors of America, 215 W. Harrison, Seattle, Washington.
Plan Bureau, 2413 Western Avenue, Seattle, Washington.

LATERAL, WASTEWAY
BIDS CLOSE 10 A.M., P.S.T., FEBRUARY 21
Ephrata, Washington
NOTICE TO CONTRACTORS

UNITED STATES DEPARTMENT OF THE INTERIOR, Bureau of Reclamation, January 16, 1956. Sealed bids, in single, (Specifications No. 117C-359) will be received at the office of the Project Manager, Bureau of Reclamation, Project Office Building, Division and "C" Streets N.W., Ephrata, Washington, until 10:00 a.m., Pacific Standard Time, February 21, 1956, and then publicly opened for furnishing labor and materials and performing all work for construction of Crab Creek Lateral Enlargement and Crab Creek Wasteway, Blocks 86, 87 and 88. This work will include earthwork for excavating the bottom and one side of existing lateral for approximately 6.6 miles and excavating the bottom only for approximately 6.9 miles, earthwork for excavating the bottom and sides for approximately 350 feet of wasteway, earthwork for and constructing concrete structures along lateral and wasteway including pipe drop, pipe turnouts, constant head orifice turnouts, concrete checks and drops, and county road crossings including check and pipe inlets and concrete transitions. This work will include 46,820 cu. yds. excavation; 100 mile cu. yds overhaul; 3,400 cu. yds backfill and compaction about structures; 350 cu. yds. concrete in structures; furnishing and handling 525 barrels cement; furnishing and placing 31,000 lbs, reinforcement bars; furnishing and laying 990 lin. ft. of 15, 18, 21, 48 inch diameter standard-strength reinforced-concrete; 2,950 lbs. miscellaneous metalwork; and furnishing and installing 28 steel slide gates, etc. Time allowed for completion will be 270 calendar days. For particulars address the Bureau of Reclamation, P. R. Nalder, Project Manager, Box 368, Ephrata, Washington.
5355—1-28

SIPHON, CANAL, WASTEWAY
BIDS CLOSE MARCH 13
Ephrata, Washington
NOTICE TO CONTRACTORS

DEPARTMENT OF THE INTERIOR, Bureau of Reclamation. Sealed bids (Specifications No. DC-4620) will be received at Ephrata, Washington, until March 13, 1956, for furnishing labor and materials for the construction of Wahluke Siphon, Station 0/00 to Station 159/05; Wahluke Branch Canal; and PE 16.4 Wasteway, Station 577/40 to Station 677/25, Columbia Basin Project, Washington. Location near Othello, Washington. Principal items are 281,000 cu. yds. excavation; 7,500 cu. yds. concrete in structures; 2½ miles concrete pipe in siphon, 15'-4" diameter, alternative monolithic or precast concrete pipe; ½ mile plate-steel pipe in siphon, 15'-4" diameter, and other work. Completion time 800 days. For particulars, address Bureau of Reclamation, P.O. Box 368, Ephrata, Washington; or Building 53, Denver Federal Center, Denver 2, Colorado. W. A. Dexheimer, Commissioner.
5362—2-4

POWER CIRCUIT BREAKERS
BIDS CLOSE MARCH 1
Denver, Colorado
NOTICE TO CONTRACTORS

DEPARTMENT OF THE INTERIOR, Bureau of Reclamation. Sealed bids (Invitation No. DS-4614) will be received at Denver, Colorado, until March 1, 1956, for furnishing two 69-kv (350-kv BIL), 1,200-ampere, 2,500,000-kva, power circuit breakers, suitable for switching shunt capacitors for Folsom-Elverta Terminal Switching Facilities, Central Valley Project, California. Delivery is desider with 180 days. For particulars, address Bureau of Reclamation, Building 53, Denver Federal Center, Denver 2, Colorado. W. A. Dexheimer, Commissioner.
5354—1-28

PUMPING PLANT
BIDS CLOSE MARCH 6
Ephrata, Washington
NOTICE TO CONTRACTORS

DEPARTMENT OF THE INTERIOR, Bureau of Reclamation. Sealed bids (Specifications No. DC-4630) will be received at Ephrata, Washington, until March 6, 1956, for furnishing labor and materials for Evergreen Pumping Plant, Block 77, Columbia Basin Project, Washington. Location near Quincy, Washington. Principal items are 2,800 cu. yds. excavation, common; 14,600 cu. yds excavation, rock; furnishing and handling 2,670 barrels cement; furnishing and placing 208,400 pounds reinforcement bars; furnishing and erecting 129,000 pounds steel for pumping plant superstructure; and other work. Completion time 420 days. For particulars, address Bureau of Reclamation, P. O. Box 937, Boise, Idaho; P. O. Box 1078, Quincy, Washington; or Building 53, Denver Federal Center, Denver 2, Colorado. W. A. Dexheimer, Commissioner.
5366—2-11

CHURCH
BIDS CLOSE 3 P.M., FEBRUARY 21
Tacoma, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by Dr. William Rosenbladt, in the office of Lea, Pearson & Richards, architects, 240 S. Stadium Way, Tacoma, Tuesday, February 21, 1956 at 3 p.m., for construction of a new Central Lutheran Church or reinforced concrete construction. The approximate cost of the building is $350,000. The bids will then and there be publicly opened and read aloud. Bids received after the time fixed for opening cannot be considered. Separate bids will be received for the following contracts: General, Mechanical, Electrical or Combination bid.

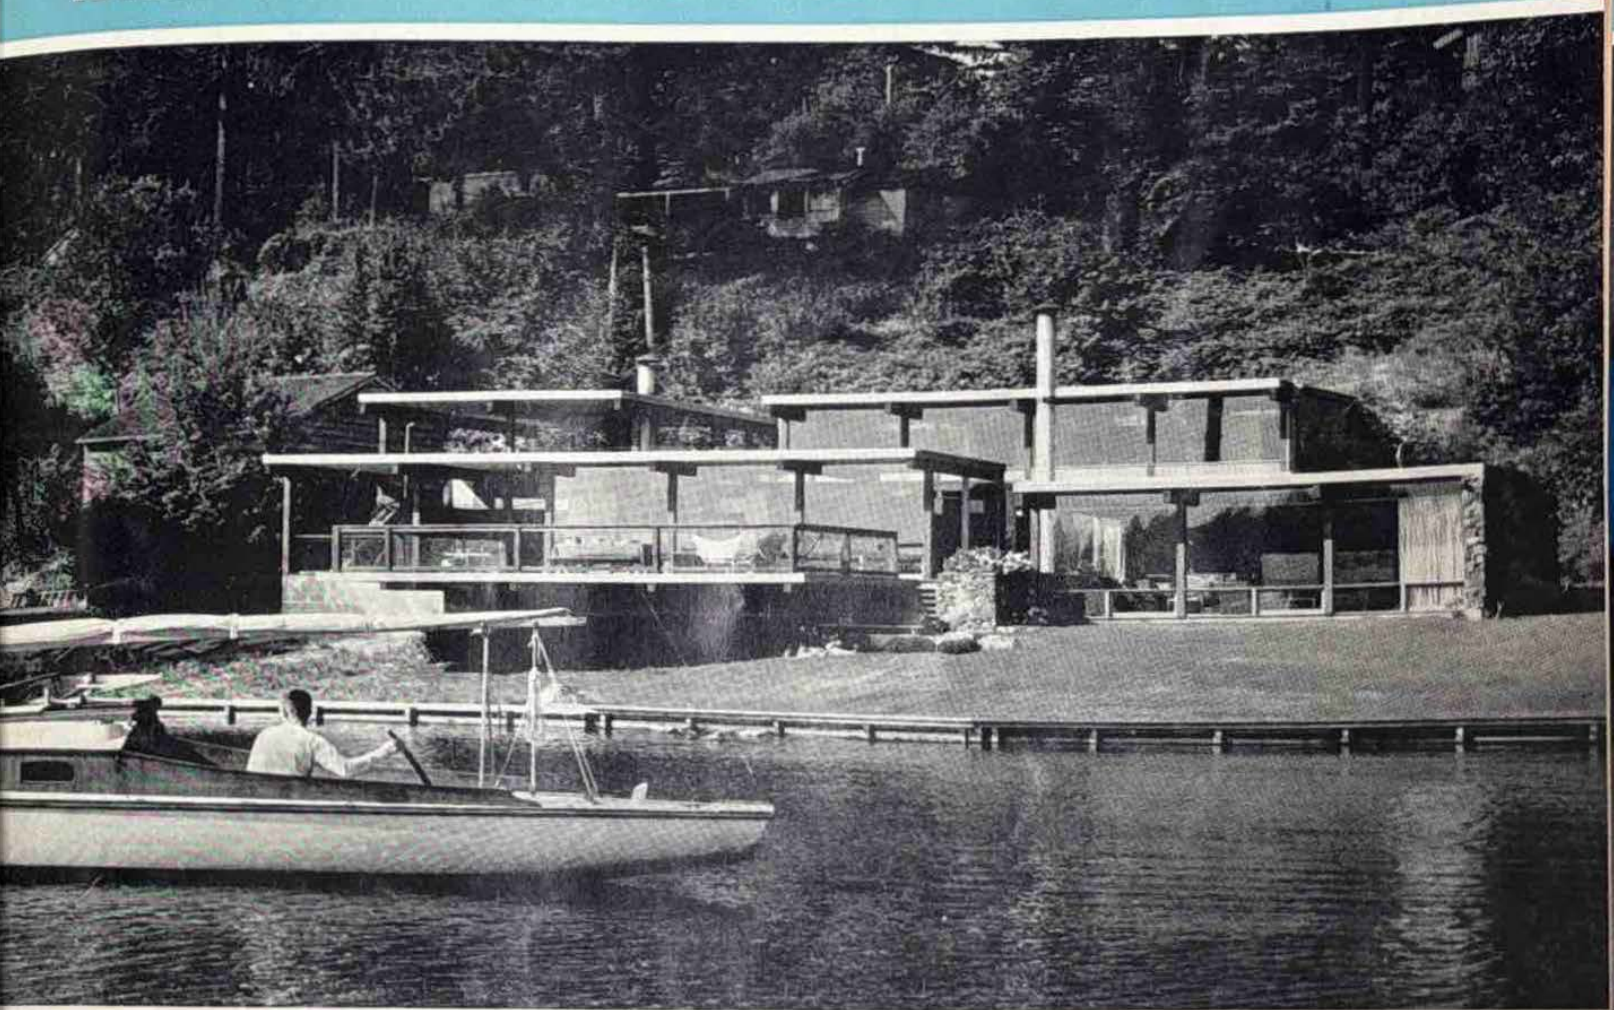
Drawing and specifications including contract documents may be examined at the office of the architects, Lea, Pearson & Richards, 240 S. Stadium Way, Tacoma, Washington, and may be obtained there upon deposit of $25 for General, and $10 each for Mechanical and Electrical. The full amount of the deposit for one set of documents will be refunded to actual bidders upon return of the documents unmutilated and without marks and annotations, within 10 days after the time set for opening of bids. Other deposits will be refunded with deductions for the actual cost of reproducing the prints, under the same conditions.

Each bid must be accompanied by a certified check, cashier's check, or bid bond in an amount not less than five per cent (5%) of the proposal submitted made payable to Central Lutheran Church. The right is reserved to accept or reject any or all bids and waive all claims, or any informalities or irregularities in the bids or the bidding. No bidder may withdraw his bid after the time set for the opening thereof, unless the award of the contract is delayed for a period exceeding 30 days.
5363—1-31; 2-1

HAYSTACK DAM
BIDS CLOSE FEBRUARY 28
Madras, Oregon
NOTICE TO CONTRACTORS

DEPARTMENT OF THE INTERIOR, Bureau of Reclamation. Sealed bids (Specifications No. DC-4613) will be received at Madras, Oregon, until February 28, 1956, for furnishing labor and materials for construction of Haystack Dam, Deschutes Project, Oregon. Location near Madras, Oregon, in Jefferson County. Principal items are 650,000 cu. yds. excavation; 533,000 cu. yds earthfill in embankments; 1,640 cu. yds. concrete and other work. Completion time 600 days. For particulars, address Bureau of Reclamation, Madras, Oregon; or Building 53, Denver Federal Center, Denver 2, Colorado. W. A. Dexheimer, Commissioner.
5353—1-28

SCHOOL CONSTRUCTION
BIDS CLOSE 2 P.M., P.S.T., MARCH 20
Spokane, Washington
NOTICE TO CONTRACTORS



Sealed bids in triplicate for furnishing all labor, equipment, and materials and performing all work for the project described herein will be received until 2:00 p.m., PST, Tues., Mar. 20, 1956, by the Housing and Home Finance Agency, in multi-purpose room of the Blair School, Fairchild AFB, Spokane, Washington, for the general, mechanical, and electrical work separately, and then publicly opened. Information regarding bidding material, bid guarantee, and bonds, plans, specifications and bidding documents may be examined at the following offices: John S. Villesvik, Architect AIA, 109 North Third Street, Yakima, Washington; all the plan centers in Spokane, Wenatchee, Moses Lake, Pasco, Yakima, Tacoma, and Seattle, Washington, and Portland, Oregon, and may be obtained upon delivery of a check in the amount of $7.50 for each separate set at 109 North Third Street, Yakima, Washington. Checks must be made payable to the Housing & Home Finance Agency—OA. Cash will not be accepted and this fee will not be returned. Bid guarantee required: 2% of Bid on U. S. Standard Form 24 or money order, certified or cashier's check. Bonds required: 50% performance and 50% payment on Standard Government Forms. Description of work: General, Mechanical and Electrical work to be bid separately for construction of a one-story masonry school building of approximately 19,000 square feet and site improvements at the Fairchild AFB, Spokane, Washington. Address sealed bids to: Mr. L. R. Durkee, Area Representative, Housing & Home Finance Agency, c/o Postmaster, Fairchild AFB., Spokane, Washington. Information regarding liquidated damages (if any), payments, etc., is attached or made a part of the specifications. Bids shall be submitted on the forms furnished or copies thereof.

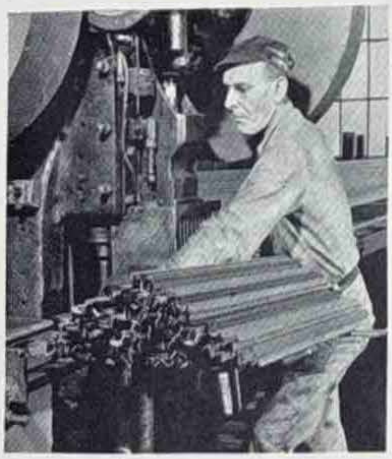
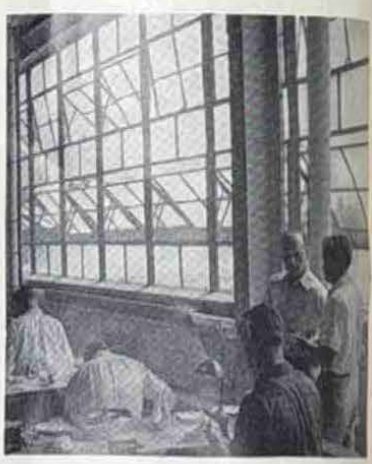
Also in this issue: all-concrete church, small apparel shop, union headquarters



Steel windows appeal to builders and contractors because they are easily installed. Fenestra windows are supplied either hot-dip galvanized and bonderized or bonderized and prime-painted.



Sturdy, easy-to-install windows made from STEEL

More and more windows these days are made from steel. The attractive, slender frames and muntins are ideal for homes, plants, hospitals and other buildings where maximum light and ventilation are important. The rugged steel frames can withstand rough treatment during shipment. And they are easy to install because they come factory-assembled.

The various types of steel window sash are just a few of the many sections we roll at our three West Coast steel plants. We're bar specialists. So be sure to check with us when you need carbon or alloy grades in either standard or special sections. All bars are rolled from new-billet steel, uniform in size and quality. Call our nearest sales office.

Bethlehem Pacific steel sections are sheared to accurate lengths in the Detroit Steel Products Co. plant in Emeryville, Calif. Their "Fenestra" line includes 270 types of window sash.

These craftsmen are gilding fine china, intricate work that calls for plenty of natural light. Only steel windows have the strength to permit the use of such slender framing members.

Architects and speculative builders: a need for both

by RICHARD WALLER

BUILDING HOMES for speculation has been a booming industry since the end of World War II.

Large residential districts in almost every town and city in the country have been created. Some are attractive and a credit to the community, others are architectural abortions. It is indeed a shame that so many of these post-war residential districts fall into the latter category. What has brought about this unnecessary situation?

First of all, an acute housing shortage faced the country immediately after World War II. Contractors could and did sell anything that even resembled a house.

Second, architectural advice was disregarded completely in many cases. The speculative builders would develop a plan that would sell, not on its architectural merits, but only as a solution to the housing problem.

Third, too many builders considered the architectural fee as an unnecessary expense in the cost of a home.

The housing shortage was undoubtedly the main contributor to the situation. The home builder was riding the gravy train. Substandard construction resulted. The speculator was getting rich at the expense of the home buyer. In many cases state and federal investigations were held in an attempt to discover any fraud and to insure against future violations.

The architect was by-passed entirely by the builders. Basic plans were developed by the builders or purchased from home-plan or stock-plan services. The plan would be labeled "popular" on the basis of the volume of sales. The amount of sales of the typical builder house was due to the severe housing shortage. A house could be very poorly planned and still sell.

For the people who strive to "keep up with the Joneses," their ambitions were partially solved. They didn't have any choice, other than the color of the exterior paint. Residential developments looked like an army camp with houses substituted for the traditional tents. Houses were built to comply with the bare minimum requirements of the VA and FHA. The home became primarily a shelter rather than a place to live.

Negative public reaction toward the architects was stimulated in residential work. Plans were available to the prospective buyers through the builders themselves or through plan services for little or nothing. Why pay for an architect when the same service can be supplied at a fraction of the architect's fee was a common opinion. Today as these people look out of their "picture" windows at their neighbors across the street, or at cars passing in front of the house, many wish that an architect had been consulted.

These situations could have been substantially curbed had the advice and planning of architects throughout the country been utilized. An architect can usually design a house, regardless of size, that will be functional at little or no additional cost in construction. Slight variations in the exteriors would have eliminated the monotony of these typical residential additions to our communities. Merely changing the color of the exterior paint can hardly be considered a basic change.

Many believed that the architect's intention was to design a building that would be a credit to him as an architect, completely disregarding costs and the wants and needs of the client. This conception of the duties and responsibilities of the architect is entirely unfounded. The architect has to be as cost conscious as the builder. The difference lies in the quality of the final product. In building materials as in anything else there is the good-better-best variety. Where the architect will specify the "best," the builder will substitute the "good" in order to bring down the cost.

The architects could have greatly enhanced the appearance of so many residential projects by planning the overall development. Provisions for schools, parks, shopping and recreation would have been incorporated. These vital features are sadly lacking in a great many builder developments.

Architects and builders have worked together in several communities and the results have been highly commendable. It is too bad that this type of cooperation in the home building industry was the exception rather than the rule.

Mr. Waller is a junior student in architecture at Montana State College, Bozeman, where he works part time for an architect. While employed from 1950 through 1954 by a home-plan, stock-plan service, he designed several builder houses.—The Editor.

Letters . . . to the editor

Providing Shelter

HAVRE, MONT.

I read with considerable interest the guest editorial by Edward P. Miller (PA&B, Jan. '56). His comments concerning the additional cost of architect-designed homes are in line with our experience. It would seem that during his college training the architectural student, after designing his typical "doctor's residence," never again gains contact with the realities of the economics of residential construction.

The average builder and the public, for reasons not without some justification, have come to regard the architect as a luxury item for a few at the top of the socio-economic ladder. The architects are failing to meet one of their first responsibilities: that of creating a physical home environment which a reasonably large portion of our population can afford. As important as it is to have well-designed schools and even gas stations, it would seem to be even more important to have the architects' talents directed toward the planning of well-designed homes—homes which have obvious and considerable influence on the development of human beings.

Since there has been no place in the architect's education, or at least not sufficient emphasis, on engineering economy, then it would certainly follow that he be assisted in meeting the responsibility of residential design as Mr. Miller suggests: through coordination and cooperation with some of the more progressive home builders.

But in addition to sharing with (educating) the architect certain of his information and experience with regard to current cost items and consumer needs and desires, the **builder**, it seems to me, has a direct (educational) responsibility to the public of constantly setting a better example of architectural design as well as other qualities. Granted no one can stay in business if he gets too far ahead of public acceptance and/or includes too many innovations which the buying public cannot afford or is not willing to pay for, but the builder must continue to improve his product if for no other reason than to stay ahead of his competition.

Here on the High Plains the results of a conservative public, short supply of skilled craftsmen, limited variety of materials in lumber yards, rigorous climate, uncompetitive loaning agencies and the type of builder who is content to sell what the public accepts (last year) are quite apparent in

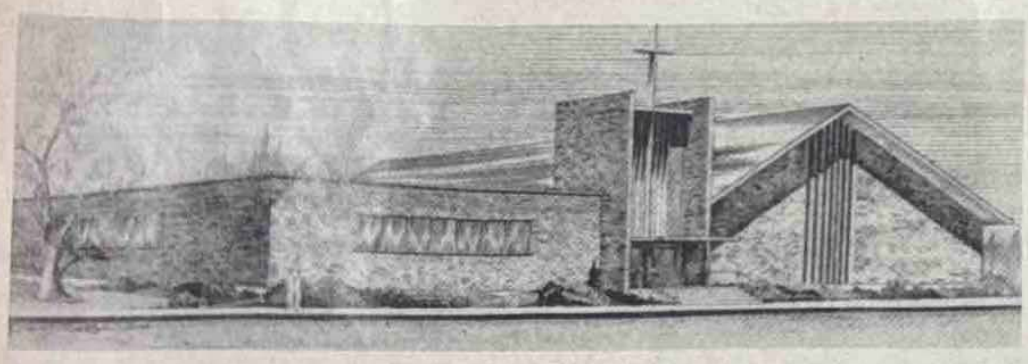
PACIFIC BUILDER AND ENGINEER—1st Saturday each month. $4 one year; $6 two years; $7 three years. Canadian $5, $8, $10. Foreign $6, $10, $13. Single copies 35c.

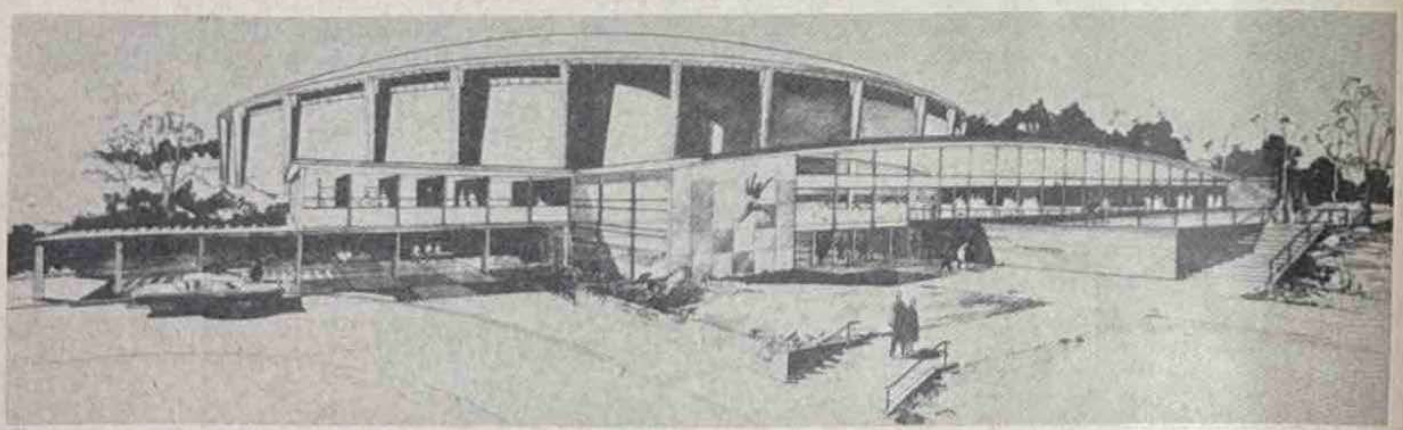
FOR NORTHWEST BUILDING AND ENGINEERING NEWS EVERY WEEK subscribe to all three (PA&B, PB&E, CNB) $20 one year; $30 two years; $38 three years. FOR FLASH ADVANCE DAILY SERVICE, read Pacific Construction Daily, $75 per year. Rates for U.S. and Alaska.

PACIFIC ARCHITECT AND BUILDER is published monthly by Pacific Builder and Engineer, Inc., 2418 Third Ave., Seattle 1, Wash., and is mailed on the third Saturday of each month. Price: $4 per year. Accepted as controlled circulation at Seattle, Wash.



MEDICAL BUILDING to be constructed in Spokane for Carl M. Stolle & Associates will have office facilities for 30 doctors and 27,500 sq. ft. of space. Designed in flexible modules to house either doctors in suites or individual practitioners, $750,000 structure will be supported by reinforced concrete columns and will include concrete floors and roof. Other materials: ceramic veneer around main entrance, some local natural stone and marble in downstairs lobby. Architects are George W. Stoddard-Huggard & Associates of Seattle.

PERSPECTIVES



by Pacific architects

PROPOSED CIVIC AUDITORIUM for Santa Monica, Calif., would be multimillion-dollar structure of reinforced concrete and steel, with seating capacity of 2,750. Preliminary plans prepared by Welton Becket & Associates call for concrete grillwork extending above sheet glass walls of lobby, long reflecting pool at front entrance and covered walkway across entire front of building. Formal presentation of cost estimate and plans will be made to city council April 2.

REMODELING of existing church building for First Church of the Nazarene in Tacoma will include construction of sanctuary, social room, kitchen and classrooms. It will feature brick veneer exterior with wood trim, shingled gable roof and glued laminated arches. Robert F. Rathjen of Kirkland, Wash., is architect.

MONTANA STATE COLLEGE CAMPUS at Bozeman will be enhanced by health and physical education center, construction of which will get underway this spring. Architects Fred F. Willson, AIA, and Oswald Berg Jr., AIA, planned building, to include concrete block walls, concrete floors and beams, glued laminated ribs and purlins and aluminum dome. It will have swimming pool and seating capacity of 8,000 to 12,000 persons.

Building News - Trends - Views

THE STATE OF CALIFORNIA will be allowed to employ private architects and engineers if a proposed constitutional amendment is passed in the November general election. Latest group to endorse the amendment is the State Chamber of Commerce.

A NEW TYPE OF STEEL ROOF DECKING manufactured in Seattle is proving to be an innovation in school and light building construction. The decking is flat steel on the top surface with flanges extending downward to receive acoustical tile. A void between the decking and tile is used to conceal electric conduits. By a simple welding procedure, the entire roof structure is tied together and to the supporting beams. T Steel Corp. is producing the decking from galvanized sheets supplied by Bethlehem Pacific Coast Steel Corp.

CONSIDERATION OF A STRUCTURE as a whole rather than as a mere collection of interiors has made buildings more dynamic and interesting. So declared Bruce Alonzo Goff, head of the University of Oklahoma School of Architecture, addressing a building conference at Armour Reasearch Foundation of the Illinois Institute of Technology. "Although concepts may vary and architects may disagree, I think the overall tendency in architecture today is a growth toward making space more active by using it dynamically," he explained.

Reminding his audience that architecture is a principle, he declared that "because we have so many outstanding designers today, there is a tendency to think of architecture as the work of only one or two men."

A chief engineer of Illinois Bell Telephone Co., appearing on the same program, charged that architects spend too much time worrying about aesthetics and neglect the practical aspects of buildings. He said that designers make sure there is adequate provision for such modern conveniences as air conditioners but forget to take into account communications systems. "We don't like to drape wires and cables all over the place," the engineer added.

IMMEDIATE PAST PRESIDENT OF NAHB, Earl Smith of El Cerrito, Calif., will lead a group of U.S. builders scheduled to arrive in Prague, Czechoslovakia, around June 1 for a month-long visit as guests of the Soviet Union in various areas of Russia. Smith was host to the group of Russian home builders who made a whirlwind tour of this country last year. He said that the U.S. builders are particularly interested in seeing examples of new Russian uses for concrete in residential construction.

ESTABLISHMENT of an architectural department in Oregon's State Department of Education is again a possibility. Sen. Lowell Steen of Umatilla proposed the plan, he said, because some architects are designing schools according to the district's ability to pay instead of the district's needs.

DISAPPEARANCE OF AGRICULTURAL LAND into industrial and housing developments has entered the political arena in Calif. Gov. Goodwin J. Knight told a San Francisco conference of some 450 people, sponsored by the California State Chamber of Commerce, that one-sixth of an acre of fertile land is taken from agricultural use and converted to housing or industry for every new person who comes into the state.

"This is an erosive threat to California," the Governor warned, "We lose more than 80,000 acres a year as a result." He told the meeting that some farm areas might be preserved by stiffer zoning regulations but that he believes such laws can provide farmers with only limited protection and that California cities will continue to expand into rural areas. The solution, Knight suggested, is to expand the state's irrigation facilities so that desert areas may be converted to agricultural usage through the construction of new dams and huge waterways.

Andres Oddstad, northern California home builder, told the group that "I never cease to marvel at the knowledge farmers have of the subdivision possibilities of their land." As he finished talking, at least a dozen farmers present asked Oddstad for his business card.

THE LARGEST FEDERAL OFFICE BUILDING outside the Washington, D.C., metropolitan area has been proposed for San Francisco. Congress has received a recommendation for the construction of a new U.S. courthouse and federal office building at an estimated maximum of $45,300,000 for the site and structure, to be financed by lease-purchase. It is proposed as a multistoried air conditioned building with nearly 1,600,000 sq. ft. of floor area, located in or adjacent to the area which the community has planned for a civic center.

NEW RELIGIOUS BUILDING CONSTRUCTION in the U.S. since 1945 has been estimated at $3,895,000,000 by the American Association of Fund-Raising Counsel. Total religious assets are believed to exceed $11 billion.

THE COST OF ALL-YEAR COMFORT, now being determined in a nationwide test, will run close to a target figure of $10 per month, according to the first progress report issued by the test sponsor. Houses of average size —1,200 sq. ft. of air conditioned floor area—submitted so far from 11 cities, ranging from Minneapolis on the north to Jacksonville and Phoenix on the south, indicate a predicted annual fuel and power cost of $125.68 against the target of $120. Owens-Corning Fiberglas Corp. is conducting the test program.

In another survey completed by Worthington Corp., the average operating costs for air conditioning per year in the western area was reported to be $87.50.

A NEW WOOD INTERIOR PARTITIONING SYSTEM, approved by the FHA, combines flush 2-in. hollow core hardwood plywood panels with hardware to make every wall a potential storage unit.

A HOUSING CONSTRUCTION BOOM dwarfing the one of the past 10 years is due to start in the early 1960s. W. E. Griffee of Portland, assistant secretary-manager of the Western Pine Association, told a logging conference last month that, "when the wartime babies now crowding our schools begin to marry, our country almost certainly will have to build two million houses a year."

A WEST COAST CITY PLANNER and former redevelopment official, James E. Lash, has been appointed executive director of the American Council to Improve Our Neighborhods. He has been serving as chief of the West Coast office of Harland-Bartholomew & Associates, city planning consultant firm with headquarters in San Francisco.

A PREFERENCE FOR WOOD KITCHEN CABINETS was expressed by 93% of 3,900 prospective home buyers surveyed recently by a Los Angeles management consultant firm.

From the editor's notebook . . .

CONGRATULATIONS: To Weyerhaeuser Timber Co for selecting architecture to lead off its "Your Career" series of 13 weekly half-hour TV programs of vocational guidance for high school youth and their parents. The show was seen in Seattle and three Oregon cities—Portland, Eugene and Medford—on Sunday, March 4. We also were pleased to learn that the final program will be devoted to another subject close to our heart: journalism.

* * *

ARCHITECTURE—USA: Speaking of films reminds us that we enjoyed "Architecture—USA" which by now a good many of our readers undoubtedly have had an opportunity to view. We felt that the presentation in general was interesting and representative of contemporary design; that it was strongest in its examples of commercial buildings and weakest in churches. But above all, the reactions we have heard indicate more than ever how architects themselves disagree on what is "good" contemporary design.

* * *

ABOUT THE SMALL FRY: Addressing a child guidance group a few months ago, a southern California architect offered some pointers to parents thinking of building or remodeling to accomodate new additions to the family. Rolf Sklarek, AIA, might very well have been talking to his colleagues.

The designer emphasized that children's interests and consequently their requirements change—a simple statement which doesn't seem quite so obvious when you visit many family residences or study the floor plans. Above all, he said, don't duplicate nursery school and its equipment at home. Would father like to come home to a house which looks like a factory or an office? Other pointers:

Adequate space is important. One plan that has worked successfully is to make the corridor that passes by the children's room to the master bedroom serve as a play passage by increasing its normal width to perhaps 6½ ft. Experience indicates that the typical divided playroom-bedroom does not work out.

Hillside homes are for adults. They fail to offer children the outdoor space they need to play in. They have no sidewalks on which to roller skate, no adjoining backyards to pass through.

The pretty decals, wallpapers and other gimmicks are cute but such "romantic crutches" are not so important to children.

Speculative home builders vs. architects: round 2

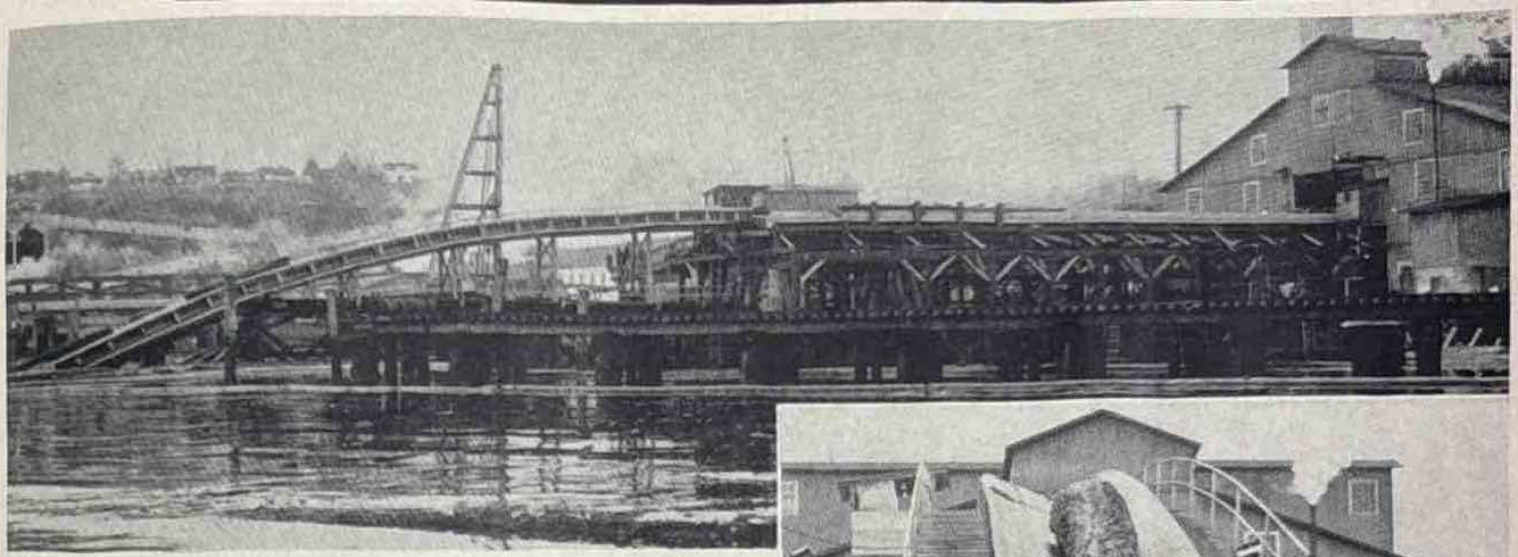
OUR JANUARY EDITORIAL evoked more comment than any other we have published since the new Pacific Architect and Builder came into being in July 1954. Edward P. Miller pulled no punches in outlining "What Speculative Builders Expect of Architects." The Tacoma, Wash., tract developer himself later admitted that "somehow it sounded much harsher in the reading than it did when being written."

We were fully aware, of course, that readers would take exception to such statements as: "The average home designed by an architect costs more to build than a plan of the same floor area worked out by the builder." What really surprised us was the nature of the responses received. The retorts were not emotional outbursts but carefully thought out statements, both by architects and builders. Several representative samples are found in this issue in "Letters to the Editor" beginning on page 4.

The replies by speculative builders were especially gratifying. They talked, for example, about **upgrading** rather than just **providing** shelter. And a few of his colleagues even took Mr. Miller to task for declaring that "we in the home building business do not feel that education is our job."

A number of architects, on the other hand, while not agreeing with the writer straight down the line, admitted that in certain areas the builder had recited more truth than poetry. But they were quick to defend their professional brothers, emphasizing that a good many of them have come down from the ivory tower to face the practical building facts of life.

* * *



The editorial produced another encouraging response. An architectural student who has worked for a stock-plan service organized some of his thoughts for PA&B, explaining: "I am extremely interested in the architect's role in the home building industry and feel that it should be more strenuously promoted to insure against future run-of-the-mill developments."

We have printed the student's remarks on page 4, not because they are profound observations but because we feel they reflect a healthy state of mind. Here is one collegian, at least, who has his feet firmly planted on the ground. The situation he writes about in Montana is more pronounced than that found on the Pacific Coast, California in particular.

* * *

Editorially speaking, this is likely the last we will have to say about the topic for some months. For those readers who have suggested that we might perform a service by strengthening the speculative builder-architect relationship, we can only say we intend to move in just that direction. We anticipate featuring occasional architect-designed builder homes and developments; and we will always have an open ear for all members of the building industry who want to speak their mind.

ANOTHER EXAMPLE OF CARCO "One Stop" STEEL SERVICE

THE HEART OF SIMPSON'S NEW LOG HAUL IS CARCO FABRICATED STEEL

Typical of the Simpson Logging Company's continuing investment in more efficient machinery and methods is a new log haul installed at its large sawmill Two in Shelton, Washington.

The new log haul was designed in two sections. The first section conveys logs from the water to the level of the operating floor of a new central barker plant which Simpson is installing to serve its sawmills and plywood plants. At this point, logs are diverted to the barker for removal of bark, or, if a log is over 60 inches in diameter, it is transported directly to the second section which carries it to the sawmill. Logs passing through the barker are returned to the water or transferred to the second section of the log haul and carried to the mill.

The first section is approximately 150 feet long on the sloping part with a 48 foot horizontal run at the top. The lift at extreme low tide is 43 feet and at extreme high tide is 23 feet.

The second section is a horizontal run that is approximately 175 feet long.

The maximum log size that can be handled is about 7 feet in diameter and 24 feet long. A log this size will weigh around 18 to 20 tons. Smaller logs may be as much as 42 feet long. The capacity of the new log haul will vary due to log size but will average about 500 to 550 logs per 8-hour shift based upon an average log size of 30 inches in diameter and 34 feet long.

Consulting Engineer: W. H. Rambo, Portland, Oregon

Pacific Car fabricated and erected 110 tons of structural steel for Simpson's new log haul. Simpson engineers planned the installation so that part of the new equipment could be erected while the mill continued to operate on the old machinery. By careful timing, the new haul was completely installed with the loss of only five operating days to the mill.

The dependability of Carco performance in meeting tight fabrication and erection schedules, such as this, is one reason why Pacific Car's structural steel facilities have become the largest in the Northwest.

Carco also offers buyers of structural steel a "one-stop" service. This means money-saving ideas and suggestions, prompt engineering detail and estimates, fabrication and erection.

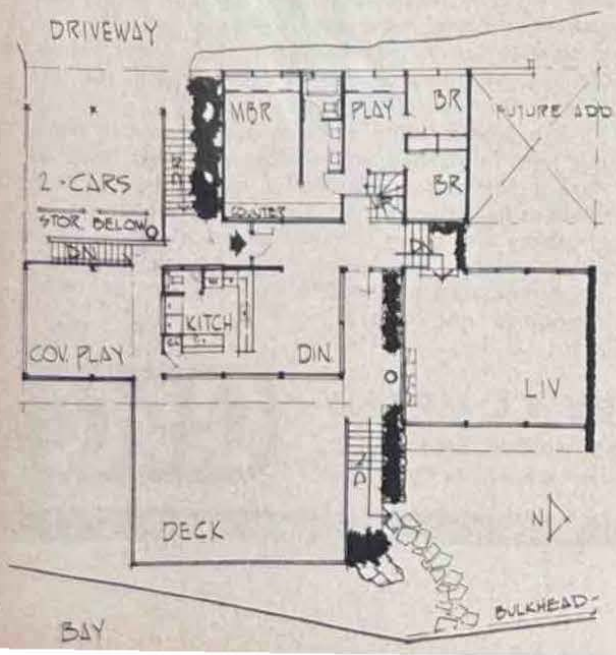
Waterfront house makes the m



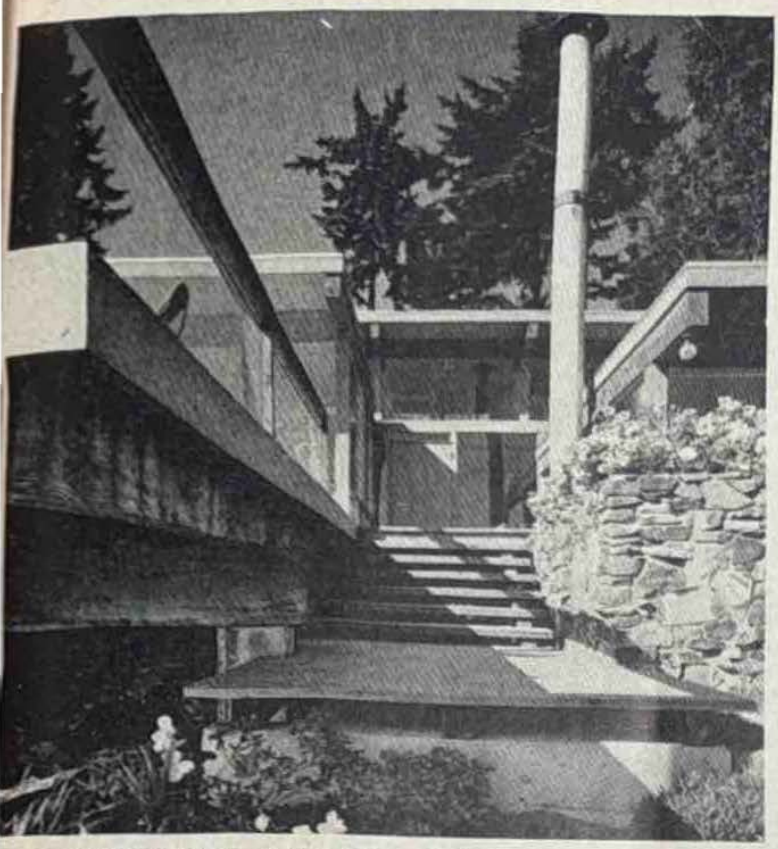
Photos, including cover, by Art Rupp

HOUSE IS BUILT virtually on four levels, providing marine view from just about every angle; note deck through window.

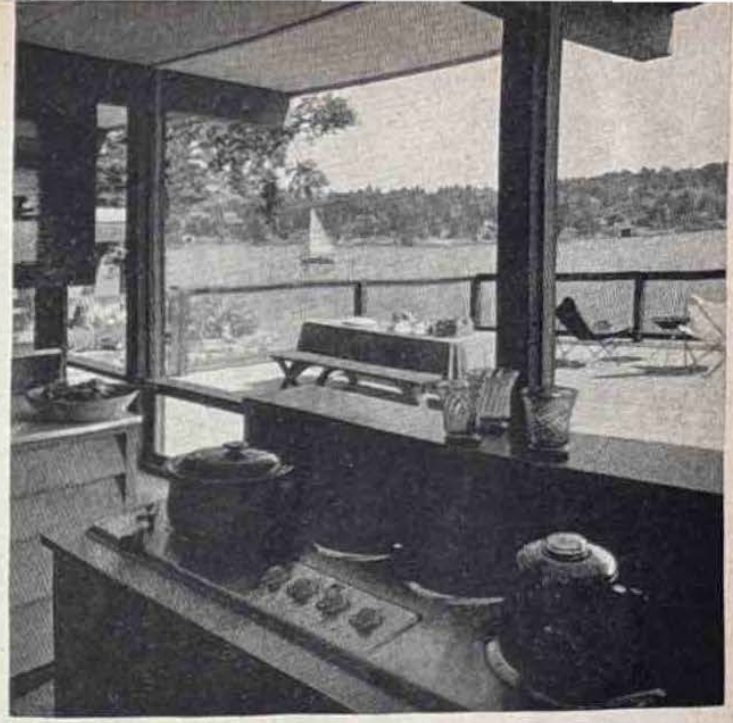
Frank E. Hodge Residence
Bellevue, Washington

DALE D. PEDERSEN, Architect

HUGH S. FERGUSON CO., Contractor



THE SITE for this home on Lake Washington's protected Meydenbauer Bay was ideal for the owner but difficult for the architect. The family thrives on the water; they can fish right off the deck which extends across the kitchen-dining area or go out in their boat; they have a fine beach and have built up a bulkhead with excavated rocks.



Finding a totally satisfactory architectural solution to the steep hillside lot was not an easy task. The clients finally selected the architect's plan of virtually four levels, having an 11-ft. fall from the carport to the marine front yard. The result: a view of the bay and mountains from every room except one.

The designer used materials and colors sympathetic to the natural setting amid the trees and water—predominantly stained fir, Mount Baker field stone and glass. Inside partitions for the most part are built-in cabinets and wardrobes.

of the view

FIREPLACE WALL of Mount Baker field stone seen at left becomes planting area on outside, leading down to waterfront.

COUNTER, with its drop leaf up, becomes breakfast-snack bar.

OUTLINE SPECIFICATIONS

Type of Construction: Post and beam.
Exterior Walls: Stained fir and Mount Baker field stone.
Roof: Fir t&g.
Floors: Concrete slab with cork tile finish and carpeting.
Windows: Stopped in wood.
Interior Walls: Fir and Mount Baker Field stone.
Heating: Oil fired hot water radiant system in slab.
Total Area: 2,400 sq. ft. (1,750 sq. ft., enclosed; 660 sq. ft., covered).
Total Cost: $30,000.
Date of Completion: August 1953.

Top on the list of design considerations were big living areas and facilities for extensive entertaining. The spacious, open plan on the several levels provided an answer to both. Adults can be relaxing in one area while the children romp in another.

Because of its nearness to the water, the house incorporates a covered play area which is partially enclosed and which the mother can supervise while working in the kitchen. The screened deck also affords another protected area for the children.

The Mount Baker field stone of the fireplace wall becomes a planting area on either side of the chimney on the exterior. The stone is repeated in several areas, including one end wall.

Expansion for the fifth member who joined the family since the house was built has been taken into account, as indicated in the future addition shown on the floor plan.

PLANTING AREA—philodendron and avocado trees produced from whole pits discarded in natural soil—provides interesting detail at foot of entry hall stair.

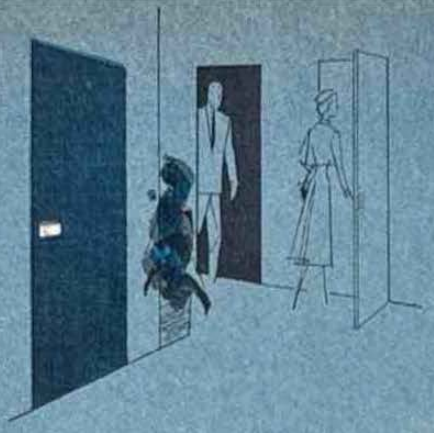
how you benefit today from the Kawneer Touch

The invention of resilient sash by the architect-founder of Kawneer, Mr. Francis J. Plym, revolutionized store front design. This was the foundation upon which Kawneer's expanding line of architectural products was developed and manufactured over its 50-year history.

The ability to put into these architectural metal products a certain "touch" has given Kawneer the opportunity to build products for all types of buildings. Today the greatly diversified line includes metal wall, flush doors, sun control products and other assemblies for big and little buildings, stores, offices, factories and schools. The Kawneer Touch offers you:

Eye-appealing metal finishes
—years of experience by skilled artisans are reflected in the lasting beauty of Kawneer products.

Large variety of stock shapes and models
—designed to be flexible and adaptable, yet retain design individuality.

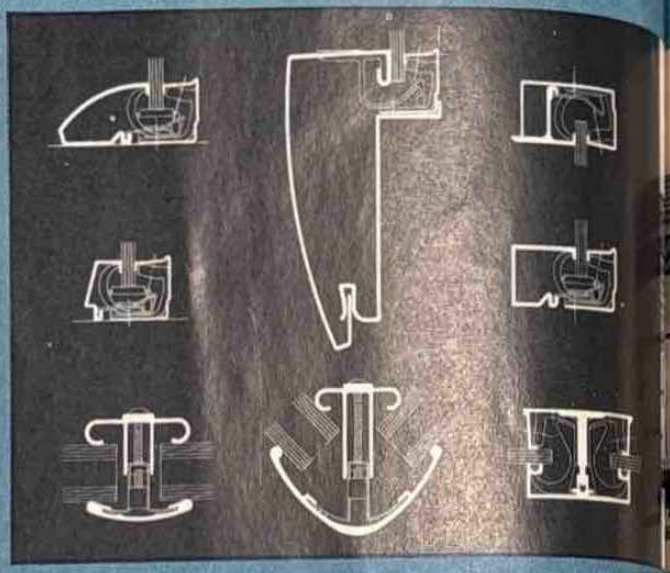


Precise engineering and production
—careful workmanship means less on-the-job erection time.

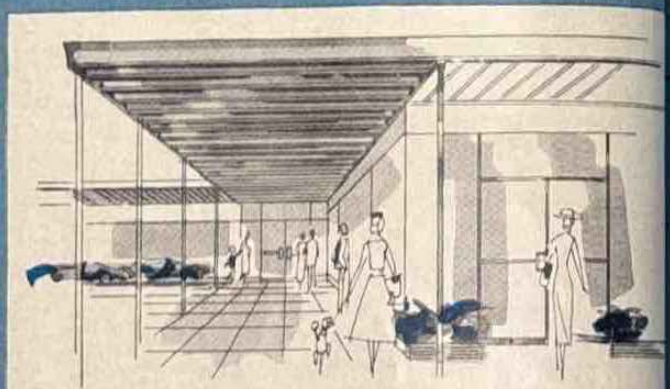
Continuous research and development
—always prepared to satisfy new architectural demands and needs.

"On-call" field representation
—over 110 representatives covering the nation and Canada, equipped through education, training and experience to assist you with any application problem.

Factory-trained dealer organization
—ready to serve with adequate inventories, prompt deliveries and skilled installation methods.



Nationwide network of factories and warehouses
—near your jobs to provide quick delivery to dealers, preventing costly delays.

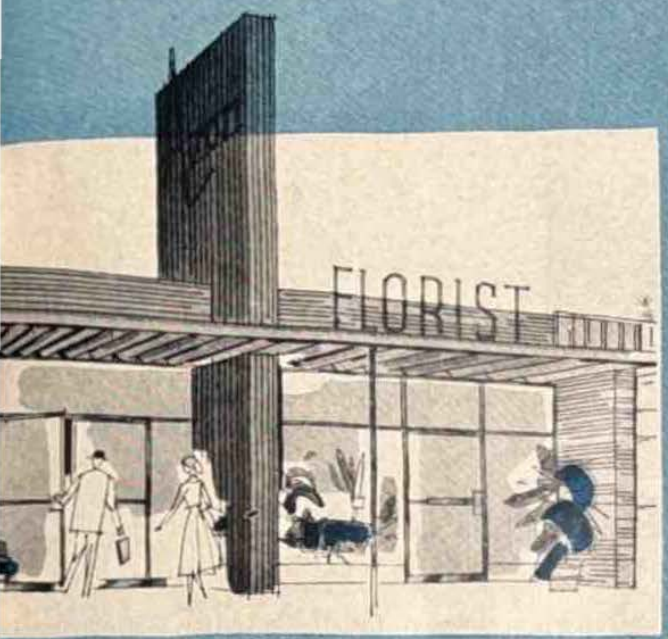


doors and entrances

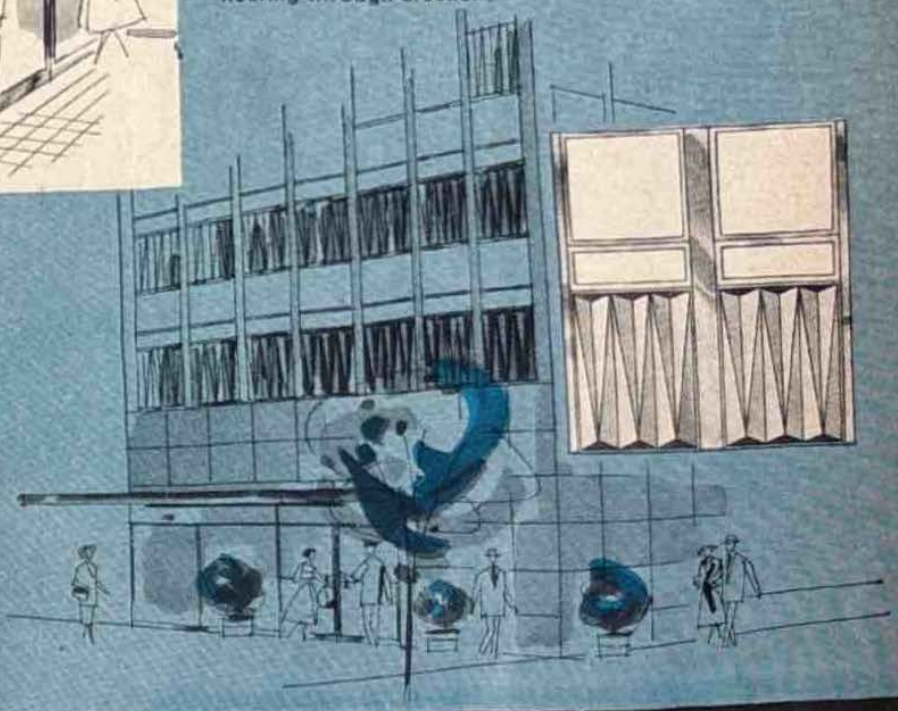
To enhance the merchandising effect of an outstanding window display, Kawneer many years ago developed entrances that would invite the public to enter. Today the epitome of doors and entrances has been developed. Kawneer's narrow-stile, all-welded aluminum doors and shop-prefabricated interchangeable hardware . . . an exclusive innovation . . . enables complete flexibility and individuality of design.

resilient sash

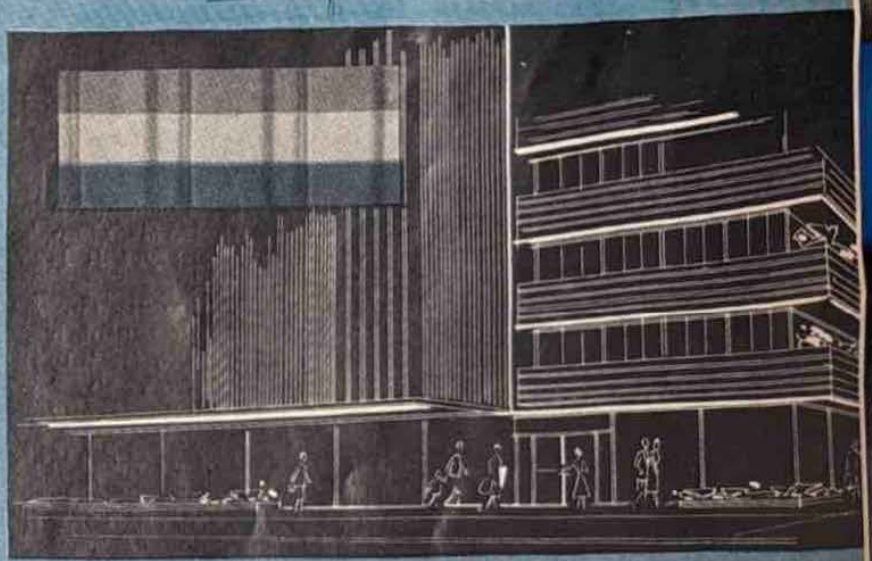
An apparent need for a sash that would "give" with the flexing of glass prompted the city architect of Kansas City, Mr. Francis J. Plym, to invent the first resilient sash. Since this time in 1906 many Kawneer sash assemblies have been developed and patented to provide you with a maximum variety of members from which to choose.

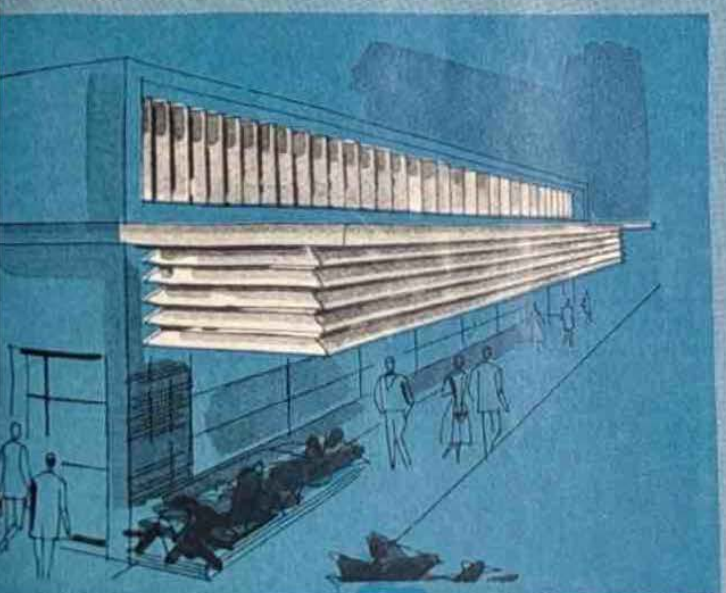


sun control products



Rainy or blistering hot weather is an asset to the fortunate merchant who has protected his walk with a Kawneer Canopy. People run for protection, practically into his arms. Kawneer K-louvers, too, shield workers and students from hot sun rays and glare. Versatile and adaptable to all types of windows, buildings and latitudes, Kawneer Sun Control products are quickly erected and complement the building design.





metal wall products

A pioneer in the fabrication of aluminum for buildings, Kawneer furnished many famous structures with windows and spandrels. Today the skills and abilities that went into the windows and spandrels of the Mellon Institute, the St. Paul City Hall and Court House, and the Boulder Dam Power House are still at work furnishing modern structures with a complete service of "one responsibility," from engineering through erection.

zourite facing

A crying need existed for a colorful, durable facing material. The exclusive Kawneer product, Zourite, was developed in aluminum with a porcelain enameled finish. Today the Kawneer Zourite product line includes 13 colors and 2 profile shapes—the narrow and bold.

A serene and chaste interpretation

ALMOST STARTLING in its simplicity, this church for the Catholic Archdiocese of Los Angeles is completely void of all extraneous ornamentation; yet it is neither radical nor ultra-conservative in toto.

The structure is situated in a valley community surrounded by foothills which are so indigenous to southern California. Thus it was deliberately planned to fit into the rural atmosphere of a small town, in sharp contrast to the usual influence found in the average large city church.

The exterior strongly suggests the California mission although the architects did not attempt a direct reproduction of this type of architecture. Instead, their aim was to design with modern materials in order to construct with modern building methods a church which would truly reflect the simplicity and atmosphere of historic eras long dead. This is seen, for example, in the eaves and roof overhang of the facade.

With 10,635 sq. ft. of space, the church has a capacity of 900 worshippers and is built on concrete caissons of poured concrete construction with steel reinforcing. Except for the norman brick veneer facade, concrete was used as a finished wall surface, both inside and out.

The 33-ft. high side walls were poured in three subsequent lifts of concrete. By predetermining the size of panels used for forming lumber, then marking strips within the forms, an excellent pattern of form joists was achieved and the usually obvious pour lines were completely concealed.

The nativity mural above the stacked brick veneer entrance was executed by Margaret Montgomery in the traditional cloisonne method of enameling upon copper. It contains more than 1,000 pieces of copper, averaging about 6 in. in area.

The cross plan concrete tower, topped with an ornamental cross which stands 100 ft. above the ground, reins majestically over the surrounding countryside and supports a large bronze bell which was imported from Holland.

Inside, both transepts are flanked by stained glass windows which rise 11 ft. from floor to ceiling. They depict the mysteries of the rosary and were done by Jansen-Winkeln for Dr. H. Oidtmann of Linnich, Germany.

Tones from the general color scheme of putty, earthy browns and greens were used to soften the effect of the mural above the altar and to blend it into the background so as to integrate the painting of the nave and sanctuary of the church. Terrazzo floors throughout the nave, transepts and sanctuary are finished in large roman travertine aggregate and olive green cement matrix.

Interior paneling—confessionals, narthex walls and pews—are of bleached white oak; the communion railing of white marble and brass ornamentation; marble altars of white and walnut travertine and applied brass symbolism. Sanctuary fitments and mural, sanctuary lamp, altar furniture, pulpit, pews, baptismal font and gates, and light fixtures all were designed by the architects.

OUTLINE SPECIFICATIONS

Type of Construction: Poured concrete with steel reinforcing on concrete caissons.

Exterior Walls: Concrete with norman brick veneer facade.

Roof: Built up with natural color desert stone, rigid insulation and glued laminated beams.

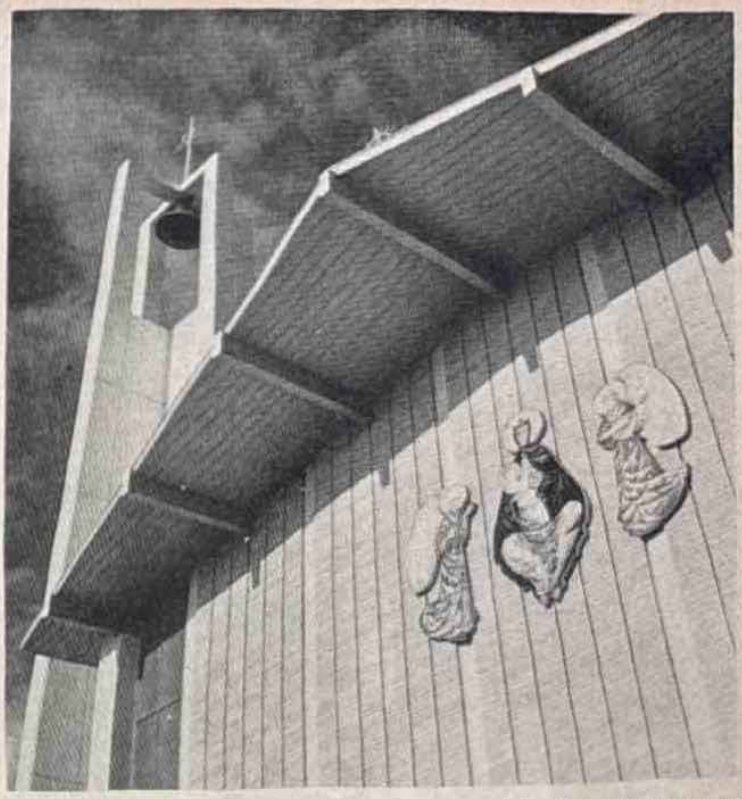
Windows: Leaded stained glass inset in steel sash.

Doors: Ornamental metal, exterior; rift sawn white oak, interior.

Floors: Concrete, surfaced with terrazzo using roman travertine marble chips.

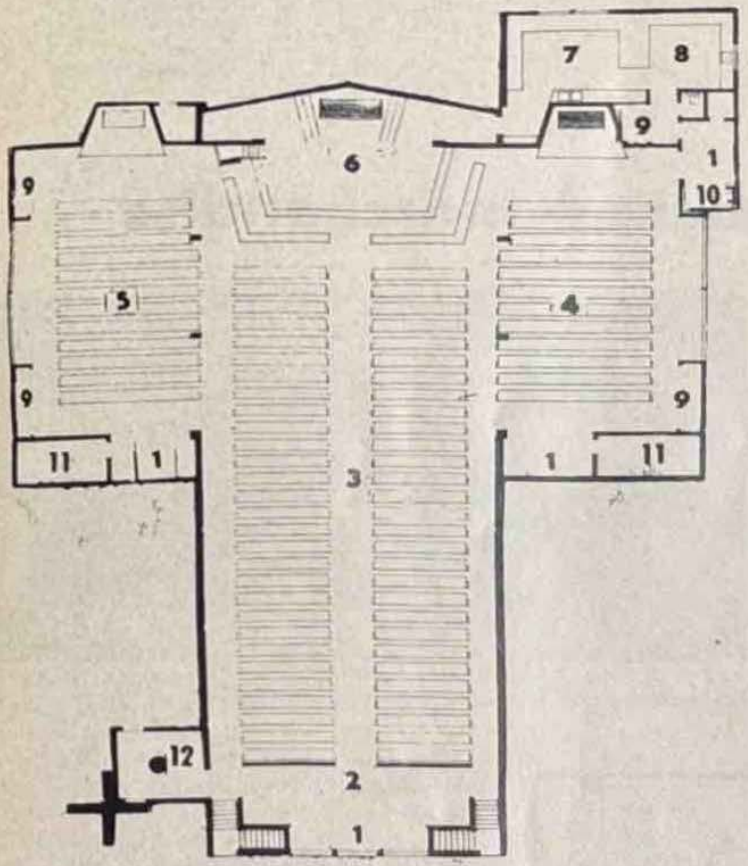
Interior Walls: Plaster.

Ceilings: Exposed structural 2-in sheathing between wood beams.



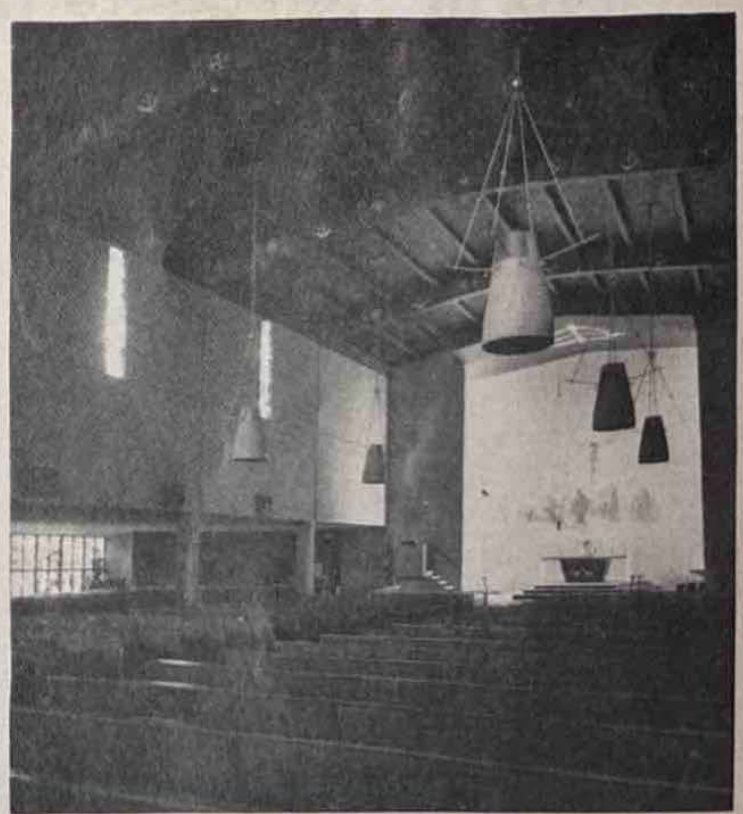
Heating: Gas fired forced air underfloor ducts.

Total Area: 10,635 sq. ft.



Total Cost: $154,293.

Cost per Square Foot: $14.32.



Date of Completion: January 1955.

INFORMALITY is keynote of selling area in front of shop as seen in top photo while more formal decor prevails in gown salon at rear. Walls are paneled in birch (above) and mahogany (below).

Lou Johnson's Apparel Shop
Yakima, Washington

PLACING of stockrooms immediately adjacent to their respective sales areas was a major design consideration for this women's apparel shop which caters to high-style clientele in an eastern Washington city of 40,000 population. In addition, the office is conveniently located to all departments and beyond the section devoted to impulse items.

The spacious, open floor plan allows for informality in such departments as sweaters and lingerie in the front of the building and for a more formal atmosphere in the gown salon at the back of the shop. The store personnel is particularly pleased with the abundance of drawer space.

Five outside windows serve as showcases besides the large plate glass display areas across the front and on one side. Just inside the entrance a slate floor in a shell pattern—some pieces smooth and others rough—lends a patio effect, enhanced by philodendrons and other plantings.

Recessed lighting, waxed birch and mahogany paneling and gray carpeting give warmth to the shop. An element of interest in the gown salon is a chandelier executed by Travyo Tynell, Finnish designed. It represents a fountain with dull brass sprays and a leaflike pattern at intervals.

Informal elegance matches merchandise

OUTLINE SPECIFICATIONS

Type of Construction: Masonry on steel reinforced concrete footings.

Exterior Walls: Concrete block filled with concrete, brick, granite bulkhead and aluminum front metal trim.

Roof: Flat, built up, with Rockwool batt insulation.

Floors: Concrete slab with asphalt tile in service areas; slate in entry; carpeting in sales areas.

Windows: Aluminum and steel sash.

Doors: Herculite glass, entry; wood and Modernfold, interior.

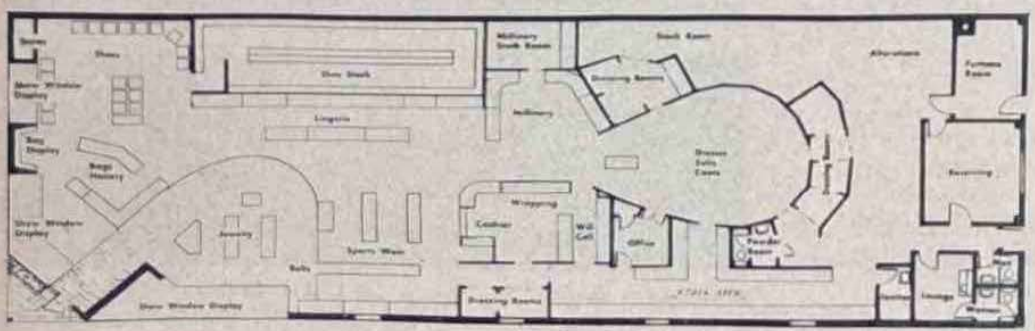
Interior Walls and Partitions: Exposed concrete block and brick; wood studs with drywall and birch and mahogany paneling.

Ceilings: Trowled finish plaster.

Heating: Oil fired warm air furnace with Trane ventilating and air conditioning system.

Total Area: 7,000 sq. ft.

Total Cost: $107,000, including fixtures and architect's fees.



Cost per Square Foot: About $15.

Date of Completion: September 1955.

RICHARD R. BRADSHAW, Structural Engineer
JOHN REARDON & ASSOCIATES, Mechanical and Electrical Engineers
MOSS BUILDING CORP., General Contractor

A FAR CRY from the days when union leaders met in dingy back rooms is this $315,000 building where United Auto Workers-American Federation of Labor officers and members hold forth in quarters which are comparable to the most ultra-modern corporation offices.

The site, which is about 175 ft. square, is located at a busy intersection in a progressive commercial area dotted with office structures, mostly of contemporary design. An old building on the site included the main foyer and storerooms plus the base of the corner pylon. With these points already established, the architect prepared an L-shaped plan using a circular drive from street to street and an adjacent parking area accessible from the main thoroughfare and the center of the building.

The central foyer served as the nucleus for organizational planning. It is large enough to accomodate receptionists, telephone switchboard operators and information clerks, all lined up behind a massive natural wood curved counter.

Technical and research offices are located on the way to the north wing which houses luxurious hardwood paneled offices with private baths and dressing rooms for the union's president, vice president and their secretaries. The latter are pleased that they can control the flow of visitors to this wing. The east wing provides for the secretary-treasurer's suite, his secretary and space for accountants, the auditor's clerks and office machines.

The entire building has been designed to create an atmosphere of tranquility in sharp contrast to the rushing traffic outside. Extensive landscaping further enhances the overall effect.

Rising above the pylon, which houses a consulting office, is the organization's insignia, a dominant feature of the entire neighborhood.

OUTLINE SPECIFICATIONS

Type of Construction: Steel frame on spread footings.

Exterior Walls: Reinforced masonry, with roman brick, wood and Santa Anita stone.

Roof: Concrete slab.

Floors: Concrete slab with terrazzo in lobby, wall-to-wall carpeting in private suites.

Windows: Aluminum and soundproofed double glass block.

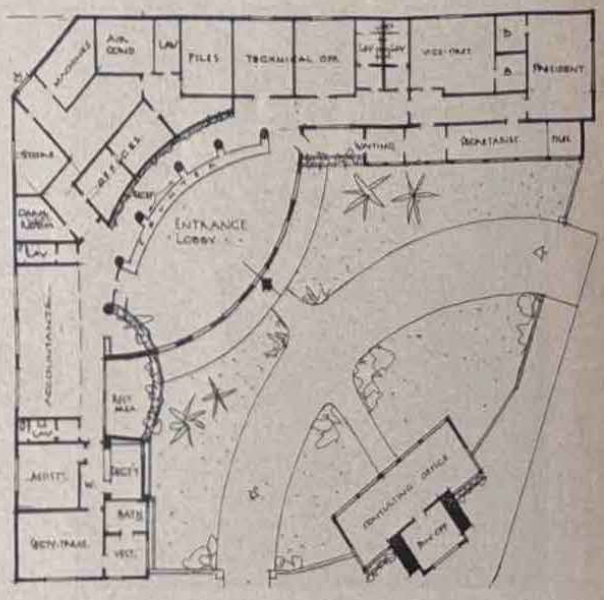
Doors: Aluminum and plate glass, exterior; hardwood slab, interior.

Interior Walls: Frame partitions, plastered; walnut, oak and other hardwood paneling and trim; some sections roman brick.

Ceilings: Acoustical pebbled plaster with asbestos fiber insulation.

Built-ins: Natural wood curved counter with Formica top.

Special Equipment: Formica paneled dressing room and bath walls with Formica table tops in natural woods for president and vice-president.



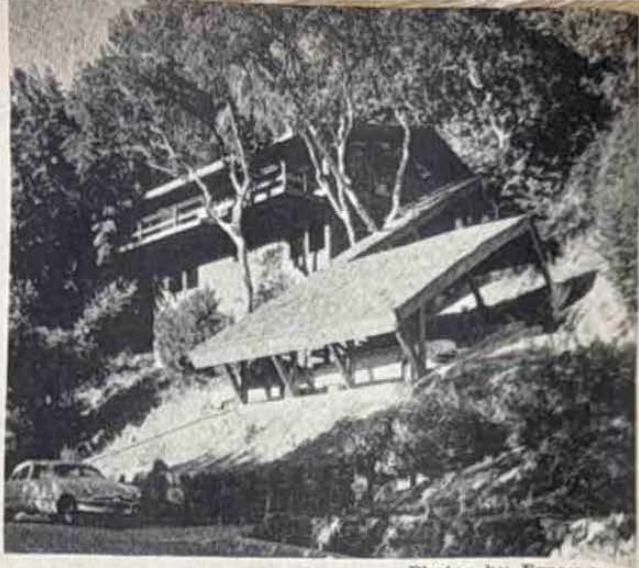
Lighting: Recessed spot lighting in general offices; recessed Plexiglas panels in ceilings of all private offices.

Heating: Forced air gas fired furnace.

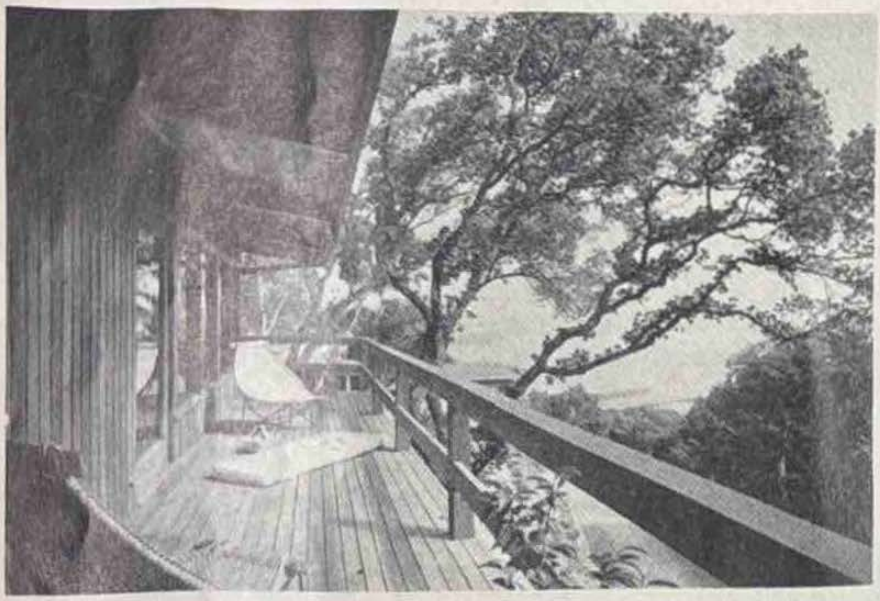
Total Area: 10,500 sq. ft.

Total Cost: $305,000 (including $200,000 for construction, $10,000 for furnishings, $5,000 for landscaping).

Cost per Square Foot: $20 (based on construction only).



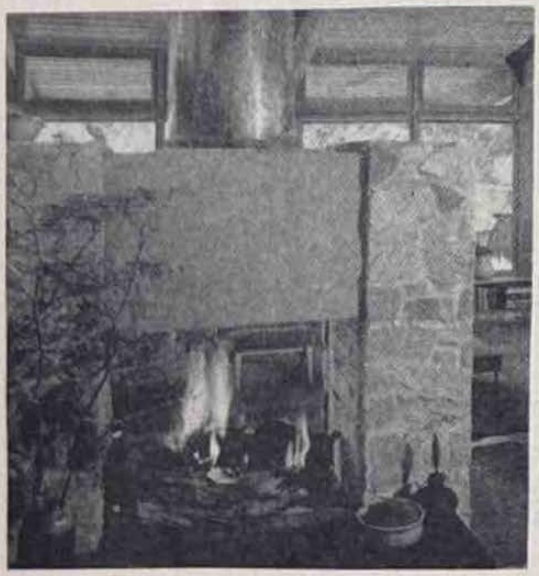
One way to hug a hillside



Norman Hodgkin Residence
Sausalito, California

CORLETT & SPACKMAN, Architects

MOSHER BROS. CONTRACTORS, Builders



Photos by Ernest Braun

LIKE OTHER HOMES clinging to steep grades, this one has usual location of main living quarters on upper deck but design is unique in several respects. Note how roof of garage follows 55-degree grade and extends upward to form roof for breezeway. An 8-ft. deck runs along view side of house, off living room.

TWO-WAY FIREPLACE with industrial size copper flue is placed between dining and living rooms.

A UNIQUE concrete grade beam and concrete pier foundation system was devised by the architect to eliminate the high cost of conventional retaining walls and stepped footings usually necessary when a home building site is on a steeply inclined lot.

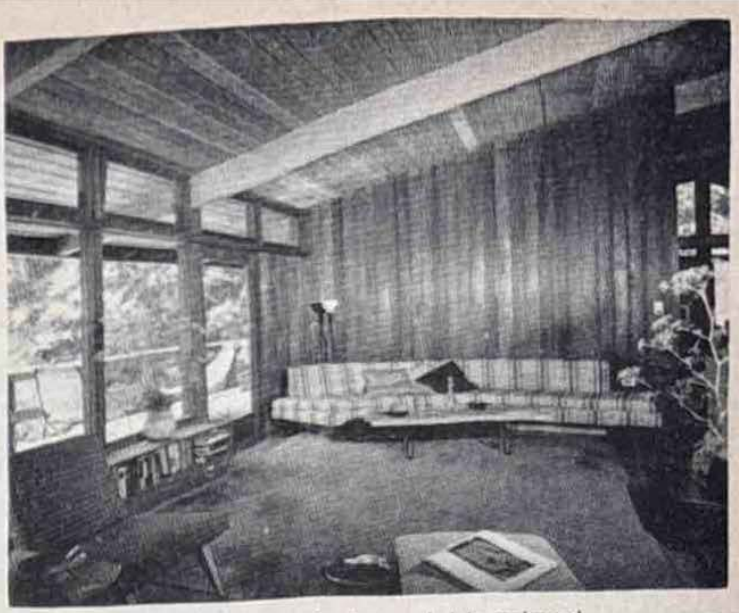
The hills which surround San Francisco Bay offer the prospective client magnificent views. However, the building boom of the past five or six years has eliminated most of the hilltops and gentle benches. View lots now available are steep and, in most instances, are modified cliffs.

The result of the desire for a view lot combined with the shortage of land has been that bigger homes are being built on the steeper lots and architects and builders have sought better foundations to give their houses a firm grip to the ground.

Such a foundation was achieved in the Hodgkins home. Resting on a 55-degree grade, it is anchored to the site with a reinforced concrete grade beam foundation system which transfers all vertical loads to four reinforced concrete piers 8 ft. in depth.

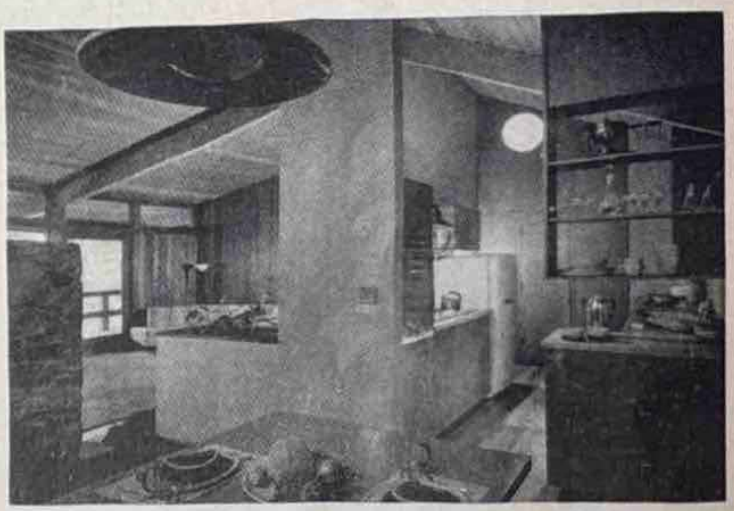
The architect contends that the conventional re-

taining wall type of stepped foundation is not only expensive but dangerous, inasmuch as subsurface water lets saturated earth build too much pressure behind such walls. In his foundation design for this house, the weight of the structure is carried on horizontal reinforced concrete beams on vertical reinforced concrete piers placed every 16 ft.



These piers extend 8 ft. into the ground, locking the entire house to the hillside. The $1,500 cost of all concrete and reinforcing steel is about half the cost of a concrete wall, according to the designer, and in his foundation, subsurface waters pass harmlessly between the piers and never build up pressure.

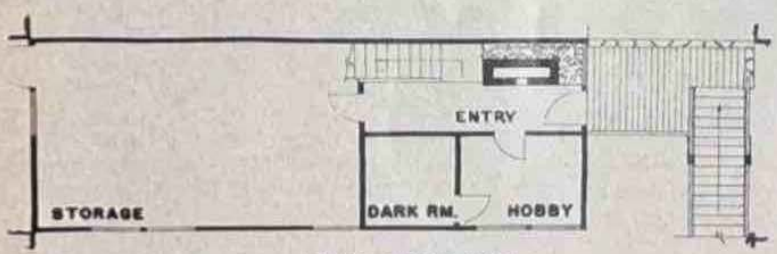
The garage roof parallels the slope of the lot. An extension up the hill forms a covered breezeway to the lower floor main entrance. The house and the covered areas total more than 2,500 sq. ft. and the construction cost ran to $11 per square foot.



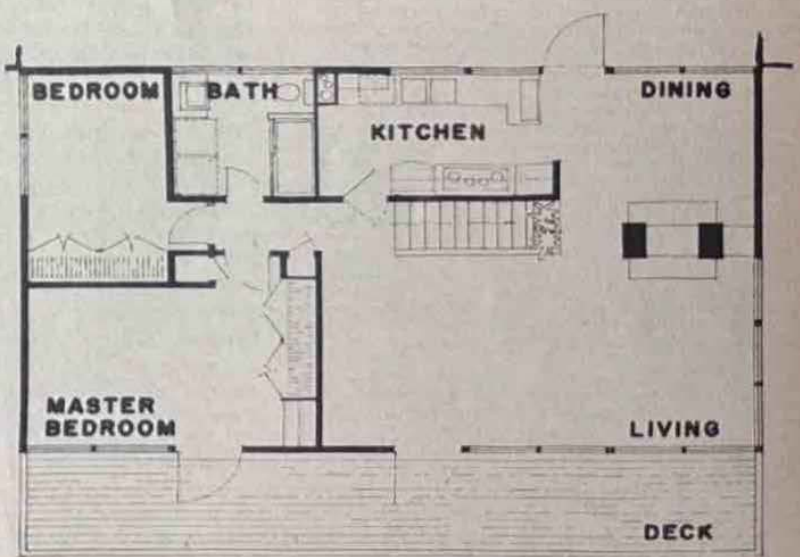
The home has two bedrooms on one floor, with sweeping views from the living and master bedroom areas. In addition there is a darkroom, hobby room and an unfinished area for a future guest bedroom and bath on the lower floor.

The washing machine and dryer are placed in the large bathroom, on the basis that this room is the principal source of soiled clothes and towels.

A good deal of stonework went into the two-way fireplace which serves both living and dining areas. Two stone piers support a cantilevered concrete hearth and a common brick throat covered with mortar. Above this mass is a copper flue, big enough to double the draft and long enough to rise through the roof, ending in a wind-driven draft ventilator.



LIVING ROOM faces deck patio, is paneled in redwood.



KITCHEN AT REAR is separated from dining-living area by Sheetrock wall. Oak plank flooring carries out rustic theme.

OUTLINE SPECIFICATIONS

Type of Construction: Frame on reinforced grade beam foundation system transferring all vertical loads to four reinforced concrete piers 8 ft. in depth; two levels.
Exterior Walls: Redwood.
Roof: Cedar shakes.
Floors: Oak plank and asphalt tile.
Windows: Plate and crystal sheet.
Doors: Flush, hollow core mahogany.
Interior Walls: Redwood paneling and Sheetrock.
Ceilings: Exposed 2x8-in. white fir.
Fireplace: Stone supporting cantilevered concrete hearth and common brick throat.
Heating: Gas fired warm air.
Total Area: 2,500 sq. ft.
Total Cost: $27,000, including carport, breezeway, built-in cabinets and stonework, but excluding architect's fee and land cost.
Cost per Square Foot: $11
Date of Completion: Fall 1952.

LOWER FLOOR PLAN

UPPER FLOOR PLAN

MOVING SIDEWALKS

and the modern shopping center

by A. E. CONOVER
Hewitt-Robins, Inc.

THERE was a time when moving sidewalks were thought of as first cousins to flying carpets. Now they are being given serious consideration in such places as airports, railroad terminals, auditoriums and shopping centers and we are confident that in the very near future they will be considered in the same category as elevators, escalators, air conditioning, self-opening doors and other such contributors to the convenience and comfort of the general public.

One of the applications, where the possibilities of a moving sidewalk can be most fully realized, is in large shopping centers. From the broadest point of view, it offers three assets which, while intangible, nevertheless can be of great importance.

1. **It can add materially to customer good will by contributing to his convenience and comfort.** Certainly, a housewife will feel better about buying an armful of purchases if she knows she will only have to walk a hundred feet or so to her car than if she thinks of that parking place she found with great difficulty way out there in the far corner.

2. **It has a tremendous influence on publicity and promotional activities, especially in these early days of its general use.** Remember, every single customer that walks through the doors of a new shopping center on opening day was someone else's customer the day before —a local neighborhood store's, or even another shopping center's. These enterprises can certainly be expected to put up a strenuous struggle to keep their old accounts. Taking advantage of every technological improvement that will contribute to good public relations adds just one more factor that will influence these new customers to keep coming back.

3. **Its contribution to the overall advertising program can be substantial.** Not only are moving sidewalks prime news items today but they also have qualities not found in other forms of advertising. They have continuity which newspapers and radio advertisements, for example, do not have and they do something for the customer, which billboards and illuminated signs, for example, do not do. Long after an individual ad is forgotten, the moving sidewalk is still there urging customers to shop the easy way and adding one more proof that this shopping center is really modern in every respect.

So much for generalities and intangibles. Specifically, one of the more important contributions that moving sidewalks can make in this field is in permitting the more logical development of the large shopping center area as a whole.

It is well appreciated that there is a limit to the distance that a shopper can be expected to walk between her car and the shops. The result of this limitation is that only properties of certain shapes are suitable for development as shopping centers and then the logical layout becomes a group of buildings and stores in the center of the area, completely surrounded by parking space.

With this arrangement, a casual passer-by, driving down the adjoining highway sees a group of stores in the distance but his attention is focused primarily on a large lot full of automobiles, or at least apparently full of automobiles, for even though a large percentage of the spaces are vacant, the general effect is one of crowded conditions. This certainly must have a discouraging effect on people who have not made the center a specific objective.

Furthermore, the stores are so far away from the road that there is no possibility of the merchants displaying any of their wares to passers-by and the whole aspect, cluttered up as it is with automobiles and traffic, presents a rather unsightly appearance to the general neighborhood.

Now suppose that the entire layout had been conceived with the potentialities of the moving sidewalk in mind. The buildings can now be arranged paralleling the main artery, say 50 ft. or more from the curb line with an intervening landscaped mall or esplanade. Window displays are visible from the roadway. There is nothing to indicate that the parking lot is or is not filled and the entire facade certainly presents a much more pleasing appearance. The complete parking area is located to the rear and if served by a systematic layout of moving sidewalks, customers do not have to walk as far as they would under the old arrangement.

Obviously, all previous limitations on the shape of property suitable for development, imposed by considerations of proximity of parking areas can now be scrapped. Moving sidewalks can shrink the boundaries of any parking lot and compress the length of any row of stores to reasonable, manageable dimensions.

WORKING MODEL of moving sidewalk developed by Hewitt-Robins is tested by employees and families.

To serve a parking lot with maximum efficiency, both incoming and outgoing walkways should be provided, running in a direction perpendicular to the parking lanes to facilitate access. They should have solid waist-high balustrades on both sides and be wide enough for two people abreast. The spacing of entrance and exit plazas will relate to the distance between parallel walkways and to the general shape of the lot. Moving sidewalks are available that can follow meandering paths and so course through an area so that all parts are tapped and no car will be more than 300 ft. from an entrance. Generally speaking, the inbound walkway should terminate as near as possible to the "center of gravity" of the shopping area.

For a completely integrated system, this parkway lot walkway of relatively high speed (132 fpm.) and with limited access should tie in with a "window shopping" moving sidewalk of relatively low speed (44 fpm.) and with practically unlimited access. The purpose of this walkway is to encourage free-flowing circulation of customers throughout the entire area so that there will be no undesirable locations for which maximum rentals cannot be obtained. This effect on gross income alone could well justify the cost of the moving sidewalk installation.

In any case, considering the price of a complete moving sidewalk system as a single item unrelated to the entire project is to obtain a distorted picture. If the annual charges against operation, maintenance and depreciation are related to the anticipated number of people who will use this facility, it will be found that less than a penny is being spent for the comfort, convenience and goodwill of each customer.

"One of the most important contributions that moving sidewalks can make is in permitting the more logical development of the large shopping center area as a whole."

How a contractor beats Old Man Winter

In Missoula, Mont., they do something about the weather with portable gas furnaces and plastic covered framework

PROBLEMS of winter construction in western Montana have been tackled successfully by the contractor on a $2,250,00 high school in Missoula.

Hightower & Lubrecht Construction Co. of Missoula figures it held the extra cost of work in cold and snow to between $4,000 and $5,000 while keeping the job going for all but a few days of a severe winter.

John E. Hightower, company president, believes the cost has been worth it to keep the firm's organization intact.

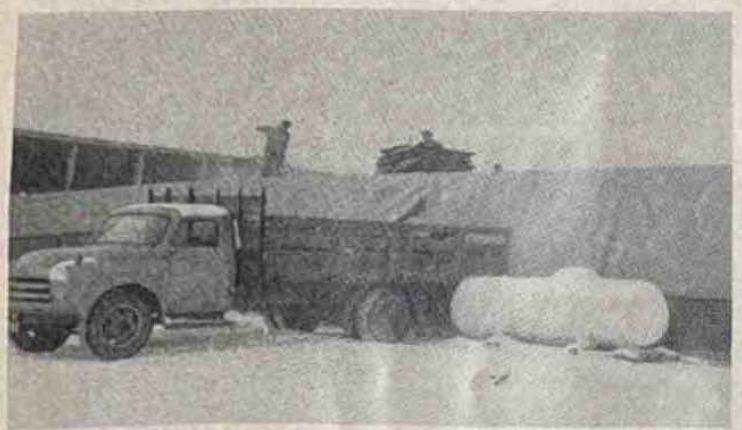
"We'll be ready to go onto another job in the summer," he comments.

Portable furnaces burning manufactured gas were used to heat sections of the building. Tanks of gas were spotted at various points outside the structure, which has overall dimensions of 638x482 ft. Rubber hoses piped the gas to the furnaces.

Work on the huge building was planned so that several trades were ready to work in heated sections at the same time.

Concrete pouring in temperatures ranging down to zero posed the biggest problem, especially on exposed floor slabs.

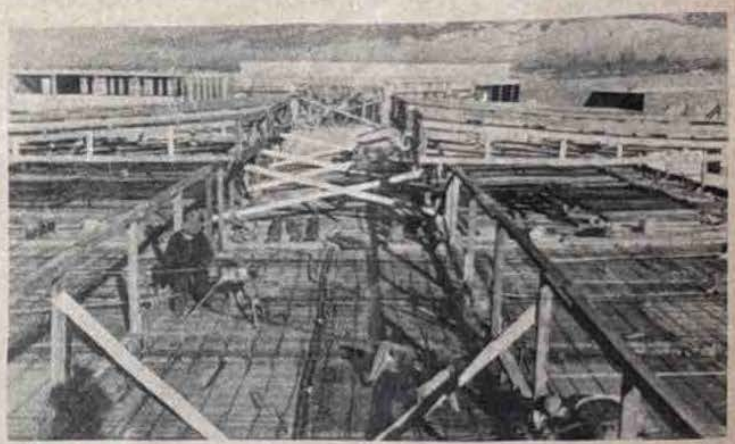
The concrete subcontractor, M&S Readymix, heated its 350-ton aggregate bins, used hot water in the mix and even preheated its mixer trucks in the shop. No water was carried in the mixer tanks on the coldest days; a careful check on the automatic moisture control in the batching plant made it unnecessary.



Even when the mercury dropped to 23 below, it was found necessary to add only 2% of calcium chloride. This gave a seven-day cylinder in three days and the speeded set provided enough heat to reduce protection needed.

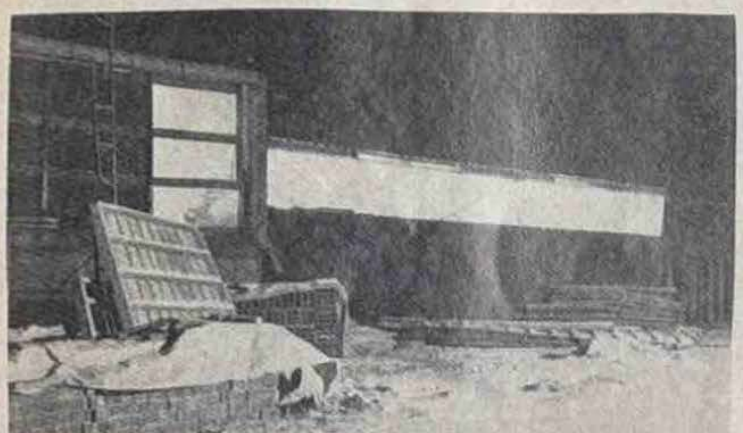
Some exposed slab pours were protected by a temporary framework covered with Visqueen, a new plastic product furnished by Visking Corp. Plastics Division of Terre Haute, Ind.

The framework for the temporary roof was constructed in sections on the ground and lifted into place by crane. The sections were used several times.

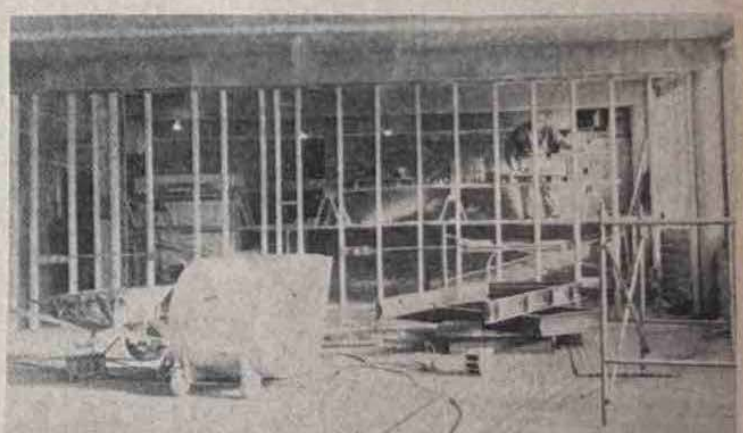


The plastic roof and canvas sidewalls enabled maintenance of 54- to 56-degree temperatures while the mercury hovered around zero outside.

Hightower & Lubrecht used about 15,000 sq. ft. of Visqueen at a cost

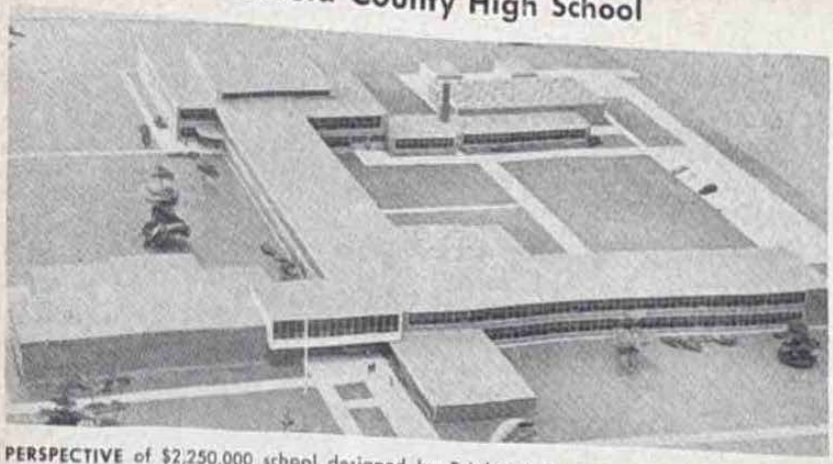


Photos by John A. Forssen



TANKS OF MANUFACTURED GAS are spotted around outside of huge building and gas fed to portable furnaces by rubber hoses. Roofers kept work going through most of winter.

TEMPORARY WOODEN FRAMEWORK being erected here was covered with plastic Visqueen to protect otherwise open large concrete slab pour in temperatures that dropped to minus 23.



LIGHTS SHINE through plastic windows which were used in enclosing various portions of $2,250,000 school during winter construction.

PORTABLE FURNACE burning manufactured gas is seen in foreground. This photo was made without artificial light inside enclosed portion.

Missoula County High School

PERSPECTIVE of $2,250,000 school designed by Brinkman & Lenon.

The structure is of reinforced steel with a brick exterior. It will utilize 92 tons of structural steel, 402 tons of reinforcing steel and 7,500 cu. yd. of concrete.

Architects Brinkman & Lenon of Kalispell and Missoula have made considerable use of Rilco laminated wood beams in the cafeteria, shop area, stage and gymnasium wings. Longest span is 64 ft. in the cafeteria, which has a clear area of 64x74 ft. The longer laminated beams have a section of 7x32½ in.

The structural steel includes two trusses, 12 ft. long with 14-ft. chord, which key the gymnasium area. The trusses, weighing 13½ tons each, were raised with a 25-ton P&H truck crane of Hightower & Lubrecht.

The building, with 130,000 sq. ft., is being constructed at a cost of $9.80 per square foot, compared with a national school average of about $14.

of 2¢ per square foot. Canvas, at 13¢ per square foot, is not as good an insulator and is too heavy to be used for some purposes to which Visqueen is adapted, but canvas is more durable than the plastic.

When aluminum sash and glass failed to arrive, temporary frames were made and covered with Visqueen for windows on sections of the building to be heated, with the plastic admitting plenty of light for interior work and insulating well against the cold. The frames for the windows were constructed so they could be used again.

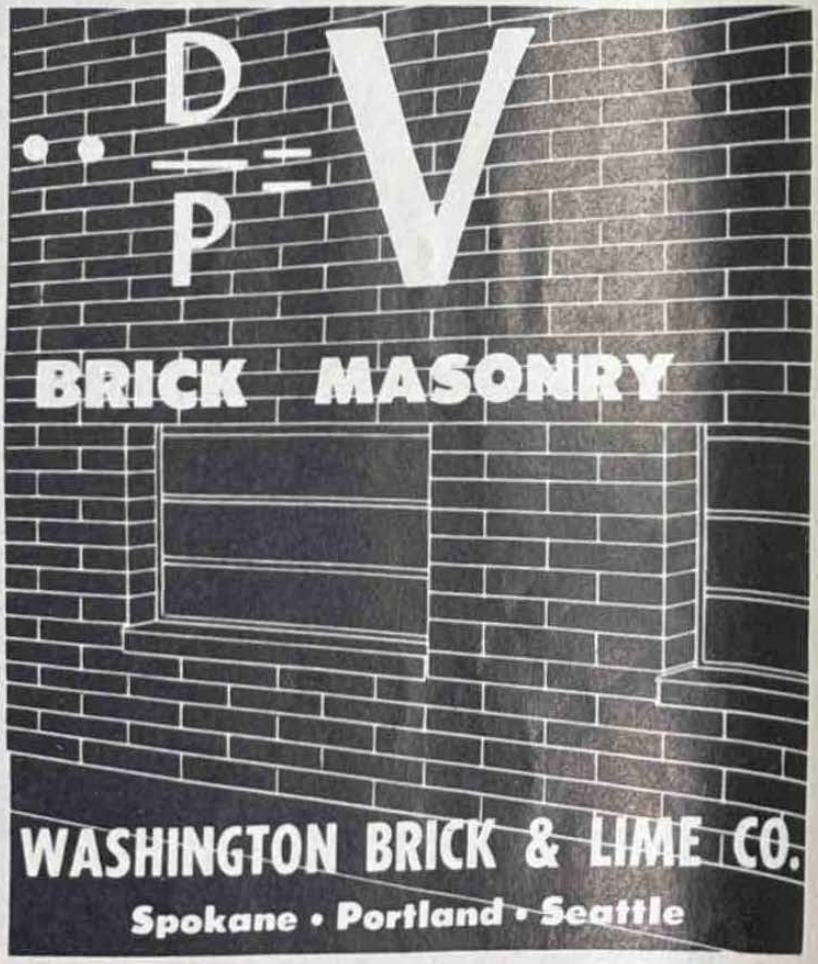
The weather posed other problems. Snow depths ranged up to 18 in. and a bulldozer was used occasionally to move snow so men and vehicles could operate around the building more efficiently. Plenty of brooming went into sweeping snow off forms and scaffolding. Men bundled in heavy clothes worked more slowly and less efficiently but roofers kept work going most of the winter.

Hightower & Lubrecht's general contract is for $1,448,120. Other contracts: C. W. Schmid Plumbing & Heating of Missoula, mechanical, $320,209; Allen Electrical Co. of Helena, electrical, $164,928; Brasch Masonry Co. of Spokane, masonry, $203,000.

FORMULA FOR HIGHEST VALUE IN BUILDING • •

Desirability divided by Price, equals Value.

REINFORCED



FOR + VALUES IN BUILDING

+1. Maintenance-free beauty of brick.
+2. Optional interior finishes — plaster, panelling, or face brick.
+3. Same structural wall at cost comparable to architectural concrete.
+4. Less structural steel required.
+5. Greater wall height without pilasters.

MACOMBER V-BEAMS

STRONGER • LIGHTER • MORE RUGGED

AN ENGINEER'S PRODUCT

The Macomber V-BEAM carries more load per pound than any other structural member, with greater reserve strength. Lateral rigidity is appreciably increased.

PERFORMANCE — proved by extensive Pittsburgh Testing Laborator tests — transcends all existing framing standards. If you want to extend your construction dollars through the more economical support of spans to 48 feet—the V-BEAM is your qualified framing member.

Send for your V-BEAM Catalog.

Building volume continues climb over 1955

AN INCREASE of 11% in dollar volume of building permits has been chalked up in the first two months of 1956 in a five-state area of the West. The total is $381,962,752 in California, Oregon, Washington, Idaho and Montana, as compared with $343,604,897 during the first two months last year.

Montana, with $1,840,061, shows the highest percentage of increase, 27%. California is up 17% with $325,995,729; Oregon is up 3% with $17,986,322. Washington is down 22% with $34,488,894; Idaho is down 6% with $1,651,746.

The total for the area for February is down from the total for January in a normal seasonal decline, but is higher than the figure for February a year ago. The February total was $184,435,405, down 6% from January, but up 5% over February 1955 and up 33% over February 1954.

Slightly more than half of the 116 agencies reported decreases from February 1955, but sharp jumps in several unincorporated areas brought up the total. Los Angeles County was up $4 million over the same period last year, Orange County, $9½ million; San Bernardino County, $7½ million; and Multnomah County, $2 million.

On a statewide basis, only California, up 11%, and Montana, up 53%, showed increases over last year. Oregon was down 5%; Washington, 23%; and Idaho, 37%. In comparison with January totals, California was down 8%; Washington, 3%; and Idaho, 5%; while Oregon was up 14% and Montana, 16%.

Following is a breakdown of building permits issued by several of the major agencies during February:

	DWELLING UNITS	COMMERCIAL & INDUSTRIAL	PUBLIC
Portland	107 ($ 1,245,685)	30 ($ 192,440)	
King County	422 ($ 4,395,795)	47 ($ 303,738)	4 ($346,000)
Seattle	498 ($ 3,724,380)	20 ($ 404,830)	2 ($ 14,925)
Tacoma	116 ($ 670,767)	34 ($ 356,381)	17 ($774,656)
Los Angeles Co.	1664 ($18,978,829)	211 ($4,174,860)	
Orange County	1157 ($16,357,253)	33 ($ 236,731)	5 ($161,550)
Sacramento Co.	366 ($ 3,042,959)	60 ($ 411,151)	18 ($909,333)

HERMOSA

Glazed Ceramic TILE

Winter Night

Line of Light

ONLY HERMOSA OFFERS SUCH A LARGE CHOICE OF COLORS, SIZES AND *EXCLUSIVE* DECORATOR DESIGNS

HERE ARE TILE IDEAS that sell homes and win remodeling jobs. Hermosa decorative tile gives architects, builders, designers and color coordinators greater opportunity to express creative ideas in one of the oldest, yet newest mediums of expression. The new decoratives shown here are among scores of vibrant patterns in Hermosa *glazed ceramic* Tile.

EXCLUSIVE Hermosa designs—match custom handprint wallpapers by W. P. Fuller & Co. It's the year's most exciting decorator plan... a new feature Mrs. America will admire, love to touch and ASK FOR in new homes and in remodeling. Call or write today for folder illustrating California Coordinates.

CALIFORNIA COORDINATES achieve fresh decor with exciting new *matching* decorative Hermosa Tile and fine custom handprint wallpapers. These decoratives have the unique ability to harmonize with other lovely papers or painted surfaces.

Letters to the editor

(Continued from page 4)

the homes that are being built in this region. How to overcome the above difficulties, that is, to produce a better home for what the public will and can pay for, is of course the proverbial $64 question. For one thing the public should be influenced (educated) to demand (and pay for) a better home architecturally. It would seem that the builder has at least some responsibility in this direction since in general the public can buy only what the contractor offers them and presents to them in his advertising. If the contractor does not contribute to this phase of the public's education, then who will?

I sensed upon rereading Mr. Miller's editorial a number of times that he is quite concerned with this problem of architectural design, not only as a builder interested in a reasonable profit, but also as a person interested in seeing the public get better housing.

ERNEST E. BRUFFEY
General Manager
Everette Shulund
Building Contractor

SACRAMENTO, CALIF.

From the point of view of one of the "older" architects, I am inclined to agree with Edward P. Miller regarding the unrealistic approach of some architects. However, I would like to see some response to him from a few practical architects, pointing up the shortcomings of those in Mr. Miller's field.

ARTHUR F. DUDMAN
Principal Architect
State Division of
Architecture

SEATTLE, WASH.

There is hardly a person in the United States today who does not have a roof of some sort over his head. Therefore, we are not charged with providing shelter but rather with upgrading that shelter, and those builders and architects who are going to be successful must recognize this fact.

E. B. VAUGHTERS
General Contractor

RIVERSIDE, CALIF.

Some architects may be prima donnas but there are those of us who want to design and be able to build within our client's budget or below. Good planning and design alike make for harmony at home, in the community and the world, so they can never be considered a luxury.

JAMES E. CALKINS
Architect

Mutual Problems

SEATTLE, WASH.

Glenn M. Canaday's article entitled "An Open Letter to Architects" (PA&B, Sept. '56) is excellent. One cannot criticize any of his remarks.

This kind of article always prompts me to want more of a get-together of architects and contractors in discussing their mutual problems, which in most instances are rather haphazard and particular to a given job.

Why not sponsor a roundtable discussion or discussions in regard to the subject material of the article? Specifications, plans and how they could be improved with a mutual understanding might be of real interest to both groups of the building industry.

ROBERT H. DIETZ, AIA
Waldron & Dietz

A Rose and a Thorn

TACOMA, WASH.

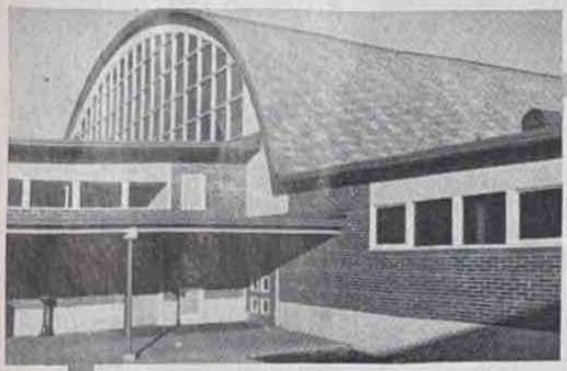
Your articles are inclusive and give a good condensation of the latest trends in the building industry in the Northwest and Pacific Coast areas.

HENRY KRUIZE, JR., AIA

SAN FRANCISCO, CALIF.

I find nothing of value in your publication. Incredibly inferior work has been shown all through the year.

HENRY HILL, AIA



Errata

SPOKANE, WASH.

Concerning your report on the pay-as-you-go plan for School District 271 in Couer d'Alene, Idaho (PA&B, Pan. '56), may I make one correction in an otherwise fine article. The work as shown in the perspective represents $787,000 in contracts and a total of $831,000 with the architect's fee for an area of 74,000 sq. ft. or $11.28 per square foot. The $1½ million which you cited is the cost of the ultimate project indicated by dashed lines.

This high school is fantastic in its price—the best of everything and complete with hardwood fixtures, lockers, built-ins. It has a steel frame, solid masonry exterior, wood interior plastered partitions, the finest of hardware and toilet accomodations. Classroom widths are to 26 ft. net in depth, meaning open web joists throughout single- and two-story work. The gymnasium is an open valuted rigid frame job with diaphram construction from the balcony level downward. No structural steel runs to the ground here as all tie-backs are directed into the concrete balcony units.

BENJAMIN K. RUEHL, AIA

architect:
William Arild Johnson

Building Bookshelf

American Architects' Directory. R. R. Bowker Co., 62 W. 45th St., New York 36, N. Y. 748 pp., $20.

Sponsored by the American Institute of Architects, this volume contains data on all members and on certain non-members deemed likely to be inquired about. In each of the alphabetically arranged biographies, when the information was obtainable, there are complete details on the architect's home and business address, his outstanding architectural achievements, positions he has held, education, professional affiliations, etc. An appendix includes such topics as the value of an architect, selection of an architect and standards of professional practice. Another feature is a geographical cross-index to all architects listed.

Building Planning and Design Standards. By Harold R. Sleeper, AIA. John Wiley & Sons, Inc., 440 Fourth Ave., New York 16, N. Y. 334 pp., $12.

A compact assembling in illustrative form of 23 basic building types forms the backbone of this volume, along with data on special requirements, planning suggestions, furniture, fixtures, equipment and other working details. Separate chapters are devoted to small homes, motels, bars, restaurants and kitchens, schools, gymnasiums, theaters and auditoriums, stadiums and grandstands, shops and stores, office buildings, banks and agricultural buildings. Treated in individual sections are air and bus terminals, parking garages, service stations, railroad and trucking data, fire stations, hospitals, doctors' and dentists' offices, churches and temples and mechanical equipment.

Fine Hardwood Selectorama. Fine Hardwoods Association, 666 Lake Shore Drive, Chicago 11, Ill. 60 pp., $1.50.

A handy reference guide for anyone who specifies, buys or sells hardwoods or hardwood products. Over 400 commercially available species of hardwoods are described, giving geographical sources, color, pattern, characteristics, common uses, availability and general price range. All woods are cross-referenced under the various names by which they are known in different localities and countries.

In addition, 146 of the most popular hardwood figure and species types are illustrated, 38 in color, as a further aid in specifying or identifying woods. A chart of comparative physical properties includes 65 of the most widely used hardwood species.

Basic Guide on Store Modernization. Store Modernization Institute, 5 Middlesex Road, Darien, Conn. $10.

The purpose of this book is to help the small store owner answer his own questions all the way from "What have I now" through to "What do I want to accomplish after modernizing?" The institute believes the store owner himself is best qualified to collect this information. After the guide has helped him organize his modernization ideas, he can turn the material over to an architect for sketches, plans, blueprints and estimates.

Writer's Fact Sheet on Home Fixture Lighting. American Home Lighting Institute, 542 S. Dearborne St., Chicago 5, Ill. 22 pp., 50c.

Despite its title, this booklet is of value as a sales training aid and as a speaker's guide. It is primarily a general information piece and includes a brief glossary of lighting terms.

Guide H-20 (residential heat losses). Institute of Boiler and Radiator Manufacturers, 608 Fifth Ave., New York 20, N. Y. $1.

Planned to simplify heat loss calculations and save the installer time and effort, the guide includes prefigured area and volume tables, all-in-one calculation forms, heat loss factors for any type of residential construction and sections on unusual climate and temperature conditions. It was prepared by Arthur L. Wales, the institutes's technical secretary, and answers many of the questions most commonly asked him by installers during his five years of teaching heating techniques.

Pacific Architect and Builder

T-square talk

about architects • planners • engineers

NEW OFFICES: Douglas C. Durkoop of Spokane has opened an office for the practice of architecture in the Realty Building. A graduate of the University of Oregon, he has been employed for the past six years by two Spokane architectural firms: Culler, Gale & Martell and Whitehouse & Price. Durkoop is active in the local AIA chapter, serving on both the public relations and public information committees.

DURKOOP

Another Spokane architect, Henry J. Swoboda, AIA, is now practicing at N. 6605 Division St. He was graduated from Washington State College in 1953.

William M. Valentine has opened his own consulting engineering offices at 905 Lloyd Bldg., Seattle. For the past six years he has been associated with the architectural and engineering firm of George W. Stoddard — Huggard & Associates. Valentine is a member of the Washington Society of Professional Engineers and of the American Society of Heating and Air Conditioning Engineers.

ON THE MOVE: The office of Jesse W. Green, AIA, formerly at 103 Vesta Del Mar, Redondo, Calif., now is located at 3907 Duquesne Ave., Culver City.

CHANGE IN NAME: The firm name of Mock & Morrison has been changed to Nelson J. Morrison, architect. President of the Southwest Washington chapter, AIA, Morrison wil continue to practice at 227 Perkins Bldg., Tacoma.

JOINS FIRM: Daniel J. Nacht, AIA, of San Francisco and a former faculty member of the University of Illinois, has joined the Sacramento architectural firm of Starks & Jozens, now known as Starks, Jozens & Nacht.

DIED: Mark Henry White, internationally known retired architectural engineer, died February 26 at his home in Berkeley at the age of 80. He had been associated in business for a number of years with his brother-in-law, Bernard Maybeck, architect who designed San Francisco's Palace of Fine Arts, the University of California Faculty Club and many East Bay residences.

Coming to California as a boy from his native Missouri, White was graduated from the University of California in 1900.

TO COMMISSIONS: Donald Beach Kirby, AIA, and Robert Lilienthal, president of the Planning and Housing Association, have been named by San Francisco's new Mayor George Christopher to serve on the City Planning Commission.

New appointees to the San Francisco Art Commission are Clarence O. Peterson, AIA; Albert Roller, AIA; John Garth, artist; and Mrs. William L. Jackson, landscape architect.

In Pullman, Wash., Leon Luck, assistant professor of civil engineering at Washington State College, has been reappointed to the City Planning Commission for a six-year term. He presently is serving as chairman.

DESIGN AWARDS: A Montana architectural firm, Bordeleau-Pannell of Great Falls, has received a First Award for its design of St. Gabriel's Church in Chinook in the annual competition sponsored by Church Property Administration magazine.

Now known as Bordeleau-Pannell & Amundson, the architects took top honors in the category, "a church seating less than 400."

Three California projects were cited in the competition, devoted to Catholic church, school and institutional buildings. Distinctive Design Awards went to Chaix & Johnson of Los Angeles for Sacred Heart Parish School, Covina, and St. Hilary Parish Convent, Pico; and to Armet & Davis of Los Angeles for St. John of God Rectory, Norwalk.

AIA convention to hear MIT dean

—Keynoter at Los Angeles session

With the Southern California chapter as the host, the 88th annual convention of the American Institute of Architects convening in Los Angeles May 15-18 will be keynoted by John E. Burchard, dean of the School of Humanities and Social Studies at Massachusetts Institute of Technology.

Seminars and talks relating to the overall theme of "Architecture for the Good Life" will explore such subjects as community planning, safety, new materials and techniques and aesthetics. A number of AIA national committees are scheduling roundtables on school buildings, hospitals, preservation of historic buildings, architectural education, office practice and specifications.

Chairman Charles O. Matcham of Los Angeles and his committee are arranging numerous special events including architectural and sightseeing tours, exhibitions and a variety of entertainment. The host chapter's seminar tours will provide opportunities for visiting architects and guests to judge the degree of success with which the local practitioners are solving the problems of good living.

Also on the agenda are post-convention trips to Hawaii and to Japan and a special convention train to and from Los Angeles originating in Chicago.

AIA programmed events will be held in the Biltmore Hotel and Theater except the president's reception May 15, which will be given in the Ambassador Hotel.

WESTERN COMPETITION

The AIA, Sunset magazine and House & Home have joined in sponsoring the first annual "Homes for Better Living" competition with entries limited to homes built during the past three years in the West and in Hawaii. Awards will be announced at the AIA convention in Los Angeles.

Two groups of awards will be made to registered architects for homes designed 1) for an individual owner and 2) for sale by a development builder.

Group 1 will be judged in three classes, by size—under 1,600 sq. ft. of living space; 1,600 to 2,800 sq. ft.; over 2,800 sq. ft. Group 2 will also be judged in three classes by sales price (including lot) — under $15,000; $15,000 to $20,000; over $20,000.

AIA activities

Oregon: For how long should we build? This was one of the questions put to architects by Dr. O. Meredith Wilson, president of the University of Oregon, at the chapter's 45th annual banquet February 28. The event, held at Riverside Golf & Country Club in Portland, attracted nearly 200 members of the Oregon and Southwest Oregon chapters, their wives and guests.

Dr. Wilson wryly commented that "there is no period of natural death for an academic building." Although many "temporary" buildings have become fairly "permanent," he remarked that 25 years from now we may wish that our new buildings were not so permanent. Dr. Wilson said that the architect is the only one the layman can turn to tell him what is wise for the student and the taxpayer in terms of permanency, size of classrooms, materials, etc.

"The function of an architect may be to provide machines for living," the university president said. He commented that the homes architects design may help to return to us the equilibrium which the machine age has upset.

Donald W. Edmundson, newly elected chapter president, asked the architects whether they were using the new materials properly—" are we meeting the challenge of our time in our profession?" Edmundson succeeds Donald J. Stewart.

EDMUNDSON

Other new officers introduced were Walter L. Gordon, vice president; Earl P. Newberry, secretary; and Charles Gilman Davis, treasurer. (Gordon's name was inadvertently omitted from the list of officers published in PA&B for February.)

George E. Dickel, banquet chairman, was assisted by John M. Amundson Jr., Everett B. Franks, Robert B. Martin, Richard W. Norman, James C. Payne Jr., and Nancy E. Reed.

Idaho State College: At a meeting in Pocatello last month the campus society of architectural students, Architectural Forum, became an affiliate of the AIA. Charles W. Johnston of Payette, who represented the institute, spoke on "Light Control of Schools and Homes."

Officers of the student group are Donald Johnson, president; A. Kent Parrish, vice president; Ernest Brodie, secretary; and Richard M. Forbes, treasurer. All are from Pocatello except Forbes who resides in Salem, Ore.

California architects set dates for fall meeting

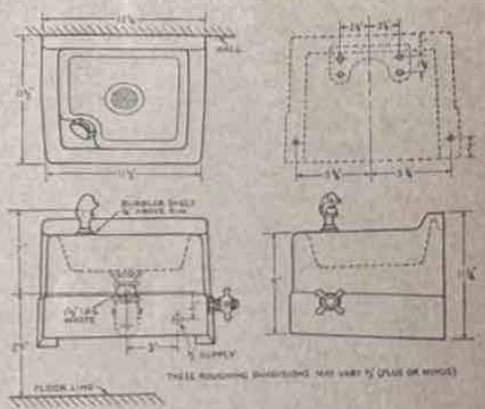
The California Council of Architects will hold its 11th annual convention October 10-14 in Yosemite National Park, according to Melton Ferris, executive director of the council which has headquarters at San Francisco.

Ferris said the convention will be held at the new Yosemite Lodge, now under construction. An estimated 700 conventioneers will stay at the lodge, the Ahwanee Hotel and Camp Curry, with the Ahwanee reserved for architects.

All of the old lodge building will be devoted to the annual display of building products and materials. Space, however, will limit the display to between 50 and 60 exhibits. Some 75 producers exhibited at the 1955 Santa Barbara convention.

Professional programs are now being planned by a special council committee headed by San Francisco architect William Corlett. Exhibits will be organized and managed by Donald Canty who recently joined the council staff at 26 O'Farrell St.

another *new* HAWS FOUNTAIN!



a product of modern styling

Model No. 7X
Acid resisting enamel
cast iron drinking fountain
Designed by CHANNING WALLACE GILSON
Industrial Designer

FOR PERFECT ADAPTATION to current architectural trends . . . and constructed of durable acid-resisting enameled cast iron to withstand the severest abuses of the school yard, this new HAWS drinking fountain assures lasting trouble-free service.

HAWS Model No. 7X drinking fountain contains HAWS *complete sanitation* features . . . with raised, shielded, angle-stream fountain head of chromium plated brass. Water pressure and volume is automatically controlled . . . it's anti-squirt!

WRITE TODAY for full details of HAWS Model No. 7X . . . a complement to new construction . . . a vast improvement for modernization! *It's designed to meet ALL city, county and state material and operational sanitation requirements.* Specify HAWS with confidence!

HAWS DRINKING FAUCET CO.

1443 FOURTH STREET (Since 1909) BERKELEY 10, CALIFORNIA

Materials – Products – Tools

and the latest literature

HORIZONTAL SHORING: A greatly simplified horizontal shoring with built-in camber used as support for form work in reinforced concrete structures has been placed on the market under the trade name S-L Spanall.

Developed in Europe, the shoring supports are made of fewer and simpler parts than previous designs. By adjusting one screw before placement, the camber is automatically set and the supports can then be extended to any desired length of span. Sections have been engineered to fulfill all structural horizontal shoring requirements for spans up to 29 ft. 6 in. without need of intermediate shoring.

(Item No. 1)

PAVEMENT INSERTS: As a decorative and useful touch for floors in airports, resorts, schools or large public and commercial buildings, Manor Crafts offers solid brass pavement inserts indicating compass points. The directional indicator comes in a variety of designs and are easily installed in new pavement or flagstone, brick and slate.

(Item No. 2)

ACOUSTICAL CEILING: To give architects greater freedom in ceiling design, Owens-Corning is producing large-size Fiberglas acoustical ceiling boards.

Designed especially for modular ceilings, the boards come in eight sizes ranging from 24x24 in. to 48x48 in. Three types are available in the new sizes, Stria with a white grooved ceiling surface, Sonofaced with du-Pont Mylar film facings and Textured which has a soft white finish.

(Item No. 3)

CONCRETE FORMS: To increase the life of wood or plywood concrete forms and produce a clean, smooth concrete surface, Form Kote has developed a product that penetrates into the wood, providing a protective coating unaffected by mars or scratches.

Applied with roller, brush or spray, it lasts an average of four pours and eliminates scraping and coating forms between each pour.

(Item No. 4)

SEALING TAPE: A sealing tape that will not shrink, crack or harden over the wide range of temperatures to which building exteriors are exposed is being marketed under the trade name Warflex.

Termed "permanently flexible" by the manufacturer, it prevents air and water leakage between glass and sash or between joints of metal panels, yet allows for expansion and contraction or movement caused by temperature changes or wind pressure.

(Item No. 5)

CABINET HARDWARE: For cabinets in the elementary school or at home, Amerock has introduced Story Book knobs, steel knobs colorfully decorated in baked enamel with such childhood favorites as Humpty-Dumpty and Peter Rabbit.

(Item No. 6)

COLUMN FORMS: A line of improved fiber tube forms for pouring round columns has been announced by Richkraft.

Called Richtubes, they are made from virgin Kraft. A plasticized treatment makes them weather resistant and assures their stripping easily on the job, leaving a smooth-finished concrete surface.

(Item No. 7)

PLASTIC SURFACING: Expansion and contraction of Marlite decorated hardboard panels has been reduced to a minimum by a stabilizing treatment developed by Marsh Wall Products.

The process was designed to overcome any tendency to expand and warp. Marlite paneling is a Masonite tempered hardboard with baked plastic surface.

(Item No. 8)

SLIDING WINDOWS: Sun Valley Industries, manufacturer of aluminum sliding glass doors, has entered the window market with an aluminum sliding window which will be available in 34 sizes and several styles.

Use of Tenite Butyrate plastic liner for sill weatherstripping makes movement of windows smooth and silent. Tapered sill with weep holes facilitates water drainage. Fin and trim have prepunched nail holes for easy installation.

(Item No. 9)

INSULATION: L.O.F. Glass Fibers has introduced a home insulation product made of light density, fine glass fibers with an aluminum reflective vapor barrier on one side.

Quickly installed, it has tabs extending beyond the edges of the insulation for nailing or stapling to framing members. It comes in three thicknesses and in widths to fit framing members, studs and joists, typically spaced 16 in. on centers, or for 20- and 24-in. spacings.

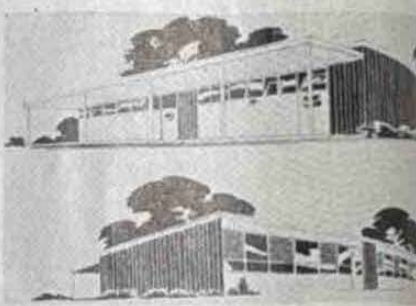
(Item No. 10)

FIBERGLASS PANES: For industrial and commercial use, International Molded Plastics has introduced a glass-fiber reinforced plastic glazing material that is shatterproof, weather resistant and reduces glare and heat of direct sunlight.

Structoglas panes have a pebble-grain surface and are available in green, blue or clear.

(Item No. 11)

PLAN HOLDER: For convenient filing of skirted plans, the Plan Hold Division of Air Comfort has developed a wall rack with brackets that swing back and forth providing ready reference to either side.



Brackets pivoted within a wall plate support the company's Plan Holds which are equipped with special slide-over clips.

(Item No. 12)

KITCHEN CABINETS: Sliding glass doors are featured on several models of the 1956 line of Kitchen Maid wood cabinets. The glass door sections and metal channel track are easily removed for cleaning.

(Item No. 13)

PREFAB CLASSROOM: To meet the need for flexible classroom space Calcor is marketing modular prefab

NEW LOOK IN PREFABS

classroom units, attractively designed to match modern school construction yet easily erected or disassembled.

The prefabs were designed by Earl Heitschmidt, FAIA, of Los Angeles and offer such features as fiberglass in roof and walls, 100% incombustibility and an interlocking mechanism that makes the buildings easy to disassemble and relocate. Classrooms are shop fabricated in modular panels of over 50 sq. ft. each.

(Item No. 14)

FURNACES: For the closet type installation that is becoming so popular D. P. Ran has designed a new line of compact forced air furnaces.

Models are 14¼ in. wide, 28¼ in. deep and 64½ in. high and available in 75,000 Btu. and 85,000 Btu. sizes.

Resonant noise and roaring often heard when a furnace starts to heat up are eliminated by balanced design of cast iron burner and clam-shell type elements.

(Item No. 15)

FLOOR TILE: As an assist to the hard-working maintenance engineer, B. F. Goodrich has developed a resilient floor tile with a super-dense surface that eliminates dirt-catching surface pores and a pattern that doesn't show flecks or footmarks.

Called Agatine, the multicolored pattern is derived from the gem stone agate and extends throughout the full thickness of the tile.

(Item No. 16)

Latest Handbooks, Manuals and Literature

Yours for the Asking

METAL LATH: Specifications for all types of metal lath construction and for materials, fire resistive ratings and definitions of terms are included in the 1956 specifications manual prepared by the Metal Lath Manufacturers Association.

The 16-page booklet covers solid and hollow partitions; wall furring; metal lath attached directly to wood supports; contact, furred and suspended ceilings; beam and column protection for fireproofing; and reinforcing for exterior stucco.

(Item No. 17)

SCHOOL LIGHTING: The value of glass blocks in providing just the right light for school classrooms is the subject of "The 3-R's and Daylighting," a brochure prepared by Pittsburgh Corning.

The brochure discusses studies that have resulted in new standards of lighting, the basic need of the classroom and the role glass blocks can play in controlling daylight to supply the desired lighting pattern.

(Item No. 18)

MOVABLE WALLS: More than 50 photographs of installations are included in the latest catalog on Mills movable metal walls for offices, factories, schools, hospitals and other buildings.

Detailed installations, drawings and specifications are included, as well as a section on the company's line of accessories. The 68-page book is indexed for quick reference.

(Item No. 19)

FOUNDATION PILES: A veritable textbook on pressure treated timber foundation piles has been published by the American Wood Preservers Institute for architects, engineers and builders interested in heavy buildings, grain elevators and the like.

Technical information includes pile driving formulae, means for determining safe loads, methods of solving problems of uplift and lateral forces and protective devices for use during driving. Photographs include Star Machinery Co. and Langendorf Bakeries in Seattle, King Towers apartment hotel in Portland and a number of Northwest grain elevators.

(Item No. 20)

AIR CONDITIONING: "Engineered Temperature at Work" is simply a 36-page picture book depicting the many different types of buildings where Worthington air conditioning and refrigeration equipment is used.

The photographs of the White House, on down to a motel in Florida, are excellent. The advertising message is extremely brief.

(Item No. 21)

WOOD ROOF TRUSSES: The second printing of Timber Engineering's "Typical Designs of Timber Structures" is now available. Demand for the third edition of the book, published last year, quickly depleted the stock, but distribution has now been resumed.

The guide contains 102 typical designs illustrating suggested methods of applying Teco timber connector system in wood framing for the more commonly encountered structural problems.

(Item No. 22)

WOOD PANELS: Directions for working with Presdwood and application details for both exterior and interior use are included in a 24-page brochure offered by Masonite.

Well-illustrated with drawings, the brochure also includes data on properties and sizes of all Presdwood panels, Masonite siding and underlayment.

(Item No. 23)

WINDOW WALLS: A fenestration plannig kit offering almost unlimited combinations for custom and prefab

WINDOW WALLS

homes, schools, clinics, shopping centers and professional buildings has been prepared by Fabrow.

Called "48 Ways to Turn Daylight into Dollars," the plans start with 48 different modular window units.

(Item No. 24)

LUMBER GRADING RULES: West Coast Lumbermen's Association has incorporated more than just rules in its latest edition. There is information on the function of its bureau (now West Coast Lumber Inspection Bureau), grade stamps, inspection procedures and grading practices; and 75 lumber patterns are shown in detail.

Stress grades are explained more fully and detailed drawings have been added to aid the reader. The glossary has been expanded to include a full list of the terms used throughout the rules.

(Item No. 25)

RESILIENT FLOORS: To assist architects and builders in selecting the resilient flooring material best suited to a building's conditions and needs, Armstrong Cork has prepared an information-packed, 36-page booklet.

Drawings, photographs, charts and graphs illustrate a text which delves thoroughly into such factors as subflooring, service conditions, radiant heating, cost, noise reduction and light reflectivity.

Four pages are devoted to specifications and three more describe important factors to watch for when inspecting installations.

headlining the news

• **Codding Enterprises Inc.** and 21 subsidiary and related home building companies have been merged at Santa Rosa, Calif., with combined assets of $9 million. H. J. Stockman, vice president and general manager, said the firm and its subsidiaries comprise one of the largest development companies in northern California and expects a 1956 gross business of $30 million. Hugh B. Codding is president and James W. Codding is executive vice president.

• **Cascade Contractors** is the name of a new partnership formed by two Eugene, Ore., builders, Fred Hollister and George Millett. Located at 175 E. Fourth Ave., the firm will bid on commercial, school and residential construction projects in the area under $300,000 valuation.

• **Andres Oddstad** of San Francisco has added a complete new resale and brokerage department to his Oddstad Homes organization. To be managed by Ernest J. Mosher, the new department will handle sales of properties traded in on new Oddstad homes as well as additional sales of original Oddstad construction. Oddstad anticipates a $3.5 million volume for the new department this year. Eichler Homes recently took similar steps by joining forces with Saxe Realty Co. and in the first month the trade-in program resulted in more than $900,000 in new Eichler home sales and more than $600,000 in the resale of homes traded in on Eichler homes.

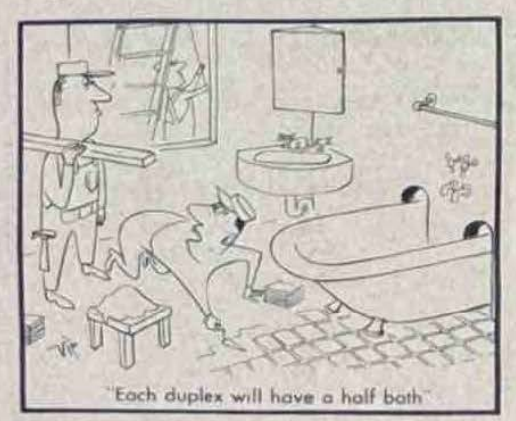
• **Jack Beaver,** project manager of Hoffman Construction Co., is the new president of the Longview-Kelso (Wash.) Contractors Association. Harold Hill was named vice president and Frank L'Amie, secretary-treasurer. The association now numbers 40 regulars and associate members.

• **Malarkey & Moore** announces the retirement of Dan J. Malarkey Jr. The Portland building firm will now be known as George A. Moore & Associates, Inc.

• **Frank Oman** and **William Blackers,** have joined together to form Regency Development Corp. to develop property in the Sherwood Heights area where they have opened a tract of 40 homes designed by San Francisco architects Campbell & Wong. Blackfield is the current president of the Associated Home Builders of San Francisco and has built more than 5,000 homes in the Bay area. Oman is the immediate past president of the home builders' association and has been building homes for the past 20 years.

• **Frank Ozanne** has been named assistant manager of the Seattle chapter, AGC. He succeeds Colton D. Harper, who was named manager two months ago. Ozanne, a native of Butte, formerly was manager of the Seattle office of R. E. Chase & Co., manufacturers' agents.

Suppliers



• **Lynart, Inc.,** of West Los Angeles, which has limited its distribution of aluminum glass sliding doors to California markets for the past six years, is spearheading its expansion with the appointment of R. M. (Rocky) Brown as national sales manager. Former sales manager for Miller Sliding glass doors, Brown is currently traveling the United States and Canada to appoint qualified distributors.

• **Northwestern Portland Cement Co.** of Seattle has reelected its entire slate of officers, including James D. Burns of Condon, Ore., chairman of the board, and Gordon Tongue, president.

• **L. Sonneborn Sons, Inc.,** has opened a Pacific Coast headquarters for its building products division at 4821 S. Vermont Ave., Los Angeles. Alvin S. Baer, division general manager, says the new operation will serve both as a production and sales center for Sonneborn's line of cement admixtures, air entraining agents and curing compounds used in construction plus a broad line of products for building maintenance.

In line with this move, the West Coast staff has been doubled, with new representatives appointed in Oregon, Washington, Idaho, Arizona and Nevada.

The Los Angeles headquarters is managed by Otto Bachrach, assisted by L. L. Johnston.

Courtesy of Pomona Tile Manufacturing Co.

Producers' Council and the AIA will co-sponsor the annual caravan exhibit of building products in Seattle's Norway Center March 26-27. Doors open at 1 p.m.

• **Seattle Construction Council** has elected E. W. Waldal of the painting firm of the same name to serve as its president, succeeding Elmer Coats of Mutual Materials Co. A past president of the local Painting and Decorating Contractors Association, Waldal heads one of Seattle's largest painting concerns.

• **Permanente Cement Co.** has named James G. Hansen works manager for its new $12 million southern California cement plant, including the quarry, to supply both cement and steel grade limestone at Cushenbury in San Bernardino County. He formerly was manager of Kaiser Steel Corp.'s iron ore mine at Eagle Mountain, Calif.

Gordon K. Wilson of Seattle has been appointed assistant division sales manager of Permanente's Pacific Northwest division.

• **Frank K. Donnelly Co.** of Seattle has been named sales representative in the state of Washington by J. F. Pritchard & Co., manufacturer of cooling towers for air conditioning and industrial applications and of Hydryers, packaged dehydration units for air and other gases. Donnelly has been a manufacturer's representative since 1954.

• **Robert B. Taylor** of Geneva, Ill., director of research for the Structural Clay Products Research Foundation, told a Seattle audience this month: "The principal objective of the research program is to lower costs of masonry walls by developing new types of materials, such as the popular SCR brick, and improving equipment for contractors and masons." He was a key speaker at the annual meet-

ing of the SCPI Pacific Northwest Brick and Tile Association.

One of the newest advances, Taylor said is "packaged brick"—bricks strapped together for easier moving to a construction job. "A two-wheel cart has been developed to handle smaller packaged loads," he explained. "The packaged method, either in large or multiple lots, also is feasible for handling by power equipment."

• **V. M. di Suvero**, who originated the Construction Materials Center at 330 Clay St., San Francisco, where manufacturers maintain a permanent display of the latest in building materials, has announced plans for at least 10 similar centers in major U. S. cities. The first branch, scheduled for opening in May, will be in Los Angeles.

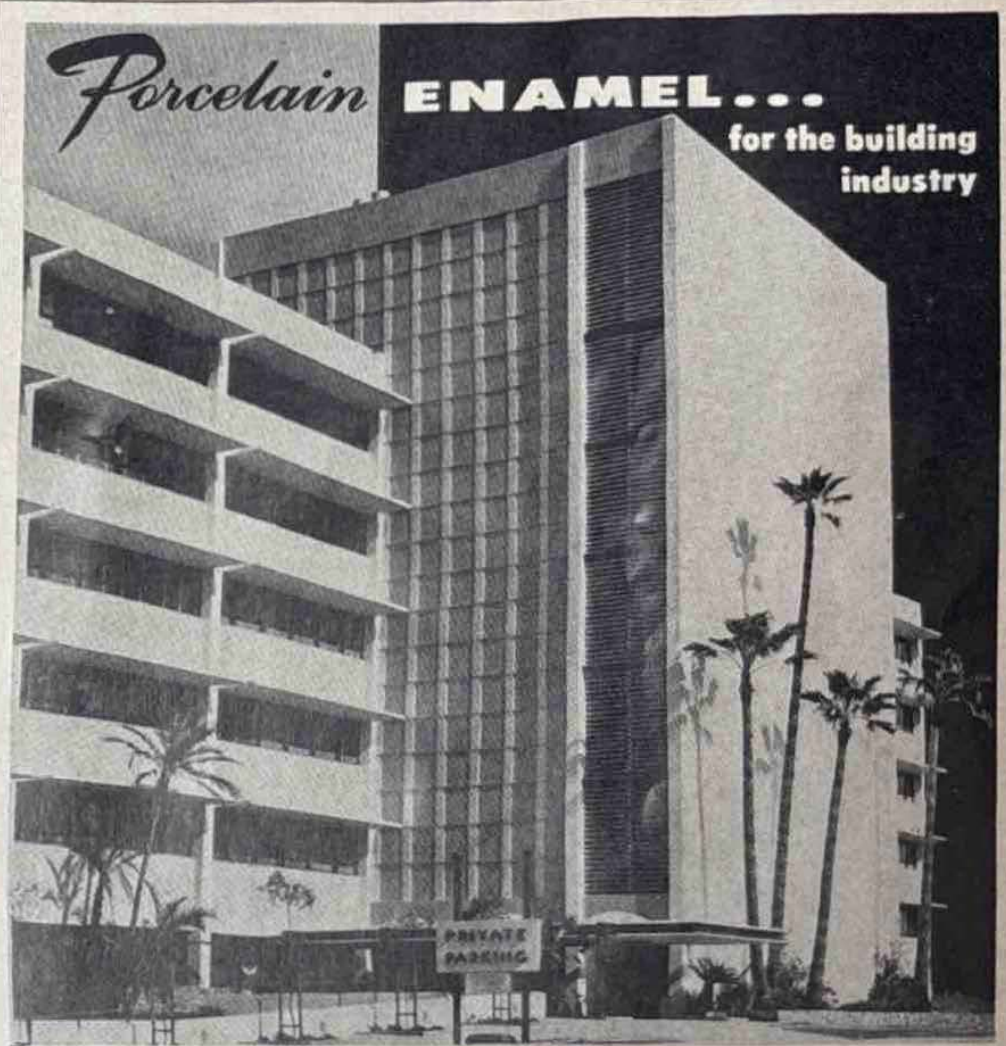
The San Francisco center — open, free of charge, to architects, contractors and the public—was used to officially launch Operation Home Improvement in the Bay area by Mayor George Christopher, M. Justin Herman, regional HHFA administrator, and members of the Associated Home Builders of San Francisco.

• **Ralph F. Dreitzler,** general manager of West Coast Wood Preserving Co., Seattle, was reelected president of Western Wood Preserving Operators' Association in San Francisco last month. Other officers: James McGregor of McCormick & Baxter Creosoting Co., Portland, vice president; V. C. Monahan of Cascade Pole Co., Tacoma, treasurer; Charles Craig of J. H. Baxter Co., Portland, secretary.

• **Haws Drinking Faucet Co.** of Berkeley, Calif., has purchased Kramer Manufacturing Co., manufacturer of Kramer flush valves since 1925. Known as the Kramer Flush Valve Division of Haws, the firm will remain at its present location at 819 Bryant St., San Francisco.

J. E. Traynor, Haws president, has also announced the appointment of John S. Googins as manager of the newly acquired company. Prior to his new post, Googins served as general production manager of C. K. Williams & Co., East St. Louis and earlier was manager of the same concern in Emeryville, Calif.

• **The Bryan W. Burtch Co.** of Seattle has been awarded the annual trophy given to the nation's outstanding distributor of Modernfold folding doors. Burtch, who sells the doors in the Pacific Northwest and Alaska, won out over 150 other dealers. The award was based on overall sales and distribution results.



• **Kaiser Gypsum Co., Inc.,** has appointed three sales representatives in southern California. Hugh G. Ferguson has been assigned to handle promotion of lath and plaster sales in the Ventura, Los Angeles and Orange County area; Allan R. (Bob) Olson to the Riverside-San Bernardino area; and Jack L. Cosbey to the San Diego-Imperial County region.

The company has begun production at the first unit of its multimillion-dollar gypsum products plant at Antioch, Calif., 4½ months after groundbreaking. It replaces the burned out plant at Redwood City.

With an annual capacity of 94 million square feet of gypsum board products, the new unit is a forerunner of a second larger addition which will increase production to a total of 274 million square feet and 20,000 tons of plaster by this November.

Kaiser Gypsum operates two other gypsum plants on the Pacific Coast—at Long Beach, Calif., now undergoing a 60% expansion, and at Seattle.

• **K S M Products, Inc.,** stud welding division, of Merchantville, N. J., has opened a new district office at 1615 Polk St., San Francisco. In charge

GENERAL TELEPHONE COMPANY OF CALIFORNIA, Santa Monica
ARCHITECT AND ENGINEER: Albert C. Martin and Associates
CONTRACTOR: George A. Fuller Company

Pleasing contrast is the keynote...when PORCELAIN ENAMEL is effectively blended with other permanent materials—offering lasting richness in any color and virtually any finish. INVESTIGATE THE ADVANTAGES of Architectural Porcelain Enamel.

of this operation will be F. G. Kern who represents the company as district engineer in California and supervises stud welding distributors in Washington, Oregon, Idaho, Montana, Utah, Colorado and Wyoming.

• **H. L. Hutchinson Co.** of Portland has been appointed a stocking agent for Termite rotary masonry drills, which are manufactured by Termite Drills, Inc., of Pasadena, Calif.

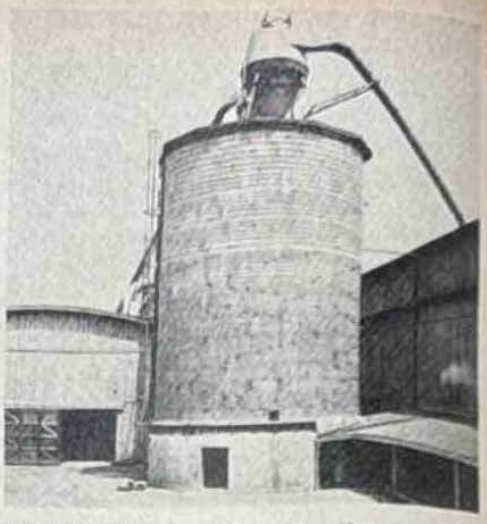
• **General Controls Co.** of Glendale, Calif., has named Joe Bustad field representative for its Los Angeles branch. With the firm since 1952, Bustad has been assigned to the San Fernando Valley territory.

• **United Distributors** of Spokane, wholesale outlet for Gates form ties, Meyers electric heaters and Easy Mold forms, is now located at E. 3003 Courtland Ave. The firm's territory includes Washington east of the Cascades, the panhandle of Idaho as far south as Boise and all of Montana.

• **Pabco Products, Inc.,** has moved R. R. Galloway, vice president in charge of eastern sales, to the company's head office in San Francisco to assume the position of sales manager of the building materials division. He returns to the western scene after three years in Pabco's floor covering division.

Pabco stockholders have approved a plan by which the firm will acquire complete ownership of Fibreboard Products, Inc. through the purchase of stock now owned by Crown Zellerbach Corp.

• **Utility Appliance Corp.** of Los Angeles has named Stanley F. Skafte, manager of its heating and air conditioning division, to the board of directors. He has headed the division for three years and has been associated with the manufacturing firm since 1947.



• **A. H. Witt Co.** of Los Angeles has named J. C. Wheeler, formerly with American Glass Refrigerator Door Co., to head a new department created to produce refrigeration doors and glass sliding panels for meat cases and cutting rooms, developed to tie in with the doors.

Concrete stave silo built for chip storage

Graystone, Inc., of Centralia, Wash., has constructed what is believed to be the first concrete stave silos for storage in the lumber industry.

The fourth one to be built for Weyerhaeuser, just completed at North Bend, Ore., is a 50-ft chip storage silo, 30 ft. in diameter and with a capacity of over 27,000 cu. ft.

Precast staves used in the silo were made with special high-strength, wet-pour vibrated concrete, according to Ralph Metzger of Graystone. Vertical joints are set in a straight line, but horizontal joints are staggered.

GRAYSTONE'S concrete stave silo.

Staves are tongue and groove and are set so that each stave is locked into place by six other staves. The circumference of the silo is held in compression by galvanized hoops and galvanized lugs. The raised base of the silo is set 10 ft. off the ground.

Manufacture and erection was by the silo division of Graystone. It will be used in connection with the new particle board manufacturing operations at the North Bend plant. Three silos of similar design, also constructed by Graystone, are in use at the Snoqualmie, Wash., mill of Weyerhaeuser.

Built-in telephone outlets are a must in today's homes

says ARTHUR K. EHRLICH, Arthur K. Ehrlich & Associates, Burbank, Calif. Builders, *Better Homes & Gardens* Idea Home for 1955 in Glendale, Calif. (pictured below)

"We wouldn't dream of building a home without concealed wiring and telephone outlets in the original plans. It's the kind of detail that sets the well-built home above the average. It just has to be there." Telephone outlets in rooms that are used most add much to the value of Ehrlich homes.

To successful builders like Mr. Ehrlich, who are setting living standards in the Pacific West, complete telephone planning is as basic as adequate electrical wiring. We are always ready to help you plan built-in telephone facilities. Just call us and ask for our *free* Architects and Builders Service.

Specify built-in telephone facilities —a sign of good planning

Bids to be opened 1 p.m., March 26, by Purchasing and Contracting Office, Fort Lewis, for constructing and paving streets for Tent Camp Area, Yakima Firing Center, Yakima; AVI-45-016-56-90. Bid bond 20%. Completion time 60 calendar days.

Quantities: 4,500 c.y. excavation; 2,000 c.y. base course; 720 c.y. leveling course; 14 ton prime coat, MC-1; 800 ton asphaltic concrete. MG 3-6

● **IRRIGATION PIPE—** **Kennewick, Wash.**

Bids to be opened 9 a.m., March 21, by Kennewick Irrigation District, Van E. Nutley, manager, 214 W. 1st Ave., Kennewick, for furnishing 360' of 6" concrete irrigation pipe to be distributed to job which crosses 7th Ave. between Ely St. and Morain St. Specifications with district. DC 3-14

▲ **SEWERS—** **Kittitas, Wash.**

Bids received by Town Council, Grace Krouskop, town clerk, Town Hall, Kittitas,

for replacement of approximately 5,780' of 8", 10" and 12" sewer lines. LOW BIDS: De Blasio Bros., Route 4, Yakima, $13,108; E. M. Gostovich, Sunnyside, $19,352; Don Akins, Inc., Box 298, Ellensburg, $22,455. Bids were opened March 7 in Kittitas.
IG-M 3-10. Previous report 2-17

● DREDGING— Lapush, Wash.

Bids to be opened 2:15 p. m., March 21, by Corps of Engineers, Seattle District, Colonel N. A. Matthias, district engineer, 4735 E. Marginal Way, Seattle, for maintenance dredging, entrance channel, Quillayute River, Lapush, Wash.; CIVENG-45-108-56-45. Plans and specifications may be obtained at the office of the district engineer, 4735 E. Marginal Way, Seattle. Bid bond 20%. Completion time 60 calendar days.

Quantities include 30,800 c.y. depositing dredged materials in disposal Area "A"; 30,800 c.y. depositing dredged material in disposal Area "B". MG 3-14

● SEWERAGE SYSTEM—Long Beach, Wash.

Bids to be opened 8 p. m., P.S.T., March 29, by Town Council, Florence L. Rine, town clerk, Town Hall, Long Beach, for construction of SCHEDULE 1—44,000' of 6" to 12" asbestos-cement sewers; SCHEDULE 2—four pneumatic ejector lift stations and one sewage pumping station; SCHEDULE 3—lagoon sewage treatment facility. Specification with town clerk in Long Beach or with N.W. Haner & Associates, 220 S.W. Alder St., Portland. $25 deposit. Certified check, cashier's check or bid bond 5%. DC 3-14

STONE REVETMENTS— McNary Dam Reservoir, Wash.

Bids to be opened about 2 p. m., April 17, by Corps of Engineers, Walla Walla District, Colonel Myron E. Page., Jr., district engineer, Bldg. 602, City-County Airport, Walla Walla, for repair of stone revetments along shore McNary Dam Reservoir, Columbia and Snake River, Oregon and Wash.; CIVENG-45-164-56-55. $100 deposit. Completion time December 1, 1956.

Quantities: Unit 1—McNaryDam, 2,265 c.y. foundation; 500 c.y. random rock; 5,920 c.y. dumped riprap. Unit 2—Cold Springs access Road: 1,800 c.y. excavation; 2,400 c.y. select gravel surfacing; 15 c.y. crushed rock surfacing. Unit 3—Oregon State Highway: 5,040 c.y. preparation of foundation; 500 c.y. rock; 500 c.y. gravel filter; 13,530 c.y. dumped riprap. Unit 4—U. P. Railroad: 12,850 c.y. foundation; 4,000 c.y. rock; 34,080 c.y. riprap. Unit 5—U. P. R. R.: 3,900 c.y. foundation; 1,500 c.y. rock; 9,840 c.y. riprap. Unit 6—Madame Dorion Bridge; 6,000 c.y. rock; 15 c.y. select gravel surfacing. Unit 7—U. P. Bridge Approach (Col. R.) and Bonneville Tower: 405 c.y. foundation; 100 c.y. rock; 1,400 c.y. riprap. Unit 8—Pasco Levee 12-1: 1,150 c.y. foundation; 500 c.y. rock; 19,595 riprap. Unit 9—Pasco Levee 12-2: c.y. foundation; 200 c.y. rock; 8,445 c.y. riprap. Unit 10—S. P. & S. Railway: 1,400 foundation; 300 c.y. rock; 3,360 c.y. riprap. Unit 11—S. P. & S. Railway: 5,200 c.y. foundation; 500 c.y. rock; 11,040 c.y. riprap. Unit 12—S. P. & S. Railway: 18,870 c.y. foundation; 1,700 c.y. rock; 39,800 c.y. riprap. Unit 13—S. P. & S. Railway: 5,100 c.y. foundation; 500 c.y. rock; 10,200 c.y. riprap. GM 3-14

DRAINAGE WELL— Moses Lake, Wash.

Project cancelled for increasing the depth of existing drainage well, Harwood area, Block 41, approximately 6 mi. southeast of Moses Lake, by Bureau of Reclamation, P. R. Nalder, project manager, Box 368, Ephrata; Spec. No. 117C-363. Bids were to have been opened February 16, but were postponed prior to cancellation.
GW 3-8. Previous report 2-25

REVETMENT REPAIR, EXTENSION— Neah Bay, Wash.

Bids to be opened about April 4 by Corps of Engineers, Seattle District, Colonel N. A. Matthias, district engineer, 4735 E. Marginal Way, Seattle, for revetment repair and extension, Neah Bay, Wash.; CIVENG-45-108-56-43. Bid bond 20%. Plans and specifications may be obtained from the office of the district engineer, 4735 E. Marginal Way, Seattle. Completion time 120 calendar days.

Quantities: 27,000 c.y. common excavation; 6,500 ton rock spalls; 5,800 ton back-up rock; 1,500 ton back-up rock; 20,300 ton armor rock. MG 3-14

● ROAD REPAIR— Oak Harbor, Wash.

Bid opening extended from March 15 to 2 p. m., March 28, by 13th Naval District, Bureau of Yards and Docks, Captain J. R. Davis, public works officer, room 100, Bldg. 232, U. S. Naval Station, Seattle, for road repairs to Midway Blvd., at the U. S. Naval Air tSation, Whidbey Island, Oak Harbor; Spec. No. 49242. GW 3-14

■ STATE HIGHWAY PROJECTS— Olympia, Wash.

Planholders announced on highway construction on which bids will be opened 10 a. m., March 20, by Washington State Highway Commission, W. A. Bugge, director, Transportation Bldg., Olympia.

LAKE CRESCENT VICINITY — Surfacing and paving with bituminous plantmix type F on 10.95 mi. PSH. No. 9, Clallam County, a state project.

Planholders: Acme Construction Co., Box 306, Eugene; American Bitumuls and Asphalt Co., Box 409, Portland; Associated Sand and Gravel Co., 2508 Colby Ave., Everett; Curtis Construction Co., Box 106, Spokane; Interstate Asphalt Co., Inc., 905 E. Heron, Aberdeen; Harrison Bros. Co., 225 Wakefield Drive, Tacoma; Pieler Construcion Co., Box 549, Port Angeles; J. D. Shotwell Co., 3113 S. Pine St., Tacoma; Strong & Macdonald, Inc., 4045 Ruston Way, Tacoma; Washington Asphalt Co., 309 W. 39th, Seattle; Sjoboen Bros., 3205 Hoadley Road, Olympia; Asphalt Paving and Engineering Co., Box 356, Tacoma; Pacific Sand and Gravel Co., Box 628, Centralia.

FAIRHOLM WEST—Clearing, grading, surfacing, constructing cement treated base and paving with type I-1 asphaltic concrete on 3.066 mi. PSH No. 9, Clallam County, FAP No. F-007-3(5).

Planholders: American Bitumuls and Asphalt Co., Portland; Bocek Bros., Box 666, Hoquiam; N. Fiorito Co., Inc., 844 W. 48th, Seattle; Harrison Bros. Co., Tacoma; Peter Kiewit Sons' Co., Box 531, Vancouver; Pacific Sand and Gravel Co., Box 628, Centralia; Permanente Cement Co., 5975 E. Marginal Way, Seattle; Pieler Construction Co., Inc., Box 549, Port Angeles; Thomas Scalzo Co., 3211 Airport Way, Seattle; J. D. Shotwell Co., 3113 S. Pine, Tacoma; Sjoboen Bros., Olympia; S. D. Spencer & Son, 4506 N.E. Jaggy Road, Vancouver; Strong & Macdonald, Inc., Tacoma; J. P. Surace Construction Co., 3238 Seaview Ave., Seattle; Standard Asphalt Paving Co., Inc., 119 N. Post, Spokane.

PEASLEY CANYON TO AUBURN—Clearing, draining, grading 0.698 mi. PSH No. 2, King County, FAP No. BF-046-1(3).

Planholders: J. N. Conley, 4332 N.E. Royal Court, Portland; Erickson Paving Co., Route 2, Box 2155, Bellevue; Fiorito Bros., 110 Leary Way, Seattle; N. Fiorito Co., 833 W. 48th, Seattle; Peter Kiewit Sons' Co., Vancouver; Morrison-Knudsen Co., Inc., 603 Hoge Bldg., Seattle; Murphy Bros., Inc., E. 3728 Broadway, Spokane; Natt McDougall Co., 824 Pittock Block, Portland; N. Paduano Bulldozing, Route 2, Box 596, Bothell; Thomas Scalzo Co., 3211 Airport Way, Seattle; Scarsella Bros., 2207 S. 146th, Seattle; Sjoboen Bros., Olympia; S. D. Spencer & Son, Vancouver; Strong & Macdonald, Inc., Tacoma; Woodworth & Co., Inc., 1200 E. D St., Tacoma; Northwest Construction Co., 3950 6th Ave. N.W., Seattle; Soule Steel Co., Box 3685 Terminal Annex, Seattle; J. P. Surace Construction Co., 3238 Seaview Ave., Seattle; Harrison Bros. Co., Tacoma.

ALASKAN WAY, HOLGATE STREET TO HANFORD STREET — Draining, grading, surfacing, paving with cement concrete and type I-1 asphaltic concrete and installing illumination system on 0.690 mi. PSH No. 1, King County, FAP No. U-001-3(13).

Planholders: M. P. Butler, 3419 13th S.W., Seattle; Fiorito Bros., 110 Leary Way, Seattle; N. Fiorito Co., Inc., Seattle; Glacier Sand and Gravel Co., 4974 E. Marginal Way, Seattle; Pacific Construction Co., 3002 16th Ave. S., Seattle; Seattle Contracting Co., 1001 Nickerson, Seattle; Washington Asphalt Co., 309 W. 39th, Seattle; City Electric and Fixture Co., 433 8th Ave. N., Seattle; Line Material Co., 700 W. Michigan St., Milwaukee, Wis., Northwest Construction Co., 3950 6th Ave. N.W., Seattle; Soule Steel Co., Box 3685 Terminal Annex, Seattle; Superior Construction Co., 4610 37th Ave. S.W., Seattle.

OCOSTA EAST—Clearing, draining, grading, surfacing with light bituminous surface treatment, paving with bituminous plantmix type F, 1.297 mi. SSH No. 13-A, Grays Harbor County, FAS No. S-0250(6).

Planholders: American Bitumuls and Asphalt Co., Portland; Bocek Bros., Box 666, Hoquiam; Glacier Sand & Gravel Co., 4974 E. Marginal Way, Seattle; Peter Kiewit Sons' Co., Vancouver; Pacific Sand and Gravel Co., Centralia; Sjoboen Bros., 3295 Hoadley Road, Olympia; S. D. Spencer & Son, Vancouver.

END OF PAVEMENT TO TELFORD—Surfacing with light bituminous surface treatment and paving with type I-1 asphaltic concrete, 6.961 mi. PSH No. 2, Lincoln County, FAP No. F-028-3(2).

Planholders: American Bitumuls and Asphalt Co., Portland; Carbon Bros., Spokane; Columbia Asphalt Paving Co., 207 Masonic Temple Bldg., Yakima; J. N. Conley, Portland; Curtis Construction Co., Spokane; F. R. Hewett Co., Spokane; Inland Asphalt Co., 10th and Havana, Spokane; Max J. Kuney Co., Inc., N. 120 Ralph, Spokane; McAtee & Heathe, Inc., Box 4187, Station B, Spokane; Parker-Schram Co., 200 Builders Exchange Bldg., Portland; S. D. Spencer & Son, Vancouver; D-H Paving Co., Vancouver; United Paving Co., Route 1, Box 188, Spokane.

PORT TOWNSEND RAILROAD OVERCROSSING, APPROACHES—Clearing, draining, grading, surfacing, paving with type I-1 asphaltic concrete, constructing cement treated base and reinforced concrete flat slab bridge, 0.482 mi. PSH No. 9, Jefferson County, FAP No. F-FG-013-1(1).

Planholders: American Bitumuls and Asphalt Co., Portland; M. P. Butler, Seattle; Cotton Engineering and Shipbuilding Corp., 126 Madison St., Port Townsend; Del Guzzi Construction Co., 1020 E. Front, Port Angeles; Louis Elterich Co., Box 868, Port Angeles; Excavators, Inc., 5756 29th Ave. N.E., Seattle; Glacier Sand and Gravel Co., 5975 E. Marginal Way, Seattle; Owens Bros., Railroad and Oak, Port Angeles; Permanente Cement Co., 5975 E. Marginal Way, Seattle; Pieler Construction Co., Inc., Box 549, Port Angeles; Scheumann & Johnson, 1001 Lloyd Bldg., Seattle; Soule Steel Co., Box 3685 Terminal Annex, Seattle; Strong and Macdonald, Tacoma; J. Surace Construction Co., 3238 Seaview Ave., Seattle; Washington Asphalt Co., Seattle; Wilson & Simpson, Box 1070, Port Angeles; Winterburn Construction Co., Box 202, Port Townsend.

ADDY-GIFFORD ROAD—Clearing, draining, grading and surfacing 2.380 mi. road, Stevens County, FAS No. S-0475(3).

Planholders: J. N. Conley, Portland; James Crick & Sons, Box 4205, Station B, Spokane; Curtis Construction Co., Spokane; Carl Hohner, E. 6203 Sharpe, Spokane; Max J. Kuney Co., Inc., N. 120 Ralph, Spokane; Murphy Bros., Inc., E. 3728 Broadway, Spokane; Natt McDougall Co., Pittock Block, Portland ;Sather & Sons, N. 1410 Howe, Yardley; Clifton & Applegate, E. 5521 Railroad Ave., Yardley.

DAYBREAK BRIDGE — Reinforced concrete girder approach spans on 0.025 mi. road, Clark County, FAS No. S-0351(1).

Planholders: Natt McDougall Co., Pittock Block, Portland.

JCT. PSH No. 5 VICINITY, JCT, SSH No. 1-L VICINITY—Draining, grading, surfacing, paving with unfinished cement concrete and type I-1 asphaltic concrete, installing illumination system on 1.346 mi. PSH No. 1, King County, a state project.

Planholders: American Bitumuls and Asphalt Co., Portland; J. Arlie Bryant, 216 Hutton Bldg., Spokane; Doolittle Construction Co., 510 Adams, Seattle; Fiorito Bros., 110 Leary Way, Seattle; Line Material Co., 700 W. Michigan, Milwaukee, Wis.; Northwest Construction Co., Seattle; Pacific Construction Co., 3002 16th Ave. S., Seattle; Permanente Cement Co., Seattle; Scheumann & Johnson, 1001 Lloyd Bldg., Seattle; Seattle Construction Co., 101 Nickerson St., Seattle; Superior Construction Co., 4610 37th Ave. S.W., Seattle; Washington Asphalt Co., Seattle.

CHELATCHIE SCHOOL AND AMBOY

VICINITY—Stockpiling crushed stone surfacing, maintenance rock, ballast, mineral aggregates on SSH No. 1-S, Clark County, a state project.

Planholders: J. Arlie Bryant, Spokane; J. N. Conley, Portland; Curtis Construction Co., Spokane; Peter Kiewit Sons' Co., Vancouver; Pacific Sand and Gravel Co., Box 628, Centralia; Sjoboen Bros., Olympia; S. D. Spencer & Son, Vancouver; R. Wamberg, 7404 S. Tacoma Way, Tacoma; W. F. Herrett Co., Box 398, Edmonds.

WAITSBURG VICINITY—Stockpiling maintenance rock, sand and mineral aggregates on state highways Nos. 3, S-E and 3-L, Columbia and Walla Walla Counties, a state project. Involves about 17,980 ton crushed materials.

Planholders: Carbon Bros., N. 3430 Cook, Spokane; J. N. Conley, Portland; Curtis Construction Co., Spokane; F. R. Hewett Co., Spokane; W. F. Herrett Co., Edmonds; F. H. DeAtley & Co., Box 638, Lewiston, Idaho. DM 3-13. Previous report 3-2

●DRAINS— Othello, Wash.

Bids to be opened 10 a.m., April 3, by Bureau of Reclamation, P. R. Nalder, project manager, Box 368, Ephrata, for construction of DPE224A drains, Block 11, in Franklin County approximately 9 miles southeast of Othello, Wash.; Spec. No. 117C-367. Specifications with P. R. Nalder, in Ephrata. Completion time 120 calendar days.

Work includes earthwork for approximately 6,430' of open drains with 3-foot bottom widths; excavation and backfill of trenches for drain pipe and excavation and backfill for manhole and road crossing structures; construction of approximately 3,410' of 8", 10", 12" and 15" drain pipe lines for closed drains and construction of manhole and road crossing structures; placing coarse gravel protection at inlet and outlet of road crossings at the drain outlet, and placing gravel about drain pipe; 7,000 c.y. common excavation; 600 c.y. rock excavation; 2,500 c.y. unclassified excavation and backfill; 450 c.y. unclassified excavation for structures; 350 c.y. backfill; 3,415' of drain pipe with uncemented joints; 200' asbestos bonded corrugated metal pipe. MG 3-14

●PLANTMIX SURFACING— Port Angeles, Wash.

Bids to be opened 10 a.m., March 20, by Clallam County Commissioners, Roy E. Atterberry, Courthouse, Port Angeles, for approximately 6.39 mi. bituminous surface treatment, plantmix, type F on county road, Project No. 324, in the Forks-Quillayute area. Plans with county road engineer, Courthouse, Port Angeles. Certified check, cashier's check or bid bond 5%. DC 3-9

●EQUIPMENT— Port Angeles, Wash.

Bids to be opened 11 a.m., March 20, by Board of County Commissioners, Roy E. Atterberry, county auditor, Courthouse, Port Angeles, for the purchase of one two-drum hoist and one bucket loader for the trade-in of two TD-14 tractors and one Land Clearing Blade. MH 3-6

STREET, DRAINAGE IMPROVEMENTS— Puyallup, Wash.

Gray & Osborne, consulting engineers, 230 S. 2nd St., Yakima, have completed preliminary studies on city-wide street and drainage improvements. Included in the studies were plans for a storm drain program, $275,000; street widening program, on East Pioneer, $18,000; resurfacing streets, $35,000; new pavement, curbs and gutters, $142,000; obtaining properties for street right-of-way, $15,000. Proposed financing of the projects would be by general obligation bond issue. MC 3-6

●STREET LIGHTING— Redmond, Wash.

Bids to be opened 8 p.m., March 29, by Town Council, Town Hall, Redmond, for street lighting. Specifications with town clerk, Town Hall, Redmond. $5 deposit. Certified check 5%. DC 3-13

▲WATER SUPPLY LINE— Renton, Wash.

Bids received March 7 by Board of Public Works, E. G. Henry, secretary, room 512, County-City Bldg., Seattle, for construction of unit No. 1, Mercer Island water supply line, first phase of the project, which will be furnishing and laying water pipe from Renton to Factoria; Ord. No. 82863. Plans by William E. Parker, city engineer, room 404 County-City Bldg., Seattle. LOW BIDS: Scheumann & Johnson, 1011 Lloyd Bldg., $1,086,630 (concrete pipe, overhead crossing), $1,083,819 (concrete pipe, sub-aqueous crossing); Thorburn & Logozo, 4608 36th Ave. S.W., $1,289,618 (steel pipe, overhead crossing), $1,324,266 (steel pipe, sub-aqueous crossing), $1,085,819 (concrete pipe, overhead crossing), $1,111,232 (concrete pipe, sub-aqueous crossing); Harold Kaeser Co., 3929 34th Ave. S., $1,149,665 (concrete pipe, overhead crossing), $1,154,200 (concrete pipe sub-aqueous crossing); Valley Construction Co., $1,317,294 (steel pipe, overhead crossing), $1,310,423 (steel pipe, sub-aqueous crossing), $1,217,107 (concrete pipe, overhead crossing), $1,208,549 (concrete pipe, sub-aqueous crossing); Argentieri & Colorassi, 1815 Jackson, $1,320,017 (steel pipe, overhead), $1,351,497 (steel pipe, sub-aqueous), $1,224,444 (concrete pipe, overhead), $1,238,286 (concrete pipe, sub-aqueous); Frank Colluccio, 7743 Seward Park Ave., $1,371,049, $1,367,772, $1,239,965, $1,234,147; Thorn & Marble Co., Inc., 4225 23rd Ave. W., $1,334,770 (concrete pipe, overhead), $1,292,033 (concrete pipe, sub-aqueous; Paul Jarvis, Inc., W. Ewing, $1,335,883 (concrete pipe, overhead), $1,378,411 (concrete pipe, sub-aqueous). Of Seattle. GW 3-9

▲PAVING— Seattle, Wash.

Bids received March 7 by Board of Public Works, E. G. Henry, secretary, room 512 County-City Bldg., Seattle, for paving Brooklyn Ave., from Ravenna Blvd. to E. 52nd St.; Ord. No. 84760. Plans by William E. Parker, city engineer, room 404, County-City Bldg., Seattle. LOW BIDS: Seattle Contracting Co., 101 Nickerson, $28,590; Pacific Construction Co., 3002 16th Ave. S., $35,752; Superior Construction Co., 4610 37th Ave. S.W., $36,591; Northwest Construction Co., 3950 6th Ave. N.W., $37,668. All of Seattle. GW 3-9

●TRACTOR, DIGGER— Seattle, Wash.

Bids to be opened 10 a.m., March 20, by Paul R. Hendricks, purchasing agent, 511 County-City Bldg., Seattle, for furnishing a diesel tractor, backhoe digger, loader, post hole digger. Specifications with purchasing agent. DC 3-9

★GRADING, SURFACING, SEWERS, WATER MAINS— Seattle, Wash.

Award to A. Jacaboni, 5232 41th Ave. S.W., Seattle, $51,052, for grading, surfacing, sewers and water mains on the Mead St., LID No. 6117. Plans by William E. Parker, city engineer, 404 County-City Bldg., Seattle. GW 3-10. Previous report 3-1

▲WATER WELL— Seattle, Wash.

No bids received March 8 by 13th Naval District, Bureau of Yards and Docks, Rear Admiral R. H. Meade, chief of Bureau, room 100, Building 232, U. S. Naval Station, Seattle, for rehabilitation of fresh water well, Building 39, at the Naval Supply Depot, Seattle; NBy-1909; Spec. No. 1909/56. GW 3-10. Previous report 2-16

BRIDGE— Seattle, Wash.

Plans under way by D. L. Evans, King County road engineer, County-City Bldg., Seattle, for bridge construction on which bids will be called during the spring and summer.

Projects include: Flaming Geyser Bridge, steel decking and asphaltic concrete surfacing, $15,000, April 1 bid call; Green River Gorge Bridge, steel decking and asphaltic concrete surfacing, $40,000, May 1 bid call; Des Moines Way Bridge, concrete deck widening, 200' long, 24' wide, $90,000, July 1 bid call; culvert 245A Fairfax, concrete bottom, $4,000, April 1 bid call. DM 3-13

SURFACING PAVING— Seattle, Wash.

Plans under way by D. L. Evans, King County road engineer, County-City Bldg., Seattle, for paving and surfacing projects on which bids will be called by the county commissioners late spring and summer.

Projects include: Krain-Wabash road surfacing and grading, 5.75 mile, $60,000, bids to be called in July and contract let in August; Military Road, 2.6 mile cement concrete paving, involves 33,800 sq. yd. material, $180,000, bids to be called in May; S. 312th St., 2 mile cement concrete paving, 26,000 sq. yd. material; $140,000, June bid call; East Lake Sammamish, 3.4 mile cement concrete paving, 44,200 sq. yd. materials, $250,000, July bid call; Airport Way, .25 mile cement concrete paving, 6,500 sq. yd. material, $40,000, July bid call; S. W. 150th, .57 mile asphaltic concrete paving, 1,300 ton material, $14,000, May bid call; S.W. 152nd St., .7 mile asphaltic concrete paving, 3,300 ton material, $80,000, June bid call; Cougar Mountain, 1.7 mile asphaltic concrete paving, 2,800 ton material, $48,000, May bid call. DM 3-13

●PAVING— Seattle, Wash.

Bids to be opened 10 a.m., March 22, by Washington State Highway Commission, J. J. McKay, district engineer, 450 Spokane St., Seattle, for paving with type I-1 concrete a portion of the Corson Avenue Headquarters yard in Seattle, King County, a State Project. Certified check, cashier's check or bid bond 5%. $2 deposit.

Quantities: 12,125 sq. yd. of preparation of untreated surface; 1,520 tons of asphalt cement; 275' of extruded traffic curb. MG 3-13

●WATER WELL— Seattle, Wash.

Bids to be opened 2 p.m., March 20, re-advertisement, by 13th Naval District, Bureau of Yards and Docks, Rear Admiral R. H. Meade, chief of bureau, room 100, Bldg. 232, U. S. Naval Station, Seattle, for rehabilitation of fresh water well Bldg. 39, at the Naval Supply Depot, Seattle; NBy-1909; Spec. No. 1909/56. No bids were received at a March 8 bid opening. Plans with Navy Department. $10 deposit. Bid bond 20%.

Work includes removal of a deep well pump; the provision of additional column and shafting and an extension of the intake manifold; the cleaning of the well; reinstallation of the pump and testing. MG 3-13. Previous report 3-1

●SUBSTATION EXTENSION— Seattle, Wash.

Bids to be opened 2 p.m., March 21, by Board of Public Works, E. G. Henry, secretary, room 512, County-City Bldg., Seattle, for substation extensions at Bothell and Shoreline. Plans with City Light, Engineering Division, H. G. Silliman, chief electrical engineer, 4th Floor, Galland Bldg., 1217 2nd Ave., Seattle.

Construction will include the foundations for equipment, including transformer, circuit breakers and switches. There will also be construction of duct runs; grounding system, and extension of utilities including a fire main system; some excavation and backfill; fencing. GW 3-13

GAS SUPPLY MAINS— Seattle, Wash.

(Estimated cost over $5,000,000)

Additional description on installation of 70 miles of natural gas supply mains in the Puget Sound area. Bids to be opened 2 p.m., April 2, by Washington Natural Gas Co., Charles M. Sturkey, executive vice president and general manager, 1507 4th Ave., Seattle. Plans to be issued March 9 by the gas company. Bidders will be briefed by company engineers March 21. Inspection

tour by chartered bus will be held March 22 and 23.

Supply mains will connect various parts of the company's distribution system with the natural gas transmission line metering stations. Work in three contracts: Line starting near Alderwood-Manor extending to North Seattle and Everett systems, 26 miles; line starting near Renton extending to company's Georgetown pumping station to serve South Seattle, and line starting near Issaquah to serve communities east of Lake Washington, 25 miles; line starting near Dieringer extending to Tacoma, 10 miles, including two river crossings laid with concrete coated pipe. Industrial sales laterals, to be built later this year, will expand Dieringer-Tacoma line to 32 miles. Pipe to be installed is 20" to 4½" welded steel pipe, coated and wrapped with coal tar enamel and fiberglas. Hydraulic Supply Manufacturing Co., 7500 8th S., Seattle, has received a $95,000 contract for pipe wrapping. Other pipe will be wrapped before shipment by suppliers in the East. Construction to start about May 1, for completion by September 1.

THE RATE for Advertisements for Bids is 35 cents per line for the first insertion; 25 cents per line for each insertion thereafter.

MAPLE STREET BRIDGE

BIDS CLOSE 10 A. M., APRIL 17

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Director of Highways of the State of Washington at the Transportation Building, Olympia, Washington, until 10:00 A. M., Tuesday, April 17, 1956, for the construction of the substructure and superstructure of the Maple Street Bridge across the Spokane River in the City of Spokane, Spokane County, Washington, and will then and there be opened and publicly read. Bids received after the time fixed above for opening will not be considered.

This improvement consists of the following elements:

1. **Substructure:** Constructing 20 reinforced concrete bridge piers and abutments.
2. **Superstructure:** Constructing 1,713 linear feet of steel plate girder deck spans and 377 linear feet of welded steel beam deck spans.
3. The principal approximate quantities involved are:

Substructure Alternate A	
Demolition	Lump Sum
Structure Excavation, Below Elevation 1,735	2,050 Cu. Yds.
Structure Excavation, Above Elevation 1,735	5,800 Cu. Yds.
Furnishing Steel Piling	18,130 Lin. Ft.
Driving Steel Piles	314 Only
Pile Loading Tests	4 Only
Class "D" Concrete	1,350 Cu. Yds.
Class "B" Concrete	7,200 Cu. Yds.
Steel Reinforcing Bars in Place	1,110,000 Lbs.
Shoring and Cribs	Lump Sum
Furnishing and Placing Anchor Bolts	18,500 Lbs.
Loose Riprap in Place	1,150 Cu. Yds.
Curbs, Sidewalks, Etc.	Lump Sum
Reinforced Concrete Culvert Pipe 12" Diameter, in Place	382 Lin. Ft.
Reinforced Concrete Culvert Pipe 15" Diameter, in Place	1,172 Lin. Ft.
Reinforced Concrete Culvert Pipe 18" Diameter, in Place	251 Lin. Ft.
Manholes in Place	14 Only
Downspouts and Connections in Place	Lump Sum
Steel Pile Splices	30 Only
Substructure Alternate B:	
Demolition	Lump Sum
Structure Excavation, Below Elevation 1,735	2,050 Cu. Yds.
Structure Excavation, Above Elevation 1,735	5,500 Cu. Yds.
Furnishing Cast-in-place Concrete Piling	21,980 Lin. Ft.
Driving Cast-in-place Concrete Piles	381 Only
Pile Loading Tests	4 Only
Class "D" Concrete in Place	1,350 Cu. Yds.
Class "B" Concrete in Place	6,990 Cu. Yds.
Steel Reinforcing Bars in Place	1,110,000 Lbs.
Shoring and Cribs	Lump Sum
Furnishing and Placing Anchor Bolts	18,500 Lbs.
Loose Riprap in Place	1,150 Cu. Yds.
Curbs, Sidewalks, Etc.	Lump Sum
Reinforced Concrete Culvert Pipe 12" Diameter, in Place	382 Lin. Ft.
Reinforced Concrete Culvert Pipe 15" Diameter, in Place	1,172 Lin. Ft.
Reinforced Concrete Culvert Pipe 18" Diameter, in Place	251 Lin. Ft.
Manholes in Place	14 Only
Downspouts and Connections in Place	Lump Sum
Superstructure:	
Structural Steel in Place	4,405,000 Lbs.
Steel Reinforcing Bars in Place	550,000 Lbs.
Lightweight Concrete in Place	3,110 Cu. Yds.
Handrail in Place	4,195 Lin. Ft.
Bridge Drains, Complete in Place	20 Only
Portland Cement	300 Bbls.
Maintenance Traveler and Rails	Lump Sum

The foregoing quantities are approximate only, being given as a basis for the comparison of bids, and the State does not expressly or by implication, agree that the actual amount of work will correspond therewith, but reserves the right to increase or decrease the amount of any class or portion of the work, or to omit portions of the work, as may be deemed necessary or expedient by the Engineer.

Bids may be submitted under any one of the three following conditions:

1. A bid on the substructure only. There are two alternates on the substructure, namely, "Alternate A" and "Alternate B," and the bidder shall bid on only one of the alternates. Essentially "Alternate A" provides for the use of steel H piles for pile footings whereas "Alternate B" provides for the use of cast-in-place concrete piles for pile footings.
2. A bid on the superstructure only.
3. A combined bid on the substructure, conditioned above under No. 1, and the superstructure.

Proposals are available for each of the three conditions. Submission of a bid on any of the three conditions will be acceptable in no other manner than on the proposal form that will be furnished for the purpose.

A price shall be submitted on each of every item for the portions of work upon which a bid is submitted, and any omission of prices on items within these portions will

render the proposal informal and be cause for its rejection.

The Department of Highways will allow combined bids on an "all-or-none" basis and may make such a combined award as will be in the public interest and for the best interests of the State. In the event a combined award is made, the time of completion of the superstructure shall control and the liquidated damages shall be $700 per day for the combined contract.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the City Engineer in the City of Spokane, the chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

E. C. HUNTLEY, Chairman
W. A. BUGGE, Director of Highways

5403—3-17, 24, 31; 4-7

STATE HIGHWAY PROJECTS

BIDS CLOSE 9:30 A.M., MARCH 28

Helena, Montana

NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the offices of said Commission in the City of Helena until 9:30 A. M. on March 28, 1956. The proposals will be publicly opened and read immediately thereafter.

F 60(12), F-IN 117(11) & F 117(12) Seal coat oiling of 1.716 miles on the Livingston-Wilsall Road in Park County, and partial grading, gravel surfacing, plant mix oiling and drain 15.727 miles on the Livingston-Big Timber Road in Park and Sweet Grass County, involving about 9,573 cu. yds. excavation; 240 cu. yds. boulder backfill; 33,998 tons plant mix; 67,238 gal. liquid asphalt 5,475 Lin. Ft. Steel Guard Rail; 42 Lin. Ft. Reinforced Concrete Pipe Culverts; 4,450.7 Lin. Ft. special concrete curb; 1,048.7 sq. yds. concrete structures to be removed, and other items. Project to be completed by September 15, 1956.

F 64(9) U2, F 148(6) U2 & F 155(7) U2, F 211(11) U2 and F-220(6) U2 Seal Coat Oiling of 39.080 Miles on Various Roads.

This project involves about 7,565 tons hauling and placing cover course; 161,834 gals. liquid asphalt; 10,108 gals. emulsified asphalt; 235 hours watering; 295 Units Rolling; and other items. Project to be completed by September 15, 1956.

F 69(10) U2 & F 248(11) U2, F 264(5) U2, S 120 (6) U2 & S 170(1) U3, S-SG 169(1) U4. Seal Coat Oiling of 23.261 Miles on Various Roads.

This project involves about 4,250 tons hauling and placing cover course; 96,350 Gals. emulsified asphalt; 179 gals liquid asphalt; 132 hours watering; 166 Units rolling; and other items. Project to be completed by September 15, 1956.

F 186(4) Grading, gravel surfacing, bituminous surface treatment and drain 3.632 miles on the Perma Southeast Section of the Paradise East Road in Sanders County, involving about 240,500 cu. yds. excavation; 132 cu. yds. gravel backfill; 19,913 mi. yds. overhaul; 29,357 tons crushed material; 44,279 tons uncrushed selected borrow base course; 25,357 gals. liquid asphalt; 25,357 gals. emulsified asphalt; 5,070 M gals. Watering; 813 Units rolling; 2,070 Lin. Ft. Reinforced Concrete Pipe Culvert; and other items. Project to be completed in 280 calendar days.

F-FG 384(3) The construction of an 825.0' steel and concrete bridge and overpass on the Forsyth Northwest Road over the Yellowstone River in Rosebud County, involving about 156,269 lbs. reinforcing steel; L Sum structural steel; 2,750.9 cu. yds. concrete; 1,643.76 steel bridge rail; 86,100 furnishing steel bearing piles; 1,741 Lin. Ft. driving steel bearing piles; 28 each floor drains; 3,545 cu. yds. structure excavation; 2,200 cu. yds. unclassified excavation, and other items. Project to be completed by November 30,1957.

S 19(1) Grading, gravel surfacing, bituminous surface treatment and drain 7.340 miles of the Lewistown-Forestgrove Road in Fergus county; involving about 253,055 cu. yds. excavation; 38,141 Mi. Yds. overhaul; 296 cu. yds. gravel backfill; 120,434 tons crushed gravel; 639,269 ton mi. haul on type "A" top course and selected borrow base course; 2,440 M gal. watering; 1,200 units rolling; 43,661 gals. liquid asphalt; 43,661 gals. emulsified asphalt; 46,203 Lin. Ft. reinforced concrete pipe culverts; 139 lin. ft. corrugated metal pipe culverts; and other items. Project to be completed in 240 calendar days.

S 40(2) The construction of two 50' treated timber pile bridges over the East Gallatin River on the Belgrade-Menard Road in Gallatin County, involving about 1,088 lbs. structural steel, 44.858 MBM treated timber; 1.556 MBM untreated timber; 835 cu. yds. unclassified excavation; 1,820' treated timber and other items. Project to be completed by September 30, 1956.

S 131(2) Grading, gravel surfacing, plant mix oiling and drain 7.962 miles on the Brady-East Road in Pondera County, involving about 9,622 cu. yds. excavation; 82.021 tons crushed gravel, 200,887 gals. liquid asphalt; 1,820 M. gal. watering; 783 units rolling; 484 Lin. Ft. corrugated metal pipe culverts; 305 hours blading work; 76 hours scraping work, and other items. Project to be completed by September 15, 1956.

S-SG 156(2) Furnishing and placing of new steel guard rail; pre-mix bituminous curb; bituminous surfacing for approaches; and drain 0.365 miles on the Nissler South and West Road in Silver Bow County, involving about 3,424 cu. yds. excavation; 5.0 cu. yds. concrete; 24 hours bulldozer work; 190 cu. yds. random riprap, 195 Lin. Ft. structural plate pipe arch culverts; 4,650 Lin. Ft. steel guard rail; 3,165.9 Lin. Ft. premix bituminous curb; and other items. Project to be completed by August 31, 1956.

S 172(1) Grading, gravel surfacing, bituminous surface treatment, and drain 2.896 miles on the Black Otter Trail North of Billings Road in Yellowstone County, involving about 117,743 cu. yds. excavation; 17,010 Mi. Yds. Overhaul; 25,754 tons selected borrow base course; 11,406 tons crushed gravel; 19,631 gals. liquid asphalt; 19,631 gals. emulsified asphalt; 2,505 M. Gal. watering, 415 Units rolling; 840 lin. ft. reinforced concrete pipe culverts; 887.5 Lin. Ft. steel guard rail; 1,940 lin. ft. concrete curb; and other items. Project to be completed by September 15, 1956.

S 186(4) Grading, gravel surfacing, drain and one 25' treated timber pile bridge 4.830 miles on the Wilsall Northeast Section of the Wilsall Northeast Road in Park County, involving about 181,503 cu. yds. excavation; 71,618 Mi. yds. overhaul; 29,348 tons top course surfacing; 2,575 M. Gal. watering; 634 Cu. Yds. binder; 1,268 overhaul on binder; 1,360 Lin. Ft. reinforced concrete pipe culverts; 812 Lin. Ft. corrugated metal pipe culverts; 135 cu. yds. gravel backfill; 13.202 MBM treated timber; 0.424 MBM untreated timber; 380' treated timber piles; and other Items. Project to be completed in 135 calendar days.

S 191(1) Grading, gravel surfacing and drain 9.864 miles on the Jordan-Haxby Road in Garfield County, involving about 186,576 cu. yds. excavation; 282 cu. yds. gravel backfill; 2,279 Mi. Yds. overhaul; 36,094 cu. yds. top course; 3,490 M Gal. watering; 650 units rolling; 1,608 Lin. Ft. corrugated metal pipe culverts; 222 Lin. Ft. structural plate pipe culverts; and other items. Project to be completed in 140 calendar days.

S 200(3) Grading, gravel surface, bituminous surface treatment and drain 10.657 miles on the Froid-West Road in Roosevelt County, involving about 254,195 cu. yds. excavation; 34,064 Mi. Yds. overhaul; 31,717 tons crushed gravel; 55,918 gals. liquid asphalt; 55,977 gals, emulsified asphalt; 1,165 units rolling; 6,795 M Gal. watering; 3,164 Lin. Ft. corrugated metal pipe culverts; 440 lin. ft. structural plate pipe culverts; 516 cu. yds. gravel backfill; and other items. Project to be completed in 250 calendar days.

S 201(1)U1 Grading, gravel surfacing, bituminous surface treatment and drain 6.195 miles on the Mildred-Fallon Road in Prairie County, involving about 157,779 cu. yds. excavation; 25 cu. yds. gravel backfill; 34,320 mi. yds. overhaul; 53,970 tons selected borrow base course; 21,006 tons crushed gravel; 37,108 gals. liquid asphalt; 37,108 gals. emulsified asphalt, 3,860 M gal. watering; 705 units rolling; 942 lin. ft. corrugated metal pipe; 172 lin. ft. reinforced concrete pipe and other items. Project to be completed by September 15, 1956.

S 201(1) U2 Construction of one 63' treated timber pile bridge across Plum Creek on the Mildred-Fallon Road in Prairie County, involving about 24.910 MBM treated timber; 0.961 MBM untreated timber; 1,140' treated timber piles. Project to be completed by August 31, 1956.

The above listed quantities are approximate only.

All bid proposals shall be accompanied by a certified or cashier's check, cash, postal money order, bank money order, or bid bond in the amount of at least 5% of the bid. Should the successful bidder fail to enter into his contract and furnish a satisfactory performance bond within the time stated in his proposal, the bid deposit shall be forfeited to the State Highway Commission of Montana.

Prequalification of bidders at least 72 hours prior to the opening of bids is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission in Helena, Montana. Plans and specifications for all Federal Aid Projects are also on file and may be examined in the office of the Bureau of Public Roads at Missoula.

SCHOOL ADDITIONS

BIDS CLOSE 8 P.M., M.S.T., MARCH 27

Shelby, Montana

NOTICE TO CONTRACTORS

Sealed proposals for the construction of an Addition to the West Side School Building and an Addition to the North Side School Building for School District No. 14, Toole County, Montana, will be received by the Board of Trustees of said School District No. 14 of Toole County, Montana. These proposals will be received at the High School Building, Shelby, Montana. At the option of the contractor he may submit a combined bid upon both of the buildings hereinbefore noted. This bid shall be marked "Aggregate Bid" and shall be submitted as a separately sealed proposal. All bids will be publicly opened at 8:00 P.M. (M.S.T.) March 27, 1956.

Contractors may obtain plans and specifications at the office of the Architects, Brinkman & Lenon, Strand Theater Building, Kalispell, Montana. A deposit of $25.00 for each set of plans will be required and this deposit will be refunded upon return of the plans and specifications in good condition within ten days after the opening of bids. All bidders shall state the type of contract bid upon; whether General, Electrical, or Plumbing, Heating & Ventilating.

As a condition precedent to considering any bid and as evidence of good faith on the part of the bidder, and as indemnity for the benefit of School District No. 14 of Toole County, Montana, against the failure or refusal of any bidder to enter into a standard written contract which may be awarded him upon and following acceptance of his bid, any bid submitted must contain a written covenant of indemnity conditioned as herein set forth, and each bid must be accompanied by bid security of the nature herein specified for the performance of such covenant.

Any bid submitted must expressly covenant that if the bidder shall be awarded a contract, the bidder will, within a reasonable time after the acceptance of said bid

by School District No. 14 of Toole County, Montana, enter into a standard written contract and give an approved surety bond covering the full amount of his contract to secure the performance of the terms and conditions of such contract. If any bidder shall neglect or refuse to enter into such contract such bidder shall forfeit to School District No. 14, of Toole County, Montana, the sum of not less than 5% (five percent) of the amount of his Basic Bid or Aggregate Bid.

All bids must be accompanied by lawful money of the United States, cashier's check, certified check, bank money order, or bank draft, drawn and issued by a National Banking Association located in the State of Montana or by any banking corporation incorporated under the laws of the State of Montana, or a bid bond executed by a surety corporation authorized to do business in the State of Montana, and be payable directly to School District No. 14 of Toole County, Montana, in the sum of not less than five percent (5%) of the amount of the Basic Bid or Aggregate Bid.

No bidder may withdraw his bid for at least 30 days after the scheduled closing time for the receipt of bids, unless waived by the Board of Trustees. No bid will be considered unless the number of the receipt issued to the bidder for payment of the annual contractor's license fee for the State of Montana appears upon the bid and is in a classification that will allow the bidder to execute the contract.

The Board of Trustees of School District No. 14 of Toole County, Montana, hereby reserves the right to reject any and all bids and to waive formalities.

Dated at Shelby, Montana, this 15th day of February, 1956.

SCHOOL

BIDS CLOSE 8 P. M., MARCH 28

Olympia, Washington

NOTICE TO CONTRACTORS

Separate sealed bids for General, Mechanical and Electric Work will be received by Olympia School District No. 1, at the School District Office, 116 North Columbia Street, Olympia, Washington, until 8:00 P. M., Wednesday, March 28, 1956, for the construction of the JOHN R. ROGERS ELEMENTARY SCHOOL to be located on Springer and Friendly Grove Roads, Thurston County, Washington.

Separate sealed bids will also be received until the same time and date for portable chalkboards, corkboards, portable school furniture, and metal counters, all for the above named building.

Bids will then and there be publicly opened and read aloud. Bids received after the time fixed for opening cannot be considered.

Specifications, including Contract Documents and Drawings, may be examined and may be obtained at the office of the Architects, WOHLEB & WOHLEB and ASSOCIATES, Architects and Engineers, 715 South Washington Street, Olympia, Washington, and may be examined at the Associated General Contractor's Offices in Seattle and Tacoma, Washington, and at the Plan Bureau in Seattle, Washington, and the Association of Subcontractors of Washington, Tacoma, Washington.

Plans may be obtained at the Architect's Office upon deposit of Fifty and No/100 Dollars ($50.00) for each set of General, Mechanical or Electrical Plans for the building and a deposit of Twenty-Five and No/100 Dollars ($25.00) for each set of chalkboard and furniture and equipment plans and specifications.

The full amount of the deposit for one set of documents will be refunded to actual bidders upon return of the documents, unmutilated and without marks or annotations, within 3 days after the time set for opening bids. Other deposits will be refunded with deduction for the actual cost of reproducing the Drawings, under the same condition.

Each bid must be accompanied by a certified check, cashier's check or bid bond, with state-licensed surety company as surety, in an amount not less than five per cent (5%) of the largest single amount bid made payable to Olympia School District No. One.

The right is reserved to reject any or all bids and to waive informalities in connection with said bids.

By order of:
OLYMPIA SCHOOL DISTRICT NO. ONE,
By Virgil L. Adams,
Secretary.

Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

NO CONSTRUCTION DELAYS

with Western made Soulé metal windows

Soulé steel and aluminum windows end construction delays caused by slow, Eastern shipments of windows. Our plants in California, Oregon and Washington supply you with the windows you want, when you need them, installed by our crews. Western Soulé window service means faster transmission of details, too.

There's no limitation to standard sizes when you specify Soulé Paramount Steel or Series 900 Aluminum windows. And our design engineers will assist you with problems concerning materials, sizes and shapes, to help you get *your* window at the lowest cost. A big plus service is expert installation by Soulé. *And remember, we deliver on time!*

Opened on time! Liberty School, Marysville, Washington. A steel installation by Soulé where prompt manufacturing and service helped open school on time! Architects: Mallis and De Hart. Contractor: Paul Odegard.

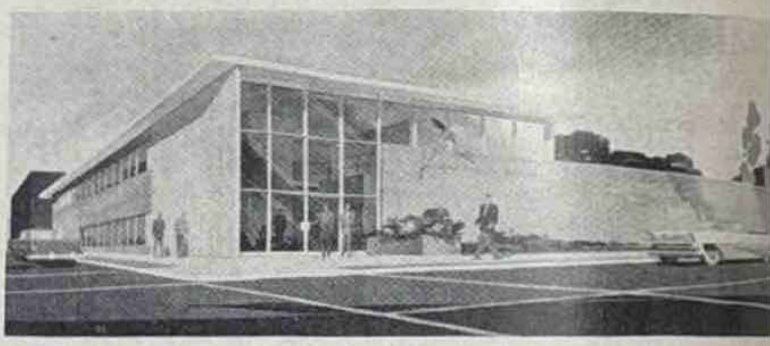
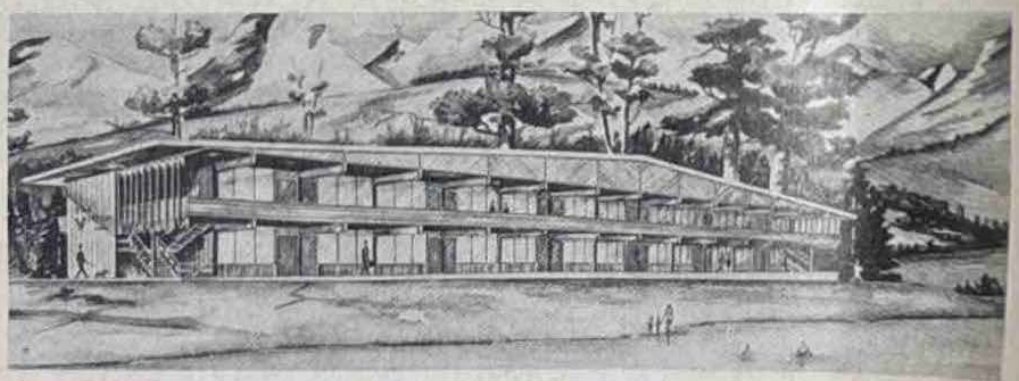
PERSPECTIVES



by Pacific architects

HOLLYWOOD CENTER ultimately will include office building, department store and 12-story Hollywood Hotel (not shown), representing investment of more than $10 million. First phase of project will be 12-story office building for First Federal Savings and Loan Association. It will have glass mosaic and aluminum exterior, placing emphasis on light control and color. Court will connect office building with 200,000-sq. ft. department store to accommodate restaurant, banquet rooms and private dining rooms. Entire center is being planned by Austin, Field & Fry, architects-engineers.



JOHN R. ROGERS ELEMENTARY SCHOOL for Olympia, Wash., is estimated to cost $230,000. Designed by Wohleb & Wohleb, architects-engineers, one-story building will contain 18,624 sq. ft. It will have solid masonry cavity type walls (some block), glued laminated t&g roof, exposed brick or block wall finish with wood trim inside and out. Completion date has been set for this August.

UNIT MASONRY QUITE NATURALLY will be featured in split-level headquarters to be constructed this spring by Mason Trades Building Association in Portland. Lower level will house kitchen, lunchroom, offices and conference room; upper level, hiring hall and offices. Brick fence will hide parking lot, site of future one-story addition. Architect is Holman J. Barnes, AIA.

CHALET TYPE MOTEL will be ready for summer tourists to Glacier National Park. Two-story, 24-unit structure, being built on private land at cost of $110,000, will command view of 10-mi. long Lake McDonald and snow-capped mountains. Richard L. Taylor of Kalispell, Mont., is architect.

Building News - Trends - Views

THE AIA GOLD MEDAL will be presented to Clarence S. Stein, 73-year-old New York architect and internationally known planner, during the 88th annual convention in Los Angeles next month. The award, the institute's highest professional honor, will be formally made at the annual banquet May 17 at which Stein will be principal speaker. Latest of his achievements is direction of planning for the new town of Kitimat in British Columbia, now partially completed on a former wilderness site for the Aluminum Company of Canada. Stein has been a fellow of the AIA since 1934.

Among other presentations to be made during the convention May 15-18 at the Biltmore Hotel will be the Fine Arts Medal to Hildreth Meiere, American mural painter and designer; the Craftsmanship Medal to Harry Bertoia, sculptor, designer and painter; and the Edward C. Kemper Award to Theodore Irving Coe, FAIA, technical secretary at AIA's Washington headquarters.

WEST COAST HOUSING CONSTRUCTION will not be halted because of the use of thinner sheathing boards, according to Norman P. Mason, federal housing administrator. Fears of such a halt arose through a misunderstanding of a difference in measurement of 1-in. boards.

The FHA says that "nominal" 1-in. boards must be at least 25/32-in. thick; the West Coast Lumbermen's Association since March 15 has specified a ¾-in. standard. A committee of the American Lumber Standards Association, which the FHA has always followed, will meet in Chicago April 30 to consider rule changes.

Mason told a Senate banking committee—especially Sen. Wayne Morse (D.-Ore.) who did most of the questioning—that there was no intention by FHA to halt any construction. He said that FHA's Portland, Ore., office "apparently through its choice of words in which to tell the story alarmed the industry."

SAN FRANCISCO'S REDEVELOPMENT AGENCY now has a series of projects totaling nearly $400 million which would tear out most of the dilapidated areas of the city for rebuilding. Most of the jobs, which have been accumulating since the agency was created seven years ago, are still in the planning stage.

MORE THAN 50 U. S. CITIES and communities from coast to coast and as far away as Hawaii and Alaska have launched local-level Operation Home Improvement drives. In Seattle, one of OHI's four pilot cities, R. V. Blackstock, lumber dealer and committee chairman, has announced a tentative budget of $100,000 for his city's campaign, to be underwritten by local businessmen.

STANDARDIZATION AND SIMPLIFICATION of door and window sizes will be undertaken jointly by the NAHB and the Producers' Council. As an initial step the latter group is adding a technical director to its staff to work on this and mutual NAHB-PC programs.

PAPER COVERED, LOW GRADE WOOD shows promise of being a good siding material. Tests made at the Forest Products Laboratory, Madison, Wis., indicate that low grade lumber covered with resin-impregnated paper can also be used for boards for house trim, cabinet partitions, shelving, paneling and signboards. Overlaid planks used as bleachers in the University of Wisconsin's Camp Randall Stadium have come through two football seasons and exposure to winter snows, spring rains and summer heat in as good condition as high grade planks used as a control in this experiment.

PORCELAIN ENAMELERS got these warnings and suggestions from a New York architect recently: keep your costs competitive with masonry construction; develop a panel wall that is not limited in use to a single window system; don't use porcelain enamel as an imitation for other building materials. William B. Tabler, AIA, also advised producers to make their own fire rating tests on their panels.

PLANS FOR A 120-STORY STRUCTURE—18 stories taller than the Empire State Building in New York—have been submitted to the St. Louis County Council by a private company. To cost an estimated $200 million, it would have 18 levels below the ground for parking.

IF BLAST RESISTANCE is considered in the initial design of structures, the area of severe damage to buildings in an atomic assault can be cut as much as 70% "at relatively low cost." But Edward Cohen, an associate of Ammann & Whitney, New York consulting engineers, warns that blast resistance is not the only problem. Occupants saved from death in the blast may die of suffocation and heat in atomic fire storms.

Cohen appeared before a House civil defense subcommittee which heard other testimony indicating that destruction in the explosion of a bomb in the Megaton range will be so great as to make evacuation or dispersal the only defense. (For another comment on this topic see p. 24).

A GROUP OF AMERICAN HOUSEWIVES of middle-income families are in Washington, D.C., this month to help the federal government establish improved design standards of homes. Albert M. Cole, administrator of the Housing and Home Finance Agency, invited 100 women from all parts of the country to share their ideas in housing with him. Some of them were selected on the basis of letters written to the agency and others were nominated by civic and trade organizations.

AN ATOMIC POWER PLANT to serve the San Francisco Bay area will be built by General Electric Co. and Pacific Gas and Electric Co., bringing to 15 the number of civilian atomic plants under construction, in process of design or proposed in the U.S. To be financed by private capital, the project will be located in the Livermore-Pleasanton area of Alameda County, Calif. Plans call for its completion during 1957 at a cost of between $3 and $4 million.

NEARLY EVERY HOME BUILDER who attended a national conference in Washington, D.C., earlier this year plans basic design changes in 1956. Only a few have changed their basic construction materials in the past three years, usually in the use of additional masonry products.

While a few builders had shifted from conventional on-site production to prefabrication, some were shifting back to more conventional methods.

THE ACOUSTICAL MATERIALS ASSOCIATION at its annual meeting in San Francisco's Fairmont Hotel April 5 named Lyle F. Yerges, U. S. Gypsum Co., Chicago, president, succeeding E. S. Graybill, Armstrong Cork Co., Lancaster, Pa. Paul J. Washburn, Johns-Manville Sales Corp., New York, was elected vice president and Wallace Waterfall, New York, was reappointed secretary-treasurer.

A look at urban redevelopment:

REMODELING THE ARCHITECT'S IVORY TOWER

Guest Editor

ROBERT W. EVANS, AIA
Tacoma, Washington

When the Northwest's first Urban Redevelopment Conference was held in Tacoma last month, the Southwest Washington chapter, AIA, was officially represented—and ably so—by one of its younger members and its public relations chairman, Robert W. Evans. It is fitting then that he should develop some of his own ideas on the subject in this month's editorial. A member of Johnston & Evans, Associates, he holds both a BA and MA degree from the University of California.—The Editor.

THE ARCHITECT'S well worn ivory tower has fallen into the same blighted condition as the rundown city in which it stands.

The tower generally is an old and faded landmark, in disrepair and disrepute, its windows on the world small and its occupants' eyes myopic—all due primarily to careless habits of thought employed by the individual architect.

The need for updating our own mental structures is apparent and immediate. Urban redevelopment thus begins here, on our own premises, in our own towers.

We must realize that our ability to plan in three dimensions, to visualize the whole urban problem, to solve it functionally, economically and beautifully is unique. We have our place on the planning team, and while our influence on the quality of proper design in our future urban pattern seems only vaguely tangible to those outside our profession, we know it must be a major contributing factor to the exciting redevelopment of our cities.

But more than realization is required. We must overcome the difficulty of maintaining high-level interest required to bring the full force of our abilities and technical training to bear on the problems. It is necessary to sell the idea of group effort in a scheme which benefits first the community, then its citizens and lastly ourselves.

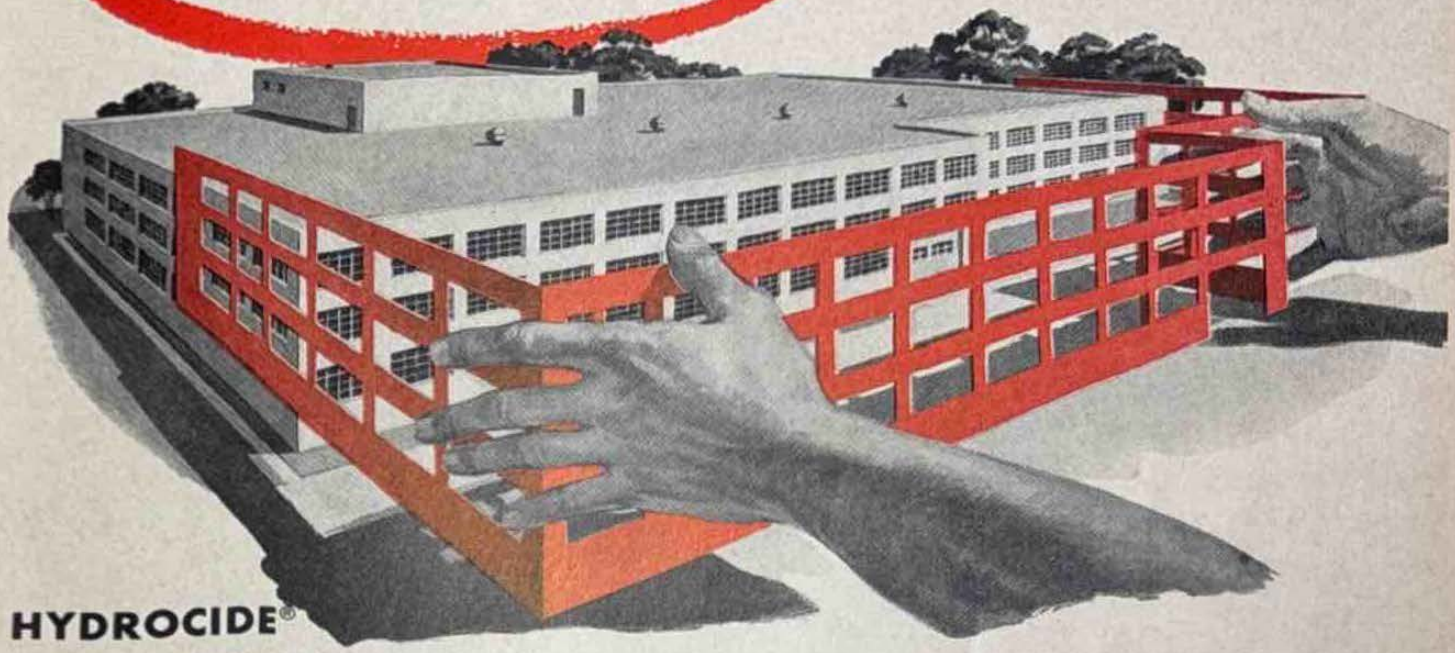
Full citizen participation then is a first essential in renovating our ivory tower in preparation for the challenging task of community redevelopment.

To recognize the architect's proper status in the task, the community must be shown his understanding of the complex problems of economy and administration as well as his more specific talents. Individually and collectively he must put his weight behind any move toward community development, to create where none is current and to promote the idea in his organizational and social life.

The architect, for the preservation of his city and all its citizens, must involve himself not sporadically but on the basis of full participation as a person concerned with the future of his community. He must seize the opportunity to fulfill his role as an architect in the complete sense.

As an example, architects in Tacoma became sharply aware of their role at an Urban Development Conference sponsored by the AIA in November when Frank Emery Cox addressed architects and civic leaders (see PA&B for December and January). A U.S. Chamber of Commerce team followed up in March, providing a fresh major impetus to a statewide group (report starts on page 18).

Four speakers examined problems in detail, each offering information and presenting a challenge to take further action. It was pointed out that Tacoma's needs, rapid growth, physical problems of blight and rehabilitation are typical—an ideal framework on which to build a long-range urban redevelopment program.



The need for broad, long-range planning by a team of community leaders was stressed by all speakers. The highly complex business of formulating and executing our plans was dramatically and completely presented.

Reaction to the conference was one of unbridled enthusiasm. Here was the challenge, so rewarding that it is difficult to visualize the total beneficial effect on even the one city of Tacoma. And the challenge can be multiplied by the number of communities in the Northwest and on the Pacific Coast and across the whole nation.

We must equip ourselves with new bifocals or binoculars to improve our professional vision and install new sash in our ivory towers to permit the long-range, overall view of our problems. We must provide the equivalents of parking at the tower bases and elevators within them to permit our fellow citizens easy access to our thought and to permit us to move out to close contact with them as active citizens of our community. We must equip ourselves with the latest communication devices and teaching aids to increase the understanding between us and our fellow urban development team members.

Our remodeling must begin at once, must be full scale and long range in nature and no personal expense must be spared to make ourselves and our towers patterns and guides for the redevelopment of our cities.

PROTECT BUILDINGS WITH THIS ALL-WEATHER COAT!

HYDROCIDE®

COLORCOAT

*Pat. pending

A ONE-COAT, WATER-REPELLENT MASONRY FINISH

Just one coat of this resin-base masonry finish decorates, protects and makes most exterior walls water-repellent. The extra thickness of Colorcoat gives extra hiding power and extra weather resistance.

Colorcoat's decorative, textured finish increases the value of buildings old or new. Its toughness and long life cut maintenance costs. Colorcoat is applied by either brush or spray—to stucco, brick, concrete, block construction, and asbestos cement shingles.

- Contains Silicone to impart water-repellency
- Uniquely formulated* to eliminate chalking, flaking and peeling
- Bridges hairline cracks and pores
- Permits walls to "breathe"—reducing possible internal condensation
- Can be applied over surfaces previously painted with either oil or water-base coatings
- Bonds two ways—by adhesion of its resin base, and gripping action of reinforcing agents
- Gives lasting protection, plus a colorful, textured finish

The Mormons' largest temple

DWARFING WORKMAN, Angel Moroni is 15-ft., 2,100-lb. cast aluminum statue atop tower which is visible to ships 25 mi. to sea.

". . . in the process of time the shores of the Pacific may yet be overlooked from the temple of the Lord."

—A message from Brigham Young in August 1847.

SPIRAL STAIRCASE is indicative of beauty and simplicity of temple construction and its furnishings. Chandelier, which hangs from ceiling of floor above, further carries out spiral effect.

CHAPEL, with sculptured ceiling, upholstered pews, floor-to-ceiling drapes and soft lighting, follows temple decor of quiet, subdued tones.

All interior photos copyrighted 1956 by Corporation of the President of the Church of Jesus Christ of Latter-day Saints. Reproduction expressly prohibited.

HOW DOES ONE begin to describe a $4 million Mormon temple? The eight photographs on these three pages and the nighttime scene on the cover only hint at the story of the twelfth and largest temple ever built by the Church of Jesus Christ of Latter-day Saints.

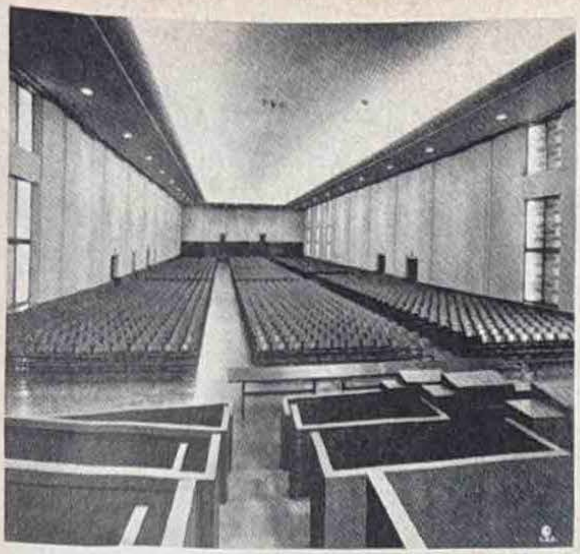
After 3½ years of architectural planning and another 3½ years of construction, the reinforced concrete structure was dedicated last month. Just five miles from the Pacific Ocean, the temple stands on a hilltop site purchased from Harold Lloyd in 1937. Its tower, topped by the cast aluminum statue of the Angel Moroni, is visible to ships 25 miles at sea. The building is the second tallest in the Los Angeles area.

The exterior of Mo-Sai stone of crushed quartz and white cement is enhanced at night by its lighted windows laced with grilles. Stately doors open onto a pool in front of the temple facing Santa Monica Boulevard. The water is maintained to a depth of 18 in., reflecting architectural details in varied hues of blues and greens. Two massive fountains also grace the structure.

Inside, the temple is tastefully decorated and furnished: modern but not extreme, rich but not extravagant, colorful but not obtrusive. Murals depict the entire tableaux of the creation; a baptismal font is supported by 12 oxen; and the 90 rooms include a cafeteria to serve members who are working in the building.

The 190,014 sq. ft. of floor space produces a massiveness about the entire structure. Yet there is a feeling of solitude in the ordinance rooms, of peace and reverence in the chapel. The latter has special earphone outlets for the hard of hearing and a templewide sound system enables music to be sent to all or any rooms.

The landscaping job, accomplished long before construction was completed, is in itself phenomenal. The four acres of lawn are dotted with 12 species of transplanted trees and a variety of ornamental plants and shrubs; 22 specimen olive trees line the main walks. Some of the sandstone blocks used for landscaping terraces weigh several tons.



Prior to the dedication, more than 600,000 visitors were escorted through most of the 90 rooms. But like all LDS temples in use, it is now closed except to qualified church members.

ASSEMBLY ROOM—Located on third floor, this 257-ft.-long room is largest in temple. It seats 2,600 and will be used for special gatherings.

MATCHED FURNISHINGS—Subdued murals blend with rich furnishings. Thick carpeting was especially designed.

MASSIVE MURAL—Scenes suggesting scriptural account of creation of world extend 360 deg. around this room except for entrance and exit. Artist is Harris Weberg of San Francisco.

BAPTISMAL FONT—Stainless steel font rests on backs of 12 bronze oxen as seen in ancient temple of Solomon. Oxen were sculptured in Salt Lake City by Millard Malin, cast in New York, shipped to coast.

Los Angeles Mormon Temple Data

Location: Atop hill at 10741 Santa Monica Blvd., Los Angeles (Westwood Village).

Type of Construction: Reinforced concrete and structural steel, fireproof and quake resistant. Exterior covered with 146,000 sq. ft. of Mo-Sai stone of crushed quartz and white Portland cement; each stone is 2½-in. thick and 8x7 ft., weighing about 1,600 lb. and fastened to concrete wall with bolts and concrete grout. Exterior Rockville granite base from Cold Springs, Minn.; marble for temple annex base, first floor, grand stairway, altars and Bureau of Information from Vermont, Tennessee, Italy and France.

Area: 90 rooms totaling 190,014 sq. ft. of floor space or 4½ acres (7,412 sq. yd. carpeted). Width, temple front at annex, 364 ft.; depth, 241 ft. 6 in.; height (including tower), 257 ft. 8½ in. above first floor; height of roof above first floor, 106 ft.; height of tower above roof, 151 ft. 8½ in.

Cost: Temple building about $4 million; entire plant, including four auxiliary buildings, about $6 million.

Building Schedule: 25-acre site (temple and grounds occupy 13 acres) dedicated September 1951; excavation started August 1952; cornerstone laid December 1953; temple completed December 1955.

Auxiliary Buildings: Bureau of Information (160x78 ft.) built in 1953-54; heating plant, 1953-54; California Mission home, 1952-53; Westwood Ward Chapel, 1952.

Statue atop Tower: Sculpture of Angel Moroni, one of dominant characters of Book of Mormon, executed in gold-leaf cast aluminum by Millard F. Malin of Salt Lake City. Height 15 ft. 5½ in.; weight, 2,100 lb.; length of trumpet, 8 ft.

Artists for Interior Murals: Joseph C. Gibby, Los Angeles; Harris Weberg, San Francisco; Edward T. Grigware, Cody, Wyo.; Robert L. Shepherd, Salt Lake City.

Rank in Church: Twelfth and largest. Other temples at Kirtland, Ohio, dedicated 1936; Nauvoo, Ill., 1846; St. George, Utah, 1877; Logan, Utah, 1884; Manti, Utah, 1888; Salt Lake City, 1893; Laie, Hawaii, 1919; Cardston, Alberta, 1923; Mesa, Ariz., 1927; Idaho Falls, Idaho, 1945; Bern, Switzerland, 1955. Temples under construction at Newchapel, Surrey, England, and Hamilton, N. Z.

BAXCO POLES

CHEMONITED

FOR POLE FRAME CONSTRUCTION

"Used to take me 3 hours, Babe, to build a new mess hall." The Blue Ox looked wide-eyed as Paul Bunyan set the first pole in the ground, bracing it with his little finger. "But with this here newfangled pole-frame construction, Babe, I done the job in jest 20 minutes * . . . Like the Baxter man in Frisco says, the pole-frame way shore saves a lotta time and money...and with Chemonited poles she'll never rot."

* 20 minutes?!! Paul, you're off your rocker...However, it is true that even mere mortals can complete large structures—warehouses, canneries, etc.—in a matter of weeks, instead of months, by this revolutionary new construction method. This is possible because no foundations are required, and framing is simplicity itself: Poles are set directly into the ground. More astounding is the cost factor—as low as $1.00 per square foot. And when poles are Chemonited (pressure-treated) against decay, the rigid frame structure is permanent, rock-solid.

Before you build, consult BAXCO engineering service for help with your plans. Learn why BAXCO Chemonited poles—clean, odorless, economical—are preferred by pole-frame builders. Your inquiry will receive prompt attention.

CANTED ROOF thrusts out from slope, pointing to view beyond. Front wall of cast stone is inset with panes of circular glass. Fireplace divides banquet room from main entry.

Photos above and below by Hugh Ackroyd

A TWISTING, wooded road leads up to Terwilliger Heights, a quiet residential area far from the noise and bustle of downtown Portland, and to one of its most dramatic sites.

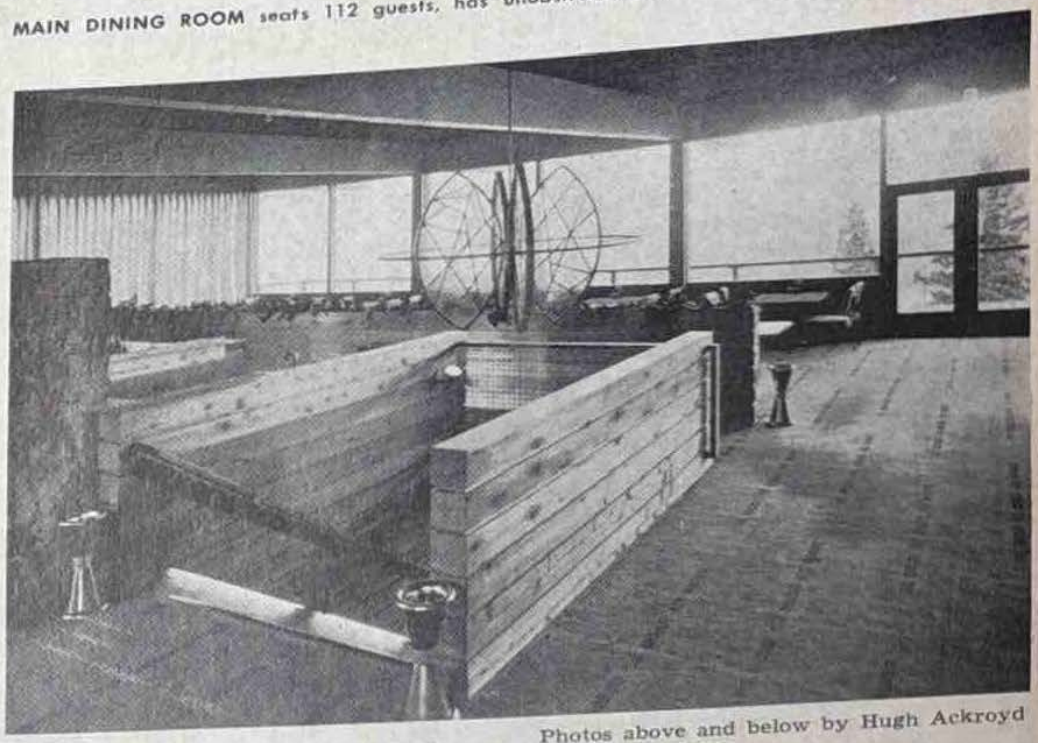
Here can be seen a sweeping view of the city, the Willamette River winding its course 900 ft. below and the ever-changing character of the snow-capped peaks of the Pacific Northwest: Washington's Mount Adams and Mount Rainier and Oregon's Mount Jefferson, Mount St. Helen's and Mount Hood, a mere 45 mi. away.

For 15 years Eddie Palaske dreamt of transforming the box-like lines of the old Simmons Hillvilla—long famous for its fine menu—into a structure truly expressive of this region. The designer's main task then was to plan a restaurant that would match the panorama.

Much of the old building — perched on the hillside—was torn down because of a local ordinance but the location and outline had to remain virtually unchanged. A new supporting steel structure was erected on new footings for safety reasons.

Space was given foremost consideration in the design. Dining rooms command a generous view through the use of maximum glass areas. Laminated wood beams have kept the upper dining room free of columns; aisles are a minimum of from 5 to 8 ft. throughout. A 100-ft. porch opens off the dining room.

Warmth has been attained with native cedar in natural finish, copper, a massive fireplace and considerable planting. Paneled walls are relieved by rugged stonework partitions and half walls. A staircase highlighted by a custom-designed chandelier leads to the lounge and seafood bar on the lower level where the same unobstructed view is enjoyed.



The fireplace, fixtures (tables, chairs and bars), draperies and carpeting all were executed by the Hillvilla's designer, as was an entry waterfall of stone with recirculating pool which backs the service bar to the main dining area.

A change of pace is offered in the front wall of cast stone with its insets of art glass: reds, yellows and oranges adding a colorful bit of fancy. But in the final analysis the dark stained cedar exterior is a fitting counterpart to the fir forested hillside.

MODERNISTIC CHANDELIER is by Sam Nichols. At foot of staircase is stone partition and planting which helps break up large lounge area and seafood bar seating 75.

OUTLINE SPECIFICATIONS

Type of Construction: Frame, concrete and steel on reinforced concrete footings.

Exterior Walls: Frame; poured concrete, lower level.

Exterior Finish: Stained rough sawn cedar and custom-designed cast stone blocks with art glass insets.

Windows: Wood frame.

Doors: Glass in wood frame, exterior; flush wood, interior.

Floors: Frame and concrete slab.

Floor Finish: Carpeting over plywood in main dining room; quarry tile in entry; vinyl cork in banquet room; vinyl tile in kitchen.

Interior Walls: Frame, drywall and plaster partitions with planed cedar and Oswego field stone.

Ceilings: Thermacoustic mineral fiber.

Heating: Gas fired furnace.

Total Area: 4,059 sq. ft., upper level; 3,306 sq. ft., lower.

Total Cost: $89,178, construction only; $42,099, furnishings and fittings.

Cost per Square Foot: $12.11, construction only.

Date of Completion: April 1955.

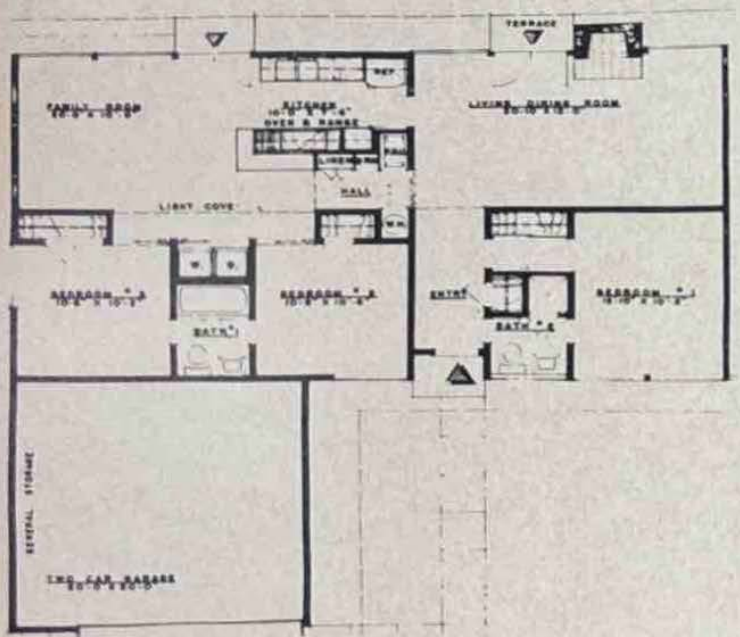
House divided—for comfort

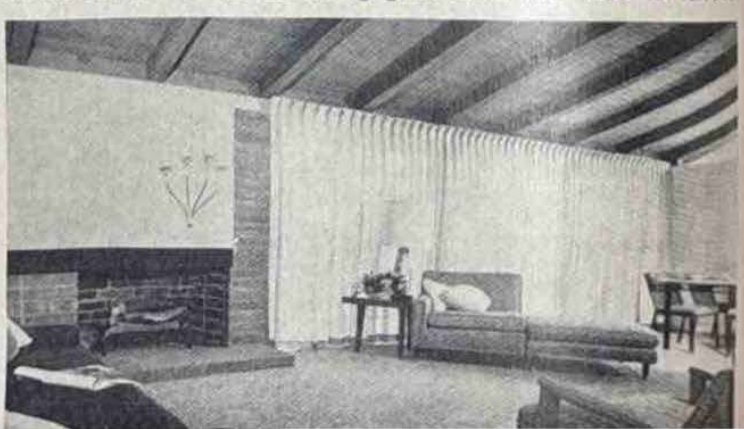


A HOUSE DIVIDED against itself, the Bible tells us, cannot stand. But a house divided for itself—and for the comfort and convenience of the family that inhabits it—should contribute toward a happier home.

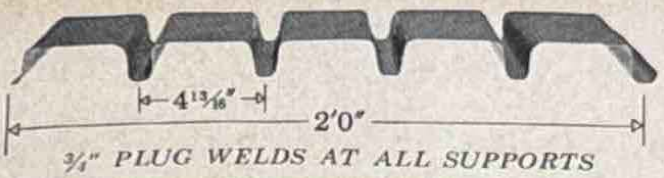
This frame model, which won a 1956 Design Merit Award of the National Association of Home Builders, is such a house divided. The floor plan apportions the space almost equally into two general zones, one for the parents and one for the children, each with its own living, sleeping and dining areas as well as its own entrance and terrace. The result is to provide a remarkable degree of privacy for every member of the household when it is required and still allow the family to spend its leisure hours together by simply opening up the entire rear half of the house into one large living-dining-recreation area.

Hub of the house is the kitchen which commands a view of all the living areas, inside and out, and is so arranged that it can serve with equal ease the dining area of the living room or the food bar in the family room. Even the washer and dryer are only a few steps away, concealed behind accordian-fold doors.

The versatile family room becomes either a playroom, informal dining room, workroom or den, depending upon the requirements of the moment; and the living room, relieved of having to fulfill any function but its own, can maintain its character as an uncluttered retreat for the grown-ups.



Open beam ceilings, wood sheathing, floor-to-ceiling windows and sliding glass doors communicate a sense of light and spaciousness throughout the entire house, with gabled glass and ribbon windows utilized elsewhere to offer still more daylighting without reducing wall space to the point where it would interfere with furnishings.



OUTLINE SPECIFICATIONS

Type of Construction: Frame; one-story, 26x48 ft.
Exterior Walls: Stucco and painted wood siding.
Roof: Gabled; three layers of 15-lb. felt hot mopped in-between with 40-lb. flood coat to receive white crushed rock surface.
Floors: Concrete slab with asphalt tile finish.
Windows: Aluminum siding.
Doors: Hardwood, hollow core, flush slab.
Ceilings: Wood sheathing between exposed beams.
Interior Partitions: Drywall.
Built-ins: Range, oven, garbage disposal.
Heating: 75,000 Btu forced air.
Total Area: 1,246 sq. ft. (excluding garage).
Total Cost: $12,500 (excluding lot but including garage).
Date of Completion: October 1955.

LIVING-DINING ROOM has sliding glass doors that lead to terrace.

¾" PLUG WELDS AT ALL SUPPORTS

Notice the Widman section is distinguished by a fifth rib. The extra rib increases the section modulus. Widman makes 18 and 20 gauge decking of high-quality United States Steel sheets.

TYPICAL SIDELAP

Steel roof decking saves framing and insulation costs

Here's a perspective on 46,600 square feet of roof decking, fabricated and recently erected by George D. Widman, Inc., of Gardena, California. Formed from USS steel coils, the two-foot-wide sections were laid in 22 and 28 foot lengths. Steel decking (20 gauge) was selected for the job to allow greater load-bearing capacity and important construction economies.

These 5-rib steel sections have the required strength to span greater distances and thus eliminate considerable amounts of framing. And the one-inch space between the ribs (narrower than usual) reduces thickness of insulation over open spaces. The incomparable strength of steel makes it ideal for roof decking. To obtain the same strength from other materials, weight would have to be greatly increased . . . and with it the cost.

If you would like additional information and specifications on the use of steel roof decking both for commercial or *residential* construction, we will be happy to put you in touch with United States Steel customers here in the West who fabricate roof decking.

Whither urban (re)development?

Photo by Robert Rudsit

TACOMA'S SKYLINE at night.

Henry van Loon, AIA, has combined his training as an architect—at Columbia University and later at Amsterdam, Holland—with economics to form a background for the economic study of cities. His numerous projects include helping to prepare recommendations for the economic recovery of West Berlin in 1952. Founder and president of City Guidance, Inc., he also is associated with U.S. Economics Corp., a research organization.

Anyone who watches the rapid increase in the population of the United States and the way this population is becoming concentrated in urban centers, realizes that the problem of urban development is going to become more difficult in the near future. Cities will actually become more competitive and the impact on individuals will be severe.

The city which successfully surmounts the obstacles which are certain to develop in its path must have a very careful plan and this plan must be concerned not only with what is happening in the community, but also with the forces that are playing upon the community outside.

No city today can be sure of its place in the national picture until it knows its relationship to the national and even the international influences. Until it has determined this potential, the city cannot be sure of its needs for future development and cannot determine the proper course of action for its greatest progress.

Once a city has done this kind of broad planning, it has before it a clear course of action to pursue for

Continued on next page

Editor's note

MISSION ACCOMPLISHED. That was the consensus of delegates to the two-day Urban Redevelopment Conference in Tacoma last month, one of the first such sessions on the West Coast and the only one of its kind scheduled to be held in the Northwest this year.

Its mission was to take a first-hand look at the city's own needs and to tell its neighbors how to effectively organize and carry out the work of urban development. Among the participants—close to 200 the first day and 150 the second—were groups and individuals from scores of western Washington communities.

They discovered that Tacoma's problems are pretty much the same as those that confront any metropolitan area. An eavesdropper from Portland or Boise or San Francisco surely would have remarked "I've heard that song before" when the chief issues were discussed—blighted downtown sections, inadequate sewage facilities on fringe areas, an ailing transit system, lack of parking pace, taxation, lack of cooperation between various elements which should be working to make it a better city.

The U. S. Chamber of Commerce co-sponsored the conference with the local chamber. Excerpts from the talks of three of the former's urban development team—an architect-city guidance consultant, a municipal government specialist and a real estate consultant—begin in the adjacent column.

Conference moderator was James F. Steiner, a graduate of Washington State College who joined the national chamber's Washington, D. C., staff in 1953. He commented that his organization has held 22 workshops in various cities during the past five years with 1,100 communities represented. Steiner emphasized that the manner in which urban problems are being solved elsewhere can be of use in Tacoma and vice versa.

The local speakers made up an interesting cross-section. Robert W. Evans represented the Southwest Washington chapter, AIA, whose total delegation numbered 15. Some of his viewpoints on the subject are found in this month's guest editorial (p. 8). Others were Gerrit Vander Ende, president of Pacific First Savings and Loan Association; Marshall McCormick, legal council for the City of Tacoma; L. P. Staman, director of Tacoma City Light; C. M. Johnson, president of Washington Steel Products, Inc.; and Cecil C. Cavanaugh of Cavanaugh Lumber Co.

It is not our purpose here to completely review the proceedings, for many of their ramifications would be of local interest only. Suffice to say that recommendations were made to appoint a 24-member urban development team and to study a proposed local housing code.

Meanwhile, a bit later last month Los Angeles architect Victor Gruen, AIA, was attracting national attention with his blueprint for a Greater Fort Worth (p. 21).

And in a recent address at Cooper Union, a leading architect and widely recognized authority of city planning recommended a plan to end business-throttling traffic jams (p. 22). Morris Ketchum Jr., FAIA, urged redevelopment of New York City into complete self-sufficient neighborhood units which would be linked with the already existing arterial highway system.

Urban (re)development, it would seem, is far from an idle phrase in 1956.

the development of its opportunities and for the creation of the conditions which are most conducive to freedom and opportunity for its citizens.

This idea—of attempting to understand our community—brings us to a series of thoughts on economic research and analysis.

We can identify two main historical phases of research applied to the examination of cities—the city **standing**, the city **moving**. A new phase is the concept of the city **living**.

The City Standing

The static economic research of a few decades back examined the city standing in a static condition. The information gathering process was slow and the data was incomplete. Research was essentially a documenting of economic history. On this basis an observer might have examined the market for buggy whips in 1900, found it good, and concluded that buggy whips would sell well in 1950.

The City Moving

The dynamic economics of a few years later watched the nation moving. It could detect trends. A researcher of that day might have observed that the market for buggy whips was declining and the accelerator pedal and carburetor market was growing.

The City Living

The community research methods that are now possible for use in city guidance watch the economic unit —the city—living because this is the true picture of a city. It is a living, changing, integrated group of people in an environment reacting to the many exterior forces that are constantly in motion.

This is more than just a market analysis, and more than the concept of the city moving.

City guidance involves economic factors plus the impacts of technological change, legal and social elements which affect communities. City guidance would relate the market for accelerator pedals to the market for highway construction, new schools and downtown parking facilities. This is the type of analysis which cities need to help their leaders understand how to solve the many problems of growth and change.

Method for Analysis

Now let me outline the process for making a city guidance analysis.

National Trends Analysis: We begin with the analysis of the national trends in each type of industry. What are the earnings in relation to investment? What is the relation of output to wages; market costs to sales?

In this process of establishing trends, some significant information begins to come out. We see whether our local manufacturer is keeping pace with its national counterparts in production and we also uncover information as to whether the industry is maintaining the internal relationships that mean a healthy industry.

Local Industries Related to National Trends: Next, we analyze the principal local industries—the main sources of jobs for the community.

We determine how the local industries stack up with comparable industries in other communities. Is the local industry growing as fast as similar industries elsewhere? What are the reasons for any differences found?

Technological Influences: Technological changes are the next area of inquiry. Materials and processes used are affected by technological changes. We examine all local industries to determine whether any new or pending technological developments are likely to increase or decrease the volume of products made locally.

Changing Materials Sources and Market Areas: Any significant change in the source of materials is related to the cost of the finished product. The trends in the economies of the market in which the local industries sell are examined for indications of capacity to consume more locally produced products or any factors that would reduce sales.

Availability of Labor: The labor portion of the production team is evaluated to determine the capacity to improve its skills.

Power, Transportation: The sources of power and the facilities for transportation are related to the industries they serve.

Community Factors in Industrial Growth: The influence of community laws and the adequacy of public facilities are evaluated for their favorable or unfavorable effect on industrial growth. Is the city a good place to live? Are the schools adequate? Is the right type of housing available for the labor force? Is blight a serious problem? What is being done about it? What is the municipal tax picture? Does it encourage or discourage industry and home ownership?

This city guidance data can be converted into information which will accurately indicate what your city can expect in terms of need for industrial space, number and kinds of new jobs produced, need for retail and wholesale space, sales volume, housing accommodations, schools, etc.

Frederick J. Bashaw entered the real estate business in Providence, R.I., in 1925 and later received his law degree. His most active nationwide activity is his real estate sales conferences and lectures for which he has developed a library of more than 8,000 color slides. He is producer of the colored motion picture, "The Dynamic American City."

A matter of pressing concern in recent years has been the density of American cities. As a people we have become anxious and disturbed about urban density that is so prevalent everywhere. We have come to think of it as a repugnant form of obsolescence that deters us in our pursuit for an ever higher standard of living. At times we have even gone so far as to lose faith in our cities.

The average basic American city lot is 20 ft. wide wherever located and this fact underscores our urban problems everywhere. The reason for this is simple but often overlooked. Again we must look to the cause as founded in transportation limitations.

The horse, and his limitations, dictated the basic nature of our urban development. Millions of Americans can well remember the horse; our memories tend to be short as we feel the impact of the automobile.

However, it is vitally important today that we think of density not as something of which we should be ashamed but rather a fact of growth that was utterly essential because of transportation limitations. One thing is certain: we never worried about land density during the horse and buggy period. There was no alternative.

Within the very lives of most living Americans our land economy has been struck by the impact of two forces that have revolutionized land use. They are the electrification and motorization of our land economy. They go hand in hand, and to say that they have revolutionized land use is to put it mildly.

We all know what has happened. Responding to the allurement of open space and technology, millions have fled the cities. The movement has been so fast that we have all but reached a point of despair concerning the plight of some metropolitan areas.

There is more to life, however, than open space. Somehow, in the shifting of peoples, we have lost sight of the fact that many of our most important amenities are to be found in our existing urban centers. Medical services, churches, schools, parks, abundant shopping inventories, a multitude of conveniences and other benefits of a good life have often been sold short

by a restless people.

Moreover our pursuit for open space has often been illusory. Inflationary costs of land development have more often than not put us in a position where suburban density is almost the same as urban.

Already we are finding many people revaluing the amenities of urban life and actually there is an ever-growing trend toward centralizing again.

Without question, we shall see a continued expansion into new areas but just as certainly we shall also see a redevelopment of the old. In tackling the existing urban problems we have a great two-fold task.

1. We must labor to accommodate our automobiles.
2. We must make every effort to restore residential allurement to our cities.

We are making real strides in this direction but the challenge is great. Urgently needed is a united front of enlightened people and energetic leaders to move forward together toward full solution. In the last analysis, all the major problems of our cities can be resolved if our attitudes toward cities as a way of life become positive.

Parking, public transit, housing, downtown shopping areas and other problems of the day are not each separate unto themselves. They are collective problems wrapped up in our popular estimation of urban value as a way of life.

There are sufficient evidences of strong trends in America that augur well for the future of our cities and the solution of urban problems. This movement will grow ever stronger to the extent that we appraise rather than dispraise the real benefits of urban life.

S. Howard Evans trained in the East to become a city manager. During World War II he directed the government requirements division of the War Production Board. Joining the staff of the Housing and Home Finance Agency in 1950, he now is director of the urban renewal service branch of the Urban Renewal Administration.

The reason that the federal government has been injected into the problem of urban renewal is that most of our cities are facing bankruptcy. They do not have the money with which to renew old and worn out parts of the cities. As a result, they cannot stop deterioration and prevent the loss of further tax revenues.

The federal government has been concerned about this problem for a considerable period of time and it has been concerned by the necessity of having citizens as well as public officials understand the nature of it and what needs to be done about it. Congress, in making federal funds available, has insisted that the responsibility for the program is primarily local and that before any extensive federal funds can be made available, the city has to face up to its total problem and to formulate a program for dealing with its slums and blight.

Philosophy of Program

Now let me give you the background to the urban renewal idea. Here is the philosophy of the broad citizen, business, labor and government group that put the urban renewal concept into the Housing Act of 1954. They said, (and this is the direct quotation from the report of the President's Advisory Committee on Government Housing Policies and Programs):

> What we hope we are doing is to help the cities help themselves. By clearing slums, removing blight and checking the deterioration cycle, cities should be able to increase municipal revenues at the same time they are reducing the demand for services. In short, we are trying to establish the urban renewal process on an orderly basis so that over the long pull we will establish healthy cities with reduced requirements for the federal aid which we now find mandatory.
>
> But the job will be neither cheap nor easy. There is no simple dramatic solution. There must be well planned and well organized action, using all the tools of slum prevention, physical rehabilitation, neighborhood conservation and slum clearance. No one tool will do the job. Each is absolutely essential to the effectiveness of the other.
>
> There is no justification for federal assistance except to cities which will face up to the whole process of urban decay and undertake long range programs.

The federal aid machinery was then set up to help the cities help themselves. This meant that a city must necessarily face up to the total problem of their slums and blight.

Workable Program Concept

Thus, the Housing Act of 1954 contains a requirement that, as a prerequisite to most kinds of assistance which can be made available, each community applying for these aids must show that it has developed what we call a "workable program" for urban renewal. Briefly, the seven essential requirements are:

1. Adequate local codes and ordinances, effectively enforced to assure minimum standards of health, sanitation and safety in housing.
2. A comprehensive general plan for the development of the community as a whole, covering land use, thoroughfares, community facilities and public improvements.
3. Analyses of neighborhood characteristics to determine the extent and causes of blight throughout the community and the means of correction.
4. An adequate administrative organization that can act intelligently in the best interests of the community in carrying out urban renewal programs.
5. Means to assure the community's ability to meet financial requirements under its urban renewal program.
6. Ability to rehouse, in decent, safe and sanitary quarters the families displaced by urban renewal and other governmental activities.
7. Full-fledged citizen participation in both the community as a whole and in the project area.

Citizen Participation

The citizen participation element of the "workable program" is the key to achieving success on all the other points.

From our experiences with dozens of communities, we have found that when all interested community groups get together to discuss urban renewal there is a general misunderstanding of the purposes and processes of this program. This evidence of misunderstanding is strong evidence of the need for citizen participation.

Citizenship participation is essential to getting public understanding of the overall problems involved in the community's development. Public understanding is the only avenue for getting support of housing code enforcement, comprehensive city planning, and the financing of the municipal machinery needed for neighborhood surveys and the relocation of persons displaced by urban renewal activities.

It has been our experience that in many localities citizens who are made aware of this problem agree that something should be done about it and then fail to act because there is no effective organization. It becomes evident, therefore, that some kind of a team needs to be organized within the community which will bring together key leaders who are in a position to determine the future of the city and create a framework in which they can work together to solve the urban renewal problems. This pattern is described in the "Urban Development Guidebook," which sets up a series of committees to be created as part of the team. They are seven in number: economic base and business outlook; local public finance; building and construction finance; housing; legal powers of the locality; physical planning; traffic and parking.

The guidebook not only suggests the outline for the formulation of a local development team to spark urban renewal but also suggests a work program and gives examples of successful activities which have been carried out in a number of localities.

Blueprint for a Greater Fort Worth

Pedestrian is king in Victor Gruen's city center proposal which has elements of interest for planners everywhere

AN ARCHITECT'S bold and imaginative blueprint for a Greater Fort Worth, Tex., would include, along with an integrated county highway system, a central business district completely free of vehicular traffic.

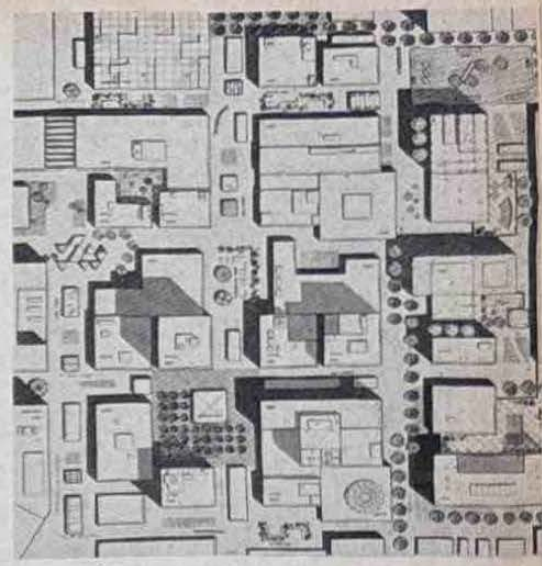
Victor Gruen, AIA, of Los Angeles made his presentation last month to 200 executives who formed the Greater Fort Worth Planning Committee to implement his proposal.

The Gruen plan, resulting from intensive research into the problems of the city in an effort to keep the metropolitan area from strangling in its own traffic by 1970, makes these recommendations:

1. Creation of a pedestrian central business district free of surface vehicular traffic—it would be unnecessary for automobiles, buses and trucks to enter the heart of the city. Comfortable, noiseless, battery powered shuttle cars would be available throughout the area for the convenience of pedestrians.

2. Eventual construction of underground freight and cargo delivery facilities in the central business district.

3. Construction of a loop or belt line highway ringing the central business district, receiving traffic from the city's freeways and other tributary roads and funneling the traffic into strategically placed parking garages and terminals where buses, taxis and airport limousines would discharge passengers.



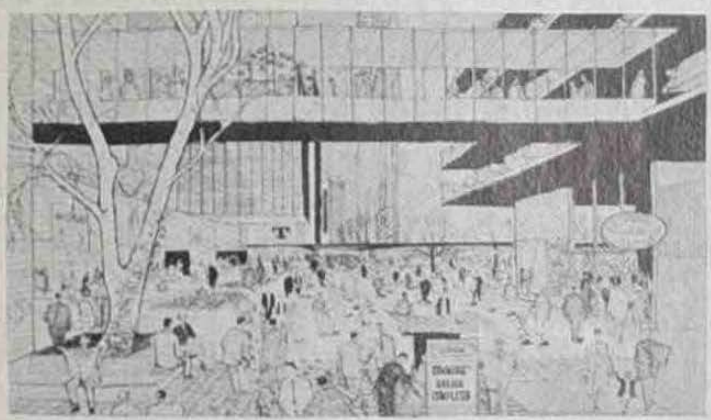
4. Construction of six major parking garages inside the belt line highway to serve the entire downtown area, with a deep penetration into the pedestrian central business district so as to minimize walking distances within the area. No point would be more than a 2½-minute walk from the nearest parking garage.

In his plan, Gruen envisions certain downtown areas being replete with trees, greenery, benches and statuary in an area that would have the atmosphere and appeal of such developments as New York's Rockefeller Center.

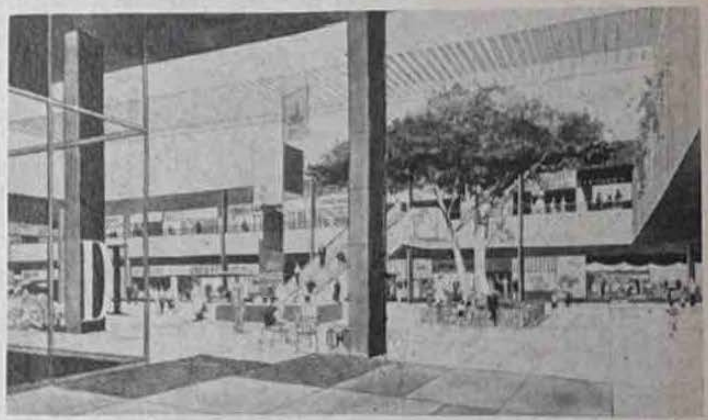
"Tomorrow's central district will have no signs of blight or deterioration," Gruen contends. "In their place will be lovely malls and concourses, covered sidewalks and comfortable benches, landscaped gardens, sculpture, fountains—a city shopping center that is restful and pleasant.

"The central district will be an integral addition instead of an ugly disturbance: a cultural, social, educational center. Shopping, going to work, attending cultural and entertaining events in such an environment will be a new and thrilling experience for everyone."

Gruen estimates that by the year 1970 approximately 152,000 cars will visit the central district of Fort Worth each day. This is approximately twice the number that visit the central district daily at present. Thus, if cars are permitted on the downtown streets of the city in 1970, the existing street system would have to be enlarged by more than 300%.

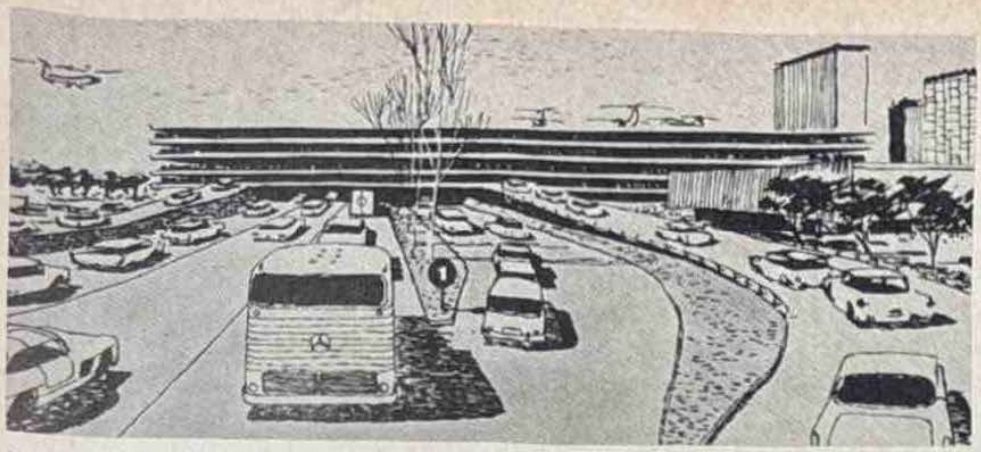


PEDESTRIAN IS KING: walks, malls, parks and plazas take place of automobile traffic and parked cars.



Gruen also estimates that the central district in 1970 would require approximately 2,600 trucks per day for the handling of its goods. He ruled out as not workable or feasible such possibilities as widening and improving the present surface delivery system or the construction of new elevated delivery facilities. Therefore, Gruen proposes that the truck routes be underground.

What would life be like in 1970 in Fort Worth revitalized under the Gruen plan?



People would drive downtown and turn onto the multilane belt line highway encircling the central district. A few seconds' drive along an exit ramp would find the motorist in front of a large parking garage. An electronic control panel would

REMOVAL OF VEHICULAR TRAFFIC gives shoppers view of windows on both sides of street uninterrupted by wall of cars. Cross shopping thus becomes easy and shoppers are encouraged to stay longer and see more. Pedestrian bridge connects parking structure with hotel.

TWO-LEVEL SHOPPING MALL, actually under construction at Southdale Shopping Center in Minneapolis, might be part of Fort Worth plan. Street has been roofed across third floor line, doors put at each end, sidewalk balcony hung at second level and whole street air conditioned.

SKETCH INDICATES SIMPLICITY of driving directly off loop or belt road which encircles downtown district into parking structure. Motorist ramps onto any chosen parking level without confusion and delay of interchange.

guide the car to the most convenient parking space, after which a moving ramp would take the discharged passengers down to the street level exit.

On the streets would be a complete absence of automobiles and trucks. Except for an occasional fire truck or ambulance and the battery driven shuttle cars, there would be no vehicular traffic. The pedestrian would be king. There would be no traffic laden streets to cross, no impatient waiting for traffic lights to change, no frantic dodging of cars, no horns blaring, no sharp smell of monoxide fumes.

No point downtown would be more than a 2½-minute walk from a parking garage or bus terminal, although the convenient shuttle cars would always be available for the use of pedestrians.

What would the revitalized Fort Worth look like in 1970 under the Gruen plan?

"In the revitalized city," according to Gruen, "many of the streets will be narrowed in stretches so that they become malls. In other places, streets will be widened into courts, and the rich colors of the paving, the trees and the little pools in the central district will stand out like jewels against the backdrop of the buildings surrounding them. Here and there pavilion-like shops will be added in the center of the streets.

"Some of the sidewalks will be covered, just one more of the innovations which by 1970 will be as much a part of the downtown environment as the landscaped malls, the absence of curbs to stumble over and the sidewalk cafes. Some blocks will be roofed over and the mall thus created will be air conditioned. In short, downtown Fort Worth will be a pedestrian's paradise."

Other cities are considering and even undertaking plans for redevelopment that contain certain of the proposals inherent in the Gruen plan, which is particularly suited for Fort Worth because it takes advantage of the natural boundaries of the city set by the Trinity River, the railroads and the freeways. It locates the inner belt highway just within these boundaries.

Therefore, while the plan is a natural for Fort Worth, in toto it would probably prove to be economically and physically unrealistic and unsuitable for other cities.

Life in a traffic jam

Complete neighborhood redevelopment called 'cookie-mold solution' to big-city traffic congestion problem

Excerpts from an address by Morris Ketchum Jr., FAIA, New York City

LIKE EVERY American city, New York inherits both its opportunities and its handicaps from the past. The energy and vigor of the 19th century built up our city into a great monument to American enterprise. In the process, the growing city swallowed one adjacent townlet and country neighborhood after another as it marched along Manhattan Island.

In spite of its size, 20th century New York is still a collection of neighborhoods, each with specialized characteristics, all interrelated and interdependent and all sharing together the opportunities and the handicaps of city life.

The worst handicap to life on Manhattan is the traffic problem. Within the heart of our city, gridiron street systems planned for the horse and buggy traffic of the 19th century are completely overloaded with the motor traffic of the 20th century. The concentrated activities housed in Manhattan's tall buildings — shopping, business, industry, finance—draw all these cars and trucks like a magnet. The existing streets, choked by curb parking, are unable to accommodate them. Even when streets have been widened, parking meters installed, avenues reorganized for one-way traffic and some attempt made at creating off-street parking and off-street truck docks, the picture remains practically unchanged.

Every minor move of this type merely invites more motorists to drive downtown. Congestion on Manhattan will never be cured in this way. The only solution is to plan and provide for safe and separate routes for motor and pedestrian traffic and for adequate off-street parking and unloading facilities for autos and trucks. Then we may be able to unscramble our urban traffic snarl.

To do this in one giant operation for all of Manhattan is obviously impossible. Instead, we should remember that the core of our city is still a collection of neighborhoods and that it is much easier to reorganize it neighborhood by neighborhood provided that each reorganization is tied in to a broad traffic concept for the whole island.

Aside from specialized districts where shopping, business, industry, amusements or government buildings predominate or where public housing has followed slum clearance, Manhattan's neighborhoods are made up of private housing plus neighborhood shops and services. There are no definite boundaries to each neighborhood. One merges with another up and down the north-south avenues but each neighborhood has a definite life of its own.

Manhattan's neighborhoods are constantly changing. They are always being torn down and rebuilt. Apartment house builders clear sites

ranging in size from small segments of city blocks to entire blocks or neighborhoods for such giants as Manhattan House or Stuyvesant Town. The larger private projects have their own landscaped terraces and gardens, their own shops and stores, their own garages and truck docks. Public housing agencies have cleared out great slum areas, chiefly along the two rivers, replacing urban squalor with light, air, playgrounds and comfortable living quarters.

Both private builders and public housing agencies have missed two great opportunities—the opportunity to create **complete** neighborhoods with **all** the basic elements of neighborhood life—housing plus shopping, education, recreation—and the opportunity to help solve Manhattan's traffic jam at a profit to themselves. For there is money to be made from properly planned and built neighborhood shopping centers and off-street parking facilities.

One reason why these opportunities have not been realized is the fact that until the urban redevelopment act was created a few years ago private enterprise and public government were not sufficiently encouraged to work together or given the legal and financial means for full collaboration. Another reason is that specialists are inclined toward a narrow viewpoint. Private builders interested in apartment houses have not fully grasped the economic possibilities of built-in shopping and parking; public housing experts with complex housing problems to face forgot that neighborhood life needs something more than just good housing. Both are inclined toward little plans for little programs not in scale with the large scale needs of the city as a whole.

When a large blighted urban district is cleared for new construction, all its existing neighborhood shops and services are demolished and seldom replaced. In every housing project, an economic analysis which scientifically determines the type of housing and the number and type of shops and stores which that housing needs and could support should be incorporated in the building program. This survey should also include a thorough investigation of the size of off-street parking areas that could be used by both the project residents and a profitable proportion of off-street transient traffic. The necessary truck terminals within the project would be a minor problem if incorporated in the program at this time.

Armed with the power of land condemnation and the power to close

Cecil Young, Chief Engineer, The Peerless Electric Company, with Peerless motors in new NEMA frame sizes.

CAN YOU MATCH THIS?

Peerless is one of the few fan and blower manufacturers that builds its own motors. That's one reason why Peerless fans and blowers conform with all standards—PFMA, NAFM and NEMA. What's more, because we build our own motors, we can match them to fans and blowers for peak performance.

We select motor characteristics which give best results. This versatility permits us to equip our fans and blowers with special motors—custom-built for the jobs they must perform—moving dirty, grit-laden foundry air; working in high heats in electronic cabinets; operating safely in hazardous locations where non-explosive qualities are needed; and operating without failure where uninterrupted service is a must.

Premium-built Peerless motors power famous OEM products in all fields and are the choice of those manufacturers who insist on specials rather than repetitive models. Is it any wonder that Peerless Electric fans and blowers hit such high performance levels.

Select the fans and blowers that meet all industry codes —Peerless. Check the Peerless bulletins. SDA-160 shows performance data on all fans and forward curve blowers. SDA-200 gives complete data on backward curve blowers. Dimension prints available on request.

Some thoughts about design and other topics

Excerpts from talks and panel discussions of interest to all segments of the construction industry as presented at the 1956 Chicago sessions of the National Association of Home Builders

Top priority: design

Robert J. Lewis, president, National Association of Real Estate Editors

Home builders should look to the nation's architects for the new excitement in residential design that the public is demanding on an ever-increasing scale.

The best new opportunity to builders in 1956 is to give No. 1 priority to architectural design. The people are more and more demanding good design in everything they buy.

Manufacturers of everything from locomotives to TV sets, from automobiles to automatic toasters, have increasingly recognized that industrial designers are the star salesmen on their team. Builders too are finding that homes designed by good architects sell faster, can be built more economically and give buyers more lasting satisfaction than those in which design has been given secondary consideration.

The whole field of architecture is largely a new one for newspapers and one that is rapidly expanding in coverage. (Lewis accepted a convention resolution thanking the nation's real estate editors for their interest in the construction field.)

The atomic age

Harold Goodwin, director, Atomic Test Operations, Federal Civil Defense Administration

It does not appear economically feasible to design homes that would stand up under high atomic blast.

However, conventionally designed homes can be made somewhat more blast resistant by careful workmanship and relatively inexpensive design changes. Such factors would be important in fringe areas of large cities where blast pressures would be expected to be moderate in case of enemy attack on the city.

Concerning civil defense residence tests in Nevada, there was no evidence that one type of construction has substantially greater resistance than another, although it is obvious that houses designed under earthquake construction codes would be inherently more resistant than houses without reinforcement.

Home builders should concentrate on providing shelter areas in new home construction. Basements offer good, inexpensive protection against all effects outside the major damage area of a nuclear explosion.

(PA&B carried a report on the Nevada tests in June 1955.)

"Builders are finding that homes designed by good architects sell faster, can be built more economically and give buyers more lasting satisfaction than those in which design has been given secondary consideration."

Challenge of Korea

Gen. James A. Van Fleet, USA (ret.)

The Homes for Korea project of the American Korean Foundation is directed toward teaching the Koreans how to rebuild their own country. The committee now has 100 family units under construction in Seoul. They are low cost homes adaptable to mass production. They are being built by Koreans under the direction of an American construction team selected with the advice of the NAHB.

The Koreans are being taken through every phase of home construction. When the American team is confident that the Koreans are sufficiently trained, the reconstruction of that country will be left to them.

In addition, Homes for Korea has introduced to that country a few industries which are basic to large-scale production of homes. Koreans are being trained to operate these industries so that they may take advantage of modern construction techniques.

Funds for this project are being sought from the American people, particularly those involved in the building industry. The Korean people, including their leaders, do not ask us to rebuild their country; they ask only that we show them how to do it.

"It does not appear economically feasible to design homes that would stand up under high atomic blast."

Community facilities

Earl W. Smith, El Cerrito, Calif., retiring president, National Association of Home Builders

The formation of some form of metropolitan government probably will be the answer to the problems of schools, streets, sewer and water systems that are besetting American cities and their suburban communities.

The widespread and growing need for essential community facilities are one big huge problem for which no one now has a ready answer. But it is encouraging that more people are taking an interest in trying to find the right answers.

NAHB is not endorsing the metropolitan government concept which now is in effect in Toronto, Canada, although it is inevitable that such a solution will be reached to provide the essential amenities required by central cities and their satellite communities. The present arrangement of local governments in metropolitan areas has outlived its usefulness.

The metropolitan area government plan envisages a metropolitan council, another public authority, with power to program and finance the construction of facilities with a view toward the overall needs and development of the entire area, rather than on the basis of the desires of the individual communities.

The cost of community facilities together with the constantly increasing standards and requirements imposed on housing and housing developments by public authorities have raised the prices of houses at least 20% and some say this estimate is conservative. The result is that we are getting seriously out of joint and pushing away from the broad base of the housing market.

While the increase in standards has resulted in better homes, it also has resulted in more expensive homes, with the result that prices have climbed out of the reach of the modest income groups.

We of the industry think it is our

job to provide good housing for all segments of the economy, which calls for a readjustment of standards.

Things to come:

The home building industry should construct about 1.2 million units in 1956.

Prices of materials and labor will creep up during the year. The increases might be reflected in higher housing prices which certainly will not go down.

The mortgage market, generally

BUILDER-ARCHITECT AWARDS

Of the eight NAHB Awards of Merit for excellence of home design presented this year, six went to West Coast builders and their architect associates — five from California and one from Washington.

Prices of the award-winning houses ranged from $11,475 to $18,500. With the exception of one split-level, all were single-story houses. They varied in size from 796 to 1,776 sq. ft.

The winners follow, with builder, architect, price, square foot area and location of project in that order:

Midland Properties, Beverly Hills; Palmer & Krisel, Los Angeles; $14,450; 1,246 sq. ft.; La Mirada and Fullerton (design details on page 16).

Harlan Lee, North Hollywood; Palmer & Krisel; $15,950; 1,432 sq. ft.; San Fernando.

American Homes Co., Broderick; Anshen & Allen, San Francisco; $11,475; 796 sq. ft.; Elkhorn Village, Broderick.

Ross Cortesi, Anaheim; Robert G. Jones and Benjamin Urmston, West Los Angeles; $15,750; 1,506 sq. ft.; Anaheim.

Eichler Homes, Palo Alto; A. Quincy Jones & Frederick E. Emmons, Los Angeles; $18,500; 1,550 sq. ft.; San Mateo County.

Vaughters Construction Co., Seattle; Seth M. Fulcher Jr. Associates, Seattle; $17,500; 1,776 sq. ft.; Seattle.

A California entry also received an Award of Merit for neighborhood development. Robert R. Platt, builder, and Hewitt H. Clark, architect, both of Lafayette, were cited for Dos Encinas, a 14-house project in the $25,000 price range.

Quality Homes by Leonard, Inc., of Bellevue, Wash., won a second-place plaque for its part in National Home Week of 1955.

A Metalbestos gas vent specification

is your guarantee against fire and condensation hazards resulting from improper venting systems — your assurance of complaint-free venting for the life of your homes.

A Metalbestos gas vent installation

is a proven cost-saver because this insulated venting line of versatile, lightweight units permits rapid one-man assembly without cutting, fitting . . . cement or special tools.

"Here's building insurance with a low net cost"

"The formation of some form of metropolitan government probably will be the answer to the problems of schools, streets, sewer and water systems that are besetting American cities and their suburban communities."

speaking, seems to be easing. During the year the supply should come into fairly good balance with the demand.

While discount rates on home mortgage will continue, they should not be too serious.

The price of raw land has soared in some areas and the combination of this increase and the costs involved in the excessive requirements for facilities have completely disrupted the normal cost relationship of land to house.

Trends in color

W. Shrewsbury Presey, Urbana, Ill., color consultant—Home buyers should not be permitted to turn a project development into a patchwork of bad colors through individual selection. Too much of the American landscape is cluttered with eyesores which could be made attractive with better uses of current trends in color, lighting and styling. Increasing competition in the home building field in the years ahead calls for a professional, planned color design for the small as well as the large project development.

C. Eugene Stephenson, New York City, past president, American Institute of Decorators — Advanced abstract design is not what the average American desires and instead more emphasis should be placed on combining traditional and contemporary furnishings in good taste.

Myrtle Fahsbender, Bloomfield, N. J., director, residential lighting for Westinghouse—Keep in step with the trend of the American family to outdoor living. Don't limit your buyers' use of patios, terraces and gardens to the daylight hours but provide well designed, well placed outdoor lighting of landscape features and play areas.

Alex Simms, Dayton, Ohio—Effective application of light color touches not only makes the sales package more appealing but also scores as a lasting source of customer satisfaction and good will.

Public housing

Alan Brockbank, Salt Lake City, past NAHB president—The home building industry should devise a positive program to eliminate public housing. No organization is more interested in seeing that people are properly housed than the NAHB. Our argument with public housing is not on the basis of need but on the method of alleviating this need.

The country is gradually being sidetracked from its goal of more houses for low income families. This has been caused by the great demand for three- and four-bedroom houses and the general public apathy toward the housing needs of low income groups. A contributing factor has been the added requirements of FHA and VA which increase the cost of construction. We hoped the 1954 Rehabilitation Act would take care of low income families but with red tape and everything, this legislation got held up.

Joseph B. Deckman, Washington, D.C. —Everywhere you find the builder accused of not providing for the low income groups—yet he's not given the proper tools. Our big problem is to educate the taxpayers and congressmen as to what's taking place. Otherwise we will continue to see more and more socialization, just as in England.

Robert A. Bready, Baltimore — The Baltimore plan — based on the obligation of owners to keep their property in good condition—is working out well; in fact so well that it is being tried in other cities, notably Grand Rapids, Mich., and Richmond, Va. What we need is a rehabilitation to minimum standards of old property. Here we are going around tearing down sound structures in the name of better housing. It just doesn't makes sense to me. The Baltimore plan is based on the obligation of owners to keep their property in good condition.

Ernest Fritsche, Columbus, Ohio — When people have a choice, they turn it (public housing) down. A public housing issue was defeated by a three-to-one vote in Columbus.

One of the best things a city can have is an able assistant safety director. It doesn't hurt if he's over 6 ft. 6 in. tall and weighs 265 lb. and a man who can say no—no matter how much the heat's on him. Before our man came in, there were no condemnations; in 1955 there were 297. That fellow doesn't take no from anybody.

Air conditioning

Ned A. Cole, trustee of NAHB's Research Institute and project manager of its experimental village at Austin, Tex.—Tests made in 21 houses over the past 12 months showed the average operating cost of a heating-cooling system was $9.41 a month, or a yearly total of $112.93. In another year the factor of operating costs probably will no longer figure in questions about air conditioning. (NAHB is sponsoring the research in cooperation with the National Warm Air Heating and Air Conditioning Association, the Air Conditioning and Refrigeration Institute and a cross-section of leading manufacturers.)

Herbert Gilkey, research department, National Warm Air Heating and Air Conditioning Association—Proper sizing in selecting the unit is of utmost importance. Undersizing by not more than 15% is far better than oversizing. For hot and dry climates, we recommend water-cooled units with cooling tower; for hot and humid climates, a unit with either cooling tower or air-cooled condenser; for humid but not so hot climates, a unit with air-cooled condenser.

George S. Jones Jr., Washington, D.C., managing director, Air Conditioning and Refrigerating Institute — In the past four years 300,000 homes have been supplied with all-year air conditioning. Of this number, 200,000 homes were equipped last year.

Juvenile delinquency

Dr. Frances Horwich—The character of the American child is influenced to a greater degree by the house he lives in than by any other factor in his physical environment. Build a happy generation by providing the kinds of homes that are vital to a happy family life.

(Miss Frances of NBC's "Ding Dong School" received an NAHB Certificate of Merit for her work in the field of education.)

Fred Brunetti, New Milford, N. J., builder — Programs that the builder can institute — tours of the jobsite, model home building contests, giveaway piles of scrap lumber and building material for children—have effectively cut vandelism costs in my area from $75 per unit to less than $2 per unit. Parents must be made aware of the tremendous cost to the public in vandelism at jobsites.

"Our argument with public housing is not on the basis of need but on the method of alleviating this need."

NEW GRADE NAMES FOR WEST COAST LUMBER *are NOW in effect*

Boards, Dimension and Timbers of Douglas fir, West Coast hemlock, Western red cedar and Sitka spruce now have grade names instead of numbers as shown below:

NO. 1 . *becomes* **CONSTRUCTION** — MILL 750 WCLB CONST

NO. 2 . . . . . *becomes* **STANDARD** — MILL 750 WCLB STAND

NO. 3 . . . . . *becomes* **UTILITY** — MILL 750 WCLB UTIL

NO. 4 . . . . . *becomes* **ECONOMY** — Not Customarily Grade Stamped

There is no change in the identification of Select Merchantable Boards, Select Structural Dimension and Timbers, or vertical grain Clears.

The top grade of flat grain Clears becomes **C&Btr.** — MILL 750 WCLB C&BTR

For additional information on grades write to:

WEST COAST LUMBERMEN'S ASSOCIATION
1410 S. W. MORRISON, PORTLAND 5, OREGON

All Grade Stamps shown are registered, U. S. Patent Office.

Life in a traffic jam

(Continued from page 23)

and abandon streets within the project site, as is commonly done in large public housing projects, each rebuilt neighborhood could be organized as a quiet pedestrian island surrounded by minor traffic. All its everyday needs — shops, services, restaurants, gardens, playgrounds, schools—could be located at ground level at the center of the project. The residential apartments, which usually occupy less than 30% of the site, could be distributed along the perimeter. The basement level under the entire site could be used for mechanical services, storage, truck docks and a huge pool of parking.

The new neighborhood unit would then be completely self-sufficient. Its community life would focus on its own central shopping area, its parks and its playgrounds. None of its residents would have to cross streets congested with motor traffic on their daily errands. Off-street bus stations, subway entrances and taxi stops would be available for trips to and from work or trips to major shopping cultural or amusement districts. The inhabitants of such neighborhood units would have all the advantages and very few of the usual disadvantages of city life.

By stacking parking, community activities and living space on successive levels, foot traffic is separated from motor traffic, community life from private life and the neighborhood unit itself from the surrounding city. At the same time, neighborhood residents are not prisoners within their own neighborhood. Public and private transportation are easily available; access to the rest of Manhattan and to parkways, suburbs and regional recreation areas is right at hand.

The parking pool under each neighborhood project would be of great value in solving Manhattan's traffic problem. The logical locations for such redeveloped neighborhoods are on blighted land around the edge of Manhattan Island, at or near its encircling belt highway. The majority of our existing housing projects are so located but there is room for more neighborhood units.

There are also sites close in to the spine of the island and its major business, industry, shopping and amusements. All these neighborhood sites could be tied in with the belt highway and the interior traffic pattern on the island. Suburbanites driving into the city would be able to reach them readily and to park their cars in the underground parking areas for a reasonable fee They could then use public transportation of one kind or another to and from their destination, pick up their cars again and drive home.

This would accomplish several things. First, it would provide adequate and accessible off-street parking in contact with the regional traffic arteries of Greater New York; second, it woud keep a large percentage of private cars off Manhattan streets; third, it would make life safer for pedestrians; fourth, it would make it possible for more and more suburbanites to enjoy all of Manhattan's shopping, amusements and cultural life; fifth, it would eliminate some of the immense cost of living and doing business on Manhattan Island.

New York—like every other city in the country—faces the grim fact that its downtown areas are snarled in its own traffic. As a result, commerce, industry and retail trade must all bear the burden of higher operating expenses and diminishing returns. It is getting harder and harder to live and work in the heart of a traffic jam.

Mr. Ketchum is a partner in the New York architectural firm of Ketchum, Gina & Sharp, author of a textbook on store planning and vice president of the Architectural League of New York.

Increased Treated Lumber Facilities

The exceptional value of WOODLIFE treatment in improving and prolonging the life of lumber has been widely accepted by the architect, engineer and builder. Because of our six years of satisfactory experience in treating lumber with WOODLIFE we are expanding our plant facilities to now supply treated western red cedar siding, roof-decking and fencing.

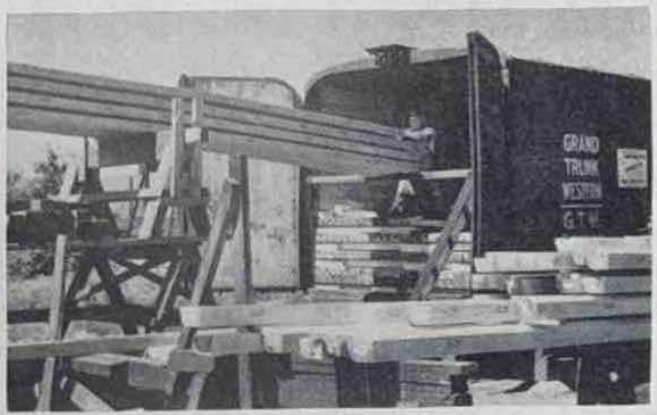

Photo showing another carload of wood gutter, WOODLIFE treated, being shipped to one of our customers.

Custom treating service will still be available in Seattle. Our enlarged manufacturing facility will be in Auburn, Washington, and centrally located to serve the Pacific Northwest.

Building volume up 37% over February

DESPITE a slump in home construction, building starts in the five western states climbed up to a $253,148,403 dollar volume in March, highest monthly total since last August and a good 37% higher than February. The total is a bare 0.5% over March of 1955.

All states reported gains over February. California was up 34%; Oregon, 16%; Washington, 59%; Montana, 296%; and Idaho 197%. In comparison to March 1955, Oregon and Washington both reported decreases. Oregon was down 2% and Washington, 15%. California was up 2%; Montana, 70%; and Idaho, 10%.

For the first three months of 1956, dollar volume of the 116 building agencies surveyed is running 7% higher than the same period last year. The January through March total is $635,111,155, compared to $595,539,978 a year ago. Washington is the only state to show a drop from 1955. With $61,550,962, the volume is down 20%. Montana with $5,757,210 is up 44%; California with $534,-694,369 is up 10%; Idaho with $4,030,743 is up 3%; and Oregon with $29,077,871 shows a 1% increase.

On a nationwide basis, all major categories of building, except private mass housing showed excellent gains during the first quarter of 1956. Industrial building has skyrocketed 163%; commercial building increased 38%; public buildings, 15%; and public housing, 126%. Private tract housing is running about 6% less than 1955. This is reflected in dollar volume decreases in most of the high population areas of the West during March. Los Angeles, for example, dropped $5½ million compared to March 1955.

Following is a breakdown of building permits issued by several of the major agencies during March:

	DWELLING UNITS		COMMERCIAL & INDUSTRIAL		PUBLIC	
Portland	128	($1,335,240)	41	($ 61,025)		
King County	547	(5,299,550)	54	(374,486)	3	($28,000)
Seattle	216	(3,339,790)	127	(975,400)	2	(860,150)
Tacoma	167	(836,919)	37	(321,849)	1	(95,000)
Los Angeles Co.	2520	(28,075,196)	1136	(8,291,895)	30	(2,305,809)
Orange County	452	(4,572,545)	52	(707,226)	39	(854,860)
Sacramento Co.	553	(4,475,450)	88	(2,409,602)	4	(210,800)

PORTRAIT OF A

Fire-Resistive Structural Material

Through generations of fire history, heavy timber or "mill-type" construction has proved the ability of heavy timbers to resist destruction by fire more effectively than other unprotected structural materials. A recent test shows why:

The glulam timber shown at the left was exposed to direct flame for one hour at an average temperature of 1200 degrees. The section at the beginning of the test measured 9" x 27¼"; at the end of the hour, sound, uncharred area of 7¼" x 26" remained. Thus, with 77% of its original section undamaged, the timber was capable of continuing in service with a safety margin of greater than 2 to 1.

The ability to resist destruction by fire is one reason why heavy structural timbers by Timber Structures, Inc. provide the practical approach to buildings of permanence, economy and beauty. Other advantages, together with outstanding examples of engineered timber construction and a wealth of preliminary design information, are shown in the booklet, "Engineered Timbers." Get your copy from your nearest Timber Structures representative, or fill-in and mail the coupon below.

Olympic Hotel addition

Seattle, Washington

NARAMORE, BAIN, BRADY
& JOHANSON
Architects-Engineers

ENTRANCE STUDY of $1,200,000 improvement to Olympic Hotel, made possible by demolition of Metropolitan Theater.

WITHIN A YEAR Western Hotels, Inc., expects to present Seattle with the finest convention facilities north of Los Angeles. The $1,200,000 improvement of the Olympic Hotel is now underway with the wrecking of the Metropolitan Theater (scene of the 1953 national AIA business sessions).

The project will include the largest exhibition and banquet hall in the Pacific Northwest, a new specialty restaurant, a new cocktail lounge and a new main carriage entrance.

Occupying the entire theater area, 129x82 ft., the carriage entrance will be open to University Street. It will provide a U-shaped driveway for taxicabs and automobiles. In the center a ramp will lead down to a delivery dock in the basement for commercial traffic; above will be the exhibition hall, seating 1,000 at banquet tables and from 1,300 to 1,400 at lectures and other functions.

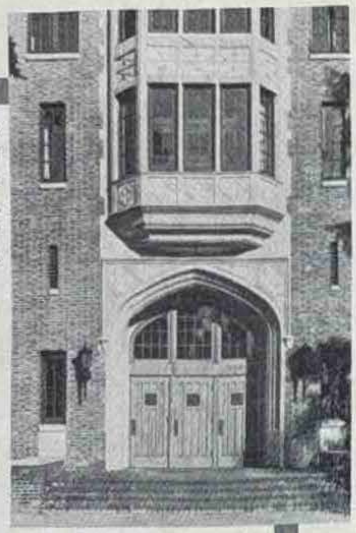
Decorative planting will be set into the street along the sidewalks on both sides of University Street.

Motoring guests will be able to register at the carriage entrance and go directly to their rooms from the arcade.

Swedish granite, roman travertine and stainless steel will be combined on the exterior University Street wall of the building.

The exhibition hall will be situated between the Spanish Ballroom, which will not be changed, and the existing kitchen. A movable gondola housing projectors and TV equipment will be lowered from the ceiling whenever required and when not in use will be out of sight. The light fixtures will be capable of being lowered from the ceiling on 10-ft. centers to a 13-ft. level when desired for illumination of exhibits.

At one end of the room will be a stage elevated 3 ft., 40 ft. wide and 19 ft. deep with a theatrical switchboard permitting gradual dimming of lights.



Small shops and transportation offices and facilities will line the carriage area. Entrances to both the grill and the new specialty restaurant will be on the east side.

Located off the lobby between the Georgian Room and exhibition hall, the new cocktail lounge will accommodate 69 persons. The specialty restaurant will seat 200 and will occupy space now used for stores.

The present Georgian Room will be left intact and will serve as a ballroom and banquet room. The junior ballroom also will be unchanged.

Completion date of the entrance, exhibition hall and specialty restaurant has been set for March 1957; the lounge off the lobby by June of this year.

Western operates the Olympic Hotel for the University of Washington.

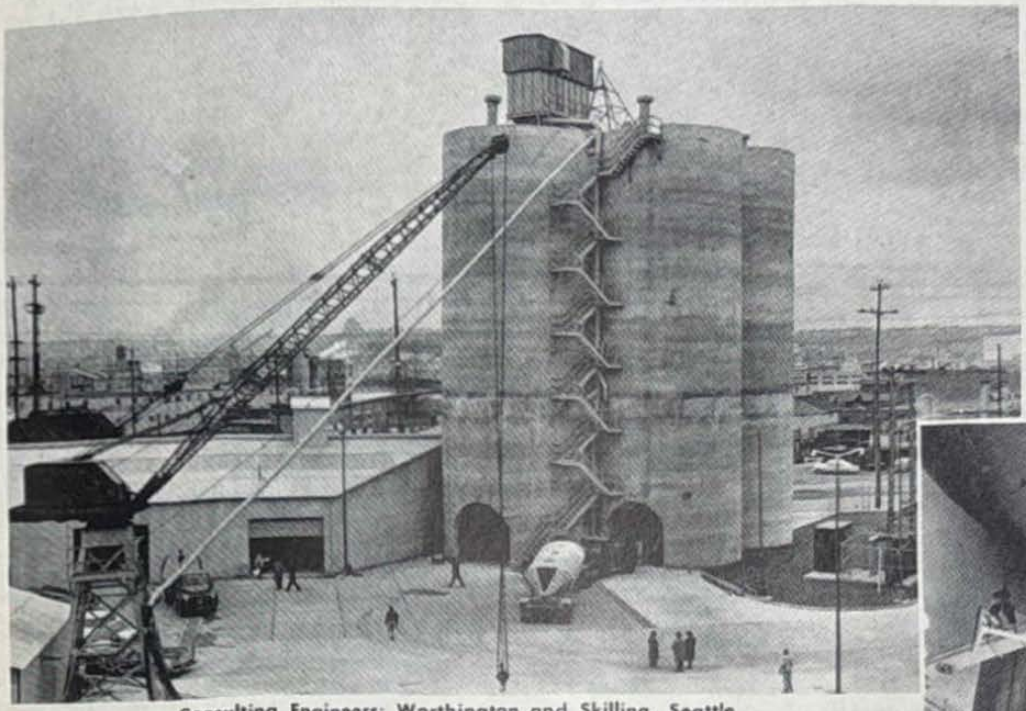
College of Puget Sound
Memorial Library features . . .

Distinctive Chehalis Brick



Architect Silas Nelson chose Chehalis Select Common Brick—in a harmonious variety of red shades—to achieve both dignity of design as well as an atmosphere of warm, lasting friendliness in this handsome Memorial Library at Tacoma's College of Puget Sound. For more than three generations the distinctive tones and textures of Chehalis Brick have played an integral part in much of the Pacific Northwest's finest regional architecture.

ANOTHER EXAMPLE OF CARCO "One Stop" STEEL SERVICE

Consulting Engineers: Worthington and Skilling, Seattle
General Contractor: Kuney Johnson Co., Seattle

NEW CEMENT DISTRIBUTION PLANT USES CARCO FABRICATED STEEL

The Olympic Portland Cement Company, Ltd., has invested $600,000 in a new distribution plant on the east bank of Harbor Island's West Waterway, just north of the Spokane St. bridge.

The distinctive feature of the new plant is four large storage silos. Each silo is 30 ft. in diameter by 95 ft. high and holds 10,000 barrels of cement.

Cement is shipped to the new distribution plant in a closed metal barge from the company's property at Bellingham. Upon arrival, the cement is pumped from the barge to the storage silos through a 200 ft., 8-inch seamless steel pipe. All conveying of cement is by the "air-slide" method.

The new bulk loading facilities are among the most modern ever engineered. Two trucks may be loaded at the same time from two silos each. Only ten minutes are needed for a truck to receive a 120 barrel load.

Adjoining the bulk loading facility is the new packaging plant. Here a modern packaging machine is supplied from the four silos. After sacking, bagged cement is loaded on trucks by a reversable conveyor at the rate of 1,000 bags per hour.

Pacific Car fabricated and erected 70 tons of structural steel for this new addition to Seattle's industrial facilities. The major part of this tonnage was used for the silo bottoms and walkways.

Regardless of whether your need for fabricated steel is large or small, let Carco help you solve your problems. Remember, Pacific Car offers buyers of structural steel not only the largest fabricating facilities in the Northwest, but also a "one stop" steel service. This means money-saving ideas and suggestions, promp engineering detail and estimates, fabrication and erection.

T-square talk

about architects • planners • engineers

NEW OFFICES: Donald Lutes, formerly with the architectural firm of Wilmsen & Endicott in Eugene, has opened a design office in the U.S. National Bank Bldg. in Springfield. A resident of that city since 1949, he is serving as chairman of the Springfield Planning Commission.

LUTES

Lutes holds a degree in architecture from the University of Oregon, is an associate member of the Southwest Oregon chapter, AIA, and a member of the Society of American Military Engineers.

Frank L. Shell, a graduate of Washington State College, has opened an architectural office at 8313 S.W. Barbur Blvd., Portland. Among the Portland firms for which he has worked are Stewart & Richardson, Hollis Johnston and Wolf & Phillips.

NEW NAME: One of the oldest architectural firms in Los Angeles, Parkinson, Powelson, Briney, Bernard & Woodford, has become Woodford & Bernard. C. Day Woodford, AIA, joined the firm in 1940 and L. G. Bernard, AIA, in 1936.

Both Briney and Powelson will remain in the organization although their names will not appear in the designation of the firm, founded in 1895 by the late John Parkinson.

NEW PARTNERSHIP: John C. Lindahl of Bellevue, Wash., has announced the formation of a partnership to be known as Lindahl & Bacon, architects, in the 411 Building on 104th Ave. N.E. For the past six years Douglas Bacon has been associated with Lindahl, who established his practice in Bellevue 10 years ago.

NEW ASSOCIATE: Norman J. Hamill & Associates of Butte, who have moved from 404 Medical Arts Bldg. to 122 W. Granite St., announce the admission of Merle C. Whitney to associateship in the architectural firm. He is in charge of the Idaho Falls, Idaho, office.

RESIGNS GUILD POST: B. Dudley Stuart, AIA, founder of the Craftsman's Guild of Washington in 1939, has resigned as secretary-treasurer of the organization. He has been succeeded by Ralph E. Spencer, craftsman in ceramics.

For the past several years Stuart has operated an architectural practice in the Lloyd Building under his own name. Earlier he was associated with Robert L. Durham in the firm of Stuart & Durham for 10 years.

ON THE MOVE: Kistner, Wright & Wright, architect-engineers, announce the removal of their offices to 1125 W. Sixth St., Los Angeles.

Lin B. Bissell of Yakima, Wash., has moved his office in the Ward Building to his home at 1503 Belmont Ave.

CANDIDATE: Ernest F. Winkler, 43-year-old San Francisco architect who lives in Sleepy Hollow, has indicated that he will run for the new Marin County lay board of education.

AIA activities

Washington State: Mogens Koch, professor of architecture at the Danish Academy of Fine Arts, Copenhagen, was featured speaker at the chapter's April 6 meeting in Seattle's Benjamin Franklin Hotel. His remarks on "Danish Applied Art" were illustrated with color slides of his country's industrial art.

Seven craftsmen in the building trades received certificates for superior work. Lawrence Waldron of the honor awards committee announced the awards: Marvin C. Benham and Willis P. Elliott for their company's excellence in painting; J. M. Boersema for custom precision metal work; Frank R. Bogue for wood turning; Carl Engstrom for millwork; Earl Morrison for carpentry; Frank E. Hagstrom for carpentry and cabinet making; and Stuart O. Phillips for carpentry and millwork.

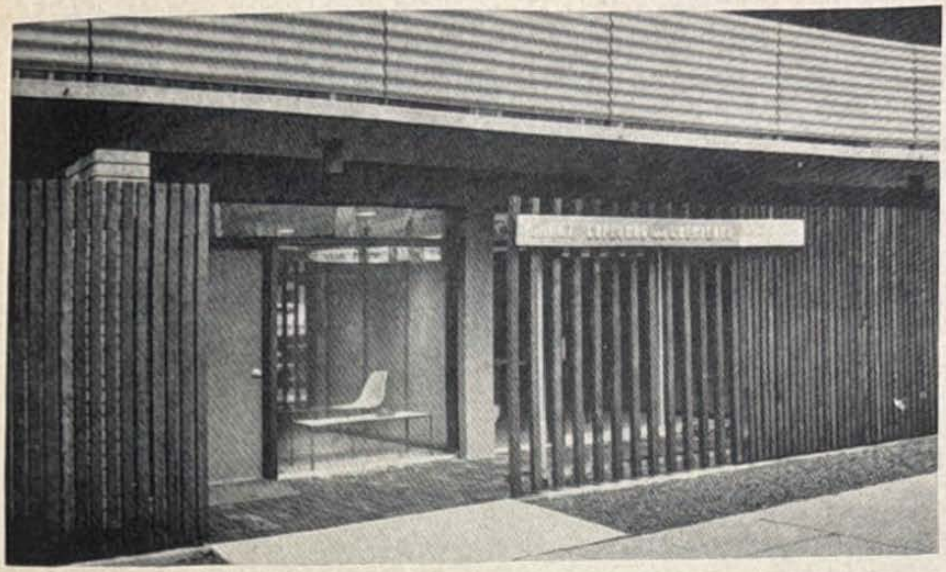
CERTIFICATE for superior craftsmanship for painting is presented by Lloyd J. Lovegren (left), who heads Washington State chapter, AIA, to Willis P. Elliott and Marvin C. Benham.

An award for superior execution and design was presented Jean Johanson for rock mosaics, especially that mosaic in the East Shore Unitarian Church.

Oregon: Entries in the chapter's first annual honor awards competition and presentation are to be received by Walter Gordon, chairman, by May 19. Corporate, associate and junior associate members are eligible to enter buildings of all types constructed since 1950.

The three judges will be one practicing architect from Portland, one from Seattle and one faculty member from the School of Architecture, University of Oregon. Certificates of merit will be awarded to winning architects and owners at an honor awards banquet planned for Tuesday, June 19.

Women's League: The annual Tour of Homes sponsored by the Women's Architectural League of Oregon will be held May 12 in the vicinity of S.W. Skyline Blvd. in Portland, according to Mrs. Wallace Hagestad, chairman. Homes to be viewed are: Jennings F. Suitor residence, designed by Pietro Belluschi, with landscaping by Walter and Florence Gerke; Edwin O. Mittelstadt, by Donald Blair; Mrs. Roger Newhall Sr., by John K. Dukehart; Robert Fletcher, by William Fletcher; and Bud Fraser, by Van Evera Bailey.

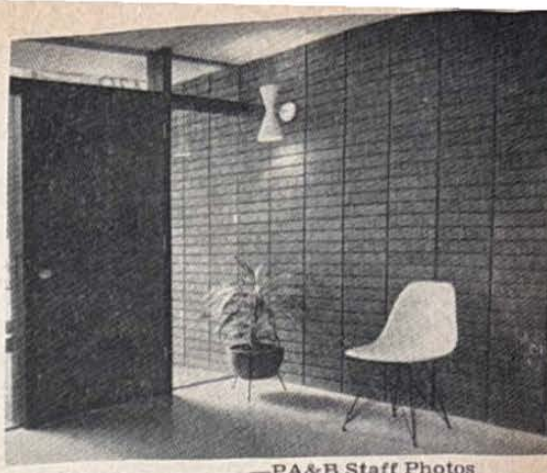


Prior to the tour Mrs. Walter Gordon has arranged an exhibit in the Pacific Power and Light Building of the work of senior architectural students at the University of Oregon. The tour is a scholar benefit for a senior student. A lecture will be held May 10 at Lincoln High School Auditorium, and all participating architects will be present except Belluschi.

California Council: John Lyon Reid of San Francisco is the 1956 president of the California Council of Architects.

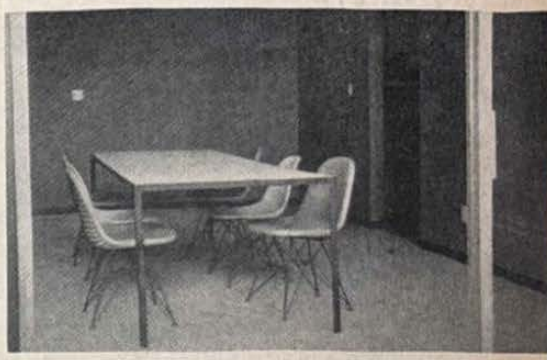
Other new officers: William Glenn Balch, Los Angeles, vice president; Lee B. Kline, Pasadena, secretary; Albert B. Thomas, Central Valley, treasurer; and Frank Treseder, Coast Valley, member at large.

Named at the annual organization meeting in Monterey, Reid succeeds Henry L. Wright of Los Angeles.



Where architects hang their hats

GRANT, COPELAND & CHERVENAK
Seattle, Washington



The architects occupy the ground floor of one leg of the L-shaped Summit and Howell Apartments building which they designed. Their offices are surrounded by stained rough sawn cedar 2x2s which, along with yellow spandrels and balconies, accent the off-white framework of the concrete block structure.

At the further end of the reception area a free standing screen which is used for renderings — an original painting will hang there later—conceals the contractors' area and serves as a passageway to a private office and the drafting room.

—PA&B Staff Photos

BRICK WALL seen at left carries into reception area (above). Conference room (below) has snack bar off to right and sliding aluminum doors leading to enclosed court to be planted later. Floors are covered with asphalt tile.

FORMULA FOR HIGHEST VALUE IN BUILDING

Desirability divided by Price, equals Value.

$\frac{D}{P} = V$

REINFORCED BRICK MASONRY

FOR + VALUES IN BUILDING

+1. Maintenance-free beauty of brick.
+2. Optional interior finishes — plaster, panelling, or face brick.
+3. Same structural wall at cost comparable to architectural concrete.
+4. Less structural steel required.
+5. Greater wall height without pilasters.

Materials – Products – Tools

and the latest literature

DRAFTING INSTRUMENT: Architects, engineers and others who must often sketch away from the traditional drawing board can now obtain a drafting instrument that can cover an area 11x17 in., yet fits snugly into a man's pocket.

The Draftette, the result of two young engineers' annoyance at the necessity of carrying rulers, protractors, T-squares and triangles into the field for routine sketches, is a precision instrument with all scales machine calibrated to .0005 of an inch. Made of anodized aluminum, it clamps to sketch pad or drawing board.

(Item No. 1)

AIR CONDITIONING: A versatile air conditioning unit that can be used as a room divider, recessed completely

VERSATILE AIR CONDITIONER

into the wall underneath a window, furred into the ceiling or suspended from the ceiling has been developed by Carrier.

Called Room Weathermakers, they use remote sources of refrigeration and heat and permit individual zone control of temperature. Units are available in cooling capacities for ½- to 1½-tons and air handling capacities from 200 to 600 cfm.

(Item No. 2)

PICKUP TRUCK COVER: Plans for a demountable pickup truck cover which can be used as an office for the construction boss have been prepared by the sales engineering department of Masonite and are available free of charge.

(Item No. 3)

BUILDING STONE: A natural-face cast building stone has been developed to satisfy the demand for distinctive building material in both the home and commercial market. The method of fracturing green concrete to produce the 24-in. long stone was invented by a retired mason and is now being marketed by Matson.

Called Highland stone, it is available in several blending and contrasting colors, comes in 2- and 4-in. widths and is the same depth as brick.

(Item No. 4)

ACOUSTICAL TILE: Armstrong Cork is marketing a mineral fiber acoustical tile, striated to create a textured surface for a more interesting ceiling pattern. Called Crestone, it can be installed by cementing or by mechanical suspension. Tiles come in 12x12-in. and 12x24-in. sizes.

(Item No. 5)

ELEVATOR: For such installations as hospitals, churches, apartments, office buildings and large homes, Elevator Service has developed an oil hydraulic personnel elevator that can be installed for approximately the cost of a fine automobile. No penthouse is required and the operating unit can be housed in a space no larger than that occupied by two office files.

(Item No. 6)

STEEL ROOF DECKING: T-Steel Corp. has provided data on a new type of long-span steel roof decking in the

NEW TYPE ROOF DECKING

Northwest that is particularly adaptable to school and finished one-story building construction such as supermarkets and office structures. Along with engineering tables and details, the 12-page catalog gives information on earthquake resistance, lighting fixtures and acoustical installations.

(Item No. 7)

PIPE PUSHER: For faster and more accurate underground pipe installation, Mercury Hydraulics is offering the Speed-Thru pipe pusher with models that will handle ¾- to 8-in. dia. pipe.

The hydraulic-powered Speed-Thru is operated by one man. Performance records offered by the company show pushes of 2-in. pipe as far as 186 ft. with less than 8 in. of deviation and average pushes of 75 ft. under streets and highways in 18 to 20 minutes through hard shale.

(Item No. 8)

FLUORESCENT LIGHT: For printers, lithographers, commercial artists and others who perform precision color tasks, Duro-Test has developed a fluorescent lighting unit that covers the full spectrum range and provides the equivalent of natural lighting entering a north skylight at high noon.

Designed to provide the best light for exacting comparison of colors, the unit uses a mixture of six 40-watt fluorescent lamps comprised of four Super Delux 45 and two standard blue in a Plexiglas and steel fixture.

(Item No. 9)

CEMENT ADMIXTURE: An admixture that provides effective control of setting time even in high temperatures has been developed by the building products division of L. Sonneborn Sons.

Called Sonotard, the material under test conditions has been shown to produce 28-day specified strength as early as the seventh day. Sonotard slows up the setting of concrete and mortar mixes for more effective control of mixing, placing and finishing. It also produces higher compressive strength, reduced permeability, minimum shrinkage and superior, denser finishes at reduced cost.

(Item No. 10)

WINDOW FRAME: Designed primarily for tract building is the Panaview aluminum window frame which is said to save substantial installation costs because it is nailed to the rough opening and uses stock glass.

The Panaview has integral, nail-on fins at top, bottom and sides. These are nailed to header, sill and sides of the rough opening. Expensive surrounds and fine adjustments are eliminated.

(Item No. 11)

CABINETS: Solid oak and oak-ply hardwood are combined in the preassembled, prefinished AristOAKraft cabinets marketed by Harris. Two-ply matched grain oak on solid hardwood core is bonded to solid oak edges on doors, fronts and other exposed areas.

The line includes standard units for kitchens, baths, utility rooms, storage centers and special installations.

(Item No. 12)

ALUMINUM COATING: Duncan-Stewart Industries, in conjunction with Alcoa, has developed an aluminum coating that can be used on any surface for waterproofing, protecting and decorating.

Available in six colors, Ore-Ite

forms a protective waterproof coating for concrete or cinder block wall and on downspouts, gutters and flashing. It substantially reduces heat loss when applied to furnaces, ducts and pipeline and is also recommended for roofs and siding on industrial buildings, barns and homes.

(Item No. 13)

DRAWING BOARD: For executives and supervisory personnel whose jobs call for a little drawing or drafting in addition to regular desk duties, Arnot is offering a board that tucks away in a center drawer.

The Foldaway drawing unit consists of a complete drawer, drawing board and parallel rule. It can be easily bolted or screwed to a conventional desk or table top.

(Item No. 14)

Latest Handbooks, Manuals and Literature

Yours for the Asking

HIGH STRENGTH BOLTS: As a working guide for ironworkers on the technique of joining structural steel members, Burdsall & Ward has prepared a pocket-sized manual called "How to Work with High Strength Bolts."

Sections include hand wrenching, power wrenching, data on proper tightening, calibration of impact wrenches, air supply and inspection techniques, tables of recommended torques, all written in a non-technical manner.

(Item No. 15)

CURTAIN WALLS: Data that will help the architect in designing curtain walls is incorporated in a 12-page booklet offered by Alcoa.

Subject matter covers kinds of systems, construction types, installation methods, forms of aluminum, design considerations, finishes and protective coatings. Numerous photographs, drawings and charts are included.

(Item No. 16)

WOOD TRUSSES: Versatility is the theme of a 24-page pictorial booklet showing many types of buildings constructed with the Teco connector system. Included are stores, supermarkets, factories, warehouses, theaters, garages and hangars, many of them in the West.

(Item No. 17)

INDUSTRIAL LIGHTING: Important revisions on both incandescent and fluorescent industrial lighting units are included in the 1956 edition of RLM Standard Specifications.

The 35-page book offers new coefficient of utilization tables for eight

LIGHTING STANDARDS

different incandescent and fluorescent lighting units. Also included are newly revised light distribution curves on RLM direct and semi-direct fluorescent lighting units.

(Item No. 18)

PORCELAIN ENAMEL: A well-illustrated brochure describes exterior and interior design possibilities of Porcelpanels, manufactured by Ingram-Richardson.

In addition to basic data on porcelain enamel panels, the brochure includes factors the architect should keep in mind in planning, installation methods, drawings of typical construction details and specifications.

(Item No. 19)

HARDBOARD: Four basic steps in proper application of hardboard are illustrated with brief text in a handy pocket-sized folder put out by Forest Fiber Products. Conditioning, joint treatment, nailing and backing and finishing are covered.

(Item No. 20)

INSULATION: Johns-Manville offers a 20-page catalog on insulation material manufactured by the company.

Prepared for quick and easy reference, the catalog briefly sketches composition, physical and thermal properties and sizes of the products.

(Item No. 21)

MASONRY CONSTRUCTION: Fundamentals of sound, watertight masonry are detailed in an information-packed booklet written by Walter C. Voss, professor emeritus from Massachusetts Institute of Technology and until recently head of the department of building engineering and construction there.

Called "Exterior Masonry Construction," it covers types of structural frames, types of masonry units, types of mortars, wall assemblage details, climatic effects and recommended construction practices. While this is not a booklet for casual browsing, it is written in an easy-to-understand manner.

Included in the 70 pages are 36 photographic and schematic illustrations and a two-page bibliography.

(Item No. 22)

ROOF DECKS: Tectum wood fiber roof planks and tile are described in a 16-page brochure recently prepared by the company. Photographs, installation drawings and pictures and specifications accompany brief text.

The company also has prepared two brochures on Tectum wood fiber sidewall insulation panels and acoustical ceiling panels.

(Item No. 23)

SLIDING GLASS DOORS: Illustrations in color highlight a 12-page brochure on Ador all-aluminum sliding glass doors. Installation details, drawings for both dual- and single-glazed doors and general specifications are given.

(Item No. 24)

HONEYCOMB ADHESIVES: A brief brush-up course on honeycomb structures is contained in a 20-page technical bulletin on 3M adhesives put out by Minnesota Mining and Manufacturing.

The bulletin gives test procedures and results of testing new resin-type and elastomeric adhesives used for bonding aluminum to kraft paper honeycomb core. Drawings and graphs illustrate the text.

headlining the news

West Coast builder heads regional veeps of NAHB

Chairman of all regional vice presidents of the National Association of Home Builders is John A. Jacobson of Rancho Cordova, Calif., president of Jacobson Construction Co. He will represent the 20 regional heads at meetings of the NAHB executive committee.

JACOBSON

Other West Coast regional vice presidents are Irving C. Jordan of Los Angeles and E. J. McClellan of Portland.

California also is represented in the 1956 slate of officers, with Nels Severin of San Diego serving as second vice president. Other national officers: Joseph B. Haverstick, Dayton, Ohio, president; George Goodyear, Charlotte, N. C., first vice president; Martin L. Bartling Jr., Knoxville, Tenn., secretary; Carl T. Mitnick, Merchantsville, N. J., treasurer. Haverstick succeeds Earl W. Smith of El Cerrito, Calif.

August Rahlves of Oakland and Frank W. Cortright of San Francisco (honorary) are West Coast members of the executive committee in addition to Severin, Smith, Jacobson and Jordan.

• **Salem (Ore.) Master Builders,** new affiliate of the NAHB, has named Glenn Hamilton, president; George Johnston, vice president; and James Minty, secretary-treasurer.

• **Seattle Master Builders Association** has appointed Joseph A. Martineau to the new position of field director to serve as a liaison officer between the group and the housing industry. Formerly a building inspector for the city building department, he has served on the mayor's housing committee and as chairman of the executive board of the Seattle Housing Center. From 1947 to 1952 Martineau was chairman of the King County Rent Advisory Board.

• **Charles R. Kreiensieck** has been elected president of the Boise affiliate of the NAHB which was organized last month. Other officers: Earl Hardy, first vice president, and DeWayne Bills, second vice president and treasurer. The secretary will be appointed by the directors.

• **Herman H. Rappaport** has formed Rappaport Construction Co., with temporary headquarters in Torrance, Calif., to specialize in tilt-up and prestressed concrete projects. He has served as engineering construction manager of factory construction for McDonald Bros.

During World War II Rappaport played a key role in the atomic energy program at Oak Ridge. He has also been engaged in activities on behalf of Bechtel Corp., Carbide and Carbon Chemicals, and Standard of New Jersey.

• **Building Contractors Association of California** has formed two new chapters to serve members in specialized fields: subcontractors and commercial-industrial builders. Edward Johnson and Henry Deley of Pasadena were instrumental in forming the former, while Ben Earl of Pasadena and Al Krumvieda of Norwalk spearheaded the latter.

• **Salem (Ore.) Contractors Exchange** has named M. L. Mills, president; Willis A. Hill, vice president; and Richard Lawrence, secretary-treasurer.

• **Edward P. Miller,** Tacoma builder, returned from Mexico last month with a 2-ft. gold cup for winning the Acapulco Derby, sponsored by the NAHB in cooperation with Minneapolis-Honeywell Regulator Co. His sailfish topped the scales at 126 lb.

FISH STORY—but it's true! The 126-pounder caught by Edward P. Miller of Tacoma won annual NAHB Acapulco Derby. Assisted by his wife, he netted three sailfish during stay at Mexican resort.

Accompanied by Mrs. Miller, the builder enjoyed a 10-day, all-expense paid trip to the fishing resort and Mexico City as Northwest regional winner of the NAHB home merchandising contest. His entry, Starliner model home in Skyline Terrace overlooking Puget Sound, was judged the best in Region 14, which includes Washington and Oregon.

Suppliers

• **Tedrick Bros.** of Kent, Wash., has franchised FashionFab of California to merchandise its line of wardrobes, cabinets and linen closets, according to Howard W. Kratzer, sales manager of the manufacturing firm. Main offices of the newly formed sales organization are at 1013 Pico Blvd., Santa Monica, under the direction of Nate Bundy, general sales manager. A branch office at Fresno is headed by Frederick H. Lewis.

FashionFab has appoined W. P. Fuller & Co. exclusive distributor in the West for Tedrick's line of metal, wood trimmed medicine cabinets.

All products manufactured by Tedrick are marketed with the trade name FashionFab.

• **Frank Benzon,** president of Timber Structures, Inc., of California, as head of the American Institute of Timber Construction, welcomed delegates from all parts of the country and Canada to its fourth annual meeting in Washington, D.C., April 2-6. Another member of the Richmond firm, MacGregor Graham, chairmaned the public information sessions.

L. A. Jacobson, general manager of Associated Wood Products of Berkeley, Calif., and a director of the institute, presented a paper.

• **Unit Masonry Association** of Seattle will hold its third annual architectural scholarship and awards banquet in the Washington Athletic Club May 22, according to Lloyd Beck, president.

The association will award a $250 scholarship to a fourth year architectural major to be selected by the staff of the Schol of Architecture at the University of Washington. A number of awards of merits also will be presented to students who in the course of their regular classroom projects have shown superior understanding of the design and structural qualities of unit masonry materials—brick, concrete block, stone, glass block and structural glazed tile.

• **Western Structural Tile Institute** is the name of a new organization formed by two tile manufacturers: Kraftile Co. of Niles, Calif., and Washington Brick and Lime Co. of Spokane. The companies, through the institute, are developing grading rules, specifications, uniform sizes and shapes which will standardize production.

Washington Brick is pushing to completion its new tile plant in Spokane, with an expected production schedule in June.

• **Peerless Pacific Co.** of Portland has appointed Joe D. Ingram to head its new gas appliance sales division. He previously was residential sales manager of Portland Gas and Coke Co. and manager of a propane gas and appliance distributorship in Anchorage, Alaska.

• **Superaire Corp.**, furnace subsidiary of General Water Heater Corp., has moved into new buildings on Coldwater Canyon Road in North Hollywood.

• **Aluminum Company of America** has named J. T. Barclay fabricating works manager of its Vancouver, Wash., operations, replacing E. D. Mairs who has become manager of Alcoa's Lafayette, Ind., works. Barclay, a 21-year Alcoan, has been assistant fabricating manager at Vancouver since January 1955. His new assistant is L. W. Meyer from Alcoa's Pittsburgh staff.

• **Weyerhaeuser Timber Co.** has named John B. Bishop branch manager at Klamath Falls, Ore., to succeed David S. Troy who died March 5.

• **Pomona Tile Manufacturing Co.** had a premier of its 30-minute color film "Quality in Tile" during the annual sales meeting at the Hollywood Roosevelt Hotel last month. Representatives from the western states, Kansas, Illinois and Missouri also viewed new tile patterns and heard president Drew Schroeder's program to expand production through improvements in both the Pomona, Calif., and Arkansas City-Winfield, Kan., plants.

• **Duncan Wood Gutter Co.** has moved its Seattle lumber treating plant to Auburn, Wash., providing increased facilities to supply Woodlife products, according to William A. Duncan who heads the firm with his son Paul.

• **Pioneer Manufacturing Co.** of Los Angeles has appointed A. L. Lockwood, formerly manager of Viking Appliance Corp. of South Gate, to the post of sales manager.

The company also has named William Bucknum, San Francisco sales manager, to a similar position with its subsidiary, Pioneer Range Co. Bucknum will continue to direct sales activities for the parent firm in northern California.

• **Chapman Manufacturing Co.** of Corvallis, Ore., has been purchased by Evans Products Co., whose executive offices are at Plymouth, Mich. No change in present personnel or management is contemplated, according to E. S. Evans Jr., president of the controlling firm.

W. J. Ritchie, Evans vice president, will direct sales of the hardboard produced by Chapman, marketed under the name Oregonbord.

The Corvallis plant becomes the fifth that Evans now owns and operates on the West Coast. Others are located at Gold Beach, Roseburg and Coos Bay, all in Oregon, and at Vancouver, B.C.

• **Peerless Electric Co.** of San Francisco has added Arthur O. Williams to its staff of sales engineers to augment the regular San Francisco-Oakland Bay area personnel as part of a general expansion program.

• **Goodyear Rubber and Asbestos Co.** of Portland has named Arthur H. Allen, sales manager for the past 10

years, to head a newly organized department devoted to the reasearch, development and application of new and existing items to industrial installations. T. R. (Ted) Ahlberg will succeed Allen as sales manager.

• **The Henry Co.** of Huntington Park, Calif., manufacturer of adhesives, sealers and coatings, has changed its name from The Henry Asphalt Co. because of the diversification of products which has taken place over the past five years. The firm has tripled its plant, office and laboratory facilities with a move to new headquarters at 5731 Bickett St. The 65,000 sq. ft. includes modern offices, material storage area and mixing facilities.

• **Graystone-Overlake, Inc.** is the name of a separate corporation formed by Graystone, Inc., at 13660 Sunset Highway, Bellevue, Wash. Hugh Watt, who has served since 1953 as manager of the plant, formerly known as Lakeside Concrete Products Co., is vice president of the new company.

Fredric M. Kettenring, who heads the parent firm in Seattle, reports that Graystone-Overlake has completed expansion of its services to embrace an all-inclusive line of masonry materials and supplies.

• **Sonic Specialties, Inc.,** of North Hollywood, Calif., has appointed two new West Coast representatives: Douglas Chappell of Oakland, covering northern California-Nevada, and Bland Simmons of Portland, covering Oregon-Washington.

• **General Controls Co.** has appointed W. B. (Bucky) Harris field representative for its Los Angeles branch. He has been employed by Southern California Gas Co. since 1939.

• **General Electric Supply Co.** has appointed K. P. Rehwaldt manager of its newy organized North Pacific supply and apparatus district with headquarters in Seattle. This district covers Washington, Oregon, northern California, Idaho panhandle, northwestern Montana and Alaska.

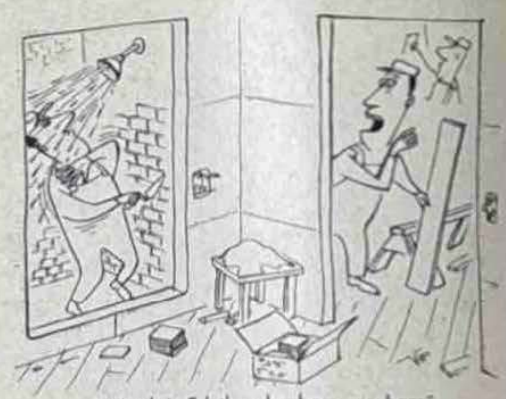
An electrical engineer from the South Dakota School of Mines, Rehwaldt started his GE career with the manufacturing department in Schenectady, N.Y., in 1941, moved to St. Paul as district sales manager in 1946 and came to the Northwest early this year.

• **Thor Power Tool Co.** has named C. B. Baron, former electric tool service engineer in its New York, Chicago and Los Angeles branches, to the post of West Coast zone manager for the firm's Los Angeles, San Francisco and Seattle territories. He will headquarter in Los Angeles.

CERAMIC ENGINEERING SCHOLARSHIPS

For the fifth year Gladding, McBean & Co. has announced the granting of two four-year scholarships in ceramic engineering at the University of Washington in Seattle. Applications must be on file with the university by May 1, 1956.

Primarily for the sons and close relatives of company personnel, the scholarships are nevertheless open to all interested parties. Gladding, McBean will pay all expenses up to $350 per year for four years to the recipients.



• **Powder-Power Tool Co.** of Portland has named J. K. Lightfoot to head its engineering department where he will develop new lines of fastening systems.

• **Kwikset Locks, Inc.,** of Anaheim, Calif., has named Robert T. Yerxa general sales manager. He has been associated with several southern California firms, including Gladding, McBean & Co. and Pacific Tile and Porcelain.

• **Oregon Portland Cement Co.** has named these appointments of two longtime employees: Kenneth T. Shipley, former sales manager, to vice president, department of sales, and Lawrence F. Newlands, former assistant secretary, to treasurer and assistant secretary.

• **Ajax Hardware Manufacturing Corp.** of Los Angeles has formed a separate organization, Ajax Hardware Sales, devoted exclusively to sales promotion, customer service and public relations.

• **Pabco Products, Inc.,** has opened a new $2.5 million gypsum plant in Newark, Calif., with L. K. Seeley as manager.

"Watch it, Ed, the plumbers are here"

Courtesy of Pomona Tile

• **Rilco Laminated Products, Inc.,** with general offices in St. Paul, has appointed Robert E. Eby chief engineer. A graduate of Oregon State College, he joined Rilco in 1954. Previously he was employed in the fabricated lumber department of Weyerhaeuser Sales Co.

EBY

From 1948 to 1953 Eby was assistant to the director of technical service of the West Coast Lumbermen's Association. During that time he was largely responsible for development of its "Standard Specifications for the Design and Fabrication of Structural Glued Laminated Lumber."

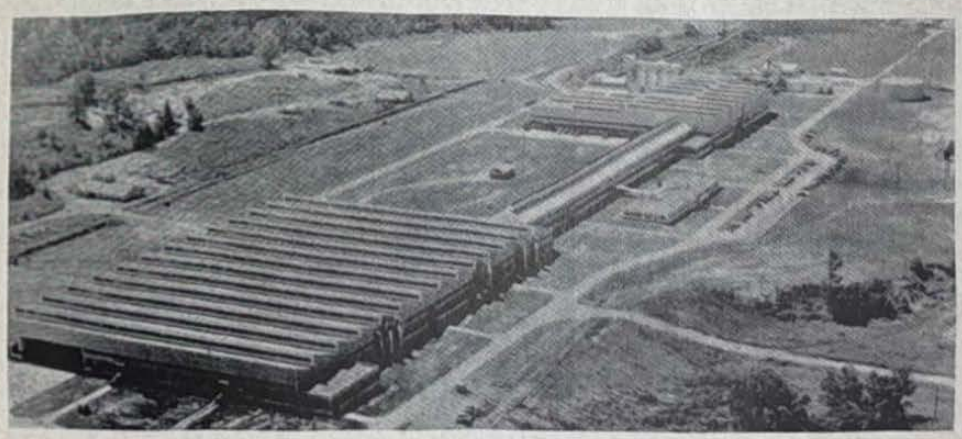
• **Northwest Hardwood Association** held its quarterly meeting in Vancouver, B.C., April 14. Major topics were "The California Market for Northwest Hardwoods" by Louis S. Kunert, Tropical and Western Lumber Co., Los Angeles; "The Manufacture and Uses of Hardwoods in British Columbia" by Dr. R. W. Wellwood, professor of forestry, University of British Columbia; and "The Management of Hardwood Timber Stands" by G. C. Warrack, British Columbia Provincial Forest Service.

• **California Steel Products Division** of Adsco Industries, Inc., Richmond, has appointed L. G. Janzow vice president and general manager. Joining the firm in May 1954, he has been serving as vice president in charge of engineering.

• **Johns-Manville Corp.** has announced plans to build two new plants on the West Coast: one to manufacture Transite asbestos-cement pipe products near Stockton, Calif.; the other to produce insulating board near Klamath Falls, Ore. The former initially will employ about 350 persons, the latter about 250. Both plants are expected to be in operation by midyear of 1957.

• **Arcadia Metal Products** has named Robert P. Reed southern California sales manager. The appointment parallels the firm's expansion program which separates the local sales office from the factory. The former is in Arcadia while the latter is in new quarters at 801 S. Acacia Ave., Fullerton.

Before joining Arcadia as a salesman in June 1954, Reed was manager of building products sales at Gladding, McBean & Co. for six years.



• **L. K. Bishop & Co.** of Oakland, building specialty wholesalers, have moved to enlarged headquarters at 751 E. Eighth St.

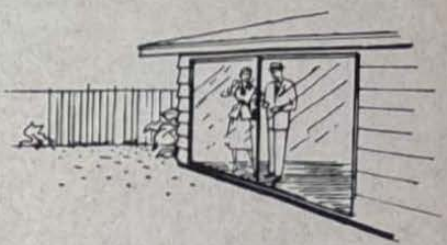
• **Bolt, Beranek & Newman, Inc.,** acoustical consulting firm of Cambridge, Mass., has opened a West Coast office at 435 S. La Cienega Blvd., Los Angeles. Dr. William J. Galloway is in charge of engineering activities and Jack B. C. Purcell, architectural acoustics.

The firm is serving as acoustics and noise control consultants on General Motors' $100 million technical center and was responsible for all acoustical installations at the UN headquarters.

• **Gladding, McBean & Co.** has signed the Puget Sound's first industrial contract for natural gas, an agreement calling for an expenditure of nearly $400,000 over a five-year period, it has been announced by Norbert O. Fratt, vice president in charge of sales for Washington Natural Gas Co.

Over one million cubic feet of natural gas per day will be fed to the plant from a special 8-in. lateral which will also serve other Renton industries

INSULATING BOARD PLANT to be erected by Johns-Manville Corp. near Klamath Falls, Ore., on Williamson River will look approximately like photo above. The $12 million operation, which will use jackpine lumber, is expected to be ready early in 1957. General construction plans will follow those used by company in its Natchez, Miss., plant.



beckoning the home buyer...

In today's increasingly competitive home market, the seller must rely more than ever before on nationally recognized brands and features in competing for the attention of the buyer. National recognition of Arcadia quality, participation in prize-winning projects everywhere, and an overwhelming preference for Arcadia on every level of the current market are just three reasons why more buyers, builders and architects specify Arcadia steel or aluminum sliding glass doors. Your nearest Arcadia distributor can give you many more reasons. You'll find his name in the Yellow Pages.

and housing developments. The system will be completed before natural gas arrives in the fall.

• **James A. Madden,** building specialties and construction materials supplier of Billings, has been appointed distributor of Teco Trip-L-Grip framing anchors throughout Montana.

• **R. F. MacDonald Co.** of San Francisco has been named manufacturers' representative for the sale of Cleaver-Brooks boiler equipment, covering the northern half of California and the western half of Nevada.

• **James B. Sunderland,** who organized Mutual Materials Co. of Seattle with Louis Hill and Oscar H. McGill in 1922, has retired from the board of directors and will move to Honolulu.

• **Robert L. Rice Co.** of Portland has been appointed distributor of Royal heating products.

• **Tapecoat Co.** has named two new West Coast distributors: Tay Holbrook, Inc., of San Francisco and Palmer Supply Co. of Seattle.

• **Woodwork Institute of California** has moved its headquarters from San Francisco to 1833 Broadway in Fresno and has named Bernard B. Barber Jr. executive secretary. Byron Taylor is institute president.

BUILDING BOOKSHELF

Selected Plans for New Air Conditioned Homes. Associated Plan Service, Inc., 384 New York Ave., Huntington, N. Y. 54 pp., 50c.

This booklet features home designs by 12 architects from all parts of the country. They range from contemporaries with low pitched roofs to two-story models, from low cost budget homes under 1,000 sq. ft. to luxury ones close to 3,000 sq. ft.

Government Bulletins

The following studies may be purchased from the Office of Technical Service, U.S. Department of Commerce, Washington 25, D.C.

PB-111154: What People Want When They Buy a House. $3.

The results show that 38% of the 1,000 home buyers interviewed were as much or more interested in location than in any particular feature of the house; 20% were looking for a house of a specific size; 25% for a satisfactory price; and others were looking first for a specific number of stories, living area, or lot size. The book has sections on likes and dislikes concerning eating arrangements kitchen, living room, etc.

PB-111652: The Cost of Municipal Services in Residential Areas. $2.

This volume is based on studies by Harvard University directed toward development of a technique to help measure the long-term costs of municipal services in different types of areas.

"SENTINEL" planned by Ronald Campbell of Seattle is among designs for air conditioned homes featured in booklet.

PB-111653: How to Make and Interpret Locational Studies of the Housing Market. $1.

A report from studies of the factors which enable local organizations to measure, analyze and predict trends in the locational aspects of housing markets. The urban area of Atlanta was chosen as the pilot area for the study.

R257-55: Thermal Conductance Factors for Preformed Above-Deck Roof Insulation. 5c.

A recommendation proposed by the Insulation Board Institute, providing five standard thermal conductance factors for thermal insulation manufactured and supplied in rigid or semi-rigid slab or board form, fibrous or cellular structure of organic or inorganic composition.

Housing Research Paper 33: Materials and Labor Analysis, Home Framing Systems. 123 pp., 65c.

A comparative analysis of 18 different wood framing systems to determine the relative economy and efficiency of each for single-family homes.

Complete telephone planning helps sell our homes faster

says SPALDING WATHEN,
President, San Joaquin Valley
Builders' Association,
Fresno, California

Today, home-builders and buyers alike know the value of complete telephone planning. "Its importance to modern family living is recognized by our Home Builders' Association," says Mr. Wathen. "The model home given away at our recent Spring Home Show has telephone outlets in every room and on the terrace as well."

To successful builders like Mr. Wathen, who are setting living standards in the Pacific West, good telephone planning is a *must*. Pacific Telephone is always ready to help you plan built-in telephone facilities. Just call us and ask for our *free* Architects and Builders Service.

Specify built-in telephone facilities —a sign of good planning

COLLEGE HOUSING— Pullman, Wash.

Announcement has been made by Howard Hollingsworth, contractor, Stadium Way Extension, Pullman, that he expected to present a proposal on housing to the State College of Washington board of regents at their Seattle meeting April 30. The contractor will petition the regents for the right to build 100 apartments for married students on college owned land. Plans are underway now by a Seattle architect. This proposal will be in lieu of a college project to build a 99-unit apartment group for married students that is now on the drawing boards of Walker, McGough & Trogdon, Spokane.
MH 4-14

NUCLEAR REACTOR Pullman, Wash.

Tentative location for the proposed nuclear reactor has been selected by State College of Washington, C. Clement French, president, Pullman, on a farm on an isolated section near the campus. The college has applied to the National Science Foundation for $142,000 toward construction. The Atomic Energy Commission has ruled that the college is eligible to receive assistance in construction after proper application is made for the license.

STATE HIGHWAY CONSTRUCTION
BIDS CLOSE 10 A.M., MAY 8
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, May 8, 1956, until 10:00 A.M., for the construction of the following improvements and will then and there be opened and publicly read:

1. Clearing, Draining, Grading, Surfacing, Constructing a Cement Treated Base, Paving with Type I-1 Asphaltic Concrete, Stockpiling Ballast, Crushed Stone Surfacing, Maintenance Rock, Crushed Cover Stone and Mineral Aggregates and Constructing a Reinforced Concrete T-Beam Bridge on 4.101 miles of Primary State Highway No. 8 in Klickitat County, GOLDENDALE NORTH, FAP No. F-014-3(3), involving about 10,920 cubic yards of Unclassified Excavation, 40,470 cubic yards of Common Excavation, 68,190 cubic yards of Solid Rock Excavation, 6,000 cubic yards of Selected Roadway Borrow, 101,510 tons of Crushed Stone Surfacing Ballast, Maintenance Rock, Crushed Cover Stone and Mineral Aggregates, 11,160 tons of Asphaltic Concrete, 100 tons of Asphalt Cement, 750 cubic yards of Mineral Aggregate, 26,400 tons of CTB Aggregate, 3,500 barrels of Portland Cement, 3,885 linear feet of Cement Concrete Curb and Gutter, 2,023 linear feet of Cement Concrete Curb, 1,584 linear feet of Concrete Pipe, 134 linear feet of Corrugated Metal Pipe, 640 linear feet of Galvanized Iron Pipe, 1,750 linear feet of Beam Guard Rail, 410 Guide Posts, 7 cubic yards of Riprap, 27 square yards of Cement Concrete Driveway, 842 cubic yards of Concrete, 149,480 pounds of Steel Reinforcing Bars, a lump sum bid for Construction of a Detour Bridge and other items.

2. Draining, Grading and Surfacing with Crushed Stone on 2.321 miles of a Whitman County Road, PULLMAN - BUSBY ROAD, FAS No. S-0669(1), involving about 17,540 cubic yards of Common Excavation, 26,770 cubic yards of Solid Rock Excavation, 41,760 tons of Crushed Stone Surfacing, 906 linear feet of Corrugated Metal Pipe and other items.

3. Constructing a Reinforced Concrete Slab Bridge on 0.011 mile of a Whatcom County Road, AUSTIN CREEK BRIDGE, FAS No. S-0766(3), involving about 76 cubic yards of Concrete, 15,287 pounds of Steel Reinforcing Bars, 120 linear feet of Beam Guard Rail, 640 linear feet of Concrete Piling and other items.

4. Draining, Grading, Surfacing and Paving with Type I-1 Asphaltic Concrete on 4.931 miles of Primary State Highway No. 8 in Clark and Skamania Counties, TOWN OF WASHOUGAL AND CAPE HORN VICINITY, a State Project, involving about 1,730 cubic yards of Unclassified Excavation, 2,220 cubic yards of Crushed Stone Surfacing, Ballast and Mineral Aggregate, 5,980 tons of Asphaltic Concrete, 17 tons of Asphalt Cement, 1,270 linear feet of Asphaltic Concrete Gutter, 3,359 linear feet of Cement Concrete Curb and Gutter, 36 linear feet of Concrete Pipe and other items.

5. Reconstructing Roadway Ditches and Surfacing with Light Bituminous Surface Treatment on 7.52 miles of Secondary State Highway No. 11-F in Lincoln County, CRAB CREEK TO JCT. SSH No. 2-G, a State Project, involving about 14,585 linear feet of Reconstructing Roadway Ditches, 2,150 linear feet of Reconstructing Roadway Ditches in Solid Rock, 44,500 tons of Selected Roadway Borrow, 26,200 tons of Crushed Stone Surfacing, Crushed Cover Stone and Mineral Aggregates, 293 tons of Asphalt Cement, 1,124 linear feet of Corrugated Metal Pipe and other items.

6. Surfacing with Light Bituminous Surface Treatment and Constructing Non-Skid Single Seal Treatment on 83.733 miles of Primary State Highway No. 1 in Clark, Cowlitz and Lewis Counties, INTERSTATE BRIDGE TO THURSTON COUNTY LINE, a State Project, involving about 3,000 cubic yards of Top Soil, 1,390 tons of Asphalt Cement, 9,490 cubic yards of Crushed Cover Stone and Mineral Aggregate from Stockpile, 3,625 cubic yards of Crushed Cover Stone and Crushed Screenings, 3,257 Guide Posts and other items.

7. Stockpiling Maintenance Rock, Sand and

Mineral Aggregates on State Highways Nos. 1, 1-A and 1-H in Skagit County, CONWAY VICINITY, a State Project, involving about 1,790 cubic yards of Common Excavation, 700 cubic yards of Selected Roadway Borrow, 50 linear feet of Corrugated Metal Pipe, 29,000 tons of Crushed Materials and other items.

Federal funds have been allocated for items Nos. 1 to 3, inclusive.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland, and the offices of the District Engineers of the Department of Highways where they may be inspected.

E. C. HUNTLEY, Chairman
W. A. BUGGE, Director of Highways.

STATE HIGHWAY PROJECTS

BIDS CLOSE 9 A.M., APRIL 26 AND 27

Portland, Oregon

NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Oregon State Highway Commission in the Queens Room of the Imperial Hotel in Portland, Oregon, at 9:00 a.m. on Thursday, April 26, and at 9:00 a.m., Friday, April 27, 1956.

BIDS TO BE OPENED AT 9:00 A.M. ON THURSDAY, APRIL 26

CLACKAMAS COUNTY: Clackamas River Park Interchange Section of the Pacific Highway East, about 1 mi. north of Oregon City. State Project. Grading and oiling of connecting roads and approaches. Requires approx 4,400 cu. yds. embankment in place; 10 metal sight posts; 2,110 cu. yds crushed base materials; 650 cu. yds. pit-run surfacing materials. 8 tons RC-3 asphalt; 16 tons 150-200 asphalt; and 6 tons RS-1 asphalt. (Completion date 7-31-56).

CLACKAMAS COUNTY: Bridge, grading and paving on the Molalla River (Meadowbrook) Bridge Section of the Woodburn-Estacada Highway, approx 2 mi. northeast of Molalla. FAP No. S-264(4). Construction of a 343' reinforced concrete bridge and 0.41 mi. of roadway. Involves following approx. quantities: 23,000 cu. yds. general excavation; 6,800 cu. yds. crushed material in base; 1,200 tons asphaltic concrete mixture; 650 cu. yds. struc. excavation; 440 lin. ft. treated timber piling (16 piling); 600 lin. ft. 10"-42# steel piling (20 piling); 900 cu. yds. Class "A" concrete; 205,000 lbs. metal reinforcement; 690 lin. ft. metal rail; 50 lin. ft. 60" corr. metal pipe; and 80 lin. ft. 8" metal pipe. (Completion date 3-31-57.)

CLACKAMAS AND MULTNOMAH COUNTIES: Bridge painting. State Project. Clean and paint all structural steel (estimated 450 tons) in the Columbia Slough Bridge on the Pacific Highway in north Portland, and clean and paint the interior surfaces of all arch ribs on the bridge over the Willamette River at Oregon City. (Completion date 8-31-56).

CLACKAMAS AND YAMHILL COUNTIES: Divisions No. 1 and 2 Oiling Project on four highways, near Molalla, Newberg, and Sheridan. State Project. 27.40 mi. of oiling. Requires approx. 400 cu. yds. contractor-furnished aggregates; hauling and placing 9,000 cu. yds. State-furnished aggregates; 550 tons 150-200 asphalt; and 350 tons RS-2 asphalt. (Completion date 8-31-56.)
This project may be bid in combination with the Division No. 2 Oiling Project in Marion County.

CLATSOP AND 3 OTHER COUNTIES: Elsie-Sunset Camp Rock Production Project on the Sunset Highway, easterly of Elsie. State Project. Requires approx. 13,000 cu. yds. crushed rock in stock piles. (Completion date 7-31-56).

COLUMBIA COUNTY: North Fork Scappoose Creek Bridges on the Pittsburg-Scappoose Highway, 3 mi. and 6 mi. northwest of Scappoose. FAP No. S-77(5). Construct one 120' (3 spans, 36'-48'-36') reinf. concrete deck girder bridge, and one 84' reinf. concrete deck girder (52' span with 16' cantilever spans) over the No. Fork of Scappoose Creek. Involves following approx. quantities: 400 cu. yds. struc. excavation; 440 cu. yds. Class "A" concrete; 105,000 lbs metal reinf., and 120 lin. ft. 8" metal drain pipe. (Completion date 10-31-56.)

COOS COUNTY: Empire (Michigan Ave. & Morrison St.) Paving. City Project. 0.29 mi. of paving. Requires approx. 530 cu. yds. crushed base material; 1,200 tons asphaltic concrete mixture; and 70 tons 85-100 asphalt. (Completion date 9-15-56.)

COOS AND LANE COUNTIES: Bridge painting, State Project. Clean and paint all steel and machinery which has been painted previously in the following bridges: (1) Coal Bank Slough Bridge on Oregon Coast Highway in the City of Coos Bay, Coos County. (Estimated weight 80 tons). (2) Coquille River Bridge on Oregon Coast Highway in the City of Coquille in Coos County. (Estimated weight 147 tons); (3) Hoffman Bridge over Middle Fork Coquille River on Powers Highway near its junction with Coos-Bay-Roseburg Highway in Coos County. (Estimated weight 114 tons); (4) Siuslaw River Bridge on Oregon Coast Highway in the City of Florence in Lane County. (Estimated weight 285 tons.) Completion date 9-30-56).

CROOK COUNTY: Barnes Butte Road Section of the Barnes Butte Road, about 1.5 mi. north of Prineville. FAP No. S-312(1). 4.58 mi. of grading and base. Requires approx. 56,000 cu. yds. excavation; and 24,000 cu. yds. pit-run or crushed material in base. (Completion date 7-31-56).

CURRY COUNTY: North Brookings Section of the Oregon Coast Highway, at Brookings. FAP No. 119(4). 1.23 mi. grading and paving. Requires approx. 60,300 cu. yds. excavation; 390 cu. yds. concrete in box culverts and curbs; 32,000 lbs. metal reinforcement; 660 lin. ft. metal guardrail; 70 metal sight posts; 14,700 cu. yds. crushed base materials; 50 tons RC-3 asphalt; 9,100 tons asphaltic concrete mixture; 550 tons 85-100 asphalt in paving; and 50 tons RS-2 asphalt. (Completion date 9-30-56.)

CURRY COUNTY: Brookings (Pioneer Rd. & Easy St.) Paving. City Project. 0.20 mi. of grading and paving. Requires approx. 3,650 cu. yds. excavation; 100 cu. yds. concrete in curbs and walks; 280 lbs. metal reinforcement; 3,400 cu. yds. crushed base materials; 1,000 tons asphaltic concrete mixture; and 60 tons 85-100 asphalt. (Completion date 9-15-56).

DOUGLAS COUNTY: Shady-Booth Ranch Slide Correction Project on the Pacific Highway, about 7.6 mi. south of Roseburg. FAP No. ER-17(1). 0.29 mi. of slide correction. Requires approx. 109,000 cu. yds. excavation; 550 lin. ft. 6-inch perf. metal drain pipe; and 600 cu. yds. pit-run gravel backfill. (Completion date 7-31-56).

DOUGLAS COUNTY: Oakland (5th St.) Paving. City Project. 0.26 mi. of paving. Requires approx. 32 hrs. blade grading; 1,790 cu. yds. crushed base materials; 530 tons asphaltic concrete mixture; and 32 tons 85-100 asphalt. (Completion date 9-15-56).

DOUGLAS COUNTY: Sutherlin (State St. & Central Ave.) Grading and Paving. City Project. 0.07 mi. of grading and paving. Requires approx. 430 cu. yds. excavation; 440 cu. yds. crushed base materials; 650 tons of asphaltic concrete mixture; 38 tons of 85-100 asphalt in paving; and 16 cu. yds. concrete in curbs. (Completion date, 9-15-56.)

KLAMATH COUNTY: Klamath Agency Rock Production Project on 3 highways near Klamath Agency and Fort Klamath. State Project. Requires approx. 8,000 cu. yds. crushed rock or crushed gravel in stock piles. (Completion date 7-15-56.)

KLAMATH COUNTY: Spencer Bridge Rail Replacement on the Spencer Bridge over the Klamath River on the Ashland-Klamath Falls Highway. State Project. Remove the existing concrete curbs and rails and replace them with new concrete curbs and galvanized steel rails. (Completion date 10-31-56).

LINCOLN COUNTY: Bridge painting. State Project. Clean and paint all structural steel and metal handrail in the Ojalla and Fuller Bridges over the Siletz River on the Siletz Highway near the town of Siletz. Each bridge contains approx. 175 tons of structural steel. (Completion date 8-31-56.)

LINCOLN COUNTY: Taft (W. Pacific Ave.) Paving. City Project. 0.33 mi. of paving. Requires approx. 40 hrs. blade grading; 220 cu. yds. crushed base materials; 1,400 tons asphaltic concrete mixture; and 80 tons 85-100 asphalt. (Completion date 9-15-56.)

MARION COUNTY: Hayesville Interchange Unit, Willamette River-Hayesville Section of the Portland-Salem Expressway, about 1 mi. north of Salem. State Project. Requires the furnishing and planting of approx. 30 trees, 1,400 shrubs and 18,600 vines; planting approx. 12,600 State-furnished vines; seeding 0.34 acre; requiring approx. 6 cwt. organic fertilizer; 40 cwt. bonemeal; 200 units sawdust; and 16 lbs. grass seed. (Completion date 12-31-56.)

MARION COUNTY: Detroit Reservoir Guardrail Project on the North Santiam Highway, west and east of Detroit. State Project. Requires approx. 8,000 lin. ft. metal guardrail. (Completion date 9-30-56).

MARION AND LINN COUNTIES: Bridge painting. State project. Clean and paint all structural steel and metal handrail on the bridge over the Santiam River on the Pacific Highway East, approx. 15 mi. south of Salem. Estimated weight of structural steel 910 tons. (Completion date 8-31-56).

MARION AND 3 OTHER COUNTIES: Division No. 2 Oiling Project on 4 highways near Alsea, Eddyville, Sweet Home and Mill City. State project. 20.63 mi. of oiling. Requires approx. 750 cu. yds. contractor-furnished aggregates; hauling and placing 1,000 cu. yds. State-furnished base material and 2,690 cu. yds. State-furnished aggregates; 200 tons 150-200 asphalt; and 190 tons RS-2 asphalt. (Completion date 8-31-56.)
(This project may be bid in combination with the Divisions Nos. 1 and 2 Oiling Project in Clackamas and Yamhill Counties.)

TILLAMOOK COUNTY: Rockaway (Pacific St.) Paving. City Project. 0.21 mi. of paving. Requires approx. 24 hrs. blade grading; 1,320 cu. yds. crushed base materials; 430 tons asphaltic concrete mixture; and 20 tons 85-100 asphalt. (Completion date 9-15-56).

TILLAMOOK AND WASHINGTON COUNTIES: South Fork Gales Creek Bridge and 5th and 6th Crossing of Wilson River on the Wilson River Highway, approx. 24 mi. west of Forest Grove. State Project. Construct a 168' and a 152' RCDG bridge over the Wilson River, and a 20' slab bridge over the South Fork of Gales Creek. Involves following approx quantities: Provide detours; 400 cu. yds., struc. excavation; 730 cu. yds. Class "A" concrete; 173,000 lbs. metal reinf.; 110 lin. ft. of 8" metal drain pipe; and placing of 420 cu. yds. of State-furnished rock in embankment. (Completion date 5-31-57).

UNION AND BAKER COUNTIES: La Grande-North Powder Pavement Sealing and Rock Production Project on the Old Oregon Trail Highway, south from La Grande. State Project. 23.89 mi. pavement sealing; also furnishing crushed materials

in stock piles. Requires approx. 21,900 cu. yds. crushed rock or crushed gravel; and 380 tons RS-2 asphalt. (Completion date 8-31-56).

UNION COUNTY: Glover Sand Shed. State Project. Construct a 60'x96' frame shed adjacent to the Old Oregon Trail Highway at Glover, approx. 12 mi. northwest of LaGrande. (Completion date 8-30-56.)

WASHINGTON COUNTY: Cornelius (N. Main St.) Paving. City Project. 0.22 mi. of paving. Requires approx 40 hrs. blade grading; 1,730 cu. yds crushed base materials; 570 tons asphaltic concrete mixture; and 34 tons 85-100 asphalt. (Completion date 9-15-56).

BIDS TO BE OPENED AT 9:00 A.M. ON FRIDAY, APRIL 27

CLATSOP COUNTY: Bridge, grading and stone base on the Nehalem River (Vine Maple) Bridge Section of the Jewell-Elsie (Fishhawk Falls) Highway, approx. 5 mi. north of its junction with the Sunset Highway in Clatsop County. State Project. Construct one bridge pier, 374' of reinf. concrete bridge superstructure, and 0.40 mi. of roadway. Involves following approx. quantities: 15,000 cu. yds. general excavation; 1,300 cu. yds. quarry-run rock in base; 600 cu. yds. loose riprap; 230 cu. yds. structural excavation; 320 lin. ft. cast-in-place concrete piling (8 piling); 770 cu. yds. Class "A" concrete; 175,000 lbs. metal reinf.; and 30 lin. ft. 8" metal drain pipe. (Completion date 3-31-57).

CLATSOP COUNTY: Klaskanine River Bridge on the Youngs River Loop Road, 8 mi. southeast of Astoria. FAP No. S-134(3). 182' timber and reinf. concrete bridge (seven 26' precast beam spans on treated pile bents). Involves following approx. quantities: 1,920 lin. ft. treated timber piling (48 piling); 230 cu. yds. Class "A" concrete; 62,000 lbs. metal reinf. and 9 M-FBM treated timber in place. (Completion date 9-30-56).

CLATSOP COUNTY: Humbug Summit Section of the Sunset Highway, about 4.4 mi. west of Elsie. State Project. 1.59 mi. grade widening. Requires approx. 48,000 cu. yds. excavation. (Completion date 8-31-56).

CLATSOP AND 2 OTHER COUNTIES: Divisions Nos. 1 and 2 Guardrail Project on 4 highways, near Astoria, Vernonia and Tillamook. State Project. Requires 3,400 lin. ft. metal guardrail. (Completion date 8-31-56).

COOS COUNTY: Coquille (Knott St.) Paving. City project. 0.29 mi. paving. Requires approx. 200 cu. yds. excavation; 790 cu. yds crushed base materials; 1,100 tons asphaltic concrete mixture; and 66 tons 85-100 asphalt. (Completion date 9-15-56).

DOUGLAS COUNTY: Reedsport (Winchester Ave.) Paving. City project. 0.54 mi. paving. Requires approx. 150 cu. yds crushed material in shoulders; 1,150 tons asphaltic concrete mixture; and 70 tons 85-100 asphalt. (Completion date 9-30-56.)

GRANT COUNTY: Beech Creek-Mt. Vernon Rock Production on the Pendleton-John Day and Beech Creek Highways, north from Mt. Vernon. State project. Requires approx 9,000 cu. yds. crushed rock or crushed gravel in stock piles. (Completion date 8-31-56).

HOOD RIVER COUNTY: Illumination installation. State Project. Involves the installation of 11 mercury-vapor luminaires on the Second Street connection to Columbia River Highway. (Completion date 7-31-56).

LAKE AND 5 OTHER COUNTIES: Division No. 4 Oiling Project on 7 highways, near Sisters, Madras, Prineville, Hampton, Wagontire and Lapine. State project. 37.30 mi. of shoulder oiling; and 40.72 mi. travelway oiling. Requires approx. 2,700 cu. yds. contractor-furnished aggregates; hauling and placing 8,400 cu. yds. State-furnished aggregates; 960 tons 150-200 asphalt; and 200 tons RS-1 asphalt. (Completion date 8-31-56).

LANE COUNTY: Florence (Gallagher St.) Grading and Paving. City Project. 0.32 mi. grading and paving. Requires approx. 2,100 cu. yds. excavation; 800 cu. yds. crushed base materials; 700 tons asphaltic concrete mixture; and 42 tons 85-100 asphalt. (Completion date 9-15-56).

LINN COUNTY: Albany and Sweet Home Traffic Signal Installation. State project. Involves one intersection in each city. Completion date 7-31-56).

MULTNOMAH COUNTY: Barbur Boulevard Junction Interchange Illumination on Pacific Highway. State project. Install highway lighting system, involving 23 mercury-vapor luminaires. (Completion date 7-31-56).

MULTNOMAH COUNTY: Median Fence on Harbor Drive in Portland. State project. Involves installation of 1,380 lin. ft. of woven wire fence and an electrically operated gate. (Completion date July 31, 1956).

MULTNOMAH COUNTY: 122nd Ave.-Sundial Fencing Project on the T. H. Banfield Expressway, east of Portland. State project. Requires approx. 2,000 rods 26" V-mesh fencing on median area. (Completion date 7-31-56).

MULTNOMAH COUNTY: Banfield Expressway Undercrossing of N.E. 28th Ave. in the city of Portland. Bridge, grading and paving. FAP No. UI-323(18). Construction of section of roadbed passing beneath the structure and surfacing of approach to the structure. Removal of 105' of existing viaduct and replacing it with 160' section of new viaduct (2-30' simple RCDG spans and a 100' prestressed concrete box girder span). Involves following aprox. quantities: 4,200 cu. yds. general excavation, 2,050 cu. yds. crushed material; 650 cu. yds. structural excavation; 525 cu. yds. Class "A" concrete; 380 cu. yds. Class "A-A" concrete; 110,000 lbs. metal reinf.; and 340 lin. ft. metal rail. (Completion date 2-28-57.)

MORROW COUNTY: Lexington (Arcade St.) Grading and Paving. City project. 0.22 mi. grading and paving. Requires approx. 1,030 cu. yds. quarry-run base rock; 300 cu. yds. State-furnished base material; 570 tons asphaltic concrete mixture; and 34 tons 85-100 asphalt. (Completion date 9-15-56).

MORROW AND WHEELER: Rock Creek-Summit Rock Production Project on the Heppner-Spray Highway, about 6 mi. south of Hardman. State project. Requires approx. 10,000 cu. yds. crushed rock or crushed gravel in stock piles. (Completion date 8-31-56).

SHERMAN COUNTY: Grass Valley-Kent Rock Production Project on the Sherman Highway. State project. Requires approx. 10,000 cu. yds. crushed rock or crushed gravel in stock piles. (Completion date 7-31-56).

TILLAMOOK COUNTY Nehalem Draw Bridge, Dolphin and Drawrest Replacement. State project. Remove the existing timber and pile drawrest and replace it with a new 50 pile drawrest. Remove and replace 30 piling in the dolphins and shear boom. Involves following approx quantities: Remove 119 existing timber piling; furnish and drive 80 treated timber piling (4,320 lin. ft. of piling); and 7.0 M-FBM treated timber. (Completion date 8-31-56).

UMATILLA COUNTY: Van Sycle - Helix Section of the Helix Van Sycle County Road, north from Helix and about 24 mi. northeast of Pendleton. FAP No. S-304(1). 7.40 mi. grading and oiling. Requires approx. 79,000 cu. yds. excavation; 51,300 cu. yds. crushed base materials and aggregates; 150 tons MC-2 asphalt; 330 tons 150-200 asphalt; and 100 tons RS-1 asphalt. (Completion date 8-31-56).

WASCO COUNTY: Beaver Butte Cr. & Butte Cr. Guardrail Project on the Warm Springs Highway, from 34 to 40 mi. northwest of Madras. State Project. Requires approx. 3,300 lin. ft. metal guardrail. (Completion date 7-31-56).

WASHINGTON COUNTY: Banks Section of the Nehalem Highway, at Banks. State project. 0.26 mi. grading and paving. Requires approx. 1,060 cu. yds. excavation; 76 cu. yds. concrete curbs; 1,010 cu. yds. crushed base material; 650 tons asphaltic concrete mixture; 40 tons 85-100 asphalt in paving; and 4 tons RS-2 asphalt. (Completion date 7-31-56).

WASHINGTON COUNTY: Hillsboro (Tenth Ave.-Dennis Ave. Traffic Signal Installation. State project. Install traffic signals at 9 intersections. (Completion date 7-31-56).

WASHINGTON COUNTY: Rock Creek Bridge and Beaverton Creek Bridges on the Base Line Road near Hillsboro. FAP No. S-310(1). Construct a 125' and a 150' timber and reinf. concrete bridge over Beaverton Creek; and a 75' timber and reinf. concrete bridge over Rock Creek. Span arrangement on all three bridges is 25' precast beam spans on 6 pile treated timber bents. Involves following approx. quantities: 4,980 lin. ft. treated timber piling (102 piling); 455 cu. yds. Class "A" concrete; 117,120 lbs. metal reinf.; 9.0 M-FBM treated timber in place; and 94 lin. ft. 8"-metal drain pipe. (Completion date 12-31-56).

WASHINGTON COUNTY: Dairy Creek Bridge Widening on the Tualatin Valley Highway, approx. 1 mi. west of Hillsboro. FAP No. F-183(10). Widen the existing bridge by constructing a 24' additional roadway and new curb and rail. Involves following approx. quantities: 270 cu. yds. structural excavation; 980 lin. ft. cast-in-place concrete piling (14 piling); 1,665 lin. ft. untreated timber piling (40 piling); 2,655 lin. ft. composite timber piling (47 piling); 530 cu. yds. "Class "A" concrete; 130,000 lbs. metal reinf. (Completion date 12-31-56).

YAMHILL AND 2 OTHER COUNTIES: Division No. 2 Bridge Replacement Project on 4 highways, near Astoria, Tillamook and Siletz. State project. 6 units, 0.13 mi. in aggregate length, involving replacement of bridges with corrugated metal pipe, roadway construction and stone base. Requires approx. 19,200 cu. yds. excavation; 390 lin. ft. riveted corr. metal pipe; 128 lin. ft. struct. plate pipe; 72 lin. ft. struct. plate pipe arch; and 1,270 cu. yds. crushed base materials. (Completion date 9-30-56).

Unskilled labor employed for the Federal projects shall be obtained from lists prepared by agencies designated by the Oregon State Employment Service. The minimum wage paid to all labor employed in Federal projects shall be as follows: Skilled labor, $2.25 per hour; intermediate labor, $2.00 per hour; unskilled labor, $1.75 per hour.

Prequalifications of bidders will be required in accordance with the provisions of ORS 279.010 to 279.024, inclusive. Full information for bidders may be obtained at the office of the Oregon State Highway Commission, State Highway Building, Salem, Oregon. Plans and specifications may be inspected at the same place and may be obtained by eligible bidders upon payment of $2.00 per each set.

Plans and specifications may also be inspected at the office of the Associated General Contractors in Portland, Seattle, Spokane, and Boise; and at the Builders Exchange Cooperative, Portland.

The right is reserved to reject any and all proposals or to accept the proposal deemed best for the State of Oregon.

OREGON STATE HIGHWAY COMMISSION
H. B. Glaisyer, Secty

SCHOOL ADDITION

BIDS CLOSE 8 P.M., MAY 7

Sandpoint, Idaho

NOTICE TO CONTRACTORS

Notice is hereby given that Class "A" School District No. 82, Bonner County, Idaho, herein referred to as the "Owner" will receive up but not later than 8 P.M., May 7, 1956, Sealed Proposals for the General Construction, Electric Wiring & Electric Fixtures, Heating & Ventilating, and Plumbing & Drainage for New Addition to Kootenai School, consisting of New Multipurpose Room, Kitchen, and Toilets, Showers & Dressing Room for Boys and Girls.

Bids will be received by Chas. E. Selle, Clerk and Business Manager for Class "A" School District No. 82, at the District Administrative Office, McFarland Building, Sandpoint, Idaho.

Bids will be opened by the Board of Trustees for Class "A" School District No. 82 at the Administrative Office on the date and hour stipulated herein and shall be publicly read aloud.

Sets of Drawings and Specifications will be on file for public inspection in the above named Administrative Office, and at the Office of G. A. Pehrson & Associates, Architects, Old National Bank Building, Spokane, Washington.

One set of Drawings and Specifications will be issued to each Bidder upon written request together with a deposit of $10.00. The deposit will be refunded to the Bidder if the Drawings and Specifications held by the Bidder, except the Bidders submitting the three lowest Bids, are delivered to the Architect in good order and without markings, two days after the opening of the Bids.

Refunds to the three lowest Bidders shall be made under conditions stipulated above, if the Drawings are delivered to the Architect six days after the Contract is awarded. Should any Bidder require additional sets of Drawings and Specifications same will be furnished for a reproduction cost of $20.00 for each set.

Each Bid shall be accompanied by a Certified Check or Cashier's Check in the amount of 5% of the Base Bid or a Bid Bond in the amount of 5% of the Base Bid.

Certified Checks or Cashier's Checks, or the amount stipulated in the Bid Bonds shall be made payable to Class "A" School District No. 82, Bonner County, Idaho.

The Owner reserves the right to reject any or all Bids when such rejection is in the interest of the Owner, and to reject Bids of a Bidder, which in the Owner's opinion is not in position to perform the Contract or not holding License in the State of Idaho.

STATE HIGHWAY PROJECTS

BIDS CLOSE 9:30 A.M., APRIL 26

Helena, Montana

NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the offices of said Commission in the City of Helena until 9:30 A.M., on April 26, 1956. The proposals will be publicly opened and read immediately thereafter.

F 2(12) Grading, sand surfacing, plant mix oiling and drain 8.893 miles on the Baker-Wibaux Road in Fallon County, involving about 184,802 cu. yds. unclassified excavation; 7,190 mi. yds. overhaul; 1,004 tons crushed gravel; 41,642 tons sand asphalt; 58,579 tons sand base; 2,980 tons shoulder gravel; 467,674 gals. asphalt cement; 3,435 M gals. watering; 748 units rolling; 800 lin. ft. corrugated metal pipe culverts; 666 lin. ft. reinforced concrete pipe culverts, and other items. Project to be completed by September 15, 1957.

F 23(4)U1, F 81(5)U1, F 101(6)U1 Plant mix oiling of 9.927 miles on the Chinook-East, Zurich-East and the Chinook-Harlem Roads in Blaine County involving about 22,410 tons plant mix bituminous surfacing; 290,004 gals. asphaltic cement; 34,861 gals. liquid asphalt and 2,027 tons crushed gravel. Project is to be completed by September 15, 1956.

F 84(21)U1 Grading, gravel surfacing, bituminous surface treatment and drain 9.308 miles on the West of Wolf Point-North Dakota Line Road in Roosevelt County, involving about 509,920 cu. yds. unclassified excavation; 15,900 mi. yds. overhaul; 139,941 tons crushed gravel; 34,550 cu. yds. sand base; 63,070 gals. liquid asphalt; 62,912 gals. emulsified asphalt; 10,440 M gals. watering; 1,879 units rolling; 4,008 lin. ft. corrugated metal pipe culverts; 78 lin. ft. structural plate pipe culverts, and other items. Project to be completed in 280 calendar days.

F 84(21)U2 Construction of one 57.0' treated timber bridge and one 152.0' steel and concrete bridge on the West of Wolf Point-North Dakota Line Road in Roosevelt County, involving about 1,250 cu. yds. unclassified excavation; 31.026 MBM treated timber; 0.872 MBM untreated timber; 1,410 lin. ft. treated timber piles; 80,893 lbs. reinforcing steel; 170 cu. yds. class "A" concrete; 236.0 cu. yds. class "AD" concrete; 301.50 lin. ft. steel bridge rail; 505 cu. yds. structure excavation; 3,230 lin. ft. furnishing treated timber foundation piles; 3,155 lin. ft. driving treated timber foundation piles, and other items. Project to be completed by September 30, 1956.

surfacing, bituminous surface treatment and

F 203 (5)U1 and F 222(12) Grading, gravel drain of 6.958 miles on the Gallatin Gateway-Bozeman Road and 0.122 miles on the Bozeman-East Road in Gallatin County, involving about 231,064 cu. yds. excavation; 131,098 mi. yds. overhaul; 73,482 tons crushed material; 78,778 cu. yds. designated borrow; 145,757 mi. yds. overhaul on designated borrow; 50,988 gals. liquid asphalt; 51,019 gals. emulsified asphalt; 55.9 cu. yds concrete driveways; 12 corr. metal catch basins; 2,001.4 linear feet integral curb and gutter; 1,552.9 linear feet concrete curb to be removed; 14,225 linear feet corrugated metal pipe culverts; 192 linear feet structural plate pipe culverts; 2,872 linear feet rein. concrete pipe culverts; 6,385 M gals. watering; 1,400 units rolling, and other items. Project is to be completed in 280 calendar days.

F 203(5) U2 Construction of one 30.0' steel and concrete bridge over Middle Creek on the Gallatin Gateway-Bozeman Road in Gallatin County, involving about 19,830 lbs. reinforcing steel; 104 cu. yds. class "A" concrete; 57.1 cu. yds. class "AD" concrete; 67.0 lin. ft. steel beam bridge rail, and other items. Project to be completed by September 30, 1956.

F 235(24) Grading, gravel surfacing, bituminius surface treatment and drain 3.967 miles on the Armington-Lewistown Road in Judith Basin County, involving about 487,321 cu. yds. unclassified excavation; 45.917 mi. yds. overhaul; 11,009 tons crushed gravel; 69,275 tons sand base; 52,388 gals. liquid asphalt; 1,400 units rolling; 8,900 M Gal. watering; 1,076 lin. ft. reinforced concrete pipe culverts; 336 lin. ft. structural plate pipe culverts; 214 lin. ft. asbestos bonded corrugated metal pipe culverts, and other items. Project to be completed in 240 calendar days.

F 270(7)U2 Widening of a 155' steel and concrete bridge over the Stillwater River on the Kalispell-Whitefish Road in Flathead County, involving about 30,399 lbs. reinforcing steel; 107 cu. yds. class "A" concrete; 113.4 cu. yds. class "AD" concrete; 317.17 lin. ft. steel beam bridge rail; 2,204 lin. ft. furnishing untreated timber piles; 2,076 lin. ft. driving untreated timber piles, and other items. Project to be completed by October 31, 1956.

S 50(2) Grading, gravel surfacing, and drain 6.055 miles on the Hysham-Southeast Road in Treasure County, involving about 241,138 cu. yds. unclassified excavation; 7,716 mi. yds. overhaul; 27,552 tons top course; 4,140 M gal. watering; 3,134 lin. ft. reinforced concrete pipe culverts; 216 lin. ft. structural plate pipe culverts, and other items. Project to be completed by October 31, 1956.

S 194(1) Reshaping, gravel surfacing and drain 9.236 miles on the Ekalaka-Mill Iron Road in Carter County, involving about 122,022 cu. yds. unclassified excavation; 2,479 mi. yds. overhaul; 32,139 tons top course; 121 hours scraping work; 81 hours blading work; 2,440 M gal. watering; 1,307 lin. ft. corrugated metal pipe culverts, and other items. Project to be completed by October 31, 1956.

S 208(1)U2 Construction of one 110' reinforced concrete bridge over Sweetgrass Creek on the Melville East and West Road in Sweet Grass County, involving about 42,084 lbs. reinforcing steel; 179.6 cu. yds. class "AD" concrete; 41 cu. yds. class "AD" concrete; 217.5 lin. ft. steel bridge rail and other items. Project to be completed by September 30, 1956.

S 332(6) Grading, gravel surfacing, road mix oiling and drain 2.429 miles on the Fort Peck-Nashua Road in Valley County, involving about 142,240 cu. yds. unclassified excavation; 70,942 mi. yds. overhaul; 14,378 tons crushed gravel; 40,206 tons selected borrow base course; 78,990 gals. liquid asphalt; 2,359 miles processing; 3,191 sq. yds. processing; 3,130 M gal. watering; 500 units rolling; 1,064 lin. ft. corrugated metal pipe culverts; 2,725 cu. yds. random rip rap and other items. Project to be completed by August 31, 1957.

S 362(3) Grading, gravel surfacing, and drain 9.069 miles on the Lame Deer-Colstrip Road in Rosebud County, involving about 236,599 cu. yds unclassified excavation; 8,566 mi. yds. overhaul; 46,876 tons crushed gravel; 4,450 m gals. watering; 141 units rolling; 3,167 lin. ft. corrugated metal pipe culverts; 726 lin. ft. structural plate pipe culverts, and other items. Project to be completed by October 31, 1956.

The above listed quantities are approximate only.

All bid proposals shall be accompanied by a certified or cashiers check, cash, postal money order, bank money order, or bid bond in the amount of at least 5% of the bid. Should the successful bidder fail to enter into his contract and furnish a satisfactory performance bond within the time stated in his proposal, the bid deposit shall be forfeited to the State Highway Commission of Montana.

Prequalification of bidders at least 72 hours prior to the opening of bids is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission in Helena, Montana. Plans and specifications for all Federal Aid Projects are also on file and may be examined in the office of the Bureau of Public Roads at Missoula.

Frank G. Connelly, Chairman
Scott P. Hart, State Highway Engineer

WATER WORKS CONSTRUCTION

BIDS CLOSE 8 P.M., APRIL 24

Montesano, Washington

NOTICE TO CONTRACTORS

Sealed proposals will be received by the undersigned at the City Hall, Montesano, Washington, until 8:00 P.M., April 24, 1956 for the following Water Works Construction:

1. Furnish all material, except pipe, and installation of approximately 1,500 linear feet of 12" Cast Iron Mechanical Joint, 21/45 metal "U.S." pipe, fittings and necessary appurtenances.
2. Furnish all material, except pipe, and installation of approximately 29,500 linear feet of 10" to 4" Asbestos Cement, "Fluid Tite" joint "Century" Pipe, fittings and necessary appurtenances.

The improvements shall be in accordance with plans on file at the City Hall and at the office of Howard T. Harstad & Associates, 1000 Lenora Street, Seattle 1, Washington. Copies of said plans and specifications are available at the offices of the Engineers. A deposit of $15.00 per set will be required.

Each bid shall be accompanied by a bid bond or certified check payable to the order of City Treasurer, City of Montesano, for a sum not less than 5% of the amount of the bid, and no bid will be considered unless accompanied by such bid bond or check.

At the time and place named, such bids shall be publicly opened and read and the Council will proceed to canvass the bids and may let a contract to the successful bidder. The Council reserves the right to reject any or all bids.

BERTHA SATTERSTROM
Clerk, City of Montesano

5428—4-17

HOUSING UNITS, MAINTENANCE FACILITIES

BIDS CLOSE 10 A.M., MAY 1

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, May 1, 1956, until 10:00 A.M., for the construction of the following improvement and will then and there be opened and publicly read:

Constructing Duplex Housing Units and Maintenance Facilities for District No. 3, a State Project, consisting of five base bids as follows:

BASE BID NO. 1
Constructing Duplex Housing Units and/or Maintenance Facilities in AMANDA PARK, KALALOCH, FORKS and POTLATCH in Grays Harbor, Jefferson, Clallam and Mason Counties, respectively.

BASE BID NO. 2
Constructing a Duplex Housing Unit and/or Maintenance Shed at AMANDA PARK in Grays Harbor County, and/or

BASE BID NO. 3
Constructing a Duplex Housing Unit and/or Maintenance Shed at KALALOCH in Jefferson County, and/or

BASE BID NO. 4
Constructing a Maintenance Shed at FORKS in Clallam County, and/or

BASE BID NO. 5
Constructing a Maintenance Shed at POTLATCH in Mason County.

All work for this improvement is combined into one set of plans and specifications which contains a common proposal.

Bidders who are satisfactorily prequali-

fied shall have the option of submitting proposals on any one or all of the base bids, except that when submitting a proposal on Base Bid No. 1 a bidder may also submit proposals on Base Bids Nos. 2 to 5 inclusive. The Director of Highways reserves the right to accept or reject the lowest bid on each base bid which gives the lowest total to the State.

Prequalifications of bidders is required. Plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each such set of plans and specifications as a rental for the use of them. Plans will be forwarded by first class mail.

Bidders who may not be prequalified in sufficient amount to bid on the entire improvement, namely Base Bid No. 1, shall indicate in their application for plans and specifications the particular section or sections upon which they desire to bid.

Each bid proposal shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five percent (5%) of the total of Base Bid No. 1 or of any combination of Base Bids Nos. 2 to 5, whichever is the greater. Should a successful bidder fail to enter into such contract and furnish a satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Informational copies of plans and specifications are on file in the Chapter Offices of the Associated General Contractors of America in Seattle, Tacoma and Portland, Oregon and the office of the District Engineer of the Department of Highways in Olympia where they may be inspected.

STATE HIGHWAY PROJECTS
BIDS CLOSE 10 A.M., MAY 1
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, May 1, 1956, until 10:00 A.M. for the construction of the following improvements and will then and there be opened and publicly read:

Clearing, Draining, Grading and Constructing Two Reinforced Concrete Rigid Frame Slab Bridges and One Reinforced Concrete Slab Bridge on 2.535 miles of Primary State Highway No. 2 in Kittitas County, HYAK TO SUNSET LODGE, FAP No. IN-002-2(4) involving about 60 acres of Clearing, 444,400 cubic yards of Common Excavation and Borrow, 46,600 cubic yards of Solid Rock Excavation, 130,940 units of Overhaul, 200 cubic yards of Pit Run Gravel, 560 tons of Asphaltic Concrete, 1,328 linear feet of Concrete Pipe, 2,300 cubic yards of Riprap, 1,078 cubic yards of Concrete, 195,820 pounds of Steel Reinforcing Bars and other items.

Draining, Grading and Surfacing with Light Bituminous Surface Treatment on 6.571 miles of Secondary State Highway No. 11-G in Adams County, FRANKLIN COUNTY LINE TO JCT. SSH NO. 7-C, FAP No. F-045-1(3), involving about 99,250 cubic yards of Common Excavation and Class A Excavation, 90,160 tons of Crushed Stone Surfacing, Ballast, Crushed Cover Stone and Crushed Screenings, 260 tons of Asphalt Cement, 62 cubic yards of Concrete, 4,234 pounds of Steel Reinforcing Bars, 2,868 linear feet of Concrete Pipe, 406 linear feet of Beam Guard Rail, 55 cubic yards of Riprap and other items.

Draining, Grading, Surfacing with Light Bituminius Surface Treatment and Constructing a Reinforced Concrete Rigid Frame Bridge on 0.994 mile of Primary State Highway No. 2 in Chelan County, SLEEPY HOLLOW NORTH, FAP No. F-028-1(9), involving about 45,670 cubic yards of Common Excavation, 6,180 cubic yards of Solid Rock Excavation, 19,245 tons of Crushed Stone Surfacing, Ballast, Crushed Cover Stone and Mineral Aggregates, 36 tons of Asphalt Cement, 300 linear feet of Iron and Steel Pipe, 685 linear feet of Concrete Pipe, 86 linear feet of Corrugated Metal Cattle Pass, 225 linear feet of Beam Guard Rail, 29 Guide Posts, 514 cubic yards of Concrete, 92,320 pounds of Steel Reinforcing Bars and other items.

Surfacing with Light Bituminous Surface Treatment, Constructing Non-Skid Single Seal Leveling Treatment and Type C Bituminous Surface Treatment Road Mix and Paving with Type I-1 Asphaltic Concrete on 18.912 miles of Primary State Highway No. 7 in Grant County, QUINCY TO NAYLOR AND VANTAGE TO SEVEN MILES EAST, FAP No. F-031-1(4) and State Project, involving about 22,150 tons of Crushed Stone Surfacing, Crushed Cover Stone and Mineral Aggregate, 745 tons of Asphalt Cement, 15,740 tons of Asphaltic Concrete and other items.

Surfacing with Light Bituminous Surface Treatment and Paving with Type I-1 Asphaltic Concrete on 7.494 miles of Secondary State Highway No. 3-A in Yakima County, ALFALFA TO SATUS, FAS No. S-0268(7), involving about 4,810 cubic yards of Maintenance Rock and Crushed Cover Stone, 316 tons of Asphalt Cement, 19,515 tons of Asphaltic Concrete, 815 cubic yards of Mineral Aggregate and other items.

Surfacing with Light Bituminous Surface Treatment and Paving with Type I-1 Asphaltic Concrete on 17.194 miles of Primary State Highways Nos. 10 and 2 in Douglas and Okanogan Counties, TONASKET TO ELLISFORD, ET AL, FAP Nos. F-029-2(11), F-028-2(5), F-030-1(11) and State Project, involving about 12,970 tons of Crushed Stone Surfacing and Crushed Cover Stone, 526 tons of Asphalt Cement, 12,290 tons of Asphaltic Concrete and other items.

Clearing, Draining, Grading and Surfacing with Screened Gravel on 2.500 miles of a Jefferson County Road, QUILCENE-CENTER ROAD, FAS No. S-0497(4), involving about 17 acres of Clearing, 55,130 cubic yards of Unclassified Excavation, 20,960 cubic yards of Selected Roadway Borrow, 3,500 cubic yards of Screened Gravel Surfacing, 804 linear feet of Concrete Pipe, 60 linear feet of Galvanized Iron Pipe and other items.

Draining, Grading, Surfacing, Paving with Type I-1 Asphaltic Concrete and Installing Traffic Signals on 0.429 mile of a Pierce County Road, JCT. GRAVELLY LAKE DRIVE AND BRIDGEPORT WAY, FAS No. S-0547(1), involving about 3,840 cubic yards of Unclassified Excavation, 4,250 cubic yards of Ballast and Crushed Stone Surfacing, 3,180 tons of Asphaltic Concrete, 1,040 linear feet of Cement Concrete Curb and Gutter, 2,450 linear feet of Precast White Reflecting Curb, 6 cubic yards of Concrete, 1,536 linear feet of Concrete Pipe, 2.5 miles of Traffic Line Painting, a lump sum bid for Installation of Traffic Signals and other items.

Clearing, Draining, Grading and Surfacing with Selected Roadway Borrow on 0.862 mile of a Pend Oreille County Road, IONE-SULLIVAN LAKE ROAD, FAS No. S-0547(6), involving about 43,390 cubic yards of Unclassified Excavation,, 1,840 cubic yards of Selected Roadway Borrow, 156 linear feet of Corrugated Metal Pipe and other items.

Surfacing with Light Bituminous Surface Treatment on 6.390 miles of a Douglas County Road, LEAHY NORTH ROAD, FAS No. S-1125(1), involving about 10,400 cubic yards of Selected Roadway Borrow, 8,500 cubic yards of Crushed Stone Surfacing and Crushed Cover Stone, 260 tons of Asphalt Cement and other items.

Constructing Type F Bituminous Surface Treatment Plant Mix on 3.918 miles of a Snohomish County Road, WOODS CREEK-LAKE ROESIGER ROAD, FAS No. S-0321(1), involving about 5,250 tons of Plant Mix, 700 cubic yards of Crushed Stone Surfacing and other items.

Grading, Surfacing with Light Bituminous Surface Treatment and Paving with Type I-1 Asphaltic Concrete on 4.292 miles of Primary State Highway No. 1 in Whatcom County, BELLINGHAM TO FERNDALE, a State Project, involving about 11,000 cubic yards of Common Excavation, 5,000 cubic yards of Sand Borrow, 22,660 linear feet of Reconstructing Roadway Ditches, 22,530 tons of Selected Roadway Borrow, 7,820 tons of Crushed Stone Surfacing, 103 tons of Asphalt Cement, 870 cubic yards of Crushed Cover Stone and Mineral Aggregate, 9,470 tons of Asphaltic Concrete and other items.

Surfacing with Light Bituminous Surface Treatment and Paving with Type I-1 Asphaltic Concrete on 5.586 miles of Secondary State Highway No. 1-I in Snohomish County, JUNCTION PSH NO. 1 TO MUKILTEO, a State Project, involving about 4,630 tons of Crushed Stone Surfacing, 122 tons of Asphalt Cement, 955 cubic yards of Crushed Cover Stone and Mineral Aggregate, 7,390 tons of Asphaltic Concrete, 1,500 linear feet of Asphaltic Shoulder Curb and other items.

Surfacing with Light Bituminous Surface Treatment and Constructing Non-Skid Single Seal Treatment on 113.42 miles of State Highways Nos. 7-C, 2, 7, 10-C and 11-G in Adams, Chelan, Douglas and Grant Counties, VANTAGE TO OTHELLO, ET AL, a State Project, involving about, 1,801 tons of Asphalt Cement, 23,145 cubic yards of Mineral Aggregates and Crushed Cover Stone and other items.

Constructing Non-Skid Single Seal Treatment on 55.98 miles of State Highways Nos. 11, 11-F, and 2-G and 3-H in Lincoln, Adams and Spokane Counties, FRANKLIN COUNTY LINE TO HATTON COULEE, ET AL, a State Project, involving about 790 tons of Asphalt Cement, 9,650 cubic yards of Mineral Aggregates and 45 M gallons of Water.

Stockpiling Maintenance Rock, Sand and Mineral Aggregates on Primary State Highway No. 15 in King and Snohomish Counties, GROTTO AND GOLD BAR VICINITIES, a State Project, involving about 38,000 tons of Crushed Materials, 15,000 tons of Sand and other items.

Federal funds have been allocated for items nos. 1 to 11, inclusive.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

E. C. HUNTLEY, Chairman
W. A. BUGGE, Director of Highways

5426—4-14, 21

HIGH SCHOOL
BIDS CLOSE 5:30 P. M., MAY 2
Longview, Washington
ADVERTISEMENTS FOR BIDS

NOTICE TO CONTRACTORS:

Sealed bids will be received by Longview School District No. 122 at the District's Administration Offices, Longview, Washington, until 5:30 p. m., Wednesday, May 2, 1956, for (a) the General Contract, (b) the Mechanical Contract, (c) the Electrical Contract, separately, for the construction of a High School Building for Longview School District No. 122.

BID OPENING:

Bids will be opened publicly at the above stated time and place, and read aloud. Bids received after the time set for opening cannot be considered. Bidders and others properly interested are invited to be present at the bid opening.

BID DOCUMENTS:

Specifications, including bid and contract documents, and drawings, may be examined at the office of the Architect, McGuire & Muri, 231 Broadway, Tacoma, Washington, and at offices of the Associated General

Contractors, Seattle, Washington, and Portland, Oregon, and may be obtained at the Architect's office upon deposit of $50.00 for each general contract set and $25.00 for each mechanical or electrical set.

REFUND OF DEPOSITS:

The full amount of deposit for one set of documents will be refunded to bona fide bidders upon return of the documents in good condition to the Architect's office at or before the time set for opening bids. Other deposits will be refunded with deductions for the actual cost of reproducing the documents, under the same conditions.

BID GUARANTEE:

Each bid must be accompanied by a certified check, a bank cashier's check, or a bid bond issued by a bonding company licensed to do business in the locality of the project, in form furnished by the Architect, in an amount not less than five percent of the Base Bid, plus additive alternates.

WITHDRAWAL OF BIDS:

No bid may be withdrawn after the time set for the opening thereof unless and until award of contract is delayed for a period exceeding thirty days.

OWNER'S RIGHT TO REJECT BIDS:

The right is reserved to reject any or all bids, and to waive informalities.

BY ORDER OF LONGVIEW SCHOOL DISTRICT No. 122,
By Corrine Miles,
Clerk.

LATERALS
BIDS CLOSE MAY 8
Lindsay, California
NOTICE TO CONTRACTORS

DEPARTMENT OF THE INTERIOR, Bureau of Reclamation. Sealed bids (Specifications No. DC-4663) will be received at Lindsay, California, until May 8, 1956, for furnishing labor and materials for Shafter - Wasco Laterals and Sublaterals, Unit 1, Lateral 134.4 Station 249/54 to Station 573/19, Shafter-Wasco Irrigation District, Friant-Kern Canal Distribution System, Central Valley Project, California. Location near Wasco, California. Principal items are earthwork for and furnishing and installing about 48 miles of precast concrete pipe lines. Pipe diameters vary from 12 to 66 inches with option for installation of asbestos-cement pipe for pipe diameters of 24 inches or less; furnishing and installing 335 gate valves, 50 linemeters, and 184 vertical flowmeters; and other work. Completion time 600 days. For particulars, address Bureau of Reclamation, P. O. Box 525, Lindsay, California; or Building 53, Denver Federal Center, Denver 2, Colorado. W. A. Dexheimer, Commissioner.

5415—4-7

STREET AND SEWER IMPROVEMENTS
BIDS CLOSE 10 A. M., P.S.T., MAY 23
Juneau, Alaska
NOTICE TO CONTRACTORS

Project Aaa. 50-A-146-V, Street and Sewer Improvements, Juneau, Alaska, April 12, 1956. Name and Location of Project: Street and Sewer Improvements, Project Aaa. 50-A-146, Section V, Juneau, Alaska. Department or Agency: Alaska Public Works, Office of Territories, Department of the Interior. By (Issuing office): John D. Argetsinger, Acting Director, Alaska Public Works, Office of Territories, Department of the Interior, Post Office Box 1181, Juneau, Alaska. Sealed bids in single copy for furnishing all labor, equipment, and materials and performing all work for the project described herein will be received until 10:00 A. M., Pacific Standard Time, May 23, 1956, in the mailroom of the Office of the Acting Director, Alaska Public Works, Office of Territories, Department of the Interior, 123 West Third Street, P. O. Box 1181, Juneau, Alaska, and then publicly opened, and read aloud. Information regarding bidding material, bid guarantee, and bonds follows: Plans and specifications and other proposed contract documents are open for public inspection at the Acting Director's office, Juneau, Alaska; at Room 2723 Interior Building, Washington 25, D. C., and Associated General Contractors of America offices as follows: Seattle Chapter, Construction Center, 215 West Harrison St., Seattle, Wash.; Mountain Chapter, 220 West Harrison St., Seattle, Wash.; Tacoma Chapter, 452 St. Helens Ave., Tacoma, Wash., Portland Chapter, Suite 112, Multnomah Hotel, Portland, Oregon; and the Alaska Chapter, 306 Central Bldg., Anchorage, Alaska; at the Plan Bureau, 2413 Western Ave., Seattle, Wash.; and Builders Exchange Cooperative, 317 Builders Exchange Bldg., Portland, Oregon. A set of such documents may be procured from the office of the Director at Juneau, Alaska, upon deposit of $25.00, all of which will be refunded upon the return of the plans and specifications in good condition within twenty (20) days from date of bid opening. Each bid must be accompanied by a satisfactory bid security (certified check or bid bond) in an amount not less than 5 percent of the total bid in dollars and cents. No bid will be withdrawn until thirty days after the scheduled closing date for the receipt of bids. The successful bidder will be required to furnish a performance bond and payment bond, each in the amount of 100 per cent of the contract price. The Government reserves the right to award a contract for the project on the basis of the acceptance of any or all of the alternates, whichever course is in the best interest of the Government. DESCRIPTION: Project Aaa. 50-A-146, Section V, Street and Sewer Improvements, Juneau, Alaska. The project consists of the following items of work: Removing existing structures—Lump Sum, concrete manholes—10 each, concrete catch basins—10 each, 6" sewer pipe—186 l.f., 8" sewer pipe—340 l.f., 10" sewer pipe—608 l.f., 12" sewer pipe—253 l.f., 16" sewer pipe—519 l.f., 8" BTCMP—24 l.f., concrete encasement, 10 c.y. borrow excavation — 550 c.y., unclassified excavation — 50 c.y., concrete sidewalks — 1,176 s.f., concrete stairs—616 s.f., 1½" pipe handrail—419 l.f., concrete curb—565 l.f., concrete footing—35 c.y., concrete retaining walls 43 c.y., concrete cribbing—228 s.f. Six priorities are involved in the above mentioned quantities and only that portion of the work will be awarded which is within the funds available at the time of award.

SCHOOL ADDITION, ALTERATIONS
BIDS CLOSE 2 P. M., APRIL 24
Millwood, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the undersigned at the office of George M. Rasque and Son, Architects, in the Washington Trust Building at Spokane, Washington, up to 2:00 P. M., April 24, 1956, for construction of an addition and alterations to the Orchard Center Elementary School, School District No. 143, Millwood, Washington, and will then and there be opened and publicly read aloud in his office. Bids received after the time for opening will not be considered.

Plans and Specifications may be obtained from the office of George M. Rasque & Son, Washington Trust Building, Spokane, Washington, upon deposit of $25.00, which sum will be returned to the bidder provided plans are returned in good condition with submitted bid, or provided plans are returned within 6 days after issued if no bid is to be submitted.

The character and amount of security to be furnished by each bidder is stated in the specifications.

The Board of Directors reserves the right to reject any or all bids or to accept the proposal deemed best for the District and to waive informalities.

PIPELINES, STORAGE TANK
BIDS CLOSE MAY 3
Bridgeport, Washington
NOTICE TO CONTRACTORS

DEPARTMENT OF THE INTERIOR, Bureau of Reclamation. Sealed bids (Specifications No. DC-4671) will be received at Bridgeport, Washington, until May 3, 1956, for furnishing labor and materials for Bridgeport Bar Pumping Plants and Distribution System, Bridgeport Bar Irrigation District, Foster Creek Division, Chief Joseph Dam Project, Washington. Location near Bridgeport, Washington. Principal items are 5,5[illegible] cu. yds excavation and backfill of pipe trenches; 7,500 cu. yds. excavation for Bar Area Pumping Plant; 23,050 lin. ft. furnishing and installing 4-inch to 24-inch diameter steel pipe in distribution system; furnishing and erecting steel water storage tank; and other work. Completion time 320 days. For particulars, address Bureau of Reclamation, P. O. Box 937, Boise, Idaho; or Building 53, Denver Federal Center, Denver 2, Colorado. W. A. Dexheimer, Commissioner.

5412—4-7

POST OFFICE, COURTHOUSE
BIDS CLOSE 3 P.M., P.S.T., MAY 8
Nome, Alaska
NOTICE TO CONTRACTORS

Sealed bids for construction of the U. S. Post Office & Court House, Nome, Alaska, will be received until 3:00 P.M., Pacific Standard Time, May 8, 1956 in Rm. 12[illegible] Federal Office Bldg., 909 First Ave., Seattle 4, Washington. Three sets of bidding material may be obtained without deposit; additional sets require $50.00 deposit each. Request should be made to the Deputy Regional Director, P.B.S., General Services Administration at the above address or Public Building Service, Rm. 1304 General Services Bldg., 19th & F Sts., N.W., Washington 25, D. C. Fred S. Poorman, Deputy Commissioner of Public Buildings, General Services Administration.

5418—4-7

SEWAGE TREATMENT PLANT
BIDS CLOSE 2 P. M., APRIL 26
Medical Lake, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by John B. Firmin, Supervising Engineer, Department of Institutions, at the Superintendent's office at Eastern State Hospital, Medical Lake, Washington, up to 2 p. m., April 26, 1956, for the furnishing materials and equipment for and the construction of a Sewage Treatment Plant for Eastern State Hospital.

Plans and Specifications including Contract Documents, Information to Bidders and Bid Forms may be examined at the office of Walter L. Woodward, Consulting Engineer, Empire State Building Spokane, Washington, and may be obtained there upon deposit of $25.00 per set. Plans and Specifications are on file at the following places:

Construction Council, W. 933 Third Ave., Spokane, Wash.; AGC Builders Chapter, N. 1207 Washington St., Spokane, Wash.; Associated General Contractors, N. 18[illegible] Stevens, Spokane, Wash.; Associated General Contractors, 215 W. Harrison St., Seattle, Wash.; Plan Bureau, 2413 Western Ave., Seattle, Wash.

The full amount of the deposit will be refunded to actual bidders upon return, in good condition, unmarked, within 10 days after opening date. Other deposits will be refunded under the same conditions, deducting $10.00 to cover reproduction costs.

The Department of Institutions reserves the right to reject any or all bids or parts thereof and to waive informalities.

Department of Institutions.
John B. Firmin,
Supervising Engineer.

ANOTHER EXAMPLE OF CARCO "One Stop" STEEL SERVICE

CARCO FABRICATED POTS AND POT CRADLES HELP ALCOA SMELT ALUMINUM

At Wenatchee, Washington, near low cost electric power, the Aluminum Company of America has invested millions of dollars in a large aluminum smelter.

The production of aluminum begins with the mining of bauxite, the only substance that, to date, has proved economical as a commercial source of this metal. After preliminary processing, the next major step occurs in alumina plants. Here, Alcoa removes the impurities from the ore, leaving a fine white powder which is a combination of aluminum and oxygen.

Alcoa separates the aluminum from the oxygen by an electrolytic smelting process. A direct electric current is passed through large smelting pots filled with molten cryolite in which alumina is dissolved. The passage of electricity through the solution causes aluminum to be deposited at the bottom of the pot while the oxygen is released as carbon dioxide gas.

The pots are deep rectangular shells of fabricated steel lined with carbon to serve as the cathode or negative pole. A row of the smelting pots, which are connected electrically in series, is called a potline.

Pure aluminum represents about one-fourth the weight of its basic ore, bauxite. It takes four pounds of bauxite to make two pounds of alumina. Likewise, the smelting of two pounds of alumina results in one pound of aluminum. Accordingly, Alcoa's large Wenatchee smelter must process over 400,000,000 pounds of alumina annually in order to produce the installed yearly capacity of 217,000,000 pounds of primary aluminum.

Pacific Car has fabricated steel not only for Alcoa's smelter at Wenatchee but also for their smelter and fabricating division at Vancouver, Washington. At Wenatchee, Carco fabricated the pots and pot cradles for Alcoa's recent $2,000,000 expansion of this smelter as well as hundreds of pot cradles for the older potlines. At Vancouver, Carco fabricated the structural steel for several of the buildings incorporated in Alcoa's large plant.

Whether your needs are small or large, let Carco help you solve your structural steel problems. Remember, Pacific Car offers not only the largest fabrication facilities in the Northwest but also a "one stop" steel service. This means money-saving ideas and suggestions, prompt engineering detail and estimates, fabrication and erection.

ANOTHER EXAMPLE OF CARCO "One Stop" STEEL SERVICE

CARCO FABRICATED POTS AND POT CRADLES HELP ALCOA SMELT ALUMINUM

At Wenatchee, Washington, near low cost electric power, the Aluminum Company of America has invested millions of dollars in a large aluminum smelter.

The production of aluminum begins with the mining of bauxite, the only substance that, to date, has proved economical as a commercial source of this metal. After preliminary processing, the next major step occurs in alumina plants. Here, Alcoa removes the impurities from the ore, leaving a fine white powder which is a combination of aluminum and oxygen.

Alcoa separates the aluminum from the oxygen by an electrolytic smelting process. A direct electric current is passed through large smelting pots filled with molten cryolite in which alumina is dissolved. The passage of electricity through the solution causes aluminum to be deposited at the bottom of the pot while the oxygen is released as carbon dioxide gas.

The pots are deep rectangular shells of fabricated steel lined with carbon to serve as the cathode or negative pole. A row of the smelting pots, which are connected electrically in series, is called a potline.

Pure aluminum represents about one-fourth the weight of its basic ore, bauxite. It takes four pounds of bauxite to make two pounds of alumina. Likewise, the smelting of two pounds of alumina results in one pound of aluminum. Accordingly, Alcoa's large Wenatchee smelter must process over 400,000,000 pounds of alumina annually in order to produce the installed yearly capacity of 217,000,000 pounds of primary aluminum.

Pacific Car has fabricated steel not only for Alcoa's smelter at Wenatchee but also for their smelter and fabricating division at Vancouver, Washington. At Wenatchee, Carco fabricated the pots and pot cradles for Alcoa's recent $2,000,000 expansion of this smelter as well as hundreds of pot cradles for the older potlines. At Vancouver, Carco fabricated the structural steel for several of the buildings incorporated in Alcoa's large plant.

Whether your needs are small or large, let Carco help you solve your structural steel problems. Remember, Pacific Car offers not only the largest fabrication facilities in the Northwest but also a "one stop" steel service. This means money-saving ideas and suggestions, prompt engineering detail and estimates, fabrication and erection.

STRUCTURAL ENGINEERING

HAS A NEW STANDARD OF PERFORMANCE

IN THE STRONGER, LIGHTER, MORE RUGGED

MACOMBER V-BEAM

JUST WRITE V-BEAM ACROSS YOUR LETTERHEAD

PRODUCT ACCEPTANCE in structural engineering is based upon FACT.

1. WHO makes it? 2. WHAT will it do? 3. What are its STRUCTURAL advantages? 4. WILL it actually lower construction costs? 5. What is your performance PROOF?

HERE ARE YOUR ANSWERS: This MACOMBER product is the culmination of 40 years of structural product engineering. It was designed to support floors and roofs with a lighter, shallower structural member whose ultimate strength is over twice its published carrying capacity. In addition to the fact this member weighs less and costs less, it has the time and labor saving NAILABLE feature in both top and bottom chords. And lastly—every size in the various spans was load tested by Pittsburgh Testing Laboratory. YES! The phenomenal success of V-BEAMS is based upon fact. You can specify this structural member with complete confidence.

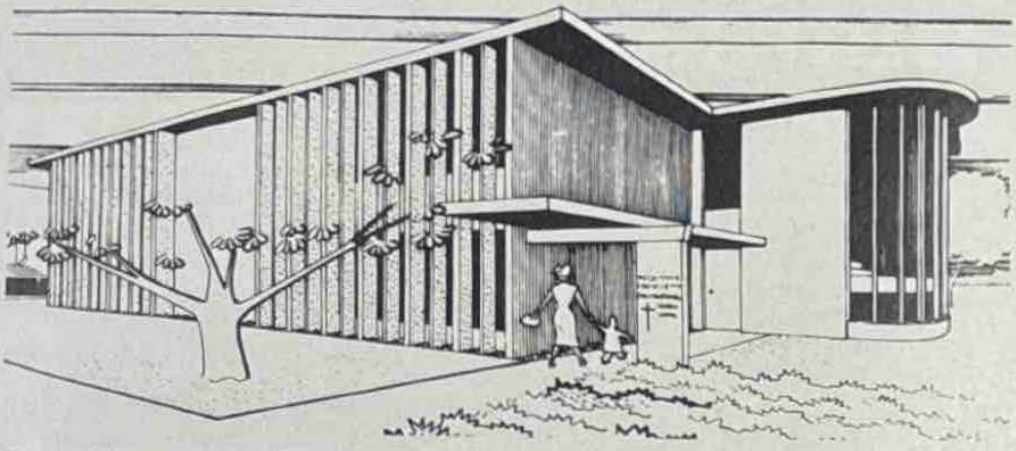
Building and Engineering News of the Pacific Northwest and Alaska 41

SUBSCRIPTION RATES—Payable in Advance

PACIFIC ARCHITECT AND BUILDER—3rd Saturday each month $4 one year; $6 two years; $7 three years. Canadian $5, $8, $10. Foreign $6, $10, $13. Single copies 50c. With CONSTRUCTION NEWS BULLETIN (2nd, 4th, 5th Sat.) $16, $24, $31, in U.S. and Alaska.



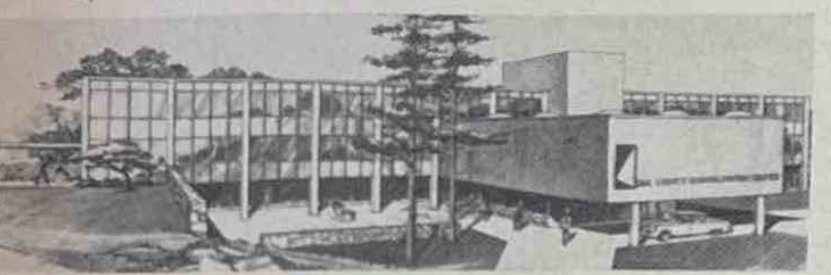
PACIFIC BUILDER AND ENGINEER—1st Saturday each month, $4 one year; $6 two years; $7 three years. Canadian $5, $8, $10. Foreign $6, $10, $13. Single copies 50c.

FOR NORTHWEST BUILDING AND ENGINEERING NEWS EVERY WEEK subscribe to all three (PA&B, PB&E, CNB) $20 one year; $30 two years; $38 three years. FOR FLASH ADVANCE DAILY SERVICE, read Pacific Construction Daily, $75 per year. Rates for U.S. and Alaska.

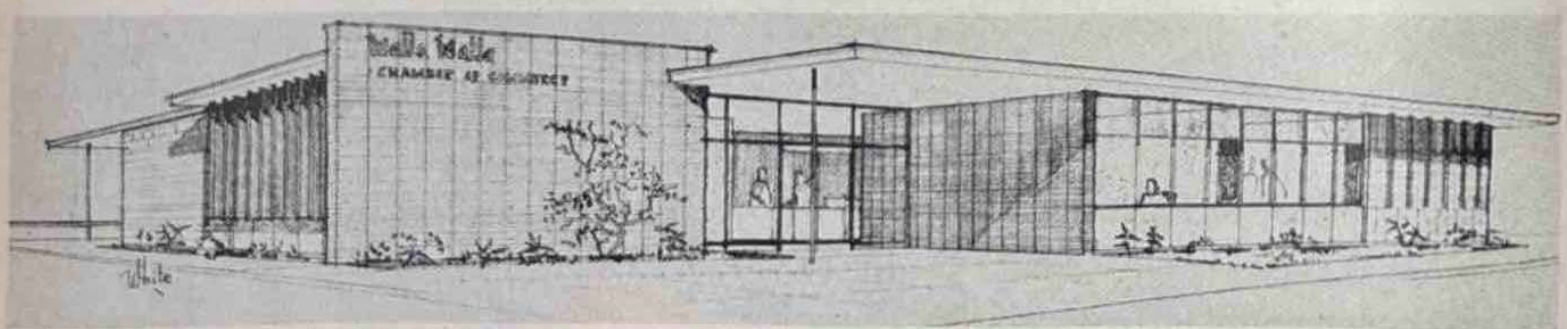
PACIFIC ARCHITECT AND BUILDER is published monthly by Pacific Builder and Engineer, Inc., 2418 Third Ave., Seattle 1, Wash., and is mailed on the third Saturday of each month. Price: $4, per year. Acceptance under P.L.&R. 34.64 authorized.

PERSPECTIVES

by Pacific architects



EDUCATIONAL UNIT ADDITION for Parkrose Community Congregational Church in Portland will be two-story structure with covered passageway to main building. Half of precast concrete fins, which will serve to shield light, will support second floor and roof. Building also will have some wood frame structural members, cedar siding, aluminum sash and flat, built-up roof. Warren Weber, AIA, has designed project.



MULTIMILLION DOLLAR PLANT of Insley Manufacturing Corp. and its subsidiary, The Maxi Corp., is now under construction on 35-acre site in Puente, Calif. Adjacent to and south of Union Pacific main line, it is located on Turnbull Canyon Road. George Vernon Russell & Associates are architects for plant, where self-propelled cranes and shovel carriers will be made.

PROPOSED REHABILITATION CENTER planned by King County (Wash.) Society for Crippled Children. Several Seattle sites are being considered for building, for which preliminary plans have been prepared by Decker, Christenson & Kitchin, architects-engineers.

UPON COMPLETION of this $85,000 one-story building next October, Walla Walla (Wash.) Chamber of Commerce will move from leased quarters on top of city hall. To be built of expanded shale blocks, it will have brick exterior and 3,750 sq. ft. Architects are Harold Crawford, H. Brandt Gessel and Thomas O. Williams.

Building News - Trends - Views

A SAN FRANCISCO ARCHITECT, Arthur Brown Jr., AIA, has been named one of three chief advisers for the proposed multimillion dollar remodeling of the U.S. Capitol. The designer of San Francisco's City Hall, buildings at Stanford University and at the University of California and the Labor Department and Interstate Commerce buildings in Washington, D.C., will serve with architects John F. Harbeson of Philadelphia and Henry R. Shepley of Boston.

The proposed remodeling will extend the center of the Capitol forward under the dome and improve its proportions relative to the Senate and House wings, according to the project's proponents.

THE BEST LOCATION for Portland's $8 million exposition-recreation center is the South Auditorium site, its architects have declared. Skidmore, Owings & Merrill made their recommendation to the E-R Commission early this month after studying two other centrally located sites termed "feasible"—the Broadway-Steel Bridge and Buckman Field.

A PRIVATE BATH FOR EVERY BEDROOM someday may be commonplace for homes at every level of construction. Paul J. Doyle, president of the Associated Plumbing and Heating Contractors of Montana, told the annual convention in Butte last month that every member of a family should have the enjoyment and benefit of a bath of his own—even the children, with junior-sized fixtures that can be replaced at a later date with those of regulation size. "No one wants a single-bath home any more," Doyle declared. "That's one very good reason why so many older homes are hard to sell."

THE LOS ANGELES BOARD OF EDUCATION has voted to revise agreements with architects concerning re-use of construction drawings. Area school architectural fees formerly were 8% on projects costing up to $1.5 million and 6% for anything exceeding that amount. Where the school district furnished services, the percentages were reduced to 7 and 5%.

Under the new schedule, adopted in an effort to streamline the city's school building program, the compensation to architects will be at the rate of 8% on the first $1 million, 7% beyond that figure to $3 million and 6% for more than $3 million; school services will reduce the fees to 7, 6 and 5% respectively. Where drawings and the same architect are used to rebuild other structures, the fees will be 4, 3½ and 3%.

AIR FORCE ACADEMY BUILDING PLANS, with the exception of the controversial chapel, have been approved by Air Force Secretary Donald A. Quarles. The project will be built near Colrado Springs, Colo.

OREGON'S 1957 LEGISLATURE is expected to give considerable attention to a long-term construction program involving state institutions and higher education centers. The plan would provide a priority schedule so that buildings most needed would be given right of way over other work. Presently construction of state institution buildings is under jurisdiction of the State Board of Control, higher education buildings under the State Board of Education. The State Emergency Board has to approve construction before it can start.

At a recent meeting of the State Board of Control, Gov. Elmo Smith warned that he does not sanction approval of architects' plans for state buildings where the cost exceeds legislative appropriations.

SLUGGISH HOME BUILDING is expected to get a new shot in the arm from federal lawmakers as this year's major housing legislation starts on the bumpy road through Congress. A housing program for elderly persons is the only really new aspect anticipated in a catch-all bill, with stepped-up loans for servicemen and college dormitories thrown in for good measure.

A WORLD CONFERENCE on earthquake engineering will be held on the University of California campus at Berkeley June 12-16 to commemorate the 50th anniversary of the 1906 San Francisco disaster. The five-day meeting will be devoted to the presentation of technical papers on the latest design and construction practices in all the major seismic areas of the world.

A NEW METHOD OF CENTRAL SUMMER COOLING has proved to be economical and highly practical for homes heated by hot water or steam. Research at the University of Illinois shows that a cooling system split from the hot water heating system and operating on the so-called "liquid" or chilled water principle of cooling offers year-round conditioning at low cost. It does not interfere with or detract from heating quality and avoids the need for sheet metal duct work.

In the new cooling system a circuit of small piping is used to hook up a water chiller to a heavy duty forced convector, consisting of fan, coils and filter. The water chiller is placed in the basement, utility closet, outdoors or any other out-of-the-way location.

NORTHERN CALIFORNIA HOME BUILDERS played host last month to a visiting group of 13 Japanese home builders, contractors, engineers and architects who are touring the U.S. on a trip sponsored by the International Cooperation Administration. While in the Bay area they visited Marinwood and were shown some of the 4,000 homes now going up in the tract near San Rafael. Being built by Gerald G. Hoyt, the project is a $70 million investment and includes three schools, two shopping centers and parks.

The Japanese also will visit Phoenix, Kansas City, Chicago, Washington, D.C., and New York.

"HOMES FOR BETTER LIVING" AWARDS JURY meet to select best home designs from 343 entries in first annual AIA contest. Seated (l. t r.): Clarence Stein, FAIA, New York; L. Morgan Yost, AIA, Chicago; Joseph Haverstick, Dayton, Ohio, NAHB president; Neil Connor, director, Architectural Standards Division, FHA, Washington, D.C.; Earl Smith, NAHB past president, El Cerrito, Calif.; Miss Mary Hamman, modern living editor, Life magazine, New York. Standing: Peter Blake, architectural editor, House and Home, New York; Charles Goodman, AIA, Washington, D.C.; Pietro Belluschi, FAIA, dean, MIT School of Architecture and Planning; Worley R. Wong, AIA, San Francisco; P. I. Prentice, editor and publisher, House and Home, New York (jury chairman for merchant built houses); Paul Groesse, director of art and architecture for M-G-M, Culver City, Calif.; Proctor Mellquist, editor, Sunset magazine (jury chairman for custom built homes); Prof. H. L. Vaughn, chairman, department of landscape design, University of California at Berkeley.

CALIFORNIA: ARCHITECTURAL GRAB BAG

Guest Editor

DONALD BEACH KIRBY, AIA
San Francisco, California

This timely evaluation of California architecture has been written by a man who started his professional career in New York City, then moved to Los Angeles and now practices in San Francisco under the firm name of Donald Beach Kirby & Associates, architects-engineers. Long active in AIA affairs, his term as director of the California-Nevada-Hawaii Regional Council expires in 1957.

ARCHITECTS who live in California are lucky—no Gothic, no Cape Cod tradition to haunt them. With all architectural eyes on California at this moment of the national AIA convention in Los Angeles, it is timely to review this product of our creation.

California living is envied by thousands of persons who come here to see whether we do actually produce "Architecture for the Good Life" as advertised in the convention theme.

In general, California architecture has progressed. Design is being more thoroughly studied. We see less self-consciousness. There are examples of open planning, free design elements and inventiveness in structural form. Some structural solutions for large buildings have been translated into smaller work. But the cliches are still with us.

One encouraging trend is the increased use of fine arts in conjunction with architecture. Some architects are beginning to be aware of the advantages of integrating fine arts in their design, particularly in liturgical work. It will take a long time, however, before either architect or layman understands that integration of art and architecture is not just a building with frosting.

Why has design improved in California? There are signs around us to indicate that some laymen appreciate better design. A few home builders are merchandising design by registered architects. The AIA nationwide public relations program has brought slightly more acceptance of the architect. Material producers have encouraged the employment of the architect.

There is ample evidence of recognition of good work done in California. Our colleagues have selected for First Honor Awards in the national AIA program two California architects in a total of five; six out of the 14 awards of Merit also came to California.

California has won a lot of awards, this year, last year, and the year before; however, let us not be **SMUG.** Actually, they represent the creme de la creme: the top off the top. The fantastic volume of building in California is not **all** well designed. Much of it is ghastly, some mediocre, a mere handful distinguished. What is the truth?

The truth is that very few merchant builders are actually working with architects. Lots of tracts are going up based on carpenter-draftsman's rehash of design and well worn floor plans. It is still a seller's market. If you can finance it and build it, you can sell it. Community planning, city planning are largely conversation. Tiresome rows of monotonous white houses march up and over the lovely hills of San Francisco—up and over with no regard for contours, in fact, contrary to contour. Houses with no side yards, built tight together—nothing learned from the fire of '06. Up and down the coast—from Oregon to Mexico—our cities have fallen into similar traps. Mistakes made in old eastern cities have been repeated out here.

Where are the garden apartments with light and air for everyone; with group garbage disposal; group lawn care; central heating; close-in location? No, we go out to suburban lots—too big for the average homeowner to care for; so far out that he must commute for hours. Central heat? No, each owner wrestles his own furnace and water heater. Trash disposal? No, you burn it in the backyard and add to the smog.

Our cities stretch out in straggling, growing tracts so that you drive from San Francisco to San Jose or from Los Angeles to Capistrano without ever being in the country. Decentralization, yes; dispersal, yes. But what are the benefits?

The architect is indicted who gives his client the first thing he asks for, rather than argue for what he needs.

California, with the biggest building boom in its history, is indicted; it has scarcely recognized community living or growth problems and has done little or nothing to solve them.

It is an indictment against both architect and client that neither has faced the fact that buildings, like automobiles, outlive their usefulness. Outmoded buildings are like hand-me-down clothing, makeshift and inconvenient.

We indict the public demand for cheapness in construction which they dignify as economy. The public also seeks so-called permanent construction that is not permanent and has no right to be. To patch a building after it has outlived its economic life is contrary to public interest.

These indictments are true all over the USA, not just California. They are really community growing pains. We can be very proud of our awards. We shouldn't be smug because our sites and climate are spectacular and we have a relatively advanced clientele. We ought to do good work and yet we have relatively few distinguished jobs to point to. We have all the advantages but we've muffed most of them. I'm as guilty as anyone.

THE WINDOWS YOU WANT

made and installed on time by Soulé

Soulé Intermediate Window Wall and Windows in
Hamilton Recreation Center, San Francisco.
W. G. Merchant, A.I.A., M & K Corp., Contractor.

Soulé Intermediate steel windows impose no limit to stock sizes. When you design a window or window wall job, specify the opening sizes you want. Soulé sales engineers will work with you, help assure you the exact window you design at the price you want to pay. All Soulé metal windows are made in the West, for fast transmission of details and delivery to your job on time. A big plus advantage is installation by our own crews, guaranteeing you a workmanlike job. You deal with one responsible Company for the manufacture and the installation of your intermediate steel windows.

EXTERIOR MATERIALS: mosaic tile spandrels and columns, rigid aluminum sash, ceramic tile windowless wall areas.

COVERING a full city block in the downtown civic center, the eight-story police headquarters with basement represents the first entirely functional approach to the physical problems of police administration and is expected to establish precedents for the planning of similar buildings. And while such projects seldom are worthy of architectural recognition, this one has been selected for a 1956 AIA Award of Merit.

The building is noteworthy too for the incorporation of two unusual pieces of art: Joe Young's glass mosaic mural which hangs in the lobby (see p. 14) and Bernard Rosenthal's controversial sculpture of a family group, mounted on the wall beside the main public entrance.

All of the various units of the municipal police department, formerly scattered among half a dozen different buildings, are brought together under one roof, with the overall plan permitting a closer integration than ever before attained. Related police activities are found on the same floor. This centralization provides better service to citizens visiting the department for informa-

SLOPING SITE provides two-level parking area for more than 850 police cars. Parking also is available for public in separate lot.

tion, advice or assistance; and with all records and report-taking facilities in one place, both officers and public save time and effort.

The $6 million reinforced concrete structure has precast concrete partitions in many cases to cut costs. Rigid sash windows have been installed throughout, ventilation being provided by air conditioning—except in the jail. Windowless wall areas are surfaced with glazed ceramic tile; spandrels and columns with mosaic tile.

To form the multitude of offices needed, the architects specified movable wood partitions wherever possible, allowing flexibility and reorganization at minimum expense. In the jail areas unbreakable glass partitions were frequently used instead of solid wall or bars to afford more supervision of prisoners with less personnel.

An extensive pneumatic tube system for sending messages and reports speeds up administrative operations. The sender merely dials the desired destination on an electronic device and deposits the papers in the tube. Automatic controls route the material to the indicated office outlet.

One of the economy measures designed into the building is the piping of steam from the heating plant of the health building which is directly across the street.

A combination ground and deck area provides parking facilities for more than 850 police cars. Space also is available for public parking. Underground squad rooms and lockers for officers can be easily reached from the lower level parking area. The basement contains assembly rooms for the officers.

The ground floor also houses the property division where a vault and refrigerator guarantee that articles ranging from jewelry to perishables will be stored safely while in custody of the department.

On the first floor are the business offices, information center, communications, traffic division, police commission offices, jail for initial booking procedures and a completely equipped auditorium and stage for "show-ups." Seating 400 persons, the auditorium has a huge screen permitting the victims to identify suspects while the prisoners cannot see the audience. With electric controls it is possible to reproduce the lighting conditions under which victims may have seen the suspects during the commission of a crime.

The felon prison and the record and identification bureaus are on the second floor; the detective bureau on the third floor; various police bureaus and business offices on the remaining five. The eighth floor has an employee cafeteria and lounge.

The typical upper-floor plan consists of a central core of specialized rooms, surrounded by a corridor and perimeter of offices.

The nine levels of the building contain 407,826 sq. ft.: administration, 273,148; jail, 39,930; parking, 95,748.

Cost of construction was $6,142,548, more than $2 million under the proposed city budget for the structure, which was made possible by a bond issue passed by the citizens of Los Angeles in 1947.

In May 1949 preliminary plans for a police building were approved but recommended alterations caused a delay in construction. During 1950-51 rapidly spiraling building costs and material shortages resulting from the Korean War forced a redesign of the building to conform to funds available. Revised plans were approved in March 1952 and construction started the following January.

A total of 2,500 police officers and civilian employees work in or out of the building.

OUTLINE SPECIFICATIONS

Type of Construction: Bethlehem Pacific steel frame and reinforced concrete.

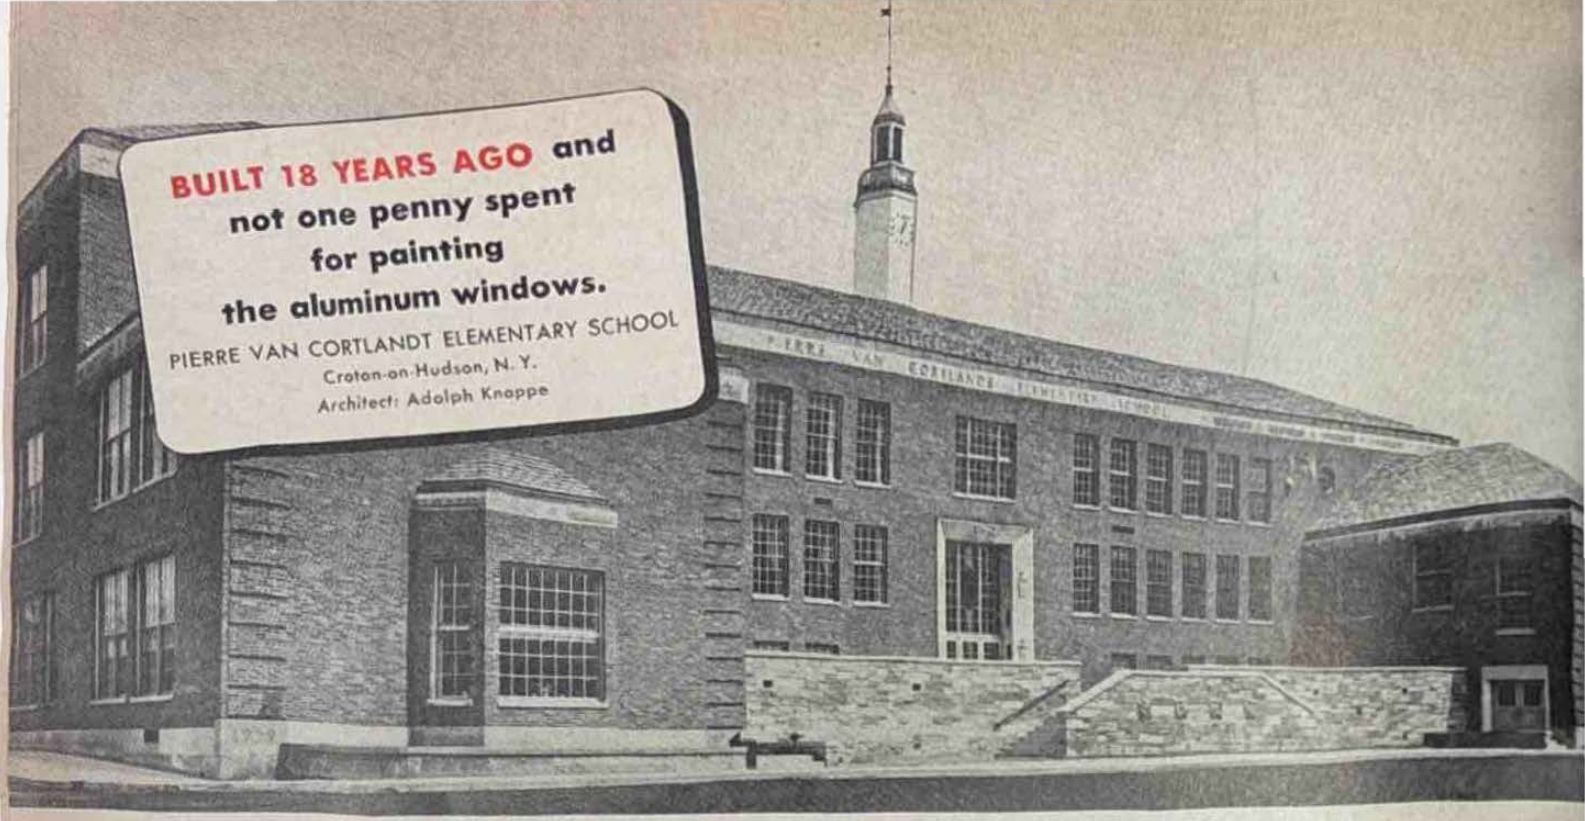
Exterior Walls: Reinforced concrete with Gladding, McBean Ceramic Veneer and mosaic tile spandrels.

Roof: Reinforced concrete.

Floors: Asphalt, rubber and ceramic tile over concrete slab.

Windows: Rigid aluminum sash with aluminum louvers on east and west walls of jail wing.

Interior Partitions: Precast concrete, movable wood and unbreakable glass (jail).



Lighting: Fluorescent and incandescent.

Heating: Steam piped from health building across street.

Total Area: 407,826 sq. ft.

Total Cost: $6,142,548.

Date of Completion: October 1955.

ALUMINUM WINDOWS KEEP MAINTENANCE EXPENSE AT A MINIMUM

If you're interested in keeping maintenance expense at a minimum you can profit from the experience of many schools (like the one pictured on the opposite page), hospitals and other buildings erected 15 to 25 years ago with aluminum windows.

School officials, hospital superintendents and others responsible for the maintenance of these buildings are unanimous in their praise of the aluminum windows. They all report that not one penny of expense has ever been required for painting them.

Now, just think what this means to the annual school budget. Think of the money that will be saved—extra money that can be well used for salaries, for books and for other necessary items. Certainly, the selection of aluminum windows for any type building is a wise choice that will pay handsome dividends.

As you plan new schools, hospitals, apartments or commercial buildings be sure you, too, include "Quality-Approved" aluminum windows. They are the only practical, reasonably-priced windows that *never* require painting . . . that cannot rust or rot, warp or swell . . . that retain their trim, modern looking appearance for the life of the building.

"Quality-Approved" aluminum windows are available in all types — double-hung, casement, awning, projected, sliding and jalousies — to fit any exterior design.

They are made by many manufacturers (see list below) to rigid quality standards established by the Aluminum Window Manufacturers Association. For your protection and complete satisfaction be sure to insist on the "Quality-Approved" Seal when you specify or OK specifications for aluminum windows.

A WORD OF CAUTION—Remember that only aluminum is rustproof through and through. Mere surface protection against rust is not enough. Wear, unintentional scratches in delivery or installation may nullify any protective coating and soon require painting.

For additional information consult Sweet's (Architectural File, Section 16a/ALU) or any of the approved manufacturers listed below, or write for our latest "Window Specification Book". Address, Dept. PAB-65.

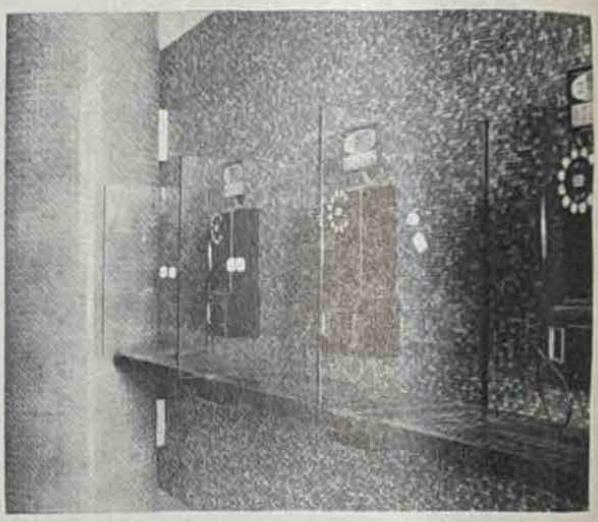
WINDOWS



Police Administration Building

Joe Young's Mural

SIX TONS OF MOSAIC MURAL hang from structural columns in lobby. Back of panel supports public telephones.

"This was an unusual opportunity wherein architect and artist were able to collaborate freely. Perhaps in this sense the end result might be described as a 'transitional' mural, i.e., a situation that required the mural to come down from its traditional position on the wall and be employed as the contemporary space modulator it should be. If this turns out to be a contribution to the historical evolution of art integrated within architecture, then much of the credit should go to the planning of Maynard Woodward, AIA, as head designer for Welton Becket & Associates."—*Joe Young.*

CERTAINLY one of the high points of interest in the Police Administration Building is the hanging mosaic mural, first major work of this type to depart from a conventional wall installation and the largest ever executed in the United States.

Seeming to float in the air in the building's lobby, the six-ton monumental mosaic by Joe Young consists of more than 250,000 tiny glass stones, each one set by hand in 50 diverse colors. The mural, 36 ft. long and 6 ft. high, is cantilevered from two structural columns and serves as a divider partition between the lobby and the public telephone area.

The 436 sq. ft. of mosaic surface presents a panoramic theme of Los Angeles and its architectural growth. The city skyline seems to move with the spectator as he walks through the lobby. The rear of the mural, finished in monotone colors of hand-set glass stones, acts as a panel to support the telephones which are installed in the panel itself.

Young took two years to create the mural, using steel, aluminum, copper, concrete and glass. Copper lathing was reinforced with concrete for the basis of the panel structure.

The tiny pieces of glass were set in the artist's studio, mounted on paper sections and then installed on the cantilevered wall. Seams from one section to another are invisible. The mural will last hundreds of years and can be cleaned with a hose.

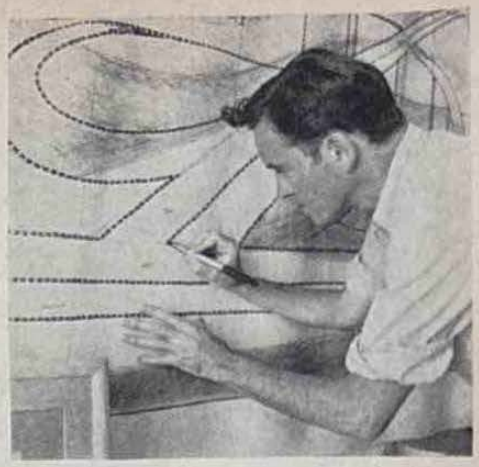
Briefly, here is the step-by-step process in executing the mural as outlined in the American Artist magazine:

1. Once the design of the mural was decided upon, the first step in making the mosaic was the enlarging of the cartoon to full scale.

2. When this full-scale cartoon was completed, it was cut into sections for working convenience. The size and areas of these sections had been determined in the planning stages of the project. Then, like a huge jigsaw puzzle, the parts were carefully assembled in reverse since, during installation, the face of the mosaic was pressed into the concrete.

3. Mosaic pieces (Italian glass tesserae) had to be cut by hand to assure the right size and color for each space in the design.

4. To set the tesserae in place, mastic was first brushed on the cartoon, which served as a backing for the tesserae as well as a guide to the exact placement of pieces in the design. Tesserae of the proper size and color were selected from small bins of sorted pieces and set in place on the cartoon.



5. As the work progressed, small mosaics were held in position with neighboring sections of the original cartoon to check the accuracy of the linear mosaic design.

6. Small sections of mosaics were stacked on top of each other for packing.

7. The mosaic sections were set into a special brown grouting cement.

8. When all sections were in place and the cement had dried, the paper cartoon — which had served as backing for the tesserae — was removed, revealing the finished mosaic mural.

Integration of the arts in architecture

by JOE YOUNG

Reprinted from the Southern California Chapter, AIA, Bulletin

IN THE PAST 10 YEARS, many panel forums have discussed "integration of the allied arts within contemporary architecture."

In most of these sessions, the invited speakers generally admit that a synthesis of the arts is the unsolved problem of our culture. Some experts explain the lack by pointing to the diversity of our society and say, as long as decentralization is a goal, integration will progress slowly. A few refuse to admit any problem exists and in one instance I actually heard an architect, who never commissioned an artist, argue vociferously with an artist, who had never executed a commission.

Whatever the opinions, these discussions have evoked recognition of a serious shortcoming, often the first step to a solution. If what has been stirring on the West Coast since the war is a portent of the future, then we certainly are no longer in the academic stage of discussion, but beginning to work out an answer.

It is well known that architects in this area are no longer completely oriented by what occurs in the East. This regional self-sufficiency, which had to happen on many levels all over the country before it influenced local building concepts, helped this particular area to lead a significant break-through on some of the important design accomplishments of our time. This leadership meant new responsibilities and how these weights were to be carried became the challenge.

In the Southland alone, the number of architects who have awarded commissions to artists has begun to bridge that vast gap that divides architecture in America from its natural allies. We must admit some planners still haven't learned that art didn't commence with Mattise or Mondrian, any more than it ended with the Renaissance. It is just as urgent that artists come down out of their ivory towers and apply themselves to learning the practical nature of the building profession.

If we are edging out of this period, when suspicion among the arts impeded all coordination, then it is in part due to the architects who first achieved a wider freedom of design and realized that endless facades of textures were not the answer. Glass and stone combined with brick and tile may create a required simplicity, but for the want of an artist's contribution, the essential purpose of the building often goes unexpressed. Everything in our past indicates we are a nation ready to utter dynamic images and yet, in one of America's important decades, how many structures reflect a Spartan purity that underestimates our needs? If the enlargement of our environment into a wider meaning is the mission of the architect, then to succeed, the breadth of this ambition must encompass every activity. Our best schools have accepted this premise, but in getting down to cases, just how does an architect with an opportunity go about selecting an artist for commission?

First, experience shows that following the AIA regulation on providing free sketches works out best when architect, artist and client all agree on this as a guide. Second, in seeking an artist to perform a commission it is also best to encourage mutual confidence by entrusting the problem to one artist as versus running a competition. The ability to make a building speak requires high qualifications and so the artist who can organize a project **with** the architect is the ideal. Admittedly these artists are rare, but it is also important to remember development in this direction by an artist can only come if he is awarded commissions.

An obvious precaution is to avoid the artist who mistakenly believes, simply because he works large, that he is qualified to collaborate. A developed sense of structural scale is more important than mock-heroics. The contemporary architect cannot afford to entrust his building to those artists who abort the architectural medium itself because they have no sense of continuity with the past; men who can only think in terms of obscure allegories or sterile illustrations of sentimental ideas—and this exists in the most advanced forms of cubism as well as in the more representative forms of art!

Generally the commissioning architect wants his buildings to feel human and the imaginative artist has much to offer. His knowledge of color-form has developed his sense of imaginary space and controlled illusory space can be an indispensible foil when integrating actual planes. Since the artist's direct language of visual imagery is of ancient and almost magic potency, then great care must go into every stage of the planning.

This artist can't be the sort of fellow you telephone if the finishing-up budget will permit, nor is he of any value if his work is arbitrarily added like a patch to conceal the haste of hurried planning. Successful integration cannot afford such luxurious crutches. Synthesis depends on the architect's willingness to persuade the client that his own best interests are at stake and that art integrated within a structure is essential to the function of a building.

Today a creative architectural artist knows the optics of wall perspectives, how to utilize color in a unified sense and the infinite possibilities of acoustical and mobile structures coordinated with light engineering. The tasteful use of plastics as transparent or translucent planes is understood. Photo-murals, collages, stereoptic walls and sculpture—all have departed from the genre to become contemporary architectonic means.

The contemporary artist with a thorough knowledge of the architect's spatial problems will accept all op-

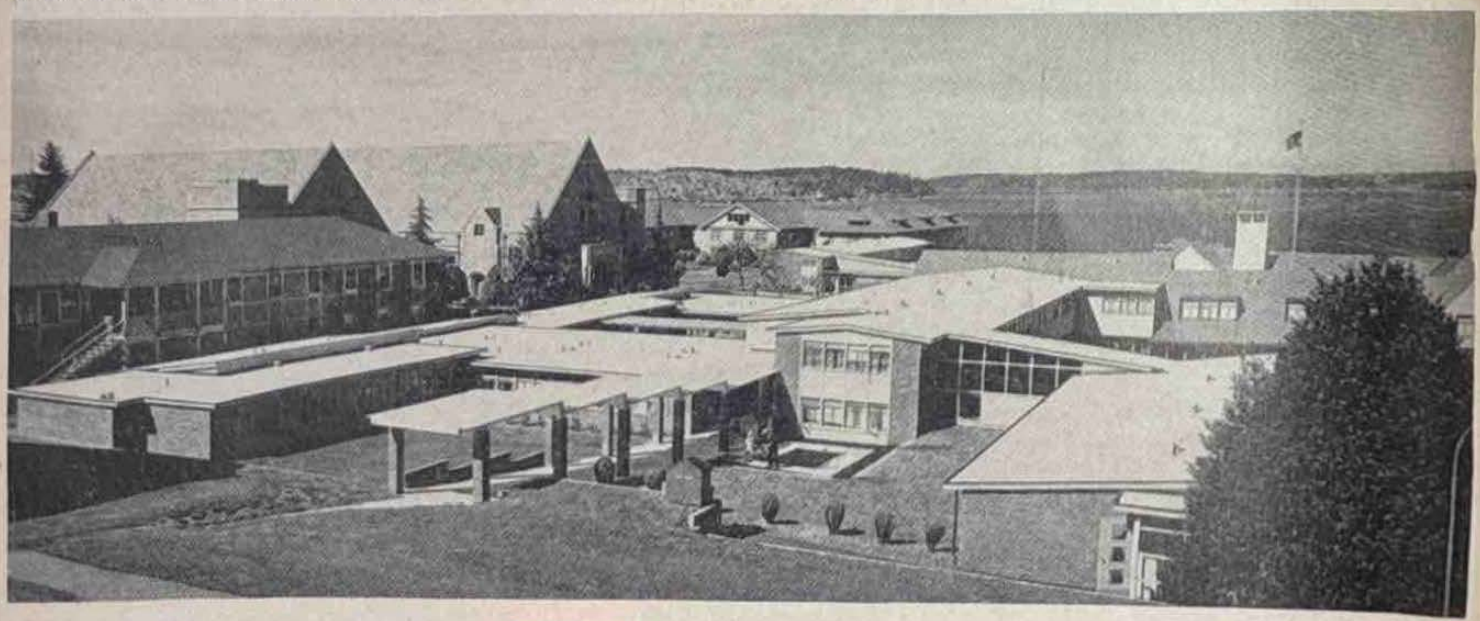
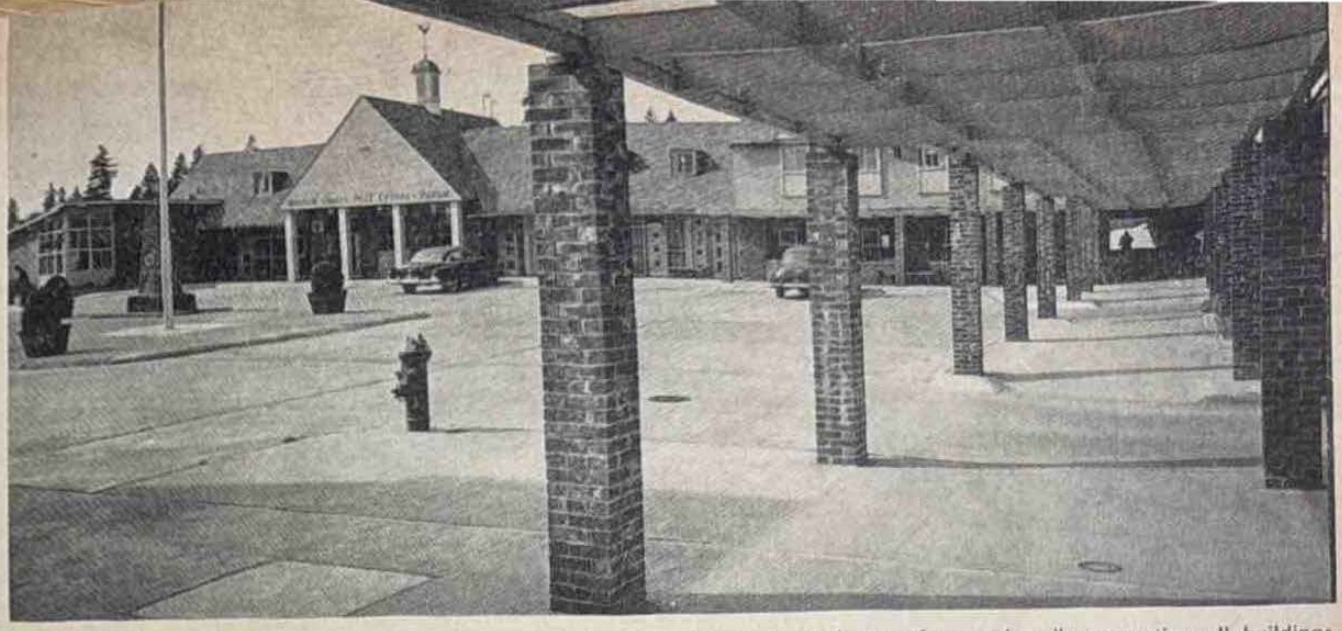
HOW FAR CAN architectural design go toward improving the living patterns within a state institution?



Can mere sketches off a drawing board hope to change age-old concepts of life within the confines of a government-operated "home?"



Answers to these queries can be found quite readily at the Washington State Veterans' Home in Retsil where a program of expansion has also included a new approach to institution living.

Here's the background of the story:

In 1910 the State of Washington dedicated a home for needy war veterans, their wives and widows. It was located on a 10-acre tract at Retsil, overlooking Sinclair Inlet and with a sweeping view of the Olympic Mountains.

SINCLAIR INLET AND OLYMPIC PENINSULA form backdrop for some new construction at veterans' home.

SQUARE AS SEEN from beneath one of covered walks connecting all buildings.

veterans' home expansion

by BOB KAROLEVITZ

That, of course, was three wars ago. Since then the population of the home has increased considerably until now it is on a waiting-list basis. The original living quarters became more and more crowded and, because of the increasingly older age-average of the inhabitants, some of the early facilities were proving hazardous, especially to the wheel chair portion of the population.

With those conditions existing, the State Department of Public Institutions under its director, H. D. Van Eaton, launched in 1951 a long-term program of additions, modernization and rehabilitation of the Retsil establishment.

The program afforded these prime considerations:

1. The addition of sufficient living quarters to eliminate the overcrowding, to permit the housing of more eligible veterans and to anticipate as far as possible the future needs of an ever-growing veterans' population in the state.

2. To provide further community facilities such as lounges, a post office, a fire station, administration offices and even a snack bar.

3. To confine this development to the original tract since property limitations precluded any expansions.

4. To locate the new living quarters close to the existing dining hall and hospital.

Faced with these problems, plus the generally accepted principle of designing institutional buildings to facilitate maintenance to the highest degree possible, the architects could immediately visualize a practical solution. Fireproof, multistory elevator buildings would make the most economical use of limited ground area, would allow for more apartment-like units and would provide off-the-ground views of the Olympic Peninsula's beautiful mountains. At the same time such buildings would cause minimum dislocation of established day-to-day operations of the home.

But there was another consideration much more important than any of these cold, practical, dollars-and-cents views. That was the human element: the requirements and the niceties which would make life more livable for the elderly inhabitants.

The first move then was to make a considerable study of the habits and desires of those who would be most affected by the new construction, the veterans themselves.

It was readily ascertained that the majority of inhabitants were Spanish-American War veterans whose average age exceeded 70 years. Many were confined to wheel chairs, and none were very active physically. The study just as readily indicated that these men, their wives and their widows would never be happy in a big-city apartment atmosphere; neither would the people of the World War I era now seeking entry into the home in ever-increasing numbers.

To them home is something informal, neighborly and intimate. The bigger the building, the more they feared the idea of becoming inmates rather than free-to-come-and-go citizens forced by circumstances into government facilities.

The first conclusion the architects arrived at was that living quarters must fit the veterans' concept of home. They must be tied to the earth and have an intimate scale. Only in such dwellings could fighting men of another generation live out their final years happily and in comfort—the ultimate reason for building such an institution in the first place.

These were the factors which forced the architects' thinking beyond mere walls, roofs and patios and into the realm of social considerations. The result was a new village type approach to institution living, featuring a village square, a semi-colonial style of architecture and the friendly, informal atmosphere so definitely hoped for by the Retsil veterans.

The final solution called for seven buildings of one and two stories grouped almost casually around the village square, which itself was developed on the site without changing the existing road pattern or displacing any important buildings.

Most of the buildings have been developed around

RAMPS used throughout new construction in place of stairs make walking easier for elderly members of home and facilitate wheel chair transportation.

OFF-THE-SQUARE VIEW shows rockeries and flower beds which offer recreational opportunities for oldsters who sport green thumbs. Ramps also are used outside buildings.

quiet interior courts, large enough to afford not only light and air but landscaping and sitting areas. The landscaping was planned to include flower beds and small rockery areas where veterans themselves can work at growing things.

The community facilities—the post office, the fire station, two large lounges, TV room, card room and snack bar, post exchange, beauty shop, barber shop and the administrative offices—face the village square.

The basic housing unit is a single bedroom of 136 sq. ft. with wash basin and 8 sq. ft. additional for wardrobe. Each pair of such bedrooms has a shared toilet. There are eight community bathrooms with showers, tubs, toilets and basins to serve the 228 rooms of this type.

A secondary type consists of 18 bedrooms and wardrobe with shared baths consisting of toilet, shower and basin. These rooms have individual exterior entrances independent of main buildings. They are for the use of members (as home inhabitants are called) whose physical conditions make desirable an adjacent bathroom. They are also used by single employees of the home.

Finally, there are seven suites with living room, bedroom and semi-private or private bath. These suites, on second floors, are assigned to married members and married employees.

All of the new buildings are connected by covered walks which lead eventually to the dining hall in an existing building. Covered walks also lead to the chapel and hospital facilities.

Throughout the new development, the physical inabilities of members are considered. Ramps have replaced stairways, lighting has been designed to make seeing easier for failing eyes and bathtubs have been equipped with handrails to prevent falling accidents. In the event of any emergency requiring evacuation of the buildings, the ramps and numerous outside entrances will facilitate such an exodus.

Many public institutions are built to house those who are paying a debt to society. However, those like the Washington State Veterans' Home have a direct opposite goal: to make a final installment on society's debt to old soldiers, sailors and marines who long ago defended their country in battle but who now are in the twilight years of their lives. Without a doubt the designers of the new facilities at Retsil organized the true purpose of the home.

Outline Specifications

Type of Construction: Masonry and wood frame combinations on reinforced concrete foundations.

Exterior Walls: Select common brick veneer backed with 4-in. concrete block; finished with ¼-in. cement asbestos board and fir siding, painted.

Roof: 3x6 t&g, supported by wood beams located about 11 ft. apart; 1-in. insulation board on top of deck, covered with built-up asphalt roofing and white marble chips.

Floors: Asphalt tile on concrete slab and on some wood second floors.

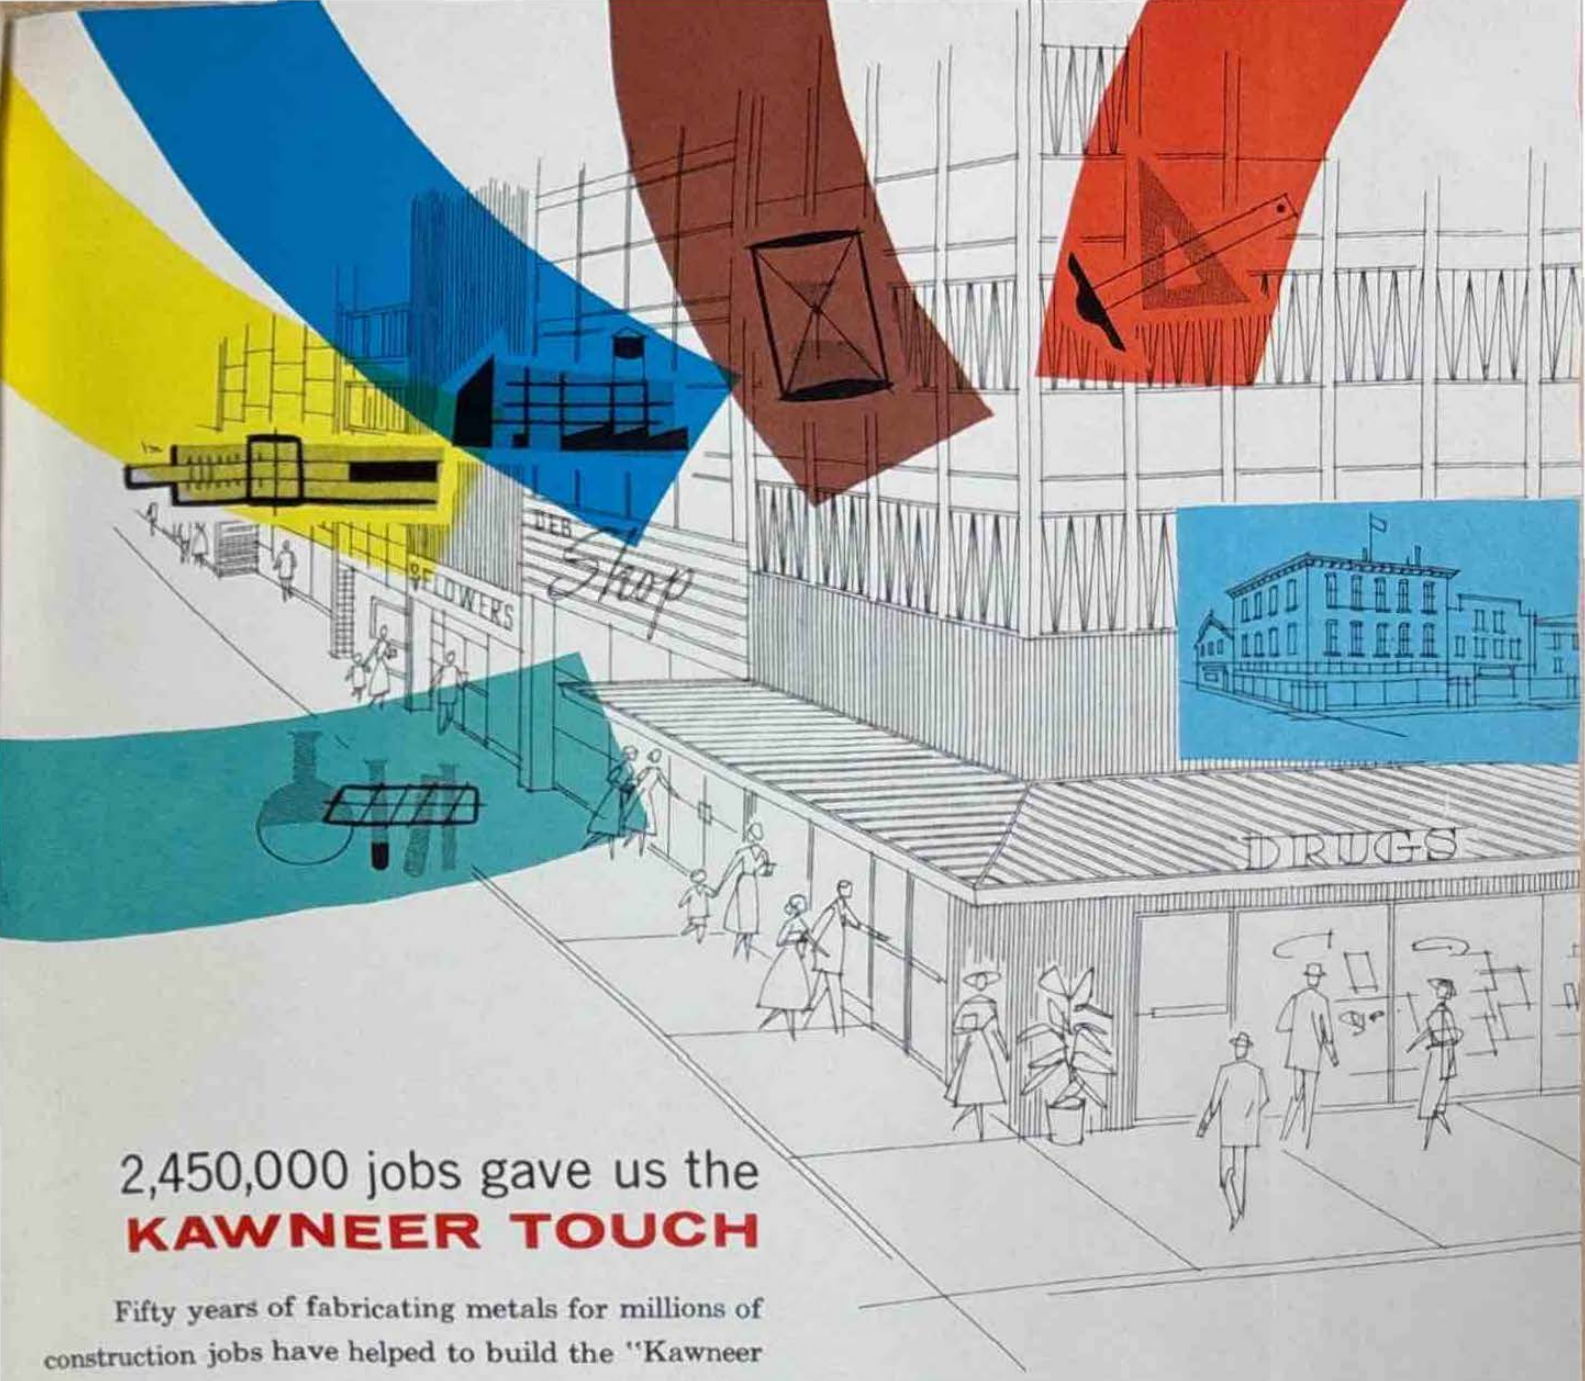
Windows: Aluminum sash.

Doors: Flush solid core fir cut for three glass panels, painted finish, exterior; hollow metal for all corridor doors to bedrooms; flush panel fir to private toilets and for sliding wardrobe closets.

Corridor Walls: 4-in. concrete block.

Room Partitions: 2-in. t&g solid wood, covered either side with ⅝-in. gypsum wallboard, taped joints.

Interior Trim: Fir base, chair rail and all trim, painted finish.



Ceilings: ⅝-in. gypsum wallboard nailed to bottom of wood roof deck and to wood furring on suspended ceilings.

Equipment and Specialties: Medicine cabinet and lavatory in each room; toilet room between each pair of rooms with grab bar on wall facing water closet; wide wood window stool (6 to 12 in. wide) covered with linoleum; built-in wood desk in corner of each bedroom; wood shelf (8 in. by 5 ft.) on wall side of each bed location; wardrobe closet (2x4 ft.) in each bedroom.

Lighting: Swing lights at head of bed, at end of desk and over medicine cabinet in each bedroom, bracketed to wall and provided with metal shade and indirect reflectors; bracket light in toilet rooms; no ceiling lights; corridor lights of dense boxes specially designed to mount in wall, with face of box at angle to throw main beam at 45 deg., about 20 ft. on centers.

Electrical: Service and distribution 440-volt, three-phase; dry type transformers located in each building; additions to main switchboard in boiler house with new feeder through existing tunnel to distribution center in village; all panels Westinghouse circuit breaker type.

Fire Alarm: Coded, supervised system providing continuous ringing bells in each building and setting off code box to give coded signal at fire station; break-glass stations at rear of each door.

2,450,000 jobs gave us the **KAWNEER TOUCH**

Fifty years of fabricating metals for millions of construction jobs have helped to build the "Kawneer Touch". All the new construction and modernization jobs from small store fronts to steamships have given us *our* skills . . . a "touch" that makes your job sparkle with finesse. On top of design and finish we offer construction "sense" that brings you metals that are easy to assemble on the job. You enjoy the benefits of *factory-controlled construction labor*. See your Kawneer representative and dealer. Their job is to serve you—to help you with information, details and specifications.

50TH ANNIVERSARY

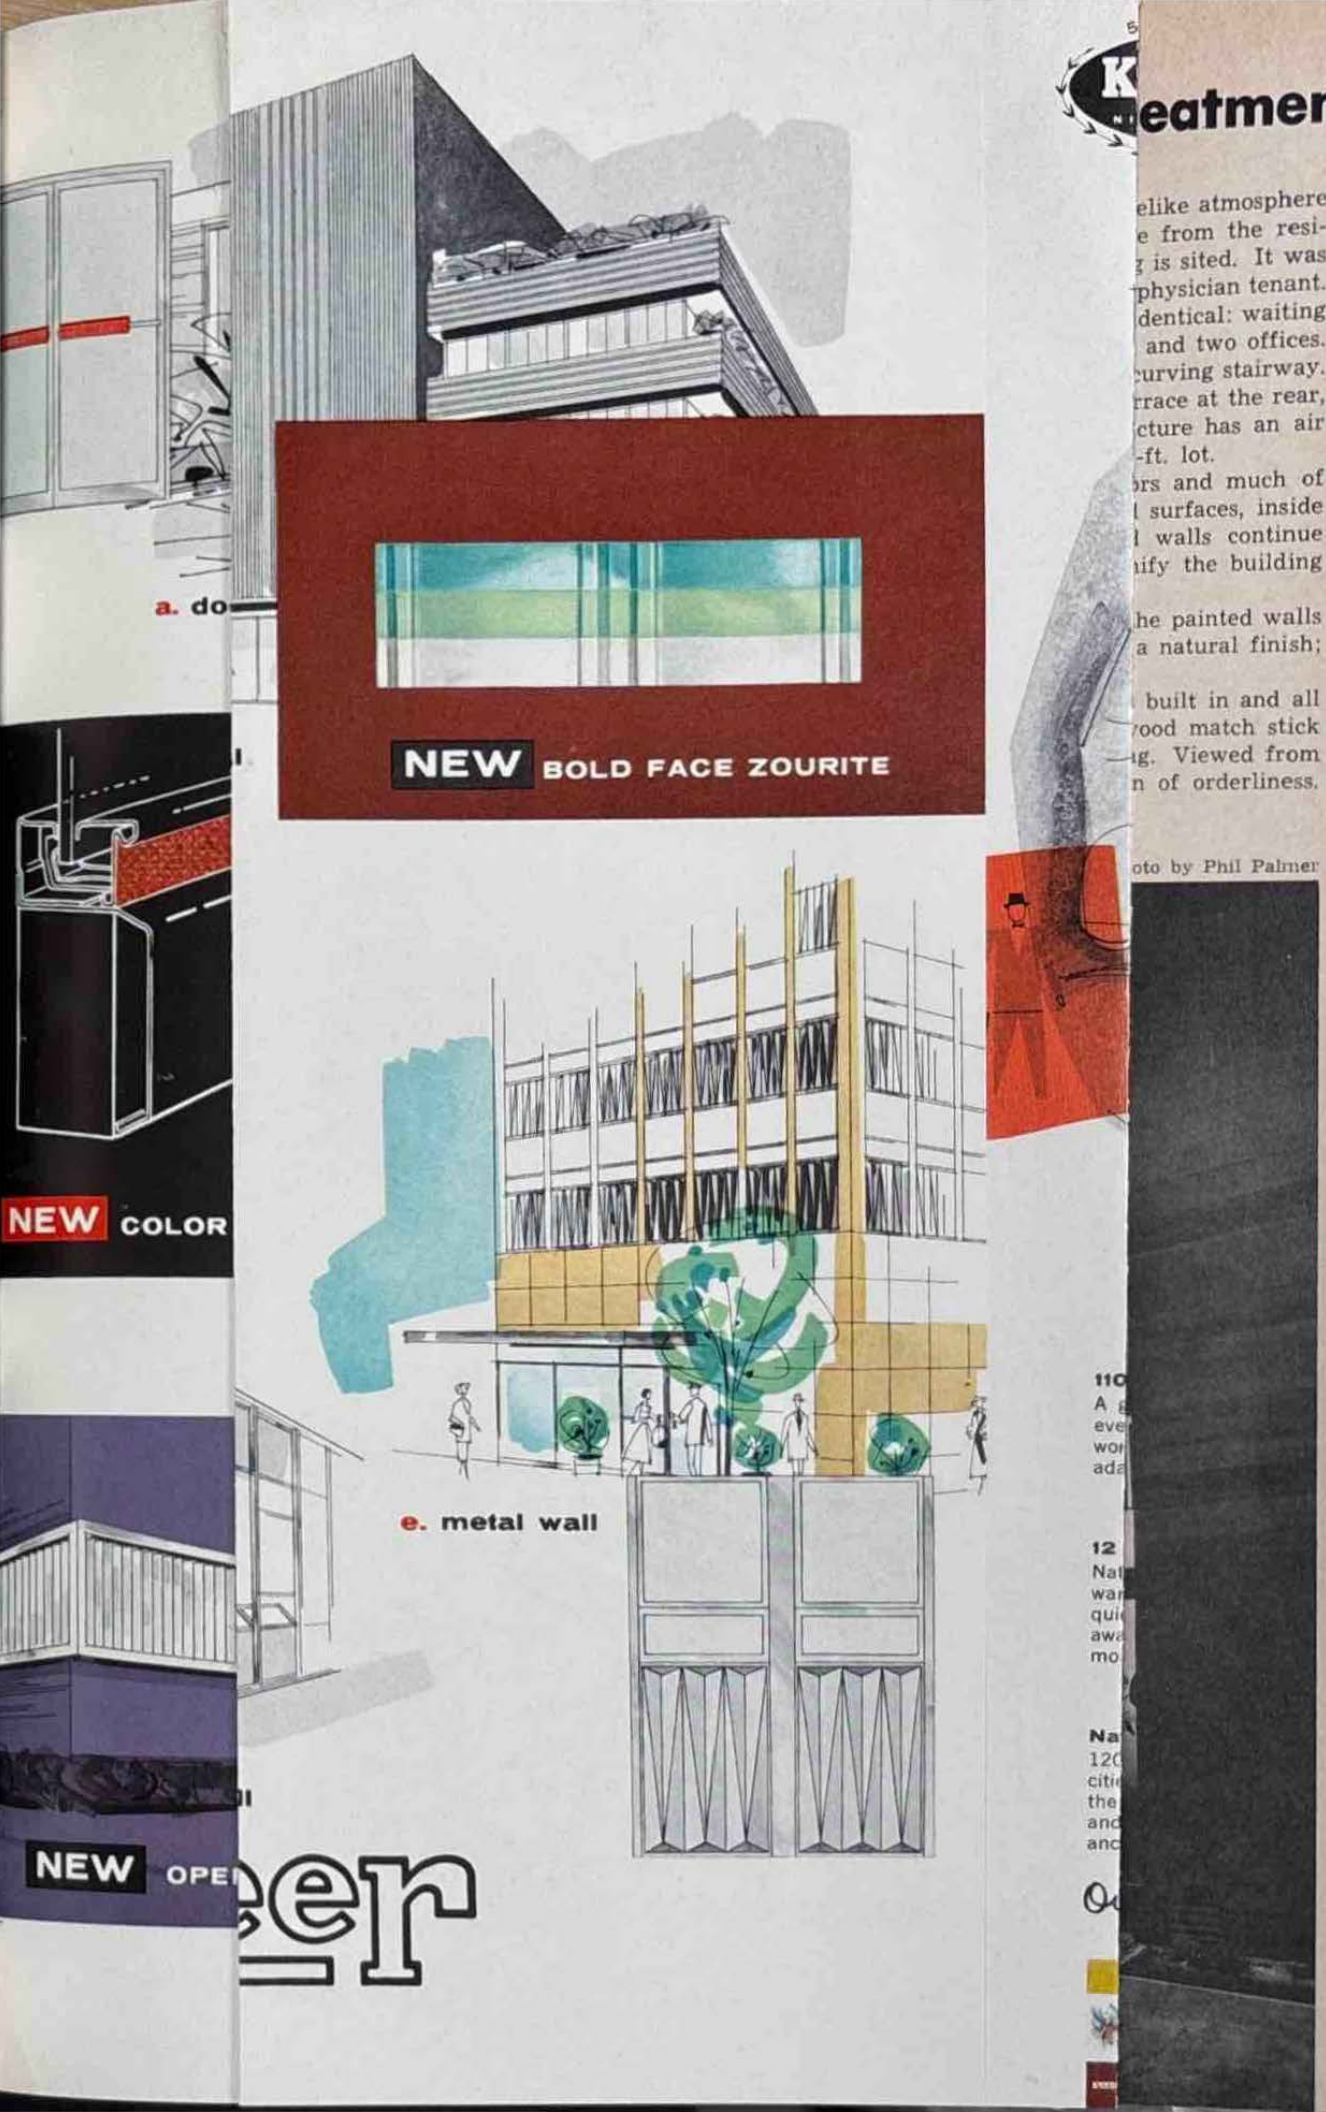
foremost fabricator of aluminum and plastics for the construction, aircraft and appliance industries since 1906.

the complete Kawneer line plus **NEW** 50th Anniversary products

a. doors and entrances
A complete line of narrow stile doors with the unique interchangeable hardware feature; wide stile doors; honeycomb core flush doors; and **new** full-vision, sliding glass doors for homes, offices and stores.



b. store fronts
An extensive variety of sash assemblies, trim members and facings to complement the store front design. **New** sash with a striking color stripe combines aluminum and vinyl.

c. sun control products
Durable, aluminum, sun-reflecting, canopies for store fronts, walks or parking. Sun-heat and glare controlling aluminum Kawneer K-Louvers, including the **new** *operating* unit help solve sun control problems.

d. facing material
Kawneer porcelain enamel and alumilited Zourite facing, now in two modular sizes and a variety of colors; the narrow-face 2″ and the **new** bold-face 6″. Can be used in combination or individually.

e. metal wall
Kawneer will provide shop-prefabricated and water-resistant window-spandrel units on the job, including erection. One responsibility from inception through installation.

f. unit wall
New unit wall system for single or 2-story buildings. Complete flexibility of design through a wide selection of color, unit types, unit sizes and choice of proportions, all with basic standard units. Superior weatherproofing system.

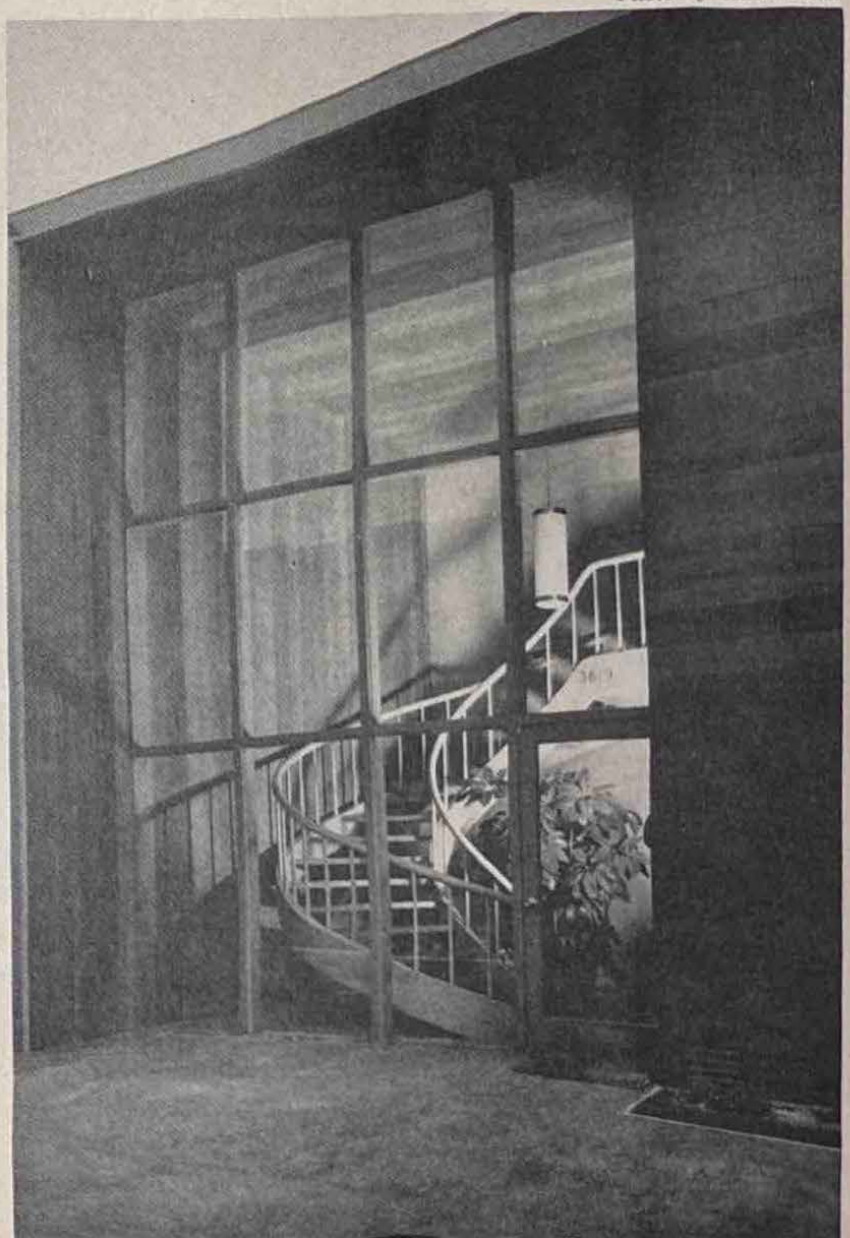
Architectural prescription: homey treatment

BECAUSE of the doctor-owner's belief that a homelike atmosphere is beneficial to his patients, the architect took his cue from the residential area in which this small medical office building is sited. It was designed to house the practice of the client and that of a physician tenant.

Except for a center court patio, the two floors are identical: waiting room, reception desk, two treatment rooms, laboratory and two offices. The upper floor is served by an elevator and a unique curving stairway.



With the courtyard in the center and a screened terrace at the rear, all of the rooms get natural light and the entire structure has an air of spaciousness belying the narrowness of the 100x25-ft. lot.

To carry out the residential character, all exteriors and much of the interior are of a mellow California redwood. Wall surfaces, inside and out, are of surfaced 6-in. shiplap. The redwood walls continue from the interior out into the patio and terrace to unify the building with the outdoor space.

The redwood is finished in a natural, clear color; the painted walls are a soft gray green. The stairway is of oak, left in a natural finish; the woodwork is either redwood or birch.

Much of the furniture designed by the architect is built in and all of the windows, except those in the lobby, have redwood match stick drapes. Surfaces were kept simple for ease of cleaning. Viewed from the street, the building gives an immediate impression of orderliness.

Outline Specifications

Type of Construction: Frame on L-and T-shaped concrete continuous footings.

Exterior Walls: Surfaced California redwood 6-in. shiplap finished in natural color.

Roof: Flat, built-up composition, with rigid insulation.

Windows: Sugar pine casements and French doors.

Doors: Built-up redwood and Douglas fir, painted.

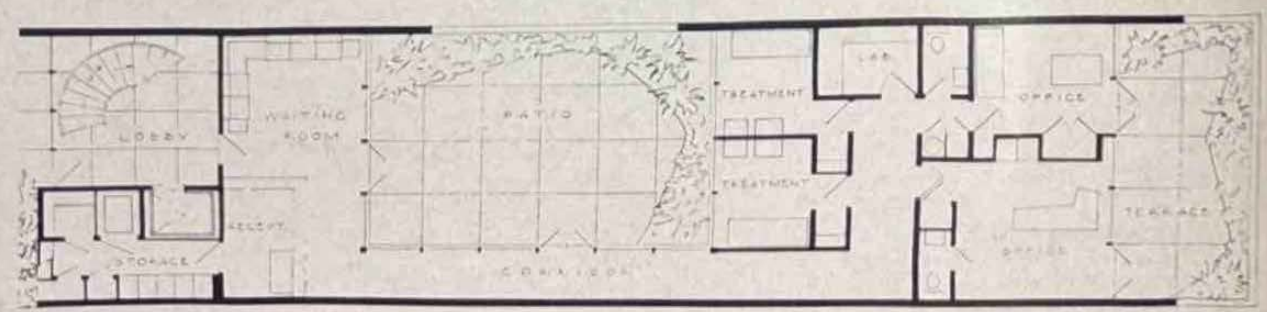
Floors: Concrete slab and rubber tile over wood.

Interior Walls: Surfaced California redwood 6-in. shiplap in natural finish and painted drywall.

Ceilings: Drywall.

Stairway: Oak in natural finish.

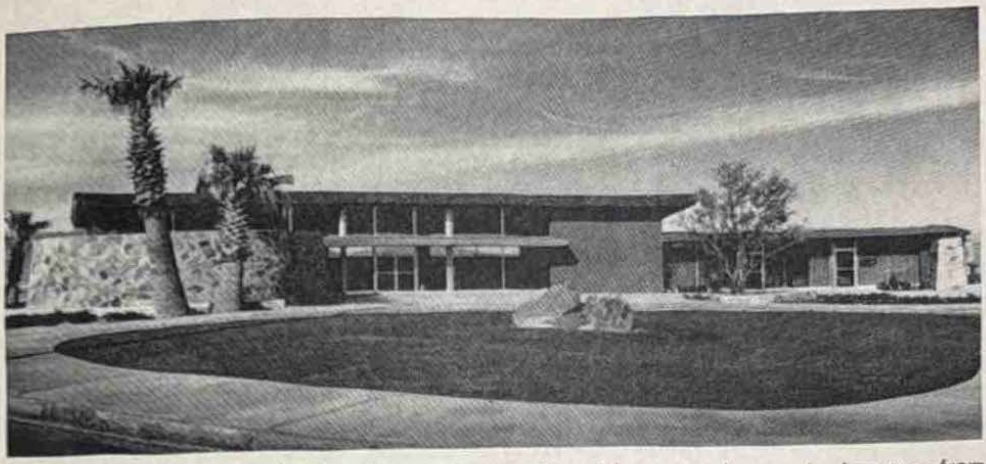
Built-ins: Lounges, etc., in redwood and birch.



Heating: Forced hot air, one furnace for reception area and one for treatment area.

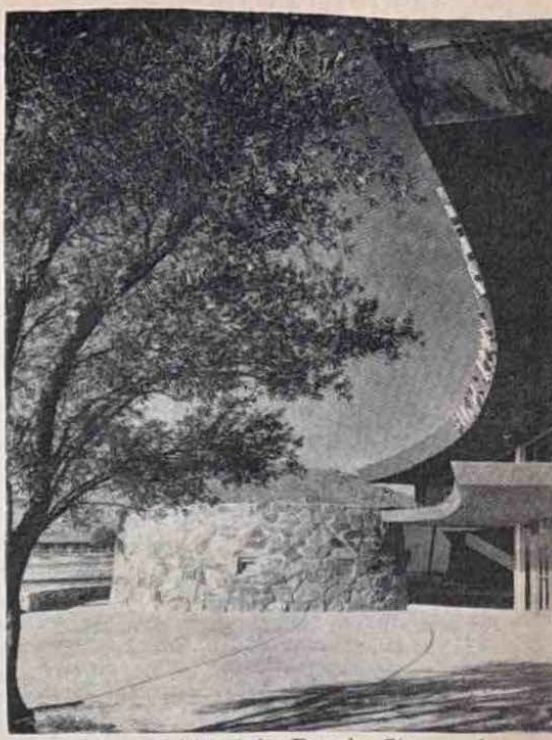
Total Area: 3,788 sq. ft., including patio; 2,959 sq. ft., floor space only.

Total Cost: $47,473, including patio, sidewalks and fences.



Cost per Square Foot: $12.53; $16.05, floor space only.

Date of Completion: August 1953.



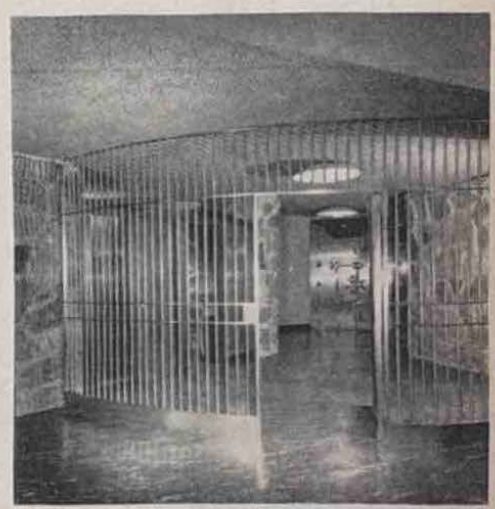
Security, dignity and beauty

Bank of Apple Valley
Apple Valley, California

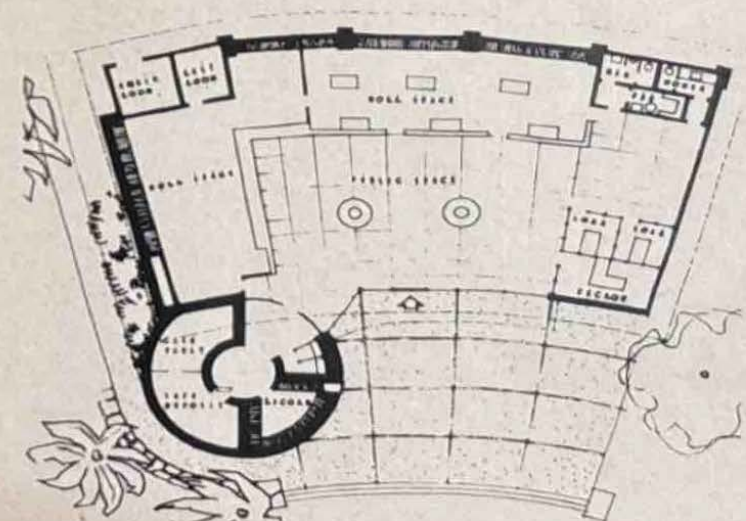
WITH PLENTY of space available, architects have achieved beauty and grace in departure from traditional bank design. Wing at right has three suites of offices.

Photos by Douglas Simmonds

CURVED OVERHANG and native stone enclosure for vault highlight exterior. Detail view of vault shows how stone is used inside.



McFARLAND, BONSALL & THOMAS, Architects
WILLIAM T. WHEELER, Structural Engineer
DON CLOUGH, Mechanical and Electrical Engineer
BENNINGTON & SMITH, General Contractors



THE BANK EXECUTIVES wanted a structure that would meet all of the technical requirements of banking but also would be unique, beautiful and a credit to the community—a comparatively simple problem although often difficult to solve.

The architects took advantage of their clients' willingness to sacrifice the traditional massive effect in favor of beauty, utilizing native, natural stone with which to encase the vault and produce a focal point on which the eye would center. For complementary materials they selected frame walls, aluminum trim outside and walnut inside to create a bank that is warm and friendly in both its exterior and interior treatment.

Built on spread concrete footings, the structure has 5,300 sq. ft. of space in the bank portion and 2,700 sq. ft. in the wing on the right side (added a year later) which houses three suites of offices.

The project was cited for an AIA Award of Merit in 1955.

OUTLINE SPECIFICATIONS

Type of Construction: Frame with steel beams on concrete footings.
Exterior Walls: Frame with plaster, native stone and aluminum trim.
Roof: Flat, steel beam, composition built-up with rigid insulation.
Floors: Concrete slab with asphalt tile finish.
Windows: Aluminum.
Doors: Herculite, exterior; hollow core, interior.
Interior Walls and Partitions: Frame and plaster on gypsum lath with walnut trim.
Ceilings: Acoustical plaster.
Heating: Forced air.
Total Area: 8,000 sq. ft. (5,300 sq. ft., bank portion; 2,700 sq. ft., office wing).

Oregon's School of Architecture

Eugene, Oregon

ANNAND, BOONE & LEI
Architects

SIDNEY W. LITTLE, AIA
Consulting Architect

COMPLETED STRUCTURE will consolidate into one building the school's nine areas: architecture, interior architecture, landscape architecture, urban planning, drawing and painting, sculpture, applied design, art history and art education.

TWO ADDITIONS to the School of Architecture and Allied Arts at the University of Oregon will put under a single roof the nine areas formerly housed in three separate buildings.

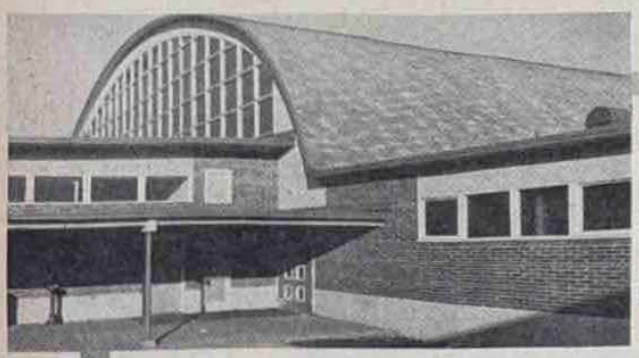
Scheduled for completion by the fall term of 1957, the structure will be named Lawrence Hall in honor of the late Dean Ellis F. Lawrence, who organized the school in 1916 and served as its first head until 1945. Total area of the school will not be substantially increased but it is expected to be adequate for the next 10 or 20 years.

The old gallery wing has been demolished to make room for the three-story architecture unit, old portions of the building will be remodeled and a second new unit will be added.

Of particular interest to graduates will be a seminar room dedicated to the late Prof. W. R. B. Willcox, who directed the architecture curriculum for many years. Alumni who studied under his direction will furnish the Willcox Memorial Room.

The old patio will be retained and slightly enlarged; and the old Hawthorne tree will be returned to the area.

The architecture unit will be of reinforced concrete with curtain window wall construction for the exterior. The first floor will contain the main entrance lobby, the dean's office suite, lecture room and drawing review room. The second floor will be devoted to a series of small offices along the south side, with drafting and review rooms occupying the balance. The third floor will have offices and a drafting room.



Attached to the architecture unit will be the library unit—an open first floor and second floor housing the passage between the new architecture unit and the present architecture building, as well as the library. Access to the various floors will be divided by a primary stairway on the west.

The first floor lobby and entryway will be of plate glass from floor to ceiling; the second and third floor window walls will be of aluminum.

Interior finish will be confined to the offices, lecture room and review rooms. The drafting room areas will be left as loft space. The exterior finish of the lecture room will be left in the rough and it is proposed that the mural designs developed by the school will be applied over this surface as a finish. The balance of the building will be painted architectural concrete.

The second addition, the sculpture unit will connect the present east wing, in which is now housed ceramics and weaving, to the present architecture building. It will be a one-story building with a concrete slab floor, Q-deck roof, concrete exterior, walls, and steel sash. Space will be provided for an entrance lobby, office, sculpture studios and storage, with a crane rail serving each of these areas.

The Portland architects and Dean Little have been assisted in planning by the school's staff, with Robert R. Ferens and Lionel T. Chadwick as coordinators in building design and Frederick A. Cuthbert as landscape consultant.

Housing slows building volume in West

BUILDING PERMITS for the five Western states totaled $214,276,627 for April, a 15% drop from March and also a 15% drop from April 1955.

The decreases reflected a continuing trend toward less home building activity in the entire area. For example, Los Angeles County was down $16 million from the same period last year, mainly because of a big decrease in tract housing; Orange County was down $5 million; and San Bernardino County was down $4 million.

Although King County showed a $1¼ million increase, housing was down $700,000. Seattle and Portland also reported decreases in housing starts.

On a statewide basis, only California showed a drop from April of last year, 21%. Oregon was up 17%; Washington, 16%; Montana, 4%; and Idaho, 7%. This is the first time this year that the Washington total has risen above last year's volume.

Two states reported decreases from March. California was down 22% and Montana, 38%. Oregon, Washington and Idaho reported increases of 22%.

By the end of April, the 116 building permit agencies participating in the survey, had recorded a total of $846,821,642, a bare $2,566,140 higher than the first four months of 1955 (and a 3% increase).

Only one state, Washington, is running behind last year. With $94,491,654 that state's volume is down 10%. Montana shows the highest rate of increase, 34%, with a dollar volume of $8,194,907 for the four months. Oregon with $42,555,766 is up 5%; Idaho with $6,944,538 is up 5%; and California with $697,200,917 is up 1%.

Following is a breakdown of building permits issued by several of the major agencies during March.

	DWELLING UNITS		COMMERCIAL & INDUSTRIAL		PUBLIC	
Portland	145	($ 1,619,200)	30	($1,253,735)	4	($ 655,000)
King County	647	(6,452,175)	66	(1,977,417)	5	(718,195)
Seattle	221	(3,385,685)	26	(857,630)	1	(1,350,000)
Tacoma	209	(847,519)	50	(695,498)		
Los Angl. Co.	1655	(19,185,871)	205	(3,963,650)	143	(1,495,340)
Orange County	840	(9,794,217)	35	(736,915)	11	(292,992)
Sacrmnto. Co.	582	(5,082,739)	51	(299,770)	9	(289,080)

A unique feature of the Equitable Building's air-conditioning is 1,180 of these air blending units. There is a blender installed in every perimeter office. The units are connected to the central duct system and they act as independent thermostats delivering conditioned air according to an individual's wants.

Pinched inside a space 11½ inches deep–

Steel ductwork stands rigid air-conditioning test

The 25-story Equitable Building is San Francisco's newest skyscraper and the city's first office building to be completely air-conditioned. The Scott Nelson Company, Mechanical Contractors, had a job on their hands fitting a duct shape in the 11½-inch furred ceiling space. The problem was to fabricate ductwork flat and narrow, yet rigid enough to withstand constant vibration and pulsation. Adding frame reinforcement to the duct was only part of the answer. The rest depended on the selection of the right metal sheet.

The job required metal properly ductile to form sharply angled, tight seams; yet rigid enough to prevent seams from cracking or opening under the stress of high velocity airflow. The Scott Nelson Company selected steel . . . USS Galvanized Steel Sheets for the job . . . and report the USS sheets did a perfect job.

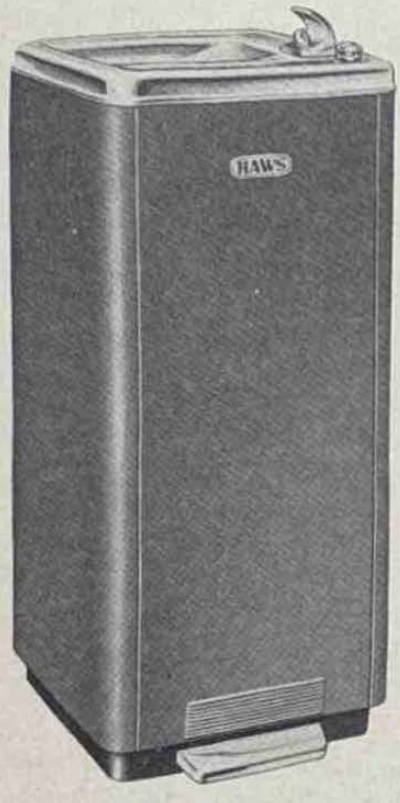
Integration of the arts in architecture

(Continued from page 15)



portunities as a challenge. Industrial, commercial, educational and recreational buildings all arouse his enthusiasm and call forth exciting, practical solutions. Since commercial and industrial structures do have a shorter lift, the art should be conceived with this limitation in mind: inexpensive, transportable expressions that can be redesigned as necessary. Educational recreational and religious buildings, however, require statements projected with vigor and insight. Contemporary living can be reflected with an impact that will increase the civic value of a structure as it ages. Thematic material visualizing what our way of life means and where it is leading can produce an integrated architecture of **lasting** interest.

As our society moves forward, opportunities for spiritual rejuvenation through self-evaluation must be created. Our timidity will be conquered if we realize that within our power to see ourselves honestly lies the greatness of our democracy. With new mediums at his command and a sense of historical purpose to direct his efforts, the architectural artist can create buildings that will stand as an inspiring revelation of our past and as a testament to our faith in the future. The roll of the artist is developing as the architect grows. No longer is he thought of as a specialist, but as a broad creative personality, capable of contributions vital to the healthy growth of the building professions.

True integration can only return when the architect and artist sit down to break honest bread together and when the architect insists that the artist be capable of executing every step of his work, since personal command of technique is the only way creativity can be evolved. As John Steinbeck recently wrote, "People need responsibility. They resist assuming it, but they cannot get along without it. Man is a double thing . . . a group animal and at the same time an individual. And he cannot successfully be the second until he has fulfilled the first."

HAWS
ELECTRIC
WATER
COOLERS!

Add beauty and convenience to your interior plan! Specify HAWS Coolers—designed in smooth, functional lines that complement today's architecture—with custom-styled cabinets, lifetime stainless steel tops, chrome trim. They are ideal for school, office, restaurant or cafeteria, commercial, industrial and institutional application.

No complex planning is necessary! HAWS Electric Water Coolers merely require an electric outlet, water source and drain. There are many models for many needs...bubbler faucets, bottle cooler types, fill-glass faucets...all with HAWS complete sanitation features.

HAWS also features complete lines of drinking fountains and Emergency Eye-Wash Fountains...also **KRAMER Flush Valves** for every make plumbing fixture that requires an automatic closing valve.

For full information and specifications, see the HAWS Catalog. Write today!

Steel framed houses get push in Far West

Architects and engineers in the West are showing increased interest in the use of light structural steel in the framework of new single-family dwellings. This is indicated, at least, by an increasing number of experimental projects being developed in this area.

One such project is the X-100 research house which Eichler Homes of Palo Alto, Calif., is building in San Mateo Highlands for the primary purpose of showing the public what may be expected in contemporary home design within a few years. A. Quincy Jones, AIA, and Frederick E. Emmons, AIA, are the architects for the home, scheduled for public viewing about September 1. Color coordination is under the direction of Matt Kahn of the fine arts department of Stanford University.

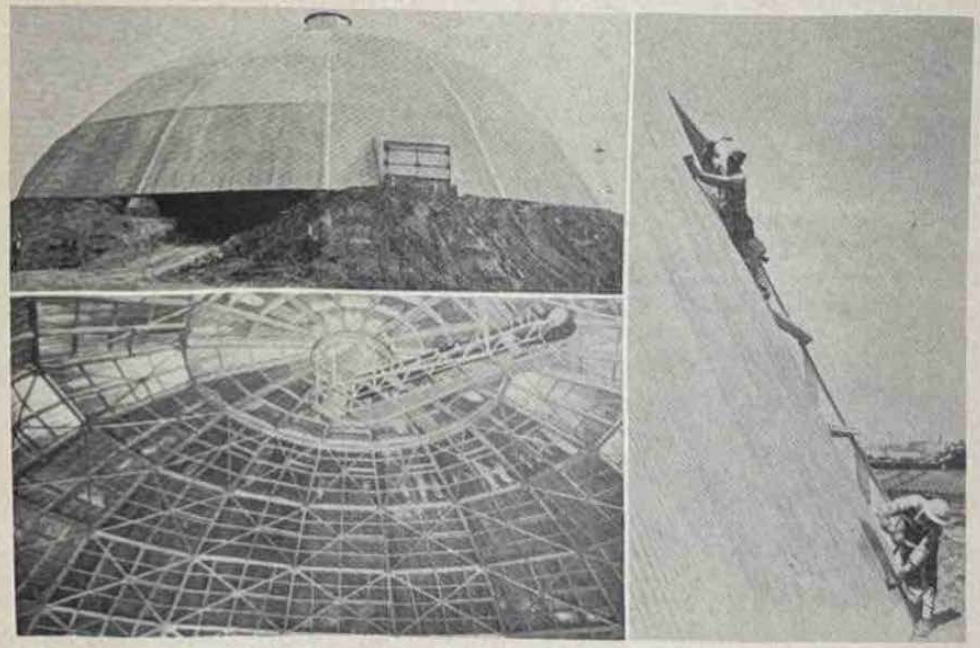
There seems to be a reasonable possibility that steel framing for single-family units can become competitive costwise with conventional material according to Ralph W. Seely, vice president of sales for U. S. Steel's Columbia-Geneva Division.

"Steel permits the use of slim structural members and longer spans," Seely points out, "providing greater footage of usable space, permitting greater freedom in floor plan and design and allowing a broader use of materials for walls and roofs."

Corrugated aluminum sheeting applied on steel frame without scaffolding

Sheeting impaled on aluminum studs that had been end welded to the frame cuts labor cost in half on Long Beach job

When a new type of dome-shaped storage warehouse, without interior bracing, was built recently for Kaiser Gypsum Co. in Long Beach, Calif., the corrugated aluminum sheeting was secured with end-welded composite aluminum Rivweld studs at an estimated labor cost saving of at least 50%.



Actually, stud welding was the only fastening method considered by the designers, Kaiser Engineers, Oakland, because of its speed and the fact that it could be accomplished without interior scaffolding. Operators with portable Nelson stud welding guns simply climbed over the steel framework to which the studs were welded. Use of other types of fasteners requiring scaffolding would have doubled labor costs, according to M. M. Walker, superintendent for Mitchell Steel Inc., Torrance, Calif., who installed the corrugated aluminum sheathing.

Twelve thousand Nelson composite aluminum Rivweld studs were used on the job. Two Nelson stud welding guns were employed, operating off a single Nelwelder battery power unit. Templates established stud locations. The aluminum sheeting was impaled over the studs with rubber hammers and the ends of the studs were then upset.

Since the portions of the composite studs that come in contact with the sheeting are aluminum, there will be no electrolytic action between the sheeting and the steel building framework. Appearance of the building was improved because the studs are almost invisible.

The 35,000-ton capacity rock storage building is part of an expansion costing about $3 million, which began in March 1955. It increased the productive capacity of the Long Beach plant to 210 million square feet of gypsum board and lath and 50,000 tons of plaster annually.

The plant supplies the 19 counties of southern California, southern Nevada and Arizona and employs 150 persons, with an annual payroll of more than $750,000.

KAISER GYPSUM'S unique new bulk storage warehouse at Long Beach, top, and the steel framing of interior, bottom, to which Rivweld aluminum studs were welded by Nelson guns. Corrugated aluminum sheeting then was impaled on the studs and studs were upset. Construction without scaffold saved 50% of labor costs.

Lightest handful of concrete masonry material...

CASCADE PUMICE

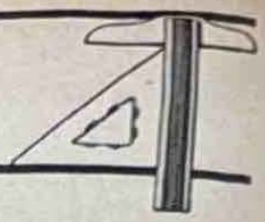
The extra light weight of Cascade Pumice Concrete saves you money on handling costs, speeds up building. When weight is a factor, always specify Cascade Pumice Concrete for best results.

Cascade Pumice Concrete gives you tops in:

LIGHT WEIGHT
STRENGTH
FIRE RESISTANCE
HIGH INSULATION VALUE

Insist on A.S.T.M. specs.:

When specifying ANY concrete masonry demand blocks "in accordance with ASTM specs., on adequate foundation." Also Bond Beam Blocks, used where needed, end masonry problems.



WILLIAMSON Cascade PUMICE

Pacific Architect and Builder

T-square talk

about architects • planners • engineers

NEW PARTNERSHIP: Walter Wagner, AIA of Fresno has announced the formation of a partnership with six key men who have been associated with his office for the past 10 years. The firm is now known as Walter Wagner & Partners, architects and engineers.

Partners of Wagner, who also is a civil engineer, are Paul Harris, AIA; James A. Blayney, mechanical and electrical engineer; Henry DuPertuis, architect and manager of the firm's Merced office; Paul Schoenwald, architect; Will Thomas, architect; and Harry Bode.

The firm is one of the largest in the San Joaquin Valley, specializing in the design of public schools.

Gordon N. Johnston, AIA, and Robert W. Evans, AIA, have announced their association for the practice of architecture under the firm name of Johnston & Evans, Associates, in the Washington Building, Tacoma (BRoadway 4768).

NEW ASSOCIATES: Two project directors, Harry Saunders and Kaz Nomura, have been made associates in the architectural firm of A. Quincy Jones & Frederick E. Emmons, Los Angeles. Saunders is a graduate of Texas A&M College, Nomura of the University of Southern California. Both have served with the firm for several years. Emiel Becsky continues as associate architect.

ON THE MOVE: Raymond Kermit Thompson, AIA, and Polly Povey Thompson, AIA, are occupying the home and office at 1728 N.W. 32nd Ave., Portland, of Herman Brookman, FAIA, who left in April to spend a year traveling in Europe. The Thompsons were formerly located in the George White Veterans Building.

NEW OFFICE: Neil Farnham, formerly on the staff of Hollis Johnston and of Stanton & Johnston, has opened his own office in his home at 2850 N.W. Westover Road, Portland. Farnham, an associate member of the Oregon chapter, AIA, is a graduate of the University of Oregon.

PRIVATE PRACTICE: Thomas M. I. Leake, AIA, of Boise has severed his contract with Boise Payette Lumber Co. to devote full time to his private architectural practice. While serving as consultant architect and product development director for the lumber firm the past two years, Leake has engaged in private work at 1321 Vista Ave., where he will continue to occupy offices.

Rodney James Grider, who joined Leake's staff upon graduation from the University of Idaho in 1953, has been named associate and designer in the new endeavor.

Leake has been active in affairs of the Northwest Regional Council, AIA, and has served as an officer of the Idaho chapter, of which Grider also is a member.

DIED: Robert L. Tidball, 44, structural and mechanical engineer, died May 1, in Veterans Hospital in Portland after a long illness. He was a graduate of Oregon State College. Before opening his own firm in 1946, Tidball served in the Navy and was in the power design section of the Corps of Engineers.

Albert A. Geiser, 64, retired architect, died May 4 in Seattle, where he had designed many commercial buildings and residences. Born in Chicago, he had lived in the Northwest since 1907.

Homer B. Mathes, architect and lifetime resident of Bellingham, Wash., passed away April 27 at the age of 51.

HONOR PROF: University of Idaho students of Ted J. Pritchard, who heads the department of architecture, presented him with a wrist watch, marking his 30 years of teaching at the Moscow institution.

Paul L. Blanton of Pasco, Wash., president of the student AIA chapter, made the presentation during the department's annual dinner. Principal speaker was Carroll Martell, AIA, of Spokane, who discussed "Education of an Architect."

Blanton and Paul L. Duffy shared first place honors in the C. F. Hummel prize awards, with William E. Ostrander taking third. An elementary school was the subject of this year's design competition, sponsored by the architectural firm of Hummel, Hummel & Jones and Chester Shawver, associate, of Boise.

AWARDS: Robert P. Darlington of Pullman, Wash., on a year's leave of absence from Washington State College where he is an instructor in architectural engineering, won the $2,500 third prize in a nationwide competition for new design and construction ideas for aluminum curtain wall buildings. Darlington is now working on his MA degree at the University of Illinois.

Among the 15 honorable mention award winners in the contest sponsored by Aluminum Company of America and the National Association of Architectural Metal Manufacturers were three West Coast entrants: Wendell H. Lovett, AIA, Bellevue, Wash.; Dike Nagano, Culver City, Calif.; and Richard Blanchard, San Francisco.

TO HONORARY: The two West Coast chapters of Tau Sigma Delta, scholastic honorary in architecture and allied arts, have announced election of new members.

Iota chapter at the University of Washington has initiated Richard Alden, Alvin Dreyer, Ching-Hwa Hsiao, Dean Latourell, Richard Lundstrom, John K. Miller, Joseph Onuma, Gerard R. Torrence, Barry Upson and David Wright.

New members of the Lambda chapter at the University of Southern California are Sheldon B. Caris, Loch Crane, Charles R. Erickson, Harry Gittelson, John A. Rinaldi and Paul S. Wuesthoff.

Lambda chapter marks its 25th anniversary this year while Iota chapter was founded in 1924.

SAN SALVADOR PROJECT: Raymond R. Shaw, AIA, and William D. Coffey, structural engineer, both of Los Angeles, have been selected by the Banco Hipotecario de El Salvador to design and supervise construction of its new $2 million head office building, the first multistoried steel frame structure to be erected in San Salvador. With 95,000 sq. ft. of floor space, it will comprise a basement and three or four floors above.

Correction: The item in PA&B for March concerning the move of Jesse W. Green, AIA, to 3907 Duquesne Ave., Culver City, Calif., was incomplete since it failed to mention that he joined forces with Thomas B. McGhee.

AIA OFFICE MOVES

The Northern California chapter, AIA, has expanded and moved into new offices at 47 Kearny St. in San Francisco. There will be two telephones: DOuglas 2-7397 and DOuglas 2-3041.

Role of architectural school outlined by director

A worthy school does not teach architecture but creates a climate into which students come for direction, inspiration and guidance, according to Arthur P. Herrman, FAIA, director of the School of Architecture, University of Washington.

He addressed a group of Tacoma high school students who were guests of the Southwest Washington chapter, AIA, at its monthly meeting April 24.

"Architecture is not only a science of building," Director Herrman explained. "Vitruvius defined it as a combination of commodity, firmness and delight. To redefine it, architecture is primarily emotion—the emotion of the designer expressed in materials with the resultant effect on the emotion of the observer." Other excerpts from his talk:

"The architect is born not made. An architectural climate is created for five years, the student's perception sharpened, his imagination and sensitivity developed, his taste and judgment formed. These are fundamentals gained; the rest is his.

"The 'complete' architect is not trained in five years. The danger in architectural training today is that such close association is forced in school that the new architect is frustrated in the outside world.

"The prospective architect must possess the qualities of fondness for artistic and spiritual things. He must know how to draw and to communicate graphically and he must know people. If he possesses these things, he has great opportunity for self-expression. Since the architect has a responsibility to society, he must discipline himself to the practical aspects as compared to the designer who designs, then rationalizes. Without technical skill and imagination, the man will fail as an architect.

"He must then communicate on the level of society in which he works. He must know many things—politics and community problems, for instance—and must gain people's respect and confidence. The physician deals with one individual plus mysticism; the architect deals with one individual plus society. Danger lies in too much technical training without a citizen's responsibility."

Plug for Aspen Conference

As an opening feature of the evening's program, Gerald Davis, marketing manager of Heidelberg Brewing Co., presented a color film of the fifth International Design Conference held at Aspen, Colo., in the summer of 1955. Stating that the 1956 sessions will be devoted to "Ideas on the Future and Design," he explained that the conference stresses the importance of contact between all fields of design and makes possible discussion and study of all pertinent problems occurring in each field.

TACOMA AREA ARCHITECTS and student guests meet in Scotty's Caravan Inn to hear Arthur P. Herrman (seated, center of photo), director of the School of Architecture, University of Washington.

Cut hours of travel time to minutes...FLY WCA!

Materials – Products – Tools

and the latest literature

ROOFING STONES: Coarse aggregate roofing stones for low pitch, built-up roofs are now available in a range of 10 colors: light green, dark green, bronze, brown, blue, red, coral, silvertone, sea green and rose.

Colors are fired on the aggregate. Uniform gradation allows the pebble-size stones—called Ceramic-Color—to pack tightly, producing a shadow effect and appearance of depth.

(Item No. 1)

CLOSET DOOR: To resist warping, Metaloc sliding closet doors are completely vapor sealed internally and have built-in expansion seams to take up any expansion or contraction.

Faces of the doors are Masonite Duolux, three-ply mahogany or a combination of the two. They are metal edged and framed. Doors are delivered ready for installation with complete steel track, nylon rollers, pulls and floor guide.

(Item No. 2)

FASTENING TOOL: Ramset this month will begin marketing a fastening tool developed to handle many jobs between the light duty hammer and nail and heavy duty, powder actuated fastening tool.

With Shure-Set a worker can manually drive a fastener through ¼-in. steel. It seats a specially constructed fastener into a variety of materials, such as concrete, concrete block, cinder block, brick and steel. It can be used where anchors, toggle bolts, expansion shields and concrete nails were formerly used and ends the tedious job of star drilling or the aggravating job of pounding at stubborn concrete nails.

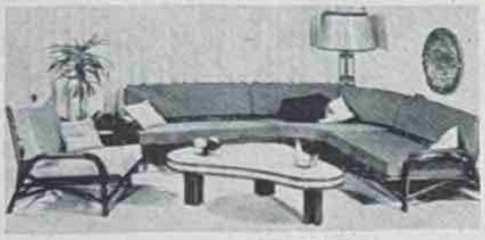
(Item No. 3)

PLASTIC PANELS: Women will be particularly pleased with a Fiberglas reinforced plastic sheet inlaid with coarsely woven natural fabrics whose reflected light does not change the colors of cosmetics, flesh or clothing.

The Rend-O-Lite flat and corrugated sheets, manufactured by Commodore Industries, contain jute netting, natural burlap, bleached burlap, Osnaburg cloth or Philippine Grass.

(Item No. 4)

WEATHERSEAL: A plastic backed, woven wool pile weatherseal that will not mat or take a set no matter how many times it is pounded has been developed by Schlegel. The stripping is impervious to Arctic cold, summer heat or strong cleaning solutions and will not corrode, rot or get moldy.



A selection of 90 extruded shapes is available for use on prime and secondary windows of all types and on all styles of doors or sliding panels, including plate glass.

(Item No. 5)

PANEL SAW: For easy, one-man cutting of large plywood, Masonite or plastic panels, Richard C. Bennett offers the two-way panel saw mounted on a turntable to permit either ripping or crosscutting. The saw runs between tubular steel tracks on a sturdy wood frame. The unit measures 12 ft. long, 6 ft. 7 in. high and 24 in. wide.

(Item No. 6)

FURNITURE: An original group of casual furniture with what the designer calls authentic Nordic ancestry

NORDIC FURNITURE

has been added to the Ritts line.

The Scandia group features hazelnut finish, a touch of woven cane, ash marproof plastic table tops, foam rubber cushions and imported upholstery designs. Included are Viking chairs, two-piece sectionals, curved corner units, dining groups, bar and bar stools and other pieces.

(Item No. 7)

TROFFER: To save space for air conditioning ducts, piping, etc., Lighting Products is offering Thin-Lite troffers that require only 2⅞ in. depth in the ceiling.

Three models are available: the one-piece polystyrene louver panel, the Corning No. 70 low brightness flat glass lens and a formed acrylic diffuser.

(Item No. 8)

DECORATIVE BOARD: Using "even the squeal," Pack River Tree Farm Products has come up with a distinctive waferboard for interior use which combines the appearance of a three-dimensional pattern with good strength and stability.

Tenex is made of thin wood wafers bonded under heat and pressure with chemical resin to make a solid wood board ¼-in. thick. It uses debarked slabs and edgings that have all too often ended up in the sawmill burner.

(Item No. 9)

PLYWOOD FORMS: Eight to twelve re-uses of plywood forms before recoating is possible with a protective finish recently developed by L. Sonneborn.

A blend of synthetic resins in fast-evaporating solvents, Form-Saver permits clean, smooth stripping of the forms with no pitting of the concrete surface or transference of raised grain from forms to masonry.

(Item No. 10)

FASTENER: For faster assembly and better appearance of insulated metal sandwich and other curtain walls, Nelson Stud Welding has developed a stud welded construction fastener with an aluminum cap.

Setlock employs a steel shoulder type stud with serrated tip which is end welded to structural girts with the Nelson stud welding gun. The aluminum cap is placed over the serrated tip of the stud and driven into position with a tool which causes the aluminum to grip the serrations.

(Item No. 11)

SCAFFOLDING: Superior Scaffold is marketing a Double-Grip stud scaffold jack which can be quickly hung, without nails, on any exposed stud to provide instant scaffolding at low cost.

(Item No. 12)

GLASS DOORWALL: An all-aluminum sliding glass doorwall designed specifically for the volume builder is offered by Modern Specialties.

Mass produced at low cost, the Panorama offers twin-seal silicoated mohair pile weatherstripping, easy, noise-free operation, easy installation and a wide range of sizes.

(Item No. 13)

LOW COST DOORWALL

Latest Handbooks, Manuals and Literature

Yours for the Asking

STEEL BUILDING PANELS: Detroit Steel's latest catalog on Fenestra steel and aluminum building panels is packed with technical information, installation drawings and excellent photographs of completed buildings.

Material covers panels for long span structural floors, acoustically treated roofs and ceilings, the TAC system for reinforced concrete, fluted wall panel, fire partition, steel roof decks and reinforcing floor forms.

(Item No. 14)

ARCHITECTURAL PORCELAIN: Drawings give typical details for porcelain panels for curtain wall construction and facing in a 16-page brochure offered by Davidson Enamel Products. The brochure also includes four pages of illustrations showing schools, medical buildings, banks and other types of structures where the panels were used.

(Item No. 15)

GLASS BLOCK: Various glass block patterns manufactured by Kimble Glass, an Owens-Illinois subsidiary, are pictured and described in a catalog recently published by the firm.

Included are instructions and construction details for both large and small size panel installations in steel, wood frame, brick or brick veneer construction. The catalog also has a convenient table of dimensions, a section on how to calculate illumination and brightness, and tables on solar heat control and fuel savings.

(Item No. 16)

RADIANT HEATING: A. M. Byers has prepared a report featuring sketches of various types of radiant heating construction arranged in order of preference. Each sketch shows the position of the wrought iron pipe coils in the concrete slab and relation of coils and slab to the structural features of both on grade and above grade construction.

A one-page digest of recommendations discusses floor surfacing, heating slab, radiant heating coils, insulation base or fill, waterproof membrane and support brackets for radiant heating coils.

(Item No. 17)

LIGHTING SYSTEM: Wakefield's Sigma type architectural unit, a system of lighting and other services combined with movable partitions on 4-ft. modules, is featured in an eight-page bulletin. Drawings are used almost entirely to tell the story.

Text lists such advantages as maintenance of high illumination with low source brightness, control of brightness ratios, virtual elimination of shadows, reduction of specular reflection and flexibility.

(Item No. 18)

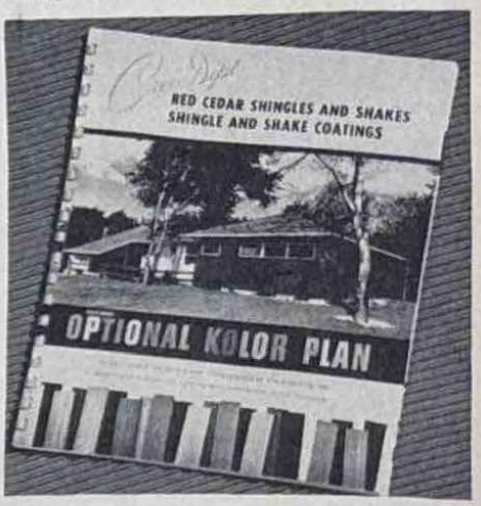
AUTOMATIC ELEVATOR: The elevator with the electronic brain, Autotronic, which automatically adjusts itself to peak load requirements, is explained in a well illustrated brochure put out by Otis. Drawings, charts and text are used to simplify, as much as possible, a description of the system for handling basic traffic patterns and detecting and reacting to traffic changes, either by an individual car or with an entire bank of attendantless elevators.

(Item No. 19)

WINDOWS: Complete stock sizes of Calco aluminum casement windows are given in a recent brochure produced by the new California firm. It includes installation detail drawings for brick veneer, solid brick and concrete block.

(Item No. 20)

AIR CONDITIONING: A two-page mean temperature difference table is just one of many tables and graphs contained in the 40-page engineering manual on air conditioning put out by Drayer-Hanson. The publication includes data on the company's ceiling suspended and floor mounted series of air handling units, plus a great deal of general interest information, such as recommended fan outlet velocities for residential, church, school classroom and other types of installations.



(Item No. 21)

CERAMIC TILE: Gladding, McBean and W. P. Fuller have joined forces to produce a decorating idea called California Coordinates that matches glazed ceramic tile and handprint wallpaper.

A full-color brochure shows off the five basic designs in 11 color combinations developed specifically for western homes.

(Item No. 22)

RED CEDAR SHINGLES: To provide greater flexibility in the selection of shingles, shakes and colors, Creo-Dipt

FLEXIBLE COLOR PLAN

has expanded its Kolor plan under which the factory primed shakes or shingles are sold as a unit with Fynal-Kote, a heavy bodied linseed oil base finish coating.

The plan is explained in a 40-page bulletin which also includes detailed information on the eight styles of shingles and shakes sold with Fynal-Kote, a 22-color chart, installation data and a two-page illustrated discussion on what happens when shingles are applied improperly.

(Item No. 23)

OFFICE PARTITIONS: Arnot Partition-ettes, Office-ettes and modular furniture are shown in some of the innumerable possible varieties in a 16-page brochure. The line features work stations that provide privacy without loss of valuable space and that are easily rearranged when necessary. Furniture is designed to cater to specific needs of each worker.

The booklet devotes space to construction and assembly features and shows a complete office layout for supervisory and clerical staffs.

Seattle meeting scheduled for lumber producers

More than 100 leaders of the nation's lumber industry will meet in Seattle May 28-30 to consider ways of improving their products and services and otherwise strengthening their sales position against competitive materials. The occasion will be the 1956 spring meeting of National Lumber Manufacturers Association.

Among the speakers scheduled to address the lumber meeting at the Olympic Hotel are Reno Odlin, president, Puget Sound National Bank, Tacoma; H. R. Northup, executive vice president, National Retail Lumber Dealers Association, Washington, D.C.; Gilbert E. Morris, superintendent of building, Los Angeles, and Albert Balch, Seattle home builder.

Odlin will address a luncheon meeting of lumber association directors and committee members, May 28. Northup, Morris and Balch will participate in a panel discussion the same day on the subject, "A Long Look at Lumber's Future."

A highlight of the meeting will be a field trip of logging and sawmill operations of Weyerhaeuser Timber Co., at Everett, Wash., May 29.

• **Lionel J. Tilson** of San Jose and three others were killed instantly early in April in the crash of a single-engine Beechcraft Bonanza being piloted by the 41-year-old home builder. His wife Ann, 40; their daughter Judith, 15; and Vern S. Jopling, 50, Tilson's field manager, also died when the plane apparently lost a wing in a sudden, violent hailstorm and crashed, bursting into flames.

• **Champion bricklayer apprentice** of 1956 is Robert G. Neasham, 22-year-old apprentice from Santa Clara, Calif., who won his title at a six-day elimination contest held last month at the Union-Industries Show in Seattle.

Neasham won out over 37 other apprentices from the United States and Canada who participated in the eighth annual competition sponsored by the Bricklayers, Masons and Plasterers International Union.

• **Midwood Construction Co.** will start construction soon of the first homes in what is expected to be the largest single housing subdivision ever built in Orange County, Calif. the 400-acre site in the Long Beach-Garden Grove area, will include 1700 houses, a complete shopping center and other buildings at a cost of some $24 million.

• **The California Drywall Contractors Association** has been organized at Oakland by delegates from all three of the state's reigonal groups. New offices will be established at 608 S. Hill St., Los Angeles. Officers are Wayne Vaughn, Los Angeles, president; Paul Johnson, Oakland, first vice president; Hugh Hathcoat, Concord, second vice president; Fred O'Haver, San Jose, secretary; and Earl Kirby, Los Angeles, treasurer.

• **T Steel Corp.** of Seattle, manufacturer of long-span steel roof decking, has opened its Los Angeles office at 429 S. Western Ave. The new office is headed by John J. Miles, structural engineer, formerly with Young, Richardson, Carleton & Detlie, architects-engineers of Seattle.

• **Fenestra, Inc.**, formerly Detroit Steel Products Co., has opened its Portland branch offices at 337 Pittock Block, with Quenton Coble as sales manager.

Stockholders adopted the new com-

Built-in telephone outlets are a big selling point in today's home

says H. J. HARLOW, Jr., Harlow Construction Company, Sacramento, California

Homes built by the Harlow Construction Company have telephone outlets located for maximum convenience—in rooms where the family spends a lot of time. Concealed telephone wiring is another feature that adds to the livability and value of Harlow homes.

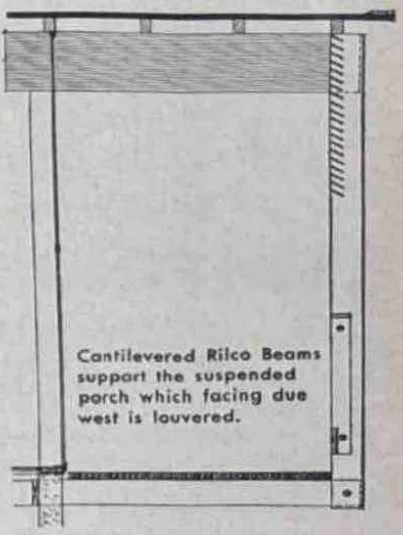
To successful builders like Mr. Harlow, who are setting living standards in the Pacific West, complete telephone planning is as basic as adequate electrical wiring. Pacific Telephone is always ready to help you plan built-in telephone facilities. Just call us and ask for our *free* Architects and Builders Service.

Specify built-in telephone facilities —a sign of good planning

Pacific Telephone

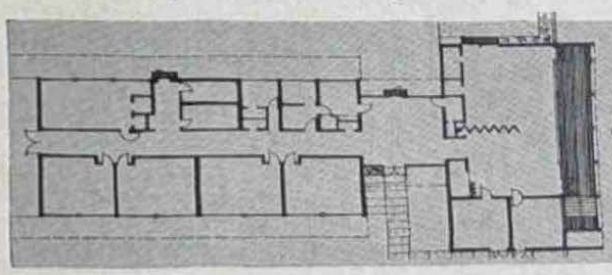
WINNER 1955
Award of Merit

Architects, Belluschi and Skidmore, Owings & Merrill.



Consulting Structural Engineer, Cooper and Rose.

Rilco Beamed School Wins American Association of School Administrators Award



We don't know what part Rilco Laminated Beams played in winning the 1955 Award of Merit for the Tucker-Maxon School in Portland, Oregon. They must, however, have been instrumental in helping the architect to carry out this practical award winning design.

For graceful Rilco arches, beautiful beams, rugged trusses and four inch insulating cedar deck offer the warmth that only wood can give—warmth to the eye and warmth to the touch. And because each member is tailored to specification, Rilco imposes no design limitations.

Today Rilco Laminated Wood Members provide fire safety with less bulk to schools, churches, homes, factories and commercial buildings helping to fulfill new concepts of practical design for the architect. Rilco experience can be yours for the asking.

Cantilevered Rilco Beams support the suspended porch which facing due west is louvered.

Rilco Laminated Beams support roof over the preschool and dining area.

RILCO

pany name at their annual meeting in Detroit in March. President H. D. Palmer explained that "the name Fenestra, the Latin word for window, has been inseparably identified with our company since 1907 when he entered the steel window field."

Incorporated in 1904 to make leaf springs for the then infant automobile industry, the company acquired in 1907 from an English firm the exclusive patent rights to manufacture and market the Fenestra window in the United States. Today's products which bear the Fenestra label also include wall, floor and ceiling panels, exterior and interior metal doors and roof deck.

• **Unit Masonry Association** of Seattle now has a full-time manager, Carl Robertson, with offices at 2413 Western Ave. He has been associated with a number of newspapers and trade publications, including Pacific Architect and Builder.

Founded in Seattle in 1953, the association has spread to many parts of the country and includes all elements of the masonry construction industry.

• **Pomona Tile Manufacturing Co.** has appointed Richard L. Scherbacher as advertising and promotion manager, succeeding Robert Rexroad who has been promoted to administrative manager.

Upon opening its new $200,000 administrative building addition at 629 La Brea, Los Angeles, last month, Pomona announced plans to increase production substantially, despite a "slight dip" anticipated in 1956 home construction.

• **Concrete Products Association of Washington** awarded top honors to Graystone of Olympia, Inc., and Bellingham Builders Supply in submitting heavy and lightweight aggregate blocks respectively in a competition. Each unit was judged for dimensional tolerance, symmetry, overall appearance, sharpness of detail and uniformity of color.

The jurors were Barrie Branch, AIA, of Bremerton; James Lindstrom, Superior Concrete Products Co., Seattle; and E. J. Dale, Portland Cement Association, Seattle.

• **Nudor Manufacturing Corp.** announces expansion plans that will increase production at the North Hollywood, Calif., plant by 100%. The new building is the third addition at the Nudor plant in the past six years.

• **Northwest Hardwood Association** adopted grading rules on Pacific Coast alder and maple logs and shop lumber at its quarterly meeting in Vancouver, B.C., April 14.

The new rules will govern the measurement, sale and purchase of hardwoods by association members and are designed to set up standards that will insure a higher quality product, comments president E. J. Nist. Printed copies may be obtained from the association's headquarters, 3253 Commodore Way, Seattle 99.

A. P. York of Educators Mfg. Co., Tacoma, headed the log rules committee and L. R. Smith of L. R. Smith Hardwood Co., Longview, Wash., the lumber rules committee.

• **Coast Aluminum Co.** has begun production of a complete line of residential aluminum casement windows, first in a line of aluminum building products planned by the new Gardena, Calif., firm.

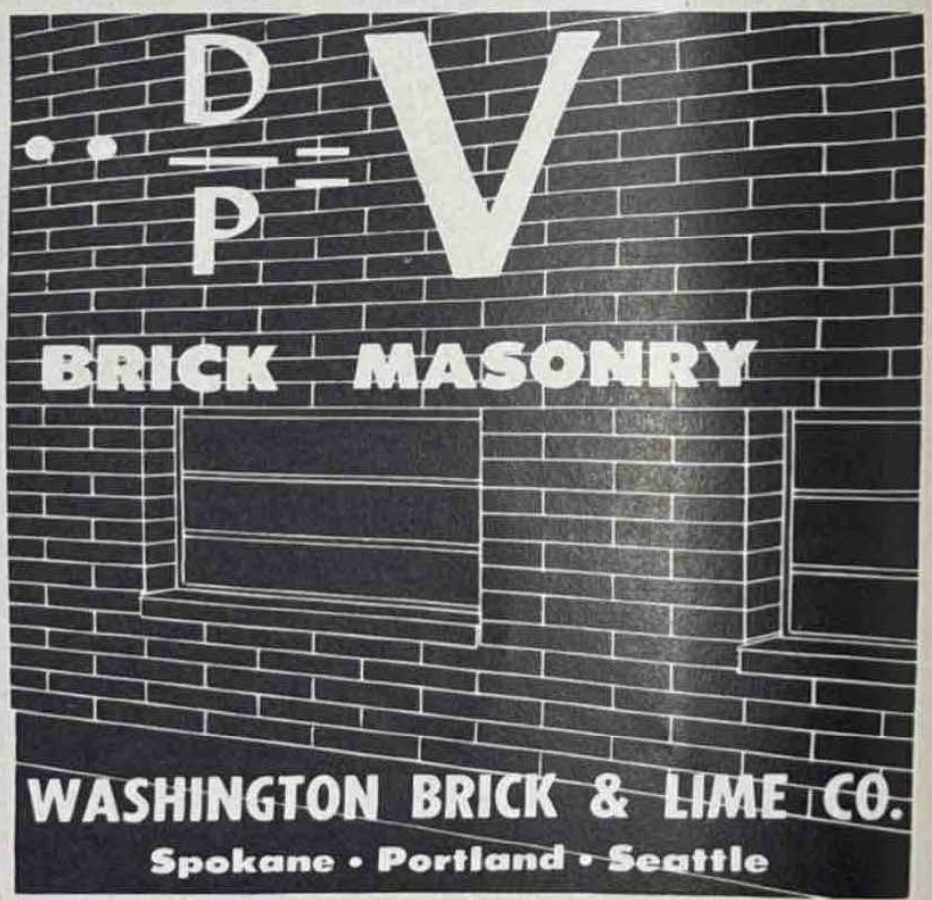
Heading the company are Saul Pick, who has been in the construction supply business the past nine years, and Dave Griffith, who has had 18 years' association with the aluminum industry.

• **Ames Co.**, Hollywood, Calif., has been appointed West Coast representative for E. G. Building Fastners Corp., producer of the Fitsall screwshield.

FORMULA FOR HIGHEST VALUE IN BUILDING

Desirability divided by Price, equals Value.

REINFORCED



FOR + VALUES IN BUILDING

+ 1. Maintenance-free beauty of brick.
+ 2. Optional interior finishes — plaster, panelling, or face brick.
+ 3. Same structural wall at cost comparable to architectural concrete.
+ 4. Less structural steel required.
+ 5. Greater wall height without pilasters.

OREGON

STARTER SCHOOL— Aloha, Ore.

Bond issue for $47,000 approved by School District No. 81, Washington County, clerk, 81 Wheeler Ave., Aloha, for starter unit school. Plans by James C. Gardiner, architect, 3158 S.W. 87th Ave., Portland. Two classrooms, boiler room, storage room, sick room, two lavatories, corridor and paved covered play area. Post and beam construction; solid decking; concrete floor with asphalt tile; aluminum sash; masonry boiler room; hot water convectors. WB 5-12

LIME PLANT— Baker, Ore.
(Estimated cost $1,100,000)

Plans announced by Anthony Brandenthaler, president and owner of Burnt River Lumber Co., 3100 Broadway, for construction of a plant north of Baker for production of chemical grade and hydrated lime, for the newly formed Chemical Lime Co. Plans include erection of two kilns and foundations for two others to allow for expansion. Consulting engineers are Stoyanov & Johnson, 833 N. Shaver, Portland. Construction to be completed by fall. SC 5-8

● SCHOOL ADDITIONS— Beaverton, Ore.

Bids to be opened 8 p.m., May 31, by School District No. 57-J, Washington County, Calvin R. Evans, clerk, Cedar Hills School, Cedar Hills Blvd. and Park Way, Cedar Hills, Beaverton, for additions to the school. Plans with Stokes & Allyn, architects, 205 Hughes Bldg., Portland. $25 deposit. Certified check, cashier's check or bid bond 5%.

One-story, 63'x108' addition with five classrooms and toilets; another one-story and basement addition, 40½'x63' with two classrooms upstairs, and board room, offices and work room in basement. Reinforced concrete construction; wood joist first floor; wood joist roofs with built-up roofing; bat insulation between joists; cement stucco exterior finish; gypsum board interior finish; steel sash; asphalt tile flooring; acoustical tile ceilings; unit ventilators with heat from existing boilers; concentric ring lighting fixtures. WB 5-11. Previous report 2-4

COLLEGE— Bend, Ore.

Property granted to Central Oregon College Foundation, William E. Miller, president, 1540 W. 5th, Bend, by School Board, District Office, Wall and Kansas Streets, Bend, for construction as planned in the college building program. Plans include combination library and student union building, liberal arts building, science hall, museum. Five acres allocated to the college are in northwest corner of the new high school area. Grounds bounded on the west by E. 5th St., on the north by E. Emerson Ave., on the east by E. 7th St., and on the south by E. Elden St. and high school. SC 5-3

● TWO GRADE SCHOOLS— Burns, Ore.

Bids to be opened 8 p.m., June 1, by Harney County School District No. 501-C, Mildred L. Mayo, clerk, superintendent's office, Burns, Ore., for the Fillmore St. and Washington St. grade school buildings. Separate or combination bids. Plans with Freeman, Hayslip, Tuft & Hewlett, architects, 2040 S.W. Third Ave., Portland. $25 deposit. Certified check, cashier's check or bid bond 5%. Previous bid call was cancelled.

Each school to have four classroms, multi-purpose room, health room, kitchen and teachers' room. Fillmore school will also have eating area in multi-purpose room. Concrete slab floors; post and laminated beam construction; beveled cedar exterior siding; aluminum or steel sash; built-up roofing; asphalt tile flooring; ceramic tile in toilets; gypsum board upper walls; plywood wainscots; acoustical tile ceilings; fluorescent lighting; radiant heating in floors. WB 5-12. Previous report 3-29

★ GRADE SCHOOL— Canyonville, Ore.

Award by School District No. 8, Douglas County, Mrs. Helen Altree, clerk, Canyonville, Ore., for new grade school at Canyonville. Plans by Freeman, Hayslip, Tuft & Hewlett, 2040 S.W. 3rd Ave., Portland. AWARD: S. Ferche, P.O. Box 542, Roseburg, $100,756. 2ND LOW: Clyde Hamilton, 57 N.E. "A" St., Grants Pass, $101,195. 3RD LOW: Hampton C. Platt, P.O. Box 27, Salem, $102,500. Bids opened May 8. WB 5-15. Previous report 4-24

★ SCIENCE BUILDING, DORMITORY— Corvallis, Ore.

Awards by Oregon State Board of Higher Education, Earl M. Pallett, secretary, for the Agricultural and Biological Science Building, including utility tunnel system and the men's dormitory, Units A and B, and cafeteria at Oregon State College, Corvallis. Plans by Burns, Bear, McNeil & Schneider, architects, 2940 S.E. Belmont St., Portland. AWARDS — SCIENCE BLDG. — GENERAL: Ross B. Hammond Co., Box 3901, Portland, $1,104,597. MECHANICAL: Buchanan Co., 1518 N.E. Killingsworth St., $337,787. ELECTRICAL: Watco Electric Co., 4715 S.W. Macadam Ave., $117,551. LABORATORY EQUIPMENT: Weber Showcase & Fixture Co., Los Angeles, $144,000. DORMITORY-CAFETERIA — GENERAL: Ross B. Hammond Co., $1,446,798. MECHANICAL: Lord Bros., 9233 N. Calvert, $314,490. ELECTRICAL: Electric Corporation, P.O. Box 266, Salem, $116,960. STRUCTURAL STEEL: American Steel Warehouse Co., 425 N.E. 9th Ave., $16,507. KITCHEN EQUIPMENT: Losli Sheet Metal Works, 1729 S.W. 1st Ave., $72,145. Of Portland except as noted. Bids for refrigeration system for science building were rejected as too high and will be readvertised. WB 5-16. Preivous report 4-21

★ MEDICAL-DENTAL CLINIC— Eugene, Ore.

Award to John M. Steinmuller, 907 W. 3rd Ave., Eugene, $105,289, by Brothers Investment Co., c/o Percy D. Bentley, architect, U.S. National Bank Bldg., Eugene, for a 15-unit medical-dental clinic to be built on the southwest corner of E. 18th Ave. and Oak St., Eugene.

SP 5-11. Previous report 5-5

▲ SCHOOL ADDITION— Eugene, Ore.

Bids received by School District No. 4, Clarence Hines, superintendent, 275 E. 7th Ave., for a classroom addition to the Santa Clara Elementary School building in Eugene. Plans by John Laurin Reynolds, architects, 264 E. Broadway, Eugene. LOW BIDS: Elson C. Shields Co., 170 Patterson Road, Eugene, $14,830; V. A. Nelson, Route 1, Box 736, Creswell, $15,397; J. M. Steinmuller, Jr., 907 W. 3rd Ave., Eugene, $16,145. Bids opened May 9. DW 5-15

● FIRE STATION— Eugene, Ore.

Bids will be opened 11 a.m., May 28, by Bethel Water & Fire District, 2485 Roosevelt Blvd., Eugene, for construction of a Bethel fire station in Eugene. Plans with Paul Bogen, architect, 858 Pearl St., Eugene.

Two-story 40'x72'; reinforced concrete block construction for first floor, wood frame for second floor; built-up roof; concrete slab floors; glued laminated beams; acoustical tile ceilings; gypsum board walls; vinyl-asbestos tile, ceramic tile; plastic skylights; overhead doors; hot water radiant heating system. DW 5-15

● SCHOOL ADDITIONS— Eugene, Ore.

Bids will be opened 2 p. m., May 28, by Eugene School District No. 4, Clarence Hines, superintendent, 275 E. 7th Ave., Eugene, for classroom and corridor extension to Harris Elementary School, 1150 E. 29th Ave., Eugene, and a seven-classroom addition to Willagillespie Elementary School, 245 Willagillespie Road, Eugene. Plans with Hamlin & Martin, architects, 159 W. 12th Ave., Eugene.

Wood frame construction; concrete slab floor; built-up roof; asphalt and acoustical tile; new boiler to existing hot water heating system in Willagillespie School, connection to existing heating system in Harris School. DW 5-15

RESIDENCE— Gilchrist, Ore.

(Estimated cost $68,000)

Contract negotiated with Duncan Construction Co., Box 1088, Klamath Falls, by Gilchrist Timber Co., Gilchrist, for construction of a residence for Frank R. Gilchrist, president of timber company, in Gilchrist. Plans by Nina Pence, architect, 5241 Alva St., Klamath Falls. Completion date December 1, 1956.

One and a half stories; 4,000 sq. ft.; reinforced concrete footings and foundation; frame walls; pitched rafters; wood windows; drywall and wood panel partitions; wod, linoleum and cork floor finish; drywall and wood paneling ceilings; batt insulation in ceilings and wall. ZZ 5-11

● CHURCH ADDITION— Gresham, Ore.

Bids to be opened at 8 p. m., May 24, by St. Luke's Episcopal Church, Rev. Rene Bozarth, rector, 1205 S.E. Cathey Road, Gresham, for an addition to the church. Plans with Stuart B. Mockford, 723 Washington St., Oregon City.

One-story and daylight basement; includes two Sunday school rooms, toilets; concrete basement; upper story frame with redwood siding; wood sash; composition shingle roofing; asphalt tile flooring; acoustical tile ceiling; dry wall interior finish. WB 5-11

★BUILDING ADDITIONS, ALTERATIONS— Medford, Ore.

Award by Pacific Telephone and Telegraph Co., G. F. Zolling, chief engineer, 509 S.W. Oak St., Portland, for additions and alterations to the North Central Avenue telephone exchange, Medford. Plans by Church, Newberry & Roehr, architects, Kurt P. Schuette, associate, 619 Builders Exchange Bldg., Portland. AWARD: Smith-Phillips Co., 7402 S.W. Macadam Ave., Portland, $247,768. OTHER BIDS: H. Barnhart, 722 Dakota St., Medford, $257,000; Wiley Co. and L. C. McLaughlin, 252 Ridge Road, Ashland (joint venture) $271,400. Bids opened May 9. WB 5-15. Previous report 4-28

For Permanent Insulation that Saves TWO Ways

-- Specify New REFLECTIVE Kimsul

The only insulation which gives both heat-barrier and vapor-barrier savings is the new reflective type Kimsul. Kimsul's aluminum foil backing stops heat loss. Kimsul is a permanent, fire-resistant installation, applied easily and at low cost to walls, floors, attics. Prefabricated in standard sizes, will not sift or settle.

WHITE ALICE FACILITIES— Alaska

Bids will be called soon by Corps of Engineers, Alaska District, district engineers, D-E Bldg., Anchorage, for construction of White Alice Facilities, communications projects at Middleton Island; ENG-95-507-56-53; Sparrevohn, Indian Mountain, Unalakeett, Kodiak, Bethel and Sitkinak, ENG-95-507-56-54. Projects will be advertised for three weeks, but bidders should arrange to view sites, etc., before the time of advertising. Other information may be obtained at the district engineer's office, Anchorage. Plans and specifications of similar (not identical) projects may be examined at the Anchorage or Seattle branch office. Completion about 4 months from date of contract award.

The work at all sites consists of construction of an equipment building of approximately 5,000 sq. ft.; installation of diesel engines and generators; erection of towers and antennae composed of structural steel shapes bolted together, and the erection of a communications cable on a pole line from an existing Air Force Station which is located nearby to the site. The foundations at the site vary. A bench mark will be set for control of all elevation and a base line will be established to control the azimuth sitting of the towers and equipment building. Sparrevohn; in addition to the equipment building will have a dormitory of 5,200 sq. ft. Unalakleet will have a dormitory 4,500 sq. ft., and 10 mi. of road will have to be constructed from the Air Force station to the site before work can be started on the site. This will be done generally by dumping sand and gravel on the tundra and will also have erection of a tower at an Air Force station nearby included in its invitation. Bethel, steel H-piles will be used and steel shapes for the floors, these to be government furnished. GW 5-16

▲SHOP PAINTING— Anchorage, Alaska

●ACCESS ROAD— Yaak, Mont.

Bids will be opened 2 p.m., June 15, by U.S. Air Force, Procurement Office, C. S. Phelps, contracting officer, Geiger Field, Spokane, for repairing access road at the 680th AC&W Squadron in the vicinity of Yaak; IFB 45-614-56-77. Specifications with above office. Bid bond 20%. CE 5-15

WYOMING

★STEAM POWER PLANT—Glenrock, Wyo.
(Estimated cost $22,000,000)

Several contracts have been awarded by Portland General Electric Co., Paul B. McKee, president, Public Service Bldg., Portland, for equipment and other work in connection with a 100,000 kw. steam-electric generating plant to be located 5 miles east of Glenrock on North Platte River. Actual construction is expected to start in fall of 1956. Ebasco Services, Inc., is in charge of design and managing construction. The plant will use an estimated 400,000 tons of coal per year from deposit to be developed by the company immediately north of the plant location. Plant will be modern "outdoor type" installation, with a single large generator. Water from North Platte River will provide water for boilers and for cooling. Estimated cost includes fuel development and transmission line connections. Plant to start operation in fall of 1958. CONTRACTS: Exploration drilling in coal—Morrison-Knudsen Co., Boise; Evitt Drilling Co., Casper, Wyo.; aerial mapping of coal area and plant site—Ryall Engineering Co., Denver; ground topographic mapping of plant site in connection with coal area—Worthington & Lenhart, Casper; consulting geologist—Florent Bailey, Petroleum Engineers Associates, Pasadena, and Wyoming Natural Resources Research Institute, Laramie; 100,000 kw. turbine-generator and related transformers—General Electric Co.; boiler, 1450 psi/1000°/1000°—Babcock & Wilcox; condensor—Ingersoll-Rand; structural steel—Gate City Steel Co., Omaha.

Advertisements for Bids

Advertisements reaching us not later than Wednesday noon will appear the same week.

THE RATE for Advertisements for Bids is 35 cents per line for the first insertion; 25 cents per line for each insertion thereafter.

ELEMENTARY SCHOOL
BIDS CLOSE 8 P.M., MAY 23
Bay Center, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the undersigned at the Bay Center Elementary School Building, Bay Center, Washington, until 8:00 p.m. on May 23, 1956 for the construction of an elementary school building for Bay Center School District No. 22, Bay Center, Washington. The building consists of four classrooms, a book room, office, boys' and girls' toilet rooms, storage rooms, janitor and boiler room, kitchen, and multipurpose unit including stage and storage room; employing tilt-up reinforced concrete construction. Combined bids will be received for general construction, plumbing and heating, and electrical. Plans and specifications may be obtained from the office of Charles A. Baylon, Architect, 912 Elliott Avenue West, Seattle 99, Washington, upon deposit of $25.00 which sum will be returned to the bidder provided plans are returned in good condition with submitted bid, or provided plans are returned within five (5) days after issue if no bid is submitted. Plans and specifications may be examined at the office of Charles A. Baylon and Associates at the above address.

Each bid shall be accompanied by a certified check, cashier's check, or bid-bond (with authorized surety company as surety) made payable to the Bay Center School District No. 22 in an amount not less than 5% of the basic bid plus alternates. Board of Directors of Bay Center School District No. 22 reserves the right to waive any informalities or irregularities in any bid or in the bidding, or to accept or reject any or all bids. Bid opening shall be public.

No bidder may withdraw his bid after the hour set for the opening thereof or before award of the contract unless said award is delayed for a period exceeding thirty (30) days.

Edwin R. Stearns
Clerk of the Board
Bay Center School District No. 22
Bay Center, Washington

ELEMENTARY SCHOOL
BIDS CLOSE 3 P.M., MAY 29
Enumclaw, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by Mr. Albert Bogdan, Clerk of Board of School, Enumclaw School District No. 216 at the Superintendent's office at the Enumclaw High School, 2222 Porter Street, Enumclaw, Washington, until 3 p.m., Tuesday, May 29th, 1956, for the construction of J. J. Smith Elementary School Building, Enumclaw, Washington, for School District No. 216, Enumclaw, King County, Washington, and will then and there be opened and will be publicly read aloud. Bids received after the time fixed for opening will not be considered.

Specifications, including contract documents, and drawings may be examined at the office of the Architect, William Aitken, 408 Marion Street, Seattle 4, Washington, and at the office of the Superintendent of the Enumclaw School District No. 216, at Enumclaw, Washington, and may be obtained by bona fide bidders at the Architect's office upon deposit of $25.00 for each General Work set and $10.00 for each set of Mechanical and/or Electrical Work. Contractors who hold bidding documents over forty-eight hours shall forfeit deposit if bid is not tendered.

The full amount of the deposit for one set of documents will be refunded to actual bidders upon return of the documents, unmutilated and without marks or annotations, within 3 days after the time set for opening of bids. Other deposits will be refunded with deductions for the actual cost of reproducing the documents.

Bidders shall submit proposals for the General, Plumbing and Heating, and Electrical Work separately. Each bid must be accompanied by a certified check, cashier's check, or bid bond, in an amount not less than 5% of the Base Bid, made payable to the Enumclaw School District No. 216.

The right is reserved to reject any or all bids and to waive informalities.

No bidder may withdraw his bid after the time set for the opening of bids unless the award of contract is delayed for a period exceeding 30 days.

By order of Board of Directors, Enumclaw School District No. 216, King County, Washington.

MR. ALBERT BOGDAN,
Clerk of Board.

1. Clearing, Draining, Grading, Surfacing, Constructing a Cement Treated Base and Paving with Type I-1 Aspshaltic Concrete on 3.980 miles of Primary State Highway No. 5 in Lewis County, ETHEL TO SALKUM, FAP No. F-016-1(6), involving about 27,200 cubic yards of Common Excavation, 63,400 tons of Selected Roadway Borrow, 47,600 tons of Crushed Stone Surfacing and Crushed Cover Stone, 10,475 tons of Aspshaltic Concrete, 84 tons of Asphalt Cement, 770 cubic yards of Mineral Aggregate, 5,850 tons of CTB Aggregate, 1,575 barrels of Portland Cement, 921 linear feet of Concrete Pipe, 106 Guide Posts and other items.
2. Clearing, Draining, Grading, Surfacing with Light Bituminous Surface Treatment and Paving with Type I-1 Asphaltic Concrete on 4.386 miles of Secondary State Highway No. 15-B in Snohomish County, KING COUNTY LINE TO HASKELL'S SLOUGH, FAS No. S-0225(3) Unit 2, involving about 38 acres of Clearing, 189,170 cubic yards of Common Excavation and Borrow, 1,600 cubic yards of Solid Rock Excavation, 32,400 units of Overhaul, 40,000 tons of Selected Roadway Borrow, 14,330 tons of Crushed Stone Surfacing, 181 tons of Asphalt Cement, 1,560 cubic yards of Crushed Cover Stone and Mineral Aggregates, 10,480 tons of Asphaltic Concrete, 3,620 linear feet of Asphaltic Concrete Curb, 240 cubic yards of Concrete, 46,240 pounds of Steel Reinforcing Bars, 3,474 linear feet of Concrete Pipe, 635 linear feet of Corrugated Metal Pipe, 405 linear feet of Iron Pipe, 1,577 linear feet of Beam Guard Rail (State Furnished), 149 Guide Posts, 30 cubic yards of Riprap and other items.
3. Surfacing with Light Bituminous Surface Treatment and Stockpiling Ballast, Crushed Stone Surfacing, Maintenance Rock and Mineral Aggregates on 5.751 miles of Secondary State Highway No. 1-Q in Lewis and Cowlitz Counties, KNAB VICINITY TO CEDAR CREEK

AND JCT. SSH NO. 1-R TO LEWIS COUNTY LINE, FAS No. S-0258(3) and State Project, involving about 38,990 tons of Selected Roadway Borrow, 46,280 tons of Crushed Stone Surfacing, Crushed Cover Stone Maintenance Rock and Mineral Aggregates, 172 tons of Asphalt Cement, 72 linear feet of Concrete Pipe and other items.

4. Surfacing with Light Bituminous Surface Treatment and Paving with Type I-1 Asphaltic Concrete on 17.194 miles of Primary State Highways Nos. 10 and 2 in Douglas and Okanogan Counties, TONASKET TO ELLISFORD, ET AL, FAP Nos. F-029-2(11), F-028-2(5), F-030-1(11) and State Project, involving about 12,970 tons of Crushed Stone Surfacing and Crushed Cover Stone, 526 tons of Asphaltic Cement, 12,290 tons of Asphaltic Concrete and other items.
5. Draining, Grading, Surfacing, Paving with Type I-1 Asphaltic Concrete and Constructing a Reinforced Concrete Box Girder Bridge on 0.044 miles of Primary State Highway No. 14 in Kitsap County, OLD PSH NO. 14 OVERCROSSING, FAP No. F-009-1(4), involving about 300 cubic yards of Common Excavation, 160 cubic yards of Selected Roadway Borrow, 5 cubic yards of Crushed Stone Surfacing, 80 tons of Asphaltic Concrete, 30 linear feet of Corrugated Metal Pipe, 13 Guide Posts, 785 cubic yards of Concrete, 185,000 pounds of Steel Reinforcing Bars, 4,000 linear feet of Concrete Piling and other items.
6. Draining, Grading and Surfacing with Crushed Stone on 5.034 miles of a Lincoln County Road, ADAMS COUNTY LINE NORTH ROAD, FAS No. S-0723 (3), involving about 74,190 cubic yards of Common Excavation and Borrow, 49,000 tons of Crushed Stone Surfacing and Crushed Cover Stone, 500 tons of Sand, 923 linear feet of Corrugated Metal Pipe, 56 linear feet of Corrugated Metal Structural Plate Pipe-arch and other items.
7. Surfacing with Light Bituminous Surface Treatment on 6.390 miles of a Douglas County Road, LEAHY NORTH ROAD, FAS No. S-1125(1), involving about 10,400 cubic yards of Selected Roadway Borrow, 8,500 cubic yards of Crushed Stone Surfacing and Crushed Cover Stone, 260 tons of Asphalt Cement and other items.
8. Clearing, Draining, Grading, and Surfacing with Selected Roadway Borrow on 5.236 miles of an Okanogan County Road, TWISP RIVER ROAD, FAS No. S-1149(1), involving about 77,950 cubic yards of Unclassified Excavation, 17,280 cubic yards of Selected Roadway Borrow, 34 cubic yards of Concrete, 3,000 pounds of Steel Reinforcing Bars, 465 linear feet of Steel Pipe, 1,240 linear feet of Corrugated Metal Pipe, 6 linear feet of Concrete Pipe, 170 cubic yards of Riprap and other items.
9. Draining and Grading on 3.559 miles of an Okanogan County Road, SALMON CREEK ROAD, FAS No. S-1145(1), involving about 53,530 cubic yards of Unclassified Excavation, 60 linear feet of Corrugated Structural Plate Pipe-arch, 16 linear feet of Corrugated Metal Pipe, 930 linear feet of Concrete Pipe and other items.
10. Clearing, Draining and Grading for Shoulder Widening on 1.761 miles of an Okanogan County Road, CHESAW ROAD, FAS No. S-0495(3), involving about 20,200 cubic yards of Unclassified Excavation, 27 linear feet of Concrete Pipe, 702 linear feet of Corrugated Metal Pipe and other items.
11. Draining, Grading, Surfacing, Paving with Type I-1 Asphaltic Concrete and Stockpiling Crushed Stone Surfacing, Maintenance Rock and Mineral Aggregates on 0.577 mile of State Highways Nos. 5 and 5-K in Lewis County, TOWN OF MORTON, a State Project, involving about 2,700 cubic yards of Common Excavation, 32,420 tons of Crushed Stone Surfacing, Ballast, Maintenance Rock and Mineral Aggregates, 2,010 tons of Asphaltic Concrete, 110 cubic yards of Mineral Aggregates, 13 tons of Asphalt Cement, 3,381 linear feet of Cement Concrete Curb and Gutter, 5 cubic yards of Concrete, 5,450 linear feet of Concrete Pipe, 30 linear feet of Iron Pipe, 806 square yards of Cement Concrete Sidewalk and Driveway and other items.
12. Grading, Surfacing, Constructing a Cement Treated Base and Paving with Type I-1 Asphaltic Concrete on 1.784 miles of Primary State Highways Nos. 1 and 9 in Thurston County, STATE AVENUE IN OLYMPIA, ET AL, a State Project, involving about 6,800 cubic yards of Unclassified Excavation, 4,650 cubic yards of Selected Roadway Borrow, 120 cubic yards of Crushed Stone Surfacing, 8,300 tons of Asphaltic Concrete, 39 tons of Asphalt Cement, 1,500 barrels of Portland Cement, 7,250 tons of CTB Aggregate and other items.
13. Surfacing with Light Bituminuos Surface Treatment and Stockpiling Mineral Aggregates on 10.038 miles of Primary State Highway No. 3 in Asotin County, ROCKY HOLLOW TO TOP OF ASOTIN HILL, a State Project, involving about 102,465 tons of Crushed Stone Surfacing, Ballast, Maintenance Rock, Crushed Cover Stone and Mineral Aggregates, 323 tons of Asphalt Cement and other items.
14. Stockpiling Maintenance Rock and Mineral Aggregates on State Highways Nos. 2, 10 and 10-B in Douglas County, PINE CANYON TO DOUGLAS, ET AL, a State Project, involving about 5,165 cubic yards of Stripping Borrow and Surfacing Pits and 55,945 tons of Crushed Materials.
15. Cleaning and Painting CHEHALIS RIVER BRIDGE NO 13/1 on Primary State Highway No. 13 in Grays Harbor County, a State Project, involving a lump sum bid for the Entire Improvement.
16. Constructing an Office and Shop Building in Lincoln County, OFFICE AND SHOP BUILDING IN DAVENPORT, a State Project, involving a lump sum bid for the Entire Improvement.

Federal funds have been allocated for items nos. 1 to 10 inclusive.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Information copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

E. C. HUNTLEY, Chairman
W. A. BUGGE, Director of Highways

5464—5-12, 19

ELEMENTARY SCHOOL ADDITION
BIDS TO BE RECEIVED UNTIL 5 P.M. OPENED AT 8 P.M., MAY 29
Spokane, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by F. A. Long, Architect until 5:00 P.M., May 29, 1956, for the construction of the Otis Orchards Elementary School Addition, and will be publicly opened and read aloud at 8:00 P.M. same date at the Otis Orchards Primary School. Bids received after 5:00 P.M. will not be considered.

Work will be awarded under General Construction, Plumbing and Heating, and Electrical.

Plans and Specifications and forms of Contract Documents may be examined at the office of the Architect, Frederic A. Long, 500 Columbia Building, Spokane, and a set of said documents may be obtained at the office of the Architect upon a deposit of $25.00.

Each bid shall be accompanied by a Certified Check, Cashiers Check, or Bid Bond made payable to Otis Orchards School District No. 348, for five percent of the amount of the Bid.

School District No. 348 reserves the right to reject any or all bids and to waive informalities.

No bidder may withdraw his bid after 5:00 P.M., May 29, 1956, or before award of Contract unless said award is delayed for a period exceeding thirty days.

By order of the Board of Directors.

Charles H. Stafford
Clerk

5467—5-12, 15, 22

GRADING, DRAINAGE, BITUMINOUS SURFACING
BIDS CLOSE 11 A. M., JUNE 5
Juneau, Alaska
NOTICE TO CONTRACTORS

SEALED BIDS, in single copy for furnishing all labor, equipment, and materials and performing all work for the project described herein will be received until 11:00 a.m., June 5, 1956, in Room 319, Alaska Road Commission Offices, Federal Building, Juneau, Alaska, and then publicly opened.

Plans and specifications for the project may be obtained from the Alaska Road Commission, P. O. Box 1961, Juneau, Alaska. Plans should be returned to the Alaska Road Commission District Office, Anchorage, Alaska. No deposit will be required, but if plans are not returned in good condition within thirty days after date of bid opening, the planholder will be billed for the actual cost of the plans.

A guarantee of not less than five percent (5%) of the total amount bid will be required with each bid.

Grading, drainage and bituminous surfacing of 29.28 miles of the Sterling Highway. Principal items of work include 1,143,000 cu. yds. Unclassfied Excavation, 466,000 cu. yds. Unclassified Excavation for Borrow, 117,000 ton crushed gravel base course, 37,200 ton Class F Pavement Plant Mixture.

Work shall be started within 30 calendar days after date of receipt of Notice to Proceed and shall be completed within 476 calendar days after date of Notice to Proceed.

The attention of bidders is directed to the invitation for bids by the Department of Commerce, Bureau of Public Roads, Juneau, Alaska, for the construction of Alaska Forest Highways Project 5-A6, B4, Kenai River Highway, to be opened at the same time and place as bids for Sterling Highway, Section B2. Bid invitation for both projects provide for offering a percentage or lump sum reduction in the total amounts to be paid under each contract if both contracts are awarded to the same bidder. Bidders are invited to execute the certificates on the bid schedules providing for such reduction, but no bid will be rejected solely for failure to do so. Information concerning Bureau of Public Roads Alaska Forest Highways Project 5-A6, B4, may be secured from Mr. Chr. F. Wyler, District Engineer, Bureau of Public Roads, P. O. Box 1511, Juneau, Alaska.

A. F. Ghiglione
Director

C.; at the Area Engineer's office, Alaska Public Works, Room 309 Federal Bldg., Ketchikan, Alaska; and Associated General Contractors of America offices as follows: Seattle Chapter, Construction Center, 215 West Harrison St., Seattle, Wash.; Mountain Chapter, 220 W. Harrison St., Seattle, Wash.; Tacoma Chapter, 452 St. Helens Ave., Tacoma, Wash.; Portland Chapter, Suite 112, Multnomah Hotel, Portland, Oregon; Alaska Chapter, 306 Central Building, Anchorage, Alaska also the Plan Bureau, 2413 Western Ave., Seattle, Wash.; and the Builders Exchange Cooperative, 317 Builders Exchange Bldg., Portland, Oregon. A set of such documents may be procured from the office of the Acting Director at Juneau, Alaska, upon deposit of $25.00, all of which will be refunded upon the return of the plans and specifications in good condition **within** twenty (20) days from date of bid opening. Each bid must be accompanied by a satisfactory bid security (certified check or bid bond) in an amount not less than 5 percent of the total bid in dollars and cents. No bid will be withdrawn until thirty days after the scheduled closing date for the receipt of bid. The successful bidder will be required to furnish a performance bond and payment bond, each in the amount of 100 per cent of the contract price. The Government reserves the right to award a contract for the project on the basis of the acceptance of any or all of the alternates, whichever course is in the best interest of the Government.

DESCRIPTION: Project Aaa. 50-A-210, Unit 2, Water Supply, Ketchikan, Alaska. Water main installations in the City of Ketchikan, Alaska, including 372 L.F. 4" pipe, 1917 L.F. of 6" pipe, 460 L.F. of 10" pipe, 1826 L.F. of 16" pipe, four fire hydrants, valves, fittings and other necessary appurtenances. Alternates are provided for steel, cast iron, and asbestos cement pipe. Information regarding liquidated damages (if any), payments, etc., is attached or made a part of the specifications. Bids shall be submitted on the forms furnished or copies thereof.

5452—5-5, 12, 19

HOUSING, MAINTENANCE FACILITIES

BIDS CLOSE 10 A.M., MAY 29

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, May 29, 1956, until 10:00 A.M., for the construction of the following improvement and will then and there be opened and publicly read:

1. Constructing Duplex Housing Units and Maintenance Facilities for District No. 3, a State Project, consisting of five base bids as follows:

BASE BID No. 1

Constructing Duplex Housing Units and/or Maintenance Facilities in AMANDA PARK, KALALOCH, FORKS and POTLATCH in Grays Harbor, Jefferson, Clallam and Mason Counties, respectively.

BASE BID No. 2

Constructing a Duplex Housing Unit and Maintenance Shed at AMANDA PARK in Grays Harbor County, and/or

BASE BID No. 3

Constructing a Duplex Housing Unit and Maintenance Shed at KALALOCH in Jefferson County, and/or

BASE BID No. 4

Constructing a Maintenance Shed at FORKS in Clallam County, and/or

BASE BID No. 5

Constructing a Maintenance Shed at POTLATCH in Mason County.

All work for this improvement is combined into one set of plans and specifications which contains a common proposal.

Bidders who are satisfactorily prequalified shall have the option of submittting proposals on any one or all of the base bids, except that when submitting a proposal on Base Bid No. 1 a bidder may also submit proposals on Base Bids Nos. 2 to 5, inclusive. The Director of Highways reserves the right to accept or reject the lowest bid on each base bid which gives the lowest total cost to the State.

Prequalification of bidders is required. Plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each such set of plans and specifications as a rental for the use of them. Plans will be forwarded by first class mail.

Bidders who may not be prequalified in sufficient amount to bid on the entire improvement, namely Base Bid No. 1, shall indicate in their application for plans and specifications the particular section or sections upon which they desire to bid.

Each bid proposal shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five percent (5%) of the total of Base Bid No. 1 or of any combination of Base Bids Nos. 2 to 5, whichever is the greater. Should a successful bidder fail to enter into such a contract and furnish a satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Informational copies of plans and specifications are on file in the Chapter Offices of the Associated General Contractors of America in Seattle, Tacoma and Portland, Oregon and the office of the District Engineer of the Department of Highways in Olympia where they may be inspected.

E. C. HUNTLEY, Chairman
W. A. BUGGE, Director

CONSTRUCTION, REPAIR TIMBER BRIDGES

BIDS CLOSE MAY 29

Lindsay, California

NOTICE TO CONTRACTORS

DEPARTMENT OF THE INTERIOR, Bureau of Reclamation. Sealed bids (Specifications No. DC-4684) will be received at Lindsay, California until May 29, 1956, for furnishing labor and materials for Construction of Timber Operating Bridge, Station 3607+00 and Repair and Reconstruction of Timber Operating Bridges, Station 3769+68.60 and Station 5165+80, Friant-Kern Canal, Central Valley Project, California. Location near Tulare, California. Principal items are 100 cu. yds. excavation; 1,970 lin. ft. furnishing and driving timber piles; 3.9 Mbm furnishing and erecting treated timbers in structures; 109.0 Mbm furnishing and erecting untreated timbers in structures; and other work. Completion time 150 days. For particulars, address Bureau of Reclamation, P. O. Box 2511, Sacramento 11, California; or Building 53, Denver Federal Center, Denver 2, Colorado. W. A. Dexheimer, Commissioner.

5448—5-5

SCHOOL BUILDING

BIDS CLOSE 8 P.M., MAY 29

Seattle, Washington

NOTICE TO CONTRACTORS

Separate sealed proposals will be received by Shoreline School District No. 412, King County, Washington, at the Shoreline School District Office East 158th Street and 20th Avenue N.E., Seattle 55, Washington, until 8:00 P.M., May 29, 1956, for the General, Mechanical, and Electrical contracts (separate contracts), for the construction of a new Meridian Elementary School, and the said proposals will then and there be publicly opened and read aloud. Bids received after the time set for opening cannot be considered.

Specifications and drawings may be examined at the office of the Architects, Jones and Bindon, 715 Hoge Building, Seattle 4, Washington, and at the Seattle Chapter, Associated General Contractors of America, 215 West Harrison Street, Seattle, and may be obtained at the Architects' office upon deposit of $25.00 for each set of general drawings and specifications and $15.00 for each set of mechanical or elctrical drawings and specifications.

The full amount of deposit for **one set** of documents will be refunded to **actual** prime contract bidders upon return of the documents, unmutilated and without marks or annotations, within one week after the date of the bid opening. Other deposits will be refunded with deductions for the actual cost of reproducing the drawings, under the same conditions.

Each bid must be accompanied by a certified or bank cashier's check, or by a bid bond, each in an amount not less than 5% of the Base Bid, made payable to Shoreline School District No. 412, King County, Washington, bid bond must be furnished in the form set forth in the specifications with a State-licensed surety company as surety.

Attention of bidders is directed to State laws concerning wages, working hours, and other conditions of employment.

The Board of Directors reserves the right to reject any or all bids, and to waive informalities. No bidder may withdraw his bid after the hour set for the opening thereof, unless and until the award of contract has been delayed for a period exceeding thirty (30) days.

By Myron Ernst, Secretary
Shoreline School District No. 412
East 158th Street and 20th Ave. N.E.
Seattle 55, Washington

STATE HIGHWAY PROJECTS

BIDS CLOSE 9:30 A.M., JUNE 4

Helena, Montana

NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the offices of said Commission in the City of Helena until 9:30 A.M., on June 4, 1956. The proposals will be publicly opened and read immediately thereafter.

1. **F 64(9)U2, F 148(6)U2 & F 155(7)U2, F 211 (11)U2 & F 220 (6)U2, F 69(10)U2 & F 248 (11)U2, F 264(5)U2** Seal coat oiling of 50.701 miles on various roads.

F 64(9)U2—Great Falls-Armington Road in Cascade County. This portion of the project is under the supervision of Ben B. Briscoe, Division Construction Engineer at Great Falls.

F 148(6)U2 & F 155(7)U2—The Saco East and Glasgow West Road in Valley County. This portion of the project is under the supervision of Gerald Flemming, Division Construction Engineer at Wolf Point.

F 211(11)U2—The Dutton Southeast section of the Vaughn-Conrad Road in Cascade and Teton Counties. This portion of the project is under the supervision of Ben B. Briscoe, Division Construction Engineer at Great Falls.

F 220(6)U2—The Cut Bank East and West Road in Glacier County. This portion of the project is under the supervision of A. G. Middleton at Havre.

F 69(10)U2 & F 248(11)U2—The Whitehall Section of the Pipestone Pass-Whitehall and the Three Forks-Whitehall Roads in Jefferson County. This portion of the project is under the supervision of Lewis M. Chittim, Division Construction Engineer at Butte, Montana.

F 264(5)U2—The Townsend-White Sulphur Springs Road in Broadwater and Meagher Counties. This portion of the project is under the supervision of Glenn Learn, Division Construction Engineer at Lewistown.

This work involves about 9,908 tons hauling and placing cover material; 224,959 gals. MC-5 Liquid Asphalt; 308 hours watering; 386 units rolling, and other items. Project to be completed by September 15, 1956.

2. **I-FI 188(7)U2, & I-IN 212(12) U2**—Construction of two 156.0' steel and concrete bridges over the Little Big Horn River on the Crow Agency Hardin & Wyoming Line-Crow Agency Road in Big Horn County, involving about 156,834 lbs. reinforcing steel; 838.4 cu. yds. concrete; 619.0 lin. ft. steel bridge rail; 720 cu. yds. structure excavation; 2,040 cu. yds. unclassified excavation;

60,480 lbs. furnishing steel bearing piles; 783 lin. ft. driving steel bearing piles, and other items. Project to be completed by July 31, 1957.

3. **F 191(16)U2**—Construction of a 82.0' steel and concrete bridge over Pablo Feeder Canal on the Polson-South section of the Pablo-Kalispell road in Lake County, involving about 40,042 lbs. reinforcing steel; 153.9 cu. yds. concrete; 160.46 lin. ft. steel bridge rail, and 16 each 25' concrete piles. Project to be completed by October 31, 1956.

4. **U 230(6) & U 386(4)**—Grading, gravel surfacing, plant mix oiling and drain about 0.598 mile on the Billings East Road and 0.705 mile on the First Avenue South North 13th Street and Fourth Ave. North-Billings Road both in Yellowstone County, involving about 38,559 cu. yds. unclassified excavation; 7,655 tons plant mix bituminous surfacing; 53,256 tons crushed gravel; 1,217 M gals. watering; 292 units rolling; 111,705 gals. 100-120 Penetration Asphalt Cement; 15,395 gals. MC-1 liquid asphalt; 12,391.2 lin. ft. concrete integral curb and gutter; 1418.6 lin. ft. special concrete curb; 4,820.0 lin ft. new concrete sewer pipe, and other items. Project to be completed by September 15, 1957.

5. **F 333(17)**—Grading, gravel surfacing and drain 11.279 miles on the Grass Range-Malta Road in Phillips County, involving about 912.837 cu. yds. unclassified excavation; 1,755 cu. yds. gravel backfill; 37,318 mi. yds. overhaul; 1,906 cu. yds. binder; 3,812 mi. yds. overhaul on binder; 81,292 tons crushed gravel; 15,270 M. gals. watering; 2,225 units rolling; 2,502 lin. ft. corrugated metal pipe culverts; 1,718 lin. ft. structural plate pipe arch culverts, and other items. Project to be completed in 290 calendar days.

6. **F 391(3)**—Grading, gravel surfacing, bituminous surface treatment and drain 10.781 miles on the Lane-Lambert section of the Circle-Sidney road in Richland County, involving about 496,730 cu. yds. unclassified excavation; 30,817 mi. yds. overhaul; 35,283 tons crushed gravel; 154,676 tons selected borrow base course (uncrushed); 64,201 gals. MC-2 liquid asphalt; 64,201 gals. RS-2 emulsified asphalt; 11,190 M gals. watering; 1,900 units rolling; 2,895 lin. ft. corrugated metal pipe culverts; 974 lin. ft. structural plate pipe culverts, and other items. Project to be completed by September 15, 1957.

7. **S 94(3)**—Grading, gravel surfacing, and drain 7.628 miles on the Chester Northwest Road in Liberty County, involving about 85,328 cu. yds. unclassified excavation; 1,865 mi. yds. overhaul; 196 cu. yds. gravel backfill; 18,981 cu. yds. selected borrow base course (uncrushed); 27,367 tons crushed gravel; 910 cu. yds. binder; 1,825 mi. yds. overhaul on binder; 2,190 M gals. watering; 1,250 lin. ft. corrugated metal pipe culverts, and other items. Projects to be completed by October 31, 1956.

8. **S-174(2)**—Grading, gravel surfacing and drain 4.878 miles on the Judith Gap-East Road in Wheatland County, involving about 215,484 cu. yds. unclassified excavation; 327 cu. yds. gravel backfill; 22,498 mi. yds. overhaul; 31,138 tons crushed gravel; 664 cu. yds. binder; 1,328 mi. yds. overhaul on binder; 3,835 M. Gals. watering; 1,306 lin. ft. reinforced concrete pipe culverts; 351 lin. ft. structural plate pipe culverts, and other items. Project to be completed by October 31, 1956.

9. **S 188(1)**—Grading, gravel surfacing, and drain 10.395 miles on the Galata North Road in Toole County, involving about 115,407 cu. yds. unclassified excavation; 54 cu. yds. gravel backfill; 4,191 mi. yds. overhaul; 45,-932 tons crushed gravel; 2,620 M gals. watering; 1,415 cu. yds. binder; 2,830 mi. yds. overhaul on binder; 2,056 lin. ft. corrugated metal pipe culverts; 60 lin. ft. structural plate pipe culverts, and other items. Project to be completed in 150 calendar days.

10. **S 190(2) U1**—Grading, gravel surfacing, and drain 5.000 miles on the Presserville-Girard-Fairview Road in McCone County, involving about 128,822 cu. yds. unclassified excavation; 54 cu. yds. gravel backfill; 5,488 mi. yds. overhaul; 29,093 tons crushed gravel; 2,500 M. Gals. watering; 145 units rolling; 672 cu. yds. binder; 1,344 mi. yds. overhaul on binder; 832 lin. ft. corrugated metal pipe culverts; 60 lin. ft. structural plate pipe culverts, and other items. Project to be completed by October 31, 1956.

11. **S 289(4) U2**—Construction of one 110.0' steel and concrete bridge over Rosebud Creek near Roscoe on the Red Lodge-Columbus road, in Carbon County, involving about 48,108 lbs. reinforcing steel, 247.3 cu. yds. concrete; 217.34 lin. ft. steel bridge rail; 195 cu. yds. structure excavation; 430 cu. yds. unclassified excavation. Project to be completed by October 31, 1956.

The above listed quantities are approximate only.

All bid proposals shall be accompanied by a certified or cashier's check, cash, postal money order, bank money order, or bid bond in the amount of at least 5% of the bid. Should the successful bidder fail to enter into his contract and furnish a satisfactory performance bond within the time stated in his proposal, the bid deposit shall be forfeited to the State Highway Commission of Montana.

Prequalification of bidders at least 72 hours prior to the opening of bids is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission in Helena, Montana. Plans and specifications for all Federal Aid Projects are also on file and may be examined in the office of the Bureau of Public Roads at Missoula.

Frank G. Connelly, Chairman
Scott P. Hart, State Highway Engineer

M., for the construction of an **addition to Silverdale Elementary School** and will be then publicly opened and read aloud. Bids received after the time fixed for opening cannot be considered. Project aided by State of Washington. Project 145-15-3057.

Specifications, including contract documents and drawings may be examined at the office of the architect, Branch & Branch, 2616 East 11th Street, Bremerton, Washington, and at the various plan depositories and at the office of the school district at Silverdale, Washington, and may be obtained at the architect's office upon deposit of $25 for each set.

The full amount of the deposit for one set of documents will be refunded to actual bidders upon return of the documents, unmutilated and without marks or annotations, or within 5 days after receiving documents.

Each bid must be accompanied by a certified check, cashier's check or bid bond not less than 5 per cent of the base bid, made payable to Central Kitsap School District No. 401.

The right is reserved to reject any or all bids and to waive informalities.

No bidder may withdraw his bid after the time set for the opening thereof, unless the award of contract is delayed for a period exceeding 30 days.

By order of:
RUTH J. STERNEMAN
Clerk
Central Kitsap School District No. 401
Silverdale, Washington

GRADING
BIDS CLOSE 9 A. M., JUNE 11
Juneau, Alaska
NOTICE TO CONTRACTORS

DEPARTMENT OF COMMERCE, BUREAU OF PUBLIC ROADS, May 14, 1956. SEALED BIDS will be received at the office of Chr. F. Wyller, District Engineer, Bureau of Public Roads, Room 419, Federal Building, P. O. Box 1511, Juneau, Alaska, until 9 A. M. on June 11, 1956, and then publicly opened for furnishing the materials and performing the work for constructing 2.029 miles Grading, Alaska Forest Development Road No. 153, Snug Harbor, Chugach National Forest, Third Judicial Division, Territory of Alaska, located adjacent Alaska Forest Highway Project 5-A6, B4, Kenai River Highway, involving 13.5 acres clearing, 9 acres grubbing, 27,000 C.Y. excavation unclassified, 22,500 C.Y. Borrow, 3500 C.Y. pit stripping, 1098 lin. ft. culvert pipe and other small

items. Plans and specifications may be examined on or after May 21, 1956, at the Bureau of Public Roads, 419 Federal Building, Juneau, Alaska; Bureau of Public Roads, Seward, Alaska; Associated General Contractors of America, Multnomah Hotel, Portland, Oregon; Associated General Contractors of America, 304-306 Central Building, Anchorage, Alaska; or Associated General Contractors of America, 220 W. Harrison Street, Seattle, Washington. Plans, proposal forms and specifications will be furnished to any bona fide or previously qualified contractor on or after May 21, 1956, by the District Engineer, Room 419 Federal Building, P. O. Box 1511, Juneau, Alaska, upon request. Chr. F. Wyller, District Engineer.

5473—5-15, 22, 29

MULTIPURPOSE BUILDING, ALTERATIONS

BIDS CLOSE 8 P. M., P.S.T., MAY 29

Sultan, Washington

NOTICE TO CONTRACTORS

Notice is hereby given that the Sultan School District No. 314 will receive sealed bids up to 8 P. M., P.S.T., May 29, at Sultan Elementary School on Date Street, Sultan, Washington, at which time all bids will then and there be opened and publicly read aloud for the Sultan Elementary School multipurpose building and alterations.

Each bid shall be in accordance with the plans, specifications, and other contract documents now on file with Ralph Burkhard, architect, 2120 S.W. 152nd Street, Seattle 66, Washington, where copies may be obtained upon furnishing a deposit of $50.00 for each set. Deposit will be refunded upon the return of plans and specifications in good condition on the above date.

Each bid shall be made out on a bid form to be obtained from the architect.

Each bid must be accompanied by a certified check, Cashier's Check, or a satisfactory bid bond in favor of Sultan School District No. 314 executed by the bidder and a surety company in an amount equal to 5 per cent of the bid.

Each proposal shall be sealed and addressed to the clerk of the board of Sultan School District No. 314, and the name of the project plainly written on the outside of the package.

Sultan School District No. 314 reserves the right to reject any or all bids and to waive minor informalities.

No bidder may withdraw his bid after the hour set for the opening thereof, unless the award of contract is delayed for a period exceeding thirty days.

Signed: MELVIN CLAUSEN,
Superintentdent.

BITUMINOUS SURFACING

BIDS CLOSE 11 A.M., JUNE 12

Juneau, Alaska

NOTICE TO CONTRACTORS

SEALED BIDS, in single copy for furnishing all labor, equipment, and materials and performing all work for the project described herein will be received until 11:00 a.m., June 12, 1956, in Room 319, Alaska Road Commission offices, Federal Building, Juneau, Alaska, and then publicly opened.

Plans and specifications for the project may be obtained from the Alaska Road Commission, P. O. Box 1961, Juneau, Alaska. Plans should be returned to the Alaska Road Commission District Office, Fairbanks, Alaska. No deposit will be required, but if plans are not returned in good condition within thirty days after date of bid opening, the planholder will be billed for the actual cost of the plans.

A guarantee of not less than five percent (5%) of the total amount bid will be required with each bid.

Bid schedule No. 1 consists of reconstruction, bituminous surface repair and new bituminous surfacing between about Mile 1385 and Mile 1314. Principal items of work are: Unclassified Excavation, 44,000 cubic yards; Borrow, 63,000 cubic yards; Crushed Gravel Base Course, 45,000 tons; Plant Mixture, 11,000 tons.

Bid Schedule No. 2 consists of sealing all new paving proposed above, and all remaining penetration-type bituminous surfacing on the B2 portion of the contract, a total length of 54.95 miles of seal coat. Principal items of work are: Cover aggregate, 7,100 tons; Asphalt, 860 tons.

Prospective bidders are advised that the Government has limited funds available for the contract as a whole, and that if the total successful low contract bid price exceeds the funds available, the right is reserved to either reject Bid Schedule No. 2 in its entirety, consisting of 59.15 miles of bituminous seal, or to reduce the length; provided that if the length is reduced an increment of not less than 20 miles of seal, located at the easterly end of Alaska B2, will be included in the contract. Additional increments will be added to the easterly 20 miles as funds permit.

Bid Schedule No. 3 consists of placing gravel base and bituminous surfacing on streets belonging to the Alaska Communication System at Tok Junction. Principal items of work are: Crushed Gravel Base Course, 1,700 tons; Plant Mixture, 620 tons.

All work shall be completed within 270 calendar days after date of receipt of Notice to Proceed.

A. F. Ghiglione
Director

GARAGE, POWER HOUSE

BIDS CLOSE 11 A.M., JUNE 12

Juneau, Alaska

NOTICE TO CONTRACTORS

SEALED BIDS, in single copy for furnishing all labor, equipment, and materials and performing all work for the project described herein will be received until 11:00 a.m., June 12, 1956, in Room 319, Alaska Road Commission, Federal Building, Juneau, Alaska, and then publicly opened.

Plans and specifications for the project may be obtained from the Alaska Road Commission, P. O. Box 1961, Juneau, Alaska. Plans should be returned to the Alaska Road Commission District Office, Anchorage, Alaska. No deposit will be required, but if plans are not returned in good condition within thirty days after date of bid opening, the planholder will be billed for the actual cost of the plans.

A guarantee of not less than five percent (5%) of the total amount bid will be required with each bid.

Constructing at Naknek, Alaska, a garage and power house, consisting of two (28'x80' and 12'x20') wood frame buildings with steel roof girders, finished inside and out with plywood, concrete floors, and insulated with glass wool. The work includes installation of equipment and drilling a water well. The Government will furnish at the site all building materials required except concrete aggregate.

Work shall be started within 30 calendar days after date of receipt of Notice to Proceed and shall be completed within 246 calendar days after date of Notice to Proceed.

ELEMENTARY SCHOOL

BIDS CLOSE 10 A.M., P.S.T., JUNE 13

Anchorage, Alaska

NOTICE TO CONTRACTORS

Project Aaa. 50-A-144, Talkeetna Elementary School, Anchorage, Alaska. May 10, 1956. Talkeetna Elementary School, Project Aaa. 50-A-144, Anchorage, Alaska. Alaska Public Works Office of Territories, Department of the Interior (by (Issuing office) John D. Argetsinger, Acting Director, Alaska Public Works, Office of Territories, Department of the Interior, Post Office Box 1181, Juneau, Alaska. Sealed bids in single copy for furnishing all labor, equipment, and materials and performing all work for the project described herein will be received until 10:00 A.M., Pacific Standard Time, June 13, 1956, in the mailroom of the office of the Acting Director, Alaska Public Works, Office of Territories, Department of the Interior, 123 West Third Street, P. O. Box 1181, Juneau, Alaska, and then publicly opened, and read aloud. Information regarding bidding material, bid guarantee, and bonds follows: Plans and specifications and other proposed contract documents are open for public inspection at the Acting Director's office, Juneau, Alaska; at Room 2723, Interior Bldg., Washington 25, D. C.; at the Area Engineer's office, Alaska Public Works, Reliable Service Bldg., Anchorage, Alaska; and Associated General Contractors of America as follows: Seattle Chapter, Construction Center, 215 West Harrison St., Seattle, Wash.; Mountain Chapter, 220 W. Harrison St., Seattle, Wash.; Tacoma Chapter, 452 St. Helens Ave., Tacoma, Wash.; Portland Chapter, Suite 112, Multnomah Hotel, Portland, Oregon; Alaska Chapter, 306 Central Building, Anchorage, Alaska also the Plan Bureau, 2413 Western Avenue, Seattle, Wash.; and the Builders Exchange Cooperative, 317 Builders Exchange Bldg., Portland, Oregon. A set of such documents may be procured from the office of the Acting Director at Juneau, Alaska, upon deposit of $25.00, all of which will be refunded upon the return of the plans and specifications in good condition within twenty (20) days from date of bid opening. Each bid must be accompanied by a satisfactory bid security (certified check or bid bond) in an amount not less than 5 percent of the total bid in dollars and cents. No bid will be withdrawn until thirty days after the scheduled closing date for the receipt of bid. The successful bidder will be required to furnish a performance bond and payment bond, each in the amount of 100 per cent of the contract price. The government reserves the right to award a contract for the project on the basis of the acceptance of any or all of the alternates, whichever course is in the best interest of the Government. DESCRIPTION: Talkeetna Elementary School, Project Aaa. 50-A-144, Anchorage. A 20-classroom reinforced concrete, steel frame and masonry elementary school containing approximately 34,000 square feet. Information regarding liquidated damages (if any), payments, etc., is attached or made a part of the specifications. Bids shall be submitted on the forms furnished or copies thereof.

STATE HIGHWAY PROJECTS

BIDS CLOSE 10 A. M., JUNE 5

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia Washington, on Tuesday, June 5, 1956, until 10:00 A. M., for the construction of the following improvements and will then and there be opened and publicly read:

1. Clearing, Draining, Grading, Surfacing with Light Bituminous Surface Treatment, Paving with Type I-1 Asphaltic Concrete and Constructing a Steel Girder Railway Bridge Undercrossing on Primary State Highway No. 2 in Spokane County, G.N. RAILWAY UNDERCROSSING AND BARKER ROAD UNDERCROSSING APPROACHES, FAP No. UGI-002-6(23) and State Project, involving about 44,300 cubic yards of Common Excavation, 760 cubic yards of Solid Rock Excavation, 2,430 tons of Crushed Stone Surfacing, 13 tons of Asphalt Cement, 95 cubic yards of Crushed Cover Stone and Mineral Aggregate, 510 tons of Asphaltic Concrete, 693 linear feet of Beam Guard Rail, 236 linear feet of Concrete Pipe, 242 linear feet of Steel and Iron Pipe, 1,041 linear feet of Asbestos-Cement Pipe, 944 cubic yards of Concrete, 53,000 pounds of Steel Reinforcing Bars, 611,000 pounds of Structural and Cast Steel, 31 MBM of Timber and Lumber and other items.
2. Draining, Grading and Surfacing with Crushed Stone on 2.321 miles of a Whitman County Road, PULLMAN-BUSBY ROAD, FAS No. S-0669(1), involving about 17,540 cubic yards of Common Excavation, 26,770 cubic yards of Solid Rock Excavation, 41,760 tons of Crushed Stone Surfacing, 906 linear feet of Corrugated Metal Pipe and other items.
3. Clearing, Draining, Grading and Surfacing with Crushed Stone on 2.100 miles of a Clark County Road, HAAPA EAST, FAS No. S-0590(5), involving about 11 acres of Clearing, 59,560 cubic yards of Common Excavation, 21,160 tons of Selected Roadway Borrow, 9,160 tons of Crushed Stone Surfacing, 858 linear feet of Concrete Pipe, 542 linear feet of Corrugated Metal Pipe and other items.
4. Paving with Type I-1 Asphaltic Concrete on 11.33 miles of Primary State Highway No. 3 in Benton County, PROSSER TO KIONA, a State Project, involving about 20,975 tons of Asphaltic Concrete, 48 tons of Asphalt Cement, 4,250 cubic yards of Maintenance Rock and other items.
5. Surfacing and Constructing a Bituminous Surface Treatment Road Mix, Non-Skid Single Seal Treatment and Light Bituminous Surface Treatment on Shoulders on 31.29 miles of State Highways Nos. 15, 15-C and 15-D in Chelan and King Counties, DECEPTION CREEK TO GAYNOR, ET AL, a State Project, involving about 16,960 tons of Selected Roadway Borrow, 57,710 tons of Crushed Stone Surfacing, Crushed Cover Stone, Maintenance Rock and Mineral Aggregate, 693 tons of Asphalt Cement, 2,565 cubic yards of Mineral Aggregate and other items.
6. Constructing a Light Bituminous Surface Treatment and Non-Skid Single Seal Treatment on 19.10 miles of State Highways Nos. 3 and 3-L in Yakima, Garfield and Columbia Counties, PARKER BRIDGE TO DONALD, ET AL, a State Project, involving about 300 tons of Asphalt Cement, 2,350 cubic yards of Crushed Cover Stone and Mineral Aggregates and other items.

Federal funds have been allocated for items Nos. 1 to 3, inclusive.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

STATE HIGHWAY PROJECT

BIDS CLOSE 10 A.M., MAY 22

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, May 22, 1956, until 10:00 A.M. for the construction of the following improvement and will then and there be opened and publicly read:

1. Removing Portions of Existing Steel Girder Bridge on Primary State Highway No. 13 in Gray Harbor County, CHEHALIS RIVER BRIDGE REMOVAL, FAP No. U-006-1(8), involving the Removal of about 300 Existing Piles and 2 lump sum bids for the Removal of the Existing Steel Spans and Existing Piers and Fenders.

Bids for this project will be opened in the office of the Director of Highways, room 203, Transportation Building, instead of in the board room of the Public Service Commission where bid openings are usually held.

Federal funds have been allocated for item no. 1.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Legal advertisements appearing in our columns come to the attention of construction firms, and equipment and supply houses throughout the entire Pacific Northwest and Alaska.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

ANOTHER EXAMPLE OF CARCO "One Stop" STEEL SERVICE

CARCO FABRICATED POTS AND POT CRADLES HELP ALCOA SMELT ALUMINUM

At Wenatchee, Washington, near low cost electric power, the Aluminum Company of America has invested millions of dollars in a large aluminum smelter.

The production of aluminum begins with the mining of bauxite, the only substance that, to date, has proved economical as a commercial source of this metal. After preliminary processing, the next major step occurs in alumina plants. Here, Alcoa removes the impurities from the ore, leaving a fine white powder which is a combination of aluminum and oxygen.

Alcoa separates the aluminum from the oxygen by an electrolytic smelting process. A direct electric current is passed through large smelting pots filled with molten cryolite in which alumina is dissolved. The passage of electricity through the solution causes aluminum to be deposited at the bottom of the pot while the oxygen is released as carbon dioxide gas.

The pots are deep rectangular shells of fabricated steel lined with carbon to serve as the cathode or negative pole. A row of the smelting pots, which are connected electrically in series, is called a potline.

Pure aluminum represents about one-fourth the weight of its basic ore, bauxite. It takes four pounds of bauxite to make two pounds of alumina. Likewise, the smelting of two pounds of alumina results in one pound of aluminum. Accordingly, Alcoa's large Wenatchee smelter must process over 400,000,000 pounds of alumina annually in order to produce the installed yearly capacity of 217,000,000 pounds of primary aluminum.

Pacific Car has fabricated steel not only for Alcoa's smelter at Wenatchee but also for their smelter and fabricating division at Vancouver, Washington. At Wenatchee, Carco fabricated the pots and pot cradles for Alcoa's recent $2,000,000 expansion of this smelter as well as hundreds of pot cradles for the older potlines. At Vancouver, Carco fabricated the structural steel for several of the buildings incorporated in Alcoa's large plant.

Whether your needs are small or large, let Carco help you solve your structural steel problems. Remember, Pacific Car offers not only the largest fabrication facilities in the Northwest but also a "one stop" steel service. This means money-saving ideas and suggestions, prompt engineering detail and estimates, fabrication and erection.

MACOMBER V-BEAM

JUST WRITE V-BEAM ACROSS YOUR LETTERHEAD

PRODUCT ACCEPTANCE in structural engineering is based upon FACT.

1. WHO makes it? 2. WHAT will it do? 3. What are its STRUCTURAL advantages? 4. WILL it actually lower construction costs? 5. What is your performance PROOF?

HERE ARE YOUR ANSWERS: This MACOMBER product is the culmination of 40 years of structural product engineering. It was designed to support floors and roofs with a lighter, shallower structural member whose ultimate strength is over twice its published carrying capacity. In addition to the fact this member weighs less and costs less, it has the time and labor saving NAILABLE feature in both top and bottom chords. And lastly—every size in the various spans was load tested by Pittsburgh Testing Laboratory. YES! The phenomenal success of V-BEAMS is based upon fact. You can specify this structural member with complete confidence.

PRODUCT ACCEPTANCE in structural engineering is based upon FACT.

1. WHO makes it? 2. WHAT will it do? 3. What are its STRUCTURAL advantages? 4. WILL it actually lower construction costs? 5. What is your performance PROOF?

HERE ARE YOUR ANSWERS: This MACOMBER product is the culmination of 40 years of structural product engineering. It was designed to support floors and roofs with a lighter, shallower structural member whose ultimate strength is over twice its published carrying capacity. In addition to the fact this member weighs less and costs less, it has the time and labor saving NAILABLE feature in both top and bottom chords. And lastly—every size in the various spans was load tested by Pittsburgh Testing Laboratory. YES! The phenomenal success of V-BEAMS is based upon fact. You can specify this structural member with complete confidence.

ANOTHER EXAMPLE OF CARCO "One Stop" STEEL SERVICE

CARCO FABRICATED POTS AND POT CRADLES HELP ALCOA SMELT ALUMINUM

At Wenatchee, Washington, near low cost electric power, the Aluminum Company of America has invested millions of dollars in a large aluminum smelter.

The production of aluminum begins with the mining of bauxite, the only substance that, to date, has proved economical as a commercial source of this metal. After preliminary processing, the next major step occurs in alumina plants. Here, Alcoa removes the impurities from the ore, leaving a fine white powder which is a combination of aluminum and oxygen.

Alcoa separates the aluminum from the oxygen by an electrolytic smelting process. A direct electric current is passed through large smelting pots filled with molten cryolite in which alumina is dissolved. The passage of electricity through the solution causes aluminum to be deposited at the bottom of the pot while the oxygen is released as carbon dioxide gas.

The pots are deep rectangular shells of fabricated steel lined with carbon to serve as the cathode or negative pole. A row of the smelting pots, which are connected electrically in series, is called a potline.

Pure aluminum represents about one-fourth the weight of its basic ore, bauxite. It takes four pounds of bauxite to make two pounds of alumina. Likewise, the smelting of two pounds of alumina results in one pound of aluminum. Accordingly, Alcoa's large Wenatchee smelter must process over 400,000,000 pounds of alumina annually in order to produce the installed yearly capacity of 217,000,000 pounds of primary aluminum.

Pacific Car has fabricated steel not only for Alcoa's smelter at Wenatchee but also for their smelter and fabricating division at Vancouver, Washington. At Wenatchee, Carco fabricated the pots and pot cradles for Alcoa's recent $2,000,000 expansion of this smelter as well as hundreds of pot cradles for the older potlines. At Vancouver, Carco fabricated the structural steel for several of the buildings incorporated in Alcoa's large plant.

Whether your needs are small or large, let Carco help you solve your structural steel problems. Remember, Pacific Car offers not only the largest fabrication facilities in the Northwest but also a "one stop" steel service. This means money-saving ideas and suggestions, prompt engineering detail and estimates, fabrication and erection.

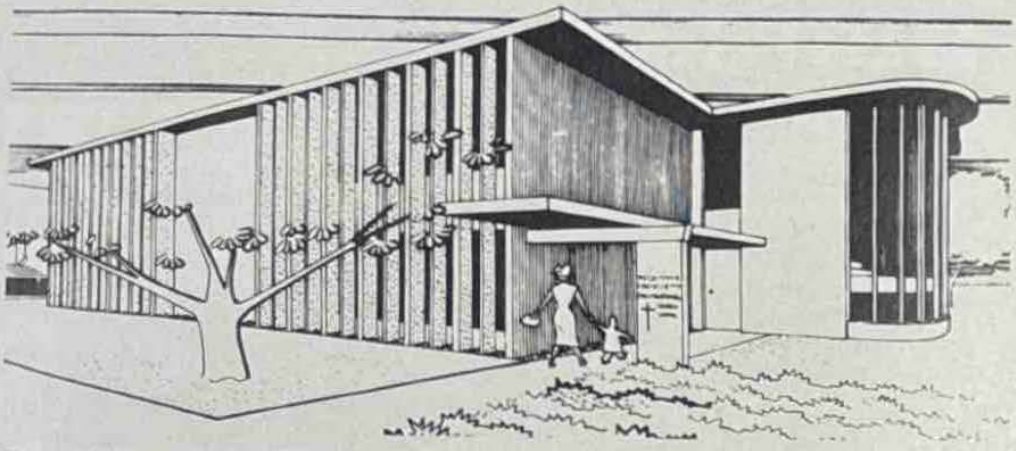
Building and Engineering News of the Pacific Northwest and Alaska 41

SUBSCRIPTION RATES—Payable in Advance

PACIFIC ARCHITECT AND BUILDER—3rd Saturday each month $4 one year; $6 two years; $7 three years. Canadian $5, $8, $10. Foreign $6, $10, $13. Single copies 50c. With CONSTRUCTION NEWS BULLETIN (2nd, 4th, 5th Sat.) $16, $24, $31, in U.S. and Alaska.



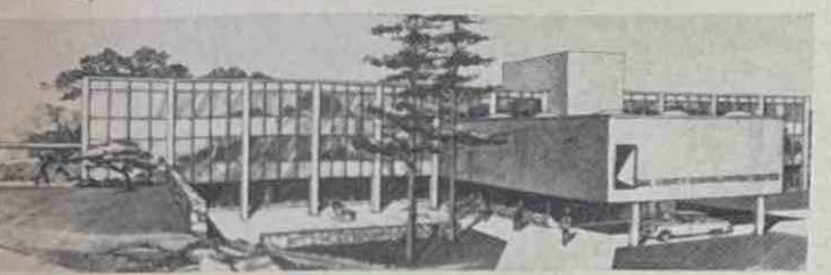
PACIFIC BUILDER AND ENGINEER—1st Saturday each month, $4 one year; $6 two years; $7 three years. Canadian $5, $8, $10. Foreign $6, $10, $13. Single copies 50c.

FOR NORTHWEST BUILDING AND ENGINEERING NEWS EVERY WEEK subscribe to all three (PA&B, PB&E, CNB) $20 one year; $30 two years; $38 three years. FOR FLASH ADVANCE DAILY SERVICE, read Pacific Construction Daily, $75 per year. Rates for U.S. and Alaska.

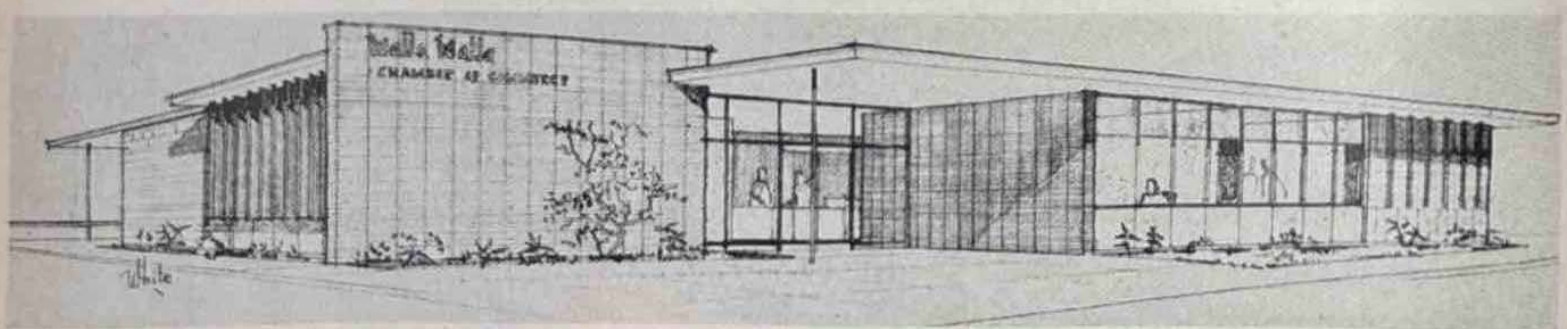
PACIFIC ARCHITECT AND BUILDER is published monthly by Pacific Builder and Engineer, Inc., 2418 Third Ave., Seattle 1, Wash., and is mailed on the third Saturday of each month. Price: $4, per year. Acceptance under P.L.&R. 34.64 authorized.

PERSPECTIVES

by Pacific architects



EDUCATIONAL UNIT ADDITION for Parkrose Community Congregational Church in Portland will be two-story structure with covered passageway to main building. Half of precast concrete fins, which will serve to shield light, will support second floor and roof. Building also will have some wood frame structural members, cedar siding, aluminum sash and flat, built-up roof. Warren Weber, AIA, has designed project.



MULTIMILLION DOLLAR PLANT of Insley Manufacturing Corp. and its subsidiary, The Maxi Corp., is now under construction on 35-acre site in Puente, Calif. Adjacent to and south of Union Pacific main line, it is located on Turnbull Canyon Road. George Vernon Russell & Associates are architects for plant, where self-propelled cranes and shovel carriers will be made.

PROPOSED REHABILITATION CENTER planned by King County (Wash.) Society for Crippled Children. Several Seattle sites are being considered for building, for which preliminary plans have been prepared by Decker, Christenson & Kitchin, architects-engineers.

UPON COMPLETION of this $85,000 one-story building next October, Walla Walla (Wash.) Chamber of Commerce will move from leased quarters on top of city hall. To be built of expanded shale blocks, it will have brick exterior and 3,750 sq. ft. Architects are Harold Crawford, H. Brandt Gessel and Thomas O. Williams.

Building News - Trends - Views

A SAN FRANCISCO ARCHITECT, Arthur Brown Jr., AIA, has been named one of three chief advisers for the proposed multimillion dollar remodeling of the U.S. Capitol. The designer of San Francisco's City Hall, buildings at Stanford University and at the University of California and the Labor Department and Interstate Commerce buildings in Washington, D.C., will serve with architects John F. Harbeson of Philadelphia and Henry R. Shepley of Boston.

The proposed remodeling will extend the center of the Capitol forward under the dome and improve its proportions relative to the Senate and House wings, according to the project's proponents.

THE BEST LOCATION for Portland's $8 million exposition-recreation center is the South Auditorium site, its architects have declared. Skidmore, Owings & Merrill made their recommendation to the E-R Commission early this month after studying two other centrally located sites termed "feasible"—the Broadway-Steel Bridge and Buckman Field.

A PRIVATE BATH FOR EVERY BEDROOM someday may be commonplace for homes at every level of construction. Paul J. Doyle, president of the Associated Plumbing and Heating Contractors of Montana, told the annual convention in Butte last month that every member of a family should have the enjoyment and benefit of a bath of his own—even the children, with junior-sized fixtures that can be replaced at a later date with those of regulation size. "No one wants a single-bath home any more," Doyle declared. "That's one very good reason why so many older homes are hard to sell."

THE LOS ANGELES BOARD OF EDUCATION has voted to revise agreements with architects concerning re-use of construction drawings. Area school architectural fees formerly were 8% on projects costing up to $1.5 million and 6% for anything exceeding that amount. Where the school district furnished services, the percentages were reduced to 7 and 5%.

Under the new schedule, adopted in an effort to streamline the city's school building program, the compensation to architects will be at the rate of 8% on the first $1 million, 7% beyond that figure to $3 million and 6% for more than $3 million; school services will reduce the fees to 7, 6 and 5% respectively. Where drawings and the same architect are used to rebuild other structures, the fees will be 4, 3½ and 3%.

AIR FORCE ACADEMY BUILDING PLANS, with the exception of the controversial chapel, have been approved by Air Force Secretary Donald A. Quarles. The project will be built near Colrado Springs, Colo.

OREGON'S 1957 LEGISLATURE is expected to give considerable attention to a long-term construction program involving state institutions and higher education centers. The plan would provide a priority schedule so that buildings most needed would be given right of way over other work. Presently construction of state institution buildings is under jurisdiction of the State Board of Control, higher education buildings under the State Board of Education. The State Emergency Board has to approve construction before it can start.

At a recent meeting of the State Board of Control, Gov. Elmo Smith warned that he does not sanction approval of architects' plans for state buildings where the cost exceeds legislative appropriations.

SLUGGISH HOME BUILDING is expected to get a new shot in the arm from federal lawmakers as this year's major housing legislation starts on the bumpy road through Congress. A housing program for elderly persons is the only really new aspect anticipated in a catch-all bill, with stepped-up loans for servicemen and college dormitories thrown in for good measure.

A WORLD CONFERENCE on earthquake engineering will be held on the University of California campus at Berkeley June 12-16 to commemorate the 50th anniversary of the 1906 San Francisco disaster. The five-day meeting will be devoted to the presentation of technical papers on the latest design and construction practices in all the major seismic areas of the world.

A NEW METHOD OF CENTRAL SUMMER COOLING has proved to be economical and highly practical for homes heated by hot water or steam. Research at the University of Illinois shows that a cooling system split from the hot water heating system and operating on the so-called "liquid" or chilled water principle of cooling offers year-round conditioning at low cost. It does not interfere with or detract from heating quality and avoids the need for sheet metal duct work.

In the new cooling system a circuit of small piping is used to hook up a water chiller to a heavy duty forced convector, consisting of fan, coils and filter. The water chiller is placed in the basement, utility closet, outdoors or any other out-of-the-way location.

NORTHERN CALIFORNIA HOME BUILDERS played host last month to a visiting group of 13 Japanese home builders, contractors, engineers and architects who are touring the U.S. on a trip sponsored by the International Cooperation Administration. While in the Bay area they visited Marinwood and were shown some of the 4,000 homes now going up in the tract near San Rafael. Being built by Gerald G. Hoyt, the project is a $70 million investment and includes three schools, two shopping centers and parks.

The Japanese also will visit Phoenix, Kansas City, Chicago, Washington, D.C., and New York.

"HOMES FOR BETTER LIVING" AWARDS JURY meet to select best home designs from 343 entries in first annual AIA contest. Seated (l. t r.): Clarence Stein, FAIA, New York; L. Morgan Yost, AIA, Chicago; Joseph Haverstick, Dayton, Ohio, NAHB president; Neil Connor, director, Architectural Standards Division, FHA, Washington, D.C.; Earl Smith, NAHB past president, El Cerrito, Calif.; Miss Mary Hamman, modern living editor, Life magazine, New York. Standing: Peter Blake, architectural editor, House and Home, New York; Charles Goodman, AIA, Washington, D.C.; Pietro Belluschi, FAIA, dean, MIT School of Architecture and Planning; Worley R. Wong, AIA, San Francisco; P. I. Prentice, editor and publisher, House and Home, New York (jury chairman for merchant built houses); Paul Groesse, director of art and architecture for M-G-M, Culver City, Calif.; Proctor Mellquist, editor, Sunset magazine (jury chairman for custom built homes); Prof. H. L. Vaughn, chairman, department of landscape design, University of California at Berkeley.

CALIFORNIA: ARCHITECTURAL GRAB BAG

Guest Editor

DONALD BEACH KIRBY, AIA
San Francisco, California

This timely evaluation of California architecture has been written by a man who started his professional career in New York City, then moved to Los Angeles and now practices in San Francisco under the firm name of Donald Beach Kirby & Associates, architects-engineers. Long active in AIA affairs, his term as director of the California-Nevada-Hawaii Regional Council expires in 1957.

ARCHITECTS who live in California are lucky—no Gothic, no Cape Cod tradition to haunt them. With all architectural eyes on California at this moment of the national AIA convention in Los Angeles, it is timely to review this product of our creation.

California living is envied by thousands of persons who come here to see whether we do actually produce "Architecture for the Good Life" as advertised in the convention theme.

In general, California architecture has progressed. Design is being more thoroughly studied. We see less self-consciousness. There are examples of open planning, free design elements and inventiveness in structural form. Some structural solutions for large buildings have been translated into smaller work. But the cliches are still with us.

One encouraging trend is the increased use of fine arts in conjunction with architecture. Some architects are beginning to be aware of the advantages of integrating fine arts in their design, particularly in liturgical work. It will take a long time, however, before either architect or layman understands that integration of art and architecture is not just a building with frosting.

Why has design improved in California? There are signs around us to indicate that some laymen appreciate better design. A few home builders are merchandising design by registered architects. The AIA nationwide public relations program has brought slightly more acceptance of the architect. Material producers have encouraged the employment of the architect.

There is ample evidence of recognition of good work done in California. Our colleagues have selected for First Honor Awards in the national AIA program two California architects in a total of five; six out of the 14 awards of Merit also came to California.

California has won a lot of awards, this year, last year, and the year before; however, let us not be **SMUG.** Actually, they represent the creme de la creme: the top off the top. The fantastic volume of building in California is not **all** well designed. Much of it is ghastly, some mediocre, a mere handful distinguished. What is the truth?

The truth is that very few merchant builders are actually working with architects. Lots of tracts are going up based on carpenter-draftsman's rehash of design and well worn floor plans. It is still a seller's market. If you can finance it and build it, you can sell it. Community planning, city planning are largely conversation. Tiresome rows of monotonous white houses march up and over the lovely hills of San Francisco—up and over with no regard for contours, in fact, contrary to contour. Houses with no side yards, built tight together—nothing learned from the fire of '06. Up and down the coast—from Oregon to Mexico—our cities have fallen into similar traps. Mistakes made in old eastern cities have been repeated out here.

Where are the garden apartments with light and air for everyone; with group garbage disposal; group lawn care; central heating; close-in location? No, we go out to suburban lots—too big for the average homeowner to care for; so far out that he must commute for hours. Central heat? No, each owner wrestles his own furnace and water heater. Trash disposal? No, you burn it in the backyard and add to the smog.

Our cities stretch out in straggling, growing tracts so that you drive from San Francisco to San Jose or from Los Angeles to Capistrano without ever being in the country. Decentralization, yes; dispersal, yes. But what are the benefits?

The architect is indicted who gives his client the first thing he asks for, rather than argue for what he needs.

California, with the biggest building boom in its history, is indicted; it has scarcely recognized community living or growth problems and has done little or nothing to solve them.

It is an indictment against both architect and client that neither has faced the fact that buildings, like automobiles, outlive their usefulness. Outmoded buildings are like hand-me-down clothing, makeshift and inconvenient.

We indict the public demand for cheapness in construction which they dignify as economy. The public also seeks so-called permanent construction that is not permanent and has no right to be. To patch a building after it has outlived its economic life is contrary to public interest.

These indictments are true all over the USA, not just California. They are really community growing pains. We can be very proud of our awards. We shouldn't be smug because our sites and climate are spectacular and we have a relatively advanced clientele. We ought to do good work and yet we have relatively few distinguished jobs to point to. We have all the advantages but we've muffed most of them. I'm as guilty as anyone.

THE WINDOWS YOU WANT

made and installed on time by Soulé

Soulé Intermediate Window Wall and Windows in
Hamilton Recreation Center, San Francisco.
W. G. Merchant, A.I.A., M & K Corp., Contractor.

Soulé Intermediate steel windows impose no limit to stock sizes. When you design a window or window wall job, specify the opening sizes you want. Soulé sales engineers will work with you, help assure you the exact window you design at the price you want to pay. All Soulé metal windows are made in the West, for fast transmission of details and delivery to your job on time. A big plus advantage is installation by our own crews, guaranteeing you a workmanlike job. You deal with one responsible Company for the manufacture and the installation of your intermediate steel windows.

EXTERIOR MATERIALS: mosaic tile spandrels and columns, rigid aluminum sash, ceramic tile windowless wall areas.

COVERING a full city block in the downtown civic center, the eight-story police headquarters with basement represents the first entirely functional approach to the physical problems of police administration and is expected to establish precedents for the planning of similar buildings. And while such projects seldom are worthy of architectural recognition, this one has been selected for a 1956 AIA Award of Merit.

The building is noteworthy too for the incorporation of two unusual pieces of art: Joe Young's glass mosaic mural which hangs in the lobby (see p. 14) and Bernard Rosenthal's controversial sculpture of a family group, mounted on the wall beside the main public entrance.

All of the various units of the municipal police department, formerly scattered among half a dozen different buildings, are brought together under one roof, with the overall plan permitting a closer integration than ever before attained. Related police activities are found on the same floor. This centralization provides better service to citizens visiting the department for informa-

SLOPING SITE provides two-level parking area for more than 850 police cars. Parking also is available for public in separate lot.

tion, advice or assistance; and with all records and report-taking facilities in one place, both officers and public save time and effort.

The $6 million reinforced concrete structure has precast concrete partitions in many cases to cut costs. Rigid sash windows have been installed throughout, ventilation being provided by air conditioning—except in the jail. Windowless wall areas are surfaced with glazed ceramic tile; spandrels and columns with mosaic tile.

To form the multitude of offices needed, the architects specified movable wood partitions wherever possible, allowing flexibility and reorganization at minimum expense. In the jail areas unbreakable glass partitions were frequently used instead of solid wall or bars to afford more supervision of prisoners with less personnel.

An extensive pneumatic tube system for sending messages and reports speeds up administrative operations. The sender merely dials the desired destination on an electronic device and deposits the papers in the tube. Automatic controls route the material to the indicated office outlet.

One of the economy measures designed into the building is the piping of steam from the heating plant of the health building which is directly across the street.

A combination ground and deck area provides parking facilities for more than 850 police cars. Space also is available for public parking. Underground squad rooms and lockers for officers can be easily reached from the lower level parking area. The basement contains assembly rooms for the officers.

The ground floor also houses the property division where a vault and refrigerator guarantee that articles ranging from jewelry to perishables will be stored safely while in custody of the department.

On the first floor are the business offices, information center, communications, traffic division, police commission offices, jail for initial booking procedures and a completely equipped auditorium and stage for "show-ups." Seating 400 persons, the auditorium has a huge screen permitting the victims to identify suspects while the prisoners cannot see the audience. With electric controls it is possible to reproduce the lighting conditions under which victims may have seen the suspects during the commission of a crime.

The felon prison and the record and identification bureaus are on the second floor; the detective bureau on the third floor; various police bureaus and business offices on the remaining five. The eighth floor has an employee cafeteria and lounge.

The typical upper-floor plan consists of a central core of specialized rooms, surrounded by a corridor and perimeter of offices.

The nine levels of the building contain 407,826 sq. ft.: administration, 273,148; jail, 39,930; parking, 95,748.

Cost of construction was $6,142,548, more than $2 million under the proposed city budget for the structure, which was made possible by a bond issue passed by the citizens of Los Angeles in 1947.

In May 1949 preliminary plans for a police building were approved but recommended alterations caused a delay in construction. During 1950-51 rapidly spiraling building costs and material shortages resulting from the Korean War forced a redesign of the building to conform to funds available. Revised plans were approved in March 1952 and construction started the following January.

A total of 2,500 police officers and civilian employees work in or out of the building.

OUTLINE SPECIFICATIONS

Type of Construction: Bethlehem Pacific steel frame and reinforced concrete.

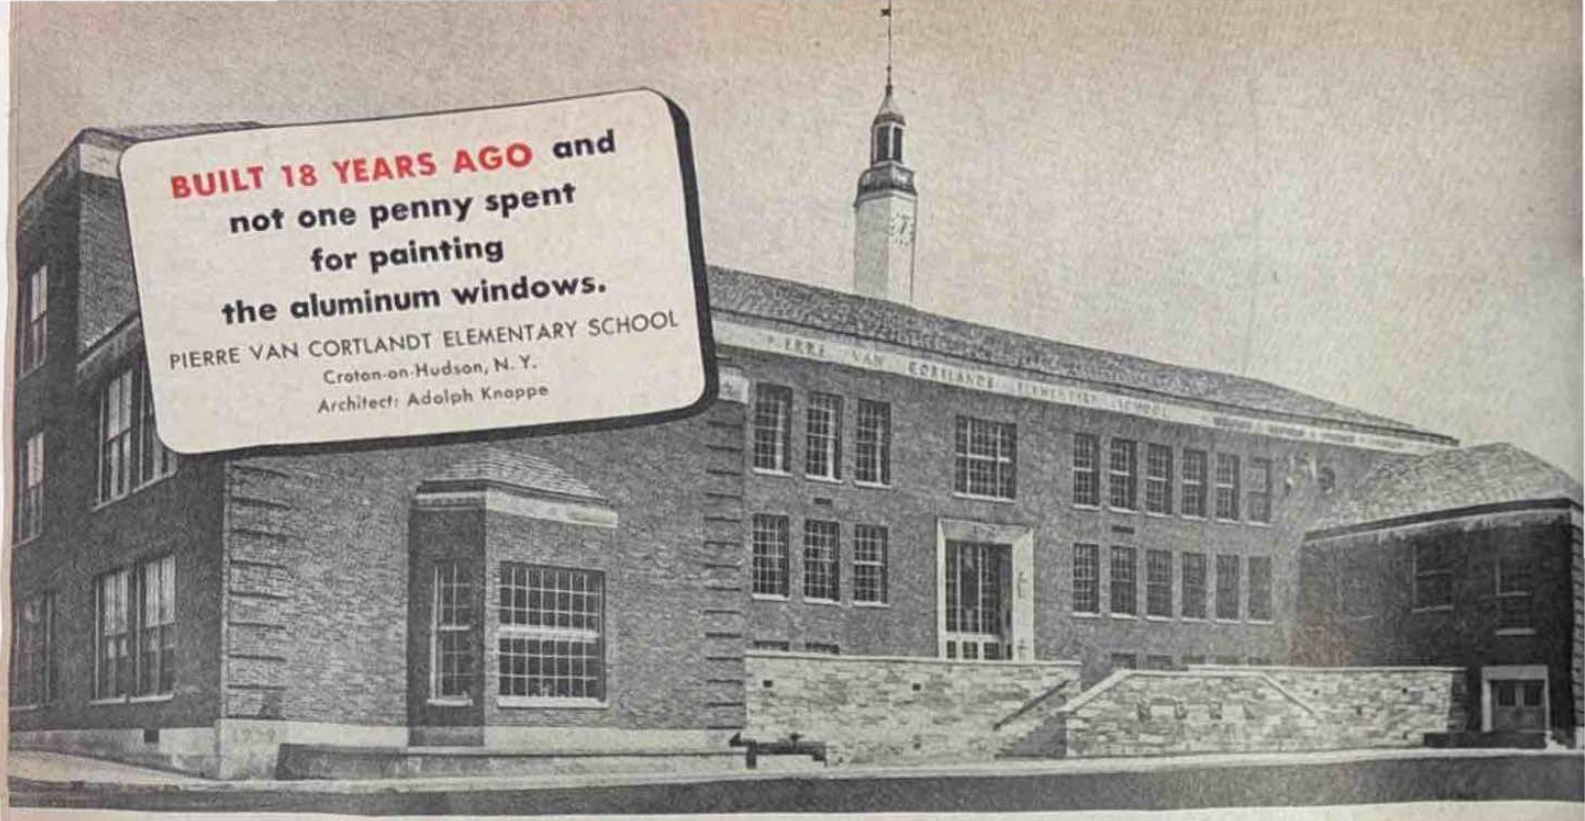
Exterior Walls: Reinforced concrete with Gladding, McBean Ceramic Veneer and mosaic tile spandrels.

Roof: Reinforced concrete.

Floors: Asphalt, rubber and ceramic tile over concrete slab.

Windows: Rigid aluminum sash with aluminum louvers on east and west walls of jail wing.

Interior Partitions: Precast concrete, movable wood and unbreakable glass (jail).



Lighting: Fluorescent and incandescent.

Heating: Steam piped from health building across street.

Total Area: 407,826 sq. ft.

Total Cost: $6,142,548.

Date of Completion: October 1955.

ALUMINUM WINDOWS KEEP MAINTENANCE EXPENSE AT A MINIMUM

If you're interested in keeping maintenance expense at a minimum you can profit from the experience of many schools (like the one pictured on the opposite page), hospitals and other buildings erected 15 to 25 years ago with aluminum windows.

School officials, hospital superintendents and others responsible for the maintenance of these buildings are unanimous in their praise of the aluminum windows. They all report that not one penny of expense has ever been required for painting them.

Now, just think what this means to the annual school budget. Think of the money that will be saved—extra money that can be well used for salaries, for books and for other necessary items. Certainly, the selection of aluminum windows for any type building is a wise choice that will pay handsome dividends.

As you plan new schools, hospitals, apartments or commercial buildings be sure you, too, include "Quality-Approved" aluminum windows. They are the only practical, reasonably-priced windows that *never* require painting . . . that cannot rust or rot, warp or swell . . . that retain their trim, modern looking appearance for the life of the building.

"Quality-Approved" aluminum windows are available in all types — double-hung, casement, awning, projected, sliding and jalousies — to fit any exterior design.

They are made by many manufacturers (see list below) to rigid quality standards established by the Aluminum Window Manufacturers Association. For your protection and complete satisfaction be sure to insist on the "Quality-Approved" Seal when you specify or OK specifications for aluminum windows.

A WORD OF CAUTION—Remember that only aluminum is rustproof through and through. Mere surface protection against rust is not enough. Wear, unintentional scratches in delivery or installation may nullify any protective coating and soon require painting.

For additional information consult Sweet's (Architectural File, Section 16a/ALU) or any of the approved manufacturers listed below, or write for our latest "Window Specification Book". Address, Dept. PAB-65.

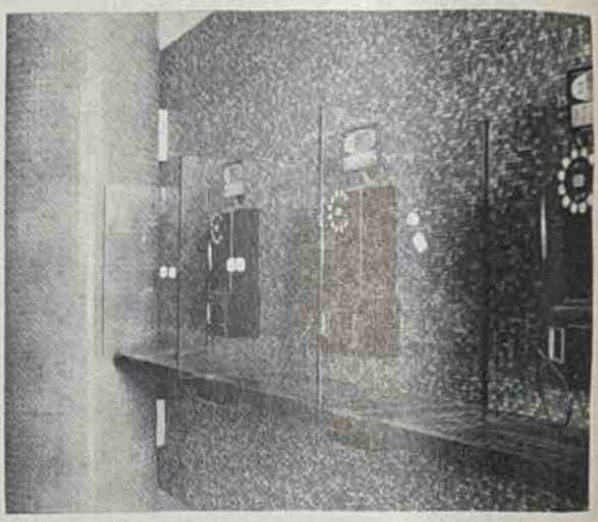
WINDOWS



Police Administration Building

Joe Young's Mural

SIX TONS OF MOSAIC MURAL hang from structural columns in lobby. Back of panel supports public telephones.

"This was an unusual opportunity wherein architect and artist were able to collaborate freely. Perhaps in this sense the end result might be described as a 'transitional' mural, i.e., a situation that required the mural to come down from its traditional position on the wall and be employed as the contemporary space modulator it should be. If this turns out to be a contribution to the historical evolution of art integrated within architecture, then much of the credit should go to the planning of Maynard Woodward, AIA, as head designer for Welton Becket & Associates."—*Joe Young.*

CERTAINLY one of the high points of interest in the Police Administration Building is the hanging mosaic mural, first major work of this type to depart from a conventional wall installation and the largest ever executed in the United States.

Seeming to float in the air in the building's lobby, the six-ton monumental mosaic by Joe Young consists of more than 250,000 tiny glass stones, each one set by hand in 50 diverse colors. The mural, 36 ft. long and 6 ft. high, is cantilevered from two structural columns and serves as a divider partition between the lobby and the public telephone area.

The 436 sq. ft. of mosaic surface presents a panoramic theme of Los Angeles and its architectural growth. The city skyline seems to move with the spectator as he walks through the lobby. The rear of the mural, finished in monotone colors of hand-set glass stones, acts as a panel to support the telephones which are installed in the panel itself.

Young took two years to create the mural, using steel, aluminum, copper, concrete and glass. Copper lathing was reinforced with concrete for the basis of the panel structure.

The tiny pieces of glass were set in the artist's studio, mounted on paper sections and then installed on the cantilevered wall. Seams from one section to another are invisible. The mural will last hundreds of years and can be cleaned with a hose.

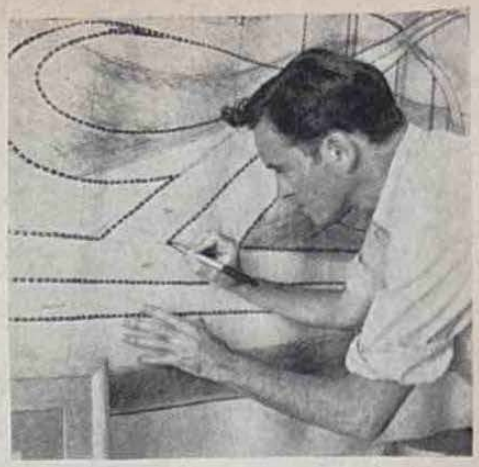
Briefly, here is the step-by-step process in executing the mural as outlined in the American Artist magazine:

1. Once the design of the mural was decided upon, the first step in making the mosaic was the enlarging of the cartoon to full scale.

2. When this full-scale cartoon was completed, it was cut into sections for working convenience. The size and areas of these sections had been determined in the planning stages of the project. Then, like a huge jigsaw puzzle, the parts were carefully assembled in reverse since, during installation, the face of the mosaic was pressed into the concrete.

3. Mosaic pieces (Italian glass tesserae) had to be cut by hand to assure the right size and color for each space in the design.

4. To set the tesserae in place, mastic was first brushed on the cartoon, which served as a backing for the tesserae as well as a guide to the exact placement of pieces in the design. Tesserae of the proper size and color were selected from small bins of sorted pieces and set in place on the cartoon.



5. As the work progressed, small mosaics were held in position with neighboring sections of the original cartoon to check the accuracy of the linear mosaic design.

6. Small sections of mosaics were stacked on top of each other for packing.

7. The mosaic sections were set into a special brown grouting cement.

8. When all sections were in place and the cement had dried, the paper cartoon — which had served as backing for the tesserae — was removed, revealing the finished mosaic mural.

Integration of the arts in architecture

by JOE YOUNG

Reprinted from the Southern California Chapter, AIA, Bulletin

IN THE PAST 10 YEARS, many panel forums have discussed "integration of the allied arts within contemporary architecture."

In most of these sessions, the invited speakers generally admit that a synthesis of the arts is the unsolved problem of our culture. Some experts explain the lack by pointing to the diversity of our society and say, as long as decentralization is a goal, integration will progress slowly. A few refuse to admit any problem exists and in one instance I actually heard an architect, who never commissioned an artist, argue vociferously with an artist, who had never executed a commission.

Whatever the opinions, these discussions have evoked recognition of a serious shortcoming, often the first step to a solution. If what has been stirring on the West Coast since the war is a portent of the future, then we certainly are no longer in the academic stage of discussion, but beginning to work out an answer.

It is well known that architects in this area are no longer completely oriented by what occurs in the East. This regional self-sufficiency, which had to happen on many levels all over the country before it influenced local building concepts, helped this particular area to lead a significant break-through on some of the important design accomplishments of our time. This leadership meant new responsibilities and how these weights were to be carried became the challenge.

In the Southland alone, the number of architects who have awarded commissions to artists has begun to bridge that vast gap that divides architecture in America from its natural allies. We must admit some planners still haven't learned that art didn't commence with Mattise or Mondrian, any more than it ended with the Renaissance. It is just as urgent that artists come down out of their ivory towers and apply themselves to learning the practical nature of the building profession.

If we are edging out of this period, when suspicion among the arts impeded all coordination, then it is in part due to the architects who first achieved a wider freedom of design and realized that endless facades of textures were not the answer. Glass and stone combined with brick and tile may create a required simplicity, but for the want of an artist's contribution, the essential purpose of the building often goes unexpressed. Everything in our past indicates we are a nation ready to utter dynamic images and yet, in one of America's important decades, how many structures reflect a Spartan purity that underestimates our needs? If the enlargement of our environment into a wider meaning is the mission of the architect, then to succeed, the breadth of this ambition must encompass every activity. Our best schools have accepted this premise, but in getting down to cases, just how does an architect with an opportunity go about selecting an artist for commission?

First, experience shows that following the AIA regulation on providing free sketches works out best when architect, artist and client all agree on this as a guide. Second, in seeking an artist to perform a commission it is also best to encourage mutual confidence by entrusting the problem to one artist as versus running a competition. The ability to make a building speak requires high qualifications and so the artist who can organize a project **with** the architect is the ideal. Admittedly these artists are rare, but it is also important to remember development in this direction by an artist can only come if he is awarded commissions.

An obvious precaution is to avoid the artist who mistakenly believes, simply because he works large, that he is qualified to collaborate. A developed sense of structural scale is more important than mock-heroics. The contemporary architect cannot afford to entrust his building to those artists who abort the architectural medium itself because they have no sense of continuity with the past; men who can only think in terms of obscure allegories or sterile illustrations of sentimental ideas—and this exists in the most advanced forms of cubism as well as in the more representative forms of art!

Generally the commissioning architect wants his buildings to feel human and the imaginative artist has much to offer. His knowledge of color-form has developed his sense of imaginary space and controlled illusory space can be an indispensible foil when integrating actual planes. Since the artist's direct language of visual imagery is of ancient and almost magic potency, then great care must go into every stage of the planning.

This artist can't be the sort of fellow you telephone if the finishing-up budget will permit, nor is he of any value if his work is arbitrarily added like a patch to conceal the haste of hurried planning. Successful integration cannot afford such luxurious crutches. Synthesis depends on the architect's willingness to persuade the client that his own best interests are at stake and that art integrated within a structure is essential to the function of a building.

Today a creative architectural artist knows the optics of wall perspectives, how to utilize color in a unified sense and the infinite possibilities of acoustical and mobile structures coordinated with light engineering. The tasteful use of plastics as transparent or translucent planes is understood. Photo-murals, collages, stereoptic walls and sculpture—all have departed from the genre to become contemporary architectonic means.

The contemporary artist with a thorough knowledge of the architect's spatial problems will accept all op-

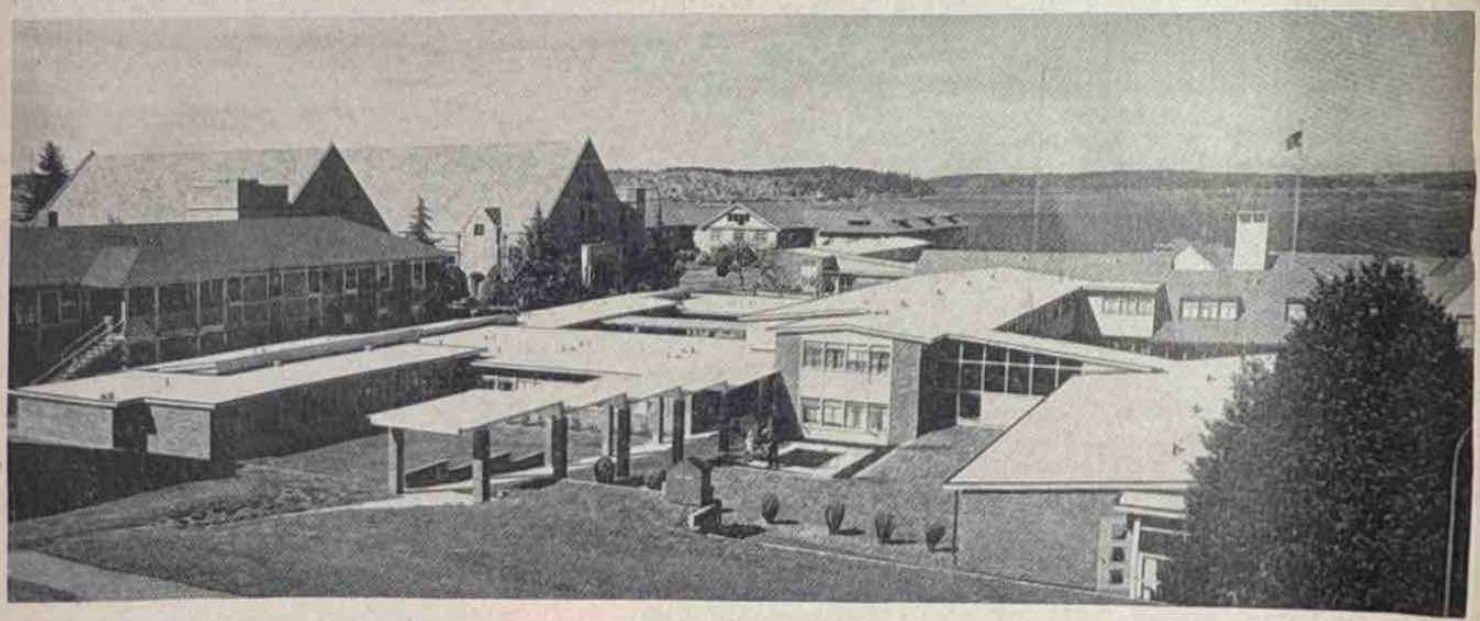
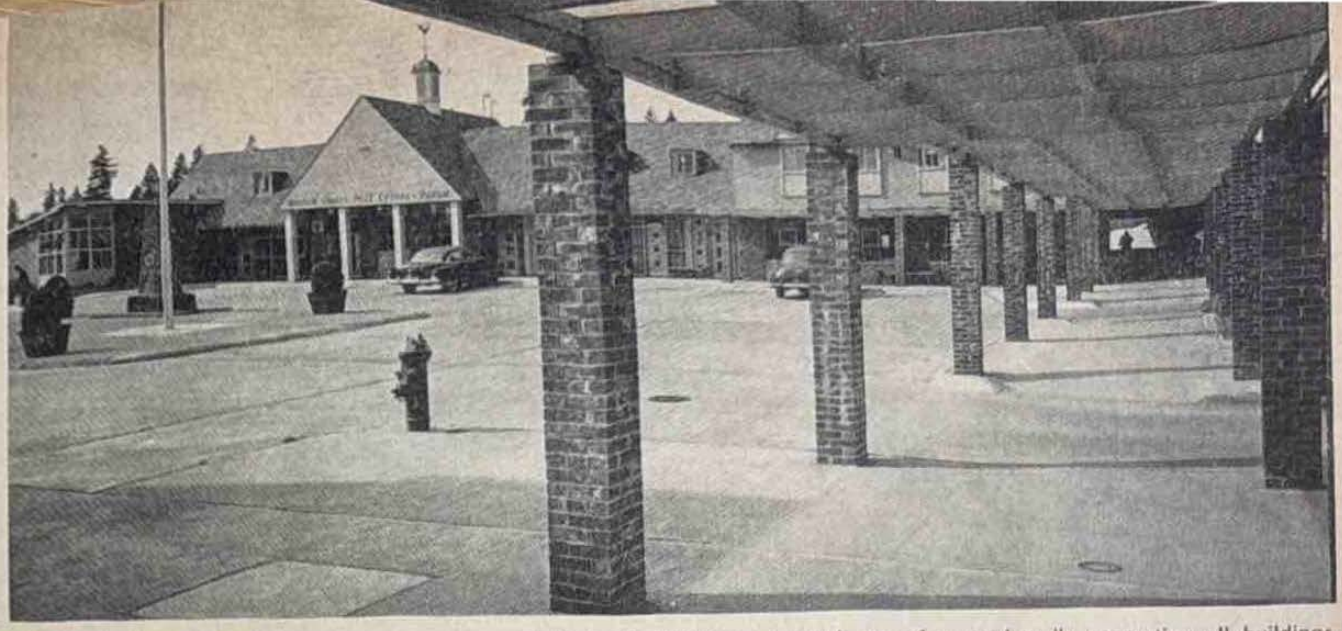
HOW FAR CAN architectural design go toward improving the living patterns within a state institution?



Can mere sketches off a drawing board hope to change age-old concepts of life within the confines of a government-operated "home?"



Answers to these queries can be found quite readily at the Washington State Veterans' Home in Retsil where a program of expansion has also included a new approach to institution living.

Here's the background of the story:

In 1910 the State of Washington dedicated a home for needy war veterans, their wives and widows. It was located on a 10-acre tract at Retsil, overlooking Sinclair Inlet and with a sweeping view of the Olympic Mountains.

SINCLAIR INLET AND OLYMPIC PENINSULA form backdrop for some new construction at veterans' home.

SQUARE AS SEEN from beneath one of covered walks connecting all buildings.

veterans' home expansion

by BOB KAROLEVITZ

That, of course, was three wars ago. Since then the population of the home has increased considerably until now it is on a waiting-list basis. The original living quarters became more and more crowded and, because of the increasingly older age-average of the inhabitants, some of the early facilities were proving hazardous, especially to the wheel chair portion of the population.

With those conditions existing, the State Department of Public Institutions under its director, H. D. Van Eaton, launched in 1951 a long-term program of additions, modernization and rehabilitation of the Retsil establishment.

The program afforded these prime considerations:

1. The addition of sufficient living quarters to eliminate the overcrowding, to permit the housing of more eligible veterans and to anticipate as far as possible the future needs of an ever-growing veterans' population in the state.

2. To provide further community facilities such as lounges, a post office, a fire station, administration offices and even a snack bar.

3. To confine this development to the original tract since property limitations precluded any expansions.

4. To locate the new living quarters close to the existing dining hall and hospital.

Faced with these problems, plus the generally accepted principle of designing institutional buildings to facilitate maintenance to the highest degree possible, the architects could immediately visualize a practical solution. Fireproof, multistory elevator buildings would make the most economical use of limited ground area, would allow for more apartment-like units and would provide off-the-ground views of the Olympic Peninsula's beautiful mountains. At the same time such buildings would cause minimum dislocation of established day-to-day operations of the home.

But there was another consideration much more important than any of these cold, practical, dollars-and-cents views. That was the human element: the requirements and the niceties which would make life more livable for the elderly inhabitants.

The first move then was to make a considerable study of the habits and desires of those who would be most affected by the new construction, the veterans themselves.

It was readily ascertained that the majority of inhabitants were Spanish-American War veterans whose average age exceeded 70 years. Many were confined to wheel chairs, and none were very active physically. The study just as readily indicated that these men, their wives and their widows would never be happy in a big-city apartment atmosphere; neither would the people of the World War I era now seeking entry into the home in ever-increasing numbers.

To them home is something informal, neighborly and intimate. The bigger the building, the more they feared the idea of becoming inmates rather than free-to-come-and-go citizens forced by circumstances into government facilities.

The first conclusion the architects arrived at was that living quarters must fit the veterans' concept of home. They must be tied to the earth and have an intimate scale. Only in such dwellings could fighting men of another generation live out their final years happily and in comfort—the ultimate reason for building such an institution in the first place.

These were the factors which forced the architects' thinking beyond mere walls, roofs and patios and into the realm of social considerations. The result was a new village type approach to institution living, featuring a village square, a semi-colonial style of architecture and the friendly, informal atmosphere so definitely hoped for by the Retsil veterans.

The final solution called for seven buildings of one and two stories grouped almost casually around the village square, which itself was developed on the site without changing the existing road pattern or displacing any important buildings.

Most of the buildings have been developed around

RAMPS used throughout new construction in place of stairs make walking easier for elderly members of home and facilitate wheel chair transportation.

OFF-THE-SQUARE VIEW shows rockeries and flower beds which offer recreational opportunities for oldsters who sport green thumbs. Ramps also are used outside buildings.

quiet interior courts, large enough to afford not only light and air but landscaping and sitting areas. The landscaping was planned to include flower beds and small rockery areas where veterans themselves can work at growing things.

The community facilities—the post office, the fire station, two large lounges, TV room, card room and snack bar, post exchange, beauty shop, barber shop and the administrative offices—face the village square.

The basic housing unit is a single bedroom of 136 sq. ft. with wash basin and 8 sq. ft. additional for wardrobe. Each pair of such bedrooms has a shared toilet. There are eight community bathrooms with showers, tubs, toilets and basins to serve the 228 rooms of this type.

A secondary type consists of 18 bedrooms and wardrobe with shared baths consisting of toilet, shower and basin. These rooms have individual exterior entrances independent of main buildings. They are for the use of members (as home inhabitants are called) whose physical conditions make desirable an adjacent bathroom. They are also used by single employees of the home.

Finally, there are seven suites with living room, bedroom and semi-private or private bath. These suites, on second floors, are assigned to married members and married employees.

All of the new buildings are connected by covered walks which lead eventually to the dining hall in an existing building. Covered walks also lead to the chapel and hospital facilities.

Throughout the new development, the physical inabilities of members are considered. Ramps have replaced stairways, lighting has been designed to make seeing easier for failing eyes and bathtubs have been equipped with handrails to prevent falling accidents. In the event of any emergency requiring evacuation of the buildings, the ramps and numerous outside entrances will facilitate such an exodus.

Many public institutions are built to house those who are paying a debt to society. However, those like the Washington State Veterans' Home have a direct opposite goal: to make a final installment on society's debt to old soldiers, sailors and marines who long ago defended their country in battle but who now are in the twilight years of their lives. Without a doubt the designers of the new facilities at Retsil organized the true purpose of the home.

Outline Specifications

Type of Construction: Masonry and wood frame combinations on reinforced concrete foundations.

Exterior Walls: Select common brick veneer backed with 4-in. concrete block; finished with ¼-in. cement asbestos board and fir siding, painted.

Roof: 3x6 t&g, supported by wood beams located about 11 ft. apart; 1-in. insulation board on top of deck, covered with built-up asphalt roofing and white marble chips.

Floors: Asphalt tile on concrete slab and on some wood second floors.

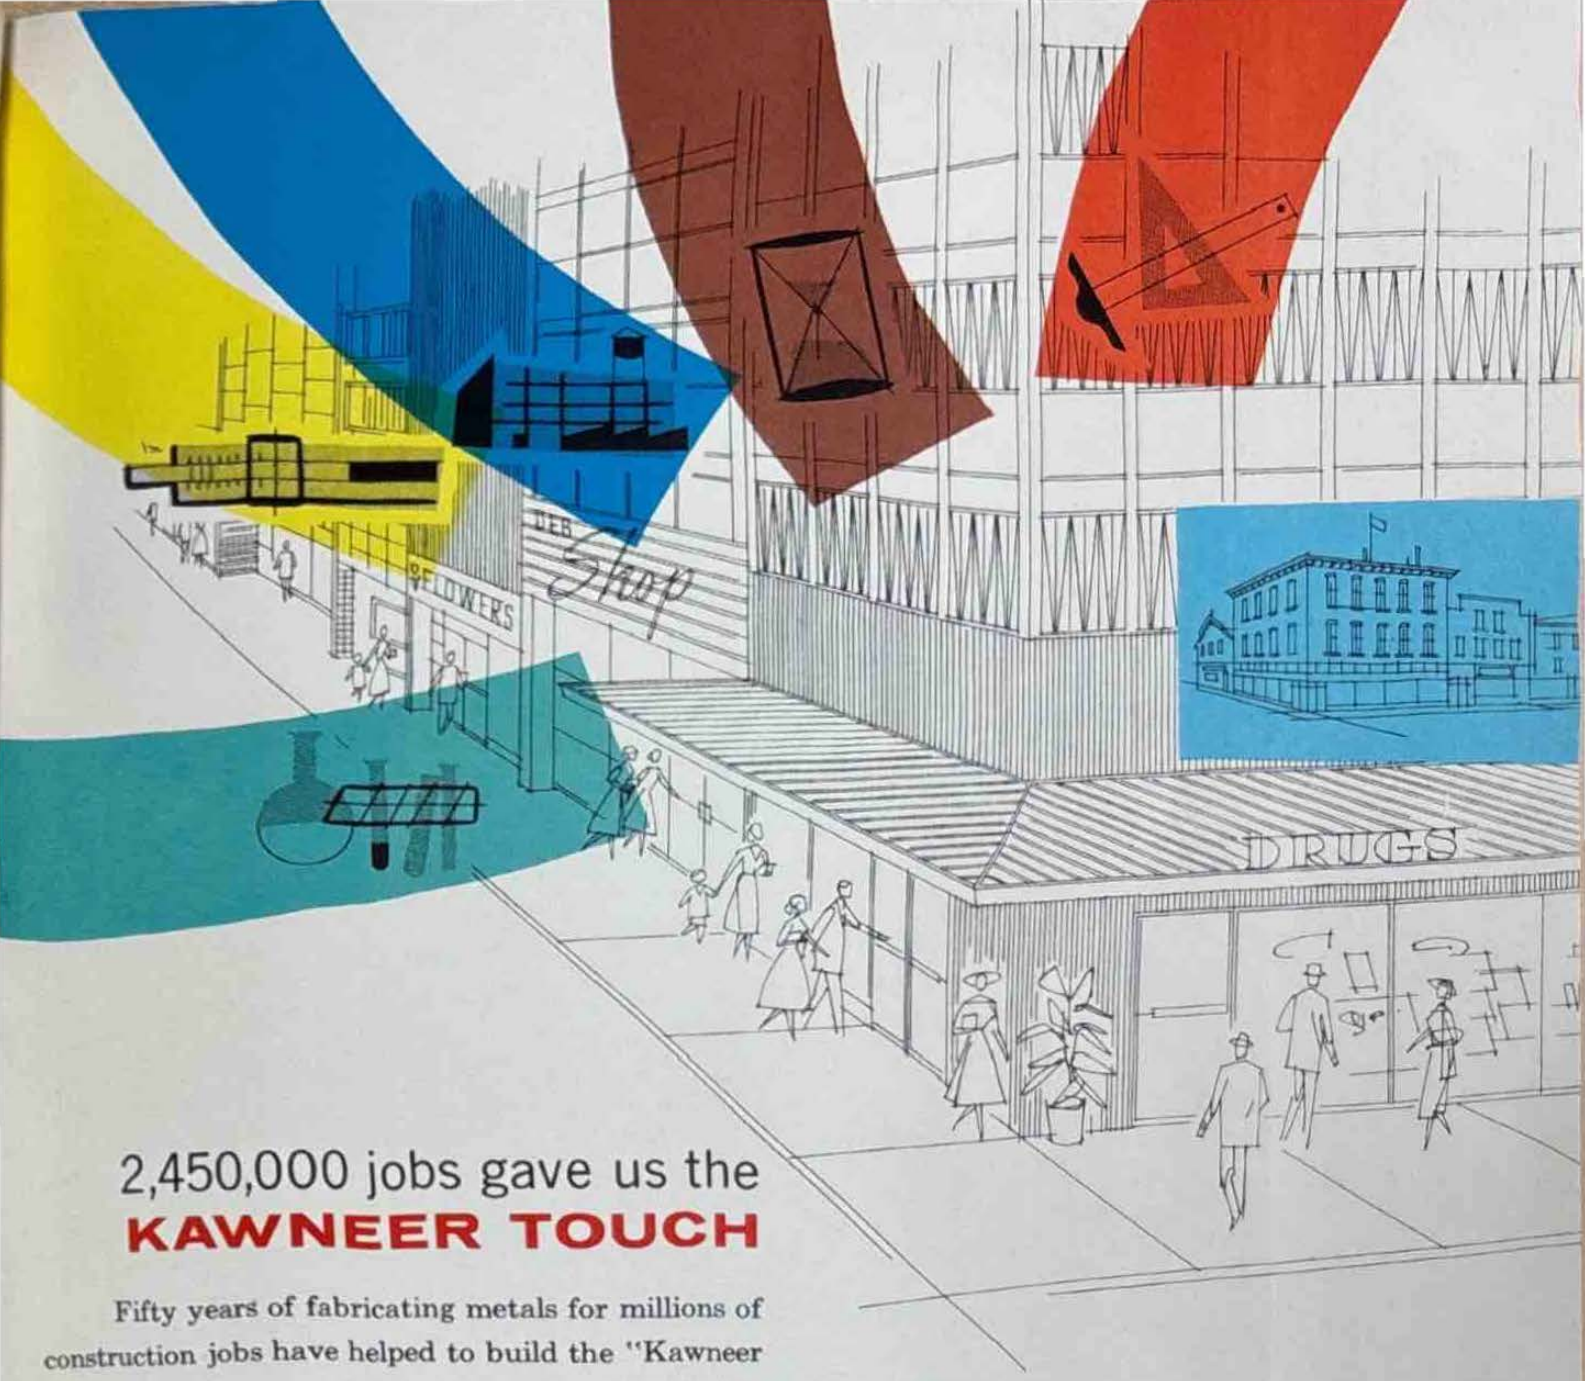
Windows: Aluminum sash.

Doors: Flush solid core fir cut for three glass panels, painted finish, exterior; hollow metal for all corridor doors to bedrooms; flush panel fir to private toilets and for sliding wardrobe closets.

Corridor Walls: 4-in. concrete block.

Room Partitions: 2-in. t&g solid wood, covered either side with ⅝-in. gypsum wallboard, taped joints.

Interior Trim: Fir base, chair rail and all trim, painted finish.



Ceilings: ⅝-in. gypsum wallboard nailed to bottom of wood roof deck and to wood furring on suspended ceilings.

Equipment and Specialties: Medicine cabinet and lavatory in each room; toilet room between each pair of rooms with grab bar on wall facing water closet; wide wood window stool (6 to 12 in. wide) covered with linoleum; built-in wood desk in corner of each bedroom; wood shelf (8 in. by 5 ft.) on wall side of each bed location; wardrobe closet (2x4 ft.) in each bedroom.

Lighting: Swing lights at head of bed, at end of desk and over medicine cabinet in each bedroom, bracketed to wall and provided with metal shade and indirect reflectors; bracket light in toilet rooms; no ceiling lights; corridor lights of dense boxes specially designed to mount in wall, with face of box at angle to throw main beam at 45 deg., about 20 ft. on centers.

Electrical: Service and distribution 440-volt, three-phase; dry type transformers located in each building; additions to main switchboard in boiler house with new feeder through existing tunnel to distribution center in village; all panels Westinghouse circuit breaker type.

Fire Alarm: Coded, supervised system providing continuous ringing bells in each building and setting off code box to give coded signal at fire station; break-glass stations at rear of each door.

2,450,000 jobs gave us the **KAWNEER TOUCH**

Fifty years of fabricating metals for millions of construction jobs have helped to build the "Kawneer Touch". All the new construction and modernization jobs from small store fronts to steamships have given us *our* skills . . . a "touch" that makes your job sparkle with finesse. On top of design and finish we offer construction "sense" that brings you metals that are easy to assemble on the job. You enjoy the benefits of *factory-controlled construction labor*. See your Kawneer representative and dealer. Their job is to serve you—to help you with information, details and specifications.

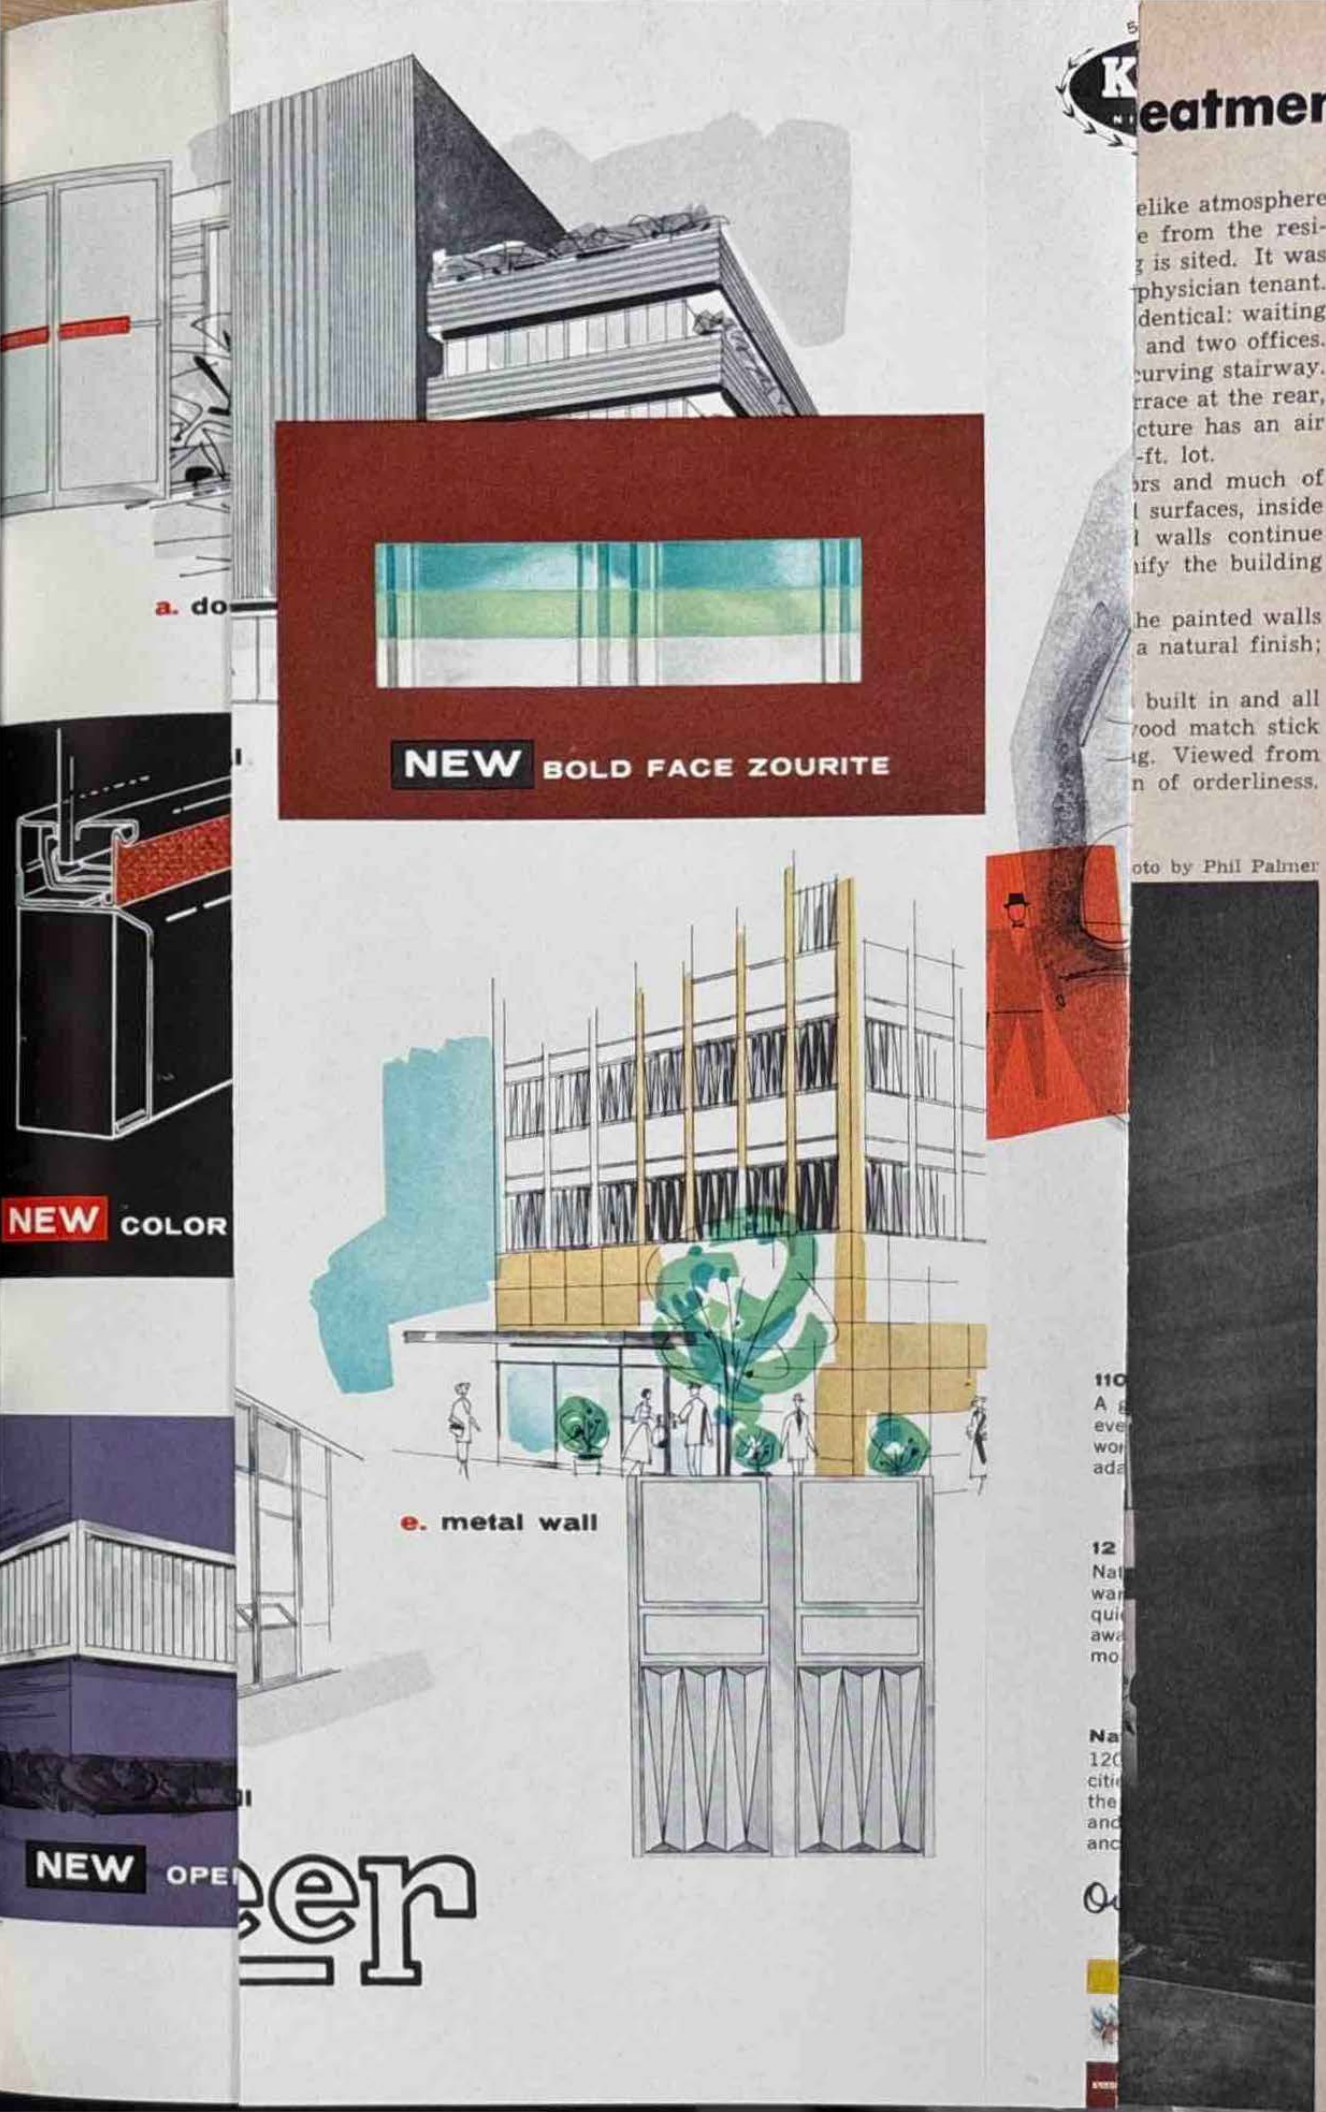
foremost fabricator of aluminum and plastics for the construction, aircraft and appliance industries since 1906.

the complete Kawneer line plus **NEW** 50th Anniversary products

a. doors and entrances
A complete line of narrow stile doors with the unique interchangeable hardware feature; wide stile doors; honeycomb core flush doors; and **new** full-vision, sliding glass doors for homes, offices and stores.



b. store fronts
An extensive variety of sash assemblies, trim members and facings to complement the store front design. **New** sash with a striking color stripe combines aluminum and vinyl.

c. sun control products
Durable, aluminum, sun-reflecting, canopies for store fronts, walks or parking. Sun-heat and glare controlling aluminum Kawneer K-Louvers, including the **new** *operating* unit help solve sun control problems.

d. facing material
Kawneer porcelain enamel and alumilited Zourite facing, now in two modular sizes and a variety of colors; the narrow-face 2″ and the **new** bold-face 6″. Can be used in combination or individually.

e. metal wall
Kawneer will provide shop-prefabricated and water-resistant window-spandrel units on the job, including erection. One responsibility from inception through installation.

f. unit wall
New unit wall system for single or 2-story buildings. Complete flexibility of design through a wide selection of color, unit types, unit sizes and choice of proportions, all with basic standard units. Superior weatherproofing system.

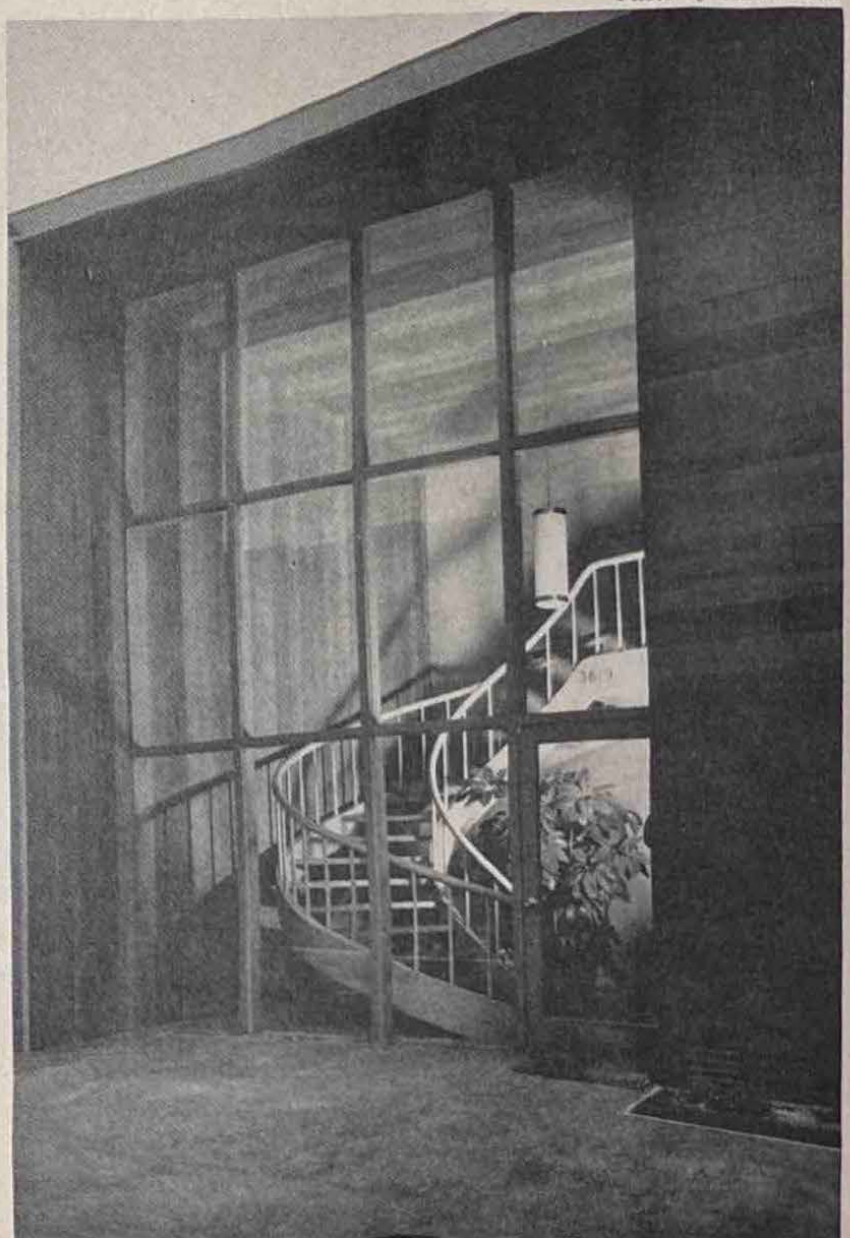
Architectural prescription: homey treatment

BECAUSE of the doctor-owner's belief that a homelike atmosphere is beneficial to his patients, the architect took his cue from the residential area in which this small medical office building is sited. It was designed to house the practice of the client and that of a physician tenant.

Except for a center court patio, the two floors are identical: waiting room, reception desk, two treatment rooms, laboratory and two offices. The upper floor is served by an elevator and a unique curving stairway.



With the courtyard in the center and a screened terrace at the rear, all of the rooms get natural light and the entire structure has an air of spaciousness belying the narrowness of the 100x25-ft. lot.

To carry out the residential character, all exteriors and much of the interior are of a mellow California redwood. Wall surfaces, inside and out, are of surfaced 6-in. shiplap. The redwood walls continue from the interior out into the patio and terrace to unify the building with the outdoor space.

The redwood is finished in a natural, clear color; the painted walls are a soft gray green. The stairway is of oak, left in a natural finish; the woodwork is either redwood or birch.

Much of the furniture designed by the architect is built in and all of the windows, except those in the lobby, have redwood match stick drapes. Surfaces were kept simple for ease of cleaning. Viewed from the street, the building gives an immediate impression of orderliness.

Outline Specifications

Type of Construction: Frame on L-and T-shaped concrete continuous footings.

Exterior Walls: Surfaced California redwood 6-in. shiplap finished in natural color.

Roof: Flat, built-up composition, with rigid insulation.

Windows: Sugar pine casements and French doors.

Doors: Built-up redwood and Douglas fir, painted.

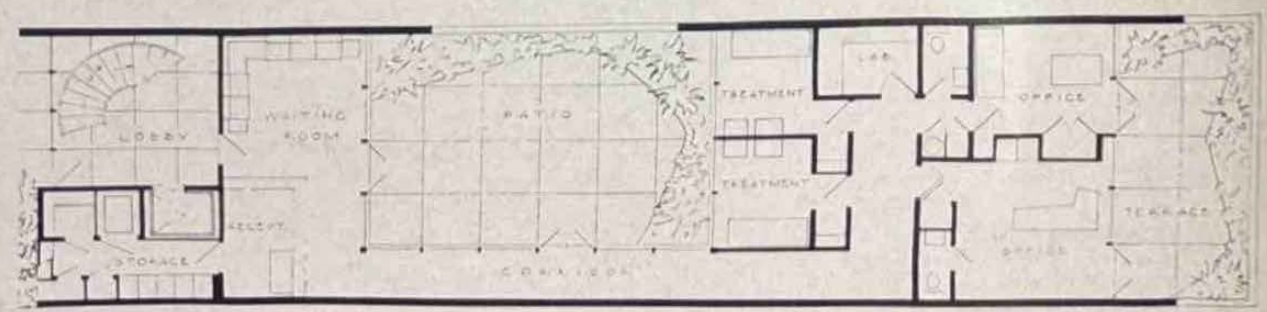
Floors: Concrete slab and rubber tile over wood.

Interior Walls: Surfaced California redwood 6-in. shiplap in natural finish and painted drywall.

Ceilings: Drywall.

Stairway: Oak in natural finish.

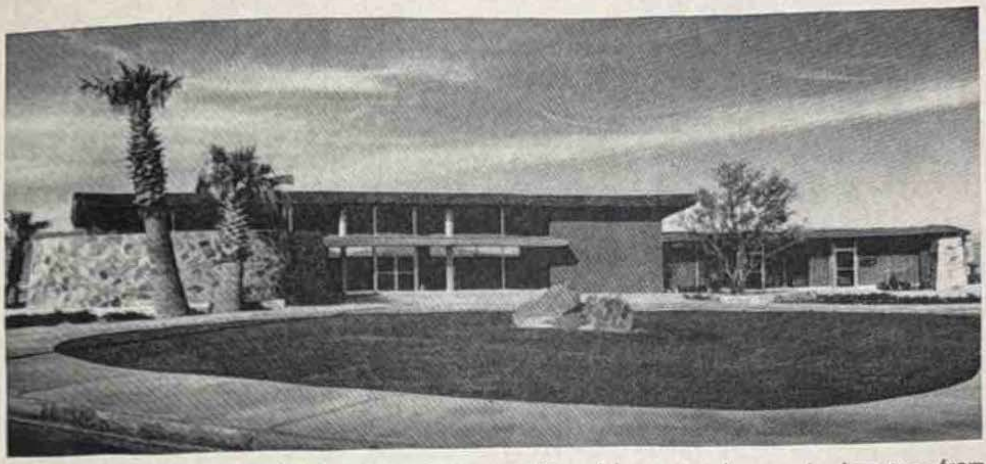
Built-ins: Lounges, etc., in redwood and birch.



Heating: Forced hot air, one furnace for reception area and one for treatment area.

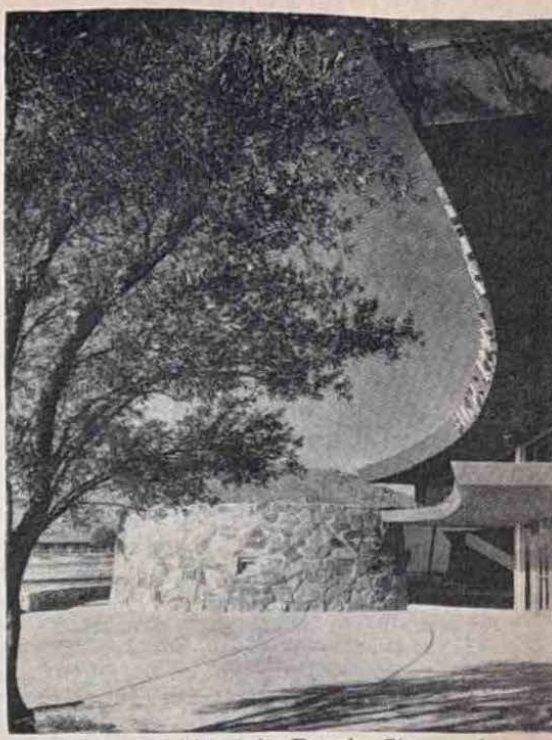
Total Area: 3,788 sq. ft., including patio; 2,959 sq. ft., floor space only.

Total Cost: $47,473, including patio, sidewalks and fences.



Cost per Square Foot: $12.53; $16.05, floor space only.

Date of Completion: August 1953.



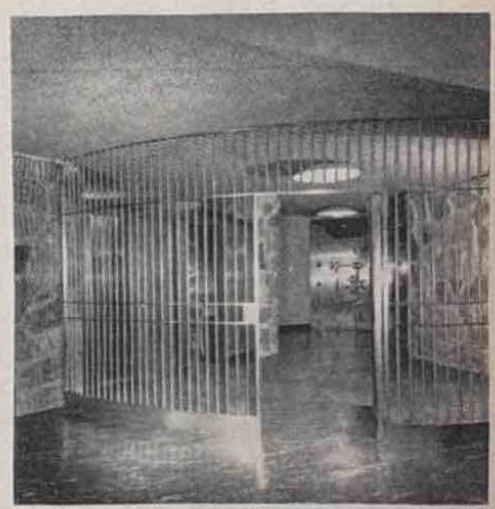
Security, dignity and beauty

Bank of Apple Valley
Apple Valley, California

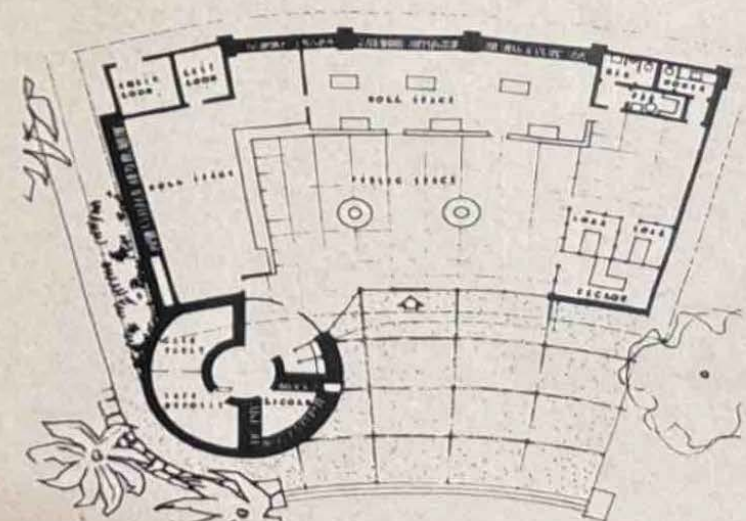
WITH PLENTY of space available, architects have achieved beauty and grace in departure from traditional bank design. Wing at right has three suites of offices.

Photos by Douglas Simmonds

CURVED OVERHANG and native stone enclosure for vault highlight exterior. Detail view of vault shows how stone is used inside.



McFARLAND, BONSALL & THOMAS, Architects
WILLIAM T. WHEELER, Structural Engineer
DON CLOUGH, Mechanical and Electrical Engineer
BENNINGTON & SMITH, General Contractors



THE BANK EXECUTIVES wanted a structure that would meet all of the technical requirements of banking but also would be unique, beautiful and a credit to the community—a comparatively simple problem although often difficult to solve.

The architects took advantage of their clients' willingness to sacrifice the traditional massive effect in favor of beauty, utilizing native, natural stone with which to encase the vault and produce a focal point on which the eye would center. For complementary materials they selected frame walls, aluminum trim outside and walnut inside to create a bank that is warm and friendly in both its exterior and interior treatment.

Built on spread concrete footings, the structure has 5,300 sq. ft. of space in the bank portion and 2,700 sq. ft. in the wing on the right side (added a year later) which houses three suites of offices.

The project was cited for an AIA Award of Merit in 1955.

OUTLINE SPECIFICATIONS

Type of Construction: Frame with steel beams on concrete footings.
Exterior Walls: Frame with plaster, native stone and aluminum trim.
Roof: Flat, steel beam, composition built-up with rigid insulation.
Floors: Concrete slab with asphalt tile finish.
Windows: Aluminum.
Doors: Herculite, exterior; hollow core, interior.
Interior Walls and Partitions: Frame and plaster on gypsum lath with walnut trim.
Ceilings: Acoustical plaster.
Heating: Forced air.
Total Area: 8,000 sq. ft. (5,300 sq. ft., bank portion; 2,700 sq. ft., office wing).

Oregon's School of Architecture

Eugene, Oregon

ANNAND, BOONE & LEI
Architects

SIDNEY W. LITTLE, AIA
Consulting Architect

COMPLETED STRUCTURE will consolidate into one building the school's nine areas: architecture, interior architecture, landscape architecture, urban planning, drawing and painting, sculpture, applied design, art history and art education.

TWO ADDITIONS to the School of Architecture and Allied Arts at the University of Oregon will put under a single roof the nine areas formerly housed in three separate buildings.

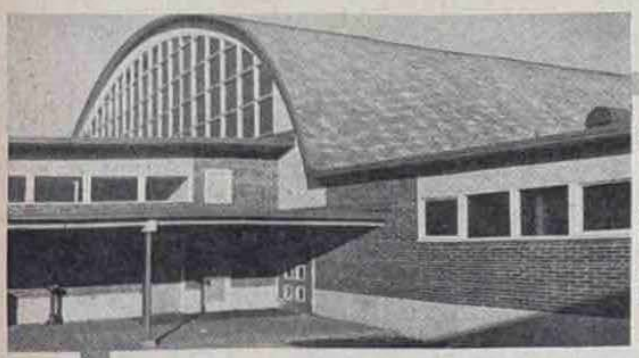
Scheduled for completion by the fall term of 1957, the structure will be named Lawrence Hall in honor of the late Dean Ellis F. Lawrence, who organized the school in 1916 and served as its first head until 1945. Total area of the school will not be substantially increased but it is expected to be adequate for the next 10 or 20 years.

The old gallery wing has been demolished to make room for the three-story architecture unit, old portions of the building will be remodeled and a second new unit will be added.

Of particular interest to graduates will be a seminar room dedicated to the late Prof. W. R. B. Willcox, who directed the architecture curriculum for many years. Alumni who studied under his direction will furnish the Willcox Memorial Room.

The old patio will be retained and slightly enlarged; and the old Hawthorne tree will be returned to the area.

The architecture unit will be of reinforced concrete with curtain window wall construction for the exterior. The first floor will contain the main entrance lobby, the dean's office suite, lecture room and drawing review room. The second floor will be devoted to a series of small offices along the south side, with drafting and review rooms occupying the balance. The third floor will have offices and a drafting room.



Attached to the architecture unit will be the library unit—an open first floor and second floor housing the passage between the new architecture unit and the present architecture building, as well as the library. Access to the various floors will be divided by a primary stairway on the west.

The first floor lobby and entryway will be of plate glass from floor to ceiling; the second and third floor window walls will be of aluminum.

Interior finish will be confined to the offices, lecture room and review rooms. The drafting room areas will be left as loft space. The exterior finish of the lecture room will be left in the rough and it is proposed that the mural designs developed by the school will be applied over this surface as a finish. The balance of the building will be painted architectural concrete.

The second addition, the sculpture unit will connect the present east wing, in which is now housed ceramics and weaving, to the present architecture building. It will be a one-story building with a concrete slab floor, Q-deck roof, concrete exterior, walls, and steel sash. Space will be provided for an entrance lobby, office, sculpture studios and storage, with a crane rail serving each of these areas.

The Portland architects and Dean Little have been assisted in planning by the school's staff, with Robert R. Ferens and Lionel T. Chadwick as coordinators in building design and Frederick A. Cuthbert as landscape consultant.

Housing slows building volume in West

BUILDING PERMITS for the five Western states totaled $214,276,627 for April, a 15% drop from March and also a 15% drop from April 1955.

The decreases reflected a continuing trend toward less home building activity in the entire area. For example, Los Angeles County was down $16 million from the same period last year, mainly because of a big decrease in tract housing; Orange County was down $5 million; and San Bernardino County was down $4 million.

Although King County showed a $1¼ million increase, housing was down $700,000. Seattle and Portland also reported decreases in housing starts.

On a statewide basis, only California showed a drop from April of last year, 21%. Oregon was up 17%; Washington, 16%; Montana, 4%; and Idaho, 7%. This is the first time this year that the Washington total has risen above last year's volume.

Two states reported decreases from March. California was down 22% and Montana, 38%. Oregon, Washington and Idaho reported increases of 22%.

By the end of April, the 116 building permit agencies participating in the survey, had recorded a total of $846,821,642, a bare $2,566,140 higher than the first four months of 1955 (and a 3% increase).

Only one state, Washington, is running behind last year. With $94,491,654 that state's volume is down 10%. Montana shows the highest rate of increase, 34%, with a dollar volume of $8,194,907 for the four months. Oregon with $42,555,766 is up 5%; Idaho with $6,944,538 is up 5%; and California with $697,200,917 is up 1%.

Following is a breakdown of building permits issued by several of the major agencies during March.

	DWELLING UNITS		COMMERCIAL & INDUSTRIAL		PUBLIC	
Portland	145	($ 1,619,200)	30	($1,253,735)	4	($ 655,000)
King County	647	(6,452,175)	66	(1,977,417)	5	(718,195)
Seattle	221	(3,385,685)	26	(857,630)	1	(1,350,000)
Tacoma	209	(847,519)	50	(695,498)		
Los Angl. Co.	1655	(19,185,871)	205	(3,963,650)	143	(1,495,340)

A unique feature of the Equitable Building's air-conditioning is 1,180 of these air blending units. There is a blender installed in every perimeter office. The units are connected to the central duct system and they act as independent thermostats delivering conditioned air according to an individual's wants.

Pinched inside a space 11½ inches deep–

Steel ductwork stands rigid air-conditioning test

The 25-story Equitable Building is San Francisco's newest skyscraper and the city's first office building to be completely air-conditioned. The Scott Nelson Company, Mechanical Contractors, had a job on their hands fitting a duct shape in the 11½-inch furred ceiling space. The problem was to fabricate ductwork flat and narrow, yet rigid enough to withstand constant vibration and pulsation. Adding frame reinforcement to the duct was only part of the answer. The rest depended on the selection of the right metal sheet.

The job required metal properly ductile to form sharply angled, tight seams; yet rigid enough to prevent seams from cracking or opening under the stress of high velocity airflow. The Scott Nelson Company selected steel . . . USS Galvanized Steel Sheets for the job . . . and report the USS sheets did a perfect job.

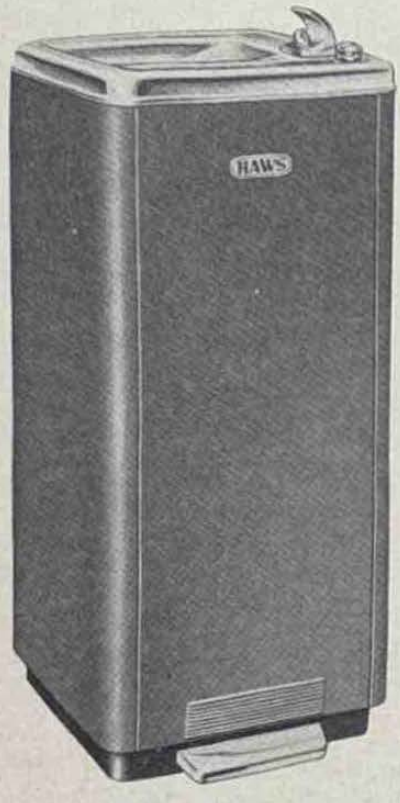
Integration of the arts in architecture

(Continued from page 15)



portunities as a challenge. Industrial, commercial, educational and recreational buildings all arouse his enthusiasm and call forth exciting, practical solutions. Since commercial and industrial structures do have a shorter lift, the art should be conceived with this limitation in mind: inexpensive, transportable expressions that can be redesigned as necessary. Educational recreational and religious buildings, however, require statements projected with vigor and insight. Contemporary living can be reflected with an impact that will increase the civic value of a structure as it ages. Thematic material visualizing what our way of life means and where it is leading can produce an integrated architecture of **lasting** interest.

As our society moves forward, opportunities for spiritual rejuvenation through self-evaluation must be created. Our timidity will be conquered if we realize that within our power to see ourselves honestly lies the greatness of our democracy. With new mediums at his command and a sense of historical purpose to direct his efforts, the architectural artist can create buildings that will stand as an inspiring revelation of our past and as a testament to our faith in the future. The roll of the artist is developing as the architect grows. No longer is he thought of as a specialist, but as a broad creative personality, capable of contributions vital to the healthy growth of the building professions.

True integration can only return when the architect and artist sit down to break honest bread together and when the architect insists that the artist be capable of executing every step of his work, since personal command of technique is the only way creativity can be evolved. As John Steinbeck recently wrote, "People need responsibility. They resist assuming it, but they cannot get along without it. Man is a double thing . . . a group animal and at the same time an individual. And he cannot successfully be the second until he has fulfilled the first."

HAWS
ELECTRIC
WATER
COOLERS!

Add beauty and convenience to your interior plan! Specify HAWS Coolers—designed in smooth, functional lines that complement today's architecture—with custom-styled cabinets, lifetime stainless steel tops, chrome trim. They are ideal for school, office, restaurant or cafeteria, commercial, industrial and institutional application.

No complex planning is necessary! HAWS Electric Water Coolers merely require an electric outlet, water source and drain. There are many models for many needs...bubbler faucets, bottle cooler types, fill-glass faucets...all with HAWS complete sanitation features.

HAWS also features complete lines of drinking fountains and Emergency Eye-Wash Fountains...also **KRAMER Flush Valves** for every make plumbing fixture that requires an automatic closing valve.

For full information and specifications, see the HAWS Catalog. Write today!

Steel framed houses get push in Far West

Architects and engineers in the West are showing increased interest in the use of light structural steel in the framework of new single-family dwellings. This is indicated, at least, by an increasing number of experimental projects being developed in this area.

One such project is the X-100 research house which Eichler Homes of Palo Alto, Calif., is building in San Mateo Highlands for the primary purpose of showing the public what may be expected in contemporary home design within a few years. A. Quincy Jones, AIA, and Frederick E. Emmons, AIA, are the architects for the home, scheduled for public viewing about September 1. Color coordination is under the direction of Matt Kahn of the fine arts department of Stanford University.

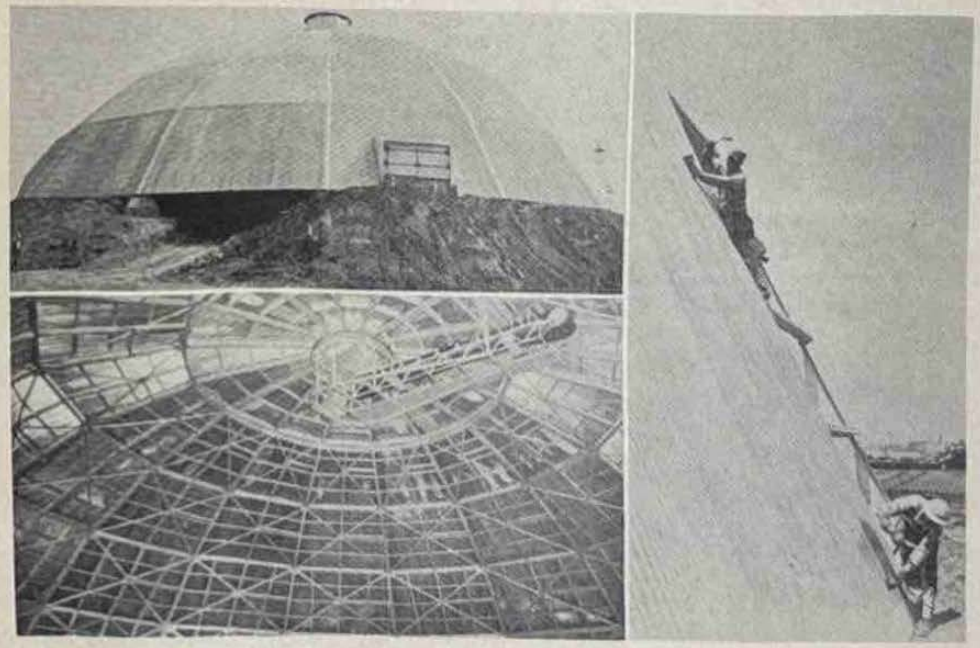
There seems to be a reasonable possibility that steel framing for single-family units can become competitive costwise with conventional material according to Ralph W. Seely, vice president of sales for U. S. Steel's Columbia-Geneva Division.

"Steel permits the use of slim structural members and longer spans," Seely points out, "providing greater footage of usable space, permitting greater freedom in floor plan and design and allowing a broader use of materials for walls and roofs."

Corrugated aluminum sheeting applied on steel frame without scaffolding

Sheeting impaled on aluminum studs that had been end welded to the frame cuts labor cost in half on Long Beach job

When a new type of dome-shaped storage warehouse, without interior bracing, was built recently for Kaiser Gypsum Co. in Long Beach, Calif., the corrugated aluminum sheeting was secured with end-welded composite aluminum Rivweld studs at an estimated labor cost saving of at least 50%.



Actually, stud welding was the only fastening method considered by the designers, Kaiser Engineers, Oakland, because of its speed and the fact that it could be accomplished without interior scaffolding. Operators with portable Nelson stud welding guns simply climbed over the steel framework to which the studs were welded. Use of other types of fasteners requiring scaffolding would have doubled labor costs, according to M. M. Walker, superintendent for Mitchell Steel Inc., Torrance, Calif., who installed the corrugated aluminum sheathing.

Twelve thousand Nelson composite aluminum Rivweld studs were used on the job. Two Nelson stud welding guns were employed, operating off a single Nelwelder battery power unit. Templates established stud locations. The aluminum sheeting was impaled over the studs with rubber hammers and the ends of the studs were then upset.

Since the portions of the composite studs that come in contact with the sheeting are aluminum, there will be no electrolytic action between the sheeting and the steel building framework. Appearance of the building was improved because the studs are almost invisible.

The 35,000-ton capacity rock storage building is part of an expansion costing about $3 million, which began in March 1955. It increased the productive capacity of the Long Beach plant to 210 million square feet of gypsum board and lath and 50,000 tons of plaster annually.

The plant supplies the 19 counties of southern California, southern Nevada and Arizona and employs 150 persons, with an annual payroll of more than $750,000.

KAISER GYPSUM'S unique new bulk storage warehouse at Long Beach, top, and the steel framing of interior, bottom, to which Rivweld aluminum studs were welded by Nelson guns. Corrugated aluminum sheeting then was impaled on the studs and studs were upset. Construction without scaffold saved 50% of labor costs.

Lightest handful of concrete masonry material...

CASCADE PUMICE

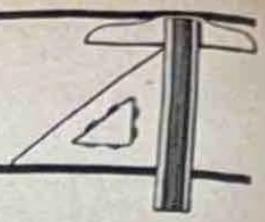
The extra light weight of Cascade Pumice Concrete saves you money on handling costs, speeds up building. When weight is a factor, always specify Cascade Pumice Concrete for best results.

Cascade Pumice Concrete gives you tops in:

LIGHT WEIGHT
STRENGTH
FIRE RESISTANCE
HIGH INSULATION VALUE

Insist on A.S.T.M. specs.:

When specifying ANY concrete masonry demand blocks "in accordance with ASTM specs., on adequate foundation." Also Bond Beam Blocks, used where needed, end masonry problems.



WILLIAMSON Cascade PUMICE

Pacific Architect and Builder

T-square talk

about architects • planners • engineers

NEW PARTNERSHIP: Walter Wagner, AIA of Fresno has announced the formation of a partnership with six key men who have been associated with his office for the past 10 years. The firm is now known as Walter Wagner & Partners, architects and engineers.

Partners of Wagner, who also is a civil engineer, are Paul Harris, AIA; James A. Blayney, mechanical and electrical engineer; Henry DuPertuis, architect and manager of the firm's Merced office; Paul Schoenwald, architect; Will Thomas, architect; and Harry Bode.

The firm is one of the largest in the San Joaquin Valley, specializing in the design of public schools.

Gordon N. Johnston, AIA, and Robert W. Evans, AIA, have announced their association for the practice of architecture under the firm name of Johnston & Evans, Associates, in the Washington Building, Tacoma (BRoadway 4768).

NEW ASSOCIATES: Two project directors, Harry Saunders and Kaz Nomura, have been made associates in the architectural firm of A. Quincy Jones & Frederick E. Emmons, Los Angeles. Saunders is a graduate of Texas A&M College, Nomura of the University of Southern California. Both have served with the firm for several years. Emiel Becsky continues as associate architect.

ON THE MOVE: Raymond Kermit Thompson, AIA, and Polly Povey Thompson, AIA, are occupying the home and office at 1728 N.W. 32nd Ave., Portland, of Herman Brookman, FAIA, who left in April to spend a year traveling in Europe. The Thompsons were formerly located in the George White Veterans Building.

NEW OFFICE: Neil Farnham, formerly on the staff of Hollis Johnston and of Stanton & Johnston, has opened his own office in his home at 2850 N.W. Westover Road, Portland. Farnham, an associate member of the Oregon chapter, AIA, is a graduate of the University of Oregon.

PRIVATE PRACTICE: Thomas M. I. Leake, AIA, of Boise has severed his contract with Boise Payette Lumber Co. to devote full time to his private architectural practice. While serving as consultant architect and product development director for the lumber firm the past two years, Leake has engaged in private work at 1321 Vista Ave., where he will continue to occupy offices.

Rodney James Grider, who joined Leake's staff upon graduation from the University of Idaho in 1953, has been named associate and designer in the new endeavor.

Leake has been active in affairs of the Northwest Regional Council, AIA, and has served as an officer of the Idaho chapter, of which Grider also is a member.

DIED: Robert L. Tidball, 44, structural and mechanical engineer, died May 1, in Veterans Hospital in Portland after a long illness. He was a graduate of Oregon State College. Before opening his own firm in 1946, Tidball served in the Navy and was in the power design section of the Corps of Engineers.

Albert A. Geiser, 64, retired architect, died May 4 in Seattle, where he had designed many commercial buildings and residences. Born in Chicago, he had lived in the Northwest since 1907.

Homer B. Mathes, architect and lifetime resident of Bellingham, Wash., passed away April 27 at the age of 51.

HONOR PROF: University of Idaho students of Ted J. Pritchard, who heads the department of architecture, presented him with a wrist watch, marking his 30 years of teaching at the Moscow institution.

Paul L. Blanton of Pasco, Wash., president of the student AIA chapter, made the presentation during the department's annual dinner. Principal speaker was Carroll Martell, AIA, of Spokane, who discussed "Education of an Architect."

Blanton and Paul L. Duffy shared first place honors in the C. F. Hummel prize awards, with William E. Ostrander taking third. An elementary school was the subject of this year's design competition, sponsored by the architectural firm of Hummel, Hummel & Jones and Chester Shawver, associate, of Boise.

AWARDS: Robert P. Darlington of Pullman, Wash., on a year's leave of absence from Washington State College where he is an instructor in architectural engineering, won the $2,500 third prize in a nationwide competition for new design and construction ideas for aluminum curtain wall buildings. Darlington is now working on his MA degree at the University of Illinois.

Among the 15 honorable mention award winners in the contest sponsored by Aluminum Company of America and the National Association of Architectural Metal Manufacturers were three West Coast entrants: Wendell H. Lovett, AIA, Bellevue, Wash.; Dike Nagano, Culver City, Calif.; and Richard Blanchard, San Francisco.

TO HONORARY: The two West Coast chapters of Tau Sigma Delta, scholastic honorary in architecture and allied arts, have announced election of new members.

Iota chapter at the University of Washington has initiated Richard Alden, Alvin Dreyer, Ching-Hwa Hsiao, Dean Latourell, Richard Lundstrom, John K. Miller, Joseph Onuma, Gerard R. Torrence, Barry Upson and David Wright.

New members of the Lambda chapter at the University of Southern California are Sheldon B. Caris, Loch Crane, Charles R. Erickson, Harry Gittelson, John A. Rinaldi and Paul S. Wuesthoff.

Lambda chapter marks its 25th anniversary this year while Iota chapter was founded in 1924.

SAN SALVADOR PROJECT: Raymond R. Shaw, AIA, and William D. Coffey, structural engineer, both of Los Angeles, have been selected by the Banco Hipotecario de El Salvador to design and supervise construction of its new $2 million head office building, the first multistoried steel frame structure to be erected in San Salvador. With 95,000 sq. ft. of floor space, it will comprise a basement and three or four floors above.

Correction: The item in PA&B for March concerning the move of Jesse W. Green, AIA, to 3907 Duquesne Ave., Culver City, Calif., was incomplete since it failed to mention that he joined forces with Thomas B. McGhee.

AIA OFFICE MOVES

The Northern California chapter, AIA, has expanded and moved into new offices at 47 Kearny St. in San Francisco. There will be two telephones: DOuglas 2-7397 and DOuglas 2-3041.

Role of architectural school outlined by director

A worthy school does not teach architecture but creates a climate into which students come for direction, inspiration and guidance, according to Arthur P. Herrman, FAIA, director of the School of Architecture, University of Washington.

He addressed a group of Tacoma high school students who were guests of the Southwest Washington chapter, AIA, at its monthly meeting April 24.

"Architecture is not only a science of building," Director Herrman explained. "Vitruvius defined it as a combination of commodity, firmness and delight. To redefine it, architecture is primarily emotion—the emotion of the designer expressed in materials with the resultant effect on the emotion of the observer." Other excerpts from his talk:

"The architect is born not made. An architectural climate is created for five years, the student's perception sharpened, his imagination and sensitivity developed, his taste and judgment formed. These are fundamentals gained; the rest is his.

"The 'complete' architect is not trained in five years. The danger in architectural training today is that such close association is forced in school that the new architect is frustrated in the outside world.

"The prospective architect must possess the qualities of fondness for artistic and spiritual things. He must know how to draw and to communicate graphically and he must know people. If he possesses these things, he has great opportunity for self-expression. Since the architect has a responsibility to society, he must discipline himself to the practical aspects as compared to the designer who designs, then rationalizes. Without technical skill and imagination, the man will fail as an architect.

"He must then communicate on the level of society in which he works. He must know many things—politics and community problems, for instance—and must gain people's respect and confidence. The physician deals with one individual plus mysticism; the architect deals with one individual plus society. Danger lies in too much technical training without a citizen's responsibility."

Plug for Aspen Conference

As an opening feature of the evening's program, Gerald Davis, marketing manager of Heidelberg Brewing Co., presented a color film of the fifth International Design Conference held at Aspen, Colo., in the summer of 1955. Stating that the 1956 sessions will be devoted to "Ideas on the Future and Design," he explained that the conference stresses the importance of contact between all fields of design and makes possible discussion and study of all pertinent problems occurring in each field.

TACOMA AREA ARCHITECTS and student guests meet in Scotty's Caravan Inn to hear Arthur P. Herrman (seated, center of photo), director of the School of Architecture, University of Washington.

Cut hours of travel time to minutes...FLY WCA!

ROOFING STONES: Coarse aggregate roofing stones for low pitch, built-up roofs are now available in a range of 10 colors: light green, dark green, bronze, brown, blue, red, coral, silvertone, sea green and rose.

Colors are fired on the aggregate. Uniform gradation allows the pebble-size stones—called Ceramic-Color—to pack tightly, producing a shadow effect and appearance of depth.

(Item No. 1)

CLOSET DOOR: To resist warping, Metaloc sliding closet doors are completely vapor sealed internally and have built-in expansion seams to take up any expansion or contraction.

Faces of the doors are Masonite Duolux, three-ply mahogany or a combination of the two. They are metal edged and framed. Doors are delivered ready for installation with complete steel track, nylon rollers, pulls and floor guide.

(Item No. 2)

FASTENING TOOL: Ramset this month will begin marketing a fastening tool developed to handle many jobs between the light duty hammer and nail and heavy duty, powder actuated fastening tool.

With Shure-Set a worker can manually drive a fastener through ¼-in. steel. It seats a specially constructed fastener into a variety of materials, such as concrete, concrete block, cinder block, brick and steel. It can be used where anchors, toggle bolts, expansion shields and concrete nails were formerly used and ends the tedious job of star drilling or the aggravating job of pounding at stubborn concrete nails.

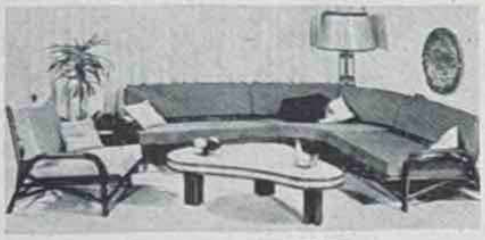
(Item No. 3)

PLASTIC PANELS: Women will be particularly pleased with a Fiberglas reinforced plastic sheet inlaid with coarsely woven natural fabrics whose reflected light does not change the colors of cosmetics, flesh or clothing.

The Rend-O-Lite flat and corrugated sheets, manufactured by Commodore Industries, contain jute netting, natural burlap, bleached burlap, Osnaburg cloth or Philippine Grass.

(Item No. 4)

WEATHERSEAL: A plastic backed, woven wool pile weatherseal that will not mat or take a set no matter how many times it is pounded has been developed by Schlegel. The stripping is impervious to Arctic cold, summer heat or strong cleaning solutions and will not corrode, rot or get moldy.



A selection of 90 extruded shapes is available for use on prime and secondary windows of all types and on all styles of doors or sliding panels, including plate glass.

(Item No. 5)

PANEL SAW: For easy, one-man cutting of large plywood, Masonite or plastic panels, Richard C. Bennett offers the two-way panel saw mounted on a turntable to permit either ripping or crosscutting. The saw runs between tubular steel tracks on a sturdy wood frame. The unit measures 12 ft. long, 6 ft. 7 in. high and 24 in. wide.

(Item No. 6)

FURNITURE: An original group of casual furniture with what the designer calls authentic Nordic ancestry

NORDIC FURNITURE

has been added to the Ritts line.

The Scandia group features hazelnut finish, a touch of woven cane, ash marproof plastic table tops, foam rubber cushions and imported upholstery designs. Included are Viking chairs, two-piece sectionals, curved corner units, dining groups, bar and bar stools and other pieces.

(Item No. 7)

TROFFER: To save space for air conditioning ducts, piping, etc., Lighting Products is offering Thin-Lite troffers that require only 2⅞ in. depth in the ceiling.

Three models are available: the one-piece polystyrene louver panel, the Corning No. 70 low brightness flat glass lens and a formed acrylic diffuser.

(Item No. 8)

DECORATIVE BOARD: Using "even the squeal," Pack River Tree Farm Products has come up with a distinctive waferboard for interior use which combines the appearance of a three-dimensional pattern with good strength and stability.

Tenex is made of thin wood wafers bonded under heat and pressure with chemical resin to make a solid wood board ¼-in. thick. It uses debarked slabs and edgings that have all too often ended up in the sawmill burner.

(Item No. 9)

PLYWOOD FORMS: Eight to twelve re-uses of plywood forms before recoating is possible with a protective finish recently developed by L. Sonneborn.

A blend of synthetic resins in fast-evaporating solvents, Form-Saver permits clean, smooth stripping of the forms with no pitting of the concrete surface or transference of raised grain from forms to masonry.

(Item No. 10)

FASTENER: For faster assembly and better appearance of insulated metal sandwich and other curtain walls, Nelson Stud Welding has developed a stud welded construction fastener with an aluminum cap.

Setlock employs a steel shoulder type stud with serrated tip which is end welded to structural girts with the Nelson stud welding gun. The aluminum cap is placed over the serrated tip of the stud and driven into position with a tool which causes the aluminum to grip the serrations.

(Item No. 11)

SCAFFOLDING: Superior Scaffold is marketing a Double-Grip stud scaffold jack which can be quickly hung, without nails, on any exposed stud to provide instant scaffolding at low cost.

(Item No. 12)

GLASS DOORWALL: An all-aluminum sliding glass doorwall designed specifically for the volume builder is offered by Modern Specialties.

Mass produced at low cost, the Panorama offers twin-seal silicoated mohair pile weatherstripping, easy, noise-free operation, easy installation and a wide range of sizes.

(Item No. 13)

LOW COST DOORWALL

Latest Handbooks, Manuals and Literature

Yours for the Asking

STEEL BUILDING PANELS: Detroit Steel's latest catalog on Fenestra steel and aluminum building panels is packed with technical information, installation drawings and excellent photographs of completed buildings.

Material covers panels for long span structural floors, acoustically treated roofs and ceilings, the TAC system for reinforced concrete, fluted wall panel, fire partition, steel roof decks and reinforcing floor forms.

(Item No. 14)

ARCHITECTURAL PORCELAIN: Drawings give typical details for porcelain panels for curtain wall construction and facing in a 16-page brochure offered by Davidson Enamel Products. The brochure also includes four pages of illustrations showing schools, medical buildings, banks and other types of structures where the panels were used.

(Item No. 15)

GLASS BLOCK: Various glass block patterns manufactured by Kimble Glass, an Owens-Illinois subsidiary, are pictured and described in a catalog recently published by the firm.

Included are instructions and construction details for both large and small size panel installations in steel, wood frame, brick or brick veneer construction. The catalog also has a convenient table of dimensions, a section on how to calculate illumination and brightness, and tables on solar heat control and fuel savings.

(Item No. 16)

RADIANT HEATING: A. M. Byers has prepared a report featuring sketches of various types of radiant heating construction arranged in order of preference. Each sketch shows the position of the wrought iron pipe coils in the concrete slab and relation of coils and slab to the structural features of both on grade and above grade construction.

A one-page digest of recommendations discusses floor surfacing, heating slab, radiant heating coils, insulation base or fill, waterproof membrane and support brackets for radiant heating coils.

(Item No. 17)

LIGHTING SYSTEM: Wakefield's Sigma type architectural unit, a system of lighting and other services combined with movable partitions on 4-ft. modules, is featured in an eight-page bulletin. Drawings are used almost entirely to tell the story.

Text lists such advantages as maintenance of high illumination with low source brightness, control of brightness ratios, virtual elimination of shadows, reduction of specular reflection and flexibility.

(Item No. 18)

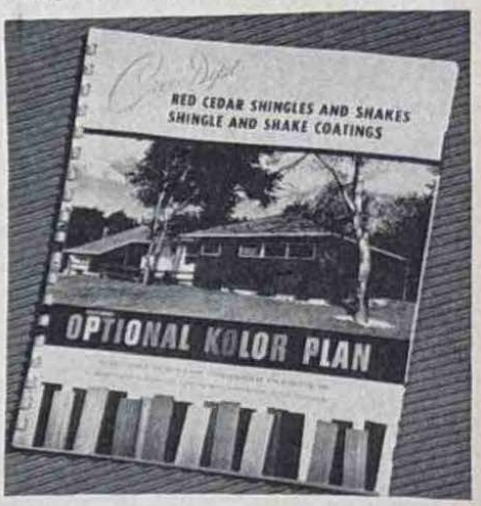
AUTOMATIC ELEVATOR: The elevator with the electronic brain, Autotronic, which automatically adjusts itself to peak load requirements, is explained in a well illustrated brochure put out by Otis. Drawings, charts and text are used to simplify, as much as possible, a description of the system for handling basic traffic patterns and detecting and reacting to traffic changes, either by an individual car or with an entire bank of attendantless elevators.

(Item No. 19)

WINDOWS: Complete stock sizes of Calco aluminum casement windows are given in a recent brochure produced by the new California firm. It includes installation detail drawings for brick veneer, solid brick and concrete block.

(Item No. 20)

AIR CONDITIONING: A two-page mean temperature difference table is just one of many tables and graphs contained in the 40-page engineering manual on air conditioning put out by Drayer-Hanson. The publication includes data on the company's ceiling suspended and floor mounted series of air handling units, plus a great deal of general interest information, such as recommended fan outlet velocities for residential, church, school classroom and other types of installations.



(Item No. 21)

CERAMIC TILE: Gladding, McBean and W. P. Fuller have joined forces to produce a decorating idea called California Coordinates that matches glazed ceramic tile and handprint wallpaper.

A full-color brochure shows off the five basic designs in 11 color combinations developed specifically for western homes.

(Item No. 22)

RED CEDAR SHINGLES: To provide greater flexibility in the selection of shingles, shakes and colors, Creo-Dipt

FLEXIBLE COLOR PLAN

has expanded its Kolor plan under which the factory primed shakes or shingles are sold as a unit with Fynal-Kote, a heavy bodied linseed oil base finish coating.

The plan is explained in a 40-page bulletin which also includes detailed information on the eight styles of shingles and shakes sold with Fynal-Kote, a 22-color chart, installation data and a two-page illustrated discussion on what happens when shingles are applied improperly.

(Item No. 23)

OFFICE PARTITIONS: Arnot Partition-ettes, Office-ettes and modular furniture are shown in some of the innumerable possible varieties in a 16-page brochure. The line features work stations that provide privacy without loss of valuable space and that are easily rearranged when necessary. Furniture is designed to cater to specific needs of each worker.

The booklet devotes space to construction and assembly features and shows a complete office layout for supervisory and clerical staffs.

Seattle meeting scheduled for lumber producers

More than 100 leaders of the nation's lumber industry will meet in Seattle May 28-30 to consider ways of improving their products and services and otherwise strengthening their sales position against competitive materials. The occasion will be the 1956 spring meeting of National Lumber Manufacturers Association.

Among the speakers scheduled to address the lumber meeting at the Olympic Hotel are Reno Odlin, president, Puget Sound National Bank, Tacoma; H. R. Northup, executive vice president, National Retail Lumber Dealers Association, Washington, D.C.; Gilbert E. Morris, superintendent of building, Los Angeles, and Albert Balch, Seattle home builder.

Odlin will address a luncheon meeting of lumber association directors and committee members, May 28. Northup, Morris and Balch will participate in a panel discussion the same day on the subject, "A Long Look at Lumber's Future."

A highlight of the meeting will be a field trip of logging and sawmill operations of Weyerhaeuser Timber Co., at Everett, Wash., May 29.

• **Lionel J. Tilson** of San Jose and three others were killed instantly early in April in the crash of a single-engine Beechcraft Bonanza being piloted by the 41-year-old home builder. His wife Ann, 40; their daughter Judith, 15; and Vern S. Jopling, 50, Tilson's field manager, also died when the plane apparently lost a wing in a sudden, violent hailstorm and crashed, bursting into flames.

• **Champion bricklayer apprentice** of 1956 is Robert G. Neasham, 22-year-old apprentice from Santa Clara, Calif., who won his title at a six-day elimination contest held last month at the Union-Industries Show in Seattle.

Neasham won out over 37 other apprentices from the United States and Canada who participated in the eighth annual competition sponsored by the Bricklayers, Masons and Plasterers International Union.

• **Midwood Construction Co.** will start construction soon of the first homes in what is expected to be the largest single housing subdivision ever built in Orange County, Calif. the 400-acre site in the Long Beach-Garden Grove area, will include 1700 houses, a complete shopping center and other buildings at a cost of some $24 million.

• **The California Drywall Contractors Association** has been organized at Oakland by delegates from all three of the state's reigonal groups. New offices will be established at 608 S. Hill St., Los Angeles. Officers are Wayne Vaughn, Los Angeles, president; Paul Johnson, Oakland, first vice president; Hugh Hathcoat, Concord, second vice president; Fred O'Haver, San Jose, secretary; and Earl Kirby, Los Angeles, treasurer.

• **T Steel Corp.** of Seattle, manufacturer of long-span steel roof decking, has opened its Los Angeles office at 429 S. Western Ave. The new office is headed by John J. Miles, structural engineer, formerly with Young, Richardson, Carleton & Detlie, architects-engineers of Seattle.

• **Fenestra, Inc.**, formerly Detroit Steel Products Co., has opened its Portland branch offices at 337 Pittock Block, with Quenton Coble as sales manager.

Stockholders adopted the new com-

Built-in telephone outlets are a big selling point in today's home

says H. J. HARLOW, Jr., Harlow Construction Company, Sacramento, California

Homes built by the Harlow Construction Company have telephone outlets located for maximum convenience—in rooms where the family spends a lot of time. Concealed telephone wiring is another feature that adds to the livability and value of Harlow homes.

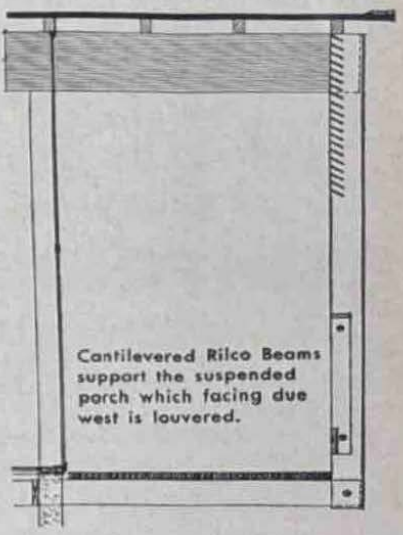
To successful builders like Mr. Harlow, who are setting living standards in the Pacific West, complete telephone planning is as basic as adequate electrical wiring. Pacific Telephone is always ready to help you plan built-in telephone facilities. Just call us and ask for our *free* Architects and Builders Service.

Specify built-in telephone facilities —a sign of good planning

Pacific Telephone

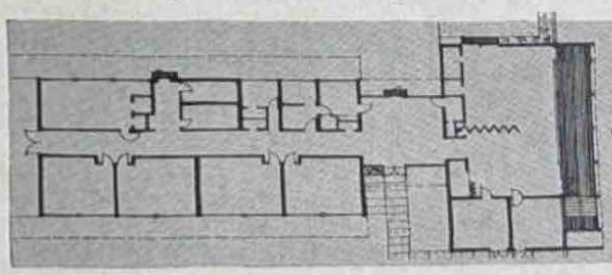
WINNER 1955
Award of Merit

Architects, Belluschi and Skidmore, Owings & Merrill.



Consulting Structural Engineer, Cooper and Rose.

Rilco Beamed School Wins American Association of School Administrators Award



We don't know what part Rilco Laminated Beams played in winning the 1955 Award of Merit for the Tucker-Maxon School in Portland, Oregon. They must, however, have been instrumental in helping the architect to carry out this practical award winning design.

For graceful Rilco arches, beautiful beams, rugged trusses and four inch insulating cedar deck offer the warmth that only wood can give—warmth to the eye and warmth to the touch. And because each member is tailored to specification, Rilco imposes no design limitations.

Today Rilco Laminated Wood Members provide fire safety with less bulk to schools, churches, homes, factories and commercial buildings helping to fulfill new concepts of practical design for the architect. Rilco experience can be yours for the asking.

Cantilevered Rilco Beams support the suspended porch which facing due west is louvered.

Rilco Laminated Beams support roof over the preschool and dining area.

RILCO

works wonders with wood

pany name at their annual meeting in Detroit in March. President H. D. Palmer explained that "the name Fenestra, the Latin word for window, has been inseparably identified with our company since 1907 when he entered the steel window field."

Incorporated in 1904 to make leaf springs for the then infant automobile industry, the company acquired in 1907 from an English firm the exclusive patent rights to manufacture and market the Fenestra window in the United States. Today's products which bear the Fenestra label also include wall, floor and ceiling panels, exterior and interior metal doors and roof deck.

• **Unit Masonry Association** of Seattle now has a full-time manager, Carl Robertson, with offices at 2413 Western Ave. He has been associated with a number of newspapers and trade publications, including Pacific Architect and Builder.

Founded in Seattle in 1953, the association has spread to many parts of the country and includes all elements of the masonry construction industry.

• **Pomona Tile Manufacturing Co.** has appointed Richard L. Scherbacher as advertising and promotion manager, succeeding Robert Rexroad who has been promoted to administrative manager.

Upon opening its new $200,000 administrative building addition at 629 La Brea, Los Angeles, last month, Pomona announced plans to increase production substantially, despite a "slight dip" anticipated in 1956 home construction.

• **Concrete Products Association of Washington** awarded top honors to Graystone of Olympia, Inc., and Bellingham Builders Supply in submitting heavy and lightweight aggregate blocks respectively in a competition. Each unit was judged for dimensional tolerance, symmetry, overall appearance, sharpness of detail and uniformity of color.

The jurors were Barrie Branch, AIA, of Bremerton; James Lindstrom, Superior Concrete Products Co., Seattle; and E. J. Dale, Portland Cement Association, Seattle.

• **Nudor Manufacturing Corp.** announces expansion plans that will increase production at the North Hollywood, Calif., plant by 100%. The new building is the third addition at the Nudor plant in the past six years.

• **Northwest Hardwood Association** adopted grading rules on Pacific Coast alder and maple logs and shop lumber at its quarterly meeting in Vancouver, B.C., April 14.

The new rules will govern the measurement, sale and purchase of hardwoods by association members and are designed to set up standards that will insure a higher quality product, comments president E. J. Nist. Printed copies may be obtained from the association's headquarters, 3253 Commodore Way, Seattle 99.

A. P. York of Educators Mfg. Co., Tacoma, headed the log rules committee and L. R. Smith of L. R. Smith Hardwood Co., Longview, Wash., the lumber rules committee.

• **Coast Aluminum Co.** has begun production of a complete line of residential aluminum casement windows, first in a line of aluminum building products planned by the new Gardena, Calif., firm.

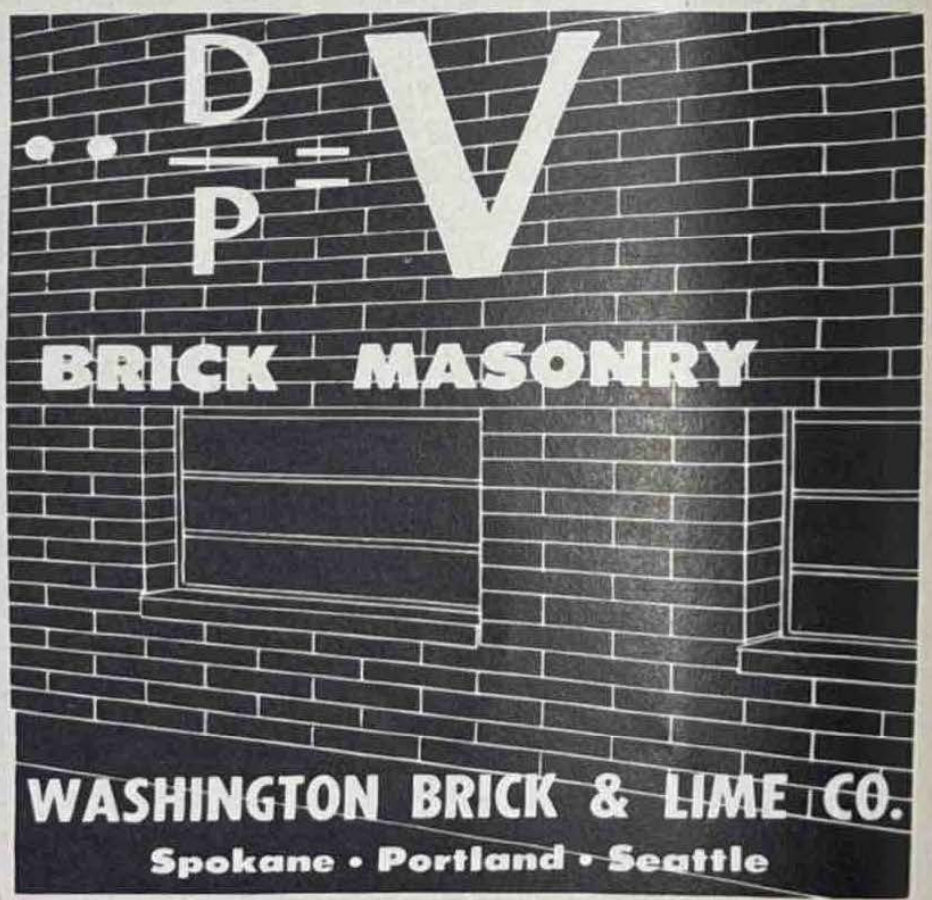
Heading the company are Saul Pick, who has been in the construction supply business the past nine years, and Dave Griffith, who has had 18 years' association with the aluminum industry.

• **Ames Co.**, Hollywood, Calif., has been appointed West Coast representative for E. G. Building Fastners Corp., producer of the Fitsall screwshield.

FORMULA FOR HIGHEST VALUE IN BUILDING

Desirability divided by Price, equals Value.

REINFORCED



FOR + VALUES IN BUILDING

+ 1. Maintenance-free beauty of brick.
+ 2. Optional interior finishes — plaster, panelling, or face brick.
+ 3. Same structural wall at cost comparable to architectural concrete.
+ 4. Less structural steel required.
+ 5. Greater wall height without pilasters.

OREGON

STARTER SCHOOL— Aloha, Ore.

Bond issue for $47,000 approved by School District No. 81, Washington County, clerk, 81 Wheeler Ave., Aloha, for starter unit school. Plans by James C. Gardiner, architect, 3158 S.W. 87th Ave., Portland. Two classrooms, boiler room, storage room, sick room, two lavatories, corridor and paved covered play area. Post and beam construction; solid decking; concrete floor with asphalt tile; aluminum sash; masonry boiler room; hot water convectors. WB 5-12

LIME PLANT— Baker, Ore.
(Estimated cost $1,100,000)

Plans announced by Anthony Brandenthaler, president and owner of Burnt River Lumber Co., 3100 Broadway, for construction of a plant north of Baker for production of chemical grade and hydrated lime, for the newly formed Chemical Lime Co. Plans include erection of two kilns and foundations for two others to allow for expansion. Consulting engineers are Stoyanov & Johnson, 833 N. Shaver, Portland. Construction to be completed by fall. SC 5-8

● SCHOOL ADDITIONS— Beaverton, Ore.

Bids to be opened 8 p.m., May 31, by School District No. 57-J, Washington County, Calvin R. Evans, clerk, Cedar Hills School, Cedar Hills Blvd. and Park Way, Cedar Hills, Beaverton, for additions to the school. Plans with Stokes & Allyn, architects, 205 Hughes Bldg., Portland. $25 deposit. Certified check, cashier's check or bid bond 5%.

One-story, 63'x108' addition with five classrooms and toilets; another one-story and basement addition, 40½'x63' with two classrooms upstairs, and board room, offices and work room in basement. Reinforced concrete construction; wood joist first floor; wood joist roofs with built-up roofing; bat insulation between joists; cement stucco exterior finish; gypsum board interior finish; steel sash; asphalt tile flooring; acoustical tile ceilings; unit ventilators with heat from existing boilers; concentric ring lighting fixtures. WB 5-11. Previous report 2-4

COLLEGE— Bend, Ore.

Property granted to Central Oregon College Foundation, William E. Miller, president, 1540 W. 5th, Bend, by School Board, District Office, Wall and Kansas Streets, Bend, for construction as planned in the college building program. Plans include combination library and student union building, liberal arts building, science hall, museum. Five acres allocated to the college are in northwest corner of the new high school area. Grounds bounded on the west by E. 5th St., on the north by E. Emerson Ave., on the east by E. 7th St., and on the south by E. Elden St. and high school. SC 5-3

● TWO GRADE SCHOOLS— Burns, Ore.

Bids to be opened 8 p.m., June 1, by Harney County School District No. 501-C, Mildred L. Mayo, clerk, superintendent's office, Burns, Ore., for the Fillmore St. and Washington St. grade school buildings. Separate or combination bids. Plans with Freeman, Hayslip, Tuft & Hewlett, architects, 2040 S.W. Third Ave., Portland. $25 deposit. Certified check, cashier's check or bid bond 5%. Previous bid call was cancelled.

Each school to have four classroms, multi-purpose room, health room, kitchen and teachers' room. Fillmore school will also have eating area in multi-purpose room. Concrete slab floors; post and laminated beam construction; beveled cedar exterior siding; aluminum or steel sash; built-up roofing; asphalt tile flooring; ceramic tile in toilets; gypsum board upper walls; plywood wainscots; acoustical tile ceilings; fluorescent lighting; radiant heating in floors. WB 5-12. Previous report 3-29

★ GRADE SCHOOL— Canyonville, Ore.

Award by School District No. 8, Douglas County, Mrs. Helen Altree, clerk, Canyonville, Ore., for new grade school at Canyonville. Plans by Freeman, Hayslip, Tuft & Hewlett, 2040 S.W. 3rd Ave., Portland. AWARD: S. Ferche, P.O. Box 542, Roseburg, $100,756. 2ND LOW: Clyde Hamilton, 57 N.E. "A" St., Grants Pass, $101,195. 3RD LOW: Hampton C. Platt, P.O. Box 27, Salem, $102,500. Bids opened May 8. WB 5-15. Previous report 4-24

★ SCIENCE BUILDING, DORMITORY— Corvallis, Ore.

Awards by Oregon State Board of Higher Education, Earl M. Pallett, secretary, for the Agricultural and Biological Science Building, including utility tunnel system and the men's dormitory, Units A and B, and cafeteria at Oregon State College, Corvallis. Plans by Burns, Bear, McNeil & Schneider, architects, 2940 S.E. Belmont St., Portland. AWARDS — SCIENCE BLDG. — GENERAL: Ross B. Hammond Co., Box 3901, Portland, $1,104,597. MECHANICAL: Buchanan Co., 1518 N.E. Killingsworth St., $337,787. ELECTRICAL: Watco Electric Co., 4715 S.W. Macadam Ave., $117,551. LABORATORY EQUIPMENT: Weber Showcase & Fixture Co., Los Angeles, $144,000. DORMITORY-CAFETERIA — GENERAL: Ross B. Hammond Co., $1,446,798. MECHANICAL: Lord Bros., 9233 N. Calvert, $314,490. ELECTRICAL: Electric Corporation, P.O. Box 266, Salem, $116,960. STRUCTURAL STEEL: American Steel Warehouse Co., 425 N.E. 9th Ave., $16,507. KITCHEN EQUIPMENT: Losli Sheet Metal Works, 1729 S.W. 1st Ave., $72,145. Of Portland except as noted. Bids for refrigeration system for science building were rejected as too high and will be readvertised. WB 5-16. Preivous report 4-21

★ MEDICAL-DENTAL CLINIC— Eugene, Ore.

Award to John M. Steinmuller, 907 W. 3rd Ave., Eugene, $105,289, by Brothers Investment Co., c/o Percy D. Bentley, architect, U.S. National Bank Bldg., Eugene, for a 15-unit medical-dental clinic to be built on the southwest corner of E. 18th Ave. and Oak St., Eugene.

SP 5-11. Previous report 5-5

▲ SCHOOL ADDITION— Eugene, Ore.

Bids received by School District No. 4, Clarence Hines, superintendent, 275 E. 7th Ave., for a classroom addition to the Santa Clara Elementary School building in Eugene. Plans by John Laurin Reynolds, architects, 264 E. Broadway, Eugene. LOW BIDS: Elson C. Shields Co., 170 Patterson Road, Eugene, $14,830; V. A. Nelson, Route 1, Box 736, Creswell, $15,397; J. M. Steinmuller, Jr., 907 W. 3rd Ave., Eugene, $16,145. Bids opened May 9. DW 5-15

● FIRE STATION— Eugene, Ore.

Bids will be opened 11 a.m., May 28, by Bethel Water & Fire District, 2485 Roosevelt Blvd., Eugene, for construction of a Bethel fire station in Eugene. Plans with Paul Bogen, architect, 858 Pearl St., Eugene.

Two-story 40'x72'; reinforced concrete block construction for first floor, wood frame for second floor; built-up roof; concrete slab floors; glued laminated beams; acoustical tile ceilings; gypsum board walls; vinyl-asbestos tile, ceramic tile; plastic skylights; overhead doors; hot water radiant heating system. DW 5-15

● SCHOOL ADDITIONS— Eugene, Ore.

Bids will be opened 2 p. m., May 28, by Eugene School District No. 4, Clarence Hines, superintendent, 275 E. 7th Ave., Eugene, for classroom and corridor extension to Harris Elementary School, 1150 E. 29th Ave., Eugene, and a seven-classroom addition to Willagillespie Elementary School, 245 Willagillespie Road, Eugene. Plans with Hamlin & Martin, architects, 159 W. 12th Ave., Eugene.

Wood frame construction; concrete slab floor; built-up roof; asphalt and acoustical tile; new boiler to existing hot water heating system in Willagillespie School, connection to existing heating system in Harris School. DW 5-15

RESIDENCE— Gilchrist, Ore.

(Estimated cost $68,000)

Contract negotiated with Duncan Construction Co., Box 1088, Klamath Falls, by Gilchrist Timber Co., Gilchrist, for construction of a residence for Frank R. Gilchrist, president of timber company, in Gilchrist. Plans by Nina Pence, architect, 5241 Alva St., Klamath Falls. Completion date December 1, 1956.

One and a half stories; 4,000 sq. ft.; reinforced concrete footings and foundation; frame walls; pitched rafters; wood windows; drywall and wood panel partitions; wod, linoleum and cork floor finish; drywall and wood paneling ceilings; batt insulation in ceilings and wall. ZZ 5-11

● CHURCH ADDITION— Gresham, Ore.

Bids to be opened at 8 p. m., May 24, by St. Luke's Episcopal Church, Rev. Rene Bozarth, rector, 1205 S.E. Cathey Road, Gresham, for an addition to the church. Plans with Stuart B. Mockford, 723 Washington St., Oregon City.

One-story and daylight basement; includes two Sunday school rooms, toilets; concrete basement; upper story frame with redwood siding; wood sash; composition shingle roofing; asphalt tile flooring; acoustical tile ceiling; dry wall interior finish. WB 5-11

★BUILDING ADDITIONS, ALTERATIONS— Medford, Ore.

Award by Pacific Telephone and Telegraph Co., G. F. Zolling, chief engineer, 509 S.W. Oak St., Portland, for additions and alterations to the North Central Avenue telephone exchange, Medford. Plans by Church, Newberry & Roehr, architects, Kurt P. Schuette, associate, 619 Builders Exchange Bldg., Portland. AWARD: Smith-Phillips Co., 7402 S.W. Macadam Ave., Portland, $247,768. OTHER BIDS: H. Barnhart, 722 Dakota St., Medford, $257,000; Wiley Co. and L. C. McLaughlin, 252 Ridge Road, Ashland (joint venture) $271,400. Bids opened May 9. WB 5-15. Previous report 4-28

▲CREAMERY— Oregon City, Ore.

Bids received May 9 by Larsen's Creamery, 707 Railroad, Oregon City, for a new creamery building at 13th and Center Streets. Plans by Stuart Mockford, architect, 218 8th St., Oregon City. GENERAL—LOW BIDS: David W. Lind, 1115 Molalla Ave., $26,733; Serge R. Perrin, 405 Ogden Drive., $31,494; V. C. Johnson, 445 W. Clarendon, Gladstone, $33,196.
