As you well know, there is a great deal of new building on the college campuses today. The cheeseboxes which once housed the GIs and their wives are being replaced by new dormitories and these new dormitories for the married students are of two units. Small units for the newlyweds and larger ones for those with babies. When I was an undergraduate at Harvard, you were automatically dismissed if you got married in term; now the dean simply allows you an extra room. These young couples—these married children I am tempted to call them—are very eager to raise a family. Where we budgeted ourselves to have two, they throw the budget in the scrap basket and elect to have four, the sooner the better.

And there is one thing more which you will have observed. Singly, these young men and women are, many of them, fearfully lonely. I have been told that 20% of the undergraduates at eastern colleges—one in five—are receiving or ought to receive psychiatric. The future seems much more luring to them than it ever did to us in the 1920s. I think the reason why they are marrying so early and are so intent on having a family is that the home—their almost pathetically little homes—represents the only form of personal security they can imagine. Whether their home life will prove to be secure or a shambles depends to no small degree upon the kind of house, the kind of apartment you architects provide for them.

* * *

I have been speaking of the aspirations and of certain spiritual needs which I find in young Americans. Now I should like to consider what you architects can do to nourish their aspirations. In their daily living these young couples will be pulled two ways by conflicting impulses. Their first impulse will be to stay at home in their new pastel-tinted house which they have bought or rented with such high hopes; and these are the things which will hold them at home: their children, their TV screen, their long-playing records, their books, their flowering shrub and their little garden plot. If they find their home conducive to their needs and restful, they will stay in it; if not, the social mobility, which is a driving force in all Americans, will pull them out of their homes for longer and longer periods every year. It may pull them apart.

Let me tell you what I think of these newlywed homes which have been on the assembly line ever since the end of World War II. I find an initial fallacy in the proposition that we can go on making smaller and smaller houses for larger and larger Americans. The American boy and girl have been growing a fraction of an inch larger in each generation and you only have to compare a football player's uniform with the suits of armor in the Tower of London to realize that this is a condition of the New World which is going to continue. But the prefabricators have not taken this growth into account and if the cubic space of these homes continues to shrink, it won't be long before the newlyweds will be feeling like Alice in Wonderland who could contain hersef only by sticking one arm out of the window and a foot up the chimney.

Next, there is the picture window. People love to have a room with a view and in many of these new pastel homes there is a big picture window providing the inmates with a clear view of the public highway and its endless procession of motor cars. My wife and I spend our summers in a seaside resort north of Boston and to get to it we frequently drive through the East Boston Tunnel. When my boy Ted was 10 and having his first infatuation with automobiles, he loved everything about the East Boston Tunnel—the jam-up of cars, the gasoline stink, the fender to fender creeping, the out-of-state licenses. One day as we were battling our way through it, he remarked dreamily that he didn't see why we wanted to go away for the summer "Why," said he, "don't we just put the Boston house on its side in the tunnel and watch cars go by"? It amazes me to find how many American contractors have the same idea.

The shortage of space in the modern house has obliged the occupants to put most of their furniture out of doors. The result is that when they have a party everyone sits on the floor. They try to make an art of it with sheepskin rugs, tables 16 in. high and bookshelves you have to kneel down to. I am told that the Bauhaus has inspired this movement for the abolition of the chair and I wonder what Freudian bruise was inflicted on the members of the Bauhaus when they first came to sit. Speaking as a grandfather who is still addicted to the flyrod, I do like a chair when the evening comes—a chair with a back!

More serious is the question of privacy. Most of you are too young to remember that old adage:

> Come when you are called
> Do as you're bid,
> Shut the door after you,—
> And you'll never be chid.

That was a definition of American behavior in an age when children were quiet and houses had doors. But in these new homes there are few interior doors. As the housewife says in the popular advertisement, "I can stand at the sink and just by turning my head see into every corner of the house and what the children are up to." Yes, and by the same token, dear lady, the children without turning their heads can see into every corner of you. I think that the lack of privacy is the crying deficiency in American life. My heart goes out to the young housewife who said to me recently, "I can stand it just so long and then on Saturday mornings when Jack is home, you know what I do? I take a pillow and a book and I go into the bathroom and lock the door and lie down in the empty bathtub. It's the only spot in the house where I can really be unmolested."

The reason why Mrs. Lindbergh's book, "Gift from the Sea," touched millions of American women was because in it she was reminding them of this precious privacy which they have lost and cannot live without. "Mothers and housewives," writes Anne Morrow Lindbergh, "are the only workers who do not have regular time off. They are the great vacationless class . . . Woman's life today is tending more and more toward the state William James describes so well in the German word 'zerrissenheit'—torn-to-pieces-hood."

Men need to have a private place too, down cellar where they can putter, but in many of these modern houses there is no cellar and so they find privacy in puttering over their cars. Men find privacy in commuting and some of them in their work itself. But I repeat, the lack of privacy, the

lack of any place to get away from the pressure of world events and the family clamor is the greatest single deficiency in American living.

In an age of great insecurity we depend more than we realize upon that intangible known as community spirit. The cover of a recent issue of America Illustrated (the magazine which the USIA distributes in Russia) showed a panorama of San Francisco's Sunset District, a panorama which made me shudder. For here were row on row, block after block, of two-storied, identical concrete houses with not enough room in between to swing a cat. The uniformity and the lack of space are stifling and what was more benumbing was the lack of any green oasis. The only green spot in these square miles of concrete were the lawns and trees surrounding the public school.

Californians have told me that in the beginning the city planners on the West Coast called for a ratio of 1 to 10, one acre of parks and recreation areas for every 10 of buildings. But in San Bernadino County, that area which J. B. Priestley once described as "six suburbs in search of a city," in Los Angeles today, the subdividers are having their way. Oases which should have been parks have been plowed up and if this goes on much longer, the ratio will not be 1 in 10 but 1 in 60 or 1 in 80. It is not a pretty sight to see how the suburbs have devoured the orange and walnut groves in California.

In Seattle which has one of the most beautiful sites in the United States, one has to go 10 miles out of town to find a reasonably good specimen of Douglas fir, that superb native giant. There once were beautiful trees on the campus of the University of Washington but they have been destroyed to make room for more buildings.

Community spirit is kindled when people have room in which to devote themselves. It is kindled today in churches and in schools; it is kindled when old and young come together to watch the Little Leaguers play ball; it is kindled when the neighbors who believed in Ralph Bunche and who put together a purse of $1,000 to send him East to study, meet together in the high school of an evening to hear their local boy tell them of what is happening in the Middle East; it is kindled by the swanboats in the Boston Public Garden, by the picnics in Central Park and by art festivals; it is kindled by having a place to fish when the shad are running; it is kindled by the PTA, by community orchestras (of which we have more than 300 in the United States), by community singing in which the Negroes took such a leading part in Westchester County; it is kindled when mothers, dragging fathers with them, go to see their daughters dance in the high school auditorium. When you scant the space for such gatherings in our metropolitan centers, you mutilate the community spirit.

* * *

If the home will no longer provide privacy and fulfillment and if the comumnity subdivides its green oases until they are no more, then, and inevitably, the American families will have to compensate by getting into their cars and seeking refreshment elsewhere. We are in the process of shifting from a five-to a four-day week; it will come gradually and it will come with the increase of holidays and the extensions of weekends. You architects should have visible influence on the use which is made of this new leisure. As the Eastern Seaboard fills in from Bangor to the Florida Keys, people in the thickly settled areas will take their Sunday suppers to the picnic grounds, the fringe of woods, the stretch of flowering shrubs which borders the great thruways and which may come to be the only uncut land in the vicinity. Already the picnic grounds on Route 128, the big road which encircles Boston, are jammed with family parties every weekend.

Your aid will be required in the piecing together and preservation of the old colonial villages ike Sturbridge in Massachusetts, like Shelburne, that vivid reconstruction of old Vermont which Mrs. Watson Webb has assembled on the shore of Lake Champlain, or like the Farmers' Museum and its Crossroads Village in Cooperstown, N.Y.; you will have to fight for the preservation of historic sites which are in the path of bulldozers. (Fifty million visits were made to historic sites and buildings open to the public in 1956.) You will try to set apart in every city certain old houses, certain breathing spaces, certain outlooks on the harbor or the river to show the more impressionable teen-agers that American life does not consist merely of gasoline stations, the drive-in diner and the second-hand car park with its frantic little flags urging you in for the quick bargain.

In a state like Virginia, preservation has become a fine art. In Williamsburg where every fence rail and Kleenex carries the arms of William and Mary and in the gracious houses along the James — Westover, Stratford, Shirley and Berkeley Hundred—, it is so easy for the 20th century to imagine the grace and the

Only OLYMPIC *is Perfect for Redwood*

The natural beauty of redwood should be worn proudly. Olympic Stain is specially formulated to enhance and preserve this natural beauty. It penetrates deeply, protects against time and weather. Allows redwood to "breathe" naturally so there's no blister, crack or peel. Eliminates costly, unsightly paint failures. Olympic Stain is the only *perfect* product for redwood roofs, siding, entry-ways and fences. Costs so little, but you save so much! Colors: California Redwood, Sierra Brown, Yosemite Red and Redwood Clear.

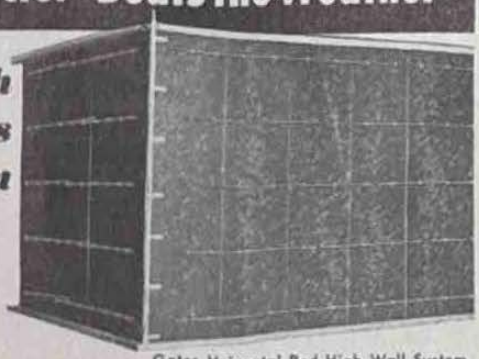
OLYMPIC

quality of Colonial America. One is grateful for the care which has kept these shrines alive and it is fortunate for us all that they do not lie in the path of suburbia, that relentless stonecrusher.

I must say the Virginians had a more difficult time with Jamestown. The natural surroundings, if you remember, were not too impressive. They had to begin with the crumbling ivy-covered ruins of chapel, a small island from which the public was excluded and a sandy peninsula holding a large statue from which someone had mercifully removed its head. Now, what have they done? They have left the island right where it is with the padlock on it; they have left the chapel right where it is with the ivy on it; they have left the winged victory right where it is but now they have a head on it. They have dug out a couple of sod houses and a "little old fort"—and to this hallowed spot they are attracting thousands and thousands of tourists who can stand there and gaze at each other in a wild surmise. This is one of the most quietly spectacular achievements in the whole long history of sightseeing. Yet I notice that the Mayflower has been blown south and maybe that will help.

But the real fight today and the one which has challenged some of your greatest ability is the fight to revitalize and to beautify an old smoke-streaked city. Recapturing the beauty of the Golden Triangle in Pittsburgh, as the Allegheny Conference has done; restoring the usefulness and beauty of the St. Louis waterfront; recapturing the open declaration of Independence Mall in Philadelphia—these are the hard fights already half won. There will be many more of them ahead.

"Sleeping under a hedge," said the late G. K. Chesterton, "is not a new form of architecture." To that witticism I should like to add my postscript: that sleeping by a thruway is not the most desirable form of American architecture. Men have always lived by the side of a road because it was convenient to do so. But this country we loved is going to fill up at an astonishing rate in the next 25 years and I say that we can no longer permit this filling to be done haphazardly, as the local contractors and subdividers choose.



It is difficult to learn just how much rural land is being alienated for urban expansion each year but Paul B. Sears, chairman of the conservation program at Yale University, thinks that the estimates in the order of one million acres a year are not far off. One million acres a year of woodlands, meadows, abandoned farms, and marshes, taken out of the rural zone and into the city hopper! At that rate, how long will it take us to convert the Eastern Seaboard into a replica of the neon-lit, chromium-plated landscape which stretches from Los Angeles to San Diego. If that urban sprawl is to be avoided, it will be avoided because you architects join forces with city planners and conservationists—men as far-sighted as Robert Moses and Paul Sears—in devising a building philosophy for the future.

If each man plans for himself, if each contractor or each industry works solely for a single aim, the intentions may be good but the country will suffer. As an example of what non-planning can do, look at lower Bucks County, Pa. Here on the Delaware River an enormous steel plant has been erected to process the ore coming in from Venezuela. One hundred sixteen allied firms dealing in iron and steel products followed in the wake of the giant plant. Houses were at a premium and so a new town was erected, Levittown, Pa., a com-

Contractor "Beats the Weather"

with Gates System

Gates Horizontal Rod High Wall System

"Getting out of the ground in time to beat the weather would have been impossible with our old panel forms," reports Contractor Bert L. Wagner of Cincinnati, Ohio.

"On a recent custom foundation, four men using your system poured an 8-inch-thick wall, 7' 9" high, in *three* days. Total concrete order was 49 cu. yds....and the job was plumb and true. The simplicity of the system, and quality results impressed me very much."

Bids will be opened 8 p.m., July 2, by Damascus Union District No. 26, Mrs. Lillian O. Anderson, clerk, at Damascus School on Herman Johnson Road (County Road No. 1060), Clackamas County, near Damascus, Ore., for construction of two-classroom wood frame addition to Damascus Primary School. Bids may be mailed to Route 1, Box 187, Clackamas. Plans with Wick & Hilgers, architects, 909 Portland Trust Bldg., Portland. $15 deposit.

Concrete slab floor on grade; cedar siding; aluminum sash; built-up roof; asphalt tile floor covering; dry-wall interior; acoustical ceilings; incandescent lighting; extension of existing warm air heating system. WB 6-12

★HIGH SCHOOL— Elgin, Ore.

Award by School District No. 23, Union County, Elgin, for construction of 180-student wood frame high school building. Plans by Freeman, Hayslip, Tuft & Hewlett, architects, 2040 S.W. 3rd, Portland. AWARD: Riverman & Son, 1230 N.E. 63rd, Portland, $310,000 (basic of $331,000 alternates). Other two low base bids were: Mason & Robinson, 2004 N.E. 137th, Portland, $336,428; Fred W. Carter, Inc., 6034 N.E. 60th, Portland. Bids opened June 6. WB 6-8. Previous report 5-23

●LIGHTING, OIL BURNER—Eugene, Ore.

Bids to be opened 3 p.m., P.S.T., June 24, by General Services Administration, Public Building Service, 909 1st Ave., Seattle, Wash., for installation of fluorescent lights, wiring, new circuit breakers, new oil burner and underground storage tank, new incinerator, overhauling vacuum pump, new service sink at the U.S. Post Office, 5th and Willamette, Eugene, Ore.; Proj. No. SEA-569. Plans with Seattle office. DM 6-7

●ADMINISTRATION BUILDING ADDITION— Eugene, Ore.

Bids to be opened 2 p.m., June 19, by Eugene School District No. 504-C, Clarence Hines, superintendent, 275 E. 7th, Eugene, for construction of a two-story addition to the administration building. Plans with Hamlin & Martin, architects, 150 W. 12th, Eugene. Addition will have 5,000 sq. ft. on each floor; masonry with steel joists; concrete block exterior walls, some brick facing; built-up roof; lath and plaster on steel studs for interior walls; acoustical plaster ceilings; new boiler for heating system. DW 6-8. Previous report 1-8

■ADMINISTRATION BUILDING ADDITION— Eugene, Ore.

Planholders announced for construction of a two-story addition to the administration building in Eugene, on which bids will be opened 2 p.m., June 19, by School District No. 504-C, Clarence Hines, superintendent, 275 E. 7th St., Eugene. Plans with Hamlin & Martin, architects, 150 W. 12th, Eugene.

Planholders: Albert Vik & Son, Box 3056; W. H. Shields Construction Co., Box 3037; J. M. Steinmuller, Jr., Box 3302. All of Eugene. DW 6-11. Previous report 6-8

LABOR TEMPLE— Eugene, Ore.

Stock sale underway by Labor Temple Association, Jens Horstrup, president and Joe Willis, secretary, 507 Willamette, Eugene, to finance construction of the new joint AFL-CIO union locals labor temple on Villard St. between Franklin Blvd. and Garden St. in Eugene. Plans by Paul Bogen, architect, 858 Pearl, Eugene. Two-story structure to be separated by 450-seat auditorium; offices on first floor, meeting halls on second floor; parking lot to accommodate 60 cars. DW 6-8

★ELEMENTARY SCHOOL ADDITIONS— Eugene, Ore.

Award to Arnt Ree & Son, 113 W. 18th, Eugene, $38,361, for one-classroom and playshed addition to Bailey Hill Elementary School near Eugene and $39,050 for three-classroom addition to Whittaker Elementary School in Eugene by Lane County School District No. 504-C, 275 7th Ave., Eugene. Plans by John H. Reynolds, architect, 364 E. Broadway, Eugene. Bids opened May 24. DW 6-11. Previous report 5-21

■COURTHOUSE— Eugene, Ore.
(Estimated cost $2,026,000)

Planholders announced for construction of a new courthouse just north of the existing structure on E. 8th Ave. in Eugene. Bids will be opened 2 p.m., July 1, by Lane County Commissioners, Courthouse, Eugene. Plans with Wilmsen & Endicott, architects, 863 E. 13th Ave., Eugene.

Planholders: W. H. Shields Construction Co., Box 3037; Gale M. Roberts, 338 W. 11th Ave.; Waldo S. Hardie & Son, Box 422; Albert Vik & Son, Box 3056; Viesko & Post, Box 69, Salem; H. G. Carl Construction Co., Box 387, Salem. Of Eugene unless noted. DW 6-11. Previous report 5-17

NURSING HOME ADDITION— Gresham, Ore.
(Estimated cost $104,000)

Construction underway by Howard Swanson Construction Co., Route 2, Gresham, on a one-story, 52-bed concrete block addition to Wildwood Nursing Home, Lillian E. Doerksen, owner-operator, 618 N.E. Hood Ave., Gresham. Plans by W. H. Yahn, architect, 208-B Fitzpatrick Bldg., Portland.

The addition will connect with the proposed 57-bed, 3-story hospital, on which construction is expected to start later this summer, and is designed for either convalescent or hospital use. Before the hospital is started a 3,000 sq. ft. reinforced concrete and cement block boiler and laundry building will be built across the street from the main hospital to serve both the nursing home and hospital. The nursing home addition will match existing building; brick and aluminum entrances; asphalt shingle roofing; aluminum sash; plaster wall finish; some acoustical tile ceilings; ceiling insulation; vinyl tile floor covering; ceramic tile floors and wainscots in lavatories and utility areas; plumbing in every ward; intercom system; complete air conditioning;

mostly incandescent lighting; oxgen piped to each room. For description of proposed hospital see PCD 1-18. WB 6-8

Planholders: Don McDonald, 120 Fairview Ave. N., Seattle; Dale M. Madden, 3010 E. 163rd, Seattle; Paul Odegaard Construction

Buildings which shape our lives (Cont'd from p. 34)

munity of 16,000 houses for approximately 70,000 persons. The questions of schools sewerage, plumbing and social services were of incidental concern to Mr. Levitt; they were foreign to the steel company and so there was a minimum of coordination between the local authorities and the newcomers as this huge slice of prefabricated America went up.

There were even some hit or miss calculations on the part of the steelmasters. Not until the plant was erected did they discover that they had placed it at the exact spot on the Delaware where the fresh water from upstream meets the salt water from the estuary. Here the silt is deposited to such an extent that there was not sufficient depth to float the incoming freighters. So an $8 million pier was erected in Philadephia where the ore could be transshipped to scows which would then be towed upstream. If the engineers are susceptible to an error in judgment as fundamental as this, think of the errors in human engineering, in human living which could be perpetuated as we fill in the future gridirons of industry!

* * *

On October 23, 1943, Sir Winston Churchill was speaking to the members of the House of Commons who because of the blitz were meeting in secret. He said, "On the night of 10th May, 1941, with one of the last bombs of the last serious raid, our House of Commons was destroyed by the violence of the enemy, and we have now to consider whether we should build it up again and how and when. We shape our buildings and afterwards our buildings shape us." In those simple magnificent words, "We shape our buildings and afterwards our buildings shape us," Sir Winston revealed the nobility of architecture.

When you stand in the gloaming of Westminster Hall, that great cool, high-vaulted room, you may remember that here Richard II was dethroned and Charles I condemned, here were the trials of Sir Thomas More, of Essex and Warren Hastings, here the indecision and anguish of Parliament, and remembering, you feel the heartbeat of the English spirit. So the Cathedral of Chartres gives you to see the French genius and with your first view of the Acropolis, you begin to understand the Greeks.

And where does the "genius loci" reside in America? What are the buildings that have shaped American character so indelibly that when we visit them today, or stand in their shade, we too feel the invisible pressure of history? We find this deity in the New England village green with its church and white spire, its white orderly houses, its elms and quiet common; we find it in Mount Vernon with its commanding view high above the water, the slopes, and the fields which Washington loved; we find it in Monticello where the enterprise and the vision of the man who wrote the Declaration of Independence still lives; we find it in the Lincoln Memorial, the most heart-stirring, evocative building in the Capital.

But what of the buildings of tomorrow, the buildings which you will shape and which in time to come will shape our grandchildren and great-grandchildren? What will they be? On the campus, in the new high schools which are more and more tending to be community centers, in the factories which have become so colorful with your use of new materials, in laboratories like the General Motors Technical Center, in the recreation areas, and most needful of all, in the network of new communities which cannot live without a heart—there you will find your greatest challenge to be American.

Co., Box 735; Peter Spadafore, 607 Maulsby Lane; George Newland, 3302 Hill; Sanford Wright, Clark Bldg.; Darrow & Shaffer; Roy Rudd, 834 Grand; Don Walser, 1101 Casino Road. All of Everett unless otherwise noted.

Wood frame; flat built-up roof; 3" t&g decking, joist with sheathing; metal operating sash, stopped in Troppa glass; exterior sheathing with stucco, Italian tile, honeycomb plastic; plasterboard partitions, some ¼" plywood paneling; vinyl asbestos flooring; acoustical ceilings; some batt insulation for sound proofing; seven individual gas furnaces. Project includes five doctor's units, a laboratory and a pharmacy, and a 7,000 sq. ft. asphaltic concrete parking area.
PD 6-12

▲BUILDING REHABILITATION—

▲HEATING SYSTEM CONVERSION—
Fort Lewis, Wash.

Bids received by Department of the Army, Fort Lewis, for conversion of coal, hand-fired and stoker-fired heating systems to oil fired at Fort Lewis; AVI-45-016-57-185. Bids opened June 10. BIDDERS: Pease & Sons, 10719 Waller Road, Tacoma, $37,092; Weber Plumbing & Heating, 110 N. Tacoma, $45,122; Stoker Engineering Co., 4320 S. Tacoma Way, Tacoma, $50,709. SP 6-12. Previous report 6-4

SCHOOL CONSTRUCTION— Lacey, Wash.

Plans underway by William Arild Johnson & Associates, architects, 3506 Broadway, Everett, for the 39,000 sq. ft. frame Hawkes Prairie Elementary School in Lacey, for North Thurston School District No. 3 of Lacey. Some brick and radiant heating are included with the estimated cost being $450,000. Plans are also underway by the architects for a multipurpose room and other additions to the South Bay Elementary School for an estimated $55,000. Plans have been completed and bids will be called soon by the district for construction of a five-classroom addition to Mountain View Elementary School, estimated at $55,000. SP 6-8

SCHOOL CONSTRUCTION—
Longview, Wash.
(Estimated cost $4,412,000)

Five-year construction program including eight new buildings has been approved by voters of Longview School District No. 122, Scott Milligan, superintendent, 28th and Lilac, Longview. Five of the structures are for expansion of the lower Columbia junior college campus. Also planned are a new elementary school on Columbia Heights and another junior high school. A bond election held now would qualify the district for $949,000 in state funds, leaving $3,436,100 to be paid by the district. SC 6-8

HEADQUARTERS BUILDINGS—
Montesano, Wash.
(Estimated cost $60,000)

A four-acre site across the highway from the Wynooche Airport west of Montesano has been purchased by Washington State Department of Natural Resources for construction of a new district headquarters, which would eventually include office, garage and shop, crew quarters and cookhouse, and a gasoline and oil storage shed. Lack of funds makes it unlikely that construction will start this year, according to L. T. Webster, chief state forester. SC 6-8

ELEMENTARY SCHOOL—Montesano, Wash.
(Estimated cost $300,000)

Recommendations with relation to the proposed elementary school at Montesano have been made by Vern Leidle, consultant on school building facilities for Montesano School District No. 124, Willis Rambo, superintendent, 124 Spruce East, Montesano. The recommendations include (1) a new elementary school to house the first six grades located on a separate 10-acre site, (2) consideration for establishment of a junior-senior high school program in the existing building after remodeling, and (3) development of the playground area between Sylvia and Church streets for junior and senior high school purposes. The school board has been considering locating the new elementary school on Wheeler Field but a definite decision has not been made.

6 reasons why architects prefer COLUMBIA BRICK for schools...

1 Low maintenance saves school boards thousands of dollars each year.
2 Enduring beauty.
3 Flexibility of design—choice of many colors, texture and patterns.
4 Sound, fire-safe construction.
5 Creates feeling of pride and security in students and teachers.
6 Stands up to hard usage.

Add these features to Columbia Brick's superior craftsmanship, and unique clays, and you know why Columbia Brick is "specified" so often.

STRUCTURE CONTRACT FAIP No. I-091-4(1)—Construction of twin three-continuous plate girder span bridges over Sugar Creek on Rawlins-Sinclair Road, Carbon County.

Quantities: 306 c.y. class A concrete; 513 c.y. class B concrete; 165,020 lb. reinforcing steel; 284,260 lb. structural steel.

PORTLAND CEMENT CONCRETE PAVEMENT, FAIP No. I-223(14), I-223(16) Unit 2; I-223(17) Unit 2; F-134(5), F-223(20)—Paving 6.623 mi. of four-lane divided highway including interchange ramps on Wheatland-Cheyenne, and grading, draining, select material surfacing, curb and gutter, irrigation sprinkler system, portland cement concrete paving on four-lane divided highway on 1.393 mi. of Central Avenue connection, Laramie County.

Quantities: 11,900 c.y. excavation; 780 c.y. mi. haul; 282,440 sq. yd. concrete pavement; 13,880 sq. yd. reinforced concrete pavement.

ASPHALTIC PAVEMENT FAIP No. I-223 (14), I-223(15), I-223(16) Unit 2; I-223(17), Unit 2; F-134(5), F-223(20), F-0167(3)—Crushed gravel base course, bituminous stabilized base course, plantmix surface course on 11.094 mi.; base course surfacing, plantmix surface course on 6.623 mi. shoulders; base course surfacing, plantmix surface course on 4.368 mi. service roads, all located on Wheatland-Cheyenne Road, Laramie County.

Quantities: 3,100 c.y. excavation; 350 c.y. mi. haul; 2,700 ton select material surfacing; 50,895 ton crushed gravel base course; 77,600 ton plantmix base course; 50,410 ton plantmix surface course; 6,995 ton asphaltic material.

STRUCTURE CONTRACT FAIP No. I-225 (5) Unit 2—Two separation structures consisting of one four-continuous WF girder spans over McKinley St. and One four-continuous WF girder spans over Center St. on F St. section of Casper Urban System, Natrona County.

Quantities: 968 c.y. class B concrete; 396,440 lb. structural steel; 140,670 lb. reinforcing steel.

PLANTMIX FAIP No. F-010-4(1)—Grading, draining, crushed gravel base course, plantmix surface course, stone chip seal coat on 3.691 mi. Jackson-Moran Road, Teton County.

Quantities: 265,000 c.y. excavation; 112,000 c.y. mi. haul; 129,000 T mi. haul; 24,000 ton select material surfacing; 17,200 ton crushed gravel base course; 8,400 ton plantmix surface course.

PAVING, FAIP No. F-034-5(1)—Grading, draining, storm sewer, curb and gutter, median paving, base course surfacing, plantmix surfacing, stone chip seal coat on 0.970 mi. Greybull streets, Big Horn County.

Quantities: 57,010 c.y. excavation; 62,000 c.y. mi. haul; 347 ton asphaltic material; 25,050 ton select material surfacing; 51,770 T mi. haul; 3,800 ton plantmix surface course; 1,350 sq. yd. concrete median paving.

SURFACING — Grading, draining, base course surfacing, sand seal coat, one structural plate pipe, two structural plate pipe arches, four structural plate stockpiles on 7.633 mi. Gillette-Savageton Road, Campbell County.

Quantities: 260,000 c.y. excavation; 30,000 c.y. mi. haul; 368,000 T mi. haul surfacing material; 16,000 ton select material surfacing; 355 ton asphaltic material.

SURFACING, FAIP No. S-1002(1)—Grading, draining, base course surfacing, surface treatment (inverted peneration type), three structural plate pipes on 6.098 mi. Sussex-Linch Road, Johnson County.

Quantities: 434,500 c.y. excavation; 68,200 c.y. mi. haul; 63,000 ton select material surfacing; 40.8 c.y. concrete; 2,240 lb. reinforcing steel; 34,160 lb. structural steel; 15,000 ton crushed gravel base course; 171,000 T mi. haul surfacing material; 330 ton asphaltic material.

PLANTMIX, FAIP No. S-1205(1)—Grading, draining, base course surfacing, plantmix surface course, stone chip seal coat on 5.110 mi. Aubur south to Nield String Road, Lincoln County.

Quantities: 166,000 c.y. excavation; 11,300 c.y. special embankment; 140,000 c.y. mi. haul; 104,000 T mi. haul surfacing material; 590 ton asphaltic material; 17,800 ton select material surfacing; 6,150 ton plantmix surface course.

SURFACING, FAIP No. S-2200(1)—Base course surfacing, stabilized base course surfacing, stone chip seal coat on 10 mi. Gooseberry Creek Road, Washakie County.

Quantities: 29,100 ton crushed gravel base course; 97,100 T mi. haul surfacing material; 925 ton asphaltic material.

SURFACING, State Project No. SC-CFM 4360—Base course surfacin' 7.42 mi. Big Badger Creek Road, Sheridan County.

Quantities: 20,000 ton crushed scoria base course; 60,000 T mi. haul surfacing material.

ROADMIX, State Project No. SC-CFM 4361 Unit 2—Oil treatment by road mix method, crushed sand-gravel seal coat 9 mi. Lingle-Veteran Road, Goshen County.

Quantities: 7,200 ton crushed gravel surfacing; 42,600 T mi. haul surfacing material; 107,000 sq. yd. processing; 430 ton asphaltic material.

SURFACING—State Project No. SC-CFM 4404—course surfacing, crushed sand-gravel seal coat 11.288 mi. Palmer Canyon Road, Platte County.

Quantities: 15,000 ton crushed gravel base course; 345 ton asphaltic material; 55,400 T mi. haul surfacing material.

SURFACING—State Project No. SC-CFM 4500—Draining, base course surfacing 10 mi. Cheyenne River - Roxson Road, Niobrara County.

Quantities: 4,350 ton crushed gravel base course; 450 ton crushed gravel surfacing; 90 ton asphaltic material; 2,506' laying corrugated metal pipe.

PLANTMIX, State Project No. SC-CFM

4530—Base course surfacing, plantmix surfacing course, sand seal coat 2.352 mi. Boulder-Big Sandy Road, Sublette County.

Quantities: 5,000 c.y. pit run gravel base course; 4,000 c.y. mi. haul 2,200 ton plantmix surface course; 26,000 T mi. haul surfacing material; 210 ton asphaltic material.

SHOP BUILDING, State Project No. 4342—Highway maintenance building 122'x81' at Kemmerer, Lincoln County.

BRIDGE—State Project No. 4444—Excavation and construction of one three-continuous reinforced concrete slab span bridge and approaches, one bituminous coated siphon, two welded steel flumes 1.351 mi. waste drain ditch on Lingle-Barnes Road, Goshen County.

Quantities: 40,000 c.y. excavation; 193 c.y. concrete; 28,130 lb. reinforcing steel; 4,790 lb. structural steel. DM 6-8

UTAH

●EARTHWORK, PIPE LINE, STRUCTURES— Ogden, Utah

Bids to be opened 10 a.m., M.S.T., July 17, by Bureau of Reclamation, Bldg. 53, Denver Federal Center, Denver, Colo., for earthwork, 4.2 mi. of pipe lines, concrete structures for trunkline 10 (West Farmington) and trunkline 18.8 (Woods Cross), Davis Aqueduct near Ogden, Davis County, Utah; Spec. No. DC-4927. Plans with above office. Bid bond 10%. Quantities: 111,300 c.y. excavation; 455 c.y. concrete in structures; 883 c.y. concrete in reservoir lining; 2,013 bbl. cement; 149,000 lb. reinforcement bars; 27,000 lb. steel pipe, fittings. Completion time 330 days. DM 6-11

PARKING TERRACE—Salt Lake City, Utah

Working drawings underway for construction of a 110'x210' 500-car parking terrace adjacent to the Auerbach Department Store at State and Broadway in Salt Lake City. Plans by Ashley T. Carpenter, architect, Crandall Bldg., Salt Lake City. Plans will be complete in September for seven floors of the structure and all 14 levels will be complete by June of 1958. GH 6-7

▲STATE HIGHWAY PROJECTS— Salt Lake City, Utah

Bids received by Utah Road Commission, Salt Lake City, for the following highway construction projects on which bids opened June 4.

SURFACING—BRIGHAM CITY: Construction of 0.468 mi. of 3½" plantmix bituminous surfaced road on U. S. 30-A (Main St.) betweent 2nd South and 1st North St., Box Elder County; State Proj. No. 1587. LOW BIDS: Waterfall Construction Co., 1685 Wall Ave., Ogden, $99,385; Hilton & Carr Construction Co., Box 572, Ogden, $106,709; Fife Construction Co., Brigham City, $108,347.

BITUMINOUS SURFACING — Plantmix surfacing 11.601 mi. on U.S. 89 between Pigeon Hollow Junction and Mt. Pleasant and a portion of Spring City main street, Sanpete County; FAP F-027-5(2) and S.P. 1588. LOW BIDS: L. A. Young Construction Co. & Vernal Sand & Gravel Co., Richfield, $628,615; Jack B. Parson Construction Co., Smithfild, $632,934; W. W. Clyde & Co., Springville, $649,109.

SP 6-11. Previous reports 511-, 5-25

●STATE HIGHWAY PROJECTS— Salt Lake City, Utah

Bids to be opened 2 p.m., June 18, by Utah State Road Commission, State Capitol, Salt Lake City, for highway construction. Plans with above office. $2 deposit. Certified check, cashier's check or bid bond 5%.

ROADMIX, BRIDGE, STATE ROAD 86—Roadmix bituminous surfacing and concrete structure over 20' span for 3.751 mi. from junction of State Road No. 86 and 87, Duchesne County, FASP S-0252(1).

Quantities: 414 ton bituminous material; 41,600 ton gravel; 717 c.y. concrete; 80,000 c.y. roadway excavation.

ROADMIX, STATE ROAD 88 — Roadmix bituminous surfacing from Ouray north for 10.8 mi., Uintah County, FASP S-0264(1).

Quantities: 1,214 ton bituminous material; 115,500 ton gravel; 148,500 c.y. excavation.

PLANTMIX, STATE ROAD 171—Plantmix bituminous surfacing for 3.3 mi. on 33rd S. between State and 23rd E., Salt Lake County; State Project 1566.

Quantities: 18,000 ton plantmix bituminous material; 48,000 sq. yd. portland cement stabilized base course.

PLANTMIX, BRIDGE, U. S. 56 and 80—Plantmix bituminous surfacing and concrete structure over 20' span for 1.266 mi. between Springville and Mapleton Bench, Utah County; FAP F-020-1(1).

Quantities: 16,500 ton plantmix bituminous surfacing; 1,102 ton bituminous material; 71,500 c.y. borrow; 1,168 c.y. concrete. DM 6-11

ALASKA

●AIRFIELD REHABILITATION— Nome, Alaska

Bids to be opened 10 a.m., June 27, by Civic Aeronautics Administration, Federal Bldg., Anchorage, for rehabilitation of the airfield at Nome; Inv. No. 57-92. Plans with above office. $20 deposit. Work to be bid on three schedules. Sched. 1—sub-surface drainage. Quantities: 33,100' of 6" to 18" corrugated metal pipe drains; 400' of 42" and 600' of 24" corrugated metal pipe culverts; 30,000 ton crushed rock backfill; flood gates, manholes, spillways, ditches. Sched. 2—Produce, place, compact about 60,000 ton crushed rock sub-base on runways, stockpile 36,000 ton crushed rock aggregates. Sched. 3 — Install high intensity runway lighting system on two runways and control panel, duct under runways, erect 62' beacon tower, 25'x44' regulator substation building, install standby power plant, equipment, asrial and underground control line and cable. DC 6-12

SUBSTRUCTURE, SUPERSTRUCTURE FOR NARROWS BRIDGE
BIDS CLOSE 10 A.M., JUNE 18
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Director of Highways of the State of Washington at the Transportation Building, Olympia, Washington, until 10:00 A.M. Tuesday, June 18, 1957, for the construction of the concrete substructure and superstructure of the Port Washington Narrows Bridge across the Port Washington Narrows on Secondary State Highway No. 21-B in the City of Bremerton, Kitsap County, Washington, and will then and there be opened and publicly read. Bids received after the time fixed above for opening will not be considered.

This improvement consists of the following elements:

1. Constructing 16 reinforced concrete bridge piers and abutments and aproximately 312 linear feet of T-beam structure, 793 linear feet of box girder structure and 609 linear feet of lightweight concrete deck slab and sidewalk.
2. The principal approximate quantities involved are:

Common Excavation	20,800 Cu. Yds.
Structure Excavation above Elevation 101	4,900 Cu. Yds.
Structure Excavation below Elevation 101	9,400 Cu. Yds.
Shoring and Cribs	Lump Sum
Riprap in Place	3,900 Cu. Yds.
T-Beam Superstructure in Place (Approximately 1,090 Cu. Yds Class "A" Concrete)	Lump Sum
Box Girder Superstructure in Place (Aproximately 4,960 Cu. Yds. Class "A" Concrete)	Lump Sum
Lightweight Concrete Slab, Sidewalks and Median in Place (Aproximately 960 Cu. Yds. Lightweight Concrete)	Lump Sum
Portland Cement	960 Sacks
Class "H" Concrete in Place	11,300 Cu. Yds.
Class "B" Concrete in Place	6,970 Cu. Yds.
Class "A" Concrete in Place	140 Cu. Yds.
Superstructure Steel Reinforcing Bars in Place (Approximately 1,812,000 Pounds	Lump Sum
Steel Reinforcing Bars in Place	1,386,000 Pounds
Furnishing and Placing Anchor Bolts	6,560 Pounds
Downspouts and Drain Pipes in Place	Lump Sum
Bridge Drains in Place	20 Only
Water Line Hangers in Place	11 Only
Expansion Pit Frames and Covers in Place	2 Only
Telephone Conduit, 3½" "Korduct", in Place	10,100 Linear Feet
Telephone Conduit Expansions in Place	42 Only
Electrical Items in Place	Lump Sum
Navigation Light Brackets in Place	12 Only
Standard Bridge Railing Type No. 2 in Place	3,417 Linear Feet
Painting Steel Superstructure	Lump Sum

Prequalification of bidders is required. Maps, Plans and specifications for the concrete substructure and superstructure of the Port Washington Narrows Bridge may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans, and specifications as a rental for use of them. Plans will be forwarded by first-class mail.

Informational copies of maps, plans, and specifications are on file in the office of the City Engineer in the City of Bremerton, the Chapter Offices of the Associated General Contractors of America in Seattle, (Mt. Pacific), Spokane, Tacoma, and Portland, Oregon, and the office of the District Engineers of the Department of Highways where they may be inspected. Soil samples and a copy of the soils report are on file in the office of the City Engineer in the City of Bremerton where they may be inspected.

W. A. Bugge, Director of Highways

STATE HIGHWAY PROJECTS

BIDS CLOSE 10 A.M., JUNE 18

Olympia, Wash.

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, June 18, 1957, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvemnts listed below.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal funds have been allocated for items nos. 1 to 11 inclusive.

The improvements for which bids will be received follow:

1. Surfacing, Constructing a Cement Treated Base, Paving with Type I-1 Asphaltic Concrete and Installing Eight Illumination Systems on 5.556 miles of Primary State Highway No. 2 in Spokane County, PINES ROAD TO GREENACRES — PAVING, FAP No. I-002-6(25), involving about 20,120 cubic yards of Common Excavation, 690 cubic yards of Solid Rock Excavation, 63,400 tons of Selected Roadway Borrow, 75,780 tons of Crushed Stone Surfacing, 2,810 cubic yards of Crushed Cover Stone and Mineral Aggregate, 613 tons of Asphalt Cement, 36,940 tons of Asphaltic Concrete, 12,710 barrels of Portland Cement, 45,800 tons of CTB Aggregate, 11,350 tons of Blending Sand, 146 cubic yards of Concrete, 33,400 pounds of Steel Reinforcing Bars, 7,945 linear feet of Cement Concrete Curb, 9,455 linear feet of Cement Concrete Gutter, 2,300 linear feet of Precast Traffic Curb, 221 linear feet of Corrugated Metal Pipe, 3,655 linear feet of Chain Link Fence, 2,857 linear feet of Beam Guard Rail, 198 Guide Posts, 8 lump sum bids for Installation of Illumination Systems and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
2. Surfacing and Paving with Cement Concrete and Type I-1 Asphaltic Concrete on 3.583 miles of Primary State Highway No. 2 in King County, MIDDLE CROSSING OF SNOQUALMIE RIVER TO CAMP MASON, FAP No. I-002-1(15), involving about 1,020 cubic yards of Common Excavation, 4,400 cubic yards of Solid Rock Excavation, 19,050 tons of Selected Roadway Borrow, 13,520 tons of Crushed Stone Surfacing, 45 tons of Asphalt Cement, 310 cubic yards of Crushed Cover Stone and Mineral Aggregates, 7,180 tons of Asphaltic Concrete, 57,910 square yards of Cement Concrete Pavement, 50 cubic yards of Concrete, 854 linear feet of Asphaltic Shoulder Curb, 153 linear feet of Beam Guard Rail, 58 Guide Posts and other items. Minimum Wage Rates for this project have been predetermined by law and are set forthin the bid proposal.
3. Clearing, Draining, Grading, Surfacing with Light Bituminous Surface Treatment and Stockpiling Crushed Stone Surfacing, Maintenance Rock and Mineral Aggregates on 2.320 miles of Secondary State Highway No. 6-A in Stevens County, PARK RAPIDS TO OLSEN CREEK, FAS No. S-0283(1) and State Project, involving about 43 acres of Clearing, 100,410 cubic yards of Common Excavation, 6,180 cubic yards of Solid Rock Excavation, 19,000 tons of Selected Roadway Borrow, 59,935 tons of Crushed Stone Surfacing, Crushed Cover Stone, Maintenance Rock and Mineral Aggregates, 70 tons of Asphalt Cement, 466 linear feet of Corrugated Metal Pipe, 262 linear feet of Corrugated Structural Plate Pipe-Arch, 481 linear feet of Beam Guard Rail, 35 Guide Posts, 635 cubic yards of Riprap and other items.
4. Grading, Surfacing and Paving with Type I-1 Asphaltic Concrete on 1.913 miles of Secondary State Highway No. 2-H in Spokane County, (DOLLAR ROAD TO ARGONNE ROAD, FAS No. US-0284(1), involving about 3,500 cubic yards of Common Excavation, 7,900 tons of Crushed Stone Surfacing, 41 tons of Asphalt Cement, 240 cubic yards of Crushed Cover Stone, 12,550 tons of Asphaltic Concrete, 740 linear feet of Beam Guard Rail and other items.
5. Surfacing, Constructing a Bituminous Surface Treatment Road Mix and Paving with Type I-1 Asphaltic Concrete on 18.18 miles of State Highways Nos. 7, 2 and 2-F in Douglas and Grant Counties, WINCHESTER WASTEWAY TO NAYLOR, ET AL, FAB Nos. F-031-1(6) and F-028-2(4) and State Project, involving about 16,935 cubic yards of Crushed Stone Surfacing, Crushed Cover Stone and Mineral Aggregates, 615 tons of Asphalt Cement, 14,250 tons of Asphaltic Concrete and other items.
6. Clearing, Draining, Grading and Surfacing with Light Bituminous Surface Treatment on 0.664 mile of Secondary State Highway No. 3-B in Yakima County, WHITE SWAN VICINITY, FAS No. S-0269(2), involving about 11,900 cubic yards of Common Excavation and Borrow, 5,650 tons of Selected Roadway Borrow, 5,700 tons of Crushed Stone Surfacing and Ballast, 25 tons of Asphalt Cement, 200 cubic yards of Crushed Cover Stone, 23 cubic yards of Concrete, 5,160 pounds of Steel Reinforcing Bars, 490 linear feet of Corrugated Metal Pipe, 1,419 linear feet of Concrete Pipe, 75 linear feet of Beam Guard Rail and other items.
7. Constructing a Light Bituminous Surface Treatment on 11.740 miles of Primary State Highway No. 8 in Klickitat County, MARYHILL EAST, FAP No. F-047-1(3), involving about 379 tons of Asphalt Cement, 3,290 cubic yards of Crushed Cover Stone and other items.
8. Clearing, Draining, Grading, Surfacing and Paving with Type I-1, Asphaltic Concrete on 3.200 miles of Pierce County Roads, EATONVILLE CUT-OFF AND MUCK-KAPOWSIN HIGHWAY, FAS Nos. S-1319(1) and S-0390(3), involving about 1,970 cubic yards of Unclassified Excavation, 15,860 cubic yards of Common Borrow, 21,670 cubic yards of Selected Roadway Borrow, 2,785 cubic yards of Crushed Stone Surfacing and Mineral Aggregates, 55 tons of Asphalt Cement, 8,750 tons of Asphaltic Concrete, 17,315 linear feet of Asphaltic Concrete Gutter and Spillway, 1,069 linear feet of Concrete Pipe, 40 linear feet of Corrugated Metal Pipe-Arch, 218 Guide Posts, 1,800 linear feet of Beam Guard Rail and other items.
9. Clearing, Draining, Grading, Surfacing and Constructing a Reinforced Concrete Slab Bridge on 0.270 mile of a Grays Harbor and Pacific County Road, COUNTY LINE BRIDGE, FAS No. S-0573(2), involving about 4,970 cubic yards of Unclassified Excavation, 1,220 cubic yards of Selected Roadway Borrow, 460 cubic yards of Crushed Stone Surfacing, 338 cubic yards of Concrete, 77,200 pounds of Steel Reinforcing Bars, 365 linear feet of Steel Bridge Rail, 306 linear feet of Steel Piling and other items.

10. Constructing a Reinforced Concrete Girder Bridge on 0.030 mile of a Spokane County Road, LATAH CREEK BRIDGE, FAS No. S-0469(1), involving about 403 cubic yards of Concrete, 73,600 pounds of Steel Reinforcing Bars, 307 linear feet of Standard Bridge Railing, 840 linear feet of Concrete Piling and other items.
11. Surfacing with Light Bituminous Surface Treatment on 7.500 miles of a Klickitat County Road, GOLDENDALE-KLICKITAT-LYLE ROAD, FAS No. S-0958(3), involving about 9,270 cubic yards of Crushed Stone Surfacing and Crushed Cover Stone, 278 tons of Asphalt Cement and other items.
12. Constructing a Storm Sewer on 0.746 mile of Primary State Highway No. 11 in Adams County, CITY OF RITZVILLE, a State Project, involving about 550 cubic yards of Crushed Stone Surfacing, 60 tons of Bituminous Mix, 4,412 linear feet of Concrete Pipe and other items.
13. Paving with Type I-1 Asphaltic Concrete on 3.701 miles of Primary State Highway No. 2 in King County, OLALLIE CREEK TO SUMMIT, a State Project, involving about 400 cubic yards of Crushed Stone Surfacing, 1,190 tons of Asphaltic Concrete, 5,530 linear feet of Asphaltic Concrete Curb, 362 linear feet of Corrugated Metal Pipe and other items.
14. Stockpiling Crushed Stone Surfacing, Maintenance Rock and Mineral Aggregates on Primary State Highway No. 2 in Kittitas County, MIDWAY VICINITY, a State Project, involving about 144,000 tons of Crushed Materials.
15. Stockpiling Crushed Stone Surfacing, Maintenance Rock and Mineral Aggregates on Primary State Highway No. 12 in Pacific County, SOUTH BEND VICINITY, a State Project, involving about 9,350 tons of Crushed Materials and other items.
16. Cleaning and Painting Six Bridges on State Highways Nos. 8, 12, 1-N and 1-R in Skamania, Lewis, Wahkiakum and Cowlitz Counties, WIND RIVER BRIDGE, ET AL, a State Project, involving about 215 hours of Sand Blast Cleaning and 6 lump sum bids for Cleaning and Painting.
17. Cleaning and Painting Three Bridges on State Highways Nos. 9 and 13-A in Grays Harbor County, QUINAULT RIVER BRIDGE NO. 9/410, ET AL, a State Project, involving about 158 hours of Sand Blast Cleaning and 3 lump sum bids for Cleaning and Painting.
18. Cleaning and Painting Four Bridges on State Highways Nos. 15-C and 16 in Chelan and Okanogan Counties, WENATCHEE RIVER BRIDGE, ET AL, a State Project, involving 4 lump sum bids for Cleaning and Painting.

ADMINISTRATION BUILDING
BIDS CLOSE 2 P.M., P.S.T., JUNE 26
Seattle, Washington
NOTICE TO CONTRACTORS

Notice is hereby given that the South Central School District No. 406, 14208 42nd Ave. So., Seattle 88, Washington, will receive sealed bids up to 2:00 P.M., P.S.T., June 26, 1957, at 14208 42nd Ave. So., Seattle, Washington, at which time all bids will then and there be opened and publicly read aloud in Room 71 of Foster Jr.-Sr. High School at 42nd Ave. So. and So. 144th St. for the construction of a new 2,000 sq. ft. Administration Office. It will be one story with a concrete slab, lightweight block walls and a frame roof with built-up roofing.

Each bid shall be in accordance with the plans, specifications, and other contract documents now on file with Ralph H. Burkhard, A.I.A., 2120 S.W. 152nd Street, Seattle 66, Washington, where copies may be obtained upon furnishing a deposit of $15.00 for each set. Deposit will be refunded upon the return of plans and specifications in good condition on the above date or the submission of a bona fide bid accompanied by the plans and specifications.

Each bid shall be made out on a bid form to be obtained from the Architect at 2120 S.W. 152nd Street, Seattle 66, Washington.

Each bid must be accompanied by a certified check, Cashier's Check, or a satisfactory bid bond in favor of South Central School District No. 406 executed by the bidder and a surety company in an amount equal to 5 per cent of the bid.

Each proposal shall be sealed and addressed to Frank Horsfall, Clerk of the Board of South Central School District No 406, and the name of the project plainly written on the outside of the package.

The South Central School District No. 406 reserves the right to reject any or all bids and to waive minor informalities.

No bidder may withdraw his bid after the hour set for the opening thereof, unless the award of contract is delayed for a period exceeding thirty days.

Dated this 10th day of June, 1957.

Signed: FRANK D. HORSFALL.

NURSING HOME
BIDS CLOSE 10:30 A.M., P.S.T., JUNE 25
Grangeville, Idaho
NOTICE TO CONTRACTORS

Sealed bids in duplicate for the construction of the Idaho County Nursing Home at Grangeville, Idaho will be received at the office of the Board of Idaho County Commissioners at the Idaho County Court House, Grangeville, Idaho, Room No. 6 until 10:30 A. M. Pacific Standard Time, Tuesday, June 25, 1957, and then at said office publically opened and read aloud.

The Board of Idaho County Commissioners reserves the right to waive any informality in, or to reject any or all bids.

No bidder may withdraw his bid after the hour set for the opening thereof unless said award is delayed for a period exceeding 30 days.

Each bid must be accompanied by a certified check, cashier's check or a bid bond issued by a bonding company licensed to do business in the locality of the project, in form furnished by the Architect, in an amount not less than five per cent (5%) of the Base Bid.

Drawings, specifications, and forms of contract documents may be obtained at the office of Walker, McGough & Trogdon, Architects, A.I.A., West 1023 Riverside Avenue, Spokane, Washington, or viewed at the office of the County Auditor, Idaho County Court House, Grangeville, Idaho.

Each prime contractor shall submit a plan deposit of $50.00 per set of contract documents with the maximum of two sets per contractor.

Plan deposits will be refunded providing that drawings and specifications are returned within 30 days and in good condition. Forms PHS 142, 145, 146, 147, 148, need not be returned.

The building is a brick veneer structure, with a composition roof, steel window-wall units, partial basement of reinforced concrete, slab on grade with composition flooring, interior partitions of plaster and glazed masonry units, acoustic tile and plaster ceilings, ceramic tile floors and walls in some areas, commercial type kitchen, miscellaneous hospital equipment, an elevator, and a hot water heating combined with an air distribution system. Estimated construction cost $189,000.00.

The General, Mechanical and Electrical work will be performed under separate prime contracts operating concurrently.

Secretary
Board of Idaho County Commissioners
Grangeville, Idaho

C.; at the Area Engineer's office, Alaska Public Works Room 309, Federal Bldg., Ketchikan, Alaska; and Associated General Contractors of America offices as follows: Seattle Chapter, Construction Center, 215 West Harrison St., Seattle, Wash.; Mountain Chapter, 220 West Harrison St., Seattle, Wash.; Tacoma Chapter, 1605 Center St., Tacoma, Wash.; Portland Chapter, Suite 112,

Multnomah Hotel, Portland, Oregon; the Alaska Chapter, 306 Central Bldg., Anchorage, Alaska, and the Plan Bureau, 2413 Western Avenue, Seattle, Wash.; and the Builders Exchange Cooperative, 317 Builders Exchange Bldg., Portland, Ore. A set of such documents may be procured from the office of the Director at Juneau, Alaska upon deposit of $25.00, all of which will be refunded upon the return of the plans and specifications in good condition within twenty (20) days from date of the bid opening. Each bid must be accompanied by a satisfactory bid security (certified check or bid bond) in an amount not less than 5 per cent of the total bid in dollars and cents. No bid will be withdrawn until thirty days after the scheduled closing date for the receipt of bids. The successful bidder will be required to furnish a performance bond and payment bond, each in the amount of 100 percent of the contract price. The Government reserves the right to award a contract for the project on the basis of the acceptance of any or all of the alternates, whichever course is in the best interest of the Government. DESCRIPTION: STREET IMPROVEMENTS, Project Aaa. 50-A-241, Petersburg, Alaska consisting of the following items of work: 3,049 l.f. 6", 8" and 10" asbestos cement sewer pipe, 659 l.f. 12" and 18" BTCMP Culverts, 9 each standard manholes, 431 l.f. concrete curb and gutters, 120 c.y. rock riprap, 4.6 sq. yd. concrete sidewalk, 2.30 miles of fine grading subgrade and 4,513 c.y. crushed aggregate base course. Information regarding liquidated damages (if any), payments, etc., is attached or made a part of the specifications. Bids shall be submitted on the forms furnished or copies thereof.

REMOVE PILING, DRIVE NEW PILING
BIDS CLOSE 8 P.M., JUNE 24
Everett, Washington
NOTICE TO CONTRACTORS

Sealed bids will be recived by the PORT OF EVERETT at the Port Office, Pier 1, Everett, Washington until 8:00 P.M., June 24, 1957, for the removal of approximately 60 existing piling and the driving of approximately 80 piling at the 14th Street Small Boat Harbor. Said bids will then and there be opened and publicly read aloud.

Plans and specifications may be examined at the Port Office or at the office of James H. Reid & Associates, and a set thereof obtained upon a deposit of $10.00.

Each bid shall be accompanied by a bid bond, certified check or cashier's check made payable to the Port of Everett in amount not less than five per cent (5%) of the amount of the bid, as a guarantee that the bidder shall execute the contract in conformity with the contract documents if it be awarded to him, and shall provide surety bond or bonds as specified therein within five (5) days after notification of the award of contract to the bidder.

The Port of Everett reserves the right to reject any or all bids and to waive irregularities or informalities in the bid or in the bidding.

No bidder may withdraw his bid after the hour set for the opening thereof, or before award of contract, unless said award is delayed for a period exceeding thirty (30) days.

Tom McCutchan, Manager
Port of Everett

REINFORCED CONCRETE BRIDGE
BIDS CLOSE 11 A.M., P.S.T., JULY 2
Juneau, Alaska
NOTICE TO CONTRACTORS

Department of Commerce, Bureau of Public Roads, Region 10. Date: May 31, 1957, Juneau, Alaska. Sealed bids, in single copy, for furnishing all labor, equipment, and materials and performing all work for the Chilkat River Bridge, Federal Aid Project No. F-095-5(1), Haines Highway, Territory of Alaska, described herein will be received until 11:00 a.m., P.S.T., July 2, 1957, in Room 319, Federal Building, Juneau, Alaska, and then publicly opened. This project, located 24 miles north of Haines, Alaska, is construction of a 500'x24' I-beam bridge consisting of ten 50' spans. The structure will have a reinforced concrete deck with steel angle and channel railing. The abutments and piers are to be concrete supported on 10 BP steel piles. Stage construction will permit the existing timber structure to serve as a detour bridge before being removed. The following work is involved: excavation for structures, 100 cu. yds.; structural steel piles, 10BP42, furnished 3,750 lin. ft.; 10BP42 structural steel piles, driven 79 each; splices 6 each; pile core stoppers 75; class A concrete 549.7 cu. yds.; reinforcing 87,880 lbs.; structural steel, furnished, fabricated and erected 156,840 lbs.; dismantling the existing bridge. Plans and specifications may be obtained free of charge by all who have a bonafide need for them for bidding purposes at Room 311, Federal Building, Juneau, Alaska. Unsuccessful bidders will be required to return plans and specifications. E. H. Swick, Regional Engineer.
5833—6-15

STATE HIGHWAY PROJECTS
BIDS CLOSE 9:30 A. M., June 28
Helena, Montana
NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the offices of said Commission in the City of Helena until 9:30 a.m. on June 28, 1957. The proposals will be publicly opened and read immediately thereafter.

1. **F 86(16)**—Grade, gravel surfacing, bituminous surface treatment, drain and construction of one 57.0' treated timber bridge on 12.247 miles on the Miles City-North Dakota Line Road in Fallon County, involving about 649,045 tons crushed gravel; 15,177 M gals. watering; 2,608 units rolling; 81,455 gals. liquid asphalt; 81,455 gals. emulsified asphalt; 3,679 lin. ft. corrugated metal pipe culvert; 156 lin. ft. structural plate pipe culvert; 772 lin. ft. relay pipe culverts; 15.899 MBM treated timber; 0.861 MBM untreated timber; 380 lin. ft. treated timber piles; 200 lin. ft. steel beam guard rail; all L. sum removal of existing structure and maintaining traffic; and other items. Project to be completed in 250 calendar days.

2. **F 149(11)**—Plant-mix oiling 10.322 miles on the Great Falls-Fort Benton Road in Cascade and Chouteau counties, involving about 28,956 tons crushed gravel; 40 hours watering; 78 units rolling; 20,591 gals. liquid asphalt; 47,603 gals. emulsified asphalt; 347,495 gals. asphalt cement; all L. sum furnish and maintain water plant. Project to be completed in 90 calendar days.

3. **F 191(14)U1**—Grade and drain 4.831 miles on the Pablo-Kalispell Road in Lake County, involving about 441,660 cu. yds. excavation; 344 cu. yds. gravel backfill; 86,091 mi. yds. overhaul; 6,175 M gals. watering; 823 units rolling; 122 lin. ft. galvanized iron pipe; 300 lin. ft. structural plate pipe culverts; 1,784 lin. ft. reinforced concrete pipe culverts; 100 lin. ft. relay pipe culverts; all L. sum clearing and grubbing; and other items. Project to be completed in 250 calendar days.

4. **USG 213(2)**—Construction of one 214.5' steel and concrete overpass over the Northern Pacific Railway tracks and one 172.0' box culvert on the Clark Fork on the Upper Nine Mile Road in Silver Bow County, involving about 625 cu. yds. excavation; 127,262 lbs. reinforcing steel; 785 cu. yds. concrete; 595 cu. yds. structure excavation; 22 each prestressed beams; and 431.5 lin. ft. bridge rail. Project to be completed by June 30, 1958.

5. **S 2(13)U2**—Grade and drain 6.234 miles on the Helena-Flesher Pass-Lincoln Road in Lewis and Clark County, involving about 533,787 cu. yds. excavation; 112 cu. yds. riprap; 537 cu. yds. gravel backfill; 19,114 mi. yds. overhaul; 7,977 M gals. watering; 156 lin. ft. corrugated metal pipe culverts; 225 lin. ft. structural plate pipe culverts; 2,134 lin. ft. reinforced concrete pipe culverts; 44 lin. ft. relay pipe culverts; and other items. Project to be completed in 150 calendar days.

6. **S 26(6)U1**—Grade, gravel surfacing, bituminous surface treatment and drain 8.436 miles on the St. Xavier-Hardin Road in Big Horn County, involving about 291,727 cu. yds. evcavation; 990 cu. yds. riprap; 118 cu. yds. gravel backfill; 439,795 mi. yds. overhaul; 117,402 tons crushed gravel; 6,696 M gals. watering; 1,132 units rolling; 52,382 gals. liquid asphalt; 52,689 gals. emulsified asphalt; 561 lin. ft. corrugated metal pipe culverts; 4,304 lin. ft. reinforced concrete pipe culvert; 263 lin. ft. relay pipe culverts; 520 FBM lumber for headgates; and other items. Project to be completed in 200 calendar days.

7. **S 26(6)U2**—Construction of 3 treated timber pile bridges and the widening of one treated timber pile bridge on the St. Xavier-Hardin Road in Big Horn County, involving about 68.066 MBM treated timber; 2.834 MBM untreated timber; 2,280 lin. ft. treated timber piles; 1,407 lbs. structural steel; all L. sum removal of existing structure and maintaining traffic; all L. sum revision of existing structure and maintaining traffic. Project to be completed by May 31, 1958.

8. **S 107(5)**—Reshaping and gravel surfacing 6.527 miles on the Ledger-East and West Road in Pondera County, involving about 827 cu. yds. binder; 1,654 mi. yds. overhaul on binder; 25,202 tons crushed gravel; 922 M gals. watering; 234 units rolling; 52 hours blading; and other items. Project to be completed in 80 calendar days.

9. **S 187(3)U1**—Grade, gravel surfacing, bituminous surface treatment and drain 12.624 miles on the Armells Creek-Hays-Harlem Road in Blaine County, involving about 980,539 cu. yds. excavation; 59,427 mi. yds. overhaul; 226,516 tons crushed gravel; 19,185 M gals. watering; 2,978 units rolling; 75,765 gals. liquid asphalt; 75,765 gals. emulsified asphalt; 4,968 lin. ft. corrugated metal pipe culverts; 212 lin. ft. structural plate pipe culverts; 89 lin. ft. relay pipe culverts; all L. sum clearing and grubbing; all L. sum removal of existing structure; and other items. Project to be completed in 450 calendar days.

10. **S 187(3)U2**—Construction of 3 treated timber pile bridges on the Armells Creek-Hays-Harlem Road in Blaine County, involving about 48.789 MBM treated timber; 1.455 MBM untreated timber; 1.340 lin. ft. treated timber piles; 563 lbs. structural steel; 378 cu. yds. unclassified excavation; and all L. sum removal of existing structures and maintaining traffic. Project to be completed by April 30, 1958.

11. **S 302(13)**—Construction of one 825.0' steel and concrete bridge over the Yellowstone River near Terry on the Terry-Brockway Road in Prairie County, involving about 216,729 lbs. reinforcing steel; all L. sum structural steel; 1,647.0 lin. ft. steel bridge rail; 2,372.5 cu. yds. concrete; 5,125 cu. yds. structure excavation; 202,356 lbs. furnishing steel bearing piles; 4,053 lin. ft. driving steel bearing piles; all L. sum test piles; 36 each floor drains; all L. sum shoring and cribs; and other items. Project to be completed by August 31, 1959.

12. **SMP 003-0323-0142**—The work contemplated consists of providing all labor, materials and equipment for construction and entire completion of a combined office and shop building (160'x60' shop and 42'x85'8" office) at Billings, Montana, according to Plans and Specifications prepared by LONERS & STROEBE, ARCHITECTS, Billings, Montana.

The above listed quantities are approximate only.

All bid proposals shall be accompanied by a certified or cashier's check, cash, postal money order, bank money order, or bid bond in the amount of at least 5% of the bid. Should the successful bidder fail to enter into his contract and furnish a satisfactory performance bond within the time stated in his proposal, the bid deposit shall be forfeited to the State Highway Commission of Montana.

Prequalification of bidders at least 72 hours prior to the opening of bids is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission in Helena, Montana. Plans and specifications for all Federal Aid Projects are also on file and may be examined in the office of Harry L. Burns, chairman, the Bureau of Public Roads at Missoula.

TRUE FACTS* about **PUMICE** (expanded by nature) **BLOCKS** (properly manufactured and cured)

ONLY PUMICE BLOCKS can offer the following outstanding qualities—and at the same time: conform to ASTM standards of load bearing blocks (C-90); possess lasting BEAUTY; offer the other desirable qualities of lightweight blocks.

#1 LIGHTWEIGHT
ONLY PUMICE BLOCKS weigh as little as 20 to 22 lbs. for a standard 8"x8"x16".

#2 INSULATION
ONLY PUMICE BLOCKS have a "U" Factor of under .25 for a standard 8"x8"x16".

#3 FIRE-RETARDENT
ONLY PUMICE BLOCKS satisfy UNDERWRITERS LABORATORIES, INC., specifications for a 4-hour fire wall with a standard 8"x8"x16".

Supported by certified laboratory tests and research data. Copies gladly sent upon request.

THE CENTRAL OREGON PUMICE COMPANY

'In the daily movement of people between model house, office, factory, school, train, social-togetherness with people who live under the same laws of existence, are there symbols left which break the conformist compulsion? . . . Neither the city planners nor the architects nor those who direct the movement of the population can produce such symbols.'

The individual and *his* environment

by DR. PAUL TILLICH, Professor, Harvard University

THE TERM ENVIRONMENT seems simple and without problems. Actually it is complex and a difficult though open doorway for man's self-understanding. Man and his relation to his world are misunderstood if man's environment is defined as the totality of objects which are so close to the place where he lives that he experiences them in a continuous encounter. If taken in this sense, environment is identical with surroundings. In order to know the environment of a man one has to register, within an arbitrarily chosen orbit, every single object which he may regularly encounter. For instance, every single tree along the road he uses daily, every single figure in the pattern of his drapery, every single car which he sees passing his street, every color, every sound by which he is consciously or unconsciously affected. All this and an infinite amount of other objects surround him. But they are not his environment.

Environment is made up of those elements of his surroundings which are relevant for him as man. A man and his dog have the same surroundings but a different environment. The Bosch painting in my living room is environment for me; it is not environment for my dog for whom only the peculiar smell of oil and varnish may have environmental character. For my maid, the environmental character of the picture may consist of the awareness of the subject matter of the painting and of her duty to dust it from time to time. All this means that environment is not identical with surroundings and that it is correlative to him who has surroundings. The question is not environment and the individual but the individual and HIS environment.

This means that the same surroundings are something quite different for different kinds of individuals. If one takes a New York Puerto Rican out of his slum surroundings and out of the environment which was his environment and puts him into an apartment within a new housing project, he will bring his old environment into the new surroundings and deal with them in terms of his old. They soon will become a slum. Conversely, if somebody who grew up in a cultivated house and for whom the Bosch picture was a picture, he could make of a cave in a wartime trench a small underground living room. This is the first limit for the influence of surroundings on the individual. He selects from the surroundings what shall become his environment.

In this man is not different from any other living being—the dog, the fly, the migrating bird. But there is a difference between man and all other beings: man's environment has the character of world. The environment of animals remains environment. It never can become world. What is world?

The Greeks called it cosmos, which means beauty, order, structure. The Romans called it universe, which means the unity of an infinite manifoldness. A definition of man in which all other definitions are implied is that he has not only environment but also world. World is the structural unity of an inexhaustible number of actual and possible things. It is THE STRUCTURE which makes the world world: if we encounter world, we encounter it as a whole which is structural in time and space, in geometrical and biological forms, in things and consciousness of things, in laws and spontaneity, in the positive and the negative. All this makes the world world and determines the relation of world and environment. One could say that in man's environment world is present and that every piece of his en-

The Building Month: Trends/Views

RETURNING FROM A 16,000-MILE TOUR OF EUROPE, a Los Angeles architect believes that "diminishing home ownership in the free countries of the world constitutes a greater threat to democracy than the Soviet stockpile of atomic bombs." Dan Saxon Palmer, who visited Portugal, Spain, Switzerland, France, Germany, Austria and Italy on his extensive housing tour, declared that there is virtually no new individual home construction of consequence underway in any of these countries, with the result that there is a serious overcrowding in most metropolitan areas. Practically all new European housing is in the form of apartments, he said, and the percentage of families who own their own homes is steadily decreasing.

FIRST PROJECT UNDER CONTROVERSIAL MISSION 66 PROGRAM has been completed at Yellowstone National Park. Canyon Village, located about two miles from the Grand Canyon, includes 500 cottage units capable of housing 1,500 persons overnight, a massive lodge 320 ft. long with dining room, cafeteria and coffee shop to accommodate some 5,000 persons a day, an administrative building and three employee dormitories.

CAN CONSTRUCTION OF SCHOOL BUILDINGS BE STANDARDIZED? This hot potato which has been kicked about in many a school board meeting is now being considered in Ogden, Utah. "Some standards should be adhered to in all buildings," the superintendent declared at a recent session; and the school district's consulting architect agreed that certain broad policies should be outlined in writing, but warned against those so stringent and inflexible as to restrict progress.

TOMORROW'S HOME MAY WELL HAVE LUMINOUS CEILINGS and electrically lighted panel walls, with the intensity of light and color readily controlled by the flick of a switch to suit the householder's changing moods. George W. Clark, Sylvania's lighting engineering manager, believes that ceiling design is one of the few ways left to the architect to express his individuality and that ceilings lighted with fluorescent tubes from wall to wall behind plastic sheeting of various design, tones and textures is a way out for new effects.

MENTAL HOSPITALS OF THE FUTURE should have more space, even if they are to accommodate the same number of patients. VA psychiatrist Dr. Harry H. Botts of Chillicothe, Ohio, says that strides made in rehabilitation have changed the whole picture. "Mental hospitals in the future will not be designed just for bedding down patients," he explains. "Bed care always will have to be provided for the older chronic patients, but it will be part of geriatric or old-age care, not part of a mental institution."

DESIGNS FOR A SOLAR-HEATED RESIDENCE, particularly adapted to the arid Southwest, will be sought in an international competition open to practicing architects, designers and students, which closes August 15, 1957. Nathaniel Owings of San Francisco will be a member of the five-man jury for the sponsor, the Association for Applied Solar Energy of Phoenix.

FIRST NEW PRIVATE COLLEGE OF SCIENCE AND ENGINEERING established in the U.S. in more than 20 years is being organized in Claremont, Calif., with the initial construction program underway. To be known as Harvey Mudd College, it will be the fifth member of the Associated Colleges of Claremont which share certain facilities. Ultimate enrollment probably will not exceed 350 and there will be one faculty member for each 10 students.

METHODS FOR DISTRIBUTING CURTAIN WALL DATA to architects and builders are being considered by the Aluminum Window Manufacturers Association, with F. A. Loeback, manager of architectural sales for Kaiser Aluminum, in charge.

Six-month total in five states hits $1.2 billion

Building volume in the five western states for the first six months of this year exceeded $1.2 billion, $94 million below the same period in record-breaking 1956. While the picture is by no means rosy at the mid-year point, if the second half of 1957 follows last year's pattern a good share of the deficit may be wiped out. The first half of 1956 showed a $2½ million drop compared with the preceding period, but the year-end total chalked up a $63 million gain.

The following tabulation by states comparing January through June totals shows that building volume in all five states is running behind 1956.

	Jan.-June 1957	Jan.-June 1956
California	$1,014,674,729	$1,063,898,673
Oregon	59,803,247	75,560,905
Washington	135,772,981	161,298,241
Montana	13,381,720	15,280,497
Idaho	11,495,279	13,045,845
	$1,235,136,956	$1,329,084,161

While the April and May figures tend to indicate building was beginning to set a faster pace, the June volume slumped down, with a drop of $44½ million below the same month in 1956. Idaho was the only state to record an increase.

The usual seasonal increase of June over May was completely ignored except in Montana where it was very slight. The five-state total showed a $45½ million decrease.

Following is a breakdown of building permits issued for new buildings and additions by several of the major agencies during June. (First number in each category refers to the number of permits, not the number of units.)

	DWELLING	COMMERCIAL & INDUSTRIAL	PUBLIC
Portland	63 ($ 1,037,150)	27 ($2,139,910)	1 ($ 9,750)
King Co.	447 (4,452,720)	54 (450,590)	3 (79,000)
Seattle	566 (3,844,976)	159 (2,792,920)	1 (2,000)
Tacoma	97 (424,065)	34 (256,645)	1 (366,000)
Los Angeles Co.	2,109 (16,985,802)	372 (5,586,268)	50 (1,102,320)
Orange Co.	256 (2,677,783)	23 (151,176)	6 (200,500)
Sacramento Co.	420 (3,042,319)	47 (828,080)	7 (3,599,000)

Building Permit Totals for 116 Western Agencies for June 1957

CALIFORNIA	June 1957	May 1957	June 1956
Alameda County	$ 3,976,200	$ 3,232,000	$ 2,740,200
Anaheim	2,841,700	2,597,407	2,915,850
Bakersfield	365,618	309,571	602,485
Burbank	1,229,820	1,575,262	864,675

The Building Month: Trends/Views

RETURNING FROM A 16,000-MILE TOUR OF EUROPE, a Los Angeles architect believes that "diminishing home ownership in the free countries of the world constitutes a greater threat to democracy than the Soviet stockpile of atomic bombs." Dan Saxon Palmer, who visited Portugal, Spain, Switzerland, France, Germany, Austria and Italy on his extensive housing tour, declared that there is virtually no new individual home construction of consequence underway in any of these countries, with the result that there is a serious overcrowding in most metropolitan areas. Practically all new European housing is in the form of apartments, he said, and the percentage of families who own their own homes is steadily decreasing.

FIRST PROJECT UNDER CONTROVERSIAL MISSION 66 PROGRAM has been completed at Yellowstone National Park. Canyon Village, located about two miles from the Grand Canyon, includes 500 cottage units capable of housing 1,500 persons overnight, a massive lodge 320 ft. long with dining room, cafeteria and coffee shop to accommodate some 5,000 persons a day, an administrative building and three employee dormitories.

CAN CONSTRUCTION OF SCHOOL BUILDINGS BE STANDARDIZED? This hot potato which has been kicked about in many a school board meeting is now being considered in Ogden, Utah. "Some standards should be adhered to in all buildings," the superintendent declared at a recent session; and the school district's consulting architect agreed that certain broad policies should be outlined in writing, but warned against those so stringent and inflexible as to restrict progress.

TOMORROW'S HOME MAY WELL HAVE LUMINOUS CEILINGS and electrically lighted panel walls, with the intensity of light and color readily controlled by the flick of a switch to suit the householder's changing moods. George W. Clark, Sylvania's lighting engineering manager, believes that ceiling design is one of the few ways left to the architect to express his individuality and that ceilings lighted with fluorescent tubes from wall to wall behind plastic sheeting of various design, tones and textures is a way out for new effects.

MENTAL HOSPITALS OF THE FUTURE should have more space, even if they are to accommodate the same number of patients. VA psychiatrist Dr. Harry H. Botts of Chillicothe, Ohio, says that strides made in rehabilitation have changed the whole picture. "Mental hospitals in the future will not be designed just for bedding down patients," he explains. "Bed care always will have to be provided for the older chronic patients, but it will be part of geriatric or old-age care, not part of a mental institution."

DESIGNS FOR A SOLAR-HEATED RESIDENCE, particularly adapted to the arid Southwest, will be sought in an international competition open to practicing architects, designers and students, which closes August 15, 1957. Nathaniel Owings of San Francisco will be a member of the five-man jury for the sponsor, the Association for Applied Solar Energy of Phoenix.

FIRST NEW PRIVATE COLLEGE OF SCIENCE AND ENGINEERING established in the U.S. in more than 20 years is being organized in Claremont, Calif., with the initial construction program underway. To be known as Harvey Mudd College, it will be the fifth member of the Associated Colleges of Claremont which share certain facilities. Ultimate enrollment probably will not exceed 350 and there will be one faculty member for each 10 students.

METHODS FOR DISTRIBUTING CURTAIN WALL DATA to architects and builders are being considered by the Aluminum Window Manufacturers Association, with F. A. Loeback, manager of architectural sales for Kaiser Aluminum, in charge.

Six-month total in five states hits $1.2 billion

Building volume in the five western states for the first six months of this year exceeded $1.2 billion, $94 million below the same period in record-breaking 1956. While the picture is by no means rosy at the mid-year point, if the second half of 1957 follows last year's pattern a good share of the deficit may be wiped out. The first half of 1956 showed a $2½ million drop compared with the preceding period, but the year-end total chalked up a $63 million gain.

The following tabulation by states comparing January through June totals shows that building volume in all five states is running behind 1956.

	Jan.-June 1957	Jan.-June 1956
California	$1,014,674,729	$1,063,898,673
Oregon	59,803,247	75,560,905
Washington	135,772,981	161,298,241
Montana	13,381,720	15,280,497
Idaho	11,495,279	13,045,845
	$1,235,136,956	$1,329,084,161

While the April and May figures tend to indicate building was beginning to set a faster pace, the June volume slumped down, with a drop of $44½ million below the same month in 1956. Idaho was the only state to record an increase.

The usual seasonal increase of June over May was completely ignored except in Montana where it was very slight. The five-state total showed a $45½ million decrease.

Following is a breakdown of building permits issued for new buildings and additions by several of the major agencies during June. (First number in each category refers to the number of permits, not the number of units.)

	DWELLING	COMMERCIAL & INDUSTRIAL	PUBLIC
Portland	63 ($ 1,037,150)	27 ($2,139,910)	1 ($ 9,750)
King Co.	447 (4,452,720)	54 (450,590)	3 (79,000)
Seattle	566 (3,844,976)	159 (2,792,920)	1 (2,000)
Tacoma	97 (424,065)	34 (256,645)	1 (366,000)
Los Angeles Co.	2,109 (16,985,802)	372 (5,586,268)	50 (1,102,320)
Orange Co.	256 (2,677,783)	23 (151,176)	6 (200,500)
Sacramento Co.	420 (3,042,319)	47 (828,080)	7 (3,599,000)

Becket sets up shop in Bagdad for Iraq government

The West Coast firm of Welton Becket & Associates has been selected by the government of Iraq to establish architectural headquarters in that country and has already sent a study team to Bagdad to undertake first steps to organize the office.

"Office space has been provided by Iraq, but it will require extensive alterations to meet our needs," Becket explains. "This office will be completely unique from any architectural office in the United States.

"In the first place, it will have to be organized as an architect-general contractor-client combination, but run as a single unit by our firm. The Iraq government requirements call for this grouping and building in a foreign country is a close composite of these functions."

Becket says that perhaps the most unusual feature of the office will be that all figuring will have to be done on both the Arabic language and metric scales so that plans can be read by all contractors and suppliers working on the jobs.

Heading the study team in Bagdad is Charles B. McReynolds, architectural project chief with the Becket organization. Once the office is established after the first of next year, McReynolds is to be director. Others on the team are Dick Bird, architectural designer, and Richard Bradshaw, consulting structural engineer. A fourth member, Haig Assadourian, will travel from Becket's Cairo, Egypt, office to join the team in Bagdad.

First project to be planned by the office will be a huge hotel for the government of Iraq. Operation and management will be handled by Hilton Hotels International.

Briefly noted . . .

• The University of Washington School of Architecture in Seattle has been given status as an autonomous college to be known as the College of Architecture and Planning. Prof. Arthur P. Herrman, director of the school, has been named acting dean.

• Development of Los Angeles County's $51 million civic auditorium and music center through an open competition has been advocated by the Southern California Chapter, AIA.

• California's Marin County Board of Supervisors has voted to open negotiations with Frank Lloyd Wright to design an $8 million government center just north of San Rafael on U. S. Highway 101.

• The Hawaii Housing Authority has called for construction of 624 low-rent homes in Honolulu at a cost of $9,605,000.

• The Greater Seattle Housing Council has elected William C. Newell Jr. of the Home Builders' Association of Greater Seattle as president and architect John M. Morse as vice president. The council was formed to develop greater availability of housing for minority group families.

• The regents of the University of California, planning for a 1970 enrollment of 103,000 students, have earmarked more than $43 million for capital improvements next year. They also have announced that the Berkeley-Richmond architectural firm of Vernon DeMars-Donald Hardison has won a competition to design a $10 million student center on the Berkeley campus.

Projects of note

• Pietro Belluschi's Equitable Building in Portland will get a four-story addition—38 ft. in width, stretching 200 ft. across the west side—to the two-story portion of the glass and aluminum structure. Architects for the addition are Skidmore, Owings & Merrill, whose office succeeded the original designer.

• A boom town seems to be in the making in Washington's Stevens County. Washington Water Power Co. has completed a 60,000-volt substation and a local transmission line, awaiting a town to grow into it at Uranium City, site of a $3 million uranium processing plant now being erected by Dawn Mining Co. Construction is now starting on a 10-unit motel, two service stations, a four-unit office building and 12 all-electric homes.

• San Francisco's highest skyscraper, to be designed by architects Pereira & Luckman, is now in the planning stage and will be erected within three years south of Market Street.

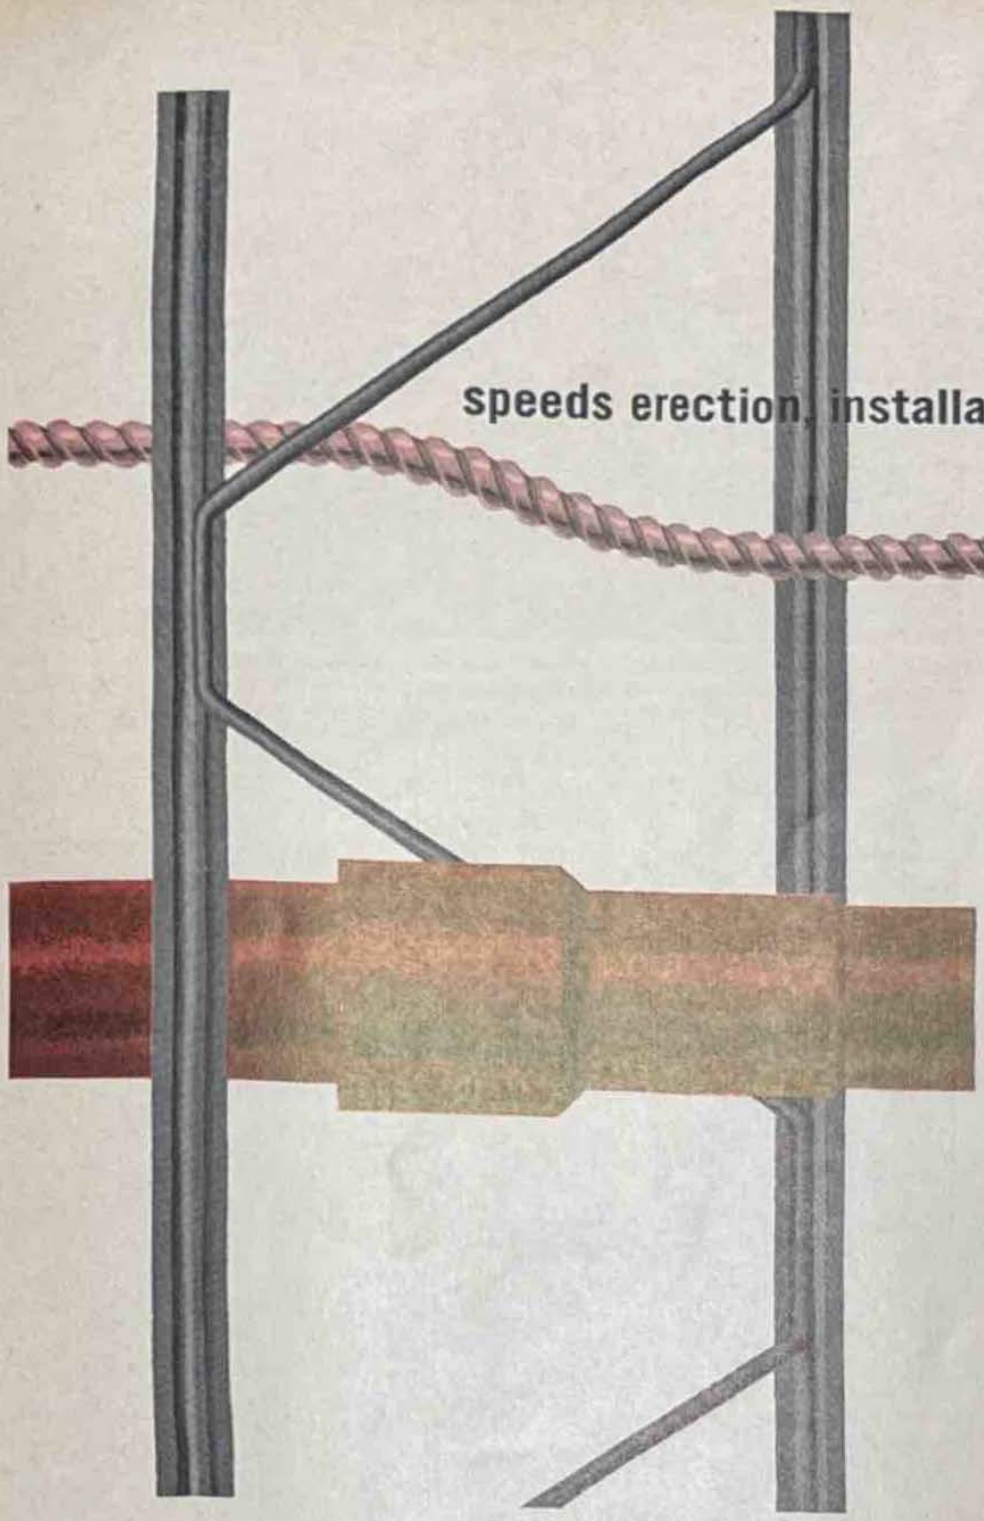
San Francisco studies needs of housing government

A team of consulting architects has reported that it would cost at least $24 million to solve the problem of housing San Francisco's local government offices for the next 20 years.

The architects' recommendations are part of a $70,000 master plan being prepared for the future development of San Francisco's Civic Center. Three firms are associated in making the plan: architects Wurster, Bernardi & Emmons, architects Skidmore, Owings & Merrill and traffic engineers DeLeuw Cather & Co.

The report indicates the city should build a new $16 million courthouse and spend $8 million on remodeling the existing city hall to serve both the judicial and executive branches of San Francisco government. Later an office building annex to cost $4½ million would be added to the Civic Center to bring all of the now scattered city bureaus into one structure.

The report is now being reviewed by the finance committee of the San Francisco Board of Supervisors.



Board reviews roof slab failure on Florida job

An engineering board assigned to investigate the causes of the collapse of a section of roof last August on the then newly completed Blanckner Elementary School in Orlando, Fla. has released its report to the Prestressed Concrete Institute. Among the points covered are these:

1. The collapse was not caused by ultimate failure of the slabs.
2. The design of the roof slab was defective in that the extreme fiber stresses exceeded the allowable.
3. The cracking of the slab resulted in excessive deflection and the ponding of water on the roof which brought about more deflection and also rotation of the slab at the supports.
4. The bearings points of the slab on the concrete block wall were eccentric and the wall design was inadequate.
5. The rotation of the slabs shifted the bearing point causing the wall to collapse. This wall, which had window openings from one end to the other, its pilasters and the tie (bond) beam were inadequately designed.

Board members were H. Ross Bryan, consulting engineer, Nashville, Tenn.; H. H. Edwards, president, Leap Concrete, Inc., Lakeland, Fla.; and Prof. A. M. Ozell, College of Engineering, University of Florida.

Another Soulé First

SOULÉ STEEL STUD

speeds erection, installation of pipe and conduit

This time-saving and cost-cutting steel stud design was pioneered and perfected by Soulé. It features wide web openings for faster installation of pipe and conduit. The Soulé design also makes the stud easier to handle on the job—hand cutting is faster, speeding erection. Soulé steel stud is available in 2″, 3¼″, 4″, and 6″ widths. Call your nearest Soulé office for complete specifications and details.

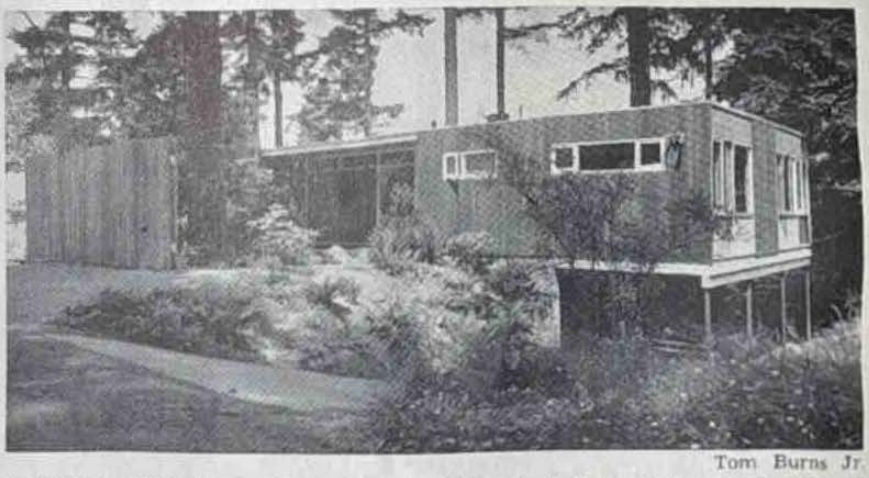
Oregon premiates five projects in awards program

In its second design competition, the Oregon Chapter, AIA, presented three buildings with first honor awards and two with awards of merit. The architect jury made up of Paul Kirk of Seattle, Kenneth Brooks of Spokane and Dewitt Robinson of Portland reviewed 28 entries. In commenting on the winners, they said that all were small, beautifully and sensitively carried out and featured regional woods. Architects and owners received their citations at a banquet in Portland June 16, with Brooks as principal speaker.

First Honor Awards (below and right)

OCEANLAKE-WECOMA COMMUNITY CONGREGATIONAL CHURCH, Oceanlake: Warren Weber, architect; John Fuller & Sons, contractor (PA&B for Sept. '55). "Site not unlike those chosen in Sweden; shingle tower similar to those used in that country."

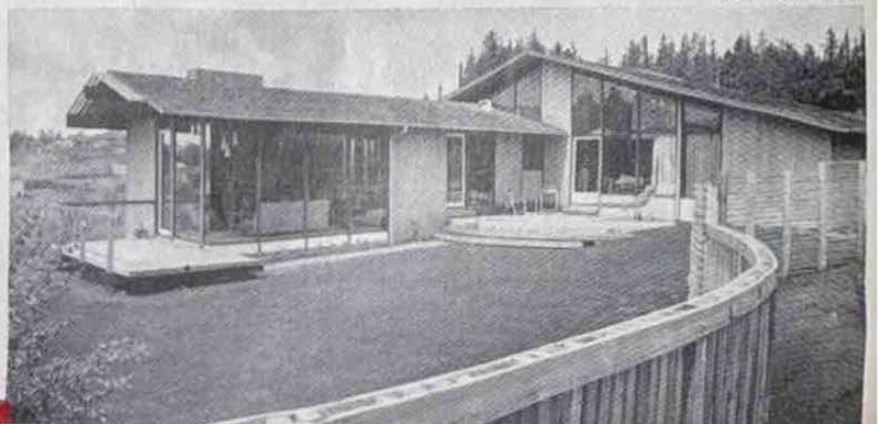
HOYT STREET MEDICAL CLINIC BUILDING, Portland: Skidmore, Owings & Merrill, architects; Norman Builders, contractors. "Simple cube forward on site with parking at rear; side setbacks required by code used for driveways; has plesant scale."



Dearborn-Massar

PORTLAND GARDEN CLUB: John Storrs, architect; Norman Builders, contractor. "Refined detailing with integrated landscaping; quality of Saarinen of growing old with dignity; adopated mass of building to site."

Awards of Merit

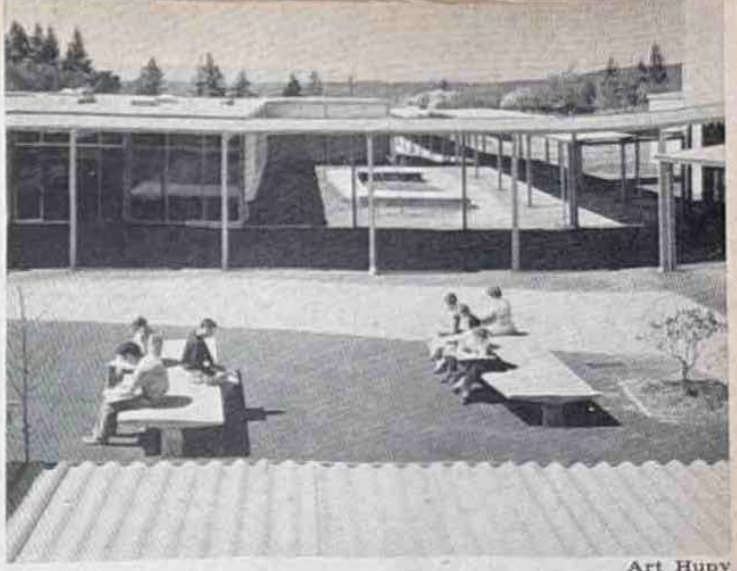


Tom Burns Jr.

WILLIAM L. FLETCHER RESIDENCE, Portland: William L. Fletcher, architect; Fred McCarroll (original construction) and Ellis-Andrews (addition) contractors. "Small, pure shelter on carpet of forest, rather than growing out of forest, decks are spacious and inviting; good site planning."

PHILIP FELDMAN RESIDENCE, Portland: Saul Zaik, designer; Max Shimshak, contractor. "Completeness of plan of house and site very commendable, particularly treatment of main entrance; details carefully considered and worked out."

Tom Burns Jr.

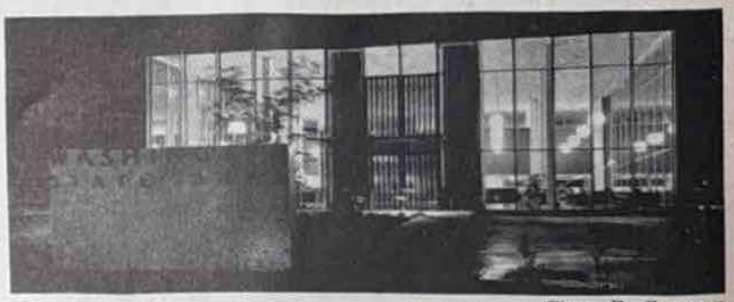


Five buildings honored in Seattle competition

A school, an office building, a bank and two residences were cited as outstanding examples of Seattle area architecture in the seventh annual honor awards competition sponsord by the Washington State Chapter, AIA.

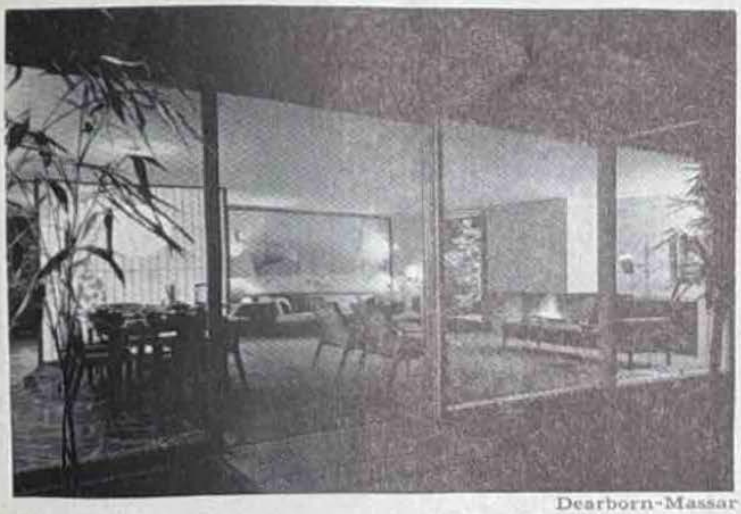
A jury of three Northwest architects—Lancelot E. Gowen of the University of Washington's School of Architecture, Thomas F. Hargis of Yakima and Robert B. Price of Tacoma—selected the five winners from 31 entries which were first judged on the basis of photographic panels. Twelve finalists were then personally viewed and inspected by the jurors.

At a June 6 dinner meeting architects, owners and contractors of the winning buildings were awarded certificates "in recognition of the professional excellence manifested by the Architect . . . the intelligent cooperation shown by the Client in demanding and recognizing the highest architectural standards and the fine performance of the Contractor in execution of the work."



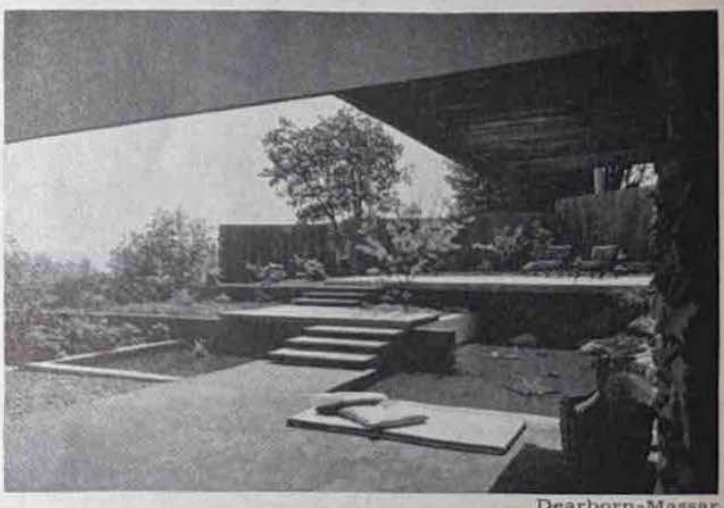
Art Hupy

OLYMPIC VIEW JUNIOR HIGH SCHOOL, Mukilteo: Waldron & Dietz, architects; Hedeen Construction Co., contractor (PA&B for June '57). "Simple in plan and details in which provision has been made for an orderly and coordinated expansion program. Particularly impressed with the central student court that appears to form a hub of all activity centers."



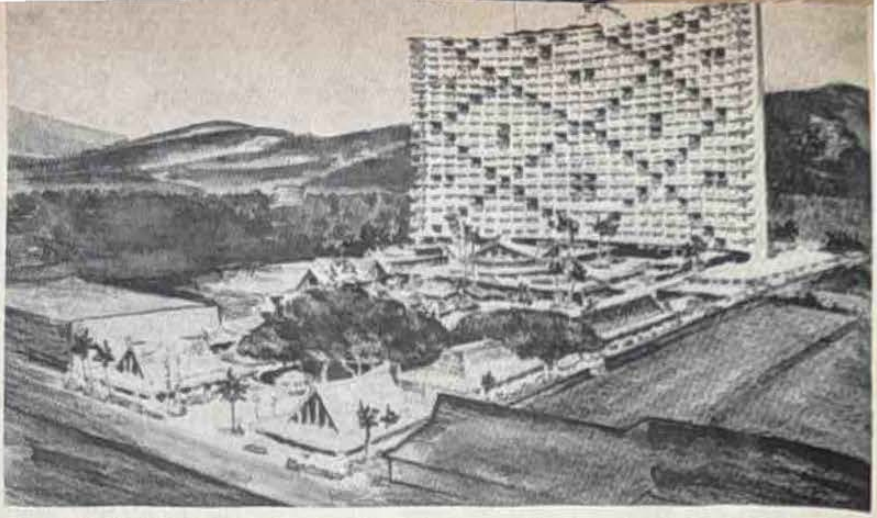
Art Hupy

WASHINGTON CONFERENCE OF SEVENTH-DAY ADVENTISTS OFFICE BUILDING, Seattle: Robert J. Burman, architect; Baugh Construction Co., contractor. "Impressed with the simplicity of plan and consistent detailing."



Chas. R. Pearson

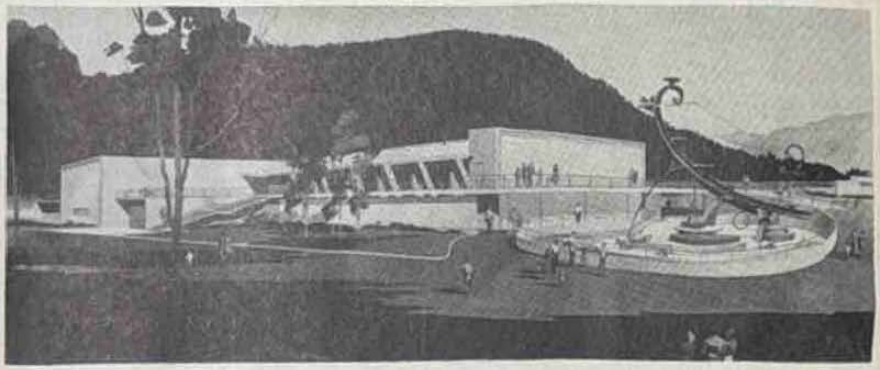
SEATTLE-FIRST NATIONAL BANK, BELLEVUE BRANCH: Mithun & Nesland, Ridenour & Cochran, Associates, architects; Wick Construction Co., contractor. "Particularly impressed with this glass and steel cage design for modern banking facilities."



Dearborn-Massar

JOHN RUSSELL RESIDENCE (Electri-Living Home), Medina: Paul Hayden Kirk & Associates, architects; Robinson Homes, Inc., contractor. "Commended for excellence of plan, simplicity of detail and general consistency of its parts."

Dearborn-Massar



LEWIS J. DOWELL RESIDENCE, Seattle: Paul Hayden Kirk & Associates, architects; Lewis J. Dowell, contractor. "Vertical as well as horizontal space was used to the utmost for drama and a sense of continuity. Special commendation for integration of house and garden."

PROPOSED 20-STORY HOTEL FOR HAWAII would be built of steel and concrete in one-story thickness to catch vista of ocean and Waikiki in front and of mountains at rear. Plans call for corridors to be dropped below floor level and glass enclosed with vents, permitting full view and trade wind ventilation. Ocean front balconies are designed to give decorative pattern to facade which recalls Hawaiian tapa cloth. Costing about $7 million, hotel would be focal point of Waikiki Development Co.'s current project, International Market Place. Architects: Wimberly & Cook.

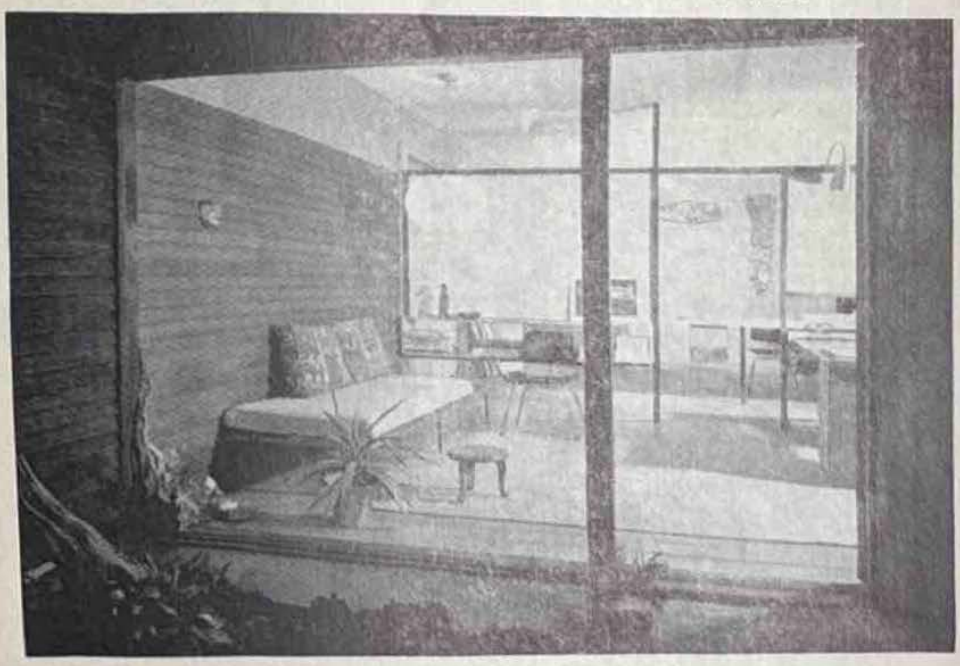
FIRST NEW MAJOR OFFICE BUILDING in downtown Seattle, 21-story structure costing more than $10 million, is scheduled for occupancy by mid-1959. Main entrance will feature landscaped plaza. Building above lobby level will be enclosed with tinted gray glass set in vertical aluminum members. Each floor will be spanned by 70-ft. prestressed concrete joints, eliminating interior supporting columns and allowing complete flexibility of layout. Architects: Jones & Bindon; consultants: Skidmore, Owings & Merrill.

PRIMATE HOUSE AND MONKEY ISLAND part of five-year project to be completed by mid-1959 at Portland Zoological Gardens, will be unique in its interrelationship of interior and exterior displays. Public will view exhibits through reflection-free glass during cooler months and will see monkeys in their outdoor cages whenever weather permits. Island, surrounded by 20 ft. of water and reached by tunnel from basement, will feature gayly painted apparatus in fantastic forms. Architects: Lawrence, Tucker & Wallmann.

NINE-YEAR PROJECT OF NEWPORT HARBOR UNION HIGH SCHOOL in Costa Mesa, Calif., is sited on 70 acres, 20 of which have been set aside for agricultural programs. Administration building will be suspended off ground to allow unobstructed view of entire plant, of lift-slab construction for most part. Eating shelter is planned as dome 100 ft. in diameter, with standard rolled steel beams and poured gypsum roof over asbestos formboard. Architects: Lind, Pleger, Blurock & Hougan.

Where architects hang their hats

SETH M. FULCHER
Seattle, Washington



FLIMSY POULTRY STORE becomes pleasant office for architect who is assisted in practice by his art-major wife turned draftsman. Cedar wall hides unattractive backyard outside, covers old plaster inside.

Vern Green photos except below

WINDOW INTERCEPTS beveled siding which carries visitor's attention inside.

WITH a minimum budget and no structural changes, this architectural office was remodeled from a small poultry store built more than 20 years ago. The face lifting was accomplished primarily by relocating the entrance through a small scale side court backed by a screen fence and wall detail of ¼x4-in. beveled cedar siding.

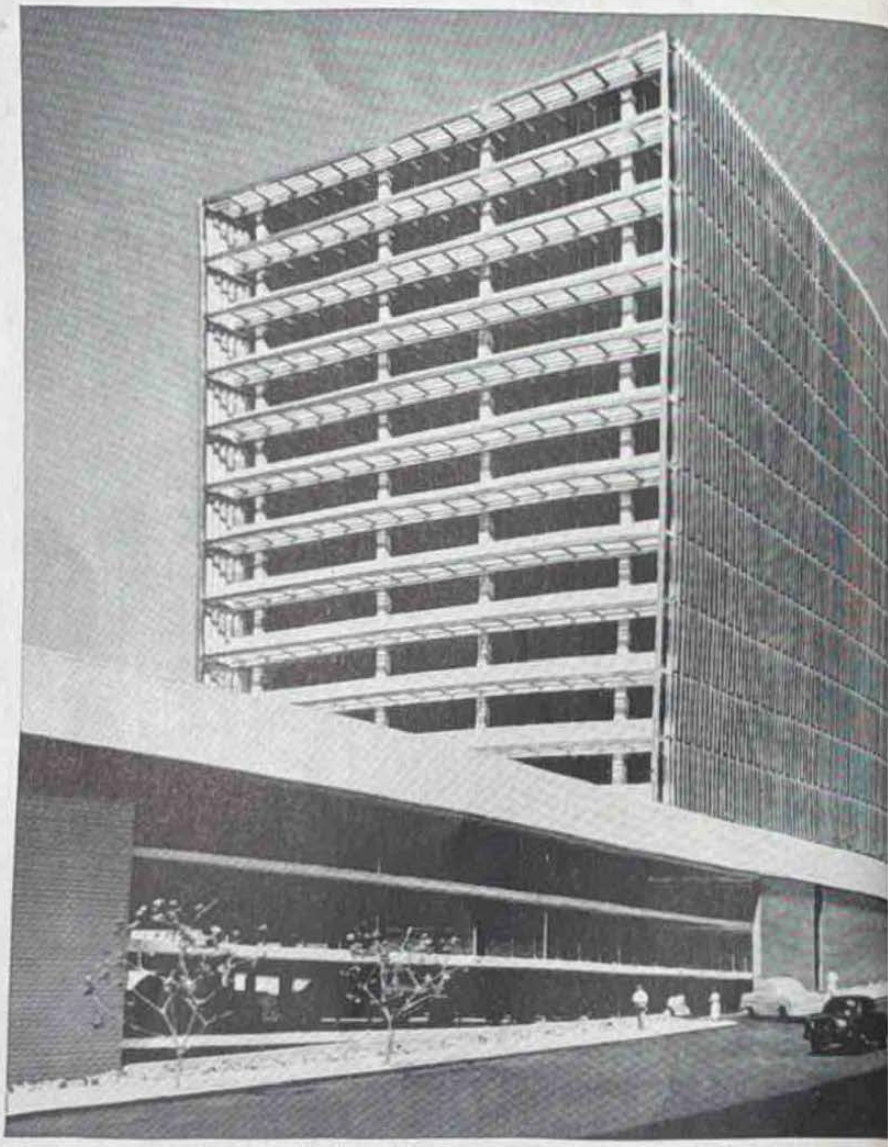
Shoji screens and horizontal eyebrow louvers at the existing front windows provide the required privacy and sun control on the south exposure. Clinker brick garden wall and contiguous planter boxes furnish masonry contrast to the slate gray stained siding. Mahonia and barberry form a planting buffer at the street.

Included in the 625 sq. ft. of area is a small waiting and drafting room, with space for a future conference and samples area.

KAWNEER...

A single source for a comple

CUSTOM FABRICATED



ANALYSIS AND ENGINEERING—The Kawneer engineering team considers every curtain wall application as unique. Each is subjected to a searching analysis. Such points as (1) the curtain wall's effect on load bearing elements, (2) adequate accomodation for wall movement due to wind load and temperature change, (3) weathering features and (4) integration of all components within the wall system are the subjects of careful study. The result of this careful analysis is a curtain wall design that provides the highest standards of performance while retaining the most expressive appearance of the architect's design.

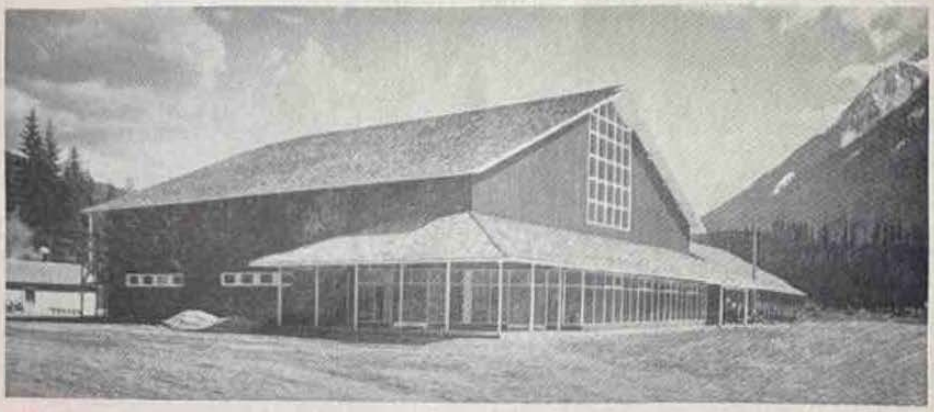
PREFABRICATED by San Francisco contractor, cabin is available for slightly more than $1,000 f.o.b.

A do-it-yourself cabin

PREFAB LEISURE HOUSE: Using a hammer, wrench and ladder, two persons can erect this all-purpose cabin in three to four days. It is suitable for metropolitan and suburban living, the mountains or the seaside; it can serve as a playhouse, garden shelter, pool cabana, ski hut, resort cabin and even a motel or rental unit.

The basic structure makes a shelter 18 ft. wide and 20 ft. from rear wall to front porch, or by the addition of two 4-ft. units, a 30x18-ft. area. Beams are all precut and can be bolted together with bolted holes already drilled into the beams. Battens are included.

Engineered to resist extreme winds and heavy snow loads, the house is built around a series of 11 triangular trusses of 2x6 Oregon fir, which eliminate the problems of stud walls and cross bracing. Exterior panels of marine plywood are secured by heavy 2x3 pine battens; plywood ¾-in. flooring and 2x6 porch flooring are applied to 2x6 joists. Campbell & Wong, architects.



PROJECT ROUNDUP—

For civic-minded townsfolk

COMMUNITY HALL, DARRINGTON, WASH.: In planning a building to house a gymnasium, lounge and kitchen, the architect had to keep utmost in mind that it would be constructed by untrained labor.

The hall is of frame construction, with exterior siding of rough board and batten, 1x10 and 1x3. Covered with handsplit cedar shakes ¾ to 1¼ in. thick, the roof deck is made of 3x6 t&g on trusses at 17 ft., 4 in. o.c., the span being 110 ft. The gymnasium floor is 60x103 ft. and the balcony will seat nearly 1,000 spectators. Possible addition of a pool was provided for in the design. Harold W. Hall, architect.

HALL BUILT BY VOLUNTEER LABOR serves community nestled in lower foothills of Cascade Mountains.

Another do-it-yourself cabin

WEEKEND LOG CABIN: Although this "contemporary" was specifically planned for a sloping site near Lake Tahoe, it would feel right at home in the Pacific Northwest too. It has a construction cost of slightly more than $8 per square foot of living area and includes 1,000 sq. ft. of interior space and 240 sq. ft. of deck area.

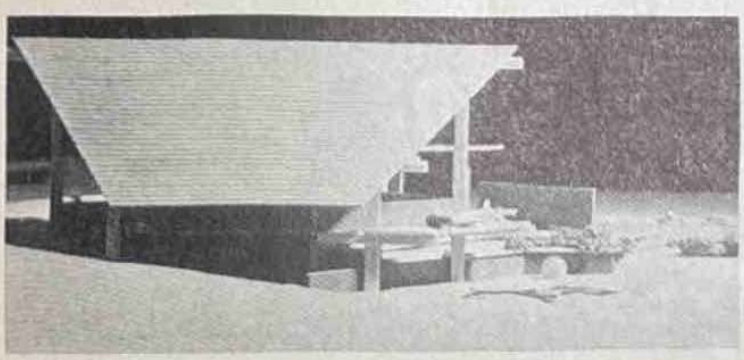
In summer months the living area can be opened to the deck to make one large room Kitchen, bath and bedroom are on the main floor, with additional sleeping quarters in the attic. The main floor is raised above the ground level to provide space for a two-car garage or carport as well as storage and workshop space under the cabin itself.

Built on pier type concrete foundations, the basic structure is of five A-frames formed with Douglas fir logs cut from trees adjacent to the site. They are simply strapped to the founnations at the bottom and are notched into and strapped to each other at the roof peak. The same heavy timbers are used to tie the A-frames together at the floor line and the floor joists also serve to provide rigidity to the frames, set 10 ft. o.c., with purlins across to receive t&g sheathing.

Exterior walls (actually the roof) are shingled, although shakes could be used just as easily, and the flat portions are finished with built-up material and asbestos cap sheet. All interior partitions are frame, windows are wood and the log cabin character is retained by use of a ladder instead of stairs. The kitchen is separated from the main living areas by a counter and hanging cabinets of wood. One of two sinks in the kitchen is deep for small laundry washings and additional space for such facilities is found under the house adjacent to the garage.

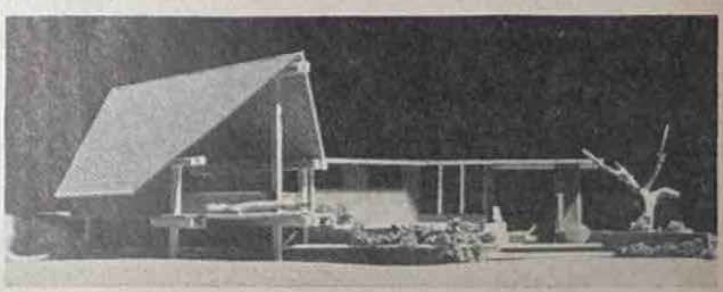
Sleeping quarters in the attic area open out onto a flat section of roof which can be used for sun bathing or outdoor loafing. Windows also offer access to the flat deck for wintertime removal of snow. Central heating is provided by a butane floor furnace located between the kitchen and bath glamor of an open fire. Harold Onstad, architect.

ENTRANCE IS VIA RAMP and all floor levels are above average snow line. Deck faces paved court used for games.

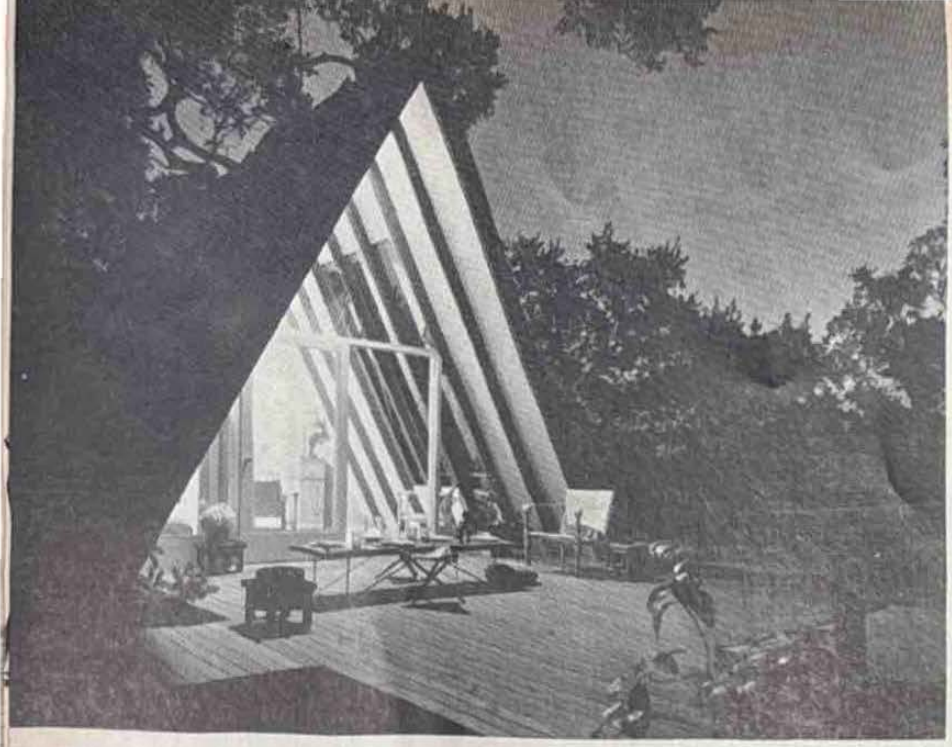


RECREATION up and down the coast

For a change of pace in living



BEACH HOUSE, NESCOWIN, ORE.: Conceived as a retreat from the daily chores of city life, the structure was designed to be as free as possible from housekeeping problems; to be imaginative, both in form and in material; and to take advantage of a spectacular site of mountains and pounding surf.



The young family includes three small boys, whose bunk room sleeps six when needed; the guest loft sleeps four. Kitchen drudgery is lessened by the closeness of a large family type dining table and a unit which encloses all necessary appliances.

Construction is of heavy rough-sawn posts and beams, covered with 3-in. t&g hemlock decking which is used on the floor as well as the roof. The sloping portion of the roof is treated with shakes; the flat section is built up. Bleached cedar boards on the exterior have been left to weather. Donald Blair, architect.

UNUSUAL DESIGN DICTATED by architect's desire to give client complete change from typical city residence.

Morley Baer photos

BASIC LIGHTING SYSTEM is installed in 2x2-ft. modular grid suspended ceiling. Fixtures are insertable at any point by lifting out acoustical panels. Underfloor ducts every 6 ft. accommodate power, telephone, communication, signal and future TV circuits on all floors.

Tomorrow's design today

Modesto Irrigation District Office Building
Modesto, California

THE PROGRAM called for a highly flexible, special purpose public building in a hot agricultural community to which the owner supplies all electric power and both irrigation and domestic water. The client plans to occupy the structure for 20 years by utilizing progressively advanced equipment and operational techniques and then for 30 more by physical expansion; thus long-range amortization criteria had to be applied to problems of internal space rearrangement and of maintenance characteristics, both inside and out.

Provision also had to be made for customer and staff parking, public access for drive-in cashiers, routine business and multipurpose use of an assembly hall at any time. Finally, the architect was instructed to design a building which would not make uncomfortable the farmer-customer who comes to town in work clothes.

The result has been a three-story and basement building of reinforced concrete, planned for a fourth floor addition by means of movable metal partitions and a coordinated mechanical-electrical floor and ceiling system at each level, with a single vertical utility shaft at the center. The structure is virtually free from any permanent interior lateral walls. Its exposed monolithic columns are in contrast with spandrels and walls of quartz crystals in 2-in. thick precast panels used as forms and poured solid.

OUTLINE SPECIFICATIONS

Structure: Reinforced concrete, 3-story and basement, 122x82 ft.

Exterior Walls: 2-in. precast concrete with gray and white quartz facing, aluminum trim.

Roof: Flat, vermiculite insulation over membrane with 5-ply composition.

Windows: All-vent aluminum sash, precast white concrete sills, adjustable aluminum sun control louvers.

Floors: Concrete slab covered with terrazzo in public areas; vinyl, rubber, ceramic and cork tile elsewhere except carpeting in directors' room.

Interior Walls: Plaster on metal lath over furring, with marble, Flexwood, Novoply, perforated metal acoustical panels in public areas; movable prefabricated metal partitions (Weber Showcase & Fixture Co.).

Ceilings: Suspended modular acoustical, translucent plastic luminous, plaster.

Heating: Gas fired heat pump, central heating and air conditioning system based on reverse cycle operation of refrigeration compressor.

Total Area: 44,050 sq. ft.

Total Cost: $819,675.

Cost per Square Foot: $18.60.

Date of Completion: August 1956.

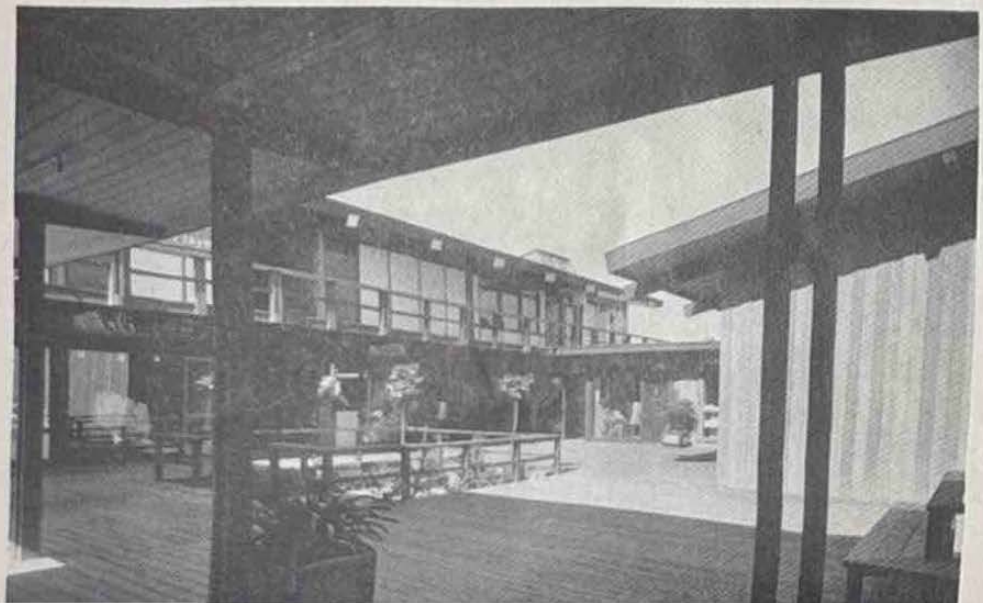
COVERED WALKWAYS which cluster around courtyards form wind screen for terrace cafe outside restaurant.

An eloquent architectural understatement

THIS SHOPPING CENTER has a unanimity and graceful simplicity seldom achieved in such a project; furthermore, the overall operation has proved to be unusually financially successful. Here is the architect's thinking behind the center:

"The Boardwalk was designed to meet the rapidly growing retail needs of the south end of the Tiburon Peninsula and the city of Belvedere. A thorough economic study indicated that about 44,000 sq. ft. of space, together with the existing and potential shopping area in the town of Tiburon, would handle neighborhood requirements of the anticipated population.

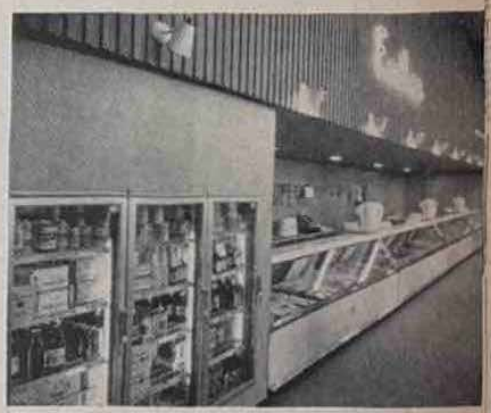


"The site, a flat triangular piece of four acres, was ideally located on the Tiburon Highway, with excellent access to Belvedere and immediately adjacent to the balance of the commercially zoned land in Tiburon. Access roads to the parking area are so located that they can tie in to future expansion across Beach Road and the shops in Tiburon. Geographically the site was developed with a somewhat residential character to act as a buffer and green strip between the housing areas of Belvedere and industrially zoned railroad property on the east side of Tiburon Highway.

"The site in the old days was a deep water lagoon which, over the years, silted up and has been recently filled. As a consequence foundation problems were difficult. The cost of piling in the deep silt was considered prohibitive; thus a gridiron of concrete pad footings, spaced 20x40 ft., was placed upon the crust of the new fill, with precast concrete cantilevered foundation girders forming the support for a wood deck 3½ ft. above existing grade. This height allowed for initial settlement and since each foundation girder is shimmed up about 8 in. from its footing and held in place by stirrups, the expected differential settlement is extremely easy to handle.

"The sloping parking lot is 18 in. below the center proper and is readily accessible at strategic points by cantilevered wood steps. This elevation increases the identity of the stores and minimizes the sea of cars in front. At the service side of all shops, the existing grade was maintained, thereby providing a loading platform at normal height.

"All of the shops are tied together



REDWOOD EXTERIOR SIDING reflects general residential character of area. Roof structure is of 2x6 t&g fir on wood purlins; boardwalk is of edge-grained vertical fir.

AWARD OF HIGHEST HONOR goes to Boardwalk in Northern California AIA competition. Architect gives much credit to owner, David W. Allen of Belvedere-Tiburon Development Co., "as it was largely due to his imagination and confidence in the area that the project came into being." Juror Pietro Belluschi's comment: "I think the jury was delighted to see the professional hand of architects in this particular field of buildings. We hope that this specific project may serve, in a sense, as an example of what can be done to make shopping centers an attractive addition to any community."

by covered walkways and those clustered around the courtyards form a wind screen which affords a pleasant terrace cafe outside of the restaurant, used on sunny days even during the winter.

"The structural frame supported on the cantilevered foundation beams consists of steel bents 20 ft. on centers and spanning either 30, 40 or 90 ft. For flexibility, it was decided that the frame should be rigid in itself to allow complete freedom of planning and minimize the difficulties inherent in future tenant changes. The exterior deck or boardwalk from which the center gets its name is of edge-grained vetrical fir with ¼-in. cracks between boards, simplifying the drainage problems. Narrow sidewalks and approaches to the steps on the parking lot level and the courtyards are paved with exposed aggregate concrete.

"A uniform pattern of fluorescent light was provided throughout the store areas, with a continuous strip of incandescent downlights over all show windows. The canopies in which these downlights are mounted cantilever out through the exterior wall and act as light coves to illuminate the covered walkways. This has proven to be adequate at night, but does not conflict with the desired intensity within the show windows themselves.

"Piped services are provided in a continuous strip at the rear of all stores, with gas, power, water and waste suspended from the cantilevered foundation beams. Again, the structural system offers utmost simplicity and flexibility in the arrangement of any particular plumbing requirements.

"One of the earliest considerations in design was the careful control of all tenant signs. The choice of eight related colors was given to each tenant, but the location and size of the sign was limited by the panels above

the show windows of the store fronts. Hanging signs perpendicular to the fronts were provided in a uniform size for identification along the boardwalk. Any lettering on glass was prohibited. Bulletin boards at strategic locations seem to be adequate and a source of considerable interest to shoppers, even more so than signs which might be pasted upon the inside of windows.

"In keeping with the residential character, a great deal of attention was paid to landscaping. Trees for shade or windbreaks have been planted throughout the parking lot, along the street and within the courts. While most low planting is tough ground cover to withstand public traffic, there are areas where colorful flowers and shrubs have been used which can be changed to follow the seasons.

"Prior to the initial planning of the Boardwalk, it was contemplated that about two-thirds of the present retail area would be built. However, during construction there was so much interest in the project that it seemed logical to complete the building as designed, even though some areas might not develop their full retail expectancy for a number of years. At the end of 10 months, every store is paying above the minimum rental and the gross volume of business is 25% above the original estimate."

OUTLINE SPECIFICATIONS

Structure: Steel bents 20 ft. o.c. on concrete pad footings on grade and precast concrete cantilevered foundation beams. One story, some areas with mezzanines for selling and storage; 4,000 sq. ft. of two stories.

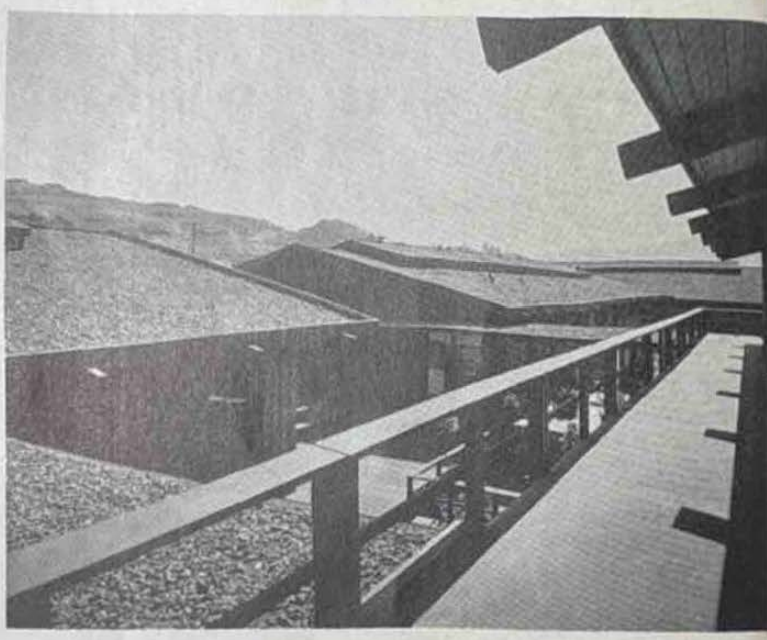
Exterior Walls: Resawn redwood siding with fir trim.

Roof: 2x6 t&g fir on wood purlins covered with tar and gravel.

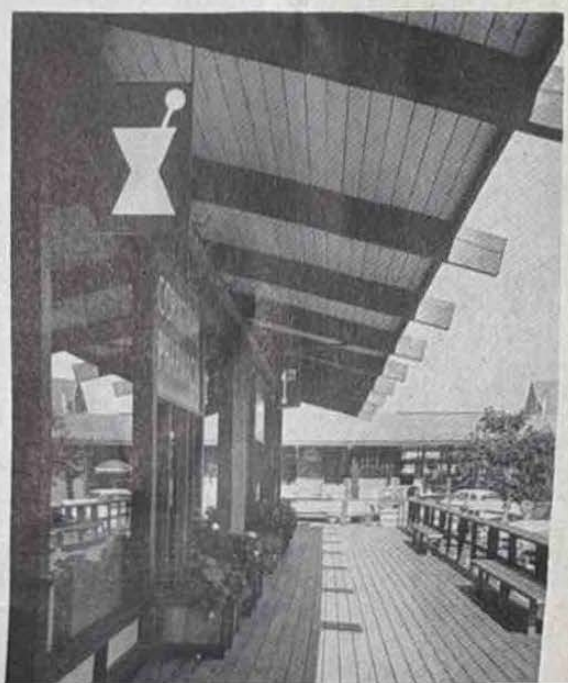
Doors: Solid core pine, exterior; hollow core, interior.

Floors: Vinyl or asphalt tile over wood.

Interior Finish: Redwood, plywood, plasterboard with fir trim on drywall partitions.

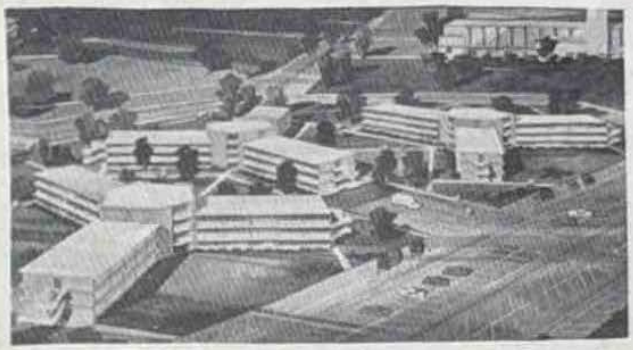


Ceilings: Exposed wood decking except for few areas such as bank and underside of mezzanines where acoustical treatment is used.

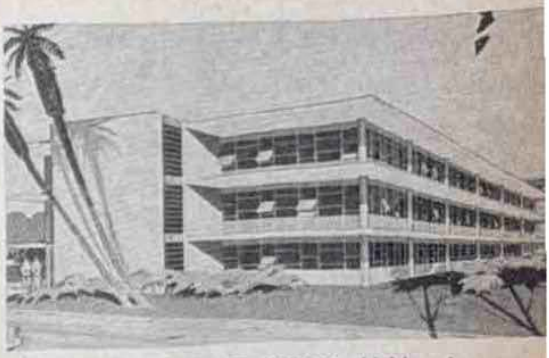


Heating: Gas fired unit heaters or independent forced warm air systems.

Total Area: 45,450 sq. ft.



Date of Completion: March 1956.



CONTINUITY AND CLEAN LINES of overall project are clearly evident in these photos. Cost data are not of much value since general contract included complete finish in many units, including bank, and also included work not part of center which was not segregated.

DORMITORIES ARE now underway for Loyola University, Los Angeles. Lift-slab has been specified for fast, economical and fireproof construction. Architects: Albert C. Martin & Associates.

LIFT-SLAB'S CANTILEVER DESIGN shields windows with protective overhang in Administration Building for Pasadena city schools. Architects: Neptune & Thomas.

LIFT-SLAB--a progress report by first firm to make this method available on West Coast

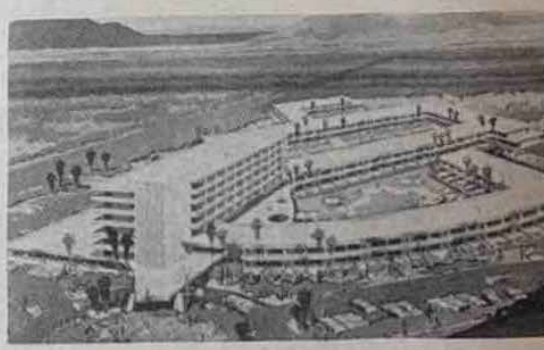
LIFT-SLAB CONSTRUCTION is coming of age. Structures totaling more than 16 million square feet were lifted as of December 1956 by licensees of United States Lift Slab Corp. and International Lift Slab Corp. as compared with four million square feet lifted as of January 1955.

Vagtborg Lift Slab Corp., first to make the method available on the West Coast, reports that the increasingly tight supply of steel in 1956 served to focus attention on this type of construction, along with the development of new and improved techniques.

For instance, last year Vagtborg demonstrated the practicability of lifting on concrete columns, using a new, wide-head jack, adjustable to round or square columns. Fitted to 20-in. square precast concrete columns, the new jacks lifted 67 tons each during construction of a parking structure in Oakland. This is believed to be the heaviest single jack loading yet put on a lift-slab column, although it did not extend the jacks to full capacity, according to company officials.

Other lifts on concrete columns included the multi-million dollar Ramo-Wooldridge project in Los Angeles and the Aerophysics Corp., Goleda, which utilized round concrete columns fabricated by a unique spinning process. Significantly, the very first lift-slab project in Mexico—in 1956—also used concrete columns.

Last year also marked increased application of prestressed concrete slabs. Particularly noteworthy was the manner in which William Simpson Co. used both prestressed and mild steel in the same slab during construction of North American Aviation's new headquarters in El Segundo, Calif. Conventional steel reinforcement was used in each slab's 30-ft. span, while the 35-ft. span was post-tensioned with wrapped steel cables supplied by Prescon Corp.; Bowen & Bowen were engineering consultants.



Another North American Aviation project, the Autonetics Division Building in Downey, Calif., earned still another lift-slab distinction in 1956 with 140,000 sq. ft. poured and lifted within one month. General contractor for the record-breaking performance was Diversified Builders, Inc., a division of Macco Corp., with Vagtborg the lifting subcontractor.

Quality, as well as speed, was improved in 1956. Typical was the elimination of a previous tendency toward a deflection in the center of each slab. A carefully calculated "crown" is now poured in the center, resulting in a level upper surface despite any slight deflection of the slab.

Definite improvements in corrugated paper boxes used in coffered lift-slab were achieved. Extensive research produced new methods of cross-ply reinforcement and waterproofing which have virtually eliminated box failures. Today designers can count on a perfect waffle-patterned ceiling, along with the proved struc-

RECORD NUMBER of slabs will be lifted in office-parking structure planned for Las Vegas this year. Architect: Kenneth N. Lind, AIA.

ONE OF LAST YEAR'S most spectacular lift-slab projects—Valley Ho Hotel, Scottsdale, Ariz. Architects-engineers: Edward L. Varney & Associates.

the show windows of the store fronts. Hanging signs perpendicular to the fronts were provided in a uniform size for identification along the boardwalk. Any lettering on glass was prohibited. Bulletin boards at strategic locations seem to be adequate and a source of considerable interest to shoppers, even more so than signs which might be pasted upon the inside of windows.

"In keeping with the residential character, a great deal of attention was paid to landscaping. Trees for shade or windbreaks have been planted throughout the parking lot, along the street and within the courts. While most low planting is tough ground cover to withstand public traffic, there are areas where colorful flowers and shrubs have been used which can be changed to follow the seasons.

"Prior to the initial planning of the Boardwalk, it was contemplated that about two-thirds of the present retail area would be built. However, during construction there was so much interest in the project that it seemed logical to complete the building as designed, even though some areas might not develop their full retail expectancy for a number of years. At the end of 10 months, every store is paying above the minimum rental and the gross volume of business is 25% above the original estimate."

tural and acoustical benefits of coffered lift-slab construction.

Improved techniques were accompanied by a widening application of lift-slab in 1956. Near the year-end, for example, United States Lift Slab Corp.'s projects under contract included schools, dormitories, hospitals, apartments, residences, hotels, motels, warehouses, office buildings, garages, parking structures and miscellaneous government buildings.

Lift-slab also extended its geographical frontiers in 1956. Projects were reported from practically every state in the union and licensees of the Youtz-Slick method were active in Australia, Hawaii, Mexico, Cuba, Iceland and Puerto Rico. To Canada went the honor of lifting the first eight-story building.

An increase was noted too, in the number of architects and engineers planning lift-slab projects. Today California leads the world in lift-slab designers, with Texas, Canada and Ohio following in order.

New multi-stage techniques will probably mean taller buildings in 1957. An 11-story building has been planned for Las Vegas and it is reported that lift-slab is being considered for a 22-story apartment building to be erected on famed Sunset Strip in Los Angeles.

Other developments to look for this year include the use of lift-slab in raising bridges above flood levels, the construction of double-decker, lift-slab highways and further application of the tilting of lift-slabs in building sports stadiums.

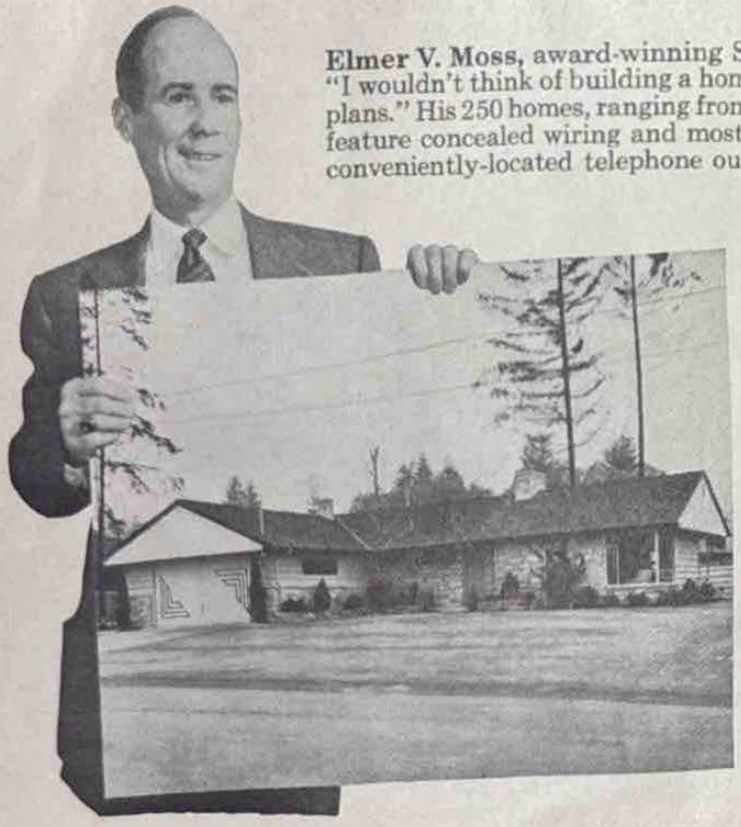
Ed. note: Lift-slab made its debut in the Northwest in the summer of 1953 with the building of the Roosevelt Grade School in Missoula, Mont., reported in Construction News Bulletin, forerunner of PA&B, for September 19, 1953.

IN RECOGNITION of firm's designing more than one million square feet of lift-slab construction, J. Edward Martin (l.), chief of engineering, is congratulated by Robert C. Field, vice president of Southern California Chapter, AIA. Special award was made to Albert C. Martin & Associates at recent luncheon by C. Henning Vagtborg (r.), president of Vagtborg Lift Slab Corp.

Lift-slab makes gains in school projects

The growing importance of lift-slab in school construction throughout the country is dramatically told in photographs and charts in a 24-page booklet issued by a licensor, United States Lift Slab Corp.

In 28 states, Canada and Cuba, 117 educational structures have been completed using the Youtz-Slick method. These projects range from one to five stories and from 4,633 sq. ft. to 365,723 sq. ft., the total being 4,457,951 sq. ft. as of July 1, 1956.



California, with 16, leads the West in the number of school jobs. Montana has two; Oregon, one; and Washington, one.

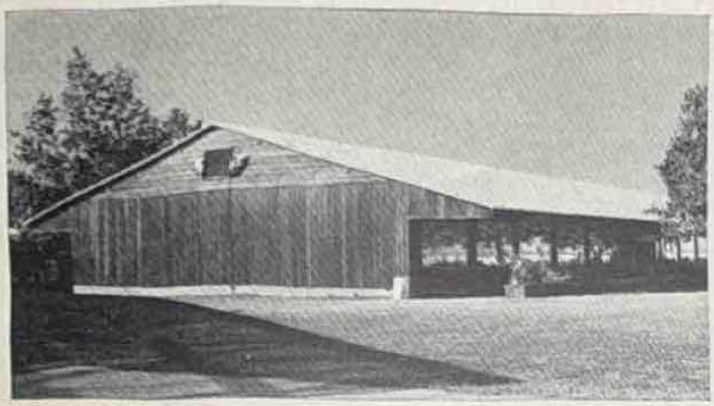
Economies of time and money have been found to exist in not only the smallest utility type structures, but also in the larger and more ornate ones, the booklet points out.

The chart below cites the number of architects and engineers who have designed lift-slab projects of all types.

State	Architects	Engineers
Calif.	37	26
Idaho	1	1
Mont.	1	
Oregon	3	3
Wash.	6	3

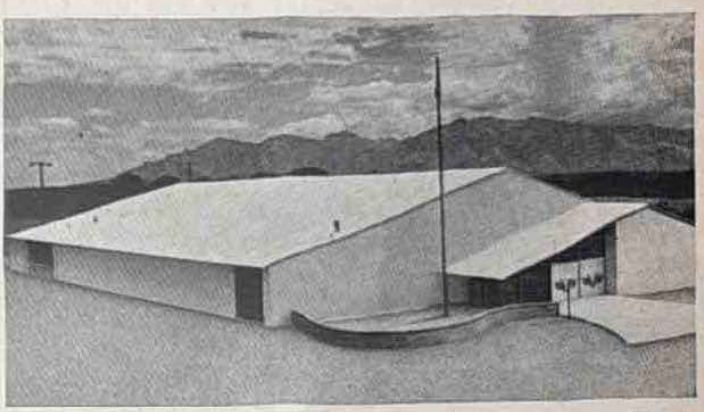
Today's homebuyers are sold on complete telephone planning

Elmer V. Moss, award-winning Seattle builder, says "I wouldn't think of building a home without telephone plans." His 250 homes, ranging from $13,250 to $30,000, feature concealed wiring and most of them have three conveniently-located telephone outlets.



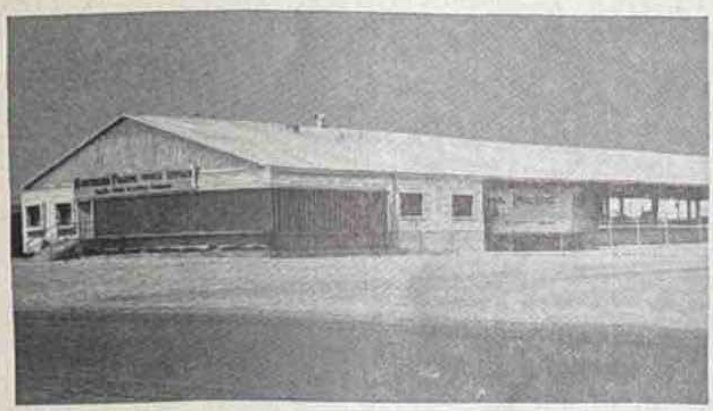
Concealed wiring, built-in outlets, color telephones, kitchen and bedroom phones — these are features your buyers look for! Leading architects and builders include some or all of these in every new home. They know how much telephone planning adds to the value of a home . . . that it makes for better-built homes and satisfied buyers.

Pacific Telephone



We'll be glad to help you plan built-in telephone facilities. Just call our business office and ask for our free Architects & Builders Service.

It pays to include Telephone Planning in every home you build!



check these four good reasons for building with steel

ECONOMY—Real dollar savings are possible when you build with steel. Rigid frame construction with post-free interiors, gives you almost 100% use of the enclosed area. Speed of construction puts the building to use faster . . . and there's no costly maintenance problem with steel. That's why the District Fair Committee, at Turlock, California, specified steel for the functional, economical fair building shown above.

VERSATILITY—The building above is an example of the flexibility of use possible with steel structures. This is a combination gymnasium, auditorium and classroom in Tucson, Arizona. Steel buildings are being constructed for *every* purpose in all kinds of businesses, industries and institutions. And remember, the use of steel construction allows for the easiest and most economical expansion of your building when needed.

STABILITY—The strength and rigidity of steel makes it the ideal material to use in the construction of industrial plants, warehouses and shipping sheds. It combines structural strength with freedom of layout and movement in your building. Rigid frame construction provides a stable structure which withstands battering winds, weather and accidental knocks. That's why steel was selected for the loading depot, above, under lease by Pacific Motor Trucking Company in Fresno.

BEAUTY—The attractive looking office building above, located in Bakersfield, is just one example of the many smart architectural designs possible with steel. NOTE: The architect-designed buildings shown on this page were constructed from Butler Manufacturing Co. pre-engineered structural systems using United States Steel Roofing, Siding, Plates and Sheets. When *you* build, specify the *one* material that gives you *all* the important building advantages...steel...United States Steel.

For offices, plants, theatres, farms, churches, schools . . .

Give your buildings the advantage of steel

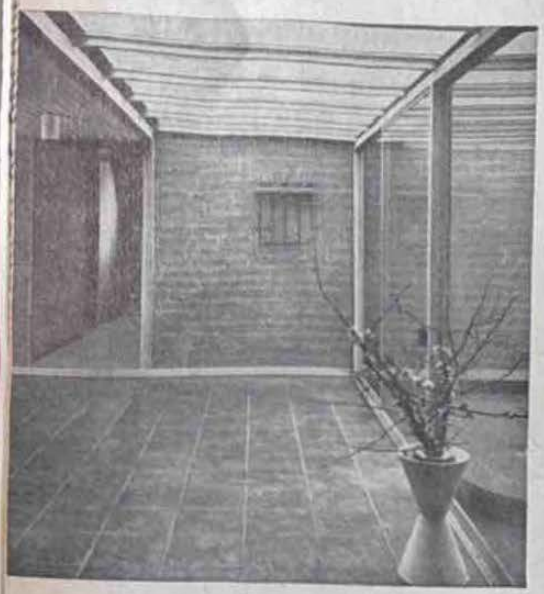
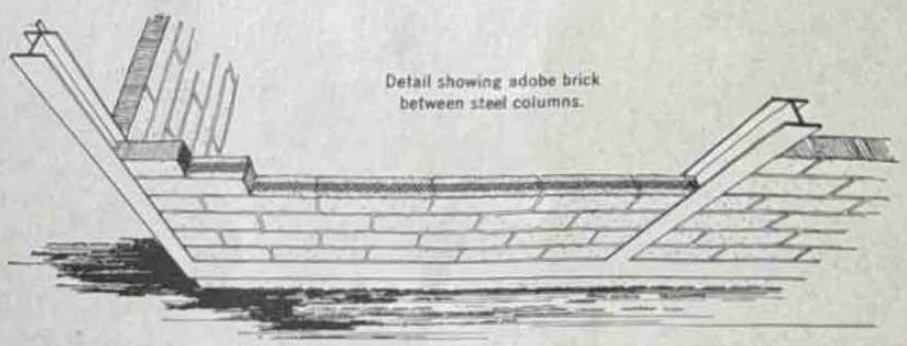
United States Steel Corporation • Columbia-Geneva Steel Division
120 Montgomery Street, San Francisco 6

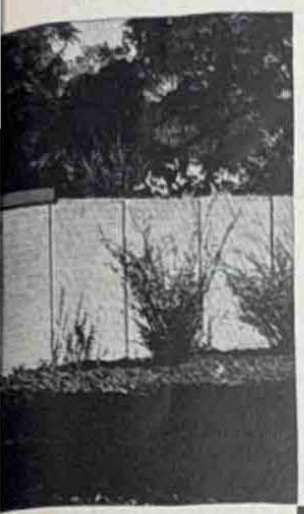


UNITED STATES STEEL



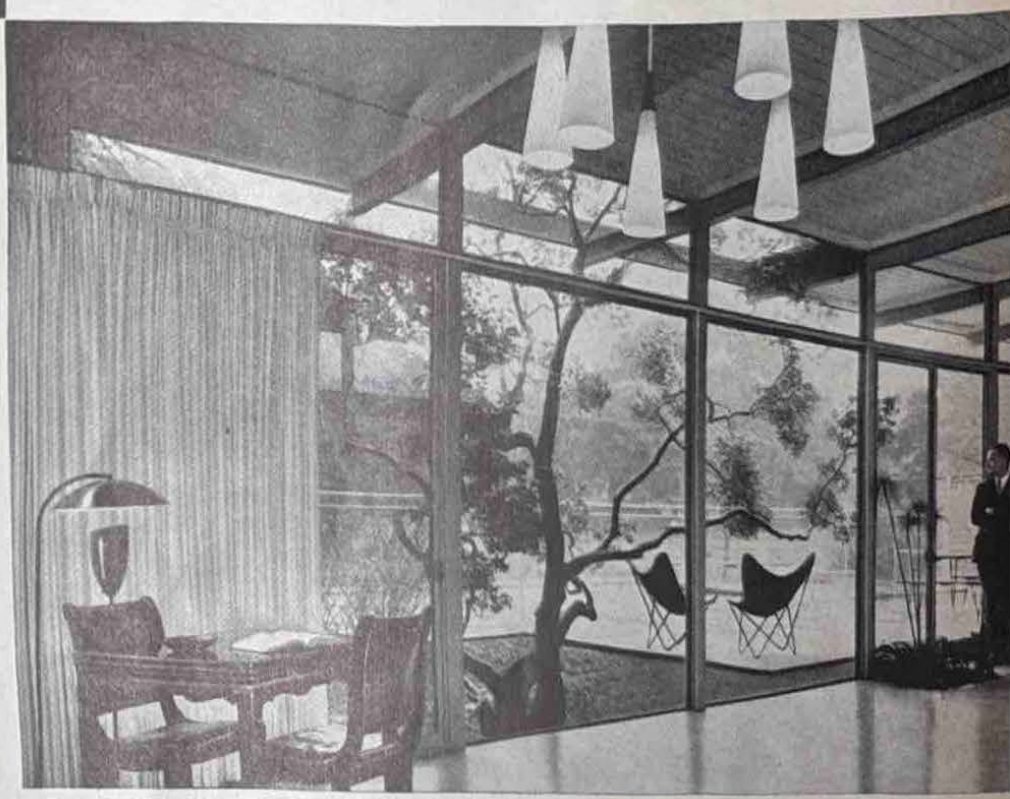
This Atherton, California, home combines the native qualities of both steel and adobe brick—the strength and versatility of steel and the insulating ability of adobe. The owner has a home that is attractive, permanent, fire and termite resistive, and requires the barest minimum of upkeep. Construction cost, in 1955, was $11.34 per square foot of living area. The home is arranged in a bi-nuclear design with living and sleeping quarters separated by a glass entry.

The speed and ease of steel construction was an important plus-factor since the home was built during the heavy winter rains of 1955-56. Steel framing members were welded together at the plant and delivered to the site where San Jose Steel Co., Inc., erected the complete steel frame in just two days. The roof was placed during the third day and interior work continued uninterrupted by outside conditions.



The adobe bricks, 3½" x 4" x 16", were fitted directly into the H-section steel columns. Expanded metal lath was used on every other course of brick to give greater rigidity to the wall. Since the adobe bricks formed non-bearing walls, only a single rather than the usual double course of brick was required. United States Steel vertical columns used were 4"H13#; horizontal beams were 6"WF15.5#. The module was 6 feet, 9 inches.

ARCHITECTS & ENGINEERS: Write for your free copy of *"New Horizons for Home Building...With Steel."* This new booklet contains case histories of architect-designed steel homes and information on building codes, specification data and advice on the maintenance and painting of steel. Write: Architects & Engineers Service, Room 1260, United States Steel Corporation, Columbia-Geneva Steel Division, 120 Montgomery Street, San Francisco 6.



News of another steel home from United States Steel

Teaching old materials new tricks...with steel

The use of adobe brick, one of the oldest home building materials, and steel, one of the newest, combine in this house to achieve a new level of originality in residential architecture.

This unique combination of adobe and steel resulted in both artistic and practical advantages. Unrestricted by conventional building methods, this 3,474 square-foot home is designed for indoor-outdoor integration and maximum design flexibility.

The United States Steel shapes used in this home are sold by steel jobbers in your locality.
Designer: Don Knorr, Knorr Associates, San Francisco
Engineer: John Brown, San Francisco
Builder: Whelan Construction Co., Redwood City

Constructed as a speculative home, steel gave the contractor the rare opportunity of building the house so that it was adaptable to the demands of the buyer. Steel framing eliminates the need for load-bearing walls, which allows the new owner to adapt the interior to his individual needs. Walls in steel-frame homes can be free-standing storage cabinets or even drapes can be used to divide interior space.

Western homes of the future are now building with steel... **UNITED STATES STEEL**

Materials – Products – Tools

and the latest literature

SKYLIGHT: Believed to be the first major development in skylighting since the introduction of Skydomes by Wasco in 1950, a material has been developed to provide controlled daylighting sought by architects and engineers. To be used in Wascolite Reflectadomes, it reduces glare and the variation in light received at different hours of the day as well as objectionable heat.—Wasco Products, Inc.

(Item No. 1)

JOIST HANGER: Cutting installation time as much as 50% is a feature of the Teco-Cal joist hanger formed from heavy gauge galvanized sheet metal, coming complete with special 1½ in. nails for mounting. The hangar is said to eliminate shrinkage problems encountered with most conventional types and provide a stronger connection. Only two sizes are required to handle all 2-in. dressed lumber from 2x6 to 2x14. Flush joints, top or bottom, are easily achieved without mortising.—Timber Engineering Co.

(Item No. 2)

SHOWER SEAT: Here's an answer to that problem of washing and drying feet and legs without standing in an awkward position—a stainless steel shower seat which will support any human weight. The Saf-T-Showr folds flush against the wall when not in use and measures 14⅜x13¼ in. It fits into a 4⅜-in. recess between studs, attaches with four lag screws and, when folded flush, provides a convenient ring for washcloth or towel. The recessed portion of the seat is watertight when closed and can be used to house soap, shampoo, etc.—Safety Seat Division, House of Hospitality.

(Item No. 3)

SPACE DIVIDERS: A flexible group of go-together hardwood modules can be used as a space divider or as furniture. Any or all of the 15 basic Wonderwall units can be grouped in a variety of arrangements. Included are open-shelf, closed-shelf, pegboard-backed wardrobe and drawer type units with nine of the units having two-sided utility.—I-XL Furniture Co.

(Item No. 4)

BATHTUB: A porcelain on steel bathtub with end outlet permits installation of trap and waste line above the floor. Called the Huntington, it offers economy in installation, particularly in slab type construction, by eliminating the necessity of runing waste lines under the slab. Tub was developed by Ingersoll-Humphryes in conjunction with the research and development committee of the NAHB. — Ingersoll-Humphryes Division, Borg-Warner Corp.

(Item No. 5)

JOINT COMPOUND: For curtain wall construction and on surfaces where adhesion is difficult, A. C. Horn has developed an expansion joint material and caulking compound that elongates 325% through the normal temperature range of 70 deg. to 80 deg. Called Hornflex, it maintains a tight seal of joints by squeezing and stretching with any movement. The company says it sets to touch in 12 hours.—A. C. Horn Co., Inc.

(Item No. 6)

WALL TILE: To provide an interesting note for tile walls in many locations—schools, libraries, auditoriums, home nurseries, recreation rooms, etc.—Mosaic has produced a new series of colorful glazed ceramic inserts. These multicolor inserts, depicting events in early American history, come in two sizes: 6x6x⅜ in. and 9x6x½ in.—The Mosaic Tile Co.

(Item No. 7)

Latest Handbooks, Manuals and Literature

Yours for the Asking

STRUCTURAL CLAY PRODUCTS: "The Pacific Northwest Brick and Tile Index" has been published to aid the designer in using and specifying locally manufactured structural clay products from selection of a unit type to the application of a specific unit on the job. But the loose-leaf manual will be used outside the area too for it contains general specifications for masonry construction and shows 10 typical wall sections, with descriptions and technical data for each.—Pacific Northwest Brick and Tile Association.

(Item No. 8)

SCHOOL DESIGN: In December 1955 the Douglas Fir Plywood Association called together six of the country's foremost architects for a design conference and handed them this assignment: to meet the challenge for tomorrow's schools with provocative, new ideas in building and equipment.

The results of each designer's work is now available as a separate sheet and conveniently assembled in a 9x11¾-in. folder. Architects represented are Robert B. Price of Tacoma (stressed skin vaulted roof), John Lyon Reid of San Francisco (folded plate roof), Charles R. Colbert of College Station, Texas (an educational oasis), William W. Caudill of Bryan, Texas (a classroom evolution), John Weems of Aiken, S. C. (a demountable classroom), and Paul Rudolf of Cambridge, Mass. (stressed skin acousti-temp roof).—Douglas Fir Plywood Association.

(Item No. 9)

METAL LETTERS: "Architectural Metal Letters" is a profusely illustrated 20-page booklet giving detailed specifications, showing methods of installation and describing all available finishes for Bayer's basic alphabets and script styles. Examples of specially cast, highly stylized trademark names, plaques, crests and emblems are shown.—A. J. Bayer Co.

(Item No. 10)

KITCHEN LAYOUTS: For architects and school planners concerned with the layout of kitchens using all-paper service, the Paper Cup and Container Institute has prepared a series of guide sketches. Plans are for kitchens serving from 100 to 1,000 students and include comparative designs for conventional service. Sketch of a central kitchen designed for 3,500 meals per day is also included.—Field Research Division, Paper Cup and Container Institute.

(Item No. 11)

CHURCHES: How to design the Tudor arch, with examples of formulas and drawings, is explained in a 12-page brochure devoted to churches which use glued laminated structural arches. There are illustrations of typical purlin and haunch connections, with tables for the latter. Among 12 projects whose finished interiors are shown, along with sketches of basic arches, are three West Coast churches. —Timber Structures, Inc.

(Item No. 12)

WROUGHT IRON: While design and text of "The Picture Book of Wrought Iron" are "pitched" to the consumer, emphasizing advantages and sales points of Locke products, the 12-page brochure is cataloged especially for the architect and builder. Wrought iron designs are grouped with wrought iron accessories, cast designs with their accessories and standard size rails with awning columns, lanterns and posts and other allied building products.—Locke Manufacturing Co.

(Item No. 13)

PLYWOOD FINISHING: A 36-page manual containing 68 full-color illustrations shows how various plywoods look after they are finished and offers work-saving techniques. Among the topics covered: preparing the surface, method of application, interior and exterior finishes, how and when to apply finishes and suggested uses in the home.—Simpson Logging Co.

(Item No. 14)

PLASTIC INSULATION: Both architects and builders will be interested in a construction detail folder containing 12 scale drawings of comfort applications of Styrofoam, each on an individual sheet. Shown are the plastic insulating material applied to either a wood or metal window, to a masonry wall at the door opening, under a concrete slab, on a foundation, in a crawl space, on a foundation wall exterior and in connection with either a perimeter heating duct or an electrical outlet. Also included in the file-size folder is a drawing of a push box for application of adhesive to the Styrofoam. — Plastics Sales Department, The Dow Chemical Co.

(Item No. 15)

ROOF PROBLEMS: Anyone concerned with roof maintenance will find "Solving Roof Problems" a helpful addition to his files. The 16-page brochure is illustrated by photographs, drawings and diagrams and explores such subjects as the various types of roofs, how they are built, what factors enter into their deterioration and how roof troubles can be diagnosed and treated. —Tremco Manufacturing Co.

(Item No. 16)

LIGHTING: For those interested in the specifications, installation or purchase of industrial lighting equipment, RLM Standards Institute has announced publication of a periodic newsletter. The first issue now being released treats such items as the forthcoming RLM specifications covering fluorescent lighting units for the 800 milliampere lamps and recommendations for increase in the efficiency of light output on the SD-1 units.—RLM Standards Institute, Inc.

(Item No. 17)

PERFORATED PANELS: Despite its limiting title, "Home Owners' Guide to Masonite Peg-Board Panels and Fixtures" contains some ideas for architects and builders, especially those engaged in remodeling projects. Hints on decorative and functional applications are presented plus sketches of the matching metal fixtures.—Masonite Corp.

(Item No. 18)

COLUMN TYING: How general contractors reportedly save up to 35% in labor and material costs by tying concrete column forms with Signode steel strapping is explained in a four-page brochure. An illustrated case history describes how the company's methods enabled one contractor to save 350 man-hours in pouring column forms for a six-story building just completed in Kalamazoo, Mich.—Canadian Steel Strapping Co.

PA&B T-square talk

DIED: Charles Sumner Greene, 89, a native of Ohio who came to California in 1893, to become one of the country's most distinguished architects, died June 11 at his home in Carmel. He and his brother, the late Henry Mather Greene, were credited with developing what is now known as the "native California" school of residential design, noted for its glassed openings onto shaded courts, pierced overhangs and the absence of gingerbread.

Arthur Brown Jr., FAIA, often referred to as the dean of architects in the Bay area, died July 7 in Burlingame, Calif., at the age of 83. He was stricken with a heart attack upon his return from Washington, D. C., where he had served as one of three chief advisors on design for the remodeling of the U. S. Capitol.

Despite his age, Brown maintained a continuously active architectural practice and refused to retire. Among his projects: San Francisco City Hall, War Memorial Opera House, Veterans Building, Federal Office Building —all in Civic Center—, Coit Tower, Hoover Library and many other Stanford University structures, as well as the Interstate Commerce and Labor Department buildings in Washington, D.C. Born in Oakland and a graduate of the University of California, he was made a member of the Institut de France in 1926 and was elected to the American Academy of Arts and Letters in 1943.

Grey Wornum, an internationally known English architect who spent much of his time in San Francisco, died June 11 in New York City at the age of 68. He was decoration architect for the liner Queen Elizabeth and in 1952 was awarded the Royal Gold Medal for architecture.

NEW OFFICE: The architectural firm of Victor Gruen Associates has opened an office in Hawaii, with Neal Butler, associate and project coordinator for the Waialae Shopping Center in Honolulu, in charge of the operation.

The firm also has announced two new associates: Marcel Sedletzky and Franz Szymanski.

NEW PARTNERS: Baird Heffron, structural engineer, and Ted Moulton, AIA, have formed a partnership known as Heffron & Moulton at 717 Market St., San Francisco (YUkon 2-5674). The two men, formerly associated with Donald Beach Kirby & Associates, San Francisco architects-engineers, will continue to work with that office in the promotion of new projects.

NEW FIRM NAME: The Seattle architectural firm of Jones & Bindon has been changed to Bindon & Wright, with Leonard W. Bindon, AIA, and John L. Wright, AIA, as principals. John Paul Jones, AIA, although relinquishing his position as a partner, will serve as a consultant.

ON THE MOVE: John Kewell, AIA, has announced the removal of his offices to 1901 W. Eighth St., Los Angeles.

HONORED: Frank T. Kegley, partner in the Los Angeles architectural firm of Kegley, Westphall & Arbogast, has been elected a member emeritus of the AIA in recognition of his more than 47 active years in the profession. A graduate of the University of Illinois in 1908, he became a licensed practicing architect in California two years later. Later Kegley continued his career in Chicago and during

Warehouses in Seattle, Portland, Spokane

World War II was supervisor of shipbuilding for the Navy in the Great Lakes area.

TO FRANCE: Miss Nina Pence, who has practiced architecture in Klamath Falls, Ore., for the past 10 years, has left for France where she will take advanced study at the American School of Fine Arts at Fontainbleau. She is a graduate of the University of Michigan.

BACK HOME: Professor Emeritus Stanley A. Smith returned to Pullman, Wash., last month after two years of special service in Turkey aiding in the design of buildings for that nation's new Ataturk University. For 32 years he was chairman of the department of architectural engineering at Washington State College. Upon retiring in 1955 he took the Turkish assignment with a team of experts organized by the University of Nebraska to provide technical aid in the founding of the university.

APPOINTED: James G. Pulliam, AIA, and member of the American Society of Planning Officials, has been named land planning chief of Welton Becket & Associates, Los Angeles architects-engineers. With the firm since 1955, he holds degrees in architectural engineering from Dartmouth College and in architecture from Harvard University.

ELECTED: Seattle architect Francis E. Huggard, who is a member of the City Planning Commission, has been named international president of the Knights of the Round Table.

ON FACULTY: Portland architect Walter Gordon has been named a visiting professor of architecture at the University of Oregon and will spend two days a week on the Eugene campus.

TOURS: The second annual architect's tour of Japan is scheduled to leave San Francisco October 3. Led by southern California architect Kenneth Nishimoto, the group will spend three weeks visiting the most colorful cities in Japan, which also contain the most interesting architectural projects — shrines, palaces, universities and private homes.

✔ Gira Arquitectura, the Mexican architectural seminar tour, will depart from Laredo, Texas, October 6, returning to that city October 19, with Paul Elliott, AIA, of Houston as co-escort.

ENGINEERS ELECT: New officers of the Consulting Engineers Association of Oregon are Thomas R. Miles, Portland, president; Holly A. Cornell, Corvallis, vice president; Rowland Rose, Portland, secretary; and Guy H. Taylor, Portland, treasurer.

CONSULTING ENGINEERS: Hugh C. Carter, former senior design engineer for the Los Angeles architectural-engineering firm of Pereira & Luckman has formed a new consulting engineering organization, Hugh Carter Engineering Co., at 222 Atlantic Ave., Long Beach, Calif.

✔ In Seattle Gilbert H. Mandeville has resigned as executive director of Leo A. Daly & Associates to establish his own firm of Gilbert H. Mandeville & Associates in the Joseph Vance Building.

STUDENT AWARDS: Neil R. Penry, 23-year-old graduate student, has won three of the most coveted prizes for architectural students at the University of California, Berkeley: the Alpha Rho Chi prize, a grant-in-aid from the Northern California Chapter, AIA; and the Tile Council of America prize. At the same school Richard M. Clayberg was awarded the Mario Ciampi prize and a grant-in-aid from the Women's Architectural League of San Francisco; and George F. Tully won the Kenneth Foster Strong architectural prize.

Among other citations to West Coast architectural students this spring:

University of Southern California: Peter von Muehlen, Welton Becket & Associates fellowship.

University of Oregon: George A. McMath, Women's Architectural League of Oregon scholarship ($250); Gary Michael, Ion Lewis travel fellowship ($2,000).

University of Washington: Richard S. Alden, AIA gold medal: Joseph H. Onuma, AIA second award; Robert J. Patton, faculty medal; Alvin Dreyer, Alpha Rho Chi medal; Glenn L. Brewer, alumni traveling scholarship ($700); Jerald Bell and Jack Vincent, Washington State Chapter, AIA, scholarships ($250 each); Barry K. Upson, Northwest Plaster Bureau prize ($250).

With the AIA

Southwest Washington has honored five area crafstsmen for excellence in their particular skills. They are: Guy Anderson for a mural to be erected in the new Clover Park Junior High School; Anders Liljas, masonry foreman of Johnston Construction Co. for crafstmanship executed by himself as well as ability to coordinate and direct the work of his men; Oliver Tiedman of Klee Wyk Studios for a terra cotta and mosaic sculptured wall panel for Knight, Vale & Gregory; Mark Mitchell for roofing work; Ed Buettner of Standard Iron and Wire Works for structural as well as ornamental metal work.

IN TACOMA: New Southwest Washington officers are (seated) Charles Pearson, president; Gilbert Wojahn (retiring president), director; (standing) Robert T. Olson, first vice president; Gordon Johnston, director; Alan Liddle, treasurer; Percy Ball, secretary; Donald Burr, second vice president.

California Council has approved establishment of a group health insurance program for AIA members and their employees. In other actions at its board meeting in Carmel June 28-29, the council launched a long-range legislative program designed to "gain the understanding and win the informed support of the architectural profession in California by all members of the state legislature."

Washington State has reelected James J. Chiarelli as president. Other officers: Robert H. Dietz, first vice president; Walter H. Rothe, second vice president; Talbot Wegg, secretary; and A. O. Bumgardner, reelected treasurer. John L. Wright succeeds Dietz as director for a three-year term, joining Lloyd J. Lovegren, Arnold G. Gangnes and Harrison J. Overturf. All are Seattleites except Rothe who is from Yakima.

Northern California has appointed Joseph Paul as public relations counsel, succeeding Erich Nielsen. Paul, who has maintained his own office since 1947, has been named by the San Francisco Art Commission to handle publicity for the 1957 Art Festival.

Southwestern Oregon has named this slate of officers for 1957: Clare K. Hamlin, Eugene, president; Sheldon R. Haatvedt, Albany, vice president; B. King Martin, Eugene, secretary-treasurer; and Thomas A. Balzhiser, Eugene, retiring president, and V. E. (Chris) Jeppsen, Corvallis, directors.

Only **OLYMPIC** *is Perfect for Redwood*

The natural beauty of redwood should be worn proudly. Olympic Stain is specially formulated to enhance and preserve this natural beauty. It penetrates deeply, protects against time and weather. Allows redwood to "breathe" naturally so there's no blister, crack or peel. Eliminates costly, unsightly paint failures. Olympic Stain is the only *perfect* product for redwood roofs, siding, entry-ways and fences. Costs so little, but you save so much! Colors: California Redwood, Sierra Brown, Yosemite Red and Redwood Clear.

• **The Coralite Co.** has been organized in Los Angeles to manufacture and distribute Coralite, plastic finish wallboard.

The individual and his environment (Cont'd from p. 4)

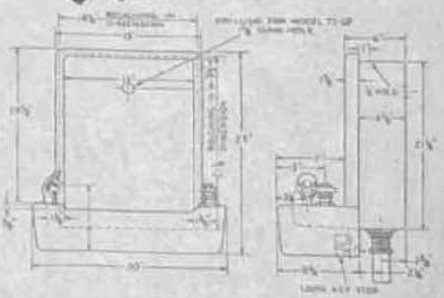
vironment points beyond itself to his world. This is decisive for any attempt to change man's environment. The criterion of every change in environment is the character of the world which is manifest in the changed surroundings and which determines the character of the environment which people can make of it.

The presence of world in an environment expresses itself in many ways. And each of these expressions has symbolic character. It points to a particular self-understanding of man within his world. As such it reveals something about man and world in themselves and in their encounter. The environment as the result of an encounter wins spiritual significance. Let me give a few examples.

Environment is by its very nature limited in space. But world, present in environment, drives beyond any limited space. The world-space is open in all directions without a noticeable or even imaginable end (whatever physical theory may say about the limited space of the universe). This infinite space is potentially present in the limited space of the environment, producing two reactions each mixed with anxiety and courage. The infinite space is both threatening and liberating. It threatens to take away any place upon which one can stand by its endlessness and emptiness. It liberates from the bondage to a particular space its narrowness and its tendency to isolate from the world.

Narrowness, on the other hand, has given the name to anxiety, "angustiae" in Latin. It is the cutting off of life-potentialities which produces such an outbreak of basic anxiety. At the same time the narrow place is the protected place—the mother's womb, the cave, the narrow streets of the wall-protected medieval town. The modern functional house with its large open glass walls seems to express the same courage which has conquered the space above the surface of the earth and is conquering the cosmic space itself. But man remains man and often just in contrast to his wide openness, needs the place which is a separated part of endless space to give him a feeling of psychological as well as physical protection.

Connected with the question of the endless and limited space is that of environment which gives privacy and which prevents privacy. The spiritual problem in this respect is even more urgent than that in the former example. External privacy makes inner solitude possible or at least easier. And nothing is more needed in a period of loneliness within the crowd than solitude with oneself and the divine ground of one's being. The interdependence of the individual and his environment has produced an environment in which solitude is less and less possible. Both time which leaves no time for solitude and space which is organized without a space for privacy work against it.



There is no privacy in houses for the individual member of the family. This is being caused by owners and builders under the false assumption that the family is a unity which must always appear together. But the family consists of individual selves who need self-encounter. Otherwise, they become lonely within the family group and hostile to it, or they resign to their fate of losing their individuality. It is here that a large responsibility lies wth the architectural profession.

Connected again with this problem is that of environment and conformity. Its spiritual significance is still greater. Driving through the housing projects which are found throughout Long Island in commuting

fine plans demand

FINE DRINKING FOUNTAINS

by HAWS

Model 73, in stainless steel . . . beautifully styled to match grand surroundings—with HAWS raised, shielded, anti-squirt head, and automatic stream control. Same distinctive design available in vitreous china (Model 77).

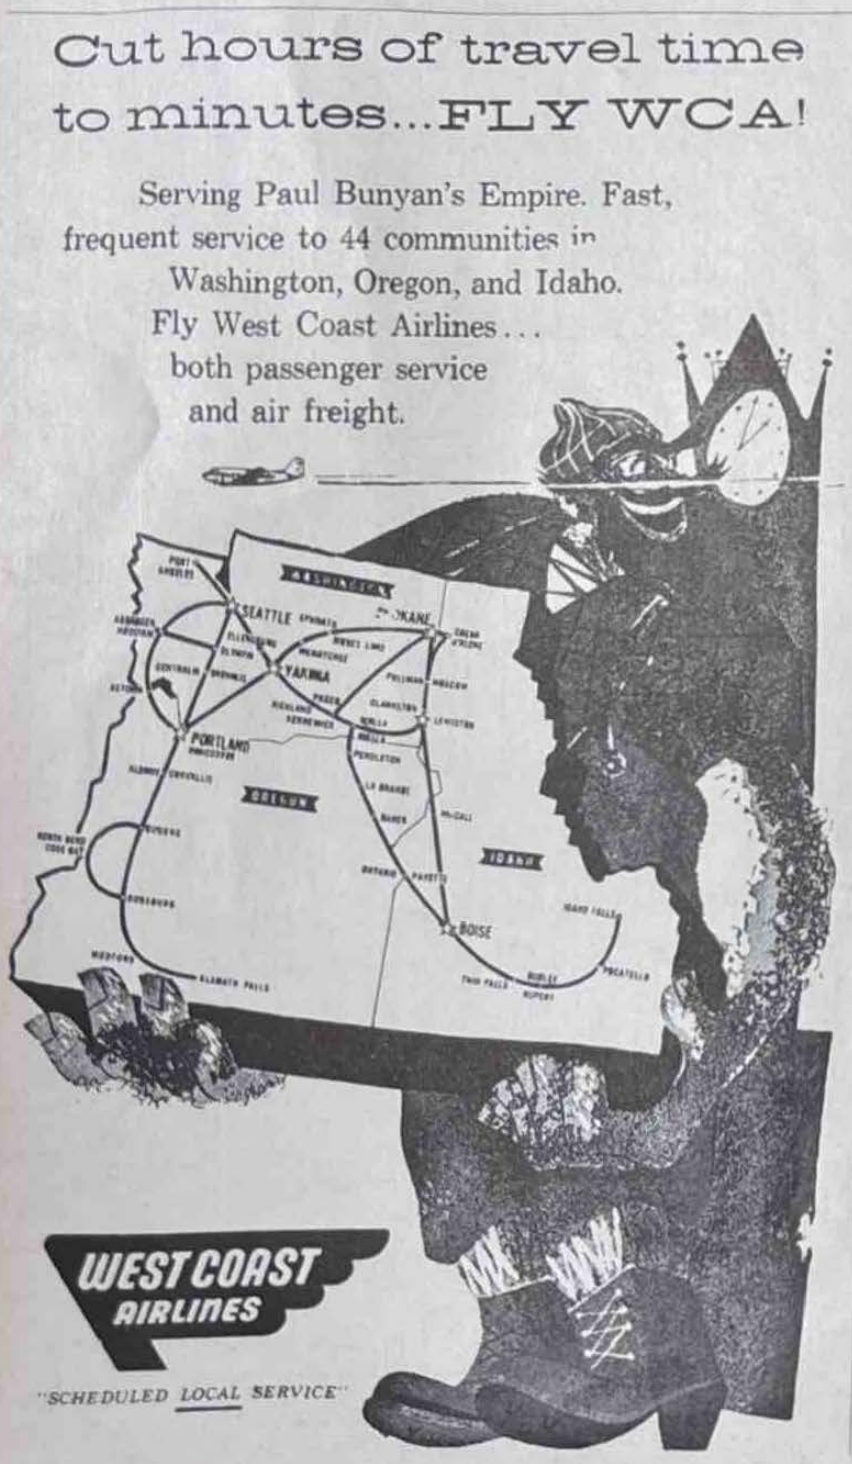
Specify HAWS recessed fountains . . . and be *sure* of drinking facilities that match the quality and distinction of your finest project. Snugly recessed in the wall, they provide the utmost in modern drinking convenience . . . and HAWS workmanship assures the finest sanitation and service.

WRITE FOR DETAILS! These and hundreds of other fountains are illustrated in HAWS new 1957 catalog. *Ask for your free copy!*

HAWS DRINKING FAUCET COMPANY

1443 FOURTH STREET (Since 1909) BERKELEY 10, CALIFORNIA

distance from New York, I asked myself: what does this mean in terms of human existence? Settlement after settlement with little distance between them, each with exactly the same model of house, small differences in color and design, each for itself in immediate vicinity of the others, each surrounded by a small garden. The whole things seems to me a disturbing symbol of loneliness in a crowd, breeding as well as confirming the patternization of present-day industrial society.



The impression given by the metropolitan apartment house developments is different. They lie more in the direction of mass concentration but they seem to leave more freedom for individual non-conformism—as big cities always do. What will these developments do to the individual is the question that now arises? In the daily movement of people between model house, office, factory, school, train, social-togetherness with people who live under the same laws of existence, are there symbols left which break the conformist compulsion?

The answer may be: it cannot be done from outside. Neither the city planners nor the architects nor those who direct the movement of the population can produce such symbols. They must come from inside. They are the concern of education and religion. But if we look in the light of this answer at the educational institutions, from family and school to public communications and at the way in which the churches consecrate conformism every Sunday morning, we shall become skeptical about this answer. Adjustment to the demands of our competitive mass society is the aim of most directly or indirectly educational activities. Such developments are useful for the ruling groups in a society and they give security to the others, not only in dictatorial but also in democratic systems. But there is a limit to their usefulness. When man becomes dehumanized in patternized security, the whole system loses those who can support it in the future, those who can say "no" to a given pattern.

Let us remember that environment is a correlative concept and that surroundings are not yet environment. It may be that the surroundings develop in a way which makes non-conforism almost impossible. But they cannot suppress it completely. Every man has a source of uniqueness in his self. Participation is only one pole of being, individualization is the other. And every man has a direct approach to the ultimate ground and meaning of life—the divine. Certainly solitude seeks for privacy. But it can even be experienced within the crowd.

And since this is so, symbols of non-conformism will always appear in the midst of surroundings which try to compel adjustment to models and patterns. We are made by our environment and we make it at the same time. Out of this follows our task, the task also of a group like this today. We should not imagine that we can change our cultural trend, either as architects or as theologians or as educators.

Symbols cannot be produced intentionally. They are born and grow and die. But one can tell how they are conceived and born: out of the personal passion of individuals who in total honesty and total seriousness penetrate into the demands of the material with which they work, who have a vision of the form which is adequate to their aim, and who know that in the depth of every material, every form and every aim something ultimate is hidden which becomes manifest in the style of a building, of a poem, of a philosophy. Out of this depth symbols can and will be born which, by their very character, say "no" to present conformity and which point to an environment in which the individual can find symbols of his encounter with ultimate reality.

Award to Harold W. Salter, Rogue River, $38,960, by Bureau of Reclamation, Bldg. 53, Denver Federal Center, Denver, Colo., for construction of a two-stall garage, shop and storage building, laundry and toilet building and generator shed, and furnishing and installing sewage, water and electrical distribution system for Howard Prairier community facilities; Spec. No. 100C-298. SP 7-16

★VENTILATING SYSTEM—
Klamath Falls, Ore.

Awards announced by School District No. 1, Klamath Falls, for installation of a new ventilating system at Mills Elementary School, E. Main and Orchard Ave., Klamath Falls, and for carpentry work incidental to the project. Plans by Howard R. Perrin, architect, 1121 Main St., Klamath Falls. Bids opened July 6 (extended from July 2). AWARDS—VENTILATING: G. C. Motley, 812 Klamath Ave., Klamath Falls, $21,733 (basic and alt. 2). CARPENTRY: Guy Mo-

lott, 5206 Walton Drive, Klamath Falls, $1,300. ZZ 7-12. Previous report 6-22

★INSULATING BOARD PLANT— Klamath Falls, Ore.

(Estimated cost $12,000,000)

Three additional subcontracts have been let by Robert Swan, project manager, Box 527, Klamath Falls, on projects included in construction of the insulating board plant near Klamath Falls, according to H. R. Stokes, project engineer for Johns-Manville Corp., 22 E. 40th St., New York City. General contractor is George A. Fuller Co., 3100 W. 8th St., Los Angeles, Calif. Plans by Skidmore, Owings & Merrill, architects of New York, Chicago, San Francisco and Portland. AWARD: Fenstra, Inc., Emeryville, Calif., for steel sash for the four main buildings covering 271,500 sq. ft. AWARD: Lord Electric Co., 535 S.W. Clay St., Portland, for complete electrical work, including all power wiring, connecting all machines, lighting, distribution circuits, exterior distribution system. Work to start July 15. AWARD: Rosendahl Engineering Co., Los Angeles, for mechanical portion of the entire project, including processing piping for all materials (as opposed to piping for sanitary and water purposes), heating and ventilating and equipment installation. Sub-bids may be asked for items such as sheet metal.

Sub-bids have been invited from the J-M approved list of contractors for glass and glazing. It is anticipated that approximately 14 more subcontracts will be let for work such as sanitary plumbing, masonry, interior fire sprinklers, aluminum sash, lockers and kitchen equipment. Southern Pacific Co. is running in a double siding and first tests of material are expected to go through the plant about mid-December.

Excavation is underway by George A. Fuller crews at the north end of the ½ mi. long series of proposed buildings for the sorting house. Work will start immediately on the slasher building. Chicago Bridge & Iron Co. of Chicago has completed the 100,000-gal. water tank and has started on the metal work for three soaking tanks in the debarking building. Work will include erecting three storage tanks in the same building. Link-Belt Co. of Seattle has nearly completed the erection of coal handling equipment for the boiler house. Sub-contract will be let soon for brick work for the building. Bethlehem Pacific Coast Steel Co. of San Francisco has returned crews to the job to start erecting structural steel for the 10,000 sq. ft. administrative office building which will be on the front highway side of the four main buildings.

ZZ 7-12. Previous report 5-25

★RESIDENCE REMODELING— Klamath Falls, Ore.

Contract negotiated with Al Depew, 5808 Denver Ave., Klamath Falls, by R. L. Cotter, owner, 1049 Lakeshore Drive, Klamath Falls, for extending roofing and one room and applying siding to entire front of structure and other interior remodeling of a residence in Klamath Falls. ZZ 7-12

★U. S. NATIONAL BANK— Klamath Falls, Ore.

(Estimated cost $40,000)

Contract negotiated with Duncan Construction Co., Box 1088, Klamath Falls, by U. S. National Bank of Portland, E. C. Sammons, president, 740 Main St., Klamath Falls, for construction of a 36'x90' pumice block one-story second branch bank (Town and Country Branch) building in the 3600 block on S. 6th St. in Klamath Falls. Plans by Morrison & Howard, architects, Williams Bldg., Klamath Falls. Work will start this month and will be completed for an October opening. ZZ 7-17. Previous report 6-28

■DORMITORY, GYM, HEATING PLANT— La Grande, Ore.

(Estimated cost $1,358,000)

Planholders announced for construction of three-story dormitory to house 146 students; physical education building, and two-story, 1,000 sq. ft. addition to central heating plant, all reinforced concrete construction at Eastern Oregon College of Education, La Grande. Bids will be opened 11 a. m., July 25, by Oregon State Board of Higher Education, Earl M. Pallett, secretary, (Eugene), at 311 State Hall, Portland State College, 1620 S.W. Park Ave., Portland. Plans with Freeman, Hayslip, Tuft & Hewlett, architects, 2040 S.W. 3rd Ave., Portland. $50 deposit. Heating plant plans by W. Bruce Morrison, mechanical engineer, Cascade Bldg., Portland. Separate general, mechanical and electrical bids on dorm and on gym. Separate general and mechanical (latter includes electrical) bids on heating plant. Separate or combination bids on the three projects.

Bold Architectural Design Featuring

Chehalis Brick

Distinguishes Shelton Grade School Building

The warm colors and pleasing texture of Chehalis Brick, combined with a bold new design concept by the architect, has made the Evergreen Grade School at Shelton one of Washington's finest examples of contemporary school architecture. CHEHALIS SELECT COMMON BRICK—permanent, practical, fire-safe—is used in effective contrast to provide lasting dignity and quality to the structure.

STATE OFFICE BUILDING REPAIRS— Salem, Ore.
(Estimated cost $110,000)

Architects William I. Williams and John Grimmer Groom, 467 Marion St., Salem, have been retained to prepare plans for structural repairs, including floor rehabilitation and rewiring for the State Capitol Bldg. in Salem, according to Secretary of State Mark Hatfield. Relocation of several state agencies will be necessary to make room for the repair work. Bids will be called after plans have been approved. CP 7-16

SWIMMING POOLS, PARKS— Salem, Ore.

Three proposals were approved in the July 11 special election held in the city of Salem for swimming pool and park improvements. School district voters favored a pool repair levy of $52,000 a year for two years, while city voters approved an extra pool repair $38,000 levy a year for two years. The swimming pool measures will raise a total of about $180,000 for renovation of Olinger and Leslie pools which are jointly operated by the City of Salem and Salem School District. In addition to those measures, voters approved a $150,000 bond issue to improve city parks. Parks included for the scheduled improvements are Highland Park, Fairmount Playground, West Salem Playground, River Road Playground, Clarmont St. Playground, Fairgrounds Playground, Albert-Wallace (Marine) Park, Pringles Creek Park and Bush Pasture Park. SC 7-17

LABOR AND INDUSTRIES BUILDING— Salem, Ore.

Secretary of State Mark Hatfield is urging the Department of Finance & Administration to recommend immediate planning of a labor and industries building in the Capitol Mall. SC 7-17

Plans with Freeman, Hayslip, Tuft & Hewlett, architects, 2040 S.W. 3rd Ave., Portland. $25 deposit. WB 7-13. Previous report 7-2

WASHINGTON

REFINERY— Anacortes, Wash.

A long-term contract has been concluded with The Texas Co. to supply the requirements of Texaco's new refinery now under construction at March's Point near Anacortes, according to John F. Wallin, northern division manager of Puget Sound Power & Light Co. The contract calls for the delivery of 55,000-volt power to serve requirements up to 16,700-hp at the refinery. To serve the refinery and other industry in western Skagit County and Whidbey Island, Puget plans to install the coming year a second 40,000-kva, 110/55-kv transformer bank at its March's Point substation the new equipment will double the capacity of the substation. To serve the enlarged substation Puget expects to complete construction of a second 110-kv, 23-mi. long transmission line from the Sedro Woolley switching station to the March's Point substation at Summit Park.

Underground construction is more than halfway completed at the refinery site. The 780-acre area has been fenced in and former county roads traversing the heart of the refinery have been closed to public travel. Pile driving and foundation pouring for the main processing units have been nearly completed and work is still underway on the main drainage system. Six tank foundations have been poured recently and six additional tanks are to be completed each week, with an eventual total of 60 tanks in the Texas Co. tank farm. About 100 c.y. concrete is being poured daily at the site, with about 40,000 c.y. required before the plant is completed, according to Bechtel Corp. superintendent W. V. Hanna. Other progress at the plant includes installation of a railroad spur from the nearby Great Northern line onto the refinery tract. Some delay is expected in building wharf facilities, as a result of revisions in plans, and work will not start until late August. Work is well underway on two water reservoirs which will be encased by earth levees with asphaltic cement lining. The reservoir will be located in the north refinery area in the heart of the tank farm. ET 7-16. Previous report 6-21

BULK, STORAGE BUILDINGS— Anacortes, Wash.
(Estimated cost $100,000)

Construction underway on bulk and storage buildings at Dean's Corner in Anacortes, for Pacific Gas & Fuel, Inc. The firm has purchased one acre of land west of the service station on which the buildings and warehouse will be built. ET 7-16

REFINERY— Anacortes, Wash.

The Fluor Corp., Ltd., 2500 S. Atlantic Blvd., Los Angeles, Calif., has started on the second phase of the alkylation plant at Shell Oil Co. refinery near Anacortes, with the recent unloading of part of the heavy equipment needed in the next construction step. A second Chicago Bridge & Iron Co. crew has arrived at the site and has started the erection of pressure storage vessels. ET 7-17. Previous report 6-28

6 reasons why architects prefer **COLUMBIA BRICK** *for schools...*

1. Low maintenance saves school boards thousands of dollars each year.
2. Enduring beauty.
3. Flexibility of design — choice of many colors, texture and patterns.
4. Sound, fire-safe construction.
5. Creates feeling of pride and security in students and teachers.
6. Stands up to hard usage.

Add these features to Columbia Brick's superior craftsmanship, and unique clays, and you know why Columbia Brick is "specified" so often.

Columbia BRICK

(Estimated cost $10,000,000)

Aluminum Co. of America, W. N. Farquhar, manager of Wenatchee Works, Wenatchee, has announced plans for a $10,000,000 expansion of its smelting plant at Wenatchee by mid-1961. This news was announced simultaneously with notice of an agreement to purchase 23 per cent of the power generated by Chelan County Public Utility District No. 1's Rocky Reach dam, under construction on the Columbia River near Wenatchee. Alcoa's agreement to pay 23 per cent of all cost of building and operating the Rocky Reach project over a 50-year contrate period is contingent on a provision that final costs, including financing expenses, do not exceed certain limits. The proposed new potline would use 50,000 kw. of firm power.

●COLLEGE BUILDING ADDITIONS— Havre, Mont.

(Estimated cost $48,000)

Bids will be opened August 1 by State Board of Examiners, G. L. Bryant, executive secretary, State Capitol Bldg., Helena, for construction of an addition to the top floor of Cowan Hall, to house a practical nurses' laboratory and construction of a ground floor addition to the auto mechanics' building at Northern Montana College in Havre. President of the college is Dr. L. O. Brockmann. Plans with the board of examers. The nurses laboratory is estimated to cost $15,000 and the mechanics addition, $33,000. SC 7-13

CATHEDRAL RENOVATION—Helena, Mont.

Renovation work is well underway at the Cathedral of St. Helena, 551 N. Warren, Helena, according to Rev. Edward P. Gilmore, pastor of the cathedral parish. Repair aind cleaning of stained glass windows is the most important part of the project. In addition to this work, interior and exterior work is planned for completion in 1958. SC 7-16

●EXECUTIVE MANSION— Helena, Mont.

Bids will be opened 10 a. m., August 8, by State Board of Examiners, G. L. Bryant, executive secretary, State Capitol Bldg., Helena, for construction of the two-story, 159½'x63', 5,900 sq. ft. Governor's mansion to be located at the corner of Carson and Broadway streets, about three blocks east of the Capitol building in Helena. Plans with Chandler C. Cohagen, architect, Hedden Bldg., Billings. Bids were previously received last December for this project and rejected as too high. Plans have been revised.

The front elevation of the building will show only one floor, with both stories being visible from the sides and back. The structure will have a low-peak sloping roof and many windows. Dominating the main floor will be the State Room which will have a high ceiling and will measure 33½'x27½'. The room will open onto a triangular shaped porch through picture window-type doors facing north. SC 7-17. Previous report 4-6

TELEPHONE FACILITIES EXPANSION— Shelby, Mont.

(Estimated cost $100,000)

Work is underway on expansion of telephone facilities and equipment in Shelby, according to Mountain States Telephone & Telegraph Co., L. G. Bucklin, manager, Shelby. The initial phase of the project required an addition to the telephone building. The addition has been completed and an installation crew, under the supervision of foreman Charles Benjamin, is now installing additional power supplies, dial switching equipment and long distance trunking equipment. A major part of the job is installing of seven new switchboard operator positions. SC 7-17

MARGINAL WAY EXPRESSWAY— Seattle, Wash.

Several modifications in plans have been approved by City Council Streets and Sewers Committee of Seattle and the Washington State Highway Commission on the proposed West Marginal Way expressway, according to City Engineer Roy W. Morse. The changes were recommended by the City Planning Commission to minimize adverse effects of the expressway on the South Park community. The project is being planned as a link between the 1st Ave. South bridge and Highway 99, eventually to connect with the proposed freeway. Although it is too late to make basic changes in the structure, the following modifications have been approved: construction of an "on ramp" for northbound traffic at Cloverdale St. instead of Sullivan St.; construction of a pedestrian overpass at Henderson St.; construction of a pedestrian sidewalk in an overpass to be erected at 14th Ave. South. SC 7-16

STEAM GENERATING UNIT—Seattle, Wash.

Bid opening postponed, with new opening date to be announced later, by Board of Regents, University of Washington, Administration Bldg., campus, Seattle, for furnishing and erecting a new steam generating unit having a continuous steam generating capacity of 150,000 lb. steam per hour. QUANTITIES—INVERNESS DRIVE: 26,400 sq. yd. of 6" concrete paving; 12,650 c.y. earth work, sub-grading; 7,700' concrete sidewalks; miscellaneous items. W. LEE ST.: 170' of 15", 174' of 12" pipe sewer; 70' of 10" corrugated metal pipe sewer; 5 manholes; miscellaneous drainage items. 39TH AVE. S.: 10,810' of 6" to 30" pipe sewer; 44 manholes; miscellaneous drainage items. PD 7-13

● PUMPING PLANT EXPANSION, FORCE MAIN— Seattle, Wash.

Bids will be opened 2 p.m., July 31, by Board of Public Works, E. G. Henry, secretary, 512 County-City Bldg., Seattle, for furnishing and installing 145' of 24" and 1,160' of 42" force main pipe, to enlarge existing pumping station and a new force main on 63rd Ave. S.W., Seattle. Specifications with city engineer, 404 County-City Bldg., Seattle. PD 7-13

▲ASPHALTIC CONCRETE SURFACING— Seattle, Wash.

Bids received by Shoreline School District No. 412, Myron Ernst, secretary, E. 16th, E. 158th and 20th Ave. N.E., Seattle, for 5,800 sq. yd. of 1½" asphaltic concrete surfacing at Meridian elementary school, 170th and Meridian, Echo Lake elementary school, 195th and Wallingford, and Shoreline High School, E. 185th and 1st Ave. N.E., in Seattle.

LOW BID: Lake City Gravel & Materials, Inc., 10728 Bothell Way, Seattle. Amounts of low bids will be released later and award will be made on August 5.
PD 7-17. Previous report 7-9

● COPPER SULPHATE— Seattle, Wash.

Bids will be opened 10 a.m., August 7, by Paul R. Hendricks, city purchasing agent, 511 County-City Bldg., for furnishing 80,000 lb. copper sulphate. Specifications with above office. PD 7-17

● METER PARTS— Seattle, Wash.

Bids will be opened 10 a.m., July 23, by Paul R. Hendricks, city purchasing agent, 511 County-City Bldg., Seattle, for furnishing of parts for watch dog meters. Specifications with above office. PD 7-17

WATER LINE— Snohomish, Wash.

An emergency ordinance has been passed by City Council, City Hall, Snohomish, authorizing the construction of an auxiliary water line from the Everett line to the Snohomish city reservoir. The project, estimated at $6,051, was passed by emergency ordinance because the laying of the 8" pipe was not included in the present budget. SC 7-13

NATURAL GAS PIPELINE— Spokane, Wash.
(Estimated cost $3,000,000)

Construction of a natural gas pipeline has just started from Spokane and is scheduled to reach Coeur d'Alene, Idaho, in mid-August and Kellogg, Idaho, in late September. A. B. Allyne, vice president in charge of transmission for Pacific Northwest Pipeline Corp., has reported that between 200 and 250 men will be employed at the peak of construction of the Spokane-Kellogg line, a distance of about 75 mi. The line will be a 6" welded steel pipe of the same construction, although smaller than the line built into Spokane from the gas fields of the southwest. SC 7-12

TRUNK SEWER— Spokane, Wash.

Assessments totaling $349,000 approved by City Council, City Hall, Spokane, for construction of the North Perry trunk sewer between Francis and Rowan and Lidgerwood and Crestline in Spokane. SC 7-13

SEWAGE TREATMENT PLANT— Sunnyside, Wash.

Gray & Osborne, consulting engineers, 228 S. 2nd St., Yakima, have been retained by City Council, City Hall, Sunnyside, to prepare plans for a sewage treatment plant and for complete enlargement of the sewer system at Sunnyside. DM 7-13

POWERHOUSE— Swift Dam Site, Wash.

Additional description given for construction of powerhouse and installation of turbine generators at Swift Hydroelectric Project, Lewis River, Wash. A low bid of $2,596,848 was submitted June 26 by Guy F. Atkinson, 10 W. Orange Ave., South San Francisco, to Pacific Power & Light Co., Paul B. McKee, president, Public Service Bldg., Portland. The contract will include reinforced concrete foundations for the indoor-type plant; 80'x190'x60' high steel frame superstructure with aluminum panel sheathing; installation of turbines, generators and appurtenances and construction of a switchyard. This is the last major construction phase of the $51,000,000 project, and total estimated cost of the powerhouse section is $10,500,000. The low bidder has been awarded a contract for the downstream canal, forebay and Swift No. 2 powerhouse for the Cowlitz County, Wash., P.U.D. phase of the project. WB 7-5. Previous report 6-28

Quantities: 350 ton crushed gravel surface; 6.40 mi. mixing, finishing and rolling; 375 ton asphaltic road material for roadmix; 25,750 gal. same for seal coat; 1,285 ton cover coat material; 6.40 mi. tearup, pulverize and windrow.

WINDROWS, SURFACING STOCKPILING —STARKEY LOOP: Constructing crushed gravel windrows on 3.0 mi. and a crushed gravel surfacing on 6.8 mi. of Starkey Loop Road and furnishing cover coat in stockpile,

Residence for Mr. and Mrs. R. D. Schmitz, Storm Lake, Iowa
Architects: Smith, Voorhees, Jensen, Silletto and Associates, Des Moines, Iowa

Time gives to Rilco laminated woods a warmth and richness and depth of beauty impossible with other materials. Rilco laminated wood beams, for example, age gracefully while resisting warping, checking, splitting.

Such beams offer availability plus economy, for Rilco beams are obtainable in sizes difficult or impossible to get in solid construction. They can be flat, pitched or tapered with or without cantilevered overhang.

Standard-size flat beams are now stocked by Rilco . . . assuring prompt delivery and the low price of volume production.

Whether you are designing a residence, church, school, industrial or commercial building Rilco beams, arches, trusses and wood roof deck offer beauty at surprising savings.

Rilco laminated beams and deck blend with the modern furnishings and add a feeling of spaciousness.

RILCO works wonders with wood

RILCO LAMINATED PRODUCTS, INC.
Room 236 Tacoma Building, Tacoma, Washington

Adams County; Idaho Proj. No. ST-3112(511) and Stockpile No. 211.

Quantities: 19,800 ton crushed gravel base course; 4,400 ton crushed gravel in windrows; 3,720 ton cover coat material.

DRAIN, SURFACE—DEEP CREEK ROAD: Constructing roadway, drainage structures and bituminous surface treatment on 5.076 mi., Jct. U.S. 191-East, Oneida County; FAP No. S-1707(1).

Quantities: 71,500 c.y unclassified excavation; 380 c.y. excavation for structures; 20,600 ton selected borrow; 14,700 ton crushed gravel base course; 49,200 gal. asphaltic road material; 2,275 ton cover coat material; 3.3 c.y. concrete; 1,850' pipe culvert. SP 7-16

WATER LINE REPLACEMENT—Boise, Idaho

Water line replacement this summer will involve 14 blocks of excavation in Boise, according to J. E. Fuger, water superintendent, City Hall, Boise. Most of the work involves replacement of old lines and relocation of meters in streets which will be paved this summer. Work is now underway on the 600 block of W. Day St., the 600 and 700 blocks of N. Grant St., the 600 and 700 blocks of Bridger and the 600 block on Sublette. LID street paving this summer will include eight blocks and city resurfacing is planned for six blocks, including Highland Ave. SC 7-12

★CUTOUTS—Michaud Flats Project, Idaho

Award to James R. Kearney Corp., St. Louis, Mo., $1,173 fob American Falls, by Bureau of Reclamation, Bldg. 53, Denver Federal Center, Denver, Colo., for Sched. 3, 39 unit-combination arrester and open-drop-out cutouts for Areas 1 and 6. SP 7-13

GRADING, PAVING— Parma, Idaho
(Estimated cost $14,000)

Plans underway by Melvin V. Davenport, city engineer, City Hall, Parma, on grading and paving city streets. Bids will be called at a later date. DM 7-13

MONTANA

SEWAGE TREATMENT FACILITIES— Montana
(Estimated cost $1,902,668)

Priority has been awarded by the Montana State Board of Health, Capitol Bldg., Helena, for assistance in financing sewage treatment facilities in Butte, Billings, Culbertson, Plevna, Cut Bank and the State Orphans Home at Twin Bridges. The priority brings the total to nine communities which will have projects (estimate for all nine projects is $2,005,466).

A $1,118,878 project is planned for the Butte area to provide sewage interceptor lines to prevent the present pollution of Blacktail Deer Creek. Construction will start in the fall, with $250,000 to be used from federal funds. Industrial waste waters from the Butte mines, the Anaconda smelter and domestic sewage will be discharged into stabilization lagoons near Warm Springs. The Anaconda Co. is financing the lagoon construction. The Billings project will provide sewer interceptor lines for west Billings, to deliver sewage to the city's sewage treatment plant (estimated cost $420,000). The State Orphans' Home at Twin Bridges plans construction of a sewage lift station, outfall line and sewage lagoons at an estimated cost of $28,571. Other projects will amount to $59,000 at Culbertson, $21,350 at Plevna and $254,860 at Cut Bank. SC 7-11

STREET IMPROVEMENT PROGRAM— Billings, Mont.
(Estimated cost $3,000,000)

Reports of a street improvement program survey have been submitted to the City Council, City Hall, Billings, by Morrison-Maierle, Inc., consulting engineers, 910 Helena Ave., Helena, who began the work last December. The engineers have suggested the establishment of two special improvement districts for the program, one of which would embrace the downtown section of the city and the other being a city-wide arterial system embracing main thoroughfares within the city. Cost of the downtown project was estimated at $279,000 and cost of the arterial project, $2,743,000. Cost of the down town project would be borne by owners of the property affected; city-wide arterial system would be shared equally by all property owners in the city. SC 7-13

●SEWAGE DISPOSAL SYSTEM— Culbertson, Mont.

Bids will be opened 8 p.m., July 25, by E. F. Garbe, town clerk, Town Hall, Culbertson, for installation and construction of 3,600' of 8" force main, valves, overflow manhole, sewage lift station and pumps, all involving 48,000 c.y. earthwork, at Culbertson. Specifications with L. W. Burdick, consulting engineer, c/o Willard Webster, Box 1134, Williston, N. Dak. $30 deposit. Bid bond 5%. SC 7-16

★WATER SUPPLY, DISTRIBUTION SYSTEM— Flaxville, Mont.

Award announced by James Cavanaugh, town clerk, Town Hall, Flaxville, for a distribution system involving 8,405' cement-asbestos pipe and 4,350 lb. cast iron fittings (Sched. A) and a 25,000-gallon elevated steel water tank on 100' steel tower and appurtenant work (Sched. B) at Flaxville. Specifications by Wenzel & Co., consulting engineers, 41 Meadowlark Drive, Great Falls. Bids opened July 9. SCHED. A—AWARD: Kallevig Bros., Sidney, $28,876 (second low basic bid). LOW BID: A & B Drilling Co., Scobey, $28,131. 3RD LOW: Elmer Johnson Plumbing & Heating, Glasgow, $30,389. SCHED. B—ONLY BIDDERS (not awarded): Pittsburgs-Des Moines Steel Co., Denver, Colo., $21,945; Chicago Bridge & Iron Co., 550 W. 175th, Salt Lake City, Utah, $24,150. SP 7-17. Previous report 7-3

★PAVING, UTILITIES— Helena, Mont.

Awards announced by W. J. Leary, acting city manager, Civic Center Bldg., Helena, for street paving, utility connections and sanitary sewer construction in SID Nos. 204 and 205 in Helena. AWARDS: Helena Sand & Gravel Co., Broadwater, Helena, $112,723 (SID 204), $133,543 (SID 205). No award was noted for SID 202 for which bids were opened at the same time. SC 7-17. Mr. Architect . . .

you can counteract the high costs of construction

. . . by placing your official advertisements for bids in the construction trade journals of the Northwest—PACIFIC BUILDER & ENGINEER (1st Saturday of each month), PACIFIC ARCHITECT AND BUILDER (3rd Saturday of each month), and CONSTRUCTION NEWS BULLETIN (2d, 4th and 5th Saturdays).

They reach more contractors, subcontractors and suppliers than any twenty newspaper-type publications.

That's why more consulting engineers — and more school districts, cities, counties, state departments, PUDs and federal bureaus — place their advertisements for bids in our columns than in any other publication in the entire Northwest.

IF YOU WISH THE *LOWEST COMPETITIVE BIDS CONSISTENT WITH RESPONSIBLE WORKMANSHIP* we can get them for you, whether your job is located in the Willamette Valley or in the Blue Mountains . . . in Western Washington or the Inland Empire . . . in the Coeur d'Alene or the Snake River Valley . . . in the Flathead or on the Yellowstone . . . in the Wasatch country or in Wyoming.

PACIFIC BUILDER & ENGINEER, Inc.

2418-Third Ave., Seattle 1, Wash.

Advertisements for Bids

Advertisements reaching us not later than Wednesday noon will appear the same week.

THE RATE for Advertisements for Bids is 35 cents per line for the first insertion; 25 cents per line for each insertion thereafter.

OFFICE BUILDING, RESIDENCE
BIDS CLOSE 2 P. M., AUGUST 5
Portland, Oregon
NOTICE TO CONTRACTORS

Sealed bids for the construction of an office building and a residence at Tieton Ranger Station, Yakima County, Snoqualmie National Forest, Washington, will be received until 2:00 p.m., P.S.T., August 5, 1957, by the Regional Supply Officer, P. O. Box 4137, 729 N.E. Oregon, Portland, Oregon. Bids may be secured from him or the Forest Supervisor, Snoqualmie National Forest, 415 Federal Office Bldg., Seattle, Washington.
7877—7-18

BITUMINOUS OR CEMENT CONCRETE PAVING
BIDS CLOSE 11 A. M., AUGUST 1
Yakima, Washington
NOTICE TO CONTRACTORS

NOTICE is hereby given that sealed bids will be received by the Board of County Commissioners at their office in the County Courthouse at Yakima, Washington, until 11:00 A. M., August 1, 1957, for the letting of one Contract involving the following work:

One Contract—
County Road Project No. 706 for the placing of a Bituminous pavement on a portion of Summitview Avenue with the following principle quantities:

ALTERNATE No. 1—Special Bituminous Pavement Type "C" applied with a traveling cold mix plant preparation of Cement concrete pavement 2.0 miles; Asphaltic Cement RC-3 in place 200 Tons; Mineral Aggregate in place from stockpile which includes mixing and laying 2,600 cu. yds.; and shoulder surfacing in place from stockpile 540 cubic yards.

ALTERNATE No. 2—Preparation of Cement Concrete Pavement 2.0 miles; Asphaltic Type I-1 Asphaltic Concrete Pavement Class B Wearing Course in place which includes all necessary material 4,000 Tons; and shoulder surfacing in place from stockpile 540 cubic yards.

A set of plans and specifications may be purchased from the County Engineers Office in Yakima at $4.00 per contract (No refunds for return of plans and specifications).

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check or cashiers check, payable to the Yakima County Treasurer in an amount equal to five percent (5%) of the amount bid.

The deposit will be forfeited to the County if the successful bidder fails to enter into a contract and furnish a satisfactory performance bond within ten (10) days from date of award.

The Board of County Commissioners expressly reserves the right to reject any and all bids or parts thereof.

HAROLD PURDIN,
County Auditor.
By Lois Mathus,
Deputy County Auditor.

GRADE SCHOOL BUILDING
BIDS CLOSE 10 A.M., P.S.T., AUGUST 14
Fairbanks, Alaska
NOTICE TO CONTRACTORS

Project Aaa. 50-A-317, Grade School, Fairbanks, Alaska. July 8, 1957. College Grade School, Project Aaa. 50-A-317, Fairbanks, Alaska. Alaska Public Works, Office of Territories, Department of the Interior. By (Issuing office) Thomas G. Mooney, Director, Alaska Public Works, Office of Territories, Department of the Interior, Post Office Box 1181, Juneau, Alaska. Sealed bids in single copy for furnishing all labor, equipment, and materials and performing all work for the project described herein will be received until 10:00 A.M. Pacific Standard Time August 14, 1957, in the mailroom of the Office of the Director, Alaska Public Works, Office of Territories, Department of the Interior, 123 West Third Street, P. O. Box 1181, Juneau, Alaska and then publicly opened and read aloud. Information regarding bidding material, bid guarantee, and bonds follows: Plans and specifications and other proposed contract documents are open for public inspection at the Director's office, Juneau, Alaska; at Room 5621 Interior Bldg., Washington 25, D. C.; at the Area Engineer's Office, Alaska Public Works, Room 220, Chena Bldg., 510 Second Ave., P. O. Box 1189, Fairbanks, Alaska; and Associated General Contractors of America offices as follows: Seattle Chapter, Construction Center, Third Avenue West and Harrison St., Seattle, Wash.; Mountain Chapter, 219 Benjamin Franklin Hotel, Seattle, Wash.; Tacoma Chapter, 1605 Center St., Tacoma 3, Wash.; Portland Chapter, Suite 112 Multnomah Hotel, Portland, Oregon; and the Alaska Chapter, Anchorage, Alaska; at the Plan Bureau, 2413 Western Ave., Seattle, Wash., and Builders Exchange Cooperative, 317 Builders Exchange Bldg., Portland, Oregon. A set of such documents may be procured from the office of the Director at Juneau, Alaska, upon deposit of $25.00, all of which will be refunded upon the return of the plans and specifications in good condition within twenty (20) days from date of bid opening. Each bid must be accompanied by a satisfactory bid security (certified check or bid bond) in an amount not less than 5 per cent of the total bid in dollars and cents. No bid will be withdrawn until thirty days after the scheduled closing date for the receipt of bids. The successful bidder will be required to furnish a performance bond and payment bond, each in the amount of 100 per cent of the contract price. The Government reserves the right to award a contract for the project on the basis of the acceptance of any or all of the alternates, whichever course is in the best interest of the Government. DESCRIPTION: College Grade School, Project Aaa. 50-A-317, Fairbanks, Alaska. Construction of a one story, pipe column with laminated beam and concrete masonry, grade school building containing approximately 20,000 sq. ft. Additive alternates are provided for extra classrooms. Information regarding liquidated damages (if any), payments, etc., is attached or made a part of the specifications. Bids shall be submitted on the forms furnished or copies thereof.

STATE HIGHWAY PROJECTS
BIDS CLOSE 9:30 A.M., JULY 26
Helena, Montana
NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the offices of said Commission in the City of Helena until 9:30 a.m. on July 26, 1957. The proposals will be publicly opened and read immediately thereafter.

1. **F 8(10)**—Plant-mix oiling and seal-coat oiling 7.372 miles on the White Sulphur Springs, Harlowton Road in Meagher County, involving about 1,358 tons crushed gravel; 17,877 tons plant mix; 40 hours watering; 50 units rolling; 231,361 gals. asphalt cement, 11,076 gals. liquid asphalt; 30,670 gals. emulsified asphalt; and all L. sum furnish and maintain water plant. Project to be completed in 100 calendar days.
2. **F 157(13)**—Grade, gravel surfacing, bituminous-surface treatment and drain 9.090 miles on the Miles City-Jordan Road in Garfield County, involving about 374,007 cu. yds. excavation; 656 cu. yds. gravel backfill; 13,734 mi. yds. overhaul; 20,032 tons crushed gravel; 113,317 tons uncrushed gravel; 8,240 M gals. watering; 1,359 units rolling; 54,787 gals. liquid asphalt; 54,787

gals. emulsified asphalt; 3,152 lin. ft. corrugated metal pipe culverts; 454 lin. ft. structural plate pipe culverts; 100 lin. ft. relay pipe culverts; 100.0 lin. ft. guard rail; and other items. Project to be completed in 200 calendar days.

3. S-US 19(2) — Grade, gravel surfacing, plant-mix oiling, drain, and construction of a 49.1' steel and concrete bridge on 1.442 miles on the Lewistown-Forest Grove Road in Fergus County, involving about 50,450 cu. yds. excavation; 30 cu. yds. gravel backfill; 255 mi. yds. overhaul; 22,142 tons crushed gravel; 3,548 tons plant mix; 1,229 tons uncrushed gravel; 47,658 gals. asphalt cement; 1,221 M gals. watering; 214 units rolling; 9,438 gals. liquid asphalt; 7,922 gals. emulsified asphalt; 630 lin. ft. corrugated metal pipe culverts; 3,019.1 lin. ft. concrete curb to remove; 3,119.4 lin. ft. new concrete integral curb & gutters; 280 lin. ft. treated timber piles; 176 lin. ft. concrete piles; 163.5 lin. ft. steel beam bridge rail; 19,116 lbs. reinforcing steel; 117.1 cu. yds. concrete; all L sum removal of existing structure & maintaining traffic; and other items. Project to be completed by September 15, 1958.

4. US 370(8) & S 370(10)—Grade, gravel surfacing, plant-mix oiling, seal-coat oiling, and drain 3.672 miles on the North Rouse Avenue-Bozeman section of the Bozeman-Wilsall Road and the Bozeman-Wilsall Road in Gallatin County, involving about 7,391 cu. yds. excavation; 165 cu. yds. riprap; 400 cu. yds. gravel backfill; 8,539 tons plant mix; 44,754 tons crushed gravel; 1,365 M gals. watering; 380 units rolling; 110,521 gals. asphalt cement; 20,413 gals. liquid asphalt; 16,382 gals. emulsified asphalt; 100 lin. ft. relay pipe culverts; 50 hours mechanical tamping; 105 hours blading work; 75 hours scraping work; 337.5 lin. ft. steel guard rail; 4 each drop inlets; 11 each adjust manholes to grade; all L. sum clearing & grubbing; 2,201.1 sq. ft. galvanized metal bin-type retaining wall; and other items. Project to be completed in 180 calendar days.

5. S 9(7)—Reshaping, gravel surfacing, and bituminous surface treatment on 8.840 miles on the Cardwell-Boulder Road in Jefferson County, involving about 80,456 tons crushed gravel; 1,607 M gals. watering; 392 units rolling; 47,095 gals. liquid asphalt; 47,095 gals. emulsified asphalt; 177 hours scraping work; 268 hours blading work; and other items. Project to be completed in 200 calendar days.

6. S 36(7)—Gravel surfacing, bituminous surface treatment, and drain 5.011 miles on the Drummond-Helmville-Blackfoot Canyon Road in Powell County, involving about 11 cu. yds. excavation; 100 cu. yds. gravel backfill; 44,081 tons crushed gravel; 881 M gals. watering; 219 units rolling; 26,429 gals. liquid asphalt; 26,429 gals emulsified asphalt; 46 lin. ft. reinforced concrete pipe culverts; 100 lin. ft. relay pipe culverts; and 4,487.5 lin. ft. steel guard rail. Project to be completed in 100 calendar days.

7. S 96(3)—Grade, gravel surfacing, bituminous surface treatment, drain, and construction of one 50.0' treated timber bridge on 8.067 miles on the Conrad-EastRoad in Pondera County, involving about 175,144 cu. yds. excavation; 100 cu. yds. gravel backfill; 33,470 mi. yds. overhaul; 115,206 tons crushed gravel; 4,920 M gals. watering; 874 units rolling; 43,803 gals. liquid asphalt; 43,803 gals emulsified asphalt; 2,314 lin. ft. corrugated metal pipe culverts; 64 lin. ft. reinforced concrete pipe culverts; 92 lin. ft. relay pipe culverts; all L. sum clearing & grubbing; 23.122 MBM treated timber; 0.778 MBM untreated timber; 560 lin. ft. treated timber piles; 574 lbs. structural steel; all L. sum removal of existing structure and maintaining traffic; and other items. Project to be completed in 200 calendar days.

8. S 226(1)—Grade, gravel surfacing, bituminous surface treatment, and drain 2.938 miles on the Hamilton-East Road in Ravalli County, involving about 142,829 cu. yds. excavation; 4.5 cu. yds. riprap; 175 cu. yds. gravel backfill; 10,936 mi. yds. overhaul; 36,915 tons crushed gravel; 2,860 M gals. watering; 456 units rolling; 16,015 gals. liquid asphalt; 16,015 gals. emulsified asphalt; 974 lin. ft. corrugated metal pipe culverts; 68 lin. ft. structural plate pipe culverts; 2,006 lin. ft. reinforced concrete pipe culverts; 100 lin. ft. relay pipe culverts; all L. sum clearing and grubbing; all L. sum miscellaneous to be removed; and other items. Project to be completed in 180 calendar days.

9. S 249(2)U1—Grade, gravel surfacing, bituminous surface treatment, and drain 6.409 miles on the Starr Route (Browning) Road in Glacier County, involving about 319,589 cu. yds. excavation; 100 cu. yds. gravel backfill; 66,703 mi. yds. overhaul; 84,244 tons crushed gravel; 6,471 M Gals. watering; 1,027 units rolling; 35,168 gals. liquid asphalt; 35,168 gals. emulsified asphalt; 68 lin. ft. corrugated metal pipe culverts; 1,608 lin. ft. reinforced concrete pipe culverts; 100 lin. ft. relay pipe culverts; and other items. Project to be completed in 200 calendar days.

10. S 249(2)U2—Construction of one 100.0' treated timber pile bridge over Cut Bank Creek on the Starr School Route (Browning) Road in Glacier County, involving about 960 cu. yds. unclassified excavation; 44.338 MBM treated timber; 1.486 MBM untreated timber; 1,000 lin. ft. treated timber piles; and 2,152 lbs. structural steel. Project to be completed by May 31, 1958.

11. S 319(5)—Grade, gravel surfacing, road-mix oiling, seal-coat oiling, and drain 1.675 miles on the Pendroy-Conrad Road in Teton County, involving about 21,128 cu. yds. excavation; 100 cu. yds. gravel backfill; 1,570 mi. yds. overhaul; 27,449 tons crushed gravel; 788 M gals. watering; 169 units rolling; 57,693 gals. liquid asphalt; 272 lin. ft. corrugated metal pipe culverts; 176 lin. ft. relay pipe culverts; 1.675 miles processing; 544 sq. yds. processing; and other items. Project to be completed in 150 calendar days.

12. SMP 2589—Crushing and stockpiling ¾" crushed gravel surfacing from eleven setups in Cascade, Judith Basin, Lewis & Clark, Pondera, and Teton counties, involving about 127,500 tons ¾" crushed gravel; and 111,750 ton-miles haul on stockpiled material. Project to be completed by January 31, 1958.

The above-listed quantities are approximate only.

All bid proposals shall be accompanied by a certified or cashier's check, cash, postal money order, bank money order, or bid bond in the amount of at least 5% of the bid. Should the successful bidder fail to enter into his contract and furnish a satisfactory performance bond within the time stated in his proposal, the bid deposit shall be forfeited to the State Highway Commission of Montana.

Prequalification of bidders at least 72 hours prior to the opening of bids is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission in Helena, Montana. Plans and specifications for all Federal aid projects are also on file and may be examined in the offices of the Bureau of Public Roads at Missoula.

STATE HIGHWAY PROJECTS
BIDS CLOSE 10 A. M., JULY 30
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, July 30, 1957, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below. All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalifications of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal funds have been allocated for Items Nos. 1 to 3 inclusive.

The improvements for which bids will be received follow:

1. Draining, Grading, Surfacing and Paving with Type I-1 Asphaltic Concrete on 1.718 miles of a Pierce County Road, PORTLAND AVENUE, FAS No. S-1213(1), involving about 11,128 linear feet of Cleaning and Preparing Ditches, 14,764 linear feet of Concrete Pipe, 6,460 cubic yards of Selected Roadway Borrow, 2,150 cubic yards of Crushed Stone Surfacing and Crushed Cover Stone, 30 tons of Asphalt Cement, 3,890 tons of Asphaltic Concrete, 15,810 linear feet of Asphaltic Concrete Gutter and other items.
2. Constructing Bituminous Treatment Road Mix on 7.437 miles of Thurston County Roads, MARVIN ROAD AND FIR TREE CHAMBERS ROAD, FAS Nos. S-0510(2) and S-0492(1), involving about 425 tons of Asphalt Cement, 6,250 cubic yards of Mineral Aggregate and other items.
3. Surfacing and Constructing Light Bituminous Surface Treatment and Non-Skid Seal Treatment on 1.210 miles of a Wahkiakum County Road, SUNNY SANDS WEST, FAS No. S-0579(3), involving about 2,250 cubic yards of Solid Rock Borrow, 2,000 cubic yards of Sand Borrow, 2,565 cubic yards of Crushed Stone Surfacing, Crushed Cover Stone and Mineral Aggregate, 58 tons of Asphalt Cement and other items.
4. Surfacing, Constructing Bituminous Surface Treatment Plant Mix and Stockpiling Crushed Stone Surfacing and Mineral Aggregates on 6.180 miles of Primary State Highway No. 9 in Clallam and Jefferson Counties, BLYN EAST, ET AL, a State Project, involving about 7,855 tons of Screened Gravel Surfacing, 31 tons of Asphalt Cement, 13,825 tons of Bituminous Plant Mix, 53,000 tons of Crushed Stone Surfacing, Mineral Aggregate and Reject Material and other items.
5. Draining, Surfacing, Constructing Cement Treated Base and Paving with Type I-1 Asphaltic Concrete on 3,292 miles of State Highways Nos. 13, 13-A and 9 in Grays Harbor County "J" STREET IN COSMOPOLIS TO SURTIS STREET IN ABERDEEN, ET AD, a State Project, involving about 5,965 cubic yards of Common Excavation, 7,490 tons of Selected Roadway Borrow, 6,330 tons of Crushed Stone Surfacing, Gravel Surfacing and Ballast, 73 tons of Asphalt Cement, 420 cubic yards of Crushed Cover Stone and Mineral Aggregate, 10,625 tons of Asphaltic Concrete, 1,285 tons of CTB Aggregate, 410 barrels of Portland Cement, 200 linear feet of Asphaltic Shoulder Curb and other items.
6. Surfacing with Light Bituminous Surface Treatment and Paving with Type I-1 Asphaltic Concrete on 4.365 miles of Primary State Highway No. 1 in Pierce County, PONDERS TO LAKEVIEW AND PUYALLUP RIVER TO ARDENA ROAD, a State Project, involving about 2,940 cubic yards of Crushed Stone Surfacing and Crushed Cover Stone, 121 tons of Asphalt Cement, 14,400 tons of Asphaltic Concrete, 200 linear feet of Precast Traffic Curb and other items.
7. Constructing Two Reinforced Concrete Flat Slab Bridges on 0.046 mile of Secondary State Highway No. 14-A in Mason County, CRANBERRY CREEK AND DEER CREEK BRIDGES, a State Project, involving about 2,270 cubic yards of Common Excavation, 1,300 cubic yards of Selected Roadway Borrow, 360 cubic yards of Crushed Stone Surfacing, 180 cubic yards of Loose Riprap, 84 cubic yards of Concrete, 18,800 pounds of Steel Reinforcing Bars, a lump sum bid for Superstructures (about 224 cubic yards of Concrete, 47,400 pounds of Steel Reinforcing Bars and 290 linear feet of Reinforced Concrete Bridge Railing), 2,040

linear feet of Treated Timber Piling and other items.

8. Clearing, Draining, Grading, Surfacing with Light Bituminous Surface Treatment and Constructing a Reinforced Concrete Slab Bridge on 0.232 mile of Primary State Highway No. 5 in Lewis County, RAINY CREEK BRIDGE AND APPROACHES, a State Project, involving about 10,170 cubic yards of Common Excavation., 2,400 cubic yards of Selected Roadway Borrow, 1,260 cubic yards of Crushed Stone Surfacing and Crushed Cover Stone, 8 tons of Asphalt Cement, 117 linear feet of Concrete Pipe, 1,620 linear feet of Wire Fence, 22 Guide Posts, 187 cubic yards of Concrete, 34,240 pounds of Steel Reinforcing Bars, 85 linear feet of Special Beam Guard Rail and other items.
9. Constructing a Reinforced Concrete Box Culvert and Repairing Reinforced Concrete Bridge Columns on Primary State Highway No. 3 in Stevens County, CITY OF CHEWELAH, a State Project, involving about 565 cubic yards of Structure Excavation, 100 cubic yards of Crushed Stone Surfacing, 40 tons of Bituminous Mix, 100 linear feet of Cement Concrete Curb, 35 linear feet of Steel Pipe, 50 square yards of Cement Concrete Sidewalk, 100 cubic yards of Loose Riprap, 165 cubic yards of Concrete, 38,500 pounds of Steel Reinforcing Bars, 57 linear feet of Steel Pipe Rail, a lump sum bid for Repairing Reinforced Concrete Bridge Columns and other items.
10. Stockpiling Maintenance Rock, Sand and Mineral Aggregates on Primary State Highway No. 5 in Pierce and King Counties, BLACK DIAMOND VICINITY, ET AL, a State Project, involving about 34,300 tons of Crushed Materials and other items.
11. Installing an Illuminating System on Primary State Highway No. 5 in Yakima County, RIMROCK TUNNEL, a State Project, involving a lump sum bid for Installation of Illumination System.
12. Installing Four Illumination Systems on Primary State Highway No. 3 in Benton and Franklin Counties, RICHLAND WYE, ET AL, a State Project, involving 4 lump sum bids for Installation of Illumintion Systems.
13. Constructing a Reinforced Concrete Addition to the District Office Building in Thurston County, DISTRICT OFFICE BUILDING IN TUMWATER, a State Project, involving a base bid for the Entire Improvement.

SWIMMING POOL

BIDS CLOSE 3 P. M., July 29

Chehalis, Washington

NOTICE TO CONTRACTORS

Separate sealed bids for General, Mechanical and Electrical Work will be received by the City Commissioners of the City of Chehalis at their office at the City Hall, Chehalis, Washington, at 3:00 P. M. on July 29, 1957, for the construction of a Natatorium at Chehalis, Washington; and will then and there be opened and publicly read aloud. Bids received after the time fixed for opening will not be considered.

Plans, specifications and form of Contract Documents may be examined at the office of the City Clerk, Chehalis, Washington; at the office of C. W. Fairthfull and J. W. Wilson, Architect, Masonic Building, Centralia, Washington. Plans may be obtained upon the deposit of Fifteen Dollars ($15.00).

The full amount of the deposit for one set of documents will be returned to each actual bidder within a reasonable time after the receipt of the bids and return of the documents.

Each bid shall be accompanied by a certified check or bid bond payable to the City of Chehalis in an amount of not less than five percent (5%) of the amount of the bid.

The City Commissioners of Chehalis reserve the right to reject any or all bids and to waive informalities.

No bidder may withdraw his bid after the hour set for the opening thereof, or before award of contract, unless said award is delayed for a period exceeding thirty (30) days.

By Order of the City Commissioners.
Margaret McChord,
City Clerk.

ELEMENTARY SCHOOL

BIDS CLOSE 3 P.M., JULY 23

Metaline Falls, Washington

NOTICE TO CONTRACTORS

1. **NOTICE TO CONTRACTORS**
Sealed bids will be received by Metaline Falls Consolidated Schools, District No. 57, at the office of the Architects, McClure & Adkison, 707 Sherwood Building, Spokane, Washington, until 3:00 P. M., P.S.T., July 23, 1957, for
(a) General Contract,
(b) Mechanical Contract, and
(c) Electrical Contract,
separately, for the construction of an Elementary School, Metaline Falls Consolidated Schools, Metaline Falls, Washington, and the said bids will then and there be publicly opened and read aloud. Bidders and others properly interested are invited to be present at the bid opening. Bids received after the time fixed for opening cannot be considered.

2. **BID DOCUMENTS**
Specifications, including bid and contract documents, and drawings, may be examined at the office of the Architect, at the Associated General Contractors of America, Eastern Washington Builders Chapter, Spokane Construction Council, Spokane, Washington. Bonafide bidders may obtain one set each of General, Mechanical and Electrical plans and specifications at the Architect's office upon deposit of a check payable to the Architect in the amount of $25.00 for each set of General plans and specifications and $15.00 for each set of Mechanical or Electrical plans and specifications. Should a bidder wish additional sets or parts of sets, he may obtain them by paying the the cost of reproduction.

3. **REFUND OF DEPOSITS**
The full amount of deposit for one set of documents will be refunded to bonafide bidders upon return of the documents in good condition to the Architect's office at or before the time set for opening bids. There will be no refund for additional sets or parts of sets. Planholders who do not submit a bonafide bid and do not return the documents at least 10 days before the time set for opening bids will forfeit the full amount of their deposit.

4. **RIGHT TO REJECT BIDS**
The Owner reserves the right to reject any and all bids and to waive informalities.

STATE HIGHWAY PROJECT

BIDS CLOSE 9 A.M., AUGUST 8

Portland, Oregon

NOTICE TO CONTRACTORS

Sealed bids on the following project will be received by the Oregon State Highway Commission in the Queens Room of the Imperial Hotel in Portland, Oregon, at 9:00 a.m., on Thursday, August 8, 1957. Additional projects will be advertised later.

MARION-LINN COUNTIES: North Jefferson Junction-Santiam Junction Section of the Pacific Highway. 16 structures. Federal Aid Interstate project. Construct 16 reinforced concrete deck girder bridges. Alternate bids will be received for construction of the structures by the pretensioned-precast method of construction and by the conventional poured-in-place method. Involves following approx. quantities: 900 cu. yds. struc. excavation; furnish 11,000 lin. ft. concrete piling; drive 500 only concrete piles; 450 lin. ft. 8" metal drain pipe; 7,000 cu. yds. general excavation; for the pretensioned alternate, the following: 3,100 cu. yds. Class "A" Concrete; 1,140 cu. yds. Class "A-A" Concrete; 663,000 lbs. metal reinf.; and 103,000 lbs. prestressed reinf.; or for the poured-in-place alternate, the following: 4,240 cu. yds. Class "A" Concrete; and 1,-156,000 lbs. metal reinforcement.

THE MINIMUM HOURLY WAGE RATES TO BE PAID TO LABOR EMPLOYED ON THE ABOVE ADVERTISED FEDERAL INTERSTATE PROJECT HAVE BEEN PREDETERMINED BY THE SECRETARY OF LABOR AND ARE AS SET FORTH IN THE SPECIAL PROVISION APPLICABLE TO FEDERAL INTERSTATE PROJECTS.

Prequalification of bidders will be re-

quired in accordance with the provisions of ORS 279.010 to 279.024, inclusive. Full information for bidders may be obtained at the office of the Oregon State Highway Commission, State Highway Building, Salem, Oregon. Plans and specifications may be inspected at the same place and may be obtained by eligible bidders upon payment of $2.00 for each set.

Plans and specifications may also be inspected at the office of the Associated General Contractors in Portland, Seattle, Spokane, and Boise; and at the Builders Exchange Cooperative, Portland.

The right is reserved to reject any and all proposals or to accept the proposal deemed best for the State of Oregon.

H. B. Glaisyer, Secretary
OREGON STATE HIGHWAY COMMISSION
5869—7-12

SCHOOL ADDITION
BIDS CLOSE 1:30 P. M., JULY 26
Opportunity, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Secretary of the Central Valley School District No. 356, Opportunity, Washington, at the offices of the School District, North 607 Pines, on or before 1:30 P. M., P.S.T., Friday, July 26, 1957, for the construction of an addition to McDonald Elementary School consisting of 6 classrooms of frame and masonry construction. The bids will then and there be publicly opened and read aloud.

Bids received after the time fixed for opening cannot be considered.

Separate bids will be received for the following contracts:

General (includes Mechanical and Electrical).

Drawings and specifications including contract documents may be examined at the office of the Architect, Victor Louis Wulff, 1526 West Riverside Avenue, Spokane, Washington, and may be obtained there, upon the deposit of $25.00 per set for general and $15.00 for electrical and mechanical.

The set of plans and specifications will be on file at the following places:

Construction Council, W. 933 3rd Ave., Spokane, Washington.
AGC Builders' Chapter, N. 1207 Washington St., Spokane.
Associated General Contractors, 215 W. Harrison St., Seattle 99, Wn.
Builders' Exchange Cooperative, 317 Builders' Exchange Bldg., Portland 4, Oregon.
Plan Bureau, 2413 Western Ave., Seattle 1, Washington.

The full amount of the deposit for one set of documents will be refunded to actual bidders upon return of the documents, unmutilated and without marks and annotations, within 10 days after the time set for opening of bids, but to non-bidders only if returned no later than 10 days before the bid opening.

Each bid must be accompanied by a certified check, cashier's check or bid bond with State-licensed surety or sureties in an amount of not less than five per cent (5%) of the largest bid, made payable to the Central Valley School District No. 356.

The right is reserved to accept or reject any or all bids and waive all claims or any informalities or irregularities in the bids or in the bidding.

No bidder may withdraw his bid after the time set for the opening thereof, unless the award of contract is delayed for a period exceeding 30 days.

By order of:
Central Valley School District No. 356, North 607 Pines, Opportunity, Wash.
Carl G. Lawson, Secretary.

YODER

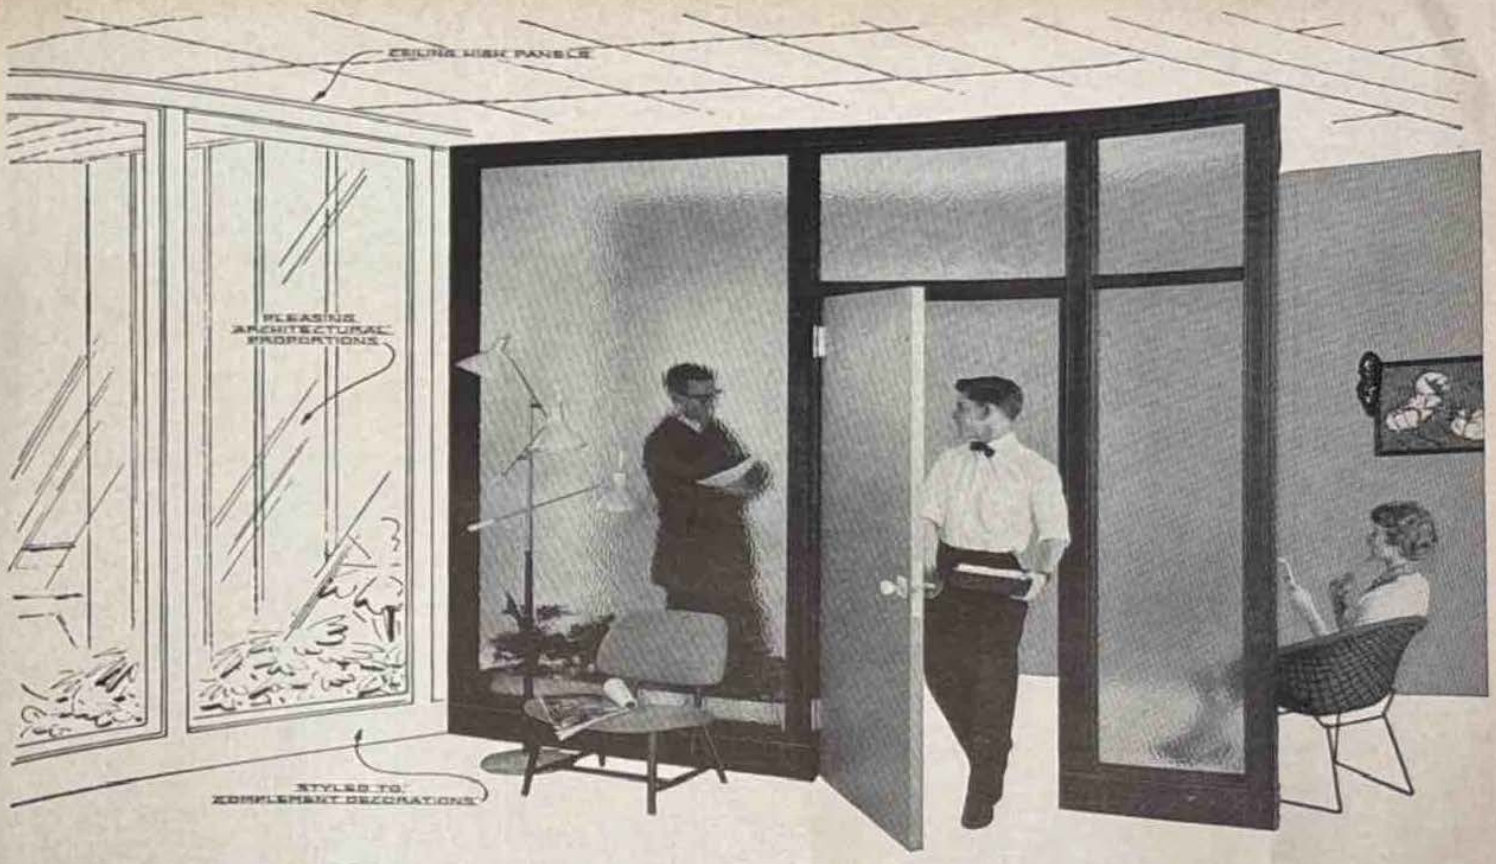
In addition to press brake fabrication described below, Fentron Industries often use the Yoder (continuous) method in which roof sections are made to any length and standing seams are crimped together for greater strength.

PRESS BRAKE

Steel roof decking...durable, strong and economical

Fentron Industries of Seattle, Washington, has found USS Steel Sheets ideal for low-cost and reliable roof deck construction. The service station canopy roof above, formed and installed by Fentron, is fabricated from 18-gauge USS Sheets by the press brake method and plug-welded every 18 inches. Sections are one-foot wide in nine-foot spans with two-and-one-half inch standing seams that interlock on installation; leak-proof against wind and water. This roof decking has withstood test loads of 55 lbs. per sq. foot, without distress . . . good overhead insurance under the snow loads in Washington winters.

Steel roof decking is durable, strong and costs less to install. Other materials require more weight, additional construction time and greater cost to equal the strength and carrying capacity of steel.



Whether you build service stations, industrial plants or homes, we'll be happy to direct you to steel decking fabricators who will provide you with additional information and specifications.

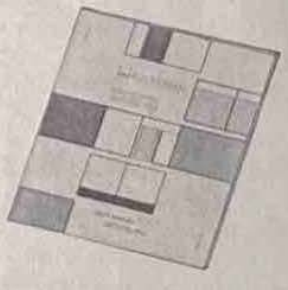
your new interior designs come alive with



MOVABLE *Hauserman* INTERIOR WALLS

Movable HAUSERMAN Walls give you new freedom to create imaginative interior designs . . . give your clients lifetime interior flexibility to handle inevitable floor-plan changes. HAUSERMAN's sound architectural engineering, expansive use of interesting glass patterns and wide choice of colors suggest applications as broad as the architectural horizon.

HAUSERMAN helps you save expensive drafting time by working closely with the architectural team to provide detailed working drawings. Time-stealing field supervision is also cut to a minimum with HAUSERMAN because there is just one source of supply, eliminating the need to coordinate the activities of several trades.

MOVABLE HAUSERMAN INTERIORS

National Lifetime Service . . . An Exclusive Hauserman Dividend

THE E. F. HAUSERMAN COMPANY
7453 Grant Avenue, Cleveland 5, Ohio
Hauserman of Canada, Ltd., Toronto, Ontario

Please send your new Data Manual 57 covering complete HAUSERMAN technical details to:

Only **OLYMPIC** *is Perfect for Redwood*

The natural beauty of redwood should be worn proudly. Olympic Stain is specially formulated to enhance and preserve this natural beauty. It penetrates deeply, protects against time and weather. Allows redwood to "breathe" naturally so there's no blister, crack or peel. Eliminates costly, unsightly paint failures. Olympic Stain is the only *perfect* product for redwood roofs, siding, entry-ways and fences. Costs so little, but you save so much! Colors: California Redwood, Sierra Brown, Yosemite Red and Redwood Clear.

For further information write:

Olympic Stained Products
1118 Leary Way, Seattle 7, Washington
Department D-3

OLYMPIC

publicity in new light

In this day of high-powered publicity, it is refreshing to work with a representative of that field who has always done a straight-forward, honest job. We think it is significant that a counsel who has represented an architectural firm, a mosaic muralist and a sliding glass door manufacturer among others should win the first award in publicity in the 11th annual Frances Holmes Achievement presentation made by the Los Angeles Advertising Women and sponsored for entrants throughout the 11 western states, British Columbia and Hawaii. And so it is with regret that we learn of Elaine K. Sewell's leaving southern California next month to do graduate work at Michigan State University's School of Journalism. We wish her well and know that she will make a valuable contribution to the teaching of public relations, which she intends to pursue upon receiving her MA in communication arts.

rain in spain hits coast

Belonging to that legion of national AIA conventioneers who went to New York City minus tickets for "My Fair Lady" (we settled for "Most Happy Fella"), we'll admit that the publicity photo of Anne Rogers and Brian Aherne of the cast playing the West Coast really caught our eye. To justify our conscience in using it, here's the scoop: the road production was the first to use Ward Leonard's new portable autotransformer type dimmer boards which "effect important power savings over the widely used resistance dimmers and, in addition, simplify and speed up wiring at each location."

when in rome

Seattle architect Fred Bassetti who writes about his sabbatical leave in Italy in this issue (p. 19) was scheduled to return to the Northwest as we go to press. He spent the year developing a building program in four cities and supervising two apartment house projects in Rome, but admits that "also time-consuming and rewarding has been an investigation into the subtleties of Italian food and drink, the delights of bathing resorts along the Tyrrhenian Sea and a careful study of Bikini bathing suits!"

Among the random photos received from Italy are the two shown here: a race track at Monza near Milan and Nervi's auditorium for the 1960 Olympics now going up in Rome.

bow down to washington?

Reporting his impressions of the University of Mexico in Mexico City in a recent issue of the Seattle Times, columnist Byron Fish made a couple of pointed observations about architecture. "A Seattleite," he declared, "should try to keep his thoughts from the University of Washington where millions of dollars in new construction also have been spent—most of it in a thoroughly uncreative way on a phony Gothic style. The style never had anything to do with the region, but 'consistency' has doomed Washington to becoming more and more a monument to architectural sterility."

Upturn noted in five-state building volume for July

Building volume took an encouraging upswing during July, climbing to a total of $212,969,959 for the five western states, a good $16¾ million higher than June. California recorded a $10¼ million increase; Washington, $4½ million; and Oregon, $2½ million. Dollar volume in Idaho and Montana dropped slightly from the June total.

Compared to July 1956, the dollar volume was down $47¼ million. Oregon and Idaho recorded slight increases, while totals in the three other states were below last year.

Dollar volume of building permits issued during the first seven months of this year in the five-state area totals $1,448,097,915. The following tabulation by states compares the January through July total with last year's volume at this point.

	Jan.-July 1957	Jan.-July 1956
California	$1,184,628,080	$1,279,265,656
Oregon	72,388,890	87,710,253
Washington	161,814,100	189,022,726
Montana	15,501,512	18,508,825
Idaho	13,765,333	14,758,231

The monthly breakdown of building permits issued by several major agencies in the area shows a considerably brighter housing picture in Seattle and King County where the dollar volume for all types of housing units was up over July of 1956 by nearly $2½ million and $1¾ million respectively. Portland's July total for housing units was almost the same as last year; Tacoma and Sacramento County dropped slightly; Orange County and Los Angeles County showed considerable decreases.

Following is the breakdown of building permits issued for new buildings and additions by several of the major agencies during July. (First number in each category refers to number of permits, not number of units.)

	DWELLING	COMMERCIAL & INDUSTRIAL	PUBLIC
Portland	59 ($ 971,985)	14 ($ 315,775)	2 ($ 855,635)
King Co.	542 (5,390,345)	51 (670,750)	9 (189,500)
Seattle	616 (4,541,590)	195 (3,105,580)	3 (784,900)
Tacoma	127 (539,770)	49 (582,750)	1 (1,000)
Los Angeles Co.	1819 (12,667,627)	354 (5,438,845)	25 (1,468,390)
Orange Co.	398 (4,781,741)	41 (519,284)	3 (62,000)
Sacramento Co.	469 (3,742,942)	72 (345,735)	8 (2,217,347)

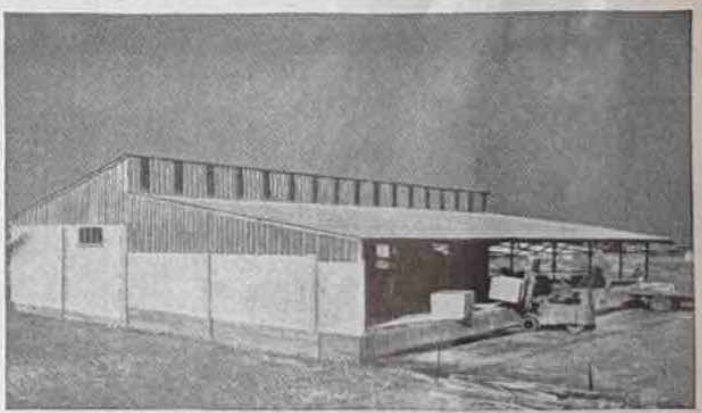
They're building with steel because it's permanent, economical, easy-to-maintain and fire-safe



FIRE PROTECTION was the number one reason this Oregon grain storage mill was built with steel. The owner lost his first mill to fire, so vowing it would never happen again, he specified USS Corrugated Roofing and Siding Sheets and USS Floor Plate for his new building. This also lowered his insurance costs.

NO COSTLY MAINTENANCE PROBLEM HERE: This new Uranium Mill on the Colorado Plateau is frequently attacked by sand and snow storms. For maximum protection and minimum maintenance, steel roofing and siding was the obvious answer for these buildings. Steel framework leaves interiors open and flexible.

MANY COST-SAVING POSSIBILITIES result from the use of steel framing and wall panels. Curtain walls, for example, are faster to erect and provide more usable floor space. Steel framing eliminates bearing walls and reduces amount of framing. The school pictured above features an all-welded frame which helped make it Utah's least expensive (per square foot) school.

THE STABILITY of rigid frame construction provides a greater capacity to withstand winds, snow, cranes and "bumps" from materials handling equipment. Steel spans also mean more clear working space. This is just what Hansen Lime & Stucco wanted for their new Salt Lake City warehouse and shipping shed . . . so they specified steel framing, and USS StormSeal roofing and siding.

For offices, plants, freight-handling, restaurants, theaters, churches, schools . . .

Give your buildings the advantage of steel

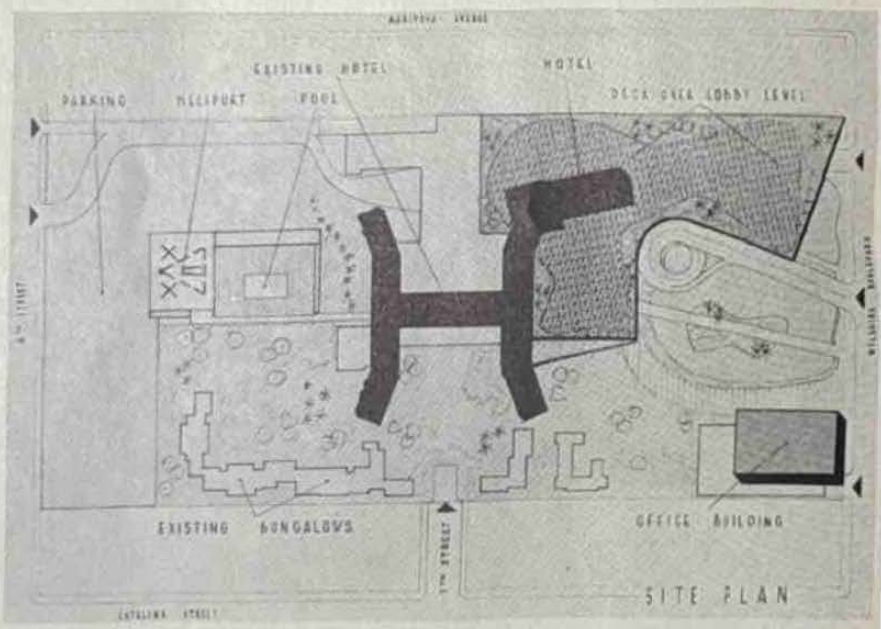
UNITED STATES STEEL

AMBASSADOR INTERNATIONAL'S total office space would reach 10½ million square feet, four times size of Rockefeller Center's. Phase 1 indicated in site plan calls for construction of 25-story, 500,000-sq. ft. office building fronting Wilshire Boulevard, 450-500 room addition to present hotel, convention-ballroom facilities, underground parking provisions, heliport and other improvements. Estimated cost, about $30 million. Phase 2 shown at left would have four office buildings and extend new hotel wing.

Los Angeles eyes $300 million-plus development



Largest commercial development in the history of Los Angeles is being planned by Schine Enterprises on 21 acres stretching between Wilshire Boulevard and Eighth Street, site of the Ambassador Hotel. An application requesting a zone change estimated ultimate cost of the long-range project at $316-350 million.

Master plan for the property, developed by Daniel, Mann, Johnson & Mendenhall, Los Angeles architects-engineers, calls for ultimate construction of seven office buildings, a new 2,000-room hotel, convention hall-ballroom facilities for 2,500 persons, a merchandise mart, a heliport, exhibition facilities, underground parking and attendant facilities.

G. David Schine has announced that the project, to be known as Ambassador International, will be built in several phases to provide a logical continuity to the further development of the entire Wilshire area. Until the final stages, the existing hotel, rehabilitated and improved, will be integrated into the plans.

Addition to the hotel would extend from the northwest corner of the building and contain a 32-story tower consisting of luxury suites as well as 450 additional hotel rooms. Rising from the Wilshire Boulevard entrance would be a concrete ramp, placed over a proposed lake and leading to the new lobby, with a deck above to provide recreational facilities.

Integration of the present hotel with the new wing would be brought about through an exterior wall treatment in character with the contemplated construction. One of the office buildings is planned to connect to the hotel.

Marin County gives FLLW bad time and vice versa

A finalized (by contract) romance between Frank Lloyd Wright and California's Marin County Board of Supervisors almost went on the rocks when a letter written by Bryson Reinhardt, a San Rafael salesman, was read to the board, charging the architect with being a "Communist sympathizer."

"Oh, rats," snorted Wright, as he stood up, waved his cane and headed for the door. "This is an absolute and utter insult and I will not be subject to it. I am a loyal American and people will have to take me as I am."

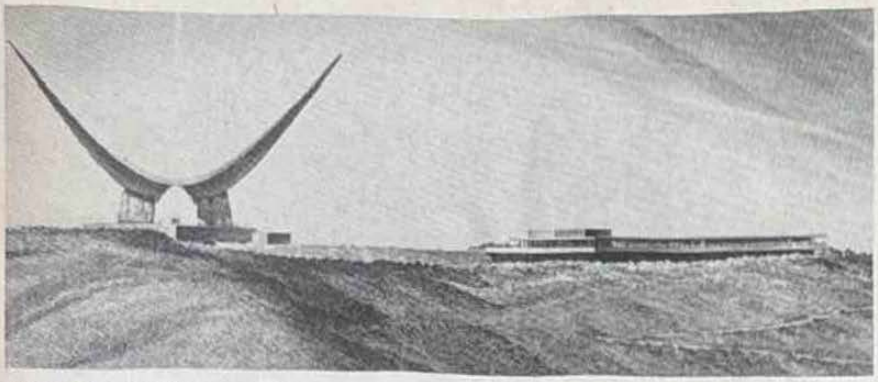
He stalked from the chambers and county officials momentarily feared their effort to get Wright to design an $8 million civic center had failed. Later, however, he agreed to visit the proposed center site north of San Rafael with the supervisors.

The Reinhardt letter was a seven-page affair, but county clerk George Jones had time only to read the first sentences when Wright exploded. Reinhardt said he based his accusations on information from J. B. Matthews, New York, who resigned in 1953 as staff director for the late Sen. Joseph McCarthy's investigations subcommittee.

I'm saving you up to $24 on every shower installation!

Yes, now your plumber installs a Dura Steel DURACEPTOR porcelain shower receptor just as easily and quickly as other standard bathroom fixtures. And you get a leak-proof, good looking installation to last a lifetime.

You save installation costs by avoiding "mopped in" pans . . . and special construction or reinforcing. There's a style, modular size and color for every bathroom plan that accomodates glass, tile, plaster or hardboard walls. Meets W.P.O.A. and Uniform Building Code standards.



Write or phone for A.I.A. literature and name of distributor. Dura Steel Products Co., 1774 East 21st St., Los Angeles 58, California.

LIFETIME SHOWER FLOOR

MONUMENT WOULD BE PLACED on very top of island, presenting dark silhouette by day and, with its underside brightly lighted, white silhouette by night. Jury recommended that small meditation chapel be included in memorial.

Seattle firm wins Corregidor-Bataan competition

Winner of the Corregidor-Bataan Memorial competition is the Seattle architectural firm of Naramore, Bain, Brady & Johanson, whose design of twin parabolic concrete shells was selected over nine other finalists. The two curved slabs, 500 ft. from tip to tip, would be joined at the perimeter by prestressed edge members and supported on a pair of 54-ft. pylons, which the architects suggest could be subjects of a sculptural competition.

Because the monument will be visible from the airlines into Manila, the top would be surfaced in colored mosaic. This surface also would be accessible to visitors who could climb up through the base pylon to viewing platforms on either side. It also would be possible to provide steps up the center of each shell to the apex points.

The monument by its form will serve as a catch basin for rainwater, which may be stored for domestic use as well as for reflective pool requirements.

The architects explain that the double form of parabolic concrete shells "is essentially the shape of outstretched arms, or of simple outstretched hands, an inherent form of hope and supplication universally understood. The double form can also symbolize the East and the West, each a separate and distinct entity, yet each equally striving to the highest point; each held to the other by an encircling bond without which the structure of their civilization would collapse, even as the structure of the monument would collapse without the tie between the two.

"The opening, or eye, between the two portions of the monument, with its single vertical unwavering beam, protected by the encircling monument, symbolizes the singleness of purpose, shared by both East and West. The shaft of light also symbolizes the brilliance of mutually shared ideals and hopes, and also by its transitory quality emphasizes the need for constant care and nurture of these ideals and hopes."

The jury, headed by MIT's Pietro Belluschi, found the winning design "to possess sculptural qualities of a high order, to be a simple form easy to remember, to admire and to love; it composed well with the shape of the island and it had the right scale." And in the end the jurors believed that "it had spiritual power and its meaning did not need to be explained any more than the Washington Monument needs to be explained."

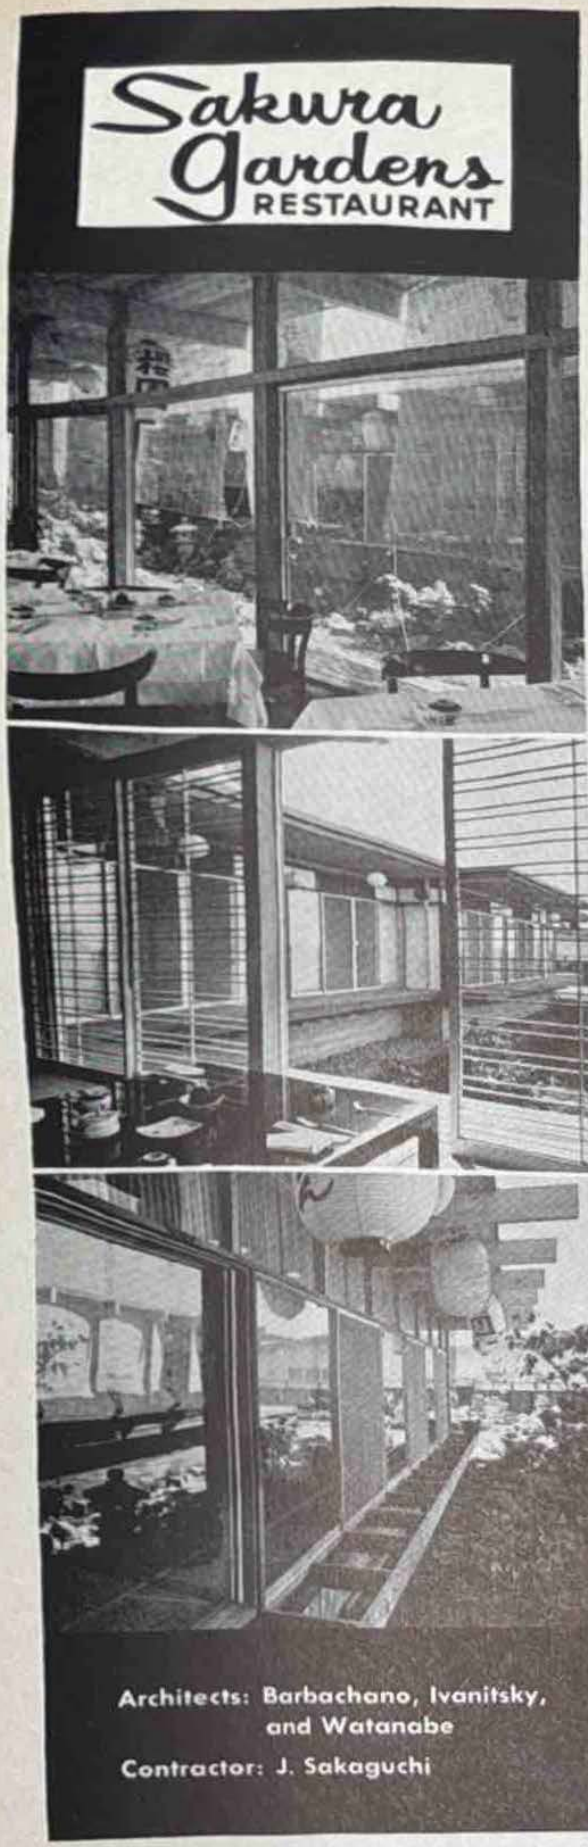
Other West Coast architects invited to participate following an open competition were Anshen & Allen, Gardner A. Dailey and Donald Powers Smith, all of San Francisco, and Paul Thiry of Seattle.

Seattle HHFA office gets regional status

Long-sought regional status has come to the Seattle office of Housing and Home Finance Agency in all fields except urban renewal, eliminating the routing of its affairs through San Francisco for further processing. New title for Seattle office head Lindley R. Durkee is director of Northwest operations, which encompasses Washington, Oregon, Montana and northern Idaho.

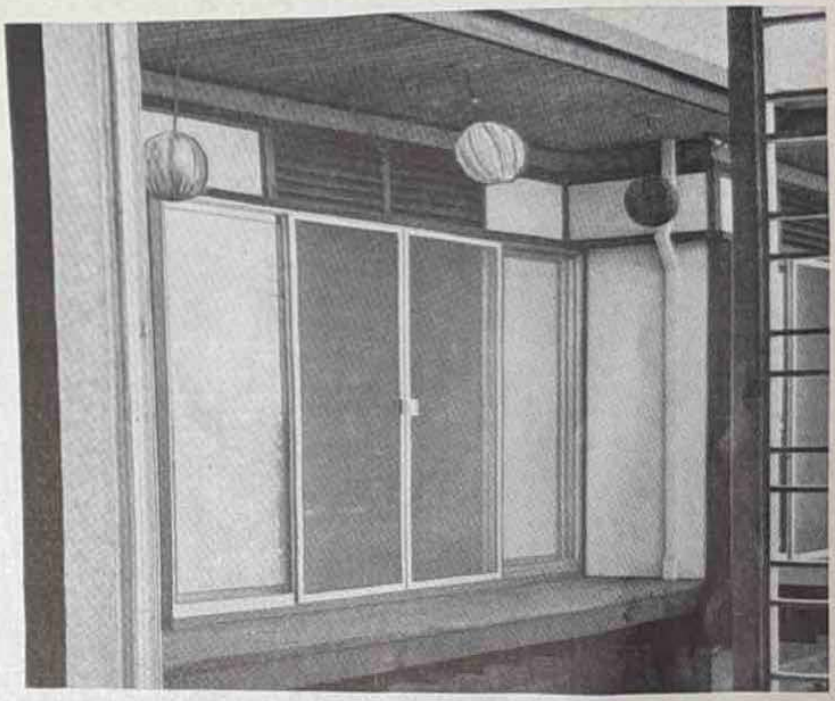
DURKEE

Durkee also has been elected to a second term as vice president of the western region of the National Society of Professional Engineers. He is a past president of both the Washington Society of Professional Engineers and the Seattle chapter. A graduate of Montana State College, Durkee holds an honorary doctorate in engineering and public administration.



Briefly noted . . .

• Oregon will celebrate its 100th anniversary as a state with a Centennial Exposition and Trade Fair to be held in Portland in 1959. The Oregon legislature has allocated $830,000 for the event, $500,000 of which will be used to rehabilitate the Pacific International Livestock Exposition site in north Portland for the fair. The Centennial Commission had hoped that the city's proposed Exposition-Recreation Center or its proposed National Guard Armory would be ready in time for the event, but both have been beset with delays.



• A proposed $51 million-plus cultural center in downtown Los Angeles has run into a red light, with the county's Board of Supervisors accepting its citizens advisory committee's recommendation that contemplated financing of the facility is not advisable at this time.

• Methods of developing an expanded housing program to meet the nation's present and future requirements will be explored when home builders and building materials manufacturers meet in San Francisco September 12. The conference will highlight the fall directors' meeting of NAHB.

PROJECT PREVIEW

SIX-STORY ADDITION to Rickey's Studio Inn Garden Hotel at Palo Alto, Calif., will rise from depressed water garden extending under first floor. Access to lobby and free-standing steel and glass elevator enclosure will be via curved bridge leading to garden. Each floor will have 11 rooms, entered from balcony running along windowless rear side. Architect: Ernest J. Kump.

TOTAL BUILDING AREA of project being planned for Greater Renton Shopping Centers, Inc., will exceed 60,000 sq. ft. with more then 1,000 ft. of frontage on Sunset Boulevard in Renton, Wash. Center will include 16,000-sq. ft. supermarket, drug and variety stores, 16-alley bowling facility and service area. Architects: Johnston-Campanella.

BOURNE DUAL-FIN® ALUMINUM WINDOWS

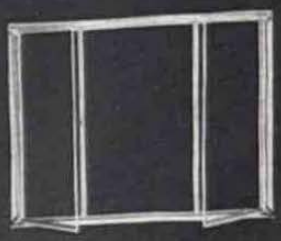
Weathertight! Beautiful! Permanent! Economical!

Even a hose can't force water through Bourne Jalousies!

EXCLUSIVE, PATENTED DUAL FIN CUTS INSTALLATION COSTS—KEEPS OUT WEATHER!

Bourne's patented Dual Fin is a ¾" integral extension of the extruded aluminum frame, serving as a nailing flange in frame construction or an anchor flange in masonry construction. Any Bourne Window can be plumbed, squared and installed in five minutes. Exclusive capillary weather seal around all vent openings keeps out wind, dust and rain. Bourne has the right frame for every installation. Architects who specify Bourne Dual-Fin Windows assure lifetime satisfaction.

WRITE FOR NEW ILLUSTRATED CATALOG



This new 16-page Bourne Dual-Fin Window Catalog tells the complete Dual-Fin story, with size diagrams of all four styles of Bourne Aluminum Windows, and complete installation details. Mailed promptly on request.

DEALERS! ASK ABOUT THE PROFITABLE BOURNE FRANCHISE!

M.I.T.'s dean of architecture speaks about the profession in terms of where it's been and where it's going

A new century of architecture

by PIETRO BELLUSCHI, FAIA

ARCHITECTURE, the theater of human activity, to which our happiness and well-being are so closely attached has changed in scale and visual meaning. The old architectural traditions have been questioned and found inadequate. The kinds of peaceful satisfying environment which existed in past centuries has given place to a complex and confused agglomeration of structures executed in a manner and on a scale difficult to comprehend or to love.

One of our most cherished machines, the automobile, has wrought havoc within our midst. Seventy million, soon 100 million of them, using up and demanding enormous amounts of land, killing, maiming and patronizing the pedestrians, riding high over our communities bringing congestion and blight, are forcing us to ask whether the city itself can be saved as a social entity. Not the city alone, but the whole visual world brought about by modern man's growing arsenal of technology has been up to now an insult to man's own nature. We see mostly disorder and ugliness everywhere, the obvious signs of a society still in a state of transition, a society which no longer places value on permanence, therefore on grace, because it assumes that improvements brought by a still advancing technology will continue to produce obsolescence.

There are now 170 milion people in the USA. The next 100 years may well see double that number, most of them living in urbanized communities. The amount of land used for this expansion will be many times the present one. In terms of future patterns of life, this is a frightful prospect which makes obsolete the conventional image of urban life on which present political boundaries were established and upon which even now many of our important decisions are made. The importance and the urgency of what must be done to guide mankind in this new century of growth staggers the imagination and gives all of us a feeling of inadequacy.

Are we architects prepared for the enormously challenging task which is ahead of us? I wish I could please my audience by assuring them that everything is going to be all right with the profession, that it is ready and raring to go, but I hope you will not think me rude if I should express some doubts.

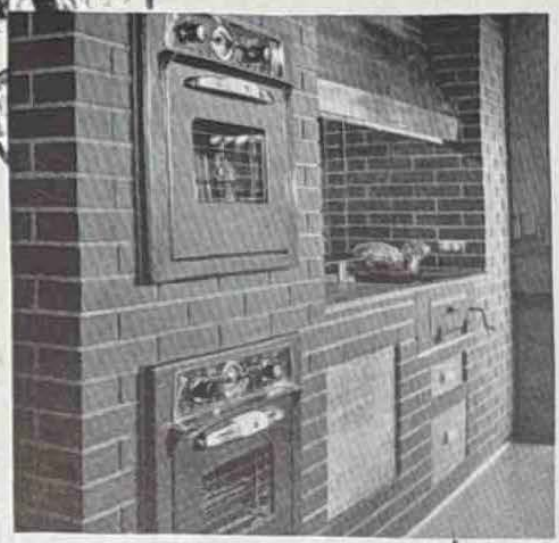
So much has been written, thought and argued in the last few decades about architectural expression by the practicing man, the critic, and the layman, and it covers such a large variety of views and opinions, all containing some portion of truth, that it would be impossible for me to make final statements and to avoid confusion and contradiction.

I may be on safer grounds if I tried rather to review the role which our profession has played in the past and the one it must play in the future. The architect is many things to many people and the standards by which his performance may be judged by his peers and by society are not easy to define.

We can say that in these last 100 years the architect has searched for cultural value in a world progressively dominated by the machine. Almost half of this time was marked by conflict between those who identified those values with the classic or romantic and humanistic ideals of the past and those who would search first for the true nature of our age. That conflict is being slowly resolved, but the search now is for the ways of again expressing our humanity against the complex facts of our era, a revolution in effect of the meaning of culture in a fast-changing society.

I cannot help but feel that the changes which have taken place in architecture during the last 100 years when past imitations and revivals were tried, found inadequate and in the main rejected by our profession were but a prelude, a clearing of the decks so to speak, for a vastly more important or significant task: the reshaping of our physical world, the rebuilding of human communities in a way which may respond to a vastly changed set of circumstances. It is in this larger context which I like to raise the vision of architecture for the next century. It is here that the profession will be asked to make its greatest contribution. It is here also where the profession has most conspicuously failed up to now. It would be unjust to say that our profession alone is to blame and it would be unfair also to state that it is completely unprepared for the task.

Through many agonizing reappraisals, the modern architect is slowly becoming a vastly different kind of man from the one whose image we have so long held. He is more open-minded, more able to work with others; less emcumbered by preconceived ideas of what a form should be, less self-conscious about being tasteful and more likely moved to do what is feasible and significant. He is placing less emphasis on cleverness, on style, on novelty, and more on good performance and appropriateness to purpose—two virtues which do not exclude joy and the happy feeling which all good things give to human beings.



The architect is the environment specialist; no longer obsessed with the romantic idea of self-expression, but rather with the idea of learning to see and understand. From nature he is learning to see the enormous variety of structural forms which are possible; from science he is learning how to apply his skill and ingenuity in finding materials and methods which may enable him to use similar ones for his construction; from many fields of engineering he is learning how to make those forms stable in compliance with natural physical laws; from industrial methods he is learning directness of solution and economy of construction. Research in many

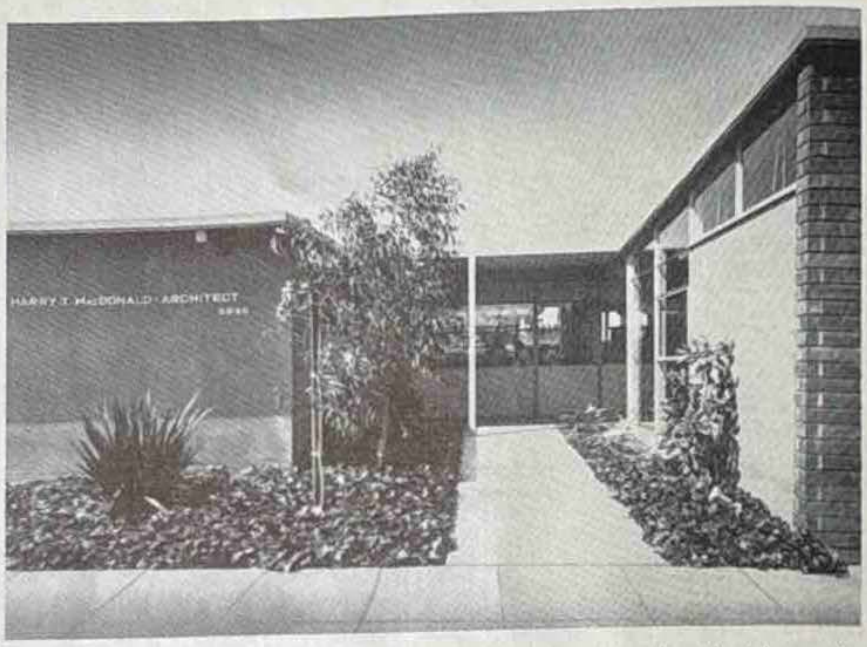
Where architects hang their hats

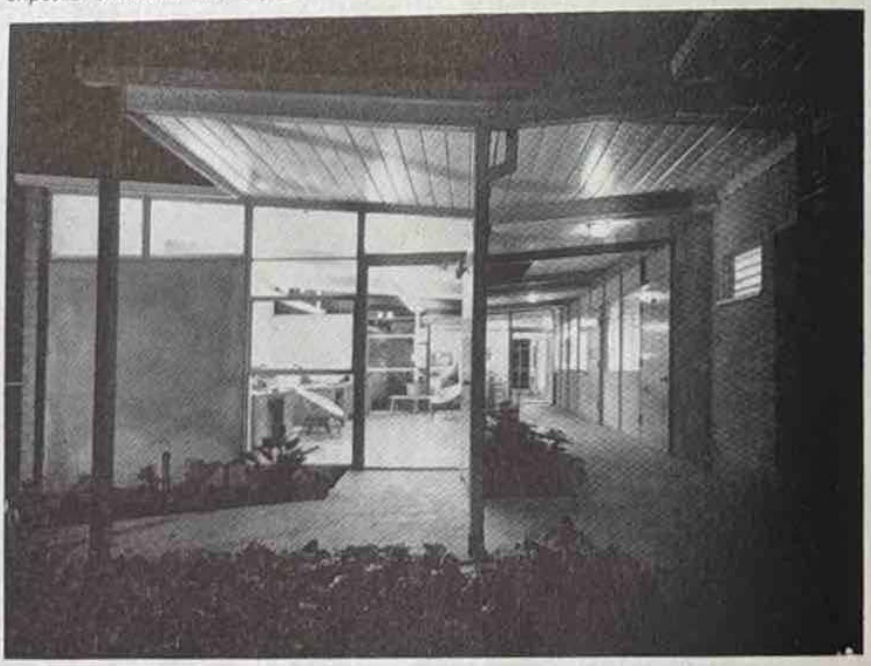
HARRY T. MacDONALD

Los Angeles, California

THROUGH the honest and unpretentious use of common building materials, the architect has designed an economical project, including two rental units which can serve as future expansion for his practice. The 1,966-sq. ft. structure was completed at a cost of $11 per square foot.



To take advantage of available natural light, the structure was planned with maximum glass areas which are shielded from glare by a roof overhang on the south and fixed redwood louvers on the west. A tall hedge at



the north wall shields the drafting room from secondary reflection glare. Ceiling light fixtures over critical work areas supplement daylight when necessary.

Construction is of exposed post and beam in modular pattern. Cement asbestos board is used to sill height below windows. Exterior is tan stucco, red brick and blue-green exposed wood; interior walls are buff and lemon yellow. Ample off-street parking is provided.

Structural engineer was S. B. Barnes; mechanical engineer, Storms & Lowe; electrical engineer, Clayton T. Gibbs; general contractor, J. H. Kuhl & Sons.

ON CORNER SITE, building is located at intersection of business and residential street. Its appearance from main boulevard has pleasant yet efficient character. Two solid walls of exposed brick and stucco protect offices from street noises.

A partner in the firm of Bassetti & Morse on an Italian housing mission gives a first-hand report on building techniques and design

by FRED BASSETTI, AIA

An architect's sabbatical leave in Italy

BEING IN ITALY for an extended stay as an architectural consultant has provided an exceptional opportunity to study at leisure, not only ancient buildings along with the medieval and renaissance structures, but also to reflect unhurriedly about today's European building methods, design philosophies and city planning concepts.

This sabbatical year, which is being taken away from architectural practice in Seattle, is being spent developing a building program in Italy. It consists, in one part, of the construction in four Italian cities—Vicenza, near Venice, in the north; Salerno, just south of Naples; Palermo, in Sicily; and Sassari, on the island of Sardinia—of so-called pilot housing developments. The program is an attempt to show by good example how housing can be built better and for less cost. Since we are only in the planning stages now, the success of our experiments in an economic sense has not yet been established.

The other part of our program lies in the design and construction of two small experimental apartment houses here in Rome totaling about 80 units. While the pilot projects are scattered throughout the country like seeds which we hope will bear fruit by stimulating others to do better, the Rome project is to be more experimental in a technical sense. We hope that it will be influential among architects and engineers who will be kept informed and invited to follow the course of construction.

Building conditions here differ vastly from ours, not only in ways easily forseen, but also in the unexpected and the unexplainable. As always, the strongest influences are climate and materials, then architectural and engineering attitudes, which are often themselves swayed decisively by the cultural climate and traditional heritage of the country. Finally, and sometimes the controlling factor, are the financial considerations which include the relationship between wage rates and material costs as well as credit policies and tax structure.

Probably the fact best understood in the United States about building in Europe and particularly in Italy is that it is based on masonry and reinforced concrete rather than on wood or steel. But it is not a use of masonry as we know it generally and there have been countless experiments with earth materials, looking toward better and cheaper building. The most successful of these has been the use of prefabricated and often prestressed clay tile joists, beams and whole clay tile floor structure roofing systems. At least 90% of European floor strucures are built this way.

This emphasis on finely calculated structure comes about because of the relation between the cost of labor and of materials, which relative proportion is the reverse here of what it is at home, materials being expensive and labor cheap. Cement and steel cost about the same as in America but workmen's wages are between eight and ten times greater in the latter. A journeyman bricklayer, for example, gets 247 lire per hour here, about 38 cents! He works at a fast clip, too, eight hours a day, six days a week being about a minimum schedule.

As far as construction methods and techniques go, the custom here is also quite different from American practice. Primarily there is a lack of machine tools because again, machines are costly and labor cheap by comparison. For instance, very little concrete is made readymix, almost all being mixed on the job as is all mortar.

The mortar is made from lime and "pozzolana," a native red earth plentiful in central Italy. No sand is used and the pozzolana is ground on the job in a small machine consisting of two or three heavy rollers rotating on a flat bed and crushing the mixture of earth and water until powdery smooth. Then a laborer hollows out a shallow depression, builds up dirt banks around it and in this crude container mixes his mortar by hand. Why bother with a mortar box? No sand is needed since the pozzolana and lime combine chemically with the water to make a first-class hydraulic

LOW COST HOUSING PROJECTS in various sections of Rome are illustrated on these two pages.

AN ARCHITECT'S SABBATICAL LEAVE IN ITALY

cement. The Romans discovered this toward the end of the Republican period and made a sort of concrete with it using "tufo," a common volcanic rock, as the aggregate.

Materials handling on the job is done not with elevator hoists but almost entirely with a "gru" or traveling crane. It does most of the work horizontally as well as up and down, the operators being amazingly quick and versatile, picking up a load of brick or concrete at one end of the lot, hoisting it up, over and halfway down the other side of the building from where the crane stands in a matter of seconds. Motorized wheelbarrows and the like are practically unknown and the huge cranes with their great, counterbalanced tops are a sort of do-it-all highly prized by the European building fraternity. Of course it must be kept in mind that the bulk of their construction here consists of 5- to 10-story apartment buildings built in groups of two or more together, which circumstance adapts itself well to the use of a gru.

As for finished wall materials the long tradition still continues in an almost universal use of stucco outside to cover rough brick, clay tile or tufo and plaster inside. In bathrooms and for exterior walls in more pretentious buildings, glass or clay mosaic tile is used to great advantage.

Regarding architectural design there are both strong differences and evident similarities with the recent work in the United States, the latter being easier to illustrate than the former. The basic similarity lies in the fact that in Italy, as elsewhere in most of the Western world, a majority of the important building commissions are given to architects who are business men first and designers second. Now, after 12 years of architectural practice, I am first to admit, even to assert, that an architect who is to practice in his own name must be a businessman to some degree if he wants to survive. But the result of putting the business part first is that inspired work rarely gets done. Only seldom does one happen upon a first-rate building, one with a spark of creative imagination or one reflecting an unquenchable will to avoid fashion and build something genuine.

When these rare exceptions are found they are worth studying. There comes through a spirit and vitality that still shows respect and sound understanding of the great history of Italian architecture. However, the last war had such a catastrophic effect on the whole of Italian life that there was an almost complete break with the past economically and politically and a somewhat lesser one culturally. While creative design had been stifled under Fascism for 20 years, it was suddenly liberated about 1944 and the result was largely what might have been expected—unbridled license.

Other important factors to consider in any comparison between the American and the European building complex are construction financing, bidding procedures and most important from an overall viewpoint, city planning.

The cost factor is of absolute importance in at least 80% of the work and Italian architects also have to struggle to meet a budget. But the significant fact is that different parts of the building are cut in order to meet the budget than is the case back home. Where we will use asphalt tile on a concrete slab for a bottom-of-the-barrel job, in Italy the designers would never consider such a thing. They do not think a slab-on-grade is satisfactory and will build a reinforced, tile-joist supported slab above the ground and then will be satisfied with nothing less than a ground and polished terrazzo surface even for the very lowest cost work.

Savings will be made by eliminating kitchen cabinets rather than by giving up the ubiquitous bidet. They will leave out a hot water tank instead of cutting down on the size of their rooms. They will practically delete the whole heating system in large apartment buildings in order to have at least one, but more likely two or three, balconies opening out from each apartment.

In a few cases quality gets a break and the fine craftsmanship of which these people are capable comes through. Particularly noticeable are the absolutely perfect cabinet work, the tile setting—long an Italian specialty—and masonry work of all kinds. Real glory shines in their best materials: stunning marbles, onyx, porphyry, alabaster—about all there is of value under this poor peninsula's stony skin. Combine these materials with the fine workmanship to be had at low cost, add a dedicated architect and the result is a building which will delight the world for centuries. How will I ever again be able to stand

TYPICAL CONCRETE FRAME STRUCTURES with unit masonry (either hollow tile or "tufo") in filling—and balconies, of course—are seen at right. In foreground below is "little market" open air style.

green 2x4s and plasterboard?

As for financing, the situation is tough. Money for investment is scarce. Let alone the last war and inflation, the Italians had already lost everything in countless earlier wars and invasions, and especially in the centuries-old struggle between the Guelphs and the Ghibellines. What little capital they do now have is largely eaten up by the terrific rates of interest. The basic rate starts somewhert around 6% but charges and discounting soon build it up to 12 and even 15% for long-term mortgages. Even then they complain that money is not available. Fortunately the lira has been one of Europe's stablest currencies in the last few years. Therefore this problem should very gradually cure itself as demand for building money slacks off and supply catches up—if they can manage to control their population problem!

Bidding practices are so odd and difficult to comprehend that it will probably take another six months to understand and report them accurately. So only one specific one will be mentioned here, that used by Ina-Casa which is the largest single building organization in Italy and a semi-public agency. When it goes out for bids to a selected list of from eight to twelve firms, Ina-Casa establishes a maximum figure over which no one is allowed to go and still have his bid considered. If the potential bidder feels that the sum allowed is too low, he simply does not participate. The bids obtained in this way are then tabulated and that bid closest to the mathematical mean — the point exactly between the high and the low—is the one selected.

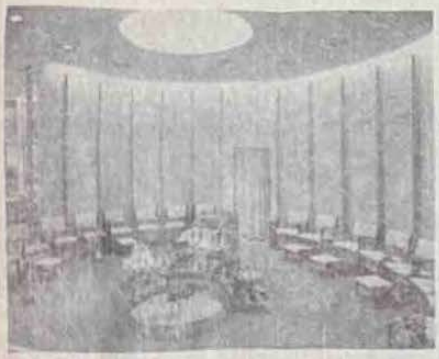
The reason for this, as explained to me, is that the agency thereby gets a competent contractor at a fair price. The incentive to bid extremely low to get the job is not present, ensuring good workmanship, but whether this is the actual result in practice I haven't as yet determined. This agency is now beginning its second seven-year building program and is continuing this bidding system.

The final point of particular interest in this crazy-quilt of feverish building and designing activity is the status of city planning theory and practice. At first sight an architect visiting here will be completely overcome by the widespread violation of good city planning principles and will promptly conclude that the Italian architects and planners have holes in their heads. This isn't true.

The politicians have the Swiss cheese heads, because the abominably laid-out and overbuilt areas on the outskirts of most or the large Italian cities are about 80% a beautiful example of speculative profiteering run riot and perhaps 20% legacy from pre-war Fascistic planning. Some of the overcrowding of eight- and ten-story apartment houses can be forgiven as a result of the frantic rush to build as soon as military occupation was over. But most of it is the bitter fruit of non-understanding, non-concern or even worse, actual involvement on the part of government officials.

If these officials did not understand, the architects are certainly partly to blame for not informing them. But, perhaps as a reaction from the early postwar failures, the design professions today are doing a magnificent job of informing the whole educated classes as to the principles of good city and neighborhood planning and the overriding need for reform in all fields of building legislation. As a result of their activities in this field Urbanistica, the leading planning magazine, is now sold by practically all news and magazine dealers and is actually bought by the public at large despite the relatively high price of 1500 lire or about $2.40. It is a remarkable review, probably the leading one in the world today, largely due to the wisdom of its founder, the no less remarkable Italian industrialist Adriano Olivetti.

Basic principles underlying most city planning thinking here, as elsewhere, is the reorganization of the city structure to remove the present intolerable conflict between pedestrian and vehicular traffic. But equally important in Italy's thinking is the need to humanize and rescale our urban environment by thinking of the people first and the automobiles second. Her hope is to counteract the trend toward closing oneself off from the community and into the home, family by family around the TV, by making available for community use more attractive gathering places for groups of families.



The Italian public square is, of course, an age-old institution, but there is a new emphasis on the need for newly conceived neighborhood

Meier & Frank's
Salem, Oregon

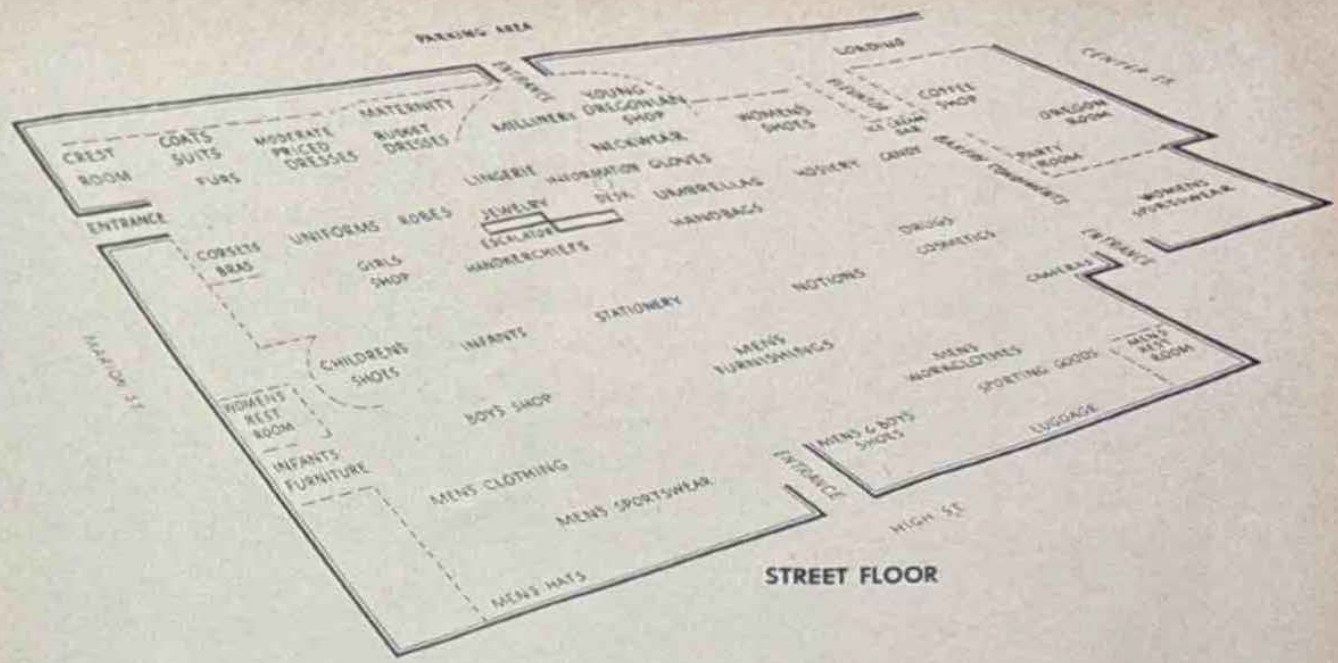
418,000 sq. ft. of 'total design'

SPECIAL DEPARTMENTS such as children's shoes are clearly defined in massive selling area.

"MEET ME UNDER THE CLOCK," long a byword with Meier & Frank shoppers in Portland, now can be heard in Salem.

RESTAURANT IS DONE in native woods, complemented with Oregon murals and foliage.

REQUIREMENTS OF PLACING great quantities of goods in pleasant and convenient surroundings held the key to the design of this full block department store in downtown Salem. The two-story $5 million plant, with mezzanine and a 700-car parking facility, houses the largest expanse of merchandise on one level in the Pacific Northwest.



Through a variety of techniques and materials, departmental intimacy has been maintained for many sections, while harmonizing with the overall plan. In employing what they call the "total design" concept for 75 service and selling departments, the architects developed not only the details of the building itself but all furnishings, fixtures and interior appointments from the color of the walls to the shape and size of door handles. The fixtures of different hardwoods with colorful panels of plastic veneer are designed to carry the maximum amount of stock on the selling floor.

The client desired that particular attention be paid to facilities for its nearly 500 employees who, regardless of where they are stationed in the store, enjoy year-round controlled temperatures as well as the customers. Good lighting is found in all workrooms and behind-the-scene areas and cheerful colors help to relieve monotony wherever possible. A central food kitchen services both the employees' cafeteria and a public restaurant and coffee shop. A lounge and locker space also are provided for personnel.

Exterior of the reinforced structure is of Roman brick in oyster white; mosaic tile in white, yellow and gray; supporting columns of the store front and garage tiers in yellow. A wide expanse of glass highlights the main entrance. Original silver birch trees in the area have been retained and additional ones have been incorporated in the landscaping.

The double-spiral ramp garage, which reaches the full height of the building, gives patrons immediate access to the floor upon which they desire to shop. Elevators and stairways also lead from the roof deck to all shopping levels. The parking facility has access and ingress on the three streets which flank the structure. The lower level has a will-call station where purchases can be picked up.

In all there are seven public entrances to the store—four on the ground level, each marked by special design tile in alternating colors on the sidewalk—so that the shopper, whether arriving by car or by foot, can reach the desired destination in the shortest possible time. Automobile approaches are free of truck traffic, with the installation of an off-street dock for receiving and deliveries.

Architects

HOFFMAN CONSTRUCTION CO.
VIESKO & POST
General Contractors

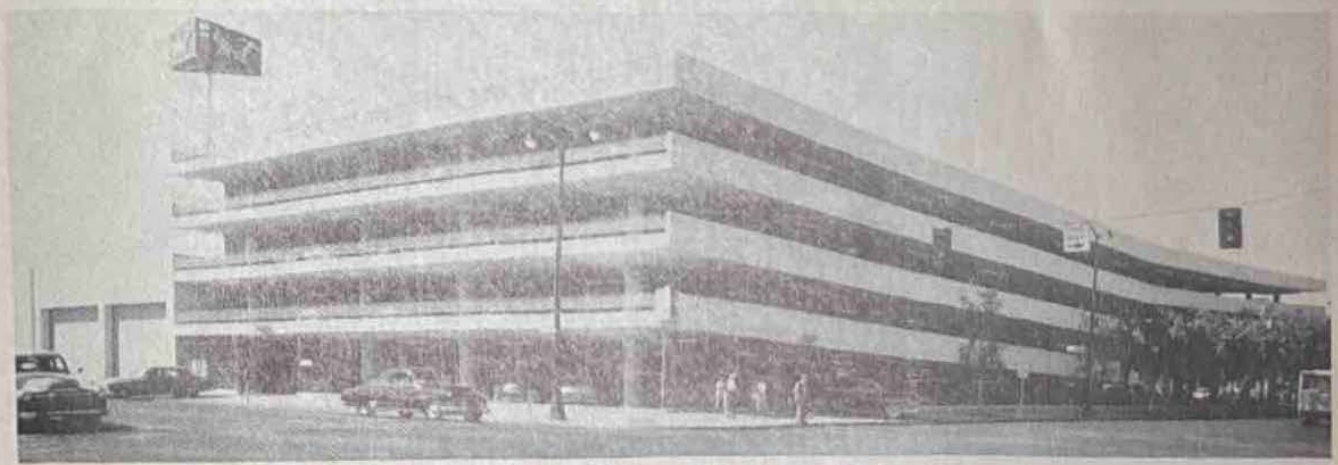
OUTLINE SPECIFICATIONS

Type of Construction: Flat slab reinforced concrete and structural steel supplied by Bethlehem Pacific.

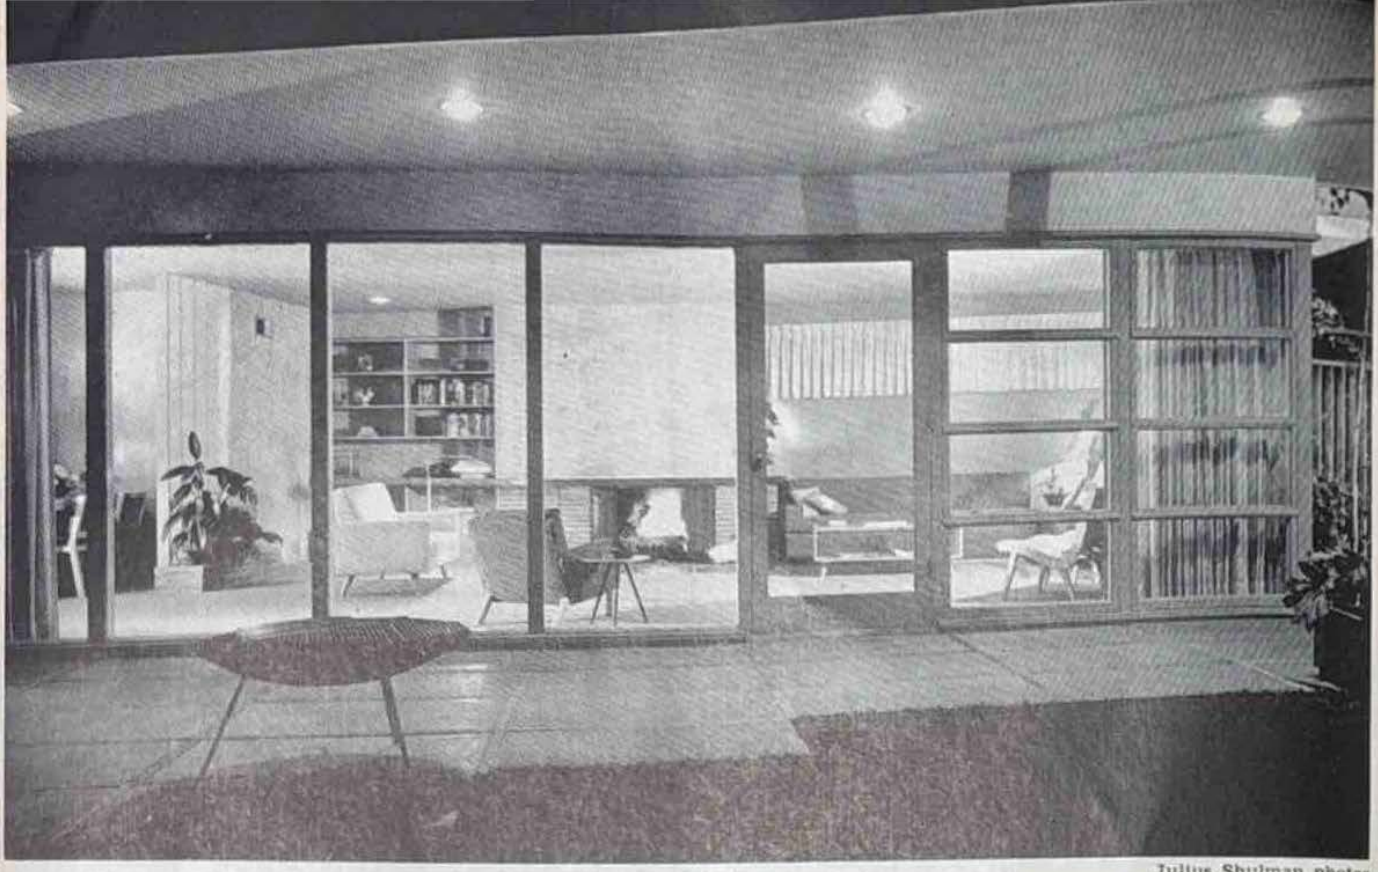
Exterior Walls: Reinforced concrete, straited Roman ruffle brick, mosaic tile and plate glass.

Doors: Glass in aluminum frame, exterior; some flush wood, interior.

Floors: Concrete slab covered with rubber, cement, ceramic, asphalt and vinyl tile and custom-designed carpeting; special design tile in alternating colors at sidewalk entrances.



Interior Walls: Paint, wallpaper and stone on selling floor surfaces; redwood, wormy chestnut and light walnut paneling in special departments and restaurant.

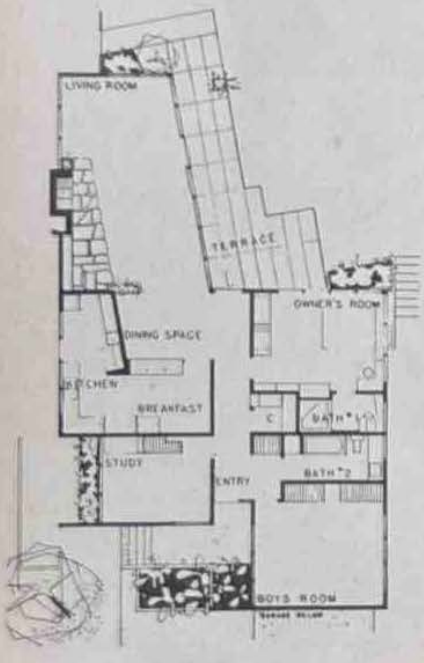


Total Area: 418,000 sq. ft. (183,000 in store; 235,000 in parking garage).

Total Cost: $5,000,000 (construction and land).

Date of Completion: October 1955.

CONCRETE AND STEEL MESH GUARD RAILS surround each parking level. Painted exterior becomes integral part of total plant. Garage parks 700 autos.



LIVING-DINING AREA faces garden-terrace, is completely free of cross traffic.

RAINS-McLELLAN CORP., Contractor

MASTER BEDROOM also looks out to terrace, has easy accessibility to all parts of home. Built-ins include bed and shelf cabinet headboard, dressing table, dresser drawers, wardrobe and storage shelves.

Garden-terrace lends space and surprise

THE ARCHITECT wanted to build his own home on a hillside lot which sloped in two different directions, creating a somewhat difficult site planning problem. The lot had a 50-ft. width and a frontage that curved at a 30-deg. angle. Two small boys negated changes in floor level; in addition, the family desired a shaded and private garden-terrace for everyday outdoor living and entertaining.

To accomplish his one-level plan, the architect had a shelf cut out of the hillside, providing a level area in the rear, with the remainder of the lot rising sharply to offer seclusion from the back. The living-dining area, which faces the terrace, is not directly visible from the entry. Full length sheer glass windows add to the indoor-outdoor feeling. The openness of the plan is further enhanced by the use of a two-way cabinet and pass-through between the kitchen and dining areas. The former includes the breakfast area, laundry and cleaning equipment. Cabinet doors and drawers are all flush type, presenting simple and smooth surfaces accented by chrome sphere pulls.

The boys' bedroom is placed away from the active living area to assure privacy for the adults. The study—it doubles as a guest room—is also isolated by location and has such sound absorbing materials as an acoustical tile ceiling, cork floor and fiberglass insulation in the common walls. The two bathrooms are back to back and each has a pullman lavatory counter. The bath off the boys' room can be reached from the hall and study room.

Exterior vertical redwood siding is repeated in the rooms which front the street; hardwood veneer is used in the living-dining area and over the fireplace mantel. The redwood and hardwood walls have a natural finish.

OUTLINE SPECIFICATIONS

Structure: Wood frame.

Exterior Walls: Redwood beveled siding installed vertically, cement plaster.

Roof:

Windows: Steel casement (Soule) wood awning type.

Doors: Solid core, exterior; hardwood veneer, hollow core, inside.

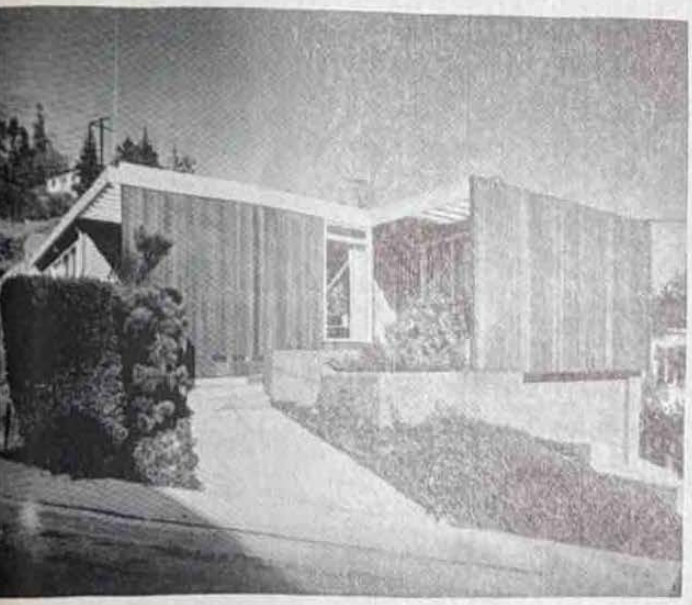
Floors: Asphalt tile (Kentile), cork tile (Kencork), carpeting over plywood.

Interior Walls: Hardwood veneer, redwood beveled siding, smooth plaster.

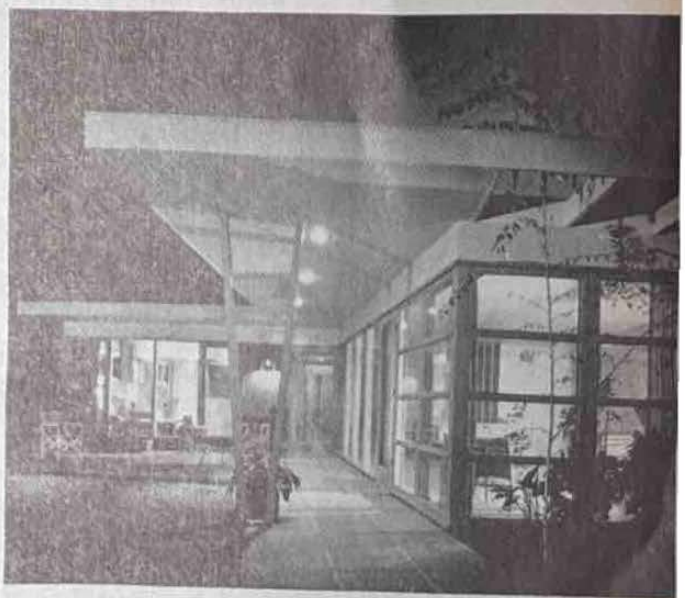
Ceilings: Plaster, acoustical tile (Acousti-Celotex).

Insulation: Fiberglass batts (Owens-Corning) in common walls.

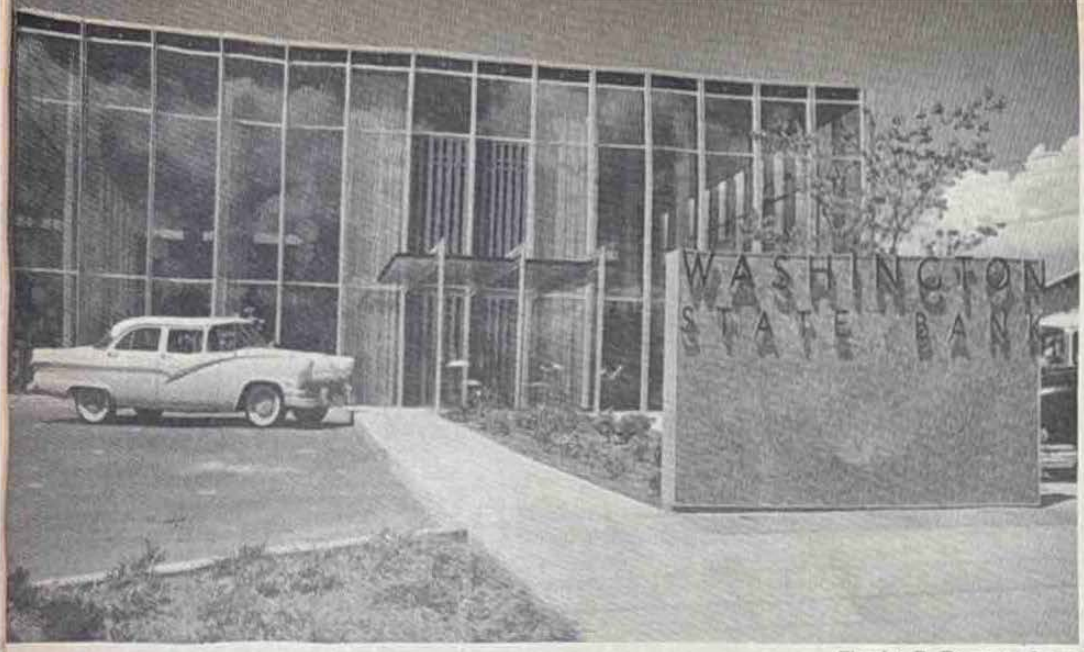
Fireplace: Roman brick, copper mantel, slate hearth.



Cabinets: Flush pine doors and drawer faces, chrome sphere pulls, kitchen; hardwood veneer faces, doors and drawer faces, elsewhere.



Heating: Gas fired forced air system (Janitrol).



Lighting: Remote control system (General Electric).

Total Area: 1,700 sq. ft.

GARAGE is on lower level to conform with building requirements imposed by slope of street. Shelf cut out of hillside provides level outdoor living area in rear.

General Contractor

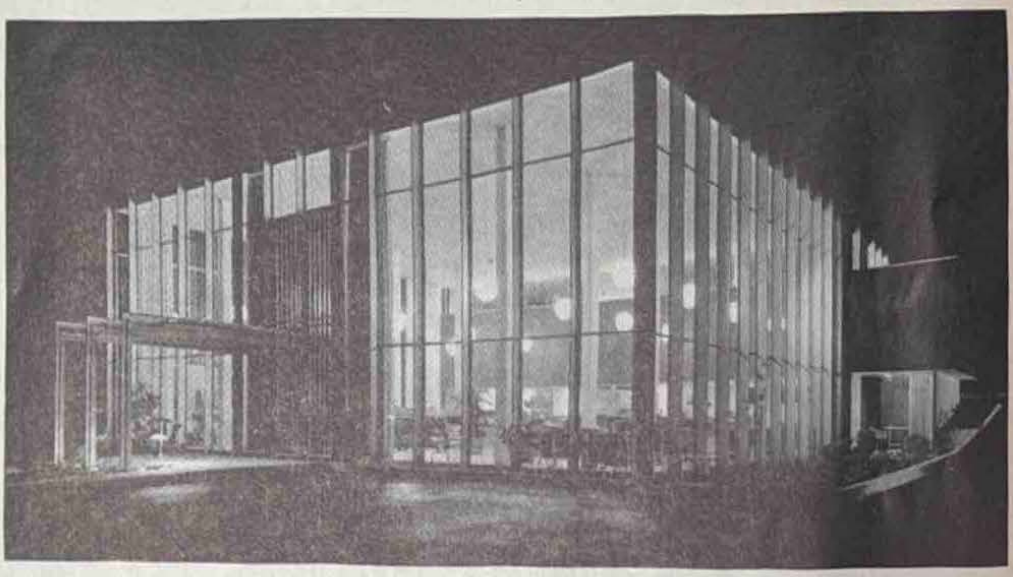
Bellevue Branch, Washington State Bank
(sold to Seattle-First National Bank)

SIGN PIER is covered with Italian glass mosaic tile in blue-green, in same color range as heat absorbing glass walls; letters and steel channel fascias are black-brown; aluminum mullions are silver.

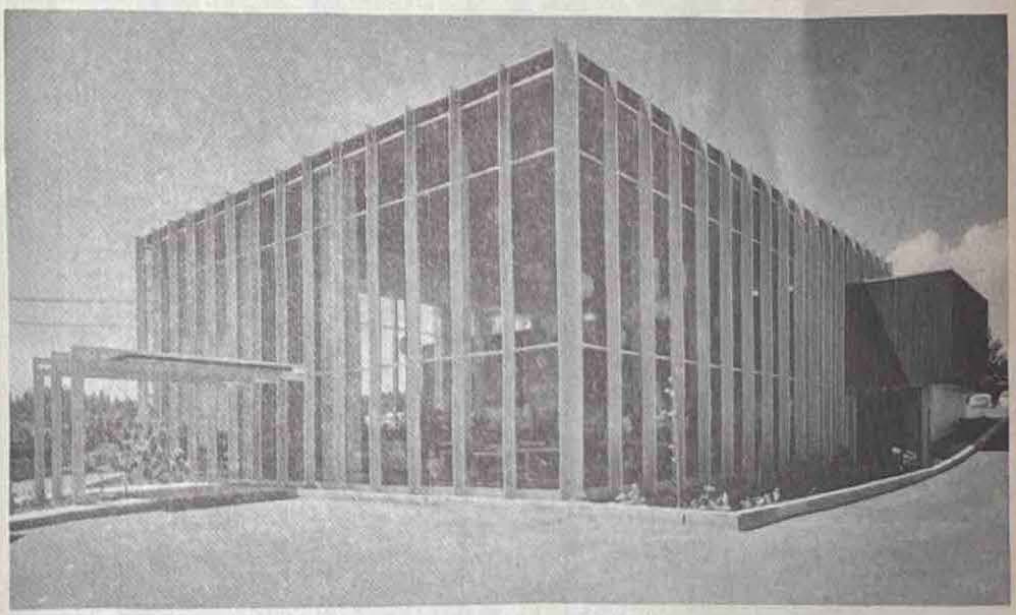
THE CLIENT, with whom the architects worked closely in the plan function of the building, desired to take a small community banking operation from behind a formal stone front and display it as a personal, friendly activity before the public. These factors, plus heat and glare control, led naturally into the building solution.

It was found that most glare is caused by the contrast of bright light in window areas against the dark wall areas. As in a cave, the opening is painfully bright while the side walls are too dark for vision. As the opening is increased more and more, the contrast is lessened, much as standing outdoors under a tree or an umbrella is more comfortable than in the cave.

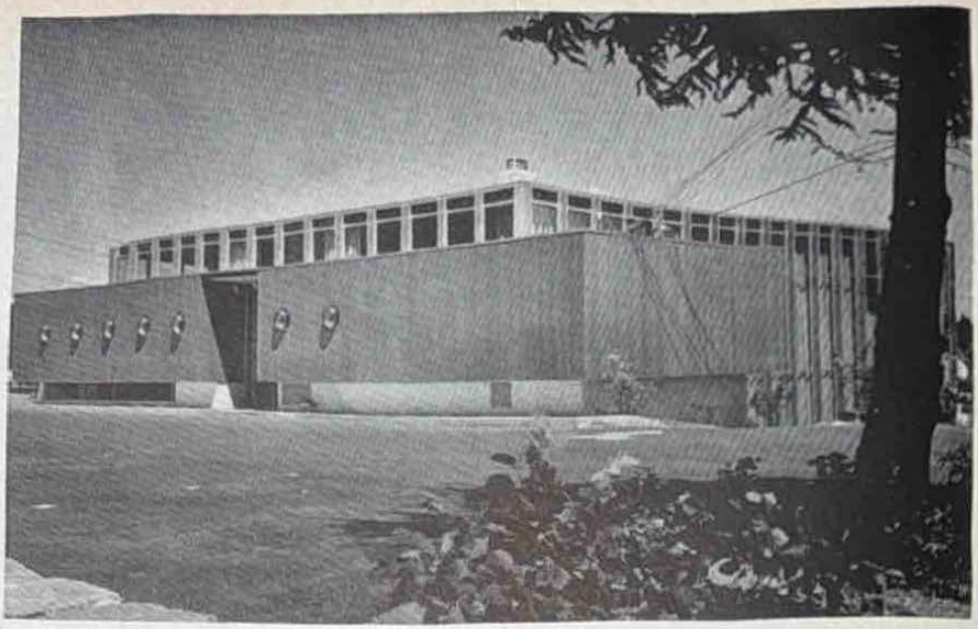
The major design problem was light control. Direct east and south sunlight through heat absorbing glass appeared too bright for comfort. Partial glazing with obscure panels on south and east elevations was investigated, but the problem of severe light contrast would have been created. In all existing large glass installations, the use of partitioning, obscure wall areas, dark materials and colors underscored the problem of extreme contrast. It was finally decided to leave the glass box completely unobstructed, with light color surfaces, and use heavyweight fiberglass boucle drapes to diffuse the direct sunlight and "close" the bank after hours.



Heating and cooling in operation have been substantially less costly than in a typical fenestrated building.

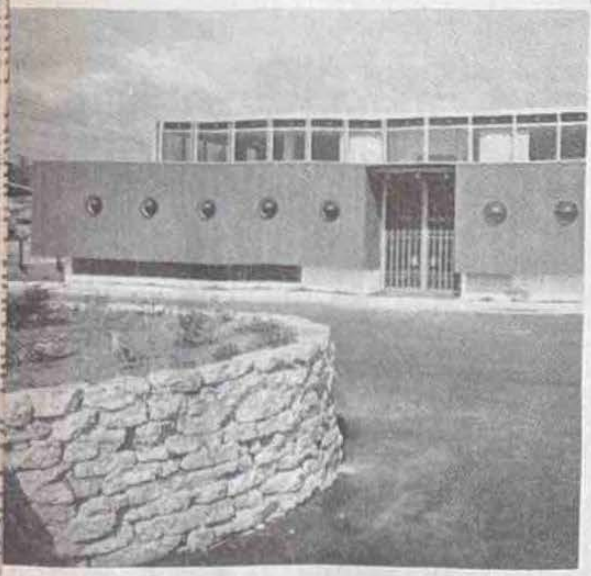


In the summer this is principally due to the reflectivity of the glass and the lack of heat from artificial lighting. The cooling system's capacity is equal to the heat output of the lighting fixtures which are not used when sunlight is available. During banking hours the white draperies have seldom been used on the east elevation and only occasionally on the south to diffuse direct sunlight caused by this reflection. Even with limited fall sunshine the heating costs have been average or better.

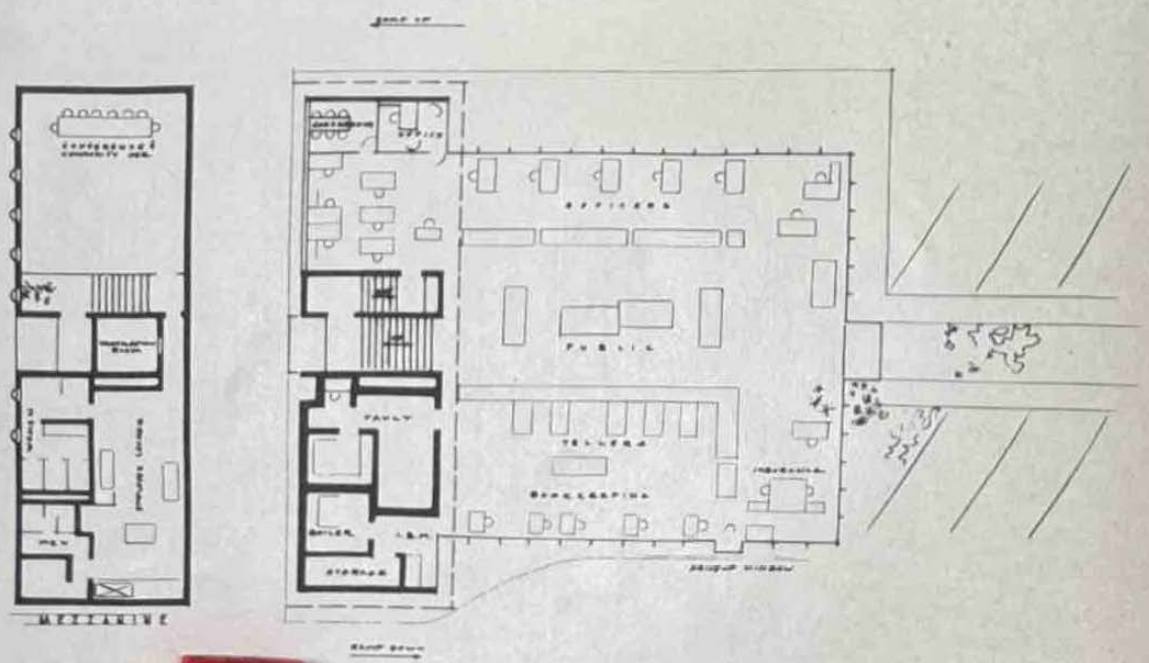


The cost and technical problems involved in the glass installation were solved collectively by the manufacturers and the designers. The glass producer has rigid requirements for sash clearances and expansion provisions because of past problems with double glazing units containing heat absorbing glass; the basic esthetic requirement was for deep, thin vertical mullions at 4 ft. o.c. Steel was selected from the standpoint of greater strength to produce members as light and graceful as possible. The vertical mullions were fabricated from light steel beams with the outboard flange removed and a round bar substituted, with the resultant section modulus the minimum required to resist horizontal wind forces only.

The windows are clamped between vertical mullions so that thermal expansion of glass and steel sash can occur both horizontally and vertically. The mullions are welded to the edge of the roof structure and connected by slip joints only at the base. This permits the roof to deflect from snow loading without placing compression stresses on the vertical mullions and provides the sash slip behind the mullion with enough top clearance to avoid transfer of compression stresses to sash and glass. The roof structure is cantilevered from steel columns placed well behind the outside walls, purely a curtain type hung from the top of the roof.



HONOR AWARD goes to project in 1957 design competition of Washington State Chapter, AIA. Jury comment: "Particularly impressed with this glass and steel cage design for modern banking facilities."



CONCRETE WALLS at parking lot entrance are painted white, redwood siding is black-brown. Blue-green plexiglass bubbles match heat absorbing glass. Dots in brown roof spandrel are aluminum midget louvers for ventilation. Entrance door grilles are walnut. Architect-designed sofa is upholstered in blue-green fabric.

TOP TWO PHOTOS SHOW how white fiberglass boucle drapes "close" bank after hours. Ceiling is light tan asbestos fiber, asphalt tile floor is white with black flecks. Architect-designed bank fixtures are walnut plastic laminate with aluminum extrusion frames and perforated stainless steel sheet metalwork. Upholstery and fixture panels are orange, yellow, blue, pumpkin, turquoise and white.

OUTLINE SPECIFICATIONS

Structure: Concrete and steel on reinforced concrete spread footings, 1 story and basement, 60x60 ft. (main banking area).

Exterior Walls: Poured concrete with white Zolatone, blue-green heat absorbing glass (Libby-Owens-Ford Thermopane) in steel sash (Fentron), black-brown redwood siding; steel, walnut trim.

Roof: Flat, long-span galvanized steel decking (T Steel Corp.) with built-up, water retaining roofing (Johns-Manville).

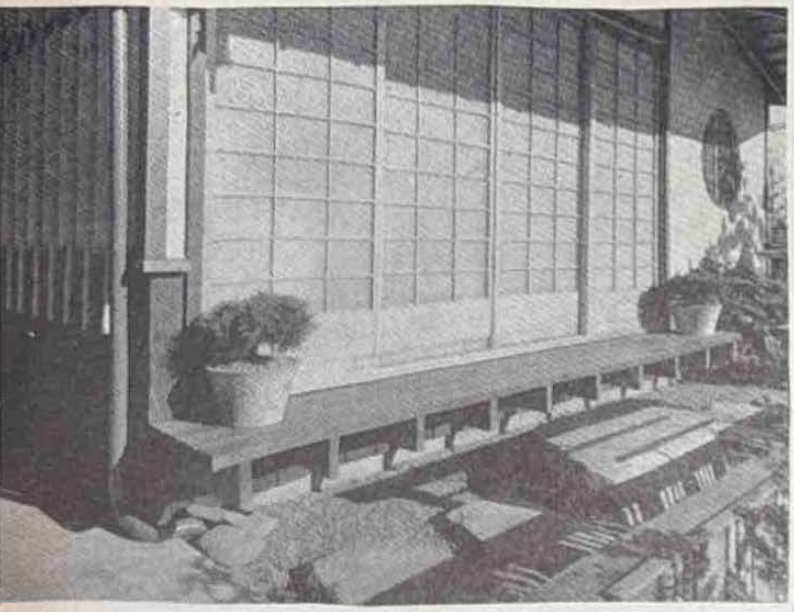
Doors: Walnut grilles with cathedral glass, exterior; walnut slab, interior.

Floors: Concrete slab covered with asphalt tile (Matico confetti).

Interior Walls: Glass, walnut, plaster on metal lath partitions; steel, walnut, aluminum trim.

Ceilings: Light tan asbestos fiber (Limpet), acoustical plaster.

Insulation: 4-in. fiberglass (Owens-Corning) in walls, ceilings.



Heating: Hot water, oil fired boiler (American Radiator). Water pumped to heat exchanger in ventilator room; air passes from ventilator unit (Frigidaire) through heat exchanger through buried ducts to heated spaces. On cooling cycle chilled water is run through heat exchanger and cool air is distributed.

Total Area: 7,000 sq. ft.

Date of Completion: June 1956.

Delightful surprise in rear garden space

George Schlenker 'Hanare'
Oakland, California

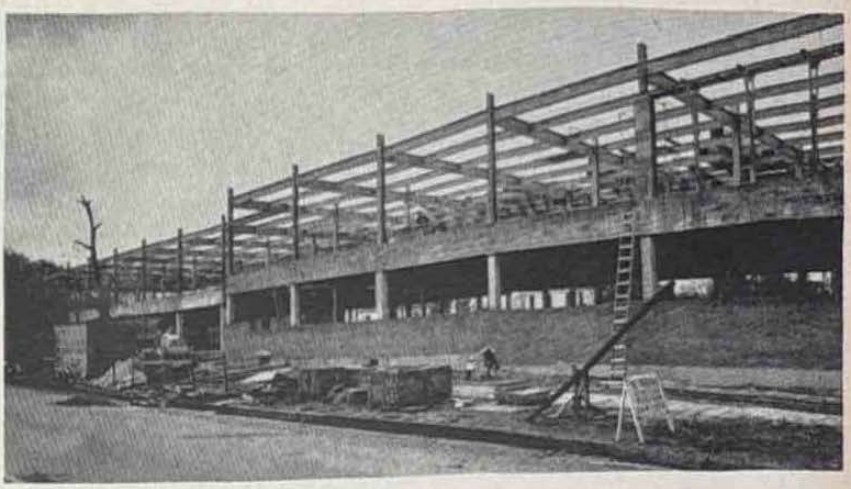
GEORGE NAKAHARA, AIA
Architect

HAROLD SPEAGLE
Contractor

SLIDING SHOJI PANELS open onto small landscaped garden of miniatures. Architect designed Japanese ash storage cabinet with door for spools of thread; thus machine and other equipment are hidden when not in use.

SPACE RESTRICTIONS proved to be the greatest challenge in designing this "hanare" or supplementary dwelling in the traditional Japanese style. The architect had only 350 sq. ft. of irregular garden space in which to produce a combination sewing room and small apartment for overnight guests. The plan specified 3-ft. modules and construction of bamboo poles, with three of these at the ridge serving as the actual roof structural members.

The main sewing room was squared off, with partitions dividing the remaining space in the angled areas into a bathroom and storage compartment. One entire wall contains architect-designed built-in cabinets and work space for the sewing machine and equipment. Separating the bathroom from the sewing area is a partition which the architect faced with what he calls "tokonoma" and "chigai-tana" recesses in which floral arrangements can be displayed. The third wall is used for the storage compartment, against which is placed a low bed. The 12½ feet of the fourth wall is made up of sliding shoji screens providing access to a small garden landscaped by Mario Iwamoto. The project was built for $20 per square foot.



SECTION OF ROOM planned for guest use has bed and storage section seen behind sliding doors. Entrance is through wall adjoining main residence.

Phil Fein photos

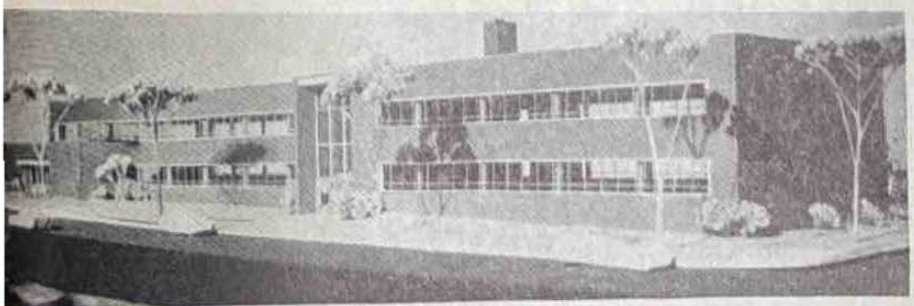
HIGH TENSILE BOLTS

cut erection time, cost on Idaho job

FIRST BOLTED STRUCTURE in Boise, Idaho, is two-story State Office Building (two more stories will be added later), using 680 tons of steel. Two-man team can bolt as many joints per day as four-man riveting team.

SCARCITY OF RIVETERS has accelerated the trend toward high tensile bolting of steel structures. The ease with which workers can be trained to make bolted joints is as important to steel fabricators and erectors as economic advantages in the shift to bolting.

Typical of jobs where bolting has taken over for rivets is Idaho's new State Office Building. Boise is off the beaten track of steel construction workers, and architects Hummel, Hummel & Jones figured that delays in rounding up riveting teams would hold up job progress. Thus they accepted bolting as an alternative method in the basic riveted design of the two-story structure.



Gate City Steel, Inc., which was awarded the contract for fabrication and erection of the 680 tons of steel in the building at the end of 1956, cut erection costs $4 per ton and erection time by an estimated 25% using high strength bolts produced by Russell, Burdsall & Ward. Steel was detailed, fabricated, erected and the Cellufior was placed and welded by May 4. This was done despite the shortage of structural steel and an unusually severe winter that delayed pouring of foundations. Steel was actually fabricated completely and stored for 23 days pending the pouring of footings.

Two-man teams, employed by erection subcontractor N. P. Mettome, were readily trained in bolting techniques. Each team averaged 350 bolts per day, the same rate expected of a highly trained four-man riveting team.

Both air-impact and hand torque wrenches were used to tighten bolts. Tightening torque is critical since the strength of the joint depends on preload tension in the bolt. Air-impact wrenches used on the job were calibrated twice a day. Gate City's chief engineer John Griffiths reports that not a single bolt had to be replaced on the job.

As is most construction work where high tensile bolting has been used, the Boise project was designed for rivets. Substitution of bolts was possible because the quenched and tempered steel bolt (ASTM A325) is actually stronger than a rivet. Joints fastened with high strength bolts outlast others in fatigue, tension or other applied stresses.

In joining structural members, the function of a high strength bolt differs from that of a rivet. The only stress in properly tightened bolts is the preload applied in torquing up which keeps the nut tight and the joint rigid. External load doesn't affect stress in the bolt or generate cycle loading. Therefore, superior resistance to fatigue and shear stress is academic. By transferring failure point from the net to gross section, the clamping force of high strength bolts stiffens joints and changes the weak element in design to the strong one.

and the latest literature

STEEL BOOTHS: Built primarily to solve problems of traffic control, admission control and money collection systems, three newly designed standard prefabricated steel booths are used for drive-in theaters and banks, parking lots, gas stations, bridges, civil defense, construction control and transit control. Taller & Cooper models include single-, double- and multi-lane installations, the latter consisting of several booths under a single canopy and completely equipped to serve one or two lanes with work space for one or two collectors. — Taller & Cooper, Inc.

(Item No. 1)

MAILBOXES: Design of apartment house mailboxes, approved by the U.S. Post Office Department, now makes it possible to remove large magazines from the individual tenants' compartments without tearing. Each compartment door opens from top to bottom and reportedly even the largest magazines slide out without injury to covers or pages. The boxes are supplied with from 3 to 12 compartments to a frame; for more than 12, frames are joined together.—Auth Electric Co., Inc.

(Item No. 2)

ANTIQUE GLASS: In keeping with the trend toward more imaginative types of colored glass, particularly in residential work, Mondial has introduced for the first time in the U.S. two rolled glass patterns—Roundel in a soft circular design and Lozenged in a distinctive diamond design. Both let light in, but assure privacy. They come in clear or gold tints in a maximum size of 48x100 in. — Mondial United Corp.

(Item No. 3)

BELL SHELLS: For churches where the shape of a traditional cast bell is desired, either for its tone or architectural effect, but where the cost of a bell or lack of tower strength will prohibit its installation, Schulmerich has developed bronzed aluminum bell shells. Finished in a bronze color, they weigh just a few pounds and come in three sizes: 20 in. in diameter by 16¼ in. high; 29 by 23¼ and 40 by 32½. The four bell shells shown in the photograph are a duplication of the shape of the Liberty Bell on the lawn.—Schulmerich Carillons, Inc.

(Item No. 4)

ACCORDIAN DOOR ACCESSORIES: To provide the architect with a maximum degree of room arrangement, flexibility and door control, a cremone bolt locks the Hufcor accordian door top and bottom, whether in closed, open or any predetermined intermediate position. Normal hardware allows such locking in only the fully closed position. Bolt is completely concealed within the door stile post. Operating handle and escutcheon harmonize with the balance of the hardware. Another accessory, a three-way glide switch, provides for the stacking of a number of doors against a wall when not in use.—Hough Manufacturing Corp.

(Item No. 5)

PLASTIC GRID PANEL: An all-plastic grid sandwich panel for curtain walls and skylights minimizes the problem of thermal instability found in assemblies of dissimilar materials. When faced with reinforced plastic sheets, an entirely homogeneous unit results, offering great strength, light weight, controlled translucency, insulation and pattern. The panel is being produced in sizes up to 48x120 in. for use in curtain wall applications and integral roof systems and as a complete skylight unit with perimeter flashing permanently bonded for both curb mounting or mop-in systems. U-factors vary from .04 to .05; light transmission can be specified from 5 to 60%. Panels will withstand normal uniform roof loads with large safety factors.—Design Industries.

(Item No. 6)

Latest Handbooks, Manuals and Literature

Yours for the Asking

SCHOOL STAGE LIGHTING: A complete set of recommendations for the basic layout of stage lighting and control equipment for the modern school has been assembled to guide architects, engineers and administrators. The 12 pages are divided into four parts: underlying principles which form the basis for planning the installation and selecting the equipment; schematic layouts that show in plan and elevation the locations of the various items of equipment; a set of explicit schedules, in both general and engineering terms, of the equipment needed for three common size classification of stages, each for three types of budgetary conditions; and condensed descriptions of Hub equipment particularly suited to use on school stages.—Hub Electric Co.

(Item No. 7)

ASBESTOS-CEMENT SHINGLES: Highlight of a manual on application of asbestos-cement roof shingles is a section devoted to the latest development —the new method of applying such shingles to low slope decks. By using this method of interlacing underlayment material — asphalt felt — between courses of shingles, a waterproof roof can be obtained even at an extremely low pitch.

Illustrated with detailed drawings, the 12-page manual gives instructions

covering every aspect of application from a general discussion of the various types of designs available through necessary accessory materials, special tools, job planning, preparation and application on the many different kinds of roofs. It has an alphabetically arranged index. — Asbestos-Cement Products Association.

(Item No. 8)

WATERTIGHT MASONRY: In discussing the important elements involved in the construction of waterproof masonry, this six-page folder covers mortar ingredients and proportioning; campatibilty of brick and mortar; control of shrinkage and bleeding; separation cracks; effect of mechanical disturbance; and the importance of proper protection. Specific reference is made to Omicron Mortarproofing in providing a cohesive plastic mortar. —The Master Builders Co.

(Item No. 9)

BATHROOMS: AllianceWare has issued two publications on its Permasheen porcelain-on-steel plumbing fixtures—a 12-page product line catalog and a 16-page consumer booklet. Actually the latter is of interest to architects and builders because of the bathroom arrangements sketched, with alternate floor plans for each.—AllianceWare, Inc.

(Item No. 10)

FIRE PROTECTION: More and more, fire protection officials are prevailing on architects and engineers to provide intelligent and imaginative solutions on the drawing boards to this increasing problem. Here is an eight-page booklet which explains how an investment in automatic sprinkler protection can amortize itself out of insurance savings and bring many other economic benefits. Cited are examples of systems which paid for themselves in from 2½ to 8 years.—Automatic Sprinkler Corporation of America.

(Item No. 11)

COLLEGE LABORATORIES: "Designs for Laboratory Living" does more than simply describe installations of Standard Electric's Flexlab distribution system in more than 100 colleges and universities across the country; it also serves as a general reference for school architects, engineers and administrators in that it indicates the trend of such design, including lighting, layout, machinery, etc. The 120 pages give complete details of power supplies, methods of distribution within the laboratory and terminal facilities as well as descriptions of components. Every type of laboratory is shown.—Standard Electric Time Co.

(Item No. 12)

MOULDINGS: "Minding Your Moulding Manners" is a folder which fits into a No. 10 envelope but it is packed with bits of useful information. Primarily it shows how mouldings may be used in interiors and exteriors to accomplish such effects as stressing lines of direction, creating textures and patterns on otherwise flat surfaces, increasing visual attraction of flat planes in architecture and new functional applications. Woodworking procedures designed to simplify installation are illustrated. — Western Pine Association.

(Item No. 13)

WALL ENAMEL: "Plextone Specification Data for Architects" is a looseleaf booklet bound in a leatherette cover, featuring 30 actual color sprayouts of multicolors offered in this interior wall enamel. It is intended not only as an aid in specification work, but also for use in client presentations. —Plextone Corporation of America.

(Item No. 14)

CURTAIN WALL DESIGN: "Design Manual, Part 2, Porcelain Enamel in Architecture, Curtain Wall Construction" is an unusually attractive and informative 28-page booklet, with photographs of a number of installations, some in full color. Each is accompanied by section details and such technical data as weight, U-factor and color of panels.—Porcelain Enamel Institute.

(Item No. 15)

HARDWOOD FLOORING: A leaflet designed for the contractor and floor layer is divided into two parts. The first contains suggestions for the installation and care of northern hardwood flooring, with special emphasis on the allowance for expansion, damp season ventilation and preliminary handling of flooring before laying. The second part contains a list of simple precautions to take in handling hardwood flooring at the jobsite. The leaflet also lists the sizes and kinds of nails recommended.—Maple Flooring Manufacturers Association.

(Item No. 16)

DRAFTSMAN HINTS: How to speed drafting and computation work is described in "Time Saving Tips for the Draftsman and Engineer" which incorporates 59 shortcuts submitted by 52 contributors. Clearly written and well illustrated, the 34 pages show new approaches to old problems. For example, the section on "Calculating Ideas" contains 10 tips including easy ways of remembering the signs of trig fractions, dividing a circle into parts and locating decimal points. Eighteen suggestions are listed under "Board Timesavers."—Frederick Post Co.

(Item No. 17)

VERMICULITE CONCRETE: A digest of the report covering a test program to demonstrate the adequacy of vermiculite concrete as a horizontal diaphragm is available in booklet form. The testing was conducted by S. B. Barnes, consulting structural engineer of Los Angeles. A research recommendation of the International Conference of Building Officials is included in the brochure.—Vermiculite Institute.

(Item No. 18)

INSULATION METHODS: A 12-page brochure for home builders describes proper methods of installing insulation and a solution to the paint peeling problem. Included are 20 sketches and 11 photographs.—Owens-Corning Fiberglas Corp.

(Item No. 19)

ALUMINUM BIBLIOGRAPHY: Alcoa has compiled a selected bibliography from its library for designers and design engineers in the metalworking industry. All available literature and motion pictures are listed.—Aluminum Company of America.

(Item No. 20)

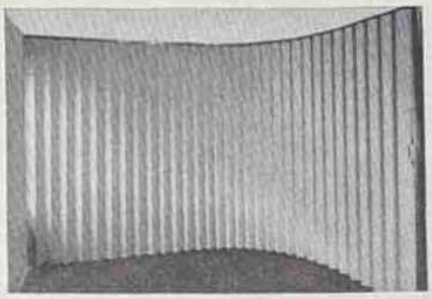
hufcor

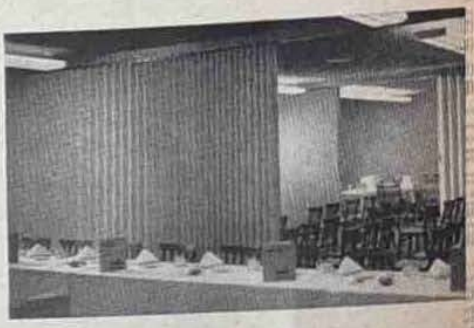
LAMINATED ACCORDION DOORS

are designed to provide maximum sound insulation characteristics without relying on costly and bulky inner liners. The heavy (55 ounce per square yard) cover construction forms a natural sound barrier between room areas. Tests prove that Hufcor, with inexpensive sweep strips, outperforms special acoustically treated folding doors selling at much higher prices. You can specify Hufcor with complete confidence that you will receive quality beauty, operation and economy.

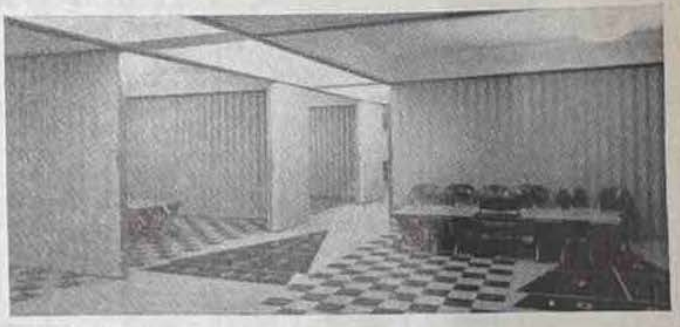


only Hufcor

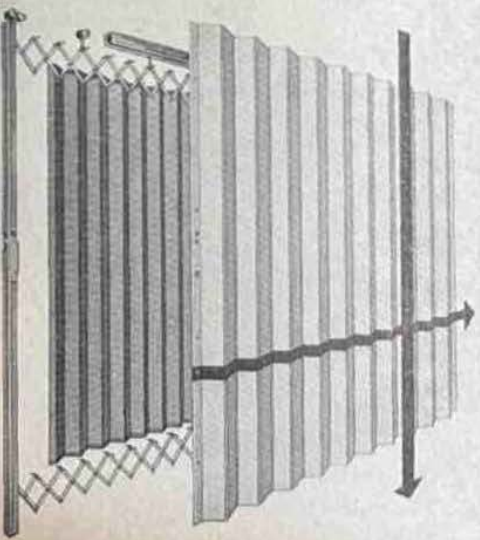
offers you superior sound resistance... plus:



straight crisp lines
less stacking space
smooth action
wrinkle-free covers
symmetrical beauty
resistance to impact
interchangeable covers
quick installation
flame resistance
semi-rigid covers
designer-approved colors
complete line of accessories



"Knockable" Hufcor covers are made of 5-ply laminated vinyl and tough, high strength fiber board. Distinctive handle latch of anodized aluminum is unique both in appearance and function—a Hufcor exclusive.



Hufcor accordion doors on curved track operate easily and uniformly without alteration. There is no binding.

Complete areas can be closed off with the trim, rigid Hufcor. No need to fear damage from large crowds or active children. Hufcors move easily by hand.
Valley Ho Hotel, Scottsdale Arizona.
Architect: E. L. Varney & Associates.

New areas can be made from old with Hufcor. Pivot switches, glide switches, multiple meeting posts, rolling posts, recessed channel, and other accessories all provide complete flexibility for room division. Mt. Calvary Lutheran Church, Janesville, Wis.
Architect: R. H. Bierman, Milwaukee.

This exploded view of Hufcor shows the simplified, trouble-free, pantograph system. The straight, rigid lines of the covers make Hufcor the "architecturally correct" door.

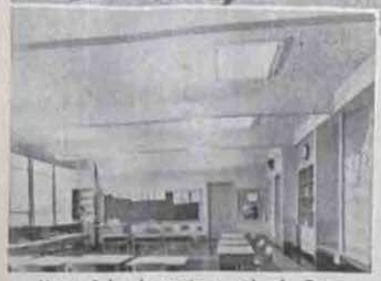
PA&B T-square talk

NEW ASSOCIATES: Don S. Wallace and David A. McKinley Jr. are new associates in the Seattle architectural firm of Paul Hayden Kirk & Associates.



PARTNERSHIP DISSOLVED: Gehres D. Weed has purchased the interest of Robert E. Fehlberg in the architectural firm of Weed & Fehlberg, Kalispell, Mont. Weed will continue to practice in the Sundelius Building under his own name; Fehlberg has opened an office in the Glacier Building.

ON THE MOVE: The Billings, Mont., architectural firm of Loners, Stroebe & Johnson has moved to 511 N. 31st St.

NEW PARTNER: Architects Walter E. Church, Earl P. Newberry and Frank Roehr have added a new partner, Kurt P. Schuette, to their firm, which will be known as Church, Newberry, Roehr & Schuette. Their offices are at 619 Builders Exchange Building, Portland.

LIBRARY ADDITIONS: The library at California State Polytechnic College's home campus in San Luis Obispo has acquired 217 rare architectural reference books, photographs and illustrations, according to George Hasslein, head of the department of architectural engineering. The collection has been donated by a college sophomore, Flemen Hardy Jr. of San Francisco, who received the volumes through Harold Wagner, former architect and currently an investor in the Bay city.

Memorial elementary school, Burlington, Mass.; Architects: Edgar T. P. Walker & Theodore B. Hanna, Boston; Contractor: Joseph Rugo, Inc., Boston

Pleased Community Orders Another of the Same

"Rilco laminated-wood beams were an extremely successful part of the structure" in keeping the construction bid below the budget — "roof framing over one 10-classroom wing was erected by three pair of men in four days." And wood's inherent beauty meant economy: "laminated-wood beams were left exposed throughout the school."

And the "town approved," says the architect; "We are now building another similar 20-room school."

But even more important for schools is the safety offered with Rilco arches, beams and wood deck. For wood members are slow to burn—won't collapse under high temperatures — allow time to save structure and contents . . . paramount considerations for any school.

For more information about how Rilco can help build larger and better structures within the budget, contact your nearest Rilco office.

California, Northwest set annual AIA meetings

October will be the month of AIA annual meetings for both the California Council and the Northwest Regional Council, comprising Oregon, Washington, Idaho and Montana.

In California

The Californians, gathering near San Diego at Hotel del Coronado October 2-6, for their 12th convention, will hear R. Buckminster Fuller deliver the keynote address on "Design Through Structure." A seminar devoted to the same topic will have architect Felix Candela of Mexico and California engineers Edgardo Contini and Richard Bradshaw.

Another broad subject, according to chairman Wallace Bonsall of Pasadena, will be the architect's role in urban development, with such speakers as city planning consultant Charles Bennett of Los Angeles and landscape architect Lawrence Halprin of San Francisco.

The annual meeting of the California-Nevada-Hawaii Regional Council will be held during the statewide sessions.

In Northwest

"Expanding the Profession of Architecture" will be theme of the Northwest's sixth regional conference at Gearhart, Ore., October 17-20, with John Dukehart of Portland as chairman. Guest speakers announced thus far are Jose Louis Sert, dean of the Graduate School of Design, Harvard University; Thomas Creighton, editor of Progressive Architecture; John Knox Shear, editor of Architectural Record; Leon Chatelain, national AIA president; and San Francisco architects Henry Hill and Francis Joseph McCarthy.

Briefly noted (Cont'd from p. 10)

• A bid date registry has been set up at the Portland Builders Exchange Cooperative in cooperation with the Oregon Chapter, AIA, and its committee on relations with the construction industry, headed by Harry Stevens. Two or three weeks before an architect intends to put a project out for bids, he will call the exchange's executive secretary to determine what bid due dates are open. He will then register the probable date and hour he will open bids. On larger jobs it is recommended that two or more sets of documents be filed.

• Named to serve on a seven-member design standards advisory board in developing the projected Civic Center and World's Fair in Seattle are four architects: chairman Perry B. Johanson, John S. Detlie, Robert H. Dietz and Paul Thiry.

• Los Angeles' squatty skyline will be soaring, but that's not all. Downtown land values have almost doubled since last November when voters repealed the 13-story height limit law, results of which will be seen shortly, following city council action to create an ordinance setting up skyscraper zones. The law is expected to take effect by early September.

• A total of 14 enormous concrete slabs, 36 ft. high and weighing 27 tons each, now form the walls of a three-story building on Mission between 10th and 11th streets in San Francisco. "There have been some heavier slabs," explains structural engineer Byron Nishkian, "but these probably cover the greatest area of any ever used in the West."

The reinforced concrete slabs were made at the site and raised into place by a 40 ton rigging truck. The building is being constructed by Williams & Burrows, Inc., of Belmont and the use of the slabs, each of which cost $1,000, may save 50% in costs."

An architect's sabbatical leave in Italy (Cont'd from p. 21)

for newly conceived neighborhood centers to counteract the disrupting effect today's inventions are having on community life.

The marvelous vitality of great Italian squares such as St. Mark's in Venice is known worldwide but in its most genuine form (free from the tourist influence which makes of Venice, particularly, a sick thing) it was only made fully evident to me one evening in Sassari. Walking across this compact northern Sardinian town of about 60,000 people, we passed through Piazza Garibaldi on our way to dinner. It was about eight o'clock and the square was already jammed with people of all ages walking vigorously in the first chill of fall. They were walking around the somewhat square square in two different rivers of people but the men in one direction and the girls in the other—the better to observe each other.

The animation and spirit was simply electrifying: interplay among the younger ones; political discussion, sports argument or just plain friendly conversation among the already married ones; running and jostling among the children who were there too—all made a vision of a civic life still healthy, coherent and unspoiled by some of our recent "improvements." It made an overwhelming impression.

This is what the Italian designers are attempting to save in their tremendous rebuilding effort today. So far the results are negligible in this respect but judging by the state of mind pervading the planning professions now, I think they will succeed.

New! Completely Engineered!

PLAQUES and LETTERS CATALOGUE

Architects, Engineers, Contractors, and Builders! You will find this catalogue from M. Greenberg's Sons easy to read and highly useful in planning and choosing plaques and letters for your requirements. Complete information and detailed instructions for selection and installation of all types of plaques and letters. All drawings are to exact scale.

This catalogue also illustrates the wide selection and the amazing versatility of M. Greenberg's Sons' designers in visualizing and realizing your ideas in lasting bronze and aluminum.

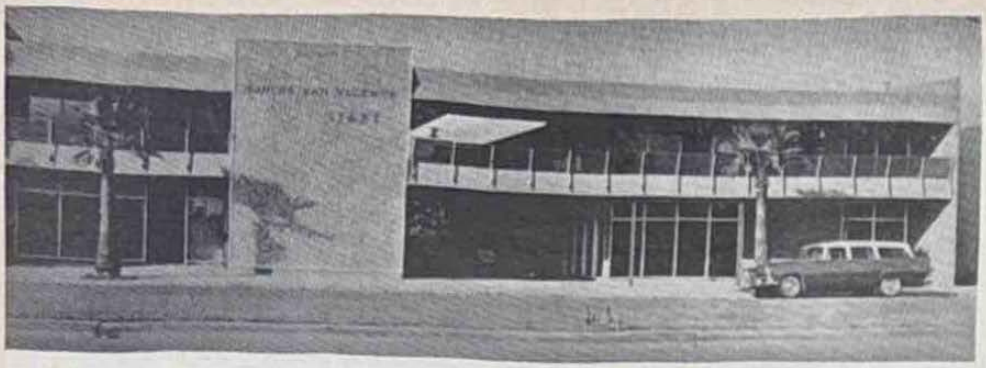
Walls and deck poured simultaneously with Gates

Foundation forming partially completed, ready for erection of outside forms.
Job: Large animal hospital, Spokane, Washington
Contractor: AAA Construction Company, Spokane

The walls on this animal hospital were formed quickly by laying the panels horizontally, and stacking to the desired height. No heavy backing, drilling, or other time-consuming panel fabrication was necessary. Since walls and floor deck were poured at the same time, the deck also provided partial bracing for the wall, eliminating the need for excessive walering.

You get speed, economy *and* quality concrete, using Gates Panel Forming Systems. Gates precision-twisted, galvanized Form Ties provide maximum strength exactly where you need it.



For detailed information on how Gates can help YOU bid lower on your next job, see your nearby Gates dealer or write:

FACADE IS DOMINATED by panel of multicolored Italian glass mosaic standing 22 ft. high and 16 ft. wide; balconies are lined with perforated sheet steel, capped with steel railings.

Manufacturer shows off movable interior walls

A $200,000 headquarters office building completed in West Los Angeles for Wayne Vaughan & Co. serves as a showcase for a new system of movable interior drywalls originated by that firm.

Designed by architects Spotts, Candreva & Jarrett and built by general contractor P. E. Philbrick, the structure has 15,000 sq. ft., including individual balconies. Basic construction combines steel and wood framing with a stucco exterior. Free-standing steel staircases, integrated with the landscape planning, grace the front and rear of the interior courtyard, and a parking area is accessible from both front and rear.

Office corridors throughout are of Vaughan movable interior walls fabricated of multi-ply gypsum panels laminated together in any of several thicknesses. Electrical raceways are installed flush with the finish base. Panels 2 ft. wide and beveled at the vertical joints are finished in a variety of colors and surfaces—wood laminates and vinyl plastics—as well as more conventional coatings. They can be refinished at will.

Up to 8 phone outlets in newest homes!...

Joseph A. Romano, well-known Fresno, Calif., contractor, likes to make sure his homes meet buyers' needs in every way. His custom-built homes, in the $21,000-$65,000 class, include 5 to 8 telephone outlets.

To Mr. Romano, complete telephone planning is a *must* in quality home construction. Buyers look for it, and in Mr. Romano's own words, "Meeting customers' demands is one of the best ways to successful selling. That's why some of my most recent homes have as many as 8 telephone outlets." And it's also why other leading Western architects and builders include concealed wiring and plenty of phone outlets in their original plans.

part of a $194 million expansion program now in progress, is scheduled to be in operation early in 1958. The entire construction program, the largest plant expansion in West Coast industrial history, will virtually double the firm's steel ingot capacity from 1,536,000 tons to about 3,000,000 tons a year. Upon its completion in mid-1958, the expansion will make Kaiser Steel the largest steel producer west of the Mississippi River.

A description of Kaiser Steel's overall operations, including the construction program now 40% completed, is available in a 34-page booklet just issued by the company.

A new century of architecture (Cont'd from p. 14)

fields is fast becoming a marvelous tool for architectural performance.

Of course, much is yet to be achieved but the next 100 years should bring unheard of developments. In housing with its tremendous potential, the architect has still to make his influence felt because of his lack of motivation and the failure on the part of industry and finance to make him one of the team. When they do we shall see spectacular advances.

Through the new knowledge at their disposal the best architect's imagination is taking wings; he has begun to deal creatively with new materials and finding infinite ways to exploit their possibilities.

There is no question that the competence of the architect as a professional specialist is steadily improving. His prestige will be further enhanced when he will not think of himself merely as a maker of beauty (with a capital B), but rather a serious interpreter who aims to convince as much as to please. The duality of the professional man as an artist and as a technician is a modern phenomenon caused by the fact that art has has become synonomous with the making of pretty images in many instances divorced from life, later to be embalmed in museums. Our society has forced the artist to take a holiday from life and to climb his stairs to the ivory tower, but great art is needed more with us in the streets than in museums and the great artist will emerge without preciousness when he is able to add significance to conviction.

There is no question about the dismal aspect of our cities and suburbs, but it will not be relieved by the cosmetic approach of applied beauty as advocated by some professional humanists. It will be remedied by a greater awareness on the part of all of us of the meaning of the forces which motivate our society and the understanding the average person has of the role that total environment plays in his life and by the courageous applications of many educated and specialized minds to the coordinated solution of its planning.

We no longer believe that the perfect function equals beauty, but we have also learned that no lasting satisfaction can derive where the purposes are not met. And beyond purpose exists the realm of appropriateness, significance and participation with nature, an ever-inspiring source of strength. We are not against beauty but against fixed and artificial images of beauty because from them spring irresistibly the whole cheap array of artiness, from the imitation stone surfaces to the juke box, to the derby hat restaurant and other cuties which line our highways. Too often in the past we have shaped our world by inert images of ideas either dead or contrived from literature. Beauty is not a static quality, not an image to be embalmed, nor a cosmetic to be put on: it is an intrinsic quality of created things, a living quality which respects their nature, their biological and psychological and even practical

Lifetime Insulation on Masonry Walls

STYROFOAM®

Styrofoam, a Dow plastic foam, bonds directly to masonry walls and serves as a plaster base, providing insulation and moisture vapor barrier. Furring and lathing are entirely eliminated. Once in, Styrofoam stays in for a lifetime.

Styrofoam also excells as perimeter and roof insulation. For further information and recommendations to fit your specific requirements, contact Wiley-Bayley.

* Styrofoam is a registered trademark of The Dow Chemical Company

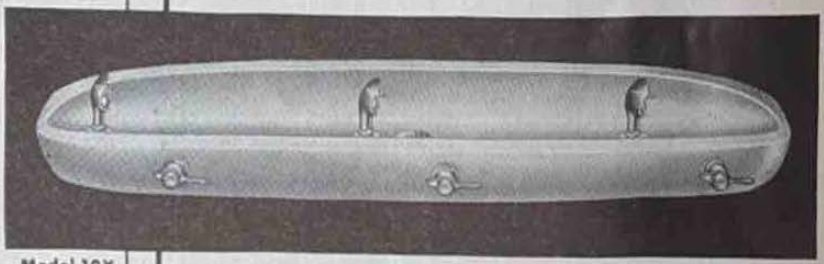
demands, while reflecting and in a sense preserving the mystery which is at the base of all created things, the realm of the spirit and the source of its poetry.

Forgive me if I dwell on this point, but it seems to me that our progress, or if you will, the contribution which our profession may be able to give to mankind in the next 100 years, may well be based on the acceptance of this idea. It is not a new idea but it is well to keep it before us because it is the synthesis of the best we have believed in and created thus far; it makes sense out of the work of our more creative men from all positions and persuasions; it damns the inferior work of the past and the present, the cliches, the cheap, the bizarre; it exhalts the subtle, the understated, the significant, the appropriate; if fully accepted it can penetrate and bring order to the jungle of our urban living, tame and guide the power of our industrial might, ally itself with science in search for the means to give more to man for less of his efforts. That it seems to me is the meaning of the challenge, the opportunity of our profession in the next 100 years.

Those who claim that architecture is a pure and aristocratic art and as such should be free of restraints know deep in their heart that without the discipline of facts and the joyful participation of people it cannot escape the dangers of shallow estheticism. Surely all of us are concerned with art, we all believe it to be the highest expression of the human spirit, but we all hope that it may also be the most respected. We may remind ourselves that the design of the juke box is motivated by the same desire to show off taste, just as some of our modern works at a higher level show off taste. On that basis who shall pass judgment and who shall arrogate the right to impinge himself for his works on the human scene for long years to come? The field of esthetic appreciation is a difficult one to explore because of the subjective nature of its problem and I have no intention of becoming too involved in its discussion. We know that to the artist, all has meaning—an old peasant shoe to Van Gogh, a sober division of space to Mondrian, or an intuitive abstraction to Jackson Pollock.

Scale, color, proportion, space, symmetry, the golden mean, the whole nomenclature by which architecture is justified and described are to be found in basic natural laws and instincts and can be modified, but not ignored.

We speak of human values; of the spirit of humanism. These are real, but up to now they have been exhumed mostly from past experiences. While here is the present and the future — exhilarating, menacing, infinitely challenging, demanding new understanding and the utmost effort from each of us. We take scientists to task for shaking us from the security of our emotions, yet everything that science has given us has increased our opportunities for greater good and for significant action.



It is our duty in the next century to be in earnest and to grasp these opportunities to guide mankind, toward what is good and significant in its evolving life, and to translate into visible patterns what we have learned from sociologists to be basic in human society; in so doing we shall gain the respect of our political and community leaders with their gift for understanding and manipulating public opinion.

Only thus can architecure of our next century became a way of life and the substance of our culture as it has been in the past. As an art, it will not only show the reasons which have determined its forms but also the human values embodied in those forms. It will also be then less concerned with fashion than in being ap-

...in COLOR ..in FIBERGLAS ...by HAWS

A bright new idea in drinking fountains! Model 10Y combines HAWS famous sanitation features with amazing lightweight toughness of Fiberglas plastic...the modern strength material.

Model 10Y

In color! Choose from five decorator colors and white, permanently bonded to receptors to assure lasting vitality. Fiberglas strength foils vandalism, too! Color appeal and ruggedness make this model ideal for school use.

propriate to a GREATER VISUAL ORDER.

It has become clear that in addition to the need to redefine the role of the city and to find the most appropriate use of its land, we must study new ways of organizing human communities in accordance with better defined social aims. As I have said before, some people believe the city to be an outdated community form, that it should be abandoned, with the grass allowed to grow on its streets. That would be the easy way, but many of us are just as sure that cities will always serve basic social needs and in their imperfect ways will never cease to serve social ends; what must be learned are the means—political, physical, and social—through which they may be made to work again as suitable centers of human activity. We must work together and find a common way of attack, to plan ahead, not in the present narrow way, but broadly enough to include the regions which are physically, if not politically, a part of the great city complexes.

We may well remind ourselves that our technological success was made possible by our having learned to work together; the architect as a man of vision can no longer act alone in arrogant self-sufficiency but needs to know and be motivated by a large body of facts which other specialists in many fields can gather and furnish him.

We may remember that while men of genius and a great variety of approaches by gifted individuals are needed to stimulate us, the great body of buildings forming our cities and the very structure of our new communities will be produced by earnest, intelligent, painstaking realists who, by their day-to-day effort, by their ability and willingness to be part of a team and to accept the realities of life, will succeed in making their influence felt in the communal process of giving form to a healthier, happier and wiser society.

Through the economic realities of the American system, architects are learning to make a virtue of what used to be a handicap. A greater concern for economy means now a wider distribution and therefore a greater social impact. This may have been done at the expense of the highest standards, but it has resulted in a great raising of the lowest standards, in a greater sense of what is appropriate and important, in a greater logic of structures and in more thoughtful planning. And beyond these is an obvious acceptance of life in all its richness and variety, in its joys and complexity, and with it a feeling of duty to meet a challenge.

We believe that man's creative powers are nourished by the world he lives in, by what he sees and learns, and that his intellect will never allow him to stand still, nor to accept his conditions as final or perfect. We may observe that nature itself has evolved and continues to evolve countless varieties of living forms and on a different time scale is always experimenting and forever meeting new conditions. Creativity in our difficult age needs to cope with problems of new magnitude. In our school we try to educate men to face new situations, to give answers which are not found in past experiences. For that reason, in educating our young men we are doing two apparently antithetic things: we are breaking down the barriers between the various areas of learning by searching for basic principles, while increasing the scope and demands for specialized knowledge.

In our own school, we believe also that only by assuming such creative responsibility will we make it possible to evolve new standards of beauty. Let's now hope that these years of preparation by our profession may bear fruit in the century which is ahead.

CAPITOL MALL CONSTRUCTION— Salem, Ore.

Master schemes for long range development of the Capitol Mall area have been presented to the Capitol Commission by Wilmsen & Endicott, architects, 863 13th Ave., Eugene. The firm presented three major studies of possible mall development, the most radical of which blocked all streets through the mall area except Center St. One plan suggested was the extension of the mall north from the capitol building into a more informal wooded area with pools, fountains and room for government buildings and a public park. New structures might include a museum, auditorium, exhibit area and governor's mansion. Tree-lined walks were suggested for the mall with as much fringe parking as possible. Any streets through the mall would be sunken so as not to disturb the view if current ideas are followed. The auditorium might be built as a joint venture of the state and city of Salem in return for the city's permission to close some streets into the area.

INDUSTRIAL SITE— Seattle, Wash.
(Estimated cost $2,000,000)

Plans announced by Stimson Mill Co., David Stimson, president, 2116 Vernon Place, Seattle, for development of the company's property on Shilshole at Vernon Place in the Ballard district, Seattle, to provide a waterfront industrial site. The mill is being razed and the area filled and remodeled to suit the needs of whatever tenants should want space. Property is about 400,000 sq. ft., with 800' waterfront on the Salmon Bay waterway and the same amount of railroad track along Shilshole Ave. The waterfront provides the widest possible turn basin between the site and Lake Union. Discussion has indicated the possibilty of converting the waterfront area for use as a marina and small boat moorage. Site planning is the responsibility of LaMont & Fey, architects and industrial engineers, 308 Columbia, Seattle. Negotiations are being handled by Lawrence W. Wiley, appraiser, 411 Seneca, Seattle. SC 8-9

Strategic Air Command, Fairchild AFB, $2,028,000; Larson AFB, $13,381,000. Reserve forces construction, Paint AFB, $425,000.
SC 8-8

BOAT HAVEN DEVELOPMENT— **Anacortes, Wash.**

Road construction across the Cap Sante Waterway at Anacortes has been temporarily delayed to let the fill material dry thoroughly, according to Lloyd Foster, port manager, Anacortes. One of the new 770' moorage floats at the waterway is in place and the second one will be completed as soon as lumber for the top of the float can be obtained. This is part of the boat haven project at the Cap Sante Waterway for which two breakwaters are under construction as the major part of the work.

An award has been made by Anacortes Yacht Club to Cal Branham, 1016 23rd, Anacortes, for moving a former Coos Bay Pulp Corp. two-story, 28'x42' building to the haven site. The contractor will drive pilings in the present fill at the Cap Sante Waterway site and will build a foundation under the structure which will be located about 450' north of the present dock.

ET 8-13. Previous report 7-24 (Breakwater)

■ **WATER FILTERING PLANT, PUMPING STATION WELL—** **Anacortes, Wash.**

Additional planholders announced for construction of a 24,000,000 gal. per day central filtering plant, and a 188,000-gal. pumping station wet well on Skagit-County River Bend Road several miles northwest of Mt. Vernon. Bids will be opened 8 p. m., August 19, by City Council, Frank Kimsey, Jr., City Clerk, Anacortes. Plans with Cary & Kramer, consulting engineers, 1917 1st Ave., Seattle.

PARK DEVELOPMENT— Noxon Rapids Dam, Mont.

A proposal from the Thompson Falls-Noxon Chamber of Commerce for the establishment of a state park on the Noxon Rapids Dam reservoir is under consideration by the state parks division of Montana State Highway Commission, Capitol Bldg., Helena.
SC 8-9

★ BRIDGE, APPROACHES— Noxon Rapids Dam, Mont.

Two awards announced by Washington Water Power Co., W. 825 Trent Ave., Spokane, Wash., for construction of approaches to new Trout Creek bridge, including grading, fill and riprap, and for erection of the superstructure of Highway 10A bridge at Trout Creek, in connection with the Noxon Rapids hydroelectric project. AWARDS— APPROACHES: Sather & Sons, N. 1410 Howe St., Yardley, $108,000. SUPERSTRUCTURE: Allied Structural Steel Co., Chicago, Ill., $500,000.
EE 8-14

CLARK FORK RIVER BRIDGE— Thompson Falls, Mont.

A final decision is expected soon from the Montana State Highway Commission, Capitol Bldg., Helena, concerning a proposal by the Thompson Falls-Noxon Chamber of Commerce for construction of a new Highway 10A bridge across the Clark Fork River at the site of the old city dump at Thompson Falls. It has been suggested that the highway department go ahead with the bridge on the basis of utilizing $85,000 offered by Washington Water Power Co., which would be spent otherwise to raise the present Birdland Bridge to place it above flood stage when the Noxon Rapids reservoir is flooded. BPR officials have stated they consider the project necessary and are willing to recommend full participation with federal funds for the construction. If constructed, the new highway bridge would eliminate the future rebuilding of two bridges across the river near Montana Power Co. plant in the county's secondary road program up Prospect Creek.
SC 8-9

ALASKA

● EXCAVATION, SEWER— Anchorage, Alasga

Bids will be opened 2 p. m., August 20, by City Council, City Hall, Anchorage, for excavation of 14th Ave. from S to P streets and both S and P streets from 14th Ave. to 15th Ave., and construction of a sanitary sewer line in 14th Ave., Anchorage. STATE HIGHWAY PROJECTS
BIDS CLOSE 9 A.M., AUGUST 30
Helena, Montana
NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the offices of said Commission in the City of Helena until 9:00 a.m. on August 30, 1957. The proposals will be publicly opened and read immediately thereafter. YOUR ATTENTION IS DIRECTED TO THE 9:00 A.M. HOUR SET FOR THE OPENING OF BIDS.

1. **F 132(6) Unit 1**—Grade, gravel surfacing, bituminous surface treatment and drain 3.737 miles on the Chester-Gildford Road in Hill County, involving about 199,305 cu. yds. excavation; 170 cu. yds. riprap; 100 cu. yds. gravel backfill; 24,943 mi. yds. overhaul; 87,642 tons crushed gravel; 4,740 M gals. watering; 800 units rolling; 26,455 gals. liquid asphalt; 26,492 gals. emulsified asphalt; 876 lin. ft. reinforced concrete pipe culverts; 100 lin. ft. relay pipe culverts; and other items. Project to be completed in 200 Calendar Days.
2. **F 132(6) Unit 2**—Construction of one 120.0' steel and concrete bridge over Sage Creek on the Chester-Gildford Road in Hill County, involving about 237.5 lin. ft. steel bridge rail; 62,070 lbs. reinforcing steel; 300.4 cu. yds. concrete; 390 cu. yds. structure excavation; 918 lin. ft. driving untreated timber piles; and all L. Sum untreated timber test piles. Project to be completed by August 31, 1958.
3. **F 161(4) Unit 2**—Gravel surfacing, bituminous surface treatment, and construction of 1,880 lin. ft. of metal ditch lining on 4.522 miles on the Skalkaho Road in Ravalli County, involving about 68,944 tons crushed gravel; 1,379 M gals. watering; 314 units rolling; 25,098 gals. liquid asphalt; 25,098 gals. emulsified asphalt; and 1,880 lin. ft. furnished and installed metal ditch lining. Project to be completed in 125 Calendar Days.
4. **I 182(5)**—Construction of one 130.0' steel and concrete bridge over Center Street in the Town of Ulm and two 100.0' steel and concrete bridges over Little Muddy Creek on the Cascade-Ulm Road in Cascade County, involving about 3,995 cu. yds. excavation; 669.3 lin. ft. steel beam bridge rail; 234,765 lbs. reinforcing steel; 1,059.1 cu. yds. concrete; 1,498 cu. yds. structure excavation; 5,520 lin. ft. furnished treated timber piling; 5,304 lin. ft. driving treated timber piling; and all L. Sum treated timber test piles. Project to be completed by October 31, 1958.
5. **I-ING 255(12) Unit 1**—Grade, gravel surfacing treatment and drain 12.082 miles on the Idaho Line-Dillon Road in Beaverhead County, involving about 1,160,852 cu. yds. excavation; 726 cu. yds. gravel backfill; 414,043 mi. yds. overhaul; 380,793 tons crushed gravel; 25,065 M gals. watering; 4,160 units rolling; 125,032 gals. liquid asphalt; 125,322 gals. emulsified asphalt; 3,532 lin. ft. corrugated metal pipe culverts; 746 lin. ft. structural plate pipe culvert; 100 lin. ft. relay pipe culverts; 2,692.6 lin. ft. Type "B" median curb; and other items. Project to be completed in 400 Calendar Days.
6. **I-ING 255(12) Unit 2**—Construction of one 280.5' steel and concrete bridge over the Union Pacific Railroad and one 118.0' steel and concrete bridge near Monida on the Idaho Line-Dillon Road in Beaverhead

County, involving about all L. Sum structural steel; 243 lin. ft. steel beam bridge rail; 123,225 lbs. reinforcing steel; 890.1 cu. yds. concrete; 1,425 cu. yds. structure excavation; 560 lin. ft. steel bridge rail; 27 each 45' prestressed beams; and 14 each 35' prestressed beams. Project to be completed by July 31, 1959.

7. S 32(8)—Grade, gravel surfacing, bituminous surface treatment, and drain 7.949 miles on the Glendive-Richey Road in Dawson County, involving about 130,735 cu. yds. excavation; 36 cu. yds. gravel backfill; 7,326 mi. yds. overhaul; 101,896 tons crushed gravel; 3,978 M gals. watering; 797 units rolling; 42,505 gals. liquid asphalt; 42,505 gals. emulsified asphalt; 722 lin. ft. corrugated metal pipe culverts; 12 lin. ft. structural plate pipe culverts; 284 lin. ft. relay pipe culverts; 108 hours blading; 72 hours scraping; and other items. Project to be completed in 180 Calendar Days.

8. S 96(3)—Grade, gravel surfacing, bituminous surface treatment, drain, and construction of one 50.0' treated timber bridge over Pondera Coulee on 8.067 miles on the Conrad-East Road in Pondera County, involving about 176,275 cu. yds. excavation; 100 cu. yds. gravel backfill; 33,318 mi. yds. overhaul; 115,206 tons crushed gravel; 4,920 M gals. watering; 874 units rolling; 43,803 gals. liquid asphalt; 43,803 gals. emulsified asphalt; 2,370 lin. ft. corrugated metal pipe culvert; 64 lin. ft. reinforced concrete pipe culverts; 92 lin. ft. relay pipe culverts; all L. Sum clearing and grubbing; 23.122 MBM treated timber; 0.778 MBM untreated timber; 560 lin. ft. treated timber piles; 574 lbs. structural steel; all L. Sum removal of existing structure & maintaining traffic ;and other items. Project to be completed in 200 Calendar Days.

9. S 190(3)—Grade, gravel surfacing, and drain 9.122 miles on the Presserville-Girard-Fairview Road in McCone County, involving about 184,412 cu. yds. excavation; 1,242 cu. yds. binder; 220 cu. yds. gravel backfill; 2,484 mi. yds. overhaul on binder; 10,086 mi. yds. overhaul; 56,847 tons crushed gravel; 3,871 M gals. watering; 337 units rolling; 2,214 lin. ft. corrugated metal pipe culverts; 148 lin. ft. structural plate pipe culverts; 206 lin. ft. relay pipe culverts; all L. Sum removal of two existing structures; and other items. Project to be completed in 150 Calendar Days.

10. S 197(3)—Grade, gravel surfacing, bituminous surface treatment, and drain 9.406 miles on the Scobey-Canadian Line Road in Daniels County, involving about 248,656 cu. yds. excavation; 1,280 cu. yds. riprap; 208 cu. yds. gravel backfill; 14,246 mi. yds. overhaul; 171,630 tons crushed gravel; 7,144 M gals. watering; 1,332 units rolling; 55,785 gals. liquid asphalt; 55,937 gals. emulsified asphalt; 1,900 lin. ft. corrugated metal pipe culverts; 214 lin. ft. structural plate pipe culverts; 96 lin. ft. relay pipe culverts; and other items. Project to be completed in 200 Calendar Days.

11. S 202(2)—Grade, gravel surfacing, bituminous surface treatment, and drain 7.507 miles on the Brockton-North Road in Roosevelt County, involving about 135,710 cu. yds. excavation; 59 cu. yds. gravel backfill; 7,171 mi. yds. overhaul; 115,139 tons crushed gravel; 4,328 M gals. watering; 793 units rolling; 40,799 gals. liquid asphalt; 40,799 gals. emulsified asphalt; 1,356 lin. ft. corrugated metal pipe culverts; 72 lin. ft. structural plate pipe culverts; 132 lin. ft. relay pipe culverts; all L. Sum removal of existing structures; and other items. Project to be completed in 180 Calendar Days.

12. S 310(5)—Grade, gravel surfacing, road-mix oiling, seal-coat oiling, and drain 1.675 miles on the Pendroy-Conrad Road in Teton County, involving about 21,128 cu. yds. excavation; 100 cu. yds. gravel backfill; 1,570 mi. yds. overhaul; 27,449 tons crushed gravel; 788 M gals. watering; 169 units rolling; 57,693 gals. liquid asphalt; 272 lin. ft. corrugated metal pipe culverts; 176 lin. ft. relay pipe culverts; 1.675 miles processing; 544 sq. yds. processing; and other items. Project to be completed in 150 Calendar Days.

13. S 362(4)—Grade, gravel surfacing, bituminous surface treatment, and drain 8.129 miles on the Lame Deer-Colstrip Road in Rosebud County, involving about 320,300 cu. yds. excavation; 100 cu. yds. gravel backfill; 16,548 mi. yds. overhaul; 110,689 tons crushed gravel; 6,995 M gals. watering; 1,199 units rolling; 44,417 gals. liquid asphalt; 44,417 gals. emuls. asphalt; 1,286 lin. ft. corrugated metal pipe culverts; 490 lin. ft. relay pipe culverts; all L. Sum clearing & grubbing; and other items. Project to be completed in 200 Calendar Days.

14. SPP 071-7512-01—The improvement consists of the lump-sum item for the revision of the water-supply system at the Lewis & Clark Cavern State Park in Jefferson County, consisting of the furnishing and the installation of a high-pressure water pump, chlorination system, float valve and water lines; and the construction of a filter system at the water source, reinforced concrete water tanks, pump house; and other work. Project to be completed by October 31, 1957.

The above-listed quantities are approximate only.

All bid proposals shall be accompanied by a certified or cashier's check, cash, postal money order, bank money order, or bid bond in the amount of at least 5% of the bid. Should the successful bidder fail to enter into his contract and furnish a satisfactory performance bond within the time stated in his proposal, the bid deposit shall be forfeited to the State Highway Commission of Montana.

Prequalification of bidders at least 72 hours prior to the opening of bids is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission in Helena, Montana. Plans and specifications for all Federal-aid projects are also on file and may be examined in the offices of the Bureau of Public Roads at Missoula, Montana.

STATE HIGHWAY PROJECTS
BIDS CLOSE 10 A.M., AUGUST 27
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, August 27, 1957, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and

specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal Funds have been allocated for items nos. 1 to 4 inclusive.

The improvements for which bids will be received follow:

1. Clearing, Draining, Grading, Surfacing, Paving with Type I-1 Asphaltic Concrete, Installing an Illumination System and Constructing Two Reinforced Concrete Box Girder Bridges on 0.284 mile of Primary State Highway No. 1 in Whatcom County, SSH 1-B OVERCROSSING AND APPROACHES, FAP NO. I-001-5(17), involving about 77,580 cubic yards of Common Excavation, 21,400 tons of Selected Roadway Borrow, 1,365 cubic yards of Sand Borrow, 2,650 tons of Crushed Stone Surfacing, 33 tons of Asphalt Cement, 250 cubic yards of Crushed Cover Stone and Mineral Aggregate 3,710 tons of Asphaltic Concrete, 603 linear feet of Cement Concrete Gutter, 2,010 linear feet of Cement Concrete Curb and Gutter, 3,710 linear feet of Precast Traffic Curb, 1,283 linear feet of Concrete Pipe, 413 linear feet of Corrugated Metal Pipe, 569 linear feet of Corrugated Metal Structural Plate Pipe-Arch, 764 linear feet of Iron Pipe, 130 square yards of Cement Concrete Sidewalk, 250 cubic yards of Loose Riprap, 1,201 cubic yards of Concrete, 380,815 pounds of Steel Reinforcing Bars, 654 linear feet of Standard Bridge Rail, 8,400 linear feet of Timber Piling, 4,000 linear feet of Concrete Pile Extensions, a lump sum bid for Installation of Illumination System and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
2. Clearing, Draining, Grading, Surfacing, Constructing a Light Bituminous Surface Treatment, Paving with Type I-1 Asphaltic Concrete and Installing Two Illumination Systems on 12.761 miles of Secondary State Highway No. 3-A in Yakima and Benton Counties, MABTON TO PROSSER, FAP No. F-048-1(1) and State Project, involving about 131,320 cubic yards of Common Excavation and Borrow, 52,220 units of Overhaul, 43,420 tons of Crushed Stone Surfacing and Crushed Cover Stone, 468 tons of Asphalt Cement, 15,470 tons of Asphaltic Concrete, 650 cubic yards of Mineral Aggregate, 22 cubic yards of Concrete, 3,036 linear feet of Concrete Pipe, 69 linear feet of Corrugated Metal Pipe-Arch, 176 linear feet of Welded Pipe, 2 lump sum bids for Installation of Illumination Systems and other items.
3. Clearing, Draining, Grading, Surfacing and Paving with Cement Concrete on 2.187 miles of a King County Road, EAST LAKE SAMMAMISH ROAD, FAS No. S-0370(2), involving about 41,360 cubic yards of Common Excavation, 1,400 cubic yards of Excavation of Unsuitable Material, 23,750 tons of Selected Roadway Borrow, 3,820 tons of Crushed Stone Surfacing, 100 tons of Asphaltic Concrete, 28,573 square yards of Cement Concrete Pavement, 12,-696 pounds of Pavement Reinforcement, 315 cubic yards of Concrete, 3,340 pounds of Steel Reinforcing Bars, 1,218 linear feet of Concrete Pipe, 124 linear feet of Corrugated Structural Plate Pipe, 1,356 linear feet of Reinforced Concrete Cribbing Headers and Stretchers, 98 Guide Posts, 24 cubic yards of Hand Placed Riprap and other items.
4. Clearing, Draining, Grading, Surfacing and Constructing a Light Bituminous Surface Treatment on 6.615 miles of an Adams and Franklin County Road, BOOKER-SCOOTENAY ROAD, FAS No. S-0973(1), involving about 122,920 cubic yards of Common Excavation and Borrow, 41,440 tons of Crushed Stone Surfacing, 222 tons of Asphalt Cement, 1,970 cubic yards of Crushed Cover Stone, 72 cubic yards of Mortar Rubble Masonry, 1,210 linear feet of Concrete Pipe, 100 linear feet of Corrugated Structural Plate Pipe and other items.
5. Clearing, Draining, Grading, Surfacing, Stockpiling Maintenance Rock, Sand and Mineral Aggregates and Constructing a Light Bituminous Surface Treatment on 2.831 miles of Primary State Highway No. 8 in Yakima County, THIRD CROSSING SATUS CREEK NORTH, a State Project, involving about 72,580 cubic yards of Common Excavation and Borrow, 30,410 tons of Crushed Stone Surfacing, Maintenance Rock, Sand, Mineral Aggregates and Crushed Cover Stone, 107 tons of Asphalt Cement, 32 cubic yards of Concrete, 3,730 pounds of Steel Reinforcing Bars, 525 linear feet of Concrete Pipe and other items.
6. Constructing a Timber Bridge and Reinforced Concrete Cribbing on 0.167 mile of Secondary State Highway No. 9-A in Clallam County, FALLS CREEK BRIDGE AND APPROACHES, a State Project, involving about 60 cubic yards of Common Excavation, 5,950 cubic yards of Selected Roadway Borrow, 160 cubic yards of Crushed Stone Surfacing, 45 cubic yards of Concrete, 7,630 pounds of Steel Reinforcing Bars, 21,344 linear feet of Reinforced Concrete Cribbing Headers and Stretchers, 75 MBM of Treated Timber and Lumber, 1,250 linear feet of Treated Timber Piling and other items.
7. Grading, Surfacing, Constructing a Cement Treated Base and Paving with Type I-1 Asphaltic Concrete on 0.789 mile of Primary State Highway No. 3 in Yakima County, CITY OF SUNNYSIDE, a State Project, involving about 2,400 cubic yards of Common Excavation, 3,150 tons of Crushed Stone Surfacing, 2,930 tons of Asphaltic Concrete, 14 tons of Asphalt Cement, 662 barrels of Portland Cement, 3,500 tons of CTB Aggregate and other items.
8. Draining, Grading, Surfacing and Constructing a Bituminous Surface Treatment Plant Mix Type F on 0.581 mile of Primary State Highway No. 21 in Kitsap County, SILVERDALE VICINITY, a State Project, involving about 2,510 cubic yards of Common Excavation, 3,435 tons of Crushed Stone Surfacing, 20 tons of Asphalt Cement, 130 cubic yards of Mineral Aggregate, 3,330 tons of Bituminous Plant Mix, 510 linear feet of Precast Traffic Curb, 87 linear feet of Concrete Pipe, 20 linear feet of Corrugated Structural Plate Pipe, 25 linear feet of Beam Guard Rail and other items.
9. Draining, Grading, Surfacing, Paving with Type I-1 Asphaltic Concrete and Installing an Illumination System on Primary State Highway No. 1 in Cowlitz County, 12TH STREET OFF-CONNECTION IN KELSO, a State Project, involving about 10,570 cubic yards of Common Excavation and Borrow, 760 cubic yards of Selected Roadway Borrow, Crushed Stone Surfacing and Mineral Aggregate, 360 tons of Asphaltic Concrete, 610 linear feet of Cement Concrete Curb and Gutter,, 850 linear feet of Mountable Cement Concrete Curb, 153 linear feet of Concrete Pipe, 384 linear feet of Corrugated Metal Pipe, a lump sum bid for Installation of Illumination System and other items.
10. Paving with Type I-1 Asphaltic Concrete on 2.506 miles of Primary State Highway No. 2 in King County, TOKUL CREEK VICINITY, ET AL, a State Project, involving about 750 cubic yards of Crushed Stone Surfacing, 4,765 tons of Asphaltic Concrete, 23 tons of Asphalt Cement and other items.
11. Paving with Type I-1 Asphaltic Concrete on 3.701 miles of Primary State Highway No. 2 in King County, OLALLIE CREEK TO SUMMIT, a State Project, involving about 400 cubic yards of Crushed Stone Surfacing, 1,190 tons of Asphaltic Concrete, 5,530 linear feet of Asphaltic Concrete Curb, 362 linear feet of Corrugated Metal Pipe and other items.
12. Constructing Non-Skid Seal Treatment and Light Bituminous Surface Treatment on 27.93 miles of Secondary State Highways Nos. 1-A and 1-D in King, Snohomish, Skagit and Island Counties, WOODINVILLE TO SNOHOMISH COUNTY LINE, ET AL, a State Project, involving about 838 tons of Asphalt Cement, 9,440 cubic yards of Mineral Aggregate and Crushed Cover Stone and other items.
13. Constructing Three Timber Bridges on 0.050 mile of Primary State Highway No. 5 in Pierce County, BRIDGES NOS 5-EF/107, 5-EF/108 AND 5-EF/109, a State Project, involving about 83 MBM of Treated Timber and Lumber, 75 tons of Bituminous Mix, 29 cubic yards of Concrete and other items.
14. Draining and Grading on 0.376 mile of Secondary State Highway No. 9-A in Clallam County, EAST BOUNDARY INDIAN RESERVATION TO SEKIU RIVER, a State Project, involving about 4,800 cubic yards of Common Excavation, 21 linear feet of Concrete Pipe, 4,600 cubic yards of Loose Riprap, 70 cubic yards of Hand Placed Riprap and other items.
15. Replacing and Reconstructing Fenders on Primary State Highway No. 14 in Pierce County, TACOMA NARROWS BRIDGE, a State Project, involving about 145 MBM of Timber and Lumber and 2,-500 pounds of Replacing Existing Fender Hardware.
16. Installing an Illumination System on Primary State Highway No. 10 in Chelan County, KNAPPS HILL TUNNEL, a State Project, involving a lump sum bid for Installation of Illumination System.

W. A. BUGGE, Director of Highways

WATER SUPPLY PROJECT
BIDS CLOSE 8 P. M., SEPTEMBER 18
Oregon City, Oregon
NOTICE TO CONTRACTORS

Sealed proposals for furnishing all materials, equipment, labor, and services of all kind for the construction of a Water Supply Project for the South Fork Water Board which supplies water to the cities of Oregon City and West Linn, Oregon, will be received at the office of the Secretary until 8:00 P.M., P.S.T., on the 18th day of September, 1957, and immediately thereafter said proposals will be publicly opened and read. A Contract will be awarded or bids will be rejected within thirty (30) days after their opening.

The project consists of a raw water intake and pumping staiton, a water purification works having a nominal capacity of 10 MGD, a water pumping station on Division Street in Oregon City and the pipe line work to connect the facilities and transport water to a reservoir in Oregon City. The

project is divided into four contracts: Contract No. 1, Raw Water Intake Structure and Pumping Station; Contract No. 2, Water Purification Works; Contract No. 3, Division Street Pumping Station; and Contract No. 4, Pipe Line Work.

Plans and Specifications may be examined at the office of the Secretary of the South Fork Water Board, City Hall, Oregon City, Oregon, or at the office of Stevens & Thompson, Consulting Engineers, 2234 S.W. Fifth Avenue, P. O. Box 508, Portland 7, Oregon.

Prospective bidders must prequalify as required by the Oregon Statutes. Prequalification blanks may be obtained from the Engineers or the bidders may use the regular AGC form for such purpose.

Copies of said plans and specifications may be obtained upon application to the Engineers accompanied by a deposit of $100.00, for the first set and $50.00 per set for each additional set of plans and specifications. The deposit for the first set will be refunded in full to any depositor who submits a bona fide bid and returns the plans within ten (10) days after the bid opening or who returns said plans and specifications in good condition within seven (7) days after receiving them, otherwise only one-half of the said deposit will be refunded when the documents are returned. For additonal sets after the first only one-half of the original deposit of $50.00 will be refunded when the documents are returned provided they are returned within ten (10) days after the bids are opened.

All proposals must be submitted on the regular forms furnished with the specifications and each must be accompanied by cash, certified check, or bid bond in an amount not less than five per cent (5%) of the total bid. A corporate surety bond in the full amount of the contract(s) will be required to guarantee its (their) faithful performance.

The South Fork Water Board reserves the right to reject any or all bids, waive informalities, or to accept any bid or combination thereof which appears to serve the best intests of the Owner.

By order of the South Fork Water Board.
ZELLA BOWERS,
Secretary.

Bids received after the time fixed for opening cannot be considered.
2. BID DOCUMENTS
Specifications, including bid and contract documents, and drawings, may be examined at the office of the Architect, Branch & Branch, 2616 East 11th Street, Bremerton, Washington, and at the School District Office at Vashon High School.
Bonafide bidders may obtain a set at the architect's office upon deposit of a check payable to the architect in the amount of $25.00. Should a bidder wish additional sets or parts of sets, he may obtain them by paying the cost of reproduction.
3. REFUNDS OF DEPOSITS
The full amount of deposit for one set of documents will be refunded to bonafide bidders upon return of the documents in good condition to the architect's office at or before the time set for opening bids. There will be no refund for additional sets or parts of sets. Planholders who do not submit a bonafide bid and do not return the documents at least four days before the time set for opening bids will foreit the full amount of their deposit.
4. RIGHT TO REJECT BIDS
The owner reserves the right to reject any and all bids and to waive informalities.

CHURCH
BIDS CLOSE 8 P. M., AUGUST 28
Klamath Falls, Oregon
NOTICE TO CONTRACTORS

Sealed bids will be received on or before 8 p. m. on Wednesday, August 28, 1957, at the residence of the Rev. Father George Murphy, 4501 Briston Avenue, Klamath Falls, Oregon. This bid will be for the erection of a new school and parish hall.

Basic bid shall be the parish hall and boiler room complete with entry, kitchen and toilet rooms partially completed as noted on drawings. Alternate bid shall be for the office, classrooms, corridor and covered walk completed to the extent indicated on the drawings. Building will be located on church property along Bristol Avenue near Wiard Street in Klamath Falls.

A general bid shall include all items of work except glued-laminated beams and hollow clay wall tile. These materials will be furnished by the owner. Bids will be publicly opened and read.

Plans and specifications may be obtained at the offices of Morrison and Howard, architects, 203 Williams Building, Klamath Falls. A deposit of $25 will be required for plans and specifications. The deposit will be refunded to the bdider upon return of the plans and specifications in good condition. Plans and specifications on file at builders exchanges at Portland, Eugene, Sacramento and San Francisco.

The successful bidder will be required to furnish a surety bond in full amount of the contract price and he shall be required to carry public liability insurance as specified. A bidder's bond or certified check in the amount equal to five per cent (5%) of the lump sum bid must accompany the bid as a guarantee of the execution of the contract and bonds in case the contract is awarded to the bidder.

The owners reserve the right to accept or reject any and all bids and to waive any informalities.

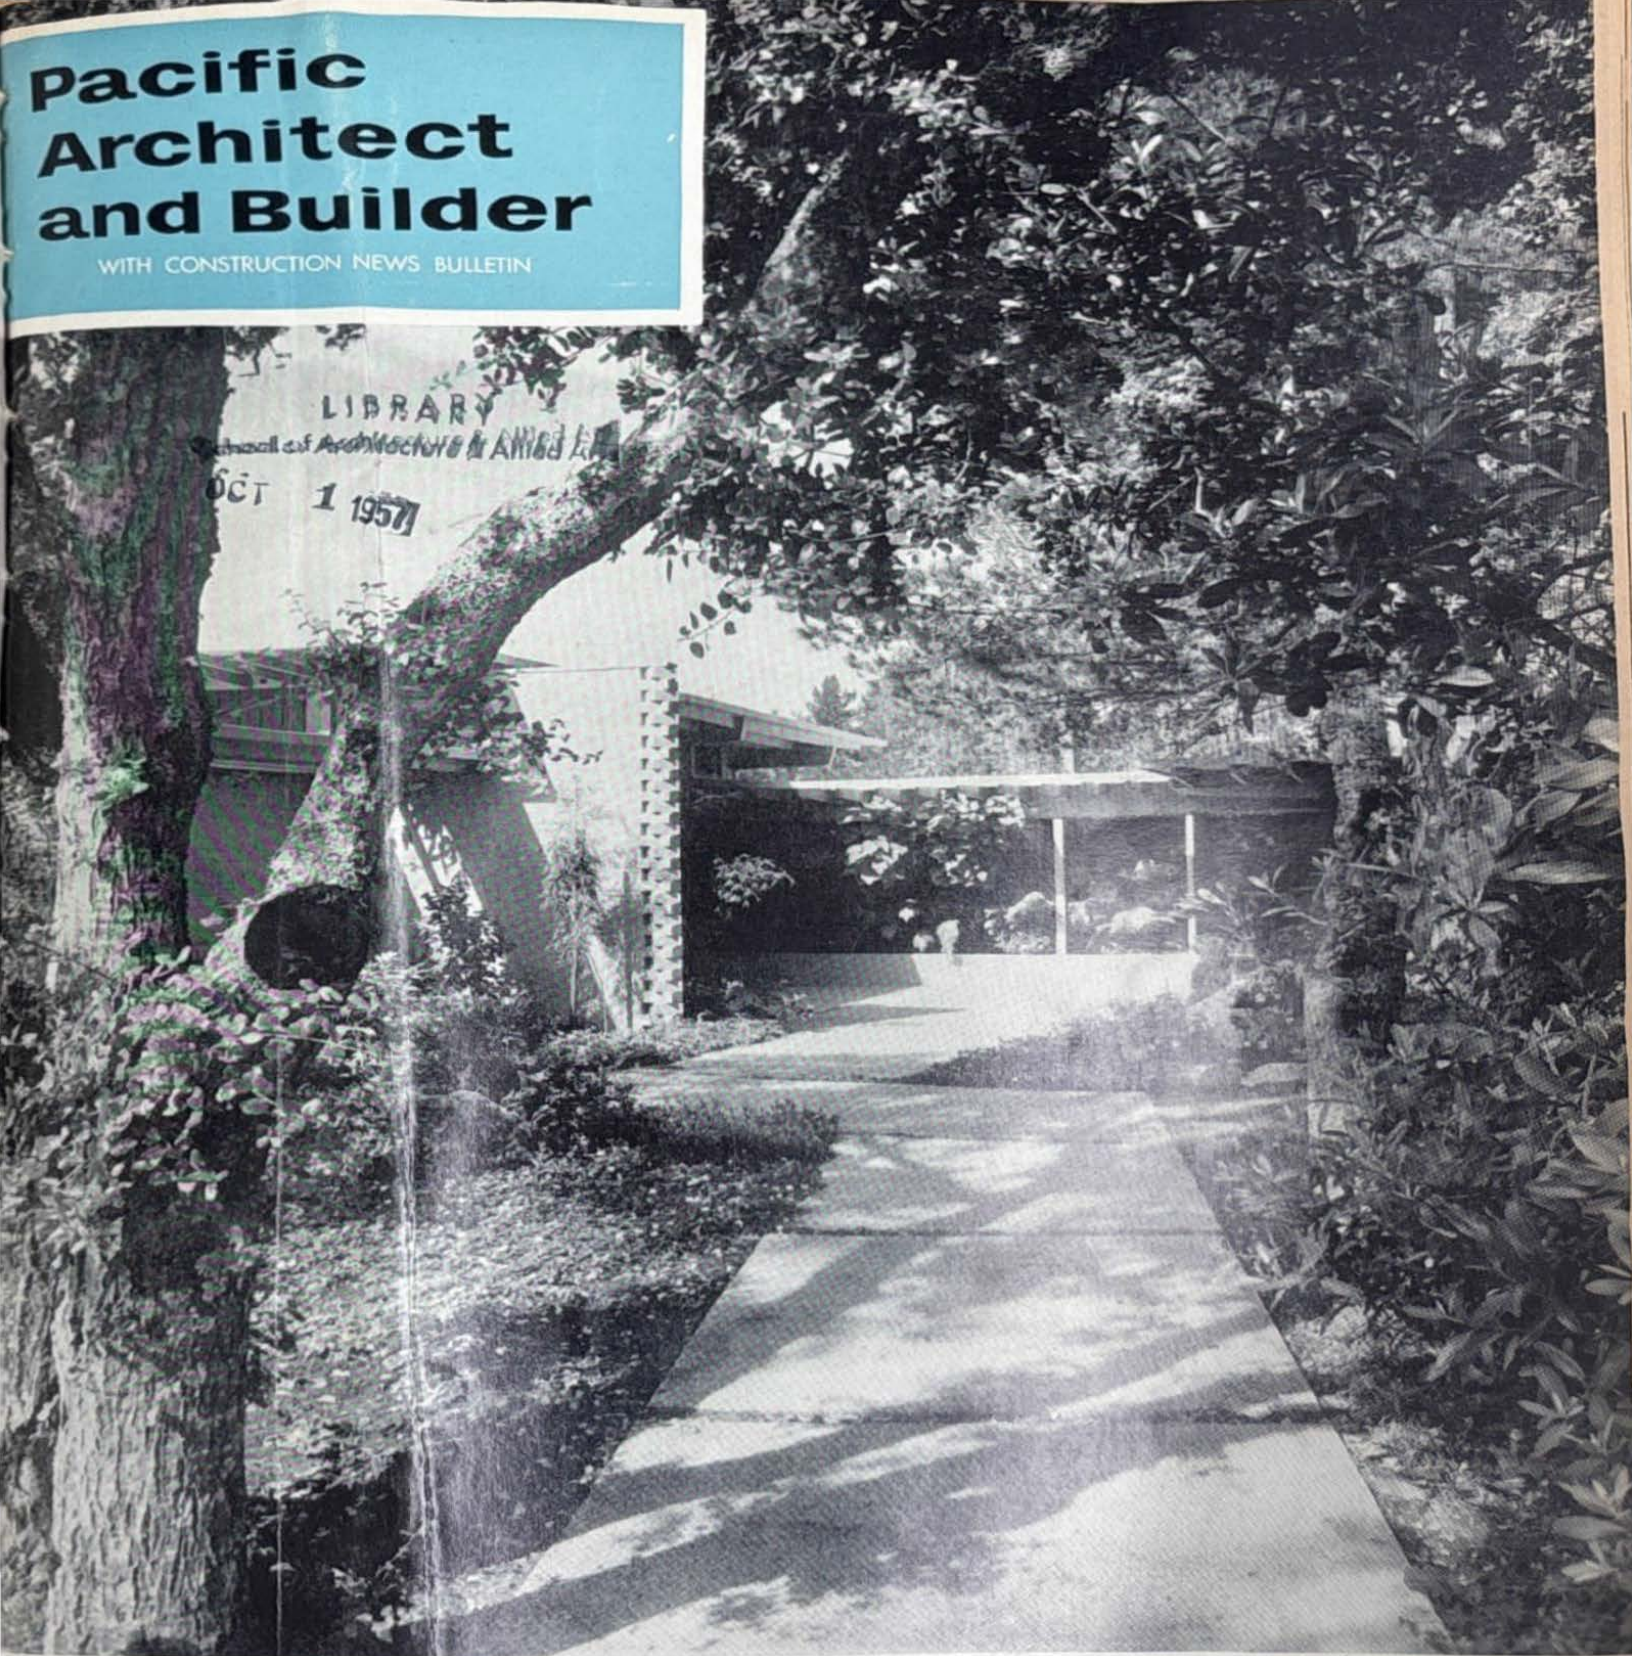
SCHOOL BUILDINGS
BIDS CLOSE 3 P.M., P.S.T., AUGUST 29
Pullman, Washington
NOTICE TO CONTRACTORS



1. NOTICE TO CONTRACTORS
Sealed bids will be received by Pullman Public Schools, District #307, at the office of the Architect, McClure & Adkison, 707 Sherwood Building, Spokane, Washington, until 3:00 P.M., P.S.T., August 29, 1957, for
(a) General Contract,
(b) Mechanical Contract, and
(c) Electrical Contract,
separately, for the construction of Military Hill Elementary School, 8 classrooms, M.P. and kitchen, and/or an addition to Franklin Elementary School, 4 classrooms, cafeteria and kitchen, Pullman, Washington, and the said bids will then and there be publicly opened and read aloud. Bidders and others properly interested are invited to be present at the bid opening.
Bids received after the time fixed for opening cannot be considered.
2. BID DOCUMENTS
Specifications, including bid and contract documents, and drawings, may be examined at the office of the Architect, at the Associated General Contractors of America, Eastern Washington Builders Chapter, Spokane Construction Council, Spokane, Washington. Bonafide bidders may obtain one set each of General, Mechanical and Electrical plans and specifications at the Architect's office upon deposit of a check payable to the Architect in the amount of $25.00 for each set of General plans and specifications and $15.00 for each set of Mechanical or Electrical plans and specifications. Should a bidder wish additional sets or parts of sets, he may obtain them by paying the cost of reproduction.
3. REFUND OF DEPOSITS
The full amount of deposit for one set of documents will be refunded to bonafide bidders upon return of the documents in good condition to the Architect's office at or before the time set for opening bids. There will be no refund for additional sets or parts of sets. Plan holders who do not submit a bonafied bid and do not return the documents at least 10 days before the time set for opening bids will forefeit the full amount of their deposit.
4. RIGHT TO REJECT BIDS
The Owner reserves the right to reject any and all bids and to waive informalities.

YODER

In addition to press brake fabrication described below, Fentron Industries often use the Yoder (continuous) method in which roof sections are made to any length and standing seams are crimped together for greater strength.

PRESS BRAKE

Steel roof decking...durable, strong and economical

Fentron Industries of Seattle, Washington, has found USS Steel Sheets ideal for low-cost and reliable roof deck construction. The service station canopy roof above, formed and installed by Fentron, is fabricated from 18-gauge USS Sheets by the press brake method and plug-welded every 18 inches. Sections are one-foot wide in nine-foot spans with two-and-one-half inch standing seams that interlock on installation; leak-proof against wind and water. This roof decking has withstood test loads of 55 lbs. per sq. foot, without distress . . . good overhead insurance under the snow loads in Washington winters.

Steel roof decking is durable, strong and costs less to install. Other materials require more weight, additional construction time and greater cost to equal the strength and carrying capacity of steel.

Whether you build service stations, industrial plants or homes, we'll be happy to direct you to steel decking fabricators who will provide you with additional information and specifications.

West Coast architects design abroad

RESIDENCE FOR U. S. AMBASSADOR TO CHILE: Paul Thiry, architect.

In Santiago, Chile

Instead of drawing upon the European heritage of the Chileno in designing a residence for the U. S. ambassador to Chile, architect Paul Thiry of Seattle has looked for his inspiration to the culture of the ancient Andean civilizations. The structure will be a contemporary expression of their indigenous architecture of walls and terraced hillsides.

To be located in suburban Santiago adjoining the city's fashionable golf club, the residence will be sited atop a ridge within a valley bordered on the north and northeast by the towering Andes.

The state reception and dining rooms, the ambassador's private apartments and the servants' quarters are dispersed around a large patio with fountain. Because of the one-story plan, the ambassador and his family have access to the patio and gardens instead of being isolated on upper floors as has been customary in buildings of this type. Although the building maintains a residential scale, it can, by implementation of formal rooms, patio and gardens, easily accommodate large groups of people.

Structurally, the building will be of earthquake-resistant monolithic concrete and can be opened by means of glass sliding doors and screens.

U. S. EMBASSY BUILDING IN PAKISTAN: Richard J. Neutra and Robert E. Alexander, architects.

In Karachi, Pakistan

Construction has started this summer in Karachi on one of the largest U. S. embassy office buildings in the world and the only one in which the host country will assume a share of the cost. Designed by Los Angeles architects Richard J. Neutra and Robert E. Alexander, Pakistan will pay half the cost of the project, estimated to cost $1.3 million.

A reflecting pool will dramatize the entrance to the 62,000-sq. ft. reinforced concrete structure which will be built in the heart of the city facing the Frere Gardens, the only green spot in the desert capital. It will have a reinforced concrete reservoir located below the basement, a 10,000-gal. tank and other mechanical equipment in a penthouse and an adjoining 16,000-sq. ft. concrete warehouse.

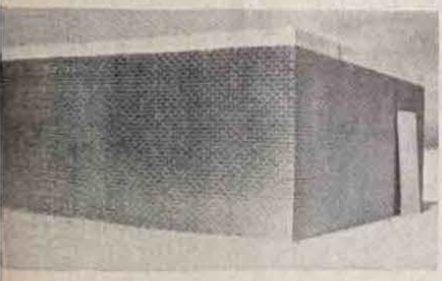
Besides normal embassy functions, plans call for office space to house the U. S. Information Service, with film distribution center and printing plant, the Foreign Operations Program and the Military Assistance Program, as well as other functions.

Briefly noted . . .

• Architect Minoru Yamasaki of Detroit and landscape architect Lawrence Halprin of San Francisco have been selected as out-of-state consultants for Seattle's proposed Civic Center and World's Fair. Yamasaki is a graduate of the University of Washington.

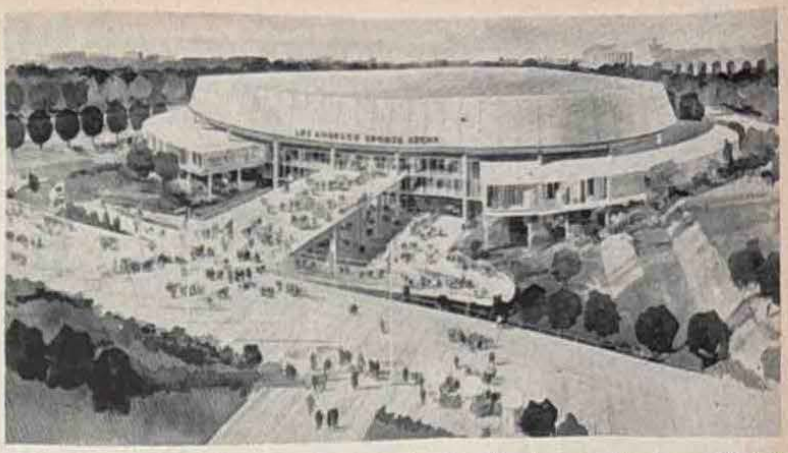
• "Designing the Next 100 years" will be the theme of the annual convention of the American Society of Industrial Designers to be held October 17-20 at the Ojai Valley Inn, Ojai, Calif. Among the speakers will be architect Charles Luckman of Los Angeles.

• Demolition work is underway on the 20-acre site on which Portland will erect its $8 million Exposition-Recreation Center.



• Beverly Hills, Calif., plans to build a museum with the profits from a movie, but just what kind of film it might be has not been disclosed.

• A newly appointed Building Research Advisory Board Committee formed to advise the FHA on its technical studies program has one West Coast member, Charles D. Clark, land planning consultant of Los Angeles.

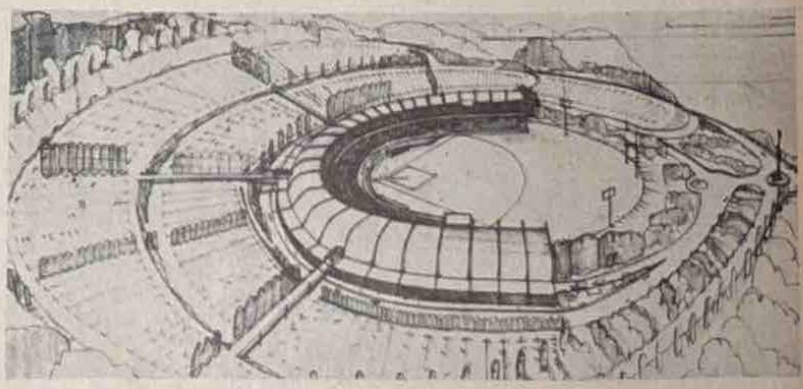


Windowless brick school survives atomic blast

A full-size reinforced brick school structure successfully withstood the effect of an atomic blast during the recent Plumbob nuclear test series in Nevada, the Federal Civil Defense Administration has reported.

Designed by the Structural Clay Products Research Foundation, the 32x28 ft. windowless building was constructed with 10-in. reinforced brick walls and a reinforced concrete roof. This classroom planned for 30 students would have afforded a high degree of protection to its occupants in 75% of the blast area.

WINDOWLESS CLASSROOM UNIT withstands effect of atomic blast in recent test.



SPORTS ARENA IN LOS ANGELES for which more than $5 million in revenue bonds were floated.

Mammoth indoor arena planned for Los Angeles

Prelminary plans for one of the largest indoor sports arenas in the country have been presented to the Los Angeles Memorial Coliseum Commission by the architectural firm of Welton Becket & Associates.

The project provides seating for 16,000 persons at ice hockey games or 18,432 for basketball and 19,320 for boxing, by use of temporary seating on a lower level. The elliptically shaped arena could seat a maximum of 30,000 for conventions when the entire lower level is filled with seats. The entire structure will be of fireproof reinforced concrete and structural steel, free of any columns within the seating area.

A controversy centering around the project reached a high point last March when the commission discharged Stiles O. and Robert Clements because of high bids on their plans. The architects now have a $374,000 lawsuit against the commission and the latter has countercharged with a suit for about the same amount.

FROM POLO GROUNDS TO BAYVIEW PARK: Giants will get new home when they come to San Francisco next season. Precast concrete sections are now being designed.

Big league baseball means new stadium for Bay

Proposed stadium for big league baseball in San Francisco, with the transfer of the New York Giants set for next spring, will have seating for 40,000 fans and parking for 10,000 cars. The overall scheme has been developed by architect John S. Bolles, consulting engineer E. Elmore Hutchison and contractor Charles Harney.

The project will cost about $12 million, $5 million of which will be furnished by the city and the balance by Harney and associates. It will be located on the northeasterly slope of Candlestick Point, with access from Bayshore Freeway, Third Street and adjacent and contiguous streets to be widened by the city to serve both the stadium and the area in the Bay to be reclaimed by the Hunters Point Reclamation District.

Upon signing of the contract, about two million cubic yards of earth will be taken from the hill within 60 days in what will be the largest earth-moving job in the history of the Bay area. Part of the earth will be used for the parking area and the balance as fill in the Bay to provide 100 acres of the 500 to be developed.

August volume lags behind same month last year

Building volume in the five western states dropped to $199,615,437 in August. The total, as reported by 116 building permit agencies, is $47 million below the same period last year.

On a statewide basis California dropped $38 million; Washington, $6¾ million; Oregon, $1½ million; and Montana, $1 million. Idaho showed a slight increase over August 1956.

Compared to the previous month, the August volume was down $13¼ million. Idaho and Washington reported increases over July, while the other three states reported decreases.

Here is the box score for the year so far:

	Jan.-Aug. 1957	Jan.-Aug. 1956
California	$1,341,449,807	$1,474,164,000
Oregon	83,777,027	100,504,217
Washington	189,548,174	223,556,066
Montana	16,853,824	20,814,764
Idaho	16,084,520	16,887,906

As the tabulation shows, all states are running behind the cumulative totals for last year. The dollar volume for the first eight months is $1,647,713,352, down $188,213,601 from the total at the same time in 1956.

Following is the breakdown of building permits issued for new buildings and additions by several of the major agencies during August. (First number in each category refers to number of permits, not number of units.)

ANALYSIS OF TYPICAL AREAS—AUGUST

	DWELLING	COMMERCIAL & INDUSTRIAL	PUBLIC
Portland	58 ($ 987,450)	20 ($ 850,300)	5 ($ 286,985)
King Co.	524 (5,246,530)	51 (336,945)	8 (617,400)
Seattle	602 (3,957,632)	167 (4,107,082)	1 (4,000)
Tacoma	84 (258,480)	45 (435,230)	3 (2,685,000)
Los Angeles Co.	1915 (13,701,260)	389 (4,619,400)	29 (795,250)
Orange Co.	334 (3,756,899)	44 (589,595)	2 (55,000)
Sacramento Co	246 (3,465,239)	79 (594,943)	11 (4,139,977)

NEW design concept... WITH COLORFUL CONCRETE

COLORUNDUM • STAYBRITE • A. E. DISPERSED BLACK • FOR USE INDOORS OR OUTDOORS

This is the Age of Color in Architecture. And particularly in concrete, color is being used with greater freedom and effect than ever before. Today, many architects specify colorful patios, terraces and walls to harmonize with new building materials like stainless steel; others use subtle pastels to create new atmospheres indoors and out; and still others are using this brilliant medium for strictly functional purposes, such as to guide traffic or set off working areas.

Color selection in construction is easy.

Specify Horn Colorundum for decorative floors, modern in appearance, with increased value.

Specify Horn Staybrite integral color to enhance the beauty of all concrete and mortar surfaces.

Both are available in a wide range of decorative colors.

Specify Horn A. E. Dispersed Black to darken concrete. It is *guaranteed* not to reduce the air content in air entrained concrete mixes.

Want more information? For condensed data see Sweets—For complete details write Dept. H62-715.

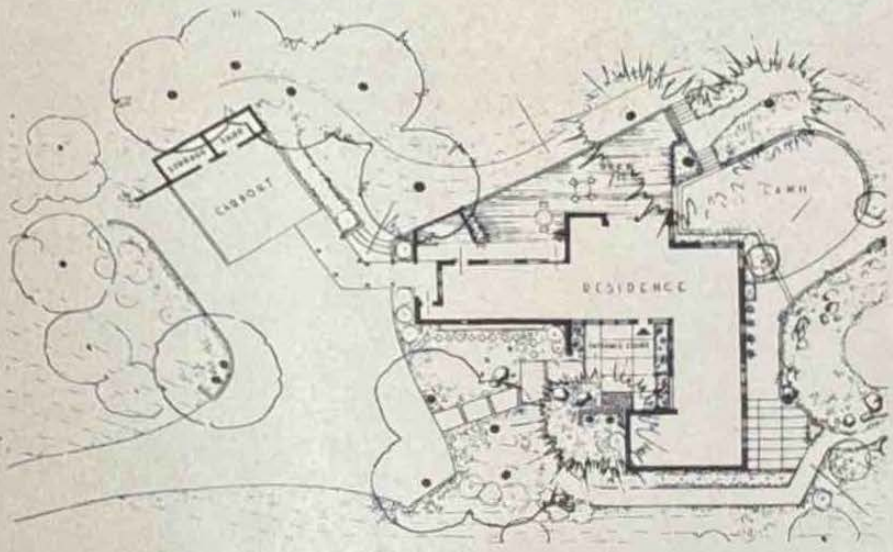
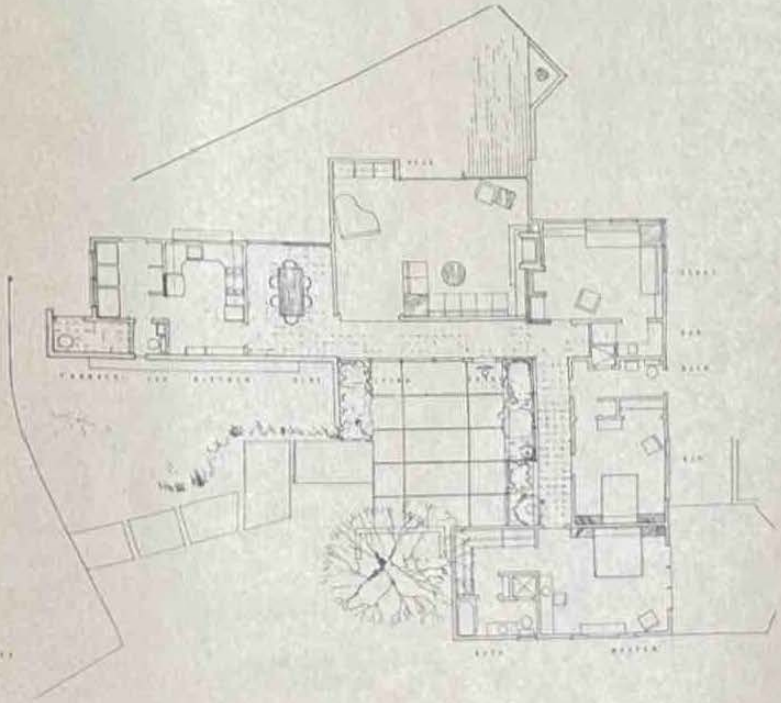
An intelligent use of the site

House that treads its way through the forest



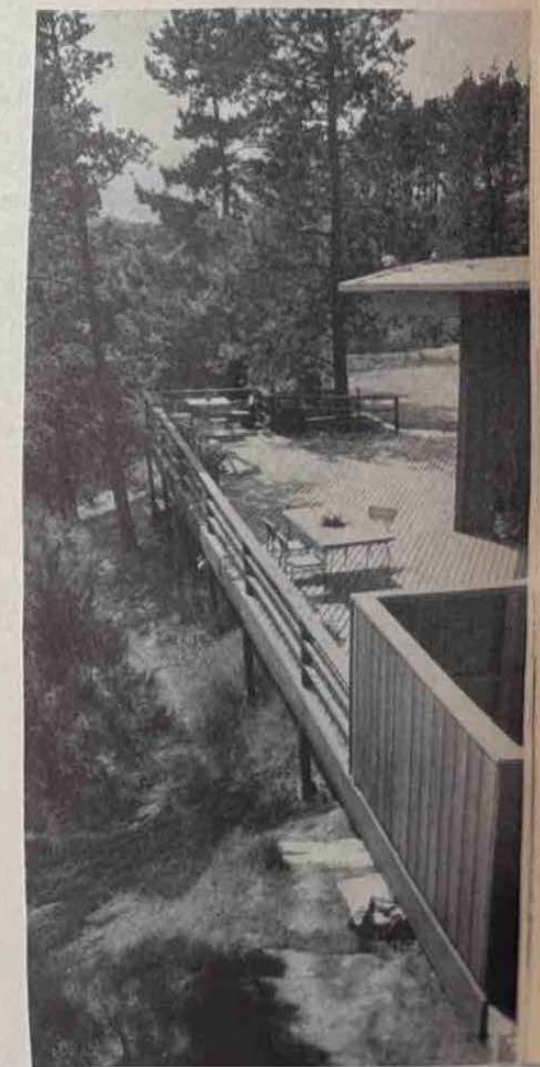
THE 2½-ACRE SITE had only a small level portion of land and just room enough for a house, carport and parking area. Although it was heavily wooded, the loss of any major tree would affect the beauty of the lot at the house location and the privacy required by the clients, both professionals without children—she, a ballet teacher; he, a dentist and a performer with chamber music groups.



The entire property has a view of the valley, but the most desirable is to the south and southwest where pine-covered mountains present a panoramic backdrop. This necessitated sheltered outdoor living to combat prevailing summer breezes off the bay from the north-northeast and protection of glass areas from the sun.

Since the site in large measure dictated the design of the house, the architect and landscape architect shared in the planning from the outset. The latter's problem was threefold: 1) to assist the architect and clients in locating the house and carport on the very narrow, wooded saddle; 2) to save all good trees and natural undergrowth on the slopes below in meeting the stated requirements; 3) to plan an appealing approach in spite of the large space needed for visitor car parking and turning.

The solution: By locating the house on the edge of the hill and extending a deck parallel with the contours, it was possible to utilize a group of pines



southwest of the house for shade in the late afternoon and to reserve an area for a small, cooling lawn at the west corner. Through careful staking of the site, a roofed connection between house and carport was laid out that would not obstruct the view across the saddle. One end of the deck, near the kitchen, was planned to function both as a service area and as a visual barrier between the parking area and that part of the deck used for lounging. The entrance garden was designed to attract visitors to the main doorway of the house where two pines extend a welcome.

DECK EXTENDS from living room (top photo, left) across front of house. Screened area in foreground (bottom photo) blocks view from parking area and carport to deck and serves as storage. Material is redwood paneling.

HUTTON RESIDENCE

HOUSE BLENDING INTO LANDSCAPE provides quiet mood of privacy. Planting beds line hallway leading to bedrooms; study is seen in background. Both dining and living rooms have mahogany paneling. Simple, direct circulation carries from one end of house to other.

OUTLINE SPECIFICATIONS

Structure: 1-story frame on concrete slab.

Exterior Walls: 8x4x16-in. masonry block (Basalt), 1x8 redwood siding with clear flat rawhide paint.

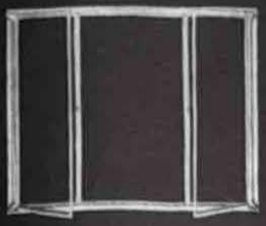
Windows: Custom-made stopped in wood.

Doors: Mahogany solid core, exterior; mahogany hollow core, interior.

Floors: Quarry tile (Mosaic), ceramic tile (Gladding McBean), vinyl tile (Robbins), carpeting on concrete slab.

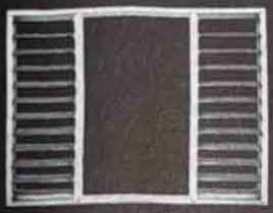
Interior Finish: 1x8 mahogany paneling, painted (Morwear) plaster.

Ceilings: Plaster, acoustical plaster (California Stucco).



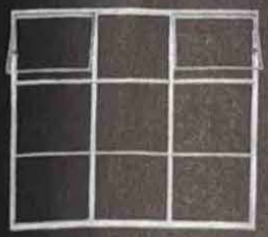
Heating: Radiant system (Arro).

Total Area: 2,200 sq. ft.

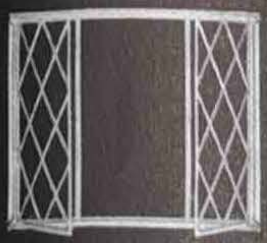


Total Cost: $35,000.

Date of Completion: June 1954.



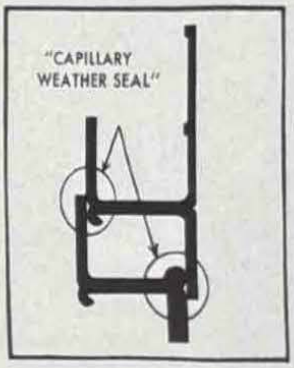
FOUR POPULAR STYLES



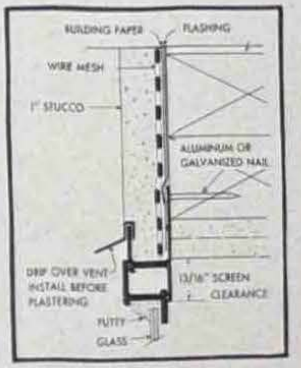
Bourne Aluminum Casements in a wide range of stock sizes.

Bourne Aluminum Jalousies for windows breezeways, porches.

Bourne Town & Country Windows for modern ranch house styling.



Bourne Diamond Patterns bring Old-World charm for modern homes.



PROMPT SERVICE ON SPECIAL-ORDER CUSTOM DESIGNS

Two exclusive features of

BOURNE DUAL-FIN® ALUMINUM WINDOWS

Bourne Capillary Seal keeps out rain, wind, and dust around all vent openings.

Bourne Patented Dual Fin saves installation time on frame or masonry construction.

MADE IN CALIFORNIA TO MEET WESTERN NEEDS

All Bourne Dual-Fin Windows are manufactured in Bourne's fine modern factory, using highest quality extruded aluminum alloy 6063-T5, with corners mitered and joined electrically by flash welding the entire cross section. Both capillary seal and Dual-Fin features are engineered specifically to meet western weather conditions. All Bourne Dual-Fin Windows are fully guaranteed.

GET YOUR NEW FREE BOURNE CATALOG — A HANDY MANUAL OF WINDOW INSTALLATION

A postal card will bring your free copy of this new 16-page catalog of Bourne Dual-Fin Aluminum Windows, with complete size tables and installation details. Invaluable for architects and builders!

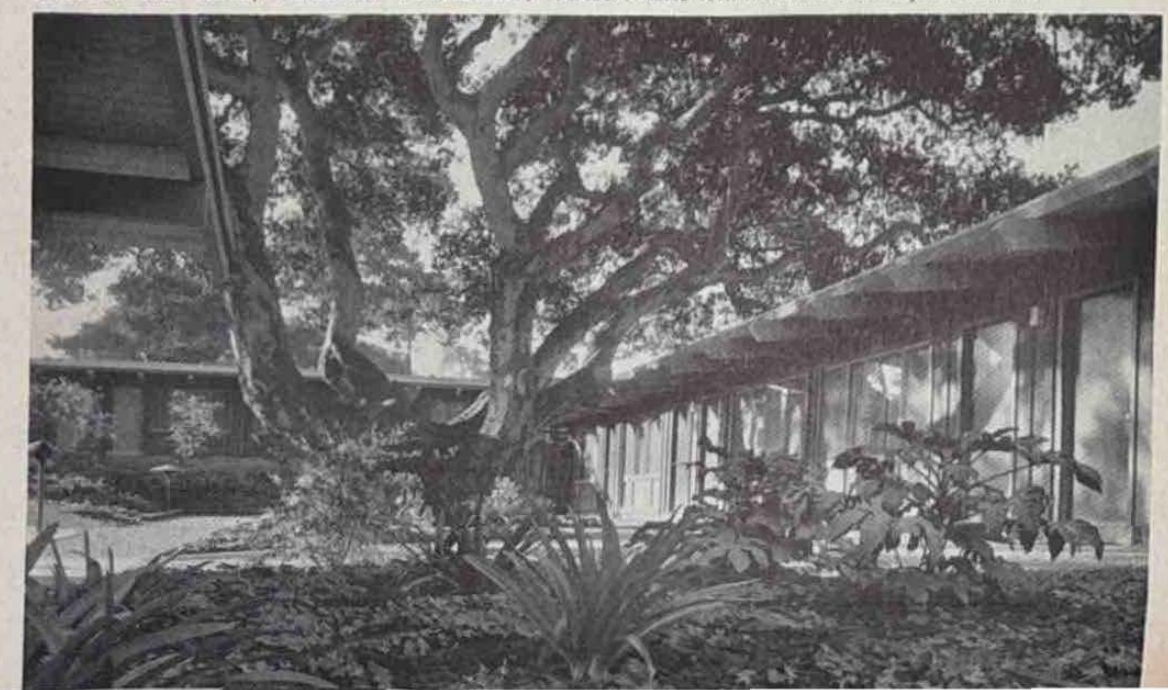
An intelligent use of the site

Design seeks to subordinate structures

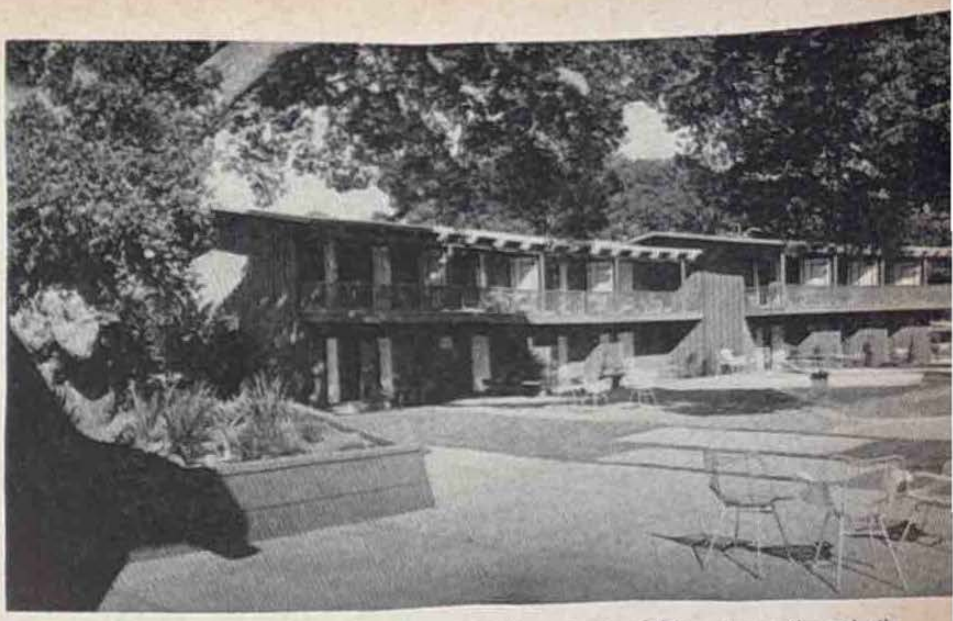


THIS MOTEL PROJECT was designed to be built in three phases, the first of which consisted of 30 bedroom units, an apartment for the manager and four shops.

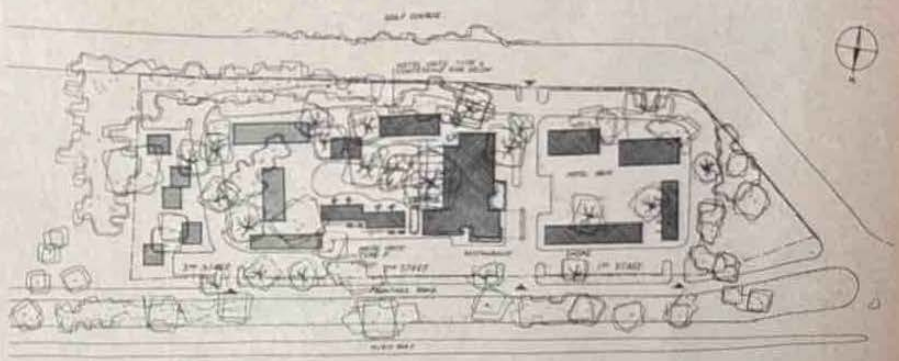
Six months of successful operation justified the construction of 28 additional and more luxurious hotel units which were arranged to face a swimming pool and terrace. A restaurant and lounge were added around the same central terrace to provide flexible facilities for conventions and other meetings, in addition to resort guests who flock to the Monterey Peninsula for golf, fishing and the coastal scenery.

Future increments will be grouped around an elongated central terrace or possibly a detached courtyard. It is anticipated that the fully developed project will have about 200 accommodation units.

The site was evolved to fit the buildings, roads and parking areas into the open spaces between the oak trees—several at least 100 years old—which are a prominent feature. The architectural organization and style is deliberately casual and subdued to harmonize with the character of the terrain. The wooden structures are quiet; parked cars are not allowed to intrude; the design seeks to subordinate the structures to the great beauty of the land forms and the trees.



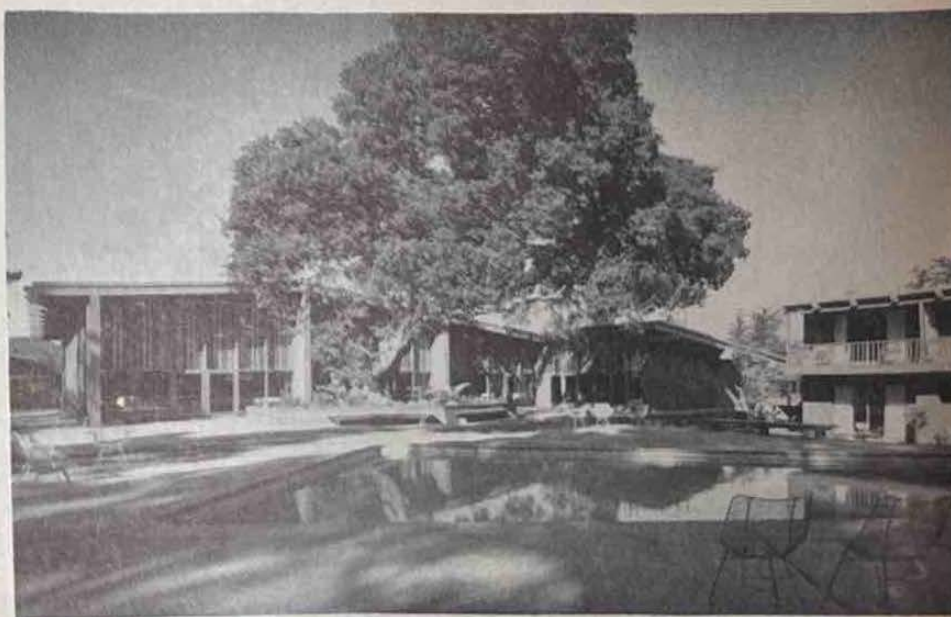
CENTURY-OLD OAKS, PLEASANT OVERHANGS, GLASS AREAS turn motel into countryside retreat.



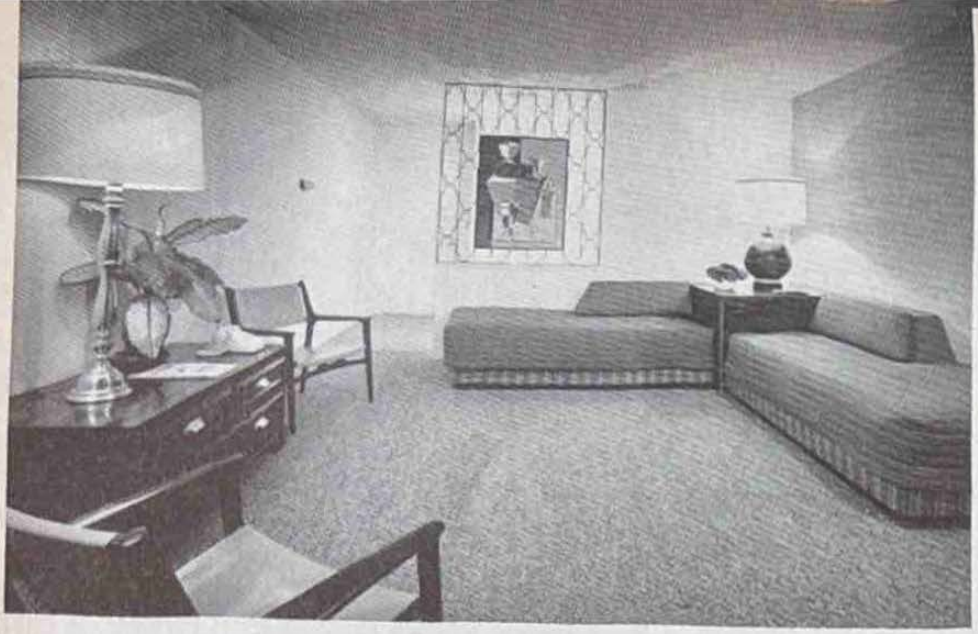
PHASE 1: The original problem was not only to retain the trees, but to design the first stage of a master plan which envisioned possibly 200 units in one- and two-story structures. Furthermore, because income would be limited initially to the rent from only 30 units, the buildings had to be planned for maintenance by a minimum staff. As a result, most of the units are small and cater to the trade of the traveling businessman.

Simple wood construction, costing $14.83 per square foot, employs fir plywood sheathing as a solid base for stained redwood board and batten exterior siding. Interior walls are paneled with gum plywood; partitions are fiberboard and acoustical plywood. Roofs consist of t&g planks on 4x10 beams covered with four-ply composition of decomposed brown granite.

Because of sandy soil conditions, the foundation is of reinforced concrete with no piling, but with a continuous membrane under all of the 4-in. concrete slabs on 6-in. gravel. Floor finishing is asphalt tile in the bathrooms and wall-to-wall carpeting in the bedrooms.



EXTERIOR DETAILS LIKE BALCONY RAILS, as well as custom fabrics, ironwork and tile of interiors, are derived from decorative traditions of Spanish era in Monterey, which served as capital of California in days when it was part of Mexico.



FIRST TWO STAGES NOW COMPLETE provide 58 units, restaurant and lounge. Third stage will be developed around elongated central terrace or detached courtyard.

PHASE 2: The second group of 28 units, bringing the total to 58, is designed in the same style and spirit as the first, but the rooms are slightly larger and more elaborately decorated and furnished. Gypsum board is used between the plywood and redwood siding; fir plywood is used as roof decking. The two-story units also have fir plywood underlayment in the floor construction and the restaurant roof has a diaphragm of the same material. Facilities include two banquet rooms, the largest of which can seat 200 diners and an additional 100 persons for meeting purposes.

SECOND STAGE OF PROGRAM wins AIA award of merit in 1957, just as first stage did a year earlier.

MARK THOMAS INN

BEDROOM INTERIORS of Phase 2 have fiberboard partitions paneled with stained acoustical plywood; one wall is covered with grass cloth. Fabrics were woven in Mexico and delicate patterns in iron grills are used as dividers. Each bedroom has wall-to-wall carpeting, asphalt tile in bath. Interiors are by James Aldridge.

OUTLINE SPECIFICATIONS

Structure: Wood frame on reinforced concrete foundation.

Exterior Walls: Stained redwood board and batten over fir plywood sheathing.

Roof: 2-in. t&g planks on 4x10 beams covered with 4-ply composition (Pabco) with brown granite chips.

Windows: Sliding steel (Rusco).

Doors: Sliding glass (Malibu) in some rooms.

Floors: Asphalt tile, carpeting over 4-in. concrete slab.

Interior Partitions: Fiberboard, acoustical plywood (U. S. Gypsum).

Interior Finish: Stained varnish gum plywood, stained exposed planks and beams, enamel plasterboard, ceramic tile wainscot in baths.

Heating: Unit heaters with thermostats (Minneapolis-Honeywell) in all bedrooms, infrared lamps in bathroom ceilings.

Cost Data:

PHASE 1 (completed June 1955)

Total Area: 12,602 sq. ft.

Total Cost: $187,385.

Cost per Square Foot: $14.83.

PHASE 2 (completed October 1956)

Touring rooms

Total Area: 9,360 sq. ft.

Total Cost: $152,000.

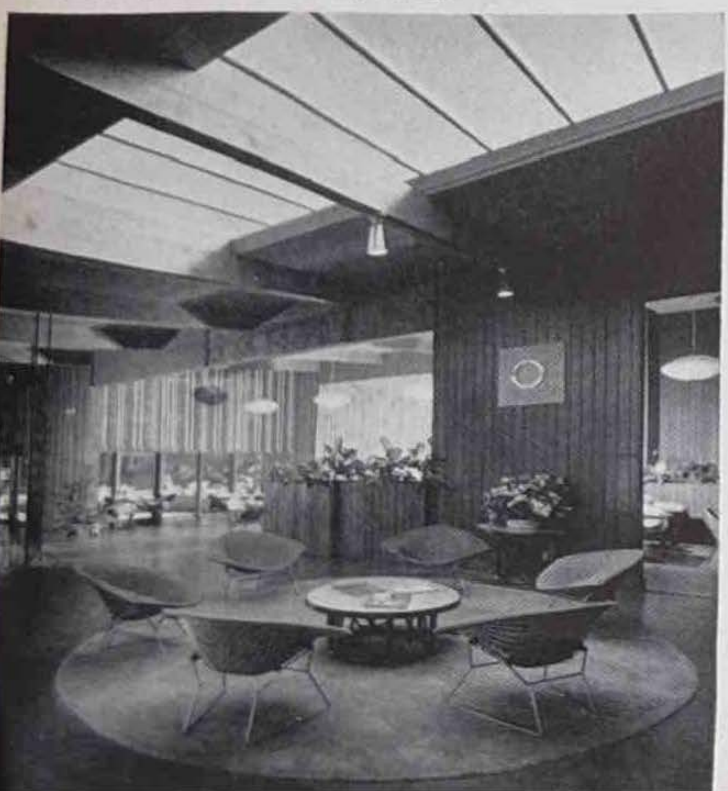
Cost per Square Foot: $16.30.

Flexible convention rooms, cabanas and services

Total Area: 2,112 sq. ft.

Total Cost: $20,000.

Cost per Square Foot: $9.50.



Restaurant and lounge building

Total Area: 9,152 sq. ft.

Total Cost: $168,390.

Cost per Square Foot: $18.40.

ENTRANCE LOUNGE repeats decorative metal grillwork found in bedrooms, has V-joint redwood rustic paneling.

RESTAURANT CONSISTS of four small interconnected rooms, each looking out to exterior court.

No Rim! One Piece! In Color!

HAWS

COMPLETE DECK-TOP, RECEPTOR AND FOUNTAIN ...IN *Fiberglass!*

No rims! No complex forming! Screws easily onto prepared frame or cabinet! Here is modern construction simplicity at its finest — furnishing greater sanitation and maintenance ease, too. There are **no cracks**, joints or crevices to interrupt water-flow from smooth deck-top into receptor, or to retain dirt and grime. The complete integral unit is smooth, rounded, one-piece molded fiberglass — in specially selected decorator colors!

A great new idea for schools! Ideal for classroom and laboratory installation, HAWS Series 2500 units are ACID RESISTANT and impervious to stains. They may be equipped with any combination of HAWS pantry and drinking faucets for versatile applications.

4 and 6 foot lengths are available, 24" deep. Any combination of backsplashes and/or endsplashes will be provided. Models are available to meet New York State or Detroit Code requirement of drinking fountain separate from receptor.

HAWS Model 2546-4 — Reinforced fiberglass, one-piece deck-top and receptor in color. HAWS Model 414A aerated gooseneck faucet at left, and Model 2N2 sanitary drinking faucet at right — both VANDAL PROOF mounted.

Color **AT NO EXTRA COST;** choose from a selection of five decorator colors and white: Coral Accent, Yellow Mist, Pistachio (green), Cerulean (blue), and Gray Satin. A "spider-web" finish of a complementary color is available if specified. All colors are permanently bonded to fiberglass.

GET DETAILED SPEC SHEETS on HAWS Series 2500 fiberglass units. Mail the coupon today! Ask for HAWS new Catalog, too.

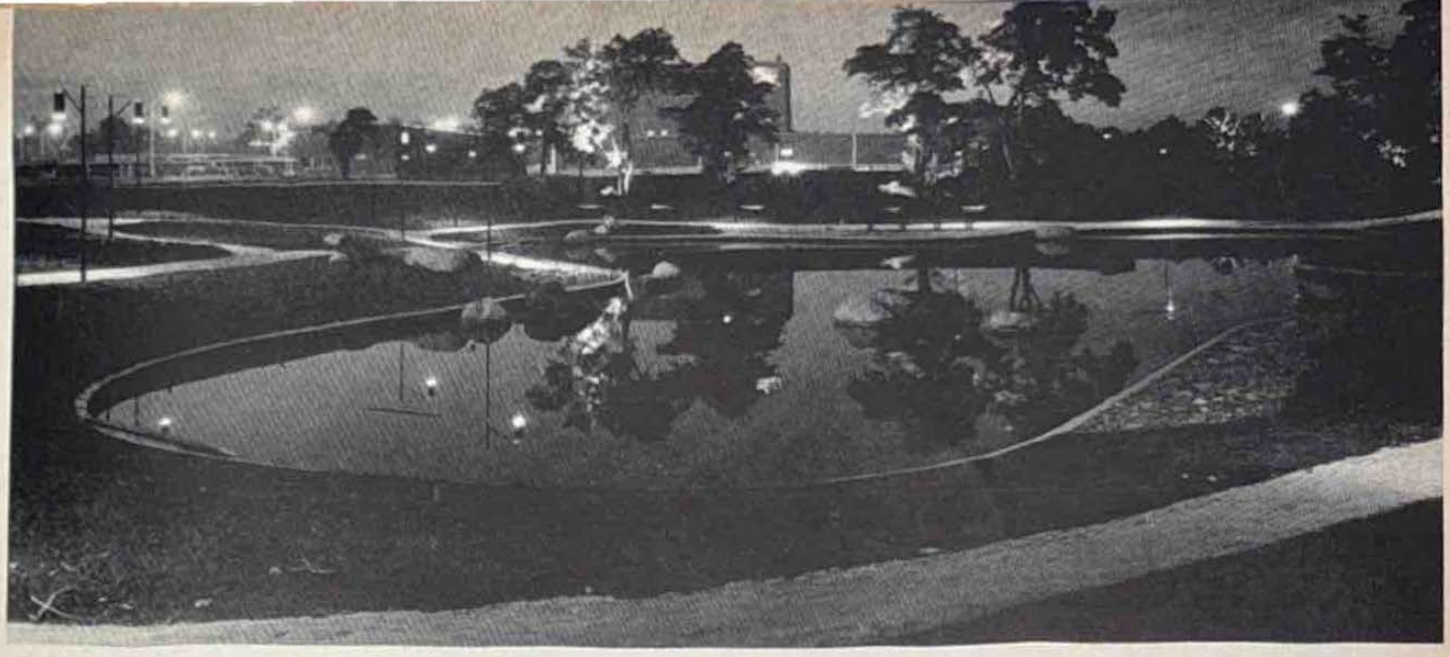
AMENITIES OF THE RIVER have been fully recognized in developing a service center for a private utility which supplies electrical power to the Inland Empire. The site lies adjacent to the Spokane River and one of the city's most scenic drives.



The landscaping program, which is still underway, was predicated on meeting requirements of a special zone classification received by the client to utilize a 28-acre residential area for an industrial purpose; hence the need for screening and planting to harmonize with nearby homes and parks. One of the distinguishing features appropriately enough is the inclusion of water: a 120,000-gal. reservoir storing the discharge water which the heat pump uses and which irrigates the entire site.

To complement this setting, the architects designed the structures as architectural understatements. Already completed are the clean-cut 300x210-ft. service building and storage and maintenance garages, the large expanses of brick facing being relieved by multicolored door panels.

Second stage of construction now in progress consists of a five-story office building—of glass, aluminum, steel and brick—, to be surrounded by spacious parking areas and connected to an adjoining cafeteria-auditorium by a covered walkway and an underground tunnel. The overall project when completed next spring will consolidate more than a dozen service, repair and maintenance operations formerly scattered throughout the city. The building program is based on a 35-year projection of requirements during a period of rapid growth and the site allows considerable room for expansion.

SERVICE BUILDING as viewed from south side of Spokane River. Rectangular brick portion rising above houses 40- and 5-ton cranes used in maintaining heavy equipment.

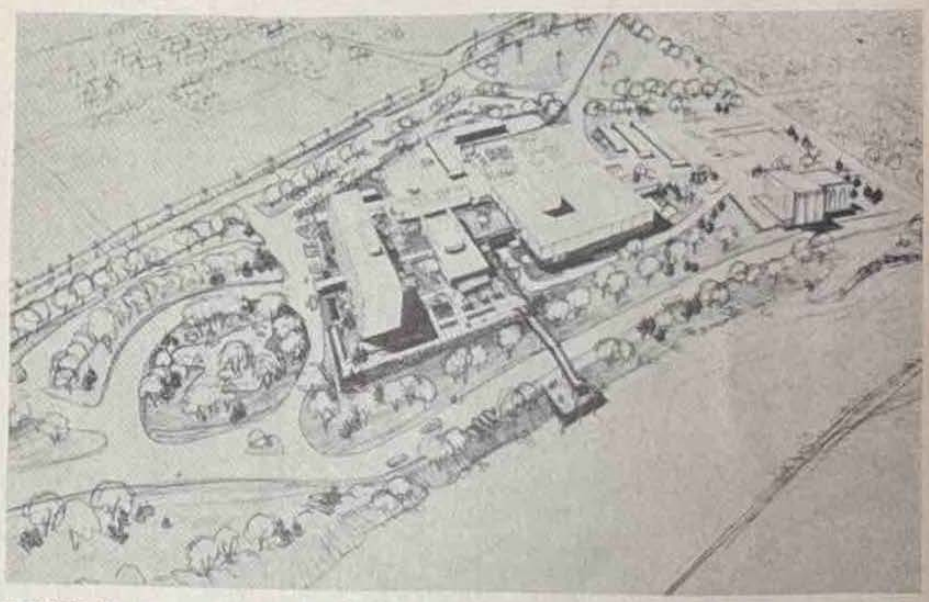
RECIRCULATING POOL has twofold purpose: it stores discharge water used by heat pump and is strong element in landscape design. Photo above shows Stage 1 construction only.

OUTLINE SPECIFICATIONS

Structure: Reinforced concrete, 30x40 bay sizes with two-way pan type slabs.

Exterior Walls: Reinforced brick cavity, aluminum, porcelain enamel, glass window.

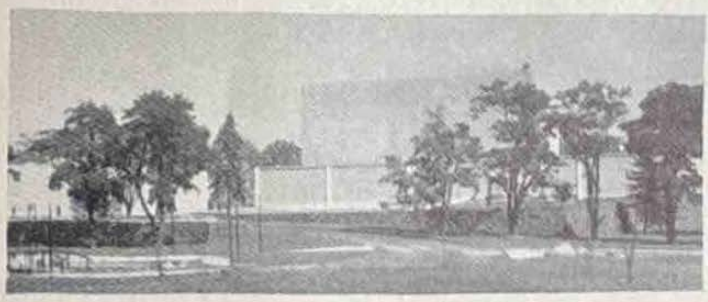
Roof: 18-in. deep pan with 2½-in. slab, built up with coal tar, pitch, gravel.



Doors: Hollow metal, personnel; 28-ft. wide overhead steel rolling with electronic control, loading dock.

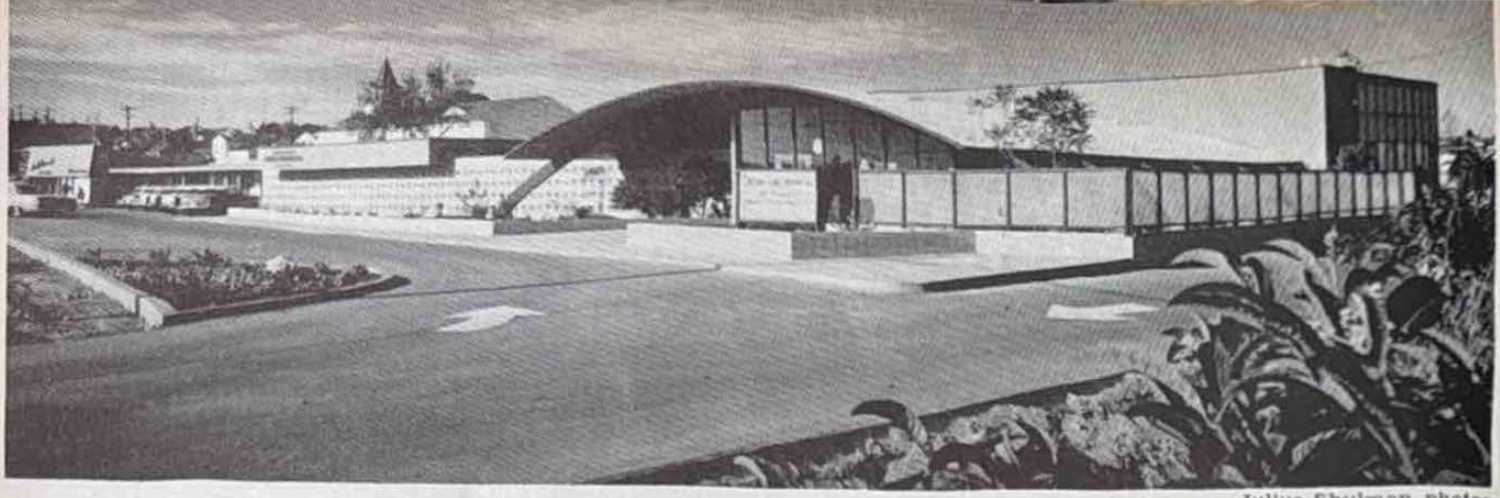
Interior Finish: Poured concrete on concrete block with speckled white, gray, beige wear-resistant paint.

Floors: Structural glazed tile, vinyl-asbestos composition tile, mosaic tile (in wet areas) on concrete slab.



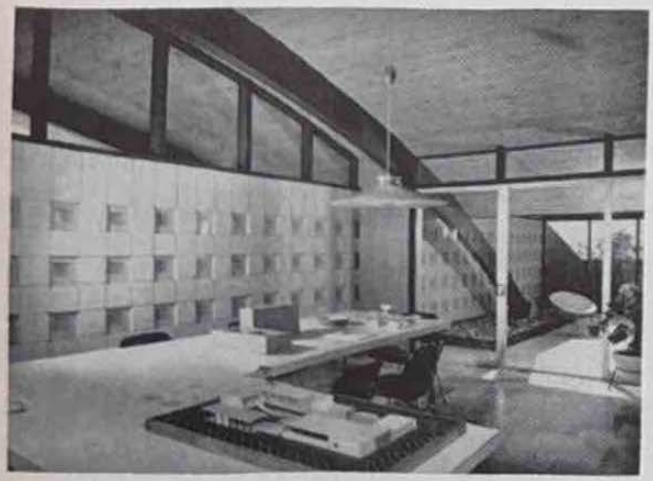
Ceilings: Suspended acoustical with integral lighting and air diffusion in office areas.

Date of Completion: October 1956.



SERVICE CENTER upon completion next spring will consist of five-story office building connected to employee cafeteria-auditorium now under construction and service building and related facilities already completed. Entire project will cost about $7 million; Phase 1, including cost of land, basements for office building and cafeteria, paving and drainage, landscaping, etc., accounts for one-half of total cost.

GROUND-LEVEL SHOPS occupy full length of service building but only half its width. At extreme left of truck parked in driveway under balcony-porch (photo right) is entrance to center's boiler room which contains heat pump equipment.



Julius Shulman photos

EXTERIOR COLORS CONCENTRATE on olive tan and burnt umber, with touches of blue and yellow on doors and various panels. Electric fixtures have been recessed as much as possible, hanging lights being used only for accent purposes. Sheets of fiberglass cut to fit into openings in screening wall of concrete block admit light, but seal cold out and heat in. Concrete block planting box serves as barrier to cars in front parking lot, provides break in design.

Where architects hang their hats

RICHARD GEORGE WHEELER & ASSOCIATES
San Diego, California

HORIZON HOUSE, which the architect designed for his own use, is shared by 12 tenants with somewhat related interests: landscape architect, decorator, land developer, civil engineer, etc. The $130,000 (covers building, landscaping and parking space for 30 cars) single-story, no-basement structure was built by Henry L. Wheeler at $8.20 per square foot. Designed for a second-floor addition above the drafting room, the building is of post and beam construction, utilizing pipe columns on a 24-ft. spacing, with laminated beams spanning 32 ft. and an 8-ft. cantilever to cover the walks. This method of beams on pipe columns, with normal wood joists between beams, helped make it possible to attach the roof arches to concrete piers which absorb all the thrust of the roof weight.

The section occupied by the architectural firm is the most dramatic in appearance. Here six 70-ft. laminated wood arches 10 ft. 6 in. o.c. are used, with 2x6 t&g sheathing spans between the arches, allowing for interior walls—wood panels and glass—that can be easily and economically moved during future remodeling or expansion. Most of the building interior consists of stucco plastering and plywood paneling.

The exterior employs concrete block set in a varied and interesting pattern, obtained by turning every third block, horizontally and vertically, on its side and projecting it 1½ in. The block, all 8x8x8 in the screening wall and retaining walls around the building, introduces a change of pace in the design and conveys a feeling of rigidity and solidity.

A problem created by the water table being only 7 ft. below the floor resulted in the use of rock gardens rather than landscape planting. Large smooth rounded gray stones make light patterns under the arches and the overall effect is Oriental. Translucent fiberglass panels, although fixed in place, heighten the effect and give the gardens a delicate air. Although the offices are not especially large, the beams carried inside and the open partitions and patios make them appear much more spacious than they actually are.

'Structural steel in today's architecture'

Excerpts from an address presented by N. P. Hayes at a preview reception of the exhibit "Structural Steel in Today's Architecture in New York's Socony-Mobil Building, largest stainless steel skyscraper in the world

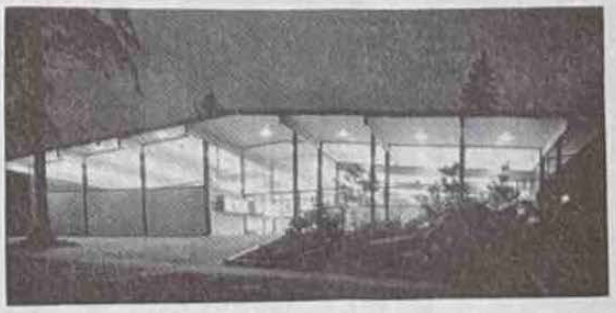
THE PRECISION with which we can now construct architectural forms has stimulated architects to create more freely. Steel, as we all know, has been accepted and used widely in building for a hundred years. Yet until very recently its possibility as a creative medium—as a beautifying material—was totally neglected. As soon as this virtue was uncovered architects began to assign steel the dual role of structural and architectural element in many new kinds of structures. Today exposed steel beams and columns share the job of supporting a building and at the same time add to its attractiveness.

We consider this development so important that we have emphasized it in selecting the buildings which make up this new exhibit. These pictures comprise an eloquent demonstration of the eye-catching beauty that results when steel—in colorfully painted, porcelainized or other finishes—is joined with glass, stone, brick or some other material to make a modern building.

The near distant future promises even greater accomplishments with structural steel. Its potential economies and creative possibilities have been scarcely touched thus far. We are now working on practical applications of a new theory of plastic design which may drastically reduce the amount of steel required for some types of buildings. Through this development builders may be able to save not only steel, but also a considerable proportion of the cost of design and structural analysis.

In addition, scientists are finding ways to produce lightweight steels that have greater tensile strength, resistance to corrosion and other desirable properties. And a leading steel company is now doing research aimed at producing a structural steel that will be transparent enough to transmit light into buildings.

We foresee a permanent marriage of steel and architecture extending very far into the future. A magnificent new era in which science will glorify steel in wonderful new ways. Members of the American Institute of Steel Construction are planning to work more closely than ever with architects, engineers, builders and laboratory scientists to speed the improvement and general progress of the construction industry.



Shown on this page are four projects represented in the exhibit of the American Institute of Steel Construction, which will hang at Hotel del Coronado near San Diego October 6-10, following a showing in Los Angeles September 16-20. The collection of photographs has been booked for Seattle for four months in 1958, starting in May.

MARINELAND, Palos Verdes, Calif.: Pereira & Luckman, architects-engineers. "The architects chose rigid frames of exposed structural steel for their architectural qualities. The rigid frames offer a convenient and economical method of resisting and absorbing impulse forces of the salt water in the open tanks during earthquakes."

BETHLEHEM PACIFIC COAST STEEL CORP., Torrance, Calif.: Albert C. Martin & Associates, architects-engineers. "By design of the architects, this building serves to demonstrate new uses for the products represented. It is the first building of its type to have exposed structural steel supporting frames. Color closely related to the steel industry is used, beginning with red lead on the X-bracings. As the background for the vivid red a variety of grays was used, light gray behind the cross bracing, charcoal in columns and beams."

NORTHWEST BRANCH, SEATTLE PUBLIC LIBRARY, Seattle: Paul Thiry, architect; Sigmund Ivarsson, structural engineer. "The role of steel in buildings is to supply the main strength element. It often remains concealed in the background, hidden beneath other materials. In this instance the architect, winner of two awards for pleasing original design, has given a clear impression of the clean, functional lines of structural steel. The exposed steel beams, spanning one half of the library's width, eliminate a number of supporting columns to allow large areas of uncluttered space."

HILLSDALE HIGH SCHOOL, San Mateo, Calif.: John Lyon Reid & Partners, architects-engineers. "The architects of Hillsdale built a school of classic quality, handling the framework in a deft manner to create a serene and orderly profile. The buildings' strong, bold classicism have fine proportion, detail and color and appear at their best when filled with children. The exposed light steel frame permitted fast erection and furnished earthquake protection."

Publicity for the architect's office

A Los Angeles public relations counsel who has represented an architectural firm offers some first-hand suggestions

by ELAINE K. SEWELL

WHAT THE ARCHITECT can do in regard to publicity for his office will depend upon the individual and his attitude toward architecture. If he has only the goal of "receiving publicity" without regard to qualitative standards, he may be disappointed.

In any form of communications between the architect and the public, the objective of the architect should be that of telling his story with pride and integrity. An architect has one of the most important responsibilities as an influence on the culture of our times. The architect has the specific assignment of making this world a better place in which to live. The architect is one of the most fortunate individuals in the world. He has more than slide rules, statistics and mortar; he has the concepts that make these things useful in the best sense of creativity.

The architect is particularly fortunate because he is directly dependent upon other professions and trades for completion of his work. The designer who creates new hardware devices, the engineer who improves weatherstripping and the manufacturer who produces new materials are important to the architect's success in finding the best possible solution for each job.

By working with others in this way, the architect in particular can understand another man's work and have respect for his craft. With this innate reverence for another man's work, the architect can think of his own profession as a means to a better way of living for others.

If you as an architect believe these things and if you then practice these thoughts, you can apply the principles in your publicity efforts.

There are two things to consider: one is public relations and the other is publicity.

Public relations is a broad overall term which includes publicity. Edward L. Bernays, well-known expert in the field, says that public relations is "good works understood by the public." One of my simplified explanations is that "public relations is the interpretation of the client and his company to his individual publics." The work of interpretation by whatever means deemed best is the job of the public relations counsel.

The work of a counsel is highly skilled and cannot be undertaken on a professional level by someone who is not trained in that field. The scope of communications is so important to a firm in the interpretation of its work that only top-level management is equipped to provide the basic information for the professional counsel, and the interpretation of the client should not be left to amateur hands.

At the same time, every individual can represent his firm at the best level for effective public relations. If every architect will take advantage of every opportunity to explain architecture, not just to toot his own horn, the profession will benefit.

The architectural firm which is not large enough to have an outside counsel to handle publicity or public relations, or who for other reasons prefers not to have a public relations program, can certainly do a thorough and good job in publicity.

The means or techniques of these communications will depend upon the objectives, strategy, planning and themes. Objectives may be long-term, short-term or intermediate. Strategy will depend upon research conducted to ascertain the problem and nature of the solution. Planning and themes follow according to the specific nature of the problem and its solution.

To repeat, publicity is one phase of public relations. Here we shall confine our remarks to publicity efforts only and just briefly in order to suggest that the subject is important for each firm to consider. Interpretation of the architect's work is necessary to bring about understanding. Misunderstandings by the voting public on school measures, for instance, come from lack of information in most instances. Educating a public is a long-term project. Public relations and publicity are not intended as measures or devices to mend broken fences. Good public relations and good publicity will help prevent the problems before they arise and will help educate the various publics over a long period of time.

The basic factor of general publicity for the architect is that it is a two-way benefit. The editors want to publicize good work; the architects want their good work to be published. How to get together?

There is an outlet for nearly every story of merit. It is important for the architectural firm seeking recognition for his work to be realistic about the publications who can logically feature the material. In other words, consider the story from the editor's point of view. The editor is in business to do a job tailored to a particular readership just as the architect has a given job to do for a given client. The editor's responsibility is to produce his publication to fill the desires of a specific readership either by age groups, professional interests, income brackets or other criteria.

If you are in doubt about usability of material, write the editor and tell him briefly what you have in mind.

Continued on p. 34

Publicity Points to Ponder

1. Don't worry about "writing an article." Worry about getting all the facts: who, what, when, why, where.
2. Be accurate. Better to omit a questionable "fact."
3. Get permission from your clients and anyone else necessary before you release material on their jobs. The editor doesn't want to look at jobs he can't publish because the client's grandfather owns a competitive publishing house.
4. Identify all photographs with name of job and architectural credit. Write only in soft pencil, lightly, on back of photo.
5. Do not use paper clips on photographs. Marks from clips damage the prints.
6. Be discriminating with photographs. The best photography is the best investment. One good photograph is worth several poor ones.
7. Type all material with double spacing to allow for editor's comments.
8. Answer editor's correspondence promptly. Deadlines wait for few mortal men.
9. Don't be afraid to ask the editor about disposition of your material. Be sure you understand if you are obligated for exclusive rights. Don't read a promise into his kind smile or hold him responsible for something he didn't say, but you hoped he would.
10. Don't be afraid to compliment the editor on a good editorial job, even though your job may not be mentioned. If it helps architecture in general, it helps every architect.

whatever you need

build it better...faster...for less...with steel

Service Station by Fentron Industries

Plant Office by Calcor Corporation

Potato Cellar by Boise Payette Lumber Co.

Warehouse by owner

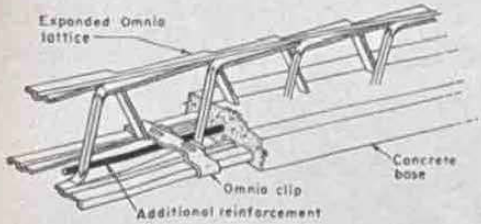
Steel is the one material that gives you ALL these important building advantages

GREATER STABILITY and longer life can be expected when you build with steel, the versatile metal.

LOW COST: Steel construction is precise, simple and fast. You get more usable space per dollar.

PROTECTION: Steel is your best protection against fire, wind, snow loads and stress from cranes. Steel is permanent!

VERSATILITY: Steel buildings are being used for every purpose. If you need a new building fast; one that will last . . . specify steel.



For offices, plants, stores, schools, farms, warehousing...

Give your buildings the advantage of steel

UNITED STATES STEEL

THE OMNIA PLANK ASSEMBLY

Concrete floor system combines structural, erection advantages of cast-in-place and precast methods

A LIGHTWEIGHT beam-and-block floor and deck system which proved itself in Europe during the past five years and which is now being used for the first time in this country, is reported to provide the structural advantages of cast-in-place concrete, yet even simpler to erect than precast flooring.

Called the Omnia floor and adaptable to spans of 30 ft. or more, it is monolithic in character, thus acting as a stiffener to the whole structure. At the same time, it is particularly suited to mass production methods. And the new floor, unlike conventional block-and-beam systems, can be cambered during erection to produce a level finished surface over any span.

More than 75 million square feet of the floors and roofs have been erected in Europe since their development in Germany five years ago. The floor consists of three components: the "plank," filler blocks and concrete topping. The plank, a reinforced steel lattice girder with a reinforced concrete base provides the support for the floor. Lightweight concrete blocks rest between the planks. The planks and blocks (Photo No. 1) provide both support and forming for the concrete topping.

Structural advantages

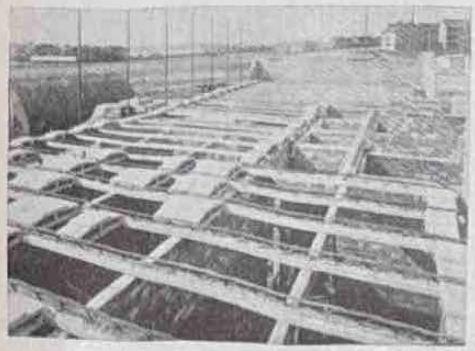
The floor behaves structurally like a poured-in-place slab. It spreads concentrated loads, absorbs impact and vibration stresses and resists cracking. Because of its light weight the new floor allows design economies by reducing the load on supporting members. Its solid construction gives great resilience.

As the steel is adequately covered, the system has fireproof qualities. Cast-in-place concrete girders may be used with precast floor joists. The floors are adaptable to many loads and spans by varying the height of the lattice girder, the amount of reinforcing, the spacing between planks and the topping thickness.

Erection advantages

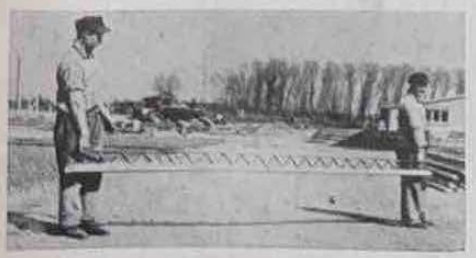
The light weight and relatively small unit size of its mass produced precast components are the primary erection advantages of the floor. Typical planks weigh but 11 lb. per foot compared to about 25 lb. or more per foot for conventional precast beams. Weight of a typical filler block is 30 lb. or 22½ lb. per square foot, although they may be lighter. Thus, the precast members are easily manhandled (Photo No. 2) and require none of the expensive heavy equipment usually necessary for precast erection.

Since the precast members act as the forming for the cast-in-place topping, expensive forms are unnecessary as is the close technical supervision which is normally required for form construction. Forming for roof lights, stairwells and stacks can be provided easily, as can change of direction of beams.



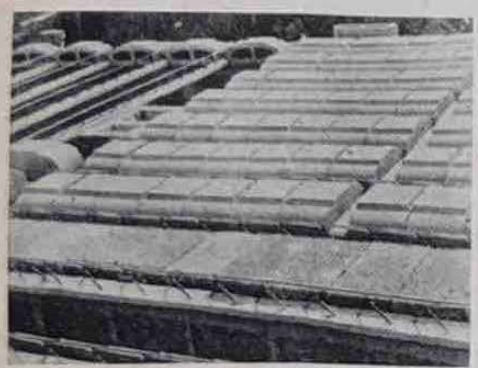
In addition, facilities for services are easily located in the floor. They may be placed beneath the topping, through the hollow blocks, or in cross ribs (Photo No. 3).

Finally, the poured concrete of the floor acts as the T-flange of reinforced beams and frames, thus increasing their resistance without additional labor or expense.



Construction

The precast plank consists of a lattice girder of 15-gage cold rolled steel, additional reinforcement attached to the lattice boom with clips, which also act as spacers, and a shallow concrete base. The stamped lattice strip is shipped and stored flat, then cut to length and expanded near the point of use. Its bottom booms provide tensile reinforcement for erection stresses and short cantilevers. Lattice diagonals mechanically bond the precast base and the cast-in-place topping. Additional reinforcement is not required on spans up to 8 ft. or 4-ft. cantilevers; for longer spans it is selected according to job requirements. The shallow concrete base which forms the soffit is cast in simple mass production molds or produced by machine.



The hollow filler blocks are precast of lightweight concrete, burnt clay or other similar materials. Their depth can be modified to suit the modular or load requirements of the job or local production facilities. Two core or three core blocks may be utilized.

No. 1: Planks in place and concrete blocks partially laid. Note wooden beam perpendicular to planks at midspan in right foreground. Beam, supported by jacks, produces camber to give level finished floor. Two core blocks are used here, but three also are suitable.

No. 2: Two workmen can carry lightweight planks up to 20-ft. long. This one is 15 ft. Plank casting bed is visible at left.

No. 3: Floors are extremely adapatable to changes in direction and to simple installation of utilities, accomodated by low, flat blocks.

PROSAIC SUBJECT + ARCHITECT =

NATIONAL ACCLAIM

Architect: W. F. Bernbrock, Moline, Illinois

Even the drab lumber yard — given the imaginative design and functional beauty of an architect's touch — can win local sales and national acclaim. Such is the experience of Builders Lumber Company, Moline, Illinois, where Rilco laminated-wood beams and deck help express the dramatic "open feeling" that seems to say "welcome" to customers.

While only a small portion of the complete structure, this store area has become the focal point which lifts this building out of the ordinary. Interest and sales have increased to a "happy" degree.

Rilco laminated-wood arches, beams, purlins, trusses and deck offer unlimited variations that stimulate new, interesting and practical design at low cost. For complete information just write

and the latest literature

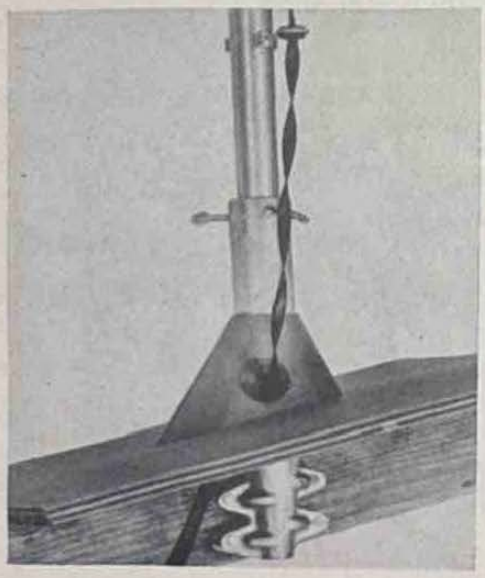
WINDOW BLIND: A semi-translucent traversing window blind, the Jaylis filters glare from sunlight and transmits diffused light into the room. The three-dimensional molded pattern permits air to pass through unobtrusive horizontal vents that are an integral part of the design. The blind can be used as a room divider, as a door for storage spaces and as wall screen; and at night these applications can be made dramatically luminous through use of electrical lighting. It has high reflective qualities, making it especially desirable for large expanses of windows with sun problems. —Jaylis Sales Corp.

(Item No. 1)

FOUNTAIN UNIT: Particularly designed for school applications, the Haws one-piece, deck-top receptor and fountain unit features the absence of any rims, cracks or joints, eliminating undesirable dirt and water accumulation. Molded in lightweight fiberglass, Series 2500 units are in standard lengths of 4 and 6 ft. and are 24 in. deep, furnished with integral backsplashes and endsplashes as required. Installation is easily accomplished by screwing wooden receptor backing onto a prepared frame or standard cabinet. — Haws Drinking Faucet Co.

(Item No. 2)

GARBAGE DISPOSAL: An addition to the Pioneer family of kitchen appliances is the D-57 disposal whose one-piece splash guard permits wide throat opening for easier loading. Chrome steel shredder plate and ring are designed for controlled microfine pulverizing of all food wastes and even bottle caps accidentally dropped into the unit are ground up without jamming the moving parts. During operation the outlet duct swirls jets of water at high velocity and low pressure to impart a scouring action that keeps home plumbing clean and free from clogging.—Pioneer Manufacturing Co.



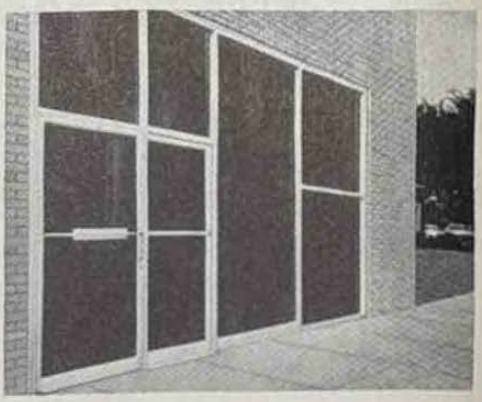
(Item No. 3)

FLOOR TILE: To match its Salt-n-Pepper wall tile, Pomona has introduced a Perma-Glaze floor tile, cream colored with "pepper" distributed evenly throughout. The double-glaze process provides a hard finish that results in a depth and texture.—Pomona Tile Manufacturing Co.

(Item No. 4)

TV ROOF MOUNT: A one-piece aluminum mast holder, the Tele-Jac eliminates unsightly guy wires and exposed lead-ins which damage the roof and keeps the antenna in a vertical position. Wires from the antenna disappear at the base of the mast and are built into the wall, terminating at a wall plate with plug. When this plug is attached to the TV set's lead wire, it enables the user to plug into and unplug from the antenna, much the same as a lamp plug into the wall. Thus it does away with the coil of wires found behind the set. If done while the building is under construction, installation should not take more than 30 minutes. The Tele-Jac has been specified for a number of Capehart housing projects in the West.—The Tele-Jac Co.

(Item No. 5)

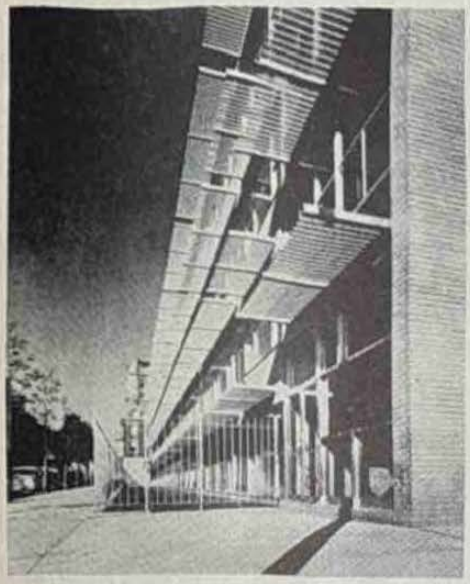


PLUMBING FIXTURES TEMPLATE: To assist architects and mechanical engineers in preparing scale elevation drawings of bathrooms and powder rooms, American-Standard has produced a template showing the exact elevations and profile views of many of its plumbing fixtures. It is done in ½-, ¼- and ⅛-in. scales for flexibility.—American-Standard Plumbing and Heating Division.

(Item No. 6)

FIXED GLAZING SYSTEM: A building front and wall system that uses only a few standardized glass framing members provides unlimited design freedom and is the first to offer flush glazing on all four sides of a glass pane. Built-in glass holding channels in all the components eliminate the extra lines of the protruding glazing members common to most other systems. Glass stops may be used where the flush glazing is not desired.—Kawneer Co.

(Item No. 7)



SUN CHART: Jaffe's sun chart provides assistance in proper placement of windows, walls, specific rooms, swimming pools, etc., by showing where the sun shines every hour everywhere in the United States and plotting its direction and altitude at various times of the day throughout the year. The chart uses a system of crossed lines with a "sun mark" placed over building plans. It gives an average position of the sun at various hours of the day at 34 deg. north (Los Angeles to Atlanta) and 42 deg. north (Medford, Ore., to Boston); thus other areas can easily be estimated from these key positions. — Western Blue Print Co.

(Item No. 8)

GRATING SUNSHADES: On school building and other structures which often require large glass areas for natural lighting, Irving has developed standard panels of grating for use as sunshades. In addition to helping control sky glare, they will not collect rain or snow and are strong enough to be used for window cleaning walkways. The grating may be mounted in any plane and is available in a variety of mesh patterns, fabricated in aluminum (used on Curtis Hall at Temple University shown in photo), steel and other metals.—Irving Subway Grating Co.

(Item No. 9)

LAMINATED PLASTIC: Joining the ever-increasing list of plastics is Pearsonite, a completely prefinished three-dimensional formable sheet, available in bright metallic, multicolored or wood veneer finishes. It is offered in a dozen finishes, a wide choice of deep-embossed textures and is produced in 40- and 48-in. wide continuous rolls of up to 100 yd. Typical applications; acoustical ceilings and walls, wall tile, decorative cabinet veneers, work surfaces, kitchen and scuff plates, venetian blind slats. —Metallic Plastic Corp.

(Item No. 10)

BONDING FOAM: Used for thermal, electrical and sound insulation, for structural strength, etc., Stafoam polyurethaene formulations for spray gun coating will foam in place to any desired thickness between ⅛ and 2 in., forming a surface bond stronger than the material itself. Densities range between 2 and 20 lb. per cubic foot, either in rigid or semi-rigid forms and in non-spray formulations as well. —American Latex Products Corp.

(Item No. 11)

Latest Handbooks, Manuals and Literature

Yours for the Asking

CONSTRUCTION DATA: Horn's 108-page handbook provides an easy reference to nearly 100 specialty products it manufactures for industrial, institutional and commercial users in the West. With each description is an outline of recommended uses, methods of application, covering capacity and colors. More than 30 construction tables, guides and charts are included. —A. C. Horn Co., Inc.

(Item No. 12)

RED CEDAR: "Western Red Cedar Lumber Grades and Uses" is a companion piece to the previously issued Douglas fir and West Coast hemlock species booklets. Eleven grades are represented in full-page illustrations. The 36 pages also include replicas of grade stamps, conversion tables, recommended nailing practices and roof decking spans.—West Coast Lumbermen's Association.

(Item No. 13)

HOME LIGHTING: The first practical standards for minimum quality lighting in the home are available on a single sheet. In addition to outlining general and specific area requirements, the standards describe desirable fixtures and outlets to assure comfort and safety.—American Home Lighting Institute.

(Item No. 14)

HEATING SYSTEM: How to integrate Lennox's Comfort Curtain heating and ventilating system into school building design is treated in an eight page brochure of sketches created by a Chicago architect, which are intended to stimulate the imagination. Simplified floor plans accompany the sketches.—Lennox Industries, Inc.

(Item No. 15)

TWO-WAY FORMING UNIT: The Ceco-Meyer Steeldome, described in a four-page brochure, is a newly developed product for use in forming waffle type concrete joist construction. It is a one-piece form designed especially for exposed ceiling construction.—Ceco Steel Products Corp.

(Item No. 16)

WELDED WIRE FABRIC: A revised 44-page edition of the design manual on the use of welded wire fabric in reinforced concrete building construction is packed with diagrams, tables and data covering such methods as short-span construction, cinder concrete floors and roofs, tilt-up wall construction, gun work and other current practices. Other topics: fireproofing structural steel, lightweight structural concrete, shrinkage and temperature reinforcement and concrete slabs on ground. — Wire Reinforcement Institute, Inc.

(Item No. 17)

DESIGNING FOR EARTHQUAKES: A bibliography concerning earthquake resistant design lists publications on seismology, the magnitude and intensity of earthquakes, engineering applications, building codes, insurance codes and reference sources.—American Institute of Steel Construction.

(Item No. 18)

MASONRY WALL REINFORCING: Results of research conducted at the University of Toledo on how joint reinforcing actually affects the strength of masonry construction have been assembled as individual sheets in a file folder. Scope of the study included the effectiveness of deformation of steel side rods, design comparison tests, mortars, distribution of wall stresses and related tests.—Dur-o-wal.

ANALYSIS AND ENGINEERING—The Kawneer engineering team considers every curtain wall application as unique. Each is subjected to a searching analysis. Such points as (1) the curtain wall's effect on load bearing elements, (2) adequate accomodation for wall movement due to wind load and temperature change, (3) weathering features and (4) integration of all components within the wall system are the subjects of careful study. The result of this careful analysis is a curtain wall design that provides the highest standards of performance while retaining the most expressive appearance of the architect's design.

PA&B T-square talk

NEW FIRM: Eric W. Johnson and Glen H. Mortensen have formed the architectural firm of Johnson & Mortensen at 142 N. California, Stockton, Calif.

✓ John R. Ross, AIA, of San Luis Obispo, Calif., who has been in partnership with William D. Holdredge for the past year, has established an office under his own name at 1149 Marsh St. Holdredge has moved to Texas where he has purchased another firm.

✓ The architectural firm of Donn Weaver & Associates has been formed to succeed Ingle & Weaver, with offices at 107 W. Perkins St., Ukiah, Calif.

OFFICE EXPANSIONS: Haarstick Lundgren & Associates, Inc., architects-engineers of St. Paul, have opened an office in San Francisco in the Pacific National Bank Building, 333 Montgomery St. In charge will be associate Robert A. Bennighof who holds architectural degrees from the University of Minnesota and the Cranbrook Academy of Art.

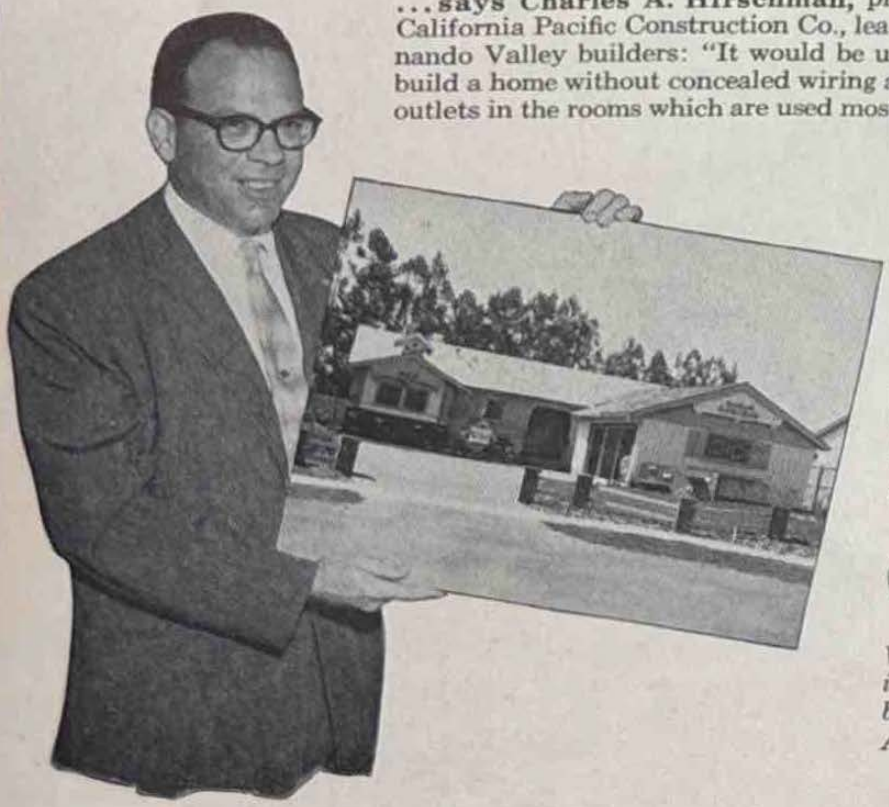
✓ Adrian Wilson & Associates, architects-engineers with headquarters in Los Angeles, have established a permanent office in Las Vegas, headed by project manager Richard Drayton. For the past two years he has been in Los Angeles during preparation of plans for the Las Vegas Convention Center.

ON THE MOVE: The office of Jack A. Edson, AIA, is now located at 44 N. Front, Medford, Ore.

DIED: Gabriel A. Berger, 88, architect who designed many of the buildings in San Francisco Mission District, died July 25 after an extended illness.

✓ Roi L. Morin, AIA, passed away August 12 in a Portland hospital at the age of 60. A native of Massachusetts, he was a graduate of MIT and in 1924 came to Portland where he was associated with Herman Brookman on the design of a number of buildings, including Temple Beth Israel. Among Morin's recent designs were the Civic Theater and Pioneer Broadcasting buildings.

NAMED: Oswald Berg Jr., who heads the Montana Chapter, AIA, has been appointed a city commissioner in Bozeman, Mont.



✓ Seattle architect J. Lister Holmes has been elected chairman of the city's newly created Board of Adjustment, which will hold public hearings on applications for conditional uses of property in various zoning districts and requests for zoning variance under the city's new zoning code.

STRUCTURAL ENGINEERS: The 1957 convention of the Structural Engineers Association of California will be held October 31-November 1 at Hotel del Coronado near San Diego. One of the program highlights will be a panel discussion on costs and limitations of concrete construction methods.

✓ PA&B editor Robert E. Koehler will address the Structural Engineers of Oregon on the construction outlook at a meeting September 25 in Portland's Timber Topper.

PROFESSIONAL ENGINEERS: Dr. Joseph Kaplan of UCLA will be among the speakers at the convention of the Professional Engineers of Oregon in the Eugene Hotel, Eugene, October 18-19.

Built-in phone outlets build up a home's value!

...says Charles A. Hirschman, president of the California Pacific Construction Co., leading San Fernando Valley builders: "It would be unthinkable to build a home without concealed wiring and telephone outlets in the rooms which are used most."

No matter how you look at it, as a builder or a buyer, you want a well-built home above all. And one of the features that speaks for a "quality" home is Telephone Planning. As Mr. Hirschman says, "Telephone outlets in rooms used most, concealed wiring and color phones add much to the value of the home." You'll find them in homes like Mr. Hirschman's, built with an eye to better living and satisfied buyers in mind.

Pacific Telephone

We'll be glad to help you plan built-in telephone facilities. Just call our business office and ask for our free Architects and Builders Service.

It pays to include Telephone Planning in every home you build!

SCHOOL FOR SALESMEN

Building materials and equipment manufacturers will have an opportunity this fall of enrolling their salesmen in a new training course aimed at improving their effectiveness in selling and servicing the architectural profession. The first schools will be held in the East, but negotiations are underway for a subsequent training course to be given in California. Further details may be obtained from Robert W. Hurst, executive assistant, Producers' Council, Inc., 2029 K St., N. W., Washington, 6, D.C.

Steel, glass, and redwood on *Fisherman's Wharf*

Architect: Hewitt C. Wells; *structural engineers:* John J. Gould and H. J. Degenkolb; *steel fabricator:* Schrader Iron Works; *contractor:* Charles O. Jones.

Designed with most of its steelwork exposed, the Franciscan Restaurant strikes a bold and appealing note in a colorful setting on San Francisco's waterfront. With accommodations for nearly 200 patrons on three levels, a fine view can be had in nearly all directions from the glass-enclosed upper floor.

Bethlehem eight-inch wide flange columns are bolted to foundation plates imbedded in the concrete mat which is seated above the water on new piling. The use of structural steel for both functional and decorative purposes allows maximum use of floor space and conveys an impression of both rigidity and lightness.

A floating stairway, fabricated by welding channels and plate, connects the glass-enclosed entrance on the ground floor to the upper level. Redwood planking adds a contrasting touch to both interior and exterior.

BETHLEHEM PACIFIC COAST STEEL CORPORATION

Sales offices: Los Angeles, Phoenix, San Francisco, Portland, Seattle, Spokane

BETHLEHEM PACIFIC

BETHLEHEM STEEL

chief sales engineer for the building panel division. Fenestra has purchased all the outstanding common stock of Davidson Enamel Products, Inc., of Lima, Ohio.

• **The Mosaic Tile Co.** has set up a marketing department for its West Coast division, with Carl von Buelow in charge.

• **Weber Showcase and Fixture Co., Inc.,** of Los Angeles has appointed vice president E. O. Stevenson to head up sales for all divisions and to become assistant general manager of the firm's Grand Rapids, Mich., plant.

• **Aluminum Company of America** has announced a $10 million expansion of its plant at Wenatchee, Wash.

• **Pabco Paint Division** of Fibreboard Paper Products Corp. has promoted John A. Elliott to sales manager of its southern district with headquarters in South Gate, Calif.

• **Standard Pressed Steel Co.** will construct a $5 million, one-story plant employing about 500 persons in Santa Ana, Calif. Completion date has been set for early 1958.

• **Empire Building Materials Co.** of Portland has been appointed distributor of Blok-Joint, a rubber control joint for masonry walls, in Oregon and southwestern Washington.

• **Potlatch Forests, Inc.,** of Lewiston, Idaho is now manufacturing glued laminated 2x4 lumber.

• **The Payne Co.** of Monrovia, Calif., has appointed Owen McComas as general sales manager.

• **Radiant Heating and Cooling Institute** has been organized in Suite 318, 5657 Wilshire Blvd., Los Angeles (WEbster 4-1635), with these officers: George Rusher, president; Harry W. Taylor, vice president; Leroy C. Bishop, secretary; Don Smith, treasurer.

• **Triangle Steel Co.** of Los Angeles has promoted general manager James McLaughlin to vice president.

• **Western Reinforcing Steel Fabricators Association** at its first annual membership meeting in San Francisco elected these officers: George L. Cobb, Soule Steel Co., San Francisco, president; Leonard Ross, Blue Diamond Corp., South Alameda, Calif., vice president; Stephen G. Herrick, Herrick Iron Works, Oakland, secretary- treasurer. Directors, in addition to the officers, are William D. Roberts, Union Iron Works, Spokane; Henry Emmrich, Judson-Pacific-Murphy Corp., Emeryville, Calif.; Ray E. Copeland, Southwest Steel Rolling Mills, Los Angeles.

The new association is headquartered at 1322 Webster St., Oakland, under the managership of F. S. Clough.

Publicity for architect's office (Cont'd from p. 20)

The exceptionally high quality of the editorial staffs of the architectural press in both national and regional publications is of particular value to the profession. The same can be said of consumer and general interest publications which have a concern for the architect's work.

The architect who submits material has certain obligations to the publication. At all times he must be honest. Integrity is essential to good relations. Do not include any unverified information, no matter how minute it may seem. A simple error of brand name may be embarrassing for the publication and may involve complications on the business side. If the publication cannot live happily with its advertisers, it cannot survive to publish the architectural work in an objective manner. By helping the editor maintain the highest standards of accuracy, the architect also helps maintain a publication of independence.

Another obligation of the architect who works with an editor is that of respect for the publication's ideas. No one outside an editorial office has the right to announce what is intended for publication. The architect with whom the magazine works for advance material should not divulge such confidence until the editor releases the information.

CYCLONE RUSTAKE WIDE MESH FENCE!

WHEN YOU design a client's new home here's a finishing touch you can well include—a trim, modern boundary definer of Cyclone Rustake Fence. More and more west coast homeowners are discovering that their yards are more beautiful, more useful and private when they're securely fenced. And one of the most attractive fences for this purpose is Cyclone Fence.

Cyclone Rustake Fence is a complement to almost any style home. It consists of slim strips of beautiful California redwood inserted into the wide mesh of Cyclone Chain Link Fence. All posts and structurals are strong, sturdy, rust-resistant steel. This smart new fence increases privacy, decreases maintenance and assures years of good service.

To find out more about this beautiful fence, just send in the coupon. Then, if your clients are not already familiar with Cyclone Rustake Fence, you'll be ready to point out its many advantages.

CORRECTIONAL INSTITUTION— Salem, Ore.

The state emergency board will be requested by Oregon State Board of Control, State Capitol Bldg., Salem, to allocate $731,000 from the emergency fund to cover the difference between the low bid ($2,684,112) and the amount of money available ($2,500,000) for construction of the first unit of the correctional institution to be located on a 10-acre site five mi. southeast of Salem. By accepting some alternates, the board of control reduced the cost of the proposed structure so that $731,000 will be a sufficient emergency appropriation.

Chehalis Red Norman Brick

. . . distinguishes new St. Rita Catholic Church in Portland's Parkrose District

Large areas of glass were combined with extensive use of beautiful Chehalis Matt Face Red Norman Brick by Architects McCoy and Bradbury to achieve the strikingly effective design of this recent addition to Portland's church community. Chehalis Brick—the Northwest's most distinctive brick—takes pride in having been selected to play such a major role in contributing to the charm and beauty of this distinguished new church building.

MOUSETRAP, STEAM TRAP, SEWER TRAP

...it makes no difference

. . . the world *won't* beat a path to the door of the man who builds a better one *and then doesn't advertise it* so that people will know about his product, know where it can be bought and how much it costs.

Advertising benefits the buyer, too. It tells you the product story, makes it easy for you to buy. Even more important to you, advertising leads to mass production and volume sales . . . which means lower costs and lower prices.

Yes, "Advertising Benefits You"... 'specially businesspaper advertising.

▲BUS GARAGE— Sumner, Wash.

Bids are being held under study by Sumner School District No. 320, 1625 Main St., Sumner, for construction of a 40'x105' school bus garage at the high school site on Washington St. in Sumner. Plans by Lea, Pearson & Richards, architects, 240 S. Stadium Way, Tacoma. Bids opened August 6. LOW BIDS: Robert E. Wootan, 9922 View St., Tacoma, $8,912; Korsmo Bros., 5944 Lake Grove Ave., Tacoma, $9,663; C. E. Skinner, Orting, $9,790. SP 9-10. Previous report 8-1

HOSPITAL EXPANSION— Tacoma, Wash.
(Estimated cost $150,000)

Architects Lea, Pearson & Richards, 240 S. Stadium Way, Tacoma, have been retained by Mary Bridge Children's Hospital, 311 S. L St., Tacoma, to prepare plans for completion of the third floor of the hospital. When the present three-story 40-bed hospital was built, the top floor was roughed in for future growth and a bed capacity of 60 persons. Work on the architectural drawings will start after recommendations are made by the hospital's medical staff. Physicians' ideas on layout are being sought by a five-man committee headed by Dr. R. A. Norton. Findings by Dr. Norton's unit will be submitted September 27 for medical staff approval. The hospital board will act on the suggestions before architects can start on plans. SC 9-7

MACHINERY FIRM BUILDING— Tacoma, Wash.
(Estimated cost $250,000)

Final plans have been completed by Lea, Pearson & Richards, architects, 240 S. Stadium Way, Tacoma, and groundbreaking is expected in early fall for a new 30,000 sq. ft. precast concrete and glass building, to be located on a level 10-acre tract adjacent to the Puyallup River Bridge on Highway 99 in Tacoma, for Murphy-Campbell Co., Frank Murphy, president, 2719 S. Tacoma Way, Tacoma. The site, accessible by highway and rail transportation, was purchased from the Port of Tacoma Industrial Development District. Focal point of the structure will be an all-glass 90'x40' display room. SC 9-10

SWIMMING POOL— Tacoma, Wash.
(Estimated cost $250,000)

Plans will be complete in October by E. L. Mills & Associates, architects, 308 S. Tacoma Ave., Tacoma, for the proposed 165'x75' South End Swimming Pool, to include separate 40'x45' diving pool, 60'x30' wading pool and bathhouse facilties, to be located at E. 56th and D, adjacent to the Stewart Heights Playfield, in Tacoma. Bids will be called soon by Metropolitan Park District, Tom Lantz, recreation supervisor, City Hall Annex, Tacoma.

The main pool will be 3' deep at each end and slope to a maximum depth of 5' at the center. Diving pool will be separated from the main pool by a concrete barrier, with opening so that the water can be filtered and chlorinated together with that of the main pool, and will have one- and three-meter boards and a 10-meter board. The pool will be 12' to 15' deep. The wading pool will have a maximum depth of 12". Adjacent facilities, besides separate dressing rooms for men and boys, women and girls,

and the filtration and chlorination equipment, will include a covered spectator area and a snack bar. Parking area for 243 cars is also planned.

Building to house chlorination and filtration equipment, dressing rooms and appurtenant facilities will be one-story; no basement; L-shaped; 250'x90', 9,250 sq. ft. area; concrete footings and foundation; solid masonry, block walls; concrete slab floors; timber beams; flat glued laminated roof; masonry partitions; exposed masonry walls and partitions; ceramic tile flooring; exposed decking on ceilings; corrugated plastic panels; power vents.

★STORE ADDITION— Tacoma, Wash.

Award to G. Kirkebo & Son, 1410 Mountain View, Tacoma, no amount noted, by S. H. Kress & Co. of New York City, for alterations and additions to the existing store at 734 Broadway in Tacoma. Plans by Lyle Swedberg, architect, 911½ Pacific Ave., Tacoma. Bids opened August 26 in New York City.

SP 9-13. Previous report 8-24

NURSING HOME— Tacoma, Wash.

Special permit has been approved by City Planning Commission, Tacoma, for construction of a nursing home at 5210 S. State St. in Tacoma. The permit was requested by Dr. Charles Arnold of Tacoma and is subject to further approval by the city fire, building and health departments. SC 9-14

PARKING GARAGES— Tacoma, Wash.

(Estimated cost $2,000 per parking space)

Plans have been proposed by a Chamber of Commerce committee in Tacoma for construction of a multi-level, ramp- type, self-parking, 418-car capacity garage fronting on Pacific Ave., between the Rust Bldg. and Washington Hardware, extending back over Commerce St. between 9th and 11th streets with access tunnels to Broadway. Car access would be from Commerce, with pedestrian access provided from both Pacific Ave. and Broadway. Plans by Gaston C. Lance, architect, 319 S. 7th, Tacoma. A similar facility was proposed by the committee between 11th and 13th streets from Pacific Ave. to Broadway; a third garage would also be necessary before long and the possibilty was mentioned of a multi-level garage over the existing Rhodes parking lot on Market St. The committee proposed that the garages be municipally operated and financed by revenue bonds. SC 9-14

● McKINLEY SCHOOL ADDITIONS— Tacoma, Wash.

Bids to be opened 8 p. m., October 22, by Tacoma School District No. 10, Toney Shelton, business manager, fifth floor, School Administration Bldg., Tacoma, for construction of an addition on stilts and a new wing to McKinley Elementary School, McKinley Ave. and E. 37th St., Tacoma. Separate bids on general, mechanical, electrical. Plans with John Hewett Sutton, architect, 916 Rust Bldg., Tacoma. $20 deposit for each set of plans. Certified check, cashier's check or bid bond 5%.

Project involves 136'x70' addition on stilts providing five classrooms, two kindergarten rooms; 125'x60' ground level addition to house multipurpose unit, kitchen, administrative wing. Classroom wing will be constructed on concrete beams and columns to provide play area below; above the structure will be frame with glued laminated beams, wood and brick exterior finish; metal sash, built-up roofing; drywall interior finish; acoustical ceilings; asphalt tile floor covering; extension of existing hot water heating system with unit ventilators. The multipurpose wing will have similar construction features. DC 9-18

ELEMENTARY, JUNIOR HIGH SCHOOLS— Tacoma, Wash.

(Estimated cost $190,124 elementary, $1,139,086 junior high)

State matching funds in the amounts of $51,010 and $614,960 have been approved by State Board of Education toward construction of an addition to Southgate Elementary School and a new junior high school, respectively, for Clover Park School District No. 400, 5214 Steilacoom Blvd., Tacoma. SC 9-18

RESTAURANT— Union Gap, Wash.

(Estimated cost $13,000)

Construction underway by Jake Leingang, 3804 Summitview Ave., Yakima, for a 1,600 sq. ft. rustic type restaurant at Union Gap, for owner Gene Luisi. Frame floors; frame exterior wall paneling; built-up roofing; asphalt tile flooring; sheet rock walls; exposed beam ceilings; hot air oil fired heating system. IG 9-10

WATER STORAGE DAM— **Dallas, Ore.**

(Estimated cost $250,000 to $275,000)

Preliminary work has been started in preparation for construction of a water storage dam on Rickreall Creek, 9 mi. northwest of Dallas, according to Lynn McCulley, city superintendent, City Hall, Dallas. Soundings and core drill preparations are underway by crews associated with Cornell, Howland, Hayes & Merryfield, consulting engineers, 1600 Western Ave., Corvallis. If conditions at the present site prove unfavorable, an alternate site two miles downstream will be investigated.

Plans call for a dam approximately 60' high which will impound a minimum of 410,000,000 gal. water. An alternate plan being studied would involve the Soil Conservation Service and the Small Water Shed Act. Under this plan, a larger dam would be built, with Dallas paying a cost equivalent to that of the smaller dam. The city will be required to hold a bond election to raise funds for the project.

SC 9-18. Previous report 6-27

●STATE HIGHWAY PROJECTS— Olympia, Wash.

Bids will be opened 10 a. m., October 1, by Washington State Highway Commission, W. A. Bugge, director, Olympia, for eleven highway construction projects. Specifications with above office. $2 deposit. Certified check or cashier's check 5%.

GRADING, CONCRETE BRIDGE—BELLINGHAM: Clearing, draining, grading and constructing a reinforced concrete slab bridge on 2.114 mi. of PSH No. 1, Fielding St. to North St., Whatcom County; FAP No. 1-001-5(23).

Quantities: 55 acre clearing; 214,400 c.y.

common excavation; 220,400 c.y. solid rock excavation; 74,000 unit overhaul; 8,650 c.y. excavation of unsuitable material; 34,000 ton select roadway borrow; 2,600 c.y. sand borrow; 3,100 ton crushed stone surfacing; 38 ton asphalt cement; 100' integral cement concrete curb; 290 c.y. crushed cover stone, mineral aggregate; 4,150 ton asphaltic concrete; 9,950' cement concrete curb and gutter; 1,960' precast traffic curb; 110' galvanized conduit pipe; 2,459' corrugated metal pipe; 12,245' concrete pipe; 290' copper pipe; 1,922' cast iron pipe; 45,212' reinforced concrete cribbing headers and stretchers; 150' beam guard rail; 3,005 sq. yd. cement concrete sidewalk and driveway; lump sum bid for superstructure (about 530 c.y. concrete and 99,000 lb. steel reinforcing bars); 983 c.y. concrete; 122,840 lb. steel reinforcing bars.

DRAINING, GRADING — PONDERS TO N.P. RAILWAY: Clearing, draining, grading on 1.521 mi. PSH No. 1, Pierce County; FAP No. 1-001-3(19) Unit 2.

Quantities: 95 acre clearing; 417,000 c.y. excavation and borrow; 185,500 unit overhaul; 14,700 ton crushed stone surfacing, special gravel surfacing; 4,400 c.y. top soil; 41 ton asphalt cement; 380 c.y. crushed cover stone, mineral aggregate; 2,930 ton asphaltic concrete; 202' asphaltic concrete spillway and gutter; 194 c.y. concrete; 43,840 lb. steel reinforcing bars; 477 c.y. riprap.

DRAINING, SURFACING, PAVING — VANCOUVER LAKE VICINITY: Clearing, draining, grading, surfacing, constructing cement treated base and paving with type I-1 asphaltic concrete on 1.613 mi. SSH No. 1-T, Clark County; FAS No. S-0261(2).

Quantities: 176,300 c.y. common excavation; 9,230 unit overhaul; 2,800 c.y. excavation of unsuitable material; 29,600 ton ballast, crushed stone surfacing; 4,530 ton asphaltic concrete; 440 c.y. mineral aggregate; 44 ton asphalt cement; 7,500 ton CTB aggregate; 1,600 bbl. portland cement; 3,100' asphaltic shoulder curb; 2,010' concrete pipe; 566' corrugated metal pipe.

REINFORCED CONCRETE BRIDGES — C.M. ST. P. & P. R.R. AND SQUALICUM CREEK: Constructing two reinforced concrete flat slab bridges on 0.065 mi. PSH No. 1, Whatcom County; FAP No. 1-001-5(21).

Quantities: 3,100 c.y. concrete; 521,000 lb. steel reinforcing bars; 1,135' standard bridge railing.

SOUTH 96TH ST. OVERCROSSING AND SOUTH 84TH ST. UNDERCROSSING—Constructing a reinforced concrete box girder bridge and a reinforced concrete rigid frame bridge on 0.016 mi. of PSH No. 1, Pierce County; FAP No. 1-001-3(30).

Quantities: 66,500 c.y. common excavation and borrow; 2,260 ton select roadway borrow; 1,125 ton crushed stone surfacing; 760 ton asphaltic concrete; 66' concrete pipe; lump sum bid for superstructures (about 1,538 c.y. concrete and 387,000 lb. steel reinforcing bars); 1,300 c.y. concrete.

13TH ST. AND NATIONAL AVE. CONCRETE UNDERCROSSINGS — Constructing two precast, prestressed concrete undercrossings on PSH No. 1, Lewis County; FAP No. 1-001-2(54).

Quantities: 1,920 c.y. excavation and borrow; 860 ton crushed stone surfacing and ballast; 869 c.y. concrete; 2,100' prestressed concrete girders; 151,000 lb. steel reinforcing bars; 18,000 lb. structural steel. 10,100' concrete piling.

DRAINING, CRUSHED STONE SURFACING — ENTIAT RIVER ROAD: Clearing, draining, grading and surfacing with crushed stone on 2.719 mi. of a Chelan County Road; FAS No. S-0440(3).

Quantities: 94,200 c.y. common excavation; 19,070 c.y. solid rock excavation; 33,895 ton ballast and crushed stone surfacing; 22 c.y. concrete; 608' structural steel; 1,602' concrete pipe; 720' corrugated metal pipe; 2,460' steel and iron pipe.

DRAINING, GRADING—UPPER ELWHA RIVER ROAD: Clearing, draining and grading on 0.932 mi. Clallam County Road; FAS No. S-1427(1).

Quantities: 2,430 c.y. common excavation; 26,480 c.y. solid rock excavation; 1,000 c.y. loose riprap; 240' concrete pipe.

PAVING, CRIBBING—NORRIS ST. EXTENSION NEAR BURLINGTON: Draining, grading, surfacing, paving with bituminous mix and constructing reinforced concrete cribbing on 0.127 mi. PSH No. 1, Skagit County; a State Project.

Quantities: 2,350 c.y. common excavation and borrow; 660 c.y. select roadway borrow and crushed stone surfacing; 270 ton bituminous mix; 9 c.y. concrete; 156' concrete pipe; 116' corrugated metal pipe; 7,918' reinforced concrete cribbing headers and stretchers.

SURFACING, MOUNT SPOKANE STATE PARK ROAD: Surfacing with crushed stone and constructing a light bituminous surface treatment on 1.030 mi. of a State Park Road in Spokane County; a State Project.

Quantities: 2,770 c.y. selected roadway borrow; 1,075 c.y. crushed stone surfacing, crushed cover stone; 17 ton asphalt cement; 184' corrugated metal pipe.

DRAINING, GRADING, SURFACING — BLOCK 46, 47 FEEDER ROADS, ET AL: Clearing, draining, grading and surfacing with crushed stone on 27.838 mi. Adams County roads; a State Project.

Qauntities: 27.8 mi. grading; 59,410 ton crushed stone surfacing; 2,828' corrugated metal pipe. SP 9-13

★STATE HIGHWAY PROJECTS— **Olympia, Wash.**

Twelve awards and three projects held for consideration by Washington State Highway Commission, W. A. Bugge, director, Olympia, for highway construction on which bids opened September 10.

DRAINING, GRADING—DAVENPORT TO GRAVELLE ROAD: Clearing, draining and grading on 5.641 mi. PSH No. 2 in Lincoln County; FAP No. F-028-4(2). AWARD: N. A. Dagerstrom Co., E. 15th and 32nd, Spokane, $273,464.

STOCKPILING, SURFACING — MONSE TO OKANOGAN: Stockpiling and surfacing with light bituminous surface treatment on 17.788 mi. PSH No. 10 in Okanogan County; FAP No. F-029-2(4). AWARD: Materne Bros., Box 7052, Spokane, $187,221.

REINFORCED CONCRETE UNDERCROSSING—UNION AVENUE: Construction of a reinforced concrete box girder undercrossing on PSH No. 1 in Pierce County; FAP No. 1-001-3(28) Unit 1. Held for consideration. LOW BID: Woodworth & Co., 1200 E. D St., Tacoma, $183,915.

PRECAST CONCRETE UNDERCROSSING — STAMPEDE ROAD, CABIN CREEK ROAD: Constructing two precast prestressed concrete undercrossings on PSH No. 2 in Kittitos County; FAP No. 1-002-2(11). AWARD: Russell Gillett Co., Box G, Cle Elum, $183,815.

REINFORCED CONCRETE BRIDGE—KENTUCKY STREET, C.M.ST.P. & P.R.R. OVERCROSSING: Constructing a reinforced concrete slab bridge on 0.025 mi. PSH No. 1 in Whatcom County; FAP No. 1-001-5(19). AWARD: C. B. Croy, 2502 Lakeway Drive, Bellingham, $121,307.

PRECAST CONCRETE UNDERCROSSING —MORRISON ROAD, MAY VALLEY. Constructing two precast prestressed undercrossings on PSH No. 18 in Grant County; FAP No. 1-002-4(8). Held for consideration. LOW BID: Cherf Bros. & Sandkay Contractors, Inc., Ephrata, $166,566.

STEEL GIRDER BRIDGE, CONCRETE APPROACHES—NORTH FORK OF SKAGIT RIVER: Constructing a steel girder bridge and reinforced concrete approaches on 0.137 mi. of Skagit County Road; FAS No. S-0315 (1) Unit 1. AWARD: Louis Elterich, Box 868, Port Angeles, and DelGuzzi, Inc., 1020 E. Front St., Port Angeles, joint venture, $470,536.

DRAINING, GRADING, PAVING—148TH AVE. S.E., J. C. O'CONNOR ROAD, 140TH AVE. N.E.: Clearing, draining, grading and paving with type I-1 asphaltic concrete on 3.316 mi. King County Road; FAS No. S-0860 (1). AWARD: Acme Construction Co., Box 641, Redmond, $142,064.

GRADING, SURFACING—NORTH FORK BRIDGE APPROACHES: Grading and surfacing on 1.367 mi. Skagit County Road; FAS No. S-0315(1) Unit 2. AWARD: Herman Kathman, Box 555, Kenmore, $125,936.

FOSTER CREEK, PALISADES CONCRETE BRIDGES: Constructing four reinforced concrete slab bridges, grading and surfacing approaches on 0.296 mi. Douglas County Roads; FAS Nos. ER-23(6) and S-1022(2). AWARD: Russell Gillette, Cle Elum, $94,171.

GRADING, SURFACING—FERTILE VALLEY ROAD: Draining, grading, surfacing with selected roadway borrow on 1.115 mi. Pend Oreille County Road; FAS No. S-1339 (1). AWARD: N. A. Dagerstrom Co., Spokane, $31,305.

STORM SEWER — CITY OF COLVILLE: Construction of a storm sewer on 0.375 mi. PSH No. 3 in Stevens County; a State Project. AWARD: Morrison & Co., Box 597, Walla Walla, $34,841.

ASPHALTIC CONCRETE PAVING — TOWN OF MONROE: Paving with type I-1 asphaltic concrete on 0.563 mi. SSH No. 15-B in Snohomish County; a State Project. AWARD: Associated Sand & Gravel Co., 6300 Glenwood Ave., Everett, $44,705.

ASPHALTIC CONCRETE PAVING — KEECHELUS INN TO KACHESS RIVER: Paving with type I-1 asphaltic concrete on 2.581 mi. PSH No. 2 in Kittitas County; a State Project, involving about 2,515 ton asphaltic concrete pavement. AWARD: Washington Asphalt Co., Seattle, $23,925.

DISTRICT OFFICE BUILDING ADDITION —WENATCHEE: Constructing a reinforced concrete addition to the district headquarters office building in Chelan County; a State Project. Held for consideration. LOW BID: Lowry Construction Co., Box 1013, Wenatchee, $141,797.

●HOOD CANAL BRIDGE, FERRY CONSTRUCTION— Olympia, Wash.
(Estimated cost $18,063,000)

Bids will be opened 10 a. m., October 15, by Washington State Highway Commission, Transportation Bldg., Olympia, for 1—constructing unit 1, the floating section of the Hood Canal reinforced concrete floating bridge, 1.341 mi. in length in Kitsap and Jefferson counties (estimated $11,063,000), 2—widening four existing steel state ferries for the State Toll Bridge Authority (estimated $1,800,000), 3—constructing two Evergreen State type ferries 310' long for the Toll Bridge Authority (estimated $5,200,000). Specifications with above office. $50 deposit. Certified check, cashier's check or surety bond 5%.

The above work is the first phase of a $30,500,000 construction program to bridge Hood Canal and improve the state ferry system. The next phase will be on September 24 when the state calls for bids on improving ferry terminals at Fauntleroy, Vashon and Point Southworth-Harper at an estimated cost of $1,100,000.

HOOD CANAL BRIDGE UNIT 1—FLOATING STRUCTURE: Constructing a reinforced concrete floating bridge 1.341 mi. in length in Kitsap and Jefferson counties; a State Project.

Quantities: 74,597 c.y. concrete; 12,586,000 lb. steel reinforcing bars; 3,000,280' prestressing reinforcement; 14,060 reinforced concrete bridge railing; 2,943,120 lb. structural steel; 20,150 sq. ft. steel bridge decking; 739,200 lb. cast steel; 271,610 lb. high strength bolts and cast steel washers; 2,600' rubber seals; 5,844' steel pipe; 1,670' cement-asbestos pipe; 3,316' aluminum bridge railing 1,136' aluminum curb; 321 MBM treated timber and lumber; 227,600 lb. machinery; lump sum bid for mechanical equipment; lump sum bid for electrical equipment; lump sum bid for operator, machinery and generator houses; 29,000 sq. yd. waterproofing pontoons; 2,450' steel piling.

WIDENING FOUR STEEL ELECTRIC FERRIES: Widening the existing state ferries M/V Illahee, M/V Klickitat, M/V Nisqually and M/V Quinault for the Washington Toll Bridge Authority; a State Project.

Work consists principally in sponsoning the hull, widening the auto deck and replacing the existing wood auto deck with a steel deck. Alternate bids requested on replacing existing lifeboats and davits with larger boats and mechanical davits, on raising the entire superstructure for increased vertical clearance on the auto deck and on replacing existing canvas deck covering on exterior passenger decks.

TWO EVERGREEN STATE TYPE VESSELS: Constructing two ferries 310' long for the Washington Toll Bridge Authority; a State Project, consisting of building two ferry vessels of the Evergreen State Class utilizing owner furnished propulsion, generator sets, propulsion motor and engine room auxiliaries. SP 9-13

■STATE HIGHWAY PROJECTS— Olympia, Wash.

Planholders announced on ten highway

construction projects for which bids will be opened 10 a. m., September 24, by Washington State Highway Commission, Transportation Bldg., Olympia.

GRADING — LOON LAKE - GROUSE CREEK—Clearing, draining, grading 6.588 mi. PSH No. 3, Stevens County; FAP No. F-041-2(1).

Planholders: J. N. Conley, 4332 N.E. Royal Court, Portland, Ore.; N. A. Degerstrom, E. 15 32nd, Spokane; Fiorito Bros., 1100 Leary Way, Seattle; F. R. Hewett Co., E. 5916 Baldwin, Spokane; Peter Kiewit Sons' Co., Box 1777, Vancouver; Lockyear & White, Inc., Box 687, Longview; Henry H. Miller, Contractors, Inc., 2191 N.E. Stephens, Roseburg, Ore.; Murphy Bros., Inc., E. 3728 Broadway, Spokane; Charles A. Power, Box 1220, Spokane; Fred H. Slate Co. ●**PAVING, STORM SEWERS—** **Bozeman, Mont.**

Bids will be opened 1 p. m., September 30, by City Council, City Hall, Bozeman, for street improvement involving paving, curb and gutter in SID Nos. 389, 390, 391, 393, 394, 395 and 398, and for construction of drainage improvements, involving storm sewers and inlets, in SID No. 392, Bozeman. Specifications with Harold Hoskins & Associates, consulting engineers, 24th and River Drive, Great Falls. $25 deposit on one set, $25 each additional set. Certified check 10%.

Quantities: 106,050 sq. yd. pavement; 11,500' of 12" to 36" reinforced concrete pipe and appurtenances; 1,376' of 10" portland cement pipe. SP 9-17. Previous report 8-21

▲**SIDEWALKS, CURBS, PUMPS, EXCAVATION—** **Chinook, Mont.**

Bids received by City Council, City Hall, Chinook, for sidewalks, curbs and pumps in SID No. 41, and for excavation work in that district in west Chinook. LOW BIDS—SIDEWALKS, CURBS, PUMPS: Oliver Schubert, Chinook, $83,601. EXCAVATION: Willis Morris, Chinook, $49,458. SC 9-17

★**WATER SYSTEM IMPROVEMENTS—** **Chinook, Mont.**

Awards to Frank Papillo, Havre, $163,174 (water system) and Chicago Bridge & Iron Co., Salt Lake City, Utah, $68,880 (storage tank), by City Council, City Hall, Chinook, for water system improvements, including a new distribution system and a 200,000-gal. capacity elevated storage tank. Specifications by Morrison-Maierle, Inc., consulting engineers, 910 Helena Ave., Helena.

SP 9-11. Previous report 8-30

★**EARTHWORK, STRUCTURES FOR DRAINS—** **Glendive, Mont.**

Award to Holm-Sutherland Co., Inc., Box 578, Billings, $43,348, by Bureau of Reclamation, Glendive, for earthwork and structures for open and closed drains 1-6-Q, 2-7-S, 2-3-K2, 2-3-K3, in the counties of Custer, Prairie and Dawson near the towns of Glendive and Terry, Mont.; Spec. No. 600C-179. SP 9-11. Previous report 8-23

WATER SYSTEM— **Great Falls, Mont.**
(Estimated cost $2,600,000)

The City Clerk, City Hall, Great Falls, has issued invitations to several engineering firms to submit proposals for engineering work on the proposed water system improvements in Great Falls. The proposals will be considered by the City Council on September 13. The firm of Black & Veatch, consulting engineers, 4706 Broadway, Kansas City, Mo., did preliminary work on the project and advised the council that it had believed that it would be retained for the entire project. SC 9-12. Previous report 8-29

●**STATE HIGHWAY PROJECT—** **Helena, Mont.**

Bids will be opened October 24 by Montana State Highway Commission, State Capitol Bldg., Helena, for the following highway construction project. Specifications with above office.

MONTANA AVENUE OVERPASS—BILLINGS: Construction of 1,721' overpass crossing Northern Pacific railroad tracks at the west end of Montana Ave. in Billings.

EE 9-13

★**DISTRIBUTION SYSTEM, STORAGE TANK—** **Hingham, Mont.**

Award to Joe Fagenstrom & Son, Black Eagle, $41,953, by Town Council, Hingham, for construction of a water supply distribution system (Sched. 1) in Hingham. Plans by Wenzel & Co., Country Club Addition, Great Falls. Award on storage tank (Sched. 2) not released.

●**DRILL, CASE WELL—** **Kalispell, Mont.**

Bids to be opened 10 a. m., P.S.T., October 3, by Fish and Wildlife Service, The Interior Bldg., 1001 N.E. Lloyd Blvd., Portland, Ore., for drilling, casing a fresh water supply well at Creston Fish Cultural Station near Kalispell, Mont. Plans with Leo L. Laythe, regional director, Box 373, Portland, Ore.

DM 9-17

★**RESERVOIR, PUMPHOUSE, PIPING—** **Miles City, Mont.**

Award to Regan Plumbing & Heating, 11 S. 9th, Miles City, Mont., $169,133, by U. S. Fish & Wildlife Service, Interior Bldg., 1001 N.E. Lloyd Blvd., Portland, for construction of reservoirs, ponds, ditches, dikes, piping, reinforced concrete structure, pumphouses, pumps, roads and allied appurtenances at the proposed U. S. Fish Cultural Station about one mi. south and west of Miles City.

WB 9-18. Previous report 8-14

●**GRADING, BRIDGE—** **Missoula, Mont.**

Bids will be opened 10 a. m., October 2, by Bureau of Public Roads, 342 Post Office Bldg., Missoula, for grading, surfacing and constructing an 80' reinforced concrete bridge on 7.878 mi. West Gallatin Highway, Gallatin National Forest, Gallatin County, Mont.; FHP No. 42-J5, K1. Specifications with above office. Bid bond 5%.

Quantities: 20 acre clearing and grubbing; 260,000 c.y. excavation; 483,000 sta. yd. overhaul; 50,700 ton crushed aggregate base; 99,000 gal. asphalt; 185 c.y. concrete; 43,000 lb. reinforcing steel; 264' structural plate pipe arch; 3,800' culvert pipe. SP 9-17

★**COUNTY ROAD RELOCATION—** **Noxon Rapids, Mont.**

Award to Murphy Bros., Inc., E. 3728 Broadway, Spokane, $20,000, by Washington Water Power Co., Inc., W. 825 Trent, Spokane, for relocating .3 mi. of county road near the mouth of Trout Creek, involving raising the road from its present level where it crosses Trout Creek to above the water line of the Noxon Rapids Reservoir. SC 9-13

ALASKA

▲**ROCK BREAKWATER—** **Haines, Skagway, Alaska**

Late bids were received (delayed in mail) by Alaska Public Works, Juneau, on construction of rock breakwater at Haines and Skagway small boat harbors. HAINES: Rock & Dirt Construction, Box 3241 Eastchester Branch, Anchorage, $137,748 and an offer of $24,000 reduction if awarded both contracts. SKAGWAY: Rivers Bros. & Wright, $137,368; Rock and Dirt, $92,049, with reduction offered for both contracts. Keil Peterman, Juneau, is low at $123,000 on Haines job and $110,000 on Skagway.

JU 9-14. Previous report 9-12

▲**PAVING—** **Ladd AFB, Alaska**

The only bid, submitted by S. S. Mullen, Inc., Box 712, Fairbanks, in the amount of $18,877, was rejected by U. S. Air Force, Procurement Office, Bldg. 1564, Wing 4, Ladd AFB, for installation of additional paving at road intersections on the base. Bid was opened August 29 and readvertisement for bids will not be issued.

SP 9-14. Previous report 8-24

●**SIDEWALKS—** **Juneau, Alaska**

Bids to be opened 3 p. m., September 27, by General Services Administration, 126 Federal Office Bldg., 909 1st Ave., Seattle, Wash., for screenline changes and sidewalk at the Federal and Territorial Bldg., 4th, 5th and Main streets, Juneau, Alaska; SEA-598. Plans with Seattle office. DM 9-17

NORTHERN CALIFORNIA

●**SANITARY SEWER, PAVING—** **Belmont, Calif.**

Bids on two projects will be opened 8 p.m., October 14, by City Council, City Hall, Belmont: Improvement of Winding Way, Ross St., and North Road sanitary sewer project; and repaving for the Panorama Heights improvement project. RC 9-21

▲**UTILITIES—** **Davis, Calif.**

Bids received by Regents of the University, Administration Bldg., University of California, Davis, for construction of utilities for Campbell Tract, University of California, Davis campus. Work includes furnishing and installing gas and water utility systems complete with pipe, valves, fittings, pipe supports, pipe blocks, trenching. Bids opened September 6. LOW BIDS: John H. McCosker, 1501 E. Shore Blvd., Berkeley, $90,000; Luppen and Hawley, 3126 J St., Sacramento, $98,756; Associated Engineers, Inc., 3606 El Camino Real, Palo Alto, $93,550.

EB 9-21. Previous report 8-31

SQUAW CREEK DAM— **El Dorado, Calif.**

The South Side County Water District has authorized Engineer Claude Hill to make a preliminary survey of the feasibility of a dam site on Squaw Creek, six mi. southeast of Placerville, El Dorado County. Chairman John C. Forni of the district board said it is believed the site will store 21,000 acre feet of water, for which the district holds rights on Clear Creek and Camp Creek. If

the preliminary survey supports the feasibility of the project, the board will request the reclamation bureau to survey the site. RC 9-21

▲GUARDHOUSES, PARKING AREA, ELECTRICAL LINE— Folsom, Calif.

Bids received by Bureau of Reclamation, Folsom, for constructing guardhouses and parking area (Sched. 1), and 4.16-kv. distribution line (Sched. 2), Folsom Dam, near Folsom in Sacramento County (Central Valley Project), Spec. No. 200C-365. Bids opened September 12. LOW BIDS: Sched. 1—Brighton Sand & Gravel Co., Box 1, Perkins, $71,-331; Granite Construction Co., Box 900, Watsonville, $78,665; A. Teichert & Son, Inc., 1931 Stockton Blvd., Sacramento, $78,974. Sched. 2 (only bids)—Slater Electric Co., 608 Sutter S., Folsom, $9,232; Collins Electrical Co., Inc., 611 W. Fremont St., Stockton, $12,343. RM 9-21. Previous report 8-31

LEVEE— Lodi, Calif.

Bids will be called at a later date by the City Council, City Hall, Lodi, for construction of a new flood-control levee on the Mokelumne River. The levee will be between 3,000′ and 4,000′ long, and 51½′ high, extending from Roper Ave. to Laurel Ave. in Lodi. Plans and specifications, prepared by City Engineering Department, A. C. Heckenlaible, city engineer, have been approved.

Quantities: 3,800 c.y. excavation of inspection ditch; 41,500 c.y. construction of levee embankment; 47 c.y. construction of concrete wall. RM 9-21. Previous report 9-7

●STREET RESURFACING—Martinez, Calif.

Bids will be opened 11 a.m., October 1, by Board of Supervisors, Contra Costa County, Martinez, for resurfacing Pacifica Ave. from Riverview Intermediate School to Flumaveg Rd.; Proj. No. 5093-57-1. Specifications available from Public Works Department, Box 509, Martinez. $2.50 charge. Completion time 30 days.

Quantities: 60,000 gals. water, furnish and apply; 1,000 c.y. roadway excavation; 2,200 tons untreated base; 450 tons plant-mixed surfacing; 70′, 12″ corrugated metal pipe, 16 gage; 58′, 18″ corrugated metal pipe, 16 gage. RM 9-21

★STREET IMPROVEMENT— Millbrae, Calif.

Award to Bragato Paving Co., 500 Bragato Rd., Belmont, $9,475, by City Council, Millbrae, for improvement of Magnolia Ave. at City Hall site in Millbrae. Bids opened September 3. EB 9-21. Previous report 8-31

FLOOD CONTROL PROJECT— Oakland, Calif.

The Board of Supervisors of the Flood Control and Water Conservation District has approved hiring three private engineering firms to begin work immediately on right-of-way surveys for the $5,000,000 San Lorenzo Creek flood control project. The firms are Murray & McCormick Inc., John A. Mancini and Martin V. Williams. James F. Vivrette, engineer-manager of the floor control district, estimates the private firms will complete the surveys in two months. The Corps of Engineers expects to award a contract next spring for construction of the initial stage of the project—improvement of San Lorenzo Creek from San Francisco Bay to B St. in Hayward. RC 9-21

HYDROELECTRIC AND WATER PROJECT Oakland, Calif.

The Eastbay Municipal Utility District has formally applied to the Federal Power Commission for a license to build a $63,917,000 hydroelectric and water project on the Mokelumne River and its south fork, in Amador, Calaveras, and San Joaquin counties. The proposal is part of the $95,000,000 long range plan to bring an additional 125,-000,000 gals. of water a day to the Eastbay.

The proposed project includes three dams to be built at Middle Bar, Camanche and Railroad Flat, with a generating capacity of 31,500 kilowatts. EBMUD also proposes to construct crest gates at its existing Pardee Dam to increase storage, and to enlarge the Pardee power plant by adding 7,500 kilowatts of generating capacity to make a total of 22,500. An 80-mile aqueduct 87″ in diameter would be built to parallel the district's two existing Mokelumne aqueducts, extending from the west portal of the Pardee Tunnel to the district's Walnut Creek pumping plant. The district also would build a second Pardee outlet tower and tunnel paralleling the existing tower and tunnel system which interconnects the Pardee Reservoir and the existing aqueducts. RC 9-21

▲DRAIN— Oakland, Calif.

Bids received September 12 by City Council, City Hall, Oakland, for construction of a drain in Hillmont Drive, 150′ more or less, easterly of 75th Ave. and in lots 4 and 5, Leona Heights Addition, adjacent thereto, in Oakland. BIDS: McGuire & Hester, 796 66th Ave., Oakland, $4.50 (per linear ft. of shafts with rock backfill), $17.00 (per linear ft. of 6″ perforated vitrified clay pipe drain placed in rock backfill), $6.00 (per linear ft. of 1½″ pipe drain, in boring); George F. Casey Co., 1337 2nd St., Berkeley, $8.70, $6.50, $6.25; P & Z Co. Inc., 120 S. Maple Ave., South San Francisco, $5.74, $26.24, $4.25. RM 9-21

●STREET IMPROVEMENT— Oakland, Calif.

Bids will be opened 12:30 p.m., September 26, by Gladys H. Murphy, city clerk, City Hall, Oakland, for improvement of Altamont Ave. between Sunnymere Ave. and Hillmont Drive, including grading, and construction of selected material sub-base, concrete curb, concrete gutter, crusher run base, asphaltic concrete surface course, concrete sidewalk, and concrete driveways, Res. No. 36224 C.M.S. Specifications available at above address. Certified check or bid bond 10%. RC 9-21

●PAVING, FENCE— Oakland, Calif.

Bids will be opened 4 p.m., September 24, by Selmer H. Berg, secretary, Board of Education, City of Oakland and Oakland Unified School District of Alameda County, 1025 Second Ave., Oakland, for two projects. PROP. No. 1—Grading and paving adjacent to the site of the Franklin Elementary School, 915 Foothill Blvd., Oakland. PROP. No. 2—Installation of a chain-link fence adjacent to the site of the Franklin Elementary School. Plans available from Director of Architectural and Engineering Services at above address. Cashier's check, certified check or bid bond—Prop. No. 1, $200. Prop. No. 2, $250. RC 9-21

●WATER RESERVOIR— Oakland, Calif.

Bids will be opened 2 p.m., September 27, by East Bay Municipal Utility District, room 104, 2130 Adeline St., Oakland, for completing the excavation for and constructing an 80 MG capacity concrete lined and covered water storage reservoir near San Pablo, Calif. Spec. No. 702. Specifications available at the district's engineering department, above address.

Quantities: excavation, 15,000 c.y.; embankment, 15,000 c.y.; concrete, 10,700 c.y.; precast concrete roof, 375,000 sq. ft. RC 9-21

SEWAGE DISPOSAL PLANT— Oroville, Calif.

Oroville area residents have reviewed a series of surveys concerning engineering and financing, but no action has been taken on a plan to construct a $1,000,000 sewage disposal plant in Oroville. RC 9-21

▲CLEARING, GRUBBING— Placerville, Calif.

Bids received September 10 by El Dorado County Board of Supervisors, Court House, Placerville, for clearing and grubbing of the landing strip area and clear zones at Lake Tahoe airport, Federal Aid Airport Project No. 9-04-115-802. LOW BIDS: Joe Vicini, Box 206, Placerville, $11,680; J. H. Trisdale, Inc., Box 779, Redding, $11,800; Clayton C. King, 69 Grand Ave., Oroville, $23,500. RM 9-21

RESERVOIR— Redwood City, Calif.
(Estimated cost $471,135)

The City Council of Redwood City has voted to advertise for new bids on the Sequoia Reservoir project, after having rejected all previous bids, the lowest of which was $100,000 in excess of the funds on hand for the purpose. The new invitation to bidders will be based on revised designs that are to be submitted and recommended by engineer Lawrence G. Brian, Redwood City. Bids will be asked on two redesigned 4,000,-000 gal. concrete reservoirs, two 4,000,000 gal. steel reservoirs, and one 8,000,000 gal. steel reservoir, along with separate bids for painting and offsite and onsite piping. Brian estimated that the new specifications should be ready in about 30 days. RC 9-21. Previous report 8-31

★SUBSTATIONS— Sacramento, Calif.

Award to B & B Construction Co., 937 49th St., Sacramento, $9,489, by Sacramento Municipal Utility District, 59th & R, Sacramento, for furnishing and installing three substations—Bercut Richards, 34th & E (Rio Linda), and Kathleen and Academy—including grading, surfacing, transformer pad, conduit, grounding system, and chain link fencing. Bids opened August 28. RM 9-21. Previous report 8-24

●STATE HIGHWAY PROJECTS— Sacramento, Calif.

Bids to be opened 2 p.m., October 2, by California Division of Highways, 510 Public Works Bldg., Sacramento, on the following highway construction. Plans with state highway engineer at above address.

IX-INY-1242—Grade and pave with road-mixed surfacing on imported base material, about 3.9 mi., on Whitney Portal Rd. between Hunter's Flat, 11.7 mi. west of Lone Pine, and near National Forest Boundary, Inyo County.

III-NEV-765—Grade about 3 mi. of two-lane highway and install drainage facilities on Tyler-Foote Rd., between Kennedy Ranch and 0.7 mi. west of North Columbia Nevada County.

III-PLA-STATE PARK—Grade and surface roads, parking areas and launching ramps with portland cement concrete and plant-mixed surfacing and install drainage facilities, electrical and water conduits in Folsom Lake State Park, at Beal's Point and Granite Bay, Placer County.

II-LAS-1232—Clear and grub about 10.3 mi. of highway right-of-way on Feather Lake Highway, about 20 mi. northwest of Susanville, Lassen County. RM 9-21

★STATE HIGHWAY PROJECTS— Sacramento, Calif.

Awards announced by California Division of Highways, 510 Public Works Bldg., Sacramento, for the following highway construction on which bids were opened September 4.

I-MEN-56-D—Repairing bridge across Big River, about 12 mi. south of Fort Bragg in Mendocino County. AWARD: Al Erickson Co., Box 284, Napa, $11,722.

I-MEN-56-G,H—Construct two reinforced concrete slab bridges, and grade and treat bridge approach roadways with penetration treatment on imported base material, about 0.3 mi. near Rockport, at the South Fork of Cottoneva Creek and at Cottoneva Creek in Mendocino County. AWARD: Tom Hull, 930 Carlson, Eureka, $80,496. RM 9-21. Previous report 9-7

WATER POLLUTION STUDY— San Francisco, Calif.

The State Water Pollution Control Board has approved spending $700,000 for water pollution studies in the San Francisco and central valleys areas. Dewitt Nelson, chairman of the Board, said that $390,000 will be used for a study of control problems in San Francisco Bay. An additional $170,000 is to be used for a one-year study on the Sacramento River. RC 9-21

●SEWAGE DISPOSAL AND WATER SYSTEMS— San Francisco, Calif.

Bids will be opened about October 15 by Corps of Engineers, 180 New Montgomery St., San Francisco, for construction of two sewage disposal systems and increasing and extending two water supply systems at two locations in the San Francisco Defense area, special AAA sites, SF-08 and 09, San Pablo Ridge, Contra Costa County, SF-31, Lake

Chabot, Alameda County. Serial No. ENG-04-203-58-9. Work includes 13,000', 4" and 8" V.C. gravity, 4" C.I. force sewer lines, and 4,000', 3" and 4" water supply lines. Systems include two concrete block pump stations, a primary sewage treatment plant consisting of an Imhoff tank and two sludge beds. Also included are fencing, creek crossing structure, cattle guard, approximately 1,000 sq. ft. of stabilized aggregate surfacing and wood bumpers, drainage facilities, outside electrical distribution, and seeding. Specifications available at above office. Bid bond 20%. Completion time 100 days. RM 9-21

★**PUMPING PLANT— Stockton, Calif.**

Award to Stockton Construction Co., 639 W. Clay St., Stockton, $23,790, by City Council, City Hall, Stockton, for construction of stormwater pumping plant at Brookside Tract in Stockton. Bids opened September 10. OTHER BIDS: Goold & Son, 1601 Turnpike Rd., Stockton, $24,444; D. A. Parrish & Sons Inc., 3128 E. Miner Ave., Stockton, $22,810; C. Norman Peterson Inc., 2832 Ninth St., Berkeley, $32,129. RM 9-21

★**PUMPING PLANT— Stockton, Calif.**

Award to Stockton Construction Co., Inc., 639 W. Clay St., Stockton, $37,647, by City Council, City Hall, Stockton, for construction of the Buena Vista stormwater pumping plant in Stockton. Bids opened September 10. OTHER BIDS: R. Goold & Son, 1601 Turnpike Rd., Stockton, $34,369; C. Norman Peterson, Inc., 2832 Ninth St., Berkeley, $38,530. RM 9-21

★**STREET RESURFACING— Stockton, Calif.**

Award to S. M. McGaw Co. Inc., 2216 E. Miner Ave., Stockton, $13,808, by City Council, City Hall, Stockton, for resurfacing E. Main St. for ¾ mi. between Locust and Filbert Sts. in Stockton. RC 9-21

▲**SEWAGE DISPOSAL PLANT— Tracy, Calif.**

Bids received September 10 by City Council, City Hall, Tracy, for construction of a sewage disposal plant and West Side sewer trunk line in Tracy. Bids on the disposal plant were made on two alternate methods of construction, one including a digestive system, and the other incorporating a catalytic reduction system. Two bids, with and without the new reduction system, were submitted by each contractor. Bids are being held under advisement until October 8. LOW BIDS—DISPOSAL PLANT: Peletz Construction Co., 475 W. College Ave., Santa Rosa, $224,170, $216,170; North Bay Construction Co., 450 College Ave., Santa Rosa, $240,762; $226,762; C. Norman Peterson Inc., 2832 Ninth St., Berkeley, $248,748, $234,549. TRUNK LINE: Jackson Hopkins Co., Box 490, Bakersfield, $48,278; Hackett Bros. Inc., Box 145, Los Altos, $48,700; G. G. Williamson Co., Box 510, Chico, $51,283. RC 9-21. Previous report 8-24

●**BULKHEAD— Trinity Dam, Calif.**

Bids will be opened 2 p.m., October 17, by Bureau of Reclamation, Building 53, Denver Federal Center, Denver, Colo., for the following equipment for the outlet works at Trinity Dam, Central Valley Project, Calif. Spec. No. DS-4968. Schedule 1—Item 1: One 16-ft. diameter, sperical, intake bulkhead. Item 2: One lot of embedded metalwork, but not including anchor bolts, for the spherical bulkhead. Schedule 2—Item 3: One lot of anchor bolts for the spherical bulkhead embedded metalwork. Specifications available at above address. Shipping time 360 days. RM 9-21

●**SITE PREPARATION— Walnut Creek, Calif.**

Bids will be opened 3 p.m., September 26, by Walnut Creek School District, Contra Costa County, 1768 Ygnacio Valley Rd., Walnut Creek, for completion of site work at the following locations: Buena Vista School, 2355 San Juan Ave.; Murwood School, 2050 Vanderslice Ave.; Parkmead Lower Grade School, 1920 Magnolia Way; Parkmead Upper Grade School, 1847 Newell Ave.; Walnut Creek School, 2425 Walnut Blvd.; Walnut Heights School, 4064 Walnut Blvd. Work includes grading, paving, storm drainage. Specifications available from office of the business manager, above address. Certified check or cashier's check 10%. RC 9-21

▲**SIDEWALKS— Woodland, Calif.**

A low bid of $225,798 was submitted by McGillivray Construction Co., 65th and Folsom Blvd., Sacramento, to the Board of Supervisors, Yolo County, Woodland, for installation of sidewalks, curbs and gutters in the West Sacramento Improvement District. Four bids were received. RC 9-21

Advertisements for Bids

STATE HIGHWAY PROJECTS
BIDS CLOSE 10 A.M., OCTOBER 1
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, October 1, 1957, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the office of the District Engineers of the Department of Highways where they may be inspected.

Federal Funds have been allocated for items Nos. 1 to 8 inclusive.

The improvements for which bids will be received follow:

1. Clearing, Draining, Grading and Constructing a Reinforced Concrete Slab Bridge on 2.114 miles of Primary State Highway No. 1 in Whatcom County, FIELDING STREET TO NORTH STREET IN BELLINGHAM, FAP No. I-001-5(23), involving about 55 acres of Clearing, 214,400 cubic yards of Common Excavation, 220,400 cubic yards of Solid Rock Excavation, 74,000 units of Overhaul, 8,650 cubic yards of Excavation of Unsuitable Material, 34,000 tons of Selected Roadway Borrow, 2,600 cubic yards of Sand Borrow, 3,100 tons of Crushed Stone Surfacing, 38 tons of Asphalt Cement, 290 cubic yards of Crushed Cover Stone and Mineral Aggregate, 4,150 tons of Asphaltic Concrete, 9,950 linear feet of Cement Concrete Curb and Gutter, 100 linear feet of Integral Cement Concrete Curb, 1,960 linear feet of Precast Traffic Curb, 110 linear feet of Galvanized Conduit Pipe, 2,459 linear feet of Corrugated Metal Pipe, 12,245 linear feet of Concrete Pipe, 290 linear feet of Copper Pipe, 1,922 linear feet of Cast Iron Pipe, 45,212 linear feet of Reinforced Concrete Cribbing Headers and Stretchers, 150 linear feet of Beam Guard Rail, 3,005 square yards of Cement Concrete Sidewalk and Driveway, a lump sum bid for Superstructure (about 530 cubic yards of Concrete and 99,000 pounds of Steel Reinforcing Bars), 983 cubic yards of Concrete, 122,840 pounds of Steel Reinforcing Bars, 409 linear feet of Standard Bridge Railing, 4,200 linear feet of Treated Timber Piling, 16,000 linear feet of Untreated Timber Piling and other items. Minmum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
2. Clearing, Draining and Grading on 1.521 miles of State Highway No. 1 in Pierce County, PONDERS TO N. P. RAILWAY, FAP No. I-001-3(19) Unit 2, involving about 95 acres of Clearing, 417,000 cubic yards of Common Excavation and Borrow, 185,500 units of Overhaul, 14,700 tons of crushed Stone Surfacing and Special Gravel Surfacing, 4,400 cubic yards of Top Soil, 41 tons of Asphalt Cement, 380 cubic yards of Crushed Cover Stone and Mineral Aggregate, 2,930 tons of Asphaltic Concrete, 3,643 linear feet of Asphaltic Shoulder Curb, 202 linear feet of Asphaltic Concrete Spillway and Gutter, 170 linear feet of Precast Traffic Curb, 194 cubic yards of Concrete, 43,840 pounds of Steel Reinforcing Bars, 868 linear feet of Concrete Pipe, 2,650 linear feet of Corrugated Metal Pipe, 462 linear feet of Beam Guard Rail, 70 Guide Posts, 477 cubic yards of Riprap, 2,400 linear feet of Chain Link Fence and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
3. Clearing, Draining, Grading, Surfacing, Constructing a Cement Treated Base and

Paving with Type I-1 Asphaltic Concrete on 1.613 miles of Secondary State Highway No. 1-T in Clark County, VANCOUVER LAKE VICINITY, FAS No. S-0261(2), involving about 16 acres of Clearing, 176,300 cubic yards of Common Excavation, 9,230 units of Overhaul, 2,800 cubic yards of Excavation of Unsuitable Material, 29,600 tons of Ballast and Crushed Stone Surfacing, 4,530 tons of Asphaltic Concrete, 440 cubic yards of Mineral Aggregate, 44 tons of Asphalt Cement, 7,500 tons of CTB Aggregate, 1,600 barrels of Portland Cement, 3,100 linear feet of Asphaltic Shoulder Curb, 2,010 linear feet of Concrete Pipe, 566 linear feet of Corrugated Metal Pipe, 35 linear feet of Steel Pipe, 1,753 linear feet of Beam Guard Rail, 80 Guide Posts and other items.

4. Constructing Two Reinforced Concrete Flat Slab Bridges on 0.065 mile of Primary State Highway No. 1 in Whatcom County, C.M. ST. P. AND P. R.R. AND SQUALICUM CREEK BRIDGE, FAP NO. I-001-5(21), involving about 3,100 cubic yards of Concrete, 1,135 linear feet of Standard Bridge Railing, 521,000 pounds of Steel Reinforcing Bars and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
5. Constructing a Reinforced Concrete Box Girder Bridge and a Reinforced Concrete Rigid Frame Bridge on 0.016 mile of Primary State Highway No. 1 in Pierce County, SOUTH 96TH STREET OVERCROSSING AND SOUTH 84TH STREET UNDERCROSSING, FAP No. I-001-3(30), involving about 66,500 cubic yards of Common Excavation and Borrow, 2,260 tons of Selected Roadway Borrow, 1,125 tons of Crushed Stone Surfacing, 760 tons of Asphaltic Concrete, 66 linear feet of Concrete Pipe, a lump sum bid for Superstructures (about 1,538 cubic yards of Concrete and 387,000 pounds of Steel Reinforcing Bars), 1,300 cubic yards of Concrete, 256,000 pounds of Steel Reinforcing Bars, 430 linear feet of Standard Bridge Railing and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
6. Constructing Two Precast, Prestressed Concrete Undercrossings on Primary State Highway No. 1 in Lewis County, 13TH STREET AND NATIONAL AVENUE UNDERCROSSING, FAP No. I-001-2 (54), involving about 1,920 cubic yards of Common Excavation and Borrow, 860 tons of Crushed Stone Surfacing and Ballast, 869 cubic yards of Concrete, 2,100 linear feet of Prestressed Concrete Girders, 714 linear feet of Standard Bridge Railing, 151,000 pounds of Steel Reinforcing Bars, 18,000 pounds of Structural Steel, 10,100 linear feet of Concrete Piling and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
7. Clearing, Draining, Grading and Surfacing with Crushed Stone on 2.719 miles of a Chelan County Road, ENTIAT RIVER ROAD, FAS No. S-0440(3), involving about 94,200 cubic yards of Common Excavation, 19,070 cubic yards of Solid Rock Excavation, 33,895 tons of Ballast and Crushed Stone Surfacing, 22 cubic yards of Concrete, 1,200 pounds of Steel Reinforcing Bars, 608 linear feet of Structural Steel, 1,602 linear feet of Concrete Pipe, 720 linear feet of Corrugated Metal Pipe, 2,460 linear feet of Steel and Iron Pipe, 2,179 linear feet of Wire Fence, 1,964 linear feet of Deer Fence and other items.
8. Clearing, Draining and Grading on 0.932 mile of Clallam County Road, UPPER ELWHA RIVER ROAD, FAS No. S-1247 (1), involving about 2,430 cubic yards of Common Excavation, 26,480 cubic yards of Solid Rock Excavation, 1,000 cubic yards of Loose Riprap, 240 linear feet of Concrete Pipe and other items.
9. Draining, Grading Surfacing, Paving with Bituminous Mix and Constructing Reinforced Concrete Cribbing on 0.127 mile of Primary State Highway No. 1 in Skagit County, NORRIS STREET EXTENSION NEAR BURLINGTON, a State Project, involving about 2,350 cubic yards of Common Excavation and Borrow, 660 cubic yards of Selected Roadway Borrow and Crushed Stone Surfacing, 270 tons of Bituminous Mix, 9 cubic yards of Concrete, 1,250 pounds of Steel Reinforcing Bars, 156 linear feet of Concrete Pipe, 116 linear feet of Corrugated Metal Pipe, 7,918 linear feet of Reinforced Concrete Cribbing Headers and Stretchers, 450 linear feet of Beam Guard Rail and other items.
10. Surfacing with Crushed Stone and Constructing a Light Bituminous Surface Treatment on 1.030 miles of a State Park Road in Spokane County, MOUNT SPOKANE STATE PARK ROAD, a State Project, involving about 2,770 cubic yards of Selected Roadway Borrow, 1,075 cubic yards of Crushed Stone Surfacing and Crushed Cover Stone, 17 tons of Asphalt Cement, 184 linear feet of Corrugated Metal Pipe and other items.
11. Clearing, Draining, Grading and Surfacing with Crushed Stone of 27.838 miles of Adams County Roads, BLOCK 46, 47 FEEDER ROADS, ET AL., a State Project, involving about 27.8 miles of grading, 59,410 tons of Crushed Stone Surfacing, 2,828 linear feet of Corrugated Metal Pipe and other items.

LIFT STATION, SEWAGE TREATMENT LAGOON

BIDS CLOSE 8 P. M., SEPTEMBER 24

Roundup, Montana

NOTICE TO CONTRACTORS

Sealed bids will be received by the undersigned until 8:00 P. M., September 24, 1957, and then publicly opened and read by the undersigned at the City Hall, Roundup, Montana, for the construction of a lift station and sewage treatment lagoon.

Principal items are—SCHEDULE 1: 19,000 cubic yards lagoon excavation and embankment; one manhole and one lift station with two 300 G.P.M. pumps, and one 600 G.P.M. pump, one inlet manhole and one outlet structure, 100 lineal feet of 15-inch vitrified clay sewer pipe, 700 lineal feet of 18-inch corrugated metal pipe and appurtenant work, all as set forth in plans and specifications prepared by Wenzel and Company, Consulting Engineers, Great Falls, Montana and on file with the City Clerk, where they may be inspected without charge, and from either of whom they may be obtained upon deposit of $15.00 per set as a guarantee of their safe return. The full amount of the deposit will be returned to each actual bidder submitting a bona fide bid, immediately upon return of said plans and specifications within 10 days after the date of the bid opening.

Each bid must be accompanied by a certified check made payable to the City of Roundup, Montana, in an amount not less than ten percent (10%) of the total bid as bid security.

Each proposal shall be sealed and addressed to the City Clerk, City Hall, Roundup, Montana, and the name of the project, and the current Montana Contractor's License Number held by the bidder shall be plainly written on the outside of the envelope. The Owner reserves the right to waive irregularities and to reject any or all bids.

No bidder may withdraw his bid after the hour set for the opening thereof for a period of thirty (30) days.

BY ORDER OF THE CITY COUNCIL,
City of Roundup, Musselshell County, Montana.
CITY OF ROUNDUP, MONTANA.

STATE HIGHWAY PROJECTS

BIDS CLOSE 9 A.M., SEPTEMBER 26

Helena, Montana

NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the offices of said Commission in the City of Helena, until 9:00 a.m. on September 26, 1957. The proposals will be publicly opened and read immediately thereafter. YOUR ATTENTION IS DIRECTED TO THE 9:00 A.M. HOUR SET FOR THE OPENING OF BIDS.

1. **FG 224(5)**—Grade, gravel surfacing, concrete pavement, road-mix oiling, seal coat oiling, drain, and construction of one 75.33' steel structure over the First Avenue North Underpass on 0.195 miles of the Second Avenue North Great Falls-First Avenue North Underpass Road in Cascade County, involving about 15,870 cu. yds. excavation (detour); 0.395 mile processing; 556 sq. yds. processing; 419 sq. yds. concrete; 10,019 tons crushed gravel; 472 M gals. watering; 136 units rolling; 9,910 gals. liquid asphalt; 1,906 gals. emulsified asphalt; 220 lin. ft. reinforced concrete pipe culverts; 342 lin. ft. concrete sewer pipe; all L. sum clearing & grubbing; 8,044 sq. yds. Portland cement concrete pavement; 8 each drop inlets; 230 lin. ft. precast concrete curb; 1,202 square yds. concrete sidewalk; all L. sum excavation (Roadway); 39.279 MBM treated timber; 300.0 lin. ft. steel guard rail; 227,071.0 lbs. reinforcing steel; 3,774.0 cu. yds. concrete; all L. sum structure excavation; all L. sum removal of existing structure; all L. sum structural steel; all L. sum ornamental railing; all lump sum pipe railing; all L. sum waterproofing; all L. sum drainage system; all L. sum lighting system; all L. sum traffic signal installation; all L. sum galvanized iron; all lump sum obliterate detour road; and other items. Project to be completed by August 31, 1959.

2. **F 240(8) & F 240(9)**—Grade, gravel surfacing, plant-mix oiling, and drain 2.361 miles on the Wolf Point Streets and the West of Wolf Point-North Dakota Line Road in Roosevelt County, involving about 85,672 cu. yds. excavation; 100 cu. yds. gravel backfill; 9,578 tons plant mix; 8,107 mi. yds. overhaul; 77,387 tons crushed gravel; 5,759 cu. yds. sand base; 2,775 M gals. watering; 512 units rolling; 122,578 gals. asphalt cement; 19,777 gals. liquid asphalt; 19,611 gals. emulsified asphalt; 52 lin. ft. corrugated metal pipe culverts; 3,841 lin. ft. reinforced concrete pipe culverts; 771 lin. ft. cast-iron pipe; 276 lin. ft. relay pipe culverts; 6 each manholes with covers; 9 each drop inlets; 10,473.6 lin. ft. concrete median curb; 5,765.1 lin. ft. concrete integral curb and gutter; 461 lin. ft. concrete structures to remove; and other items. Project to be completed in 150 calendar days.

3. **F334(15)U1** — Grade, soil-cement base; plant-mix oiling; and drain 10.980 miles on

the Crow Agency-Broadus Road in Powder River County, involving about 395,188 cu. yds. excavation; 726 cu. yds. gravel backfill; 26,029 tons plant mix; 39,084 mi. yds. overhaul; 1,257 tons crushed gravel; 26,745 cu. yds. soil aggregate; 6,581 M gals. watering; 965 units rolling; 336,825 gals. asphalt cement; 40,554 gals. liquid asphalt; 202 lin. ft. corrugated metal pipe culverts; 656 lin. ft. structural plate pipe culverts; 1,082 lin. ft. reinforced concrete pipe culverts; 2,330 lin. ft. relay pipe culverts; 11,891 bbls. Portland cement; 167,487 sq. yds. processing; all L. sum miscellaneous in place to remove; 117 each concrete right-of-way monuments; 57 each concrete station markers; and other items. Project to be completed in 200 calendar days.

4. **U-UG 405(3)U1**—Construction of 254.0' of irrigation pipe under the Fifth Street, Sixth Street and Madison Street Road in the City of Missoula, Missoula County, involving about 3,298 cu. yds. excavation; 289 cu. yds. unclassified backfill; 190 cu. yds. gravel backfill; 254 lin. ft. structural plate pipe culverts; 4,982 lbs. reinforcing steel; 57.6 cu. yds. Class "AD" concrete; and other items. Project to be completed by April 30, 1958.

5. **S 187(2)U1**—Grade, gravel surfacing, bituminous surface treatment, and drain 14.054 miles on the Armells-Hays-Harlem Road in Blaine County, involving about 654,574 cu. yds. excavation; 484 cu. yds. gravel backfill; 49,313 mi. yds. overhaul; 252,419 tons crushed gravel; 14,823 M gals. watering; 2,542 units rolling; 83,791 gals. liquid asphalt; 83,791 gals. emulsified asphalt; 2,192 lin. ft. corrugated metal pipe culverts; 518 lin. ft. structural plate pipe culverts; 1,047 lin. ft. relay pipe culverts; 47 lin. ft. steel pipe; 192 each concrete right-of-way monuments; all L. sum miscellaneous to be moved; and other items. Project to be completed in 350 calendar days.

6. **S 187(2)U2**—Construction of one 100.0' treated timber bridge over Little Peoples Creek, and one 100.0' treated timber bridge over Big Peoples creek on the Armells-Hays-Harlem Road in Blaine County, involving about 4,655 cu. yds. unclassified excavation; 98,913 MBM treated timber; 2,972 MBM untreated timber; 2,470 lin. ft. treated timber piles; 3,796 lbs. structural steel; and all L. sum removal of existing structure; and maintaining traffic. Project to be completed by June 30, 1958.

7. **S 191(2)**—Grade, gravel surfacing, and drain 10.161 miles on the Jordan-Haxby Road in Garfield County, involving about 439,125 cu. yds. excavation; 1,431 cu. yds. binder; 479 cu. yds. gravel backfill; 2,862 mi. yds. overhaul on binder; 22,174 mi. yds. overhaul; 58,005 tons crushed gravel; 7,768 M gals. watering; 1,174 units rolling; 2,886 lin. ft. corrugated metal pipe culverts; 326 lin. ft. structural plate pipe culverts; 302 lin. ft. relay pipe culverts; 162 each concrete right-of-way monuments; all L. sum miscellaneous to remove; and other items. Project to be completed in 200 calendar days.

8. **S 204(1)**—Grade, gravel surfacing, bituminous surface treatment, drain and construction of one 19.0' treated timber pile structure on 8.468 miles on the Echo Lake-East and West Road in Flathead County, involving about 369,951 cu. yds. excavation; 425 cu. yds. gravel backfill; 6,929 mi. yds. overhaul; 114,137 tons crushed gravel; 68,720 tons uncrushed gravel; 9,178 M gals. watering; 1,594 units rolling; 46,944 gals. liquid asphalt; 46,944 gals. emulsified asphalt; 270 lin. ft. structural plate pipe culverts; 4,544 lin. ft. reinforced concrete pipe culverts; 100 lin. ft. relay pipe culverts; 51.02 acres clearing; 34.45 acres grubbing; 186 each concrete right-of-way monuments; 10.256 MBM treated timber; 0.342 MBM untreated timber; 800 lin. ft. treated timber piles; all L. sum removal of existing structure and maintaining traffic; and other items. Project to be completed in 200 calendar days.

9. **S 222(1)**—Grade, gravel surfacing, bituminous surface treatment, and drain 5.766 miles on the Gildford-North Road in Hill County, involving about 115,181 cu. yds. excavation; 100 cu. yds. gravel backfill; 21,215 mi. yds. overhaul; 20,790 tons crushed gravel; 56,095 tons uncrushed gravel; 3,331 M gals. watering; 660 units rolling; 36,256 gals. liquid asphalt; 36,256 gals. emulsified asphalt; 1,348 lin. ft. corrugated metal pipe culverts; 100 lin. ft. relay pipe culverts; 98 each concrete right-of-way monuments; and other items. Project to be completed in 150 calendar days.

10. **S 228(2)U1**—Grade, gravel surfacing, bituminous surface treatment, and drain 9.777 miles on the Augusta-Southwest Road in Lewis & Clark County, involving about 302,509 cu. yds. excavation; 118 cu. yds. gravel backfill; 27,967 mi. yds. overhaul; 128,786 tons crushed gravel; 7,059 M gals. watering; 1,263 units rolling; 55,608 gals. liquid asphalt; 55,608 gals. emulsified asphalt; 530 lin .ft. corrugated metal pipe culverts; 2,916 lin. ft. reinforced concrete pipe culverts; 100 lin. ft. relay pipe culverts; 150 each concrete right-of-way monuments; and other items. Project to be completed in 180 calendar days.

11. **S 228(2)U2**—The construction of one 38.0' treated timber pile bridge on the Augusta-Southwest Road in Lewis & Clark County, involving about 44.982 MBM treated timber; 1.739 MBM untreated timber; 980 lin. ft. treated timber piles; 610 cu. yds. unclassified excavation; all L. sum removal of existing structure and maintaining traffic; and other items. Project to be completed by July 31, 1958.

12. **S 317(3)**—Grade, gravel surfacing, and drain 6.871 miles on the Wyoming Line-Moorhead-Broadus Road in Powder River County, involving about 262,175 cu. yds. excavation; 935 cu. yds. binder; 343 cu. yds. gravel backfill; 1,870 Mi. yds. overhaul on binder; 13,033 mi. yds. overhaul; 34,127 tons crushed gravel; 4,576 M gals. watering; 134 units rolling; 2,718 lin. ft. corrugated metal pipe culverts; 288 lin. ft. structural plate pipe culverts; 100 lin. ft. relay pipe culverts; all L. sum miscellaneous to remove; 100 each concrete right-of-way monuments; and other items. Project to be completed in 180 calendar days.

13. **S 340(4)**—Grade, gravel surfacing, drain, and construction of one 57.0' treated timber pile bridge on 6.975 miles of the Cleveland-Chinook Road in Blaine County, involving about 282,030 cu. yds. excavation; 1,013 cu. yds. binder; 280 cu. yds. gravel backfill; 2,026 mi. yds. overhaul on binder; 35,423 mi. yds. overhaul; 44,886 tons crushed gravel; 5,097 M gals. watering; 267 units rolling; 1,874 lin. ft. corrugated metal pipe culverts; 66 lin. ft. structural plate pipe culverts; 216 lin. ft. reinforced concrete pipe culverts; 102 lin. ft. relay pipe culverts; all L. sum miscellaneous to be removed; 119 each concrete right-of-way monuments; 25,295 MBM treated timber; 0.872 MBM untreated timber; 810 lin. ft. treated timber piles; 1,124 lbs. structural steel; and other items. Project to be completed in 180 calendar days.

The above-listed quantities are approximate only.

All bid proposals shall be accompanied by a certified or cashier's check, cash, postal money order, bank money order, or bid bond in the amount of at least 5% of the bid. Should the successful bidder fail to enter into his contract and furnish a satisfactory performance bond within the time stated in his proposal, the bid deposit shall be forfeited to the State Highway Commission of Montana.

Prequalifications of bidders at least 72 hours prior to the opening of bids is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission in Helena, Montana. Plans and specifications for all Federal-aid projects are also on file and may be examined in the offices of the Bureau of Public Roads at Missoula, Montana.

PUMPING UNITS

BIDS CLOSE OCTOBER 31

Denver, Colorado

NOTICE TO CONTRACTORS

DEPARTMENT OF THE INTERIOR, Bureau of Reclamation. Sealed bids (Invitation No. DS-4967) will be received at Denver, Colorado, until October 31, 1957, for furnishing three (3), motor-driven, horizontal, centrifugal-type, 37 cfs, 275 ft. head pumping units; and two (2) motor-driven, horizontal, centrifugal-type, 17.5 cfs, 119 ft. head pumping units for Radar Pumping Plant, Columbia Basin Project, Washington. Delivery is desired within 330 days. For particulars, address Bureau of Reclamation, Building 53, Denver Federal Center, Denver 2, Colorado. W. A. Dexheimer, Commissioner.
5939—9-21

FLOATING BRIDGE, FERRY CONSTRUCTION

BIDS CLOSE 10 A.M., OCTOBER 15

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, October 15, 1957, until 10:00 A. M. and will then and there be opened and publicly read for the construction of the improvements listed below.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalifications of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of fifty-two dollars ($52.00) for each copy of such maps, plans and specifications. Two dollars ($2.00) of the above amount is a rental payment for the use of the maps, plans and specifications and is not returnable. The remaining fifty dollars ($50.00) is a deposit on the maps, plans and specifications and will be returned to the planholder providing the maps, plans and specifications are returned to this office not later than ten (10) days from the date of award of the contract. IF PAYMENT IS MADE BY CERTIFIED CHECK, CASHIER'S CHECK OR MONEY ORDER, PLEASE MAKE PAYMENT IN TWO CHECKS, ONE FOR TWO DOLLARS ($2.00) AND ONE FOR FIFTY DOLLARS ($50.00). Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications for the Hood Canal Bridge Unit 1—Floating Structure are on file in the office of the Chief Consulting Engineer for the Washington Toll Bridge Authority, 3201 Fremont, Seattle, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland, the offices of the District Engineers of the Department of Highways and the office of the Director of Highways where they may be inspected.

Informational copies of the plans and specifications for the Widening Four Steel Electric Ferries and the Two Evergreen State Type Vessels are on file in the office of the Washington State Ferries, Coleman Ferry Terminal, Seattle, the office of W. C. Nickum and Sons, 71 Columbia Street, Seattle, and the office of the Director of Highways where they may be inspected.

The improvements for which bids will be received follow:

1. Constructing a Reinforced Concrete Floating Bridge 1.341 miles in Length in Kitsap and Jefferson Counties, HOOD CANAL BRIDGE UNIT 1—FLOATING STRUCTURE, a State Project, involving about 74,597 cubic yards of Concrete, 12,586,000 pounds of Steel Reinforcing Bars, 3,000,280 linear feet of Prestressing Reinforcement, 14,060 linear feet of Reinforced Concrete Bridge Railing, 2,943,120 pounds of Structural Steel, 20,150 square feet of Steel Bridge Decking, 739,200 pounds of Cast Steel, 271,610 pounds of High Strength Bolts and Cast Steel Washers, 2,600 linear feet of Rubber Seals, 5,844 linear feet of Steel Pipe, 1,670 linear feet of Cement Asbestos Pipe, 3,316 linear feet of Aluminum Bridge Railing, 1,136 linear feet of Aluminum Curb, 321 MBM of Treated Timber and Lumber, 227,600 pounds of Machinery, a lump sum bid for Mechanical Equipment, a lump sum bid

for Electrical Equipment, a lump sum bid for Operator, Machinery and Generator Houses, 29,000 square yards of Water Proofing Pontoons, 2,450 linear feet of Steel Piling and other items.

2. Widening the Existing State Ferries M/V Illahee, M/V Klickitat, M/V Nisqually and M/V Quinault for the Washington Toll Bridge Authority, WIDENING FOUR STEEL ELECTRIC FERRIES, a State Project, involving a lump sum bid for the Entire Improvement. The work involved consists principally in sponsoning the hull, widening the auto deck and replacing the existing wood auto deck with a steel deck. Alternate bids are requested on replacing the existing life boats and davits with larger boats and mechanical davits, on raising the entire superstructure for increased vertical clearance on the auto deck and on replacing the existthe canvas deck covering on the exterior passenger decks.
3. Constructing Two Ferries 310 feet long for the Washington Toll Bridge Authority, TWO EVERGREEN STATE TYPE VESSELS, a State Project, involving a lump sum bid for the Entire Work. The work involved consists of building two ferry vessels of the Evergreen State Class utilizing owner furnished propulsion, generator sets, propulsion motor and engine room auxiliaries.

STREET PAVING

BIDS CLOSE 1 P.M., M.S.T., SEPTEMBER 30

Bozeman, Montana

NOTICE TO CONTRACTORS

The City of Bozeman, Montana, will receive sealed bids for construction of Street Improvements in Special Improvement Districts, 389, 390, 391, 393, 394, 395 and 398 and for construction of Drainage Improvements in Special Improvement District 392 until 1:00 o'clock P. M., Mountain Standard Time, at the office of the Clerk of the Commission on the 30th day of September, 1957, at which time and place all bids will be publicly opened and read aloud.

The Contract Documents, including plans and specifications, are on file at the office of the Clerk of the Commission at Bozeman, Montana, and at the office of Harold Hoskins & Associates, Engineers, 2314 River Drive, Great Falls, Montana, or at 725 9th Street, Greeley, Colorado.

Copies of the documents may be obtained by paying to Harold Hoskins & Associates $25.00 for one set and $10.00 for each additional set. One-half of said charges will be refunded for all complete sets returned in undamaged condition. The successful bidder will be furnished, free of charge, with all copies of the documents necessary for contract award and construction purposes.

Each bid shall be accompanied by a certified check drawn on a solvent bank in an amount not less than 10% of the total amount of the bid and shall be made payable to the Director of Finance of the City of Bozeman, as security that the bidder to whom the contract may be awarded will enter into a contract to build the improvement in accordance with this notice, and give bond in the sum as hereinafter provided for construction of the improvement. Checks accompanying bids not accepted shall be returned to the bidders.

No bid shall be withdrawn after opening the bids without the consent of the City of Bozeman, Montana, for a period of 30 days after the scheduled time of closing bids.

The City of Bozeman, Montana, reserves the right to reject any or all bids and to waive any informalities in bidding.

The successful bidder will be required to furnish a satisfactory performance bond in the sum of the full amount of the contract.

In general, the improvement on which bids are requested will require the following construction:

Paving Special Improvement District 389—7,050 Sq. Yd. of pavement and 1,376 L.F. of 10" P.C. pipe; Paving Special Improvement District 390—7,700 Sq. Yd. of pavement; Paving Special Improvement District 391—5,850 Sq. Yd. of pavement; Drainage Special Improvement District 392—11,550 L.F. 12"-36" R.C. pipe and appurtenances; Paving Special Improvement District 393—57,600 Sq. Yd. of pavement; Paving Special Improvement District 394—2,050 Sq. Yd. of pavement; Paving Special Improvement District 395—6,000 Sq. Yd. of pavement; Paving Special Improvement District 398—19,800 Sq. Yd. of pavement.

Sealed bids shall be marked on outside, "Bid for Construction of Street Improvements in Special Improvement District 389, 390, 391, 393, 394, 395, and 398" and/or "Bid for Construction of Drainage Improvements in Special Improvement District 392."

Dated this 11th day of September, 1957.

CITY OF BOZEMAN, MONTANA.
By: L. G. Shadoan,
Clerk of the Commission.

HEALTH CENTER

BIDS CLOSE 10 A.M., P.S.T., OCTOBER 2

Juneau, Alaska

NOTICE TO CONTRACTORS

Project Aaa. 50-A-270, Health Center, Kenai, Alaska. September 4, 1957. Kenai Health Center, Project Aaa. 50-A-270, Kenai, Alaska. Alaska Public Works, Office of Territories, Department of the Interior, By (Issuing office) Thomas G. Mooney, Director, Alaska Public Works, Office of Territories, Department of the Interior, Post Office Box 1181, Juneau, Alaska. Sealed bids in single copy for furnishing all labor, equipment, and materials and performing all work for the project described herein will be received until 10:00 A.M. Pacific Standard Time, October 2, 1957, in the mailroom of the office of the Director, Alaska Public Works, Office of Territories, Department of the Interior, 123 West Third Street, Post Office Box 1181, Juneau, Alaska and then publicly opened and read aloud. Information regarding bidding material, bid guarantee, and bonds follows: Plans and specifications and other proposed contract documents are open for public inspection at the Director's office, Juneau, Alaska; at Room 5621 Interior Bldg., Washington 25, D. C.; at the Area Engineer's office, Alaska Public Works, Reliable Service Bldg., Anchorage, Alaska; and Associated General Contractor's of America offices as follows: Seattle Chapter, Construction Center, 215 West Harrison St., Seattle, Wash.; Mountain Chapter, 220 West Harrison St., Seattle, Wash.; Tacoma Chapter, 1605 Center Street, Tacoma, Wash.; Portland Chapter, Suite 112, Multnomah Hotel, Portland, Oregon; the Alaska Chapter, 306 Central Bldg., Anchorage, Alaska, and the Plan Bureau, 2413 Western Ave., Seattle, Wash.; and the Builders Exchange Cooperative, 317 Builders Exchange Bldg., Portland, Oregon. A set of such documents may be procured from the office of the Director at Juneau, Alaska upon deposit of $25.00, all of which will be refunded upon the return of the plans and specifications in good condition within twenty (20) days from date of bid opening. Each bid must be accompanied by a satisfactory bid security (certified check or bid bond) in an amount not less than 5 per cent of the total bid in dollars and cents. No bid will be withdrawn until thirty days after the scheduled closing date for the receipt of bids. The successful bidder will be required to furnish a performance bond and payment bond, each in the amount of 100 per cent of the contract price. The Government reserves the right to award a contract for the project on the basis of the acceptance of any or all of the alternates, whichever course is in the best interest of the Government. DESCRIPTION: Project Aaa. 50-A-270, Health Center, Kenai, Alaska. The construction of a one story frame Health Center building with approximately 113 sq. ft. of floor area.

COLLEGE ADDITIONS

BIDS CLOSE 8 P.M., P.S.T., SEPTEMBER 25

Pasco, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Clerk of the Pasco School District #1, at the offices of the School District, 517 North 3rd St., Pasco, Washington, on or before 8:00 P.M., P.S.T., Wednesday, Sept. 25, '57 for the construction of Vocational-Technical, PE-Music; Classroom Center, and Boiler Plant Additions for Columbia Basin College of steel and block construction. The bids will then and there be publicly opened and read aloud.

Bids received after the time fixed for opening cannot be considered.

Separate bids will be received for the following contracts: a. General, b. Mechanical work, c. Electrical work.

Drawings and specifications including contract documents may be examined at the offices of the Architect, Victor Louis Wulff, 1526 West Riverside Avenue, Spokane, Washington, and 507 North 4th, Pasco, Washington, and may be obtained there, upon the deposit of $40.00 per set for General, and $25.00 for Mechanical and Electrical.

The sets of plans and specifications will be on file at the following places for the convenience of sub-contractors, etc.: Plan Survey Center, Inc., 15 S.E. 22nd Ave., Portland 15, Oregon. Tri-City Construction Council, 34 Vista Way, Kennewick, Wash. Construction Council, 933 West 3rd, Spokane, Wash., AGC Builders' Chapter, N. 1207 Washington, Spokane, Wash., Builders' Exchange, 317 Builders' Exchange Bldg., Portland, Oregon, AGC Builders' Chapter, 215 West Harrison St., Seattle, Wash., Plan Bureau, 2413 Western Ave., Seattle, Washington, Basin Construction Council, 515 W. Broadway, Moses Lake, Wash., Yakima Valley Master Builders, 702 W. Walnut St., Yakima, Wash., AGC Builders' Chapter, 452 St. Helen's Tacoma, Wash.

The full amount of the deposit for one set of documents, will be refunded to actual bidders upon return of the documents, unmutilated and without marks and annotations, within 10 days after the time set for opening of bids, but to non-bidders only if returned no later than 10 days before the bid opening.

No bid will be considered unless fully completed in the manner provided in the "Instructions to Bidders" and on the bid form provided by the Architect and each bid must be accompanied by a certified check, cashier's check or bid bond with State-licensed surety or sureties in an amount of not less than five per cent (5%) of the bid for which security is given, made payable to the Pasco School District #1.

The right is reserved to accept or reject any or all bids and waive all claims, or any informalities or irregularities in the bids or in the bidding.

The School District reserves the right to award a contract for this project on the basis of the acceptance of any or all of the alternates, whichever course is in the best interests of the School District.

No bidder may withdraw his bid after the time set for the opening thereof, unless the award of contract is delayed for a period exceeding 30 days.

By order of Pasco School District #1.
Noble Moodhe,
Secretary of the School Board
517 North 3rd
Pasco, Washington

YODER

In addition to press brake fabrication described below, Fentron Industries often use the Yoder (continuous) method in which roof sections are made to any length and standing seams are crimped together for greater strength.

PRESS BRAKE

Steel roof decking...durable, strong and economical

Fentron Industries of Seattle, Washington, has found USS Steel Sheets ideal for low-cost and reliable roof deck construction. The service station canopy roof above, formed and installed by Fentron, is fabricated from 18-gauge USS Sheets by the press brake method and plug-welded every 18 inches. Sections are one-foot wide in nine-foot spans with two-and-one-half inch standing seams that interlock on installation; leak-proof against wind and water. This roof decking has withstood test loads of 55 lbs. per sq. foot, without distress . . . good overhead insurance under the snow loads in Washington winters.

Steel roof decking is durable, strong and costs less to install. Other materials require more weight, additional construction time and greater cost to equal the strength and carrying capacity of steel.

Whether you build service stations, industrial plants or homes, we'll be happy to direct you to steel decking fabricators who will provide you with additional information and specifications.

West Coast architects design abroad

RESIDENCE FOR U. S. AMBASSADOR TO CHILE: Paul Thiry, architect.

In Santiago, Chile

Instead of drawing upon the European heritage of the Chileno in designing a residence for the U. S. ambassador to Chile, architect Paul Thiry of Seattle has looked for his inspiration to the culture of the ancient Andean civilizations. The structure will be a contemporary expression of their indigenous architecture of walls and terraced hillsides.

To be located in suburban Santiago adjoining the city's fashionable golf club, the residence will be sited atop a ridge within a valley bordered on the north and northeast by the towering Andes.

The state reception and dining rooms, the ambassador's private apartments and the servants' quarters are dispersed around a large patio with fountain. Because of the one-story plan, the ambassador and his family have access to the patio and gardens instead of being isolated on upper floors as has been customary in buildings of this type. Although the building maintains a residential scale, it can, by implementation of formal rooms, patio and gardens, easily accommodate large groups of people.

Structurally, the building will be of earthquake-resistant monolithic concrete and can be opened by means of glass sliding doors and screens.

U. S. EMBASSY BUILDING IN PAKISTAN: Richard J. Neutra and Robert E. Alexander, architects.

In Karachi, Pakistan

Construction has started this summer in Karachi on one of the largest U. S. embassy office buildings in the world and the only one in which the host country will assume a share of the cost. Designed by Los Angeles architects Richard J. Neutra and Robert E. Alexander, Pakistan will pay half the cost of the project, estimated to cost $1.3 million.

A reflecting pool will dramatize the entrance to the 62,000-sq. ft. reinforced concrete structure which will be built in the heart of the city facing the Frere Gardens, the only green spot in the desert capital. It will have a reinforced concrete reservoir located below the basement, a 10,000-gal. tank and other mechanical equipment in a penthouse and an adjoining 16,000-sq. ft. concrete warehouse.

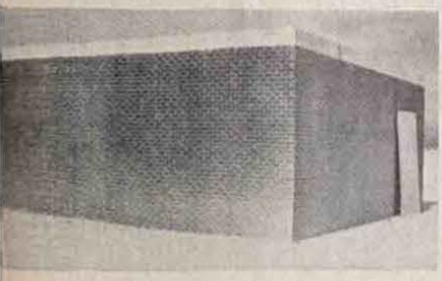
Besides normal embassy functions, plans call for office space to house the U. S. Information Service, with film distribution center and printing plant, the Foreign Operations Program and the Military Assistance Program, as well as other functions.

Briefly noted . . .

• Architect Minoru Yamasaki of Detroit and landscape architect Lawrence Halprin of San Francisco have been selected as out-of-state consultants for Seattle's proposed Civic Center and World's Fair. Yamasaki is a graduate of the University of Washington.

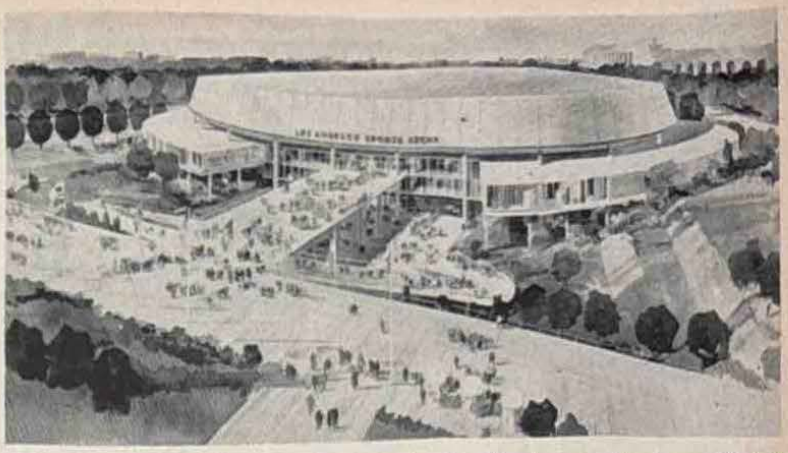
• "Designing the Next 100 years" will be the theme of the annual convention of the American Society of Industrial Designers to be held October 17-20 at the Ojai Valley Inn, Ojai, Calif. Among the speakers will be architect Charles Luckman of Los Angeles.

• Demolition work is underway on the 20-acre site on which Portland will erect its $8 million Exposition-Recreation Center.



• Beverly Hills, Calif., plans to build a museum with the profits from a movie, but just what kind of film it might be has not been disclosed.

• A newly appointed Building Research Advisory Board Committee formed to advise the FHA on its technical studies program has one West Coast member, Charles D. Clark, land planning consultant of Los Angeles.

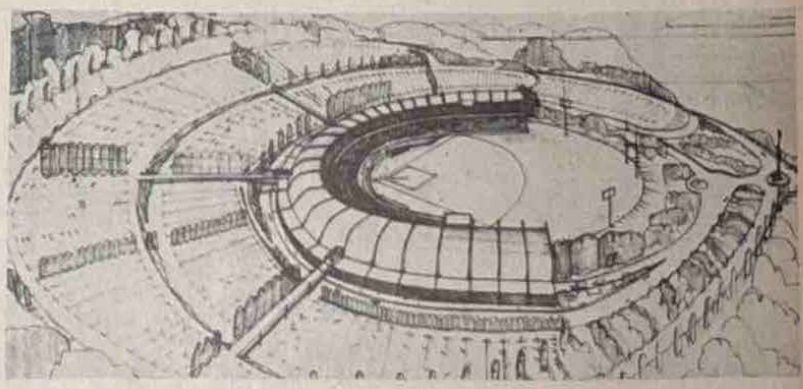


Windowless brick school survives atomic blast

A full-size reinforced brick school structure successfully withstood the effect of an atomic blast during the recent Plumbob nuclear test series in Nevada, the Federal Civil Defense Administration has reported.

Designed by the Structural Clay Products Research Foundation, the 32x28 ft. windowless building was constructed with 10-in. reinforced brick walls and a reinforced concrete roof. This classroom planned for 30 students would have afforded a high degree of protection to its occupants in 75% of the blast area.

WINDOWLESS CLASSROOM UNIT withstands effect of atomic blast in recent test.



SPORTS ARENA IN LOS ANGELES for which more than $5 million in revenue bonds were floated.

Mammoth indoor arena planned for Los Angeles

Prelminary plans for one of the largest indoor sports arenas in the country have been presented to the Los Angeles Memorial Coliseum Commission by the architectural firm of Welton Becket & Associates.

The project provides seating for 16,000 persons at ice hockey games or 18,432 for basketball and 19,320 for boxing, by use of temporary seating on a lower level. The elliptically shaped arena could seat a maximum of 30,000 for conventions when the entire lower level is filled with seats. The entire structure will be of fireproof reinforced concrete and structural steel, free of any columns within the seating area.

A controversy centering around the project reached a high point last March when the commission discharged Stiles O. and Robert Clements because of high bids on their plans. The architects now have a $374,000 lawsuit against the commission and the latter has countercharged with a suit for about the same amount.

FROM POLO GROUNDS TO BAYVIEW PARK: Giants will get new home when they come to San Francisco next season. Precast concrete sections are now being designed.

Big league baseball means new stadium for Bay

Proposed stadium for big league baseball in San Francisco, with the transfer of the New York Giants set for next spring, will have seating for 40,000 fans and parking for 10,000 cars. The overall scheme has been developed by architect John S. Bolles, consulting engineer E. Elmore Hutchison and contractor Charles Harney.

The project will cost about $12 million, $5 million of which will be furnished by the city and the balance by Harney and associates. It will be located on the northeasterly slope of Candlestick Point, with access from Bayshore Freeway, Third Street and adjacent and contiguous streets to be widened by the city to serve both the stadium and the area in the Bay to be reclaimed by the Hunters Point Reclamation District.

Upon signing of the contract, about two million cubic yards of earth will be taken from the hill within 60 days in what will be the largest earth-moving job in the history of the Bay area. Part of the earth will be used for the parking area and the balance as fill in the Bay to provide 100 acres of the 500 to be developed.

August volume lags behind same month last year

Building volume in the five western states dropped to $199,615,437 in August. The total, as reported by 116 building permit agencies, is $47 million below the same period last year.

On a statewide basis California dropped $38 million; Washington, $6¾ million; Oregon, $1½ million; and Montana, $1 million. Idaho showed a slight increase over August 1956.

Compared to the previous month, the August volume was down $13¼ million. Idaho and Washington reported increases over July, while the other three states reported decreases.

Here is the box score for the year so far:

	Jan.-Aug. 1957	Jan.-Aug. 1956
California	$1,341,449,807	$1,474,164,000
Oregon	83,777,027	100,504,217
Washington	189,548,174	223,556,066
Montana	16,853,824	20,814,764
Idaho	16,084,520	16,887,906

As the tabulation shows, all states are running behind the cumulative totals for last year. The dollar volume for the first eight months is $1,647,713,352, down $188,213,601 from the total at the same time in 1956.

Following is the breakdown of building permits issued for new buildings and additions by several of the major agencies during August. (First number in each category refers to number of permits, not number of units.)

ANALYSIS OF TYPICAL AREAS—AUGUST

	DWELLING	COMMERCIAL & INDUSTRIAL	PUBLIC
Portland	58 ($ 987,450)	20 ($ 850,300)	5 ($ 286,985)
King Co.	524 (5,246,530)	51 (336,945)	8 (617,400)
Seattle	602 (3,957,632)	167 (4,107,082)	1 (4,000)
Tacoma	84 (258,480)	45 (435,230)	3 (2,685,000)

NEW design concept... WITH COLORFUL CONCRETE

COLORUNDUM • STAYBRITE • A. E. DISPERSED BLACK • FOR USE INDOORS OR OUTDOORS

This is the Age of Color in Architecture. And particularly in concrete, color is being used with greater freedom and effect than ever before. Today, many architects specify colorful patios, terraces and walls to harmonize with new building materials like stainless steel; others use subtle pastels to create new atmospheres indoors and out; and still others are using this brilliant medium for strictly functional purposes, such as to guide traffic or set off working areas.

Color selection in construction is easy.

Specify Horn Colorundum for decorative floors, modern in appearance, with increased value.

Specify Horn Staybrite integral color to enhance the beauty of all concrete and mortar surfaces.

Both are available in a wide range of decorative colors.

Specify Horn A. E. Dispersed Black to darken concrete. It is *guaranteed* not to reduce the air content in air entrained concrete mixes.

Want more information? For condensed data see Sweets—For complete details write Dept. H62-715.

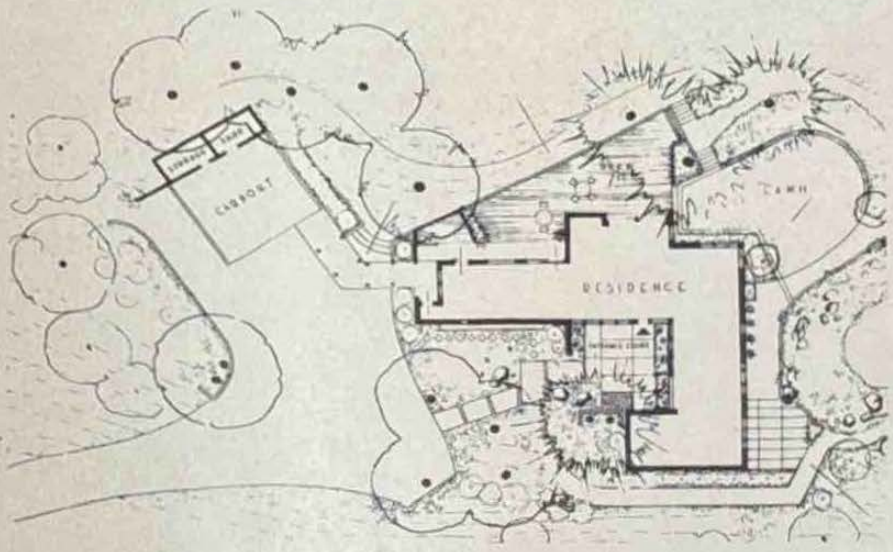
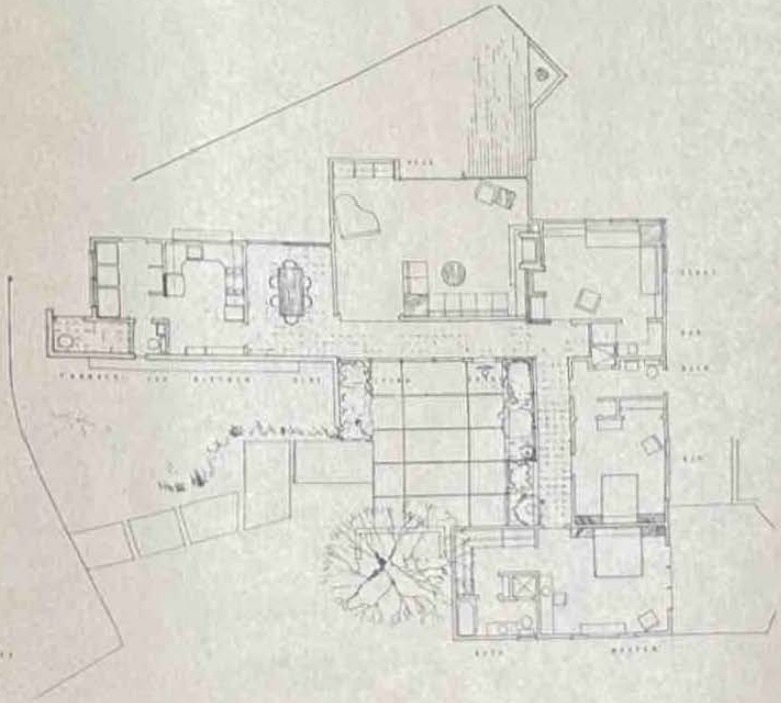
An intelligent use of the site

House that treads its way through the forest



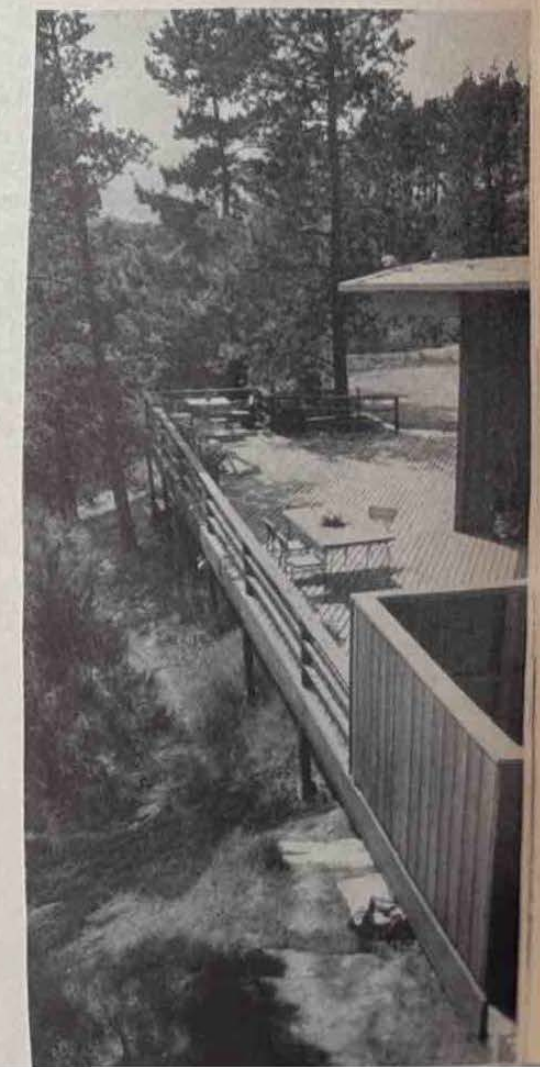
THE 2½-ACRE SITE had only a small level portion of land and just room enough for a house, carport and parking area. Although it was heavily wooded, the loss of any major tree would affect the beauty of the lot at the house location and the privacy required by the clients, both professionals without children—she, a ballet teacher; he, a dentist and a performer with chamber music groups.



The entire property has a view of the valley, but the most desirable is to the south and southwest where pine-covered mountains present a panoramic backdrop. This necessitated sheltered outdoor living to combat prevailing summer breezes off the bay from the north-northeast and protection of glass areas from the sun.

Since the site in large measure dictated the design of the house, the architect and landscape architect shared in the planning from the outset. The latter's problem was threefold: 1) to assist the architect and clients in locating the house and carport on the very narrow, wooded saddle; 2) to save all good trees and natural undergrowth on the slopes below in meeting the stated requirements; 3) to plan an appealing approach in spite of the large space needed for visitor car parking and turning.

The solution: By locating the house on the edge of the hill and extending a deck parallel with the contours, it was possible to utilize a group of pines



southwest of the house for shade in the late afternoon and to reserve an area for a small, cooling lawn at the west corner. Through careful staking of the site, a roofed connection between house and carport was laid out that would not obstruct the view across the saddle. One end of the deck, near the kitchen, was planned to function both as a service area and as a visual barrier between the parking area and that part of the deck used for lounging. The entrance garden was designed to attract visitors to the main doorway of the house where two pines extend a welcome.

DECK EXTENDS from living room (top photo, left) across front of house. Screened area in foreground (bottom photo) blocks view from parking area and carport to deck and serves as storage. Material is redwood paneling.

HUTTON RESIDENCE

HOUSE BLENDING INTO LANDSCAPE provides quiet mood of privacy. Planting beds line hallway leading to bedrooms; study is seen in background. Both dining and living rooms have mahogany paneling. Simple, direct circulation carries from one end of house to other.

OUTLINE SPECIFICATIONS

Structure: 1-story frame on concrete slab.

Exterior Walls: 8x4x16-in. masonry block (Basalt), 1x8 redwood siding with clear flat rawhide paint.

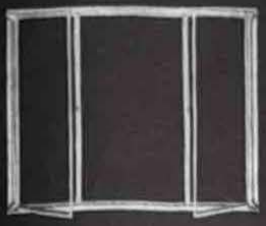
Windows: Custom-made stopped in wood.

Doors: Mahogany solid core, exterior; mahogany hollow core, interior.

Floors: Quarry tile (Mosaic), ceramic tile (Gladding McBean), vinyl tile (Robbins), carpeting on concrete slab.

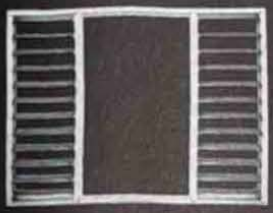
Interior Finish: 1x8 mahogany paneling, painted (Morwear) plaster.

Ceilings: Plaster, acoustical plaster (California Stucco).



Heating: Radiant system (Arro).

Total Area: 2,200 sq. ft.



Total Cost: $35,000.

Date of Completion: June 1954.

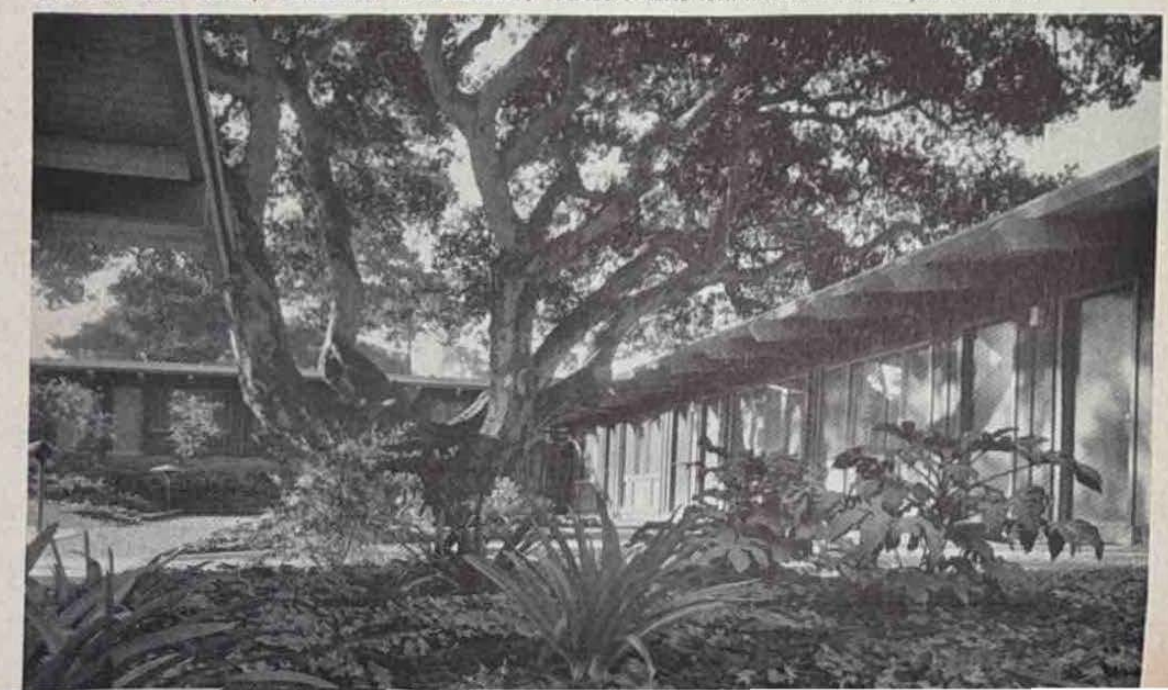
An intelligent use of the site

Design seeks to subordinate structures

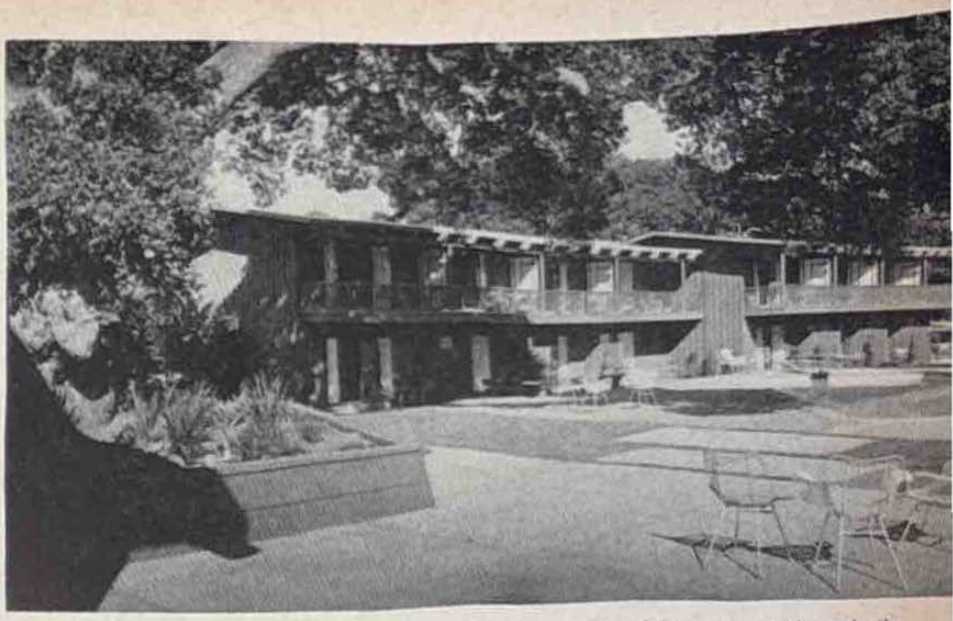


THIS MOTEL PROJECT was designed to be built in three phases, the first of which consisted of 30 bedroom units, an apartment for the manager and four shops.

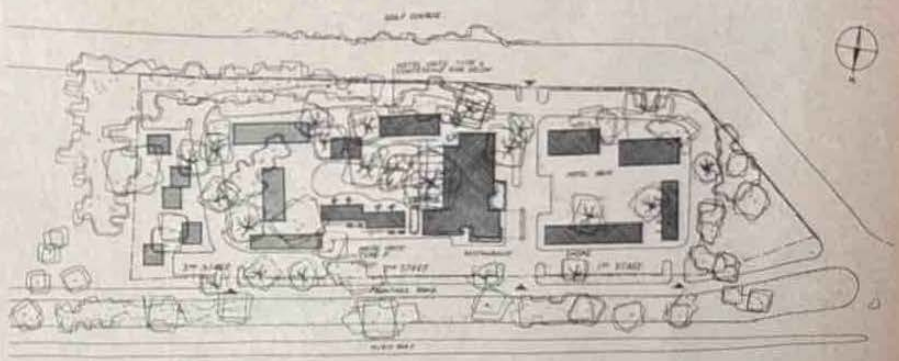
Six months of successful operation justified the construction of 28 additional and more luxurious hotel units which were arranged to face a swimming pool and terrace. A restaurant and lounge were added around the same central terrace to provide flexible facilities for conventions and other meetings, in addition to resort guests who flock to the Monterey Peninsula for golf, fishing and the coastal scenery.

Future increments will be grouped around an elongated central terrace or possibly a detached courtyard. It is anticipated that the fully developed project will have about 200 accommodation units.

The site was evolved to fit the buildings, roads and parking areas into the open spaces between the oak trees—several at least 100 years old—which are a prominent feature. The architectural organization and style is deliberately casual and subdued to harmonize with the character of the terrain. The wooden structures are quiet; parked cars are not allowed to intrude; the design seeks to subordinate the structures to the great beauty of the land forms and the trees.



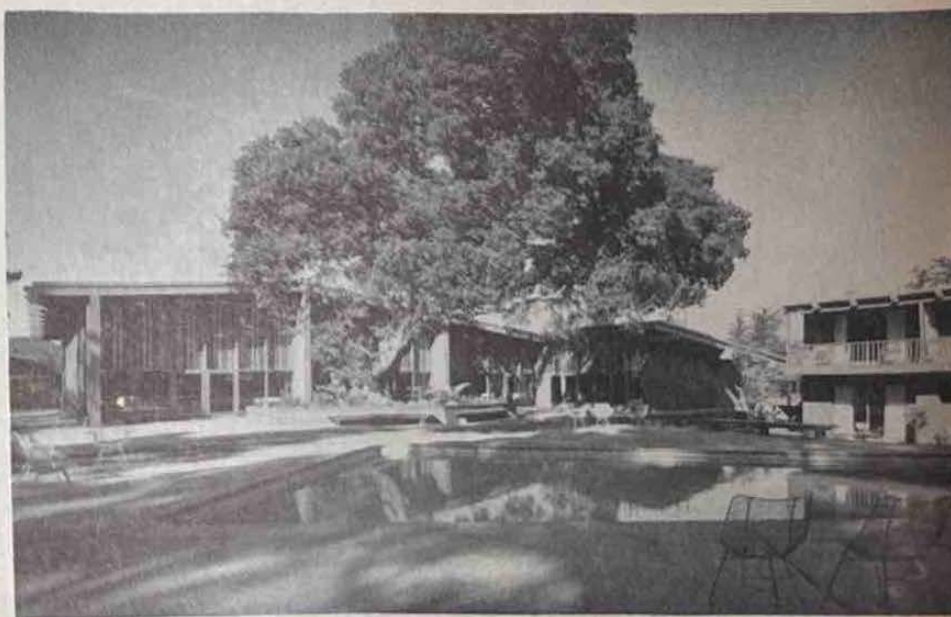
CENTURY-OLD OAKS, PLEASANT OVERHANGS, GLASS AREAS turn motel into countryside retreat.



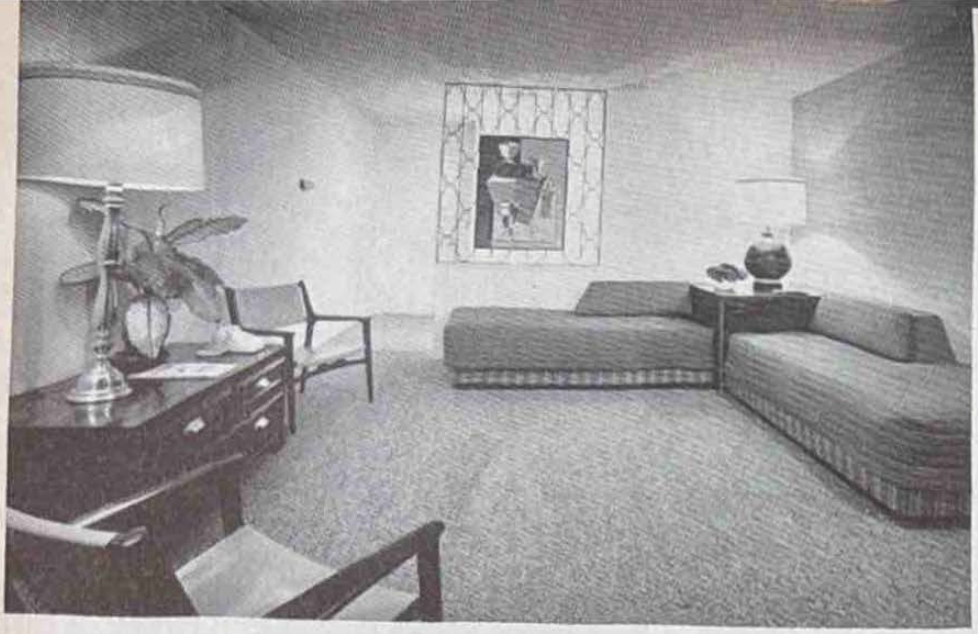
PHASE 1: The original problem was not only to retain the trees, but to design the first stage of a master plan which envisioned possibly 200 units in one- and two-story structures. Furthermore, because income would be limited initially to the rent from only 30 units, the buildings had to be planned for maintenance by a minimum staff. As a result, most of the units are small and cater to the trade of the traveling businessman.

Simple wood construction, costing $14.83 per square foot, employs fir plywood sheathing as a solid base for stained redwood board and batten exterior siding. Interior walls are paneled with gum plywood; partitions are fiberboard and acoustical plywood. Roofs consist of t&g planks on 4x10 beams covered with four-ply composition of decomposed brown granite.

Because of sandy soil conditions, the foundation is of reinforced concrete with no piling, but with a continuous membrane under all of the 4-in. concrete slabs on 6-in. gravel. Floor finishing is asphalt tile in the bathrooms and wall-to-wall carpeting in the bedrooms.



EXTERIOR DETAILS LIKE BALCONY RAILS, as well as custom fabrics, ironwork and tile of interiors, are derived from decorative traditions of Spanish era in Monterey, which served as capital of California in days when it was part of Mexico.



FIRST TWO STAGES NOW COMPLETE provide 58 units, restaurant and lounge. Third stage will be developed around elongated central terrace or detached courtyard.

PHASE 2: The second group of 28 units, bringing the total to 58, is designed in the same style and spirit as the first, but the rooms are slightly larger and more elaborately decorated and furnished. Gypsum board is used between the plywood and redwood siding; fir plywood is used as roof decking. The two-story units also have fir plywood underlayment in the floor construction and the restaurant roof has a diaphragm of the same material. Facilities include two banquet rooms, the largest of which can seat 200 diners and an additional 100 persons for meeting purposes.

SECOND STAGE OF PROGRAM wins AIA award of merit in 1957, just as first stage did a year earlier.

MARK THOMAS INN

BEDROOM INTERIORS of Phase 2 have fiberboard partitions paneled with stained acoustical plywood; one wall is covered with grass cloth. Fabrics were woven in Mexico and delicate patterns in iron grills are used as dividers. Each bedroom has wall-to-wall carpeting, asphalt tile in bath. Interiors are by James Aldridge.

OUTLINE SPECIFICATIONS

Structure: Wood frame on reinforced concrete foundation.

Exterior Walls: Stained redwood board and batten over fir plywood sheathing.

Roof: 2-in. t&g planks on 4x10 beams covered with 4-ply composition (Pabco) with brown granite chips.

Windows: Sliding steel (Rusco).

Doors: Sliding glass (Malibu) in some rooms.

Floors: Asphalt tile, carpeting over 4-in. concrete slab.

Interior Partitions: Fiberboard, acoustical plywood (U. S. Gypsum).

Interior Finish: Stained varnish gum plywood, stained exposed planks and beams, enamel plasterboard, ceramic tile wainscot in baths.

Heating: Unit heaters with thermostats (Minneapolis-Honeywell) in all bedrooms, infrared lamps in bathroom ceilings.

Cost Data:

PHASE 1 (completed June 1955)

Total Area: 12,602 sq. ft.

Total Cost: $187,385.

Cost per Square Foot: $14.83.

PHASE 2 (completed October 1956)

Touring rooms

Total Area: 9,360 sq. ft.

Total Cost: $152,000.

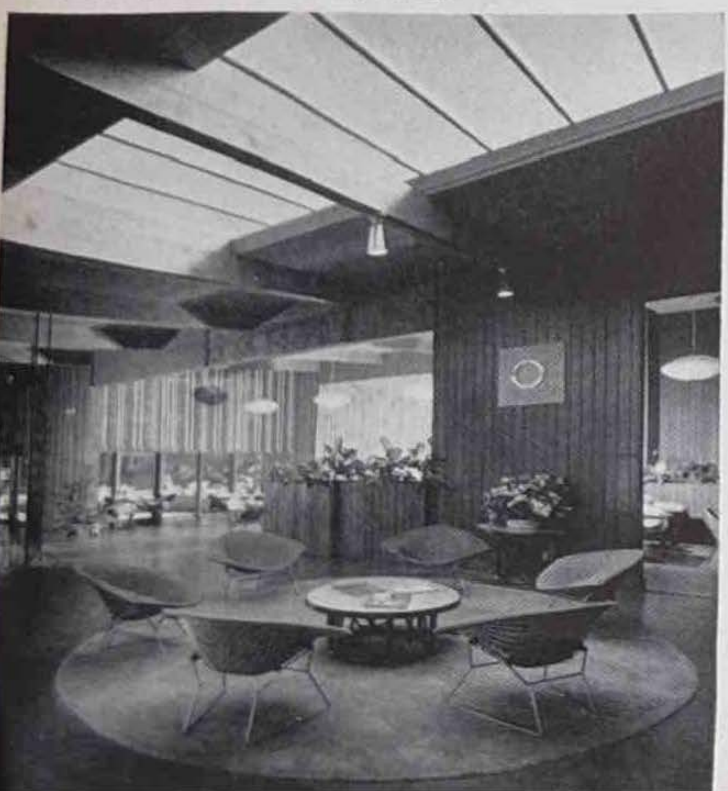
Cost per Square Foot: $16.30.

Flexible convention rooms, cabanas and services

Total Area: 2,112 sq. ft.

Total Cost: $20,000.

Cost per Square Foot: $9.50.



Restaurant and lounge building

Total Area: 9,152 sq. ft.

Total Cost: $168,390.

Cost per Square Foot: $18.40.

ENTRANCE LOUNGE repeats decorative metal grillwork found in bedrooms, has V-joint redwood rustic paneling.

RESTAURANT CONSISTS of four small interconnected rooms, each looking out to exterior court.

No Rim! One Piece! In Color!

HAWS

COMPLETE DECK-TOP, RECEPTOR AND FOUNTAIN ...IN *Fiberglass!*

No rims! No complex forming! Screws easily onto prepared frame or cabinet! Here is modern construction simplicity at its finest — furnishing greater sanitation and maintenance ease, too. There are **no cracks**, joints or crevices to interrupt water-flow from smooth deck-top into receptor, or to retain dirt and grime. The complete integral unit is smooth, rounded, one-piece molded fiberglass — in specially selected decorator colors!

A great new idea for schools! Ideal for classroom and laboratory installation, HAWS Series 2500 units are ACID RESISTANT and impervious to stains. They may be equipped with any combination of HAWS pantry and drinking faucets for versatile applications.

4 and 6 foot lengths are available, 24" deep. Any combination of backsplashes and/or endsplashes will be provided. Models are available to meet New York State or Detroit Code requirement of drinking fountain separate from receptor.

HAWS Model 2546-4 — Reinforced fiberglass, one-piece deck-top and receptor in color. HAWS Model 414A aerated gooseneck faucet at left, and Model 2N2 sanitary drinking faucet at right — both VANDAL PROOF mounted.

Color **AT NO EXTRA COST;** choose from a selection of five decorator colors and white: Coral Accent, Yellow Mist, Pistachio (green), Cerulean (blue), and Gray Satin. A "spider-web" finish of a complementary color is available if specified. All colors are permanently bonded to fiberglass.

GET DETAILED SPEC SHEETS on HAWS Series 2500 fiberglass units. Mail the coupon today! Ask for HAWS new Catalog, too.

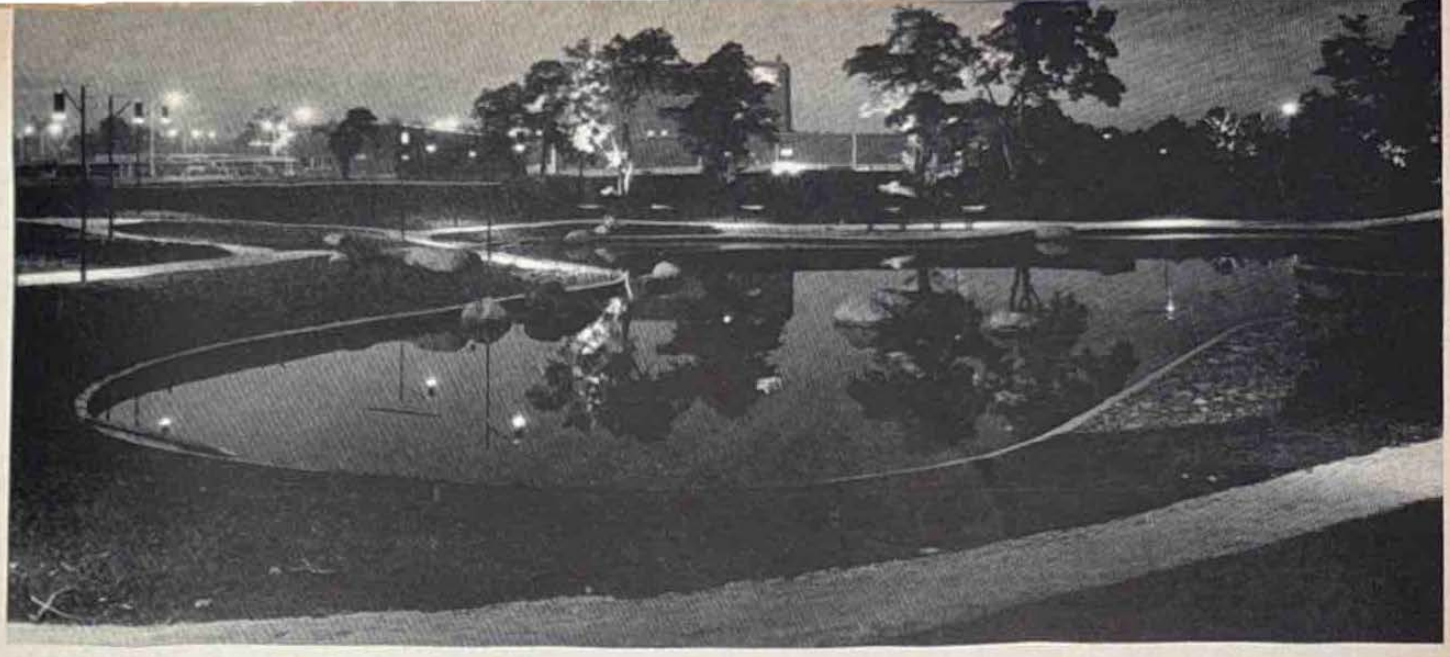
AMENITIES OF THE RIVER have been fully recognized in developing a service center for a private utility which supplies electrical power to the Inland Empire. The site lies adjacent to the Spokane River and one of the city's most scenic drives.



The landscaping program, which is still underway, was predicated on meeting requirements of a special zone classification received by the client to utilize a 28-acre residential area for an industrial purpose; hence the need for screening and planting to harmonize with nearby homes and parks. One of the distinguishing features appropriately enough is the inclusion of water: a 120,000-gal. reservoir storing the discharge water which the heat pump uses and which irrigates the entire site.

To complement this setting, the architects designed the structures as architectural understatements. Already completed are the clean-cut 300x210-ft. service building and storage and maintenance garages, the large expanses of brick facing being relieved by multicolored door panels.

Second stage of construction now in progress consists of a five-story office building—of glass, aluminum, steel and brick—, to be surrounded by spacious parking areas and connected to an adjoining cafeteria-auditorium by a covered walkway and an underground tunnel. The overall project when completed next spring will consolidate more than a dozen service, repair and maintenance operations formerly scattered throughout the city. The building program is based on a 35-year projection of requirements during a period of rapid growth and the site allows considerable room for expansion.

SERVICE BUILDING as viewed from south side of Spokane River. Rectangular brick portion rising above houses 40- and 5-ton cranes used in maintaining heavy equipment.

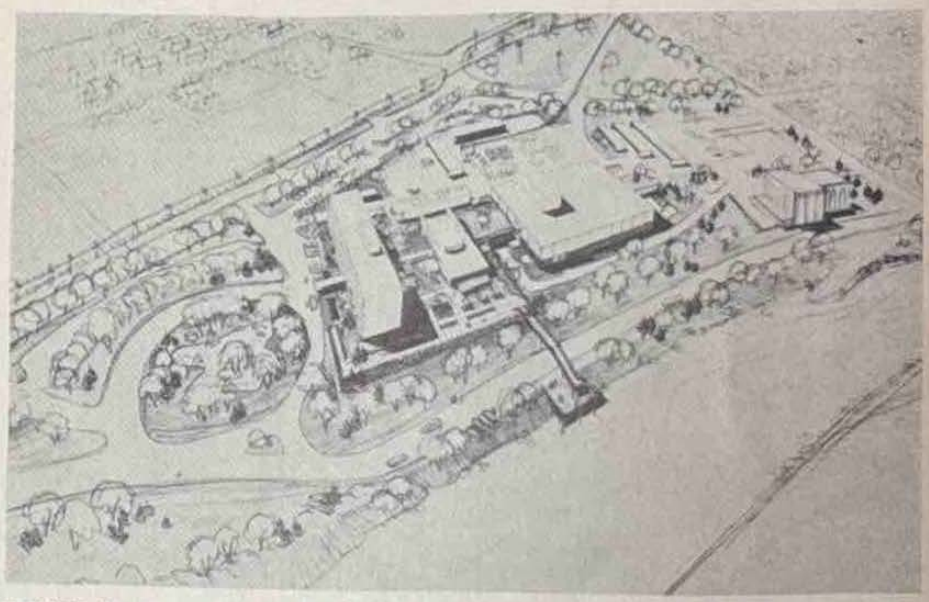
RECIRCULATING POOL has twofold purpose: it stores discharge water used by heat pump and is strong element in landscape design. Photo above shows Stage 1 construction only.

OUTLINE SPECIFICATIONS

Structure: Reinforced concrete, 30x40 bay sizes with two-way pan type slabs.

Exterior Walls: Reinforced brick cavity, aluminum, porcelain enamel, glass window.

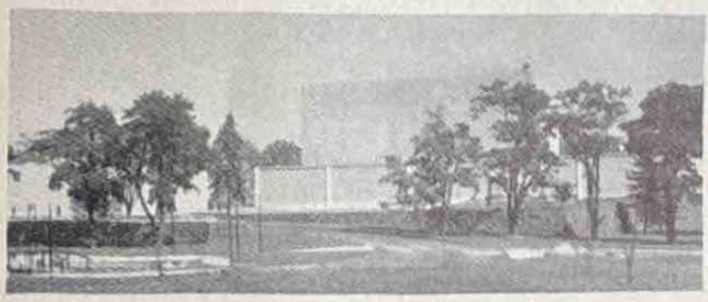
Roof: 18-in. deep pan with 2½-in. slab, built up with coal tar, pitch, gravel.



Doors: Hollow metal, personnel; 28-ft. wide overhead steel rolling with electronic control, loading dock.

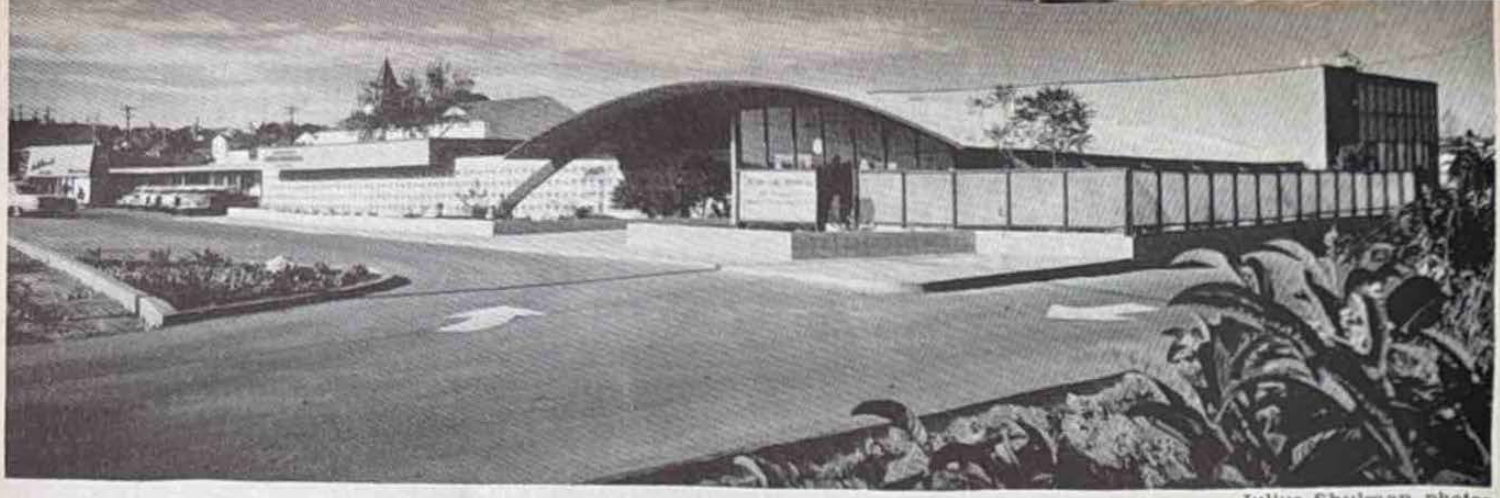
Interior Finish: Poured concrete on concrete block with speckled white, gray, beige wear-resistant paint.

Floors: Structural glazed tile, vinyl-asbestos composition tile, mosaic tile (in wet areas) on concrete slab.



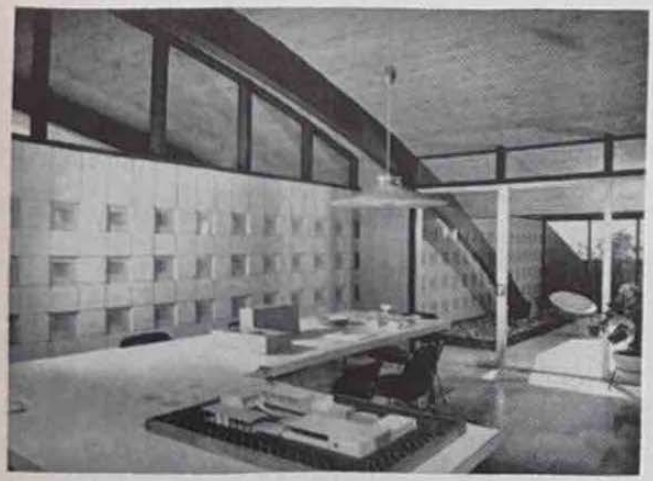
Ceilings: Suspended acoustical with integral lighting and air diffusion in office areas.

Date of Completion: October 1956.



SERVICE CENTER upon completion next spring will consist of five-story office building connected to employee cafeteria-auditorium now under construction and service building and related facilities already completed. Entire project will cost about $7 million; Phase 1, including cost of land, basements for office building and cafeteria, paving and drainage, landscaping, etc., accounts for one-half of total cost.

GROUND-LEVEL SHOPS occupy full length of service building but only half its width. At extreme left of truck parked in driveway under balcony-porch (photo right) is entrance to center's boiler room which contains heat pump equipment.



Julius Shulman photos

EXTERIOR COLORS CONCENTRATE on olive tan and burnt umber, with touches of blue and yellow on doors and various panels. Electric fixtures have been recessed as much as possible, hanging lights being used only for accent purposes. Sheets of fiberglass cut to fit into openings in screening wall of concrete block admit light, but seal cold out and heat in. Concrete block planting box serves as barrier to cars in front parking lot, provides break in design.

Where architects hang their hats

RICHARD GEORGE WHEELER & ASSOCIATES
San Diego, California

HORIZON HOUSE, which the architect designed for his own use, is shared by 12 tenants with somewhat related interests: landscape architect, decorator, land developer, civil engineer, etc. The $130,000 (covers building, landscaping and parking space for 30 cars) single-story, no-basement structure was built by Henry L. Wheeler at $8.20 per square foot. Designed for a second-floor addition above the drafting room, the building is of post and beam construction, utilizing pipe columns on a 24-ft. spacing, with laminated beams spanning 32 ft. and an 8-ft. cantilever to cover the walks. This method of beams on pipe columns, with normal wood joists between beams, helped make it possible to attach the roof arches to concrete piers which absorb all the thrust of the roof weight.

The section occupied by the architectural firm is the most dramatic in appearance. Here six 70-ft. laminated wood arches 10 ft. 6 in. o.c. are used, with 2x6 t&g sheathing spans between the arches, allowing for interior walls—wood panels and glass—that can be easily and economically moved during future remodeling or expansion. Most of the building interior consists of stucco plastering and plywood paneling.

The exterior employs concrete block set in a varied and interesting pattern, obtained by turning every third block, horizontally and vertically, on its side and projecting it 1½ in. The block, all 8x8x8 in the screening wall and retaining walls around the building, introduces a change of pace in the design and conveys a feeling of rigidity and solidity.

A problem created by the water table being only 7 ft. below the floor resulted in the use of rock gardens rather than landscape planting. Large smooth rounded gray stones make light patterns under the arches and the overall effect is Oriental. Translucent fiberglass panels, although fixed in place, heighten the effect and give the gardens a delicate air. Although the offices are not especially large, the beams carried inside and the open partitions and patios make them appear much more spacious than they actually are.

'Structural steel in today's architecture'

Excerpts from an address presented by N. P. Hayes at a preview reception of the exhibit "Structural Steel in Today's Architecture in New York's Socony-Mobil Building, largest stainless steel skyscraper in the world

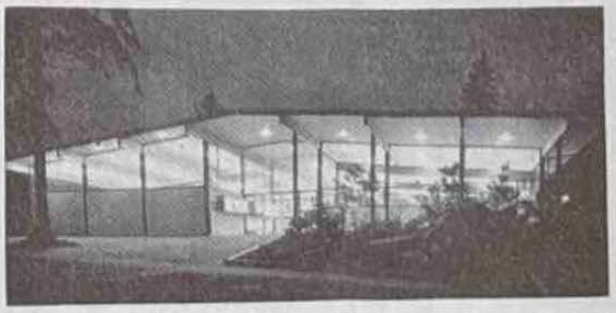
THE PRECISION with which we can now construct architectural forms has stimulated architects to create more freely. Steel, as we all know, has been accepted and used widely in building for a hundred years. Yet until very recently its possibility as a creative medium—as a beautifying material—was totally neglected. As soon as this virtue was uncovered architects began to assign steel the dual role of structural and architectural element in many new kinds of structures. Today exposed steel beams and columns share the job of supporting a building and at the same time add to its attractiveness.

We consider this development so important that we have emphasized it in selecting the buildings which make up this new exhibit. These pictures comprise an eloquent demonstration of the eye-catching beauty that results when steel—in colorfully painted, porcelainized or other finishes—is joined with glass, stone, brick or some other material to make a modern building.

The near distant future promises even greater accomplishments with structural steel. Its potential economies and creative possibilities have been scarcely touched thus far. We are now working on practical applications of a new theory of plastic design which may drastically reduce the amount of steel required for some types of buildings. Through this development builders may be able to save not only steel, but also a considerable proportion of the cost of design and structural analysis.

In addition, scientists are finding ways to produce lightweight steels that have greater tensile strength, resistance to corrosion and other desirable properties. And a leading steel company is now doing research aimed at producing a structural steel that will be transparent enough to transmit light into buildings.

We foresee a permanent marriage of steel and architecture extending very far into the future. A magnificent new era in which science will glorify steel in wonderful new ways. Members of the American Institute of Steel Construction are planning to work more closely than ever with architects, engineers, builders and laboratory scientists to speed the improvement and general progress of the construction industry.



Shown on this page are four projects represented in the exhibit of the American Institute of Steel Construction, which will hang at Hotel del Coronado near San Diego October 6-10, following a showing in Los Angeles September 16-20. The collection of photographs has been booked for Seattle for four months in 1958, starting in May.

MARINELAND, Palos Verdes, Calif.: Pereira & Luckman, architects-engineers. "The architects chose rigid frames of exposed structural steel for their architectural qualities. The rigid frames offer a convenient and economical method of resisting and absorbing impulse forces of the salt water in the open tanks during earthquakes."

BETHLEHEM PACIFIC COAST STEEL CORP., Torrance, Calif.: Albert C. Martin & Associates, architects-engineers. "By design of the architects, this building serves to demonstrate new uses for the products represented. It is the first building of its type to have exposed structural steel supporting frames. Color closely related to the steel industry is used, beginning with red lead on the X-bracings. As the background for the vivid red a variety of grays was used, light gray behind the cross bracing, charcoal in columns and beams."

NORTHWEST BRANCH, SEATTLE PUBLIC LIBRARY, Seattle: Paul Thiry, architect; Sigmund Ivarsson, structural engineer. "The role of steel in buildings is to supply the main strength element. It often remains concealed in the background, hidden beneath other materials. In this instance the architect, winner of two awards for pleasing original design, has given a clear impression of the clean, functional lines of structural steel. The exposed steel beams, spanning one half of the library's width, eliminate a number of supporting columns to allow large areas of uncluttered space."

HILLSDALE HIGH SCHOOL, San Mateo, Calif.: John Lyon Reid & Partners, architects-engineers. "The architects of Hillsdale built a school of classic quality, handling the framework in a deft manner to create a serene and orderly profile. The buildings' strong, bold classicism have fine proportion, detail and color and appear at their best when filled with children. The exposed light steel frame permitted fast erection and furnished earthquake protection."

Publicity for the architect's office

A Los Angeles public relations counsel who has represented an architectural firm offers some first-hand suggestions

by ELAINE K. SEWELL

WHAT THE ARCHITECT can do in regard to publicity for his office will depend upon the individual and his attitude toward architecture. If he has only the goal of "receiving publicity" without regard to qualitative standards, he may be disappointed.

In any form of communications between the architect and the public, the objective of the architect should be that of telling his story with pride and integrity. An architect has one of the most important responsibilities as an influence on the culture of our times. The architect has the specific assignment of making this world a better place in which to live. The architect is one of the most fortunate individuals in the world. He has more than slide rules, statistics and mortar; he has the concepts that make these things useful in the best sense of creativity.

The architect is particularly fortunate because he is directly dependent upon other professions and trades for completion of his work. The designer who creates new hardware devices, the engineer who improves weatherstripping and the manufacturer who produces new materials are important to the architect's success in finding the best possible solution for each job.

By working with others in this way, the architect in particular can understand another man's work and have respect for his craft. With this innate reverence for another man's work, the architect can think of his own profession as a means to a better way of living for others.

If you as an architect believe these things and if you then practice these thoughts, you can apply the principles in your publicity efforts.

There are two things to consider: one is public relations and the other is publicity.

Public relations is a broad overall term which includes publicity. Edward L. Bernays, well-known expert in the field, says that public relations is "good works understood by the public." One of my simplified explanations is that "public relations is the interpretation of the client and his company to his individual publics." The work of interpretation by whatever means deemed best is the job of the public relations counsel.

The work of a counsel is highly skilled and cannot be undertaken on a professional level by someone who is not trained in that field. The scope of communications is so important to a firm in the interpretation of its work that only top-level management is equipped to provide the basic information for the professional counsel, and the interpretation of the client should not be left to amateur hands.

At the same time, every individual can represent his firm at the best level for effective public relations. If every architect will take advantage of every opportunity to explain architecture, not just to toot his own horn, the profession will benefit.

The architectural firm which is not large enough to have an outside counsel to handle publicity or public relations, or who for other reasons prefers not to have a public relations program, can certainly do a thorough and good job in publicity.

The means or techniques of these communications will depend upon the objectives, strategy, planning and themes. Objectives may be long-term, short-term or intermediate. Strategy will depend upon research conducted to ascertain the problem and nature of the solution. Planning and themes follow according to the specific nature of the problem and its solution.

To repeat, publicity is one phase of public relations. Here we shall confine our remarks to publicity efforts only and just briefly in order to suggest that the subject is important for each firm to consider. Interpretation of the architect's work is necessary to bring about understanding. Misunderstandings by the voting public on school measures, for instance, come from lack of information in most instances. Educating a public is a long-term project. Public relations and publicity are not intended as measures or devices to mend broken fences. Good public relations and good publicity will help prevent the problems before they arise and will help educate the various publics over a long period of time.

The basic factor of general publicity for the architect is that it is a two-way benefit. The editors want to publicize good work; the architects want their good work to be published. How to get together?

There is an outlet for nearly every story of merit. It is important for the architectural firm seeking recognition for his work to be realistic about the publications who can logically feature the material. In other words, consider the story from the editor's point of view. The editor is in business to do a job tailored to a particular readership just as the architect has a given job to do for a given client. The editor's responsibility is to produce his publication to fill the desires of a specific readership either by age groups, professional interests, income brackets or other criteria.

If you are in doubt about usability of material, write the editor and tell him briefly what you have in mind.

Continued on p. 34

Publicity Points to Ponder

1. Don't worry about "writing an article." Worry about getting all the facts: who, what, when, why, where.
2. Be accurate. Better to omit a questionable "fact."
3. Get permission from your clients and anyone else necessary before you release material on their jobs. The editor doesn't want to look at jobs he can't publish because the client's grandfather owns a competitive publishing house.
4. Identify all photographs with name of job and architectural credit. Write only in soft pencil, lightly, on back of photo.
5. Do not use paper clips on photographs. Marks from clips damage the prints.
6. Be discriminating with photographs. The best photography is the best investment. One good photograph is worth several poor ones.
7. Type all material with double spacing to allow for editor's comments.
8. Answer editor's correspondence promptly. Deadlines wait for few mortal men.
9. Don't be afraid to ask the editor about disposition of your material. Be sure you understand if you are obligated for exclusive rights. Don't read a promise into his kind smile or hold him responsible for something he didn't say, but you hoped he would.
10. Don't be afraid to compliment the editor on a good editorial job, even though your job may not be mentioned. If it helps architecture in general, it helps every architect.

whatever you need

build it better...faster...for less...with steel

Service Station by Fentron Industries

Plant Office by Calcor Corporation

Potato Cellar by Boise Payette Lumber Co.

Warehouse by owner

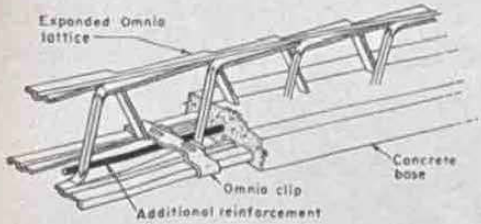
Steel is the one material that gives you ALL these important building advantages

GREATER STABILITY and longer life can be expected when you build with steel, the versatile metal.

LOW COST: Steel construction is precise, simple and fast. You get more usable space per dollar.

PROTECTION: Steel is your best protection against fire, wind, snow loads and stress from cranes. Steel is permanent!

VERSATILITY: Steel buildings are being used for every purpose. If you need a new building fast; one that will last . . . specify steel.



For offices, plants, stores, schools, farms, warehousing...

Give your buildings the advantage of steel

UNITED STATES STEEL

THE OMNIA PLANK ASSEMBLY

Concrete floor system combines structural, erection advantages of cast-in-place and precast methods

A LIGHTWEIGHT beam-and-block floor and deck system which proved itself in Europe during the past five years and which is now being used for the first time in this country, is reported to provide the structural advantages of cast-in-place concrete, yet even simpler to erect than precast flooring.

Called the Omnia floor and adaptable to spans of 30 ft. or more, it is monolithic in character, thus acting as a stiffener to the whole structure. At the same time, it is particularly suited to mass production methods. And the new floor, unlike conventional block-and-beam systems, can be cambered during erection to produce a level finished surface over any span.

More than 75 million square feet of the floors and roofs have been erected in Europe since their development in Germany five years ago. The floor consists of three components: the "plank," filler blocks and concrete topping. The plank, a reinforced steel lattice girder with a reinforced concrete base provides the support for the floor. Lightweight concrete blocks rest between the planks. The planks and blocks (Photo No. 1) provide both support and forming for the concrete topping.

Structural advantages

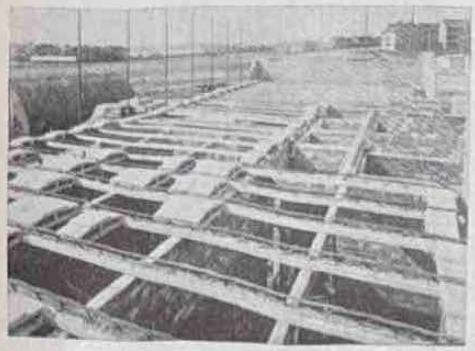
The floor behaves structurally like a poured-in-place slab. It spreads concentrated loads, absorbs impact and vibration stresses and resists cracking. Because of its light weight the new floor allows design economies by reducing the load on supporting members. Its solid construction gives great resilience.

As the steel is adequately covered, the system has fireproof qualities. Cast-in-place concrete girders may be used with precast floor joists. The floors are adaptable to many loads and spans by varying the height of the lattice girder, the amount of reinforcing, the spacing between planks and the topping thickness.

Erection advantages

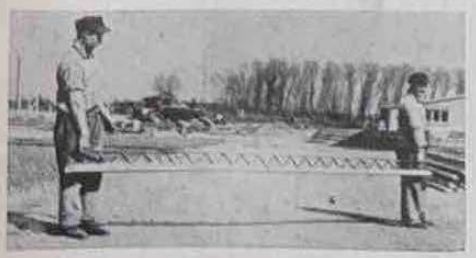
The light weight and relatively small unit size of its mass produced precast components are the primary erection advantages of the floor. Typical planks weigh but 11 lb. per foot compared to about 25 lb. or more per foot for conventional precast beams. Weight of a typical filler block is 30 lb. or 22½ lb. per square foot, although they may be lighter. Thus, the precast members are easily manhandled (Photo No. 2) and require none of the expensive heavy equipment usually necessary for precast erection.

Since the precast members act as the forming for the cast-in-place topping, expensive forms are unnecessary as is the close technical supervision which is normally required for form construction. Forming for roof lights, stairwells and stacks can be provided easily, as can change of direction of beams.



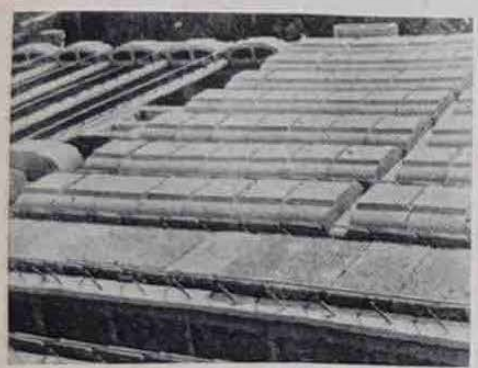
In addition, facilities for services are easily located in the floor. They may be placed beneath the topping, through the hollow blocks, or in cross ribs (Photo No. 3).

Finally, the poured concrete of the floor acts as the T-flange of reinforced beams and frames, thus increasing their resistance without additional labor or expense.



Construction

The precast plank consists of a lattice girder of 15-gage cold rolled steel, additional reinforcement attached to the lattice boom with clips, which also act as spacers, and a shallow concrete base. The stamped lattice strip is shipped and stored flat, then cut to length and expanded near the point of use. Its bottom booms provide tensile reinforcement for erection stresses and short cantilevers. Lattice diagonals mechanically bond the precast base and the cast-in-place topping. Additional reinforcement is not required on spans up to 8 ft. or 4-ft. cantilevers; for longer spans it is selected according to job requirements. The shallow concrete base which forms the soffit is cast in simple mass production molds or produced by machine.



The hollow filler blocks are precast of lightweight concrete, burnt clay or other similar materials. Their depth can be modified to suit the modular or load requirements of the job or local production facilities. Two core or three core blocks may be utilized.

No. 1: Planks in place and concrete blocks partially laid. Note wooden beam perpendicular to planks at midspan in right foreground. Beam, supported by jacks, produces camber to give level finished floor. Two core blocks are used here, but three also are suitable.

No. 2: Two workmen can carry lightweight planks up to 20-ft. long. This one is 15 ft. Plank casting bed is visible at left.

No. 3: Floors are extremely adapatable to changes in direction and to simple installation of utilities, accomodated by low, flat blocks.

PROSAIC SUBJECT + ARCHITECT =

NATIONAL ACCLAIM

Architect: W. F. Bernbrock, Moline, Illinois

Even the drab lumber yard — given the imaginative design and functional beauty of an architect's touch — can win local sales and national acclaim. Such is the experience of Builders Lumber Company, Moline, Illinois, where Rilco laminated-wood beams and deck help express the dramatic "open feeling" that seems to say "welcome" to customers.

While only a small portion of the complete structure, this store area has become the focal point which lifts this building out of the ordinary. Interest and sales have increased to a "happy" degree.

Rilco laminated-wood arches, beams, purlins, trusses and deck offer unlimited variations that stimulate new, interesting and practical design at low cost. For complete information just write

and the latest literature

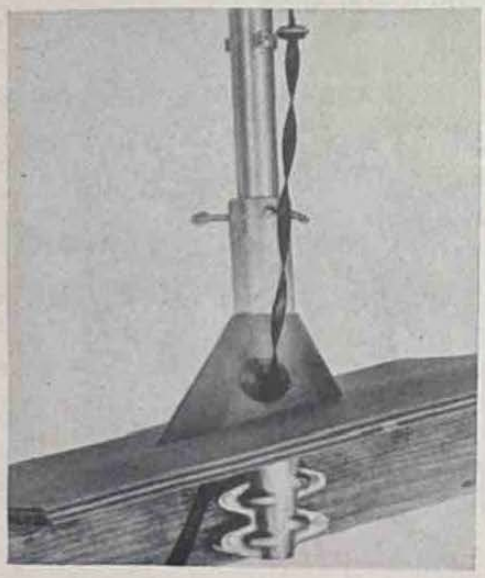
WINDOW BLIND: A semi-translucent traversing window blind, the Jaylis filters glare from sunlight and transmits diffused light into the room. The three-dimensional molded pattern permits air to pass through unobtrusive horizontal vents that are an integral part of the design. The blind can be used as a room divider, as a door for storage spaces and as wall screen; and at night these applications can be made dramatically luminous through use of electrical lighting. It has high reflective qualities, making it especially desirable for large expanses of windows with sun problems. —Jaylis Sales Corp.

(Item No. 1)

FOUNTAIN UNIT: Particularly designed for school applications, the Haws one-piece, deck-top receptor and fountain unit features the absence of any rims, cracks or joints, eliminating undesirable dirt and water accumulation. Molded in lightweight fiberglass, Series 2500 units are in standard lengths of 4 and 6 ft. and are 24 in. deep, furnished with integral backsplashes and endsplashes as required. Installation is easily accomplished by screwing wooden receptor backing onto a prepared frame or standard cabinet. — Haws Drinking Faucet Co.

(Item No. 2)

GARBAGE DISPOSAL: An addition to the Pioneer family of kitchen appliances is the D-57 disposal whose one-piece splash guard permits wide throat opening for easier loading. Chrome steel shredder plate and ring are designed for controlled microfine pulverizing of all food wastes and even bottle caps accidentally dropped into the unit are ground up without jamming the moving parts. During operation the outlet duct swirls jets of water at high velocity and low pressure to impart a scouring action that keeps home plumbing clean and free from clogging.—Pioneer Manufacturing Co.



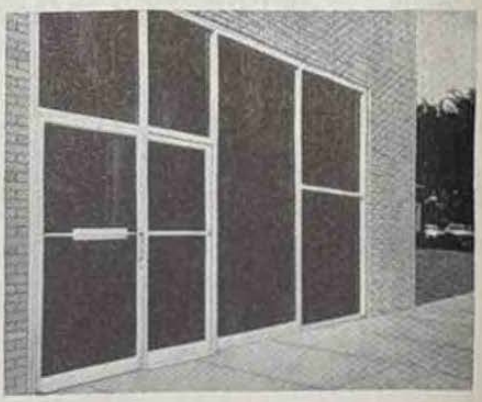
(Item No. 3)

FLOOR TILE: To match its Salt-n-Pepper wall tile, Pomona has introduced a Perma-Glaze floor tile, cream colored with "pepper" distributed evenly throughout. The double-glaze process provides a hard finish that results in a depth and texture.—Pomona Tile Manufacturing Co.

(Item No. 4)

TV ROOF MOUNT: A one-piece aluminum mast holder, the Tele-Jac eliminates unsightly guy wires and exposed lead-ins which damage the roof and keeps the antenna in a vertical position. Wires from the antenna disappear at the base of the mast and are built into the wall, terminating at a wall plate with plug. When this plug is attached to the TV set's lead wire, it enables the user to plug into and unplug from the antenna, much the same as a lamp plug into the wall. Thus it does away with the coil of wires found behind the set. If done while the building is under construction, installation should not take more than 30 minutes. The Tele-Jac has been specified for a number of Capehart housing projects in the West.—The Tele-Jac Co.

(Item No. 5)

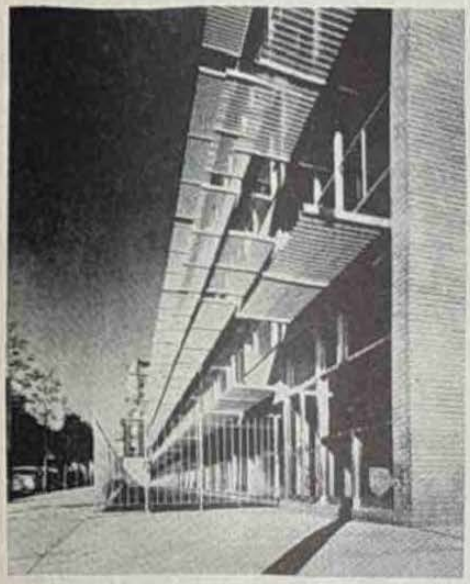


PLUMBING FIXTURES TEMPLATE: To assist architects and mechanical engineers in preparing scale elevation drawings of bathrooms and powder rooms, American-Standard has produced a template showing the exact elevations and profile views of many of its plumbing fixtures. It is done in ½-, ¼- and ⅛-in. scales for flexibility.—American-Standard Plumbing and Heating Division.

(Item No. 6)

FIXED GLAZING SYSTEM: A building front and wall system that uses only a few standardized glass framing members provides unlimited design freedom and is the first to offer flush glazing on all four sides of a glass pane. Built-in glass holding channels in all the components eliminate the extra lines of the protruding glazing members common to most other systems. Glass stops may be used where the flush glazing is not desired.—Kawneer Co.

(Item No. 7)



SUN CHART: Jaffe's sun chart provides assistance in proper placement of windows, walls, specific rooms, swimming pools, etc., by showing where the sun shines every hour everywhere in the United States and plotting its direction and altitude at various times of the day throughout the year. The chart uses a system of crossed lines with a "sun mark" placed over building plans. It gives an average position of the sun at various hours of the day at 34 deg. north (Los Angeles to Atlanta) and 42 deg. north (Medford, Ore., to Boston); thus other areas can easily be estimated from these key positions. — Western Blue Print Co.

(Item No. 8)

GRATING SUNSHADES: On school building and other structures which often require large glass areas for natural lighting, Irving has developed standard panels of grating for use as sunshades. In addition to helping control sky glare, they will not collect rain or snow and are strong enough to be used for window cleaning walkways. The grating may be mounted in any plane and is available in a variety of mesh patterns, fabricated in aluminum (used on Curtis Hall at Temple University shown in photo), steel and other metals.—Irving Subway Grating Co.

(Item No. 9)

LAMINATED PLASTIC: Joining the ever-increasing list of plastics is Pearsonite, a completely prefinished three-dimensional formable sheet, available in bright metallic, multicolored or wood veneer finishes. It is offered in a dozen finishes, a wide choice of deep-embossed textures and is produced in 40- and 48-in. wide continuous rolls of up to 100 yd. Typical applications; acoustical ceilings and walls, wall tile, decorative cabinet veneers, work surfaces, kitchen and scuff plates, venetian blind slats. —Metallic Plastic Corp.

(Item No. 10)

BONDING FOAM: Used for thermal, electrical and sound insulation, for structural strength, etc., Stafoam polyurethaene formulations for spray gun coating will foam in place to any desired thickness between ⅛ and 2 in., forming a surface bond stronger than the material itself. Densities range between 2 and 20 lb. per cubic foot, either in rigid or semi-rigid forms and in non-spray formulations as well. —American Latex Products Corp.

(Item No. 11)

Latest Handbooks, Manuals and Literature

Yours for the Asking

CONSTRUCTION DATA: Horn's 108-page handbook provides an easy reference to nearly 100 specialty products it manufactures for industrial, institutional and commercial users in the West. With each description is an outline of recommended uses, methods of application, covering capacity and colors. More than 30 construction tables, guides and charts are included. —A. C. Horn Co., Inc.

(Item No. 12)

RED CEDAR: "Western Red Cedar Lumber Grades and Uses" is a companion piece to the previously issued Douglas fir and West Coast hemlock species booklets. Eleven grades are represented in full-page illustrations. The 36 pages also include replicas of grade stamps, conversion tables, recommended nailing practices and roof decking spans.—West Coast Lumbermen's Association.

(Item No. 13)

HOME LIGHTING: The first practical standards for minimum quality lighting in the home are available on a single sheet. In addition to outlining general and specific area requirements, the standards describe desirable fixtures and outlets to assure comfort and safety.—American Home Lighting Institute.

(Item No. 14)

HEATING SYSTEM: How to integrate Lennox's Comfort Curtain heating and ventilating system into school building design is treated in an eight page brochure of sketches created by a Chicago architect, which are intended to stimulate the imagination. Simplified floor plans accompany the sketches.—Lennox Industries, Inc.

(Item No. 15)

TWO-WAY FORMING UNIT: The Ceco-Meyer Steeldome, described in a four-page brochure, is a newly developed product for use in forming waffle type concrete joist construction. It is a one-piece form designed especially for exposed ceiling construction.—Ceco Steel Products Corp.

(Item No. 16)

WELDED WIRE FABRIC: A revised 44-page edition of the design manual on the use of welded wire fabric in reinforced concrete building construction is packed with diagrams, tables and data covering such methods as short-span construction, cinder concrete floors and roofs, tilt-up wall construction, gun work and other current practices. Other topics: fireproofing structural steel, lightweight structural concrete, shrinkage and temperature reinforcement and concrete slabs on ground. — Wire Reinforcement Institute, Inc.

(Item No. 17)

DESIGNING FOR EARTHQUAKES: A bibliography concerning earthquake resistant design lists publications on seismology, the magnitude and intensity of earthquakes, engineering applications, building codes, insurance codes and reference sources.—American Institute of Steel Construction.

(Item No. 18)

MASONRY WALL REINFORCING: Results of research conducted at the University of Toledo on how joint reinforcing actually affects the strength of masonry construction have been assembled as individual sheets in a file folder. Scope of the study included the effectiveness of deformation of steel side rods, design comparison tests, mortars, distribution of wall stresses and related tests.—Dur-o-wal.

ANALYSIS AND ENGINEERING—The Kawneer engineering team considers every curtain wall application as unique. Each is subjected to a searching analysis. Such points as (1) the curtain wall's effect on load bearing elements, (2) adequate accomodation for wall movement due to wind load and temperature change, (3) weathering features and (4) integration of all components within the wall system are the subjects of careful study. The result of this careful analysis is a curtain wall design that provides the highest standards of performance while retaining the most expressive appearance of the architect's design.

PA&B T-square talk

NEW FIRM: Eric W. Johnson and Glen H. Mortensen have formed the architectural firm of Johnson & Mortensen at 142 N. California, Stockton, Calif.

✓ John R. Ross, AIA, of San Luis Obispo, Calif., who has been in partnership with William D. Holdredge for the past year, has established an office under his own name at 1149 Marsh St. Holdredge has moved to Texas where he has purchased another firm.

✓ The architectural firm of Donn Weaver & Associates has been formed to succeed Ingle & Weaver, with offices at 107 W. Perkins St., Ukiah, Calif.

OFFICE EXPANSIONS: Haarstick Lundgren & Associates, Inc., architects-engineers of St. Paul, have opened an office in San Francisco in the Pacific National Bank Building, 333 Montgomery St. In charge will be associate Robert A. Bennighof who holds architectural degrees from the University of Minnesota and the Cranbrook Academy of Art.

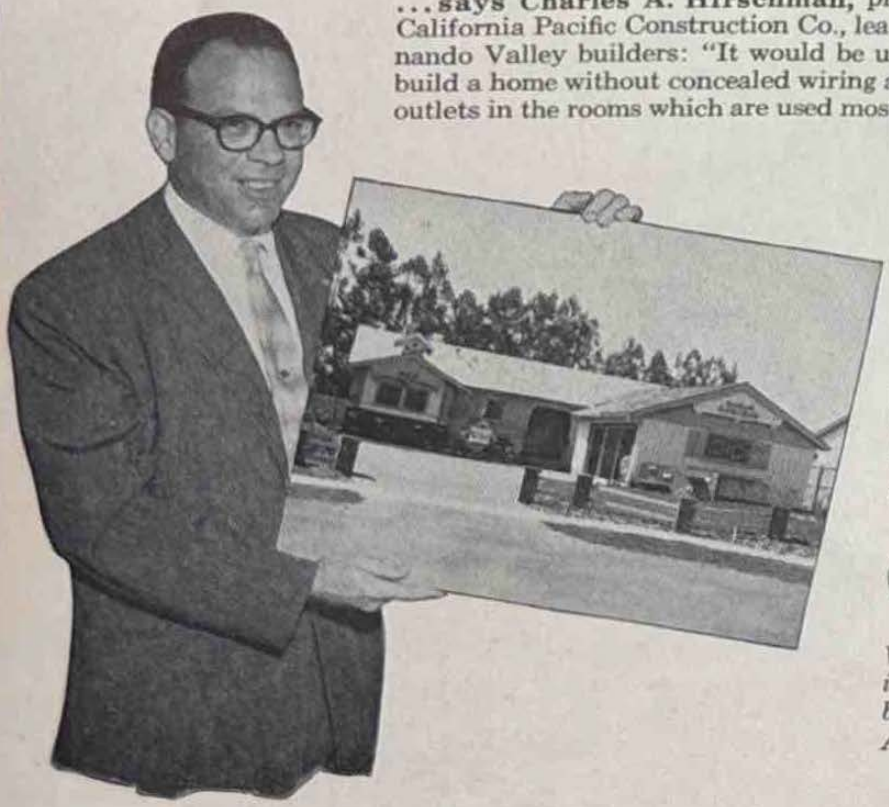
✓ Adrian Wilson & Associates, architects-engineers with headquarters in Los Angeles, have established a permanent office in Las Vegas, headed by project manager Richard Drayton. For the past two years he has been in Los Angeles during preparation of plans for the Las Vegas Convention Center.

ON THE MOVE: The office of Jack A. Edson, AIA, is now located at 44 N. Front, Medford, Ore.

DIED: Gabriel A. Berger, 88, architect who designed many of the buildings in San Francisco Mission District, died July 25 after an extended illness.

✓ Roi L. Morin, AIA, passed away August 12 in a Portland hospital at the age of 60. A native of Massachusetts, he was a graduate of MIT and in 1924 came to Portland where he was associated with Herman Brookman on the design of a number of buildings, including Temple Beth Israel. Among Morin's recent designs were the Civic Theater and Pioneer Broadcasting buildings.

NAMED: Oswald Berg Jr., who heads the Montana Chapter, AIA, has been appointed a city commissioner in Bozeman, Mont.



✓ Seattle architect J. Lister Holmes has been elected chairman of the city's newly created Board of Adjustment, which will hold public hearings on applications for conditional uses of property in various zoning districts and requests for zoning variance under the city's new zoning code.

STRUCTURAL ENGINEERS: The 1957 convention of the Structural Engineers Association of California will be held October 31-November 1 at Hotel del Coronado near San Diego. One of the program highlights will be a panel discussion on costs and limitations of concrete construction methods.

✓ PA&B editor Robert E. Koehler will address the Structural Engineers of Oregon on the construction outlook at a meeting September 25 in Portland's Timber Topper.

PROFESSIONAL ENGINEERS: Dr. Joseph Kaplan of UCLA will be among the speakers at the convention of the Professional Engineers of Oregon in the Eugene Hotel, Eugene, October 18-19.

Built-in phone outlets build up a home's value!

...says Charles A. Hirschman, president of the California Pacific Construction Co., leading San Fernando Valley builders: "It would be unthinkable to build a home without concealed wiring and telephone outlets in the rooms which are used most."

No matter how you look at it, as a builder or a buyer, you want a well-built home above all. And one of the features that speaks for a "quality" home is Telephone Planning. As Mr. Hirschman says, "Telephone outlets in rooms used most, concealed wiring and color phones add much to the value of the home." You'll find them in homes like Mr. Hirschman's, built with an eye to better living and satisfied buyers in mind.

Pacific Telephone

We'll be glad to help you plan built-in telephone facilities. Just call our business office and ask for our free Architects and Builders Service.

It pays to include Telephone Planning in every home you build!

LIFETIME PERIMETER INSULATION

STYROFOAM®

Styrofoam, a Dow plastic foam, is ideal for horizontal or vertical perimeter insulation and for insulation under slabs. Its non-interconnecting cells block out heat, cold and moisture. Easy-to-handle Styrofoam resists rot, mold and deterioration.

Styrofoam also excells as roof insulation and for insulation-plaster base against masonry walls. Contact Wiley-Bayley for complete information on Pacific Northwest Styrofoam installations and recommendations to fit your special requirements.

® Styrofoam is a registered trademark of The Dow Chemical Company

SCHOOL FOR SALESMEN

Building materials and equipment manufacturers will have an opportunity this fall of enrolling their salesmen in a new training course aimed at improving their effectiveness in selling and servicing the architectural profession. The first schools will be held in the East, but negotiations are underway for a subsequent training course to be given in California. Further details may be obtained from Robert W. Hurst, executive assistant, Producers' Council, Inc., 2029 K St., N. W., Washington, 6, D.C.

Steel, glass, and redwood on *Fisherman's Wharf*

Architect: Hewitt C. Wells; *structural engineers:* John J. Gould and H. J. Degenkolb; *steel fabricator:* Schrader Iron Works; *contractor:* Charles O. Jones.

Designed with most of its steelwork exposed, the Franciscan Restaurant strikes a bold and appealing note in a colorful setting on San Francisco's waterfront. With accommodations for nearly 200 patrons on three levels, a fine view can be had in nearly all directions from the glass-enclosed upper floor.

Bethlehem eight-inch wide flange columns are bolted to foundation plates imbedded in the concrete mat which is seated above the water on new piling. The use of structural steel for both functional and decorative purposes allows maximum use of floor space and conveys an impression of both rigidity and lightness.

A floating stairway, fabricated by welding channels and plate, connects the glass-enclosed entrance on the ground floor to the upper level. Redwood planking adds a contrasting touch to both interior and exterior.

Angeles office; and G. S. Griffith as resident architectural-builder consultant representative in Portland.

• **Triangle Steel Co.** of Los Angeles has promoted general manager James McLaughlin to vice president.

• **Western Reinforcing Steel Fabricators Association** at its first annual membership meeting in San Francisco elected these officers: George L. Cobb, Soule Steel Co., San Francisco, president; Leonard Ross, Blue Diamond Corp., South Alameda, Calif., vice president; Stephen G. Herrick, Herrick Iron Works, Oakland, secretary- treasurer. Directors, in addition to the officers, are William D. Roberts, Union Iron Works, Spokane; Henry Emmrich, Judson-Pacific-Murphy Corp., Emeryville, Calif.; Ray E. Copeland, Southwest Steel Rolling Mills, Los Angeles.

The new association is headquartered at 1322 Webster St., Oakland, under the managership of F. S. Clough.

Publicity for architect's office (Cont'd from p. 20)

The exceptionally high quality of the editorial staffs of the architectural press in both national and regional publications is of particular value to the profession. The same can be said of consumer and general interest publications which have a concern for the architect's work.

The architect who submits material has certain obligations to the publication. At all times he must be honest. Integrity is essential to good relations. Do not include any unverified information, no matter how minute it may seem. A simple error of brand name may be embarrassing for the publication and may involve complications on the business side. If the publication cannot live happily with its advertisers, it cannot survive to publish the architectural work in an objective manner. By helping the editor maintain the highest standards of accuracy, the architect also helps maintain a publication of independence.

Another obligation of the architect who works with an editor is that of respect for the publication's ideas. No one outside an editorial office has the right to announce what is intended for publication. The architect with whom the magazine works for advance material should not divulge such confidence until the editor releases the information.

Based on an address given before Seattle area architects August 26 at a meeting sponsored by Pacific Architect and Builder

GRADE SCHOOL— Portland, Ore.

Bond election for $460,000 will be held September 24 by Russellville School District No. 40, Multnomah County, Frank C. Dempsey, clerk, 124 S.E. 102nd Ave., Portland, for construction of grade school on S.E. 117th Ave. between E. Burnside St. and S.E. Stark St. WB 9-17

CITY-COUNTY BUILDING—Portland, Ore.

A committee of two Multnomah County Commissioners and two Portland City Council members has been appointed to look into the advisability of acquiring the block between the Courthouse and City Hall, between S.W. 4th and 5th avenues, and Main and Madison streets, for a future city-county building. Representing the county are Commissioners M. James Gleason and Al Brown, and the city Commissioners Ormond R. Bean and Stanley W. Earl.

The Del E. Webb Construction Co., Phoenix, Ariz., recently indicated its interest in building a 14-story building for the county and city on a lease-purchase basis, but no decision on this plan has been announced.

HOUSING UNITS— Portland, Ore.

Plans underway by Don Byers, architect, 1620 S.E. Ankeny St., Portland, for 40 permanent, low-cost housing units in Columbia Villa Housing Project on N. Woolsey Ave., a few blocks north of Columbia Park. No date has been set by the Portland Housing Authority, C. S. McGill, executive director, 8920 N. Woolsey Ave., Portland, for a bid call. The houses will include 30 with three bedrooms and 10 with four bedrooms. They will replace temporary units at Parkside, across N. Burgard Ave. from the old Oregon Shipyard property. WB 9-12

★RE-ROOFING— Portland, Ore.

Award to D. & M. Builders Service, 6218 N.E. Columbia Blvd., $2,349, by city purchasing agent, 208 City Hall, Portland, for re-roofing and renewing flashings at St. John Community Center.
WB 9-12. Previous report 8-20

★CHAIRS— Portland, Ore.

Award to J. K. Gill Co., 408 S.W. 5th Ave., Portland, $3,172, by Multnomah County Commissioners, John W. West, purchasing agent, 504 County Courthouse, Portland, for furnishing 54 swivel armchairs for Circuit Court. WB 9-12. Previous report 8-29

MEDICAL-DENTAL BUILDING—
Portland, Ore.
(Estimated cost, $1,800,000)

Construction is being resumed by Reimers & Jolivette, general contractors, Builders Exchange Bldg., Portland, for the remodeling and expansion of the 9-story former Eastern Outfitting Co. building at S.W. Washington St. and 10th Ave., Portland, for Ben Dierks, owner, Grants Pass. Plans by Sundeleaf & Hagestad, architects, 202 Portland Trust Bldg., Portland.

The existing structure was stripped to the steel framework last winter; four floors and penthouse will be added; building will be reconstructed for medical-dental offices. Double-paned glass exterior; aluminum trim; blue spandrel panels; steel stud and plaster interior partitions; interior finishes to suit tenants; three Otis high speed automatic elevators; full air conditioning from central heating; individual thermostatic control in each office; public restaurant on ground floor. The architects are starting preliminary sketches for a 300-car parking garage, to be built on 100'x100' site of existing Blue Mouse Theater at 11th and Washington.

The following Portland firms have been awarded sub-contracts on the project: PLUMBING—Gaittehs Plumbing & Heating Service, 4306 N. Williams Ave. HEATING, VENTILATING—A. G. Rushlight & Co., 3900 N.W. Site is N.E. 55th Ave. and Killingsworth St. Building will include six classrooms, combination gymnasium and auditorium (for temporary use as church), church and principal's offices, toilet rooms, dressing room, boiler room, and Sunday school rooms in basement. Frame construction of brick frame with brick veneer; aluminum sash; glued-laminated beams with tongue and groove decking, 1" insulation and built-up roofing; auditorium will have concrete block main walls and glued laminated arches; ⅝" gypsum board wall finish; acoustical tile ceilings; concrete floors; asphalt tile floor covering with rubber base; maple floor in

Perfect companion . . .
for western-style architecture

CYCLONE RUSTAKE WIDE MESH FENCE!

WHEN YOU design a client's new home here's a finishing touch you can well include—a trim, modern boundary definer of Cyclone Rustake Fence. More and more west coast homeowners are discovering that their yards are more beautiful, more useful and private when they're securely fenced. And one of the most attractive fences for this purpose is Cyclone Fence.

Cyclone Rustake Fence is a complement to almost any style home. It consists of slim strips of beautiful California redwood inserted into the wide mesh of Cyclone Chain Link Fence. All posts and structurals are strong, sturdy, rust-resistant steel. This smart new fence increases privacy, decreases maintenance and assures years of good service.

To find out more about this beautiful fence, just send in the coupon. Then, if your clients are not already familiar with Cyclone Rustake Fence, you'll be ready to point out its many advantages.

CORRECTIONAL INSTITUTION— Salem, Ore.

The state emergency board will be requested by Oregon State Board of Control, State Capitol Bldg., Salem, to allocate $731,000 from the emergency fund to cover the difference between the low bid ($2,684,112) and the amount of money available ($2,500,000) for construction of the first unit of the correctional institution to be located on a 10-acre site five mi. southeast of Salem. By accepting some alternates, the board of control reduced the cost of the proposed structure so that $731,000 will be a sufficient emergency appropriation.

Chehalis Red Norman Brick

. . . distinguishes new St. Rita Catholic Church in Portland's Parkrose District

Large areas of glass were combined with extensive use of beautiful Chehalis Matt Face Red Norman Brick by Architects McCoy and Bradbury to achieve the strikingly effective design of this recent addition to Portland's church community. Chehalis Brick—the Northwest's most distinctive brick—takes pride in having been selected to play such a major role in contributing to the charm and beauty of this distinguished new church building.

Bids will be opened for the second time on September 30 by General Services Administration, Federal Services Office Bldg., 909 1st Ave., Seattle, for the right to construct at a cost of about $900,000 a new main postoffice at 3rd Ave. and Union St., Seattle, in exchange for part of the property occupied by existing postoffice. The University of Washington and its Metropolitan tract lessee, University Properties, Inc., will bid on the project. Plans are by Naramore, Bain, Brady & Johanson, architects, 904 7th Ave., Seattle. Plans call for a three-story postoffice with dimensions of 96'x156' on first floor and 60'x156' on each of the second and third floors; 32-car capacity parking space in basement. The $9,000,000 overall building program includes a 20-story building to replace the existing Douglas building, a six-level 500-car parking garage with overflow garage parking on roof of postoffice, and a three-story postoffice. Construction is tentatively scheduled for spring of 1958.

▲BUS GARAGE— Sumner, Wash.

Bids are being held under study by Sumner School District No. 320, 1625 Main St., Sumner, for construction of a 40'x105' school bus garage at the high school site on Washington St. in Sumner. Plans by Lea, Pearson & Richards, architects, 240 S. Stadium Way, Tacoma. Bids opened August 6. LOW BIDS: Robert E. Wootan, 9922 View St., Tacoma, $8,912; Korsmo Bros., 5944 Lake Grove Ave., Tacoma, $9,663; C. E. Skinner, Orting, $9,790. SP 9-10. Previous report 8-1

HOSPITAL EXPANSION— Tacoma, Wash.
(Estimated cost $150,000)

Architects Lea, Pearson & Richards, 240 S. Stadium Way, Tacoma, have been retained by Mary Bridge Children's Hospital, 311 S. L St., Tacoma, to prepare plans for completion of the third floor of the hospital. When the present three-story 40-bed hospital was built, the top floor was roughed in for future growth and a bed capacity of 60 persons. Work on the architectural drawings will start after recommendations are made by the hospital's medical staff. Physicians' ideas on layout are being sought by a five-man committee headed by Dr. R. A. Norton. Findings by Dr. Norton's unit will be submitted September 27 for medical staff approval. The hospital board will act on the suggestions before architects can start on plans. SC 9-7

MACHINERY FIRM BUILDING— Tacoma, Wash.
(Estimated cost $250,000)

Final plans have been completed by Lea, Pearson & Richards, architects, 240 S. Stadium Way, Tacoma, and groundbreaking is expected in early fall for a new 30,000 sq. ft. precast concrete and glass building, to be located on a level 10-acre tract adjacent to the Puyallup River Bridge on Highway 99 in Tacoma, for Murphy-Campbell Co., Frank Murphy, president, 2719 S. Tacoma Way, Tacoma. The site, accessible by highway and rail transportation, was purchased from the Port of Tacoma Industrial Development District. Focal point of the structure will be an all-glass 90'x40' display room. SC 9-10

SWIMMING POOL— Tacoma, Wash.
(Estimated cost $250,000)

Plans will be complete in October by E. L. Mills & Associates, architects, 308 S. Tacoma Ave., Tacoma, for the proposed 165'x75' South End Swimming Pool, to include separate 40'x45' diving pool, 60'x30' wading pool and bathhouse facilties, to be located at E. 56th and D, adjacent to the Stewart Heights Playfield, in Tacoma. Bids will be called soon by Metropolitan Park District, Tom Lantz, recreation supervisor, City Hall Annex, Tacoma.

The main pool will be 3' deep at each end and slope to a maximum depth of 5' at the center. Diving pool will be separated from the main pool by a concrete barrier, with opening so that the water can be filtered and chlorinated together with that of the main pool, and will have one- and three-meter boards and a 10-meter board. The pool will be 12' to 15' deep. The wading pool will have a maximum depth of 12". Adjacent facilities, besides separate dressing rooms for men and boys, women and girls,

and the filtration and chlorination equipment, will include a covered spectator area and a snack bar. Parking area for 243 cars is also planned.

Building to house chlorination and filtration equipment, dressing rooms and appurtenant facilities will be one-story; no basement; L-shaped; 250'x90', 9,250 sq. ft. area; concrete footings and foundation; solid masonry, block walls; concrete slab floors; timber beams; flat glued laminated roof; masonry partitions; exposed masonry walls and partitions; ceramic tile flooring; exposed decking on ceilings; corrugated plastic panels; power vents.

★STORE ADDITION— Tacoma, Wash.

Award to G. Kirkebo & Son, 1410 Mountain View, Tacoma, no amount noted, by S. H. Kress & Co. of New York City, for alterations and additions to the existing store at 734 Broadway in Tacoma. Plans by Lyle Swedberg, architect, 911½ Pacific Ave., Tacoma. Bids opened August 26 in New York City.

SP 9-13. Previous report 8-24

NURSING HOME— Tacoma, Wash.

Special permit has been approved by City Planning Commission, Tacoma, for construction of a nursing home at 5210 S. State St. in Tacoma. The permit was requested by Dr. Charles Arnold of Tacoma and is subject to further approval by the city fire, building and health departments. SC 9-14

PARKING GARAGES— Tacoma, Wash.

(Estimated cost $2,000 per parking space)

Plans have been proposed by a Chamber of Commerce committee in Tacoma for construction of a multi-level, ramp- type, self-parking, 418-car capacity garage fronting on Pacific Ave., between the Rust Bldg. and Washington Hardware, extending back over Commerce St. between 9th and 11th streets with access tunnels to Broadway. Car access would be from Commerce, with pedestrian access provided from both Pacific Ave. and Broadway. Plans by Gaston C. Lance, architect, 319 S. 7th, Tacoma. A similar facility was proposed by the committee between 11th and 13th streets from Pacific Ave. to Broadway; a third garage would also be necessary before long and the possibilty was mentioned of a multi-level garage over the existing Rhodes parking lot on Market St. The committee proposed that the garages be municipally operated and financed by revenue bonds. SC 9-14

● McKINLEY SCHOOL ADDITIONS— Tacoma, Wash.

Bids to be opened 8 p. m., October 22, by Tacoma School District No. 10, Toney Shelton, business manager, fifth floor, School Administration Bldg., Tacoma, for construction of an addition on stilts and a new wing to McKinley Elementary School, McKinley Ave. and E. 37th St., Tacoma. Separate bids on general, mechanical, electrical. Plans with John Hewett Sutton, architect, 916 Rust Bldg., Tacoma. $20 deposit for each set of plans. Certified check, cashier's check or bid bond 5%.

Project involves 136'x70' addition on stilts providing five classrooms, two kindergarten rooms; 125'x60' ground level addition to house multipurpose unit, kitchen, administrative wing. Classroom wing will be constructed on concrete beams and columns to provide play area below; above the structure will be frame with glued laminated beams, wood and brick exterior finish; metal sash, built-up roofing; drywall interior finish; acoustical ceilings; asphalt tile floor covering; extension of existing hot water heating system with unit ventilators. The multipurpose wing will have similar construction features. DC 9-18

ELEMENTARY, JUNIOR HIGH SCHOOLS— Tacoma, Wash.

(Estimated cost $190,124 elementary, $1,139,086 junior high)

State matching funds in the amounts of $51,010 and $614,960 have been approved by State Board of Education toward construction of an addition to Southgate Elementary School and a new junior high school, respectively, for Clover Park School District No. 400, 5214 Steilacoom Blvd., Tacoma. SC 9-18

RESTAURANT— Union Gap, Wash.

(Estimated cost $13,000)

WATER STORAGE DAM— **Dallas, Ore.**

(Estimated cost $250,000 to $275,000)

Preliminary work has been started in preparation for construction of a water storage dam on Rickreall Creek, 9 mi. northwest of Dallas, according to Lynn McCulley, city superintendent, City Hall, Dallas. Soundings and core drill preparations are underway by crews associated with Cornell, Howland, Hayes & Merryfield, consulting engineers, 1600 Western Ave., Corvallis. If conditions at the present site prove unfavorable, an alternate site two miles downstream will be investigated.

Plans call for a dam approximately 60' high which will impound a minimum of 410,000,000 gal. water. An alternate plan being studied would involve the Soil Conservation Service and the Small Water Shed Act. Under this plan, a larger dam would be built, with Dallas paying a cost equivalent to that of the smaller dam. The city will be required to hold a bond election to raise funds for the project.

●STATE HIGHWAY PROJECTS— Olympia, Wash.

Bids will be opened 10 a. m., October 1, by Washington State Highway Commission, W. A. Bugge, director, Olympia, for eleven highway construction projects. Specifications with above office. $2 deposit. Certified check or cashier's check 5%.

GRADING, CONCRETE BRIDGE—BELLINGHAM: Clearing, draining, grading and constructing a reinforced concrete slab bridge on 2.114 mi. of PSH No. 1, Fielding St. to North St., Whatcom County; FAP No. 1-001-5(23).

Quantities: 55 acre clearing; 214,400 c.y.

common excavation; 220,400 c.y. solid rock excavation; 74,000 unit overhaul; 8,650 c.y. excavation of unsuitable material; 34,000 ton select roadway borrow; 2,600 c.y. sand borrow; 3,100 ton crushed stone surfacing; 38 ton asphalt cement; 100' integral cement concrete curb; 290 c.y. crushed cover stone, mineral aggregate; 4,150 ton asphaltic concrete; 9,950' cement concrete curb and gutter; 1,960' precast traffic curb; 110' galvanized conduit pipe; 2,459' corrugated metal pipe; 12,245' concrete pipe; 290' copper pipe; 1,922' cast iron pipe; 45,212' reinforced concrete cribbing headers and stretchers; 150' beam guard rail; 3,005 sq. yd. cement concrete sidewalk and driveway; lump sum bid for superstructure (about 530 c.y. concrete and 99,000 lb. steel reinforcing bars); 983 c.y. concrete; 122,840 lb. steel reinforcing bars.

DRAINING, GRADING — PONDERS TO N.P. RAILWAY: Clearing, draining, grading on 1.521 mi. PSH No. 1, Pierce County; FAP No. 1-001-3(19) Unit 2.

Quantities: 95 acre clearing; 417,000 c.y. excavation and borrow; 185,500 unit overhaul; 14,700 ton crushed stone surfacing, special gravel surfacing; 4,400 c.y. top soil; 41 ton asphalt cement; 380 c.y. crushed cover stone, mineral aggregate; 2,930 ton asphaltic concrete; 202' asphaltic concrete spillway and gutter; 194 c.y. concrete; 43,840 lb. steel reinforcing bars; 477 c.y. riprap.

DRAINING, SURFACING, PAVING — VANCOUVER LAKE VICINITY: Clearing, draining, grading, surfacing, constructing cement treated base and paving with type I-1 asphaltic concrete on 1.613 mi. SSH No. 1-T, Clark County; FAS No. S-0261(2).

Quantities: 176,300 c.y. common excavation; 9,230 unit overhaul; 2,800 c.y. excavation of unsuitable material; 29,600 ton ballast, crushed stone surfacing; 4,530 ton asphaltic concrete; 440 c.y. mineral aggregate; 44 ton asphalt cement; 7,500 ton CTB aggregate; 1,600 bbl. portland cement; 3,100' asphaltic shoulder curb; 2,010' concrete pipe; 566' corrugated metal pipe.

REINFORCED CONCRETE BRIDGES — C.M. ST. P. & P. R.R. AND SQUALICUM CREEK: Constructing two reinforced concrete flat slab bridges on 0.065 mi. PSH No. 1, Whatcom County; FAP No. 1-001-5(21).

Quantities: 3,100 c.y. concrete; 521,000 lb. steel reinforcing bars; 1,135' standard bridge railing.

SOUTH 96TH ST. OVERCROSSING AND SOUTH 84TH ST. UNDERCROSSING—Constructing a reinforced concrete box girder bridge and a reinforced concrete rigid frame bridge on 0.016 mi. of PSH No. 1, Pierce County; FAP No. 1-001-3(30).

Quantities: 66,500 c.y. common excavation and borrow; 2,260 ton select roadway borrow; 1,125 ton crushed stone surfacing; 760 ton asphaltic concrete; 66' concrete pipe; lump sum bid for superstructures (about 1,538 c.y. concrete and 387,000 lb. steel reinforcing bars); 1,300 c.y. concrete.

13TH ST. AND NATIONAL AVE. CONCRETE UNDERCROSSINGS — Constructing two precast, prestressed concrete undercrossings on PSH No. 1, Lewis County; FAP No. 1-001-2(54).

Quantities: 1,920 c.y. excavation and borrow; 860 ton crushed stone surfacing and ballast; 869 c.y. concrete; 2,100' prestressed concrete girders; 151,000 lb. steel reinforcing bars; 18,000 lb. structural steel. 10,100' concrete piling.

DRAINING, CRUSHED STONE SURFACING — ENTIAT RIVER ROAD: Clearing, draining, grading and surfacing with crushed stone on 2.719 mi. of a Chelan County Road; FAS No. S-0440(3).

Quantities: 94,200 c.y. common excavation; 19,070 c.y. solid rock excavation; 33,895 ton ballast and crushed stone surfacing; 22 c.y. concrete; 608' structural steel; 1,602' concrete pipe; 720' corrugated metal pipe; 2,460' steel and iron pipe.

DRAINING, GRADING—UPPER ELWHA RIVER ROAD: Clearing, draining and grading on 0.932 mi. Clallam County Road; FAS No. S-1427(1).

Quantities: 2,430 c.y. common excavation; 26,480 c.y. solid rock excavation; 1,000 c.y. loose riprap; 240' concrete pipe.

PAVING, CRIBBING—NORRIS ST. EXTENSION NEAR BURLINGTON: Draining, grading, surfacing, paving with bituminous mix and constructing reinforced concrete cribbing on 0.127 mi. PSH No. 1, Skagit County; a State Project.

Quantities: 2,350 c.y. common excavation and borrow; 660 c.y. select roadway borrow and crushed stone surfacing; 270 ton bituminous mix; 9 c.y. concrete; 156' concrete pipe; 116' corrugated metal pipe; 7,918' reinforced concrete cribbing headers and stretchers.

SURFACING, MOUNT SPOKANE STATE PARK ROAD: Surfacing with crushed stone and constructing a light bituminous surface treatment on 1.030 mi. of a State Park Road in Spokane County; a State Project.

Quantities: 2,770 c.y. selected roadway borrow; 1,075 c.y. crushed stone surfacing, crushed cover stone; 17 ton asphalt cement; 184' corrugated metal pipe.

DRAINING, GRADING, SURFACING — BLOCK 46, 47 FEEDER ROADS, ET AL: Clearing, draining, grading and surfacing with crushed stone on 27.838 mi. Adams County roads; a State Project.

Qauntities: 27.8 mi. grading; 59,410 ton crushed stone surfacing; 2,828' corrugated metal pipe. SP 9-13

★STATE HIGHWAY PROJECTS— **Olympia, Wash.**

Twelve awards and three projects held for consideration by Washington State Highway Commission, W. A. Bugge, director, Olympia, for highway construction on which bids opened September 10.

DRAINING, GRADING—DAVENPORT TO GRAVELLE ROAD: Clearing, draining and grading on 5.641 mi. PSH No. 2 in Lincoln County; FAP No. F-028-4(2). AWARD: N. A. Dagerstrom Co., E. 15th and 32nd, Spokane, $273,464.

STOCKPILING, SURFACING — MONSE TO OKANOGAN: Stockpiling and surfacing with light bituminous surface treatment on 17.788 mi. PSH No. 10 in Okanogan County; FAP No. F-029-2(4). AWARD: Materne Bros., Box 7052, Spokane, $187,221.

REINFORCED CONCRETE UNDERCROSSING—UNION AVENUE: Construction of a reinforced concrete box girder undercrossing on PSH No. 1 in Pierce County; FAP No. 1-001-3(28) Unit 1. Held for consideration. LOW BID: Woodworth & Co., 1200 E. D St., Tacoma, $183,915.

PRECAST CONCRETE UNDERCROSSING — STAMPEDE ROAD, CABIN CREEK ROAD: Constructing two precast prestressed concrete undercrossings on PSH No. 2 in Kittitos County; FAP No. 1-002-2(11). AWARD: Russell Gillett Co., Box G, Cle Elum, $183,815.

REINFORCED CONCRETE BRIDGE—KENTUCKY STREET, C.M.ST.P. & P.R.R. OVERCROSSING: Constructing a reinforced concrete slab bridge on 0.025 mi. PSH No. 1 in Whatcom County; FAP No. 1-001-5(19). AWARD: C. B. Croy, 2502 Lakeway Drive, Bellingham, $121,307.

PRECAST CONCRETE UNDERCROSSING —MORRISON ROAD, MAY VALLEY. Constructing two precast prestressed undercrossings on PSH No. 18 in Grant County; FAP No. 1-002-4(8). Held for consideration. LOW BID: Cherf Bros. & Sandkay Contractors, Inc., Ephrata, $166,566.

STEEL GIRDER BRIDGE, CONCRETE APPROACHES—NORTH FORK OF SKAGIT RIVER: Constructing a steel girder bridge and reinforced concrete approaches on 0.137 mi. of Skagit County Road; FAS No. S-0315 (1) Unit 1. AWARD: Louis Elterich, Box 868, Port Angeles, and DelGuzzi, Inc., 1020 E. Front St., Port Angeles, joint venture, $470,536.

DRAINING, GRADING, PAVING—148TH AVE. S.E., J. C. O'CONNOR ROAD, 140TH AVE. N.E.: Clearing, draining, grading and paving with type I-1 asphaltic concrete on 3.316 mi. King County Road; FAS No. S-0860 (1). AWARD: Acme Construction Co., Box 641, Redmond, $142,064.

GRADING, SURFACING—NORTH FORK BRIDGE APPROACHES: Grading and surfacing on 1.367 mi. Skagit County Road; FAS No. S-0315(1) Unit 2. AWARD: Herman Kathman, Box 555, Kenmore, $125,936.

FOSTER CREEK, PALISADES CONCRETE BRIDGES: Constructing four reinforced concrete slab bridges, grading and surfacing approaches on 0.296 mi. Douglas County Roads; FAS Nos. ER-23(6) and S-1022(2). AWARD: Russell Gillette, Cle Elum, $94,171.

●HOOD CANAL BRIDGE, FERRY CONSTRUCTION— Olympia, Wash.
(Estimated cost $18,063,000)

Bids will be opened 10 a. m., October 15, by Washington State Highway Commission, Transportation Bldg., Olympia, for 1—constructing unit 1, the floating section of the Hood Canal reinforced concrete floating bridge, 1.341 mi. in length in Kitsap and Jefferson counties (estimated $11,063,000), 2—widening four existing steel state ferries for the State Toll Bridge Authority (estimated $1,800,000), 3—constructing two Evergreen State type ferries 310' long for the Toll Bridge Authority (estimated $5,200,000). Specifications with above office. $50 deposit. Certified check, cashier's check or surety bond 5%.

The above work is the first phase of a $30,500,000 construction program to bridge Hood Canal and improve the state ferry system. The next phase will be on September 24 when the state calls for bids on improving ferry terminals at Fauntleroy, Vashon and Point Southworth-Harper at an estimated cost of $1,100,000.

HOOD CANAL BRIDGE UNIT 1—FLOATING STRUCTURE: Constructing a reinforced concrete floating bridge 1.341 mi. in length in Kitsap and Jefferson counties; a State Project.

Quantities: 74,597 c.y. concrete; 12,586,000 lb. steel reinforcing bars; 3,000,280' prestressing reinforcement; 14,060 reinforced concrete bridge railing; 2,943,120 lb. structural steel; 20,150 sq. ft. steel bridge decking; 739,200 lb. cast steel; 271,610 lb. high strength bolts and cast steel washers; 2,600' rubber seals; 5,844' steel pipe; 1,670' cement-asbestos pipe; 3,316' aluminum bridge railing 1,136' aluminum curb; 321 MBM treated timber and lumber; 227,600 lb. machinery; lump sum bid for mechanical equipment; lump sum bid for electrical equipment; lump sum bid for operator, machinery and generator houses; 29,000 sq. yd. waterproofing pontoons; 2,450' steel piling.

WIDENING FOUR STEEL ELECTRIC FERRIES: Widening the existing state ferries M/V Illahee, M/V Klickitat, M/V Nisqually and M/V Quinault for the Washington Toll Bridge Authority; a State Project.

Work consists principally in sponsoning the hull, widening the auto deck and replacing the existing wood auto deck with a steel deck. Alternate bids requested on replacing existing lifeboats and davits with larger boats and mechanical davits, on raising the entire superstructure for increased vertical clearance on the auto deck and on replacing existing canvas deck covering on exterior passenger decks.

TWO EVERGREEN STATE TYPE VESSELS: Constructing two ferries 310' long for the Washington Toll Bridge Authority; a State Project, consisting of building two ferry vessels of the Evergreen State Class utilizing owner furnished propulsion, generator sets, propulsion motor and engine room auxiliaries. SP 9-13

■STATE HIGHWAY PROJECTS— Olympia, Wash.

Planholders announced on ten highway

construction projects for which bids will be opened 10 a. m., September 24, by Washington State Highway Commission, Transportation Bldg., Olympia.

GRADING — LOON LAKE - GROUSE CREEK—Clearing, draining, grading 6.588 mi. PSH No. 3, Stevens County; FAP No. F-041-2(1).

Planholders: J. N. Conley, 4332 N.E. Royal Court, Portland, Ore.; N. A. Degerstrom, E. 15 32nd, Spokane; Fiorito Bros., 1100 Leary Way, Seattle; F. R. Hewett Co., E. 5916 Baldwin, Spokane; Peter Kiewit Sons' Co., Box 1777, Vancouver; Lockyear & White, Inc., Box 687, Longview; Henry H. Miller, Contractors, Inc., 2191 N.E. Stephens, Roseburg, Ore.; Murphy Bros., Inc., E. 3728 Broadway, Spokane; Charles A. Power, Box 1220, Spokane; Fred H. Slate Co. Oregon Ltd., 7805 S.W. 40th, Portland; Strong & Macdonald, Inc., 4045 Ruston Way, Tacoma; James Crick & Sons, Box 4228, Station B, Spokane; Lige Dickson Co., 3315 S. Pine, Tacoma; Donald M. Drake Co., 1600 N.W. Savier, Portland; Erickson Paving Co., 14446 Sunset Highway, Bellevue; K. L. Goulter & Son, 3419 16th W., Seattle; Grant Construction Co., Box 351, Coeur d'Alene, Idaho; Kiely Construction Co., Drawer 246, Butte, Mont.; Max J. Kuney Co., N. 120 Ralph, Spokane; C. E. Oneal, Inc., Box 270, Ellensburg; Natt McDougall Co., 824 Pittock Block, Portland; P. J. Anderson & Sons, 13501 Aurora Ave., Seattle; Union Iron Works, Box 2135, Spokane; Sather & Sons, N. 1410 Howe, Yardley; Carl Hohner, 730 W. Chelan, Spokane; Clifton & Applegate, E. 5521 Railroad Ave., Yardley.

SSH No. 5-G UNDERCROSSING—Reinforced concrete slab bridge on PSH No. 1, Pierce County; FAP No. I-001-3(29) Unit 1.

Planholders: John E. Alexander, Box 7006, Seattle; Bergersen & Roberts, 2015 Center, Tacoma; Concrete Technology Corp., 1123 Port of Tacoma Road, Tacoma; Lockyear & White, Inc., Longview; Northwest Steel Rolling Mills, Inc., 4315 9th N.W., Seattle; Poole, McGonigle & Dick, 6330 N.E. Halsey, Portland; Sawyer Construction Co., Route 3, Box 298, Tacoma; Woodworth & Co., Inc., 1200 E. D St., Tacoma; Troy T. Burnham Co., 18666 Beverly Road, Seattle; W. G. Clark Construction Co., 408 Aurora Ave., Seattle; N. Fiorito, Inc., 844 W. 48th, Seattle; L. B. Foster Co., Box 53B, Carnegie, Pa.; Harry H. Hawkins, 16274 39th N.E., Seattle; S. S. Mullen, Inc., Box 3886, Terminal Annex, Seattle; MacRae Bros., 5900 2nd S., Seattle; Ostruske-Murphy, Inc., 1515 Center, Tacoma; Quality Builders, 5220 S. Orchard, Tacoma; Tacoma Boatbuilding Co., Inc., 132 Sitcum Waterway, Tacoma; Excavators, Inc., 5756 29th N.W., Seattle.

CEMENT CONCRETE PAVING — MILITARY ROAD—Clearing, draining, grading cement concrete paving 3.282 mi. King County road; FAS Nos. S-0387(1), S-0381(4).

Planholders: American Bitumuls and Asphalt Co., Box 4062, Portland, Ore.; Fiorito Bros., 1100 Leary Way, Seattle; Peter Kiewit Sons' Co., Box 177, Vancouver; Northwest Construction Co., 3950 6th N.W., Seattle; Northwest Steel Rolling Mills, Inc., 4315 9th N.W., Seattle; Erickson Paving Co., 1446 Sunset Highway, Bellevue; N. Fiorito, Inc., 844 W. 48th, Seattle; Permanente Cement Co., 5975 E. Marginal Way, Seattle; Charles R. Watts Co., 4342 6th N.W., Seattle.

SURFACING—WALLA WALLA COUNTY—Surfacing with select roadway borrow and crushed stone on 3.547 mi., Oregon-Washington state line, Valley Chapel and Mojonnier Road sections; FAS No. S-0638(2).

Planholders: Carbon Bros., N. 3430 Cook, Spokane; Inland Excavating Co., Box 16, Walla Walla; Morrison & Co., Inc., Box 597, Walla Walla; Murphy Bros., Inc., E. 3728 Broadway, Spokane; Standard Asphalt Paving Co., Inc., N. 119 Post, Spokane; L. W. Vail Co., Inc., 1948 N. 4th, Pasco; S. D. Spencer & Son, 4614 N.E. 72nd, Vancouver; D. A. Sullivan, Box 37, Parkwater Station, Spokane; Basin Paving Co., Box 1574, Moses Lake; Carl Hohner, 730 W. Chelan, Spokane; Earl LeRoy Kelly, 119 Leonard, Walla Walla; Materne Bros. Co., Box 7052, Spokane; Sather & Sons, N. 1410 Howe, Yardley.

PAVING—TOWN OF SEDRO WOOLLEY—Grading, asphaltic concrete paving 0.396 mi. SSH No. 1-A, Skagit County; a State Project.

Planholders: American Bitumuls and Asphalt Co., Box 4062, Portland, Ore.; Wilder Construction Co., Inc., 1840 State, Bellingham; Fowler Asphalt Paving Co., 711 2nd, Mount Vernon; Skagit Valley Paving Co., Box 268, Mount Vernon.

PAVING — RENTON — Draining, grading, asphaltic concrete paving 0.104 mi. PSH No. 5, C.M. St. P. and P. R.R. undercrossing vicinity, King County; a State Project.

Planholders: Concrete Technology Corp., 1123 Port of Tacoma Road, Tacoma; Rainier Asphalt Paving Co., Box 44, Renton; MacRae Bros., 5900 2nd S., Seattle.

DUNGENESS RIVER REVETMENT—Construct bank project on PSH No. 9, Jefferson County; a State Project.

Planholders J. M. Bruch Co., Route 3, Box 504, Port Angeles; Bruck Bros., Route 1, Box 66, Port Angeles; Critchfield Logging Co., Inc., Route 1, Box 412, Port Angeles; Lake Construction Co., 1801 35th, Bellingham; Morrison-Cecotti, Box 388, Mount Vernon; C. W. Thomas & Son, Box 402, Winlock; P. J. Anderson & Sons, 13501 Aurora, Seattle; Excavators, Inc., 5756 29th N.E., Seattle; Kent & Tucker, Inc., 1431 134th N.E., Bellevue; Consolidated Construction Co., Route 12, Route 285A, Olympia; C. J. Painter, R.R. 1, Moses Lake; Owens Bros., Railroad and Oak, Port Angeles.

STOCKPILING — EASTON VICINITY — Stockpiling crushed stone surfacing, maintenance rock, sand and mineral aggregates involving about 10,000 c.y. stripping surfacing pit, 124,600 ton crushed materials on PSH No. 2, Kittitas County; a State Project.

Planholders: Carbon Bros., N. 3430 Cook, Spokane; J. N. Conley, 4332 N.E. Royal Court, Portland, Ore.; Curtis Construction Co., Box 106, Spokane; J. F. Forbes, Box 174, Olympia; F. R. Hewett Co., E. 5916 Baldwin, Spokane; Newport Construction Co., 7031 N.E. Halsey, Portland; Strong & Macdonald, Inc., 4045 Ruston Way, Tacoma; R. Wamberg, 7404 S. Tacoma Way, Tacoma; Acme Construction Co., Box 651, Redmond; J. Arlie Bryant, Inc., and Clarence Braden, 3716 Skyview Drive, Spokane; F. H. DeAtley & Co., Box 648, Lewiston, Idaho; Lige Dickson Co., 3315 S. Pine, Tacoma; N. Fiorito, Inc., 844 W. 48th, Seattle; Max J. Kuney Co., N. 120 Ralph, Spokane; Pieler Construction Co., 201 E. 8th, Port Angeles; S. D. Spencer & Son, 4614 N.E. 72nd, Vancouver; D. A. Sullivan, Box 37, Parkwater Station, Spokane; R. H. Sussex, 2850 State Highway 2A, Bellevue; Frank G. Baulne, Inc., Box 84, Yardley; Ellensburg Cement Products, Inc., W. 7th, Ellensburg; Maurice Gredvig, Box 301, Yakima; Materne Bros., Box 7052, Spokane; Sather & Sons, N. 1410 Howe, Yardley; Russell-Gillett Co., Box G, Cle Elum; C. J. Painter, R.R. 1, Moses Lake.

RECONSTRUCT COWLITZ RIVER BRIDGE—Reconstruct timber bridge deck, 0.427 mi., Bridge No. 12-LB/3, PSH No. 12, Cowlitz County; a State Project.

Planholders: J. N. Conley, 4332 N.E. Royal Court, Portland, Ore.; Hanly Salvage Co., 3912 Pacific Way, Longview; The Hart Construction Co., 3536 E. 11th, Tacoma; General Construction Co., 3840 Iowa, Seattle; Lake Construction Co., 1801 35th, Bellingham; Palmberg Construction Co., Box 991, Astoria, Ore.; Archie Radakovich, Box 308, Kelso; Wayne Construction Co., 3810 Stone Way, Seattle; Owens Bros., Railroad and Oak, Port Angeles.

BUILDING — Construct administration building and toll canopy on Maple Street Bridge, Spokane County; a State Project.

Planholders: John, Busboom, Rauh, 601 N. Cedar, Spokane; Max J. Kuney Co., N. 120 Ralph, Spokane; Kehne Electric Co., Inc., N. 146 Helena, Spokane.

DM 9-17. Previous report 9-6

ROAD IMPROVEMENT— Pasco, Wash.
(Estimated cost $200,000)

Bids will be called soon by Franklin County Commissioners, Pasco, for improvement of the Sagehill Road which connects State Highway 11-A with a road that runs to the Othello radar station. Specifications by County Engineer Harold Blanton, above address. The road, approximately 11 mi. long, will be the main arterial for Blocks 20 and 21 in the northwest part of the county.

★WATERMAINS— Pullman, Wash.

Award to W. A. McConnachie, 2 Roza Vista, Yakima, $14,258, by City Council, City Hall, Pullman, for furnishing and installing 5,494' of cast iron water pipe on various city streets. SP 9-12. Previous report 8-23

Bids to be opened 3 p. m., September 27, by General Services Administration, 126 Federal Office Bldg., 909 1st Ave., Seattle, Wash., for screenline changes and sidewalk at the Federal and Territorial Bldg., 4th, 5th and Main streets, Juneau, Alaska; SEA-598. Plans with Seattle office. DM 9-17

NORTHERN CALIFORNIA

●**SANITARY SEWER, PAVING—** **Belmont, Calif.**

Bids on two projects will be opened 8 p.m., October 14, by City Council, City Hall, Belmont: Improvement of Winding Way, Ross St., and North Road sanitary sewer project; and repaving for the Panorama Heights improvement project. RC 9-21

▲**UTILITIES—** **Davis, Calif.**

Bids received by Regents of the University, Administration Bldg., University of California, Davis, for construction of utilities for Campbell Tract, University of California, Davis campus. Work includes furnishing and installing gas and water utility systems complete with pipe, valves, fittings, pipe supports, pipe blocks, trenching. Bids opened September 6. LOW BIDS: John H. McCosker, 1501 E. Shore Blvd., Berkeley, $90,000; Luppen and Hawley, 3126 J St., Sacramento, $98,756; Associated Engineers, Inc., 3606 El Camino Real, Palo Alto, $93,550.

EB 9-21. Previous report 8-31

SQUAW CREEK DAM— **El Dorado, Calif.**

The South Side County Water District has authorized Engineer Claude Hill to make a preliminary survey of the feasibility of a dam site on Squaw Creek, six mi. southeast of Placerville, El Dorado County. Chairman John C. Forni of the district board said it is believed the site will store 21,000 acre feet of water, for which the district holds rights on Clear Creek and Camp Creek. If

the preliminary survey supports the feasibility of the project, the board will request the reclamation bureau to survey the site. RC 9-21

▲GUARDHOUSES, PARKING AREA, ELECTRICAL LINE— Folsom, Calif.

Bids received by Bureau of Reclamation, Folsom, for constructing guardhouses and parking area (Sched. 1), and 4.16-kv. distribution line (Sched. 2), Folsom Dam, near Folsom in Sacramento County (Central Valley Project), Spec. No. 200C-365. Bids opened September 12. LOW BIDS: Sched. 1—Brighton Sand & Gravel Co., Box 1, Perkins, $71,-331; Granite Construction Co., Box 900, Watsonville, $78,665; A. Teichert & Son, Inc., 1931 Stockton Blvd., Sacramento, $78,974. Sched. 2 (only bids)—Slater Electric Co., 608 Sutter S., Folsom, $9,232; Collins Electrical Co., Inc., 611 W. Fremont St., Stockton, $12,343. RM 9-21. Previous report 8-31

LEVEE— Lodi, Calif.

Bids will be called at a later date by the City Council, City Hall, Lodi, for construction of a new flood-control levee on the Mokelumne River. The levee will be between 3,000′ and 4,000′ long, and 51½′ high, extending from Roper Ave. to Laurel Ave. in Lodi. Plans and specifications, prepared by City Engineering Department, A. C. Heckenlaible, city engineer, have been approved.

Quantities: 3,800 c.y. excavation of inspection ditch; 41,500 c.y. construction of levee embankment; 47 c.y. construction of concrete wall. RM 9-21. Previous report 9-7

●STREET RESURFACING—Martinez, Calif.

Bids will be opened 11 a.m., October 1, by Board of Supervisors, Contra Costa County, Martinez, for resurfacing Pacifica Ave. from Riverview Intermediate School to Flumaveg Rd.; Proj. No. 5093-57-1. Specifications available from Public Works Department, Box 509, Martinez. $2.50 charge. Completion time 30 days.

Quantities: 60,000 gals. water, furnish and apply; 1,000 c.y. roadway excavation; 2,200 tons untreated base; 450 tons plant-mixed surfacing; 70′, 12″ corrugated metal pipe, 16 gage; 58′, 18″ corrugated metal pipe, 16 gage. RM 9-21

★STREET IMPROVEMENT— Millbrae, Calif.

Award to Bragato Paving Co., 500 Bragato Rd., Belmont, $9,475, by City Council, Millbrae, for improvement of Magnolia Ave. at City Hall site in Millbrae. Bids opened September 3. EB 9-21. Previous report 8-31

FLOOD CONTROL PROJECT— Oakland, Calif.

The Board of Supervisors of the Flood Control and Water Conservation District has approved hiring three private engineering firms to begin work immediately on right-of-way surveys for the $5,000,000 San Lorenzo Creek flood control project. The firms are Murray & McCormick Inc., John A. Mancini and Martin V. Williams. James F. Vivrette, engineer-manager of the floor control district, estimates the private firms will complete the surveys in two months. The Corps of Engineers expects to award a contract next spring for construction of the initial stage of the project—improvement of San Lorenzo Creek from San Francisco Bay to B St. in Hayward. RC 9-21

HYDROELECTRIC AND WATER PROJECT Oakland, Calif.

The Eastbay Municipal Utility District has formally applied to the Federal Power Commission for a license to build a $63,917,000 hydroelectric and water project on the Mokelumne River and its south fork, in Amador, Calaveras, and San Joaquin counties. The proposal is part of the $95,000,000 long range plan to bring an additional 125,-000,000 gals. of water a day to the Eastbay.

The proposed project includes three dams to be built at Middle Bar, Camanche and Railroad Flat, with a generating capacity of 31,500 kilowatts. EBMUD also proposes to construct crest gates at its existing Pardee Dam to increase storage, and to enlarge the Pardee power plant by adding 7,500 kilowatts of generating capacity to make a total of 22,500. An 80-mile aqueduct 87″ in diameter would be built to parallel the district's two existing Mokelumne aqueducts, extending from the west portal of the Pardee Tunnel to the district's Walnut Creek pumping plant. The district also would build a second Pardee outlet tower and tunnel paralleling the existing tower and tunnel system which interconnects the Pardee Reservoir and the existing aqueducts. RC 9-21

▲DRAIN— Oakland, Calif.

Bids received September 12 by City Council, City Hall, Oakland, for construction of a drain in Hillmont Drive, 150′ more or less, easterly of 75th Ave. and in lots 4 and 5, Leona Heights Addition, adjacent thereto, in Oakland. BIDS: McGuire & Hester, 796 66th Ave., Oakland, $4.50 (per linear ft. of shafts with rock backfill), $17.00 (per linear ft. of 6″ perforated vitrified clay pipe drain placed in rock backfill), $6.00 (per linear ft. of 1½″ pipe drain, in boring); George F. Casey Co., 1337 2nd St., Berkeley, $8.70, $6.50, $6.25; P & Z Co. Inc., 120 S. Maple Ave., South San Francisco, $5.74, $26.24, $4.25. RM 9-21

●STREET IMPROVEMENT— Oakland, Calif.

Bids will be opened 12:30 p.m., September 26, by Gladys H. Murphy, city clerk, City Hall, Oakland, for improvement of Altamont Ave. between Sunnymere Ave. and Hillmont Drive, including grading, and construction of selected material sub-base, concrete curb, concrete gutter, crusher run base, asphaltic concrete surface course, concrete sidewalk, and concrete driveways, Res. No. 36224 C.M.S. Specifications available at above address. Certified check or bid bond 10%. RC 9-21

●PAVING, FENCE— Oakland, Calif.

Bids will be opened 4 p.m., September 24, by Selmer H. Berg, secretary, Board of Education, City of Oakland and Oakland Unified School District of Alameda County, 1025 Second Ave., Oakland, for two projects. PROP. No. 1—Grading and paving adjacent to the site of the Franklin Elementary School, 915 Foothill Blvd., Oakland. PROP. No. 2—Installation of a chain-link fence adjacent to the site of the Franklin Elementary School. Plans available from Director of Architectural and Engineering Services at above address. Cashier's check, certified check or bid bond—Prop. No. 1, $200. Prop. No. 2, $250. RC 9-21

●WATER RESERVOIR— Oakland, Calif.

Bids will be opened 2 p.m., September 27, by East Bay Municipal Utility District, room 104, 2130 Adeline St., Oakland, for completing the excavation for and constructing an 80 MG capacity concrete lined and covered water storage reservoir near San Pablo, Calif. Spec. No. 702. Specifications available at the district's engineering department, above address.

Quantities: excavation, 15,000 c.y.; embankment, 15,000 c.y.; concrete, 10,700 c.y.; precast concrete roof, 375,000 sq. ft. RC 9-21

SEWAGE DISPOSAL PLANT— Oroville, Calif.

Oroville area residents have reviewed a series of surveys concerning engineering and financing, but no action has been taken on a plan to construct a $1,000,000 sewage disposal plant in Oroville. RC 9-21

▲CLEARING, GRUBBING— Placerville, Calif.

Bids received September 10 by El Dorado County Board of Supervisors, Court House, Placerville, for clearing and grubbing of the landing strip area and clear zones at Lake Tahoe airport, Federal Aid Airport Project No. 9-04-115-802. LOW BIDS: Joe Vicini, Box 206, Placerville, $11,680; J. H. Trisdale, Inc., Box 779, Redding, $11,800; Clayton C. King, 69 Grand Ave., Oroville, $23,500. RM 9-21

RESERVOIR— Redwood City, Calif.
(Estimated cost $471,135)

The City Council of Redwood City has voted to advertise for new bids on the Sequoia Reservoir project, after having rejected all previous bids, the lowest of which was $100,000 in excess of the funds on hand for the purpose. The new invitation to bidders will be based on revised designs that are to be submitted and recommended by engineer Lawrence G. Brian, Redwood City. Bids will be asked on two redesigned 4,000,-000 gal. concrete reservoirs, two 4,000,000 gal. steel reservoirs, and one 8,000,000 gal. steel reservoir, along with separate bids for painting and offsite and onsite piping. Brian estimated that the new specifications should be ready in about 30 days. RC 9-21. Previous report 8-31

★SUBSTATIONS— Sacramento, Calif.

Award to B & B Construction Co., 937 49th St., Sacramento, $9,489, by Sacramento Municipal Utility District, 59th & R, Sacramento, for furnishing and installing three substations—Bercut Richards, 34th & E (Rio Linda), and Kathleen and Academy—including grading, surfacing, transformer pad, conduit, grounding system, and chain link fencing. Bids opened August 28. RM 9-21. Previous report 8-24

●STATE HIGHWAY PROJECTS— Sacramento, Calif.

Bids to be opened 2 p.m., October 2, by California Division of Highways, 510 Public Works Bldg., Sacramento, on the following highway construction. Plans with state highway engineer at above address.

IX-INY-1242—Grade and pave with road-mixed surfacing on imported base material, about 3.9 mi., on Whitney Portal Rd. between Hunter's Flat, 11.7 mi. west of Lone Pine, and near National Forest Boundary, Inyo County.

III-NEV-765—Grade about 3 mi. of two-lane highway and install drainage facilities on Tyler-Foote Rd., between Kennedy Ranch and 0.7 mi. west of North Columbia Nevada County.

III-PLA-STATE PARK—Grade and surface roads, parking areas and launching ramps with portland cement concrete and plant-mixed surfacing and install drainage facilities, electrical and water conduits in Folsom Lake State Park, at Beal's Point and Granite Bay, Placer County.

II-LAS-1232—Clear and grub about 10.3 mi. of highway right-of-way on Feather Lake Highway, about 20 mi. northwest of Susanville, Lassen County. RM 9-21

★STATE HIGHWAY PROJECTS— Sacramento, Calif.

Awards announced by California Division of Highways, 510 Public Works Bldg., Sacramento, for the following highway construction on which bids were opened September 4.

I-MEN-56-D—Repairing bridge across Big River, about 12 mi. south of Fort Bragg in Mendocino County. AWARD: Al Erickson Co., Box 284, Napa, $11,722.

I-MEN-56-G,H—Construct two reinforced concrete slab bridges, and grade and treat bridge approach roadways with penetration treatment on imported base material, about 0.3 mi. near Rockport, at the South Fork of Cottoneva Creek and at Cottoneva Creek in Mendocino County. AWARD: Tom Hull, 930 Carlson, Eureka, $80,496. RM 9-21. Previous report 9-7

WATER POLLUTION STUDY— San Francisco, Calif.

The State Water Pollution Control Board has approved spending $700,000 for water pollution studies in the San Francisco and central valleys areas. Dewitt Nelson, chairman of the Board, said that $390,000 will be used for a study of control problems in San Francisco Bay. An additional $170,000 is to be used for a one-year study on the Sacramento River. RC 9-21

●SEWAGE DISPOSAL AND WATER SYSTEMS— San Francisco, Calif.

Bids will be opened about October 15 by Corps of Engineers, 180 New Montgomery St., San Francisco, for construction of two sewage disposal systems and increasing and extending two water supply systems at two locations in the San Francisco Defense area, special AAA sites, SF-08 and 09, San Pablo Ridge, Contra Costa County, SF-31, Lake

Chabot, Alameda County. Serial No. ENG-04-203-58-9. Work includes 13,000', 4" and 8" V.C. gravity, 4" C.I. force sewer lines, and 4,000', 3" and 4" water supply lines. Systems include two concrete block pump stations, a primary sewage treatment plant consisting of an Imhoff tank and two sludge beds. Also included are fencing, creek crossing structure, cattle guard, approximately 1,000 sq. ft. of stabilized aggregate surfacing and wood bumpers, drainage facilities, outside electrical distribution, and seeding. Specifications available at above office. Bid bond 20%. Completion time 100 days. RM 9-21

★**PUMPING PLANT— Stockton, Calif.**

Award to Stockton Construction Co., 639 W. Clay St., Stockton, $23,790, by City Council, City Hall, Stockton, for construction of stormwater pumping plant at Brookside Tract in Stockton. Bids opened September 10. OTHER BIDS: Goold & Son, 1601 Turnpike Rd., Stockton, $24,444; D. A. Parrish & Sons Inc., 3128 E. Miner Ave., Stockton, $22,810; C. Norman Peterson Inc., 2832 Ninth St., Berkeley, $32,129. RM 9-21

★**PUMPING PLANT— Stockton, Calif.**

Award to Stockton Construction Co., Inc., 639 W. Clay St., Stockton, $37,647, by City Council, City Hall, Stockton, for construction of the Buena Vista stormwater pumping plant in Stockton. Bids opened September 10. OTHER BIDS: R. Goold & Son, 1601 Turnpike Rd., Stockton, $34,369; C. Norman Peterson, Inc., 2832 Ninth St., Berkeley, $38,530. RM 9-21

★**STREET RESURFACING— Stockton, Calif.**

Award to S. M. McGaw Co. Inc., 2216 E. Miner Ave., Stockton, $13,808, by City Council, City Hall, Stockton, for resurfacing E. Main St. for ¾ mi. between Locust and Filbert Sts. in Stockton. RC 9-21

▲**SEWAGE DISPOSAL PLANT— Tracy, Calif.**

Bids received September 10 by City Council, City Hall, Tracy, for construction of a sewage disposal plant and West Side sewer trunk line in Tracy. Bids on the disposal plant were made on two alternate methods of construction, one including a digestive system, and the other incorporating a catalytic reduction system. Two bids, with and without the new reduction system, were submitted by each contractor. Bids are being held under advisement until October 8. LOW BIDS—DISPOSAL PLANT: Peletz Construction Co., 475 W. College Ave., Santa Rosa, $224,170, $216,170; North Bay Construction Co., 450 College Ave., Santa Rosa, $240,762; $226,762; C. Norman Peterson Inc., 2832 Ninth St., Berkeley, $248,748, $234,549. TRUNK LINE: Jackson Hopkins Co., Box 490, Bakersfield, $48,278; Hackett Bros. Inc., Box 145, Los Altos, $48,700; G. G. Williamson Co., Box 510, Chico, $51,283. RC 9-21. Previous report 8-24

●**BULKHEAD— Trinity Dam, Calif.**

Bids will be opened 2 p.m., October 17, by Bureau of Reclamation, Building 53, Denver Federal Center, Denver, Colo., for the following equipment for the outlet works at Trinity Dam, Central Valley Project, Calif. Spec. No. DS-4968. Schedule 1—Item 1: One 16-ft. diameter, sperical, intake bulkhead. Item 2: One lot of embedded metalwork, but not including anchor bolts, for the spherical bulkhead. Schedule 2—Item 3: One lot of anchor bolts for the spherical bulkhead embedded metalwork. Specifications available at above address. Shipping time 360 days. RM 9-21

●**SITE PREPARATION— Walnut Creek, Calif.**

Bids will be opened 3 p.m., September 26, by Walnut Creek School District, Contra Costa County, 1768 Ygnacio Valley Rd., Walnut Creek, for completion of site work at the following locations: Buena Vista School, 2355 San Juan Ave.; Murwood School, 2050 Vanderslice Ave.; Parkmead Lower Grade School, 1920 Magnolia Way; Parkmead Upper Grade School, 1847 Newell Ave.; Walnut Creek School, 2425 Walnut Blvd.; Walnut Heights School, 4064 Walnut Blvd. Work includes grading, paving, storm drainage. Specifications available from office of the business manager, above address. Certified check or cashier's check 10%. RC 9-21

▲**SIDEWALKS— Woodland, Calif.**

A low bid of $225,798 was submitted by McGillivray Construction Co., 65th and Folsom Blvd., Sacramento, to the Board of Supervisors, Yolo County, Woodland, for installation of sidewalks, curbs and gutters in the West Sacramento Improvement District. Four bids were received. RC 9-21

Advertisements for Bids

Advertisements reaching us not later than Wednesday noon will appear the same week.

THE RATE for Advertisements for Bids is 35 cents per line for the first insertion; 25 cents per line for each insertion thereafter.

STEEL DECK TRUSS BRIDGE
BIDS CLOSE 10 A.M., OCTOBER 4
Portland, Oregon
NOTICE TO CONTRACTORS

DEPARTMENT OF COMMERCE, BUREAU OF PUBLIC ROADS, September 19, 1957. SEALED BIDS will be received at the office of the Bureau of Public Roads, 757 Morgan Building, Portland, Oregon, mail address P. O. Box 3900, Portland, Oregon, until 10:00 A.M. on October 4, 1957, for furnishing the material and performing the work for constructing a 598-foot steel deck truss bridge, Washington Forest Highway Project 30-C, Wind River Highway, Wind River Bridge, Gifford Pinchot National Forest, Skamania County, Washington, involving 800 Cu. Yds. Structure Excavation; 1,026 Cu. Yds. Concrete; 94,000 Lbs. Reinforcement Steel; All Reqd. Structural Steel; 1,181 Lin. Ft. Steel Bridge Railing, and other small items of work. Plans, specifications and proposals may be obtained at the office of the Bureau of Public Roads, 757 Morgan Building, Portland, Oregon. B. M. French, Regional Engineer.

STATE HIGHWAY PROJECTS
BIDS CLOSE 10 A.M., OCTOBER 1
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, October 1, 1957, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the office of the District Engineers of the Department of Highways where they may be inspected.

Federal Funds have been allocated for items Nos. 1 to 8 inclusive.

The improvements for which bids will be received follow:

1. Clearing, Draining, Grading and Constructing a Reinforced Concrete Slab Bridge on 2.114 miles of Primary State Highway No. 1 in Whatcom County, FIELDING STREET TO NORTH STREET IN BELLINGHAM, FAP No. I-001-5(23), involving about 55 acres of Clearing, 214,400 cubic yards of Common Excavation, 220,400 cubic yards of Solid Rock Excavation, 74,000 units of Overhaul, 8,650 cubic yards of Excavation of Unsuitable Material, 34,000 tons of Selected Roadway Borrow, 2,600 cubic yards of Sand Borrow, 3,100 tons of Crushed Stone Surfacing, 38 tons of Asphalt Cement, 290 cubic yards of Crushed Cover Stone and Mineral Aggregate, 4,150 tons of Asphaltic Concrete, 9,950 linear feet of Cement Concrete Curb and Gutter, 100 linear feet of Integral Cement Concrete Curb, 1,960 linear feet of Precast Traffic Curb, 110 linear feet of Galvanized Conduit Pipe, 2,459 linear feet of Corrugated Metal Pipe, 12,245 linear feet of Concrete Pipe, 290 linear feet of Copper Pipe, 1,922 linear feet of Cast Iron Pipe, 45,212 linear feet of Reinforced Concrete Cribbing Headers and Stretchers, 150 linear feet of Beam Guard Rail, 3,005 square yards of Cement Concrete Sidewalk and Driveway, a lump sum bid for Superstructure (about 530 cubic yards of Concrete and 99,000 pounds of Steel Reinforcing Bars), 983 cubic yards of Concrete, 122,840 pounds of Steel Reinforcing Bars, 409 linear feet of Standard Bridge Railing, 4,200 linear feet of Treated Timber Piling, 16,000 linear feet of Untreated Timber Piling and other items. Minmum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
2. Clearing, Draining and Grading on 1.521 miles of State Highway No. 1 in Pierce County, PONDERS TO N. P. RAILWAY, FAP No. I-001-3(19) Unit 2, involving about 95 acres of Clearing, 417,000 cubic yards of Common Excavation and Borrow, 185,500 units of Overhaul, 14,700 tons of crushed Stone Surfacing and Special Gravel Surfacing, 4,400 cubic yards of Top Soil, 41 tons of Asphalt Cement, 380 cubic yards of Crushed Cover Stone and Mineral Aggregate, 2,930 tons of Asphaltic Concrete, 3,643 linear feet of Asphaltic Shoulder Curb, 202 linear feet of Asphaltic Concrete Spillway and Gutter, 170 linear feet of Precast Traffic Curb, 194 cubic yards of Concrete, 43,840 pounds of Steel Reinforcing Bars, 868 linear feet of Concrete Pipe, 2,650 linear feet of Corrugated Metal Pipe, 462 linear feet of Beam Guard Rail, 70 Guide Posts, 477 cubic yards of Riprap, 2,400 linear feet of Chain Link Fence and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
3. Clearing, Draining, Grading, Surfacing, Constructing a Cement Treated Base and

Paving with Type I-1 Asphaltic Concrete on 1.613 miles of Secondary State Highway No. 1-T in Clark County, VANCOUVER LAKE VICINITY, FAS No. S-0261(2), involving about 16 acres of Clearing, 176,300 cubic yards of Common Excavation, 9,230 units of Overhaul, 2,800 cubic yards of Excavation of Unsuitable Material, 29,600 tons of Ballast and Crushed Stone Surfacing, 4,530 tons of Asphaltic Concrete, 440 cubic yards of Mineral Aggregate, 44 tons of Asphalt Cement, 7,500 tons of CTB Aggregate, 1,600 barrels of Portland Cement, 3,100 linear feet of Asphaltic Shoulder Curb, 2,010 linear feet of Concrete Pipe, 566 linear feet of Corrugated Metal Pipe, 35 linear feet of Steel Pipe, 1,753 linear feet of Beam Guard Rail, 80 Guide Posts and other items.

4. Constructing Two Reinforced Concrete Flat Slab Bridges on 0.065 mile of Primary State Highway No. 1 in Whatcom County, C.M. ST. P. AND P. R.R. AND SQUALICUM CREEK BRIDGE, FAP NO. I-001-5(21), involving about 3,100 cubic yards of Concrete, 1,135 linear feet of Standard Bridge Railing, 521,000 pounds of Steel Reinforcing Bars and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
5. Constructing a Reinforced Concrete Box Girder Bridge and a Reinforced Concrete Rigid Frame Bridge on 0.016 mile of Primary State Highway No. 1 in Pierce County, SOUTH 96TH STREET OVERCROSSING AND SOUTH 84TH STREET UNDERCROSSING, FAP No. I-001-3(30), involving about 66,500 cubic yards of Common Excavation and Borrow, 2,260 tons of Selected Roadway Borrow, 1,125 tons of Crushed Stone Surfacing, 760 tons of Asphaltic Concrete, 66 linear feet of Concrete Pipe, a lump sum bid for Superstructures (about 1,538 cubic yards of Concrete and 387,000 pounds of Steel Reinforcing Bars), 1,300 cubic yards of Concrete, 256,000 pounds of Steel Reinforcing Bars, 430 linear feet of Standard Bridge Railing and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
6. Constructing Two Precast, Prestressed Concrete Undercrossings on Primary State Highway No. 1 in Lewis County, 13TH STREET AND NATIONAL AVENUE UNDERCROSSING, FAP No. I-001-2 (54), involving about 1,920 cubic yards of Common Excavation and Borrow, 860 tons of Crushed Stone Surfacing and Ballast, 869 cubic yards of Concrete, 2,100 linear feet of Prestressed Concrete Girders, 714 linear feet of Standard Bridge Railing, 151,000 pounds of Steel Reinforcing Bars, 18,000 pounds of Structural Steel, 10,100 linear feet of Concrete Piling and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
7. Clearing, Draining, Grading and Surfacing with Crushed Stone on 2.719 miles of a Chelan County Road, ENTIAT RIVER ROAD, FAS No. S-0440(3), involving about 94,200 cubic yards of Common Excavation, 19,070 cubic yards of Solid Rock Excavation, 33,895 tons of Ballast and Crushed Stone Surfacing, 22 cubic yards of Concrete, 1,200 pounds of Steel Reinforcing Bars, 608 linear feet of Structural Steel, 1,602 linear feet of Concrete Pipe, 720 linear feet of Corrugated Metal Pipe, 2,460 linear feet of Steel and Iron Pipe, 2,179 linear feet of Wire Fence, 1,964 linear feet of Deer Fence and other items.
8. Clearing, Draining and Grading on 0.932 mile of Clallam County Road, UPPER ELWHA RIVER ROAD, FAS No. S-1247 (1), involving about 2,430 cubic yards of Common Excavation, 26,480 cubic yards of Solid Rock Excavation, 1,000 cubic yards of Loose Riprap, 240 linear feet of Concrete Pipe and other items.
9. Draining, Grading Surfacing, Paving with Bituminous Mix and Constructing Reinforced Concrete Cribbing on 0.127 mile of Primary State Highway No. 1 in Skagit County, NORRIS STREET EXTENSION NEAR BURLINGTON, a State Project, involving about 2,350 cubic yards of Common Excavation and Borrow, 660 cubic yards of Selected Roadway Borrow and Crushed Stone Surfacing, 270 tons of Bituminous Mix, 9 cubic yards of Concrete, 1,250 pounds of Steel Reinforcing Bars, 156 linear feet of Concrete Pipe, 116 linear feet of Corrugated Metal Pipe, 7,918 linear feet of Reinforced Concrete Cribbing Headers and Stretchers, 450 linear feet of Beam Guard Rail and other items.
10. Surfacing with Crushed Stone and Constructing a Light Bituminous Surface Treatment on 1.030 miles of a State Park Road in Spokane County, MOUNT SPOKANE STATE PARK ROAD, a State Project, involving about 2,770 cubic yards of Selected Roadway Borrow, 1,075 cubic yards of Crushed Stone Surfacing and Crushed Cover Stone, 17 tons of Asphalt Cement, 184 linear feet of Corrugated Metal Pipe and other items.
11. Clearing, Draining, Grading and Surfacing with Crushed Stone of 27.838 miles of Adams County Roads, BLOCK 46, 47 FEEDER ROADS, ET AL., a State Project, involving about 27.8 miles of grading, 59,410 tons of Crushed Stone Surfacing, 2,828 linear feet of Corrugated Metal Pipe and other items.

LIFT STATION, SEWAGE TREATMENT LAGOON

BIDS CLOSE 8 P. M., SEPTEMBER 24

Roundup, Montana

NOTICE TO CONTRACTORS

Sealed bids will be received by the undersigned until 8:00 P. M., September 24, 1957, and then publicly opened and read by the undersigned at the City Hall, Roundup, Montana, for the construction of a lift station and sewage treatment lagoon.

Principal items are—SCHEDULE 1: 19,000 cubic yards lagoon excavation and embankment; one manhole and one lift station with two 300 G.P.M. pumps, and one 600 G.P.M. pump, one inlet manhole and one outlet structure, 100 lineal feet of 15-inch vitrified clay sewer pipe, 700 lineal feet of 18-inch corrugated metal pipe and appurtenant work, all as set forth in plans and specifications prepared by Wenzel and Company, Consulting Engineers, Great Falls, Montana and on file with the City Clerk, where they may be inspected without charge, and from either of whom they may be obtained upon deposit of $15.00 per set as a guarantee of their safe return. The full amount of the deposit will be returned to each actual bidder submitting a bona fide bid, immediately upon return of said plans and specifications within 10 days after the date of the bid opening.

Each bid must be accompanied by a certified check made payable to the City of Roundup, Montana, in an amount not less than ten percent (10%) of the total bid as bid security.

Each proposal shall be sealed and addressed to the City Clerk, City Hall, Roundup, Montana, and the name of the project, and the current Montana Contractor's License Number held by the bidder shall be plainly written on the outside of the envelope. The Owner reserves the right to waive irregularities and to reject any or all bids.

No bidder may withdraw his bid after the hour set for the opening thereof for a period of thirty (30) days.

BY ORDER OF THE CITY COUNCIL,
City of Roundup, Musselshell County, Montana.
CITY OF ROUNDUP, MONTANA.

STATE HIGHWAY PROJECTS

BIDS CLOSE 9 A.M., SEPTEMBER 26

Helena, Montana

NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the offices of said Commission in the City of Helena, until 9:00 a.m. on September 26, 1957. The proposals will be publicly opened and read immediately thereafter. YOUR ATTENTION IS DIRECTED TO THE 9:00 A.M. HOUR SET FOR THE OPENING OF BIDS.

1. **FG 224(5)**—Grade, gravel surfacing, concrete pavement, road-mix oiling, seal coat oiling, drain, and construction of one 75.33' steel structure over the First Avenue North Underpass on 0.195 miles of the Second Avenue North Great Falls-First Avenue North Underpass Road in Cascade County, involving about 15,870 cu. yds. excavation (detour); 0.395 mile processing; 556 sq. yds. processing; 419 sq. yds. concrete; 10,019 tons crushed gravel; 472 M gals. watering; 136 units rolling; 9,910 gals. liquid asphalt; 1,906 gals. emulsified asphalt; 220 lin. ft. reinforced concrete pipe culverts; 342 lin. ft. concrete sewer pipe; all L. sum clearing & grubbing; 8,044 sq. yds. Portland cement concrete pavement; 8 each drop inlets; 230 lin. ft. precast concrete curb; 1,202 square yds. concrete sidewalk; all L. sum excavation (Roadway); 39.279 MBM treated timber; 300.0 lin. ft. steel guard rail; 227,071.0 lbs. reinforcing steel; 3,774.0 cu. yds. concrete; all L. sum structure excavation; all L. sum removal of existing structure; all L. sum structural steel; all L. sum ornamental railing; all lump sum pipe railing; all L. sum waterproofing; all L. sum drainage system; all L. sum lighting system; all L. sum traffic signal installation; all L. sum galvanized iron; all lump sum obliterate detour road; and other items. Project to be completed by August 31, 1959.

2. **F 240(8) & F 240(9)**—Grade, gravel surfacing, plant-mix oiling, and drain 2.361 miles on the Wolf Point Streets and the West of Wolf Point-North Dakota Line Road in Roosevelt County, involving about 85,672 cu. yds. excavation; 100 cu. yds. gravel backfill; 9,578 tons plant mix; 8,107 mi. yds. overhaul; 77,387 tons crushed gravel; 5,759 cu. yds. sand base; 2,775 M gals. watering; 512 units rolling; 122,578 gals. asphalt cement; 19,777 gals. liquid asphalt; 19,611 gals. emulsified asphalt; 52 lin. ft. corrugated metal pipe culverts; 3,841 lin. ft. reinforced concrete pipe culverts; 771 lin. ft. cast-iron pipe; 276 lin. ft. relay pipe culverts; 6 each manholes with covers; 9 each drop inlets; 10,473.6 lin. ft. concrete median curb; 5,765.1 lin. ft. concrete integral curb and gutter; 461 lin. ft. concrete structures to remove; and other items. Project to be completed in 150 calendar days.

3. **F334(15)U1** — Grade, soil-cement base; plant-mix oiling; and drain 10.980 miles on

the Crow Agency-Broadus Road in Powder River County, involving about 395,188 cu. yds. excavation; 726 cu. yds. gravel backfill; 26,029 tons plant mix; 39,084 mi. yds. overhaul; 1,257 tons crushed gravel; 26,745 cu. yds. soil aggregate; 6,581 M gals. watering; 965 units rolling; 336,825 gals. asphalt cement; 40,554 gals. liquid asphalt; 202 lin. ft. corrugated metal pipe culverts; 656 lin. ft. structural plate pipe culverts; 1,082 lin. ft. reinforced concrete pipe culverts; 2,330 lin. ft. relay pipe culverts; 11,891 bbls. Portland cement; 167,487 sq. yds. processing; all L. sum miscellaneous in place to remove; 117 each concrete right-of-way monuments; 57 each concrete station markers; and other items. Project to be completed in 200 calendar days.

4. **U-UG 405(3)U1**—Construction of 254.0' of irrigation pipe under the Fifth Street, Sixth Street and Madison Street Road in the City of Missoula, Missoula County, involving about 3,298 cu. yds. excavation; 289 cu. yds. unclassified backfill; 190 cu. yds. gravel backfill; 254 lin. ft. structural plate pipe culverts; 4,982 lbs. reinforcing steel; 57.6 cu. yds. Class "AD" concrete; and other items. Project to be completed by April 30, 1958.

5. **S 187(2)U1**—Grade, gravel surfacing, bituminous surface treatment, and drain 14.054 miles on the Armells-Hays-Harlem Road in Blaine County, involving about 654,574 cu. yds. excavation; 484 cu. yds. gravel backfill; 49,313 mi. yds. overhaul; 252,419 tons crushed gravel; 14,823 M gals. watering; 2,542 units rolling; 83,791 gals. liquid asphalt; 83,791 gals. emulsified asphalt; 2,192 lin. ft. corrugated metal pipe culverts; 518 lin. ft. structural plate pipe culverts; 1,047 lin. ft. relay pipe culverts; 47 lin. ft. steel pipe; 192 each concrete right-of-way monuments; all L. sum miscellaneous to be moved; and other items. Project to be completed in 350 calendar days.

6. **S 187(2)U2**—Construction of one 100.0' treated timber bridge over Little Peoples Creek, and one 100.0' treated timber bridge over Big Peoples creek on the Armells-Hays-Harlem Road in Blaine County, involving about 4,655 cu. yds. unclassified excavation; 98,913 MBM treated timber; 2,972 MBM untreated timber; 2,470 lin. ft. treated timber piles; 3,796 lbs. structural steel; and all L. sum removal of existing structure; and maintaining traffic. Project to be completed by June 30, 1958.

7. **S 191(2)**—Grade, gravel surfacing, and drain 10.161 miles on the Jordan-Haxby Road in Garfield County, involving about 439,125 cu. yds. excavation; 1,431 cu. yds. binder; 479 cu. yds. gravel backfill; 2,862 mi. yds. overhaul on binder; 22,174 mi. yds. overhaul; 58,005 tons crushed gravel; 7,768 M gals. watering; 1,174 units rolling; 2,886 lin. ft. corrugated metal pipe culverts; 326 lin. ft. structural plate pipe culverts; 302 lin. ft. relay pipe culverts; 162 each concrete right-of-way monuments; all L. sum miscellaneous to remove; and other items. Project to be completed in 200 calendar days.

8. **S 204(1)**—Grade, gravel surfacing, bituminous surface treatment, drain and construction of one 19.0' treated timber pile structure on 8.468 miles on the Echo Lake-East and West Road in Flathead County, involving about 369,951 cu. yds. excavation; 425 cu. yds. gravel backfill; 6,929 mi. yds. overhaul; 114,137 tons crushed gravel; 68,720 tons uncrushed gravel; 9,178 M gals. watering; 1,594 units rolling; 46,944 gals. liquid asphalt; 46,944 gals. emulsified asphalt; 270 lin. ft. structural plate pipe culverts; 4,544 lin. ft. reinforced concrete pipe culverts; 100 lin. ft. relay pipe culverts; 51.02 acres clearing; 34.45 acres grubbing; 186 each concrete right-of-way monuments; 10.256 MBM treated timber; 0.342 MBM untreated timber; 800 lin. ft. treated timber piles; all L. sum removal of existing structure and maintaining traffic; and other items. Project to be completed in 200 calendar days.

9. **S 222(1)**—Grade, gravel surfacing, bituminous surface treatment, and drain 5.766 miles on the Gildford-North Road in Hill County, involving about 115,181 cu. yds. excavation; 100 cu. yds. gravel backfill; 21,215 mi. yds. overhaul; 20,790 tons crushed gravel; 56,095 tons uncrushed gravel; 3,331 M gals. watering; 660 units rolling; 36,256 gals. liquid asphalt; 36,256 gals. emulsified asphalt; 1,348 lin. ft. corrugated metal pipe culverts; 100 lin. ft. relay pipe culverts; 98 each concrete right-of-way monuments; and other items. Project to be completed in 150 calendar days.

10. **S 228(2)U1**—Grade, gravel surfacing, bituminous surface treatment, and drain 9.777 miles on the Augusta-Southwest Road in Lewis & Clark County, involving about 302,509 cu. yds. excavation; 118 cu. yds. gravel backfill; 27,967 mi. yds. overhaul; 128,786 tons crushed gravel; 7,059 M gals. watering; 1,263 units rolling; 55,608 gals. liquid asphalt; 55,608 gals. emulsified asphalt; 530 lin .ft. corrugated metal pipe culverts; 2,916 lin. ft. reinforced concrete pipe culverts; 100 lin. ft. relay pipe culverts; 150 each concrete right-of-way monuments; and other items. Project to be completed in 180 calendar days.

11. **S 228(2)U2**—The construction of one 38.0' treated timber pile bridge on the Augusta-Southwest Road in Lewis & Clark County, involving about 44.982 MBM treated timber; 1.739 MBM untreated timber; 980 lin. ft. treated timber piles; 610 cu. yds. unclassified excavation; all L. sum removal of existing structure and maintaining traffic; and other items. Project to be completed by July 31, 1958.

12. **S 317(3)**—Grade, gravel surfacing, and drain 6.871 miles on the Wyoming Line-Moorhead-Broadus Road in Powder River County, involving about 262,175 cu. yds. excavation; 935 cu. yds. binder; 343 cu. yds. gravel backfill; 1,870 Mi. yds. overhaul on binder; 13,033 mi. yds. overhaul; 34,127 tons crushed gravel; 4,576 M gals. watering; 134 units rolling; 2,718 lin. ft. corrugated metal pipe culverts; 288 lin. ft. structural plate pipe culverts; 100 lin. ft. relay pipe culverts; all L. sum miscellaneous to remove; 100 each concrete right-of-way monuments; and other items. Project to be completed in 180 calendar days.

13. **S 340(4)**—Grade, gravel surfacing, drain, and construction of one 57.0' treated timber pile bridge on 6.975 miles of the Cleveland-Chinook Road in Blaine County, involving about 282,030 cu. yds. excavation; 1,013 cu. yds. binder; 280 cu. yds. gravel backfill; 2,026 mi. yds. overhaul on binder; 35,423 mi. yds. overhaul; 44,886 tons crushed gravel; 5,097 M gals. watering; 267 units rolling; 1,874 lin. ft. corrugated metal pipe culverts; 66 lin. ft. structural plate pipe culverts; 216 lin. ft. reinforced concrete pipe culverts; 102 lin. ft. relay pipe culverts; all L. sum miscellaneous to be removed; 119 each concrete right-of-way monuments; 25,295 MBM treated timber; 0.872 MBM untreated timber; 810 lin. ft. treated timber piles; 1,124 lbs. structural steel; and other items. Project to be completed in 180 calendar days.

The above-listed quantities are approximate only.

All bid proposals shall be accompanied by a certified or cashier's check, cash, postal money order, bank money order, or bid bond in the amount of at least 5% of the bid. Should the successful bidder fail to enter into his contract and furnish a satisfactory performance bond within the time stated in his proposal, the bid deposit shall be forfeited to the State Highway Commission of Montana.

Prequalifications of bidders at least 72 hours prior to the opening of bids is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission in Helena, Montana. Plans and specifications for all Federal-aid projects are also on file and may be examined in the offices of the Bureau of Public Roads at Missoula, Montana.

FLOATING BRIDGE, FERRY CONSTRUCTION

BIDS CLOSE 10 A.M., OCTOBER 15

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, October 15, 1957, until 10:00 A. M. and will then and there be opened and publicly read for the construction of the improvements listed below.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalifications of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of fifty-two dollars ($52.00) for each copy of such maps, plans and specifications. Two dollars ($2.00) of the above amount is a rental payment for the use of the maps, plans and specifications and is not returnable. The remaining fifty dollars ($50.00) is a deposit on the maps, plans and specifications and will be returned to the planholder providing the maps, plans and specifications are returned to this office not later than ten (10) days from the date of award of the contract. IF PAYMENT IS MADE BY CERTIFIED CHECK, CASHIER'S CHECK OR MONEY ORDER, PLEASE MAKE PAYMENT IN TWO CHECKS, ONE FOR TWO DOLLARS ($2.00) AND ONE FOR FIFTY DOLLARS ($50.00). Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications for the Hood Canal Bridge Unit 1—Floating Structure are on file in the office of the Chief Consulting Engineer for the Washington Toll Bridge Authority, 3201 Fremont, Seattle, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland, the offices of the District Engineers of the Department of Highways and the office of the Director of Highways where they may be inspected.

Informational copies of the plans and specifications for the Widening Four Steel Electric Ferries and the Two Evergreen State Type Vessels are on file in the office of the Washington State Ferries, Coleman Ferry Terminal, Seattle, the office of W. C. Nickum and Sons, 71 Columbia Street, Seattle, and the office of the Director of Highways where they may be inspected.

The improvements for which bids will be received follow:

1. Constructing a Reinforced Concrete Floating Bridge 1.341 miles in Length in Kitsap and Jefferson Counties, HOOD CANAL BRIDGE UNIT 1—FLOATING STRUCTURE, a State Project, involving about 74,597 cubic yards of Concrete, 12,586,000 pounds of Steel Reinforcing Bars, 3,000,280 linear feet of Prestressing Reinforcement, 14,060 linear feet of Reinforced Concrete Bridge Railing, 2,943,120 pounds of Structural Steel, 20,150 square feet of Steel Bridge Decking, 739,200 pounds of Cast Steel, 271,610 pounds of High Strength Bolts and Cast Steel Washers, 2,600 linear feet of Rubber Seals, 5,844 linear feet of Steel Pipe, 1,670 linear feet of Cement Asbestos Pipe, 3,316 linear feet of Aluminum Bridge Railing, 1,136 linear feet of Aluminum Curb, 321 MBM of Treated Timber and Lumber, 227,600 pounds of Machinery, a lump sum bid for Mechanical Equipment, a lump sum bid

for Electrical Equipment, a lump sum bid for Operator, Machinery and Generator Houses, 29,000 square yards of Water Proofing Pontoons, 2,450 linear feet of Steel Piling and other items.

2. Widening the Existing State Ferries M/V Illahee, M/V Klickitat, M/V Nisqually and M/V Quinault for the Washington Toll Bridge Authority, WIDENING FOUR STEEL ELECTRIC FERRIES, a State Project, involving a lump sum bid for the Entire Improvement. The work involved consists principally in sponsoning the hull, widening the auto deck and replacing the existing wood auto deck with a steel deck. Alternate bids are requested on replacing the existing life boats and davits with larger boats and mechanical davits, on raising the entire superstructure for increased vertical clearance on the auto deck and on replacing the existthe canvas deck covering on the exterior passenger decks.
3. Constructing Two Ferries 310 feet long for the Washington Toll Bridge Authority, TWO EVERGREEN STATE TYPE VESSELS, a State Project, involving a lump sum bid for the Entire Work. The work involved consists of building two ferry vessels of the Evergreen State Class utilizing owner furnished propulsion, generator sets, propulsion motor and engine room auxiliaries.

STREET PAVING

BIDS CLOSE 1 P.M., M.S.T., SEPTEMBER 30

Bozeman, Montana

NOTICE TO CONTRACTORS

The City of Bozeman, Montana, will receive sealed bids for construction of Street Improvements in Special Improvement Districts, 389, 390, 391, 393, 394, 395 and 398 and for construction of Drainage Improvements in Special Improvement District 392 until 1:00 o'clock P. M., Mountain Standard Time, at the office of the Clerk of the Commission on the 30th day of September, 1957, at which time and place all bids will be publicly opened and read aloud.

The Contract Documents, including plans and specifications, are on file at the office of the Clerk of the Commission at Bozeman, Montana, and at the office of Harold Hoskins & Associates, Engineers, 2314 River Drive, Great Falls, Montana, or at 725 9th Street, Greeley, Colorado.

Copies of the documents may be obtained by paying to Harold Hoskins & Associates $25.00 for one set and $10.00 for each additional set. One-half of said charges will be refunded for all complete sets returned in undamaged condition. The successful bidder will be furnished, free of charge, with all copies of the documents necessary for contract award and construction purposes.

Each bid shall be accompanied by a certified check drawn on a solvent bank in an amount not less than 10% of the total amount of the bid and shall be made payable to the Director of Finance of the City of Bozeman, as security that the bidder to whom the contract may be awarded will enter into a contract to build the improvement in accordance with this notice, and give bond in the sum as hereinafter provided for construction of the improvement. Checks accompanying bids not accepted shall be returned to the bidders.

No bid shall be withdrawn after opening the bids without the consent of the City of Bozeman, Montana, for a period of 30 days after the scheduled time of closing bids.

The City of Bozeman, Montana, reserves the right to reject any or all bids and to waive any informalities in bidding.

The successful bidder will be required to furnish a satisfactory performance bond in the sum of the full amount of the contract.

In general, the improvement on which bids are requested will require the following construction:

Paving Special Improvement District 389—7,050 Sq. Yd. of pavement and 1,376 L.F. of 10" P.C. pipe; Paving Special Improvement District 390—7,700 Sq. Yd. of pavement; Paving Special Improvement District 391—5,850 Sq. Yd. of pavement; Drainage Special Improvement District 392—11,550 L.F. 12"-36" R.C. pipe and appurtenances; Paving Special Improvement District 393—57,600 Sq. Yd. of pavement; Paving Special Improvement District 394—2,050 Sq. Yd. of pavement; Paving Special Improvement District 395—6,000 Sq. Yd. of pavement; Paving Special Improvement District 398—19,800 Sq. Yd. of pavement.

Sealed bids shall be marked on outside, "Bid for Construction of Street Improvements in Special Improvement District 389, 390, 391, 393, 394, 395, and 398" and/or "Bid for Construction of Drainage Improvements in Special Improvement District 392."

Dated this 11th day of September, 1957.

CITY OF BOZEMAN, MONTANA.
By: L. G. Shadoan,
Clerk of the Commission.

HEALTH CENTER

BIDS CLOSE 10 A.M., P.S.T., OCTOBER 2

Juneau, Alaska

NOTICE TO CONTRACTORS

Project Aaa. 50-A-270, Health Center, Kenai, Alaska. September 4, 1957. Kenai Health Center, Project Aaa. 50-A-270, Kenai, Alaska. Alaska Public Works, Office of Territories, Department of the Interior, By (Issuing office) Thomas G. Mooney, Director, Alaska Public Works, Office of Territories, Department of the Interior, Post Office Box 1181, Juneau, Alaska. Sealed bids in single copy for furnishing all labor, equipment, and materials and performing all work for the project described herein will be received until 10:00 A.M. Pacific Standard Time, October 2, 1957, in the mailroom of the office of the Director, Alaska Public Works, Office of Territories, Department of the Interior, 123 West Third Street, Post Office Box 1181, Juneau, Alaska and then publicly opened and read aloud. Information regarding bidding material, bid guarantee, and bonds follows: Plans and specifications and other proposed contract documents are open for public inspection at the Director's office, Juneau, Alaska; at Room 5621 Interior Bldg., Washington 25, D. C.; at the Area Engineer's office, Alaska Public Works, Reliable Service Bldg., Anchorage, Alaska; and Associated General Contractor's of America offices as follows: Seattle Chapter, Construction Center, 215 West Harrison St., Seattle, Wash.; Mountain Chapter, 220 West Harrison St., Seattle, Wash.; Tacoma Chapter, 1605 Center Street, Tacoma, Wash.; Portland Chapter, Suite 112, Multnomah Hotel, Portland, Oregon; the Alaska Chapter, 306 Central Bldg., Anchorage, Alaska, and the Plan Bureau, 2413 Western Ave., Seattle, Wash.; and the Builders Exchange Cooperative, 317 Builders Exchange Bldg., Portland, Oregon. A set of such documents may be procured from the office of the Director at Juneau, Alaska upon deposit of $25.00, all of which will be refunded upon the return of the plans and specifications in good condition within twenty (20) days from date of bid opening. Each bid must be accompanied by a satisfactory bid security (certified check or bid bond) in an amount not less than 5 per cent of the total bid in dollars and cents. No bid will be withdrawn until thirty days after the scheduled closing date for the receipt of bids. The successful bidder will be required to furnish a performance bond and payment bond, each in the amount of 100 per cent of the contract price. The Government reserves the right to award a contract for the project on the basis of the acceptance of any or all of the alternates, whichever course is in the best interest of the Government. DESCRIPTION: Project Aaa. 50-A-270, Health Center, Kenai, Alaska. The construction of a one story frame Health Center building with approximately 113 sq. ft. of floor area.

5941—9-14, 21

COLLEGE ADDITIONS

BIDS CLOSE 8 P.M., P.S.T., SEPTEMBER 25

Pasco, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Clerk of the Pasco School District #1, at the offices of the School District, 517 North 3rd St., Pasco, Washington, on or before 8:00 P.M., P.S.T., Wednesday, Sept. 25, '57 for the construction of Vocational-Technical, PE-Music; Classroom Center, and Boiler Plant Additions for Columbia Basin College of steel and block construction. The bids will then and there be publicly opened and read aloud.

Bids received after the time fixed for opening cannot be considered.

Separate bids will be received for the following contracts: a. General, b. Mechanical work, c. Electrical work.

Drawings and specifications including contract documents may be examined at the offices of the Architect, Victor Louis Wulff, 1526 West Riverside Avenue, Spokane, Washington, and 507 North 4th, Pasco, Washington, and may be obtained there, upon the deposit of $40.00 per set for General, and $25.00 for Mechanical and Electrical.

The sets of plans and specifications will be on file at the following places for the convenience of sub-contractors, etc.: Plan Survey Center, Inc., 15 S.E. 22nd Ave., Portland 15, Oregon. Tri-City Construction Council, 34 Vista Way, Kennewick, Wash. Construction Council, 933 West 3rd, Spokane, Wash., AGC Builders' Chapter, N. 1207 Washington, Spokane, Wash., Builders' Exchange, 317 Builders' Exchange Bldg., Portland, Oregon, AGC Builders' Chapter, 215 West Harrison St., Seattle, Wash., Plan Bureau, 2413 Western Ave., Seattle, Washington, Basin Construction Council, 515 W. Broadway, Moses Lake, Wash., Yakima Valley Master Builders, 702 W. Walnut St., Yakima, Wash., AGC Builders' Chapter, 452 St. Helen's Tacoma, Wash.

The full amount of the deposit for one set of documents, will be refunded to actual bidders upon return of the documents, unmutilated and without marks and annotations, within 10 days after the time set for opening of bids, but to non-bidders only if returned no later than 10 days before the bid opening.

No bid will be considered unless fully completed in the manner provided in the "Instructions to Bidders" and on the bid form provided by the Architect and each bid must be accompanied by a certified check, cashier's check or bid bond with State-licensed surety or sureties in an amount of not less than five per cent (5%) of the bid for which security is given, made payable to the Pasco School District #1.

The right is reserved to accept or reject any or all bids and waive all claims, or any informalities or irregularities in the bids or in the bidding.

The School District reserves the right to award a contract for this project on the basis of the acceptance of any or all of the alternates, whichever course is in the best interests of the School District.

No bidder may withdraw his bid after the time set for the opening thereof, unless the award of contract is delayed for a period exceeding 30 days.

By order of Pasco School District #1.
Noble Moodhe,
Secretary of the School Board
517 North 3rd
Pasco, Washington

California, Northwest AIA conventions
—two candid reports

NOVEMBER 1957

5,000,000 people saw this ad—did you?

Remember this advertisement? It appeared late in July in nineteen leading West Coast newspapers. We figure that at least 5,000,000 people saw it—and you can bet that many of them read it carefully.

Ads like this, published both by Bethlehem Pacific and others in the steel industry, are helping to build up a public awareness of the many advantages of steel construction for homes. Yes, and for commercial construction too.

The ad describes a most unusual house in Oakland, a steel-framed house that can actually land helicopters on its roof. The copy tells how quickly the steel frame was erected. It took a little less than two hours! What's more, with the house on a 45-deg hillside, the use of steel framing made foundation work a snap for the builder.

Finally the ad tells how steel-frame construction permits the use of curtain walls with huge glass areas; allows cantilever construction of deep overhanging roofs; is immune to rot, warping and termite damage; gives the designer free rein for his ideas, and permits such a simple framing system that the builder's problems are cut in half.

If you have been building with steel, this is really *your* ad, helping to sell your kind of construction. But if you haven't used steel a great deal in your projects, take a tip: the increasing use of structural steel, especially in homes and light commercial, industrial and institutional buildings, is one of the most significant trends in construction today.

THE COVER

Woodrow Wilson High School, Portland (p. 16). Edmundson & Kochendoerfer, Architects; Art Hupy photo.

GLASS AND CONCRETE one-story building to house Parke-Davis Co. branch office and warehouse near San Francisco will rest 4 ft. above ground on cement podium about size of football field. Framework of roof will consist of precast concrete arcs—64 sections, each 20x40 ft.—held together with steel ties, supported by six interior columns and covered with white marble chips for waterproofing. Entire area around project will be landscaped to create parklike environment. Architect: Minoru Yamasaki.

PROJECT PREVIEW

NORTHEAST TACOMA ELEMENTARY SCHOOL ADDITION will be first in city to utilize campus plan. All four buildings will be identical in size and structure except that multipurpose unit will have higher ceiling. Folded plane roofs will be prefabricated plywood stressed skin units joined in self-spanning forms, supported only on perimeter wood columns, which also support prefabricated plywood wall panels. Architects: Johnston, Evans & Parker.

WITH LARGE SHEETS OF GLASS on street frontages, entire building will be showcase for interior display of J. W. Robinson in Palm Springs, Calif. Roof floating over column supports will act as umbrella for glass-enclosed sales area. Elevated light apertures inside will provide still more daylight and view of mountains to west. Architects-engineers: Pereira & Luckman.

MAIN LIBRARY BUILDING FOR SEATTLE, which caused front-page controversy over method of selecting architects, has been designed as reinforced concrete five-story structure with basement area for double tier bookstacks. Exterior will be faced with quartz aggregated panels supplemented with granite or marble. Plan calls for large area flowing together, such as found in department stores, rather than separate, high ceiling rooms for each department. Estimated cost: $3.5 million. Architects: Bindon & Wright, associated with Decker, Christenson & Kitchin.

Building volume continues to climb in October

Building activity in the five western states seems to be picking up steam once more. After a slight rise in September, the October dollar volume climbed upward even faster to a total of $213,967,583, highest since May. And for the second month in a row the dollar volume rose above the same period a year ago. October's was $9¾ million higher than the corresponding month of 1956.

The total also topped September by some $35 million. Gains were widespread throughout the five states.

Here is a state-by-state comparison for the first 10 months:

	Jan.-Oct. 1957	Jan.-Oct. 1956
California	$1,658,041,813	$1,763,320,048
Oregon	104,900,420	134,733,552
Washington	235,351,393	266,691,869
Montana	20,399,759	27,161,233
Idaho	21,951,439	21,703,516

The dollar volume for the year now stands at $2,213,-610,218, nearly $173 million lower than the January through October total for 1956. Only one state records an increase, Idaho, with a gain of $248,923 over 1956.

Following is a breakdown of building permits issued for new buildings and additions by several of the major agencies during October. (First number in each category refers to number of permits, not number of units.)

	DWELLING		COMMERCIAL & INDUSTRIAL		PUBLIC	
Portland	70	$ 1,078,800	33	$1,837,140	5	$1,190,925
King Co.	470	4,931,580	48	1,008,895	11	829,200
Seattle	551	3,344,334	186	1,546,710	4	1,055,000
Tacoma	110	410,085	29	76,070	—	—

The Architect: "Because breadth of selection is so vital to my work, I've come to rely more and more on GMcB. I like to be sure I can get the colors, shapes, sizes and textures in tile that make the job right. Too, I like the way GMcB field men are constantly checking with architects for new ideas. HERMOSA TILE has long been the answer for me."

meet THE PEOPLE *who build*

The Tile Contractor: "Because success in my business depends on the final quality of installations, I like to begin with a product that I KNOW is superior... HERMOSA TILE. And the company that pays extra close attention to the needs of the contractors. By checking with qualified men right in the field, GMcB is able to produce tile superior in every detail."

The Color Coordinator: "Because so much of my effort is concerned with design and color harmony, I like to work with manufacturers who want to HEAR recommendations and then ACT on them to produce a *complete* product line. GMcB has done this with HERMOSA TILE. When I need a custom design, I KNOW GMcB has a world of experience and can produce quickly with control and imagination."

The Builder: "A 'sold' sign is just the beginning for the owners. What really sells a house is the living in it. That's why I demand lasting quality in whatever material goes into my houses. GMcB men go out of their way to check with builders on points of quality. That's why builders can rely on HERMOSA TILE... and reliability is always the vital ingredient... particularly, when you're 'building tight'."

Back of every reason for more architects, tile contractors, color coordinators and builders choosing HERMOSA TILE is Gladding, McBean's *extra* commodity: SERVICE EXPERIENCE. Teamwork in service is the GMcB trademark. Hundreds of jobs each year are handled by the typical team illustrated below. GMcB men and women carefully consider the needs, wants and requirements of all who use tile. As a result, HERMOSA TILE achieves vibrant growth from vast experience with each of these varied groups.

the HERMOSA *reputation*

No wonder HERMOSA is the West's largest selling tile!

JOSEPH EICHLER
Palo Alto

"for recognizing the importance of architectural services in the planning, development and construction of outstanding contemporary merchant-built houses, which have created better communities for the people of California."

EARL HEITSCHMIDT
Los Angeles

"for outstanding service to the community, to the state and to the architects of California during his vice presidency of the AIA in 1954-55."

DONALD KIRBY
San Francisco

"for his leadership and outstanding service to the architects of California as regional director of the AIA from 1954-57."

JOHN LYON REID
San Francisco

"who served the architectural profession with distinction as 1956 California Council president."

California, Northwest hold lively

At Coronado: planning and structure

Coronado proved to be a gracious host during the 12th annual convention of the California Council, AIA, October 2-5, and since lack of satisfactory accomodations elsewhere necessitates returning in 1958, this year's participants can find consolation in the fact that the island is such a delightful spot.

A record attendance of nearly 900, which included about 250 architects, heard a program divided into two main topics, "Community Planning" and "Design Through Structure"; toured the Producers' Council exhibits, and in general had a good time. The Californians seem to be developing a more substantial program, but in evaluating their annual meeting it must be noted that they purposely place greater emphasis on the social aspects than do some of the other AIA groups. Looking at the 1957 convention from that point of view, it must be considered a success.

William T. Sesnon, oil company executive and chairman of the Los Angeles Community Redevelopment Agency since its establishment in 1948, set the stage for discussions covering the increasing problems facing California cities and towns and the architect's role in helping to solve them. Using the $40 million Bunker Hill project as the basis for his talk, he explained that such a program has three phases—conservation, rehabilitation and redevelopment.

Such projects are slow in developing, Sesnon explained, pointing out that the Bunker Hill idea actually goes back to 1923. He emphasized that architects should be prime movers in such programs, but cited a lack of interest in the profession.

Dean Arthur B. Gallion of the School of Architecture at the University of Southern California did a top-notch job in moderating the seminar that followed. Panelists were Henry A. Babcock, Los Angeles consulting engineer; Charles B. Bennett, former director of planning for the cities of Milwaukee and Los Angeles and now a private consultant; John Cotton, San Diego realtor; and Lawrence Halprin, San Francisco landscape architect.

Some of the random comments: Natural laws must operate in community planning . . . Public housing creates second-rate citizens . . . Planning must be human in scale . . . Los Angeles is too far beyond the human scale . . . You can't design a community on a drawing board; it must be cultivated and nurtured . . . Zoning confirms natural trends . . . Our suburbs are sterile and need variation.

Keynoting the "Design Through Structure" portion of the program was R. Buckminster Fuller, designer and inventor of such structural innovations as the geodesic dome. Always a provocative speaker, he used slides to show the development of a wide range of his ideas. He predicted that structures of the future will be so light they will be transported by aircraft anywhere in the world.

"Contemporary Engineering Aids to Design" was another interesting seminar, with one speaker stating that the Fuller dome is not architectural at all. Architect Gardner A. Dailey of San Francisco found himself busy keeping his panelists in line: architect-contractor Felix Candela of Mexico City and Los Angeles engineers Edgardo Contini and Richard Bradshaw.

Some of their opinions: Marriage of the architect and engineer is not advantageous . . . Structural form alone is not an architectural expression . . . Our structural forms are obstacles to present-day design . . . There should be more emphasis on design and less on trickery . . . Design is a compromise of existing conditions . . . There is very little texture, art, shadow and subtle color in today's architecture . . . Architecture will become less and less individual buildings and more and more total spaces . . . An attempt to be original in architecture is dangerous.

One of the fine presentations during the Coronado meeting was an AIA research committee panel devoted to the aesthetic side of curtain walls, which unfortunately was missed by some prospective listeners because it overlapped with another session. Participating were three architects—moderator Anthony Thormin and George Vernon Russell, both of Los Angeles, and Melvin Frank of Columbus, Ohio—and four Producers' Council representatives—E. J. Lawson of Aluminum Company of America, Albert E. Barnes of Gladding, McBean & Co., Ralph Lane of Pittsburgh Plate Glass Co. and Morris Hales of Ceco Steel Products Corp.

Wallace Bonsall of Pasadena was convention chairman.

AIA conventions at beach resorts

by ROBERT E. KOEHLER, Editor

Photo-Art Studios

At Gearhart: probing self-analysis

Little wonder if the architects who attended the sixth annual conference of the Northwest Region, AIA, at Gearheart shun the psychiatrist's couch for quite a spell. During their stay on the Oregon coast October 17-20 they underwent a collective self-analysis, ably led by San Francisco architect Henry Hill, who was assisted by several colleagues.

The Northwest traditionally comes up with a stimulating program and the more than 300 registrants—about half of them architects—from Oregon, Washington, Idaho and Montana found that 1957 followed the rule. And as is their custom, for the most part they faithfully patronized the sessions, foregoing the perfect weather and the lure of the beach and the green.

The Northwest makes the most of its guest speakers and called on the principal ones in addition to Hill—architect Francis Joseph McCarthy of San Francisco, Dean Jose Luis Sert of Harvard's Graduate School of Design, and New York editors Thomas H. Creighton of Progressive Architecture and John Knox Shear of Architectural Record—to appear on more than one occasion. Thus, although there were several separate seminars, subject matter tended to overlap, giving an unusual degree of continuity to the conference theme, "Expanding the Profession of Architecture."

The writer who attempts to convey the spirit of any Northwest meeting, and Gearhart in particular, is really put to task, for so much of the interplay between speakers and audience defies a reportorial approach. The architects in this region have always kept their conference in proper perspective, devoting a good share of time to the truly significant aspects of architecture, keeping social affairs within reason and getting official business done in generally concise, well-organized sessions. Not that they are bashful about speaking their mind where the institute is concerned—far from it; and this year was no exception despite two representatives from Washington, D. C.: national president Leon Chatelain and Edwin B. Morris Jr., assistant to the executive director.

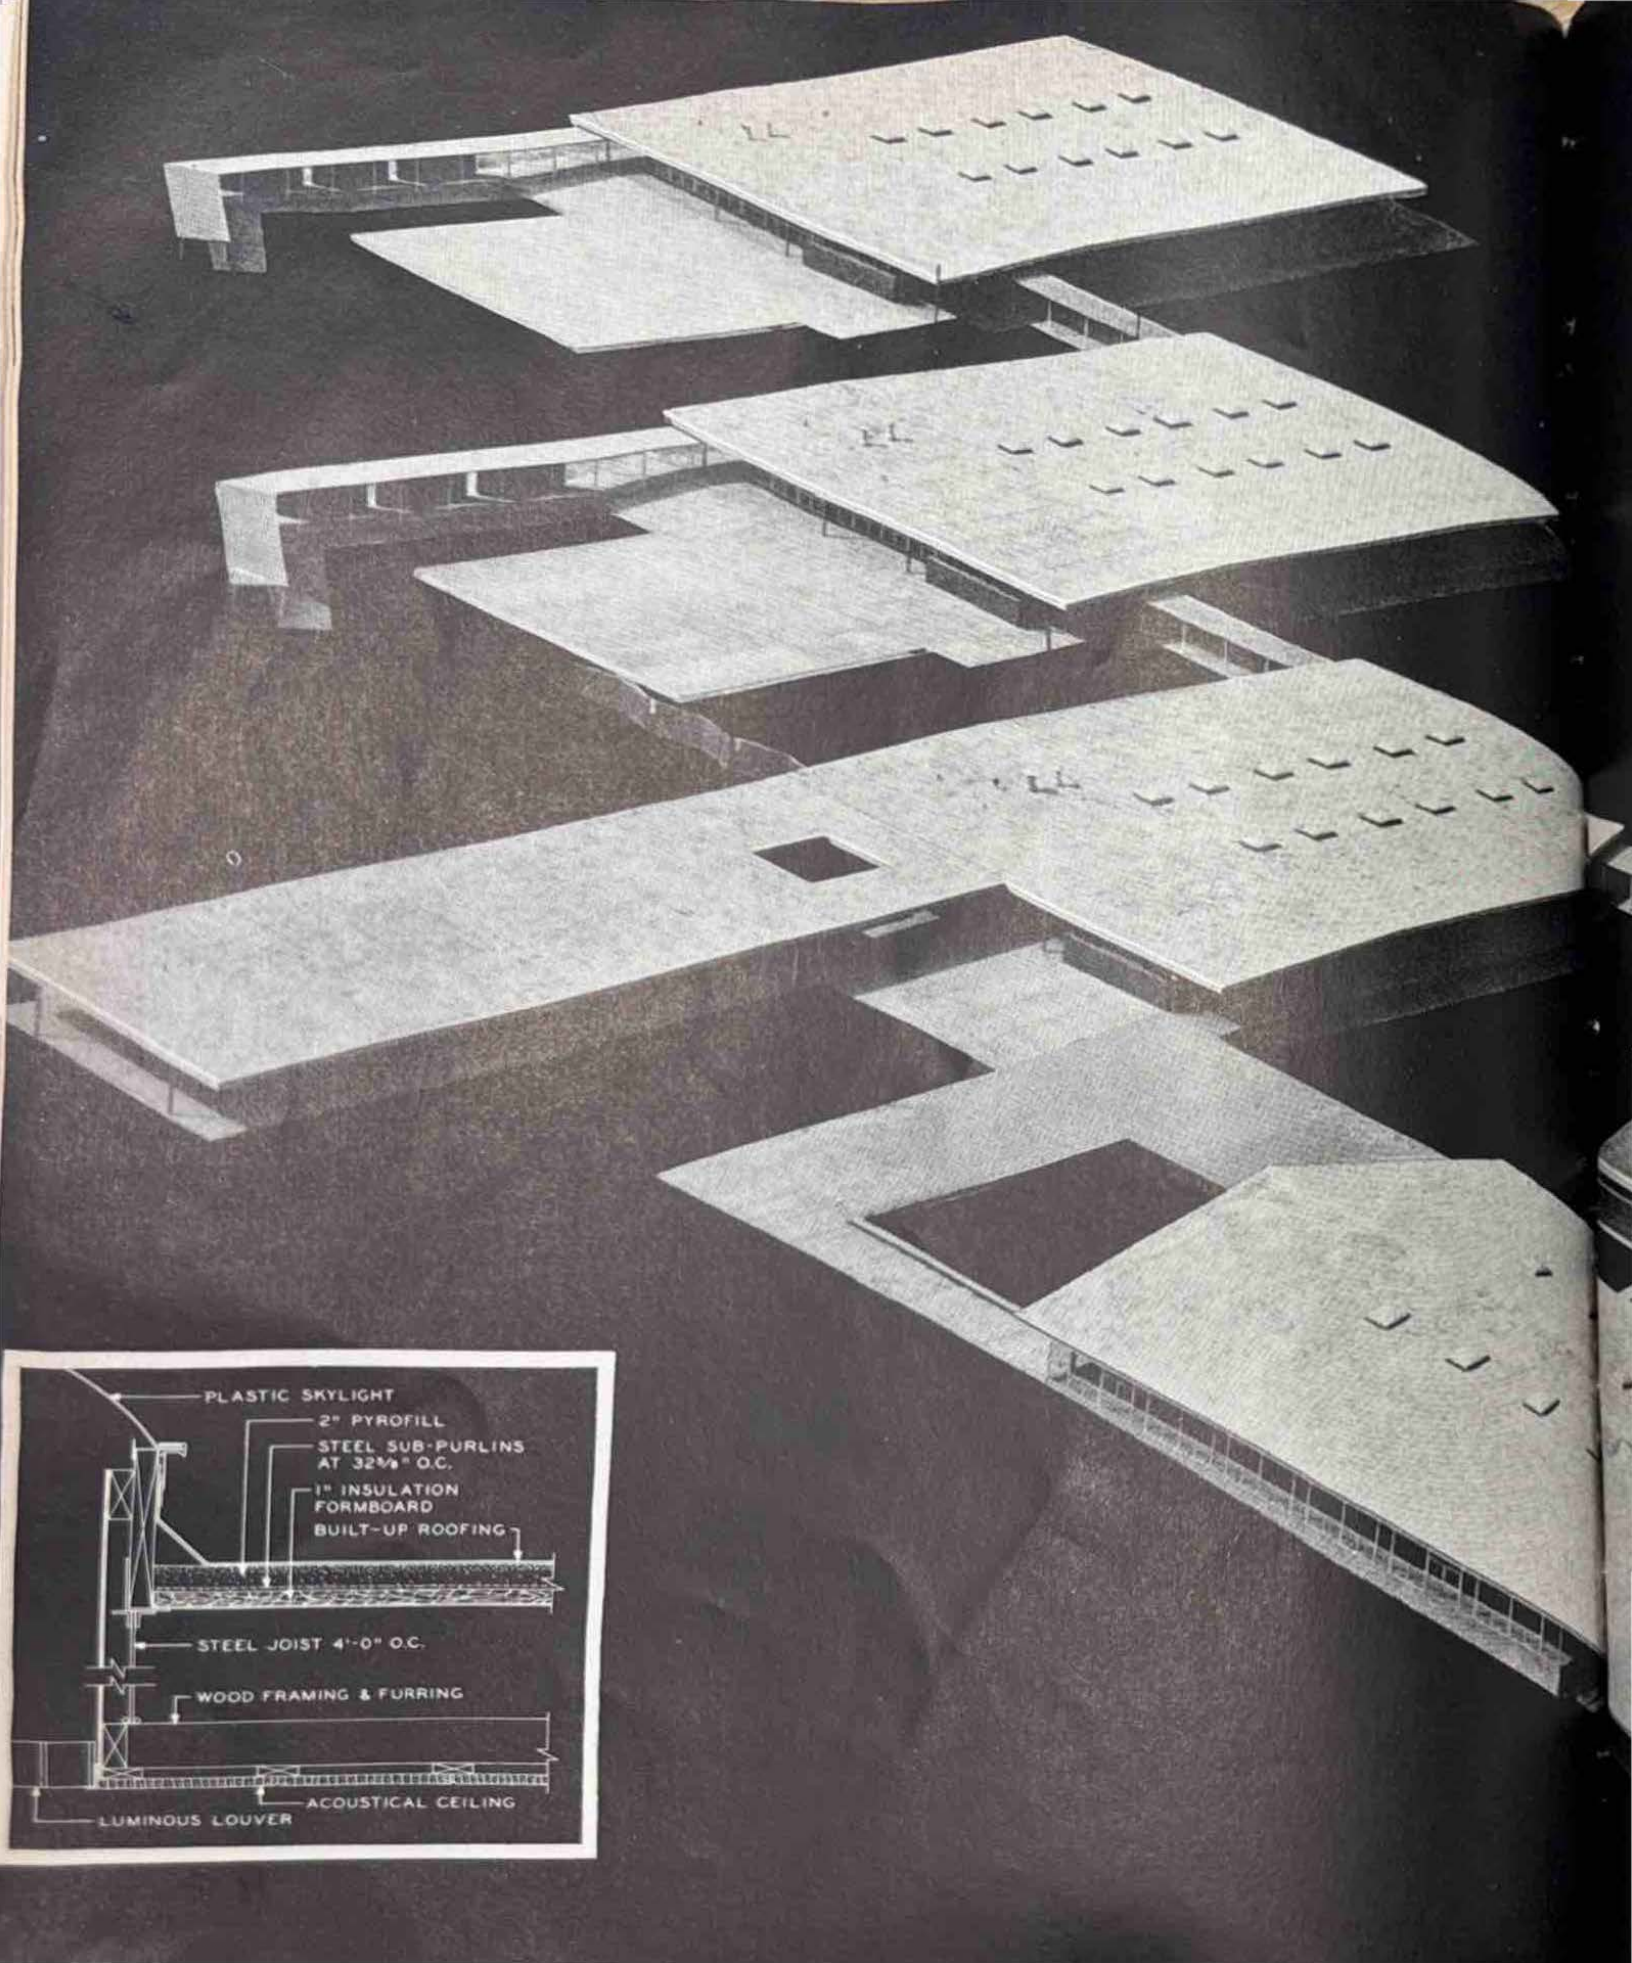
"Expansion of the profession is expansion of the individual," declared Hill, who made the greatest impact at Gearhart. Maintaining that the practice of architecture in America is mediocre, he stressed the need to reappraise one's self and his responsibilities, the need to build up individual integrity and conviction. "The architect is a man consumed by his own subject," he said. "You practice architecture because you MUST!"

Hill asked his fellow architects what they had done to gain public respect. "If we become engulfed in mediocrity, then we perform no service to the public." He emphasized that architects must establish goals rather than follow and deplored the small Lever Houses and Secretariats which are springing up all over the nation.

Sert, who is mainly concerned about the shape of our cities in years to come, said that the architect is in a transitional period: he talks about being a leader, but sits back and does nothing. The Harvard dean added that the attitude of the profession has become "incestuous."

People get better schools, hospitals, shopping centers and roads because they ask for them; but they don't ask for better cities because they don't know what to ask for, Sert pointed out.

Creighton, whose delightfully funny introduction to his banquet address had the diners rolling in the aisles, listed five basic points of criticism, but went on to offer this defense on behalf of the architects:



1. In a business sense, while a cer-

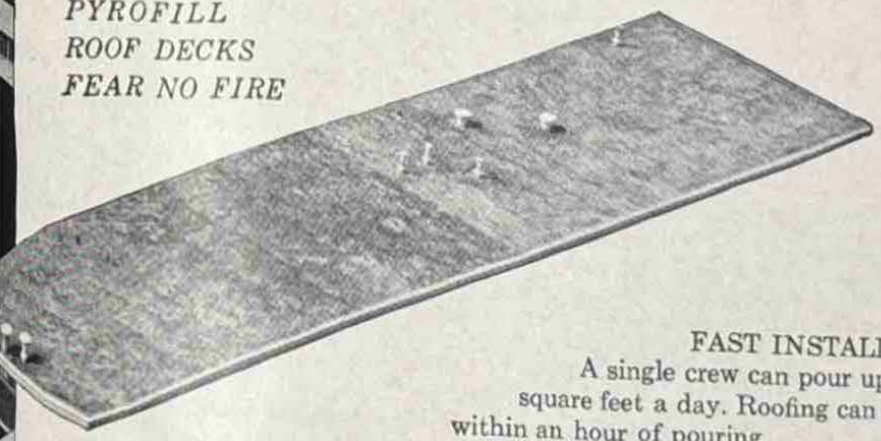
PYROFILL*

GYPSUM ROOF DECK SYSTEMS

PYROFILL gypsum concrete poured over U.S.G. formboards on steel framing provides all these outstanding advantages:

FLEXIBILITY – Variety of U.S.G. formboards provides the versatility to meet the most exacting requirements of specific requests for economy, appearance, fire resistance, insulation, strength and sound absorption.

LIGHTWEIGHT – PYROFILL roof deck weighs only 10 to 12 lbs. per square foot; permits important savings in structural steel and footings.



STRENGTH, DURABILITY – PYROFILL has a safety factor of 10 or more under normal roof loads. Decks erected over 30 years ago still give excellent service.

LOWER INSURANCE COST – PYROFILL fears no fire; often permits savings of 30% or more on insurance.

LOW MAINTENANCE COSTS – PYROFILL is an ideal base for built-up roofing; cuts roofing maintenance to a minimum.

ADAPTABLE – PYROFILL roof decks are suitable for flat, curved, or pitched roofs.

PYROFILL ROOF DECKS FEAR NO FIRE

FAST INSTALLATION – A single crew can pour up to 30,000 square feet a day. Roofing can be applied within an hour of pouring.

STRUCTURAL RIGIDITY – Bulb tee sections reinforce slab and along with incombustible gypsum provide lateral stiffening of structural steel framing.

SEISMIC FORCE RESISTANCE – Expensive cross bracing can be eliminated by using the PYROFILL deck as a horizontal diaphragm. PYROFILL meets the requirements of Uniform Building Code, California Division of Architecture, and all codes of the city and county of Los Angeles.

For full information, see Sweet's Catalog, Section 2e/Un, contact your U.S.G. Representative, or write Industrial Sales Department, 2322 West Third St., Los Angeles 54, California. For a new look at roof decks, be sure to ask about U.S.G.'s new color sound film, "Design for Tomorrow."

EXTERIOR INCORPORATES exposed steel pointed block (modified by small additions of yellow and orange); quartz panels finished in white cement; Norman red brick; amber cathedral glass in panes below ventilating sash.

Simple plan has space for offices, book store

Washington Conference of Seventh-day Adventists Office Building, Seattle, Washington

HOUSING the church organization's departmental offices and literature distribution center for western Washington, this two-story structure with partial daylight basement is marked by simplicity of plan and consistent detailing. It is sited on a corner lot which slopes in both directions, the parking and loading areas having access from two streets.

Just inside the main entrance is a centrally located reception lobby which controls circulation to all points of the building. This floor provides for executive and bookkeeping offices and the Book and Bible Store, which is entered from another street. The latter is treated as a separate department with a different address and keying, but a glass door connects its display room with the main entrance.

The second floor houses departmental offices, a large workroom and toilets. Offices are arranged in suites of two interconnecting rooms, accommodating a departmental head and his secretary. Each secretary's office has cabinetwork of ribbon grained Philippine mahogany on two walls, designed to hold such items as film strips, books, files, stationery and other everyday supplies, coat and hat—all concealed behind flush doors so that the room can always appear orderly. The workroom takes care of bulk storage, mimeographing and mailing.

The lower floor has a number of spacious storage rooms protected by a sprinkler system; an assembly room for meetings and social gatherings, served by a pass-through kitchen with stainless steel counters, built-in appliances and red birch cabinetwork; women's lounge, toilets and utilities.

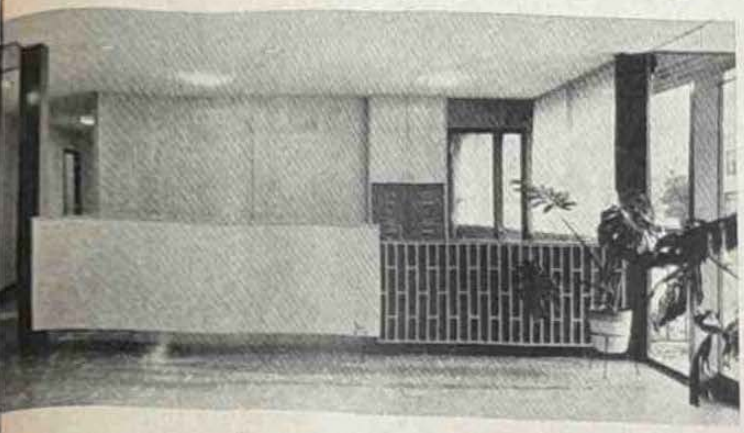
BOOK AND BIBLE STORE has separate entrance, but is connected to office portion by glass doorway. Display room is highlighted by select white birch cabinetwork. Sage green vinyl asbestos on floor is used throughout.

Art Hupy photos



SECOND-FLOOR LOBBY OVERLOOKS open, vinyl covered steel stairs. Light fixture by Irene McGowan picks up colors used throughout interior and exterior—black, mandarin, yellow, turquoise, sage green, pumpkin. Window sections carry out overall design of structure. Reception desk is of select white birch; grille hides heating unit.

OUTLINE SPECIFICATIONS

Structure: Steel frame—Pointer-Willamette Co.; precast lightweight channel slab floors and roof—Olympian Stone Co.

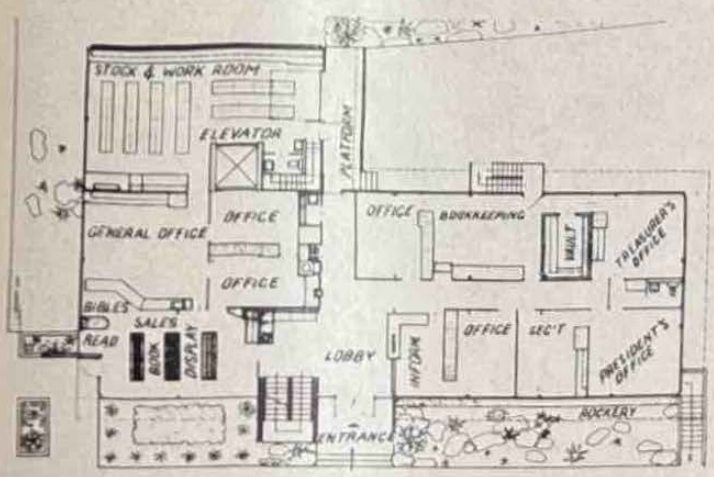
Exterior Finish: Norman brick—Builders Brick Co.; quartz panels finished in white cement (Mo-Sai)—Olympian Stone Co.

Doors: Entrance: free standing aluminum—Kawneer Co.; interior: wood—Elmer Moody Co.; hollow metal—Aetna Steel Products Corp.

Windows: Steel—Fentron Industries, Inc.

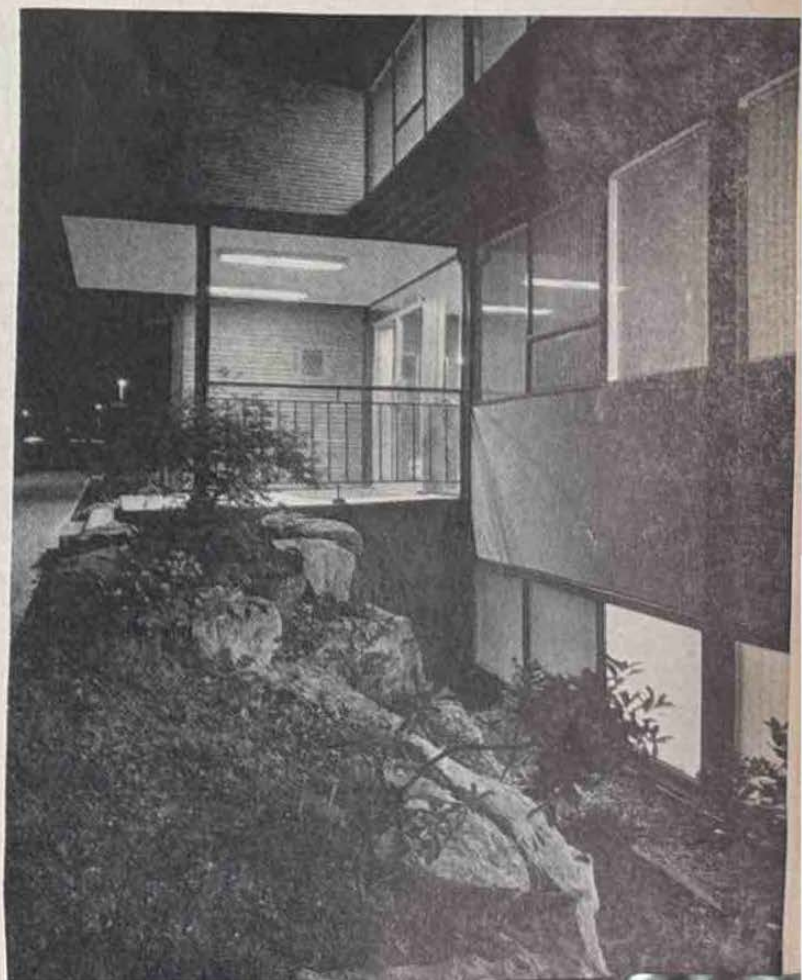
Interior Walls and Partitions: 2-in. solid plaster—U. S. Gypsum Co.; Norman brick—Builders Brick Co.

Ceilings: Plaster—U. S. Gypsum Co.; acoustical—Simpson Logging Co.



Cabinetwork: Philippine mahogany, red birch, select white birch—Elmer Moody Co.

Freight Elevator: Self-supporting electric—Otis Elevator Co.



Total Cost: $214,578 (excluding fees and land cost).

Total Area: 13,600 sq. ft. (excluding loading platform and covered entrance).

Date of Completion: September 1956.

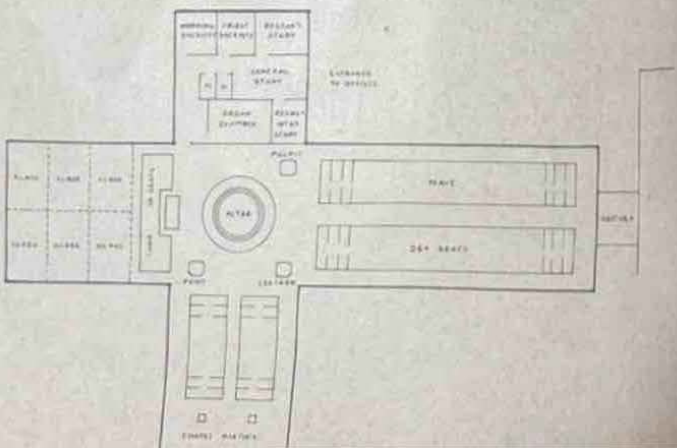
ROCKERY TO RIGHT OF MAIN ENTRANCE features Japanese cutleaf maple, natural mountain rock outcroppings. Storage rooms in basement are placed on high grade corner of building so that other habitable spaces receive natural light without use of areaways.

Religious plant can grow with parish

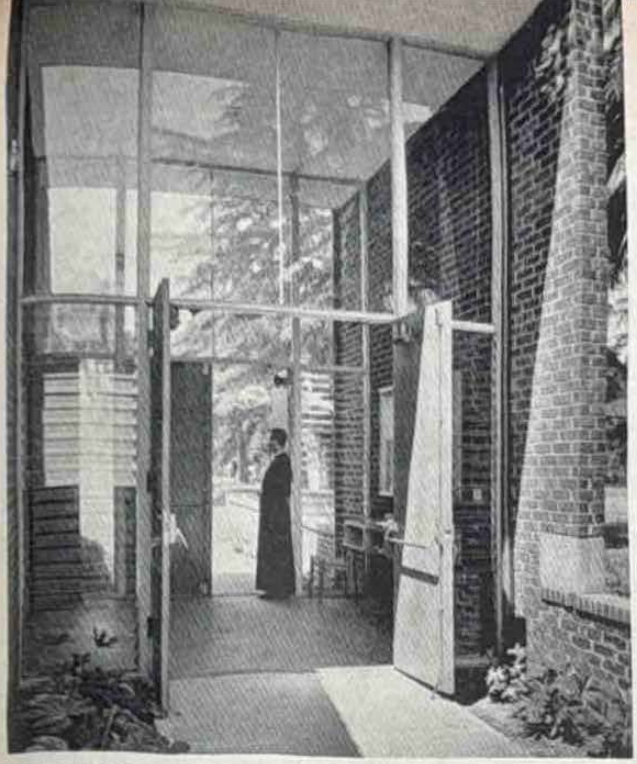
THE PLAN of this religious plant is truly geared to an expanding parish which has trebled in size within the last three years. Completed thus far are the church building itself, administrative offices and six Sunday school classrooms.

Most notable feature of the church is a free-standing altar table at the center of the cruciform structure, enabling more than 500 persons to be seated with 90 ft. of the altar rail and pulpit. Since it is on a rotating base, the altar can face either the chapel (144 seats) or the nave (364 seats); thus with one central altar the congregation can have a more intimate place of worship or can accommodate larger numbers for special religious festivals. And if still more seating is required, the classroom area can be opened up to become part of the church.

Future plans call for a parish hall auditorium with a 20-classroom basement, to be connected to the church building by another classroom wing and a foyer area, all around a central court. The auditorium can serve as a Sunday school chapel, as a meeting place for clubs, for parish dinners and dances and, with stage and equipment, for drama groups. The foyer too can function as a multipurpose unit: as a display area for books and pamphlets, for additional classrooms when needed or for overflow church crowds.

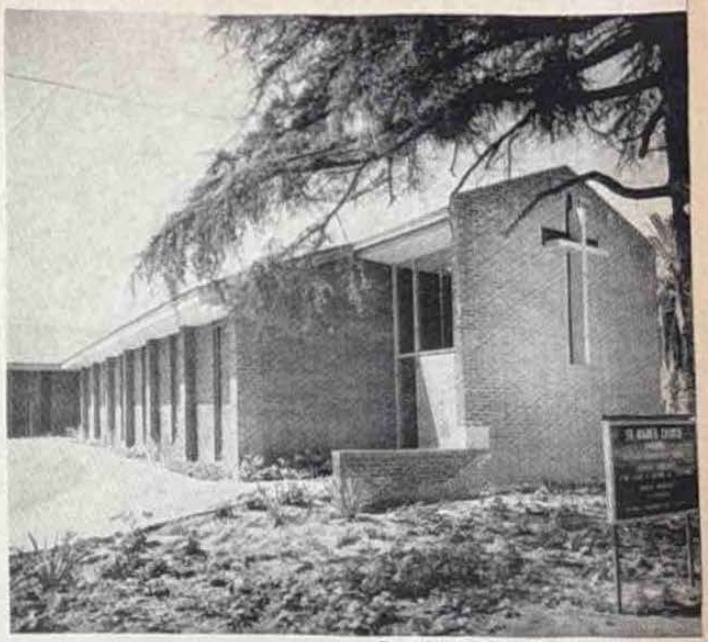


St. Mark's Episcopal Church
Van Nuys, California



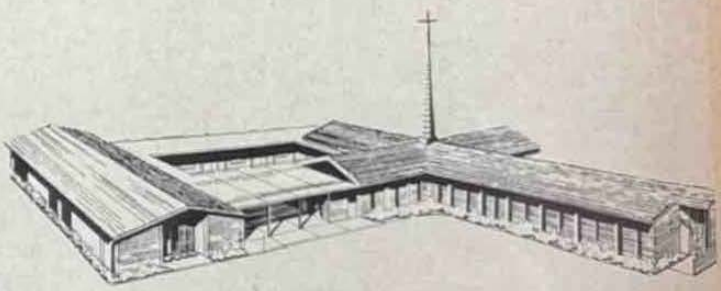
CARLETON MONROE WINSLOW, AIA, Architect

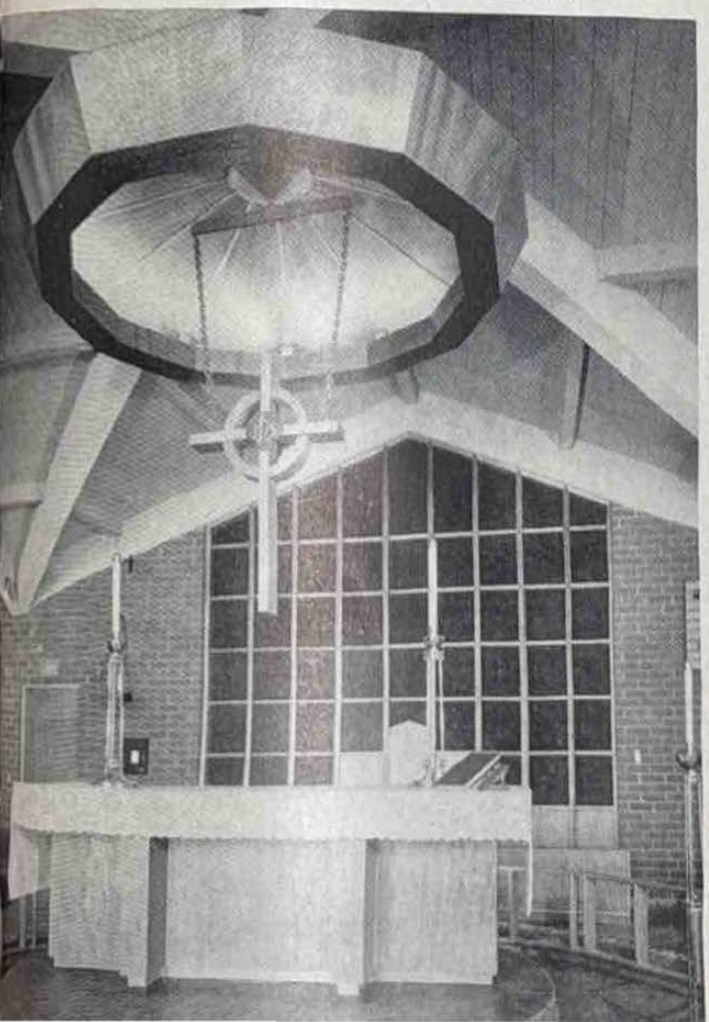
EUGENE BIRNBAUM, Structural Engineer



RICHARD MUHLEMAN, Electrical Engineer

CHARLES MILLER, General Contractor





CHURCH PROPER WILL BE CONNECTED to future parish hall auditorium by means of another classroom wing and foyer area around central court, as shown in sketch.

Douglas Simmonds photos

ALTAR TABLE ON ROTATING BASE can serve either chapel (on opposite page) or nave, is completely surrounded by communion rail.

OUTLINE SPECIFICATIONS

Structure: Steel apex with structural brick columns.

Exterior Walls: Natural brick.

Roof: Steel bent system.

Windows: Beaded glass, clear and fixed louver sliding.

Doors: Mahogany.

Floors: Concrete, wood.

Interior Finish: Natural brick.

Ceilings: Wood, acoustical tile in offices, classrooms.

Heating: Forced air radiant.

Total Area: 13,035 sq. ft.

Total Cost: $137,549.

Cost per Square Foot: $10.55.

Date of Completion: September 1955.

CURTAIN WALL EXTERIOR AND NON-BEARING PARTITIONS exploit flexibility of lift slab construction (Youtz Slick method used by Northwest Lift Slab Corp.) Exterior walls are of aluminum sash set in extruded mullions, with porcelain enamel panels backed up with detached insulating panel. Considerable use is made of brick inside and out.

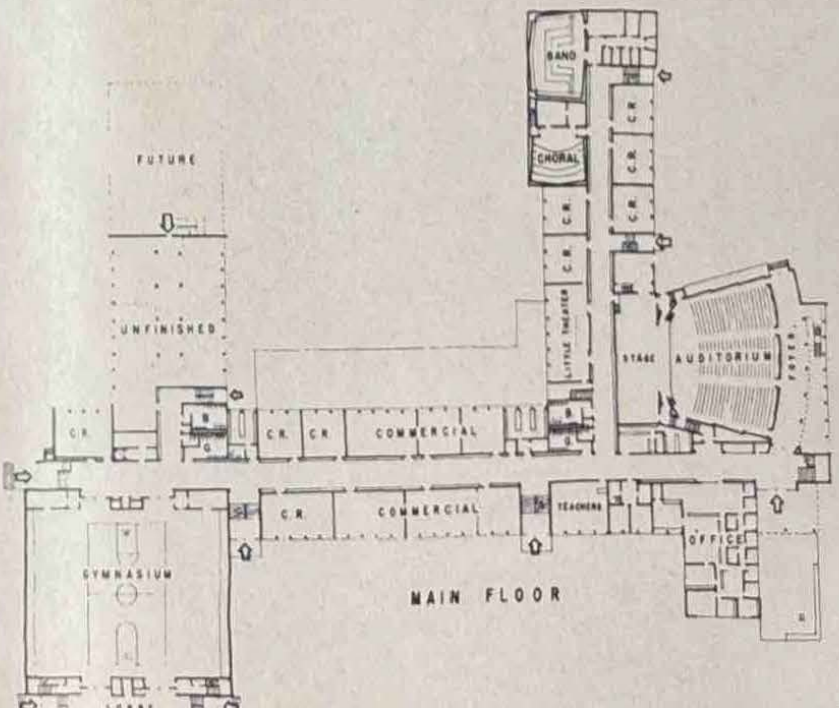
Donald Edmundson photo

CURVED WALL forming back of auditorium is finished with random pattern mosaic tile and furnishes serviceable yet natural appearing area for display of student art work.

Portland's first lift slab school

Art Hupy photos: above and p. 18

LIFT SLAB, which has been used rather extensively in California and to some extent in the Northwest, is relatively new in the Portland area. Thus when this high school was designed to utilize this type of construction, it caused considerable interest from the start.



Reduced to its most elementary form, lift slab may be described as a system whereby the ground floor slab is poured, columns set in place and subsequent slabs poured directly on top of one another. Hydraulic jacks are then placed on top of the columns; lifting rods extended down and fastened to castings around the columns; and the slabs one at a time lifted to their final place and welded to the columns.

The building was sited on a 36-acre tract in the southwest portion of the city, draped over the top of a hill, with a 100-ft. difference in elevation. The school is located at the crest of the hill, commanding a view of Mount Hood and the Cascade Mountains to the east and of the Tualatin and rolling hills to the west. Athletic fields are found on terraces stepped into the long slope to the west side of the main structure. A lighted parking area for 480 cars is arranged around the building. A future elementary school is proposed in an area reserved on the lower terrace at the west, reducing the high school site to about 26 acres.

The school was planned for an eventual capacity of 2,400 students. However, the original construction eliminated one wing and left seven classrooms unfinished in part of the building to reduce the immediate capacity to 1,600. Heating plant, cafeteria, music department, etc., are designed for the eventual student development.

To minimize distances between classes inherent in a school of this size, the plan was consciously made as compact as possible. This was further necessitated by the relatively limited space available after necessary allocations for athletics and similar activities had been made. The classroom section is mostly three stories with double-loaded corridors. The majority of academic rooms are on upper floors, with shops, cafeteria, dressing rooms, etc., on the ground floor. Auditorium, gymnasium and cafeteria are arranged to be readily available for public use and accordingly are at widely separated locations. Entrances are made obvious by the design.

Total cost of the project is $3,731,000. Plans are now out to provide for completion of the seven classrooms and when the additional wing is added, the total cost will be $4 million.

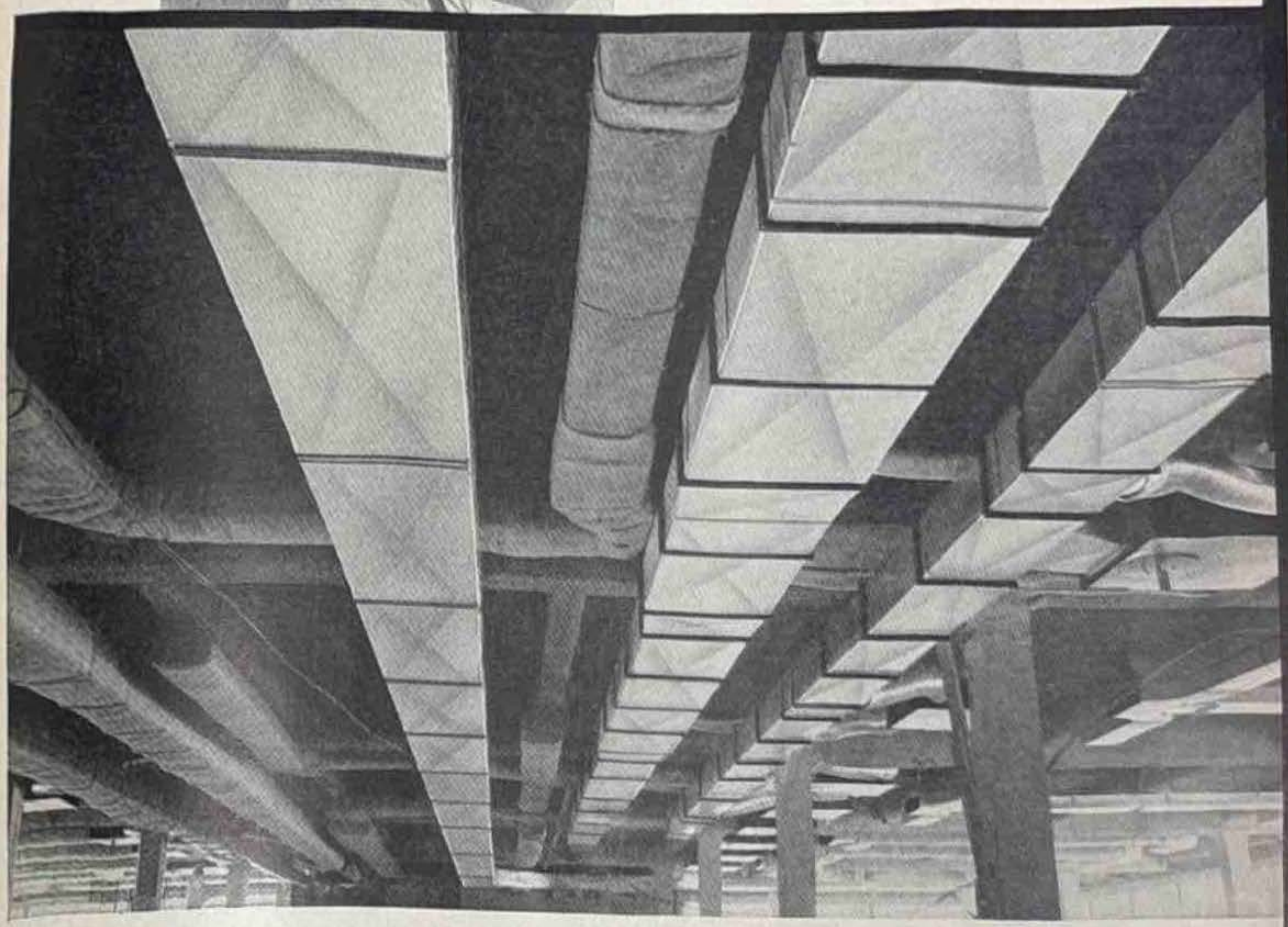
Auditorium, gymnasium and cafeteria are arranged to be readily available for public use and accordingly are at widely separated locations. Entrances are made obvious by the design.

Total cost of the project is $3,731,000. Plans are now out to provide for completion of the seven classrooms and when the additional wing is added, the total cost will be $4 million.

AUDITORIUM, with 1,372-seating capacity, has all facilities of professional theater. By planning room as broad and short as possible, distance between auditors and stage is kept to minimum. Ceiling is composed of alternate acoustical and hard panels, breaking up sound and giving appearance of hanging panels in gently curved surface. Stage has 40-ft. wide proscenium which, with stage lip, is formed of structural steel sheets to reduce battering so often heard in exposed corners of high school auditoriums.



TYPICAL CLASSROOM shows students seated around perimeter to facilitate group discussion. Chemistry rooms too are designed with laboratory tables arranged in this manner, permitting use of movable tables and variety of arrangements for recitations. When class is engaged in laboratory work, students face their own tables with backs toward center of room—practical both from supervisory point of view and as aid to concentration.

CAFETERIA is centrally located on ground floor, with large glass walls opening to protected terrace and lawn area. Food service is designed to utilize "hollow square" method rather than conventional food lines. Students come into serving area and go directly to counter which has dish they desire. Change windows are provided outside, much like an automat, and food is payed for as each item is picked up.

Welcome touch in 1st National's new Portland home is "zone control." Personnel simply set handy wall dials for the blend of air they wish. Hot and cold air streams meet in hi-pressure "mixing boxes"... blend and flow into offices at just the right degree for pleasant air conditioning.

Steel ductwork solves installation problems

Portland's newest banking office incorporates many architectural innovations. In addition to a handsome exterior, the 1st National Bank of Portland contains a modern, zone-controlled air conditioning system. Fifty tons of USS Galvanized Steel Sheets compose the ventilating ductwork which furnishes ideal temperatures throughout the year to every office in this four-story building.

Streimer Sheet Metal Works, of Portland, solved more than one installation problem by using USS Sheets. To fit construction requirements, they built the ductwork in varying depths ranging from six inches to sixteen inches. The steel sheets were ductile enough to wrap easily around sharp corners, form tight seams, and provide ample strength and corrosion resistance. Good reasons why USS Sheets are on the job today in this Portland installation and in so many others throughout the West!

Steel ductwork can solve installation problems in any office or industrial structure. Write to the address below for the names of ductwork fabricators who can provide you with additional information.

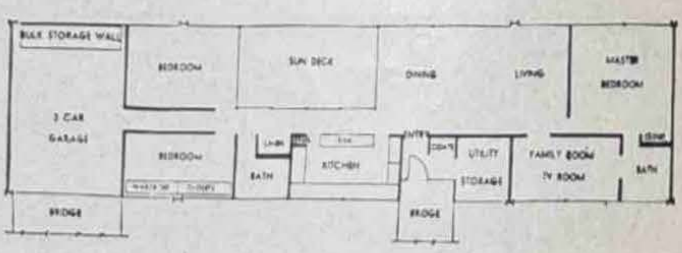
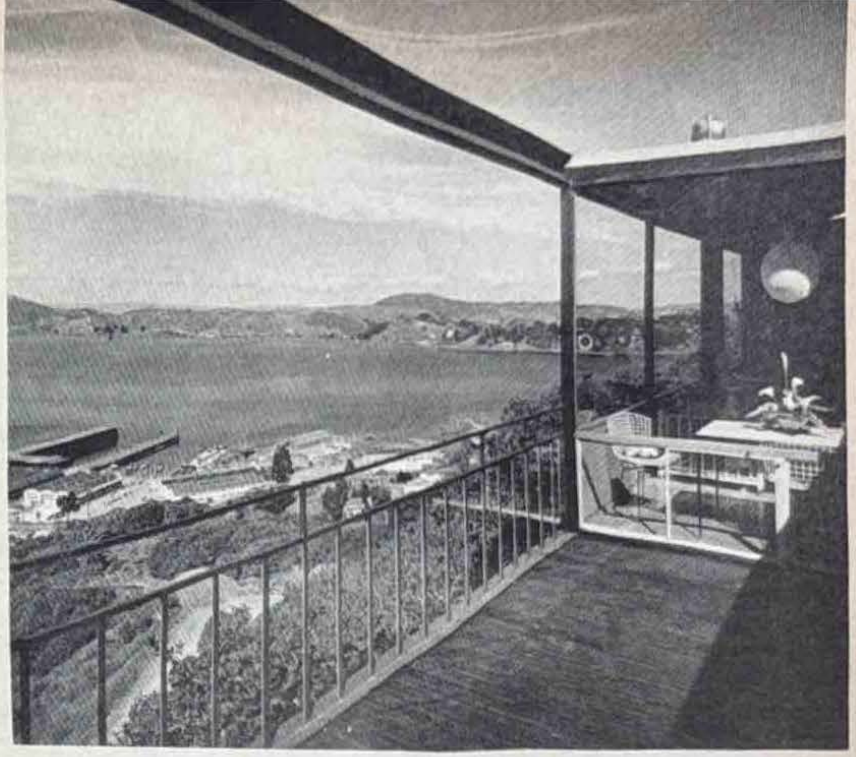
Steel framing for 'impossible' lot

STEEL WORK consisting of wide flange sections used as supporting columns and set on low foundation of eight piers is visible on steep slope of 120x70-ft. lot on Sausalito promontory. Spanning gully is 50-ft. bay.

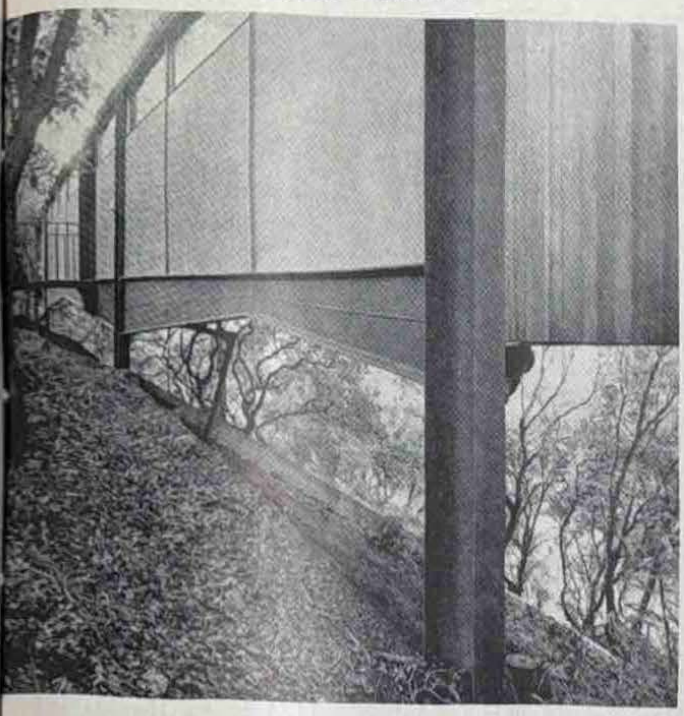


THE HILLSIDE SITE across from San Francisco Bay consisted of a slope of from 50 to 70% of uneven terrain covered by dense scrub oak, with a drain gully in its exact center. The architect turned for assistance to a civil engineer who went to steel framing for his structural design. He set the steelwork on the steep slope on a low foundation of eight piers connected with concrete tie beams, four piers at each end of the house.



Flange sections 14 in. wide were used for the supporting columns. Bays for the 100x22½-ft. structure were 25, 50 and 25 ft., the 50-ft. bay spanning the gully. Connecting girders supporting the house were fashioned from 20-in. I-sections, diagonally torch-cut along the web, from 28- to 12-in. taper and rewelded. Eight-inch wide flange sections were used in the roof beams.

In the exposed design the steel was shaped to follow closely the appearance of the stress diagrams of the structure. The exposed pattern of hipped girders, with broken lines, served to break the monotony of square shapes and angles. The 50-ft. bay spanning the gully left this portion of the lot open and free of structural elements which might otherwise impede drainage or cause slipping in severe water runoffs.



The 2,200 sq. ft. of living area was built for $24,000, or just under $11 per square foot. "Using the steel frame solved the costly problem of underpinning the house to elevate it to street level and the shorter time required for the steel work made the overall cost of the home lower," the engineer asserts.

Walls are of glass and plywood panels; the interiors are decorated in raw linen laid on fiberboard panels. Six layers of floor material, including one of cork, were placed over insulation. The rooms surround a glass enclosed deck overlooking the Marin Hills and Richardson Bay. When business took the architect to another city, the house was sold and the new owners rearranged several rooms for less than $1,000. They doubled the size of the children's bedrooms by converting the play area; and enlarged the master bedroom by moving it from the view side (now the family room) to the space formerly devoted to a study, separated from the living area by a movable partition.

OUTSIDE PATIO IS GLASS ENCLOSED on three sides. Steel framing eliminates interior bearing walls and columns which might otherwise limit view. Bridges lead to entry and to garage at extreme left.

OUTLINE SPECIFICATIONS

Structure: Steel (fabricated by Schrader Iron Works from rolled sections furnished by Bethlehem Pacific Coast Steel) on eight piers connected with concrete tie beams, four at each end of house; 14-in. flange sections for supporting columns; 20-in. I-sections (American Standard) for connecting girders.

Exterior Walls: Glass, plywood.

Roof: Tar and gravel.

Floors: Cork over five other layers of material and insulation (Celotex).

Interior Walls: Raw linen on fibreboard panels.

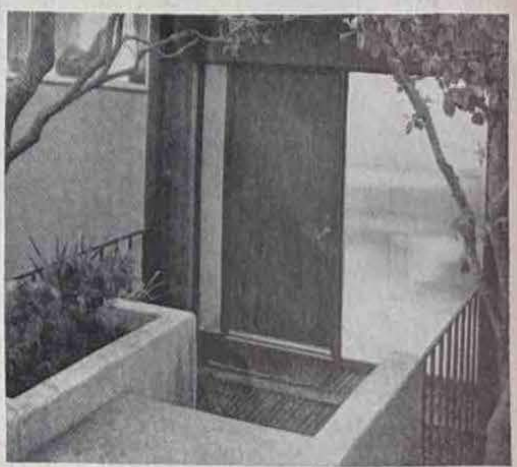
Ceilings: Exposed structural laminations.

Heating: Forced air.

Total Area: 2,200 sq. ft.

Total Cost: $24,000 (including utilities, fittings and sales tax, but does not cover alterations by new owners).

Cost per Square Foot: $11.



Date of Completion: January 1954.

Sausalito, California

The human side of specification writing

by KENNETH M. WILSON

ONE CANNOT ENTER into a study of specifications and their reception by the various segments of the construction industry without recognizing that the specifications that we write are like a mirror. In them can be seen every strength we possess and, with equal clarity, our weaknesses too. They bring to the cold light of day self-confidence or the lack of it. They cry out the relationship that exists between architect and engineer, between the design professions and their clients, contractors and manufacturers. They focus attention on the failings of our institutions of higher learning to whom we look for the engineers and architects of tomorrow. The day is now past when any architect, engineer or technician can do more than have a speaking acquaintance with more than a few of the complexities of science that go into today's modern building.

Architects are finding that they must rely more and more on the specialized services of consulting engineers who are qualified to design and specify our evermore complex building services. The deplorable practice that is indulged in by far too many architects of retaining a consultant as a blueprint maker and then denying him authority to supervise bidding and construction of his own work is one that must be wiped out. It is my humble opinion that not one practicing architect in 50 is qualified to even offer intelligent field supervision of contractors in the mechanical and electrical trades, not to mention the problem of ruling on the suitability of equipment for an application that was conceived, planned and specified by a member of the engineering profession. I firmly believe that any architect who wishes to keep step with our changing times must recognize and admit that pursuit of his profession is no longer a one-man show and that no one man can be all-seeing, all-knowing or qualified to sit in judgment of the work of other professions.

Consulting engineers too must learn many new things. One of them is that important as are physical comfort and convenience in the modern building, beauty, line, balance, color, arrangement and human motion are equally important. I have been in many new buildings where the architect's attempt to achieve this end was rendered useless by the engineer's placement of an ugly pipe line, a boxy duct, an ill-considered lighting fixture or an ill-chosen heating unit. A little thought and ingenuity on the part of the engineer could have made these objects complement rather than mar the inherent beauty of a given room.

Consulting engineers must learn that our fast-moving times are a challenge to their special skills. Our times offer an opportunity to truly grow in professional stature if engineers will cease to use the obstacles they face as excuses for compromise. Just as long as a consulting engineer will permit himself to be relegated to the position of a blueprint maker, just so long as he will permit an ill-qualified architect to make the decisions he alone should make, just so long as he fails to follow his own work with faithful field supervision, then just that long will he work for a pittance instead of a fee, because so long as he does, that's all he is worth.

Another point that is badly in need of attention is the relation between actively practicing architects, engineers, technical designers and the instructors and professors in our engineering and architectural colleges. We criticize these men in engineering education on several counts. First of all they are indoctrinated with the idea of so arranging their courses of instruction as to prepare their graduates only for work with industrial and manufacturing concerns. Very few of our engineering colleges make any effort to teach the fundamentals of business management, public relations, public speaking, professional ethics, engineering law and applied psychology as a required or even available part of engineering training. Yet if you check with any professional engineer, it will be found that more than 80% of his time is devoted to work in the fields which are largely ignored by our institution of engineering education.

Almost none of our colleges of engineering even bother to acquaint their students with the kind of work done by a professional consultant in private practice. Yet in nearly every professional examination board in the nation, you will find the personnel of engineering education represented far beyond their proper proportion in determining who is and who is not competent to practice as a professional consultant. Even worse, many of them who are technically licensed consultants offer their services to government and industry at cut rates, utilizing student help and college facilities to enable them to cut their fees. It is not surprising that the private consultant who must bear the cost of operating an office and paying employees is most unhappy about this cut-rate, extracurricular activity.

Still another sore spot is that of free engineering and specification service offered by industry to prospective customers. It is asking too much of an engineer or architect to expect him to specify the products of a manufacturer who offers free design to anyone who will buy his products. If manufacturers will have their products well received by the design professions, then they must stick to manufacturing and selling and leave the design field free for the professional designer.

The problem of deteriorating relations between the general public and the design professions is one that is deeply rooted in the inadequacy of our specifications, in professional administration of these specifications, in poor support of these professions by our colleges of engineering and architecture, and in competition between industry and the public consultants. All of the design professions have paid far too little attention to the way their efforts are presented to society and have made little or no effort to acquaint the general public with the architects' and engineers' place in the scheme of daily living. It therefore follows that so long as the cost of building continues at an unjustified rate of increase and public work costs exceed both estimates and the public's ability to pay, so long as professional infighting continues, we cannot expect the public to swallow it with a smile.

These are the human problems that must be solved if the design profession will keep pace with our fast moving times. This is the unpleasant reflection that faces us in the mirror of our own specifications.

Material handling depends on planning

"FOR MANY COMPANIES, the greatest deterrents to the initiation of effective material handling methods and equipment are the basic restrictions imposed by building limitations."

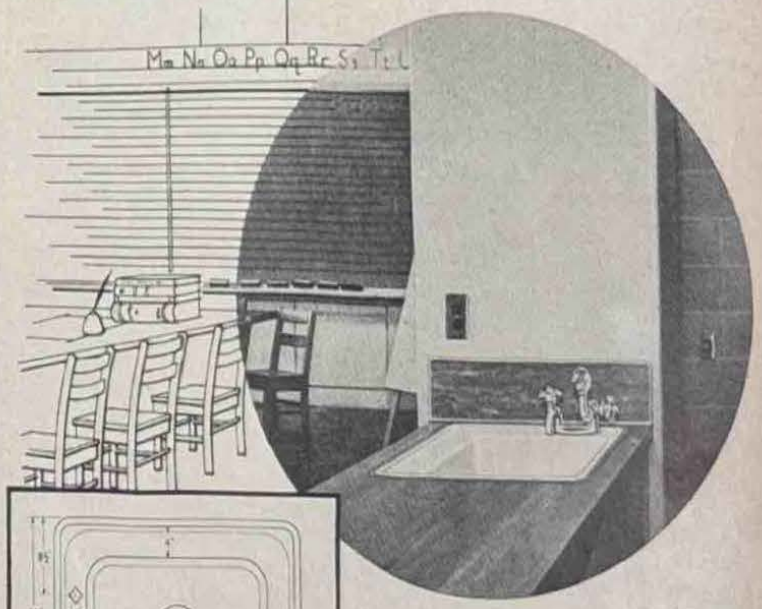
So says W. A. Meddick, vice president of Elwell-Parker Electric Co., Cleveland, in a special report to industry outlining those factors to consider in planning a new or modernized plant to take advantage of the many benefits from industrial truck handling.

Meddick stresses the importance of proper layout and material flow and suggests following these points to best utilize industrial trucks for maximum flexibility on a non-fixed route basis.

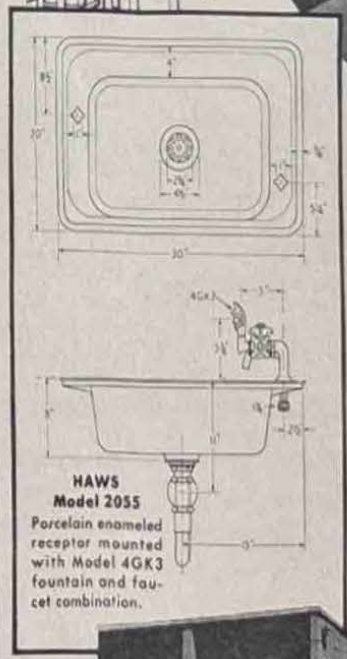
1. Locate incoming temporary storage as close to receiving areas as possible, so long as they are consistent with their point of original use on processing or assembly lines.
2. Where possible, move maximum size loads from storage to work stations. This minimizes the required number of truck trips and also reduces the chance of delays at work stations due to lack of available materials.
3. Be sure that trucks which handle loads from the ends of production, assembly and packaging lines have sufficient capacity and speed and are in adequate numbers to prevent bottlenecks.
4. When planning the location of work stations and processing fabrication equipment, allow sufficient area for proper maneuverability of industrial trucks together with their loads.

While most companies would prefer a one-story building, with its attendant handling and production advantages, obviously the majority of firms must settle for multifloor operations. Where such is the case, there are special considerations that must be observed. For example, in planning for location of elevators, points to be followed include:

1. Where storage is maintained on upper floors, goods most often handled to other floors should be located nearest to the elevators. This will minimize travel by industrial trucks, speed overall handling operations.
2. Where processing stations are located on upper floors, the end points of continuous lines should also be located as near to elevators as possible for the same reason.
3. Overall, elevators should be as centrally located as possible to minimize travel from all areas of each floor.



In some instances, elevators may not be sufficient to handle the required work volume and it may be impossible or impractical to install additional units.



In this case, the solution may be found in ramps, chutes or interfloor lifts to eliminate congestion. Such conveyances may prove valuable if properly utilized, but in all cases should be located to provide proper servicing by industrial trucks. If ramps are installed, it is important to restrict their grade to enable trucks to effectively utilize such roadways.

Building columns should be spaced for maximum efficiency of handling since loads may be even wider than the handling equipment used. Even more important is the spacing of columns for maximum utilization of available storage area. In this connection, the size of the loads to be stored will have an important bear-

Materials – Products – Tools

and the latest literature

SLIDING PARTITIONS: Outstanding feature of the Carlton sliding room dividers and screens is the elimination of a floor track. A sliding bottom floor guide permits the installation to be made over carpets without cutting, damage or obstruction of any kind. The mahogany or other hardwood panel frames are available in six colors; backgrounds of the panels are covered with either perforated metal or translucent plastic in a variety of designs. One of the applications is shown above—the use of a screen at windows in lieu of drapes.—Carlton Products.

(Item No. 1)

CEILING CONSTRUCTION: Plaster and wire lath for ceiling construction that offers such structural strength the ceiling cannot fall, unless the building collapses, is made possible by electrically welded steel wire, paper-backed K-Lath and specially designed, zinc plated earthquake staples. When applied under wood or steel joist, it forms a sheer ceiling. Tests show that wood joists break or wire ties fail before K-Lath gives away.—K-Lath Corp.

(Item No. 2)

CERAMIC TILE: Easier and faster installation of ceramic wall tile is possible with 12-tile sheets of Suntile marketed under the name Setfast. The 4¼x4¼ tiles are permanently mounted on a specially developed mesh which helps the installer work swiftly by adjusting to minor surface imperfections and remains imbedded in the mortar or adhesive, like the ribs in reinforced concrete. The concealed mesh unifies the tiles and gives the tile-to-wall bond an increased safety factor for vibration, structural shifts and temperature changes.—Cambridge Tile Manufacturing Co.

(Item No. 3)

PREFAB SKYLIGHT: Toplite is a prefabricated skylight which "selects" only the most desirable rays of sunlight the year round. Its function is based on use of solar-selecting prisms which "open" and "close" to admit only cool, even light while rejecting the sun's hot rays. The unit is available in five stock sizes ranging from 2x2 to 6x3 ft. Two types are offered: one a flange type permitting installation directly on the roof deck; the other for installation on prepared masonry, wood or metal curbs.—Kimble Glass Co.

(Item No. 4)

ALUMINUM PARTITIONS: To stress the design flexibility of conventional sections, Harvey has developed an aluminum partition system made of standard extruded shapes. Height of the partitions varies, depending on requirements, and supplementary paneling can be made of aluminum, glass or wood to harmonize with the decor desired. Standard extruded glazing channels can be used to hold the glass or panels. All the channel and square tubing can accomodate telephone, lighting or other service wiring, giving infinite flexibility.—Harvey Aluminum.

(Item No. 5)

INSULATION: A perimeter and cavity wall insulating material which permits on-the-job fabrication is reported to save up to 50% reduction in installation time. Of expanded polystyrene measuring 1 in. thick, 2 ft. wide and 8 ft. long, Scorbord has three striations cut the length of each board at the 3-, 12- and 20-in. marks across the width. This allows the installer to snap off widths of 3, 4, 8, 9, 12, 17, 20 and 21 in. as well as utilize the 24-in. width.—Dow Chemical Co.

(Item No. 6)

WOOD FLOORING: WoodX, which looks like cork, but is said to exceed oak in wearing ability, expands and contracts from floor to ceiling, not wall to wall. Random grain structure makes the floor non-slip and acoustically quiet. It is offered in both block and dowelled plank for mastic application or nailing and is laid, sanded and refinished just as any other type of wood floor.—L. D. Reeder Co.

(Item No. 7)

FLOOR FURNACE: Designed with a shallow well, an oil floor furnace built with the Electro-Jet burner is said to reduce fuel costs about 15% through utilization of No. 2 fuel oil. It is automatically self-lighting and available with thermostatic control which permits manual operation in case of power failure.—H. C. Little Burner Co.

(Item No. 8)

STAINLESS STEEL DOOR: Overly's all-stainless steel door is flexible in that it may be of solid paneling or may include vision lights or louvers for any building requirement. Suggested applications include lobby interiors, offices and banks. Complete assemblies, with stainless frame and hardware, are available in standard and custom sizes.—Overly Manufacturing Co.

(Item No. 9)

WATER COOLER: Newest Oasis electric cooler, the In-A-Wall, is adaptable for mounting to any basement's overhead joists, with both the drain and adjustable thermostat located in front for easy accessibility. A grill covers the unit when installed in or behind a wall and it is available in a stainless steel or with a prime coat ready for painting.—The Ebco Manufacturing Co.

(Item No. 10)

Latest Handbooks, Manuals and Literature

Yours for the Asking

HEATING: Carrier's 71-page manual entitled "Design Data Heating" should be helpful to architects and engineers in the layout of efficient heating systems for factories, auditoriums, gymnasiums and other large area buildings. It contains engineering information for determining proper application and capacity requirements of unitary or central plant systems. Subjects covered in the guide are survey, design conditions, transmission coefficients, heat loss calculations and piping sizes. Data for all sections of the country have been provided in a table listing key cities in each state along with their design temperature, annual degree days and prevailing winds.—Carrier Corp.

(Item No. 11)

ELEVATOR ENGINEERING: "Engineering Counsel on Elevators—a Service to the Architect" discusses the role of the consulting engineer on vertical transportation problems. Covered in the eight-page brochure are procedures available on planning for new construction or modernization, traffic surveys, writing of specifications, analysis of bids and supervision of construction through safety and other code approval.—Charles W. Lerch & Associates.

(Item No. 12)

INTEGRAL PIGMENTS: A brochure describing the uses and application of Sonobrite, integral coloring for concrete, mortar and stucco mixes, illustrates the four shades available besides black—tile red, green, buff and brown. The pigment can be added to concrete for floor toppings, walls, sidewalks and brick mortar, as well as to such commercial products as block, tile and precast masonry, without affecting their tensile or compressive strength.—L. Sonneborn Sons, Inc.

(Item No. 13)

ACOUSTICAL CEILINGS: To provide a fast means of preparing individual acoustical ceiling specifications, Armstrong has issued tear-apart specifications—perforations divide each paragraph—that can be removed from a booklet and reassembled to meet particular job requirements. The booklet in which they are bound is divided into three sections: job conditions and brief specifications; material specifications; installation specifications. If the architect needs specifications calling for a mineral wool ceiling to be applied with acoustic cement, he merely tears out the paragraphs pertaining to job conditions, mineral wool acoustical tile and cement installations, and circles the size and thickness of the material desired.—Armstrong Cork Co.

(Item No. 14)

WALKWAY COVER: Referred to as America's low-cost prefabricated walkway cover in a four-page brochure, the Childers model is an all-steel unit. It reportedly will save at least 30% over individually designed covers because it is mass produced and stocked for prompt shipment.—Childers Manufacturing Co.

(Item No. 15)

PRECAST CONSTRUCTION: The use of precast concrete frame, floors and roof in the Seahorse Hotel in Galveston, Tex., is described in a six-page folder that features construction photos and detail drawings of the crescent shaped project. The building has 104 guest rooms, each of which has a sundeck overlooking the Gulf of Mexico. Flexicore floors and roofs are exposed on the underside to form finished ceilings in the guest rooms and ceilings for the sundecks and outside walkways.—The Flexicore Co.

(Item No. 16)

STEEL IN SCHOOLS: To illustrate the use of its light steel structural sections in school construction, Penn Metal has issued a 22-page booklet with three sets of plans, drawn in perspective, showing typical classroome arrangements and methods of framing used for walls and roofs. In conjunction with these plans are enlarged sections depicting joints between load-bearing and non-bearing walls; methods of attaching collateral materials to the framing members; closet, fascia and roof details; and a number of alternate constructions, such as stucco and brick veneer for exteriors.—Penn Metal Co., Inc.

(Item No. 17)

MARBLE: The use of marble in a variety of applications ranging from countertops in the home to exterior veneer for large commercial buildings is described in a 28-page booklet. This profusely illustrated piece also includes brief discussions concerning the permanence, versatility and relative cost of marble.—Marble Institute of America.

(Item No. 18)

GLUED LAMINATED LUMBER: The revised "Standard Specifications for Structural Glued Laminated Douglas Fir Lumber" has been divided into two publications: the first covering design is intended primarily for architects and engineers; the second covering fabrication for timber fabricators and inspection agencies. The former treats design stresses, effect of duration of load and effect of curvature on stresses. Standard sizes of glued laminated members are given and the specifications provide for identification and inspection. The fabrication booklet contains requirements for lumber grades, adhesives, members loaded normal to the edges of the laminations, end joints and assembly of laminations into a member.—West Coast Lumbermen's Association.

NEW OFFICES: Marvin Witt Jr., architect, and William K. Roth, landscape architect, have opened offices at 909 Failing Building, Portland. After graduating from the University of Oregon in 1951, Witt took postgraduate training in Europe under the Ion Lewis traveling fellowship. He has been with Lawrence, Tucker & Wallmann for the past few years. Roth has been associated with landscape architects David E. Thompson and L. M. Thielen.

✔ Max E. Kuhr, who has been employed in architectural offices in the Los Angeles area, has established his own practice in the Filicetti Building, Havre, Mont.

✔ Seattle architect Artfield Johansen has opened an office at 1623 Boren Ave. (Mutual 5832). A graduate of the University of Washington, he has worked in the offices of Victor Jones, John Graham and Naramore, Bain, Brady & Johansen for the larger part of 17 years.

✔ Joseph H. Rudd, AIA, of Portland has established offices at 602 Hughes Building (CApitol 7-7282).

✔ The architectural partnership of Cummings & Martenson has been formed at 250 Market St., Kirkland, Wash., by Harry L. Cummings and Eugene G. Martenson, both of whom have been associated with several Seattle firms. Cummings studied at Iowa State College and Cranbrook Academy of Art; Martenson at the University of Washington.

✔ Eliseo O. Mariani and Donald A. Cumings have established the engineering firm of Mariani & Cummings with offices at 941 N. La Cienega, Los Angeles. Formerly of Buenos Aires, where the company maintains an office, Mariani is a graduate of Indiana University. Cummings received his BS degree at the University of Southern California. Both men most recently were employed by Pereira & Luckman.

ON THE MOVE: The architectural firm of Lindahl & Bacon is now located at 20 102nd N.E., Bellevue, Wash.

✔ Ernest M. Hicks of Coeur d'Alene, Idaho, who conducted his architectural practice in the Powell Building which recently burned, has relocated his office in the Victor Apartments.

✔ The Los Angeles architectural-engineering firm of Benedict, Beckler & Associates has moved into a building which it designed at 3501 Cahuenga Blvd. Sharing space in the new quarters are Albert Erkel & Associates, structural engineers, who recently were brought into association with the firm.

FIRM CHANGES: The Spokane architectural-engineering firm of Culler, Gale, Martell & Norrie has named a junior partner, chief draftsman Edward M. Watson, and six associate members: Keith T. Boyington, Donald R. Ericson, Donald L. Read, Charles F. Soliday, Darrel C. Stebbins and Frank E. Wescott Jr.

APPOINTED: The Pasadena and Los Angeles architectural firm of Neptune & Thomas has named F. Kirk Helm as director of architecture.

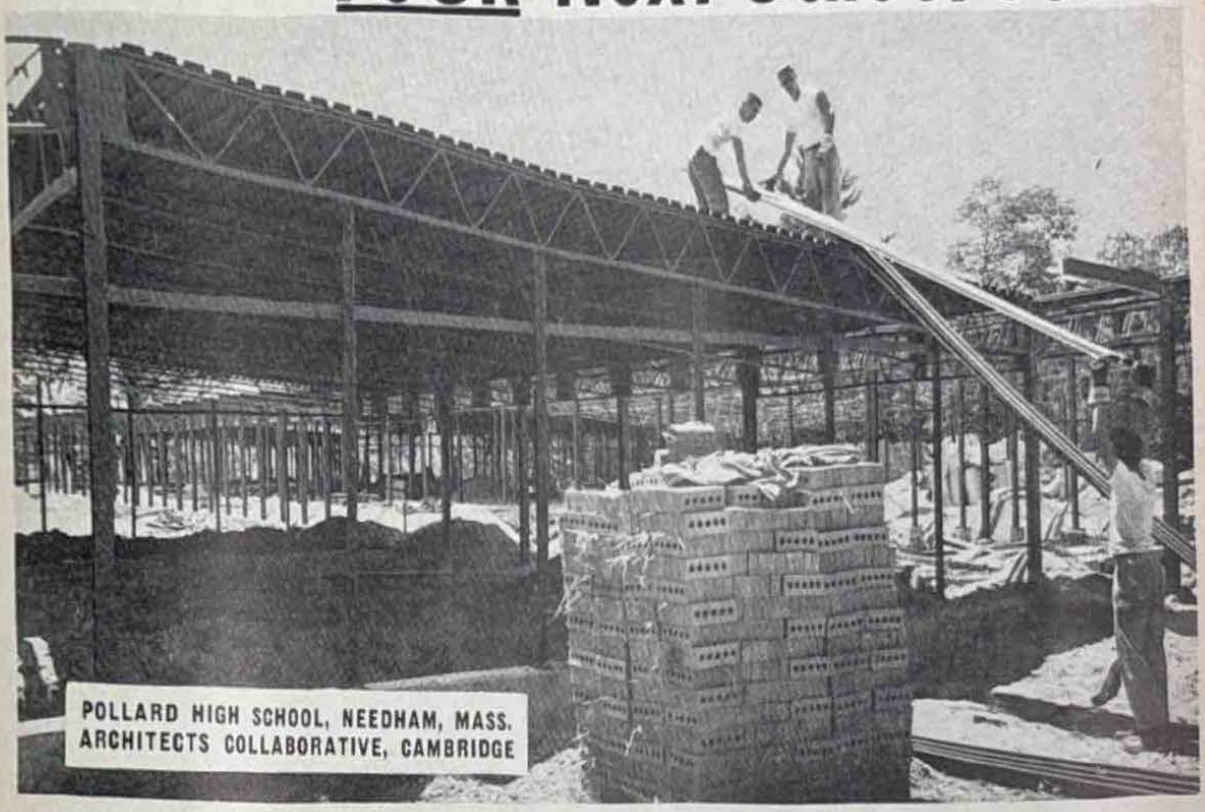
✔ Wallace V. Cunneen Jr., former vice president and board member of The Cunneen Co., Philadelphia, has been appointed to the executive staff

warm, dry floors,
lower fuel bills,
LIFETIME PERIMETER INSULATION

STYROFOAM®

Styrofoam, a Dow plastic foam, is ideal for horizontal or vertical perimeter insulation and for insulation under slabs. Its non-interconnecting cells block out heat, cold and moisture. Easy-to-handle Styrofoam resists rot, mold and deterioration.

Styrofoam also excells as roof insulation and for insulation-plaster base against masonry walls. Contact Wiley-Bayley for complete information on Pacific Northwest Styrofoam installations and recommendations to fit your special requirements.



® Styrofoam is a registered trademark of The Dow Chemical Company

Warehouses in Seattle, Portland, Spokane

Why Don't You Let V-LOK Sell YOUR Next School Job?

Acres Of Steel Framing Up and Being Roofed In And Not a Brick Has Been Laid

INTERLOCKING STRUCTURAL MEMBERS SPEED ERECTION

That's why V-LOK Steel Framing cuts construction time in half . . . 7 or 8 months instead of 12 or 14 months.

V-LOK reverses the old procedure of waiting months to lay up masonry walls and partitions so that a school can be roofed in and interior work started.

V-LOK with curtain walls designs into every need of the modern school and the Architect's structural requirements at a cost per square foot that warrants first consideration in every school district.

It only takes one V-LOK job and the savings in erection time to make a School Board and the tax payers in that district your friends for life. The V-LOK Design Manual will be a welcome addition to your files. Send for it.

MACOMBER CANTON 1, OHIO

of Welton Becket & Associates, with headquarters in the firm's San Francisco office.

Pereira & Luckman, Los Angeles architectural-engineering firm, has promoted William G. Brownie to director of construction management and named George W. Coleman, structural engineer and lawyer, as assistant director of engineering.

ELECTED: The Billings (Mont.) Architectural Association has named these officers: Lewy Evans Jr., president; Francis W. Gustafson, vice president; and C. D. Hall, secretary-treasurer.

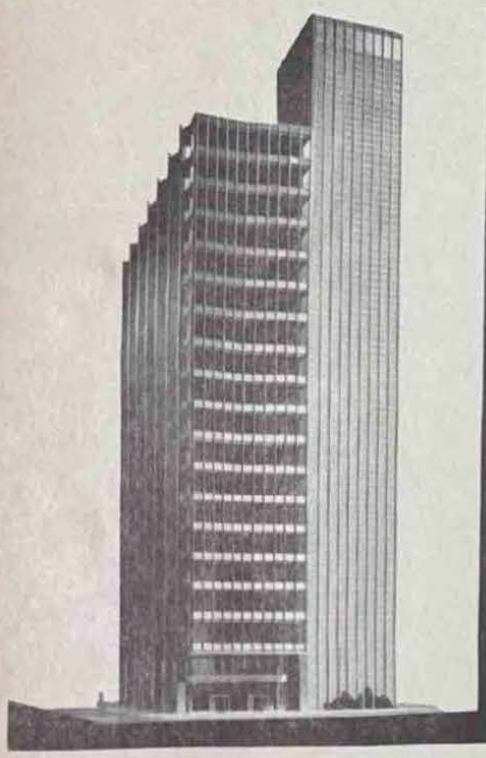
New president of the Professional Engineers of Oregon is E. R. Fletcher, industrial sales manager of Portland General Electric Co.

EXAMINERS: New officers of the Oregon State Board of Architect Examiners are Clarence H. Wick, president; Walter Gordon, vice president; George Whittier, treasurer; and Mrs. Rudy Meffert, secretary. Other members of the board are Cleo H. Jenkins and Irving G. Smith. All are from Portland except Jenkins, who comes from Corvallis.

SCHOLARSHIP: Fourth-year architectural students at the University of California will be eligible for a scholarship covering fifth-year study in a competition sponsored by Koppers Co., Inc., based on a problem for flat roofed non-residential structures. Introduced as part of the regular classroom study, the problem will be presented during the fall semester.

PLANNERS: Meyer Wolfe, associate professor in the College of Architecture and Urban Planning at the University of Washington has been named president of the Pacific Northwest Chapter, American Institute of Planners, at its annual meeting in Seattle recently. Other officers: Dale D. Cannady, Seattle, secretary; Lloyd Keefe, Portland, vice president; Harry Aumack, Spokane, Intermountain representative; James Wilson, British Columbia representative.

SEMINAR: A workshop seminar for architects has been set for December 7 in Hancock Hall at the University of Southern California as part of the national AIA post-graduate program.



Southern California AIA honors five projects

Top honors in the 1957 triennial Honor Awards program of the Southern California Chapter, AIA, have gone to the following five buildings (to be shown in next month's PA&B) and their designers:

- Los Angeles Police Administration Building by Welton Becket & Associates, J. E. Stanton, associate architect.
- Northrop Aircraft Engineering building and cafeteria in Hawthorne by Pereira & Luckman.
- Neighborhood Church in Pasadena by Smith & Williams.
- Attorney's office in Long Beach by Killingsworth, Brady & Smith.
- Residence in Long Beach by Killingsworth, Brady & Smith.

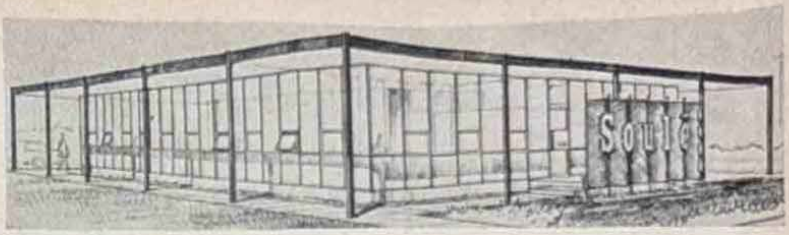
Over 200 entries were judged by a panel of 24 previous honor awards winners, who selected 40 finalists. The top five were then picked by a jury consisting of three architects—George Nelson of New York, Philip Will of Chicago and John Carl Warnecke of San Francisco—and Los Angeles industrialist Charles Ducommun.

Citations were presented at a dinner October 15 at the Ambassador Hotel. Maynard Lyndon was chairman of the awards program.

Another Outstanding CREST Tile-Set Thin-Bed Installation: Chicago's Giant INLAND STEEL BUILDING

ARCHITECTS: Skidmore, Owings, and Merrill, A. I. A., Chicago

TILE CONTRACTORS: Ravenswood Tile Company, Skokie, Ill.



What A Project! The Inland Steel Building — first new skyscraper to go up in Chicago's "loop" in 21 years. To help create a beautiful interior, the architects (Skidmore, Owings, and Merrill, A. I. A.) specified thousands of feet of ceramic tile and marble.

What A Product! The tile contractors (Ravenswood Tile Company) faced a problem: How to produce a superior job, a permanent job, *fast*, while holding costs down. That's why CREST Tile-Set, the amazing Thin-Bed Portland Cement Compound for installing tile *dry*, was selected for the job. You see, CREST Tile-Set cuts weight up to 65% . . . saves time by eliminating mortar box mixing, tile wetting, waterproofing, *and* lathing! Too, CREST gives a stronger, more water resistant bond! Remember the Inland Steel Building . . . specify CREST Tile-Set and be *sure*. It's installation-proved throughout the nation!

PA&B Suppliers

STEEL AND ALUMINUM FABRICATED by the client will be featured in box frame structure to provide for expansion of Soule Steel Co.'s Portland sales district. Roof overhang will provide sun shade and protected walk around 58x81½-ft. building. Architects: Scott & Payne.

• **Square D Co.** has appointed Dan Miller, Northwest regional manager for the past five years, as western division manager, with headquarters in Los Angeles. He succeeds Lawrence G. Maechtlen who has been promoted to first vice president in the firm's Detroit executive offices.

• **Chase Brass & Copper Co.** has opened a new warehouse and district sales office at 230 Shaw Road in South San Francisco.

• **Johns-Manville Sales Corp.** has appointed Tom Robinson, formerly in the Portland territory, to represent its building products division in northwest Washington, with headquarters in Bellingham.

• **Pioneer Manufacturing Co.** of Los Angeles has completed realignment of its sales organization with the appointment of Edward E. Headrick as assistant national sales manager. Joining the firm three years ago, he was promoted to staff assistant to the executive vice president in 1956.

• **Tamco Corp.** of San Rafael, Calif., has named Robert W. Ray as regional sales manager, covering southern California, Arizona and New Mexico from his Los Angeles base.

• **Laurence Myers & Co.**, 61 Bluxome St., San Francisco, has been appointed distributor of Morgen adjustable masonry scaffolding, with a territory covering northern California.

• **Harvey Aluminum** expects to have its aluminum reduction plant, now under construction at The Dalles, Ore., in partial operation early in 1958, with a planned capacity rate of 108 million pounds annually.

• **Waste King Corp.** of Los Angeles has promoted Elm Weingarden from assistant national sales manager to general sales manager, filling the vacancy created by the recent promotion of A. L. Haggard to vice president, marketing.

• **California Drywall Contractors Association** has elected Paul Johnson of Hayward to succeed Wayne Vaughn of Los Angeles as president. Other officers: Fred O'Haver, vice president; M. R. McColley, secretary; and Fletcher Reynolds, Fullerton, treasurer.

• **Western Air Conditioning Industries Association** has elected William P. Tennity of Los Angeles as president. Arthur Hess has been named vice president and Fred J. Tabery reelected secretary-treasurer.

• **Northwest Hardwood Association** has reelected Emmet J. Nist of Seattle Box Co. to the presidency for a third term.

• **Weber Showcase & Fixture Co.** of Los Angeles has a new vice president in charge of manufacturing, Don Smiley, operations vice president of Honeycomb Company of America. He replaces Fred Weber who is retiring to his ranch near Solvang, but will continue to serve as a director.

• **Holly-General Co.** of Pasadena has appointed Paul F. Bruning as vice president in charge of its manufacturing, heating and air conditioning plant.

• **Southern California Chapter, American Concrete Institute,** held its first general meeting November 8 in Los Angeles, with chairman Henry M. Layne outlining plans and objectives.

• **Pomona Tile Manufacturing Co.** has realigned its sales department, adding two new representatives in the

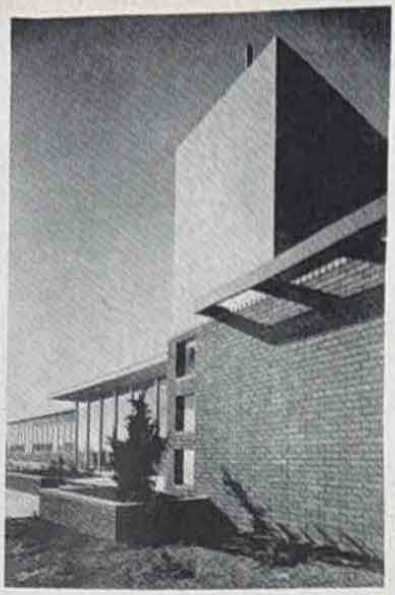
Greater Los Angeles area: Chester A. Barklow and Byron R. Smith. Smith replaces Larry Michals who was transferred to the Pomona main office in Los Angeles. Dale Ranney, who formerly operated out of the Los Angeles office, has been assigned to the Pomona, Calif., plant.



• **Kaiser Gypsum Co., Inc.,** has picked Warren R. French to supervise gypsum products sales from the San Francisco Bay region south to Bakersfield.

• **Triangle Steel Co.** of Los Angeles has promoted James McLaughlin, general manager for the past five years, to vice president.

• **Pendleton Tool Industries, Inc.,** announces that Henry W. Slining, works manager for its Los Angeles division, Proto Tool Co., has been elected vice president of the division.

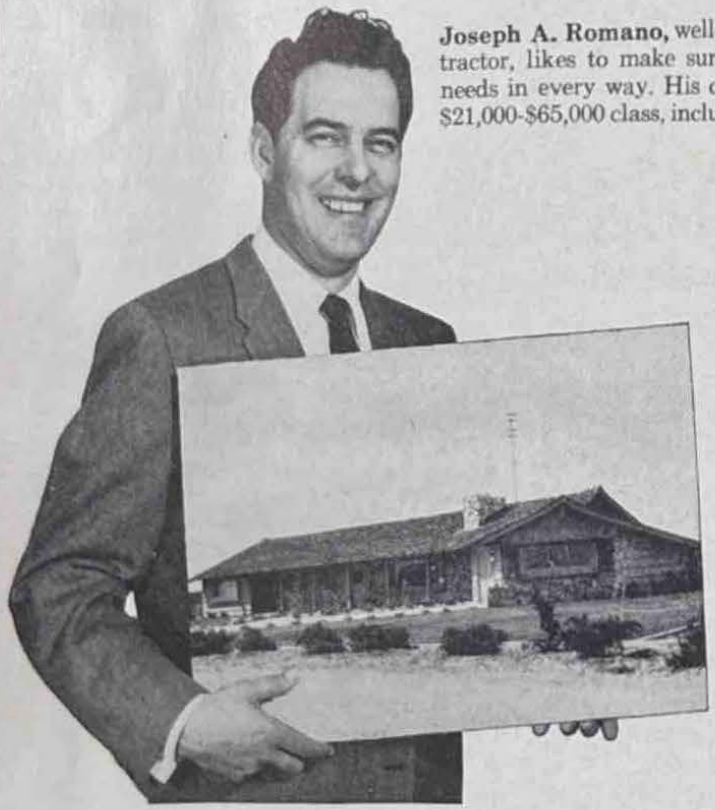
• **Kaiser Aluminum & Chemical Sales, Inc.,** announces that B. W. Blalock has been appointed architectural representative in the Los Angeles district. He will work with Walter Pruter.

• **Plywall Products Co., Inc.,** of Fort Wayne, Ind., is now equipping a branch plant in Corona, Calif., for production of its prefinished wall panels.

IN SAN FRANCISCO AREA—Distribution center for Sylvania Electric Products, Inc., provides 79,000 sq. ft., including space for western regional executive and sales offices serving eight states. Designers: P. H. Van Wert of Sylvania's facilities planning department, with John S. Bolles, associate architect.

•

• **The Tele-Jac Co.** of El Monte, Calif., has appointed Oregon Manufacturers Agents of Portland, with Glenn W. Brumm as general manager, to represent its TV antenna mounting base in the Pacific Northwest.



• **W. P. Fuller & Co.'s** new branch manager in Honolulu is Roy O. Brechwald, formerly manager of the Modesto, Calif., branch. John M. Fuller, Honolulu manager since the branch was established in 1954, will rejoin headquarters staff in San Francisco.

• **Leadlight Fixture Co.** of Oakland has named George E. Mitchell Jr. as sales engineer for the Bay area.

• **Fairbanks, Morse & Co.** is transferring W. F. Wahlenmaier from Portland, Ore., to New Orleans where he will be branch manager. Taking over as manager at Portland will be Milo C. Roy, for the past eight years manager of the Chicago sales and service branch. The changes are effective January 1.

• **The Trane Co.** has established a sub-office in San Diego which will operate under the general direction of the Los Angeles office. Ralph C. Snow, a sales engineer in Los Angeles, has been transferred to head the San Diego post.

Up to 8 phone outlets in newest homes!...

Joseph A. Romano, well-known Fresno, Calif., contractor, likes to make sure his homes meet buyers' needs in every way. His custom-built homes, in the $21,000-$65,000 class, include 5 to 8 telephone outlets.

To Mr. Romano, complete telephone planning is a *must* in quality home construction. Buyers look for it, and in Mr. Romano's own words, "Meeting customers' demands is one of the best ways to successful selling. That's why some of my most recent homes have as many as 8 telephone outlets." And it's also why other leading Western architects and builders include concealed wiring and plenty of phone outlets in their original plans.

Pacific Telephone

We'll be glad to help you plan built-in telephone facilities. Just call our business office and ask for our free Architects and Builders Service.

It pays to include Telephone Planning in every home you build!

NAHB speakers predict pick-up in home starts

A much brighter picture in the home building field was predicted for the near future by three speakers at the annual fall meeting of the NAHB board of directors, held recently in San Francisco.

NAHB president George S. Goodyear said that a major milestone was achieved in the recent passage of a "more realistic FHA down payment schedule" and commented that the benefits of this legislation will become more and more apparent in the days ahead.

U. S. housing administrator Albert M. Cole said he believed the volume of home building would soon increase and from Bank of America vice president D. Clair Sutherland came the statement that "the future is indeed bright for a cost-conscious, high productivity home building industry."

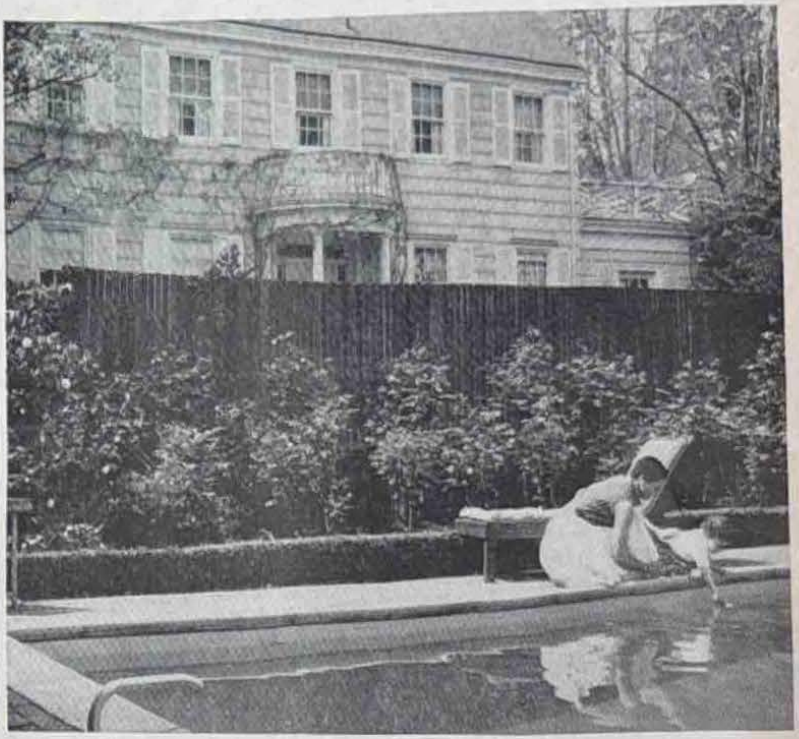
More than 1,000 builders and their wives registered for the meeting, the largest fall meeting ever held by the association. In addition more than 400 officers of firms manufacturing building materials and equipment attended the first National Executive Marketing Conference, held in conjunction with the NAHB meeting and sponsored by the National Housing Center.

Material handling depends on planning (Cont'd from p. 23)

ing on the spacing of such columns (so long as the basic need for ceiling or roof support is observed).

Also, the provision for sufficient floor load capacities cannot be overemphasized. Many a well planned industrial truck unit load system of handling must be ruled out because upper floors cannot withstand the weight of the truck plus its load.

It should be understood that the weight of the empty truck alone is not sufficient on which to calculate. An additional factor must be allowed because the trucks constitute a rolling weight during their operation.



Because of the complicated problem of figuring required floor load capacities, it has been urged by the Industrial Truck Association that only qualified architects be called upon to aid in determining the proper floor capacity involved for each company according to their specific requirements.

However, it is nevertheless best to locate the heaviest production equipment and largest capacity handling equipment on the first or basement floors.

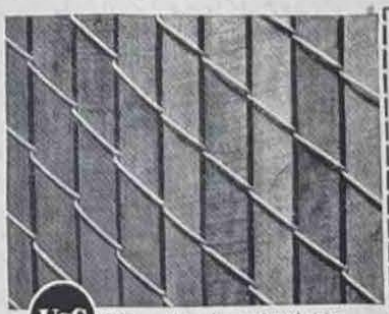
for western-style architecture

CYCLONE RUSTAKE WIDE MESH FENCE!



When you design a client's new home here's a finishing touch you can well include—a trim, modern boundary definer of Cyclone Rustake Fence. More and more west coast homeowners are discovering that their yards are more beautiful, more useful and private when they're securely fenced. And one of the most attractive fences for this purpose is Cyclone Fence.

Cyclone Rustake Fence is a complement to almost any style home. It consists of slim strips of beautiful California redwood inserted into the wide mesh of Cyclone Chain Link Fence. All posts and structurals are strong, sturdy, rust-resistant steel. This smart new fence increases privacy, decreases maintenance and assures years of good service.

To find out more about this beautiful fence, just send in the coupon. Then, if your clients are not already familiar with Cyclone Rustake Fence, you'll be ready to point out its many advantages.

At Gearhart: probing self-analysis (Cont'd from p. 9)

tain carelessness exists in some quarters, the fact remains that a huge industry is coordinated by architects, with billions of dollars of expenditures for fairly permanent establishments controlled by them and with almost never a breath of scandal or business lapse being charged.

2. In a technical sense, never in man's history has so great a change in design and construction methods been accomplished in so short a time as our last few decades. And architects HAVE led in this development.
3. In the sense of special responsibility, architects have taken the lead in developing housing and urban redevelopment legislation, in health and education studies, in development of new, 20th century building types such as the regional shopping center, the transportation terminal building, the communications center.
4. In an educational sense, no area of professional training has gone through so radical a change in our time as the teaching of architecture; this has been a remarkably successful cooperative venture of the practicing profession and the schoolmen.
5. In a design sense, again, as we all know, the change has been revolutionary in our time. There are those who believe that a new style has already emerged; there are others who believe that many separate contemporary tendencies still battle. No one, I think, denies that in relation to the history of architecture there has been too short a time—less than a century—in which to expect a fully matured new architecture, subject to ultimate, historical criticism, to have developed.

Carl Robertson photos

CONFERENCE CHAIRMAN John K. Dukehart of Portland gives some program pointers to his successor, A. O. Bumgardner of Seattle. Washington State chapter will host 1958 meeting.

In his closing remarks, Creighton had this to say: "The great future of our profession in our time, I believe, lies in finding the position of creative leadership, without sacrifice of individuality, in relation to that community. It lies in neither being beaten down by self-deprecation to an anonymous position in the community, nor in extravagant gestures by way of defiance of the community. The 'new responsibility' of the profession—and of the institute—is after all an old one. It lies simply in full use, development and improvement of the abilities now existing in the profession, to the fullest capacity of each individual, for the sober and important purpose of developing—and redeveloping—the communities men live in."

Carl Robertson of the Unit Masonry Association of Seattle, who doubled as PA&B photographer at the Gearhart sessions, suffered an attack of appendicitis during his trip home on Sunday and underwent an operation the following day.

WEST COAST EDITORS Proctor Mellquist of Sunset, Robert E. Koehler of Pacific Architect and Builder, Francis W. Brown (moderator) of Western Building and Elisabeth K. Thompson of Architectural Record discuss "Selling the Architect." Other panelists, New York editors John Knox Shear and Thomas H. Creighton, are seen in photo on page 9.

At Coronado: planning and structure (Cont'd from p. 8)

Among the actions taken by the council's board of directors were these:

- Presented a plan for action at the grass root level to obtain the informed support of state legislators for the objectives of the architectural profession.
- Instructed its president to inform the California Association of Public School Building Officials that the council will continue school contract studies through the school building committee, provided that CAPSBO appoint a state level committee of its own for this purpose and that any material resulting from the studies be subject to approval by both organizations' board of directors before distribution.
- Directed the administrative committee to continue investigation of a possible group Workmen's Compensation insurance plan for California AIA members and to submit a proposal for institution of a plan at the organization meeting of 1958 directors. Preliminary study has indicated that a group plan might result in substantial premium savings to both large and small architectural offices.

11.6% of nation's architects registered in California

Registered architects in California as of October numbered 2,791, or 11.6% of the national total. Based on population figures, this is about 66% greater than the U.S. average, it is reported by the State Board of Architectural Examiners, headed by C. J. Paderewski of San Diego.

A review of written examination results show that 116 candidates, or 33% of those qualified, successfully completed the test in December 1956, while 101 candidates, or 23.8% did so last June.

In the years 1955-56 California has given 21.7% of all examinations given in the nation (NCARB report).

State records reveal that 88% of all candidates who are fully qualified pass all phases of the written examination in five or less attempts; 64% in three or less. The board, following a public hearing, has adopted a rule making it mandatory that an applicant, after he is fully qualified to take the complete examination, shall receive passing credit in all sections in no more than five attempts. Failure to do so changes the applicant's status to that of a new candidate.

LIBRARY ADDITION— Corvallis, Ore.

A preliminary study has been authorized by City Council, City Hall, Corvallis, for an addition to the city-county public library at Corvallis. SC 10-31

PHYSICS-CHEMISTRY BUILDING— Corvallis, Ore.
(Estimated cost $4,300,000)

E. B. Lemon, dean of administration, Oregon State College, Corvallis, has reported that the college international house will be razed in preparation for construction of the first wing of a five-story physics-chemistry building (to be constructed in three units) on the campus in Corvallis. The first wing is estimated to cost $2,227,000, $457,000 of which has been granted by the U. S. Public Health Service. SC 11-8. Previous report 8-22

TRAINING CENTER— Corvallis, Ore.

Bids will be opened about December 20 by Corps of Engineers, Seattle district, 4735 E. Marginal Way, Seattle, for construction of a reinforced concrete 11,600 sq. ft. Army Reserve training center at Corvallis; ENG-45-108-58-34. Specifications with above office.

Concrete slab on grade; five-ply built-up roofing and metal decking supported on open web steel joists in main section, and by glued laminated beams and steel joists in assembly room; brick veneer facing. Also included is a reinforced concrete 2,500 sq. ft. maintenance shop with brick facing and built-up roof on wood joists. Work includes installation of electrical and mechanical systems and the construction of parking areas, concrete walks and connections to existing untilities. SP 11-12

●HEATING PLANT IMPROVEMENTS— Corvallis, Ore.

Bids will be opened 2 p.m., December 3, at the Physical Plant Department, Oregon State College, Corvallis, for improvements to the heating plant involving repairs to Boiler No. 3 at the college. Plans available from the plant office, room 3, Benton Hall, Oregon State College, Corvallis. SC 11-12

EPISCOPAL CHURCH— Eugene, Ore.

Bids will be called soon for construction of the frame 30'x90' St. Matthews Episcopal

Church in the River Road area north of Eugene. Plans by Frank Hitchcock, architect, 877 Willamette St., Eugene. Vicar of the new church is Father William Rees. Structure will include glued laminated beams; built-up roofing; concrete basement floor, wood main floor; hot water heating system. DW 11-8

INSURANCE OFFICE BUILDING—
Eugene, Ore.

Bids will be called in December or January by Standard Insurance Co., 1180 Olive St., Eugene, for construction of a two-story with partial basement, 96'x36', reinforced concrete office building at 14th and Oak streets in Eugene. Working drawings underway by Wilmsen & Endicott, architects, 863 13th Ave. E., Eugene. Some stone work is under consideration for construction.
SC 11-5

CITY HALL— Eugene, Ore.
(Estimated cost $1,000,000)

The City Council finance committee, Harold Edmunds, chairman, City Hall, Eugene, has recommended that a bond issue be presented to voters in 1958 for financing a new city hall at Eugene. The site would be selected prior to the election. Ten fifth-year students at the University of Oregon School of Architecture are studying site and space requirements for the proposed structure, and will execute architectural designs for the building as a class problem. The studies will be used by city officials in planning the city hall. DW 11-8. Previous report 9-14

COURTHOUSE REMODELING—
Klamath Falls, Ore.

Morrison & Howard, architects, 203 Williams Bldg., Klamath Falls, have been retained by Klamath County Commissioners, Courthouse, 2nd and Main St., Klamath Falls, to prepare plans and specifications for remodeling the Klamath County Courthouse to provide an additional 20'x45' equity courtroom. Plans call for removing partitions to four 8'x8' cells which were previously part of the county jail and are not in use, and enlarging the 50'x50' room now used for the county law library. Bookshelves will be extended to the ceiling and a vault type library is planned, with the relinquished space being used for the courtroom. Plans will be presented to the court in December.
ZZ 11-8

SCHOOL CONSTRUCTION— Medford, Ore.

Bond issue for $1,786,000 was approved in the November 5 election held by Jackson County School District No. 549C, Administration Bldg., 500 Monroe St., Medford, to finance a two-year school construction program for the district.

Largest single unit to be financed will be the additions to the high school, a project involving eight classrooms in one wing of the present building and up to 10 classrooms south of the shop-music wing. Preliminary plans are being prepared by Hayslip, Tuft, Hewlett & Jamison, architects, 2040 S.W. 3rd Ave., Portland.

Another project being financed by the bond issue includes two elementary schools in the eastern part of Medford. Preliminary plans are underway on the more northerly school by Jack Edson, architect, 44 N. Front, Salem; and for the other school by Wayne Struble, resident architect for the office of James L. Payne, 725 S. Commercial, Salem.

Smaller items to be planned for spring bidding include renovation of the multi-purpose room at West Side school, a classroom and dressing room addition at Roosevelt school, a shop-storage garage for the district's vehicles, and renovation of the shops at McLoughlin school. Other improvements, scheduled later, include science room, homemaking room, shop and five or six more classrooms at the high school.
SC 11-9

HARDWARE STORE— Medford, Ore.
(Estimated cost $60,000)

Plans have been completed by H. E. Mackie, architect, City Hall, Medford, for a store building at 245 S. Central Ave. for Acme Hardware, A. R. Manno, owner, 3 W. 6th St., Medford.

One-story, 52'x132'; concrete block walls; stucco veneer; clear span wood beams. Plans provide for off-street parking. DC 11-13

SCHOOL IMPROVEMENTS—
Monmouth, Independence, Ore.
(Estimated cost $130,000)

Bid call expected early in 1958 by Independence-Monmouth School District No. 13C, Polk County, Cliff Norris, superintendent, Independence, for construction of a four-classroom elementary school unit on campus of Oregon College of Education at Monmouth and extensive modernization of elementary school at Independence. Plans underway by Annand, Boone & Lei, architects, 1530 S.W. Taylor St., Portland.

Remodeling will include elimination of some partitions to add space in classrooms; leveling auditorium floor to provide multi-purpose room; remodeling kitchen facilities for cafeteria use; installation of new classroom lighting system; revamping heating system, including installation of controls; acoustical tile ceilings; asphalt tile on some floors. WB 11-1

STORAGE FACILITIES— Ordnance, Ore.

Bids will be opened about December 19 by Corps of Engineers, Walla Walla district, Bldg. 603, City-County Airport, Walla Walla, for liquid propellant storage facilities, Umatilla Ordnance Depot, near Ordnance, Ore.; ENG-45-164-58-11. Specifications with above office. $100 deposit.

Work includes but is not limited to construction of the following: (1) Change house—concrete foundations; slab on grade; masonry block walls; steel joists; reinforced concrete roof slab; oil-fired forced hot water heat; 2,500 sq. ft. area. ★HIGH SCHOOL— Pendleton, Ore.

Awards announced by Pendleton School District No. 16C, Wallace McCrae, superintendent, 229 S.W. 1st, Pendleton, for construction of a one- and two-story 107,000 sq. ft. senior high school on the present Pendleton Club site on N.W. Garden Ave. in Pendleton. Plans by Culler, Gale, Martell & Norrie, architects, Realty Bldg., Spokane. AWARDS—GENERAL: Paul B. Emerick Co., 4540 S.E. 175th, Portland, $1,128,000. The school district reserves the right to exercise some alternates. MECHANICAL: R. A. Twiss, second low on basic, 506 E. 2nd, The Dalles, $415,352 (basic plus additive for rock and common excavation). ELECTRICAL: Vaughan's Electric, 108 S.E. Court, Pendleton, $154,500.

Reinforced concrete footings and foundation; poured concrete block, metal walls; concrete slab floors; concrete beams, columns; flat roof, thin shell concrete barrels; masonry partitions; concrete beams, col-steel, aluminum windows; exposed masonry, metal lath and gypsum lath partitions; asphalt tile, ceramic tile, terrazzo flooring; acoustical ceiling; wood and steel doors; folding doors; refriferation; sprinkling systems; blackboards; fire doors; rigid board insulation in roof; low pressure steam heating system, gas fired; unit vents.
SC 11-12. Previous report 11-8

CLASSROOM WING— Portland, Ore.

Footings have been poured for a second classroom wing at Jesuit High School, 9000 S.W. Beaverton-Hillsdale Highway, Portland, but the main construction will not start before January 1 and may be delayed another year, according to Father M. I. Wilhelm, S. J., supervisor. Plans for the wing are underway by John W. Maloney, architect, 754 Central Bldg., Seattle.

Wing will duplicate north classroom wing and will contain chemistry and physics laboratories, study hall and seven classrooms. Reinforced concrete construction; aluminum windows; wood frame roof.
WB 11-8

★WHEAT STORAGE— Portland, Ore.
(Estimated cost $140,000)

Construction will begin soon by Hallidie Bldg. Div. of Hallidie Machinery Co., 1915 N.E. Union Ave., Portland, and Haskins Co., Spokane, on a 250,000 bushel wheat storage facility at Terminal Flour Mills, Terminal No. 4, Foot of N. Burgard St., Portland. A warehouse at the terminal is being removed to prepare space for the facility, which is to be completed by late January. The tanks will be connected to present facilities by a tunnel with belt conveyor system under the tanks. Butler-type bolted steel tanks will be used. WB 11-8

COVERED LOADING FACILITY—
Portland, Ore.

Construction started by owner - builder, City Galvanizers Co., 818 N. Russell St., Portland, for an L-shaped, 6,500 sq. ft. covered loading and storage area with access from Russell and Albina streets. Plans by

Stan H. Lowy & Associates, consulting engineers, 447 Sherlock Bldg., Portland. Some sub-contracts have been let; steel bids are being prepared. Structure will use galvanized iron roofing and will be around an open court. WB 11-8

★**OYSTER PLANT—** **Portland, Ore.**
(Estimated cost $70,000)

Contract let to William Wechner, 214 N. Russell St., Portland, by Rose City Oyster Co., 326 S.W. Taylor St., Portland, for construction of a reinforced concrete oyster processing plant at 1502 S.E. Morrison St., Portland. Plans by Annand, Boone & Lei, architects, 1530 S.W. Taylor St., Portland.

Concrete slab floor; reinforced concrete walls; concrete slab roof; built-up roofing; aluminum sash; a number of cast-in-place concrete tables and working surfaces; considerable stainless steel. Building will include three refrigeration rooms, sterilizing space, small retail outlet; off-street parking; truck loading facilities. WB 11-8

●■ **TELEPHONE BUILDING ADDITION— Portland, Ore.**

Bids will be opened 2 p. m., November 19, by Pacific Telephone & Telegraph Co., C. M. Twelves, chief engineer for Oregon, 406 Lincoln Bldg., Portland, for construction of one-story and basement, 60'x30' reinforced concrete addition to CHerry central office building at 2772 S.W. Troy St., Portland. Select list of bidders.

Planholders: Robertson, Hay & Wallace, 1801 S.E. Grand Ave.; A. V. Petersen Co., 2827 N.E. Glisan St.; Oscar R. Wayman, 3125 N.W. Front Ave.; Andersen & Westfall Co., Inc., 3427 N.E. Halsey St.; Smith-Phillips Co., 7402 S.W. Macadam Ave.; Henry M. Mason Co., 2206 N.E. Thurman St.; Sterner Construction Co., 13845 S.E. Rhine St.; James S. Hickey, Inc., 523 S.E. Stark St. Of Portland.

Building will house dial switching equipment and a new test center. Masonry exterior. WB 11-9

AMMUNITION STORAGE— Portland, Ore.

A 500 to 600-acre tract of farmland east of Portland air base has been recommended by Orville E. Ahern, Jr., city right-of-way agent, City Hall, Portland, as the only acceptable site which the city might buy to trade the U.S. Air Force for West Vanport. The air force planned to build an ammunition or rocket storage facility at West Vanport, but since the city wishes to develop West Vanport for an industrial tract, the air force offered to trade land if a suitable site could be found. The recommended tract is located between N.E. 158th and 185th avenues and Marine Drive and Union Pacific right-of-way. It is expected that the city planning commission will be asked to make a study as to how West Vanport could best be developed. WB 11-13

PLYWOOD PLANT— Roseburg, Ore.

Work is well underway on the U.S. Plywood Corporation's main building for a new plywood manufacturing operation at the plant at 612 N.E. Rifle Range Road in Roseburg. Additional structures and facilities are being started.

Ritter Roof Structures, 1220 S.W. Stark, Portland, has reported that about three weeks remain to complete the structure of the main building. The firm is handling trusses, purlins, roof deck, catwalks, fire curtains and some other items, as well as some remodeling in the existing plant. Parallel chord rod and timber trusses are being used, with major truss spans being 80' and 100' in length. Henry H. Miller Contractors, Inc., 2191 N.E. Stephens, Roseburg, is doing site work, and Umpqua Concrete Products, 1300 N.E. Stephens, Roseburg, is handling concrete work. The M. L. Sines Construction Co., 13340 S.E. Harold, Portland, is providing rail facilities.

Engineering work for Ritter Roof Structures was handled by Architect Harry L. Percy, Jr., and Sid Lathrop, civil engineer, both at 1975 S.W. 5th Ave., Portland. Project engineer on the site for U.S. Plywood is Frank Foystem, and George French is chief engineer for the company on the project.

Work is progressing on modernization of existing plant and on the construction of other facilities. Construction has just started on a fuel house building which will have steel columns and beams, and steel trusses, supporting conveyors and cyclones. Industrial Machine and Pump Co. is general contractor, with A. Young & Son Iron Works, 2300 N.W. Nicolai, Portland, furnishing structural steel and Soule' Steel Co., 2630 N.W. St. Helens Road, Portland, the siding, girts and purlins. Structural design was by Stan H. Lowry & Associates, consulting engineers, Portland.

Among features in the new plant are concrete steam vats, now being installed, which will steam logs before peeling, thus reducing wear on knives when peeling and reducing sanding costs. SC 11-13. Previous report 9-17

FAIRVIEW HOME BUILDINGS—Salem, Ore.

Bids will be called early in January by Oregon State Board of Control, William C. Ryan, secretary, 124 Capitol Bldg., Salem, for additions at Oregon Fairview Home near Salem, including a reinforced concrete 100-man capacity ambulatory cottage for men, a two-story, 38'x96', reinforced concrete outpatient clinic addition to the hospital, and the addition of an oil-fired boiler and a concrete with steel frame addition to the boiler house. Plans by Wilmsen & Endicott, architects, 863 13th Ave. E., Eugene.

Preliminary drawings are also underway for a new type of semi-ambulatory cottage at the Home. Bids will be called later in the spring of 1958.

SC 11-5. Previous report 10-3

BAPTIST CHURCH— Salem, Ore.

A one and three-quarters acre site on Westfield St. in Silverton has been purchased by the First Baptist Church, Rev. V. L. Loucks, pastor, Silverton, for construction of a new church building. Construction will start next spring. SC 11-6

★**PARK IMPROVEMENTS— Salem, Ore.**

Awards announced by City Council, City Hall, Salem, for park improvements, including construction of seven comfort stations, six tennis courts and two wading pools in Salem. AWARDS — COMFORT STATIONS: R. L. Forster & Son, 2180 Wallace Road, Salem, $29,770. TENNIS COURTS: T. J. Pat-

The comfort stations will be erected at Highland Park, Fairmount, West Salem, Clarmount, River Road and Fairgrounds Playgrounds, and at Bush Pasture. Two of the tennis courts will be constructed at Highland Park and the remaining four at Bush Pasture. SP 11-9. Previous report 10-30

PRESBYTERIAN CHURCH— Salem, Ore.

Plans have been presented for approval to members of First Presbyterian Church, 430 N. Winter, Salem, for a new church plant to be constructed on the southwest corner of N. Winter and Chemeketa streets in Salem. Plans were prepared by James C. Mackenzie, architect, New York, and James L. Payne, associate architect, 725 S. Commercial, Salem. SC 11-9. Previous report 6-25

▲PICNIC TABLES, RESTROOMS— Salem, Ore.

Bids received by Department of Finance and Administration, 1225 Ferry St., Salem, for furnishing 1" and 2" lumber and hardware for 100 picnic tables and six portable restrooms for Salem city parks. Tables and restrooms will be built by the park department. BIDDERS: Oregon Pulp and Paper Co., Front and Ferry streets, Salem, $2,891; Wallace Road Lumber Co., Wallace Road, Salem, $2,904; Portland Road Lumber Yard, Portland Road, Salem, $2,998. CP 11-13

COCKTAIL LOUNGE FIRE— Seaside, Ore.
(Estimated loss $22,000)

A fire early in November gutted the Embers cocktail lounge at 227 Broadway in Seaside but fire was kept from spreading to a restaurant and an apartment in the same concrete block building, according to owner Alexander Haralampus. SC 11-8

★GRADE SCHOOL ADDITION—Tigard, Ore.

Award to Harry G. Johnson, 7117 S.E. Main St., Portland, $19,894, by School District No. 82, Washington County, Mrs. Esther Pilkington, clerk, Durham Grade School, S.W. Durham Road, Tigard, for construction of two-story, reinforced concrete and frame addition to the school. Plans by Annand, Boone & Lei, architects, 1530 S.W. Taylor St., Portland.

Playroom in daylight basement; one classroom and toilet facilities on main floor; covered play porch. Reinforced concrete basement; wood frame upper portion; glued laminated beams over basement; steel sash; glass block in a window wall; asphalt tile flooring; plaster walls; acoustic tile ceilings; playroom will be unfinished; oil furnace.
WB 11-9. Previous report 10-15

ELECTRICAL PLANT— Tigard, Ore.
(Estimated cost $250,000)

Construction underway by Monson & Sivers, general contractors, 5000 S.E. 25th Ave., Portland, on a 20,000 sq. ft. tilt-up concrete manufacturing plant on six and one-half acre site on Route 217 near Hunziker Road in Tigard, for R. T. & T. Co., Waukesha, Wisc. Building will have glued laminated beam roof and will be used for manufacturing electric power distribution transformers and other electrical distribution equipment.
WB 11-9

SCHOOL CONVERSION— Toledo, Ore.

Preliminary plans underway by F. Marion Stokes, architect, 205 Hughes Bldg., Portland, for conversion of existing Toledo High School for grade school purposes for Lincoln County School District, Marion Huff, superintendent-clerk, Court House, Newport. Work will include changing shops into classrooms, remodeling existing classrooms to make them suitable for grade school use, new toilet facilities, and either a new kitchen or remodeling of old kitchen.

WASHINGTON

★CHURCH, RECTORY— Bellevue, Wash.

Low bidder Riley Pleas, Inc., 522 19th N., Seattle, has withdrawn its bid of $617,031 because of an error in computation, for construction of the 19,500 sq. ft. Sacred Heart Catholic church and rectory on Clyde Hill in Bellevue. Award was made to second low bidder Cawdrey & Vemo, 3601 Fremont, Seattle, $708,974 (basic plus two alternates), by Catholic Archdiocese of Seattle, Most Rev. Thomas A. Connolly, archbishop, 907 Terry Ave., Seattle. Bids were opened October 31. Plans by John W. Maloney, architect, 754 Central Bldg., Seattle.
PD 11-12. Previous report 11-2

MEDICAL DENTAL BUILDING— Bellevue, Wash.
(Estimated cost $45,000)

Preliminary sketches have been made and construction will be started about mid-December by W. R. Rounds & Associates, owner-contractor, 10300 N.E. 1st, Bellevue, on a one-story wood frame and stone 3,500 sq. ft. medical dental building on N.E. First St. and 103rd Ave. N.E., Bellevue. Plans which were prepared by W. R. Rounds & Associates call for office space for four physicians and four dentists. Details of construction will be determined by lessees' requirements. PD 11-6

CARL COZIER SCHOOL ADDITION— Bellingham, Wash.

Preliminary plans approved by Bellingham School District No. 501, Gordon Carter, superintendent, Roeder School, Bellingham, for a four-classroom addition to the Carl Cozier Elementary School in Bellingham. Plans by Galen Bentley, architect, 1130 State St., Bellingham. Plans must be approved by the state before bids can be called.
ET 11-5. Previous report 1-4

STUDENT UNION BUILDING— Bellingham, Wash.
(Estimated cost $525,000)

Funds in amount of $475,000 have been approved by the Federal Housing and Home Finance Agency toward construction of a new student union building to be located in the 500 block on High St. in Bellingham, for Western Washington College of Education, Dr. W. W. Haggard, president, Bellingham. In addition, $50,000 will be appropriated from the student building fund. The state legislature early this year appropriated $72,000 for purchase of a site for the building which includes four lots at the north corner of High St. and Garden Terrace, across from the library and northeast of the music building, at Bellingham. Architects are Bindon & Wright, Hoge Bldg., Seattle. ET 11-8. Previous report 2-1

▲SHOWER REPLACEMENT— Blaine AF Station, Wash.

Bids received by U. S. Air Force, Purchasing and Contracting Office, Paine AFB, for replacing metal showers in Buildings 7, 8, 9, 18 and 19 in the airmen's dormitories at Blaine Air Force Station, Wash.; Inv. No. 45-602-58-13. Bids opened November 7. LOW BID: Lake Construction Co., 1801 35th St. S., Bellingham, $7,547. OTHER BIDDERS: Emil Olson Co., 2305 South St., Bellingham, $7,632; Lindbrook Construction Co., 21016 Five Corners Road, Edmonds, $9,885; Metropolitan Construction Co., 1008 Broadway, Everett, $12,800; Kermit Abelson, Blaine, $13,000; Haskell Plumbing and Heating, 1509 Cornwall, Bellingham, $14,272.

Work will consist of removing existing metal showers and concrete floors, removing paint from shower walls and ceilings, then covering walls, floor and ceiling with glass fabric and resin.
HH 11-9. Previous report 10-17

LUTHERAN CHURCH— Bothell, Wash.
(Estimated cost $105,000)

Working drawings will be started soon by architects Grant, Copeland & Chervenak, 420 E. Howell, Seattle, for a 455-capacity church on the site of existing structure at 2nd and Fir, Bothell, for First Lutheran Church, John Hopp, pastor. The existing church will be torn down, and the existing parish will be integrated with the new church building. Bids will be called in 1958, following financial arrangements by church building committee.
PD 11-5. Previous report 4-25

CATHOLIC CHURCH— Clarkston, Wash.

A fund raising drive will be held in February 1958 by Holy Family Catholic Church, Rev. Fr. Arthur Joda, pastor, Clarkston, to raise $150,000 to finance construction of a new church on property near the present site on Chestnut St. at 11th in Clarkston. Construction of the building has been approved by Catholic Diocese of Spokane. Most Rev. Bernard J. Topel, bishop, S. 317 Howard, Spokane. The present church will be razed and the grounds used for additional school playground space and parking. DR 11-1

ADMINISTRATION BUILDING— Edmonds, Wash.

Directors of Edmonds School District No. 15, Harold Silvernail, superintendent, Edmonds, have authorized the district's attorney to negotiate for purchase of two acres of property west of the new senior high school building as the site for a proposed district administrative building. SC 11-7

● ELEMENTARY SCHOOL—Edmonds, Wash.
(Estimated cost $500,000)

Bids will be opened 8 p.m., December 2, by Edmonds School District No. 15, Box 308, Edmonds, for construction of the new 20-classroom nine-building campus plan Westgate Elementary School in Edmonds. Plans with Dan Miller, architect, 420 Bell St., Edmonds.

The following description applies to all buildings: one-story and no basement; 34,000 sq. ft. total area; concrete slab on grade; pumice block exterior walls, frame interior walls; steel joists, acoustical panel roof; asphalt tile flooring; hot water heating system converted into warm air in each building. HH 11-8. Previous report 10-30

★GRANDSTAND— Edmonds, Wash.

Contract negotiated with Norge Construction Co., 5008 Admiral Way, Seattle, $65,000, by Edmonds School District No. 15, Box 308, Edmonds, for construction of a 2,000-seat grandstand at the new high school now under construction at Holmes Corners in Edmonds. Plans by Waldron & Dietz, architects, 208 Columbia, Seattle. Norge originally bid $73,690 (basic) and $103,790 (basic plus alts.) at the August 5 opening but plans were revised slightly to reduce the cost.
HH 11-8. Previous report 9-30

■ SCHOOL ADDITION— Eltopia, Wash.

Additional planholders announced for construction of a 30'x75' two-classroom addition to the Pioneer Elementary School building about 13 mi. north of Eltopia on the Pasco-Spokane Highway. Bids will be opened 8 p.m., November 20, in the office of the Superintendent, Eltopia School District No. 15, Old Eltopia Elementary School building, Eltopia. Plans with Charles A. Bayley & Associates, architects, 912 Elliott Ave. W., Seattle.

Additional Planholders: Jensen-Rasmussen & Co., Box 89, Sunnyside; Hale Construction Co., Box 782, Pasco; R. C. Haak Construction Co., Box 82, Connell; Patton-Patton & Hill, 612 W. Albany, Kennewick; Lewis Hopkins, 221 S. 3rd St., Pasco.

Tilt-up concrete panels (concrete block alternate); concrete slab-on-grade; built-up roofing, 3" t&g decking; glued laminated beams; wood sash; asphalt tile flooring; perforated acoustical tile ceilings; connection to existing heating system, unit ventilators.
SP 11-9. Previous report 11-1

★GARAGE— Enumclaw, Wash.

Award to Ed Brehm, 9486 N.E. 32nd, Bellevue, by Pacific Telephone and Telegraph Co., 1200 3rd Ave., Seattle for construction of garage and storage facilities at the corner of Shanklin Road and the Auburn-Enumclaw Highway in Enumclaw. Plans, which were prepared by Donald N. McDonald & Associates, architects, 719 2nd, Seattle, call for about 1,000 sq. ft. of office and storage room in the building, and about 2,200 sq. ft. of vehicle storage space in a carport type shelter. Completion time three months. The building will be of concrete blocks; the shelter will be supported by heavy beams and have an aluminum roof.
DM 11-12

POST COMMISSARY— Fort Lewis, Wash.

Bids will be opened about December 19 by Corps of Engineers, Seattle office, 4733

E. Marginal Way, Seattle, for construction of a 36,205 sq. ft. Post Commissary building and utilities at Fort Lewis; ENG-45-108-58-35. Specifications with above office. Completion time 365 days.

Reinforced concrete foundations and floors; reinforced concrete frame structure with concrete block wall; concrete roof slab "folded" and flat. Work includes installation of steam heating system, ventilation, air conditioners, cooling and refrigeration equipment, show cases and lighting; construction of adjacent asphaltic concrete paved parking areas; installation of parking areas and street lighting systems; construction of storm sewer, sanitary sewer, water and electrical services. SP 11-12

●BUILDING REMODELING—
Fort Worden, Wash.

Bids will be opened 3 p. m., November 21, by Director Garrett Heyns, General Administration Bldg., Olympia, for remodeling of Bldg. Nos. 202 and 203 at Fort Worden, Port Townsend. Specifications with John B. Firmin, supervising engineer of the department. SC 11-8

▲AIRCRAFT SHELTER—Geiger Field, Wash.

Bids received by Corps of Engineers, Seattle office, 4735 E. Marginal Way, Seattle, for construction of 90'x423' four-pocket ready fighter aircraft shelter on an existing slab at Geiger Air Force Base; ENG-45-108-58-22. Bids opened November 7.

Work involves erecting the shelter using government-furnished structural steel, hangar doors and other material. Roofing will be five-ply built-up and siding of corrugated metal. The government will furnish 721,300 lb structural steel, including trusses, door tracks, structural shapes, handrails, anchors, fasteners and ladders, and 302,000 lb. hangar doors and mechanical equipment. The steel is being furnished under government contract with Pacific Iron & Steel Corp., Los Angeles, Calif. The material will be provided fob rail cars at the Great Northern railway siding at Geiger AFB.

LOW BIDS: H. Halvorson, Inc., Box 6, Yardley, $219,317; Walter G. Meyers & Sons, Box 5011, Spokane, $222,747; Purvis Construction Co., Box 64, Yardley, $224,290. Government estimate, $240,000. Nineteen bids received. SP 11-8. Previous report 10-12

★BUILDING ADDITION, ALTERATION—
Geiger Field, Wash.

Award to Warner & Brown, 2904 N. Madelia, Spokane, $5,990, by U.S. Air Force, Procurement Office, Geiger Field, for construction of an addition to Bldg. 1101 and furnishing and installing a paint spray booth for that building at the base; IFB-45-614-58-27. Bids opened November 5. OTHER LOW BIDS: Hilton-Lawrence, N. 41 Gray, Spokane, $6,520; Edward Kolbar, E. 10821 Valleyway, Spokane, $6,550.

LL 11-8. Previous report 10-23

★ROOF REPAIR— Geiger Field, Wash.

Award to Anton J. Popp Construction Co., E. 2710 Garland, Spokane, $4,924, by U.S. Air Force, Procurement Office, Geiger Field, for repairing the roofs on Buildings 1080, 1072 and 1076 at the base; IFB-45-164-58-26. APARTMENT BUILDING— Mountlake Terrace, Wash.

Plans announced by owner Jack Peterson of Mountlake Terrace for construction of a two-story 20-unit apartment building on 232nd St. S.W., west of 58th Ave. W., in Mountlake Terrace. Plans are now underway and it is hoped construction can start early in 1958. An additional 80 units may be constructed later. SP 11-12

SCHOOL ADDITION— Mukilteo, Wash.

Bond issue for $120,000 failed due to too few voters in the November 5 election held by Mukilteo School District No. 6, Mukilteo, to raise funds to finance construction of a five-classroom addition to Olympic View Junior High School at Mukilteo. This same bond issue was defeated early last summer. SC 11-13. Previous report 6-4

▲SHOWER REPLACEMENT— Neah Bay AF Station, Wash.

Bids received by U.S. Air Force, Purchasing and Contracting Office, Paine AFB, for replacing metal showers in the airmen's dormitories at Neah Bay Air Force Station, Wash.; Inv. No. 45-602-58-14. Bids opened November 7. LOW BID: Olympic Builders, Sequim, $8,392. OTHER BIDDERS: DelGuzzi, Inc., 1020 E. Front, Port Angeles, $8,555; Lindbrook Construction Co., 21016 Five Corners Road, Edmonds, $9,050; Owens Bros., Railroad and Oak, Port Angeles, $10,250; Metropolitan Construction Co., 1008 Broadway, Everett, $15,800.

Work consists of replacing metal showers in four buildings by removing existing metal showers and concrete floors, removing all paint from the shower walls and ceilings and then covering walls, flood and ceiling with glass fabric resin.

HH 11-9. Previous report 10-16

CAPITOL EXPANSION— Olympia, Wash.

The Washington State Capitol committee has approved preparation of plans for a parking garage, a parking lot and for completion of the top two floors of the General Administration Building at Olympia. The committee retained Paul Thiry, architect, 800 Columbia, Seattle, as architectural consultant. Thiry will draw a comprehensive plan for long range development and expansion of the State Capitol grounds, and present it to the committee. Building, parking and street problems will be studied.

The capitol committee authorized the Department of General Administration to proceed with preparation of plans, under direction of Warren A. Brown, department engineer, for a three-level parking garage, for a temporary parking lot, and for completion of the upper two floors of the General Administration Building. SC 11-7

SUPERMARKET— Omak, Wash.

Construction will start soon on a new 7,000 sq. ft. supermarket to be located immediately north of the existing Darrell's Drive-in Market in Omak, for owner Darrell Ferguson. The site of the present store will become a paved parking lot. SC 11-8

(Estimated cost $335,297)

Bids will be called in the spring of 1958 by Opportunity School District No. 356, Gilbert Mills, superintendent, N. 607 Pines Road, Opportunity, for construction of a 12-classroom elementary school at Opportunity. Plans by Victor Louis Wulff, architect, W. 1526 Riverside Ave., Spokane.

SC 11-8. Previous report 1-24

JUNIOR HIGH SCHOOL— Opportunity, Wash.

(Estimated cost $837,630)

Bids will be called in the spring by Central Valley School District No. 356, Gilbert Mills, superintendent, N. 607 Pines Road, Opportunity, for construction of a 52,000 sq. ft. junior high school on S. Bowdish St. in Opportunity. Plans by Victor Louis Wulff, architect, W. 1526 Riverside, Spokane.

SC 11-8. Previous report 8-9

SCHOOL ADDITIONS— Opportunity, Wash.

(Estimated costs $90,981 high, $85,125 elementary)

Preliminary plans will be submitted to the state soon by Victor Louis Wulff, architect, W. 1526 Riverside, Spokane, for a six-classroom addition to Central Valley High School and a six-classroom addition to the Greenacres Elementary School in Opportunity. It is hoped construction can start next spring, according to Gilbert F. Mills, superintendent, Opportunity School District No. 356, N. 607 Pines Road, Opportunity. SC 11-8

METHODIST CHURCH— Oroville, Wash.

Fund drive underway to finance construction of the First Methodist Church in Oroville, for which working drawings will be prepared in spring of 1958 by Eddy, Carlson & James, architects, N. 1205 Washington, Spokane. SP 11-6. Previous report 6-8

TRAIN DEPOT REMODELING— Othello, Wash.

Work will start soon at the Milwaukee depot at Othello on an expansion and improvement program, according to agent Verle Bell. The remodeling work includes lowering of the ceiling throughout the building, tiling of all floors, replacing all windows with new glass, expanding the business office, reducing the size of the waiting room and cafe to make more compact areas, and increasing space in the express storage room. The new express room will be large enough to accommodate six or seven trucks. The cafe will be reduced to about half its present size, with many of the inner partitions to be removed. SC 11-6

★LINE HEADQUARTERS BUILDING— Poulsbo, Wash.

Award to Anderson Construction Co., 1312 13th, Bremerton, $58,664, by Puget Sound Power and Light Co., Seattle, for construction of a 45'x50' concrete and concrete block, one-story line headquarters building two mi. north of Poulsbo on highway No. 21, between Lofall and Poulsbo. Construction is to start by mid-November, with completion in 120 days. Building will be of concrete and concrete block. OTHER BIDDERS: Commercial Builders, 114 Shore Drive, Bremerton, $60,434; Linden Construction Co., Box 109, Bremerton, $61,667; John H. Sellen Construction Co., 228 9th Ave. N., Seattle, $68,508; Lease Co., Inc., 1501 N. 35th, Seattle, $75,007; Sound Construction and Engineering Co., 1300 Aloha St., Seattle, $84,209. Plans by Harmon, Pray & Detrich, architects, Lloyd Bldg., Seattle. PD 11-12

PLANT SCIENCES BUILDING— Pullman, Wash.

Bids may be called about mid-January, 1958, by Washington State College, Pullman, for a four-story and basement, 175,000 sq. ft. reinforced concrete, Class A, Plant Sciences building on the campus. Working drawings are underway by architects, Jones, Lovegren, Helms & Jones, 706 Republic Bldg., Seattle. A mechanical penthouse is included in the plans.

Aluminum curtain wall exterior, panels to be of porcelain, asbestos-cement or pre-cast concrete; flat concrete roof slab, no beams; concrete bearing wall partitions, and dry-wall or plaster partitions; asphalt tile, ceramic tile, terrazzo flooring; rigid insulation in roof, rigid and batt insulation in walls.

PD 11-1. Previous report 6-11

PHYSICAL EDUCATION BUILDING— Puyallup, Wash.

(Estimated cost $500,000)

Working drawings will start about mid-December by Robert Billsbrough Price, architect, 2907 A St., Tacoma, for construction of a 189'x148'x35' physical education building on a site on 7th and Main streets, across from the high school, at Puyallup. Bids will be called by Puyallup School District No. 3, Paul B. Hanawalt, superintendent, 605 W. Main, Puyallup.

Plans call for four teaching stations in the building, two on the 96'x108' main floor (which can be subdivided by a folding partition into two 57'x96' areas), and two smaller balcony areas which will be 40'x56' each. Recessed bleachers seating about 3,000 person will be pulled out when the main floor is used for basketball games or community events. Construction plans tentatively call for reinforced concrete walls, glued laminated wood beams; plastic windows on lower floor; brick veneer exterior. Two large shower rooms and storage areas will be provided.

SHOE STORE EXPANSION—Seattle, Wash.
(Estimated cost $300,000)

Work will start in August 1958 on an expansion project for Nordstrom's, Inc., 5th Ave. and Pike St., Seattle, involving remodeling 30,000 sq. ft. of space in the building adjacent to the existing shoe store. The additional space will nearly double the size of the present three-story structure.
PD 11-5

REMODEL OFFICE BUILDING—
Seattle, Wash.

Preliminary drawings are underway by Arnold G. Gangnes, Seaboard Bldg., Seattle, on the first portion of a three-year project of remodeling the Lowman Bldg., 107 Cherry, Seattle, for United Good Neighbors, owners. Present project involves remodeling three floors for occupancy by the owners. Remaining floors will be leased to tenants, with remodeling gradually done over remaining period of time. Work includes a new entrance and lobby; modernized corridors and toilet facilities, including new lighting fixtures. Contract is already awarded for installation of two new elevators. PD 11-5

PARKING GARAGE— Seattle, Wash.

It is probable that no further action will be taken until after the first of the year by owner Emil Gaupholm, on construction of an open-deck parking garage in Seattle. Plans by John I. Mattson, architect, Lowman Bldg., Seattle. SP 11-6. Previous report 8-9

ELEMENTARY SCHOOL ADDITION—
Seattle, Wash.

Working drawings are underway by Mallis & DeHart, architects, 6th floor Lyon Bldg., Seattle, for a 12,000 sq. ft. addition and alterations to Pinehurst Elementary School, E. 117th St. and 12th Ave. N.E., Seattle, for Seattle School District No. 1, 815 4th Ave. N., Seattle. Plans for remodeling include removal of old partitions, constructing new partitions, new asphalt tile flooring in administrative area. Addition involves six classrooms, playroom, conference room and storage room.

Concrete slab-on-grade; some t&g roof decking, joist, some glued laminated beams, steel decking; brick veneer; metal sash; masonry and plaster partitions; asphalt tile, ceramic tile, maple flooring; connected to existing steam heat system, new boiler and burner added. PD 11-6

OFFICE, WAREHOUSE— Seattle, Wash.

Preliminary plans are underway by Ibsen Nelsen and Russell Sabin, architects, 1314 E 43rd, Seattle, for a one-story, 30,000 sq. ft., concrete office and warehouse to be built on piling on a 40,000 sq. ft. site adjacent to the southwest corner of Airport Way and Lander St., with frontage on Lander St., Airport Way and 8th Ave. S. Owners W. L. Gillespie, D. B. Gillespie, R. W. Krows, and K. L. Krows, plan to lease the building to a national concern. Existing building on the property is to be removed. PD 11-6

PRESBYTERIAN CHURCH— Seattle, Wash.

Preliminary plans are underway by Durham, Anderson & Freed, architects, 1100 Denny Way, Seattle, for a church at 3rd Ave. N.W. and Richmond Beach Road, Seattle, for Calvin Presbyterian Church, 618 W. 185th, Richmond Highlands. PD 11-6

▲CONCRETE APARTMENT BUILDING—
Seattle, Wash.

Bids received by The Thelma Corporation, in the office of Ted LaCourse, architect, 1826 Broadway, Seattle, for construction of a five-story reinforced concrete apartment building at 727 Bellevue Ave. N., in Seattle. Bids opened November 7.

The building, 31'x165', will contain 40 units and will be served by an elevator and parking areas, some under carports. Concrete block filler walls, ornamental steel spandrels, metal sash and electric heating are specified. Interior finishes include plastering, vinyl composition floor coverings and birch cabinet work.

LOW BID: Baugh Construction Co., 922 Poplar Place, $324,900. OTHER BIDDERS: Puget Construction Co., Inc., 1811 Bush Place, $330,800; Century Construction Co., 401 W. Galer St., $338,963; Glacier Construction Co., 5536 Coniston Road, $340,350; Jentoft & Forbes, 927 W. 46th St., $344,083; Jack Gillespie, 803 E. 73rd, $361,428; Farwest Construction Co., 608 W. 44th St., $363,870; Cawdrey & Vemo, 3601 Fremont Ave., $384,891. All of Seattle.

SEATTLE UNIVERSITY CONSTRUCTION—
Seattle, Wash.
(Estimated cost $3,725,000)

Plans announced by Seattle University, Very Rev. A. A. Lemieux, S.J., university president, Broadway and E. Madison, Seattle, for construction during the next five years of three new buildings, including a library, science building and gymnasium-armory building, at Seattle University. Plans for the project have been sketched by John W. Maloney, architect, Central Bldg., Seattle.

The gymnasium-armory, estimated to cost $1,500,000, will replace the existing gymnasium. The library, expected to cost about $1,000,000, will be a four-story reinforced concrete building with faced-in glass, brick and limestone. It will include exhibition and lecture lounges, reading and seminar rooms and visual-aid and film departments. The science building will involve extensive use of glass, aluminum, brick and limestone. It will house faculty offices, student lounge, photographic and drafting rooms, and pre-medical and nurse-training departments.

FABRICATING PLANTS— Spokane, Wash.

An industrial resources survey being taken in the Inland Empire indicates the area has enough varied industry but lacks enough small fabricating plants to use up its raw materials. Plans to produce light metal products, pulp and chip boards and to assemble aircraft and automobile units were most frequently mentioned as new industries that could locate in the area. The survey, being taken among 400 major manufacturing concerns, will be completed by the first of the year.
SC 11-7

RETIREMENT HOME— Spokane, Wash.
(Estimated cost $1,000,000)

Construction will start in the spring of 1958 on a retirement home to be built on a six-acre tract on Hawthorne road just east of Division, within three blocks of the Whitworth college campus, in Spokane, for Presbyterian Ministries, Inc., a corporation formed by the synod of Washington for the project. Plans by Eddy, Carlson & James, architects, N. 1205 Washington, Spokane. The manor will be ready for occupancy in fall of next year. SC 11-6. Previous report 5-9

DINING HALL— Stanwood, Wash.

Working drawings are nearing completion by Robert F. Rathjen, architect, 213 Lake St. S., Kirkland, for a wood frame 2,000-capacity Y-shaped dining hall on a 150-acre site north of Stanwood at Warm Beach, for Washington Conference of Free Methodist Churches, Charles D. Kirkpatrick, pastor, 7 W. Etruria, Seattle. Bids will be called upon completion of financial arrangements. This is the first unit of a proposed church district camp and youth camp, which will eventually consist of a main auditorium, administration buildings, recreational program facilities. Dining hall will have a 60'x90' lounge and entrance lobby with a large stone fireplace; a 90'x80' dining area with 70'x10' outside dining balcony; a 150'x40' main dining room with 80'x10' outside dining balcony. Both balconies will have ship-deck canvas floors.

Wood frame; one-story and daylight basement; pitched roof; 3"x6" t&g decking; glued laminated beams; cedar siding; wood sash, some drywall, some cedar paneled partitions; 2"x4" t&g flooring. Church district board will act as contractor.
PD 11-13

HIGH SCHOOL— Sumner, Wash.

Failure of three adjacent non-high school districts to vote participation will delay for a year the construction of the proposed high school building at Sumner, according to Superintendent Clayton E. Willard, Sumner School District No. 320, 1625 Main St., Sumner. Voters in Sumner School District voted $400,000 in bonds last November and added two 10-mill special levies to finance Sumner's share of the cost. In the adjacent districts, including McAlder, Edgemont and North Puyallup, insufficient votes were cast to validate the elections.
SC 11-6

★RECTORY, SCHOOL, CONVENT— Tacoma, Wash.

Award was made by Catholic Archdiocese of Seattle, 907 Terry Ave., Seattle, for construction of a rectory, elementary school and parish hall and convent for St. Charles Borromeo parish, Tacoma. Plans by McGuire & Muri, architects, 231 Broadway, Tacoma. Bids opened November 5. The three buildings will be one-story and will total 27,000 sq. ft. of floor space. They will be erected on a 14-acre site in the Narrows Bridge area, bounded by 12th, Oxford and Meyers streets, Tacoma.

Concrete footings and foundation including 10" wall and 10"x18" continuous footings; frame walls; frame and concrete floor; timber beams; rigid asbestos roof; masonry and frame partitions; Fenlite windows, aluminum alternate; brick and wood exterior, plaster interior wall finish; plaster and gypsum lath partitions; asphalt tile, rubber tile, ceramic tile and vinyl tile flooring; plaster acoustical ceilings; folding doors, corrugated plastic panels, blackboards, fire doors; batt insulation in walls and attic space; hot water heating system, oil fired; unit fluorescent and incandescent lighting.

AWARD: Strom Construction Co., 2141 Fawcett, $352,670. OTHER BIDDERS: Warter Construction Co., 7829 Pacific, $360,000; Industrial Engineers and Contractors, Inc., 711 Middle Waterway, $370,764; G. Kirkebo & Son, 1410 Mt. View, $373,759; M & O Construction Co., 1323 S. K St., $387,920; North-

ern Construction Co., 132 Sitcum Blvd., $389,300; Quality Builders, Inc., 5220 S. Orchard, $398,893; Dolph Jones, 2213 N. Proctor, $412,000; Jardeen Bros., 1240 S. Frace, $447,500. All of Tacoma. SC 11-8. Previous report 11-2

●MADISON SCHOOL— Tacoma, Wash.

Bids will be opened 3 p. m., November 26, by Tacoma School District No. 10, Toney Shelton, secretary and business manager, Administration Bldg., S. 9th and Tacoma Ave., Tacoma, for construction of a 135' diameter circular eight-classroom building addition to Madison Elementary School in Tacoma. Plans with Robert Billsbrough Price, architect, 2907 A St., Tacoma. $25 deposit. Separate contracts on general, mechanical and electrical work.

Addition will contain multipurpose room in the center with eight classrooms, teachers' room and workroom around it. Extensive alteration to the existing school is included in the contract. Construction will be slab on grade with glued laminated beam structural members, wood joists and plywood skin, insulated; wood sash; central portion to be skylighted by 20' diameter plastic dome, and classroom area by secondary domes; wood jalousies; hot water heating system converted to perimeter hot air system through heat exchanger; fluorescent lighting. SC 11-8. Previous report 9-20

SCHOOL ADDITION— Tacoma, Wash.

Working drawings complete and bid call contingent upon state approval of plans for a campus plan school designed as an addition to the Northeast Tacoma Elementary School at 5412 29th N.E. in Tacoma, for Tacoma School District No. 10, Administration Bldg., S. 9th and Tacoma Ave., Tacoma. Plans by Johnston, Evans & Parker, architects, Washington Bldg., Tacoma.

The addition will consist of four units, designed in campus plan, with a fifth section to be used as an amphitheater. One building will house four classrooms; another will have two classrooms, library and administration room; the third will be used for multipurpose room equipped with movable stage; and the fourth will be a playshed. The amphitheater will be outside the multipurpose room and will be bid as an alternate. The four units will each be 64'x64', one-story, and connected by plastic roofed covered ways, sheltered by wood screen walls. Each unit will be identical except for 12' wall panels in multipurpose building; others having 8' high walls.

Description for all units: concrete block on concrete footings; folded plane roof, prefabricated plywood stressed skin units joined in self spanning form supported only on perimeter wood columns which also support prefabricated plywood wall panels; beam minimal, acting only as tension chords after roof panels installed; plastic perimeter of all units; stainless steel jalousies in vents only, all other fixed glass; fiberglass quilt insulation in wall and roof panels. Finish: exposed structural system in classrooms with supporting casework system and interior face of fir plywood wall units, stained, other walls of gypsum board with fixed glass relights; fir trim; exposed fir plywood roof panel face and acoustic tile bands on ceiling; wood doors and cabinets; folding doors; high output fluorescent tubes; electric baseboard heating; portable stage; movable casework; carried system; exhaust type venilating system. ★HOUSING, UTILITIES— Tacoma, Wash.

Work is about 40% completed under contracts issued in September by Housing Authority of Tacoma, Harold Bergerson, executive director, 1728 E. 44th, Tacoma, for improvements on Salishan Housing Project No. WASH-5-4, involving alterations, repairs, additions to the Management and Maintenance Bldg. and to 228 existing and relocated dwelling units; existing and new overhead electric distribution system, water distribution system, sewer main system; construction of new gas distribution systems, streets, concrete curbs and sidewalks, street pavement, parking area pavement and construction of garage and shop building. Plans by A. Gordon Lumm, architect, 321 S. 11th, Tacoma.

Work as follows: Proposal A—General construction, mechanical, electrical work on alterations, repairs, additions to Management and Maintenance Bldg., to 228 existing and relocated dwelling units including demolition and adjacent site improvement work, and construction of garage and shop building. Proposal B—Alteration, repairs, additions to existing overhead electric distribution system and extending system. Proposal C—Alterations, repairs, additions to existing water distribution system, sewers and construction of new gas distribution system. Proposal D—New streets, curbing, sidewalks, paving, repairs, parking area, drainfields, grading.

CONTRACTORS—PROPOSAL A: Quality Builders, 5220 S. Orchard, Tacoma, $638,929. PROPOSAL B: Carl T. Madsen, 808 N. 12th, Tacoma, $25,888. PROPOSAL C: Malone & Tucci, 3215 S. M St., Tacoma, $99,500. PROPOSAL D: George Madsen Co., 3103 S. Lawrence, Tacoma, $82,640. Electric refrigerators and ranges for the 228 dwelling units are being furnished by Westinghouse Electric Supply Co., 1325 S. Tacoma Way, Tacoma (refrigerators, contract for $25,308) and Hotpoint Appliance Co., 3625 Interlake, Seattle, (ranges, contract for $21,838).

SWIMMING POOL— Tacoma, Wash.

Bids will be called late in November by Metropolitan Park District, Tom Lantz, recreation supervisor, City Hall Annex, Tacoma, for construction of the one-story, no basement, 253'x93'x36' L-shaped, south end swimming pool, to be located at E. 56th and D St., Tacoma, adjacent to the Stewart Heights Playfield. Plans by E. L. Mills & Associates, architects, 308 S. Tacoma Ave., Tacoma. Plans call for three swimming pools, to be constructed of reinforced concrete or ¼" steel plate (alternate); chlorination and filtration equipment; dressing rooms and appurtenant facilities; concrete footings and foundation; concrete block walls; SCR brick; concrete slab floors; flat built-up roof; glued laminated beams; steel columns; corrugated fiberglass panels; ceramic tile flooring, glazed block walls in showers; electric baseboard heating; power vents in skylights. Plans include a 400-car gravel surfaced parking area, with some asphaltic concrete.

Swimming pool will be 165'x75'; wading pool, 30'x60'; diving pool, 40'x50'. Ceiling-hung unit heaters, and boiler to heat pools, will be fired by natural gas. Main pool will be 3' deep at each end and slope to a maximum depth of 5' at the center. Diving pool will be 12' to 14' deep, and will be separated from the main pool by a concrete barrier, with opening so that the water can be filtered and chlorinated together with that of the main pool. It will have one- and three-meter boards and a 10-meter board. The wading pool will have a maximum depth of 12". Adjacent facilities, besides separate dressing rooms for men and boys, women and girls, and the chlorination and filtration equipment, will include a covered spectator area and a snack bar.

PRIMARY SCHOOL— Tacoma, Wash.

Bids may be called in January by Tacoma School District No. 10, Administration Bldg., S. 9th and Tacoma Ave., Tacoma, for construction of the Washington Primary School, consisting of a four-classroom 66'x76' classroom building and a 40'x56' multipurpose building separated by a 60'x76' play court, to be located on Union between N. 27th and N. 28th in the northern section of Tacoma. Working drawings are underway by Robert Billsbrough Price, architect, 2907 A St., Tacoma. The multipurpose building will feature 10'6" plywood roof vaults, while the classroom building will have plywood dome roof.

PD 11-12

LOBBY REMODELING— Tacoma, Wash.

Preliminary drawings have been completed and working drawings will be started soon by Johnston, Evans & Parker, architects, Washington Bldg., Tacoma, for remodeling lobby of Washington Bldg., S. 11th and Pacific Ave., Tacoma. Plans include a luminous ceiling; terrazzo flooring; new entrance doors; stripping, refacing columns. A portion of existing heating system will be replaced with new equipment. PD 11-12

HOSPITAL EXPANSION— Tacoma, Wash.

(Estimated cost $150,000)

Architectural plans are being considered by Board of Trustees, Mary Bridge Children's Hospital, 311 S. L St., Tacoma, for the completion of the third floor of the hospital. Plans were prepared by Lea, Pearson & Richards, architects, 240 S. Stadium Way, Tacoma. PD 11-13. Previous report 9-7

●BUS TERMINAL— Tacoma, Wash.

Bids will be opened 4 p. m., December 5, in office of William Churchill, regional manager, Northwest Greyhound Lines, 8th Ave. and Stewart St., Seattle, for construction of a new 300'x120' bus terminal on Pacific Ave., bounded by 13th and 14th streets and Court A, Tacoma. Plans with Decker, Christenson & Kitchin, architects, 1411 4th Ave. Bldg., Seattle, and with Associated General Contractors, 1605 Center St., Tacoma. 5% bid bond. $50 deposit.

The one-story terminal with mezzanine will have a parcel and express office, and a 10-bus loading ramp at the rear of the 200'x60' main building. Plans include a 110-car capacity parking garage over the basement, a waiting room, baggage and ticket office, post house, cocktail lounge and concession room on the main floor; restrooms and drivers' rooms on mezzanine. A 35-car parking area north of the terminal will be of portland cement with waterproofing agent added.

Reinforced concrete; 2" rigid insulation in flat built-up roof; steel frame; series of trusses fireproofed with plaster; aluminum window wall front; plaster, steel stud partitions; steel frame, light steel decking loading area canopy; terrazzo floor in waiting room, asphalt tile and ceramic tile on mezzanine floor; dry-hung ceilings; fluorescent, some incandescent lighting; aluminum entry doors; heating connected to city steam system; complete ventilation system, provision for future air conditioning.

●REACTOR BUILDING SHELL— Idaho Falls, Idaho
(Estimated cost $800,000)

Bids will be opened 3 p.m., December 11, by Atomic Energy Commission, Box 1221, Idaho Falls, for construction of reactor building shell at EBR II Area at the National Reactor Testing Station west of Idaho Falls; Inv. No. AT(10-1)-927. Specifications with above office.

Following is a general description of the work: (a) The reactor building shell is a containment vessel 80' in diameter by 139' over-all height, constructed of carbon steel plate of 1" thickness. The vessel will be cylindrical in shape with a vertical axis and will have a hemispherical top head and an ellipsoidal bottom head. The vessel will have four large airlock-type openings. (b) The reactor building shell foundation will be a stepped circular concrete pad in the bottom of a pit approximately 50' deep and 90' in diameter. Excavation of the pit will involve 6,000 c.y. common earth excavation and 8,000 c.y. rock excavation. (c) Work also will include construction of a 200,000-gal. flat bottom water storage tank (33' diameter by 32' height) with a reinforced concrete foundation.
SP 11-13. Previous report 11-12

BUILDING MODIFICATIONS— Idaho Falls, Idaho
(Estimated cost $170,000)

Bids will be called later this month by Atomic Energy Commission, Box 1221, Idaho Falls, for modifications to CFA cafeteria, CPP decontamination room in RAF Bldg. CPP-627, CFA Records Center Bldg. No. 624, and ETR Experimenters Bldg., extension of burial ground fencing, conversion of space in Bldg. CPP-602 in the CPP Area, extension of disposal field for CPP sewage plant, and modifications to CFA parking lot, all at the south end of the National Reactor Testing Station in Idaho; Inv. No. AT(10-1)-923. Plans with above office. All bidders should visit the site of the work located at the NRTS, west of Idaho Falls. Two prebid inspection tours of the work area will be arranged.

CFA CAFETERIA: Construct pumice block additions to existing cafeteria building consisting of removal of existing pumice block walls, sidewalks; addition of block walls, sidewalks, concrete slab floors and built-up roofing over metal decking; revisions and extensions of electrical, plumbing, heating and ventilating systems; painting, floor covering; furnishing or relocating cafeteria equipment and furnishings; other miscellaneous work to complete building. Additions are 32'x54' and 21'x78' and 13'x37'. Work includes construction of a built-up roof over an existing 12'x18' unloading ramp. FENCING: Construct 6,800 of 6-strand, 2-point barb wire fencing with one 18' gate opening. Steel "T" line posts and gate may be Government-furnished. Steel pipe gate, pull and corner posts to be embedded in concrete.

BLDG. CPP-602 CONVERSION: Remove certain existing portions in the basement and construct new gypsum board and stud partitions. In Room 227, first floor, install Government-furnished laboratory benches, sinks and fume hoods and modify existing laboratory benches to accommodate new equipment. Work includes extension of plumbing, piping and electrical services and installation of services in new equipment.

DECONTAMINATION ROOM: Construct 4'x19' steel work bench with stainless steel top and plexiglass cover. Modify 14" diameter exhaust duct and extend utilities for air, water, steam and electricity. Install instrument panel.

DISPOSAL FIELD EXTENSION: Construct 675' of 8" open joint concrete sewer pipe with two precast concrete manholes.

PARKING LOT: Place 120 bumper blocks using salvaged railroad ties. Install traffic control signs and paint 120 vehicle parking lanes. Erect 150' of 1"x8" rail on steel posts as barrier between bus unloading lot and vehicle parking lot. Modify existing head bolt heater rack and install 40 additional heater outlets. Paint bumper blocks and heater racks.

RECORDS CENTER BLDG: Modify existing 40'x60' area. Erect cement-asbestos board on existing pipe framework; install fin-tube radiators and ultrasonic alarm system.

EXPERIMENTERS BLDG.: Modification of interior consisting of window and door relocation, bracing of subfloor, laying secondary flooring, and installation of linoleum floor covering. Connecting protecto wire fire alarm system in MTR-ETR system. Extension of security fencing, which consists of 580' fence, and perimeter lighting on security fence.

★PAVING— Roseburg, Ore.

Award to Roseburg Paving Co., 536 W. Maple St., Roseburg, $8,206, by City Council, City Hall, Roseburg, for paving Upper Terrace Drive at Roseburg. Work will include 625 c.y. excavation, 450' concrete curb and gutter, 736 c.y. rock and 2,370 sq. yd. asphaltic concrete. SP 11-13. Previous report 11-5

COMMERCIAL STREET EXTENSION— Salem, Ore.

Plans will be completed in 1958 for the proposed extension of Commercial St. north to Chemawa Road in Salem, according to Robert Powell, chairman of the Mid-Willamette Valley Planning Council. The two-lane arterial would extend through Jack St. N., Manbrin Gardins, into Rivercrest Drive N., paralleling River Road N.E., in Salem.
SC 11-6

★SEWAGE LIFT STATION— Salem, Ore.

Award by Oregon State Board of Control, Room 124, Capitol Bldg., Salem, for construction of sewage lift station and 4,000' of pressure line connecting the sewer system of the new state correctional institution with the system at Cottage Farm, Salem. Plans by Annand, Boone & Lei, architects, 1530 S.W. Taylor St., Portland. AWARD: E. E. Batterman, 147 N. Commercial St., Salem, $32,700. OTHER LOW BIDS: Salem Sand & Gravel Co., 1401 N. Front Ave., Salem, $34,890; Mac Sharp, 9820 S.W. Eagle Lane, Beaverton, $38,450. Bids opened November 1.
WB 11-9. Previous report 10-16

STREET WIDENING— Salem, Ore.
(Estimated cost $100,000)

Bids will probably be called in summer of 1958 by Oregon State Highway Commission, Salem, for widening of State St. to four lanes, east of 12th St. to the city limits, in Salem. The project would eliminate parking on both sides of State St. east of 17th St. to the city limits, according to City Engineer J. H. Davis. This year's city budget appropriates $25,000 for the widening of State St. Work on the project will not be started until next summer. According to plans drawn by the city, State St. will be widened to 74' between 12th and 15th streets, to 64' from 15th to 17th streets, and 44' from 17th St. to the city limits. This would eliminate parking on State St. east of 17th and require parallel parking on the north side of State St. between 12th and 17th streets.
SP 11-12. Previous report 10-34

PARKING LOT— Salem, Ore.

City street crews are grading an area on the south side of Trade St. between Capitol and Winter streets in Salem to provide parking space for about 100 cars, for Willamette University, 900 State St., Salem. City Engineer J. H. Davis indicated provision of the extra parking space, being developed on university-owned property, would ease the congested parking problems on State and Winter streets. The grading and graveling of the 100'x300' lot is only a temporary measure to help meet the need for extra parking facilities. SC 11-12

▲FENCING, BACKSTOP— Salem, Ore.

Bids received by Department of Finance and Administration, 406 City Hall, Salem, for construction of a chain link fence for the River Road Playground and for construction of a dome type cone shaped softball backstop for Highland Park. Bids opened November 7. BIDDERS: Colorado Fuel and Iron Corp., 1350 N.W. Raleigh, Portland, $1,907 (backstop), $2,439 (fence); Cyclone Fence, 400 N.E. 11th Ave., Portland, $1,941, $2,462; San Jose Steel Co., Inc., 723 N. Tillamook, Portland, $1,936, $2,527.
SC 11-13. Previous report 10-31

■ WELLS, CONCRETE HEAD WALL, FILL— Sandy River, Ore.

Planholders announced for installation of relief wells, furnishing and installation of reinforced concrete pipe, construction of reinforced concrete hand wall, and construction of a pervious fill, along the left bank of the Columbia River immediately downstream from the mouth of Sandy River, Multnomah County, Ore.; CIVENG-35-026-58-68. Bids will be opened 2 p.m., November 19, by Corps of Engineers, Portland district, 628 Pittock Block, Portland, for Sandy Drainage District.

Planholders: P. S. Lord Mechanical Contractors, 4507 S.E. Milwaukie Ave.; C. J. Eldon, P. O. Box 5686; C. H. Strong, Box 366, Eugene; General Construction Co., P. O. Box 3860; Schrader Construction Co., 3030 S.E. Hawthorne Blvd.; R. A. Heintz, 211 N.E. Columbia Blvd.; A. C. Bardi, 8105 S.E. Duke St.; Russell M. Espedal, 5906 N. Greeley; American Pipe & Construction Co., 518 N.E. Columbia Blvd.; Riverside Construction Co., P. O. Box 3853; Vernie Jarl, Box 507, Gresham; LaVelle Construction Co., 10430 S.E. Bush St.; J. Bacaloff Co., 6009 N.E. 60th Ave.; Pacific Concrete Co., 6009 N.E. 60th Ave.; Pacific Concrete Co., Box 7616; J. N. Conley, 4332 N.E. Royal Court; Standard Construction Co., 13035 N.E. Glisan St.; P. C. Knox, Box 97, Gladstone; Troutdale Sand & Gravel Co., Troutdale; Elte Construction Co., Boring; Nick Spada, 7428 N.E. Alderwood Drive; Harbert Bros., Estacada; Stevenson Construction Co., P. O. Box 206, Salem. Of Portland except as noted.

SEWAGE SYSTEM— St. Helens, Ore.
(Estimated cost $600,000)

Plans are about 70% complete by N. W. Haner & Associates, consulting engineers, 220 S.W. Alder St., Portland, for sewage system, including interceptor sewers, two pumping stations, primary sewage treatment plant, and $100,000 storm drainage system. Bid call will be issued about January by Richard E. Singleton, city recorder, City Hall, St. Helens.
WB 11-8. Previous report 12-26

▲SIDEWALK— The Dalles, Ore.

No bids were received for the November 4 opening by John B. Thomas, city clerk-treasurer, City Hall, The Dalles, for replacement of a concrete sidewalk and ramp in front of the fire station and city hall at The Dalles. SP 11-8. Previous report 10-25

★BASKET STAGING— The Dalles, Ore.

Award to Albina Engine & Machine Works, Inc., 2100 N. Albina St., Portland, $2,040, by Corps of Engineers, Portland District, 628 Pittock Block, Portland, for two basket staging units, electric motor powered, 120 volt AC, fob Seufert (The Dalles), Ore.; CIVENG-35-026-58-41. Bids opened October 2.
WB 11-13. Previous report 9-20

WASCO DAM— Wapinitia Project, Ore.

Bids will be called in January 1958 by Bureau of Reclamation, Bldg. 53, Denver Federal Center, Denver, Colo., for construction of the 42' earthfill Wasco Dam, containing about 45,000 c.y. material with crest length of 390', and appurtenant structures, located on Clear Creek about 35 mi. west of Maupin, Ore., Wapinitia Project, Ore. Inasmuch as snow conditions at the time of issuance of specifications may make access to and examination of the site of the proposed work difficult, prospective bidders are invited to inspect the site in the near future, in order that they may be informed and in a position to submit a bid when the work is advertised. Completion time 600 days.

Quantities: 12,000 c.y. excavation for access road; 28,000 c.y. excavation for dam and structures; 52,000 c.y. excavation and separation from borrow; 50,000 c.y. embankment; 900 c.y. concrete in structures; 100,000 lb. reinforcement; 15,000 lb. metalwork and equipment; 900 c.y. gravel surfacing for access road; 2,000 c.y. procuring and placing riprap. SP 11-12

WASHINGTON

WATER FILTERING PLANT, PUMPING STATION WELL— Anacortes, Wash.

Work is progressing satisfactorily on the 24,000,000-gal.-per-day central filtering plant and 188,000-gal. pumping station well on Skagit County River Bend Road, which is being constructed by Marine and Industrial Supply, 1121 W. Hanford, Seattle, under a $269,372 contract. Twelve 45' filter tanks, each to handle 2,000,000 gal. per day, have been set in place at the filter plant located on the banks of the river near Avon. Only the mechanical piping work remains to be completed. The second pipeline crossing of the Skagit River has been completed and will be ready for use when the filter plant is completed. ET 11-12. Previous report 8-22

SEWER SYSTEM— Asotin, Wash.

Survey crews under direction of Walter L. Woodward, consulting engineer, Empire State Bldg., Spokane, are preparing maps of the Asotin area as part of the planning of a sewer system. When completed, the plans will be submitted to the U.S. Public Health Service for approval. A federal grant of $26,706 is available to assist in financing the work. SC 11-12. Previous report 10-21

▲TANK PAINTING— Battleground, Wash.

Bids received by City Council, City Hall, Battleground, for scraping, cleaning and repainting a 250,000-gal. steel water tank. Bids opened November 5. LOW BID: A. H. Barbour & Son, 2828 N.E. Alberta St., Portland, Ore., $990 (basic), $1,385 (alt.). OTHER BIDDERS: Northwest Tank and Maintenance Co., 1970 Warner, Salem, Ore., $1,025, $1,875; George A. Stutzer & Co., 2354 N.W. 23rd Place, Portland, $1,745, no bid; Hall Erection and Painting Co., 1633 S.E. Ash, Portland, $2,577, no bid; Northwest Protective Coatings, Inc., 7515 N.E. 13th, Portland, $2,835, $4,167.

DAKIN STREET BRIDGE— Bellingham, Wash.

The Bellingham City Council has decided to delay advertisement for bids on construction of the Dakin Street bridge, which will connect a short area on Dakin with Electric and Alabama streets, until after receipt of cost figures for the Commercial and Young St. culvert and fill and the Central Avenue bridge, now under construction.
ET 11-8. Previous report 10-24

★TREATED TIMBER BRIDGE— Carson, Wash.

Award to Balkwill & Furber, 1217 S.W. 19th Ave., Portland, $12,385, by U.S. Forest Service, Regional Supply Officer, Box 4137, 729 N.E. Oregon St., Portland, for construction of the Panther Creek Bridge, involving a treated timber superstructure approximately 101' long on existing piers and abutments on Panther Creek Road No. N605, approximately 10 mi. north of Carson, Skamania County, Gifford Pinchot National Forest, Wash.; Bid No. 157.
WB 11-13. Previous report 10-31

● TRACTOR WITH BACKHOE—Elma, Wash.

Bids will be opened November 18 by City Council, City Hall, Elma, for furnishing the street and water departments with a new tractor with backhoe. Plans and specifications with city clerk, City Hall.

This is the second bid call. Three firms submitted figures at the original bid opening and all were rejected. DC 11-13

WANAPUM DAM— Ephrata, Wash.

Site has been selected by Grant County Public Utility District, Glenn Smothers, manager, 30 C St. S.W., Ephrata, for the Wanapum Dam. The hydroelectric power project will be located on the Columbia River 16 mi. upstream from Priest Rapids Dam, which is now under construction by the PUD.

Start of construction of Wanapum Dam depends on interest rates at which bonds can be sold and on the need for power in the Northwest. The original cost of building had been estimated at $163,000,000. Including construction, engineering and financing the total cost is now estimated around $240,000,000.

The new dam site is three mi. upstream from Beverly and a few miles below a site previously considered. Priest Rapids, the

other Grant County PUD job, is 24 mi. south of Vantage, Kittitas County.

Wanapum will be a concrete gravity dam with earthfill embankments and will be 170' high with a length of 9,365'. Its initial installed capacity will be 570,000 kw. Powerhouse and spillways will be on the west side of the river, the powerhouse paralleling the the west bank. DC 11-8

▲DEEP DRAINS— Ephrata, Wash.

Bids received by Bureau of Reclamation, Box 368, Ephrata, for construction of deep drains DW239B and DW239C in Block 78, Columbia Basin Project, Wash.; Spec. No. 117C-469. Bids opened November 7. LOW BIDS: Nelson & Haisch, M. Route 2, Pasco, $37,653; Duncan Construction Co., Box 582, Moses Lake, $40,636; Murphy Bros., E. 3728 Broadway, Spokane, $41,692. Engineers' estimate, $53,118.

Work is situated in Grant County about 13 mi. south of Quincy. Features of work: earthwork for 3.9 mi. deep drains with bottom width of four ft.; earthwork for and construction of structures along the drains including drain inlets road crossings and lateral crossing; removing existing concrete pipe and metal pipe along drains.

Quantities: 98,500 c.y. excavation for drains; 3,800 c.y. excavation for structures; 3,000 c.y. backfill about structures; 1,220 c.y. compacting backfill; 1,200 c.y. puddling backfill; 100 c.y. coarse gravel protection 45 c.y. riprap; 25 c.y. sand and gravel or crushed rock bedding; 600' of 12", 114' of 24", 252' of 36", 68' of 42", 218' of 48" asbestos bonded corrugated metal pipe.

★CABLE— Everett, Wash.

Award to W. G. Mills Co., S. 1206 McClellan, Spokane, $2,986, by City Council, City Hall, Everett, for furnishing the Fire and Police Signal Department with 12,000' of 15 conductor, No. 16 AWG, Soft Drawn Copper Fire Cable, to be furnished in four 3,000' pieces. Bids opened November 4. OTHER BIDDERS: North Coast Electric Co., 171 Jackson, Seattle, $3,264; Bean Electric, Everett, and Greenshields Industrial Supply, 710 Highway 99 North, Everett, $3,372 (identical bids); Belden Electric Co., 2815 Rockefeller, Everett, $3,484.

HH 11-8. Previous report 10-12

●STREET WIDENING, CHANNELIZATION— Everett, Wash.
(Estimated cost $50,000)

Bids will be opened 10 a.m., November 22, by John L. Sugars, city clerk, City Hall, Everett, for improvements of Evergreen Way from 47th St. to 52nd St. by widening and channelization. Specifications with Rod Colvin, city engineer, above address. Certified check or bid bond 5%. HH 11-13

SUBSTATION, SUBMARINE CABLE— Fragaria, Wash.

The Puget Sound Power and Light Co., White-Henry-Stuart Bldg., Seattle, has acquired a site near Fragaria, Kitsap County, for a new substation which will tie into a new submarine cable between Vashon Island and the Kitsap peninsula. The substation is to be built next year. The cable is to be laid soon from Vashon to Fragaria and will furnish the Kitsap peninsula with another power connection with the mainland. It will tie into an existing submarine cable which extends to Vashon Island from a point near Des Moines. SC 11-13

SEWAGE DRAINAGE PROJECT— Hoquiam, Wash.

Carl E. Green & Associates, consulting engineers, 510 Henry Bldg., Portland, have reported that they will recommend to the City Council, City Hall, Hoquiam, at their meeting Tuesday evening, November 12, that all bids be rejected for a new storm water drainage system, new interceptor sewers and lagoon-type sewage treatment facilities. Bids opened October 28 are considered too high and beyond the financial ability of the district. It is expected that a new bid call will be issued in mid-December for opening in mid-January. WB 11-8. Previous report 10-31

●SEWER— Kennewick, Wash.

Bids will be opened 2 p.m., November 18, by City Council, City Hall, Kennewick, for extension of the Kennewick Ave. trunk sewer from Vista Way west. Plans and specifications with Marston Winegar, city engineer, City Hall. $5 deposit.

Work includes replacement of a section of the S. Underwood sewer lateral. Quantities: 900' of 8" and 10" sewer pipe. DC 11-13

●WATER WELL— Leavenworth, Wash.

Bids will be opened 10 a.m., P.S.T., November 19, by Fish and Wildlife Service, The Interior Bldg., 1001 N.E. Lloyd Blvd., Portland, for drilling, casing and developing a fresh water well at the U. S. Fish Cultural Station near Leavenworth, Wash. Plans with Leo L. Laythe, regional director, Portland office. DM 11-9

●PARK SPRINKLER SYSTEM— Moses Lake, Wash.

Bids will be opened 2 p.m., November 19, by Washington State Parks and Recreation Commission, in the assembly room of the Moses Lake City Administration Bldg., Moses Lake, for installation of a lawn sprinkler system, involving 1,050' of 6" welded, wrapped and dipped pipe, 4,130' galvanized iron pipe, one 500-gpm pumping unit, extension to existing pumping intake and other items, at Moses Lake State Park in Grant County. Specifications were prepared by J. L. Chambers, chief engineer in Moses Lake, and are available from the commission offices at 100 Dexter Ave., Seattle, or from Lloyd Boyle, Moses Lake State Park superintendent, Star Route, Moses Lake.

The work covered by the proposed contract is part of an over-all plan for developing the west ten acres to complete the 30-acre park. Included in the plan are subsequent construction of a bathhouse and 200-car parking strip. The last legislature appropriated $20,000 for work in the present biennium. SC 11-8

PARK COMPLETION— Moses Lake, Wash.

Plans announced by Washington State Parks and Recreation Commission, John Vanderzicht, director, 100 Dexter Ave., Seattle, for expanding Moses Lake State Park to its full acreage. The last legislature appropriated $20,000 for the present biennium for completion of the 30-acre park, 20 acres of which have been developed. The west end of the park will have a complete water system and underground utilities when the project is developed. Installation of a new bathhouse and space for a 200-car parking strip on the west side are included in the development program. SC 11-13

●STATE HIGHWAY PROJECTS— Olympia, Wash.

Bids will be called at a later date when snow may cover the ground, by Washington State Highway Commission, W. A. Bugge, director, Transportation Bldg., Olympia, on two highway construction projects. Contractors interested in bidding on the work are urged to view the proposed jobs on the ground at this time since snow can be expected to make this inspection uncertain and difficult in the near future.

It is anticipated that the state will permit a contractor to submit bids on one or both of the two projects listed below and to condition his bid upon award of the combination of the two projects. A contractor who submits bids on both projects may, if he desires to provide more favorable bid on the combination of projects, allow for a reduction in the amount of each bid.

Preliminary plans giving approximate quantities for use on this inspection may be obtained from the above office upon written request and payment by certified check, cashier's check or cash $2 deposit. Preliminary plans are on file in the office of the county engineer of Kittitas County and in the offices of the district engineers of the highway department.

KEECHELUS INN TO RUSTIC INN, PAVING—Surfacing and paving four lanes with cement concrete and asphaltic concrete on 5.088 mi. of Primary State Highway No. 2, Kittitas County.

RUSTIC INN TO TOP EASTON HILL, PAVING—Surfacing and paving four lanes with cement concrete and asphaltic concrete on 5.146 mi. of Primary State Highway No. 2, Kittitas County. DM 11-8

■STATE HIGHWAY PROJECTS— Olympia, Wash.

Planholders announced for seven highway construction projects on which bids will be opened 10 a.m., November 19, by Washington State Highway Commission, W. A. Bugge, director, Olympia.

Award to Paine & Gallucci, Inc., 1521 S. Grant, Tacoma, $8,621 (proposal 1, bell and spigot cast iron pipe), by Board of Contracts and Awards, 204 City Hall, Tacoma, for construction of 6" and 8" cast iron water mains in LID No. 5286. PD 11-9. Previous report 10-15

●BACKHOE— Tacoma, Wash.

Bids will be opened 9 a.m., November 25, by D. G. Markley, purchasing agent, room 500, Court House, Tacoma, for furnishing and delivering one heavy duty industrial type backhoe, Ottowa model DX with 18" bucket or equal, fob Lakeview Shops, 11517 S. Pacific Highway, Tacoma. Specifications with above office. SP 11-12

▲REINFORCED CONCRETE BRIDGE— Tacoma, Wash.

Following is the complete list of bids received, and subsequently rejected, by Pierce County Commissioners, Courthouse, Tacoma, for construction of reinforced concrete bridge over Day Island Lagoon and the Northern Pacific Railway between Station 1+00 and Station 7+00 of the newly constructed Day Island Road (S. 27th St.) and other work; CRP No. 1687. Bids opened November 5 and will be readvertised. BIDDERS: J. A. Troxell, 9440 N.E. Lake Washington Blvd., Bellevue, $178,903; Roy T. Earley Co., 321 Middle Waterway, Tacoma, $185,500; Ostruske-Murphy, Inc., 1515 Center St., Tacoma, $198,661; Manson Construction and Engineering Co., 5209 E. Marginal Way, Seattle, $201,602. SP 11-13. Previous report 11-6

★PUMP— The Dalles Dam, Wash.

Award to Berkeley Pump Co., Box 7, Station A, Berkeley, Calif., $6,630, by Corps of Engineers, Portland District, 628 Pittock Block, Portland, for one electric motor-driven deep well turbine or propeller type pump, fob The Dalles Dam, Wash.; CIVENG-35-026-57-44. WB 11-13. Previous report 10-19

INDUSTRIAL PARK— Tukwila, Wash.
(Estimated cost $100,000,000)

An industrial park, designed to accommodate 50 or 60 industries, will be developed immediately on a 350-acre tract directly south of the south boundary of Tukwila, for owner Andover, Inc., c/o White & Bollard, Inc., representatives, 2333 3rd Ave., Seattle. The park, to be known as Andover Park, may eventually occupy 750 acres, according to Robert G. Keever, treasurer of White & Bollard. The property is bounded on the west by 57th Ave. S., the Green River on the east, S. 180th St. on the south and the Renton Three Tree Point Road on the north. The Green River is part of the Duwamish Waterway development project with the proposed turning basin just to the north. All needed services will be installed at the site, including rail, water, sewage disposal, power, other utilities and adequate parking. SP 11-13

STREET IMPROVEMENTS— Tumwater, Wash.

Bond election will be held November 26 in place of November 5 by City Council, City Hall, Tumwater, on a $180,000 bond issue to finance street improvements for the city. Proceeds of the bond sale will finance plantmix surfacing of five mi. city streets and light bituminous surfacing of an additional 12 mi. streets. SP 11-8. Previous report 10-2

▲BASE COURSE— Vancouver, Wash.

Bids opened and held under advisement by Vancouver Housing Authority, Fred Senechal, executive director, McLoughlin Heights, Vancouver, for furnishing 2,600 tons base course in Adresen Highlands—2, McLoughlin Heights, Vancouver. Award probably will be made November 12. WB 11-8. Previous report 10-25

●TERMINAL CONNECTORS— Vancouver, Wash.

Bids will be opened 2 p.m., November 21, by Bonneville Power Administration, 1001 N.E. Lloyd Blvd., Portland, for furnishing and delivering fob Eavan Spur, Vancouver, terminal connectors; Inv. No. 8580. Specifications with above office. SP 11-9

●STEEL WIRE STRAND—Vancouver, Wash.

Bids will be opened 2 p.m., November 20, by Bonneville Power Administration, 1001 N.E. Lloyd Blvd., Portland, for furnishing and delivering 200,000' steel wire strand fob Eavan Spur, Vancouver; Inv. No. 8581. Specifications with above office. SP 11-9

★ELECTRICAL SYSTEM, SWITCHYARD— Wenatchee, Wash.

Award to Tullar Power Construction, Inc. & Associates, 3214 W. McGraw, Seattle, $2,580,578, by Chelan County PUD No. 1, Kirby Billingsley, manager, 327 N. Wenatchee Ave., Wenatchee, for construction and installation of electrical system, transmission towers, switchyard and related equipment for the Rocky Reach hydroelectric project on the Columbia River. Tullar Power Construction, Inc., & Associates is a joint venture comprised of Tullar Power Construction Co., 3214 W. McGraw, Seattle; P. S. Lord Mechanical Contractors, 4507 S.E. Milwaukie, Portland, Ore.; and Wismer & Becker, Sacramento, Calif. The contract was awarded with the stipulation that it may be withdrawn anytime prior to December 31, 1957, in the event that arrangements for financing the work are not completed by that time. SP 11-8

SEWER SYSTEM, TREATMENT PLANT— Wishram, Wash.
(Estimated cost $154,000)

Preliminary plans have been completed by Cornell, Howland, Hayes & Merryfield, consulting engineers, 1600 Western Ave., Corvallis, Ore., for a sanitary sewer system and sewage treatment plant to serve Wishram Sewer District.

Estimated cost of the sewage collection system including two main trunk lines and 19 lateral mains has been set at $80,607. Sewage treatment plant cost is estimated at $73,800. Construction would be financed through sale of revenue bonds; and a possible federal grant equal to 30% of the cost of the treatment plant. DC 11-13

★INDUSTRIAL WASTE DISPOSAL SYSTEM— Yakima, Wash.

Awards announced by City Council, City Hall, Yakima, for construction of industrial waste sewer lines (Sched. 1) and treatment plant facilities (Sched. 2) to serve the canneries on 1st St. and Lenox Ave. in Yakima. AWARDS—SCHED. 1: Walters Construction Co., Box 184, Cosmopolis, $225,081 (basic and alts.). SCHED. 2: Central Plumbing and Heating Co., 510 S. 1st St., Yakima, $114,620.

Quantities — SCHED. 1: 24,000 c.y. excavation and backfill; 500 c.y. bedding gravel; 11,000' of 24" concrete pipe or clay pipe; 400' of 24" reinforced concrete pipe; 6,500' of 18" concrete or clay pipe; 900' of 12" same; 2,700 sq. yd. asphaltic concrete repair; 400' curb and gutter repair. SCHED. 2: 1,500 c.y. excavation and backfill; 230 c.y. concrete; 650' concrete sidewalks; 28,000 lb. reinforcing steel; 40 c.y. bedding gravel; 14,800' steel pipe; 350' concrete pipe. IG 11-9. Previous report 10-24

IDAHO

WATER SYSTEM— Aberdeen, Idaho
(Estimated cost $100,000)

Bids may be called in January 1958 by City Council, City Hall, Aberdeen, for improvements to the city water system. Specifications underway by Hamilton & Voeller, consulting engineers, 417 E. Center, Pocatello. A bond issue for the project was approved early in October and further plans will be announced subsequent to the engineer's report. Project will provide a new 12" well to be drilled near the junior high school, 11,000' of 6" pipe, new fire hydrants

and water meters, larger water mains in some parts of the city, and new water lines. SP 11-12. Previous report 10-12

INTERSTATE HIGHWAY— Boise, Idaho

The Idaho Department of Highways hopes to award contracts before the end of 1958 on five mi., four-lane section of the interstate highway system west of Mountain Home and a nine mi. four-lane strip from Rockland Junction east through American Falls to the Igo overpass. Early in the year, the department plans to contract for the sections between Pocatello and Idaho Falls and from Caldwell west to the Oregon border. Bryce Bennett, state highway engineer, has stated that all segments of the interstate system must be of a controlled access type without grade intersections or traffic lights. DC 11-12

DISTRIBUTION LINE— Boise, Idaho

Bids will be called in December or January by Bureau of Reclamation, H. T. Nelson, regional director, Reclamation Bldg., Fairgrounds (Box 937) Boise, Idaho, for construction of 1.5 mi. of distribution line at Palisades Dam near Irwin, Idaho.

Specifications will call for 12.5 kv wood pole, distribution line with two communication cables to be underbuilt. DM 11-12

★STATE HIGHWAY PROJECT—Boise, Idaho

Award announced by Department of Highways, 603 Main St., Boise, on the fourth and final highway construction project on which bids opened October 8.

CRAIGMONT-CULDESAC BRIDGES—Constructing roadbed, drainage structures and seven 101.4' concrete bridges on 13.344 mi. of U. S. Highway No. 95; FAP No. F-4113(6). AWARD: S. S. Mullen, Inc., Box 3886, Terminal Annex, Seattle, Wash., $2,011,540. SP 11-13. Previous report 10-11

★STATE HIGHWAY PROJECT—Boise, Idaho

Award to J. F. Konen Construction Co., Inc., 715 D, Lewiston, $30,440, by Department of Highways, 603 Main St., Boise, for the following highway project on which bids opened November 5.

CRUSHED ROCK STOCKPILES — GILBERT HILL, FOUR CORNERS—Furnishing crushed rock in stockpiles adjacent to State Highway Nos. 7 and 62, Lewis, Clearwater and Idaho counties; Idaho Stockpile Proj. Nos. 154 and 206. SP 11-13. Previous report 11-7

● STATE HIGHWAY PROJECTS— Boise, Idaho

Bids will be opened 2 p. m., November 26, by Department of Highways, 603 Main St., Boise, for two highway construction projects. Specifications with above office. $5 charge. Certified check or cashier's check 5%.

LITTLE WOOD RIVER CONCRETE BRIDGE—Constructing a 36' concrete bridge on U. S. Highway No. 93, over the Little Wood River, in Shoshone, Lincoln County; FAP No. F-2392(4).

Quantities: 1,750 c.y. excavation for structure; 295 c.y. concrete; 50,500 lb. metal reinforcement; 450 lb. structural steel; 175' concrete curb; 75 sq. yd. concrete sidewalk; 500 c.y. special backfill.

BITUMINOUS SURFACING—U. S. HIGHWAY No. 26—Constructing the surface and bituminous surface treatment on 11.142 mi. and seal coating 9.611 mi. of U. S. Highway No. 26, Clark Hill-Granite Hill and Beeches Corner-Ririe and furnishing crushed gravel in stockpile, Bonneville County; FAP No. F-6501(4) and Idaho Stockpile Proj. No. 231.

Quantities: 8.5 mi. obliteration of old road; 77,000 ton select base course; 173,000 ton crushed gravel base course; 5,000 ton crushed gravel surfacing in stockpile; 188,000 gal. asphalt road material for surface treatment; 9,500 ton cover coat material; 40,000 ton asphalt road material for seal coat; 80' of 8" pipe culvert; 5,000 ton screened and/or crushed sand in stockpile. SP 11-13

SEWAGE SYSTEM— Deary, Idaho

Walter L. Woodward, consulting engineer, Empire State Bldg., Spokane, Wash., has been retained by the Village of Deary to make a preliminary survey for a proposed sewer system. Petitions favoring the project have been approved. Federal funds may be available for the work. DR 11-8

SEWAGE COLLECTION SYSTEM— Genesee, Idaho

Bond election will be held November 26 by City Council, City Hall, Genesee, on a $33,000 municipal bond issue to finance a sewage collection system for the city. The funds provided by the bond issue would finance sewer lines in the east and central section of the city, supplementing a system constructed several years ago in the western section of the city. A bond issue for this project was defeated in a September election. DR 11-13. Previous report 10-1

ALARM SYSTEMS— Idaho Falls, Idaho
(Estimated cost $35,000)

Bids will be called later this month by Atomic Energy Commission, Box 1221, Idaho Falls, for installation of a monitron system in the MTR Area and modification of alarm systems in the MTR and CFA areas at the National Reactor Testing Station, west of Idaho Falls; Inv. No. AT(10-1)-933. Plans with above office.

Work covered by the above contract proposal is as follows: (a) Installation of additions and modifications to the existing fire alarm gong systems and existing evacuation alarm systems in the MTR and CPP areas. Work includes furnishing and installing sirens, coding-type gongs and related control relays, control mechanisms, switches, conduit and conductors. (b) Installation of conduit, duct and conductors for an area monitron system in the MTR area. Monitoring instruments and devices have already been procured and furnishing and installing of this equipment is not included under this contract. Conductors will include four-conductor stranded wire cables and eight-conductor shielded cables. SP 11-8

DITCH COVERING— Lewiston, Idaho

The Lewiston Orchards Irrigation District, Robert Budweg, manager, 1520 Powers, Lewiston, is planning for covering open ditches with pipes or concrete flumes to eliminate water losses and evaporation. DR 11-8

RELOCATE RAIL TRACKS— Lewiston, Idaho
(Estimated cost $14,000)

Plans are being considered by the State Department of Highways, the City of Lewiston and Camas Prairie Railroad Co. for relocation of the railroad's tracks to provide for two free lanes of traffic moving west along the approach to the Interstate Bridge in Lewiston.

The plans were recently discussed by Philip A. Marsh, Lewiston district engineer for the highway department, Elmer Soniville, city engineer; members of the city's traffic committee and street department and representatives of the railroad.

A plan was proposed whereby the tracks for the railroad's spur line along 1st St. leading across Main St. to Snake River would be moved to the southwest portion of the complex intersection. A decision may be made by December 4. DC 11-12

SEWAGE SYSTEM, TREATMENT PLANT— Pocatello, Idaho
(Estimated cost $1,100,000 to $1,250,000)

A tentative date of February 18 has been set by Pocatello City Commissioners, City Hall, Pocatello, for a bond election on the proposed sewage system and treatment plant.

Plans and specifications for the project are being prepared by Hamilton & Voeller, consulting engineers, 110 N. 2nd Ave., Pocatello. The Department of Health, Education and Welfare has approved an application for a federal grant in the amount of $250,000 to aid in financing the project. DC 11-13. Previous report 10-24

★WELL REHABILITATION—Rupert, Idaho

Award to Ben Walton, 706 3rd Ave. W., Twin Falls, $25,635, by Bureau of Reclamation, Bldg. 53, Denver Federal Center, Denver, Colo., for rehabilitation of 20 drainage wells, Unit B, Minidoka Project, near Rupert; Spec. No. 100C-316. SP 11-8

BROWNLEE DAM— Snake River, Idaho

The Power Commission has authorized Idaho Power Co., 807 Idaho St., Boise, to issue $15,000,000 in bonds to help finance construction of Brownlee Dam to be located 284.6 mi. above the mouth of the Snake River, west of Cambridge, Idaho. SC 11-12

MONTANA

TRANSMISSION LINE— Billings, Mont.

Bids will be called in December by Bureau of Reclamation, F. M. Clinton, regional director, Box 2553, Billings, for construction of footings, furnishing and erecting steel towers for about 309 mi. of single circuit, 230 kv transmission line from Fort Peck Power-Plant near Fort Peck, through the Dawson County Substation near Glendive, Mont., to the substation at Bismarck, N. Dak.

It is estimated that costs for construction of lines including right of way and stringing of transmission cables, will run between $35,000 to $45,000.

The planned work will be under the Fort Peck Project, Mont., and the Missouri River Basin Project, N. Dak. Plans call for clearing rights of way, furnishing and installing fence gates, constructing footings, furnishing and erecting steel towers for about 309 mi. of single circuit, 230 kv transmission line. DM 11-12

REFINERY FACILITIES EXPANSION— Billings, Mont.

Plans announced by Carter Oil Co., John M. Sprague, vice president, 2813 3rd Ave. N., Billings, for expansion of facilities at the refinery east of Billings to raise crude oil capacities from 25,000 to 34,000-bbl.-per-day. The enlargement will be executed by revamping of existing equipment to process the higher volume. Most of the work will be done by company personnel. The expansion is expected to be completed and the plant capable of operating on a 34,000-bbl.-per-day basis by early summer of 1958. SC 11-13

INTERCEPTOR SEWER (3rd Section)— Billings, Mont.
(Estimated cost $250,000)

Bids may be opened December 3 by City Council, City Hall, Billings, for construction of the third and final section of a large interceptor sewer in south Billings. The project will include 5,364' of 30" main, 2,875' of 24" main and 21 manholes on a route extending west from Riverside Road to Orchard Lane and then north to State Ave. EE 11-13

TRANSMISSION LINE— Fort Peck to Glendive, Mont.
(Estimated cost $35,000 to $40,000 per mi.)

Bids will be called in December by Bureau of Reclamation, Region 6, 709 Central Ave., Box 2553, Billings, for construction of a 300-mi. transmission line from Fort Peck powerplant to Glendive and then east to Bismarck, N. Dak. Steel towers will be employed to carry the line. EE 11-12

FILTER PLANT— Glendive, Mont.
(Estimated cost $800,000)

Special election will be held November 20 rather than November 28 as reported in PCD 10-30, by City Council, City Hall, Glendive, on a proposed $500,000 general obligation bond issue and a $300,000 revenue bond issue to finance additions and improvements to the city water system, including a new filter plant. Specifications by Morrison-Maierle, Inc., consulting engineers, 501 St. Johns Ave., Billings. If the election is successful, contracts for the work will probably be let in spring of 1958. SP 11-8. Previous report 10-30

WATER MAIN— Great Falls, Mont.
(Estimated cost $13,000)

The Cascade County School District No. 1, Robert Farnsworth, superintendent, Great Falls, has authorized construction of an 8" water main for fire protection purposes at the Lewis and Clark and East junior high schools in Great Falls. Construction of the main and four fire hydrants placed at 400-yd. intervals along the main were recom-

mended by Fire Chief Charles Carrico. The main and hydrants are to be located from 2nd Ave. S. on 38th St. to 42nd St. on school property just south of the two school buildings. SC 11-9

★CLEARING, DRAINAGE—Missoula, Mont.

Award to Oliver General Contracting Co., Inc., Sandpoint, Idaho, $67,718, by U. S. Forest Service, 3032 Federal Bldg., Missoula, for road reconstruction, clearing, grubbing, excavation and drainage of 8.131 mi. roadway identified as Twelve-Mile Creek No. 352 (Sec. A), Coeur d'Alene National Forest, Mineral County, Mont.; Bid No. 89-58. Bids opened October 24, at which time 12 bids were received. SECOND LOW BID: Dillsworth Construction Co., Box 1005, Helena, $75,551. HI BID: Howard Tangen, 607 7th, Coeur d'Alene, Idaho, $102,609.

★STREET LIGHTING— Berkeley, Calif.

Award to General Electric Supply Co., 53rd and Hollister, Emeryville, $11,450, by City Council, City Hall, Berkeley, for 64 electrolier extensions with bracket arms to throw light downward, to be used on Shattuck Ave., a continuation of the project to improve lighting in the downtown area of Berkeley between Durant Ave. and Ward St.
RC 11-16

▲STORM SEWERS— Hayward, Calif.

Bids received by City Council, City Hall, Hayward, for installation of 2,034' of reinforced concrete pipe for a storm sewer in E St. from Main to 2nd in Hayward, Alameda County; Project No. 1155. Bids opened November 5. LOW BIDS: Associated Pipeline, Inc., Box 66, South San Francisco, $23,335; E and J Construction Co. Inc., 1253 3rd St., Oakland, $24,520; Vincent Rodrigues, 226 Jackson St., Hayward, $26,127.
RM 11-16. Previous report 11-2

▲SEWER LINE EXPANSION— Jamestown, Calif.

Bids received by Jamestown Sanitary District, Jamestown, for extending the Jamestown sanitary system to serve Volponi Acres Bids opened November 4. LOW BIDS: Beerman and Jones, Box 698, Sonora, $55,549; McGuire & Hester, 796 66th Ave., Oakland, $71,092; W. M. Lyles Co., Box 495, Avenal, $71,821. PC 11-16. Previous report 11-2

VIRGINIA POINT DAM— Merced, Calif.

Merced Irrigation District directors have engaged Tudor-Goodenough Engineers of San Francisco to conduct an economic feasibility survey on a proposed dam and reservoir at Virginia Point on the Merced River. Tudor-Goodenough will use data reports compiled the past six years by the MID and U. S. Army Corps of Engineers. The federal government thus far has allocated $100,000 for the army engineers' survey which will be readied for Congress next spring. With this report, and the one to be compiled by the private engineering firm, MID directors expect to have a better evaluation of the site's practicability.

★IRRIGATION PIPE— Modesto, Calif.

Award to Robt. Eells, Rt. 2, Box 790, Ceres, $19,677, by Modesto Irrigation District, Modesto, for installing irrigation pipe for the District. Involved is 4,700' of 36" monolithic concrete pipe, 1,800' of 30" pipe and about 340' of reinforced pipe. RC 11-16

★IRRIGATION CANAL— Modesto, Calif.

Award to Lloyd W. Terrell, 221 Sequoia Ave., Turlock, $46,789, by Modesto Irrigation District, Modesto, for lining 3,500' of the Modesto Irrigation District's main canal, between the Welch Drop and Blossom Ave., Modesto. RC 11-16

★STREET IMPROVEMENTS, SEWAGE AND WATER LINES— Palo Alto, Calif.

Two of three main contract awards have been announced by Stanford University, Palo Alto, for the Pine Hills development, the new faculty residence area for Stanford University, located between College Terrace and present dwellings on either side of Mayfield Ave. One contract is for street improvement, including grading, and constructing curbs, gutters, and paving; the second is for installing storm drainage, sewers and water distribution lines. The third contract for the electrical, fire alarm and telephone system should be granted soon. These installations will be underground. AWARDS—STREET IMPROVEMENTS: Douglas and Woodhouse, 1 Winslow St., Redwood City, $87,000. SEWAGE AND WATER LINES: Pisano Brothers, 1800 De La Cruz Blvd., Santa Clara, $133,000. RC 11-16

●STATE HIGHWAY PROJECTS— Sacramento, Calif.

Bids will be opened 2 p.m., December 4, by California Division of Highways, 510 Public Works Bldg., Sacramento, on the following highway construction. Plans with state highway engineer at above address.

X-SJ-5-B, STKN—Grade and pave about 5.1 mi. with plantmixed surfacing on untreated base and existing pavement, and construct one bridge and two culverts, between Richards Ave. and Charter Way, San Joaquin County. Estimated cost $1,078,000.

IV-ALA-5,228-G,A — Prepare and plant about 3.8 mi. of roadside areas between Center St. and Rt. 69 near Castro Valley, Alameda County. Estimated cost $25,000.

IV-SM-237-SBR—Furnish and install traffic signal, flashing beacon and highway lighting systems at Sneath Lane and at San Bruno Ave. in San Bruno on Junipero Serra Blvd., San Mateo County. Estimated cost $41,350.

III-PLA,NEV-37-F,B—About 6 mi. of four-lane separated roadways and frontage roads to be graded and surfaced with portland cement concrete pavement on cement treated subgrade and plantmixed surfaced on cement treated base, and bridges to be constructed between Hampshire Rocks and 0.5 mi. west of Soda Springs, Placer and Nevada counties. Estimated cost $5,600,000.
PB 11-16

●STATE HIGHWAY PROJECTS— Sacramento, Calif.

Bids will be opened 2 p.m., December 11, by California Division of Highways, 510 Public Works Bldg., on the following highway construction. Plans with state highway engineer at above address.

III-SOL,YOL-90-AA,B—Two lanes of an ultimate 6-lane freeway, about 13.6 mi. in length, to be graded, frontage roads and approaches to be graded and surfaced with plantmixed surfacing on untreated base, and reinforced concrete bridges to be constructed, between 0.2 mi. south of Putah Creek and 2.8 mi. north of Madison, Solano and Yolo counties. Estimated cost $3,400,000.

III-COL-15-D—Construct drainage facilities, about 0.6 mi., between 10.6 mi. and 10.0 mi. west of Williams, Colusa County. Estimated cost $20,000. PB 11-16

★PAVING— Sacramento, Calif.

Award to A. Teichert & Son, Inc., 1921 Stockton Blvd., Sacramento, $73,213, by City Council, City Hall, Sacramento, for construction of roadways in Miller Park, including curb and gutter and drainage facilities. Bids opened August 29.
RM 11-16. Previous report 9-7

●STATE HIGHWAY PROJECT— Sacramento, Calif.

Bids will be opened 2 p.m., December 18, by California Division of Highways, 510 Public Works Bldg., Sacramento, on the following highway construction. Plans with state highway engineer at above address.

III-NEV-37,38-D,A—About 8.8 mi. to be graded and surfaced with concrete pavement and plantmixed surfacing to provide a four-lane, divided highway; 11 bridges to be constructed; highway lighting, steel sign structures, and a truck scale house with attendant facilities to be constructed or installed, near Truckee between 1.4 mi. west of junction routes 37 and 38 and 0.5 mi. west of Boca, Nevada County. Estimated cost $8,800,000. PB 11-16

★STATE HIGHWAY PROJECT— Sacramento, Calif.

Award announced by California Division of Highways, 510 Public Works Bldg., Sacramento, on the following highway construction for which bids were opened October 30.

IV-ALA-60-OAK—Place concrete pavement and plantmixed surfacing on "off-ramp" and perform electrical work, about 0.2 mi., in Oakland near 16th Ave., Alameda County. AWARD: O. C. Jones & Sons, 1520 4th St., Berkeley, $43,232.
PB 11-16. Previous report 11-2

●WATER MAIN— San Francisco, Calif.

Bids will be opened 2 p.m., November 21, by the San Francisco Public Utilities Commission, City Hall, San Francisco, for laying water main in Mid Town Terrace, Water Dept. Contract No. 819. Plans and specifications with R. J. McDonald, secretary, at above address.

Quantities: 3,250' excavation and backfill; 30 c.y. additional excavation and backfill; 270' of 4" 1,180' of 6", 1,800' of 8" install B&S cast iron pipe; 8,000 lbs. install footings, gate valves, etc.; 500' make B&S joints; 700 sq. ft. repave pavement; one ¾" and 49, 1" install screw taps; 960' install service pipe, ¾" and 1". BY 11-16

●REMOVING ARCHES— San Francisco, Calif.

Bids will be opened 1:45 p.m., November 20, by the San Francisco Director of Public Works, City Hall, San Francisco, for removal of the arches at the intersection of Mission and 25th Sts., San Francisco. Plans and specifications available at Room 284, City Hall, San Francisco. BY 11-16

★LEVEES, FLOOD WALLS— San Francisco, Calif.

Award to Granite Construction Co., Box 900, Watsonville, $3,861,295, by Corps of Engineers, 180 New Montgomery St., San Francisco, for construction of a series of levees and flood walls along San Lorenzo River and Branciforte Creek. RM 11-16

▲STORM SEWER— Stockton, Calif.

Bids received by City Council, City Hall, Stockton, for construction of a trunk line stormwater sewer to serve Brookside Village in Stockton. Completion time 20 days. Bids opened November 4. LOW BIDS: Western Construction Co., 639 W. Clay, Stockton, $11,922; Stockton Construction Co., Inc., Box

2987, Stockton, $14,484; R. Goold & Son, 1601 Turnpike Rd., Stockton, $16,470. RM 11-16

▲GRADING, PAVING, ATHLETIC COURTS— Travis AFB, Calif.

Bids received by Corps of Engineers, Room 305, Wright Bldg., 1209 8th St., Sacramento, for grading, paving and fencing athletic courts at Denverton, Elmira and Potero Hills cantonment areas in the Travis AFB defense area, Solano County, Calif.; ENG-104-167-58-5. Bids opened November 7. LOW BIDS: Watkin and Sibbald, 6 Bridge St., San Anselmo, $17,800; George Reed & Wendell G. Reed, 529 Covena Ave., Modesto, $17,905; Fraser-Edwards Co., 2412 Harrison St., San Francisco, $18,892.

RM 11-16. Previous report 11-2

TRENCHES, DRAINS— Tulelake, Calif.

All bids were rejected by Bureau of Reclamation, Box 312, Klamath Falls, Ore., for excavation for pipe trenches and installing closed drains, Tulelake area, Calif., Modoc County, Klamath Project, Spec. No. 200C-367. Bids opened October 10. Bids will be re-opened next spring.

RM 11-16. Previous report 10-5

BUREAU OF RECLAMATION LISTS 23 MAJOR PROJECTS
Scheduled for Bid Call Within Next Three Months

Twenty-three major projects will be among bid invitations issued by the Bureau of Reclamation during November, December and January. Among these projects is the Esquatzel diversion channel, Columbia Basin Project, near Pasco, Wash. involving 10 mi. long canal, diversion structures, bridge and a concrete terminal chute in the Columbia River. The earthfill Wasco Dam on Clear Creek, Wapinitia Project, west of Maupin, Ore. is scheduled for 1958 bid call, as is indoor type Radar Pumping Plant, Columbia Basin Project, south of Othello, Wash. Further information on the projects described below should be directed to the office issuing invitations and should be referred to by title and number.

BID CALLS EXPECTED IN NOVEMBER

DIVERSION CHANNEL, Esquatzel (11-2) —Columbia Basin Project, Wash. Near Pasco, Wash. Earthwork and structures for a 5,300 cfs capacity, eight foot bottom width, concrete lined canal, about 10 mi. long, including a radial gate diversion structure, a timber bridge and a 2,000' long rectangular concrete terminal chute in the Columbia River.

Quantities: 1,400,000 cy. canal excavation; 300,000 c.y. compact embankment; 400,000 c.y. structure excavation; 200,000 c.y. backfill about structures; 2,000 c.y. riprap; 3,000 c.y. concrete in structures; 55,000 c.y. unreinforced concrete in canal lining; 1,000' of 12" to 24" HC50 precast concrete pipe; 150' of 66" HC100 precast concrete pipe; 32'x20' radial gate and hoist. Completion time 600 days.

Bids will be called by chief engineer, Denver, Colo.

LATERAL WIDENING, Block 49 (11-5)— Columbia Basin Project, Wash. Southwest of Othello, Wash. Widening about 2,200' of the PE16.4 open ditch lateral.

Quantities: 2,700 sq. yd. concrete removal; 1,400 c.y. excavation for lateral; 3,500 sq. yd. trimming earth foundation for concrete lining; 240 c.y. concrete in lateral lining. Completion time 90 days.

Bids will be called by project manager, Ephrata.

LATERAL, WASTEWAY LINING, Block 45 (11-6)—Columbia Basin Project, Wash. South of Othello, Wash. Placing blended earth lining in about 1.6 mi. of the EL68 and EL68T5 laterals and reshaping and gravel lining about 1.1 mi. of the EL68T16 and EL68T19 wasteways.

Quantities: 50,000 c.y. lateral excavation; 20,000 c.y. excavation from borrow; 30,000 c.y. overhaul; 41,000 c.y. compacted blended earth lining; 6,000 c.y. refill above earth lining; 50 c.y. riprap; 1,500 c.y. gravel lining for wasteways; 50 c.y. coarse gravel protection. Completion time 90 days.

Bids will be called by project manager, Ephrata.

LATERAL LINING, Block 18 (11-8)— Columbia Basin Project, Wash. Northwest of Connell, Wash. Placing compacted blended earth lining in about 8,000' of laterals.

Quantities: 5,500 c.y. lateral excavation; 2,500 c.y. excavation from borrow; 4,300 c.y. overhaul; 4,900 c.y. blended and compacted lining; 500 c.y. refill above lining; 20 c.y. riprap; 10 c.y. sand and gravel bedding for riprap; 10 c.y. coarse gravel protection. Completion time 90 days.

Bids will be called by project manager, Ephrata.

DRAINS, WASTEWAYS, Block 72 (11-11) —Columbia Basin Project, Wash. Southeast of Quincy, Wash. Earthwork and structures for about 4,000' of wasteway channel and constructing 0.5 mi. of DW30 open ditch drain and 0.5 mi. of W38 wasteway.

Quantities: 27,500 c.y. waterways excavation; 1,200 c.y. structure excavation; 1,900 c.y. backfill; 300 c.y. compacted and puddling backfill; 33 c.y. coarse gravel protection; 18 c.y. concrete in structures; 86' of 15" and 18" concrete culvert pipe; 110' of 12", 16 guage corrugated metal pipe; 282' of 18", 16 guage and 30", 14 guage asbestos bonded corrugated metal pipe; 3, 18"x12" steel slide gates; 4, 15" diameter cast iron slide gates; 347 lb. miscellaneous metalwork. Completion time 90 days.

Bids will be called by project manager, Ephrata.

TEST PITS (11-15)—Little Wood River Project, Idaho. Near Carey, Idaho. Excavating about 20 test pits in earth and gravel borrow areas. Completion time 30 days.

Bids will be called by regional director, Boise.

BID CALLS EXPECTED IN DECEMBER AND JANUARY

DAM (11-26)—Wapinitia Project, Ore. On Clear Creek about 35 mi. west of Maupin. Constructing the 42' high earthfill Wasco Dam, containing about 45,000 c.y. of material, with crest length of 390', and appurtenant structures.

Bids will be called by chief engineer, Denver.

PUMPING PLANT, TRANSMISSION LINE (11-30) — Columbia Basin Project, Wash. South of Othello. Constructing the indoor type Radar Pumping Plant will include a reinforced concrete substructure, a superstructure of structural steel frame with uninsulated metal panel siding, a crane runway for a 15-ton traveling crane, five electrically-driven horizontal pumping units of 146 cfs total capacity, and making provision for a future installation of four electrically-driven horizontal pumping units of 241 cfs total capacity. Work will also include constructing a 115 kv tap line from the Bonneville Power Administration Scooteney-Eagle Lake 115 kv line about 2.5 mi. to the pumping plant.

Bids will be called by chief engineer, Denver.

LATERALS (11-34) — Minidoka Project, Idaho. Near Rupert. Earthwork and structures for about three mi. of open ditch laterals, with capacities up to 10 cfs, from four wells.

Bids will be called by regional director, Boise.

LATERALS, WASTEWAYS (11-35)—Columbia Basin Project, Wash. Near Othello. Earthwork and structures for about 5,500' of open ditch lateral extension, new open ditch laterals and a wasteway, in Block 46 east of Othello, and in Block 49 southwest of Othello.

Bids will be called by project manager, Ephrata.

LATERAL (11-36)—Columbia Basin Project, Wash. Near Eltopia. Earthwork and structures for about 600' of the PE47Q1A open ditch lateral, including modifications to four existing structures in Block 15 west of Eltopia.

Bids will be called by project manager, Ephrata.

LATERAL LINING (11-37) — Columbia Basin Project, Wash. Near Othello. Placing blended compacted earth lining in 2,000' of laterals in Block 87, about 18 mi. northwest of Othello.

Bids will be called by project manager, Ephrata.

LATERAL LINING (11-38) — Columbia Basin Project, Wash. Near Ephrata. Placing compacted earth lining in about 2,100' of W20 lateral, in Block 89 southeast of Ephrata.

Bids will be called by project manager, Ephrata.

WASTEWAY (11-39) — Columbia Basin Project, Wash. North of Othello. Earthwork and structures for the EL68K wasteway about 1,200' long. Work will include moving two structures in Block 45.

Bids will be called by project manager, Ephrata.

WASTEWAY (11-40) — Columbia Basin Project, Wash. Southwest of Quincy. Earthwork and structures for the W35.9B2 wasteway about 1,200' long in Block 74.

Bids will be called by project manager, Ephrata.

DRAINS (11-41)—Columbia Basin Project, Wash. Northeast of Smyrna. Earthwork and structures for the DW272A, DW272A1, DW-66.7 and DW69F open ditch drains totaling about two mi. in Block 86.

Bids will be called by project manager, Ephrata.

TANKS (11-43)—Columbia Basin Project, Wash. Installing 10,000-gal. capacity underground storage tanks for aromatic solvents at Franklin Field Branch Headquarters at Mesa, and the Royal Field Branch Headquarters at Royal.

Bids will be called by project manager, Ephrata.

WELLS (11-44)—Michaud Flats Project, Idaho. Near American Falls. Drilling and casing three irrigation water supply wells.

Bids will be called by regional director, Boise.

TRANSMISSION LINE (11-45)—Fort Peck Project, Mont. and Missouri River Basin Project, N. Dak. Clearing rights of way, furnishing and installing fence gates, constructing footings, furnishing and erecting steel towers for about 309 mi. of single circuit, 230 kv transmission line from Fort Peck Powerplant near Fort Peck, through the Dawson County Substation near Glendive, Mont., to the substation at Bismarck, N. Dak.

Bids will be called by chief engineer, Denver.

DISTRIBUTION LINE (11-47)—Palisades Project, Idaho. Constructing 1.5 mi. of 12.5 kv wood-pole distribution line with two communication cables to be underbuilt, at Palisades Dam, near Irwin.

Bids will be called by chief engineer, Denver, Colo.

CEMETERY RELOCATION (11-50)—Rogue River Basin Project, Ore. Near Ashland. Relocating Hill Cemetery from the Emigrant Reservoir area.

Bids will be called by regional director, Boise, Idaho.

TRASH COLLECTING FACILITIES (11-52)—Yakima Project, Wash. Near Prosser. Furnishing and installing traveling trash racks and conveyor in the forebay of the Chandler Powerplant consisting of about 100,000 lb. of machinery parts and structural steel and some concrete work.

Bids will be called by chief engineer, Denver, Colo.

PUBLIC BUILDINGS (11-54) — Palisades Project, Idaho. Near Irwin. Constructing public restroom facilities at Palisades Dam.

Bids will be called by regional director, Boise.

Portland, Oregon
NOTICE TO CONTRACTORS

PRELIMINARY NOTICE OF CONTRACT CONSTRUCTION, U. S. DEPARTMENT OF COMMERCE, BUREAU OF PUBLIC ROADS, October 29, 1957. The Bureau of Public Roads will issue an advertisement for bids later this year for constructing 3.817 miles grading, Washington Forest Development Road Project Gifford Pinchot N818-A, Merrill Lake Road, Gifford Pinchot National Forest, Cowlitz County, Washington. In order that contractors may be in a position to submit bids, they are urged to view the work at as early a date as possible as weather conditions may make the project inaccessible at any time. Interested contractors should contact B. M. FRENCH, Regional Engineer, Bureau of Public Roads, 757 Morgan Building, Portland, Oregon, to obtain plans and specifications. The principal quantities of work are as follows: 44 acres Clearing and Grubbing; 235,000 cu. yds. Excavation; 18,000 cu. yds. Topping; 369,000 sta. yds. Overhaul; 34,000 yd miles Borrow Overhaul; 2,500 lin. ft. Culvert Pipe.

5981—11-2

STATE HIGHWAY PROJECTS
BIDS CLOSE 10 A.M., NOVEMBER 19
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, November 19, 1957, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal Funds have been allocated for items nos. 1 to 5 inclusive.

The improvements for which bids will be received follow:

1. Surfacing, Paving with Portland Cement Concrete and Asphaltic Concrete and Installing an Illumination System and Automatic Sprinkler System on 2.039 miles of Primary State Highway No. 2 in Spokane County, HELENA STREET TO CUSTER STREET IN SPOKANE, FAP No. I-002-6(24) Unit 2, involving about 100 cubic yards of Common Excavation, 6,500 tons of Selected Roadway Borrow, 20,000 tons of Crushed Surfacing, 15,660 cubic yards of Top Soil, 5,855 tons of Asphaltic Concrete, 94,360 square yards of Cement Concrete Pavement, 296 cubic yards of Concrete, 114,000 pounds of Steel Reinforcing Bars, 49,034 linear feet of Cement Concrete Curb, Cement Concrete Gutter and Cement Concrete Curb and Gutter, 1,750 linear feet of Precast Traffic Curb, 2,226 linear feet of Concrete Pipe, 3,086 linear feet of Metal Pipe, 6,327 linear feet of Beam Guard Rail, 263 Guide Posts, a lump sum bid for Installation of Illumination System, a lump sum bid for Installation of Automatic Sprinkler System and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
2. Clearing, Draining, Grading, Constructing Bituminous Pavement on Frontage Roads and Cross Streets and Constructing Three Reinforced Concrete Flat Slab Bridges on 2.123 miles of Primary State Highway No. 1 in Whatcom County, CONNECTICUT STREET TO NORTHWEST AVENUE IN BELLINGHAM, FAP No. I-001-5(20), involving about 52 acres of Clearing, 437,060 cubic yards of Common Excavation, 73,070 units of Overhaul, 34,100 tons of Selected Roadway Borrow, 2,200 cubic yards of Sand Borrow, 3,900 tons of Crushed Surfacing, 45 tons of Asphalt Cement, 380 cubic yards of Crushed Cover Stone and Prime Coat Aggregate, 1,300 tons of Asphaltic Concrete, 1,115 linear feet of Integral Cement Concrete Curb, Cement Concrete Gutter and Cement Concrete Curb and Gutter, 2,350 linear feet of Metal Pipe, 4,797 linear feet of Concrete Pipe, 456 linear feet of Structural Plate Pipe and Pipe-Arch, 580 linear feet of Iron Pipe, 300 linear feet of Beam Guard Rail, 10 Guide Posts, 595 square yards of Cement Concrete Sidewalk and Driveway, a lump sum bid for Superstructure (about 750 cubic yards of Concrete and 200,000 pounds of Steel Reinforcing Bars), 1,072 cubic yards of Concrete, 161,120 pounds of Steel Reinforcing Bars, 904 linear feet of Standard Bridge Railing, 18,160 linear feet of Treated Timber Piling, 10,240 linear feet of Untreated Timber Piling and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
3. Grading, Surfacing, Constructing Bituminous Surface Treatment and Constructing Three Reinforced Concrete Flat Slab Bridges on 0.187 mile of Primary State Highway No. 18 in Grant County, MOSES LAKE BRIDGE, FAP No. I-002-4(4) Unit 3, involving about 13,150 cubic yards of Common Excavation and Borrow, 1,040 cubic yards of Crushed Surfacing, 15 tons of Asphalt Cement, 130 cubic yards of Crushed Cover Stone, 450 linear feet of Metal Pipe, 1,878 linear feet of Beam Guard Rail, 1,320 cubic yards of Concrete, 1,479 linear feet of Standard Bridge Railing, 312,000 pounds of Steel Reinforcing Bars, 8,375 linear feet of Concrete Piling and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
4. Clearing, Draining, Grading, Surfacing and Constructing Bituminous Surface Treatment on 3.734 miles of Secondary State Highway No. 11-A in Adams, Franklin and Grant Counties, WHITE BLUFFS VICINITY, FAS No. S-0271(3), involving about 89,735 cubic yards of Common Excavation, 25,800 tons of Crushed Surfacing and Crushed Cover Stone, 145 tons of Asphalt Cement, 576 linear feet of Concrete Pipe, 86 linear feet of Metal Pipe-Arch, 500 linear feet of Wire Fence and other items.
5. Draining, Grading, Surfacing and Constructing Bituminous Surface Treatment on 13.959 miles of Grant County Roads, BURKE WEST AND WHITE TRAIL ROADS Nos. S-1384(1) and S-1004(4), involving about 8.1 miles of Grading, 30,310 tons of Crushed Surfacing, Ballast and Crushed Cover Stone, 310 tons of Asphalt Cement, 1,458 linear feet of Metal Pipe, 978 linear feet of Concrete Pipe, 5,300 linear feet of Right of Way Fence and other items.
6. Draining, Grading and Surfacing on 19.661 miles of Grant County Roads, BLOCK 77 FEEDER ROADS, a State Project, involving about 19.7 miles of Grading, 56,490 tons of Crushed Surfacing, 1,584 linear feet of Concrete Pipe, 1,752 linear feet of Metal Pipe, 5,300 linear feet of Right of Way Fence and other items.

STATE HIGHWAY PROJECT
BIDS CLOSE 10 A.M., NOVEMBER 19
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, November 19, 1957, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below, item no. 1.

The improvement for which bids will be received follows:

1. Clearing, Draining, Grading, Surfacing with Ballast and Constructing a Reinforced Concrete Flat Slab Bridge on 4.724 miles of Primary State Highway No. 2 in Kittitas County, KACHESS RIVER TO EASTON, FAP No. 1-002-2(15), involving about 77 acres of Clearing, 337,695 cubic yards of

Common Excavation and Borrow, 34,480 units of Overhaul, 16,920 cubic yards of Unsuitable Excavation, 87,180 tons of Ballast, 1,820 linear feet of Concrete Pipe, 136 linear feet of Metal Pipe, 570 linear feet of Steel Pipe, 5,270 tons of Loose Riprap, 571 cubic yards of Concrete, 81,110 pounds of Steel Reinforcing Bars, a lump sum bid for Superstructure (about 380 cubic yards of Concrete and 88,500 pounds of Steel Reinforcing Bars), 287 linear feet of Standard Bridge Railing and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.

STATE HIGHWAY PROJECTS

BIDS CLOSE 10 A.M., DECEMBER 3

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, December 3, 1957, until 10:00 A.M., and will then and there be opened and publicly read for the construction of the improvements listed below.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal Funds have been allocated for items Nos. 1 to 5 inclusive.

The improvements for which bids will be received follow:

1. Clearing, Draining, Grading, Surfacing, Paving with Asphaltic Concrete, Installing Illumination Systems and Constructing Four Reinforced Concrete Slab Bridges on 7.281 miles of Secondary State Highway No. 3-A in Yakima County, PARKER TO WAPATO, FAP No. F-048-1(2), involving about 165,355 cubic yards of Common Excavation and Borrow, 99,420 units of Overhaul, 200,090 tons of Ballast, Crushed Surfacing, Maintenance Rock, Crushed Cover Stone, Sand and Crushed Screenings, 606 tons of Asphalt Cement, 1,160 cubic yards of Prime Coat Aggregate, 28,205 tons of Asphaltic Concrete, 3,910 linear feet of Precast Traffic Curb, 2,514 linear feet of Concrete Pipe, 212 linear feet of Asbestos Cement Pipe, 716 linear feet of Beam Guard Rail, 38,793 linear feet of Cable Median Barrier, 38 Guide Posts, 1,550 linear feet of Chain Link Fence, 9 lump sum bids for Installation of Illumination Systems, 1,114 cubic yards of Concrete, 187,960 pounds of Steel Reinforcing Bars and other items.
2. Clearing, Draining, Grading, Surfacing, Paving with Asphaltic Concrete and Installing Illumination Systems on 4.074 miles of State Highways Nos. 3 and 3-A in Benton County, JCT SSH No. 3-A TO GIBBON, FAP No. F-018-3(3) and State Project, involving about 263,950 cubic yards of Unclassified Excavation, 34,730 units of Overhaul, 106,055 cubic yards of Crushed Surfacing, Ballast, Maintenance Rock, Crushed Cover Stone and Sand, 153 tons of Asphalt Cement, 715 cubic yards of Prime Coat Aggregate, 17,435 tons of Asphaltic Concrete, 1,672 linear feet of Concrete Pipe, 10 cubic yards of Concrete, 130 linear feet of Asbestos Cement Pipe, 2,750 linear feet of Beam Guard Rail, 20 cubic yards of Hand Placed Riprap, 3 lump sum bids for Installation of Illumination Systems and other items.
3. Constructing a Reinforced Concrete Box Girder Bridge on Primary State Highway No. 1 in Pierce County, 74TH AND 72ND STREET UNDERCROSSING IN TACOMA, FAP No. I-001-3(29) Unit 2, involving about 795 cubic yards of Concrete, 352 linear feet of Standard Bridge Railing, 137,000 pounds of Steel Reinforcing Bars, a lump sum bid for Superstructure (about 780 cubic yards of Concrete and 228,000 pounds of Steel Reinforcing Bars) and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
4. Constructing a Reinforced Concrete Box Girder Bridge on Secondary State Highway No. 2-A in King County, BRICKYARD ROAD UNDERCROSSING, FAP No. U-025-1(18), involving about 730 cubic yards of Concrete, 184,000 pounds of Steel Reinforcing Bars, 483 linear feet of Standard Bridge Railing and other items.
5. Constructing a Precast Concrete Girder Bridge on 0.033 mile of a Pierce County Road, TAYLOR BAY BRIDGE, FAS No. S-0333(2), involving about 1,220 linear feet of Treated Timber Piling, 7.3 MBM of Treated Timber and Lumber, 49 Precast Concrete Deck Units, 16 Precast Concrete Bulkhead Units, 457 linear feet of Special Bridge Railing and other items.
6. Redecking Bridge on 0.108 mile of Secondary State Highway No. 9-A in Clallam County, ELWHA RIVER BRIDGE No. 9-A/3, a State Project, involving about 98 MBM of Untreated Timber and Lumber, 0.6 MBM of Treated Timber and Lumber and a lump sum bid for Removing Portions of Existing Structure.
7. Placing Riprap on Primary State Highway No. 9 in Clallam County, BOGACHIEL RIVER VICINITY, a State Project, involving about 100 cubic yards of Structure Excavation and 6,600 tons of Loose Riprap.

E. A. COWELL, Chairman
W. A. BUGGE, Director of Highways

5986—11-16, 23

STATE HIGHWAY PROJECTS

BIDS TO BE CALLED AT LATER DATE

Olympia, Washington

NOTICE TO CONTRACTORS

It is the intention of the Department of Highways to advertise for bids on the following two projects at a later date when snow may cover the ground.

1. Surfacing and Paving Four Lanes with Cement Concrete and Asphaltic Concrete on 5.088 miles of Primary State Highway No. 2 in Kittitas County, KEECHELUS INN TO RUSTIC INN.
2. Surfacing and Paving Four Lanes with Cement Concrete and Asphaltic Concrete on 5.146 miles of Primary State Highway No. 2 in Kittitas County, RUSTIC INN TO TOP EASTON HILL.

Contractors interested in bidding on this work are urged to view the proposed work on the ground at this time since snow can be expected to make this inspection uncertain and difficult in the near future.

It is anticipated that the State will permit a Contractor to submit bids on one or both of the above two projects and to condition his bid upon award of the combination of the two projects. A Contractor who submits bids on both projects may, if he desires to provide a more favorable bid on the combination of projects, allow for a reduction in the amount of each bid.

Preliminary plans giving approximate quantities for use on this inspection may be obtained from this office upon written request therefore and payment to the Director of Highways by cash, certified check, cashier's check or money order the sum of two dollars ($2.00) for each copy of such preliminary plans as a rental for the use of them. At such time that the project is advertised for bids, credit will be extended to those holding preliminary plans which will apply on the regular maps, plans and specifications issued for bidding purposes on the project. Plans will be forwarded by First Class Mail.

Preliminary plans are on file in the office of the County Engineer of the County in which the work is situated, the chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma, and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

E. A. COWELL, Chairman
W. A. BUGGE, Director of Highways

FRESH WATER WELL

BIDS CLOSE 10 A.M., P.S.T., NOVEMBER 19

Portland, Oregon

NOTICE TO CONTRACTORS

U. S. Department of the Interior, Fish and Wildlife Service, The Interior Building, 1001 N.E. Lloyd Blvd., Portland 14, Oregon. Telephone BEImont 4-3361, Ext. 245. Sealed bids will be received in this office until 10:00 A.M., P.S.T., November 19, 1957, and then publicly opened, for drilling, casing, and developing a fresh-water well at the U. S. Fish Cultural Station near Leavenworth, Wash. Plans and specifications may be obtained at the above address. Leo L. Laythe, Regional Director.

5985—11-12

SCHOOL ADDITION

BIDS CLOSE 8 P.M., NOVEMBER 20

Eltopia, Washington

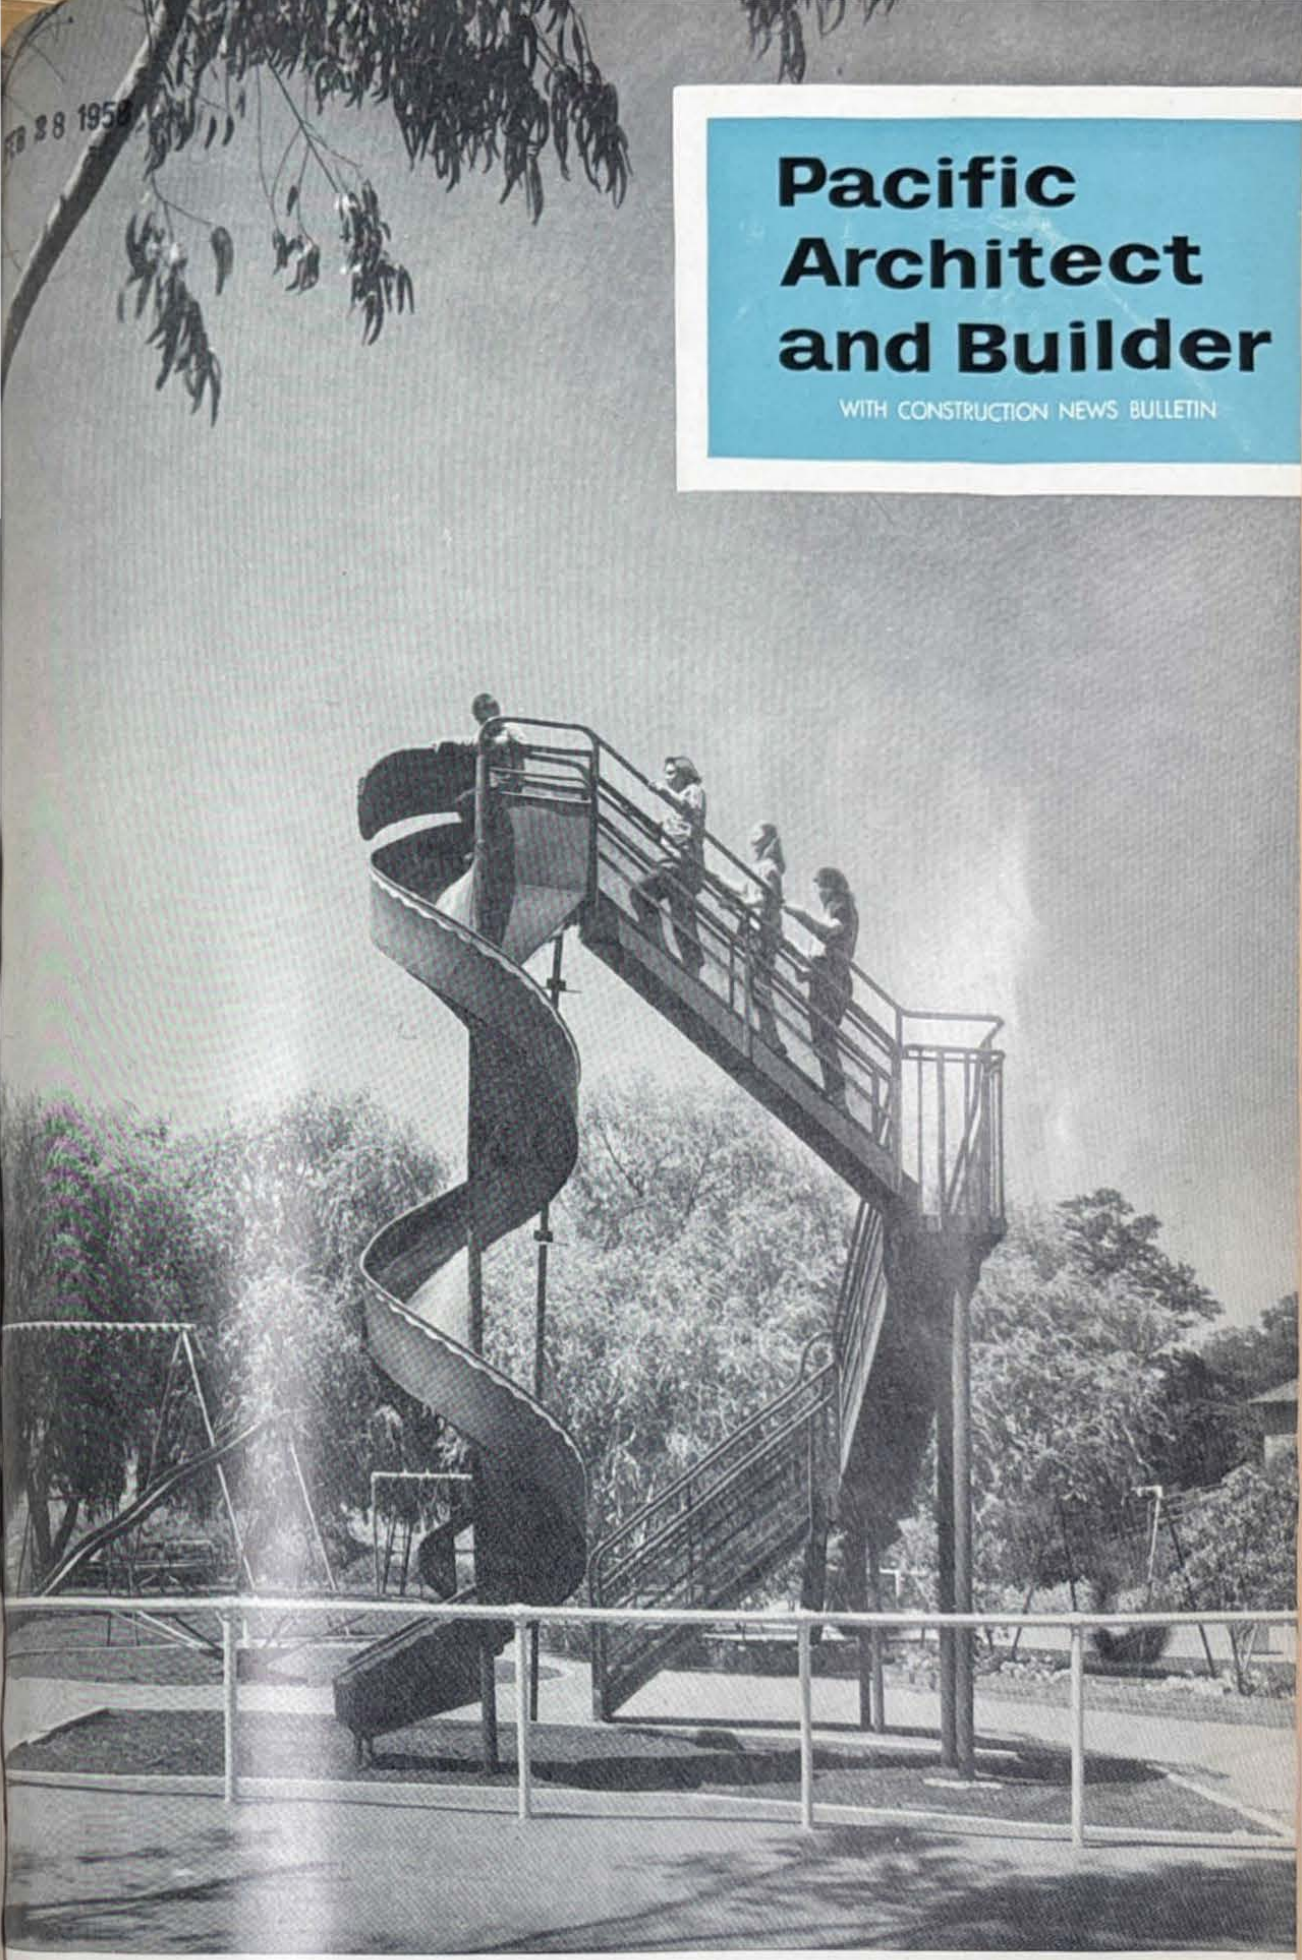
NOTICE TO CONTRACTORS

Sealed bids will be received by the undersigned at the office of the Superintendent, Old Eltopia Elementary School Building, Eltopia, Washington, until 8:00 P.M. on the 20th of November, 1957, for the construction of an addition to the Pioneer Elementary School building for Eltopia School District No. 15, Eltopia, Washington.

The building consists of two classrooms, toilet rooms and limited work on existing classrooms; tilt-up concrete construction is used. Combined bids will be received for General Construction, Plumbing, Heating and Electrical. Plans and specifications may be obtained from the office of Charles A. Baylon & Associates, 912 Elliott Ave. W., Seattle 99, Washington upon deposit of $25.00 which sum will be returned to the bidder provided plans are returned in good condition with submitted bid, or provided plans are returned within five (5) days after issue if no bid is submitted. Plans and specification may be examined at the office of the Superintendent of Schools, Eltopia, Washington or in the office of Charles A. Baylon and Associates, Architects, 912 Elliott Ave. W., Seattle 99, Washington.

Each bid shall be accompanied by a certified check, cashier's check, or bid bond (with authorized surety company as surety) made payable to the Eltopia School District No. 15 in an amount not less than 5% of the basic bid plus alternates. Board of Directors of Eltopia School District No. 15 reserve the right to waive any informalities or irregularities in any bid or in the bidding, or to accept or reject any or all bids.

No bidder may withdraw his bid after the hour set for the opening thereof or before award of the contract unless said award is delayed for a period exceeding thirty (30) days.



Eltopia School District No. 15
Everett Jones
Clerk

dramatic versatility...

Ceramic Veneer

OPPORTUNITY for almost unlimited expression in concept is an architectural advantage of the highest order in building. That's why Ceramic Veneer, custom-made to the architect's specifications, is so important a part of your plans. Here is one facing material that offers you versatile combinations for dramatic effect . . . as demonstrated in the 8-story Police Building and the one-story office wing adjoining. It has also been used indoors as a ceramic map by a prominent public utility.

VERSATILITY is the major reason why Ceramic Veneer earns the recommendation of leading architects. It is compatible with all building materials; offers unique permanence, lower cost of maintenance, and gives you a wide selection in color, texture and size.

WRITE TODAY for the 32-page catalog about Ceramic Veneer . . . or ask your CV sales representative to demonstrate how Ceramic Veneer can add dramatic versatility to your project.

Police Administration Building, Los Angeles, shows how versatile Ceramic Veneer provides the perfect background for glazed ceramic mosaic tile spandrels, ceilings and columns, stainless steel and related building materials. Architects: Welton Becket, F.A.I.A., & Associates and J. E. Stanton, A.I.A. Ford J. Twaits Company, general contractor.

Wall map demonstrates a dramatic indoor use of Ceramic Veneer. General Telephone Building. Architect: Albert C. Martin, A.I.A.; General Contractor: George A. Fuller.

Seesaw building tally down again in November

After two encouraging months, building activity in the five western states slid back down to a $149,194,554 total for November, lowest monthly tab in years. The dollar volume is $38¼ million lower than the same period a year ago.

California, Oregon, Montana and Idaho all recorded considerably lower state totals, while Washington had a bare $250,000 increase over November 1956.

Compared to the previous month, all five state totals were down. This is not too surprising, however, since October was an exceptionally good month.

Following is a state-by-state comparison for the first 11 months:

	Jan.-Nov. 1957	Jan.-Nov. 1956
California	$1,779,061,431	$1,919,654,373
Oregon	110,671,686	142,784,329
Washington	254,698,017	285,775,455
Montana	21,508,877	28,822,950
Idaho	23,899,367	24,123,376

Dollar volume for the territory covered by PA&B is running some $200 million below last year. California is down $140½ million; Oregon, $32 million; Washington, $31 million; Montana, $7¼ million; Idaho, $¼ million.

Following is a breakdown of building permits issued for new buildings and additions by several of the major agencies during November. (First number in each category refers to number of permits, not number of units.)

ANALYSIS OF TYPICAL AREAS—DECEMBER

	DWELLING		COMMERCIAL & INDUSTRIAL		PUBLIC	
Portland	41	$ 806,355	38	$ 755,515	1	$ 60,000
King Co.	310	3,458,080	38	540,520	3	1,243,000
Seattle	357	2,930,636	158	2,444,126	1	140,000

MACOMBER CANTON 1, OHIO

TOP LEFT: Bandstand roof made of 4x9-ft. sheets of ¼-in. fir plywood, bent to fit an 8-ft. curve, can be prefabricated into vaults measuring 8x24 ft. Photo indicates how easily structure goes up.

TOP RIGHT: Built according to geodesic dome principle of Buckminster Fuller, plywood dome houses exhibit of San Francisco Chapter of Industrial Designers' Institute.

BOTTOM RIGHT: This 25-ft. dome, erected in 2½ hours, consists of plywood panels, lapped and bolted. Fiberglass and glass windows and skylight were fitted into apertures between panels.

NEWS

Vaulted roof, domes spark Arts Festival in San Francisco

San Franciscans who jammed Washington Square during the city's Arts Festival in September saw a lot more than pictures. Some of the structures built to demonstrate the "Arts in Architecture" theme were as interesting as the displays they sheltered.

Among them was a vaulted roof idea worked out for a bandstand by designers Evelyn and George Kosmak in conjunction with the engineering staff of Berkeley Plywood Co., a component fabricator. Noteworthy too were plywood translations of Buckminster Fuller's geodesic dome principle: one, 39-ft. in diameter and also developed by the Kosmaks, executed in nuts, bolts and ¼-in. panels; the other, designed by architects Marquis & Stoller, an application of the plywood dome to a do-it-yourselfer's kit for a home away from home.

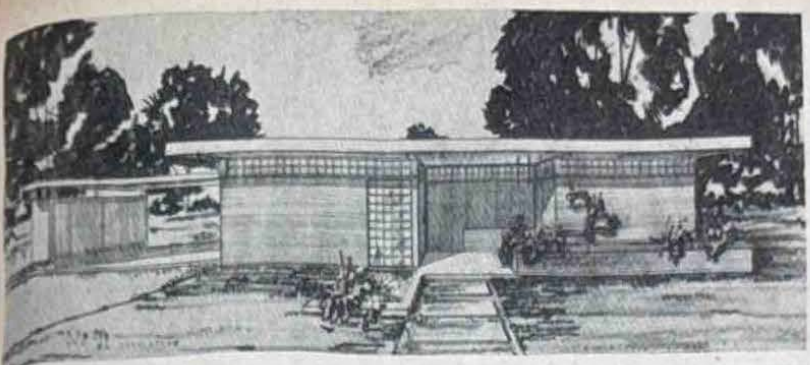
For the bandstand, the Kosmaks produced a scalloped roof line with a series of five smaller vaults of sandwich construction, supported on light metal scaffolding. Each unit was 24 ft. long and 7 ft. wide, creating a sheltering canopy 24x35 ft. for the 16x32-ft. stage. Sandwich components consisted of light top and bottom plywood skins, glued to curved framing members.

Berkeley Plywood hopes to develop both the complete vaults and the sections as standard components.

The larger of the two domes was 39 ft. in diameter and 19½ ft. high at the center, producing a sheltered area of 1,200 sq. ft. Construction was accomplished by assembling 135 sheets of fir plywood lapped at the corners in a shingled effect. Corners were fastened with nuts and bolts, eliminating any semblance of conventional framing. Thomas E. Moore of Shell Structures, Inc., Denver, supervised construction.

The smaller dome, 25 ft. in diameter and enclosing 500 sq. ft. of floor space, was erected by Grae Structures, Inc. Construction was generally similar to that of the 39-ft. dome, with fir plywood panels lapped and bolted. Fiberglass and glass windows and skylight were fitted into the apertures between panels.

Grae Structures plan to market packaged components of 25-ft. or larger domes for erection as vacation cottages or small residences.



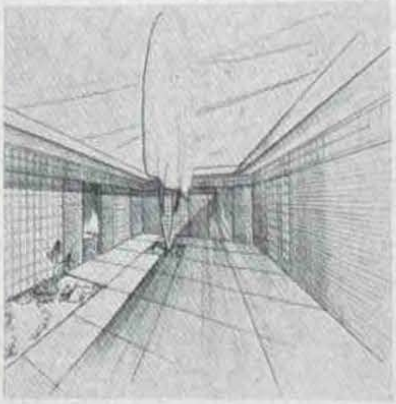
ACI regional meeting draws 200 to Seattle

About 200 engineers, technicians and suppliers, some from as far away as New York City, attended the 10th regional meeting of the American Concrete Institute in Seattle November 5-6.

Papers were presented by Jack R. Benjamin, Stanford University; T. J. McClellan, Oregon State College; Alfred L. Miller, University of Washington; Otto Buehner, Otto Buehner & Co., Ltd., Salt Lake City; Verne Frese, Layrite Concrete Products Co., Seattle; Harold S. Davis, General Electric Co., Richland, Wash.; Norman D. Lee, Foundation of Canada Engineering Corp., Ltd., Vancouver, B. C.; John B. Skilling and John V. Christiansen, Worthing & Skilling, Seattle, Edward K. Rice, T. Y. Lin & Associates, Los Angeles; Arthur R. Anderson, Birkeland & Anderson, Tacoma; and Alfred T. Waidelich, Austin Co., Cleveland. (Excerpts from some of these papers will appear in PA&B in future issues.)

Moderators at the three technical sessions were Dean H. E. Wessman of the department of civil engineering, University of Washington; William A. Bugge, director of the Washington Highway Department; and Roy W. Morse, Seattle city engineer.

R. H. Lochow of the Portland Cement Association headed the Seattle committee in charge of arrangements.



TYPICAL LOW COST HOUSE and exterior court for atomic age as envisioned by brick and tile engineers. Protection is offered by reinforced brick walls and tile roof panels. Windows are eliminated, but natural light is obtained through glass block panels at top and side of walls.

'Survival house' design result of atomic tests

Stemming from the results of the Plumbob nuclear tests held in the Nevada desert earlier this year, a "survival house" for sheltering families within range of an atomic bomb blast has been designed by brick and tile industry engineers.

A 32x28-ft. windowless building constructed with 10-in. reinforced brick walls successfully withstood the effect of the blast in tests sponsored by the Structural Clay Products Research Foundation and the Federal Civil Defense Administration.

The survival house as seen by C. B. Monk, manager of architectural and engineering research for the foundation, would be a one-story residence that could be built at a cost of only $1 or $2 more per square than an ordinary building. Windowless brick walls, 5½ in. thick, would be reinforced with steel rods and joined to the roof and floor. Glass block wall panels could provide natural light.

Dean of Hawaiian architects dies in Honolulu

Hart Wood Sr., who was instrumental in creating the Hawaiian type of architecture, died at the age of 76 in Honolulu October 6 after five years of illness.

A native of Philadelphia, Wood went to the islands in 1919 as chief designer for C. W. Dickey and later became a partner in the firm. During that time he designed the Alexander & Baldwin Building, which is noted for its works of art. In 1952 he formed his own firm called Wood, Weed & Associates, now known as Wood, Weed & Kubala, Ltd.

Wood, who was made a fellow of the AIA in 1948, won a national award from the American Association of Nurserymen for Honolulu's Board of Water Supply pumping stations.

Pasadena gives top awards to five buildings

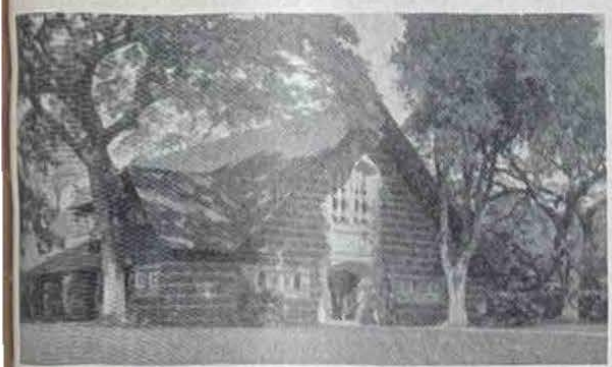
Five projects received top recognition in the Centennial Honor Awards program of the Pasadena Chapter, AIA, while nine others were runner-ups. Presentations were made at a banquet in the Huntington-Sheraton Hotel November 6.

Honor awards went to the following:

- Mobil Service Center, Santa Ana: Smith & Williams, architects; Roulac Co., contractor.
- Arthur Amos Noyes Elementary School, Pasadena: Boyd Georgi-Lee B. Kline, associated architects; Hight Construction Co.-Stephen F. Owers, contractors.
- Mountain house, Lake Arrowhead: Burge-Roach, Henry Charles Burge, architect; Burke Malcolm, contractor.
- Richard Leitch residence, Altadena: Richard Leitch, architect and contractor.
- Methodist Hospital of Southern California, Arcadia; Neptune & Thomas, architects; Twaits-Wittenberg Co., contractor.

Merit award winners were:

Proposed industrial building for Nethercutt Laboratories; Burge-Roach-Romberger, architects: Mackintosh & Mackintosh, engineers.



Remodeled medical offices, Pasadena: William L. Rudolph & Associates, architects; Stephen F. Owers, contractor.

College Car Wash, Pasadena: Smith & Williams, architects; Roulac Co., contractor.

Industrial building for B-J Electronics, Division of Borg-Warner Corp., Santa Ana; John Kewell & Associates, architects; C. L. Peck, contractor.

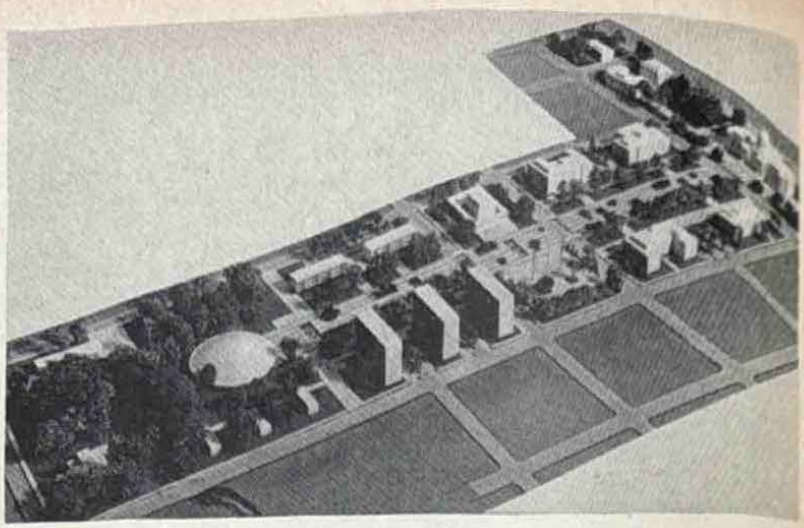
Architects' office building, Pasadena: Neptune & Thomas, architects; Peter Probst, contractor.

Burton Romberger residence, Lido Isle: Burton Romberger, architect; F.

TWO BUILDINGS which brought national recognition to Hart Wood Sr. are shown here. Christian Science Church, completed in 1923, became prototype of many others designed with cut stone and lava rock laid in horizontal courses. Honolulu branch office of Gumps of San Francisco is probably one of the best examples of oriental influence on Hawaiian architecture.

H. Glockner, contractor.

Boyd Georgi residence, Altadena: Boyd Georgi, architect; Johnson Co. and Paul Cattin, contractors.



Azusa High School, Azusa; Neptune & Thomas, architects; Crown Construction Co., contractor.

San Rafael Public Library, Pasadena; Culver Heaton, architect; Thomas F. Smith, contractor.

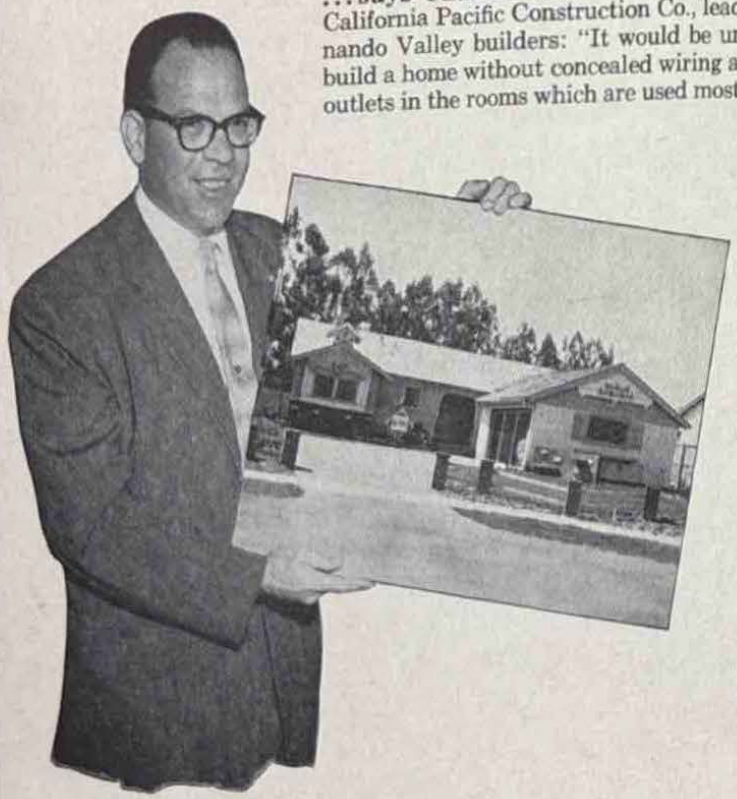
Briefly noted . . .

The Building Center Exhibition, featuring displays of the AIA, the AID, the American Institute of Landscape Architects and manufacturers of materials and equipment, has opened at 7900 W. Third St., Los Angeles.

Master plan for San Francisco's civic center, designed to meet its needs for the next 20 years, is being studied by city officials. The designers—the architectural firms of Wurster, Bernardi & Emmons and Skidmore, Owings & Merrill in collaboration with DeLeuw Cather & Co., engineers—positioned nine new public buildings, five parks, convention and parking facilities.

MASTER PLAN FOR OREGON STATE CAPITOL MALL as tentatively approved by Capitol Planning Commission. Capitol at far right is one of four existing buildings.

Oregon capitol mall proposal embraces 16 buildings



Twelve projected buildings are included in the master plan for the state capitol mall development in Salem, Ore., which has been tentatively approved by the Capitol Planning Commission. The capitol itself is presently flanked by the public service, highway and library buildings.

Construction of three of the structures is seen in the immediate future: 1) labor and industries building for which the 1957 state legislature appropriated $3 million; 2) state motor vehicle building of 40,000 sq. ft.; and 3) new supreme court building of 30,000 sq. ft.

The Eugene architectural firm of Wilmsen & Endicott is being assisted in the planning by architects Herman Brookman of Portland and Francis Keally of New York and landscape architect Lloyd Bond of Eugene.

Built-in phone outlets build up a home's value!

...says Charles A. Hirschman, president of the California Pacific Construction Co., leading San Fernando Valley builders: "It would be unthinkable to build a home without concealed wiring and telephone outlets in the rooms which are used most."

No matter how you look at it, as a builder or a buyer, you want a well-built home above all. And one of the features that speaks for a "quality" home is Telephone Planning. As Mr. Hirschman says, "Telephone outlets in rooms used most, concealed wiring and color phones add much to the value of the home." You'll find them in homes like Mr. Hirschman's, built with an eye to better living and satisfied buyers in mind.

Pacific Telephone

We'll be glad to help you plan built-in telephone facilities. Just call our business office and ask for our free Architects and Builders Service.

It pays to include Telephone Planning in every home you build!

Southern California picks 'finest five' projects

After reviewing presentations of the "foremost forty" buildings and visiting 12 of them, a five-man jury selected the "finest five" in the Triennial Honor Awards program of the Southern California Chapter, AIA. More than 200 entries, representing work built within the last five years, had been screened by 24 previous honor award members.

The jurors—Los Angeles industrialist Charles Ducommun, actor Vincent Price and architects John Carl Warnecke of San Francisco, Philip Will Jr. of Chicago and George Nelson of New York—explained in their report that they had taken into account the fact that owners and contractors as well as architects were being honored.

"Good building and the improvement of human environment is a collective effort for which responsibility is shared," the report stated. "A building does not exist until it is built. It cannot be good unless it is accurately built with good workmanship. Good design can only be created by the happy marriage of a thoughtful client and creative architect. With such criteria the success of a building cannot be measured solely by its expression of the owners' program.

"We must, in fact, consider the propriety of the program itself in serving the greater good of society. A good building on a badly located site is not deserving of premiation. Nor is one which does violence to neighborhood geography—or creates economic, esthetic or social problems that others cannot properly be asked to solve. In our awards, therefore, we attempted to measure accomplishments beyond the narrow limits of purely architectural concepts."

Design through structure

'should it become a prevailing trend, could mean the architect's withdrawal and surrender'

by EDGARDO CONTINI

I WOULD LIKE to take issue with the implication of the very title of this symposium, "Design Through Structure." I hope that I will be allowed to take a critical stand without fear that the motives may be misunderstood by my architect friends or my engineer colleagues who know that I have worked for long toward a more constructive understanding of the relationship between structure and architecture.

It is interesting to note that an entire day of this conference is given to a discussion of matters of structure. Not long ago, at a national gathering of young architectural teachers, the major topic was carried by a panel of engineers on the subject of structural forms. Perhaps these two instances should be reasons for rejoicing and concluding that great progress has been accomplished during the past few years in bringing again together the two component parts of the building art that had been arbitrarily separated about a century ago by the discovery of mathematical analysis; reasons to surmise that a fresh love is blooming and that perhaps out of this match, the new forms of the architecture of our time will be created.

Yet, upon closer analysis one discovers something unusual, something one-sided in this courtship. It can be noticed that there has been a far more aggressive initiative on the part of the architect toward the engineer than vice versa, and and I know of no architect that has been invited to speak about form at a gathering of structural engineers. I fear that the emphasis of purpose is being somewhat misplaced: marriage is perhaps not intended!

What should have been on the part of the architect primarily an effort toward better understanding of structure and structural principles, an attempt to make the acquired knowledge and sensitivity to structural behavior an integral part of his creative background, which would widen and enrich his design potential, has instead become merely participation in a kind of glorified refresher course, designed not so much at passing a higher standard of examination as to acquaint the architect with the latest tricks of the structural trade. Thus "educated" he will be in the forefront, ready to grasp the latest form, the cleverest trick for incorporation in his very next project (and for publication in the earliest available architectural magazine). I fear that the too ready and uncritical interest of the architect in things structural betrays something of a forfeiture of his responsibility as a creator of environment and of his function as the maker of the physical forms of the society of which he is part.

Design, architectural design, the creation of environment, are ultimately the responsibilty of the architect, and it is very seldom that structure alone is adequate to create environment or even to express architectural sensitivity. There are, of course, exceptions: some unconscious, such as the beautiful outstretched arms of the pylons supporting the suspension cables for the gas line across the Mississippi River; and some very conscious, such as Maillart's bridges, in their extremely sensitive response to the natural environment in terms of form and scale—a response that is revealing of Maillart's very rare twin gift of design sensitivity and structural inventiveness.

Otherwise, in general, a structural expression alone, however brilliant, however imaginative, however "tensional" or "tetrahedral," is not adequate or self-sufficient as an expression of architecture. Thus "design through structure," should it become a prevailing trend, could mean the architect's withdrawal and surrender.

I do not imply, of course, that structure is not an essential part of architecture and that the ultimate form should not respond and, in many cases, express the elements of structure. On the contrary, I rather take this for granted and go beyond. I believe that not only we should be understanding of and ready to develop the potential of new structural forms, but we should also acquire the critical sensitivity necessary to exercise choice or rejection of structural forms and capable, if a choice is made, to carry through its implementation and its integration with the project as a whole. I believe that we should cease to drool, by reflex reaction, every time a new building is covered by a thin shell dome or an entrance canopy is constructed with involved concrete shapes. I feel that it is time to develop a much more mature critical evaluation of the relationship between structure and form and cease to be taken in by the very novelty and cleverness of the forms that the structural engineer has evolved, with ingenuity and curiousity, out of available materials and techniques.

It is very important that this critique be developed and expressed in our architectural magazines. They have been very useful instruments in awakening the interest of the architect toward the structural forms and in bringing together the thinking of the engineer and the architect; yet they have been, in general, somewhat unsophisticated in analyzing the finished product this new relationship has brought about. It is also very important that this critique be developed in the schools by giving added emphasis to the ability to DESIGN and less reward to superficial cleverness. Of course, I do not advocate by this a return to academic formalism, but rather a wariness of the trend toward eclecticism that has received disproportionate acceptance in the solution of classroom problems.

I believe we need more critique and more tolerance of critique. Of course, critique in all matters of design, and especially in the architectural field, is a controversial subject. Yet it is still the best tool for cultural growth. When analyzing the combined product of architectural design and structural inventiveness, there are a number of different criteria of critique that can be exercised.

First indeed, is the criteria of balance and harmony. The question should be raised, once a structural form is selected and expressed, whether its relationship to the building as a whole and to its surroundings is an accomplishment of total aesthetic balance. Let us consider, for instance, the St. Louis Airport. (Incidentally, I hope that, by choosing as the first target an example toward the design of which I was a contributor, I will be given absolution for any other critical remarks that might follow.) In the St. Louis Airport, an old form (the Roman basilica) was revived in proportions and scale consistent with

Continued on p. 31

Edgardo Contini, chief engineer of the architectural-engineering firm of Victor Gruen Associates, with headquarters in Beverly Hills, Calif., delivered this address before the 1957 convention of the California Council, AIA, at Coronado.

THINK

When you specify aluminum windows, think about all these exclusive Soulé series 900 advantages: Tubular vent sections for rigidity, strength and greater areas of glass • Snap-on glazing beads, achieving an all-aluminum window • Soulé alumilite finish to resist abrasion and corrosion and to keep windows new looking longer • Working with one major source for the manufacture and installation of windows made to your exact dimensions. Think about profiting with Soulé one-company service on your next aluminum window job.

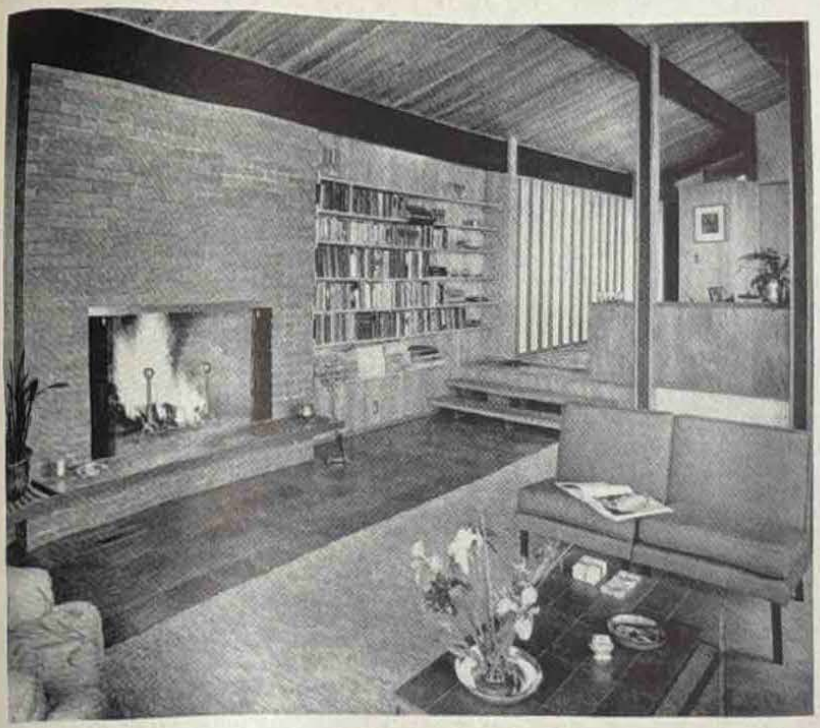
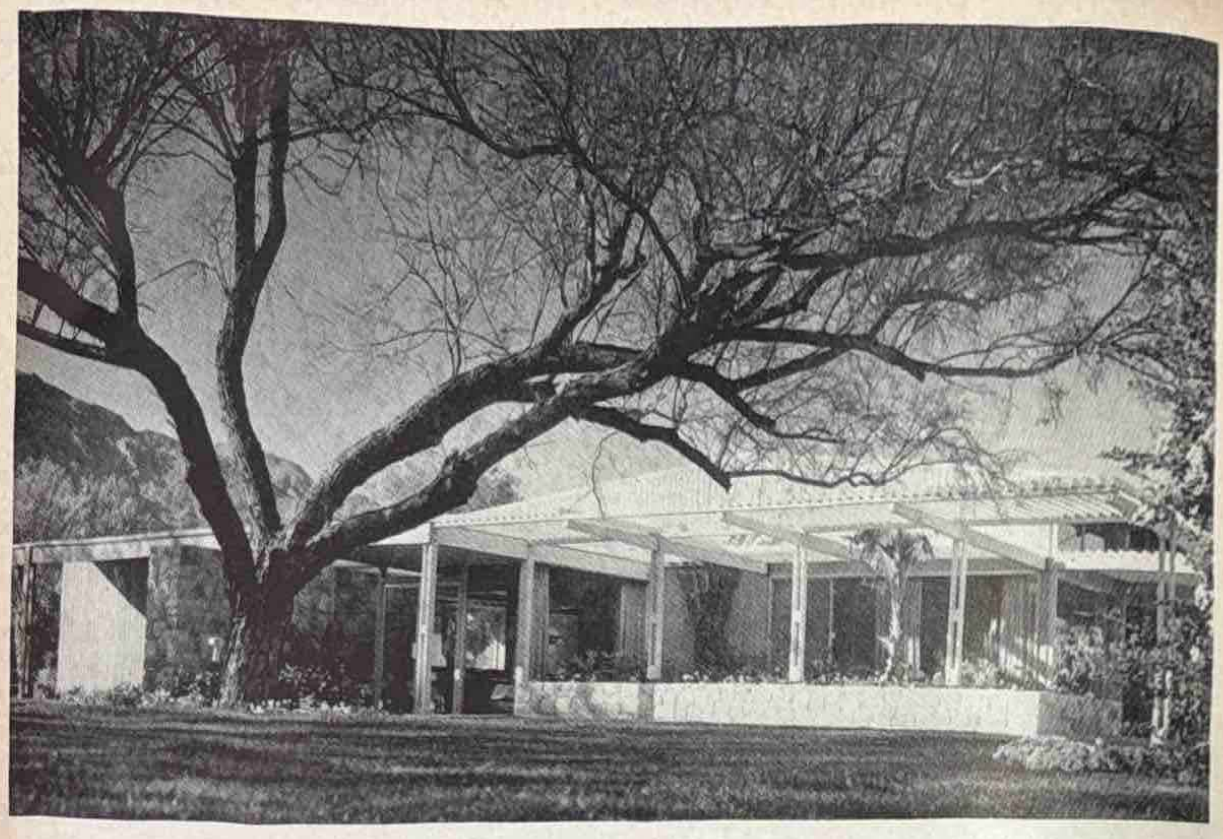
HOUSE FROM WEST REFLECTS closed view with only entry apparent. Living area drops few steps to flatter grade, as does carport. Living areas open to enclosed garden (planting at this stage is barely started), with kitchen and work areas at center of house.

Tom Burns Jr. photos



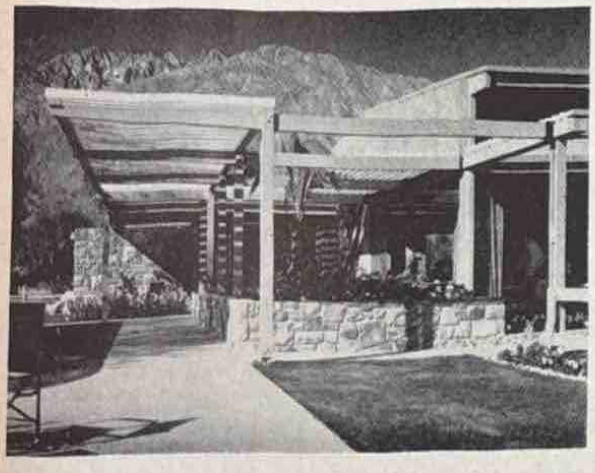
SPACE FLOWS vertically over partitions, cabinets, etc., leaving much opportunity for lighting situations, both natural and indirect.

OUTLINE SPECIFICATIONS

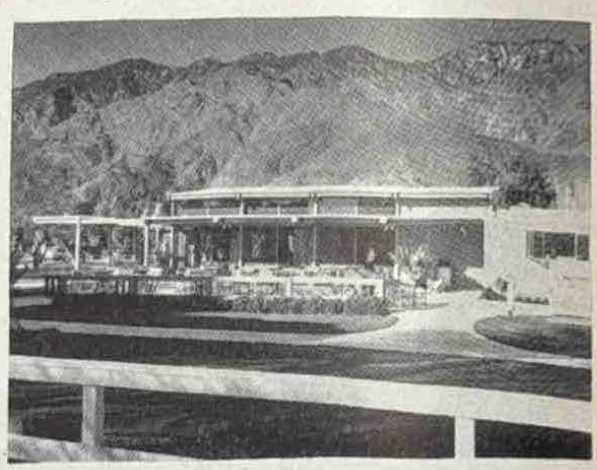


Structure: Fir post and beam; 2x4 t&g roof decking.
Exterior Finish: 1x4 resawn cedar; fir trim.
Roof Surfacing: Red cedar shingles; fiberglass insulation.
Windows: Wood casement; hardware—Whitco.
Doors: Exterior: fir solid core; interior: fir hollow core—United States Plywood Corp.
Floor Surfacing: Cork—Dodge Cork Co., Inc.; linoleum, kitchen and baths—Armstrong Cork Co.
Interior Walls and Partitions: Hemlock, cedar paneling; fir trim; drywall—United States Gypsum Co.
Ceilings: Exposed t&g decking.
Cabinets: Sen plywood—United States Plywood Corp.
Heating: Oil fired warm air furnace—The Heil Co.
Total Area: 1,900 sq. ft. plus carport and partial basement.
Total cost: $30,000.
Cost per Square Foot: $13.50 (house); $5 (carport and basement).
Date of Completion: September 1956.

DESIGN REQUIREMENTS for this residence formulated about a young couple anticipating a family; specific space requirements called for a master bedroom, two children's bedrooms and a multipurpose room plus normal living, dining and storage facilities. Located in a fast developing area southwest of Portland, the gently sloping corner lot, which was bare of plant material, necessitated inward orientation to a sheltered garden.



The designer attempted to use a modular structural frame without accepting its total discipline: i.e., employing a simple roof or shelter system without relegating walls to the same rigidity. He took advantage of the cantilever principle wherever possible to shorten spans.



With the entry at the core, the house is zoned by space articulation rather than cubicles. The plan is relatively open in the active areas, relieved by subtle variations of vertical spaced screened units. These areas are scaled with proportionately higher ceilings, while the bedrooms are pulled under the lower eave spaces at the extremities of the complex for intimacy and security.

The house is composed almost completely of native woods—cedar, fir and hemlock—, but such materials as gypsum board have been incorporated for color emphasis and sparkle.

INFORMAL CALIFORNIA STYLE, which is exerting strong influence in restaurant design across country, is seen here at its best. Gnarled trees become integral part of plan, help develop indoor-outdoor theme. Outdoor dining terrace receives morning sun.

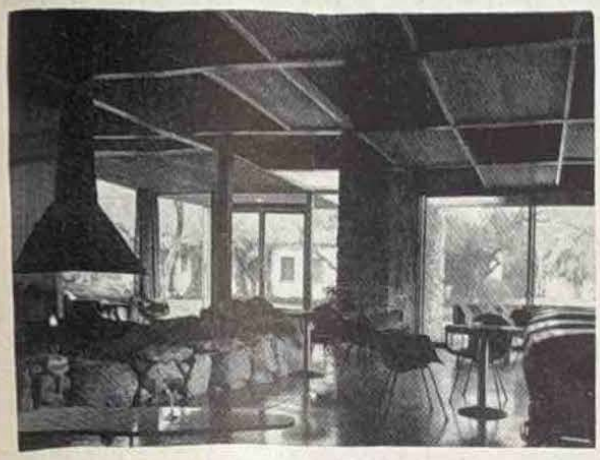
Design meets challenge of site

THE CLIENT presented the architect with this problem: to develop a restaurant design which would reflect the hospitality characterizing one of the oldest guest ranches in Palm Springs. The locale was an Indian camping ground centuries ago and today descendants of the same tribe live and own property in the area. With the 11,000-ft. San Jacinto Mountains as a backdrop, the site is enhanced by a stand of gnarled trees which have been incorporated in the overall plan. Indigenous fieldstone and river-washed boulders used for structural elements and garden decor effect an integration of the building with its primeval setting.

The casual, relaxed vacation living found on the ranch is mirrored in the expansive use of glass which permits full enjoyment of the panorama and steel sliding doors provide easy access to the out-of-doors. Interior lighting is indirect except for spotlights.

The wood frame structure has an exterior of naturally treated redwood siding. Interior walls are finished in Japanese ash. Arched laminated beams span the central main dining area; and secondary areas, as well as some of the patio space, are roofed with laminated wood decking over timber beams.

Deep Well Restaurant
Palm Springs, California



DANIEL L. DWORSKY, AIA, Architect

REUBEN ALVY, Structural Engineer

OUTLINE SPECIFICATIONS

Structure: Bent laminated beams supported on wood columns; t&g roof.
Exterior Walls: Redwood siding, local rock.
Roof Surfacing: Composition with white reflective coating.
Windows: Sliding—Arcadia Metal products.
Doors: **Entrance:** aluminum — Acme Metal Molding Co; sliding—Arcadia Metal Products.
Floor Surfacing: Asphalt tile—Mastic Tile Corporation of America.
Interior Walls and Partitions: Plaster, Japanese ash paneling.
Ceilings: Exposed t&g decking between laminated beams.
Lighting: Indirect neon and fluorescent tube, spotlights as accents.
Heating: Forced air and evaporative cooler.
Total Cost: $80,000.
Total Area: 8,000 sq. ft.
Date of Completion: 1954.

LOAD-BEARING FIELDSTONE PIER and casual arrangement of river boulders create focal point at entrance, are repeated inside. Fireplace hood suspended over steel brazier in rock-rimmed pool of water serves as divider between dining room and lounge.

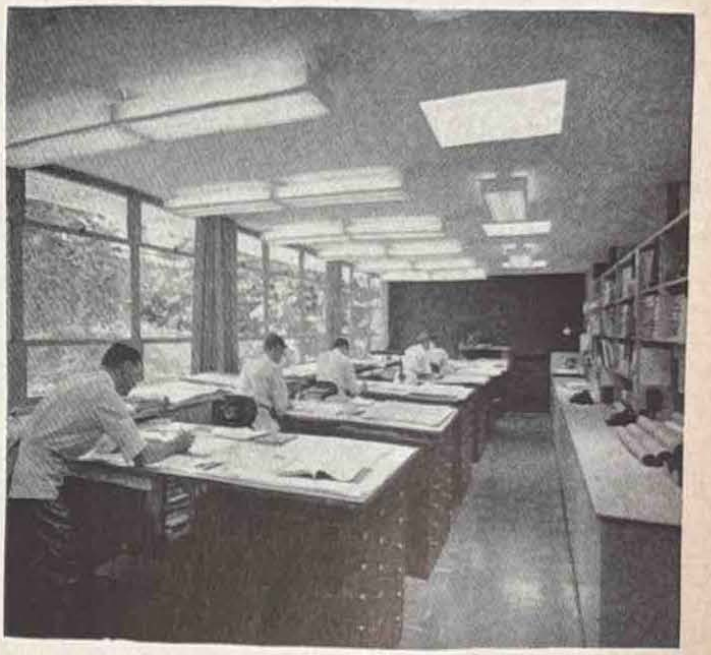
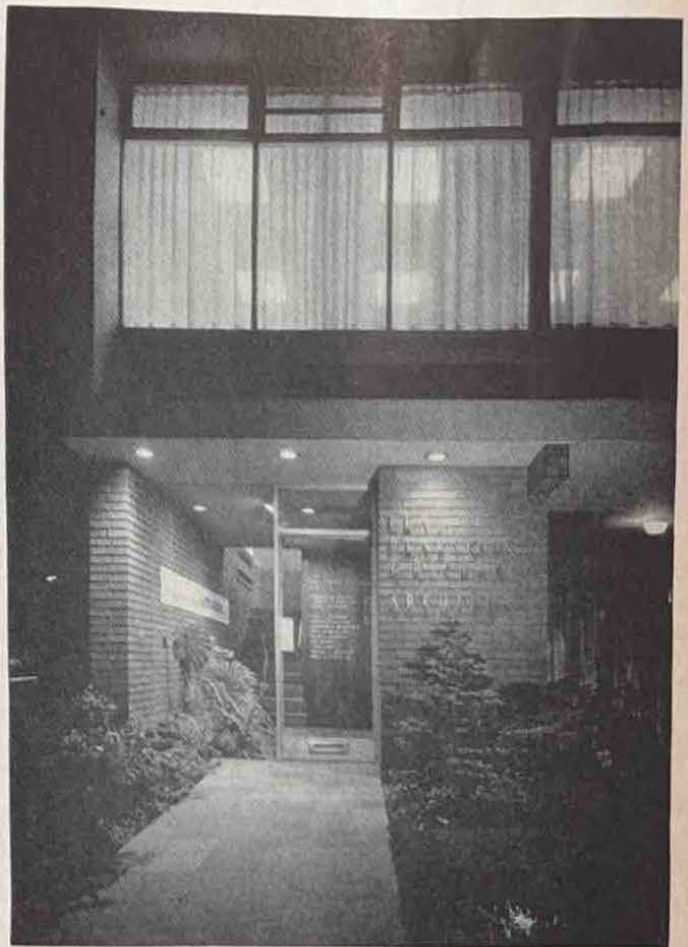
Where architects hang their hats

LEA, PEARSON & RICHARDS
Tacoma, Washington

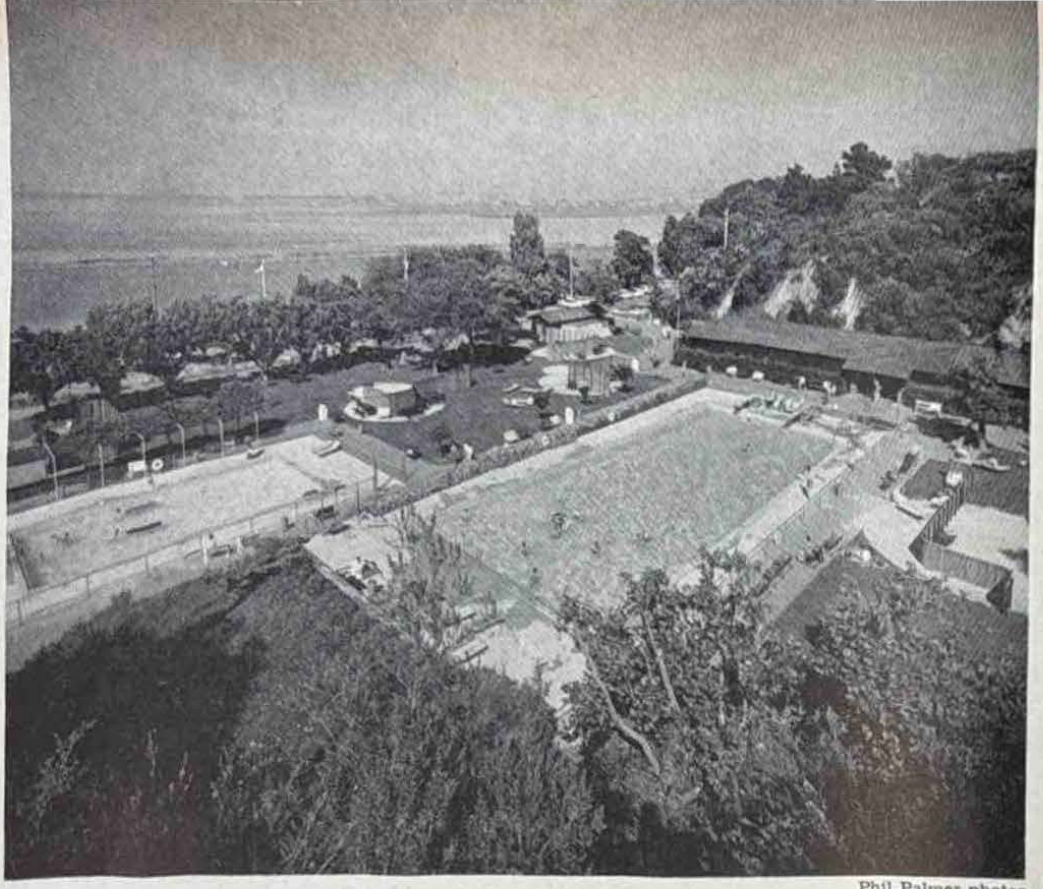


SECOND FLOOR



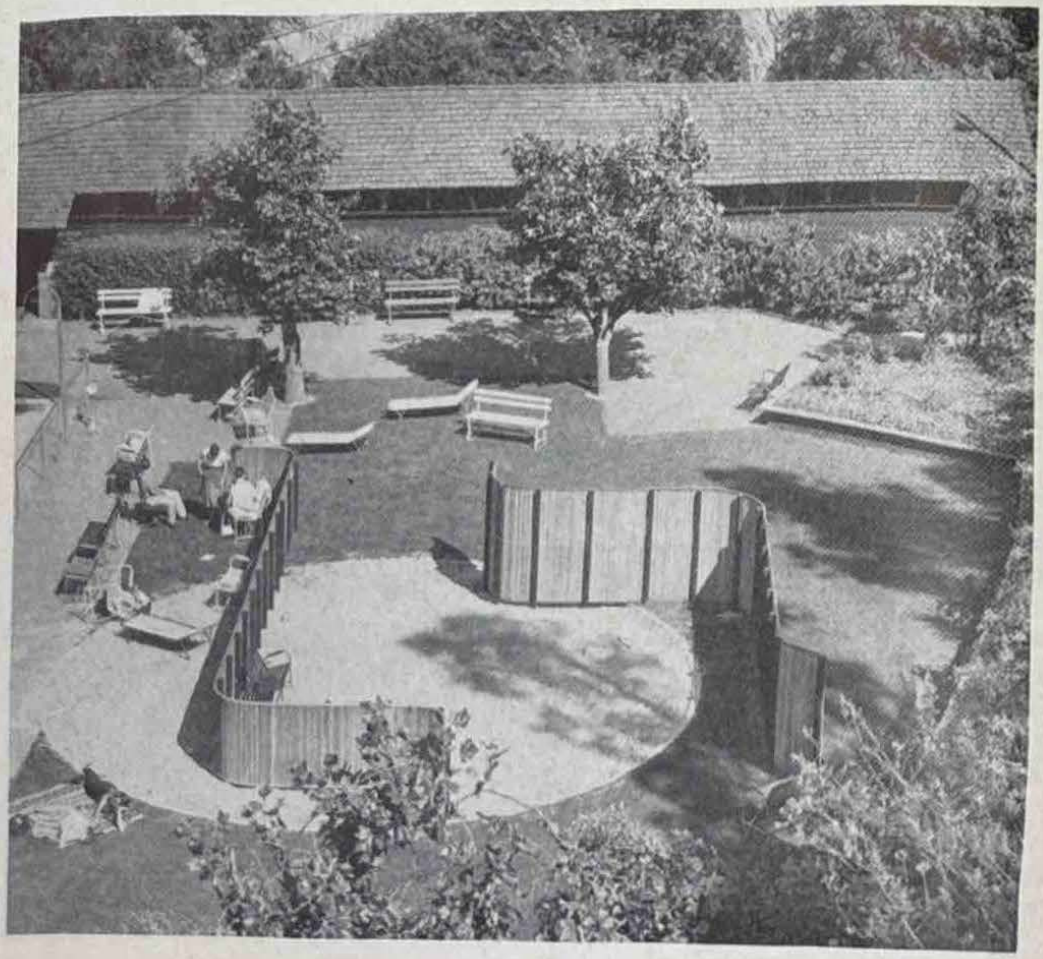
HOME of this architectural firm, which is celebrating its 21st anniversary in December, is sited on a 50x120-ft. inside lot, overlooking Commencement Bay and the industrial section of Tacoma. A two-story building was planned to take advantage of an unobstructed view of the water, to provide access to the rear of the structure for parking and to get above the traffic of the heavily traveled street on the east.

The first floor, three-fourths of which is open, contains an auto drive-through, covered parking for two cars, entrance hall and stairway, heat exchange room and lunchroom. The second floor, forming a rectangular box, 50x40 ft., is supported on brick cavity walls and steel pipe columns which are spanned by glued laminated beams.



Green vinyl coated floor tile and rubber base are used throughout the second floor. Plywood and gypsum board walls are painted white, green and pale yellow. Ceilings of the conference room and private offices are 12x12-in. fissured mineral tile with flush edges. Each of these rooms is lighted with four 24x24-in. six-tube fluorescent fixtures with smooth plastic covers. Two tubes in each of the fixtures are on a time switch for night illumination. Elsewhere, ceilings are 12x12-in. perforated type acoustical tile, lighted with surface mounted fluorescent fixtures and plastic eggcrate deflectors. Additional natural light is introduced with six 30x30-in. skylights.

Constructed by Korsmo Bros., the building cost $45,000 including furniture and equipment, when completed in December 1954. David M. Hopkins was the mechanical engineer and Walter S. Gordon, electrical engineer.



DRAFTING ROOM RUNS full length of west side. Entry floor and stairway are of slate, while walls of these areas are exposed red Normandy brick and vertical redwood boards.

SWIMMING COMPLEX includes bathhouse, adult pool with racing lanes and diving area at deep end and junior pool of shallower depths for beginners. Tot spray pool is not shown.

Phil Palmer photos

LARGE SAND PIT for sunning, adjacent to adult swimming pool, is surrounded by concrete curb and protected against wind by screens of 1x1 redwood set vertically between steel channels attached to redwood posts.

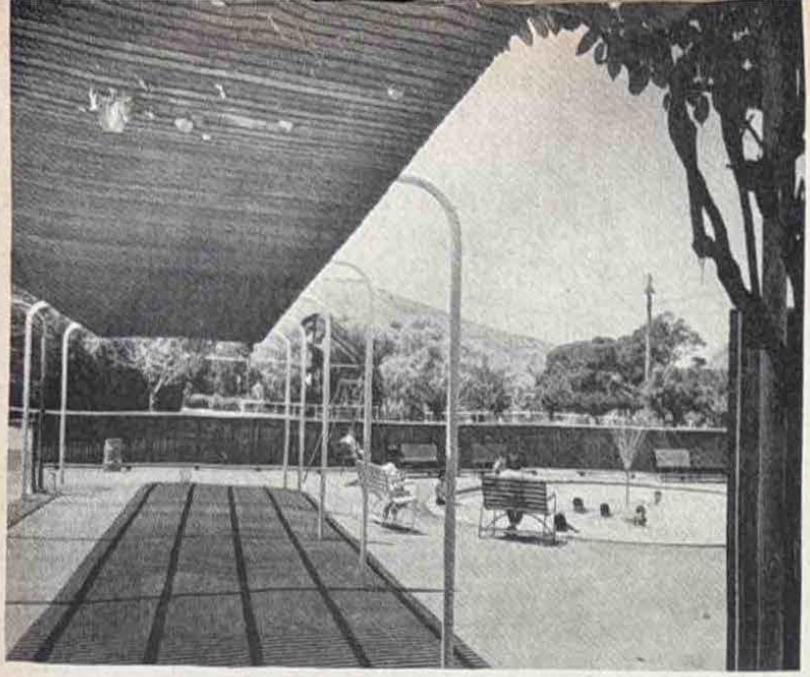
Standard Oil Co.
Rod and Gun Club Park
Richmond, California

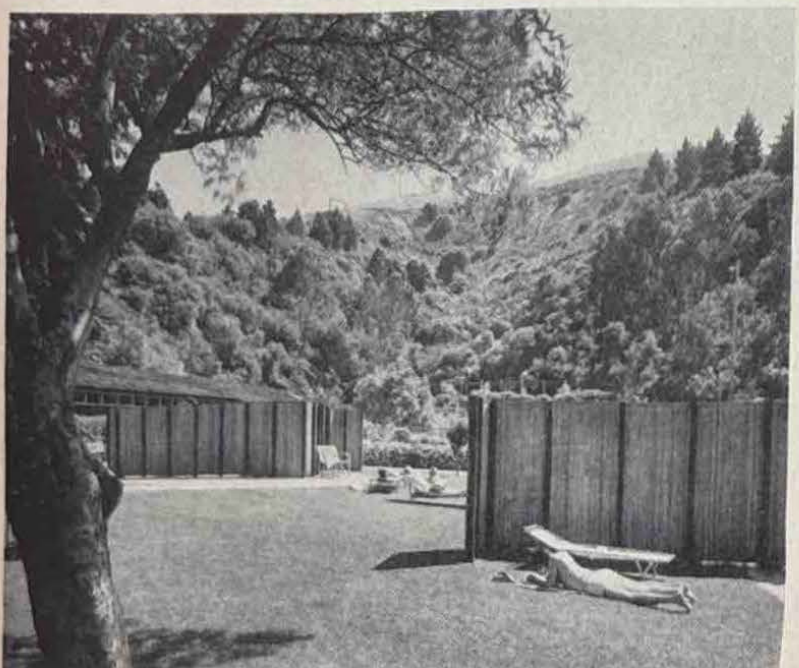
ECKBO, ROYSTON & WILLIAMS
Landscape Architects



THIS HIGHLY DEVELOPED 20-acre portion of a recreation park comprising about 100 acres edges San Francisco Bay. It consists of a gymnasium, swimming complex—bathhouse and three pools—and children's play center in three adjacent valleys facing north. Picnic places are dispersed throughout at the valley heads where they can overlook the activity centers and along the esplanade which connects all areas.

Two features are especially noteworthy: 1) the wind screen and paving arrangements in the swimming center, providing a variety of sun or shade, breeze or protection, and grass, sand or concrete surfacing, achieved through the interplay of concrete and sand circles with interpenetrating fences; 2) equipment in the children's play center which is rich in form and color, producing an unusually gay atmosphere.

The project resulted through a joint labor-management effort. Plant workers donated their free time to building those parts of the facilities which they could handle, while the company provided funds for materials and special contracts best performed by outside contractors.

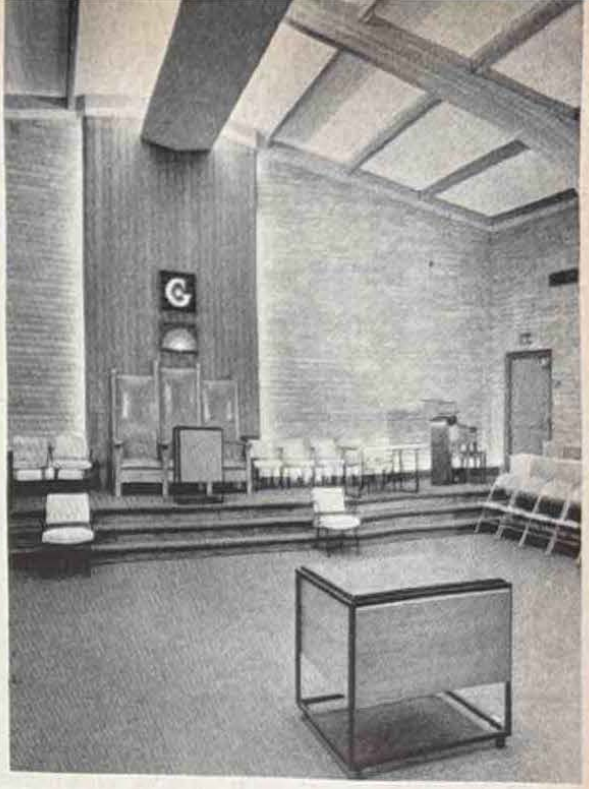


ROD AND GUN CLUB PARK

REDWOOD ARBOR supported by bent pipe U-frame separtes junior and tot spray pools.

CHILDREN'S PLAY AREA shows arrangements of different types of swings and other equipment placed in tan bark, surrounded by asphalt surfaced walkways.

VIEW toward adult swimming pool through sitting areas, each with small sandbox, protected from wind by redwood screens.



A break with tradition

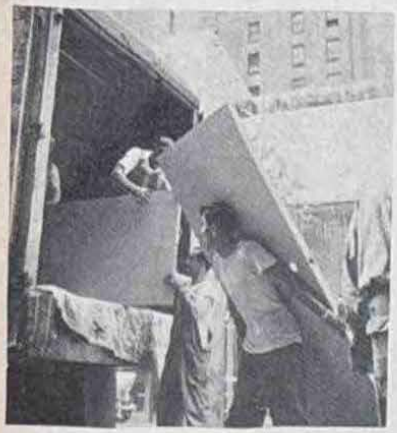
CONCRETE BLOCK EXTERIOR WALLS are laid up with aligned joints and left exposed on interior surfaces. Lodge room has custom designed altar and desk of black iron, mahogany and marble, is spanned by laminated wood arches.

Phil Palmer photos

A DEPARTURE from the customary design found in this type of building is represented in the single story L-shaped structure which includes a windowless lodge room at ground level served by storage rooms; a lounge with fireplace; a banquet room with stage; and an adjacent dining room with a completely equipped kitchen which can turn out 500 meals. The building itself forms an outdoor patio which is terraced and has a barbecue pit easily accessible to the kitchen area. Most of the materials —concrete block, laminated wood arches, columns and beams—are left exposed, inside and out. The 40x54-ft. banquet room is lighted with fiberglass lanterns custom designed by the architects.



OUTLINE SPECIFICATIONS

Exterior Walls: 4x8x24-in. concrete block laid up with aligned joints, brick trim.
Roof: Built-up Haydite surfacing.
Windows: Wood-amber glass in two tones.
Doors: Flush wood.
Floor Surfacing: Birch in banquet room, carpeting in lodge room.
Interior Walls: Exposed concrete block; wood framed partitions covered with ¼-in. mahogany plywood.
Ceilings: Acoustical tile supported by laminated wood arches.
Heating: Gas fired warm air.
Total Area: 92,000 sq. ft.
Total Cost: $138,000.
Date of Completion: 1955.

In Tishman Building

Prefabricated steel walls

mark step forward in interior layout

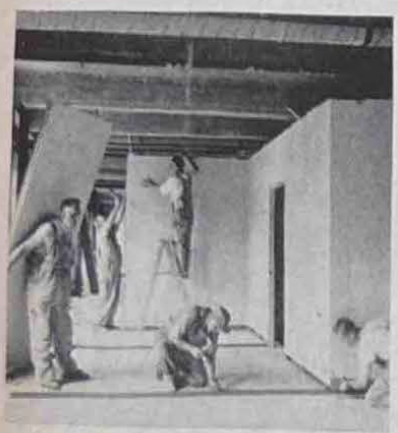
STEEL WALL PARTITIONS arrive at jobsite prefabricated and ready for installation.

SEVERAL IMPORTANT FIRSTS are tied in with the installation of prefabricated steel walls in the new 38-story Tishman Building in New York City.

- It is the first time prospective tenants of a rented office building have been given a choice between the steel wall partition or the customary wet wall construction.
- It is the first time steel partitions have been specifically designed to replace the plaster and mortar wall.
- It is the first time that the wall panel has gone through, rather than to, the ceiling.
- It is believed to be the first time in the history of office building construction that interior walls of steel have been installed before the ceilings have been hung.

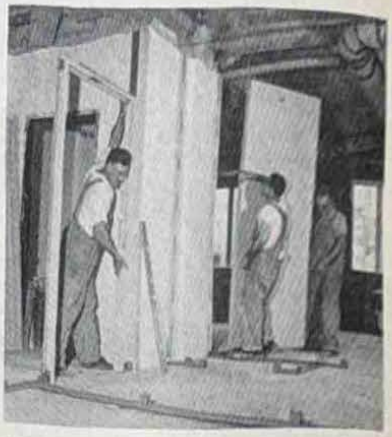
Manufacturers of the wall point out that in a new office building the initial cost of the steel partitions is higher than for wet wall construction, but cite numerous reasons why the long term costs are actually cheaper. Where an office building is being remodeled, costs are claimed to be competitive with wet wall construction.

The wall for the Tishman Building is being manufactured by E. J. Boyle Division, Aetna Steel Products Corp., in Pottsville, Pa. Three inches thick, instead of the 5 in. normally required for wet wall construction, the steel panels are constructed of 20-gauge cold-rolled stretcher level steel. Hat stiffeners on each panel are located 9 in. o.c. a part to provide desired rigidity.

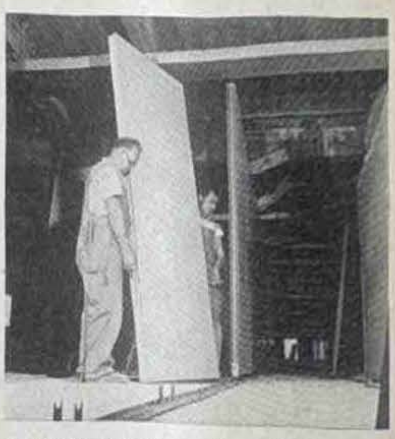


The 2-in. difference in the width between the two walls will provide an additional 16,000 sq. ft. of usable floor space in the 1,050,000-sq. ft. building.

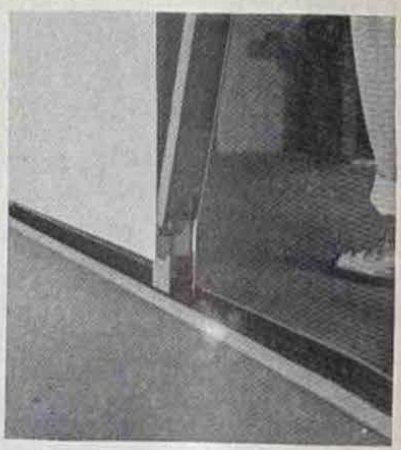
Space between the steel panels is packed with bats of rock wool providing excellent insulation against sound and fire.



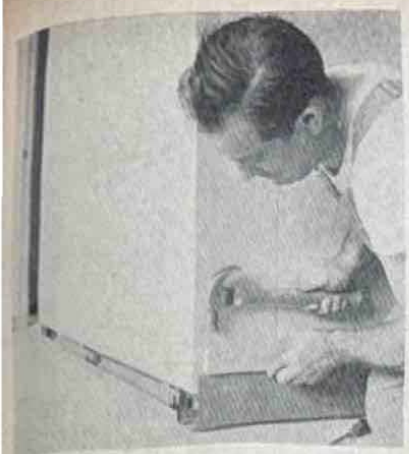
Among the obvious advantages of the steel wall is the ease with which it is both installed and removed. At the Tishman Building it is anticipated individual members of work crews will be able to install as many as 40



ON JOB panels can be stored in minimum of space until ready for use. Light enough to be handled by one workman, they can be erected before ceiling is up or even before building is enclosed. In foreground are sand and cement necessary for wet wall construction.



SPEED with which panels can be erected is indicated here. Workers lay floor channel, attach snap-on baseboard, bring in new section, attach linking device on panel's side, steady partition.



VIEW OF PANEL STRUTS attached to continuous floor channel.

WORKMEN PREPARE to slip section of panel over struts. Latter serve as both centering and keying device for steel wall panel which slips over them upon installation. Worker in foreground places one-piece prefabricated steel door frame in position.

PANEL RESTING ON STRUTS is shown as end vertical linking device is attached. Good view of unobstructed electrical wireway can be seen to left of strut.

SECTION OF SNAP-ON-BASE between bottom section of panel and floor is applied. Covering completely conceals electrical wireway.

STEEL SPLICE CAP is slipped over top of two adjacent steel wall panels giving added stability and ensuring proper alignment.

WORKMAN INSTALLS specially cut-to-size end section of panel to form perfect corner jointure. Piece is known as telescoping end filler.

lin. ft. of wall panel per day. Completely salvageable, the wall can be removed in up to a tenth the installation time for immediate relocation elsewhere.

The speed of erection at Tishman becomes important since the realty firm expects to establish the first tenants in their new surroundings this fall. Altogether, approximately 80,000 lin. ft. of wall panel requiring approximately 27,000 individual panel units in length from 6 to 48 in., in modules of 3 in., will be needed for the overall installation.

Another advantage of this new wall, which also contributes to the speed of installation, is that it can be erected under all weather conditions—rain or shine, hot or cold—and can be put up even before the building is enclosed. Adverse weather conditions have been known to delay completion of wet wall construction for many days. Further, only one union craft instead of several need be involved in the erection.

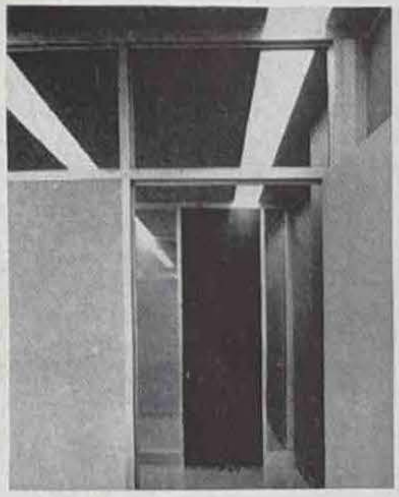
Once the prefabricated steel wall panel leaves the factory, it is ready for installation in final form except for painting, papering, or alterations for electrical outlets or air conditioning and heating pipes. Openings in the wall are easily made by a workman with a pair of electric hand-snippers.

The prefabricated form also has certain other advantages. Upon arrival at the jobsite, it can be easily and conveniently stored in a relatively small area. The large quantities of sand and cement required for wet wall construction do not have to be hauled to the upper floors, thereby tieing up elevators and preempting space which might otherwise have been put to more useful purposes.

Since the steel partitions are completely salvageable, they can be readily moved and relocated according to the needs of a new interior layout. In addition, rubble normally created when wet wall construction is torn down is eliminated., Manufacturers of the steel wall say a coat of paint lasts longer than on a wet wall and that cracks which sometimes appear in plaster are eliminated. They also claim more can be done with interior design, particularly in matching the decor of office furniture, than with the wet wall construction. For additional esthetic values, they suggest a combination of steel and glass panel, as the two combine to form an excellent and attractive panel.

To install the steel wall panel, a continuous floor channel is first fastened to the floor with 3-in. drive studs, ¼-in. in diameter. The channel is made of 16-gauge rolled steel, the same as the partition.

After the channel is laid, a panel strut, on which the wall rests and which also serves as a centering, leveling and keying device, is attached.



When the wall panel is in place, approximately 3 in. of open space remains between the wall and the floor channel for wiring. After wiring has been completed, a snap-on base covers the open area between the wall and the floor, completely concealing the wiring.

Once the panel has been erected, the ceiling can be installed and fastened to it by angle clips. While the wall can support the ceiling, the ceiling does not support the walls.

Because the design of this particular wall was worked out between Aetna, the manufacturer, and Tishman, the client, it has been given the trade name Aetnawall-T, the "T" for Tishman.

Tishman Realty and Construction Co. officials said they chose the steel walls because they represent "a substantial advance" in design over wet wall construction.

Los Angeles firm introduces wall system

GYPSUM PANELS PERMIT numerous decorating finishes and materials, including wood laminates, and framing makes it possible to use glass panels in variety of sizes.

A movable interior wall system, combining two Kaiser products—aluminum for the framing and gypsum for the wall panels—,is being introduced by Vaughn Movable Interior Walls, Inc., of Los Angeles.

Ten extruded aluminum shapes are used for base and ceiling closure plates, runners, jambs, mullions, fillers, partition and glazing stops. All sections have a satinlike finish.

The wall systems cost about half that of conventional types of movable walls and their design permits custom fitting on the job. Both the walls and framing sections can be easily dismantled and reinstalled.

The four-ply construction of the basic gypsum panels provides a sound reduction of 40 decibels and a one-hour fire rating.

The human side of specification writing

by KENNETH M. WILSON

CLIENTS COME to architects and they come to engineers for the same reason that you or I go to our attorney or our physician, namely, to have done for them the things that they are incapable of doing for themselves. Clients want and need our wise counsel; they want our opinions; they want our frank expressions of preference if we have any. Our clients are not particularly interested in the basis of our opinions or our preferences so long as they are honest. We are highly skilled men; we try to assure our clients that we are proficient in our own field. Our client wants to accept that fact without qualifications. He is not particularly interested in whether we are theoretically unfair to one supplier or to another. He is interested in our protecting his interests and he is interested in our protecting his dollars and he pays us a fee to do just exactly that. If we fail to make the decisions that he pays us to make and if we fail to make them with firmness and authority, then on what do we justify our fee? If we put out a drawing or a specification that is not clear, that is full of indecision, that is full of what the trade calls murder clauses, if it is pointed at defending the consultant or the specification writer against charges or partiality or unfairness, then how can a client help wondering if the consultant is confident of his own ability? Our clients cannot fail to wonder if the consultant he has selected is really sure of his own honesty and his own integrity, for if he were, there would be no need for all of these paper safeguards. We must approach our work with supreme confidence in our own ability, with complete faith in our own integrity. We must reflect these characteristics in firmness and decisiveness in our specifications and in our actions. We will then make our just contribution to the goal of giving our client's a dollar's worth of value for a dollar spent.

Contractors in all fields are builders, they are not merchants. Most contractors care very little about what brand of equipment they put into a given building. They do care and they have a right to expect clean, clear, concise definition, preferably in just as few words as possible, as to what equipment is wanted, how it must be installed, where it is to be placed. They want, and they have a right to expect, that every contractor bidding on the work will furnish exactly the same equipment that they must furnish and do exactly the same quality of work that will be demanded of them. Contractors want and have a right to expect a clear enough plan and a plain enough specification to enable them to bid their work without loading their proposals with innumerable contingencies to cover situations where they must guess at the intent of the designer.

Manufacturers and suppliers want first, last and always to sell their product. Honest manufacturers and honest salesman would prefer to sell their products on the merit and the utility of their product backed by the integrity of their firm. They would much prefer to sell their products at a professional level where they can be assured that their success or failure to sell will not depend solely upon having a lower price than the other fellow. Nine out of 10 prefer to figure their price on a given project, include a fair profit and either win or lose on one quotation. Nine out of 10 abhor the idea of quoting every job with a 5 or 10 or a 15% cushion that will permit them to outdeal their competition after the contract has been signed. If we ask manufacturers to stay clear of the design profession and to refrain from competition with these professions by offering free engineering, then we must reciprocate by doing a thorough job on our drawings and specifications and by making sure that we do not misapply any product so that industry need not maintain a technical service to fill in the details and compensate for the errors of the design professions. This will permit industry to employ salesmen instead of application engineers. More important, industry representatives would not be subject to competition of inferior products which the lay customer is not qualified to evalute.

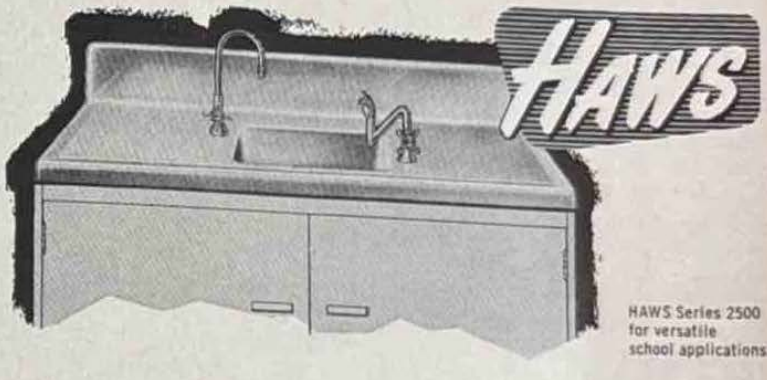
We do not deny for one minute that there is a small and a very noisy minority of contractors, manufacturers, salesmen, clients, and occasionally a few politicians, who will cry "foul ball" or "partiality" at the very slightest excuse. I am afraid these fellows are going to be with us forever, as they always have been, working on the premise that the wheel that squeaks the loudest is bound to get the most grease. Yet somehow I cannot justify penalizing the honest and the ethical segment of the construction industry simply to still the hue and the cry that is set up by this noisy minority.

Professional, marketing, trade organizations must join hands to force recognition of the design fields as genuinely professional practices and to that end encourage institutions of engineering education to offer a more realistic and usable curriculum to the student who hopes to practice his profession as a public consultant. Compensation for instructors in these institutions of engineering education must be increased to a point where active competition with practicing consultants is no longer financially attractive. More practicing consultants must contribute of their time and their knowledge by serving on examination boards and by more active participation in professional organizations.

We must make the whole public conscious of the part that is played in our entire social and economic structure by the architectural and the engineering professions. Not one layman in 50 has more than the vaguest notion of what part an architect or an engineer plays in the construction of a building other than to draw blueprints. There is a big story to be told about the studies, the thought, the planning that must be undertaken to properly plan and build even a simple building. Somehow, this message must be brought home to the rank and file of our people. Just so long as these professions will permit the general public to remain in this state of ignorance, then so long must we work in obscurity and see our efforts accepted as a legal necessity rather than as a service to human need.

Finally, I believe we must recognize that we have an ethical obligation of service to our clients and to the general public, to contractors, to manufacturers and to suppliers, and this obligation is considerably more than a set of noble platitudes which are printed, attractively framed and displayed on the wall. If we are to merit

the respect of our clients and the respect of our neighbors, we must take some risks, we must bear some criticism. If we have a conviction that a given course of action will be best for our clients, we must adhere rigidly and firmly to that course. If we, in the designing of a building, find the product of a given manufacturer fits particularly well into the overall scheme of things, then let's use it, let's name it by its right name, let's demand that we get it, not someone else's idea of an equal.



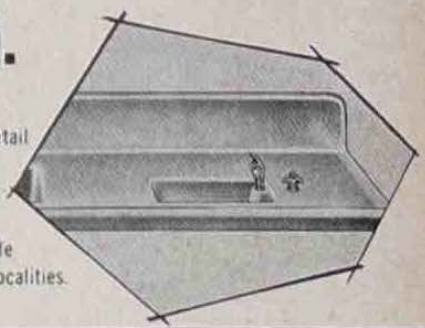
We must give to our clients the whole of our ability and the whole of our judgment and the whole of our convictions. We must practice secure in the knowledge that we are highly skilled men, that we are honest men and that we make our own decisions. For once and for all we must wipe away the stigma of being puppets, dangling on a string, that can be pulled and manipulated by any disappointed supplier, contractor, manufacturer who can scream "foul ball" or "partiality."

I firmly believe that the first small step we can take to accomplish all of these very worthwhile objectives is to clean up our specifications and rid them of their indecision, subterfuge and hypocrisy. When we turn these documents into a simple, readable, understandable supplement to clean sharp drawings, when we enforce them fairly and firmly, we will at least have made a good start in the right direction.

It is one thing to prescribe for the ills of our professions and to criticize the specifications through which they are seen; it is quite another thing to translate these prescriptions into specific action. I say this not because I have reasoned it out, as you would a problem in geometry, not because I have deduced it from a series of carefully lined up arguments, but I say this from the lessons that I have gleaned in seven very arduous years of trying to apply these principles to the practice of our own firm. From this experience I know that when you begin to assert your rightful authority, when you actually begin to take full command of your projects, that you are going to be criticized and you are going to be maligned, you are seemingly going to be hated by everyone. For a time you are going to lose some business and you are going to lose some profits. However, if you can muster the intestinal fortitude that it takes to stick by your guns for six months or for a year, you will find this criticism slowly changing into a rather grudging respect.

If you can stick by your guns for still another six months, giving your most dedicated effort, you will find that this grudging respect has changed into an open enthusiasm that is freely expressed by the most reputable and the most honest segment of the entire building industry. You will also have found that you will have driven from participation in your projects most of the dishonest and the unethical element of the construction industry. At the same time, you will find that you have won for yourself a new position of honor and a new position of dignity in the eyes of all of those whom you serve.

In closing, I want to make clear that I am not attempting to set myself up as a spokesman for either the architectural or the engineering profession or for any part of the building industry. However I have had the abvantage of viewing this situation from many angles as I have worked with tools as a tradesman, as a manufacturer's representative, as a contractor bidding and executing the work, as a draftsman and finally in my present position as an engineer and administrator. From this vantage point, I think it is time that we recognize the human side of specification writing.

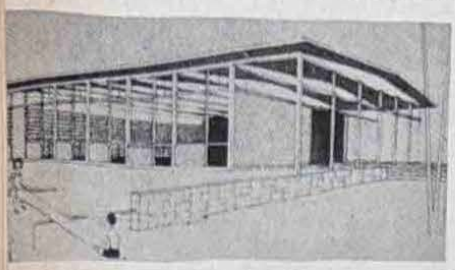


HAWS Series 2500 for versatile school applications.

ONE-PIECE INTEGRAL UNIT

deck-top, receptor and fountain in lightweight, tough fiberglass. Color, too, at no extra cost. Look—no rims, no cracks, no joints. It's all One Piece for ultimate ease of maintenance and sanitation.

Get the **full** story; write for detail sheets for Series 2500. A drinking fountain separate from main receptor is provided on **Series 2700** "two receptor" units, to meet code requirements of certain localities.



HAWS DRINKING FAUCET CO.

and the latest literature

FLAT ROOFS: A slope beam roof system, said to considerably reduce material and labor costs, is being market-

ed for schools, warehouses, supermarkets and other types of flat roof construction. The system is a custom designed, fully integrated, complete framing unit package which includes natural slope steel beams and steel purlins to be used with most types of roof deck. Economies include savings in steel costs, reduction in height of sidewalls and elimination of heavier columns and foundations. The system can be used for multiple spans, inverted positioning, overhangs and other special requirements. Slope beams are available in a variety of sizes or can be made at any length without increased cost.—The Steelcraft Manufacturing Co.

(Item No. 1)

LIGHTING SYSTEM: Almost unlimited variety of form, color and diffusing media is possible with the Lumen-Area system. Possibilities range from the conventional to the abstract, curved or straight, colored or white. The overlap-reverse interlock Polycubelouver makes crossbars unnecessary, regardless of how long the run. Adjusting for spacing and depth can be made without tools.—Electro Silv-A-King Corp.

(Item No. 2)

LIGHTWEIGHT CONCRETE: A concrete building material that rises like bread during the manufacturing process is being introduced in the United States. Already successfully used in Sweden, the material is much lighter than regular concrete, but is said to have unusually high strength and insulating properties. Durox gas concrete is manufactured of lime and cement in combination with siliceous ingredients such as flyash, sand, alum shale ash. After being pulverized and mixed with water, a fine aluminum powder is added which serves as an activating agent. The mixture then rises, expanding in the molds as much as five times its original volume. Durox can be sawed, nailed, bored or hewn with ordinary carpenter's tools. Wall and roof elements are now being manufactured as well as blocks, wall slabs, partition slabs and insulating slabs.—U. S. Durox Corporation of Colorado.

(Item No. 3)

REVERSIBLE WINDOWS: To make life easier for window washers, frames for a new office building in Chicago are completely reversible so that they can be cleaned from the inside. A vertical double-pivot permits full-circle rotation of the stainless steel frame. Windows are being installed in the new Morton Salt Co. building designed by Graham, Anderson, Probst & Whit.—Truscon Division, Republic Steel Corp.

(Item No. 4)

WATER CLOSET: Here is a new style of Eljer plumbing fixture recommended for installation in public places where traffic is heavy. Designed primarily as a women's urinal, the Toilette can serve as a urinal and water closet for both men's and women's toilet rooms where physical contact with the fixture is undesirable. It is made of vitreous china and has syphonic, reverse trap action.—Eljer Co.

(Item No. 5)

WIRING SYSTEM: To meet the housewife's desire to rearrange her furniture, a wiring system has been developed which includes outlets all around the room, plus provisions for additional circuits for any new appliances that may be invented. Called Baseduct, it is a complete system installed at baseboard level and replacing the standard baseboard. Circuits can be added by simply removing the cover.—National Electric Products Corp.

(Item No. 6)

INSULATING BOARD: For farm and industrial buildings, Johns-Manville has developed a ½-in. insulation board sheathing that can be used without corner bracing and can be handled easily by one man on the job. Called Strongbord, it is made of pine and other wood fibers bonded together with bituminous compounds. Asbestos or wood shingles can be attached directly to it.—Johns-Manville.

(Item No. 7)

NON-SLIP TILES: Manufacturer of Norton Alundum non-slip stair and floor tiles has been resumed after a two-year absence from the market. The tiles are made of Alundum abrasive grain, bonding materials and pores and are designed to make stair nosings and other vital walkway and ramp areas permanently slipproof and resistant to foot traffic. If any of the surface grain should wear off, new sharp grains beneath would be exposed, retaining the non-slip feature practically indefinitely. The tile is available in brown and gray.—Norton Co.

(Item No. 8)

FOLDING PARTITION: To improve its appearance and sound transmission loss, the Haws electric-hydraulic folding partition has an automatic trim cornice closure as an optional feature. The space at the folding end of the ceiling track, which heretofore has been open to permit folding of the panels and has left the track and mechanism exposed, now is covered when the wall is extended. As the partition is forced hydraulically to the floor to form a tight seal, the mechanism then folds down a cornice section to present passage of light and sound.—Robert Haws Co.

Latest Handbooks, Manuals and Literature

Yours for the Asking

STAINLESS STEEL: "Products of Stainless Steel for Architects and Builders," a 44-page reference manual, is illustrated with photographs, detail drawings, profiles and exploded views. The booklet describes components for store fronts, windows and doors, hardware, exterior walls, escalator parts, swimming pool appointments, signs, trim, kitchen equipment for homes as well as commercial and industrial feeding installations. Another helpful feature is a 3½-page listing of stainless steel component manufacturers, grouped by component type.—American Iron and Steel Institute.

(Item No. 10)

EXTERIOR PAINTS: Fourth in a series published annually by Rohm & Haas, "Progress Report Four" gives detailed summaries and tables covering the chemical firm's findings in an extensive every-climate test program on acrylic emulsion paints. The 70 pages describe results obtained to date from 3,000 test exposures in Florida, Pennsylvania and Arizona begun in 1952-53, as well as data from a variety of laboratory controlled test buildings and from a systematic study covering a large number of commercial paint applications throughout the nation and Canada.—Rohm & Haas Co.

(Item No. 11)

CLUBHOUSE DESIGN: How an architect met his client's special needs for a golf clubhouse design by integrating five steel building units with other materials is described in Armco's eight-page bulletin. Details are given and interior and exterior photos, some in color, show how the problem was solved.—Armco Drainage and Metal Products, Inc.

(Item No. 12)

MOVING SIDEWALKS: The growing popularity of moving sidewalks has prompted Stephens-Adamson to prepare a handbook on the subject offering both technical information and pictures of actual installations. First section goes into types of belt support, balustrades, installation data. Full pages are devoted to descriptions of conveyors in a savings and loan association building, at Chicago's Wrigley Field and Museum of Science and Industry, a Goodyear plant and a number of others. Information is assembled in a handy three-ring binder. —Stephens-Adamson Manufacturing Co.

(Item No. 13)

HARD MAPLE FLOORS: Factors influencing stability and general serviceability of hard maple floors are presented in a research paper that includes a discussion of the expansion problem and the best installation methods. Emphasis is placed on the importance of proper nailing.—Maple Flooring Manufacturers Association.

(Item No. 14)

USES OF REDWOOD: Strikingly beautiful color photographs are used in an eight-page brochure to depict

some of the design possibilities of California redwood. A number of intriguing ideas are presented for both interiors and exteriors. — Simpson Timber Co.

(Item No. 15)

THERMAL INSULATION: Architects, builders and school building officials interested in getting the most school facilities for the least money will find much helpful information in a 56-page publication called "School Building Costs." The brochure is a condensed version of a study of performance and economic values of thermal insulation in roofs and walls of modern school buildings, made by Wayne Farland Koppes, research architect, and John Hancock Callender, AIA. Included are 14 graphs detailing cost and comfort comparisons, 28 sketches, tables and a heating and cooling cost chart.—Owens-Corning Fiberglas Corp.

(Item No. 16)

CLIMATE DATA: Design guide gives temperature conditions for heating and air conditioning in southern California, Nevada and Arizona. The data, assembled by the Southern California Chapter of the American Society of Heating and Air Conditioning Engineers, deals with problems in 440 different localities in California. Directing work on the publication was William A. Holladay of the Holladay & Westcott consulting engineer firm.—American Society of Heating and Air Conditioning Engineers.

(Item No. 17)

REMODELING IDEAS: Although it is designed primarily for consumers, architects and builders will find some practical suggestions in a 16-page booklet called "77 Ideas for Remodeling Your Home with Fir Plywood." There are tips on exterior facelifting, adding rooms or wings, fences and patios, basements, kitchens, living rooms, bedrooms, attics, closets and hobby centers.—Douglas Fir Plywood Association.

(Item No. 18)

FOUNDATION TESTING: The importance of subsoil investigation for all types of buildings is stressed in a 12-page brochure prepared primarily to describe the Gow method in which drive samples are secured. Text details reasons for foundation investigations, gives a comprehensive description of the procedure for making exploratory borings and discusses two types of samples. Also included is a check list on the necessary information in a boring report.—Raymond Concrete Pile Co.

(Item No. 19)

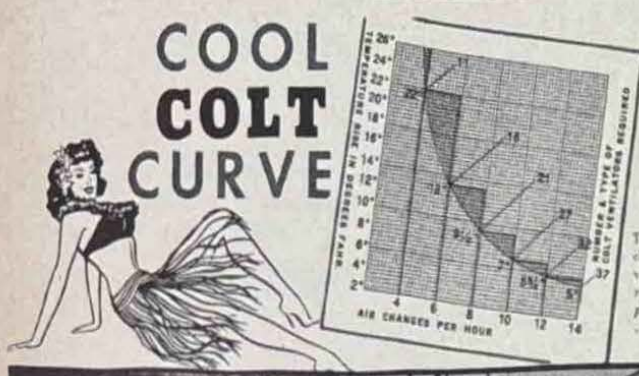
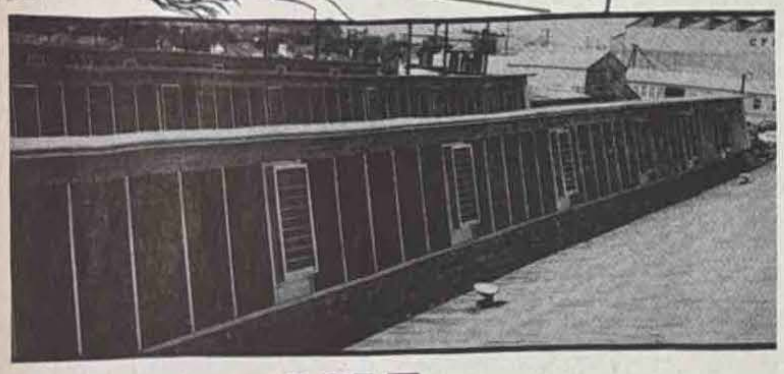
NEW OFFICES: Gene G. Westberg, architect, has opened his own office at 1962 N.W. Kearney St., Portland, in the quarters formerly occupied by Gordon Kee Cochran. Westberg was formerly in the office of Richard Marlitt and previously with Herman Brookman. Cochran is now in the office of Law & Wilson, architects-engineers, in Honolulu. Another Portland architect, Mary Alice Hutchins, had previously joined the island firm.



✓ Ray Densmore, who has been employed by the architectural firms of William Glenn Balch and Welton Becket & Associates, has opened his own office at 140 N. Robertson Blvd., Pasadena.

✓ Stockton architect Dana D. Corrough has established a branch office in the Building Service Center in San Andreas, Calif.



REYNOLDS AWARD

Nominations for the 1958 R. S. Reynolds Memorial Award—the $25,000 honorary payment to the architect making the "most significant contribution to the use of aluminum" in the building field—have been extended until January 15. To be considered for the prize, architects in this country must be nominated by an AIA chapter or any college or university.

COOL COLT CURVE

This customized, curved chart shown at a glance the ventilation system that is right for your client's plant. Another Colt "first" . . . and it's *free*!

COLT CLEARS THE AIR AT **NARDON MANUFACTURING CO.**
ALHAMBRA, CALIFORNIA

Pictured above are some of the 27 ***CO/2046 Colt Clear-Opening Adjustable Louver Ventilators*** installed in the sawtooth roof at the Nardon Manufacturing Co. Installation was carried out without affecting working operations by simply removing panes of glass and inserting ventilators instead. ***The customized chart*** illustrated at top was used to determine the ***most efficient*** and ***economical number of ventilators.*** Each building presents a different ventilation problem, and as every ventilation system operates on the law of diminishing returns, ***Colt*** has devised a unique customized chart, which will enable any engineer to see at a glance the cost of a variety of solutions he may choose to design. ***Colt*** has records of over 32,500 of the most economical and successful installations throughout the world and their data is available to all engineers. Don't settle for a hit or miss ventilation system! You know before you buy that you are getting your money's worth with ***Colt*** and ***Colt*** has a wide range of ventilators to suit every need.

Write for ***Free Technical Manual*** *giving full details of the Colt System and equipment used.*

COLT VENTILATION OF AMERICA, INC.
4652 Hollywood Boulevard, Los Angeles 27, California • NOrmandy 1-0261

DESIGN GROUP: The Architect Artist Group, a seven-man team composed of members of the related design professions, has been formed in Seattle, with offices at 200 E. Boston (FRanklin 3322). Three architect principals — Wendell Lovett, AIA, Daniel Streissguth and Gene Zema, AIA,—have been joined by landscape architect Robert Chittock, painter Spencer Mosely, sculptor Charles Smith and structural engineer Gerard Torrence.

ON THE MOVE: Harmon, Pray & Detrich, architects-engineers, to 2000 Fifth Avenue Building, Seattle (ELliot 1678).

✓ Adrian Wilson & Associates, architects-engineers, to 816 W. Fifth St., Los Angeles.

✓ Gordon W. Bradley, AIA, and Stanley F. S. Wong, design associate, to 1220 Waimanu St., Honolulu.

DIED: Two northern California architects died November 29 as the result of injuries sustained in separate automobile accidents: Raymond L. Blackwell, 51, of Berkeley and William Edward Schirmer, 66, of Oakland. Blackwell was associated with Schmidts, Hardman & Wong, for whom he designed schools in several communities; Schirmer, whose wife also was killed, was one of the architects of Oakland's City Hall and had designed a number of parochial structures in the Bay area.

✓ Retired Los Angeles architect Frank Reymann, 72, died of a heart attack November 19 in San Jose, where he had lived the last five years. His speciality was designing ornamental ironwork.

RESIGNS: Donald Beach Kirby, FAIA, has resigned from the San Francisco City Planning Commission after having served for almost two years.

PA&B Suppliers

• **Tecler Aluminum Corp.** of Seattle has named F. L. (Mac) McIntyre as head of engineering and assistant to president Ernest J. Gottula. For the past seven years McIntyre was with Soule Steel Co., serving in its Los Angeles and Portland offices and later in Seattle where he organized that firm's engineering department.

• **Tamco Corp.** of San Rafael, Calif., has named two regional sales managers—Robert W. Ray and J. V. Dean. Ray, with headquarters in Petaluma, Calif., will manage the northwestern Rocky Mountain area, excluding Colorada; Dean, based in Los Angeles, will cover southern California, Arizona and New Mexico.

• **Reynolds Aluminum Sales Co.** has named W. O. (Bill) Yates to the post of vice president and general manager of the western sales region with headquarters in Los Angeles.

• **W. P. Fuller & Co.** has appointed the following four new branch managers: Fred J. Kullenberg at Spokane, Henry B. King at Fresno, Calif., L. K. Stewart at Salt Lake City; and H. Glenn Anderson at Idaho Falls, Idaho.

• **Sunbeam Lighting Co.** of Los Angeles has appointed Henry Gluck as vice president in charge of sales.

• **West Coast Plywood Co.** of Aberdeen, Wash., lost its sales promotion manager when John H. Leik, 44, died of a heart ailment November 23 at his home in Seattle following a long illness. Before joining West Coast Plywood in 1947, he was with the Douglas Fir Plywood Association in advertising and publicity work.

• **Red Cedar Shingle Bureau** re-elected president R. D. (Don) Mackie of Aberdeen, Wash., at its 41st meeting in Seattle December 6. Also reelected were vice president N. A. English of Vancouver, B.C., and secretary-manager Virgil G. Peterson of Seattle.

English, who doubles as chairman of the public relations committee, in summarizing the bureau's 1957 activity in that field, commented that an increased number of states have dropped their fire insurance penalties against wood shingles.

• **Utility Appliance Corp.** of Los Angales will market and advertise all of its products—gas ranges, water heaters and heating and air conditioning and ventilating equipment—under the single name of Gaffers & Sattler effective January 1, 1958.

• **Simpson Logging Co.** is undertaking a $100,000 conversion of facilities to production of overlaid plywood at its Olympic plant in Shelton, Wash.

Annual builder conclave set for January

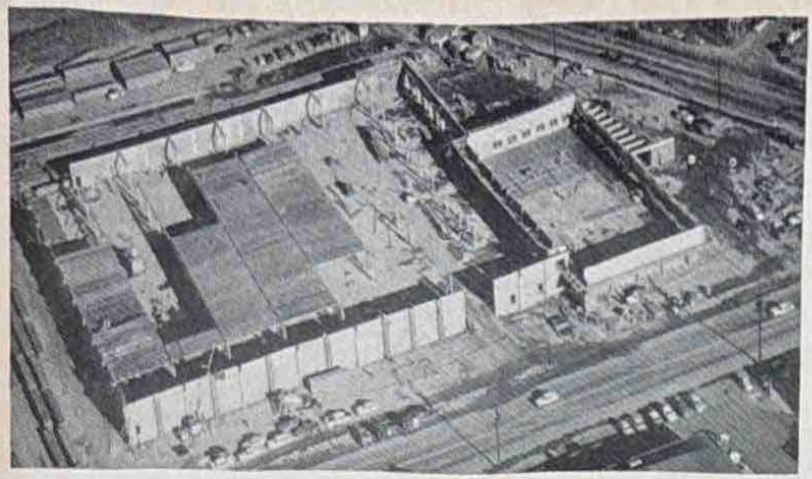
Registration of upwards to 30,000 is expected when the NAHB holds its 14th annual convention and exposition in Chicago January 19-23. All available exhibit space in three centers—the Conrad Hilton and Sherman hotels and the Chicago Coliseum—has been assigned.

Among the speakers scheduled to address the five-day meeting are Bob Whitney, former president of the National Sales Executives Club; Gordon W. McKinley, director of economics, Prudential Insurance Co.; Edwin B. George, director of economics, Dun & Bradstreet; and Vance Packard, author of the best seller "Hidden Persuaders."

Lifetime Insulation on Masonry Walls

STYROFOAM®

Styrofoam, a Dow plastic foam, bonds directly to masonry walls and serves as a plaster base, providing insulation and moisture vapor barrier. Furring and lathing are entirely eliminated. Once in, Styrofoam stays in for a lifetime.



Styrofoam also excells as perimeter and roof insulation. For further information and recommendations to fit your specific requirements, contact Wiley-Bayley.

* Styrofoam is a registered trademark of The Dow Chemical Company

Wiley-Bayley Inc.

Warehouses in Seattle, Portland, Spokane

PARTIAL ERECTION OF PRECAST CONCRETE ROOF PANELS is shown in progress photo of General Electric Co. lamp division offices and warehouse in Los Angeles. Project was completed last year.

Standardized precast concrete components urged

Increased standardization of prestressed concrete components was recommended as a means of cutting construction costs by Noyes Roach, president of Noyes Roach Co. of Los Angeles, talking at the recent California Structural Engineers Association convention at Coronado.

In joint venture with C. L. Peck, the general contracting firm set a precedent last year by completing the first commercial building in the United States to utilize roof panels and girders which were precast and tensioned on the building site in special beds built by the contractor. The 120,000-sq. ft. structure — General Electric Co. lamp division offices and warehouse—included 496 double tee section roof panels and 84 girders. Panel dimensions are 40 ft. by 5 ft.; the girders are 18 in. by 16 in. by 26 ft.

Roach revealed that the decision to fabricate casting beds on the site was made only after careful cost analysis. "The price quoted by the only Los Angeles manufacturer of prestressed concrete was high," he said. "Lower quotes by out-of-town plants were nullified by trucking costs."

Pointing out that on-site installation of casting beds is expensive, costing about $15,000 for the GE job, Roach predicted many benefits for southern California construction when prestressed concrete manufacturers can develop a truly economical plant operation. "For instance, our cost of $1.90 per square foot for the GE roof might easily have been reduced to $1.70 if the sections had been furnished by an efficient, standardized plant. We would not have had the expense of special casting beds and costly on-site handling operations could have been avoided."

Development of economical plant operation depends on cooperation among architects, structural designers and prestressed concrete manufacturers, according to Roach. "Obviously," he said, "standard widths should be established by designers so that casting beds do not have to be especially fabricated for each job. We found the 5-ft. width quite practical for the 40-ft. GE spans. Our experience with that job indicates also that considerable field labor can be saved and the possibility of errors minimized when components are standardized, permitting placement without regard to a unique, specified position."

Since the advantage of standardization does not exist when pipes, conduits and fixtures are precast into the concrete section, Roach urged that engineers study the feasibility of attachment by means of drivet guns or other methods of exterior application.

Albert C. Martin & Associates were architects for the project; T. Y. Lin was engineering consultant on fabrication and operation of the prestressed concrete casting beds.

EFCO STEEL FORMS

for concrete construction

Consider these advantages:

- Easy to handle and assemble.
- Low original cost.
- Saving in time, material, money.
- Lifetime steel faces never need to be replaced.

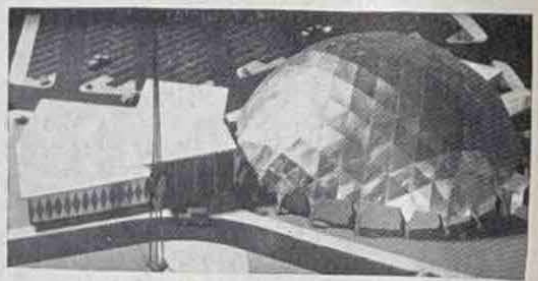
Kaiser licenses aluminum dome fabricators



Franchises to fabricate and erect stressed skin aluminum dome buildings are being awarded by Kaiser Aluminum & Chemical Sales, Inc.

Based on geodesic principles, the buildings involve the creation of spherical structures through the use of aluminum panels and struts. This combination of skin and framing eliminates the need for pillars or other interior supports.

The world's first dome building was completed in January at the Hawaiian Village Hotel in Honolulu. It is a public auditorium seating 2,000 persons.

A 145-ft. aluminum dome factory building was erected in 22 working hours by a 38-man crew in Abilene, Kan., last month with a unique construction method using two balloons as a supporting scaffolding and elevating device. The balloons raised the dome five stories high onto piers 3 to 6-ft. off the ground which form the anchoring foundation of the building.

The method made it possible to fasten the aluminum panels, which compose the dome's shell, together over the balloons and then raise them to successively higher elevations as other panels increased the diameter of the structure.

FOCAL POINT of civic center built in Virginia Beach, Va., is stressed skin aluminum dome auditorium, first such structure to be erected in U.S. Dome is exact replica of auditorium built at Hawaiian Village Hotel in Honolulu. Design shown in model was prepared by Norfolk architects Oliver & Smith.

Design through structure (Cont'd from p .10)

our new materials (reinforced concrete) to create a space enclosure of somewhat new expression. Very good, yet the question should be asked: does the form fit properly in the total balance of the building? Is a cross barrel roof set on top of a two-story building,its points of support resting on the very corners of a delicate-looking structure, a properly expressed form of the structural equilibrium of a classical arched roof?

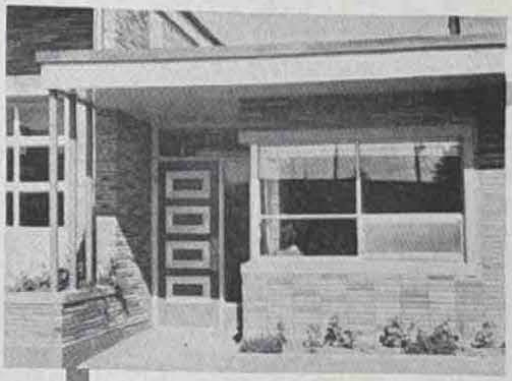
Conversely, in the case of Nervi's Exhibition Hall in Turin, should we not regret the lack of sensitive communication between architect and engineer that has resulted in a most imaginative and satisfying roof enclosure for an otherwise conventional and uninspired building?

A second design criterion is purpose. Is the selection of a structural form consistent with the use and purpose to which the building is to be dedicated? Undoubtedly, the answer will be positive when a thin shell vaulted cantilever is used (such as the stadium at Bogota) to shelter the spectators where uncluttered visibility is a prerequisite.

Is the answer still positive if we question the choice of a thin shell roof for the MIT Auditorium building which, by the very nature of its purpose, must be totally enclosed and secluded from the outside; in which the acoustical requirements deny the expression of the structure from within; and in which the levity and gracefulness of the form selected was visible and evident only for the short period between the removal of the formwork and completion of the enclosure of the building? I consider a critique of this building in this direction far more important than criticism of its difficulties of structural behavior, which must be attributed to the daring of concept and which should be accepted as part of growth through experimental knowledge.

The third element of critique is scale. While we certainly can develop interesting and clever forms for the enclosure of any space, shouldn't we respond to a sense of propriety suggesting that, for the covering of relatively short spans, the effort in development of new forms is occasionally wasted and meaningless? The hyperbolic paraboloid, delicately balanced on its two points of support, holds a superb design potential for the covering of a large uncluttered space, such as a hangar or a major open shelter; but does it make as much sense when used by Catalano in his house to shelter a plan of otherwise relatively conventional nature, which impairs the viewing of the fully expressed form by partitionings and separations, and in which the varied and slight slopes of the ceilings in each room fail to express the basic concept that prompted the design?

The fourth criterion, and perhaps the most difficult to define, is the one of design consistency. When forms derived from structure are adopted, the problem of relating them to each other, to the various elements of a building and to the surroundings of the building itself remains to be solved in terms of total architectural consistency, for the lack of which no amount of imaginative or technical brilliance can provide absolution.



I saw recently the design of two projects of our friend, Candela: one, a fantastic, sensitive combination of barrel vaults for a proposed large church project; the other, an industriel complex consisting of warehousing, office buildings, lofts, where an encyclopedic vocabulary of structural forms has been used, possibly with absolutely valid economic or structural justification. In the first case, I think the question of consistency would receive an enthusiastically positive answer; while in the second, architectural consistency seems to me to have remained unsatisfied.

I trust these remarks are understood not as critique of individual projects or of individual architects or engineers. They are rather meant as a critique of us all—a critique, in a sense, of our lack of expressed critical response.

I believe that if we attune ourselves to a more sensitive understanding of the more subtle relationship between structure and form, if we conceive of design with structure rather than through structure, if we work together rather than borrowing from each other, we might evolve toward a relationship between structure and form that will have a far greater significance to the forthcoming architecture of our country than the occasional exhuberant adoption of a barrel vault, a folded hip roof, or a daring prestressed cantilever.

I believe that it is important that we develop this more mature critical sensitivity and that we do so soon enough, because it is very likely that a major mutation in the forms of American architecture will occur in the near future.

The character of contemporary architecture, as it has become established over the last quarter of a cen-

tury, does not, I believe, present an indigenous reflection of the country's standards of life and emotional tastes. As a style, in its emphasis on simplicity and sobriety, it is far more consistent with the standard of living and the limitations of modern Europe (in which changes and new elements of progress are developed in response to scarcity of materials and high costs of processing) than it is to our habits of plenty and our economy of induced obsolescence.

Our tendencies, our tastes, our habits all tend toward expressions of greater dimensional and imaginative potentials than contemporary architecture in America seems so far to have explored. In other fields, the tremendous difference of attitudes, tastes and standards is clearly reflected: compare the American automobile of the American household with its European counterpart!

If the contemporary architectural movement has eventually gained acceptance, it is mainly as a "style," almost as a fashion, and very much because of its inherent characteristics of economy, which have been keenly appreciated by the developers and have not been balanced by an expressed public demand for higher quality of environment. Yet we are now reaching a point where the demand for richer and more imaginative architectural environment is going to be felt. Already, with the creation of the new suburban centers, the taste for new nuclei of greater civic meaning is established; and the forces of competitive enterprise may well be coaxed into sponsoring such richer urban environments. At the same time, in the coming tasks of urban renewal, where large areas of our old cities are going to be razed and rebuilt, a tremendous potential for grandiose planning will be opened, and it is probable that a newly expressed assertion of civic pride might sponsor new forms for our city's cores.

Toward the birth of a demand for richer environment, the architect should be an eager coaxer, a competent midwife, as well as a very prudent guide. These forces, if properly guided, may soon bring about a magnificent age of American baroque, with all of the characteristics of imagination, grandiosity and visual delight that characterized its classical predecessor, yet expanded to the benefit of all of the people. If, on the other hand, these forces are not properly guided, we may, in striving for the expensive and the plentiful, entirely bypass the baroque and plunge straight into an eclectic modern-day rococco—a molasses-like quagmire of environmental banana splits. The evidence offered us by the automobile design and by the jukebox styling should stand as fair warning of the danger ahead.

The choice of direction that we, as a culture, may eventually take, to a great degree will be affected by the influence that the creators of design and the critics of design will themselves develop and be instrumental in transmitting to the people as a whole through available and new educational channels. In this sense, it is then important that the more mature sensitivity that I mentioned before be rapidly acquired, lest we be forever attracted by the new and the glamorous rather than by the maturely creative, and so that we might be instrumental in steering the future of our environment away from an air-conditioned nightmare of fintails, jukeboxes and tricky structures, into a new architecture capable of extending the benefits of our physical wealth into its emotional and cultural counterparts.

Sert talks about cities on Berkeley campus

A "certain human element" is missing from American cities, in the opinion of architect Jose Luis Sert, an authority on city planning and dean of Harvard's Graduate School of Design.

Sert delivered the second Bernard Maybeck Lecture at the University of California Berkeley campus and declared that "we have added all sorts of good things to our cities, such as high buildings, low buildings, elevators, cars and highways—and they mix badly with man; he is the victim."

"I'm glad to see a growing interest among younger architects," Sert declared, "in making cities more agreeable places in which to live. Pleasure, after all, is a part of life and when we give man a better city, he is happier."

Sert, who came to the U. S. from Barcelona during the Spanish Civil War, asserted he is particularly concerned with furthering a close relationship between the visual arts and architecture.

The first speaker in the Maybeck Lecture series was Frank Lloyd Wright and Lewis Mumford will give the third early next year. The lectures are being presented by the College of Agriculture, the department of landscape architecture, the department of city and regional planning and univeristy extension in cooperation with the East Bay and Northern California chapters of AIA and the American Association of Planners.

Industrial designers hear two architects

Two architects shared the speaker's platform when members of the American Society of Industrial Designers held their first national meeting on the West Coast at Ojai Valley Inn, Ojai, Calif.

During the four-day convention Dean Arthur Gallion of the University of Southern California School of Architecture moderated a design education panel, while Charles Luckman of Los Angeles gave a dinner address.

"I sense a new Victorianism is upon us," Dean Gallion declared, "and seeing some new car models makes me feel education is more important than ever—if only to teach common sense. This is an economic world, but isn't it time to make a cultural world as well?"

Luckman told his audience that "this group represents every living and labor device of the world" and that there is "no closer relation between management and labor than the field of talent you use."

Volume 63—January through December 1957

Design: Buildings

(Name following project is the architect or architectural firm unless otherwise specified)

Residential

(Weekend cabins, etc., see Recreation)

Altadena, Calif., John Wilfong residence—Ain-Johnson & Day ... June 14
Los Angeles, Eugene Kinn Choy residence—Eugene Kinn Choy ... August 24
Menlo Park, Calif., Dr. Donald Hutton residence—Goodwin B. Steinberg ... September 8
Oakland, Calif., George Schlenker 'hanare' — George Nakahara ... August 30
Portland, Philip B. Feldman residence—Saul Zaik, Designer ... December 12
Portland, William L. Fletcher residence — William L. Fletcher ... October 16
San Mateo, Calif., Eichler Homes X-100—A. Quincy Jones & Frederick E. Emmons ... March 18
Sausalito, Calif., steel frame residence—John C. Hoops ... November 20
Sausalito, Calif., studio apartments—Campbell & Wong ... May 16
Seattle, Thomas J. Graham residence—A. O. Bumgardner ... February 18

Commercial

Bellevue, Wash., Washington State Bank—Mithun & Nesland, Ridenour & Cochran Associates ... August 26
Belvedere, Calif., The Boardwalk Community Shopping Center—John Lord King ... July 19
Beverly Hills, Calif., C. H. Baker Co. shoe store—Fredric R. Frankel (store) and Paul R. Williams (building) January 19
Hollywood, Calif., Screen Directors' Guild Building—Arthur Froehlich, Randall Duell, Associate ... October 18
Los Angeles, Berliner's Restaurant—Victor Gruen & Associates ... February 22
Mission Valley, Calif., Mead Trailer Court headquarters—Richard George Wheeler ... May 23
Monterey, Calif., Mark Thomas Inn—John Carl Warnecke ... September 12
Palm Springs, Calif., Deep Well Restaurant — Daniel L. Dworsky ... December 14
Salem, Ore., Meier & Frank's department store—Welton Becket & Associates ... August 22
San Francisco, Motel Doyle — Akol, Angell & Apaydin ... February 21
San Francisco, Knoll Associates, Inc., western showrooms —Florence Knoll, Designer ... February 16
Seattle, Rosellini's Four-10 Restaurant—James J. Chiarelli ... October 12
Seattle, Washington Conference of Seventh-day Adventists office building—Robert J. Burman ... November 12
West Linn, Ore., West Linn Inn (remodeling)—R. K. Grubb & Associates, Designers ... May 23

Industrial

Santa Ana, Calif., BJ Electronics, Borg-Warner Corp. plant —John Kewell & Associates ... May 18
Tracy, Calif., American Sisalkraft Corp. plant—Corlett & Spackman ... October 7

Religious

Alhambra, Calif., Friends Community Church—Harold B. Zook ... January 14
Apple Valley, Calif., St. Mary's Academy School and Convent—McFarland-Bonsall-Thomas ... April 16
Chinook, Mont., St. Gabriel's Church—Bordeleau-Pannell & Amundson ... January 16
Los Angeles, 28th Church of Christ, Scientist—Maynard Lyndon ... March 14
Oakland, Fruitvale Masonic Temple — Corlett & Spackman ... December 21
Van Nuys, Calif., St. Mark's Episcopal Church—Carleton Monroe Winslow ... November 14

Educational

Bozeman, Mont., Montana State College, Health and Physical Education Center—Willson & Berg Associates ... April 22
Eugene, Ore., University of Oregon, School of Journalism—Church, Newberry & Roehr ... May 23
Lafayette, Calif., Los Lomas High School gymnasium—Ernest J. Kump Associates ... January 18
Mukilteo, Wash., Olympic View Junior High School—Waldron & Dietz ... June 18
Portland, Woodrow Wilson High School—Edmundson & Kochendoerfer ... November 16

Recreational

Darrington, Wash., Community Hall—Harold W. Hall ... July 16
Do-it-yourself cabin—Campbell & Wong ... July 16
Do-it-yourself cabin—Harold Onstad ... July 17
Ellensburg, Wash., weekend house—Paul Thiry ... April 18
Nescowin, Ore., beach house—Donald Blair ... July 17
Squaw Valley, Calif., arena for 1960 Olympic Games—Corlett & Spackman and Kitchen & Hunt ... June 16

Health Facilities

Portland, Dr. Raymond L. Hess Dental Clinic—Frank L. Shell ... March 17

Penal Institutions

Walla Walla, Wash., Washington State Minimum Security Building—John W. Maloney ... June 21

Public Buildings

Modesto, Calif., Irrigation District office building—Mitchell Van Bourg ... July 18
Spokane, Wash., Washington Water Power Co. Service Center—Kenneth W. Brooks and Bruce M. Walker ... September 16
Tacoma, Lea, Pearson & Richards ... December 16

Architect's Offices

Los Angeles, Harry T. MacDonald ... August 18
San Diego, Richard George Wheeler & Associates ... September 18
Seattle, Seth M. Fulcher ... July 13
Seattle, Gene Zema, A. O. Bumgardner ... February 24

BUILDING NEWS

Washington, Oregon, Idaho, Montana and Alaska

- ● Bids Called
- ★ Contract Awards
- ▲ Low Bids—Bids Received
- ■ Planholders—Prospective Bidders

OREGON

●POST OFFICE REPAIRS— Baker, Ore.

Bids will be opened 3 p. m., December 30, by General Services Administration, room 126, Federal Office Bldg., 909 1st Ave., Seattle, for improvement and repairs to the U. S. Post Office, Dewey and Auburn avenues, Baker; Proj. No. SEA-828. Specifications with above office. SP 12-18

▲PARK UTILITY BUILDING— Beaverton, Ore.

Bids received by Tualatin Hills Park and Recreation District, Leonard S. Uppinghouse, president, 425 S.W. 3rd St., Beaverton, for park utility building on the Hall Street Park in Beaverton. Plans by Herb W. Lofstrom, designer, Valley News Bldg., Beaverton. LOW BIDS: Doerrie Construction Co., 301 N.W. Murray Road, Portland, $7,671; Enger Bros., 307 N.W. Canyon Road, Beaverton, $8,757; E. Lee Robinson, 1650 S.W. Oak St., Beaverton, $8,937. Bids opened December 10. Bids exceed funds, but it is expected that contract will be negotiated with low bidder. WB 12-13. Previous report 11-19

▲HOUSING UNITS, SITE DEVELOPMENT— Burns, Ore.

Thirteen firms submitted bids on either or both the air force personnel housing projects at Burns, Ore., and Cottonwood, Idaho. Bids were opened December 9 by procurement office of the 84th Fighter Group, Geiger Field, Spokane. The bidder-design offers were sent to air force headquarters in Omaha, Neb., for evaluation. The figures given below are apparent amounts for Burns, Ore.

Burns, Ore.—Project involves 25 housing units. Bids were on (1) one four-bedroom house for officer, (2) five three-bedroom dwellings for officers, (3) 19 three-bedroom houses for airmen, (4) utilities and site improvements.

Following are two apparent low bidders on the Burns, Ore., project: Allied Construction Co., Box 124, Parkwater Station, Spokane, Wash., $11,465 (unit price on four-bedroom officer's residence), $10,170 (unit price on three-bedroom officer's residence), $9,170 (unit price on three-bedroom airman's residence), $75,401 (utilities and site improvements), $330,286 (total bid on Burns project); Troy B. Hood, Inc., Opportunity, Wash., $13,980, $13,490, $11,460, $146,000, $470,120.

Other Burns bidders with unit figures on items 1, 2, 3 and 4: Harney Homes, Inc., Burns, Ore., $14,300, $14,300; White Bros. Co. and Earl L. Kelly, Walla Walla, Wash., $15,297, $13,403, $11,500, $80,315; Thompson & Georgeson, Inc., Portland, $14,613, $12,827, $11,500, $135,709; Frank Dunham Co. and A. C. Grant Construction Co., Kennewick, Wash., $15,500, $13,200, $11,400, $79,613; Brezina Construction Co., Rapid City, S. Dak., and Max Boesiger, Mountain Home, Idaho, $15,500, $13,500, $11,500, $92,300; Texaco Contractors, Inc., Dallas, Tex., $15,500, $13,500, $11,500, $138,531; Beacon Construction Co., Boston, Mass., $15,500, $13,500, $11,500, $189,500; Fred J. Earley Co., San Francisco, Calif., $15,500, $13,500, $11,500, $257,000.

DC 12-14. Previous report 11-12

▲BATTERY SHOP— Clackamas, Ore.

Nine bids received by National Guard Bureau, Salem, for construction of a battery shop at Camp Withycombe near Clackamas. Bids opened December 11. LOW BIDS: Walker & Green, Route 3, Box 207, Oregon City, $8,438; Gene Settergren, 2632 S.E. Salmon, Portland, $8,454; Wilson & Dean, 31016 N.E. 61st Ave., Portland, $8,848.

SC 12-14

SCHOOL ADDITIONS— Clackamas, Ore.

Plans announced by Clackamas County School District No. 64C, Clackamas, for construction of five new classrooms, purchase of a larger school bus and completion of two rooms now under construction in the present addition at Clackamas. Also included in the improvement program is a larger covered play area. The work is scheduled as a result of a $101,700 bond issue which was approved December 3. SC 12-18

WOMEN'S DORMITORY & CAFETERIA— Corvallis, Ore.

(Estimated cost $1,800,000)

Preliminary plans approved by Oregon State Board of Higher Education, Earl M. Pallett, secretary, Johnson Hall, Eugene, for a dormitory-cafeteria building to house 366 women at Oregon State College. Plans by Burns, Bear, McNeil & Schneider, architects, 2940 S.E. Belmont St., Portland. The dormitory will be located directly east of Waldo Hall and south of Jefferson St., and the 300 women who live in Waldo Hall will also use the cafeteria. The roof of the dining hall will have a landscaped play area. Reinforced concrete construction (lift slab); masonry exterior walls with brick veneer and metal panels. WB 12-17

▲TRAINING CENTER— Corvallis, Ore.

Bids received by Corps of Engineers, Seattle office, 4735 E. Marginal Way, Seattle, for construction of a reinforced concrete 11,600 sq. ft. Army Reserve training center at Corvallis; ENG-45-108-58-34. Bids opened December 17.

Concrete slab on grade; five-ply built-up roofing and metal decking supported on open web steel joists in main section, and by glued laminated beams and steel joists in assembly room; brick veneer facing. Also included is a reinforced concrete 2,500 sq. ft. maintenance shop with brick facing and built-up roof on wood joists. Work includes installation of electrical and mechanical systems and the construction of parking areas, concrete walks and connections to existing utilities.

Nine bids received. LOW BIDS: Albert Stromberg, 6905 N.E. Sacramento, Portland, $223,366 (items 1-11), $12,618 (additive items 16-21), $235,984 (total); Lester H. Burkett, 1615 Hall Lane, Corvallis, $224,046, $12,192, $236,238; Wood, Johnson & Rose, Inc., Box 127, Corvallis, $231,453, $14,893, $246,346. Government estimate, $243,473, $14,055, $257,528. SP 12-18. Previous report 12-10

SCHOOL ADDITIONS— Dallas, Ore.

Bond election will be held January 27 by Polk County School District No. 2, Dallas, on a $150,000 bond issue to finance construction of a four-classroom addition to the south wing and a music room to the south side of the boiler room of the senior high school, and construction of a two-classroom addition to form the first part of a south wing at Whitworth Elementary School at Dallas. Plans by Hayslip, Tuft, Hewlett & Jamison, architects, 2040 S.W. 3rd Ave., Portland.

Other work at the high school which may be included will be the extension of the corridor and remodeling of the typing room for office use. SC 12-18

SCHOOL ADDITIONS— Eugene, Ore.

Bids will be called next spring by Eugene School District No. 4, Clarence Hines, superintendent, 275 E. 7th Ave., Eugene, for construction of additions to seven schools in Eugene. Three architectural firms have been retained by the district to prepare plans and specifications for the projects.

Architects Hamlin & Martin, 159 W. 12th Ave., Eugene, have been authorized to prepare plans for a one-classroom addition to Adams Elementary School, 1050 W. 22nd

Ave.; two-classroom addition to Harris Elementary School, 1150 E. 29th Ave.; library and activity room addition to Laurel Hill Elementary School, 2621 Riverview; one-classroom addition to Washington Elementary School, 615 Harlow Road; one-classroom and library addition to Willagillespie Elementary School, 245 Willagillespie Road.

John L. Reynolds, architect, 364 E. Broadway, Eugene, will prepare plans for one-classroom and activity room addition to Dunn Elementary School, 3411 Willamette.

Architects Wolff & Zimmer, 509 Pearson Bldg., Portland, will prepare plans for an addition containing two classrooms, a shop and a homemaking room to Cal Young Junior High School, 875 Gilham Road.

DW 12-17

●FLOOR TILE— Eugene, Ore.

Bids will be opened 2 p.m., December 23, by Eugene School District No. 504C, Clarence Hines, superintendent, 275 E. 7th Ave., Eugene, for furnishing and installing floor tile and base in the new addition to the school administration building. Specifications with clerk of the school district. Bid bond 5%. DW 12-14

●HEATING, POWER PLANT ADDITION— Eugene, Ore.

(Estimated cost $486,050)

Bids will be opened 11 a.m., January 16, by Oregon State Board of Higher Education, Earl M. Pallett, secretary, Eugene, for the central heating and power plant addition at the University of Oregon in Eugene. Work will include installation of a high pressure boiler of 50,000 lb. per hour capacity and a condensing generator of 2500 kilowatt-hour production. A 6'x25' building addition will be required for generator equipment.

SC 12-14

SCHOOL ADDITION— Gladstone, Ore.

Bond issue for $250,000 approved for School District No. 115, Clackmas County, Walter Kraxberger, principal, P.O. Box 37, Gladstone, for addition of eight classrooms, gymnasium and cafeteria to the grade school at Gladstone. Preliminary plans underway by Boyd Jossy, architect, 12730 S.E. McLoughlin Blvd., Portland.

Bid call expected about March. Construction will be similar to that used on two new rooms last year, lightweight blocks with open corridors. WB 12-17

SAWMILL, PLANING MILL— Gold Beach, Ore.

Construction will start early in 1958 by U.S. Plywood Corp., 3333 N.W. Front Ave., Portland, on a sawmill and planing mill to be located adjacent to the plywood firm's veneer mill on the Jerry's Flat Road in Gold Beach. Completion of the mill and machinery installation is planned for July 1.

Some of the machinery has been ordered for the mill, according to Manager Frank McPherson. Present plans call for a mill capable of producing 40' long timbers on the band headrig and 32' lumber on the 'pony' side. SC 12-18

RESEARCH CENTER— Grants Pass, Ore.

Initial property in the new industrial park at Grants Pass has been purchased by X-ray Products Corp., Justine G. Schneedman, president, Rivera, Calif., with the site to be used for an electronics research center, Schneedman Electronics. The plant will be built on a five-acre tract and will be a subdivision of the main California corporation. Primary research in non-restrictive testing, through use of X-ray and ultrasonic sound devices, will be among projects at the center. SC 12-12

MANUFACTURING PLANT—Hillsboro, Ore.

Purchase of 16 acres at Hillsboro as a site for a future manufacturing plant has been announced by Armco Drainage and Metal Products, Inc., 1320 S.W. Broadway, Portland. Plans are uncertain as to when drawings will be made or a construction program formulated. When the firm does build however, it proposed to use wide-span prefabricated steel buildings which it manufactures itself. DC 12-10

●FAMILY HOUSING—Kingsley Field, Ore.

Bids will be opened 10 a.m., January 14, by George Meyers, purchasing and contracting officer, 408th Fighter Group, Kingsley Field, Klamath Falls, for construction of 70 family housing units at Kingsley Field. Plans with above office. Plans were prepared by Howard R. Perrin, architect, 1121 Main St., Klamath Falls.

This housing is in addition to the 220 units to be built under a contract recently awarded to Gresham Construction Co. of Santa Clara, Calif. (See PCD 9-19).

Work includes 20 two-bedroom units for airmen; 30 three-bedroom duplex type units for airmen; 14 three-bedroom officer duplex units for lieutenants and captains; 5 three-bedroom single units for majors and lieutenant colonels, and one four-bedroom unit for colonels and officers of higher ranks.

ZZ 12-17

★MOTEL— Klamath Falls, Ore.

(Estimated cost $255,000)

Contract negotiated with Silva Construction Co., 907 Alandle St., Klamath Falls, by Harry Molatore, 1112 Main St., Klamath Falls, for construction of a two-story, 14,000 sq. ft., 32-unit motel at 2nd and Main streets at Klamath Falls. Plans by Don Byers, architect, 1620 S.E. Ankeny, Portland.

Structure will incorporate reinforced concrete footings and foundation and pumice block walls with brick exterior facing. Plans allow for future expansion of the building to include shops and a lounge, possibly a restaurant and swimming pool. ZZ 12-14

JUVENILE HOME— Klamath Falls, Ore.

The Klamath County Court, Courthouse, Klamath Falls, has authorized juvenile officer Francis Mathews to prepare tentative specifications and cost estimates for a new building to replace the existing juvenile home at 1949 Main St. in Klamath Falls. The court has not guaranteed construction in the immediate future, but advised Mathews to have cost estimates available for the county budget board's consideration early in 1958.

ZZ 12-18

PULP AND PAPER PLANTS— Klamath Falls, Roseburg, Ore.

Plans announced by International Paper Co. for construction of two new pulp and paper plants, one near Roseburg and one in the Klamath Falls area. Wood for the Roseburg mill, a kraft paper plant, will come from International's timber holdings in southwestern Oregon. The Klamath Falls plant will utilize the stands of lodgepole or jack pine in the area. SC 12-18

★GENERAL ARTS BUILDING— Monmouth, Ore.

Awards announced by Oregon State Board of Higher Education, Earl M. Pallett, secretary, Eugene, for construction of one-story, 15,000 sq. ft., reinforced concrete general arts building at Oregon College of Education at Monmouth. Plans by Annand, Boone & Lei, architects, 1530 S.W. Taylor St., Portland. AWARDS—GENERAL: Cascade Contractors, Box 774, Eugene, $116,235. MECHANICAL: Bowen Bros. Plumbing and Heating, 860 N. High St., Salem, $44,730. ELECTRICAL: Mayer & Ross Electric, 223 S. 4th St., Corvallis, $13,890.

SWIMMING POOL— Hoquiam, Wash.
(Estimated cost $250,000)

A proposal to construct a swimming pool at Hoquiam will appear on the general ballot of the city election in March, according to Mayor F. W. McGuire, City Hall, Hoquiam. Bonds to finance the pool would be raised by a tax levy. As a site for the pool, property next to the YMCA building in Hoquiam could be purchased for $4,000, an amount considered reasonable by Dale D. Pederson, architect, 229 Broadway N., Seattle. SC 12-12

● JUNIOR HIGH SCHOOL— Kennewick, Wash.
(Estimated cost $1,000,000)

Bids will be opened January 14 by Kennewick School District No. 17, Edward F. Bloom, superintendent, 500 S. Dayton St., Kennewick for construction of a 29-classroom junior high school on a 20-acre site at W. 4th Ave. and Tweedt St. in Kennewick. Plans with John S. Villesvik, architect, and Maurice Smith, associate, 109 N. 3rd St., Yakima. Capacity of the building will be 750 students. Approximately half the cost of the building $544,513, will be paid by the state. DC 12-17. Previous report 11-27

■ DORMITORY EXTENSION— Keyport, Wash.

Planholders announced for construction of a 33'x14'x12' high wood frame dormitory extension to Fire Station Bldg. No. 76 at the U. S. Naval Torpedo Station, Keyport; Spec. No. 12280/57. Bids will be opened 2 p.m., December 23, by 13th Naval District, room 100, Bldg. 232, U. S. Naval Station, Seattle.

Planholders: C & R Builders, 1619 8th N., Seattle; Commercial Builders, 114 Shore Drive, Bremerton; Moberg Construction Co., Route 2, Box 714, Tacoma; Selmer C. Paulson, 1347 Trenton, Bremerton; Lent's, Inc., 279 4th St., Bremerton; Standard Plumbing and Heating, Box 168, Manette Station, Bremerton; General Industries, Inc., 106 Main, Edmonds; Dale M. Madden, 3010 E. 163rd, Seattle; Hanberg Construction Co., Ridgeway Road, Bremerton; Winterburn Construction Co., Box 202, Port Townsend; Ron Sowa Construction Co., Box 202, Bremerton; Clair E. Prescott, 3516 Airport Way, Seattle; Ballard Contractors, Inc., 4501 6th N.W., Seattle.

Extension will have concrete foundation wall and floor slab; brick veneer; wallboard interior finish; asphalt tile flooring; built-up roofing with gravel surfacing. Work includes provisions for the electrical and existing walls and brick veneer; relocation of windows, doors and frame; disposal of materials. PD 12-14. Previous report 12-6

HAWKS PRAIRIE SCHOOL— Lacey, Wash.

Voters in North Thurston School District No. 3, Lacey, will ballot on a $250,000 bond issue March 11 to finance construction of a new school building. The new structure will be called Nancy Jane Hawk School and will have 18 classrooms. It will be located on 20 acres in Hawks Prairie.

Superintendent of the school district, Charles Callahan, Lacey, has announced that the bond issue would keep the district eligible for the maximum state aid. If the bonds are approved, construction will start in the summer. Cost of the building is estimated at $425,000. DC 12-18

COLLEGE ADDITIONS— Longview, Wash.

Bids will be called about February 1 by Longview School District No. 122, Cowlitz County, Scott Milligan, superintendent, 28th and Lilac, Longview, for construction of a science building and library addition to the Lower Columbia Junior College near the present campus at 1600 Louisiana and Maple streets. DC 12-18

SCHOOL MODERNIZATION— Longview, Wash.

Bids will be called early in May by Longview School District No. 122, Cowlitz County, Scott Milligan, superintendent, 28th and Lilac, Longview, for modernizing Kessler, St. Helens, Columbia Valley Gardens, R. A. Long elementary schools and the administrative offices at Lower Columbia Junior College. DC 12-14

ELEMENTARY SCHOOL— Longview, Wash.

Bids will be called about February 1 by Longview School District No. 122, Cowlitz County, Scott Milligan, superintendent, 28th and Lilac, Longview, for construction of the Columbia Heights Elementary School. The school is part of a construction program that is being financed by the recently approved $2,600,000 bond issue. DC 12-17

SCHOOL CONSTRUCTION— Longview, Wash.

Bond issue in the amount of $2,600,000 was approved in the December 10 election held by Longview School District No. 222, Scott Milligan, superintendent, 28th and Lilac, Longview, to finance a six-year building program for the district.

The proposed building program includes the following facilities at Lewis and Clark Junior College: library, science building, administrative offices, vocational equipment, classroom building, gymnasium, and swimming pool to serve both the junior college and the Mark Morris school. Other projects in the program include the Columbia Heights Elementary School, Olympic school addition, modernization of existing schools, acquisition of future sites and landscaping at existing schools, and gymnasium seats at the Mark Morris school. A site for a junior high school will be obtained and plans prepared for the school. The board hopes as much as $743,000 in state matching funds will be made available to aid the program.

OFFICE BUILDING— Seattle, Wash.
(Estimated cost $3,750,000)

Construction is slated for spring of 1958 by Howard S. Wright & Co., Inc., general contractors, 414 Pontius, Seattle, on the new 12-story, 100,000 sq. ft., glass, aluminum and steel exterior Fifth and Union office building to be located on the northeast corner of 5th and Union St. in Seattle, for the Antero Co., Bagley Wright, president, Seattle. Architects and engineers for the project are Mandeville & Berge, Joseph Vance Bldg., Seattle, with whom Emery Roth & Sons, consulting architects, New York, will work in an advisory capacity. The building will have a frontage of 115' on 5th Ave. with 120' facing Union. Completion is expected in time for occupancy in the summer of 1959.

Treatment of the exterior of the structure will be a combination of glass, steel and anodized aluminum with horizontal panels of aluminum in bands extending around the entire building at window level. Vertical mullions of bronze aluminum will be spaced at intervals of 10' with two windows between each mullion. One window will be fixed, the other openable. The first two floors of the building will be completely glassed in. Above them and set back 16' on one side from the lot line will rise the other floors. Suspended ceilings of acoustical tile will provide offices with a maximum of noise control. Prime feature will be complete air conditioning, making the building the first major commercial structure in Seattle to be so equipped. Preliminary plans also call for a tower-top restaurant and roof garden. Tenants will be served by newest developments in automatic elevators with maximum waiting period of 35 seconds. SP 12-13. DEPARTMENT STORE— Seattle, Wash.
(Estimated cost $20,000,000)

A 160-acre site at 57th Ave. S. and the Renton-Three Tree Point Road, has been acquired by Southcenter Corp. for a proposed south end shopping center. Southcenter Corp. is a recently organized subsidiary of Allied Stores Corp., of which Rex Allison of The Bon Marche, is vice president. The Bon plans a department store in the shopping center tract which adjoins the route of the Tacoma-Seattle-Everett freeway.

John Graham & Co., architects and engineers, have been retained by the Southcenter Corp. to prepare plans for the development.

Construction will depend on the highway program as the state highway engineers have planned a traffic interchange at the junction to the tract. The new center will be part of a 550-acre area recently acquired by White & Bollard for Andover, Inc.

●ADDITION TO RESIDENCE— Seattle, Wash.
(Estimated cost $16,000)

Bids will be opened for the second time at 4:30 p.m., December 30, in the office of Paul Hayden Kirk A.I.A. & Associates, 615 Lakeview Blvd., Seattle, for construction of a two-story addition to the John White residence at 16026 38th N.E., Seattle. $10 deposit. Select list of bidders. Bids were previously opened on August 5, and subsequently rejected.

Planholders: Charles Tuttle, 15031 Dayton Ave.; George Raymond, Route 2, Box 5400 B, Issaquah; Hamlin Construction Co., 1117 N. 85th; Tom Paulsen, 905 12th Ave. N. Of Seattle except noted.

Wood frame; wood exterior; concrete foundation, concrete slab-on-grade, steel beams; flat built-up roof, cedar shingles; drywall, tileboard, ceramic tile partitions; louvered aluminum windows; vinyl asbestos flooring; solid, hollow core slab doors, aluminum sliding doors; wood cabinets; corrugated plastic skylight; aluminum foil insulation in walls and ceilings, oil-fired warm air heating. Plans include approximately 1,134 sq. ft. new construction and 500 sq. ft. of remodeling. L & W Construction Co., 112257 3rd Ave. N.W., Seattle, has been deleted from planholders list.

PD 12-17. Previous report 10-5

OFFICE BUILDING— Seattle, Wash.
(Estimated total cost $12,000,000)

Excavation will be started immediately by Howard Wright & Co., Inc., 414 Pontius, Seattle, for construction of the 21-story, 332,830 sq. ft. Norton Building, south of the Exchange Bldg., facing 2nd Ave. and extending west along Columbia St. to 1st Ave., in Seattle, for United Exchange Corp., owners, Seattle. Completion is scheduled for mid-summer of 1959. Plans by Bindon & Wright, architects, Hoge Bldg., Seattle, and Skidmore, Owings & Merrill, consulting architects, San Francisco, Calif.

The structure will rise 17 floors above the lobby level. An entire floor below the 2nd Ave. level will house mechanical equipment that is used in operating the building. Below this level will be three parking floors. A landscaped plaza will be featured at the 2nd Ave. entrance. The building will have a free standing office tower rising above a four-story platform.

A structural steel and concrete core will extend the full height of the building and will contain eight elevator shafts (two of which will not be utilized at this time), duct and mechanical shafts and fire stairways. Supporting columns and perimeter to be of structural steel; curtain-wall type exterior consisting of extruded aluminum mullions, with thermal insulation behind glass spandrels; tinted gray glass sealed windows; larger part of structure from 2nd Ave. level down faced with granite; entrance plaza finished in ceramic tile; floors of precast and pre-stressed concrete beams, spaced 10' on centers over which is poured 6" reinforced concrete slab and which will span 70', permitting office areas with no interior columns; vinyl flooring; acoustical tile ceilings; flush type fluorescent lighting designed with 5' module, giving about 50' candles in office areas; ceramic tile walls and floors in toilet areas, flush type metal toilet stalls, wash basins in flush type formica counter tops; steam heat from central steam system; air conditioning throughout building, controlled from central panel which will permit immediate determination in any part of building and with induction units on perimeter walls, ceiling diffusers in interior areas; Herculite entrance doors. There will be six 800'-per min. highspeed automatic elevators, approached through glassed-in lobby and set back from 2nd Ave. entrance about mid-way in the building.

The Canadian Bank of Commerce will occupy the 2nd Ave. level, with direct entry from elevator lobby and from the plaza. An escalator will be installed to bring pedestrians from 1st Ave. level to lobby, which will be interconnected with the Exchange Bldg. lobby. Tenants will be able to go from car parking levels directly to office floors. Each office floor will have men and women's restroom facilities located on exterior walls. Office floors will be equipped with an underfloor duct system, permitting maximum flexibility for electric wiring. Modular design in lighting throughout entire building permits maximum flexibility in tenant layout.

Contract will include all phases of con-

struction except the elevators, for which the contract award will be announced in the near future. PD 12-18. Previous report 12-13

(Estimated cost $350,000)

The chamber of commerce in Soap Lake has voted to pass a resolution for forming a local improvement district for construction of a convention center at Soap Lake. SC 12-18

CIVIC IMPROVEMENTS— Spokane, Wash.

Five separate bond issues covering a variety of civic improvements may be placed on the ballot at the March 11 general election to be held by City Council, City Hall, Spokane. Proposals under discussion are as follows: (1) Raising $225,000 as the city's share to construct a 10,000-seat baseball park; (2) Parks and recreation facilities, which could include municipal swimming pools, filtration systems for existing pools, additional tennis courts and similar projects; (3) New central library or a branch library; (4) Modernization of municipal airport facilities at Geiger Field; (5) Street improvements.

No formal agreement has yet been reached by the city and county for constructing the ball park. Concerning the swimming pool issue, no decision has been reached as to whether new swimming pools should be built or new filtration systems installed in existing pools, or both. It has not been decided whether a new central library should be constructed or a branch library. The Geiger Field improvement would include construction of a new terminal building, erection of a new control tower and completion of taxiways.

Street improvements would include such projects as the widening of Market St. and its eventual linking over the Greene St. bridge to the 2nd and 3rd one-way couplet; extension of Stevens St. from 7th through Pioneer Park to Cliff, then Sumner and Grove, and finally to Bernard at 13th, and similar improvements. SC 12-13

HIGHWAY DISTRICT OFFICE— Spokane, Wash.
(Estimated cost $330,000)

Bids will be called in January by Washington State Highway Commission, W. A. Bugge, director, Olympia, for construction of a reinforced concrete main office building for the district headquarters in Spokane. Prequalification forms can be secured from Jim Heaton at the Highway Office, 2820 Mayfair St., Spokane, or from W. A. Bugge in Olympia. Plans prepared by Culler, Gale, Martell & Norrie, architects, Realty Bldg., Spokane.

Reinforced concrete poured in place with precast floor channels; steel joist, steel roof deck, built-up roofing; gas fired low pressure steam heating system; air conditioning. LL 12-17

JUNIOR HIGH SCHOOL—Sunnyside, Wash.

Bond election will be held March 11 by Sunnyside School District No. 201, Lee Colby, superintendent, Sunnyside, on a $900,000 bond issue to finance construction of a new brick 800-student junior high school at Sunnyside. Plans by Don Gochnour and Ed Marble, architects, Miller Bldg., Yakima. School will have 34 teaching stations, library; offices; and cafeteria which will serve as multipurpose room. Structure will be court type with built-up roofing and concrete slab floors. IG 12-12. Previous report 10-26

●MADISON SCHOOL (Mechanical Contract)— Tacoma, Wash.

Bids will be opened for the second time at 3 p.m., January 3, by Tacoma School District No. 10, Toney Shelton, secretary and business manager, Administration Bldg., S. 9th and Tacoma Ave., Tacoma, on the mechanical portion of the eight-classroom addition to be constructed to Madison Elementary School in Tacoma. Plans with Robert Billsbrough Price, architect, 2907 A St., Tacoma. $25 deposit.

Bids were rejected on the mechanical portion of the work at the time contracts were awarded on the general and electrical contracts. General contractor is Woodard Construction Co., 3842 N. Frace, Tacoma, who will work under a $105,858 contract; electrical contract was awarded to Glassy-Roth Electric, 221½ S. 38th, Tacoma, in the amount of $12,900. Mechanical plans and specifications have been revised by the architect and include duct work and unit ventilator changes, although the basic hot air system has been retained. SC 12-13. Previous report 12-4

●NORTHWEST TACOMA SCHOOL— Tacoma, Wash.

Bids will be opened 3 p.m., January 7, by Tacoma School District No. 10, Toney Shelton, secretary and business manager, Administration Bldg., S. 9th and Tacoma Ave., Tacoma, for construction of a four-unit campus plan school designed as an addition to the Northeast Tacoma Elementary School at 5412 29th N.E. in Tacoma. Plans with Johnston, Evans & Parker, architects, 1111 Washington Bldg., Tacoma. $20 deposit. The existing building will be razed on completion of the new units.

The addition will consist of four units, designed in campus plan, with a fifth section to be used as an amphitheater. One building will house four classrooms; another will have two classrooms, library and administration room; the third will be used for multipurpose room equipped with movable stage; and the fourth will be a playshed. The amphitheater will be outside the multipurpose room and will be bid as an alternate. The four units will each be 64'x64', one-story, and connected by plastic roofed covered ways, sheltered by wood screen walls. Each unit will be identical except for 12' wall panels in multipurpose building; others having 8' high walls.

Description for all units: concrete block on concrete footings; folded plane roof, prefabricated plywood stressed skin units joined in self spanning form supported only on perimeter wood columns which also support prefabricated plywood wall panels; beam minimal, acting only as tension chords after roof panels installed; plastic perimeter of all units; stainless steel jalousies in vents only, all other fixed glass; fiberglass quilt insulation in wall and roof panels. Finish: exposed structural system in classrooms with supporting casework system and interior face of fir plywood wall units, stained, other walls of gypsum board with fixed glass relights; fir trim; exposed fir plywood roof panel face and acoustic tile bands on ceiling; wood doors and cabinets; folding doors; high output fluorescent tubes; electric baseboard heating; portable stage; movable casework; carried system; exhaust type ventilating system. Bids will be opened January 20 by Mini-

Idaho County School Board, Camden Meyer, superintendent, Rupert, for construction of a 12-classroom addition to the Paul Elementary School and a seven-classroom addition to Minidoka County High School at Rupert.

The school board will also ask voter approval of a two-mill levy to finance purchase of furniture and equipment for the school additions. SC 12-17

CLINIC ADDITION— Twin Falls, Idaho

(Estimated cost $45,000)

Sub-bids are being taken by Fred W. Read, general contractor, Route 1, Twin Falls, on work and materials involved in construction of a one-story and basement, 1,870 sq. ft., solid masonry addition to the Twin Falls Clinic, Shoshone St. and 6th Ave. E., Twin Falls, for Twin Falls Clinic Building Corp. Plans by Harald E. Gerber, architect, 203 Shoshone St. N., Twin Falls. Completion expected in April 1958.

Concrete on rock footings and foundation; 33'x34'; concrete beam and girder floors; concrete girders, beams, columns; flat concrete roof; concrete stairways; wood windows; masonry exterior, vinyl wall covering interior wall finish; plaster partitions with metal studs; asphalt tile flooring; wood doors; plaster ceilings; wood cabinets; rigid insulation in roof; incandescent and fluorescent lighting; extension to existing steam plant with converters; air conditioning. SP 12-17

MONTANA

RADIO-TELEVISION OFFICE BUILDING— Billings, Mont.

(Estimated cost $500,000)

Construction will start soon on a four-story office building at 3rd Ave. N. and 32nd St. in Billings to house facilities of KOOK Radio and Television Station, according to Joseph R. Sample, president of the station. The new building will provide radio and television production facilities and office space for the firm on the ground floor. Plans call for two main studios. The original structure may not be four-story, but ultimate plans call for a building that size. EE 12-14

ARMY RESERVE TRAINING CENTER— Billings, Mont.

(Estimated cost $500,000)

No funds have been appropriated in the 1957-58 appropriation, or has there been any indication that the same may be included in the 1958-59 appropriation, for construction of the proposed one-story, brick, 400-man U. S. Army Reserve training center in the 1400 block on Broadwater Ave. in Billings, according to Jay J. Kalez, chief, Technical Liaison Branch, Corps of Engineers, Walla Walla district, Bldg. 602, City-County Airport, Walla Walla. Architects for the building are Cushing, Terrell & Associates, 1333 Airport Road, Billings. Later appropriation could make this project eligible. SP 12-17. Previous report 11-2

SCHOOL— Brady, Mont.

(Estimated cost $330,000)

Plans will be complete in the summer of 1958 by Bordeleau-Pannell & Amundson, architects, 309 1st Ave. N., Great Falls, for a one-story and no basement, 25,500 sq. ft. combined high school and elementary school building at Brady, for Brady High School District and Common School District No. 19, Brady. The building will incorporate concrete footings and foundation. A $330,000 bond issue was recently approved for this project. SP 12-18. Previous report 12-11

COUNTY HOSPITAL— Butte, Mont.

Revised bid forms have been sent out on the three-story county hospital building and a personnel residence to be constructed at Howe Ave. between Yale and Princeton streets in Butte. Bids will be opened 10 a.m., M.S.T., December 20, by Silver Bow County Commissioners, Courthouse, Butte.

The architects, Norman J. Hamill & Associates, 122 W. Granite, Butte, have issued notice that addendum No. 2, alternate No. 15 and addendum No. 1 for omission of entire third floor will not be taken. New bid forms are either in the mail or can be obtained from the architects.

Plans are on file with Pacific Builder & Engineer, 2418 3rd Ave., Seattle. DM 12-18. Previous report 12-10

ELEMENTARY SCHOOLS— Butte, Mont.

Plans will be complete about February 1, 1958, by Eldred F. Moyle, architect, Silver Bow Bldg., Butte, for the new 12-classroom Monroe elementary school and six-classroom Lincoln elementary school to be constructed in Butte. The Monroe school is estimated to cost $350,000; the Lincoln school, $176,443. SP 12-18

ELEVATOR FIRE— Culbertson, Mont.

The Occident elevator, annex, warehouse and office were destroyed by fire on December 10, according to Otis Nelson, elevator manager. Loss has been set at more than $100,000. Plans for rebuilding have not been decided. SC 12-18

■HIGH SCHOOL ADDITIONS— Deer Lodge, Mont.

Planholders announced for construction of a partial two-story, 25,275 sq. ft. addition to the high school and for some alteration work in the existing building at Deer Lodge. Invitation for bids has been cancelled and project postponed indefinitely by Corps of Engineers, Walla Walla district, Bldg. 602, City-County Airport, Walla Walla, for construction of an Army Reserve training center, motor vehicle shed and appurtenant utilities and paving at Glasgow; ENG-45-164-58-12. If and when the project is advertised, another advance notice will be issued. SP 12-13

▲ELEMENTARY SCHOOL, SHOP BUILDING— Glasgow, Mont.

Bids received December 5 were held for tabulation by Glasgow School District No. 1-A, William C. Greer, superintendent, Glasgow, for construction of a wood and tile eight-room elementary school on the north side of Glasgow and a one-story, 5,200 sq. ft. pumice block vocational agriculture shop back of the high school in Glasgow. Plans were prepared by Brinkman & Lenon, architects, Strand Theater Bldg., Kalispell.

Figures, as released by the school district follow for the elementary school only:

GENERAL: Morgen & Oswood Construction Co., Box 225, Glasgow, $173,238; Commercial Builders, Inc., Box 568, Williston, N. Dak., $185,954; Gens Construction Co., Great Falls, $186,569; Lowe Construction Co., Billings, $192,102; Sternhan Construction Co., Glendive, $200,950; Elmer Pogue Construction Co., Billings, $201,970; C. B. Lauch Construction Co., Great Falls, $213,000.

MECHANICAL: Johnson Plumbing and Heating Co., 527 1st Ave. S., Glasgow, $76,-103; Christianson Plumbing and Heating, Billings, $77,166; Budd Plumbing and Heating, Bozeman, $80,208; Cummings Plumbing and Heating, Glendive, $82,470.

ELECTRICAL: Wagenhalls Electric Shop, 525 2nd Ave. S., Glasgow, $19,475; Glasgow Electric, Glasgow, $23,286; Gambles Electric, Glasgow, $24,150.

The elementary school will have concrete slab floor; built-up composition roofing; hot water heating system. DM 12-14. Previous report 11-19

★ELEMENTARY SCHOOL, SHOP BUILDING— Glasgow, Mont.

Awards announced for construction of tile and frame, eight-room elementary school on the north side of Glasgow and a one-story, 5,200 sq. ft. pumice block vocational agriculture shop building back of the high school at Glasgow. Bids were opened December 5 by Glasgow School District No. 1-A, William C. Greer, superintendent, Glasgow. Plans by Brinkman & Lenon, architects, Stand Theater Bldg., Kalispell.

Elementary School—AWARDS — GENERAL: Morgen & Oswood Construction Co., Box 225, Glasgow, $173,238 (basic $143,947 plus $25,176 alternate for three additional rooms and $4,115 alternate for kitchen). MECHANICAL: Johnson Plumbing and Heating Co., 527 1st Ave. S., Glasgow, $76,-103. ELECTRICAL: Wagenhalls Electric Shop, 525 2nd Ave. S., Glasgow, $19,476. Shop Building—GENERAL: Morgen & Oswood, $62,227 (basic $50,361 plus $8,942 alternate for brick facing, $963 alternate for overhead monorail, $1,961 alternate for storage cabinets.)

The elementary school will have concrete slab floor; built-up composition roofing; hot water heating system. Shop building will have concrete slab floor; glued laminated beams; flat roof; steam system gas fired. DC 12-17. Previous report 12-14

CIVIL AERONAUTICS BUILDING— Great Falls, Mont.

(Estimated cost $200,000 to $250,000)

Plans announced by Civil Aeronautics Administration, Los Angeles, Calif., for construction of a two-story 18,000 sq. ft. technical building at Great Falls. Possible sites for the building include Gore Field and various locations on the northwest edge of town. It is expected that a site comprising six or seven acres of ground will be required for the new building. The structure will house the CAA direct air-ground communication facilities, some of the maintenance and training operations and long range radar aircraft tracking equipment. After a suitable site and building needs have been agreed upon, the General Services Administration will attempt to negotiate an agreement with private industry to acquire the site and erect the building to be leased to the CAA. Should this procedure prove unfeasible, the CAA will construct the building. It is hoped the building can be completed, equipment installed and ready for operation about 15 months from now. SC 12-18

COUNTY HOSPITAL— Hardin, Mont.

(Estimated cost $335,000)

Bids will be called in late January or early February by Big Horn County Commissioners, Courthouse, Hardin, for construction of a one-story 12,000 sq. ft., 24-bed county hospital at Hardin. Final plans for the hospital were recently approved by the commissioners.

The new hospital will have ten beds in the

nursing home wing, and 14 general beds. In addition to the beds, the structure will include an operating room, delivery room, kitchen, x-ray and laboratory rooms, office, dining and recreation area in nursing home wing, and other facilities. EE 12-14

★STATE LABORATORY REMODELING— Helena, Mont.

Awards announced by State Board of Examiners, G. L. Bryant, executive secretary, State Capitol Bldg., Helena, for remodeling the basement and first floor of the Montana State Laboratory Bldg. to provide a virus laboratory and animal quarters, including special air conditioning system separate from that of the main building. Plans were prepared by Robert Munzenrider, director of hospital facilities, Montana State Board of Health, Helena. Bids opened December 12.

GENERAL—AWARD: Peter Zuroff, 501 1st St., $16,827. ●BRIDGE APPROACHES— Portland, Ore.
(Estimated cost $850,000)

Bids will be opened 10:30 a.m., January 14, by Multnomah County Commissioners, 504 Multnomah Courthouse, Portland, for construction of the new west approaches of the Hawthorne Bridge in Portland. (The date announced in PCD 12-12 was in error, as was the estimated cost). Plans with Paul Northrop, county roadmaster, 2115 S.E. Morrison St., Portland, $25 deposit. Plans by Moffatt, Nichol & Taylor, structural engineers, 1845 N.E. Couch St., Portland.

Work includes construction of Madison St. and Main St. approaches, the Harbor Drive "on" and "off" ramps, depressing and realignment of Front Ave., alteration to Harbor Drive in the vicinity of the bridge, alteration to and widening of the west end of the existing Hawthorne Bridge, and the removal of existing trolley car rails and reconstruction of rail slots for entire length of bridge. The elevated structure consists of a composite design using steel stringers or prestressed concrete stringers, and concrete decks supported on reinforced concrete bents and abutments. The majority of the concrete bents and abutments are supported on spread footings; the remainder, on piling. On-grade approaches and ramps to the elevated structure consist of selected fill materials either contained by retaining walls and abutments, or with landscaped sloped sides. Also included is all required work to adapt existing streets, curbs, sidewalks and drainage structures to accommodate the new approaches and ramps.

Quantities: Clearing and removal of existing approaches; 7,265 sq. yd. removal of walks, floors and pavement; 1,900' removal of curbs; 100 c.y. removal of miscellaneous concrete and masonry; 1,255 c.y. trench excavation unclassified; 17,400 c.y. general excavation unclassified; 4,560 c.y. structural excavation unclassified; 1,380 c.y. gravel fill; 24,250 c.y. sand fill; 1,930' furnishing composite pipe piles; 46 each driving pipe piles;

structural and deck concrete, all required; 780 c.y. concrete on grade; steel reinforcement, all required; option on prestressed concrete stringers or structural steel stringers; structural steel work and alterations to existing bridge; 14,600 lb. miscellaneous metal; 1,540' bridge rail; 650' stair handrail; 590' metal guard rail; 880 c.y. bottom course of rock base; 330 c.y. top course of rock base; 500 ton Mixture No. 1 and 1,160 ton Mixture No. 2, asphaltic concrete; 340' asphaltic concrete markers; 2,390' of 8" 130' of 12" and 150' of 15" concrete pipe; 860' extra for pipe under pavement; 6 drop manhole connections; 3 concrete manholes; 37 concrete inlets; electrical work; sprinkler system; 14,122 plants for shrubbery landscaping; 58,000 sq. ft. lawn. Bidders must be prequalified before plans can be issued. Bids must include list of sub-contractors.
WB 12-14. Previous report 12-12

●TRANSMISSION LINES— Ephrata, Wash.

Bids will be opened 2 p.m., January 15, by Grant County Public Utility District, 30 C S.W., Ephrata, for construction of two 230-kva steel tower transmission lines from Priest Rapids dam to the BPA Midway substation located near Vernita, a distance of approximately 7 miles. Specifications with above office; with AGC offices in Seattle, Spokane and Portland, Ore.; Spokane Construction Council office, and the Wenatchee Construction Council office.

The parallel lines will be erected on the Grant County side of the river from Priest Rapids to the point where it crosses the Columbia River at Midway. The construction area is accessible from the recently completed Highway 11A from Priest Rapids to the Vernita ferry. SC 12-17

★CRUSHED STONE STOCKPILING— Ephrata, Wash.

Award to Frank G. Bauine, Box 84, Yardley, $18,200, by Grant County Commissioners, Courthouse, Ephrata, for production and stockpiling of approximately 14,000 ton special base course and 6,000 ton top course crushed stone surfacing at the Mordhurst pit site about 7 mi. northwest of Ephrata.

SC 12-18. Previous report 12-12

▲EARTH LINING— Ephrata, Wash.

Bids received by Bureau of Reclamation, Box 368, Ephrata, for earth lining lateral W20, Station 414+75 to Station 562+40, Block 89, about 7 mi. south of Ephrata, Grant County, Wash.; Spec. No. 117C-480. Bids opened December 17. LOW BID: D. A. Whitley, N. 2401 Division, Spokane, $57,970. OTHER BIDS: L. D. Shilling Co., Inc., Box 1637, Moses Lake, $65,455; J. W. Hardison, Box 48, Yakima, $75,110; Cherf Bros. & Sandkay Contractors, Inc., Box 938, Ephrata, $75,448; Otis Williams, Box 1193, Kennewick, $78,695. Government estimate, $87,510.

Work to include the following—(a) Excavating the bottom of the lateral and reblending suitable coarser materials, removed in the required excavation, with select fines obtained from borrow. The bottom of the lateral within the pay lines shown on the drawing for excavation and earth lining will require combing to expose any loose rock over 5" in size, and removing and disposing of such rock. After the first layer has been blended and compacted, successive layers consisting of the select fines and coarse materials will be placed, blended and compacted. The existing lining in the bottom is of variable thickness. The existing bottom width of the lateral varies between about 32' and 34'. (b) Refilling existing exploratory trenches in the lateral.

Quantities: 47,000 c.y. common excavation from lateral; 10,000 c.y. excavation from borrow; 60,000 c.y. mi. overhaul; 47,000 c.y. compacted earth lining; 135 c.y. compacted refill of existing trenches.

▲ILAS SUPPORT FACILITIES— Paine AFB, Wash.

Eight bids were submitted to U.S. Air Force, Procurement Office, Paine AFB, for construction of concrete pads and installation of steel conduit and wiring for carrying control and power lines for ILAS equipment at the base; Inv. No. 45-602-58-30. Bids opened December 13. LOW BIDS: Dawson Construction Co., 1015 C. St., Bellingham, $1,982; Lindbrook Construction Co., 21616 Five Corners Road, Edmonds, $1,988; Metropolitan Construction Co., 1008 Broadway, Everett, $2,595.

HH 12-17. Preivous report 12-5

TREATMENT PLANT ADDITIONS— Pasco, Wash.

(Estimated cost $400,000)

Bids will be opened about February 12 by City Council, City Hall, Pasco, for construction of additions to the water treatment plant in Pasco as part of the program to improve and expand water and sewer facilities in the city. Specifications by Cornell, Howland, Hayes & Merryfield, consulting engineers, 1600 Western Ave., Corvallis.

when plans are available, deposit will be about $30.

Major mechanical items included in the work are flocculation equipment, filter underdrains and media, filter piping, valves and control, pumping facilities, and instrumentation. About 1,500 c.y. concrete is involved. SP 12-12. Previous report 11-15

●POWER CIRCUIT BREAKERS— Pasco, Wash.

Bids will be opened 10:30 a.m., December 31, by Bonneville Power Administration, 1001 N.E. Lloyd Blvd., Portland, Ore., for furnishing and delivering two 14.4-kv, 250-kva, 1200-amp. outdoor power circuit breakers, fob Pasco; Inv. No. 8608. Specifications with above office. SP 12-13

●WELL— Point Roberts, Wash.

Bids will be opened 3 p.m., December 26, by General Services Administration, room 126, Federal Office Bldg., 909 1st Ave., Seattle, for a new well at the U.S. Border Station, Point Roberts; Proj. No. SEA-964. Specifications with above office. SP 12-14

TRANSFORMER— Radar Pumping Plant, Wash.

Bids will be called soon by Bureau of Reclamation, L. N. McClellan, chief engineer, Building 53, Denver Federal Center, Denver, Colo., for furnishing one power transformer with three tank-mounted, station-type lighting arresters on the high-voltage side for Radar Pumping Plant Switchyard, Columbia Basin Project, Wash. Transformer is three-phase, class OA/FA, 8,000/10,000 kva, 115 delta kv to 4.16 Grd Y/2.4 kv. Delivery time is 420 days. DM 12-13

PUMPING UNITS— Sand Hollow Pumping Plant, Wash.

Bids will be called in January or February by Bureau of Reclamation, L. N. McClellan, chief engineer, Building 53, Denver Federal Center, Denver, Colo., for furnishing four synchronous motor-drive, horizontal, centrifugal-type pumping units for Sand Hollow Pumping Plant, Columbia Basin Project, Wash. Three units will have capacity of 51 cfs at a total head of 65' and one will have 25 cfs at a total head of 65'. DM 12-13

●SANITARY SEWER— Seattle, Wash.

Bids will be opened 8 p.m., January 6 by Bryn Mawr-Lake Ridge Sewer District, H. G. Rowland, secretary, 11402 Rainier Ave., Seattle for construction of 8,500' of sanitary sewer in LID No. 3. Plans and specifications may be obtained from Collier & Isaac, engineers, 4010 Stone Way, Seattle. Certified check 5%.

Quantities: 8,500' of 6" and 8" concrete or clay pipe; 27 manholes and appurtenances. DM 12-14

SEWER— Seattle, Wash.
(Estimated cost $3,800,000)

Working drawings are underway by Hill & Ingman, consulting engineers, 3104 Western Ave., Seattle, for construction of 35 mi. of sewer in Lake City area, Seattle, for Lake City Sewer District, 12721 30th Ave. N.E., Seattle. The trunk line will be constructed of 30" cement concrete sewer pipe, and the lateral lines of 8" to 24" cement concrete sewer pipe. This 1958 construction project will complete the sewers within the Seattle city limits in the Lake City area.
PD 12-13. Previous report 10-4

▲SEWER OUTFALL REPAIR—Seattle, Wash.

Following is the complete list of bids received by Board of Public Works, 512 County-City Bldg., Seattle, for repairing a sewer outfall on 11th Ave. N.W., located 567' south of W. 45th to Salmon Bay Waterway; Ord. No. 86334. Bids opened December 11. BIDS: Willar Construction Co., 9709 Greenwood, $9,736; Harold Kaeser Co., 3629 34th Ave. S., $9,741; Leiter Hockett, 3415 W. 66th, $9,820; Joe Lundberg Construction Co., 3420 13th S.W., $10,411; Pacific Mechanical Constructors, Inc., Lloyd Bldg., $10,940; Larsen Construction Co., Colman Bldg., $11,956; General Construction Co., 3840 Iowa, $12,667; Manson Construction and Engineering Co., 5209 E. Marginal Way, $14,215. All of Seattle.

Quantities: 120' of 72" corrugated metal pipe sewer; 300' fender piles; a 75' concrete post fence; 250 c.y. fill material; 20 ton ¾" minus crushed rock surfacing.

INDUSTRIAL DEVELOPMENT— Seattle, Wash.

Proposed improvements by Port of Seattle, E. H. Savage, president, Pier 68, Seattle, for an industrial development in the Duwamish area, may be changed due to Allied Stores' announcement of plans for a south end shopping center. The port commissioners, who recently authorized acquisition of property held by Andover, Inc., south of the south boundary of Tukwila need this additional acreage as part of the port's plan for a 1,300 acre development for industrial use. The 800 acres south and west of Renton Junction are needed, according to the port, to help bear the cost of channel work and other improvements.

The new shopping center will occupy 160 acres of the 500-acre tract acquired by Andover. The Port of Seattle has planned an estimated $35,000,000 project involving straightening of the Duwamish River to a turning basin near the junction, and improving the sites for industrial uses.
DM 12-13. Previous report 12-12

SUBSTATIONS— Seattle, Wash.

A request from Seattle City Light for a $1,750,000 program involving construction of 15 new substations, was approved by Board of Public Works. The money would come solely from City Light funds. Sites for the stations have not as yet been chosen. DM 12-13

●STEAM GENERATING PLANT— Seattle, Wash.

Bids will be opened 2 p.m., January 21, by Board of Regents, University of Washington, in the office of the business manager, room 209, Administration Bldg., Seattle, for furnishing and erecting a new steam generating unit with continuous steam generating capacity of 100,000 lb. per hour (using pulverized coal), or 130,000 lb. per hour (using natural gas). Plans and specifications with Bouillon & Griffith, consulting engineers, 1411 Fourth Avenue Bldg., Seattle. $75 deposit.

The contract will also include furnishing and installing fans, ducts, accessories, pulverizers, combustion controls and firing equipment. A foundation and a building to house the equipment will be constructed under a separate contract. Bid opening was previously set for August, but was postponed. PD 12-13. Previous report 7-1

●CRUSHED AGGREGATES—Seattle, Wash.

Bids will be opened 10 a.m., December 23, by Paul R. Hendricks, city purchasing agent, 511 County-City Bldg., Seattle, for supplying crushed aggregate to the city for a period of one year beginning January 1, 1958. Specifications with above office. DM 12-17

●AIRPORT MARKER FACILITY— Seattle, Wash.

Bids will be opened 3:30 p.m., December 30, by Civil Aeronautics Administration, 5651 W. Manchester Ave., Los Angeles, Calif., for construction of an outer marker facility for an instrument landing system, consisting of erection of an 8'x12' type "S" building, a flat steel counterpoise, fencing, antenna poles, access road, power lines and other minor related work, five mi. south of the Seattle-Tacoma Airport, Seattle; Prop. No. 4-58-958. Specifications with above office. Bid bond 10%. SP 12-17

ASPHALTIC CONCRETE, BITUMINOUS PLANTMIX— Seattle, Wash.

All bids rejected and will be readvertised by King County Commissioners, 402 County-City Bldg., Seattle, for furnishing asphaltic concrete and bituminous plantmix for year 1958. Bids opened December 9.
SP 12-17. Previous report 11-9

▲COIL RACKS— Seattle, Wash.

Four bids were received December 16 by Paul R. Hendricks, city purchasing agent, 511 County-City Bldg., Seattle, for furnishing 40 coil racks, 4,000 lb. capacity. Equipment Manufacturing Co., 5245 Pullman Ave., Seattle, were low at $860. High bid was $1,672. PD 12-17. Previous report 11-29

■CRUSHED STONE STOCKPILING— Seattle, Wash.

Planholders announced for furnishing approximately 20,000 c.y. crushed stone surfacing and stockpiling at the Krain County Pit located on S.E. 400th St., about 2½ mi. north of Enumclaw, King County, Wash. Bids will be opened 9:30 a.m., December 23, by King County Commissioners, 402 County-City Bldg., Seattle.

Planholders: Lake City Gravel and Materials, Inc., 10728 Bothell Way, Seattle; Lige Dickson Co., 3315 S. Pine St., Tacoma; Wamberg Co., 7404 S. Tacoma Way, Tacoma; Edinger Gravel Co., Box 283, Kenmore.

Quantities to be furnished are as follows: 12,000 c.y. 1½" minus crushed stone surfacing base course; 8,000 c.y. ¾" minus crushed stone surfacing top course; 4,000 c.y. surplus screenings.

Bids will be called January or February by Bureau of Reclamation, L. N. McClellan, chief engineer, Building 53, Denver Federal Center, Denver, Colo., for furnishing two motor-driven, horizontal, centrifugal-type pumping units, each with a capacity of 20 cfs at a total head of 102' for the initial

BUREAU OF RECLAMATION LISTS 24 MAJOR PROJECTS
Scheduled for Bid Call Within Next Three Months

Twenty-four major construction projects will be among bid invitations issued by the Bureau of Reclamation during December, January and February. Bids will be called soon on the transmission line from Fort Peck through Glendive, Mont. to Bismarck, N. Dak., and the 1.5 mi. of power distribution line near Irwin, Idaho. In January or February invitations will be issued for the earthfill Wasco Dam on Clear Creek about 35 mi. west of Maupin, Ore.; on the indoor type Radar pumping plant south of Othello, Wash. and for completion of the water system near Hungry Horse, Mont. for further information on these projects, contact L. N. McClellan, chief engineer of the Bureau, Building 53, Denver Federal Center, Denver, Colo., referring to the project by title and number.

BID CALLS EXPECTED IN DECEMBER

TRANSMISSION LINE, Fort Peck-Dawson County-Bismarck (12-1)—Fort Peck and Missouri River Basin Projects, Montana and North Dakota. From Fort Peck through Glendive, Mont. to Bismarck, N. Dak. Work will consist of clearing rights-of-way, furnishing and installing fence gates, constructing footings and furnishing and erecting steel towers for about 309 mi. of single circuit, 230 kv transmission line. Completion time 900 days.

Quantities: 51,000 c.y. excavation for footings; 11,000 c.y. excavation from borrow; 16,400 c.y. concrete, including 8 caisson-type footings; 820 ton reinforcing steel; 9,175 ton steel towers; 13,000' drive treated wood piles.

Bids will be called by chief engineer, Denver, Colo.

LATERAL LINING, Block 89 (12-6)—Columbia Basin Project, Wash. Southeast of Ephrata, Wash. Place compacted blended earth lining in about 14,500' of the W20 lateral. Completion time 75 days.

Quantities: 47,000 c.y. excavation from lateral; 10,000 c.y. excavation from borrow; 60,000 mi. c.y. overhaul; 47,000 c.y. compacted blended earth lining; 130 c.y. compacted refill of existing trenches.

Bids will be called by project manager, Ephrata, Wash.

LATERALS, PUMP UNIT, Blocks 46 and 49 (12-7)—Columbia Basin Project, Wash. Vicinity of Othello, Wash. Earthwork and structures for about 5,500' of open ditch lateral extensions, new open ditch laterals and wasteways, furnish and install second pumping unit and motor for the EL81.9 pumping plant. Completion time 75 days.

Quantities: 3,100 c.y. lateral and wasteway excavation; 100 c.y. borrow excavation; 150 c.y. excavation and backfill of trench for pipe chute; 1,250 c.y. structure excavation; 1,150 c.y. backfill about structures; 300 c.y. compact backfill about structures; 300 c.y. puddling backfill about structures; 5,850 lb. reinforcing steel; 315' of 6" and 15" concrete pipe; 444' of 15", 18", 21" precast concrete pipe; 178' of 15" and 18" HC50 concrete pipe; 1,050 lb. pipe and miscellaneous metalwork; 10 steel slide gates; 13, 15", 18" and 21" cast iron slide gates; pump and motor 6.5 at 20' turbine type.

Bids will be called by project manager, Ephrata, Wash.

LATERAL, Block 15 (12-8) — Columbia Basin Project, Wash. West of Eltopia, Wash. Earthwork and structures for about 600' of the 2' bottom width PE47Q1A open ditch lateral, including modifications to four existing structures. Completion time 65 days.

Quantities: 1,130 c.y. borrow excavation; 140 c.y. structure excavation; 120 c.y. backfill; 150 c.y. compact backfill; 6 c.y. concrete in structures; 460 lb. reinforcing steel; 97', 15" concrete pipe; one 15" cast iron slide gate; one 18"x12" steel slide gate.

Bids to be called by project manager, Ephrata, Wash.

DRAINS, Block 11 and 49 (12-9)—Columbia Basin Project, Wash. South of Othello, Wash. Earthwork and structures for the DPE27, DPE227, DPE227A, DPE228, DPE221A1 deep open ditch drains, totaling about 1.5 mi. Completion time 120 days.

Quantities: 17,600 c.y. common excavation; 1,230 c.y. rock excavation; 460 c.y. excavation for structures; 350 c.y. backfill about structures; 110 c.y. compact backfill about structures; 120 lb. reinforcing steel; 162' of 18" and 24" asbestos bonded corrugated metal pipe; 126' of 12" corrugated metal pipe.

LATERAL LINING, Blocks 85, 86, 87 (12-10)—Columbia Basin Project, Wash. About 18 mi. northwest of Othello, Wash. Place compacted blended earth lining in about 2.4 mi. of laterals. Completion time 65 days.

Quantities: 40,000 c.y. excavation; 29,000 mi. c.y. overhaul; 21,000 c.y. compacted blended earth lining.

Bids will be called by project manager, Ephrata, Wash.

STRUCTURE MODIFICATIONS, Enterprise Powerplant (12-15)—Klamath Project, Ore. Near Klamath Falls, Ore. Modify the powerplant to remove all power generating facilities and rehabilitate the remaining structure to serve as a control drop. Completion time 60 days.

Quantities: 10 c.y. fill cavity under forebay paving by pressure grouting; 60 sq. yd. lining sloped wall of forebay; 125 c.y. fill hole under afterbay with rock or sand and gravel; 28 c.y. concrete in afterbay floor; remove a 20'x28' corrugated metal building and an 18'x20' shed; remove exciter, generator, turbine, governor and switching equipment.

Bids will be called by chief engineer, Denver, Colo.

STRUCTURE MODIFICATION, Block 421 (12-16)—Columbia Basin Project, Wash. Southeast of Moses Lake, Wash. Modify two check structures on the EL29 lateral.

Completion time 65 days.

Quantities: 4 c.y. concrete; 400 lb. reinforcing steel; 1,350 lb. miscellaneous metalwork.

Bids will be called by project manager, Ephrata, Wash.

VHF RADIO COMMUNICATION SYSTEM, Roza and Kennewick Divisions (12-18)—Yakima Project, Wash. Near Yakima, Wash. Furnish and install one relay, two fixed radio stations and five mobile sets. No houses will be required. Completion time 90 days.

Bids will be called by chief engineer, Denver, Colo.

DISTRIBUTION LINE, Palisades Dam (12-21)—Palisades Project, Idaho. Near Irwin, Idaho. Construct 1.5 mi. of 12.5 kv wood pole distribution line with two communication cables to be underbuilt. Completion time 120 days.

Bids will be called by chief engineer, Denver, Colo.

BID CALLS EXPECTED IN JANUARY AND FEBRUARY

DAM (12-25)—Wapinitia Project, Ore. Construct 42' high earthfill Wasco Dam, containing about 45,000 c.y. material, with crest length of 390', and appurtenant structures. On Clear Creek about 35 mi. west of Maupin.

Chief engineer to issue invitations.

PUMPING PLANT, TRANSMISSION LINE (12-27)—Columbia Basin Project, Wash. South of Othello. Construct indoor type Radar Pumping Plant involving erection of reinforced concrete substructure, a superstructure of structural steel frame with uninsulated metal panel siding and a crane runway for a 15 ton traveling crane, install five electrically driven horizontal pumping units of 146 cfs total capacity, and make provisions for a future installation of four electrically driven horizontal pumping units of 241 cfs total capacity. Work will also include constructing a 115 kv tap line from the Bonneville Power Administration Scooteney-Eagle Lake 115 kv tap line about 2.5 mi. to the pumping plant.

Chief engineer, Denver, Colo. will issue invitations.

LATERALS (12-29) — Minidoka Project, Idaho. Near Rupert, Idaho. Earthwork and structures for about 3 mi. open ditch laterals with capacities up to 10 cfs, from four wells.

Regional director, Boise, will issue invitations.

WASTEWAY (12-30) — Columbia Basin Project, Wash. In Blocks 72 and 73 near Quincy, Wash. Earthwork and structures for the W35.8 and W35.9B2 wasteways, totaling about 1,600' in length. Work will also include constructing a weir and modifying a division box on the W38C3 lateral and constructing checks on the W27 and W27B laterals.

Project manager, Ephrata will issue invitations.

WASTEWAY (12-31) — Columbia Basin Project, Wash. In Block 42 southeast of Quincy. Earthwork and structures for the EL33 wasteway, about 1,400' long. Work will include modifying division and weir boxes.

Project manager, Ephrata, Wash. to issue invitations.

WASTEWAY (12-32) — Columbia Basin Project, Wash. In Block 45, north of Othello. Earthwork and structures for EL68K wasteway about 1,200' long. Work will include moving two structures.

Project manager, Ephrata, will issue invitations.

DRAINS (12-33)—Columbia Basin Project, Wash. In Block 86 northeast of Smyrna. Earthwork and structures for the DW272A, DW272A1, DW66.7, DW69F open ditch drains, totaling about two mi.

Project manager, Ephrata, Wash. will issue invitations.

DRAIN (12-34)—Columbia Basin Project, Wash. In Block 49 southwest of Othello. Earthwork and structures for DPE217B deep, open ditch drain about 2,200' long.

Project manager, Ephrata, Wash. will issue invitations.

WELLS (12-36)—Michaud Flats Project, Idaho. Near American Falls. Drilling and casing three irrigation water supply wells.

Regional director, Boise, Idaho will issue invitations.

TRASH COLLECTING FACILITIES (12-38)—Yakima Project, Wash. Near Prosser, Wash. Furnish and install traveling trash racks and conveyor in the forebay of the Chandler Powerplant consisting of about 100,000 lb. of machinery parts and structural steel and some concrete work.

Chief engineer, Denver, Colo. will issue invitations.

WATER SYSTEM COMPLETION (12-40)—Hungry Horse Project, Mont. Near Hungry Horse, Mont. Construct transmission line extensions, modify piping and install a pumping unit for completion of water system at Hungry Horse Government Community.

Regional director, Boise, Idaho will issue invitations.

CEMETERY RELOCATION (12-43)—Rogue River Basin Project, Ore. Near Ashland, Ore. Relocate Hill Cemetery from the Emigrant Reservoir area.

Regional director, Boise, Idaho will issue invitations.

BUILDINGS (12-46) — Columbia River Basin Project, Wash. Construct shop, residences and service buildings for Wahluke Watermaster Headquarters in Block 20, south of Othello.

Project manager, Ephrata, Wash. will issue invitations.

FENCING (12-50)—Columbia Basin Project, Wash. Construct additional protective fencing for pumping plant installations at various locations on the project.

Project manager, Ephrata, Wash. will issue invitations.

installation at White Bluffs Pumping Plant No. 2, Columbia Basin Project, Wash.
DM 12-13

DRAINAGE CHANNELS— Yakima, Wash.
(Estimated cost $873,000)

Voters in seven lower Yakima Valley irrigation districts have approved a contract with the federal government involving construction of 19 outlet drainage channels totaling 44 mi. to conduct irrigation water back to the Yakima River. The elections on the contract were held December 10 in six small districts and the Sunnyside District, all under the Sunnyside Board of Control: Granger, Outlook, Snipes, Grandview, Prosser and the Sunnyside District which delivers water to the Benton City area.

About $873,000 will be obtained from the government. The Roza Irrigation Project will bear $523,800, or 60% of the cost. Sunnyside Irrigation Board of Control will undertake 40% or $349,200. The Sunnyside Valley Irrigation District's share will be split. Its cost will be $280,023, less than $4 per acre, or .26 per acre over a 15-year period. The six similar districts' expense will be $67,176, not to come to more than $4 per acre.

The proposed project is designed to relieve a drainage problem in the Lower Valley, and involves installation of drains below the headworks at the Sunnyside dam.

IDAHO

★STATE HIGHWAY PROJECT— Boise, Idaho

Award announced by Department of Highways, 603 Main St., Boise, for the following highway construction project on which bids opened December 10.

SURFACING, Bliss Jct.-Malad River Bridge Section—Roadway, drainage structures, bituminous surface treatment on 4.438 mi. U. S. Highway No. 30, Gooding County; FAP No. F-2361(65).

AWARD: Earl L. McNutt Co., 351½ E. Broadway, Eugene, $630,972.

Quantities: 244,000 c.y. unclassified excavation; 1,070 c.y. structure excavation; 319,000 c.y. borrow; 231,000 Y.U. haul; 22,450 M gal. wtrg.; 1,670 c.y. mechanical tamping; 9,600' small ditches; 47,700 ton crushed gravel base course 2" maximum; 21,900 ton same, ¾"; 67,500 gal. asphaltic road material; 3,040 ton cover coat material; 28 c.y. concrete; 1,750 lb. metal reinforcement; 2,360' pipe culvert 12" to 36"; 255', 60" pipe culvert; 230', 12" reinforced concrete pipe; 175', 18 pipe siphon; 9,950' steel beam type guard rail; 20,825' fire fence; 495', 2" to 15" concrete irrigation pipe. Completion time 220 working days.
SP 12-14. Previous report 12-12

●STATE HIGHWAY PROJECT— Boise, Idaho

Bids will be opened 2 p.m., January 7, by Department of Highways, 603 Main St., Boise, for the following highway construction project. Specifications with above office. Certified check or bid bond 5%.

CRUSHED GRAVEL ROADWAY, 2 mi. N. of Notus East to U.S. 30—Construction of roadway and crushed gravel base on 4.511 mi. Notus Road connection from 2 mi. north of Notus East to U.S. 30, Canyon County; FAP No. S-3741(1).

Quantities: 51,800 c.y. unclassified excavation; 950 c.y. excavation for structures; 8,900 c.y. borrow; 10,600 yd. unit haul; 18,500 ton select base course; 16,870 ton crushed gravel base course; 20 c.y. concrete; 3,680' pipe culvert; 790' pipe siphon; 400' concrete irrigation pipe.
SP 12-17

HIGHWAYS— Boise, Idaho

Allocations of 1959 fiscal year funds in amount of $2,927,000 for improvements on the Forest Highway System were recommended to the Chief of U. S. Forest Service and to Administrator of the Bureau of Public Roads, Washington, D. C., for final approval, at a joint administrative meeting of the U. S. Forest Service, the Bureau of Public Roads, and the State Highway Board, early in December.

Allocations recommended were as follows: $235,000, Clark Fork Highway, Route US10A; $300,000, Cascade-Warm Lake Highway, a county road; $500,000, Banks-Crouch Highway, Route SH 17; $80,000, Bitterroot Big Hole Highway; $80,000, Big Springs Connection, Route SH84; $100,000, Priest River Road, Route SH57; $800,000, Lewis-Clark Highway, Route SH 9; $500,000, Elk City Highway, Route SH14.

It is expected that these funds will be available and allocated for construction purpose during the year 1958, although this does not necessarily mean that all of the projects will be underway in 1958. Present plans indicate however, that most of the projects will be started during the oncoming year.

An additional $150,000 has been earmarked for engineering surveys and also $150,000 for necessary contingencies. This leaves an unprogrammed balance of $32,000 remaining of the $2,927,000 which was made available for the 1959 fiscal year Forest Highway System apportionment.
DM 12-18

★GRADING, SURFACING— Elk City, Idaho

Award to MacGregor Triangle Co., 200 Sunrise Rim, Boise, Idaho, $382,550, by Bureau of Public Roads, Missoula, Mont., for grading and surfacing 4.8 mi. of Dixie Road, starting at Elk City and continuing east in Idaho County, Idaho; Proj. Nez Perce 222-A.
WB 12-14. Previous report 11-21

SEWAGE SYSTEM, DISPOSAL PLANT— Idaho Falls, Idaho

Bond issue for $1,600,000 was approved in the December 10 election held by City Council, City Hall, Idaho Falls, to finance expansion of the present sewage system involving construction of interceptor sewers and a primary sewage treatment plant at Idaho Falls. Plans are being prepared by Cornell, Howland, Hayes & Merryfield, consulting engineers, Idaho Bldg., Boise. The sewer work will involve furnishing and installing 8" to 48" sewer pipe. Bids will be called for at least a portion of the work in late spring or early summer of next year.
SP 12-18. Previous report 11-15

●MOTOR CONTROLLERS— Minidoka Project, Idaho

Bids will be opened 2 p.m., December 23, by Bureau of Reclamation, Box 937, Fairgrounds, Boise, for 14 motor controllers for 14 deep well pumping units and three spares, Minidoka Project, Idaho; Inv. No. 100S-320. Specifications with above office. Bid bond 20%.
GH 12-13

TELEPHONE LINES— Rupert, Idaho

R.E.A. loan for $149,000 approved for Project Mutual Telephone Cooperative Association, Inc., Donald Dickens, manager, Rupert, to finance construction of 82 mi. of line to provide initial telephone service for 206 new rural subscribers in Jerome and Minidoka counties. Service will be provided through an extension of the borrower's exchange at Paul, Idaho.
WB 12-18

MONTANA

▲BITUMINOUS DISTRIBUTOR— Great Falls, Mont.

Bids received by Cascade County Commissioners, Courthouse, Great Falls, for furnishing one pressure type bituminous distributor. Bids opened December 10. BIDS: Miller Machine Co., 1610 River Drive, Great Falls, $3,456; Montana Powder and Equipment Co., 12 E. Lawrence, Helena, $5,765; Western Construction Co., Box 1506, Great Falls, $5,890; Hall-Perry Machinery, Box 1869, Great Falls, $7,910.
SP 12-17. Previous report 11-26

SEWAGE DISPOSAL SYSTEM— Great Falls, Mont.

Approval of a plat for the Pearson Addition, a proposed development on the Dempsey Inn Road south of the city, has been given by the City County Planning Board subject to action by county attorney of protective covenants guaranteeing provision for sewage disposal. The land developers have indicated intention of providing a lagoon system of sewage disposal.

Tentative plans according to A. J. Richardson, city engineer, City Hall, Great Falls, call for a lagoon to be placed in a low area dedicated for a park. The district would be connected to a sewer when the area becomes contiguous to the city and the lagoon would be converted to park use.
DC 12-18

STORM SEWER— Laurel, Mont.

Bond issue for $185,000 defeated in the December 7 election held by Town Council, Town Hall, Laurel, to finance construction of a storm sewer trunk line to serve most of Laurel.
EE 12-17. Previous report 11-5

●DISTRIBUTION LINE, DOCKS— Malmstrom AFB, Mont.

Bids will be opened January 8 by U. S. Air Force, Procurement Office, Malmstrom AFB, for construction of distribution line and overhead docks at the base. Specifications with above office.
SC 12-14

★CORROSION CONTROL SYSTEM— Malmstrom AFB, Mont.

Award to Rainbow Electric Co., 2220 River Drive, Great Falls, $9,530, by U. S. Air Force, Malmstrom AFB, for installation of a corrosion control system on the base high test fuel system.
SC 12-18

★SURFACING, PAVING— Missoula, Mont.

Award to J. C. Compton Co., Box 86, McMinnville, Ore., $190,727, by Bureau of Public Roads, 342 Post Office Bldg., Missoula, for constructing 9.463 mi. surfacing and bituminous paving, Montana FHP No. 13-C4, D4, E2, F5, Unit 2, Columbia Falls-Glacier Park Highway, Flathead National Forest, Flathead County, Mont.
WB 12-14. Previous report 12-12

SEWAGE TREATMENT— Thompson Falls, Mont.

It has been advised by Claiborne W. Brinck, director of the division of environmental sanitation of the State Board of Health, that serious consideration be given by the City of Thompson Falls to construction of a sewage treatment system to eliminate discharges into the river. It was suggested that city officials consider constructing an intercepting sewer to pick up all sewers now discharging into the river and placing this sewage into a treatment plant such as a lagoon.
SC 12-13

ALASKA

AIRPORT— Sitka, Alaska

A representative of the Sitka Chamber of Commerce has been in Anchorage conferring with officals of the Civil Aeronautics Administration regarding a proposed airport for the Sitka area. The chamber proposes an airport designed to accommodate large aircraft. Completion of all preliminary plans is anticipated in time to present the proposal to Congress in Washington, D. C., in January.
SC 12-18

NORTHERN CALIFORNIA

●SEWAGE FACILITIES EXPANSION— Davis, Calif.

Two contract awards have been announced by City Council, Davis, for the expansion of city facilities to handle industrial sewage. One contract includes building the oxidation pond and the pipelines; the other was awarded for building a pumping station to lift the sewage into the expanded, 136-acre pond. AWARDS—POND AND PIPELINES: A. Teichert and Son, Inc., 1931 Stockton Blvd., Sacramento, $174,298. PUMPING STATION: Morris DeRock, 216 B St., Davis, $82,600.
RC 12-21

★CITY STREET MAINTENANCE—
Hayward, Calif.

Awards announced by City Council, City Hall, Hayward, for city street maintenance in Hayward from January 1, 1958, to December 31, 1958, Proj. No. 631. Contracts were awarded separately on each of three bid groups: Group 1—Approximately 200 tons of plantmixed paving, approximately 13,400 sq. ft. patching of existing streets with plantmix, about 200 c.y. excavation; Group 2—Approximately 1,000′ concrete curbs and gutters, and 10,500 sq. ft. concrete sidewalks; Group 3—Approximately 4,000 c.y. roadway excavation, 200,000 sq. ft. subgrade preparation, and constructing 1,250,000 sq. ft. armor coat. Bids opened December 10. AWARDS—GROUP 1: C. J. Wood, Inc., Box 203, Redwood City, $16,665. GROUPS 2 AND 3: J. R. Armstrong Construction Co., 5741 Central Ave., El Cerrito, $14,690, $39,420. BIDS RECEIVED: J. R. Armstrong Construction Co., $19,100 (Group 1), $14,690 (Group 2), $39,420 (Group 3); C. J. Wood, Inc., $16,665, $15,000, $72,000; Rose & Matoza Construction Co., Inc., Box 2007, Castro Valley, $29,775, no bid, $93,250.
RM 12-21. Previous report 11-23

SEWER BONDS— **Lakeport, Calif.**

Voters of Lakeport have aproved a $300,000 sewer bond issue. The general obligation bonds, to be paid for by city sales tax revenue, will be used to enlarge sewer facilities that were built in 1937. RC 12-21

BULLARDS BAR DAM—
Marysville, Calif.

U. S. Senator Thomas Kuchel has revealed that a joint study by the State of California and the U. S. Corps of Engineers is underway on a new Bullards Bar Dam on the Yuba River. Kuchel said that work has begun on coordinated studies to determine the most feasible project at the site, taking into consideration development of the flood plan and recent flood occurrances. A congressional committee has allocated a portion of the funds necessary for the survey, and is expected to allocate additional funds in the next budget. RC 12-21

●WATER MAINS— **Mather Field, Calif.**

Bids will be opened January 8 by the Contracting and Purchasing Office, Mather Air Force Base, Sacramento, for replacement of water mains in the family housing area at the installation. Specifications available from Edward Gillenwater, installation group office, Mather Field. RC 12-21

REINFORCED CONCRETE BRIDGE—
Modesto, Calif.

The Stanislaus County Board of Supervisors, Stanislaus County Office Bldg., Modesto, has cancelled the project for construction of McDonald Creek Bridge on Snelling Road, approximately 1 mi. south of La Grange, Stanislaus County. The contractor would not have sufficient time to complete the job before water is returned to the canal. RM 12-21. Previous report 11-30

▲REINFORCED CONCRETE BRIDGE—
Modesto, Calif.

Bids received by Stanislaus County Board of Supervisors, Stanislaus County Office Building, Modesto, for construction of Bridge No. 7 on Stuhr Road across San Joaquin and Kings River Canal, a reinforced concrete slab bridge 32′ wide, and grading and surfacing about 0.226 mi. with road mixed surfacing. Bids opened December 9. LOW BIDS: H. Sykes, Box 998, Patterson, $26,735; M. J. Ruddy & Son, Rt. 6, Box 1419A, Modesto, $29,837; Granite Construction Co., Box 683, Merced, $30,523. RM 12-21

▲STEEL PIPE— **Oakland, Calif.**

Bids received by East Bay Municipal Utility District, room 104, 2130 Adeline St., Oakland, for furnishing a total of 51,000′ of cement mortar lined and coated electric welded steel pipe in 6.9″, 9.05″, 13.2″ and 17.8″ diameters; Prop. No. 2527. Bids opened December 13. BIDS RECEIVED: Armco Drainage and Metal Products Inc., 2180 Milvia St., Berkeley, $14,123 (6,000′ of 6.9″), $36,244 (12,000′ of 9.05″), $37,116 (9,000′ of 13.2″), $130,581 (24,000′ of 17.8″); Southern Pipe & Casing Co., Box C, Azusa, no bid, no bid, $37,860, $133,101.
RM 12-21. Previous report 11-30

★STORM DRAINAGE— **Oakland, Calif.**

Award to Prodanovich Inc., 750 81st Ave., Oakland, $19,986, by Alameda County Board of Supervisors, Court House, Oakland, for construction of a storm drainage line in Zone 2 of flood control district, involving installation of 300′ of 18″ reinforced concrete pipe in the vicinity of Clare St. and Vincent Court. Five bids were submitted.
RC 12-21

★PIPE CONDUIT— **Oakland, Calif.**

Award to McGuire and Hester, 796 66th Ave., Oakland, $201,046, by City Council, City Hall, Oakland, for the construction of a pipe conduit in portions of 28th St., Ettie St., and San Pablo Ave. from Ettie St. to West St., in Oakland. Bids opened November 29. OTHER LOW BIDS: Prodanovich Inc., 750 81st Ave., Oakland, $238,126; John H. McCosker, Inc., 1501 Eastshore Highway, Berkeley, $246,223.
RM 12-21. Previous report 11-23

TESTING REACTOR— **Pleasonton, Calif.**

The Atomic Energy Commission has directed that a public hearing be held regarding the proposed issuance of a permit to the General Electric Company for construction of a testing reactor at the company's Vallecitos Atomic Laboratory in Alameda County, Calif.

General Electric proposes to build a pressurized water reactor with a maximum power of 30,000 kw. (heat) to provide experimental facilities capable of irradiating fuel elements and components of nuclear power plants at high neutron fluxes. The company describes the proposed reactor as a major tool for use in fuel element development and environmental testing. The company expects to complete the reactor during the period June 1958 to January 1959. RM 12-21

●RAILROAD BRIDGE—
Sacramento, Calif.

Bids will be opened 10:30 a.m., January 29, by the State Department of Water Resources 1730 24th St., Sacramento, for the construction of an 880′ railroad bridge over the North Fork of the Feather River. Contractors will be asked to bid on either a steel truss or reinforced concrete type span. The bridge will cross the forebay reservoir at the Pacific Gas & Electric Company's Las Plumas powerhouse, just east of the 8,800′ railroad tunnel now under construction. This is part of the project to relocate the Western Pacific Railroad Company tracks around the Oroville, Butte County, reservoir site of the Feather River Project. RC 12-21

★STATE HIGHWAY PROJECTS—
Sacramento, Calif.

Awards announced by California Division of Highways, 510 Public Works Bldg., Sacramento, on the following highway construction for which bids were opened December 4.

S-SJ-5-B,STKN—Grade and pave about 5.1 mi. with plantmixed surfacing on untreated base and existing pavement, and construct one bridge and two culverts, between Richards Ave. and Charter Way, San Joaquin County. AWARD: A. Teichert & Son, Inc., 1931 Stockton Blvd., Sacramento, $693,442.

IV-SM-237-SBR—Furnish and install traffic signal, flashing beacon and highway lighting systems at Sneath Lane and at San Bruno Ave. in San Bruno on Junipero Serra Blvd., San Mateo County. AWARD: R. Flatland, 1205 Harrison St., San Francisco, $30,966. PB 12-21. Previous report 12-7

●STATE HIGHWAY PROJECTS—
Sacramento, Calif.

Bids will be opened 2 p.m., January 8, by California Division of Highways, 510 Public Works Bldg., Sacramento, on the following highway construction. Plans with state highway engineer at above address.

BUTTE COUNTY—Grade and surface for 5.1 mi. to construct the initial two lanes of a future four-lane expressway between Union School and State Highway Route 21 (Oroville-Richvale Road), U.S. Highway 40 south of Oroville. Estimated cost $850,000.

CALAVERAS COUNTY—Grade and surface to widen a two-lane highway, including some realignment, for approximately 5.9 mi. on two sections between Murphys and Big Trees, State Sign Route 4. Estimated cost $555,000.

SANTA CLARA COUNTY—Construction of channelization at King Road and Capitol Ave. and installation and modification of traffic signal systems and highway lighting, State Highway Route 115 (Alum Rock Ave.) in and northeast of San Jose. Estimated cost $180,000.

SOLANO COUNTY—Construction of a retardation basin, concrete spillway and approach road at Pennsylvania Creek near the Octo Inn, U.S. Highway 40 near Fairfield. Estimated cost $55,000.

MARIN COUNTY—Grading and surfacing of the yard area and construction of two metal buildings, a loading ramp and timber bumper at the Manzanita Maintenance Station at the intersections of State Sign Route 1 and U.S. Highway 101. Estimated cost $63,000.
RM 12-21

▲STATE HIGHWAY PROJECTS—
Sacramento, Calif.

Bids received December 18 by California Division of Highways, 510 Public Works Bldg., Sacramento, on the following highway construction.

III-NEV-37,38-D,A—About 8.8 mi. to be graded and surfaced with concrete pavement and plantmixed surfacing to provide a four-lane, divided highway; 11 bridges to be constructed; highway lighting, steel sign structures, and a truck scale house with attendant facilities to be constructed or installed, near Truckee between 1.4 mi. west of junction routes 37 and 38 and 0.5 mi. west of Boca, Nevada County.

LOW BIDS: Fredrickson & Watson Construction Co. and Watson Construction Co., 873 81st Ave., Oakland, $7,620,605; McCammon-Wunderlich Co. and Wunderlich Construction Co., Box 359, Palo Alto, $7,884,076; R. A. Westbrook and Morrison-Knudsen Co., Inc., 411 W. 5th, Los Angeles, $7,926,645.

IV-C.C—1255—Grade about one mi. of highway and pave with plantmixed surfacing over untreated base, and construct a concrete and structural steel bridge on Wilbur Ave. over Sante Fe Railroad near Antioch, Contra Costa County.

LOW BIDS: G. R. Pollock, 636 S. Serrano Ave., Los Angeles, $347,635; Bos Construction Co., 1035 Grayson, Berkeley, $347,325; Pacific Co., Berkeley, $349,276.

IV-SCL,SCR-42,116-A,SAR,B—Revise existing drainage facilities between Saratoga and 5.7 mi. north of Boulder Creek, Santa Clara and Santa Cruz counties.

LOW BIDS: Walter F. Cozad, Sacramento, $21,491; Charles S. Moore, San Jose, $23,051; Edward Keehle, San Jose, $23,204.

BRIDGE APPROACHES

BIDS CLOSE 10:30 A. M., JANUARY 14

Portland, Oregon

NOTICE TO CONTRACTORS

SEALED BIDS will be received by the Board of County Commissioners of Multnomah County, Room 504, County Court House, Portland, Oregon, until 10:30 A. M., January 14, 1958, and then opened for furnishing West Approaches to the Hawthorne Bridge.

Specifications are on file with the County Clerk of Multnomah County, and copies thereof may be obtained at the office of the Roadmaster, 2115 S.E. Morrison Street. A deposit of twenty-five dollars ($25.00) will be made for the Bid Proposal and plans. This $25.00 dollars will be returned.

No bid will be received or considered by the Board of County Commissioners or any officer of such county unless the bid contains a statement of the bidder as a part of his bid that he will covenant, and it will be a condition of his bond, that in performing his contract he will pay and cause to be paid not less than the prevailing rate of wages as of the date of his bid in such county per hour, per day and per week for and to each and every workman who may be employed in and about the performance of his contract.

No proposal will be considered unless accompanied by a check payable to the Board of County Commissioners of Multnomah County, certified by a responsible bank, or in lieu thereof, a surety bond for an amount equal to ten per cent of the aggregate proposal. The successful bidder shall furnish a bond satisfactory to the Board in the full amount of the contract. The right is reserved to reject any and all bids.

Bidders must be prequalified before plans can be issued.

JOHN W. WEST,
Purchasing Agent.

6006—12-21, 28

SEWAGE TREATMENT PLANT PRIMARY UNIT

BIDS CLOSE 2 P.M., JANUARY 13

Klamath Falls, Oregon

NOTICE TO CONTRACTORS

Sealed proposals for furnishing materials and constructing the primary units of a sewage treatment plant for the City of Klamath Falls, Oregon, will be received at the Office of the Police Judge until 2 p.m. January 13, 1958, and thereafter will be publicly opened and read.

The proposed work includes a pumping station, primary settling tanks, digesters and control house for the sewage treatment plant.

The following approximate amounts for the principal items gives a general idea of the character and scope of the work:

Structural Excavation & Backfill 3,000 Cu. Yds.; Concrete, all classes, 1,655 Cu. Yds.; Reinforcing steel 220,000 Pounds. Furnishing & installing pipe & fittings, plumbing, heating, gas & electrical systems, and installing special equipment purchased by the City.

Plans, Specifications, Instructions to Bidders and blank forms of Proposal and Contract may be seen at the Office of the City Engineer or Recorder at the Klamath Falls City Hall or at the office of the Consulting Engineers, John W. Cunningham & Associates, 1112 Portland Trust Building, Portland 4, Oregon.

Copies may be obtained by qualified prospective bidders upon the receipt of cash or check in the amount of $25.00 made payable to the City of Klamath Falls. The deposit will be refunded in case a bona fide bid is submitted and the Plans and Specifications are returned in good condition. Otherwise the deposit will be retained.

Pre-qualification under State Laws is required. All proposals must be on the regular blank forms furnished with the Specifications and must be accompanied by cash or a certified check payable to the City of Klamath Falls in an amount equal to or exceeding five per cent (5%) of the total bid. A One Hundred Per Cent (100%) Corporate Surety Performance Bond will be required to guarantee the faithful performance of the Contract.

The right is reserved to postpone making the award for a reasonable length of time or to reject any or all bids, for good and sufficient reasons, or to accept the proposal deemed in the best interest of the City.

By order of the Mayor and City Council.

Dated at Klamath Falls, Oregon The 4th day of December, 1957.

Frank A. Blackmer, Police Judge

6004—12-14

STATE HIGHWAY PROJECTS

BIDS CLOSE 10 A.M., DECEMBER 31

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, December 31, 1957, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineer of the Department of Highways where they may be inspected.

Federal Funds have been allocated for items nos. 1 to 5 inclusive.

The improvements for which bids will be received follow:

1. Surfacing, Paving with Cement Concrete and Asphaltic Concrete, Constructing Cement Treated Base and Installing Illumination on 6.252 miles of Primary State Highway No. 1 in Thurston County, TROSPER ROAD TO MARTIN WAY, FAP No. I-001-2(55), involving about 7,270 cubic yards of Common Excavation and Borrow, 38,700 tons of Selected Roadway Borrow, 182,540 tons of Gravel Surfacing, 36,400 tons of Crushed Surfacing, 9,600 cubic yards of Top Soil, 340 tons of Asphalt Cement, 2,100 cubic yards of Crushed Cover Stone, 7,040 barrels of Portland Cement, 79,000 square yards of Cement Treated Base, 13,810 tons of Asphaltic Concrete, 172,560 square yards of Cement Concrete Pavement, 1,100 cubic yards of Concrete, 249,740 pounds of Steel Reinforcing Bars, 66,193 linear feet of Cement Concrete Gutter, 15,474 linear feet of Cement Concrete Curb, 51,511 linear feet of Cement Concrete Curb and Gutter, 4,422 linear feet of Asphaltic Concrete Curb, 3,995 linear feet of Precast Traffic Curb, 115 linear feet of Iron Pipe, 3,660 linear feet of Metal Pipe, 30,594 linear feet of Concrete Pipe, 16,743 linear feet of Beam Guard Rail, 1,332 Guide Posts, 1,040 square yards of Precast Concrete Slope Protection, 8 lump sum bids for Installation of Illumination Systems, a lump sum bid for Overhead Destination Sign Supports and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
2. Constructing a Steel Truss Bridge with Reinforced Concrete Box Girder Approaches on 0.210 mile of Secondary State Highway No. 1-A in Snohomish County, SNOHOMISH RIVER BRIDGE, FAS No. S-SG-0202(5), involving about 2,555 cubic yards of Concrete, 183,000 pounds of Steel Reinforcing Bars, a lump sum bid for Approach Spans Superstructure (about 1,860 cubic yards of Concrete and 510,500 pounds of Steel Reinforcing Bars), 1,593 linear feet of Standard Bridge Railing, 2 lump sum bids for Structural Steel (about 640,500 pounds), a lump sum bid for Cast Steel, 2,200 linear feet of Concrete Piling, 16,000 linear feet of Untreated Timber Piling, 4,700 tons of Loose Riprap, a lump sum bid for Air Beacon and other items.
3. Constructing a Steel Girder Bridge and Shoofly on Primary State Highway No. 1 in Clark County, N. P. RAILWAY UNDERCROSSING-YACOLT BRANCH, FAP No. IG-001-1(34), involving about 11,000 cubic yards of Common Excavation, 320 cubic yards of Ballast, 610 linear feet of Metal Pipe, 578 cubic yards of Concrete, 47,000 pounds of Steel Reinforcing Bars, a lump

sum bid for Structural Steel (about 233,000 pounds), a lump sum bid for Cast Steel, a lump sum bid for Ornamental Metal Railing and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.

4. Constructing Three Reinforced Concrete Box Girder Bridges on 0.019 mile of Primary State Highway No. 9 in Thurston County, PERRY CREEK BRIDGES, FAP No. F-007-5(10), involving about 3,500 linear feet of Concrete Piling, 570 linear feet of Standard Bridge Railing, a lump sum bid for Three Superstructures (about 710 cubic yards of Concrete and 199,500 pounds of Steel Reinforcing Bars) and other items.
5. Constructing a Precast Concrete Girder Bridge on 0.033 mile of a Pierce County Road, TAYLOR BAY BRIDGE, FAS No. S-0333(2), involving about 1,220 linear feet of Treated Timber Piling, 7.3 MBM of Treated Timber and Lumber, 49 Precast Concrete Deck Units, 16 Precast Concrete Bulkhead Units, 457 linear feet of Special Bridge Railing and other items.
6. Draining, Grading, Surfacing and Paving with Asphaltic Concrete and Cement Concrete on 1.798 miles of Primary State Highway No. 2 in Spokane County, JUNCTION PSH NO. 11 TO LATAH CREEK IN SPOKANE, a State Project, involving about 5,000 cubic yards of Unclassified Excavation, 3,260 cubic yards of Common Excavation, 25,180 cubic yards of Solid Rock Excavation, 9,500 tons of Crushed Surfacing, 37 tons of Asphalt Cement, 210 cubic yards of Crushed Cover Stone, 8,090 tons of Asphaltic Concrete, 9,920 square yards of Unfinished Cement Concrete Pavement, 4,530 linear feet of Cement Concrete Curb, 6,290 linear feet of Precast Traffic Curb, 10 cubic yards of Concrete, 360 linear feet of Metal Pipe, 2,460 linear feet of Concrete Pipe, 228 linear feet of Beam Guard Rail, 697 square yards of Cement Concrete Sidewalk and Driveway and other items.
7. Clearing, Draining, Grading, Surfacing and Paving with Asphaltic Concrete on 0.218 mile of Secondary State Highway No. 1-A in Skagit County, DUKE HILL BRIDGE VICINITY, a State Project, involving about 26,560 cubic yards of Common Excavation and Borrow, 2,074 cubic yards of Selected Roadway Borrow, Crushed Surfacing, Mineral Aggregate and Prime Coat Aggregate, 9 tons of Asphalt Cement, 530 tons of Asphaltic Concrete, 1,090 linear feet of Asphaltic Concrete Curb, 287 linear feet of Concrete Pipe, 70 linear feet of Metal Pipe, 10 Guide Posts and other items.
8. Draining, Grading and Surfacing on 21.769 miles of a Grant County Road, BLOCK 79 FEEDER ROADS, a State Project, involving about 19.3 miles of Grading, 23,900 tons of Crushed Surfacing, 1,786 linear feet of Concrete Pipe, 1,810 linear feet of Metal Pipe, 5,330 linear feet of Right of Way Fence and other items.

STATE HIGHWAY PROJECTS
BIDS CLOSE 10 A.M., JANUARY 7
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids, which were to have been received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, December 31, 1957, for the construction of improvements as listed below will not be received until 10:00 A.M. on Tuesday, January 7, 1958, and will then and there be opened and publicly read:

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal Funds have been allocated for items nos. 1 to 5 inclusive.

The improvements for which bids will be received follow:

1. Surfacing, Paving with Cement Concrete and Asphaltic Concrete, Constructing Cement Treated Base and Installing Illumination on 6.252 miles of Primary State Highway No. 1 in Thurston County, TROSPER ROAD TO MARTIN WAY, FAP No. I-001-2(55), involving about 7,270 cubic yards of Common Excavation and Borrow, 38,700 tons of Selected Roadway Borrow, 182,540 tons of Gravel Surfacing, 36,400 tons of Crushed Surfacing, 9,600 cubic yards of Top Soil, 340 tons of Asphalt Cement, 2,100 cubic yards of Crushed Cover Stone, 7,040 barrels of Portland Cement, 79,000 square yards of Cement Treated Base, 13,810 tons of Asphaltic Concrete, 172,560 square yards of Cement Concrete Pavement, 1,100 cubic yards of Concrete, 249,740 pounds of Steel Reinforcing Bars, 66,193 linear feet of Cement Concrete Gutter, 15,474 linear feet of Cement Concrete Curb, 51,511 linear feet of Cement Concrete Curb and Gutter, 4,422 linear feet of Asphaltic Concrete Curb, 3,995 linear feet of Precast Traffic Curb, 115 linear feet of Iron Pipe, 3,660 linear feet of Metal Pipe, 30,594 linear feet of Concrete Pipe, 16,743 linear feet of Beam Guard Rail, 1,332 Guide Posts, 1,040 square yards of Precast Concrete Slope Protection, 8 lump sum bids for Installation of Illumination Systems, a lump sum bid for Overhead Destination Sign Supports and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
2. Constructing a Steel Truss Bridge with Reinforced Concrete Box Girder Approaches on 0.210 mile of Secondary State Highway No. 1-A in Snohomish County, SNOHOMISH RIVER BRIDGE, FAS No. S-SG-0202(5), involving about 2,555 cubic yards of Concrete, 183,000 pounds of Steel Reinforcing Bars, a lump sum bid for Approach Spans Superstructure (about 1,860 cubic yards of Concrete and 510,500 pounds of Steel Reinforcing Bars), 1,592 linear feet of Standard Bridge Railing, 2 lump sum bids for Structural Steel (about 640,500 pounds), a lump sum bid for Cast Steel, 2,200 linear feet of Concrete Piling, 16,000 linear feet of Untreated Timber Piling, 4,700 tons of Loose Riprap, a lump sum bid for Air Beacon and other items.
