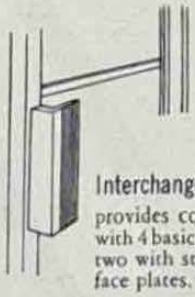
A few thoughts on church decoration
The architect and commercial structures

Now—Kawneer is the first to offer adams-rite MS (maximum security) deadbolt as part of the standard door program

The MS deadbolt is the strongest, most compact deadlock yet devised for narrow-stile aluminum doors. It retains as much bolt within the lock stile as is projected. Thus it bridges the opening with a laminated bar of steel. This rigid construction makes forced entry impossible without complete destruction of the door channel itself.



ONE BASIC DOOR

with hardware for every need

The new Kawneer narrow-stile door has all the qualities of a "custom-made" product. Welded construction is used to insure maximum strength with slim, attractive lines. Deep etch alumiliting and no exposed screws assure continued good appearance. The wide selection of hardware provides great flexibility of design. See Sweet's $\frac{16a}{Kaw}$ for complete information.

Interchangeable Hardware provides complete flexibility with 4 basic push-pull groups, two with standard or custom face plates.

Panic Device by Kawneer is designed with fewer parts, a bar shaped to fit the hand and for lower cost.

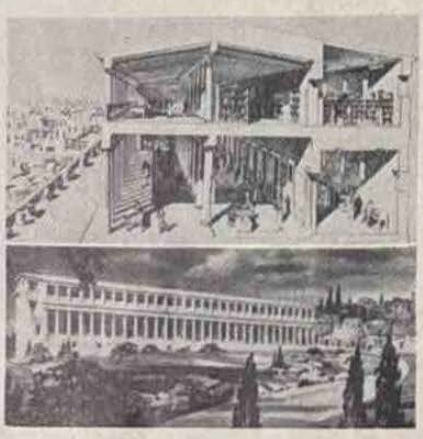
mushrooming practice

We know of at least one architect who is up on the life cycle of mushrooms. In designing the first scientific mushroom plant on the West Coast for Campbell's, John S. Bolles of San Francisco had to solve a number of problems in approaching an age-old industry. He had to plan a building that could be easily maintained and would resist rapid deterioriation, since mushrooms require high humidity and constant replenishment of fertilizer; and the plant also had to be accessible to a constant water supply to keep the mushrooms moist.

At any rate, a mushroom farm is now being built at Gazos Creek near Half Moon Bay, Calif., consisting of concrete structures for the growth of the mushrooms, a large compost pad for the mixture of fertilizer and a concrete shed to store topsoil.



not too tired

The various AIA chapter publications which come across our desk each month not only are informative but often provide a chuckle or two and remind us that architects really are human! As one piece of evidence, we quote from the December issue of "Inland Empire Architect," edited in Spokane by Norm Sylvester.

"A retired architect we know recently went to an auction and was the successful bidder (25c) on a bushel basket of miscellany—crockery, cutlery, Christmas ornaments and a large book FUN TO HUG which had caught his roving eye and prompted the bid. Having arrived home he inspected his motley acquisitions and was about to settle comfortably down with the book when he opened its cover and saw the full title: Encyclopaedia Britannica. Fun to Hug. Vol. 7.

when in greece

Modern engineering techniques and Rilco glued-laminated wood members are helping to restore the Stoa of Attaloa, one of the most beautiful buildings of ancient Greece and a symbol of its art and learning. In the year 267 barbarians plundered and destroyed the building and time covered the ruins with earth. Since excavation began 25 years ago, more than 60,000 items dating from 6,000 B.C. have been found, including statues, vases, metallic pieces and whole structural members. Now the original timber roof beams are being simulated by members designed and manufactured by Rilco at Albert Lea, Minn.

heard that song before

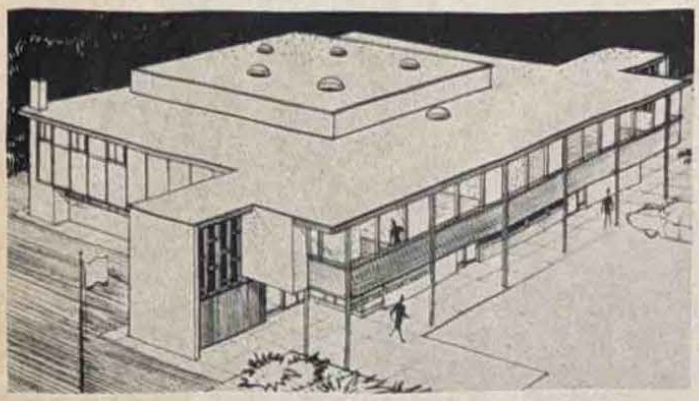
Addressing a conference of state medical associations a while back, a Kentucky doctor warned that physicians and medical societies must abandon "their ivory towers" and "in some instances their stuffed-shirt attitudes." To which architects and engineers will say "amen."

american art abroad

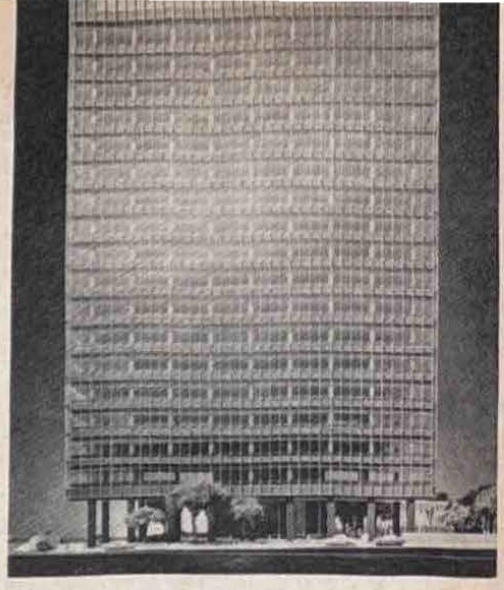
Anyone who is acquainted with the annual International Design Conference at Aspen, Colo., will be interested to learn of the activities of Herbert Bayer, an artist who is currently engaged in completing several architectural projects at the Institute of Humanistic Studies, where the design sessions are held. His exhibit including 250 items in the fields of painting, typography, graphic design, color work, murals, exhibition design and architecture opened in Nurnberg last fall and is touring Munich and other West German cities before moving on elsewhere in Europe.

"The German people are deeply interested in learning how art and design in America have progressed since the late 1930s," comments Bayer, who became consultant at Aspen in 1945 at the invitation of Container Corp. chairman Walter P. Paepcke. "For many years they were closed off from all contact with the outside world of art and a new generation has grown up that knows little about what has been happening in America."

A native of Austria, Bayer studied and taught at the Bauhaus in Germany, coming to America in 1938 when the Nazi darkness closed down.



job-seekers' note

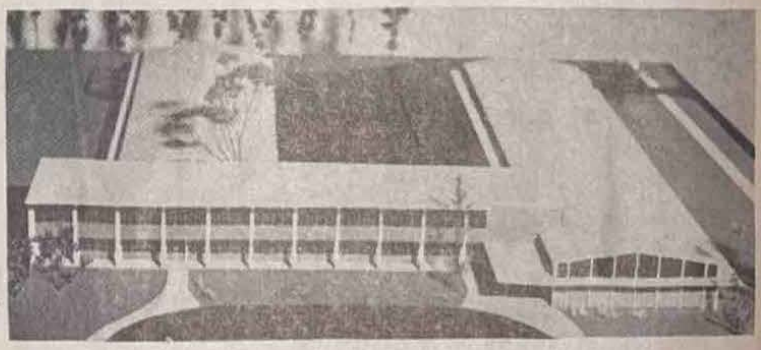


A London architect insists that West Africa is an "architect's paradise" because that area has virtually no deep-rooted architectural traditions. "These countries can develop a harmonious, exciting architectural expression that will assure them a place in modern design," says he.

PERSPECTIVES

by Pacific architects

TERRITORY OF ALASKA will soon have new U.S. courthouse, postoffice and office building in Kodiak. Two-story structure is being constructed on solid rock, with postoffice occupying entire first floor. Judicial offices, library, commissioner's office, etc., will take up second floor, whose cantilevered areas create covered walk to postoffice below. Exterior walls are reinforced concrete at first floor level, porcelainized panels on upper level street front. Architect: Robert Hugh Ross of Seattle.



MODEL of new 20-story steel and glass building which will go up soon in downtown San Francisco as headquarters of Crown Zellerbach Corp. Project is planned as "the world's most modern office building." Target date for completion is mid-1958 and razing is now underway of nine structures in block bounded by Market, Battery, Bush and Sansome streets where new building will be erected. Architects: Hertzka & Knowles; associated architects, Skidmore, Owings & Merrill.

MODERNIZATION PROGRAM of existing six-story Kjos Building in Seattle will cost more than $500,000. Exterior street elevations will be refaced with new aluminum and porcelain enamel curtain wall facade, columns with ceramic veneer. Other new features: lobby, automatic elevator, city steam heating system and plumbing facilities. Architects: Bittman & Sanders.

ALL-WOOD RESEARCH CENTER shown in model will house Oregon Forest Products Laboratory and Forest Lands Research adjacent to Oregon State College at Corvallis. Two-story central area with offices and two wings will comprise 40,760 sq. ft. Materials will include t&g panel exterior walls, hardboard interior walls and glued-laminated arches. Architect: James L. Payne.

POLICE STATION to be built in North Hollywood, Calif., will be used as prototype for all stations throughout valley areas and outlying sections. City intends to construct identical building on other sites. Costing an estimated $450,000, 1½-story structure will have poured concrete walls, steel truss roof and exposed mosaic tile partitions. Architect: William Allen.

Building News - Trends - Views

PROJECT SCIENCE, a cooperative effort of management and labor groups, is playing a big role in the construction of a new Oregon Museum of Science and Industry in Portland. Actual start of the building is scheduled for February but in the meantime the Building and Construction Trades Council is coordinating labor donations and the Oregon Building Congress, representing management, is coordinating specifications and quantity lists of materials needed. Henry M. Mason of Henry M. Mason Co. will act as general contractor on a non-profit basis. Estimated value of the museum, to be built near the zoo under construction in Hoyt Park, is $492,000. (For photo of model, see PA&B January 1956).

BUILDING MATERIALS MANUFACTURERS have been given the green light to take over the Women's Housing Congress, initially sponsored by the Housing and Home Finance Agency. Exploring entirely new areas of family needs, the meeting will give women delegates an opportunity to express themselves on basic components used in good home building.

NUCLEAR POWER HAS BEEN GENERATED from an experimental atomic reactor in Lemont, Ill., the first under the civilian reactor-development program begun in 1954 by the Atomic Energy Commission. The first atomic power came five years ago at the Arco, Idaho, reactor. The Lemont reactor is of a different type.

SANDWICH PANELS may soon take the place of columns and other conventional supports in a number of different types of buildings. Edward Kuenzi, scientist at the U. S. Forest Products Laboratory, says that even though the load-bearing capacity of properly designed structural sandwich panels has been conclusively proved in tests, only the aircraft industry has taken full advantage of this fact to date. He adds, however, that the panels are bound to become more important in building because of the increasing need for cutting costs while maintaining high standards.

HOW THE AVERAGE PUBLIC SCHOOL AGES decade by decade is being developed through a research program at the University of Michigan. Schools considered "unsatisfactory" thus far have been so rated because of educational deficiencies, fire and structural hazards present, poor location or a site too small to meet future needs.

PROJECTS OF NOTE: A luxury hotel, a modern office building and a 600-car underground garage on the property will be built in San Francisco on a block bounded by Van Ness Avenue, Geary, Post and Franklin streets, which has involved the largest land lease deal in recent years in the Bay area. Jack Tar Hotels will operate the hotel, plans for which "have the best convention facilities I have ever seen," comments president E. C. Leach.

Los Angeles architects Pereira & Luckman are designing a $15 million research and development center to investigate problems of bringing a man-carrying satellite back into the earth's atmosphere from outer space. To be built in Wilmington, Mass., by Avco Manufacturing Corp., the center will provide administrative and scientific offices as well as laboratories and experimental facilities for over 1,500 employees. Window exposures are planned to afford an "airborne" view of pine trees in the surrounding woods, thus giving a sense of release from the building's confines.

AMERICAN CONCRETE INSTITUTE will hold its 53rd annual convention February 25-28 at the Statler-Hilton Hotel in Dallas. General sessions will be devoted to concrete design and construction, materials, prestressed concrete, lightweight aggregates and the annual research seminar.

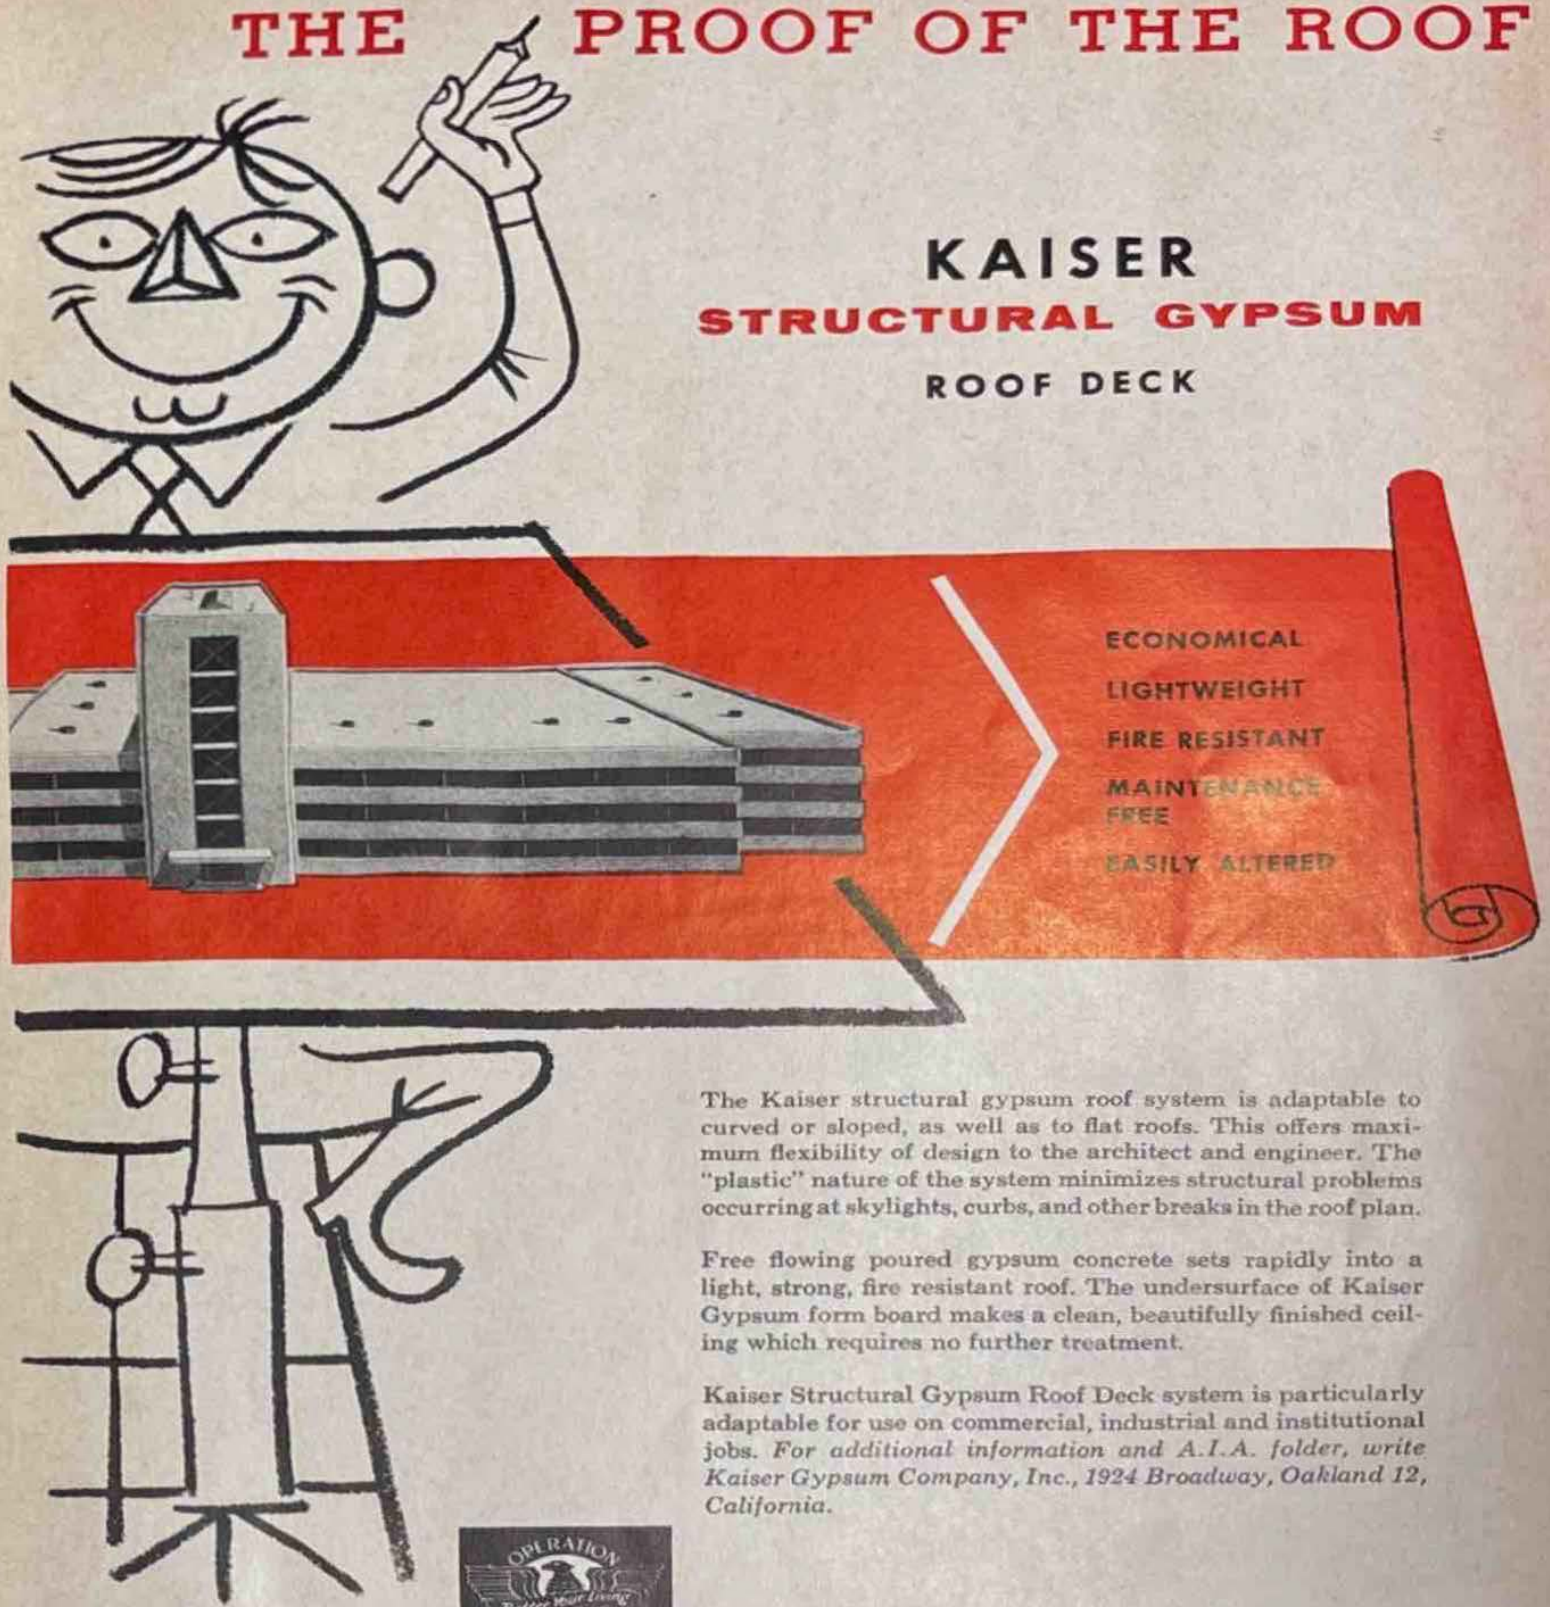
FORECASTERS SEE ANOTHER BANNER BUILDING YEAR FOR 1957

Construction forecasts for 1957 predict a new record level at least slightly ahead of last year. A rise in nonresidential work is expected to offset what every prognosticator sees as a drop in home building.

Dr. Robinson Newcomb, market analyst for the Structural Clay Products Institute, believes that physical volume of building will be about the same this year as in 1956 but construction activity will increase about 2% in current prices. He predicts 1,000,050 housing starts, a decrease of 50,000, and an increase of 4.4% in nonresidential construction.

R. Reese Myers, president of the Los Angeles Home Builders Institute, reports a trend among buyers toward larger homes in contrast to the demand for smaller ones which followed the end of World War II. A HBI survey conducted last year indicated that only one builder member is now constructing homes with two bedrooms and a convertible den. All other developments are offering residences with three or more bedrooms. And the National Association of Home Builders says it looks for higher price tags on house construction in 1957. The median price is expected to be about $15,000, an increase of about 3.4%.

The apparent dip in home building has spurred some manufacturers to action. National Gypsum Co., long primarily a producer of home building materials, is entering the commercial and industrial construction field this month "in a major way." Board chairman Melvin H. Baker says the move was dictated by the current home building decline which has cut into company sales. He predicted that by 1960 National Gypsum's nonresidential sales will account for more than 25% of the firm's total; today they account for only 12%. Several new products are being developed by company scientists.



A crest in commercial building is likely to become evident within 12 to 18 months, according to Walter E. Hoadley Jr., treasurer of Armstrong Cork Co. By that time much of the "catching up" caused by unfavorable depression, war and postwar conditions will have been accomplished.

One of the most optimistic outlooks comes from Mosaic Tile president Roy E. Jordan Jr., who forecasts a 5% increase in new housing starts, an ever-expanding modernization market, an estimated 33% rise in industrial construction and accelerated school, church and hospital programs.

His optimism about church construction is substantiated by the U. S. Department of Commerce which reports that a record $775 million spent in 1956 for new and enlarged religious buildings will be upped about 13% this year. That would make the total outlay a whopping $875 million. The Catholic Archdiocese of Los Angeles alone in the past two years has established 19 new parishes, an average of almost one every month.

Newcomb agrees with Jordan concerning the industrial, school and church programs but predicts that hospital and institutional construction may drop as much as 15% with smaller expenditures for both private and publicly sponsored facilities. He explains that new drugs and medical and administrative techniques are permitting more intensive use of existing facilities.

THE PROOF OF THE ROOF

The Kaiser structural gypsum roof system is adaptable to curved or sloped, as well as to flat roofs. This offers maximum flexibility of design to the architect and engineer. The "plastic" nature of the system minimizes structural problems occurring at skylights, curbs, and other breaks in the roof plan.

Free flowing poured gypsum concrete sets rapidly into a light, strong, fire resistant roof. The undersurface of Kaiser Gypsum form board makes a clean, beautifully finished ceiling which requires no further treatment.

Kaiser Structural Gypsum Roof Deck system is particularly adaptable for use on commercial, industrial and institutional jobs. *For additional information and A.I.A. folder, write Kaiser Gypsum Company, Inc., 1924 Broadway, Oakland 12, California.*

OPERATION Better Home Living HOME IMPROVEMENT

KAISER GYPSUM
COMPANY, INC.
LONG BEACH · OAKLAND · ANTIOCH · SEATTLE

WINNING ENTRY in 1956 Home of the Month competition, co-sponsored by AIA and Seattle Times: two-level residence perched high above Puget Sound, designed by Benjamin F. McAdoo Jr., AIA. At left, clients Mr. and Mrs. George H. Hage receive $500 check from Russell W. Young, Times advertising manager, while James J. Chiarelli, who heads Washington State chapter, AIA, and McAdoo, holding his sculptured award, look on.

Seattle names 1956 Home of Month

A two-level residence designed for a family of four by Benjamin McAdoo Jr., was named the winning entry in the 1956 Home of the Month competition, co-sponsored by the Washington State chapter, AIA, and the Seattle Times. The house overlooks Puget Sound in suburban Gregory Heights.

McAdoo was awarded a wooden relief sculpture done by George Tsutakawa, assistant professor of art at the University of Washington, while the clients, Mr. and Mrs. George H. Hage, received a $500 check from Russell W. Young, Times advertising manager. The presentations were made at a dinner in the Benjamin Franklin Hotel January 10. Michael Leder, contractor for the home, also was honored.

Of post and beam construction, the three-bedroom house has a masonry veneer exterior. The 1,350 sq. ft. include a master bedroom and bath, den, living room, family room and kitchen nook on one floor; and two bedrooms and bath, a recreation room and utility area on the lower level.

Other architects and firms who competed were James Ellison, Mithun & Nesland, Paul Hayden Kirk, Parr & Soldano, Ted LaCourse, A. O. Bumgardner, Wortman & Wilkins, Bell & Beatty. Lawrence & Hazen and Durham, Anderson & Freed.

Oregon picks architects for capitol mall planning

The Eugene firm of Wilmsen & Endicott has been retained to start work on a far-reaching master plan for Oregon's state capitol area development in Salem over the next 50 years.

Associated with the architects will be three consultants: Francis Keally of New York, who had a major part in designing the present capitol and planning the mall; Herman Brookman of Portland, FAIA, of the Capitol Planning Commission; and Lloyd Bond, landscape architect of Eugene.

The architects will project office space, parking and other space additions to the capitol group under a $50,000 contract, of which $10,000 will be used for state agency surveys and other contingencies.

Both graduates of the University of Oregon, Robert Wilmsen and Charles W. Endicott have done considerable school, courthouse and civic planning in Eugene. The State Board of Control indicated that about 35 architects or firms actively sought or showed interest in the contract.

AIA CENTENNIAL GETS UNDERWAY IN WEST

The centennial anniversary program of the American Institute of Architects will have its opening on a local level February 1 in Honolulu when the Hawaii chapter holds its annual dinner. Among the guests will be Donald Beach Kirby of San Francisco, director of the AIA's California-Nevada-Hawaii district.

And while New Yorkers will be dedicating a bronze tablet at 111 Broadway, site of the institute's founding, February 23, one of their members, Philip Johnson, will be addressing the Washington State chapter in Seattle.

Hi-fi, plastics exhibits set for Los Angeles

Indicating the tempo of the time are the high fidelity and plastics expositions which will be staged in Los Angeles within the next two months.

The High Fidelity Music Show will get underway in the Ambassador Hotel at 2 p.m., February 6, with more than 100 component manufacturers exhibiting products. In addition to a number of "firsts" to be introduced, a series of seminars will be conducted by specialists in the various component fields.

The American Institute of Architects will be among the groups participating in the show, sponsored by the Institute of High Fidelity Manufacturers.

Growing use of plastics in building will be pinpointed at the Pacific Coast Plastics Exposition March 18-21. About 100 national companies are expected to exhibit in Shrine Exposition Hall.

The show will be held jointly with the annual national conference of the Society of the Plastics Industry, Inc.

NAHB to hold Northwest meeting next month

A preview of the future in home construction, seen through new products and material displays, will be a special feature of the Northwest regional convention of the National Association of Home Builders to be held in Seattle February 14-17 at the New Washington Hotel.

The meeting will draw builders and their associates from Washington, Oregon, Idaho. Montana, Alaska and western Canada. Technical panel discussions, business problems and prominent speakers in the construction field will round out the program.

Steel manufacturer plans $25 million expansion

Bethlehem Pacific Coast Steel Corp. has announced a $25 million expansion at its Seattle plant, raising the annual capacity from 246,000 to 420,000 ingot tons.

During the next three years the company will install two 100-ton capacity electric furnaces, soaking pits and a 32-in. blooming mill. The furnaces, largest in the West, will replace five open hearth furnaces now in use.

Bethlehem Pacific president H. H. Fuller points out that availability of new grades and sizes, as well as larger quantities, should encourage the growth and diversification of construction and manufacturing industries of the Pacific Northwest.

Building permits for 1956 up $63 million

BUILDING PERMIT VOLUME in the five western states for 1956 topped the 1955 total by $63½ million. Based on reports from 116 key building permit agencies in California, Oregon, Washington, Montana and Idaho, the dollar volume reached $2,563,972,674, representing a 2½% increase over the $2,500,425,102 recorded the previous year.

On a percentage basis, Oregon showed the largest rate of increase, 7½%. The state's agencies reported a dollar increase of $10½ million. California with a $56 million rise was up 2½%, Idaho with a $½ million increase was up 2½% and Montana reported a bare $21,000 increase. Washington dropped $3¾ million for a 1% loss.

The picture was extremely spotty with just barely over half the agencies in each state recording increases. Agencies where dollar volume was up $5 million or more included Bakersfield, $5¾ million; Long Beach, $7¼ million; Los Angeles, $51½ million; Oakland, $8½ million; Sacramento, $8¼ million; San Bernardino County, $31¼ million; San Diego, $19½ million; San Diego County, $12½ million; San Jose, $17½ million; Santa Monica, $5½ million; Corvallis, $6 million; Seattle, $8 million; Spokane, $7 million; and Tacoma, $6½ million.

For the month of December, the five-state total was $172,130,312, a 15½% increase over the $148,758,551 in the same month of 1955. California gained $19½ million for a 16% increase; Oregon, $1¼ million for 22% increase; Washington, $5 million for 34% increase; Montana was down $1½ million for 75% decrease; and Idaho down $½ million for 33% decrease.

Following is a breakdown of building permits issued by several of the major agencies during December.

	DWELLING UNITS		COMMERCIAL & INDUSTRIAL		PUBLIC	
Portland	56	($ 627,270)	19	($ 941,000)	4	($ 213,250)
King County	222	(2,460,650)	34	(474,321)	2	(430,056)

SACRISTY WINDOW, Cathedral of St. Vibiana, Los Angeles, designed and produced by Judson Studios, which also produced window below.

"UNIVERSITY" WINDOW, Westwood Hills Christian Church near UCLA campus, designed by its pastor, Dr. Jesse Randolph Kellems. Valued at $15,000, it bears coats of arms of 96 educational institutions in 10 panels, beginning with first European university at Salerno. Soft light which enters 12x14-ft. window eliminates need for artificial illumination of balcony area of church.

Church decoration

by HORACE T. JUDSON, Judson Studios, Los Angeles

LET US ADMIT before we start that the ornament and color of the church present the most controversia subject matter confronting a building committee. A happy resolution of these functions will weld a churc together as nothing else will.

In this house of prayer, this house of God, we wil assume that the architect has offered a physically realisti solution to the needs of clergy, choir and congregation In the selection of ornaments, color, decoration and stained glass, we must augment the architecture and integrate the personality of the individual with God

For this purpose it is essential that the craftsmen in stained glass, wood, silver and color work with the architect to achieve a harmonious expression that will exemplify the highest corporate worship of the congregation

Fundamentally it is a matter of cooperation and thought rather than money that will lead to the happiest results. While we can not go into details of style and color, there are basic notes of which we must be continually cognizant.

First, I believe that the architect and all craftsmen concerned with the decoration of a church, from the walls to the altar, must lose their individuality to the extent that their cumulative effort will speak of the beauty of God, rather than their particular idiosyncrasies. This unity of effort can not help but reflect itself in the completed church.

As a church is seldom completed at the time of its erection with the richness of memorials and appointments the committee has envisaged in its completed planning, all details as to the ultimate in glass, silver and decoration must be prepared for and endorsed by the architect, clergy and committee as an expression of their faith and as a guide toward the worshipful beauty of the church.

To this end an ecclesiologist rather than an interior decorator should be retained or repeatedly consulted for such a man is well versed in the liturgy, history and symbolism of our church and can guide and direct the thinking of the committeemen along the lines of artistic beauty as well as aesthetics and good tastes.

In this way symbolism and color can be used for the most effectual reason, i.e., to stimulate and direct the worshippers' thoughts toward God. Otherwise, the colors become exciting or distracting and a sacred symbol becomes merely another decoration.

The question of color is basically controversial but I believe that as a general thing it is well to stay away from strong, earthy colors in the nave, the chancel and as mural decorations, including windows.

Further, it is well to make all color and pattern in the nave subservient to the richness and beauty of a well appointed sanctuary. The color and decoration of the sanctuary should in its set-apartness so beckon our hearts, our minds and our souls that all else in the church be subordinate thereto.

Bring a little outside inside

With Soulé Intermediate steel windows, you specify the opening dimensions, and we'll supply the exact windows you want. There's no limit to stock sizes with Soulé steel windows. And with our design-engineering service to help you with problems concerning materials, sizes and shapes, there's no premium cost either. Big bonus advantages include Western manufacture and installation by Soulé crews—on time! You deal with one major source for windows and installation, get maximum job protection and guarantee. Call or write your nearest Soulé office for details and specifications. Our sales engineers will gladly supply you with data for your files.

Seven West Coast churches get design recognition

AMONG the 18 churches cited for architectural excellence by the National Council of Churches in a nationwide competition conducted in 1956 are seven West Coast projects—four in Oregon and three in California.

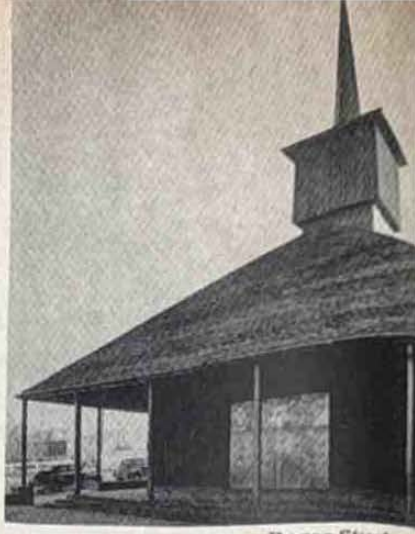
Limited to churches constructed since 1930, the winners were selected from a total of 72 nominated by 35 architects, educators, editors and clergymen who are members of the council's department of worship and the arts. Except for Eliel Saarien's Christ Evangelical Lutheran Church of Minneapolis, which was named most often by commission members, churches were not listed in order of preference.

Rev. Martin P. Halverson, director of the department of worship and the arts, states that most of the buildings selected were erected since World War II. "This indicates not only the increased amount of church construction but the growing maturity of design," he declares.

Pietro Belluschi, who now heads the School of Architecture and Planning at Massachusetts Institute of Technology, was associated with the four winning churches in Oregon. A great deal of his philosophy on church design is summed up in an article appearing in Church Property Administration for November-December 1949, excerpts from which follow.

"It has become increasingly apparent that even the conservative people are beginning to doubt the wisdom of blindly copying the historical styles and as rising costs have prevented their faithful reproduction, the decadence and lack of vitality of our present ecclesiastical architecture has become more and more apparent.

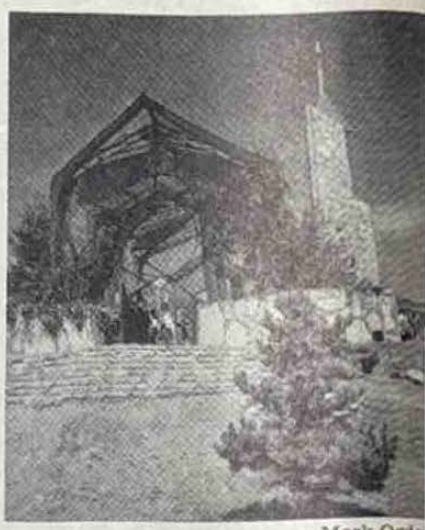
"But even if copying has led us into spiritual bankruptcy, freeing ourselves from the bonds of historical styles does not mean rejecting all past experience. The thoughtful architect will appraise the spirit which moved other ages, so that he may himself recapture such spirit, not by imitating but by truly understanding it, which means seeing the thousand ties which bind architecture to its own age. These ties of course include among other things — people, labor, costs, materials, etc.; to follow that road is indeed to be in the tradition.



"Then what is to be done about church architecture if we cannot find refuge in a sterile copying of the past? The answer does not rest in the mind of the few of us but in the very fabric of our society. It may be that after the destruction brought about by the next atomic war, our society will be able to resurge and have faith again in the perfectibility of Man as the living image of God. Many individuals have come to understand the predicament of our modern society, many architects have been baffled and impotent in their struggle to become again simple and believing; of these, only a handful have succeeded in recreating the atmosphere in which the religious man, the man who still deeply and humbly believes in God may worship Him in appropriate surroundings.

"In spite of the advantages and satisfaction accruing to the modern religious congregation by its advocacy of social advances, it must be admitted that to many persons the results of this course are the least rewarding in spiritual satisfaction.

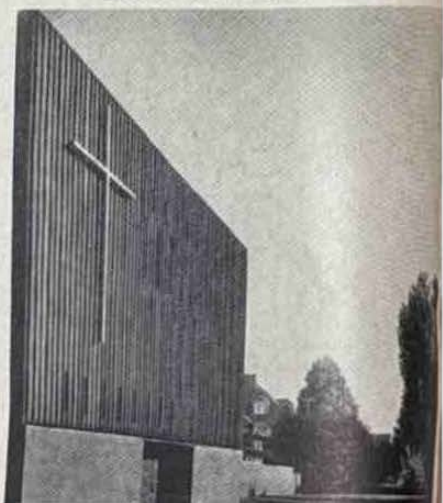
". . . The interest which a community shows in its church is dependent on the ability of the few to coax and corral funds from its members on the basis of social pressure; and in this case, the church becomes the poor man's club, and the parish hall kitchen becomes more important than the altar.



"Then, the number of conflicting denominations has tremendously weakened the church as a divinely mandated institution, and the time and wealth which a community can devote to construct its church could not possibly be compared with the wealth devoted to the same purpose in the middle ages where life revolved around the religious institutions. However, if we cannot erect great monuments, we may endeavor to create small temples, in a more human scale, designed in a sensitive and creative manner so as to produce the kind of atmosphere most conducive to worship. This then is our answer."

Central Lutheran Church, Eugene, Ore., 1954; Pietro Belluschi and Skidmore, Owings & Merrill, architects: designed as a singular rectangular volume. The severe lines of the brick and wood shell are relieved on the interior by the rhythm of the laminated wood arches supporting the roof. Set before a patterned brick wall, the pulpit, altar and font declare the Lutheran concept of the means of grace.

Roger Sturtev



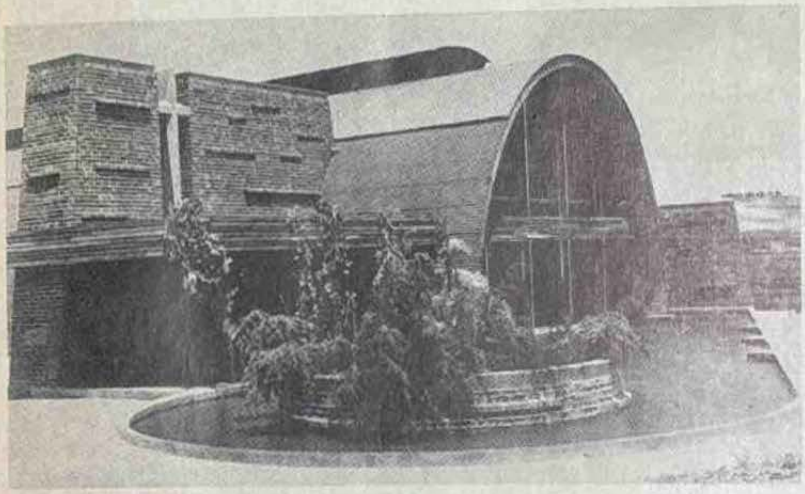
Zion Lutheran Church, Portland, 19
Pierto Belluschi, architect: construct
of brick and glass curtain walls
closing a laminated wood frame.
doors of hammered copper sheeti
the brass altar frontal and chancel cr
and candelabra are set against
simple elements of the structure.

Mark Ogde

Wayfarer's Chapel (Church of the Ne
Jerusalem), Palos Verdes, Calif., 195
Lloyd Wright, architect: relates religio
of life in a clear, positive way an
reaches out to include all things an
all people. Sections of glass set in a
interesting wood frame form the wal
and roof.

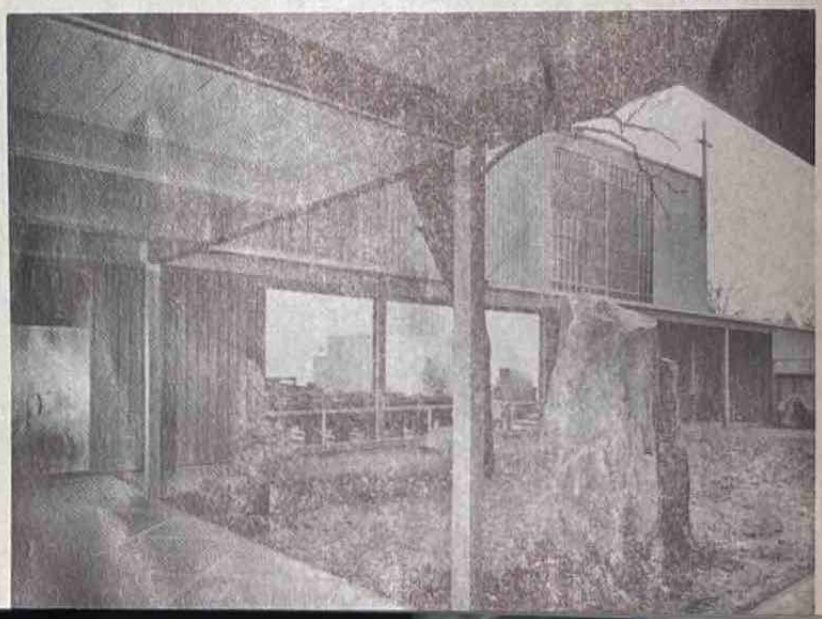
Northwest Photographic Illustrator

Central Lutheran Church, Portland, 1952; Pietro Belluschi, architect: expresses both its setting in the Pacific Northwest and the Norwegian Lutheran origin of the congregation. The nave and chancel areas are differentiated through their architectural forms. On the exterior, the brick shell enclosing the altar is balanced by the predominantly wooden rectangular nave; within, the brilliantly lighted chancel contrasts with the dark nave.

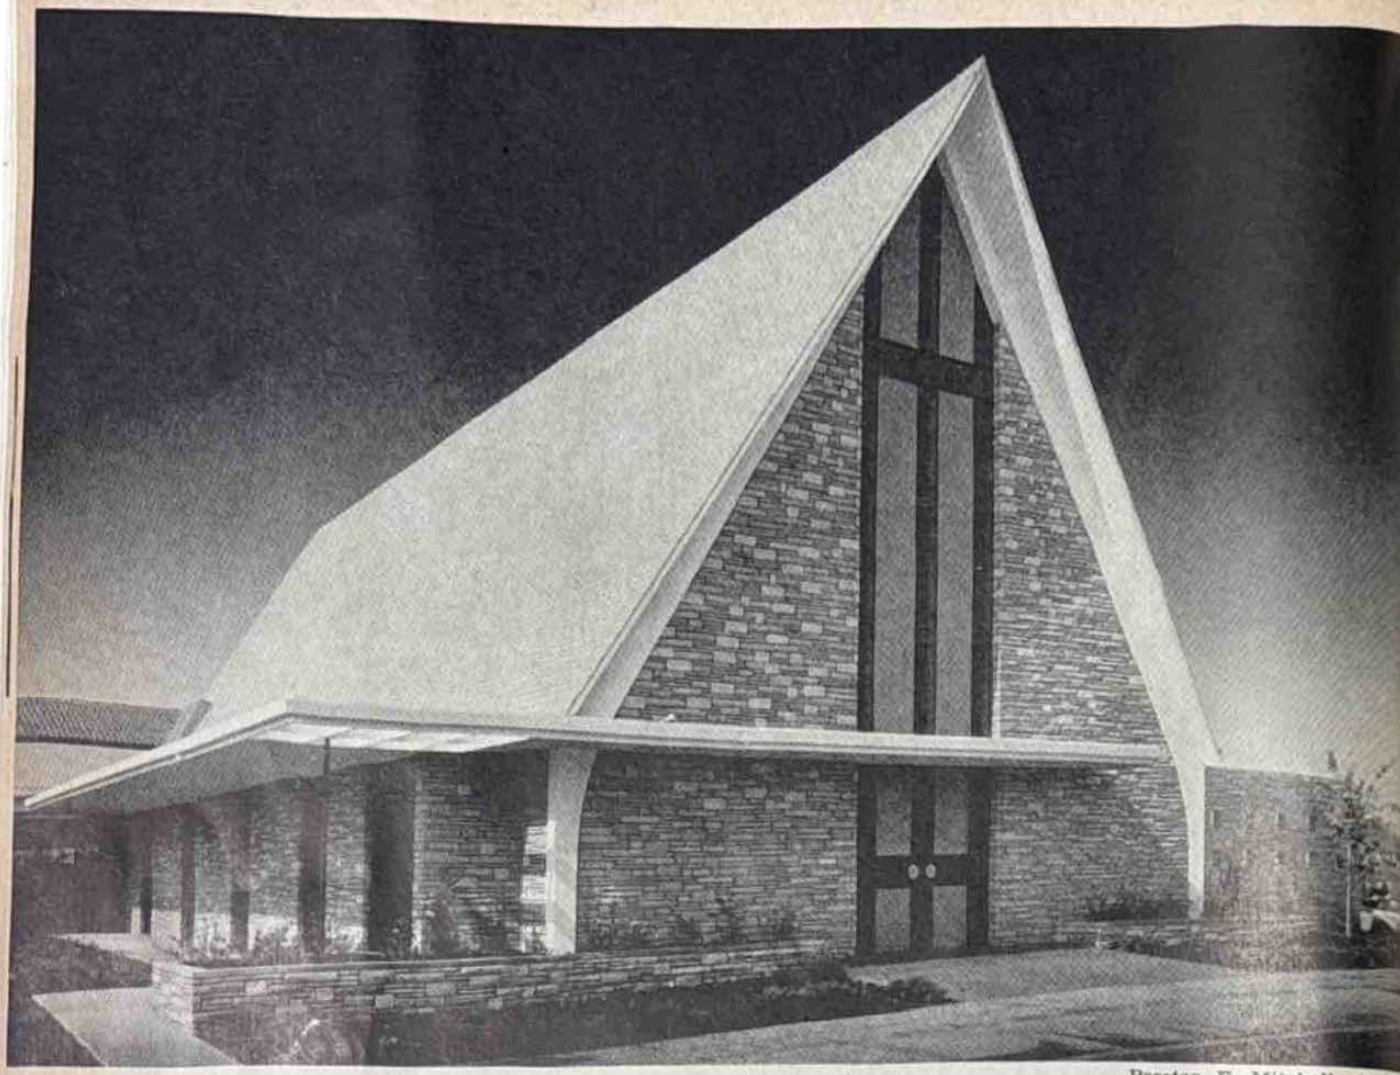


K. E. Richardson

Julius Shulman



St. Matthew's Episcopal Church, Pacific Palisades, Calif., 1953 (remodeled); A. Quincy Jones and Frederick E. Emmons, architects: designed as a temporary structure to house a relocated congregation, using parts of the old church building. Its significance lies in the transformation of an older building to a new site and to a developing complex of buildings. The steel cross contrasts effectively with the frame structure and the brick retaining walls.



San Lorenzo Community Church, San Lorenzo, Calif., 1941; Bruce Goff, architect: represents an imaginative exercise of architectural skill within the limitations of war-time military construction. Originally built as a chapel for a U. S. Navy Seabee base, using the quonset hut as its basic element, the architect "substituted a ceiling clerestory for the usual, elbow-height ribbon strip." The quonset shape was given new character by the brick forms which define the entrances and planting beds.

Julius Shulman

First Presbyterian Church, Cottage Grove, Ore., 1951; Pietro Belluschi, architect: conveys the idea of purpose rather than richness. Humble materials and simple details give the church an architectural embodiment of the historic traditions and way of worship of the Reformed branch of Protestantism.

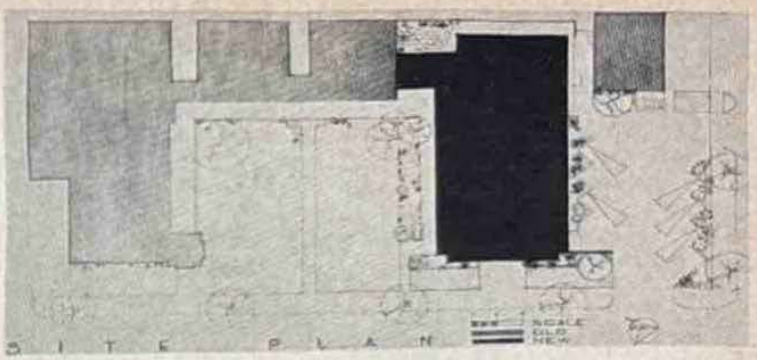
HAROLD B. ZOOK, AIA, Architect

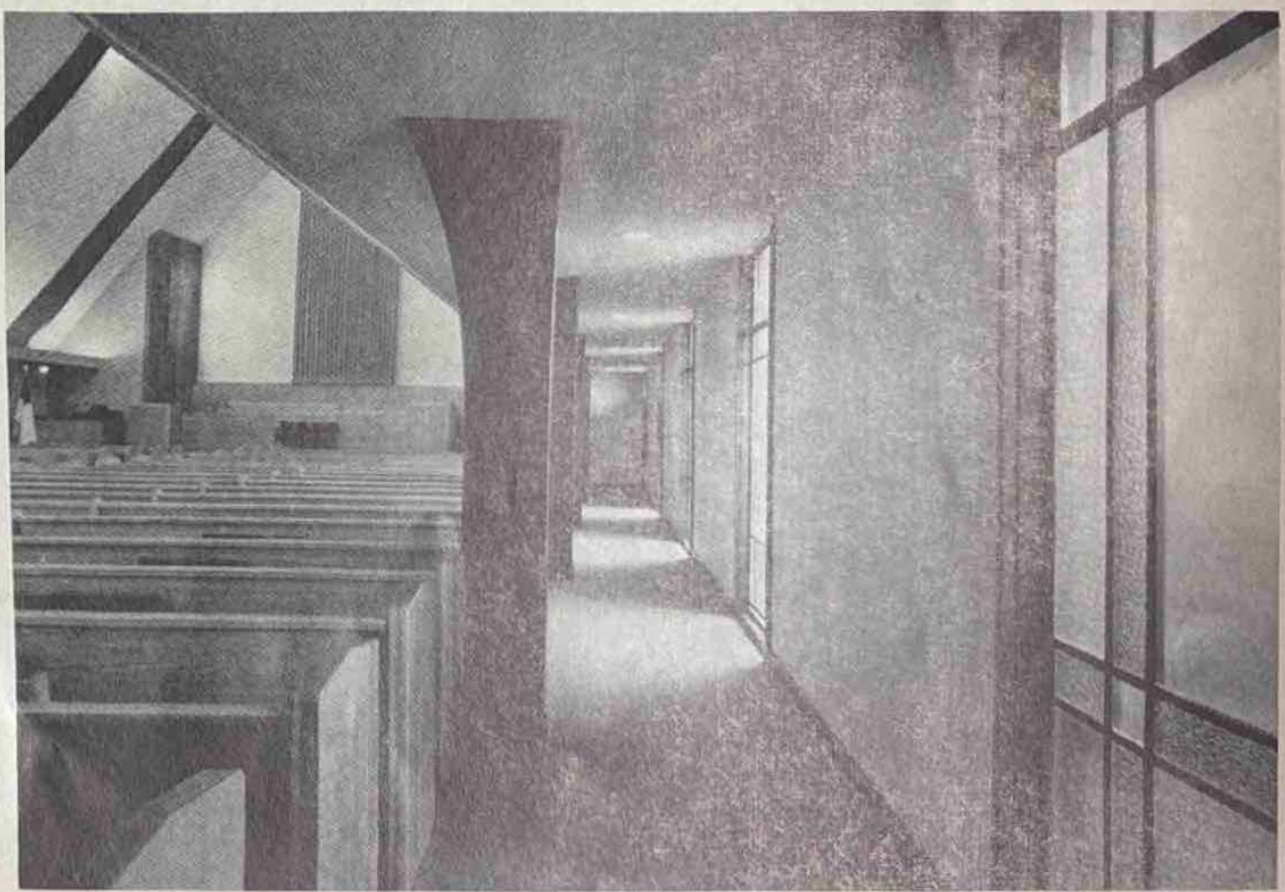


JONES & GLOEGY, General Contractors

AN INCREASED CONGREGATION made the existing sanctuary of the church inadequate to provide a proper place of worship. It was decided to construct a new sanctuary, minister's study, choir dressing rooms and toilets to supplement existing facilities. The old sanctuary was converted into a social hall.

The construction cost of $67,896 (excluding furniture, landscaping and draperies) exceeded the building committee's budget by less than $3,000. For this figure the architect gave the parishioners a church with a seating capacity of 500, including a choir of 36, and 5,726 sq. ft. of usable floor space. The wood frame structure has a masonry veneer exterior with a composition shingle roof to match the existing building. Devoid of frills, the sanctuary is highlighted by laminated arches between 3-in. thick exposed red cedar sheathing and by stained glass windows.

Acoustical plaster and acoustical tile provide sound control. Other sound devices: six earphone plug-ins at pews; an organ speaker and amplifier behind a panel at the rear of the choir; and a microphone at the lectern and pulpit with speakers on the lower section of the trusses.



OUTLINE SPECIFICATIONS

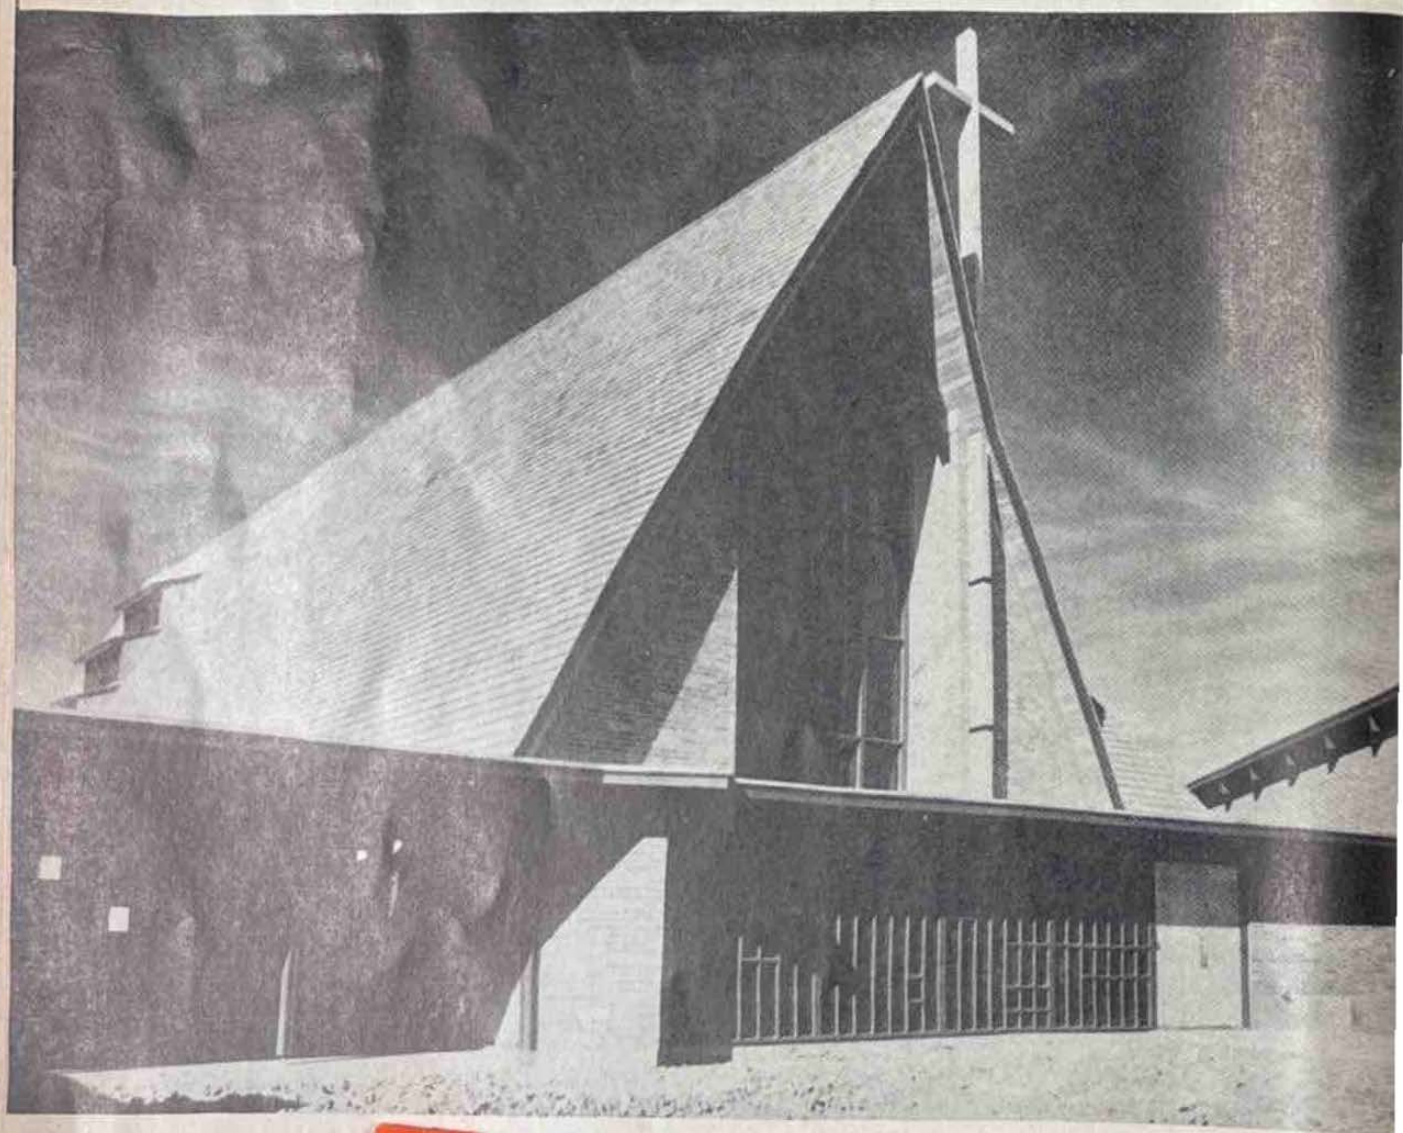
Type of Construction: Frame.
Exterior Walls: Precast concrete Slumpstone veneer.
Roof: Composition shingle.
Floors: Cement.
Windows: Stained Glass.
Interior Walls: Acoustical plaster and acoustical tile.
Ceiling: 3-in. thick exposed red cedar sheathing between laminated arches in sanctuary.
Sound: Six earphone plug-ins at pews; organ speaker and amplifier behind panel at rear of choir; microphone at lectern and pulpit with speakers on lower section of trusses.
Lighting: Direct between laminated arches controlled by power-operated dimmer switch; indirect from light trough in sanctuary.
Heating: Radiant through copper tubes embedded in concrete floor; fan exhaust system behind panel at rear of choir.
Air Conditioning: 1-hp. unit in minister's study.
Total Area: 5,952 sq. ft. (including 226 sq. ft. ½-area porches).
Total Cost: $67,896.
Date of Completion: 1955.

LIGHT TROUGH in sanctuary provides indirect illumination; direct lighting behind laminated arches is controlled by power-operated dimmer switch.

St. Gabriel's Church, Chinook, Montana

BECAUSE of the severity of Montana's northwest winds, a plan was evolved so that the church faces the southeast, with a narthex vestibule extending the length of the front of the church and connecting to the rectory and parish hall. The entire plant has been placed at an angle to provide a protective arm for arriving parishioners. The architects intended to exemplify in the unity of the buildings, the unity that should exist in man's life: an interrelation of his home, church and social life.

Windows were omitted behind the altar since this is the focal point of worshippers, in accord with Roman Catholic liturgical requirements. Clerestory windows, glazed in varicolored cathedral glass, were introduced to the left of the sanctuary so that daylight might dramatize the altar. This area is further emphasized by triple crosses of red cedar combined with a statuary bracket shelf.



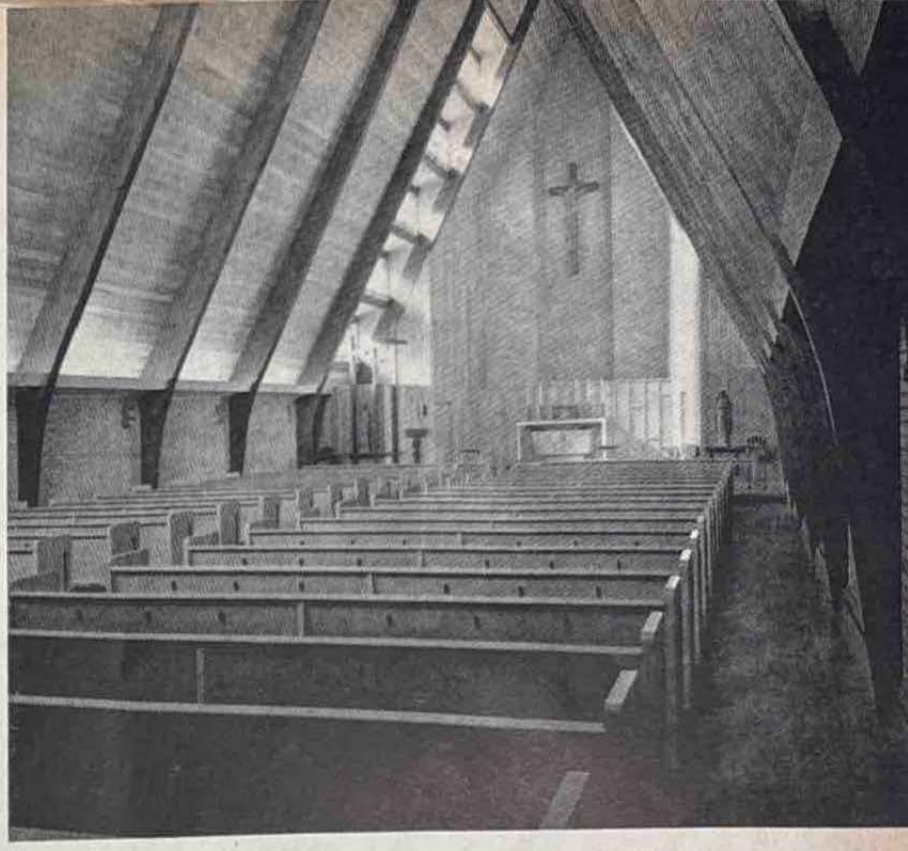
The red cedar is repeated in the driftwood stained bevel siding, while the ambulatory screen is of fir framing members and plywood. Interior side walls are buff brick and each bay is angled slightly for acoustical control. Glue-laminated arches are stained walnut contrast with the unfinished roof deck.

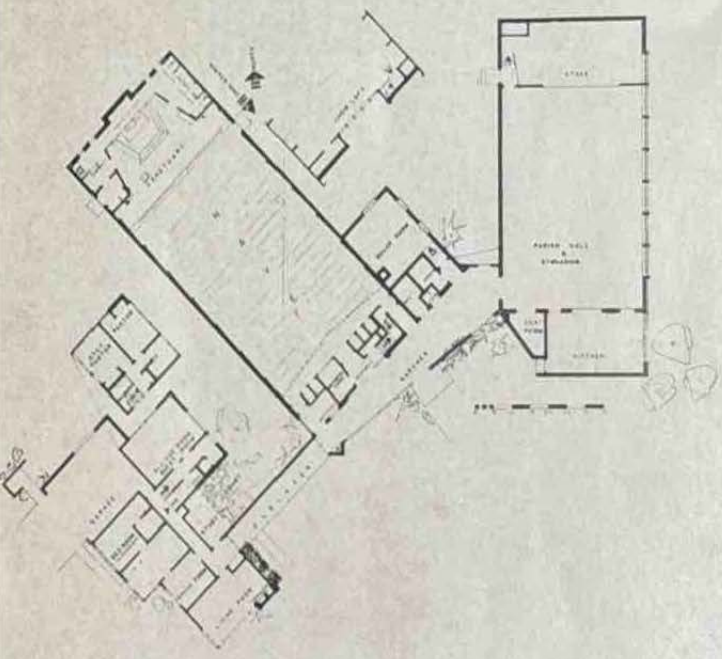
There are no windows along either side aisle. large choir window in the rear and the narthex w both glazed with heat-absorbing glass, provide f candles well above the average, without use of artifi illumination. The narthex wall has crosses worked the fenestration, with accents of ecclesiastical red green.

When weathered, the red cedar exterior siding large cross above the church entrance will harmon naturally with the brown brick exterior, touched off a deep blue-green painted trim. The church proper been shingled with thick-butt red cedar, while the lo pitched roofs are covered with built-up composition an aluminum type coating.

A future parochial school will be added, connect directly to the narthex by means of a corridor runni parallel to the left wall of the parish hall. The narth then, as planned, will make it possible to use all facilit of the plant without the necessity of going out in inc ment weather.

De Mier Studio pho





SCRIBED by jury of architects as "powerful its simplicity, with excellent use of ma- ials," church also was cited for lighting of ctuary and well planned ventilation.

OUTLINE SPECIFICATIONS

(Church only)

Type of Construction: Frame.

Exterior Walls: Brick, red cedar and heat-absorbing glass.

Roof: Stepped-back dormer type with thick-butt red cedar shingles.

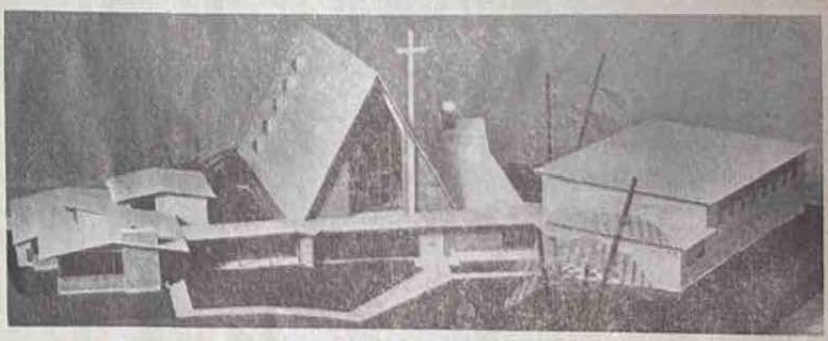
Floor: Concrete slab covered with asphalt tile under pews, vinyl tile in aisles and sanctuary.

Windows: Stopped in wood and steel; clerestory in sanctuary.

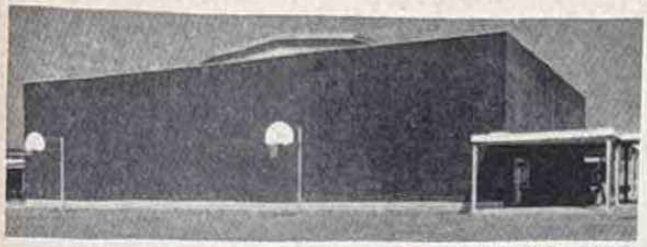
Interior Walls: Buff brick and red cedar bevel siding, applied vertically and driftwood stained.

Ceiling: Glue-laminated arches between unfinished roof deck.

Special Equipment: Ambulatory screen of fir framing members and plywood; ventilated and acoustically treated confessionals.



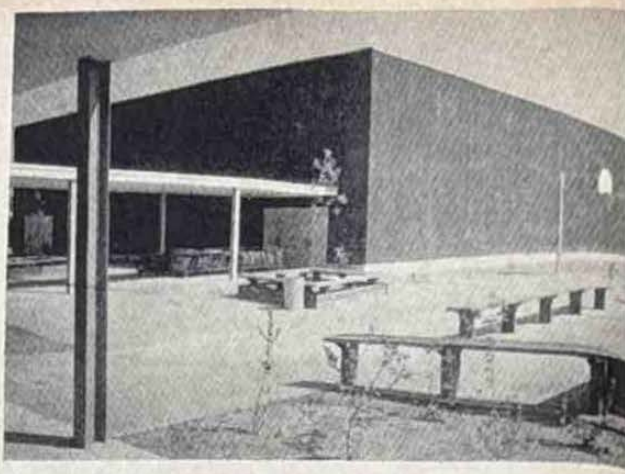
Lighting: Both incandescent and fluorescent fixtures; indirect in wood troffers in nave; spotlight on altar.



Heating: Combination of fin-tube radiation and warmed fresh air passed under floor through ducts.

Cost per Square Foot: $18.50.

Date of Completion: September 1955.



CHURCH OFFICIALS feel soaring lines contribute desirable spiritual quality to both exterior and interior of nave. However, a problem was posed in combining low-pitched roofs of adjacent structures with steep roof of church, particularly true in roofing sanctuary clerestory fenestration. Many schemes, all too heavy, were tried before arrival at stepped-back dormer roofing.

COVERED BREEZEWAYS connect gymnasium to adjacent locker rooms. Paved outdoor play area is used for eating lunch on warm sunny days.

FIVE STEEL ARCHES support roof which has clear span of 96 ft. Cle story windows open at each end to provide cross ventilation.

Low cost gymnasium with quality features

Los Lomas High School Gymnasium, Lafayette, California

ERNEST J. KUMP ASSOCIATES, Architects; HAS & ROTHSCHILD, General Contractors

AVERAGE per-square-foot-cost of constructing high school gymnasium buildings in and around Contra Costa County has been $14.25. This one, built in 1951 for the Acalanes Union High School District, was designed at $8.25 per square foot by the architects, who firmly believe in long-range planning "as the basis for good school construction at low cost."

Total cost, including corridors and 120 pilings sunk 50 ft. into the earth, was just under $100,000. The actual building cost amounted to $76,000; the remaining $23,500 was necessitated by special conditions of the construction, among them filling in a small lake which was located on the site.

The 9,000-sq. ft. gymnasium is built on concrete footings. The full spring type floor is supported on stringing which in turn is supported on sleepers over woo floor joists.

Exterior is of two layers of redwood, 1½-in. t&g with layers of asbestos building paper between to pro vide a one-hour fire rating for the wall. Covered breeze ways connect the gymnasium to adjacent locker roor buildings.

The full rigid frame structural design permits earth quake and lateral loads to be taken by the steel arche and the fully supported spring floor prevents any direc contact with the ground, thus eliminating shock an giving a floating action effect.

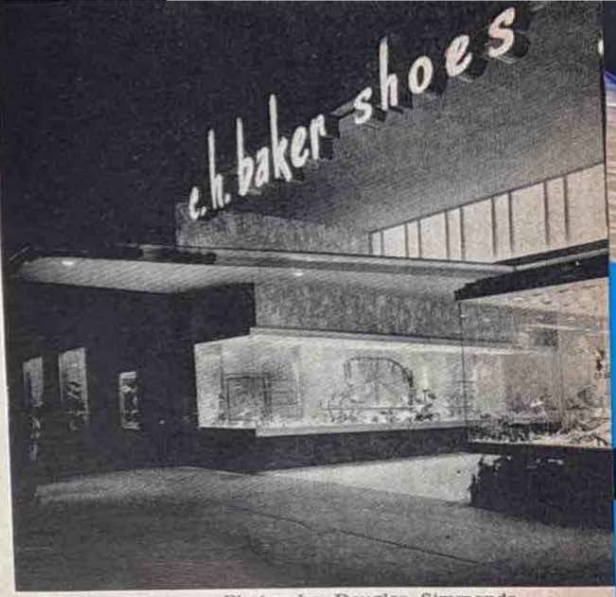
The arch roof of the single-piece skylight with 32x48-ft. span is one of the largest ever constructed on th Pacific Coast.

A bit of fancy helps spark shoe sales

C. H. Baker Co.
Beverly Hills, California

TO DISPLAY MERCHANDISE as prominently as possible, the entire store has been opened up, giving a feeling of actually being in the salesroom as one approaches the entrance from the street; to give the woman shopper a feeling of comfort and ease, a playlike atmosphere has been attempted.

The walls are serpentine shaped, the ceiling is coved in an irregular outline and an almond shaped display case in the center continues the curved line motif. A marble screen, extending from floor to ceiling, highlights the rear of the sales area. Several small display cases and a planter are attached to the screen, composed of different types of marble laid in a pattern similar to that used for flagstone.



To further dramatize the merchandise on display, a specially designed chandelier hangs from the center of the cove in the ceiling. It is made of iron strips wrought in curves with a lamp at the end of each of the 16 arms. Principal lighting is from fluorescent tubes in 4-ft.-square glass covered fixtures, supplemented by irregularly spaced spotlights and special fixtures over the display cases which use a great deal of glass shelving and mirror backing.

The entrance to the store, a 40x120-ft. single-story structure, is through a 21-ft. vestibule, flanked by clear plate glass windows, with the bulkheads and the area above the windows faced with Norwegian rose marble. A steel frame marquee with metal lath and plaster underside and aluminum facia extends over the sidewalk. The vestibule floor is of of Venetian terrazzo.

Chairs and stools in the sales area are of wrought iron, Walls are covered with an off-white sculptured paper, the ceiling is pink and the cove is turquoise. Pink is repeated in the carved rug floor covering. All of fixtures were custom designed and the woodwork is hardwood, some of it ebonized.

OUTLINE SPECIFICATIONS

Type of Construction: Reinforced concrete.
Exterior Walls: Masonry faced with brick; bulkheads and area above windows faced with Norwegian rose marble; steel frame marquee, aluminum facia and truss panels of Plexiglas over entrance.
Roof: Truss with Rockwool insulation.
Windows: Aluminum.
Doors: Kawneer aluminum, exterior; hardwood, interior.
Floors: Concrete slab covered with linoleum, terrazzo and carpeting in sales area.
Interior Walls: Plaster (papered in sales area) and wood trim on metal lath partitions.
Ceilings: Acoustical plaster.
Air Conditioning: Refrigerated gas.
Total Area: 4,600 sq. ft.
Total Cost: $81,000.

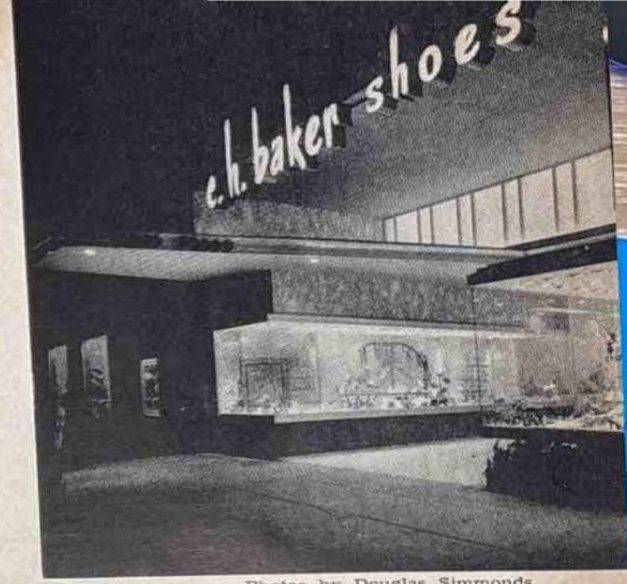
Beverly Hills, California

TO DISPLAY MERCHANDISE as prominently as possible, the entire store has been opened up, giving a feeling of actually being in the salesroom as one approaches the entrance from the street; to give the woman shopper a feeling of comfort and ease, a playlike atmosphere has been attempted.

The walls are serpentine shaped, the ceiling is coved in an irregular outline and an almond shaped display case in the center continues the curved line motif. A marble screen, extending from floor to ceiling, highlights the rear of the sales area. Several small display cases and a planter are attached to the screen, composed of different types of marble laid in a pattern similar to that used for flagstone.



To further dramatize the merchandise on display, a specially designed chandelier hangs from the center of the cove in the ceiling. It is made of iron strips wrought in curves with a lamp at the end of each of the 16 arms. Principal lighting is from fluorescent tubes in 4-ft.-square glass covered fixtures, supplemented by irregularly spaced spotlights and special fixtures over the display cases which use a great deal of glass shelving and mirror backing.

The entrance to the store, a 40x120-ft. single-story structure, is through a 21-ft. vestibule, flanked by clear plate glass windows, with the bulkheads and the area above the windows faced with Norwegian rose marble. A steel frame marquee with metal lath and plaster underside and aluminum facia extends over the sidewalk. The vestibule floor is of of Venetian terrazzo.

Chairs and stools in the sales area are of wrought iron, Walls are covered with an off-white sculptured paper, the ceiling is pink and the cove is turquoise. Pink is repeated in the carved rug floor covering. All of fixtures were custom designed and the woodwork is hardwood, some of it ebonized.

OUTLINE SPECIFICATIONS

Type of Construction: Reinforced concrete.
Exterior Walls: Masonry faced with brick; bulkheads and area above windows faced with Norwegian rose marble; steel frame marquee, aluminum facia and truss panels of Plexiglas over entrance.
Roof: Truss with Rockwool insulation.
Windows: Aluminum.
Doors: Kawneer aluminum, exterior; hardwood, interior.
Floors: Concrete slab covered with linoleum, terrazzo and carpeting in sales area.
Interior Walls: Plaster (papered in sales area) and wood trim on metal lath partitions.
Ceilings: Acoustical plaster.
Air Conditioning: Refrigerated gas.
Total Area: 4,600 sq. ft.
Total Cost: $81,000.

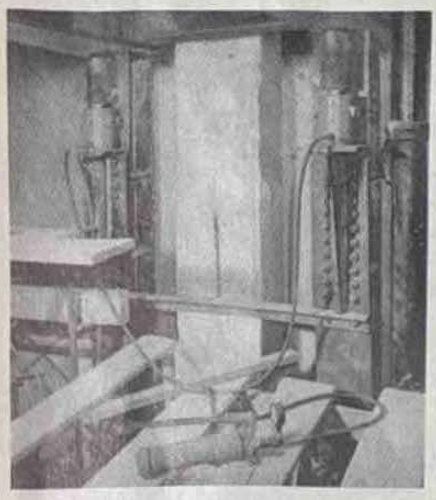
One way to remove load-bearing pillar

TWO OF FOUR GRILLAGE BEAMS sunk into basement floor to distribute end loads of new 40-ft. girders.

• Portland hotel dining room gets new look

REMOVAL of a 300-ton load-bearing pillar in the basement of Portland's Imperial Hotel has provided a 40-ft. free-span dining room, with structural changes costing about $20,000. The objectionable pillar was in the center of the 40x40-ft. Green Room, making seating arrangements difficult and full utilization of the area impossible.



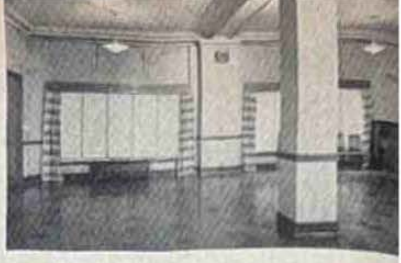
The architects and a consulting engineer determined that it would be necessary to replace the pillar with two 40-ft. long by 4-ft. deep structural steel beams. While these beams were being fabricated, four heavy H-sections, welded up from heavy plate, were placed under the basement floor as a grillage to distribute the weight now relocated to the ends of the 40-ft. beams. Two 12-in. steel columns were installed to support each end of the two beams. Windows in the side of the building were removed so the girders could be brought in from an adjacent street.

EACH OF SIX-TON BEAMS is slid into building directly from flatbed trailers. This was done at 1:30 a.m., since area is very busy during normal hours.

Because the hotel is located in a congested downtown area, it was necessary to move each of the six beams to the building site at 1:30 a.m. The city police cooperated in closing the street to general traffic. The large beams were slid horizontally, directly from the flat trailers into their approximate final position with the help of an auxiliary crane.

Using a system specified by the consulting engineer, two pairs of 100-ton Simplex hydraulic jacks were then placed on steel jacking brackets which had been bolted onto the new vertical support columns. Each pair of jacks was operated by a single pump to assure equal load distribution. After jacking each end of the beams until they were deflected the calculated amount, steel shims were placed between the vertical columns and the bottom of the girders. The connections were completely bolted and jacks and jacking brackets removed.

JACKING BEAMS into final position is accomplished by two pairs of Simplex, 100-ton hydraulic jacks, each pair controlled by one pump to assure equal pressure.



NEW BEAMS are completely installed and old column severed.

After waiting 48 hours for settlement, the old composite steel and concrete pillar was cut loose. Movement of the building was found to be less than 1/32 in. There was a slight upward reaction of the old column following as it was relieved of the load.

Architect for the project was James Coppedge of Acker, Coppedge & Jacobsen, Los Angeles. Structural engineer was Art James of James & Honey, consulting engineers, Portland. Gunderson Bros. Engineering Corp., Portland, fabricated the two 40-ft. beams. General contractor was The J. C. Milne Construction Co., Portland, with Paul G. Bintz, superintendent, in charge of actual construction.

ROOM IS FINISHED with plastic and cork wall coverings and suspended ceiling of acoustical plaster.

DINING ROOM, located in basement of Imperial Hotel, before remodeling. Composite steel and concrete pillar in center supported 300-ton load.

Can we save our downtown areas?

A letter to Los Angeles city officials from Adrian Wilson, AIA

ASKING the question "Can we save our downtown areas?" implies some doubt that it can be done. The dynamic expansion of our country, and particularly the southern California region, during the past 15 years makes it imperative that we **do** "save" our downtown areas. It is so imperative to the future of our economy that we can no longer think in terms of possible failure to succeed.

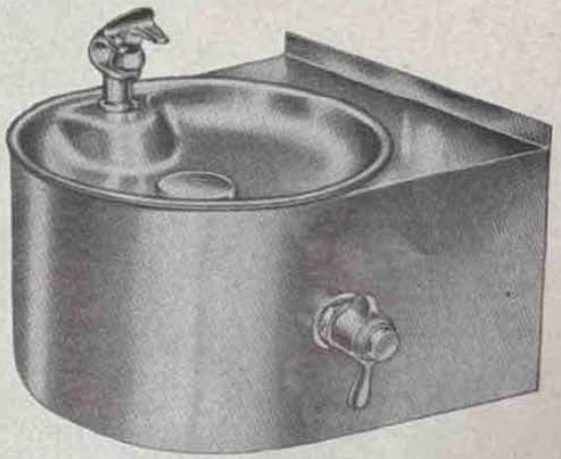
In consideration of saving our urban centers, however, it is also important that city planners, civic leaders and finincial institutions view the problem in its proper perspective. No longer can we think of saving an urban area simply as a job of rehabilitation, of face lifting, or of making the city more beautiful. These are important portions of the large picture, but in themselves and by themselves they serve only to prolong the agonizing demise of the the city.

We are now well in the third quarter of the 20th century, and it should seem obvious that the city, as we have grown up with it, must change its physical facilities in order to meet the competition from its suburban satellites. To do this, the city must engage in wholesale soul-searching. It must study its needs with all the scientific tools now at its command; it must become accustomed to the fact that half-measures will not solve its problems.

The fact that many American cities have viewed the post-war exodus to suburbia with fear only serves to indicate that they have not met the challenge with a **plan.** In the swift-moving economy of mid-century America, a large corporation cannot survive without forecasting the trends of its markets and meeting the challenges head-on with aggressive planning and action.

The city of mid-century America is faced with exactly the same challenge of the corporation: the city must retool, it must build a new plant that meets and surpasses the competition and it must leave room in its forecasting and planning to make even further drastic changes in the future.

Our cities must be redesigned, reshaped and reorganized in bold, sweeping steps by civic leaders of vision. With our present competence in the field of research, we can use scientific methods to accurately determine the necessary new shape of our future cities—in combination with the aesthetic techniques traditionally employed. We cannot eliminate the artistic in creating our new city, but the needs of the new city are such that the scientific method is an urgent ally.



In Los Angeles, probably the most notable example of the dispersal of populations (and the consequent building of satellite business centers), we have what I believe is the most exciting opportunity to develop a vital and vibrant new downtown business and cultural center. Because of the vastness of the suburban development in southern California, the city of Los Angeles can, with foresight and vision, reorganize itself into providing services and goods which will become an attraction to the huge surrounding population.

The pattern of those services and goods may have to be altered, but such alteration is natural in the retooling process. Organized planning is the only way this can be accomplished. It can be done and successfully.

Leading Designs...
for Leading Architects

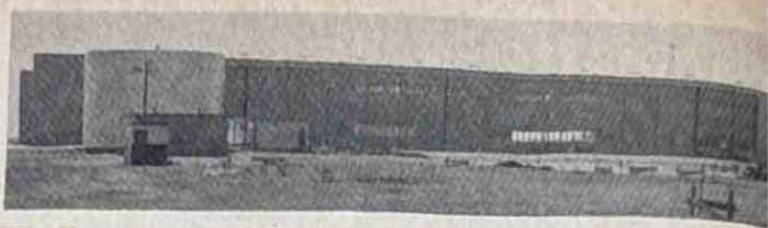
MODEL 7W. Strikingly new in lifetime stainless steel. Flowing curves completely hide supply and waste fixtures... blend with modern styling.

"BUBBLER FEATURES"...

- Raised fountain head: angle stream, shielded, anti-squirt ... prevents direct mouth contact.
- Self-closing automatic stream control valve.
- Vandal-proof socket flanges prevent fixtures from being turned.

HAWS provides drinking water facilities of the finest design for today's architectural planning. Handsome wall and pedestal models meet every design requirement—indoors or out, industrial or institutional! Up-to-the-minute styling by skilled craftsmen make HAWS Fountains the leaders!

All HAWS Fountains contain outstanding sanitation features, insuring a lifetime of unequalled protection. Find out what HAWS drinking water facilities can do for your projects!



Write for the new HAWS Catalog—today!

HAWS DRINKING FAUCET CO.

1443 FOURTH STREET (Since 1909) BERKELEY 10, CALIFORNIA

HAWS also features Electric Water Coolers, Deck-Type Fountains, HAWS Emergency Eye-Wash Fountains, and KRAMER Flush Valves for every make of plumbing fixture.

STEEL FRAME is erected (l.) for double-cantilever hangar at Castle AFB, capabl housing five B-36s at one time.

Air Force makes building news in California

Double-cantilever hangars are match for bombers they hous

FACED with the expansion of its long-range bomber operations to maintain air superiority, the U. S. Air Force has discovered one of its most urgent needs is to provide adequate space for the giant aircraft's upkeep and repair. There are other requirements too, such as storage and office space.

Designers and members of the engineering division of the Air Force Installation Representative, South Pacific Region, with headquarters in San Francisco, have teamed up with the Corps of Engineers, South Pacific Division, to create a new type of hangar.

Known as the double-cantilever type and costing from $2-4 million to build, these new hangars are now going up throughout the Southwest, with several being built in California.

Castle AFB at Merced, Travis AFB at Fairfield, Mather AFB at Sacramento and March AFB at Riverside each have one. Future plans include the double-cantilever hangar at Edwards AFB near Muroc Dry Lake and another at George AFB at Victorville.

The hangars are the equivalent of from three to six stories in height, with shop areas on both ground and upper floors to provide space for armament, parachute, electronics and hydraulics shops, tool rooms, classrooms, washrooms and other facilities.

Hangar doors, reaching up the full height of the structure, provide as much as 64 ft. or 6½ stories of clearance for the aircraft to enter or leave the hangar.

A major design requirement is that the interior have as few obstructions as possible, with an absolute maximum of clear, usable work space, dictating development of the cantilever type roof construction with no supports along the outer walls.

The frame consists essentially of a pair of longitudinal trusses supported on columns at their ends. Perpendicular to the longitudinal trusses are the cantilevered roof trusses, which project in some instances as much as 93 ft. from their supports.

"Many different combinations of framing were studied," explains Col. Edwin M. Eads, the Air Force Installation Representative who was responsible for providing design criteria and supervising completion of the projects.

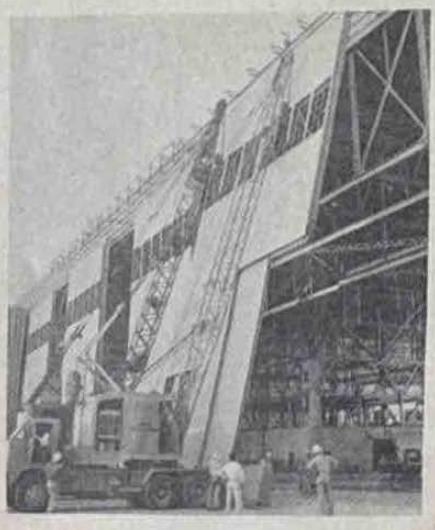
"During the planning period," Col. Eads continues, "we found that the double-cantilever design, utilizing steel for the structural frame, would not only be the most functional but also the most economical.

"When the general conformation and arrangement of the trusses had been decided on," Col. Eads points out, "the advisability of using continuous trusses for the longitudinal members was then studied.

"The character of the soil at most of the Air Force bases where this type of construction was being considered made it probable that we would face some settlement which would be unequal. This led to our choice of sim trusses for the main members."

This choice proved particularly plicable at Travis where a spec soil problem was encountered. T soil in this area consists of an alluvial deposit made up principa of alluvial silt and black clay adobe. A total of 20 test borings w made over the area by the contract Zoss Co. of Portland and Hollywo

The results of these test borin and four bearing tests conducted the approximate elevation of the b tom of the footings disclosed soil co ditions which varied greatly in distance of 100 to 200 ft.



One end of the hangar and a par ing apron at that end were built sandstone. However, at the other e the engineers had to excavate throu the alluvial deposit. The depth of t excavations varied, but at one of t corner foundations it was necessa to excavate to a depth of 8 ft.

A study of comparative costs the use of piling led to the choice simple reinforced concrete found tion slabs. The main foundations a 22x22 ft. and the smaller footings a 14x14 ft.

The floor slab was poured befo the steel was erected, thus simplif ing the problem of supporting t falsework for erection. The falsewo was simply skidded from place place as needed.

The floor, which is 14 in. of concre in the main hangar and 16 in. dee at the hangar aprons, was poured a checkerboard fashion. The parkin aprons were poured in lanes exten ing perpendicularly out from t hangar and running down a slig slope to provide the maximum drainage.

Twenty-foot lanes were poured one time, using regular runway co struction equipment to do the job. total of 2,500 tons of asphalt su facing and 16,000 c. y. of concret

MOBILE CRANES lift big door panels, each 6½ stories high, into place. When doors open, each panel rolls back into pocket along side wall.

pavement went in around the hangar.

Erection of the hangar started on one side and progressed toward the opposite. After the office and shop section was completed, the first two main columns were set in place and erection of the main trusses began.

The main trusses were shop assembled before shipment and final assembly was completed in place in the field.

First the trusses were erected complete and then they were riveted, starting from one end and working toward the other.

After the first pair of main trusses were completely riveted, except for the bottom chord connections, erection of the cantilever trusses began, again proceeding from one end of the hangar toward the opposite end.

The transverse roof trusses were connected across the main truss to increase stability and provide sway bracing. Each transverse truss was located at the panel point of the main trusses.

At each pair of columns at the ends of the main trusses, the portal or basic sway bracing was installed, designed to take the total wind load on the building. The arches are 100 ft. across, with steel column supports.

The cantilever trusses, as received on the jobsite, weighed 35 tons and were hoised 65 ft. 10½ in. into the air by Moore Dry Dock Co. of Oakland, using three 20-ton cranes to lift the huge cantilever trusses into place.

The supporting columns are spaced so their existence will least interfere with the maneuverability inside the hangar of the aircraft. These supporting columns are, for the most part, near the center of the hangar.

Detailing of the columns and trusses followed standard practice for bridge construction.

The doors, which occupy the full length of the hangar on two sides, are the rolling type, running on railroad tracks cast in the floor and supported on guide rails installed in the top of the hangar.

There are 12 door panels or leaves on each side of the hangar, six on each side of the openings. When the doors open, the leaves roll back into a pocket along the side wall.

The leaves are 30 and 35 ft. wide and 64 ft. high. Each door is operated by an individual motor and is controlled by push buttons at the ends of the hangar.

The three mobile cranes used on the job were capable of picking up one of the leaves and "duck-walking" it to the side of the hangar and setting it in place. It required only 2½ days to install the huge doors at Travis.

The entire hangar, including roof, sides, ends and doors, is of a corrugated metal, insulated with asbestos and the overall size of the building is 270x350 ft. with a height of 66 ft.

SIDING is installed on huge hangar of corrugated metal insulated with asbestos.

To protect the $2,500,000 hangar and the $6-8 million worth of aircraft which it houses against fire, a $200,000 deluge system was installed, with a 750,000-gal. reservoir and four pumps with a capacity of 2,500 gpm.

The water can be dispersed through sprinklers installed in the hangar ceiling.

The double-cantilever hangar at Castle AFB is the largest such hangar in California, capable of housing and providing maintenance for five huge B-36 bombers. The enormity of this hangar can be visualized if one realizes that it requires nearly one acre to simply park a B-36.

Built-in telephone outlets are a big selling point in today's home

says H. J. HARLOW, Jr., Harlow Construction Company, Sacramento, California

Homes built by the Harlow Construction Company have telephone outlets located for maximum convenience—in rooms where the family spends a lot of time. Concealed telephone wiring is another feature that adds to the livability and value of Harlow homes.

To successful builders like Mr. Harlow, who are setting living standards in the Pacific West, complete telephone planning is as basic as adequate electrical wiring. Pacific Telephone is always ready to help you plan built-in telephone facilities. Just call us and ask for our *free* Architects and Builders Service.

Specify built-in telephone facilities —a sign of good planning

The role of the structural engineer

'Partnership between the architect and structural engineer can look forward to an even more amazing era of design concept than has ever been known'

by ELMER E. GUNNETTE and S. CHARLES DEARSTYNE

NINETY PER CENT of man's life on earth was spent in the Stone Age. The structural sciences are roughly about 2,500 years old. In this early period the structural designer, researcher and builder were combined in one person whom most historians refer to as an "artesan."

"The artesans of this period," writes one historian, "knew the characteristics of a given material from long personal experience with that material. He was a builder as well as a designer. By his training, by his eye and by his personal knowledge of materials he provided structural adequacy yet knew little or nothing of stresses or strains."

Most of the engineering and architectural sciences can be traced back to this same artesan, but down through the years each science has become so highly skilled that today we tend toward the technological specialist. Socially the world leans toward elimination of the skilled artesan, the builder with a mind and soul of his own and pride of accomplishment.

Today's creators of structures are well in the lead of this trend; each specialist in turn making analyses, designs, details, not only of form but of the exact mixtures of the materials themselves; each specialist so engrossed in his own part of the design or construction that he knows little of the duties of his brother specialists.

Who is the structural engineer? What is his function? And what is his future?

It is the duty of the structural engineer to provide designs for an economical yet adequate structure of natural, man-made or man-altered materials to resist the forces of nature and the tendency of materials to disintegrate. The structural engineer is, frequently with an architect, the converter of knowledge, experience and conceptions into structural realities. He depends upon the structural researcher for the development of the theory of behavior of forces and materials as well as procedures. Together this interdependent team of structural researcher and structural designer practice the science of structural engineering.

After them the long chain of the construction industry takes over and those who perform the physical construction convert the results of theory, knowledge and design into actual structures.

In addition to the team of technologist and designer, the structural engineer often works in partnership with an architect. In such cases the architect is the basic planner, presenting to an engineer a succession of structural problems to fulfill effectively and economically the owner's requirements for function and esthetics.

This partnership probably began about eight or nine generations ago when elastic theory was presented as the third era of design principle. Earlier than that through the ancient and first, era of post and beam construction the artesan represented both sciences. The representation probably continued through the second era of design principle, that of the arch and buttress. As stress analyses developed, the myraid choise of design conceptions and materials became so complex that the sciences gradually became specialized.

Even with specialization, however, the successful practitioner in either science recognizes the oneness of purpose that existed when both functions were performed by an individual.

This partnership between the architect and structural engineer can look forward to an even more amazing era of design concept than has previously been known. This new concept, ultimate limit design or plastic analysis, has reached an advanced state of research and has been reported on in some detail to date. In the not too distant future manuals for this design principle will be in the hands of structural engineers, and structural design will enter the fourth great era of structural accomplishment. Ultimate limit design will add to the abilities of the structural engineer to accomplish such rational designs of structures that by elastic analyses are too rigorous and laborious to calculate. It offers some promise of economics in use of materials. It will recognize a built-in safety factor for such natural catastrophic overloads as earthquake or hurricane or for such unnatural overloads as bomb blasts or explosion.

This will be the next step resulting from the inventiveness of the structural scientist who for 2,500 years has strained to keep pace with the yielding of nature's secrets of new materials and of man's adaption and processing of these materials to provide better, safer and more economical structures for the use of man.

How one man builds architectural models

ARCHITECTURAL model building techniques are about as varied as there are model builders.

This is how Norris Hookland, research and development specialist for Tedrick Brothers Manufacturing Co. of Kent, Wash., goes about it.

First, he prepares drawings to the exact scale he intends to use. Then comes a considerable period of study during which he decides on materials, how to achieve certain effects and whether the model must be built in more than one section.

Thus the building begins. Hookland uses ¾-in. plywood as a base, cutting it to the exact size of the desired ground area. A contour map prepared during the drawing stage serves as his guide for establishing ground levels. Hookland uses wooden ribbing which he cuts on a scroll saw to give him heights and depressions. These ribs are fastened prependicularly to the base and as many of them are used as are necessary to reproduce the characteristics of the land. Over this framework he tacks copper window screening which is given a coat of plaster of paris. The shape of the wooden ribbing, then, controls the "roll" of the screening, which in turn forms the contours of the land.

Before this land mass is completed, however, the building foundation is constructed into it. This again is a piece of plywood cut to the size of the building surface and mounted into the ground elevations. From this flooring the walls of the building will rise.

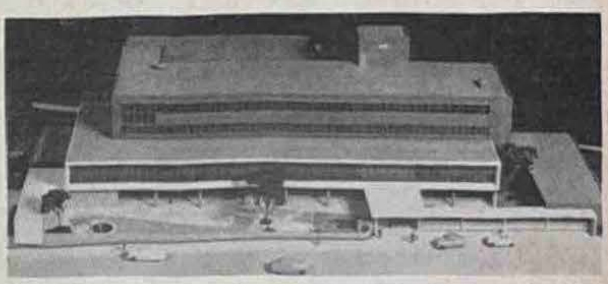
Hookland prefers to use Plexiglas for walls of his models. Application of a solvent (ethylene dichloride) will fuse two pieces of Plexiglas together smoothly and firmly, thus eliminating the need for glue, clamps, etc.

Another reason he prefers Plexiglas is that he can paint siding, shakes, stone or other surfaces on it to form the wall, while windows are produced simply by allowing the unpainted plastic to show through. To give windows a grayed or mirrored effect instead of the unrealistic clear, transparent look, Hookland has developed a thin gray paint which he sprays ever so lightly on the inside of the Plexiglas.

Roofing also has its special problems. Shakes, shingles, tile, etc., must be scored into Plexiglas or painted on.

With the basic parts of a building completed, the accessories **really** call for ingenuity. Fine copper wire becomes ornamental railing; crinkled cellophane under Plexiglas makes a fine fish pool; thin wire and aluminum-painted thread end up as a television antenna.

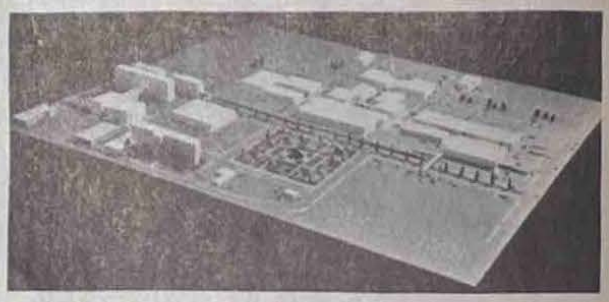
For lawns Hookland gives the plaster of paris base a coat of clear shellac to seal it off before attempting to apply a grass effect. After the lawn is in, shrubbery, plants, rockeries and other fixtures are added. Sponge is one of the best items for "growing" trees, bushes and hedges.



Actual weeds and grasses provide materials for landscaping, too. In the fall, Hookland and his family gather pods, stems, leaves and other dried vegetation which will later serve as miniature trees and nursery stock.

When Hookland landscapes his models, he carries his work to such fine details as worn spots under miniature swings and teeter-totter where children normally drag their feet.

To add further life to a model, figures of people and automobiles are often included. Nothing offends Hookland's sense of scale more than the model builder who produces an otherwise acceptable replica only to spoil it by scattering out-of-proportion cars and people around.



CHILDREN'S OROTHOPEDIC HOSPITAL, SEATTLE: Young & Richardson, Carleton & Detlie, architects-engineers. Model used up some 600 hours of builder's time. It took him 25 hours on circular pool seen in background. Patio floors are all hand-scored plastic while brickwork utilizes $\frac{1}{16}$-in. mahogany plywood for graining effect. All pieces had to be fastened securely to model so that it could be turned on end to get it through doors.

WASHINGTON STATE UNION BUILDING, PULLMAN: John W. Maloney, AIA, architect; Philip E. Keene, AIA, college architect. Replica required 500 hours of Hookland's time. Patio flagstones were individually painted. Lily ponds feature miniature goldfish and lily pads. Simulated flowing fountain was made by heating and drawing out plastic rod. Other side of building has even more landscaping, individually carved steps, railings and additional window work to that shown. Model builder uses special gray paint to coat inside of windows so they have more natural reflection rather than transparent look.

GETHSEMANE LUTHERAN CHURCH, SEATTLE: J. Emil Anderson, AIA, architect. Walls were all scored with sharp tool to simulate bricks. All crosses in tower were individually cut while stained glass windows were made of colored plastic. Railings and fence work were made of soldered bits of copper wire. Cars and people are in exact scale. Hookland spent 200 man-hours on project.

LLOYD CORP. RETAIL CENTER, PORTLAND: John Graham & Co., architects-engineers. Block style type is not so intricate or detailing but helps immeasurably in planning landscaping and indicating parking availability. Hookland made 150 exact-scale autos and trucks out of plaster of paris for model.

T-square talk

about architects • planners • engineers

NEW PARTNERS: Albert M. Dreyfuss, AIA, and Leonard D. Blackford of Sacramento have formed a partnership under the name of Dreyfuss & Blackford, architects and planners, at 2127 J St. Dreyfuss is a graduate of the University of Illinois, Blackford of the University of California.

In Seattle John Stewart Detlie, AIA, and Raymond H. Peck, AIA, have formed the firm of Detlie & Peck for the general practice of architecture in the Securities Building (MUtual 6985). Detlie had been a member of the firm of Young, Richardson, Carleton & Detlie before opening his own office in the Republic Building several months ago. Peck has practiced at 332 Second Ave. W. and was associated with John C. O'Brien on a number of projects.

NEW ASSOCIATE: Richard Bouillon, who joined the staff of Decker, Christenson & Kitchin, architects-engineers, in 1955, has become an associate member of the Seattle firm. After graduating from the University of Washington in 1952, he was employed by various Seattle architects.

NEW OFFICE: Robert J. Platt, AIA, has opened an architectural office at 1870 Rosecrans St., San Diego, where he is associated with Arthur Matsuura. The two men had worked together in Minneapolis several years ago. Since coming to San Diego 3½ years ago, Platt has been with the office of Frank L. Hope.

DIED: A long-time Tacoma architect, Earl N. Dugan, 79, died December 22 in Seattle where he had lived since his retirement five years ago. A member of the old firm of Sutton, Whitney & Dugan, he designed many of the College of Puget Sound buildings, the First Presbyterian Church, Annie Wright Seminary, the Rust Building and the YWCA, all in Tacoma.

Dugan was a native of Boone County, Iowa, and went to Tacoma soon after his graduation from the University of Illinois in 1906. He was a founder of the Tacoma Society of Architects which grew into the Southwest Washington chapter of the AIA.

JOIN FIRM: August R. Butler has been named director of engineering of Pereira & Luckman, architect-engineers, and Fred E. Wagner has affiliated with the planning department. Prior to coming to Los Angeles, Butler was director of engineering for the $350 million U.S. air and naval bases in Spain. Wagner has been a city planner in the San Diego area where he master-planned the major and secondary street system, drew up an industrial development plan and submitted a new zoning ordinance.

ON NATIONAL COMMITTEE: Representing the West on a new committee on professional service are Irving G. Smith, FAIA, Portland, and Clarence J. Paderewski, San Diego. They were appointed by the executive committee of the National Council of Architectural Registration Boards and are charged to "investigate the limits of the service normally rendered by architects for their clients, rather than ethics; and also to what extent the professions of architecture, engineering, landscaping and interior decorators overlap." Smith and Paderewski head their respective state boards of architect examiners.

ENGINEER HONORED: Portland engineer J. Donald Kroeker has been named a fellow of the American Society of Heating and Air Conditioning Engineers in the organization's initial election. Of the five engineers so honored, Kroeker is the only one west of the Mississippi River. The fellowship ceremony will take place at the group's national meeting in Chicago in February.

The owner of J. Donald Kroeker & Associates has maintained a consulting engineering practice since 1936, except for World War II service as a lieutenant colonel in the Army Corps of Engineers. He is design the two largest U.S. installations reverse cycle refrigeration.

STUDENTS ELECT: Paul R. California State Polytechnic Col is representing the western regio the National Association of Stud of Architecture. Thymio Papayann Massachusetts Institute of Techno heads the group.

The election took place during second annual Student Forum ducted by the AIA in Washing D.C., in November. One hundred dents attended the three-day meet with all of the country's 63 school architecture represented. The g maintains year-round activities.

CAA MOVES OFFICES, PICKS MEETING DATES

The California Council of Architects, a state organization of the AIA with headquarters in San Francisco, has moved its offices from 26 O'Farrell St. to Room 550, 703 Market St. The telephone remains the same: YUkon 6-5347.

The CCA and the institute's California-Nevada-Hawaii district will hold their mid-year meetings simultaneously at Coronado February 15-16 when a regional director will be named to succeed Donald Beach Kirby of San Francisco. The two groups have scheduled their fall meetings at the same place October 2-6.

Commercial structures and the architect

An address presented before the So ern California chapter, AIA

by VICTOR GRUEN, AIA

THERE WAS a time when c mercial structures were regarded lying outside the sphere of ar tectural interest but the archite point of view toward them changed radically. This is a lu thing because, in our business ciety, the commercial structure p vides the largest field of activity.

What is a commercial structu In the widest sense of the word is one which either serves the p ducing, buying or selling of goods which is erected with the purpose constituting a merchandising item self, being built for the specific p pose of leasing or selling space.

Within this category, on this br basis, fall obviously stores and pla and warehouses but also office bui ings, banks, insurance buildi apartment houses, hotels, movie th ters and other theaters; and, final to the class of commercial buildi belongs that most merchandised of architectural products — the tr house.

Outside of the classification ma age to stay only a few building typ the single private home, educatio buildings, religious buildings, ci and cultural buildings; but even these categories, commercial though process is making inroads. Th nearly for every architect comes t time when he finds himself co fronted with the task of designing commercial building and when meets up with the businessman clie

He will find that his client has lively interest in the design of th

structure but he will also find that his interest mostly takes the form of the plural, namely, interests from the structure; and often he feels like Alice in Wonderland when he finds out that he and his client may talk about the same thing but utterly different meaning. When the architect talks about the relations of the building masses, the client dreams of the relations of equity to mortgage. When the architect talks about space organization, the client has in mind the maximum amount of rental space or sales space which can be squeezed out. When the architect talks about the designing of the front, the client thinks he is referring to the front money necessary to get the project going.

Slowly it dawns on the architect that his client is really not interested in the excellency of his building but rather in its productivity and profitability, in minimum construction cost and maximum income, in fullest utilization of land values, and in meeting certain ideas and prejudices of lending institutions, banks, insurance companies, etc., in order to get the highest possible loan. And when he attempts to explain the good qualities of his building to the representatives of the mortgagors, he often finds it difficult to make them even look at plans and elevations as they are preoccupied with studying the leases and the credit rating of future tenants. Loans for buildings which are to be leased are based not on the structural soundness of the building but on the financial soundness of the tenants; not on the thoroughness of design detail but on the thoroughness of lease writing; not on the aesthetics of the structure but on the beauty of the financial statement.

Architect and client think and dream equally hard about the future building but during the time the architect visualizes colors, finishes, and textures, the client visualizes the profit from a sale with capital gains tax.

And so the temptation looms for the architect, bewildered by the financing and merchandising lingo, to give the client what the client wants; to pile rental space on rental space; to economize not only money but also on ideas, imagination and all other building materials; to please the mortgagor by conventionalism, which neither taxes anybody's time nor brains; and to produce mediocrity on the assembly line.

That temptation is great but our particular architect, full of courage and professional pride, rallies his forces. He thoroughly acquaints himself with the laws of building economics, he listens to the calls of the business jungle and learns the language, and he then assembles the weapons for his resistance fight.

He decides to give the client not what he wants but what he ought to want, and to convince him by superior knowledge, logic, persuasion, perseverance that he ought to want it; that he ought to want better materials and better workmanship because of lower upkeep and maintenance; that he ought to want sun control in the form of exterior louvers or fins because it saves capital expense in air conditioning equipment and exterior treatment of the building and also operating expense; that he ought to want certain architectural features, like spaciousness, solidity and, yes, even beauty, because he will attract a better type of lessor willing to pay a higher rental and thus an increase of the loan commitment; that he ought to want in a shopping center underground truck roads because he will gain productive rental space on the main level thus increasing rental income; that he ought to want in shopping centers and other groupings of buildings, pedestrian areas of attractive appearance with sun protection and landscaping and even art, because they will attract more shoppers, thus increasing the business of the lessors and the income from percentage rent considerably; in other words, that he ought to want good design because it spells good business.

If our architect is not only a good architect with creative ability and imagination but also fully armed with the facts of economics of leasing types and rental income, of land costs and construction costs, of financing techniques, leasing costs, property taxes, maintenance costs, upkeep costs, operating costs, mortgage retirement and net profit, if his convictions and his willpower are strong and if he has a certain streak of stubbornness, he will be able to design and build successful and beautiful commercial structures.

He will avoid just singing a tune in the mass choir of mediocrity and rather supply the tenor; he will avoid playing second fiddle in the band and will be the conductor.

We are living in a business society and only if we come down from various ivory towers, only if we join the battle, can we be productively effective. The architecture of each historic period expresses the economic organization of that period. To express the best features of a free democratic society with creativeness and imagination is the task of the contemporary architect.

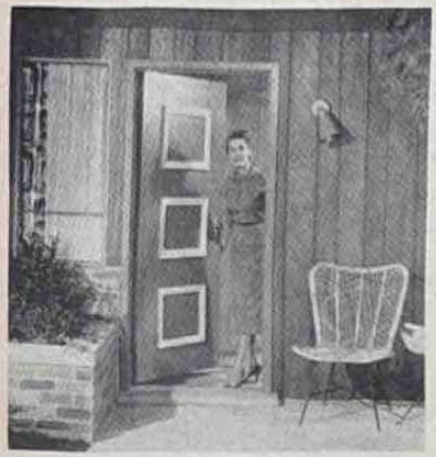
"GLAZED STRUCTURAL WALLS MAKE BREWERY SANITATION EASY"

Burgermeister's vital problem of controlled sanitation has been greatly simplified and reduced in cost with walls of Western Glazed Structural Units.

In three remodeling and expansion programs since 1952, the brewery has installed 37,620 sq. ft. of this gleaming ceramic finished tile.



Wall and finish are one—no framing, lathing, plastering or finishing required. Hard, smooth surface resists wear, stains, odors; never needs painting. Clear glaze, plus 12 attractive colors. Standardized sizes and shapes for every requirement. For shape chart and specification details write to KRAFTILE CO., Niles, Calif.; or WASHINGTON BRICK & LIME CO., Spokane, Washington; members of

and the latest literature

ALL-STEEL ENTRY DOOR: What is believed to be the first all-steel residential exterior entrance door is now

being produced by Steelcraft. The complete unit includes a 16-gauge exterior steel door frame with factory applied bronze weatherstripping, as well as a heavy extruded aluminum threshold with a built-in vinyl plastic seal. In addition to being completely insulated with Rockwool, the door is zinc coated, bonderized and finished in a prime coat of baked-on enamel.

(Item No. 1)

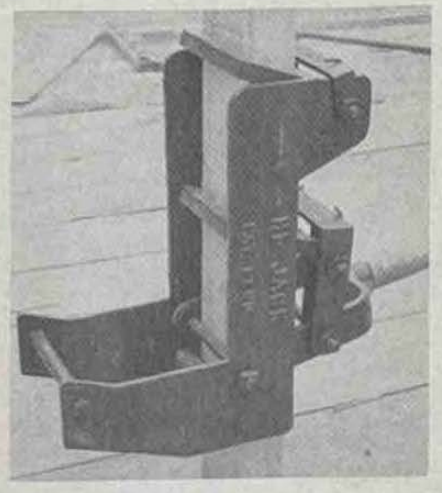
ACOUSTICAL SIDEWALLS: A new adaption for Tectum's wood fiber insulating board is intended as a single-material answer to many industrial sound control problems. When used in conjunction with Tectum roof, two of the three surfaces that have a normal tendency to reflect shop noise and confusion become sound-absorbing elements.

(Item No. 2)

DRINKING BUBBLER: The latest Haws drinking bubbler is designed for fountains where change or replacement to full automatic stream control is desired. Model 127 contains a flow regulator valve that compensates for outside water pressures varying from 10 up to 125 psi. Additional features: a generous mounting flange and an extra long threaded shank to provide wide latitude for installation on practically every type of foundation.

(Item No. 3)

CLAY MASONRY FACING: SCR renu-veneer is a ¾-in. thick slab of hard-burned Norman size brick which is attached to exterior or interior walls by means of a special metal clip nailed to the existing wood wall. After the units are nailed on, mortar is spread in the joints by a special pressure gun. The joint is then tooled as in conventional masonry. L-shaped corner units give a genuine brick appearance on all corners.



Developed by the Structural Clay Products Research Foundation, the clay masonry facing material is being marketed in three cities and will be introduced elsewhere the next several months as production is expanded.

(Item No. 4)

KITCHEN CABINETS: Available in many built-in colors to fit almost any decorating scheme, kitchen cabinets with sliding doors of Alysnite translucent fiberglass panels are adding smartness to the modern home. The 1⅛-in. corrugated fiberglass requires no painting or refinishing and is easily cleaned with a damp cloth.

(Item No. 5)

JACK: Home Service has developed the Hi-Jack for placing subassemblies in the light construcion field. A high

lift, ½-ton capacity jack, it operates off a 2x4 of any length.

In reducing man-hour requirements for residential framing, the Hi-Jack effects estimated savings of $25 to $30 per 1,000 sq. ft. It has been approved by the State of Washington's Department of Labor and Industries, safety division.

(Item No. 6)

CORK-FACED HARDBOARD: Designed for easy installation as both a structural and a decorative wall covering, Dodge Panelcork is a cork-faced hardboard. Standard panels are 5/16-in. full by 32⅛-in., t&g, beveled at the edges and scored in 16-in. squares. Panels are finished in a stain-resistant, clear resin to bring out the natural cork tones.

Panelcork can be installed directly to studding or over finished walls.

(Item No. 7)

PREASSEMBLED PANELS: Archit and builders who are turning to use of modular dimensions in pl ning houses will be interested in 4-ft. Lu-Re-Co panels, 8 ft. h consisting of studs and sheathing p assembled in a local lumber ya The panels are rough openings the desired type of window or d panels with rough openings eit centered or at one side. They can delivered at the home site, set place and bolted together, and wall framing is complete, ready insulation, interior finishing and terior siding.

Developed by the Small Ho Council of the University of Illin the wall panel system of construct gets its name from the Lumber D ers Research Council, sponsor of project.

(Item No

ELECTRICAL OUTLETS: Sierra Elec has designed a complete new line receptacles under the trade na Sierraplex, with matching wall pla in plastic, brass or stainless st Available in either ivory or brow the receptacles are fully encased arc-resistant plastic housings.

(Item No

VAULT DOORS: Five fire resist vault doors, ranging from a half- six-hour fire protection, have be added to the Meilink Steel Safe li The flat sill construction provi easy entrance into the vault. All c be opened easily from the insi protecting the employer from seri consequences in the event that employee is accidentally locked the vault. A relocking device de locks the bolts in case of attack the lock by means of mechanical to explosives or torch.

Latest Handbooks, Manu and Literature

Yours for the Asking

FIR PLYWOOD: Douglas Fir Plyw Association covers fir plywood grad specialty products and applicat data in condensed tabular form architects, builders, engineers a building code officials in a 12-p catalog. The 1957 edition for the fi time features three pages of str tural drawings that describe reco mended fir plywood uses for fl

construction, wall sheathing, roof sheathing and various soffit applications.

Other data: type-use recommendations, standard stock sizes of both exterior and interior types of fir plywood, engineering details for the best results with plywood for concrete forms, minimum FHA requirements and fundamentals of finishing.

(Item No. 11)

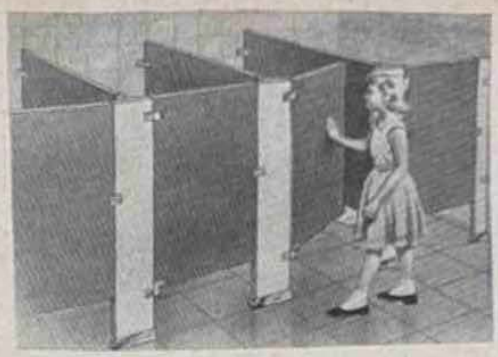
STEEL FABRICATION: Outstanding structural steel jobs fabricated and erected by Pacific Car and Foundry

Co. are pictured and described in a 16-page brochure. Included are examples of industrial plants, schools, churches, refineries, bridges and dams.

(Item No. 12)

UNIT HEATER HANDBOOK: A vest-pocket edition of the "Venturafin Unit Heater Handbook" is a handy source of information for on-the-job calculations or conferences. The 64-page book contains specifications and operating characteristics as well as installation and application data for American Blower's complete line.

The handbook has such data as capacity tables, dimensions, external ductwork suggestions, mounting heights, piping diagrams, pipe sizes, sound ratings and wiring diagrams. A typical selection problem is presented with a recommended step-by-step solution procedure.



(Item No. 13)

FIBERGLASS PRODUCTS: A 132-page manual which describes the full line of Owens-Corning Fiberglas industrial products is bound so that individual standard sheets or sections pertaining to one principal classification can be removed and used independently.

(Item No. 14)

BRIDGING TESTS: A 16-page technical bulletin reporting the effects of various types of bridging on the behavior of open web steel joists, shortspan series, has been released by the Steel Joist Institute. The test program was sponsored by the institute, an association of the country's major open web steel joist manufacturers, and conducted by the department of civil engineering of Washington University, St. Louis.

(Item No. 15)

METAL COMPARTMENTS: The new line of Mills junior height compartments for kindergarten and grade school facilities is being introduced in a 20-page catalog which covers the company's entire line of toilet compartments, shower and dressing rooms, shower units and hospital cubicles. Actual samples of the 20 standard colors available in porcelain enamel or baked-in enamel finishes are included.

(Item No. 16)

LUMBER DESIGNS: Nearly 300 designs of wood structures, ranging from basic types of trussed rafters and heavy wood roof trusses to highway structures, towers and farm buildings, are illustrated and listed in the 1957 edition of "Typical Lumber Designs." Employing the Teco connector system of engineered timber construction, they are available to architects and engineers for their use as guides in designing for specific needs.

Quantities and material lists accompany each design. Also included are many typical designs which can be secured from West Coast Lumbermen's Association and Southern Pine Association.

(Item No. 17)

BUILDING STONE: Four pictorial brochures issued by the Building Stone Institute run the gamut of stone use in modern architecture — hospitals, schools, churches and commercial buildings—and include split face applications as well as dimension or limestone. Among the West Coast projects shown are the Susan J. Henry Memorial Library and Park Department Building in Seattle, a junior high school in Lynwood, Wash., and a public school in Monterey, Calif.

(Item No. 18)

STEEL IN ARCHITECTURE: Armco has two four-page folders devoted to its special purpose steels. "Why and Where Architects Specify Special Purpose Steels" describes typical uses of stainless steel, Aluminized steel and Zincgrip-Paintgrip steel, a zinc-coated, paint-holding type.

The second folder shows three buildings in color, with drawings that illustrate how exterior and interior panel facings are combined with insulation.

(Item No. 19)

GUNITE: How old brick or concrete structures can be inexpensively rehabilitated both structurally and architecturally is explained by the Gunite Contractors Association in a case study. The four-page bulletin shows progress photos and step-by-step processes in restoring a high school building.

(Item No. 20)

ASPHALT ROOF REPAIR: Henry's 16-page illustrated booklet, "The Repair and Maintenance of Asphalt Roofs," covers such items as principles of roof maintenance, how to repair roof leaks, patching the trouble spots, asphalt roof coatings, aluminum roof coatings and easy roof replacement.

(Item No. 21)

PINE DIRECTORY: The 1957 membership directory of the Western Pine Association lists the facilities, products and plant and sales office locations of the group's 375 members and their 440 manufacturing operations. Punched for insertion in ringbinders, the 20-page publication contains data on all species manufactured.

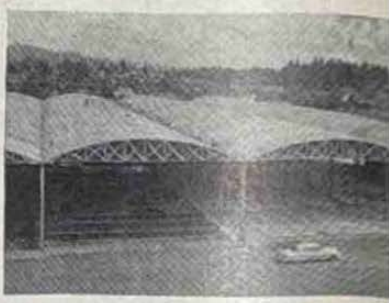
PLYWOOD provides compression member for upper chord; it is roof sheathing and diaphragmatic bracing for entire building in plane of roof. Steel provides tension members for lower chord and thrust bearing plate for top plate.

ASSEMBLY of roof units in segments, in this case 8 ft. wide and 60 ft. long. Plywood is nailed to 2x8 plate with nails at 6 in. c/c; also bolted with ½-in. bolts at each panel point, extending down to and through lower chord.

ERECTION of 8-ft. unit of roof st Trusses are swung into place by cran seated; lines are slacked away and to moved. Rigging is patterned after loggin used in woods.

Long-span wood roof framing combines plywood with steel



A NEW DESIGN for wood roof framing for long spans combines plywood with steel to provide a practical, low cost structure for warehouses, commercial buildings, industrial plants, hangars, etc.

Marketed under the label PSI, it comes to the site with all lumber and plywood cut to detail and all steel and hardware fabricated to pattern. The economy of attaching the roof sheathing to the trusses before erection is apparent.

Advantages of the low-rise truss are seen in the small dimension material required and the continuous scarfed plywood upper chord which likewise functions as roof sheathing. At the same time the plywood roof decking provides diaphragmatic bracing for the entire building.

Where the utmost economy must be provided, the roofing is done new way: joints are given one of mastic, followed by laying a ribbon of fiberglass and again another coat of mastic; the e surface is then given one moppe coat of roofing compound, gene about 3 gal. to the square.

The roof truss design was or ated by Roy A. Gould, presiden Diamond Lumber Co. A divisio the Portland firm, Plywood St tures, Inc., has been set up to ha this new operation.

COMPLETED roof framing before endwal sidewalls have been placed. Battered sid were used in this building to provide bracing. Trusses are supported on con lintel beams with columns every 24 ft. from concrete slab to bottom of trus 27 ft. Here is warehouse at total cost per square foot.

Ceramic-on-steel tile

Quality ceramic-on-steel produ formerly used only in such st areas as jet engines and indust furnaces, now are available to home building field in the form wall tile.

Bettinger Corp., for example, is packing its Starfire tile at the p into individual bathroom units all the necessary forms and acces ies for a single home unit for fabricated construction. This tech que is proving successful in m large housing developments today

Attractive Olympia Memorial Clinic *features*

Chehalis Red Roman Brick

The warm, pleasing texture of Chehalis Red Romans—the Pacific Northwest's most distinctive brick—was selected by the architect to distinguish this modern clinic building in Olympia.

Here is functional design at its eye-appealing best—permanent, practical, fire-safe . . . and economical to build and maintain! Only brick—and preferably CHEHALIS BRICK—combines all these advantages so well.

SCPI

CHEHALIS BRICK and TILE Co.

BOX 868, CHEHALIS, WASHINGTON

WOODMAN, SPARE THAT TREE! This carport, built around 12-ft. pine, uses Alsynite panels in sides and roof.

Translucent carport

A carport in La Jolla, Calif., has been built around a 12-ft. Monterey pine which projects through the roof.

When a new wing was added to the owner's ranch style home, on a knoll overlooking the Pacific, the tree, nurtured since a seedling, stood in the way. Rather than move it or cut it down, he decided to fashion the structure to fit.

The Alsynite panels used in the sides and roof provide cool, diffused light for the carport, encourage growth and require little maintenance.

Plywood panels

Bateson Contracting Co. of Fort Lewis, Wash., estimates that it saved about 30% on labor costs by using big panels of ⅜-in. thick plywood sheathing in construction of housing units like the one shown below at the fort.

The contractor used 330,000 sq. ft. of plywood panels, each 32 sq. ft., on 117 buildings which will house army officers and enlisted men and their families. The units range from four to eight in a building, with one, two or three bedrooms each.

BIG PLYWOOD PANELS are used on 117-building project at Fort Lewis, Wash.

PFMA CERTIFIED RATINGS

Peerless Electric®

Centrifugal Roof Ventilator

DEVELOPED AND MANUFACTURED WITH APPLIED CENTRIFUGAL BLOWER PRINCIPLES

QUIET! . . . Matching wheel cone accurately fits venturi inlet to create quieter, smoother air movement. Ideal for hospitals, churches, auditoriums and schools.

STURDY! . . . All welded construction. Material 16 ga. or over. Built for life of building.

PERFORMANCE! . . . Each unit air-tested, and rated to assure certified ratings. Exceedingly high efficiencies. Detailed performance data in Bulletin SDA-220.

ADAPTABILITY! . . . Fits standard curb sizes. Lower h.p. ratings for quieter operation. Higher h.p. for commercial and industrial applications.

headlining the news

• **Tecler Aluminum** of Seattle, one of the largest producers of aluminum windows and curtain walls on the Pacific Coast, has been reorganized with Ernest Gottula as president. It formerly was a joint venture of Berger Engineering Co. and Seattle Bronze Co., whose interest was purchased by Gottula, recently Northwest manager of Soule Steel Co.

Other officers of the reorganized firm, now known as Tecler Aluminum Corp., are Ferdinand Schmitz Jr. and Thomas M. Bannon, vice presidents, and Gail Williams, secretary-treasurer.

• **Bethlehem Pacific Coast Steel Corp.** has moved its Portland sales staff from the Pacific Building to 1010 S.W. 14th Ave.

• **Burke Rubber Co.** will construct a $750,000 manufacturing plant on a five-acre site in San Jose, Calif., scheduled for completion in May. The plant will be of tilt-up construction, designed so that it may be enlarged as required during the coming years.

President Roscoe E. Burke states that in the past six years sales have expanded from the California area of distribution to include all 11 western states, Alaska, Canada and export to Pacific areas.

• **Gladding, McBean & Co.** has eliminated the office of chairman of the board following the retirement of Fred B. Ortman from that position after 36 years of continuous service in an executive capacity. He has been named associate director of Stanford Research Institute, assigned to its Southern California Laboratories in South Pasadena.

• **Cedar-Tex Corp.** of Auburn, Wash., lost its shake mill, warehouse and office, estimated at $100,000 in a fire early last month.

• **Worthington Corp.** has a new Los Angeles district manager, E. Weston Hammond, formerly assistant manager, to replace J. G. Murphy who has been appointed special representative.

• **Sliding Glass Door and Window Institute** has elected Frank B. Miller of Burbank, Calif., as president, succeeding Herbert Shull.

• **Kaiser Steel Corp.** has appointed Mark T. Anthony as assistant to the vice president and general manager, succeeding A. F. (Frank) Scarr, recently named assistant general manager of Kaiser Center, Inc., Oakland.

• **Inland Empire Certified Lighting Bureau** has been organized in Spokane to serve the eastern half of the state of Washington, according to Laurance C. Messick, manager of the National Lighting Bureau, New York.

• **Simpson Logging Co.** has promoted its representative in the Spokane, Wash., area for the past two years, Don G. Olson, to district sales manager for insulating and hardboard products in Minneapolis.

• **Portland Building Division, AGC,** has elected William D. Robertson, partner in the firm of Robertson, Hay & Wallace, as president. Other officers are A. V. Petersen, vice president, and Wilford C. Long, reelected secretary-treasurer.

• **Hammond-California Redwood Co.** a newly created subsidiary of Georgia-Pacific Corp., has named John Klopfenstein as general sales manager, with offices at 417 Montgomery St., San Francisco. He formerly managed the Hammond Lumber Co. sales office in Chicago.

• **Cadillac Plastic Co. of California,** with offices in Los Angeles and San Francisco, has been appointed distributor for Acrylite, a cast acrylic sheet with embedded natural textures, by Wasco Products, Inc.

• **Reynolds Metals Co.** has appointed Don L. Geisert as western sales manager of monumental and commercial construction markets, with headquarters in San Francisco. One of the organizers of the Western Architectural Metal Manufacturers, Geisert has been active in the construction and nonferrous metals industries on the Pacific coast for the past 18 years.

• **Westinghouse Electric Corp.** has made two appointments in its elevator division: Lloyd T. Cramer as northern California and Pacific Northwest district sales manager and John E. Noren Jr. as Pacific Coast regional service manager. Both will continue to headquarter in San Francisco.

• **Weyerhaeuser Timber Co.** has named John L. Aram, former head of Boise Payette Lumber Co., as assistant to the president in Tacoma, Wash.

• **The Northern California Drywall Contractors' Association** has reelected its president, Paul W. Johnson, at the end of its first full year of activities. Other officers: Raymond R. Harrison, first vice president; William J. Thompson, second vice president; Hugh E. Hathcoat, treasurer; and J. Paul Williams, sergeant at arms.

• **Kaiser Gypsum Co., Inc.,** has a new assistant general sales manager, Tommy C. Donovan, formerly assistant district sales manager for the firm's southern California sales area. He succeeds Robert A. Costa, recently named vice president and assistant general manager in charge of Kaiser Gypsum's newly acquired insulating board division.

• **M. Greenberg's Sons** president Stuart N. Greenberg has been appointed to the Public Utilities Commission of the City and County of San Francisco.

• **The A. P. Green Fire Brick Co.** of Mexico, Mo., has purchased the interest of Washington Brick and Lime Co. in the Troy Fire Brick Co. of Troy, Idaho. Neal R. Fosseen, president of Washington Brick, says the move would make it possible for Washington Brick to emphasize its own brick and tile production. The firm had a one-third interest in the Troy company in recent times and once the Troy plant was a wholly-owned subsidiary of Washington Brick.

The plant was destroyed by fire early last year and Washington Brick joined with Green to rebuild the plant and resume production. W. S. Lowe, president of Green, states that the Troy plant will start production again in 1957.

• **Merrell Steel Building Co.** of Portland, distributor in northwest Oregon and southern Washington for Stran-Steel Corp., has appointed Chas. R. Wilson as manager of sales and sales promotion for the manufacturer's architectural products.

• **W. P. Fuller & Co.** is spearheading plans for "the most dynamic decade in the history of the firm" with the establishing of four major districts in the 11 western states. General managers who assumed their new duties December 1 are: H. B. Wilson, southern district (southern California and all of Arizona); S. H. Kline, cen-

• **Merrell Steel Building Co.** of P land, distributor in northwest Or and southern Washington for S Steel Corp., has appointed Cha Wilson as manager of sales and promotion for the manufact architectural products.

• **W. P. Fuller & Co.** is spearh plans for "the most dynamic in the history of the firm" w establishing of four major in the 11 western states. managers who assumed the duties December 1 are: H. B. southern district (southern C and all of Arizona); S. H. Kl

tral district (central and northern California); Intermountain district (Nevada, Utah, Idaho and Montana); Northwest district (Oregon, Washington and Alaska).

Other promotions announced by Fuller include the following branch managers: P. A. Sherrard, Los Angeles; Paul C. Keenan, San Diego; M. H. Poppett, San Francisco; W. Schweitzer, Seattle; L. R. Brown, Sacramento; L. R. Templeton, Boise.

• **Columbia Electric and Manufacturing Co.** has opened a new branch in Pasco, Wash., to serve southeastern Washington and northeastern Oregon. The branch, headed by Jack Vertrees who has been with the firm nine years, marks Columbia Electric's second expansion in the area this year. An electronics parts warehouse was opened in Kennewick in May.

• **Cligan & Fortier, Inc.,** western distributor for Reynolds aluminum with headquarters in Los Angeles, has opened four additional warehouses in San Diego, North Hollywood and Ontario, Calif., and Spokane, Wash., making a total of 10 such facilities on the West Coast.

• **Northwest Hardwood Association** has reelected its president, Emmet J. Nist of Seattle. Others named: Hamlet P. Steele, Bellevue, Wash., vice president; Harry P. Caldwell, Seattle, treasurer; and Paul A. Barber, Willamina, Ore., John Hauber Jr., Seattle, and Victor Nelson, Sedro-Woolley, directors for three-year term.

• **Pryne & Co., Inc.,** has named Richard V. Burns as vice president in charge of manufacturing at both the firm's Pomona, Calif., and Keyser, W. Va., factories. Burns started with the firm's West Coast plant as a bench mechanic.

A subsidiary, Pryne-Rittenhouse Sales Corp., has transferred its midwestern divisional sales manager, R. A. Maynard, to the company's home office in Pomona.

• **Gladding, McBean & Co.** has named E. H. Whitney as general superintendent of the new $1.5 million brick plant the firm is building at Mica, Wash. Whitney has been production manager of the company, with headquarters in Seattle.

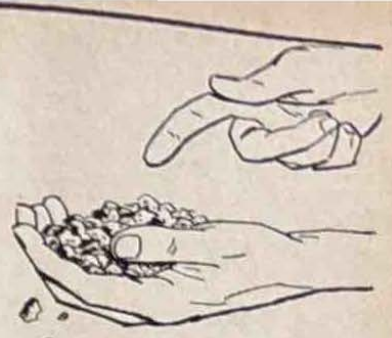
D. E. McConnell, who is now plant superintendent at the old Mica plant, will take over the same duties when the new plant is completed in September 1957. The 160,000-sq. ft. project will include a 398-ft. tunnel kiln, one of the largest in the Northwest.

• **Paul Hardeman, Inc.,** constructors-engineers, with headquarters in Los Angeles, has merged its five subsidiaries—J. B. Gill Co., Wall Cryogenics, Inc., Climate Conditioning Corp., Systems Engineering Co. and Electronetics Corp.—with the parent organization. This group, together with Hardeman Pipe Fabricating Division and fire sprinkler division, is now consolidated in a single operating company.

• **Fabricon Products** of Los Angeles has named two new distributors of its decorative plastic laminates in the Northwest: George Meyers & Co., Idaho Falls, Idaho, and Lester E. Houser Distributing Co., Billings, Mont.

• **Pomona Tile Manufacturing Co.** has appointed Kenneth P. Clayton as district sales representative for southern Idaho, Utah and Wyoming.

• **Permanente Cement Co.** has established offices in the National Oil Building, 609 S. Grand Ave., Los Angeles, for the staff of its new southern California division, headed by C. W. (Pete) McKinley, a 11-year member of the firm's sales force.



Permanente's new 2½-million-bbl. cement manufacturing plant at Lucerne Valley, San Bernardino County, is scheduled to begin production in early 1957. A bulk distribution facility is now under construction at Corona, Riverside County, to increase the efficiency of customer delivery service in the area.

• **Georgia-Pacific Corp.** has purchased the Charles E. Sand Plywood Co. in Portland, No. 35 in Georgia-Pacific's fast-growing warehouse network. Harold E. Sand, who became owner and president of the plywood company in 1948, will continue as manager. Donald D. Casey, who became a partner in the Sand operation in 1956, has resigned in favor of other business interests.

• **Westinghouse Electric Corp.** has named William G. Heath as Los Angeles district manager of its elevator division, succeeding Herbert C. Galitz, who has been promoted to southwestern regional manager with headquarters in Dallas.

• **Monroe Food Machinery, Inc.,** of Portland has been appointed an associate of York Corp. and has formed a separate division under the management of R. K. McCormack, formerly manager of York's Portland office.

• **Flintkote Co.** has acquired the United States Lime Products Corp. of Los Angeles, latest in a series of moves in a $20 million program of expansion and diversification. Kennedy Ellsworth, executive vice president of United States Lime Products, will direct the operation of the new Flintkote division. The company's sales offices in Los Angeles, San Francisco and Portland and warehouse facili-

Lightest handful of concrete masonry material...

Builders and Suppliers

headlining the news

• **Tecler Aluminum** of Seattle, one of the largest producers of aluminum windows and curtain walls on the Pacific Coast, has been reorganized with Ernest Gottula as president. It formerly was a joint venture of Berger Engineering Co. and Seattle Bronze Co., whose interest was purchased by Gottula, recently Northwest manager of Soule Steel Co.

Other officers of the reorganized firm, now known as Tecler Aluminum Corp., are Ferdinand Schmitz Jr. and Thomas M. Bannon, vice presidents, and Gail Williams, secretary-treasurer.

• **Bethlehem Pacific Coast Steel Corp.** has moved its Portland sales staff from the Pacific Building to 1010 S.W. 14th Ave.

• **Burke Rubber Co.** will construct a $750,000 manufacturing plant on a five-acre site in San Jose, Calif., scheduled for completion in May. The plant will be of tilt-up construction, designed so that it may be enlarged as required during the coming years.

President Roscoe E. Burke states that in the past six years sales have expanded from the California area of distribution to include all 11 western states, Alaska, Canada and export to Pacific areas.

• **Gladding, McBean & Co.** has eliminated the office of chairman of the board following the retirement of Fred B. Ortman from that position after 36 years of continuous service in an executive capacity. He has been named associate director of Stanford Research Institute, assigned to its Southern California Laboratories in South Pasadena.

• **Cedar-Tex Corp.** of Auburn, Wash., lost its shake mill, warehouse and office, estimated at $100,000 in a fire early last month.

• **Worthington Corp.** has a new Los Angeles district manager, E. Weston Hammond, formerly assistant manager, to replace J. G. Murphy who has been appointed special representative.

• **Sliding Glass Door and Window Institute** has elected Frank B. Miller of Burbank, Calif., as president, succeeding Herbert Shull.

• **Kaiser Steel Corp.** has appointed Mark T. Anthony as assistant to the vice president and general manager, succeeding A. F. (Frank) Scarr, recently named assistant general manager of Kaiser Center, Inc., Oakland.

• **Inland Empire Certified Lighting Bureau** has been organized in Spokane to serve the eastern half of the state of Washington, according to Laurance C. Messick, manager of the National Lighting Bureau, New York.

• **Simpson Logging Co.** has promoted its representative in the Spokane, Wash., area for the past two years, Don G. Olson, to district sales manager for insulating and hardboard products in Minneapolis.

• **Portland Building Division, AGC,** has elected William D. Robertson, partner in the firm of Robertson, Hay & Wallace, as president. Other officers are A. V. Petersen, vice president, and Wilford C. Long, reelected secretary-treasurer.

• **Hammond-California Redwood Co.** a newly created subsidiary of Georgia-Pacific Corp., has named John Klopfenstein as general sales manager, with offices at 417 Montgomery St., San Francisco. He formerly managed the Hammond Lumber Co. sales office in Chicago.

• **Cadillac Plastic Co. of California,** with offices in Los Angeles and San Francisco, has been appointed distributor for Acrylite, a cast acrylic sheet with embedded natural textures, by Wasco Products, Inc.

• **Reynolds Metals Co.** has appointed Don L. Geisert as western sales manager of monumental and commercial construction markets, with headquarters in San Francisco. One of the organizers of the Western Architectural Metal Manufacturers, Geisert has been active in the construction and nonferrous metals industries on the Pacific coast for the past 18 years.

• **Westinghouse Electric Corp.** has made two appointments in its elevator division: Lloyd T. Cramer as northern California and Pacific Northwest district sales manager and John E. Noren Jr. as Pacific Coast regional service manager. Both will continue to headquarter in San Francisco.

• **Weyerhaeuser Timber Co.** has named John L. Aram, former head of Boise Payette Lumber Co., as assistant to the president in Tacoma, Wash.

• **The Northern California Drywall Contractors' Association** has reelected its president, Paul W. Johnson, at the end of its first full year of activities. Other officers: Raymond R. Harrison, first vice president; William J. Thompson, second vice president; Hugh E. Hathcoat, treasurer; and J. Paul Williams, sergeant at arms.

• **Kaiser Gypsum Co., Inc.,** has a new assistant general sales manager, Tommy C. Donovan, formerly assistant district sales manager for the firm's southern California sales area. He succeeds Robert A. Costa, recently named vice president and assistant general manager in charge of Kaiser Gypsum's newly acquired insulating board division.

• **M. Greenberg's Sons** president Stuart N. Greenberg has been appointed to the Public Utilities Commission of the City and County of San Francisco.

• **The A. P. Green Fire Brick Co.** of Mexico, Mo., has purchased the interest of Washington Brick and Lime Co. in the Troy Fire Brick Co. of Troy, Idaho. Neal R. Fosseen, president of Washington Brick, says the move would make it possible for Washington Brick to emphasize its own brick and tile production. The firm had a one-third interest in the Troy company in recent times and once the Troy plant was a wholly-owned subsidiary of Washington Brick.

The plant was destroyed by fire early last year and Washington Brick joined with Green to rebuild the plant and resume production. W. S. Lowe, president of Green, states that the Troy plant will start production again in 1957.

• **Merrell Steel Building Co.** of Portland, distributor in northwest Oregon and southern Washington for Stran-Steel Corp., has appointed Chas. R. Wilson as manager of sales and sales promotion for the manufacturer's architectural products.

• **W. P. Fuller & Co.** is spearheading plans for "the most dynamic decade in the history of the firm" with the establishing of four major districts in the 11 western states. General managers who assumed their new duties December 1 are: H. B. Wilson, southern district (southern California and all of Arizona); S. H. Kline, cen-

tral district (central and northern California); Intermountain district (Nevada, Utah, Idaho and Montana); Northwest district (Oregon, Washington and Alaska).

Other promotions announced by Fuller include the following branch managers: P. A. Sherrard, Los Angeles; Paul C. Keenan, San Diego; M. H. Poppett, San Francisco; W. Schweitzer, Seattle; L. R. Brown, Sacramento; L. R. Templeton, Boise.

• **Columbia Electric and Manufacturing Co.** has opened a new branch in Pasco, Wash., to serve southeastern Washington and northeastern Oregon. The branch, headed by Jack Vertrees who has been with the firm nine years, marks Columbia Electric's second expansion in the area this year. An electronics parts warehouse was opened in Kennewick in May.

• **Cligan & Fortier, Inc.**, western distributor for Reynolds aluminum with headquarters in Los Angeles, has opened four additional warehouses in San Diego, North Hollywood and Ontario, Calif., and Spokane, Wash., making a total of 10 such facilities on the West Coast.

• **Northwest Hardwood Association** has reelected its president, Emmet J. Nist of Seattle. Others named: Hamlet P. Steele, Bellevue, Wash., vice president; Harry P. Caldwell, Seattle, treasurer; and Paul A. Barber, Willamina, Ore., John Hauber Jr., Seattle, and Victor Nelson, Sedro-Woolley, directors for three-year term.

• **Pryne & Co., Inc.**, has named Richard V. Burns as vice president in charge of manufacturing at both the firm's Pomona, Calif., and Keyser, W. Va., factories. Burns started with the firm's West Coast plant as a bench mechanic.

A subsidiary, Pryne-Rittenhouse Sales Corp., has transferred its midwestern divisional sales manager, R. A. Maynard, to the company's home office in Pomona.

• **Gladding, McBean & Co.** has named E. H. Whitney as general superintendent of the new $1.5 million brick plant the firm is building at Mica, Wash. Whitney has been production manager of the company, with headquarters in Seattle.

D. E. McConnell, who is now plant superintendent at the old Mica plant, will take over the same duties when the new plant is completed in September 1957. The 160,000-sq. ft. project will include a 398-ft. tunnel kiln, one of the largest in the Northwest.

• **Paul Hardeman, Inc.**, constructors-engineers, with headquarters in Los Angeles, has merged its five subsidiaries—J. B. Gill Co., Wall Cryogenics, Inc., Climate Conditioning Corp., Systems Engineering Co. and Electronetics Corp.—with the parent organization. This group, together with Hardeman Pipe Fabricating Division and fire sprinkler division, is now consolidated in a single operating company.

• **Fabricon Products** of Los Angeles has named two new distributors of its decorative plastic laminates in the Northwest: George Meyers & Co., Idaho Falls, Idaho, and Lester E. Houser Distributing Co., Billings, Mont.

• **Pomona Tile Manufacturing Co.** has appointed Kenneth P. Clayton as district sales representative for southern Idaho, Utah and Wyoming.

• **Permanente Cement Co.** has established offices in the National Oil Building, 609 S. Grand Ave., Los Angeles, for the staff of its new southern California division, headed by C. W. (Pete) McKinley, a 11-year member of the firm's sales force.

Permanente's new 2½-million-bbl. cement manufacturing plant at Lucerne Valley, San Bernardino County, is scheduled to begin production in early 1957. A bulk distribution facility is now under construction at Corona, Riverside County, to increase the efficiency of customer delivery service in the area.

• **Georgia-Pacific Corp.** has purchased the Charles E. Sand Plywood Co. in Portland, No. 35 in Georgia-Pacific's fast-growing warehouse network. Harold E. Sand, who became owner and president of the plywood company in 1948, will continue as manager. Donald D. Casey, who became a partner in the Sand operation in 1956, has resigned in favor of other business interests.

• **Westinghouse Electric Corp.** has named William G. Heath as Los Angeles district manager of its elevator division, succeeding Herbert C. Galitz, who has been promoted to southwestern regional manager with headquarters in Dallas.

• **Monroe Food Machinery, Inc.**, of Portland has been appointed an associate of York Corp. and has formed a separate division under the management of R. K. McCormack, formerly manager of York's Portland office.

• **Flintkote Co.** has acquired the United States Lime Products Corp. of Los Angeles, latest in a series of moves in a $20 million program of expansion and diversification. Kennedy Ellsworth, executive vice president of United States Lime Products, will direct the operation of the new Flintkote division. The company's sales offices in Los Angeles, San Francisco and Portland and warehouse facili-

ties in Los Angeles, San Francisco and Oakland will be maintained.

The company also has purchased Van-Packer Corp., manufacturer of prefabricated chimneys for use in residential, institutional and industrial construction.

• **Calaveras Cement Co.** recently honored two veteran employees upon their retirement: Al Maier who joined the firm in 1934 as salesman in the San Jose territory, transferring in 1941 to Oakland, and A. L. (Buck) Sundell who joined the company in 1935, serving as its North Coast sales representative for all except four years during which he was assigned to duties at the San Andreas plant.

• **Safway Scaffolds Co.** of Eugene, Ore., has been appointed dealer for Buck Equipment Corp.

NATIONAL NOTES

• **Architectural Terra Cotta Institute** reelected George H. Berry 3rd of American Terra Cotta Corp., Crystal Lake, Ill., as president at its annual meeting in Washington, D. C. Other officers are Raymond H. Brown, Gladding, McBean & Co., San Francisco, vice president; Mrs. E. D. Quackenbush, Federal Seaboard Terra Cotta Corp., New York, secretary; and Robert L. Ketcham, O. W. Ketcham Co., Philadelphia, treasurer.

• **Building Stone Institute** will hold its 1957 annual convention at the Hotel Roosevelt in New Orleans February 21-23. Topics will include architecture, economic research as applied to building and sales management.

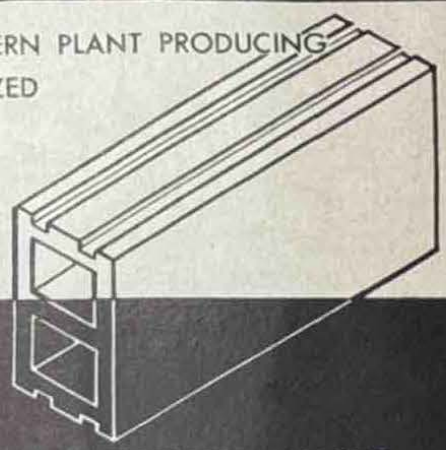
• **National Association of Distributors and Dealers of Structural Clay Products** has been organized to increase sales of burned clay products and to maintain a closer liaison with the manufacturers of these products through the Structural Clay Products Institute, according to the newly elected president, Harry M. Spaulding of Spaulding Brick Co., Boston.

Producers' Council head backs modular measure

Establishment of the Honolulu chapter of Producers' Council marks the 39th in the national organization devoted to the mutual aims of architects and building materials manufacturers and suppliers.

The new president of Producers' Council has been in the forefront in the struggle to get the construction industry to adopt the modular concept, which would utilize multiples of 4 in. as a basis for dimensioning buildings, as well as materials and equipment.

This past spring Fred M. Hauserman, 47-year-old president of The E F. Hauserman Co., was honored for his work in the field by the American Standard Association when he was given its Modular Measure Award.



Some manufacturers of similar types of products, working through their own associations, have been able to develop certain standards for dimensioning their products, but coordination of dimensions of all material and equipment is still to be achieved.

Hauserman also has been a leader in industry efforts at organized and cooperative research. From 1953 through 1955 he served as vice president and later as president of the Building Research Institute of the National Academy of Sciences.

The new head of Producers' Council has served the group in several positions. At 35 he became one of the youngest presidents of a major manufacturing firm and last year he was an area vice president of the Young Presidents' Organization.

SCHOOL EXPANSION, WOODWORKING SHOP— **Mapleton, Ore.**

One bond issue approved and one defeated in January 9 election held by Mapleton School District No. 32, Richard Boyd, superintendent, Mapleton. Bond issue for $246,000 approved to finance an eight-classroom addition to the grade school, including an administrative unit to provide offices, teachers' room, library, health room and storage space, 50'x80' multipurpose room and site improvements, and construction of a woodworking shop for the high school in Mapleton. Bond issue for $29,000 defeated; would have provided funds for kitchen equipment and folding tables for the multipurpose room.

DW 1-15. Previous report 12-28

HIGH SCHOOL— **Mill City, Ore.**

(Estimated cost $206,000)

Bond election will be held January 21 by Santiam Union High School District, James B. Putnam, principal of Santiam Union High School, Mill City, for a $206,000 bond issue to finance construction of an eight-classroom high school building to be located at the present high school site (the former Mill City High School) adjacent to the recently built school gymnasium in Mill City. Architect, Benjamin E. Cave, 3240 Triangle Drive, Salem, has been retained by the district to prepare plans and specifications for the proposed school. Tentative plans call for one-story building; lightweight concrete block structure; concrete block walls; built-up roofing; extension existing heating system. If bond issue is approved, construction is planned during 1957.

CI 1-15

HIGH SCHOOL— **Oakridge, Ore.**

(Estimated cost $550,000)

Bid call to be issued in late January with bids to be received mid-February by Oakridge School District No. 76, Paul Elliott, superintendent, Oakridge, for construction of a new senior high school on same site as existing high school. Plans by John Smeed, Frank Shell and Charles Hoyt, associated architects, 8313 S.W. Barbur Blvd.; Thomas Taylor, mechanical engineer, Portland Trust Bldg.; Grant Kelley & Associates, 1008 S.W. 6th Ave., electrical engineers, 1008 S.W. 6th Ave., all Portland.

Building will have total of 43,000 sq. ft. in two classroom wings and central section containing cafetorium, physical education activity room and shops; ramps will connect different floor levels, covered bus loading walk at front. The existing high school will be used as junior high school and existing gymnasium will be used jointly. Building will include following rooms: administrative offices (general, principal's, conference room), vault, health room, and work room; commercial and business machine; library, stacks, conference and work room; art room; homemaking; biology; general science; science room; six classrooms; auto shops; drafting, paint room; industrial arts; cafetorium, storage, kitchen; teachers' room; physical education activity room. Concrete slab floors on grade; laminated post and beam frame with 2"x6" decking (alternate for structural insulation board on bulb tees); exterior walls aluminum curtain wall (alternate for steel), and cavity brick end walls; non-bearing concrete block interior partitions, exposed; acoustical tile ceilings; asphalt tile flooring; built-up roof on insulation; hollow metal frames; hollow metal exterior doors; wood interior doors; modular cabinet work; stainless steel kitchen work; steam unit heaters in shops and physical education activity and split system of heating and ventilating for cafetorium, all using steam from existing plant; electrical unit ventilators in all classrooms; fluorescent lighting in classrooms, corridors, etc.; incandescent lighting in cafetorium, etc. Construction to be financed by $600,000 bond election approved in December. Of this amount about $550,000 will be used for the building and the remainder for equipment.

WB 1-11. Previous report 12-20

HIGH SCHOOL— **Pendleton, Ore.**

(Estimated cost $2,000,000)

Bids will be called in February for opening about March 19 (tentative) by Pendleton School District No. 16C, Wallace McRea, superintendent, 515 S.W. 4th St., Pendleton, for construction of a new high school, to be located on the golf course at the site of Pendleton Country Club, in Pendleton. Plans complete and pending final approval by Culler, Gale, Martell & Norrie, architects, Realty Bldg., Spokane. Construction is expected to start in late March or early April.

The 30-room school will be constructed in six interrelated units on a modified campus plan and will have a 750-student capacity. One-story; reinforced concrete footings and foundations; 124,000 sq. ft.; slab on grade concrete masonry units, prefabricated curtain walls of glass and porcelain enamel; precast prestressed concrete beams, thin shell concrete barrels; concrete built-up roof, composition cover; concrete masonry partitions; concrete stairways between ground levels; painted interior and exterior wall finish, wood and metal trim; painted concrete masonry interior partitions; asphalt tile, ceramic tile (shower rooms), quarry tile and stone (walls), terrazzo finish on stairs; acoustical tile ceilings on wood stripping; hollow metal exterior doors, wood slab or metal interior doors; special equipment includes 24'x110' mobile partitions in gymnasium, metal overhead doors in shop, folding wood partitions in cafeteria, flexible tack and chalk boards built as units; rigid board insulation in roof and walls; low pressure oil-fired steam heating system; unit ventilators, exhaust fans; fluorescent and incandescent lighting.

MH 1-11. Previous report 11-7

BOILER CONVERSION— **Pullman, Wash.**

The Washington State College Board of Regents, Pullman, has voted to ask the legislature for an emergency appropriation of $118,000 to finance conversion of boilers Nos. 2, 3 and 4 from coal to natural gas. The Board of Regents announced that they expect WSC would be able to make a reimbursement during the 1957-59 biennium if the appropriation is rushed to permit the conversion by October, 1957. It is estimated that this would take six months and would have to be started by April to meet this schedule. If this is done, the college would make general plans to construct a local distribution system in Pullman during the coming construction season. MH 1-15

CITY HALL— **Richland, Wash.**

(Estimated cost $550,000)

Plans will be complete early next summer for construction of a city hall to be located on a site across the street from the main fire station, Richland, according to the Atomic Energy Commission in Richland. The architect, whose name has not been released, has now planned to move the building back 10' and provide a driveway on a street which would not be as hazardous. This constitutes some changes in design but no change in the previously decided location as given above. The architect also defended his plans for a "split-level" building as more economical than a "campus-type" structure. Construction will begin about a year following completion of plans.

SC 1-11. Previous report 10-30

● **MOVE, CONVERT DORMITORY BUILDINGS—** **Richland, Wash.**

Bids will be opened February 4 by Atomic Energy Commission, Box 550, Richland, for moving two dormitory buildings from Richland to a Hanford production area where they will be converted into office structures. Specifications with above office. Completion time 4 months. The AEC has stipulated that each building can be cut into two or three sections for moving, and

THIS PIONEER TRUCK ON THE JOB MEANS QUALITY CONSTRUCTION!

MOUSETRAP, STEAM TRAP, SEWER TRAP

. . . it makes no difference

. . . the world *won't* beat a path to the door of the man who builds a better one *and then doesn't advertise it* so that people will know about his product, know where it can be bought and how much it costs.

Advertising benefits the buyer, too. It tells you the product story, makes it easy for you to buy. Even more important to you, advertising leads to mass production and volume sales . . . which means lower costs and lower prices.

Yes, "Advertising Benefits You" . . . 'specially businesspaper advertising.

●UNIVERSITY BUILDINGS—Provo, Utah

Plans will be ready January 21 and bids will be opened approximately February 14 on construction of five men's residence halls, a central hall, site improvements, subsurface drainage and utilities distribution at Brigham Young University in Provo, according to J. W. Tippetts, director of campus planning and development. Deposit on plans $100. Certified check for 5% of bid or for $100,000. Plans may be obtained from Director Tippetts or from the architects. Lowell E. Parrish, architect, Dooly Bldg., Salt Lake City, is preparing plans for the central building, site improvements and utilities. Kegley, Westphall & Arbogast, 800 S. Robertson Blvd., Los Angeles, are architects on the five dormitories.

Bids will be taken on three divisions of the project, at option of the bidder: 1—central building, site improvements, subsurface drainage, utilities distribution. 2—five dormitories. 3—the entire project. Proposals on built-in furnitude may be handled in one if two ways. The general contractor will include the built-ins with his bid or the item may be bid reparately. Kitchen equipment will be bid as a separate item.

The central hall will be one-story, have 40,000 sq. ft. floor space and be constructed with light weight steel frame. The five men's residence halls will have total capacity of 1,170 men; each building will be three-story, have 40,000 sq. ft. floor space. Contruction will be lift slab method with an alternate of poured-in-place concrete.

★CLEARING, GRUBBING—Portland, Ore.

Award to Frank Lyons & Co., 5200 N.E. Alberta St., Portland, $2,100, by Commission of Public Docks, Thomas P. Guerin, general manager, 3070 N.W. Front Ave., Portland, for clearing and grubbing approximately 19 acres at Terminal No. 4 for the future site of Pier No. 4. WB 1-16. Previous report 1-9

SEWAGE TREATMENT PLANT, INTERCEPTOR SEWERS— Roseburg, Ore.

(Estimated cost $535,000, treatment plant; $178,000, sewers)

Bids will be called about April 1 by City Council, City Hall, Roseburg, for first phase construction of the sewage treatment plant and interceptor sewer system planned for Roseburg. Plans and specifications by Cornell, Howland, Hayes & Merryfield, consulting engineer, 1600 Western Ave., Corvallis.

The first year construction will consist of a sewage treatment plant at the junction of Goeduck Road with Melrose Road at the west city limits, and an interceptor sewer consisting of 10,000' of 36" and 42" concrete pipe following the river bank upstream to the vicinity of Homewood Lane. The plant will be designed for a population of 20,000 persons and will provide complete treatment for a design flow of 3.6 mgd. Treatment will consist of primary and secondary clarification, a high rate filter, and two stage digestors. Grit removal and sludge thickening will also be incorporated.

SP 1-15. Previous report 12-20

SEWERS, TREATMENT PLANT— The Dalles, Ore.

(Estimated cost $285,000)

Plans for The Dalles' proposed sewage treatment plant have ben changed to include a pumping system and to eliminate the interceptor sewers previously planned. The consulting engineers, Stevens & Thompson, 2234 S.W. 5th Ave., Portland, have reported that the terrain at the proposed plant location at the foot of Laughlin St. is too flat for proper gravity flow unless interceptors are installed. By using a pumping system (utilizing pumps from present plant), existing sewers running to that location can be used. This new plan will reduce the estimated cost from $355,000 to $285,000. Application for $106,686 in federal funds has been approved by the State Sanitary Authority, but funds will not be available this fiscal year unless the city receives one of the top four priorities in the state. The city will receive its priority rating January 18, after which it will be determined whether the bond election scheduled for March 1 will be for $200,000 or $300,000.

WB 1-10. Previous report 12-28

■SUBSTATION, CONTROL HOUSE— The Dalles, Ore.

Planholders announced for construction of the Chenoweth substation and control house, two miles north of the west city limits of The Dalles, Wasco County, Ore.; Inv. No. 8256. HARPER FERRY TERMINAL— Harper, Wash.

The Harper ferry landing improvement, part of the over-all project which includes improvements and enlargement of Vashon and Fauntleroy ferry piers and slips, is in the formulative stage as yet. Plans by Cecil C. Arnold, consulting engineer, 511 Arctic Bldg., Seattle, call for construction of a new four-lane pier and double slip at Southworth Point, about 1.7 mi. south of the present Harper installation, surfacing a parking area for 100 cars, constructing a new low-level access road. Upon completion, the existing Harper pier would be retired. It is hoped that bids can be called sometime in March.

The over-all project on which a $1,000,000 bond issue has been approved, calls for improvements to the existing Fauntleroy-Vashon-Harper ferry system. Bids will be called by Washington State Highway Commission for the Washington Toll Bridge Authority. Charles E. Andrew, 3201 Fremont Ave., Seattle, is chief consulting engineer for the Authority.

STATE HIGHWAY PROGRAM— Olympia, Wash.

The highway program in the state for the period from July 1, 1957, through June 30, 1959, involves the proposed expenditure of $167,909,106 for construction, maintenance and administration, according to a budget released from the Washington State Highway Commission in Olympia.

New highway construction would require a total of $134,122,000 of which $52,955,379 would be from state funds and $80,126,621 from Federal aid. Of the $134 odd million, $113,224,027 would be spent on primary highway system. A large part of this money, a total of $62,555,177, is ear-marked for the interstate highway system (U. S. 10 and 99). Secondary highways would take $20,879,973, and maintenance of about 6,600 mi. of state highway would total $23,851,535. An amount of $1,833,200 would be spent for buildings and other capitol outlay purposes. DM 1-16

★CEMETERY EXCAVATION—Orting, Wash.

Award announced by G. Lee Sandritter, M. D., acting director, Department of Institutions, Olympia, for cemetery excavation at the soldier's home in Orting. Bids opened January 8. LOW BID: C. E. SP 1-12. Previous report 1-3

LINCOLN STREET LIGHTS— Port Angeles, Wash.

Bids will be called soon by City Council, City Hall, Port Angeles, for installation of new street lights for Lincoln St. in Port Angeles. The council has approved a plan for mercury-vapor lights similar to those on 1st St. from Lincoln St. to the city limits. City Manager G. S. Vergeer has asked for approval of the series type circuit on Lincoln St., as on E. 1st St., since he said some persons had asked for the type which provides for circuits to be plugged in, similar to those in the central downtown area. This plug-in type would add between $6,000 and $7,000 to the cost of the project. SC 1-11

★ROAD WORK, STOCKPILING— Prosser, Wash.

Award announced by Board of Benton County Commissioners, Courthouse, Prosser, for grading, draining and surfacing 5.07 mi. Badger Road from north and south center line of Section 14, easterly to PSH No. 8, and crushing and stockpiling crushed stone surfacing top course and base course at Horrigan Quarry; CRP No. 294. Third Saturday

SEWER SYSTEM— Kalispell, Mont.
(Estimated cost $425,000)

Improvement program tentatively approved January 7 by City Council, City Hall, Kalispell, for municipal water and sewer systems in Kalispell. The improvements are contingent upon a favorable vote on the projected bond issue which will be on the ballot at the regular city election in May. The program would include laying additional water mains from the principal city reservoir to the western part of Kalispell, construction of an elevated tank and additions to the sewer system. The council indirectly approved the program by voting to make application for increased water rates.

TELEPHONE FACILITIES—Worden, Mont.

R.E.A. loan of $280,000 approved for Project Telephone Co., Worden, Mont., Fred Rauchle, president, and Pat Taylor, manager, Worden, Mont., to improve and extend rural telephone service in Yellowstone County. Company plans to build a new combination dial central office and headquarters building in Worden, a dial exchange in Huntley and 53 miles of new line. Of existing line, 29 miles will be rebuilt. Company now has 350 subscribers and will provide service for 285 additional families. WB 1-1

WYOMING

TV TOWER— Casper, Wyo.
(Estimated cost $16,000)

Construction will start soon by The Harriscope, Inc., for a 200' TV tower on N. Durbin St. between 1st and A streets in Casper. Tower will be constructed of open steel framework to withstand 110 miles per hour wind. SC 1-11

▲EARTHWORK, STRUCTURES, LATERALS, DRAINS— Rock Springs, Wyo.

Bids received by Bureau of Reclamation, Box 944, Rock Springs, for earthwork and structures, laterals and drains in Farson Area and drains in the West Side Area, near Farson, Eden Project, Sweetwater County, Wyo.; DC-4807. Bids opened January 8. LOW BID: Asbell Bros. Construction Co., Box 449, Riverton, $940,608; Sharrock & Pursel, Box 316, Casper, $1,026,129; Long Construction Co., Box 1291, Billings, Mont., $1,244,035. SP 1-15. Previous report 11-27

UTAH

★EARTHWORK, STRUCTURES, BRIDGE, SURFACING— Linwood, Utah

Award to Wangsgaard Construction Co., Logan, $143,912, by Bureau of Reclamation, Bldg. 53, Denver Federal Center, Denver, Colo., for earthwork, structures, bridge, surfacing, temporary access road to Flaming Gorge Dam, Flaming Gorge Unit, Utah-Wyoming, Green River Storage Project; Spec. No. DC-4779.
SP 1-11. Previous report 12-4

●WATER WELL— Monticello, Utah

Bids will be opened 3 p.m., February 4, by Atomic Energy Commission, Construction, and Supply Division, Grand Junction Operations Office, Grand Junction, Colo., for construction of a water well at Monticello. Specifications with above office.

Includes one well approximately 1,790' deep with 14" O.D. casing set from the surface to a depth of 205' and an 8⅝" O.D. casing set from the surface to the top of the Navajo formation which is approximately 1,400'. LV 1-16

●OUTLET SEWER— Ogden, Utah

Bids will be opened 5 p.m., January 21, in the office of the city manager, by R. S. Starley, secretary of Board of Trustees, City-County Bldg., Ogden, for construction

of outlet sewer No. 3, Section 4, in Ogden. Plans and specifications by consulting engineers, Grix, Mueller & Plowgian, 3930 Riverdale Road, Ogden, and Henningson, Durham & Richardson, Inc., 2962 Harney St., Omaha, Nebr. Bid bondd 5%.

Quantities: 2,793′ of 30″ reinforced concrete pipe; 1,920′ of 27″ same; 2,963′ of 24″ same; 11,853′ of 21″ same; 45 manholes; 58.5′ of 48″ tunnel liner pipe. GH 1-11

SEWAGE DISPOSAL PLANT—
Salt Lake City, Utah

(Estimated cost $6,000,000)

Preliminary plans complete and construction will start in 1958 for a new sewage disposal plant to be located on land near 1250 W. 15th North and a $1,500,000 sewage trunk line on Redwood Road to 21st South, taking in the west area of Salt Lake City. Working drawings underway by Clyde C. Kennedy, engineer, 604 Mission, San Francisco, Calif. GH 1-12. Previous report 12-22

●CONTROL, DISTRIBUTION BOARDS—
Weber Basin Project, Utah

Bids will be opened 2 p.m., February 28, by Bureau of Reclamation, Bldg., 53, Denver Federal Center, Denver, Colo., for furnishing and delivering fob Ogden, one control board for Wanship Powerplant and one for Gateway Powerplant (Sched. 1, Items 1 and 2), one alternating- and direct-current power distribution board for Wanship Powerplant and one for Gateway Powerplant (Sched. 2, Items 3 and 4), and one static-type battery charger for Wanship Powerplant and one for Gateway Powerplant (Sched. 3, Items 5 and 6), for Wanship and Gateway Powerplants, Weber Basin Project, Utah; DS-4838. Specifications with above office. Delivery time 240 calendar days. Bids will be considered on any or all of the above schedules, but no bid will be considered for only a part of any schedule. SP 1-16

ALASKA

▲ELECTRICAL, TELEPHONE FACILITIES— **Anchorage, Alaska**

Bid received by George C. Shannon, city manager, City Hall, Anchorage, for construction of underground electrical and telephone facilities for the city of Anchorage; Work Order No. E-344. ONLY BIDDER: Macri Construction Co., Box 1079, Anchorage, $168,382 (base bid), $102,427 (alt.) SC 1-16

★GLENN HIGHWAY BRIDGES—
Juneau, Alaska

Award to J. J. Badraun, 109 N. 122nd, Seattle, $288,466, by Bureau of Public Roads, 319 Federal Bldg., Juneau, for construction of four bridges located on the Glenn Highway at Miles 54.9, 61, 62.5 and 89.3, Third Judicial Division, Alaska.
JU 1-15. Previous report 12-19

● INDUSTRIAL SEWER—Ladd AFB, Alaska

Bids will be opened 2 p.m., February 15, by Corps of Engineers, Alaska District, D-E Bldg., Anchorage, for construction of an industrial sewer at Ladd AFB; ENG-95-507-57-26. Specifications with above office and with Seattle branch office, 4735 E. Marginal Way, Seattle. Bid bond 20%. Completion date August 1, 1957. Work consists of constructing about 540′ of 10″ concrete or asbestos cement sewer, two manholes and a lift station complete with pumps and automatic controls. SP 1-15

▲BREAKWATER CONSTRUCTION—
Valdez, Alaska

Bids received by Corps of Engineers, Alaska District, D-E Bldg., Anchorage, for breakwater construction at the Valdez Harbor, Valdez; CIVENG-95-507-57-2. LOW BID: United General Contractors, Box 397, Seattle, $92,420. 2ND LOW: Herman J. Sontag, Construction Co., Valdez, $104,104. HIGH BID: Pacific Alaska Contractors, Box 676, Anchorage, $113,994. Engineer's estimate, $91,728. Five bids were received at the opening on January 11.
WG 1-15. Previous report 1-11

12 Major Equipment and Machinery Items . . .

. . . Invitations To Be Issued by Bureau of Reclamation

Bids will be called by the Bureau of Reclamation within the next three months on 12 major equipment and machinery items. Included among these will be transformers, control equipment, hoist, control system, gates, seats, guides, governors. Additional information may be obtained from the chief engineer, Building 53, Denver Federal Center, Denver, Colo., by referring to the title and number of the item.

BID CALLS EXPECTED IN JANUARY

MOBILE SPARE TRANSFORMERS (1-6)—Missouri River Basin Project, Mont. Three 5,000 kva, 110-69-34.5 kv mobile autotransformers complete with trailers. Bids to be called late in January. Delivery date April 1958.

CONTROL and STATION SERVICE EQUIPMENT, Gateway and Wanship Powerplants (1-9)—Weber Basin Project, Utah. Control and power boards and battery chargers. Bids to be called late in January. Delivery date October 1957.

SUPERVISORY CONTROL EQUIPMENT, Glendo Powerplant and Guernsey Switchyard (1-10)—Missouri River Basin Project, Wyo. One duplex-type control board panel for Glendo Powerplant (controlling station); one switchyard cubicle for Guernsey Switchyard (controlled station). Bids to be called late in January. Delivery date September 1957.

CONTROL BOARD PANEL, Casper Substation (1-11)—Kendrick Project, Wyo. One duplex-type control board panel. Bids to be called soon. Delivery date September 1957.

CONTROL BOARD PANEL, Anchorage Substation (1-12)—Eklutna Project, Alaska. One duplex-type control board panel. Bids to be called late in January. Delivery date October 1957.

BID CALLS EXPECTED IN FEBRUARY AND MARCH

HOIST (1-13)—Shoshone Project, Wyo. One 10-ton hoist for bulkhead gate. Estimated weight 95,000 lb. For Buffalo Bill Dam.

CONTROL SYSTEM (1-14) — Missouri River Basin Project, Mont. One hydraulic control system for two butterfly valves consisting of high-pressure oil pump, pipe fittings and valves and necessary electric controls enclosed in a metal cabinet. Estimated weight 5,000 lb. For Helena Valley Pumping Plant.

CONTROL SYSTEM (1-15) — Missouri River Basin Project, Mont. One hydraulic control system for fixed-wheel gate hoist consisting of high-pressure oil pump, pipe fittings and valves and necessary electric controls enclosed in a metal cabinet. Estimated weight 3,000 lb. For Helena Valley Pumping Plant.

GATES, SEATS, GUIDES (1-16)—Missouri River Basin Project, Mont. Four seven-foot, two-inch by four-foot 8-inch bulkhead gates, seats and guides for turbine draft tube. Estimated weights 5,875 lb. each. For Helena Valley Pumping Plant.

GOVERNORS (1-18) — Weber Basin Project, Utah. One gate-shaft-type governor for regulating the speed of a 2,000 hp turbine for Wanship Powerplant and two gate-shaft-type governors for regulating the speed of two 2,900 hp turbines for Gateway Powerplant.

GOVERNORS (1-19)—Missouri River Basin Project, Wyo. Two oil-pressure, cabinet-type actuator governors for regulating the speed of two 33,500 hp turbines for Fremont Canyon Powerplant.

MOTOR CONTROL EQUIPMENT (1-21)—Columbia Basin Project, Wash. One indoor, 2,500 volt, full-voltage starting controller for four 600 hp synchronous motors for White Bluffs Pumping Plant No. 1.

Bureau of Reclamation Lists 40 Major Projects . . .

. . . Scheduled for Bid Call Within Next Three Months

Forty major construction projects will be among bid invitations issued by the Bureau of Reclamation during January, February and March. Among these will be the earthfill Helena Valley dam about six miles northeast of Helena, Mont.; additions to the Anchorage substation for the Eklutna Project; diversion tunnel at Flaming Gorge dam site near Vernal, Utah; roads and buildings. For further information, contact L. N. McClellan, chief engineer for the Bureau, Denver Federal Center, Denver, Colo., referring to project by title and number.

BID CALLS EXPECTED IN JANUARY

DAM, Helena Valley (1-3)—Missouri River Basin Project, Mont. About six mi. northeast of Helena. Constructing a 75′ high, 2,800′ long earthfill dam with outlet works for municipal water supply, canal headworks and about one mile of operation and maintenance road.

Quantities: 75,000 c.y. excavation; 303,000 c.y. dam embankment; 316,000 c.y. excavation in borrow; 71,000 lb. reinforcing steel; 515 c.y. concrete in structures; 51,500 lb. metalwork. Completion time 550 days.

Bids will be called late in January by the chief engineer in Denver, Colo.

CANAL, Helena Valley (1-4) — Missouri River Basin Project, Mont. Near Helena. Earthwork and structures for about eight mi. of 14′ bottom width canal.

Quantities: 350,000 c.y. excavation for canal; 50,000 c.y. compact embankment; 6,600 c.y. excavation for structures; 40,000 c.y. backfill about structures; 350 c.y. concrete in structures; 1,550′ of 18″ to 36″ precast concrete pipe; one 78″ monolithic concrete pipe siphon involving 2,800 c.y. concrete and 483,000 lb. reinforcing steel or one 78″ precast concrete pressure pipe siphon, 3,750′. Completion time 500 days.

Bids to be called late in January by the chief engineer.

LATERALS, Block 20 (1-5) — Columbia Basin Project, Wash. Ten mi. northwest of Mesa. Earthwork and structures for about 85 mi. laterals and wasteways, and construction of eight minor relift pumping plants.

Quantities: 680,000 c.y. excavation for laterals and wasteways; 160,000 c.y. excavation from borrow; 175,000 mi. c.y. overhaul; 71,500 c.y. excavation for structures; 99,000 c.y. compact embankments; 54,000 c.y. backfill about structures; 2,000 c.y. concrete in structures; 22,500′ of 15″ to 66″ precast concrete pipe. Completion time 540 days.

Bids to be called late in January by chief engineer.

DRAINS (1-7)—Kendrick Project, Wyo. Near Casper. Earthwork and structures for about eight mi. of open drains.

Quantities: 50,000 c.y. excavation; 900 c.y. rock riprap; 700′ of 18″ to 36″ corrugated metal pipe; 224′ of 18″ to 27″ corrugated metal pipe arch. Completion time 200 days.

Bids to be called soon by regional director in Denver.

DRAINS, block 72 (1-9)—Columbia Basin Project, Wash. Near Quincy. Constructing DW38, 33, 36, 38A and W654D drains. Com-

pletion time to be determined.

Bids to be called soon by project manager, Ephrata.

DEEPENING DRAINS, WASTEWAYS, Blocks 41,42,43 (1-11)—Columbia Basin Project, Wash. Near Warden and Moses Lake. Deepening about 2.5 mi. DE229 drain, extending two culverts, reconstructing about 12 drain inlets, deepening about one mi. of EL31 wasteway, and removing and reconstructing a county road bridge in Block 42; deepening eight drains in Blocks 41 and 42; constructing about one mile of deep and semi deep drains on the DE53.5 and DE53.5A systems; constructing a road crossing and three pipe drain inlets in Block 43. Completion time to be determined.

Bids to be called soon by project manager, Ephrata.

TURNOUT REPAIRS, Block 72 and West Canal (1-16)—Columbia Basin Project, Wash. Near Quincy. Placing short sections of concrete lining adjacent to nine structures in Block 72, and placing anchor blocks and repairing turnout pipes on 13 turnout structures from the West Canal serving block 72.

Quantities: 4,000 c.y. excavation; 4,000 c.y. backfill; 4,000 c.y. compact backfill; 2,000 lb. reinforcing steel; 35 c.y. concrete. Completion time to be determined.

Bids to be called soon by project manager, Ephrata.

BID CALLS EXPECTED IN FEBRUARY AND MARCH

DIVERSION TUNNEL (1-21) — Colorado River Storage Project, Utah. Excavating in open cut and in tunnel for the 1,350' long, 26' diameter unlined right abutment diversion tunnel at the Flaming Gorge Dam site, on the Green River, 40 mi. north of Vernal.

Bids to be called by the chief engineer in Denver.

CANAL 1-26)—Columbia Basin Project, Wash. Wahluke Canal, nine mi. south of Othello. Earthwork and structures for about 4 mi. unreinforced concrete-lined canal with a 12' bottom width and about 3 mi. unlined canal wtih a 36' bottom width.

Bids will be called soon by the chief engineer.

PIPE LINES (1-28)—Weber Basin Project, Utah. About ten mi. north of Salt Lake City. Furnishing and laying about 21,000' of 24", 27" and 30" modified prestressed steel cylinder concrete pipe or mortar-lined and coated-steel pipe, and constructing a concrete-lined equalizing reservoir for the Davis Aqueduct trunk lines.

Bids will be called by the chief engineer.

SIPHON AND FLUMES (1-29) — Rogue River Basin Project, Ore. Near Medford. Constructing a 54" monolithic concrete of 51" modified prestressed steel cylinder concrete pipe siphon about 1,100' long, removing 5 wood-bent metal flumes and constructing two 5.5'x5.5' reinforced concrete bench flumes and a reinforced concrete cantilever wall.

Bids will be called by the chief engineer.

SIPHONS (1-30)—Rogue River Basin Project, Ore. Near Medford. Removing a 48" wood-stave pipe siphon and constructing a 60" monolithic concrete or 57" modified prestressed steel cylinder concrete pipe siphon about 1,940' long; removing a metal flume and constructing a 60" monolithic concrete or 60" precast concrete culvert pipe of 57" modified prestressed steel cylinder concrete pipe siphon about 155' long.

Bids will be called by the chief engineer.

PIPE LATERALS, PUMPING PLANT (1-31)—Weber Basin Project, Utah. South of Ogden. Constructing about 14 mi. Uintah Bench pipe laterals consisting of about 11 mi. of 12" to 36" precast reinforced concrete pipe, about 1.5 mi. of 12" to 24" precast concrete steel cylinder-type pipe and about 1.5 mi. of 8" and 10" steel or asbestos cement pipe, including pipe turnouts, manholes, blowoffs, air valves, gate valves and line meters. Constructing the P2.8R pumpplant which is to have four outdoor, horizontal booster units, two units having a total head of 225' and 9 cfs discharge, and two units having a total head of 365' and 8 cfs discharge.

Bids will be called by the chief engineer.

PIPE LATERALS (1-32)—Michaud Flats Project, Idaho. Near American Falls. Constructing 7.5 mi. welded steel pipe laterals for sprinkler-type irrigation.

Bids will be called by the regional director in Boise.

DISTRIBUTION SYSTEM (1-33) — Chief Joseph Dam Project, Wash. Near Brewster. Constructing the Brewster Flat distribution system.

Quantities: 8,000' of 4" to 30" steel pipe; 12,000' of 4" to 12" asbestos-cement pipe; appurtenant structures.

Bids will be called by the chief engineer.

LATERALS (1-34)—Columbia Basin Project, Wash. About 6 mi. northeast of Beverly. Earthwork and structures for about 30 mi. unlined open laterals, drains and wasteways with bottom widths varying from 12' to 2' in Block 84.

Bids will be called by the chief engineer.

LATERALS (1-35)—Columbia Basin Project, Wash. About ten mi. northeast of Beverly. Earthwork and structures for about 50 mi. unlined laterals, wasteways and drains with bottom widths varying from 14' to 2', Block 82.

Bids will be called by the chief engineer.

LATERALS (1-36) — Minidoka Project, Idaho. Near Rupert. Earthwork and structures for about 7 mi. open laterals with bottom widths of from 4' to 2', from 14 wells.

Bids will be called by the regional director in Boise.

LATERAL LINING (1-37)—Columbia Basin Project, Wash. Near Warden. Repairing lining and constructing a wasteway on the EL66 lateral system in Block 44.

Bids will be called by the project manager in Ephrata.

DRAINS (1-39)—Columbia Basin Project, Wash. Near Moses Lake. Constructing 6 open drains on the DE229 lateral system in Blocks 41 and 42.

Bids will be called by the project manager in Ephrata.

DRAINS (1-40)—Columbia Basin Project, Wash. Near Othello. Constructing the DPE-221A drain, extending 3 deep drains on the DPE216 system in Block 49, and constructing the DPE224C drain in Block 11.

Bids will be called by the project manager in Ephrata.

DRAINS (1-41)—Columbia Basin Project, Wash. Near Warden. Constructing about 3.5 mi. deep and semi-deep drains on the DE-44.5 systems in Block 43.

Bids will be called by the project manager in Ephrata.

DRAINS (1-42)—Columbia Basin Project, Wash. Near Quincy. Constructing three drains on the DW36 and DW35.8G systems in Block 72.

Bids will be called by the project manager in Ephrata.

DEEPENING DRAINS (1-44) — Columbia Basin Project, Wash. Near Moses Lake. Deepening 3 drains on the DE234 and DE235 systems in Blocks 41 and 42.

Bids will be called by the project manager in Ephrata.

DEEPENING DRAIN, WASTEWAYS (1-45)-Columbia Basin Project, Wash. Near Othello. Deepening one drain, constructing 7 new drains, 2 wasteways, and one pumping plant in Block 45.

Bids will be called by the project manager in Ephrata.

WASTEWAY (1-45)—Columbia Basin Project, Wash. WB-5 wasteway channel, fifteen mi. west of Mesa. Constructing a 165- to 29-cfs-capacity wasteway channel about 9 mi. long, including road crossings, drops, dikes, a small storage reservoir and a terminal chute into the Columbia River.

Bids will be called by the chief engineer in Denver.

WASTEWAY CHUTE (1-47) — Owyhee Project, Ore. About 15 mi. south of Nyssa. Constructing a rectangular reinforced concrete chute 8' wide, 4' deep, and about 1,600' long, and earthwork for an earth transition, about 100' long, to the chute.

Bids will be called by the chief engineer in Denver.

WELLS (1-49)—Minidoka Project, Idaho. Near Rupert. Additional drilling on eleven 8", 12" and 16" diameter drainage wells, and drilling and casing four 16" and 20" drainage wells with depths of from 200' to 400'.

Bids will be called by the regional director in Boise.

ROADS (1-50)—Missouri River Basin Project, Wyo. Near Glendo. Relocating 5 mi. Platte County road, and constructing 2.5 mi. permanent access road to Glendo Dam.

Bids will be called by the chief engineer in Denver.

ROAD GRAVELING (1-52) — Columbia Basin Project, Wash. Near Connell. Furnishing, placing, and stockpiling gravel for road surfacing in Block 18.

Bids will be called by the project manager in Ephrata.

SUBSTATION (1-53) — Missouri River Basin Project, Wyo. Guernsey substation. Dismantling temporary substation, grading and fencing the site, constructing a concrete foundations, furnishing and erecting steel structures, and installing a 115134.5-kv, 10,000-kva, 3-phase autotransformer and associated electrical equipment.

Bids will be called by the chief engineer in Denver.

SUBSTATION ADDITIONS (1-54)—Eklutna Project, Alaska. Near Anchorage. Constructing a 34.5-kv bay at Anchorage Substation. Work will include constructing concrete foundations, furnishing and erecting steel structures and a one-bay extension to existing 34.5-kv bus structure, and installing a 34.5-kv circuit breaker and associated electrical equipment.

Bids will be called by the chief engineer in Denver.

SUBSTATION ADDITIONS (1-57)—Missouri River Basin Project, Wyo. Additions to the Casper Substation will include constructing concrete foundations, furnishing and erecting minor steel structures and installing a Government-furnished 115-kv circuit breaker and related switching and metering equipment.

Bids will be called by the chief engineer in Denver.

TIE LINE, COMMUNICATION LINE (1-58—Provo River Project, Utah. About eighteen mi. northeast of Provo. Constructing 2,600' of 46-kv Deer Creek Powerplant tie line, 1,400' of 2,400-volt camp supply line, and 1,400' of combination signal and communication line.

Bids will be called by the regional director in Salt Lake City.

HOUSING, BUILDINGS (1-60)—Columbia Basin Project, Wash. Near Quincy and Moses Lake. Constructing two 3-bedroom frame residences with separate double garage in Block 77; two 2-bedroom frame residences with attached garages and full basements complete with water and sewerage facilities in Blocks 46 and 79; constructing an office building, storehouse, general purpose shop, equipment shelter building and one 2-bedroom frame residence with attached garage and full basement for additions to Burke Watermaster headquarters.

Bids will be called by the project manager in Ephrata.

HOUSING (1-61)—Columbia Basin Project, Wash. About 7.5 mi. north of Smyrna. Constructing two 2-bedroom frame residences with full basements, a separate 2-car garage, and one pumphouse in Block 81.

Bids will be called by the project manager in Ephrata.

HOUSING (1-62)—Weber Basin Project, Utah. About 38 mi. east of Salt Lake City. Constructing a 1,175 sq. ft., 2-bedroom, brick veneer residence with full basement.

Bids will be called by the regional director in Salt Lake City.

ROCK CASCADE DROPS, FLUME (1-63)—Provo River Project, Utah. About 18 mi. northeast of Provo. Earthwork for 6 rock cascade drops in creek bed and replacing small irrigation flume.

Bids will be called by the regional director in Salt Lake City.

ICE PREVENTIVE HEATING SYSTEM (1-65)—Yakima Project, Wash. Near Yakima. Furnishing and installing heating equipment, including rubber heating blankets, transformers, control board and wiring, for radial gate and roller gates at the Roza Diversion Dam.

Bids will be called by the chief engineer in Denver.

ICE PREVENTIVE HEATING SYSTEM (1-66)—Yakima Project, Wash. Furnishing and installing heating equipment, including rubber heating blankets, transformer, control board and wiring, for radial gates and wall plates at the Chandler Canal Headworks.

Bids will be called by the chief engineer in Denver.

Advertisements for Bids

Advertisements reaching us not later than Wednesday noon will appear the same week.

THE RATE for Advertisements for Bids is 35 cents per line for the first insertion; 25 cents per line for each insertion thereafter.

MULTIPURPOSE BUILDING
BIDS CLOSE 8 P.M., P.S.T., JANUARY 29
Shelton, Washington
NOTICE TO CONTRACTORS

Notice is hereby given that Lower Skokomish School District No. 2, Mason County, Washington, will receive sealed bids up to 8:00 P.M. o'clock P.S.T. on 29th day of January, 1957 at the Lower Skokomish Elementary School, Mason County, Washington, at which time all bids will be opened and read in public for the construction of a 61 feet by 68 feet multipurpose building.

Each bid shall be in accordance with the plans and specifications now on file with County Superintendent, County Court House, Shelton, Washington, and at the office of James A. McGrath, Architect, Times Square Building, Seattle, Washington, where copies may be obtained upon a deposit of $25.00, which sum will be returned to the bidder upon return of the plans.

Each bid shall be accompanied by a certified check, cashier's check or bid bond payable to Lower Skokomish School District No. 2, Mason County, Washington, in the sum of not less than 5% of the amount of the bid.

No bidder may withdraw his bid after the time set for opening thereof, unless the award of contract is delayed for a period exceeding 30 days.

Lower Skokomish School District No. 2 reserves the right to reject any or all bids and to waive informalities in the bidding. Dated this 2nd day of January, 1957.

Charles H. Dillon
Clerk, Lower Skokomish School District No. 2
Mason County, Shelton, Washington

ELEMENTARY SCHOOL
BIDS CLOSE 8 P.M., JANUARY 25
Anacortes, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the undersigned until 8:00 p.m., January 25, 1957, at the Office of the Principal, Fidalgo School, Fidalgo School District No. 2, Route 2, Anacortes, Skagit County, Washington, for Architectural, Mechanical and Electrical Trades Contracts for Construction of the Fidalgo Elementary School.

Contractors must submit a separate bid on the Architectural, Mechanical and Electrical Trades Contracts; or they may also submit a combination bid to include Architectural, Mechanical and Electrical trades under a general contract.

Plans, specifications and contract documents may be obtained by bidders at the office of William Arild Johnson & Associates, 3506 Broadway Avenue, Everett, Washington.

Each prime contractor will be allowed one set of drawings and specifications upon deposit as follows: Architectural, $25.000; Mechanical, $15.00; Electrical, $15.00.

Planholders who do not enter a bona fide bid and who do not return, unmarked and unmutilated, plans and specifications within five (5) days after they are issued, will forfeit their deposits. Additional sets remain the property of the Architect and shall be returned.

Each bid shall be accompanied by a certified check, cashier's check, or bid bond, made payable to Fidalgo School District No. 2, in an amount not less than five percent (5%) of the bid, plus all alternates. School board directors reserve the right to waive any informalities or irregularities in any bid or in the bidding, and may reject any or all bids.

No bidder may withdraw his bid after the hour set for the opening thereof or before award of the contract, unless said award is delayed for a period exceeding thirty (30) days.

FIDALGO SCHOOL DISTRICT No. 2.
Ken Thibert,
Clerk of the Board.

STATE HIGHWAY PROJECTS
BIDS CLOSE 10 A.M., JANUARY 29
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, January 29, 1957, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal funds have been allocated for items Nos. 1 to 5 inclusive.

The improvements for which bids will be received follow:

1. Construction a Reinforced Concrete Box Girder Bridge and Reinforced Concrete Flat Slab Bridge on 0.090 mile of Primary State Highway No. 2 in King County, PSH NO. 5 OVERCROSSING, FAP No. F-046-1(4), involving about 1,500 cubic yards of Common Excavation, 400 tons of Selected Roadway Borrow, 110 cubic yards of Crushed Stone Surfacing, 3,313 cubic yards of Concrete, 834,000 pounds of Steel Reinforcing Bars, a lump sum bid for Structural steel, 3,120 linear feet of Concrete Piling and other items.
2. Clearing, Draining, Grading and Constructing a Reinforced Concrete Flat Slab Bridge on 5.038 miles of Primary State Highway No. 1 in Snohomish County, STIMSON ROAD TO STILLAGUAMISH RIVER BRIDGE, FAP No. IN-001-4(15), involving about 67 acres of Clearing, 189,300 cubic yards of Common Excavation, 104,460 cubic yards of Special Borrow, 85,500 units of Overhaul, 900 tons of Crushed Stone Surfacing, 300 tons of Bituminous Mix, 5,014 linear feet of Concrete Pipe, 756 linear feet of Corrugated Metal Pipe, 268 cubic yards of Concrete, 73,000 pounds of Steel Reinforcing Bars, 2,200 linear feet of Concrete Piling and other items.
3. Clearing, Draining and Grading on 1.222 miles of Primary State Highway No. 1 in Skagit County, JCT. SSH NO. 1-D TO ANACORTES, FAS No. S-0964(1), involving about 20 acres of Clearing, 620 cubic yards of Common Excavation, 160,010 cubic yards of Solid Rock Excavation, 25,940 tons of Selected Roadway Borrow, 912 linear feet of Concrete Pipe, 295 linear feet of Corrugated Metal Pipe and other items.
4. Draining, Grading, Surfacing and Stockpiling Crushed Stone Surfacing on 4.2 miles of a Benton County Road, OLD RELAND EMPIRE HIGHWAY, FAS No. 0402(1), involving about 17,290 cubic yards of Unclassified Excavation and Borrow, 61,245 tons of Crushed Stone Surfacing, Ballast and Crushed Cover Stone, 1,8 linear feet of Concrete Pipe and other items.
5. Draining, Grading and Surfacing on 7.8 miles of a Grant County Road, ADAMS ROAD, FAS No. S-1002(6), involving about 7.9 miles of Grading, 11,230 tons Crushed Stone Surfacing, 648 linear fe of Concrete Pipe, 794 linear feet of Corrugated Metal Pipe, 2,110 linear feet Right of Way Fence and other items.
6. Constructing Sheer Booms on Primary State Highway No. 1 in Cowlitz and Lewis Counties, KALAMA RIVER AND COWLITZ RIVER—SHEER BOOMS, State Project, involving about 6 MBM Timber and Lumber, 4,110 linear feet Timber Piling, 1,820 linear feet of Boom Logs and other items.
7. Installing Seven Illumination Systems Primary State Highway No. 1 in Skagit County, CONWAY JUNCTION TO ANDERSON ROAD, a State Project, involving 7 lump sum bids for Installation Illumination Systems.

E. C. HUNTLEY, Chairman
W. A. BUGGE, Director of Highways

5710—1-19

SCHOOL ADDITION
BIDS CLOSE 8 P.M., JANUARY 23
Opportunity, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Secretary of the Central Valley School District #356, Opportunity, Washington, at the offices of the School District, North 6th Pines, on or before Wednesday, January 23, 1957 at 8:00 P.M., P.S.T., for the construction of an addition to Progress Elementary School consisting of 10 classrooms, remedial, health, toilet, shower and locker rooms of frame and masonry construction. The bids will then and there be publicly opened and read aloud.

Bids received after the time fixed for opening cannot be considered.

Separate bids will be received for the following contracts:

a. General
b. Mechanical work
c. Electrical work.

Drawings and specifications including contract documents may be examined at the

office of the Architect, Victor Louis Wulff, 1526 West Riverside Avenue, Spokane, Washington, and may be obtained there, upon the deposit of $25.00 per set for general and $15.00 for electrical and mechanical.

The sets of plans and specifications will be on file at the following places:

Construction Council, W. 933 3rd Ave., Spokane, Washington

AGC Builders' Chapter, N. 1207 Washington St., Spokane

Associated General Contractors, 215 W. Harrison St., Seattle 99, Wn.

Builders' Exchange Cooperative, 317 Builders' Exchange Bldg., Portland 4, Ore.

Plan Bureau, 2413 Western Ave., Seattle 1, Washington.

The full amount of the deposit for one set of documents, will be refunded to actual bidders upon return of the documents, unmutilated and without marks and annotations, within 10 days after the time set for opening of bids, but to non-bidders only if returned no later than 10 days before the bid opening.

Each bid must be accompanied by a certified check, cashier's check or bid bond with State-licensed surety or sureties in an amount of not less than five per cent (5%) of the largest bid, made payable to the Central Valley School District #356.

The right is reserved to accept or reject any or all bids and waive all claims or any informalities or irregularities in the bids or in the bidding.

No bidder may withdraw his bid after the time set for the opening thereof, unless the award of contract is delayed for a period exceeding 30 days.

By order of Central Valley School District #356, North 607 Pines, Opportunity, Wash.

Carl G. Lawson, Secretary

STATE HIGHWAY PROJECTS

BIDS CLOSE 9 A.M., JANUARY 23

Portland, Oregon

NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Oregon State Highway Commission in the Queens Room of the Imperial Hotel in Portland, Oregon, at 9:00 a.m. on Tuesday, January 22, 1957 and at 9:00 a.m. on Wednesday, January 23, 1957. Jobs listed with number only (2) are those included in the first notice. Jibs listed with a number and letter (2a) comprise the supplemental lists of jobs.

BIDS TO BE OPENED AT 9:00 A.M. ON TUESDAY, JANUARY 22, 1957

(1) COOS and DOUGLAS COUNTIES: Myrtle Point-Camas Valley Rock Production Project on the Coos Bay-Roseburg Highway, easterly from Myrtle Point. State Project. Requires approx. 10,000 cu. yds. crushed material in stockpile.

(2) DOUGLAS and JOSEPHINE COUNTIES: Azalea-Mackin Gulch Rock Production Project on the Pacific Highway, about 15 mi. south of Canyonville. State Project. Requires approx. 7,000 cu. yds. crushed material in stockpile.

(2-a) DOUGLAS COUNTY: Missouri Bottom-Fords Bridge Unit, Myrtle Cr.-Canyonville Section of the Pacific Highway, about 2.5 mi. south of Myrtle Creek. Federal Interstate Project No. I-78(31). 3.27 mi. of grading. Requires approx. 910,000 cu. yds. excavation; 160 cu. yds. concrete; 25,000 lbs. metal reinf.; 2,100 rods Type 2 fence; 12,200 cu. yds. crushed base materials; 80 tons 120-150 asphalt; and 34 tons RS-1 asphalt.

(2-b) LANE COUNTY: Eugene Traffic Signal Installation. State Project. Install traffic signals at the intersection of Sixth and Seventh Avenue on Garfield Street in the City of Eugene.

(2-c) LINCOLN COUNTY: Big Creek Park Overnight Camp Expansion Project, about 3 mi. south of Waldport. State Project. Construction of camping area and roadways. Requires approx. 3,300 cu. yds. excavation; 75 lin. ft. 12-in. conc. pipe; 100 lin. ft. 18-in. conc. pipe; and 730 cu. yds. crushed base materials.

(2-d) LINCOLN COUNTY: Big Creek Park Camp Facilities Expansion Project, about 3 mi. south of Waldport. State Project. Requires construction of utility building; and service facilities for 20 trailer stalls.

(2-e) MARION COUNTY: Sublimity Gun Club-Stout Creek Section of the North Santiam Highway, in the vicinity of Sublimity, Stayton and Mehama. FAP No. S-220(8). 9.28 mi. of paving. Requires approx. 19,900 cu. yds. excavation; 8,300 lin. ft. guard rail; 280 sight posts; 167,600 cu. yds. crushed base materials; 280 tons RC-3 asphalt; 34,500 tons asphaltic concrete mixture; 2,070 tons 85-100 asphalt; 170 tons RS-1 asphalt; and 380 tons 120-150 asphalt.

(2-f) TILLAMOOK COUNTY: Cape Lookout Park Overnight Camp Expansion Project, about 10 mi. southwest of Tillamook. State Project. Construction of camp area, roadways and footpaths. Requires approx 5,200 cu. yds. excavation; 300 lin. ft. 18-in. conc. pipe; and 1,850 cu. yds. crushed base materials.

(2-g) TILLAMOOK COUNTY: Cape Lookout Park Camp Facilities Expansion Project, about 10 mi. southwest of Tillamook. State Project. Requires construction of one standard latrine and one utility building, with water, electric and sewer systems.

(2-h) TILLAMOOK COUNTY: Tillamook-Donaldson Section of the Wilson River Highway, east from Tillamook. FAP No. F-191 (14). 3.92 mi. of paving. Requires approx. 20,000 cu. yds. excavation; 250 cu. yds. concrete in box culvert, curbs and islands; 2,600 lbs. metal reinf.; 1,200 lin. ft. guard rail; 140 sight posts; 67,000 cu. yds. crushed base materials; 110 tons RC-3 asphalt; 16,000 tons asphaltic concrete mixture; 960 tons 85-100 asphalt; 68 tons RS-1 asphalt; and 130 tons 120-150 asphalt.

(3) UMATILLA COUNTY: Cayuse-Thornhollow Section of the Adams-Cayuse County Road, about 12 mi. east of Pendleton. FAP No. S-328(1). 5.26 mi. grading and oiling; also construction of 2 reinf. concrete bridges. Requires approx. 77,800 cu. yds. excavation; 220 lin. ft. guard rail; 37,300 cu. yds. crushed base materials; 110 tons MC-2 asphalt; 230 tons 120-150 asphalt; 70 tons RS-1 asphalt; 130 cu. yds. concrete; and 24,000 lbs. metal reinforcement.

(4) UMATILLA and UNION COUNTIES: Pendleton-Hilgard Rock Production Project on the Old Oregon Trail Highway, southeast from Pendleton. State Project. Requires approx. 15,000 cu. yds. crushed materials in stockpile.

BIDS TO BE OPENED AT 9:00 A.M. ON WEDNESDAY, JANUARY 23, 1957

(4-a) CLATSOP COUNTY: Fort Stevens Park Overnight Camp Expansion Project, about 3 mi. northwest of Warrenton. State Project. Construction of camp area and roadways. Requires approx. 2,800 cu. yds. excavation; 80 lin. ft. 12-in. conc. pipe; 2,000 cu. yds. crushed base materials; and 110 cu. yds. crushed aggregates in stockpile.

(4-b) CLATSOP COUNTY: Fort Stevens Park Camp Facilities Expansion Project, about 3 mi. northwest of Warrenton. State Project. Requires construction of one standard latrine and one utility building, with water, electric and sewer systems.

(5) JOSEPHINE COUNTY: Louse Creek-Grants Pass Section of the Pacific Highway, north from Grants Pass. Federal Interstate Project No. I-138(7). 2.58 mi. of paving; also 4,000 cu. yds. crushed material in stockpile. Requires approx. 32,000 cu. yds. excavation; 2,000 lin. ft. metal conc. pipe; 520 lin. ft. 6-in. steel pipe; 60 cu. yds. concrete curbs; 100 metal sight posts; 11,790 lin. ft. metal guard rail and median barrier; 1,700 rods Type 2 fence; 70,600 cu. yds. crushed base materials; 160 tons RC-3 asphalt; 27,300 tons asphaltic conc. mixture; 1,638 tons 85-100 asphalt; 78 tons RS-1 asphalt; 140 tons 120-150 asphalt; and 4,000 cu. yds. crushed maintenance materials in stockpile.

(6) JOSEPHINE COUNTY: Hayes Hill-W Fork Illinois River Rock Production Project on the Redwood Highway, about 25 mi. southwest of Grants Pass. State Project. Requires approx 9,000 cu. yds. crushed materials in stockpile.

(6-a) POLK COUNTY: Illumination Installation on the Dolph Corner-Rickreall Section of the Willamina-Salem Highway. State Project. Install a complete highway lighting system at the Rickreall Junction, involving 16 mercury-vapor luminaires.

(7) WALLOWA COUNTY: Enterprise Rock Production Project on the Wallowa Lake and Enterprise-Lewiston Highways. State Project. Requires approx. 12,800 cu. yds. crushed materials in stockpile.

(8) WASHINGTON COUNTY: W. City Limits-Main St. (Beaverton) Section of the Farmington Highway, in Beaverton. State Project. 0.44 mi. grading and paving. Requires approx. 2,000 cu. yds. excavation; 200 cu. yds. concrete in curbs, drives and walks; 3,080 cu. yds. crushed base materials; 1 tons RC-3 asphalt; 1,800 tons asphaltic concrete pavement; and 4 tons RS-1 asphalt.

(9) WHEELER and GILLIAM COUNTIES: Thirtymile Creek-Service Creek Rock Production Project on the John Day Highway, near Condon. State Project. Requires approx. 12,800 cu. yds. crushed materials in stockpile.

(9-a) YAMHILL COUNTY: Wallace Bridge-Sheridan Section of the Salmon River Highway, east and west of Sheridan. FAP No. F-300(10). 6.25 mi. of paving; also 0.64 mi. temporary connection oiling. Requires approx. 11,400 cu. yds. excavation 13,800 lin. ft. guard rail; 270 metal sight posts; 23 rods Type 2 fence; 160 cu. yds. concrete in islands; 117,900 cu. yds. crushed base materials; 220 tons RC-3 asphalt; 28,200 tons asphaltic concrete mixture; 1,700 tons 85-100 asphalt; 144 tons RS-1 asphalt; and 23 tons 120-150 asphalt.

The minimum hourly wage rates to be paid to labor employed on the above advertised interstate projects have been predetermined by the Secretary of Labor and are set forth in the special provision applicable to those respective projects. The minimum hourly wage paid to labor employed on other Federal-aid projects shall be as follows: skilled labor, $2.25 per hour; intermediate labor, $2.00 per hour; unskilled labor, $1.75 per hour.

Prequalification of bidders will be required in accordance with the provisions of ORS 279.010 to 279.024, inclusive. Full information for bidders may be obtained at the office of the Oregon State Highway Commission, State Highway Building, Salem, Oregon. Plans and specifications may be inspected at the same place and may be obtained by eligible bidders upon payment of $2.00 for each set.

Plans and specifications may also be inspected at the office of the Associated General Contractors in Portland, Seattle, Spokane, and Boise; and at the Builders Exchange Cooperative, Portland.

The right is reserved to reject any and all proposals or to accept the proposal deemed best for the State of Oregon.

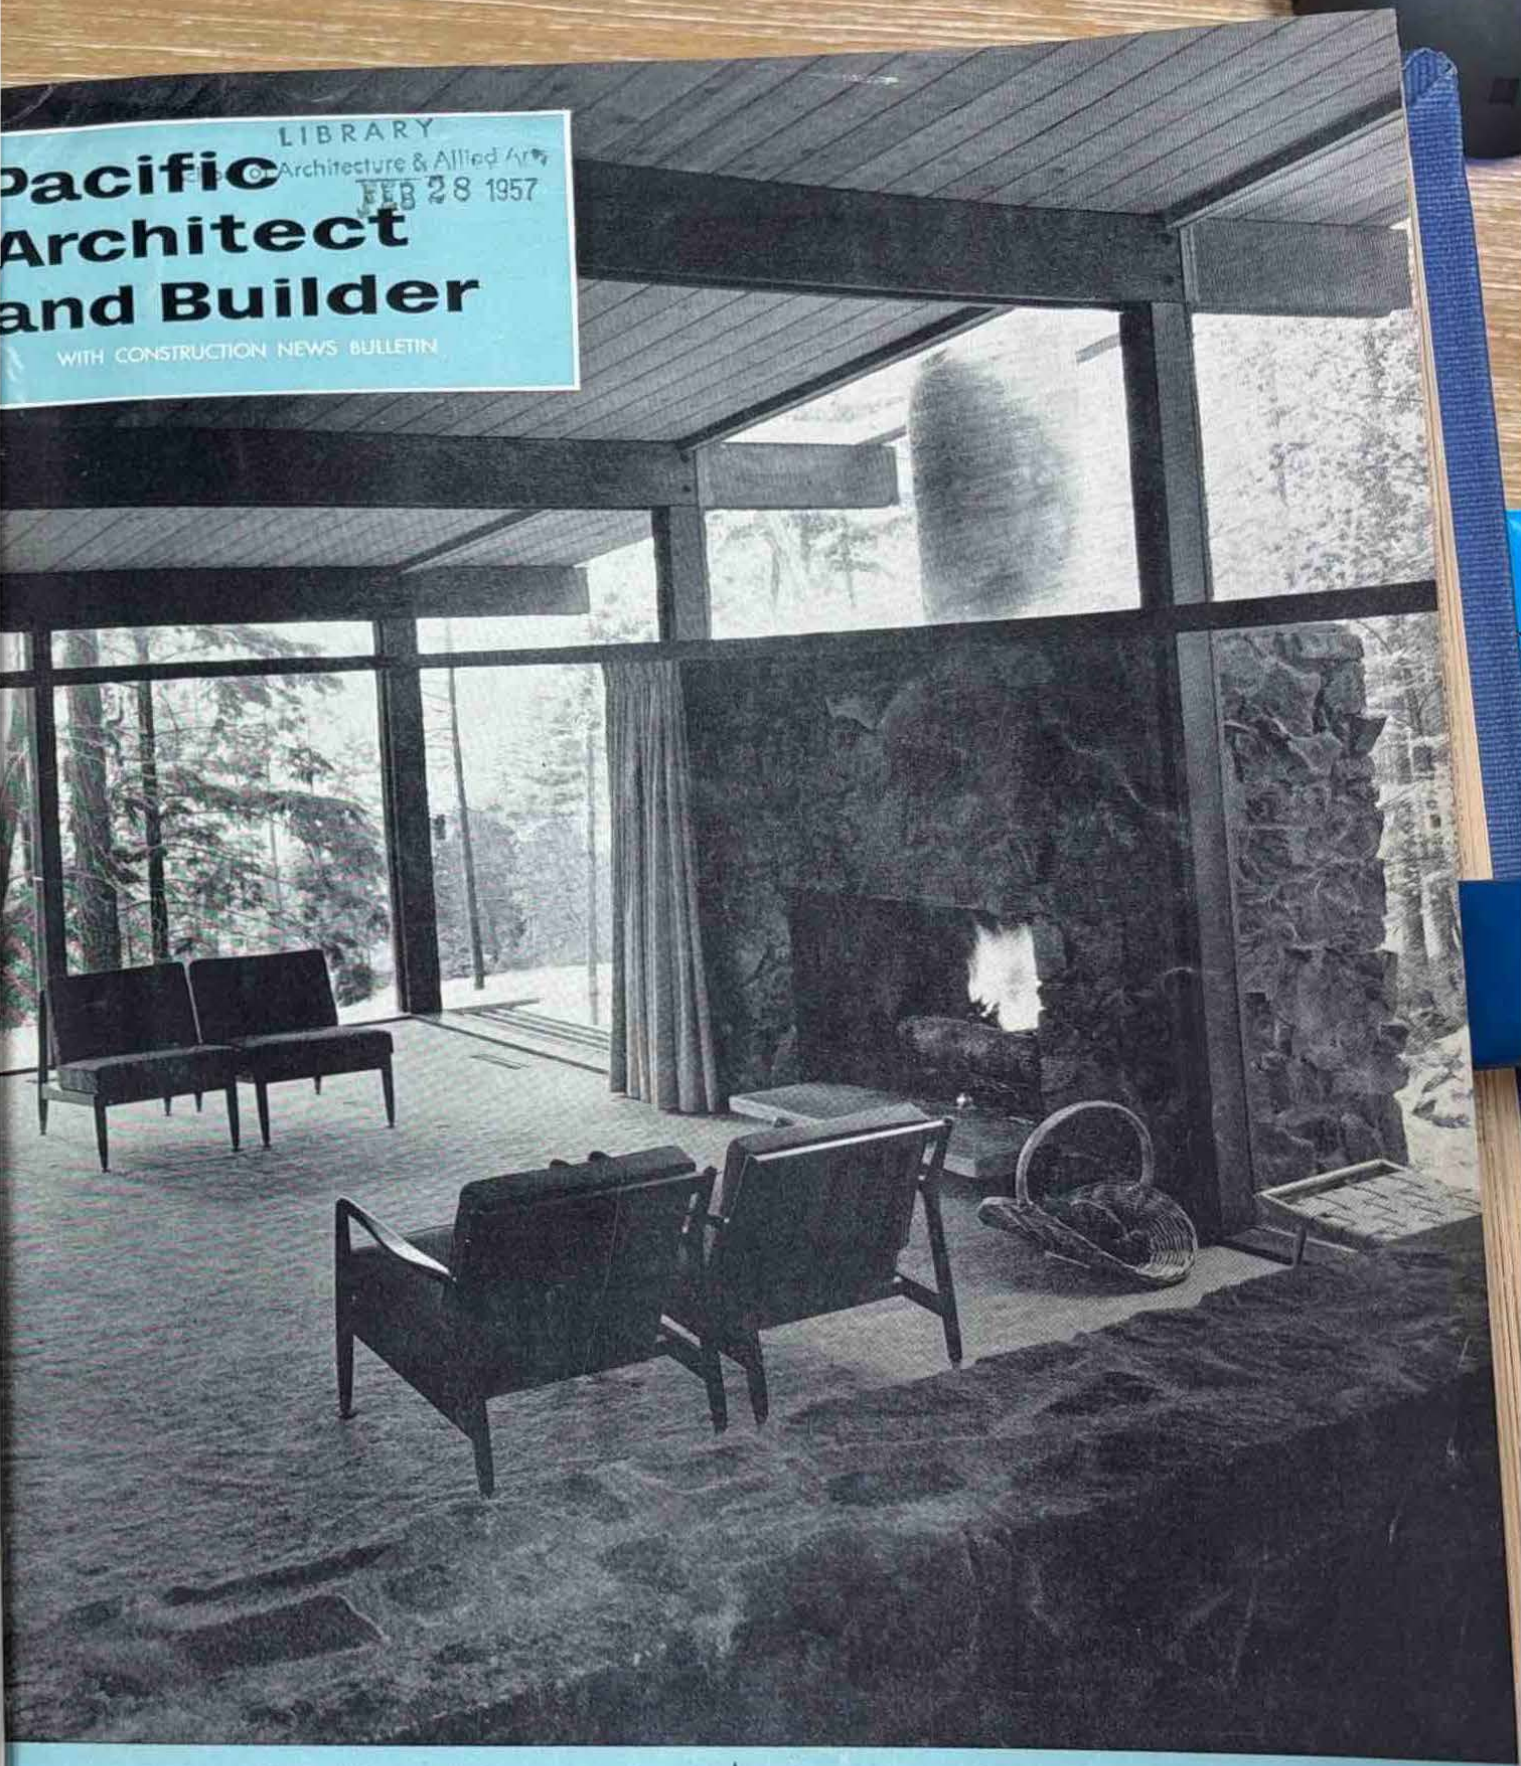
PIPELINES

BIDS CLOSE FEBRUARY 21

Bridgeport, Washington

NOTICE TO CONTRACTORS



DEPARTMENT OF THE INTERIOR, Bureau of Reclamation. Sealed bids (Specifications No. DC-4829) will be received at Bridgeport, Washington, until February 21, 1957, for furnishing labor and materials for Pipe Lines for Brewster Flat Distribution System, Chief Joseph Dam Project, Washington. Location near Brewster, Washington. Principal items are approximately: 30,000 cu. yds. excavation; 81,000 lin. ft. steel pipe, various sizes; 12,000 lin. ft. asbestos-cement pipe; various valves and accessories; and other work. Completion time 400 days. For particulars, address Bureau of Reclamation, P. O. Box 705, Bridgeport, Washington; or Building 53, Denver Federal Center, Denver 2, Colorado. W. A. Dexheimer, Commissioner.

FEBRUARY 1957

Puget Sound Power & Light Company Building
Harmon, Prey and Detrich; Architects & Engineers, Seattle
Cawdrey and Vemo; General Contractors, Seattle

The exterior face of the Fentron panel is porcelain enamel over 16-gauge USS Vitrenamel Sheet. Interior is 14-gauge USS Cold Rolled Sheet with insulation sandwiched between. "u" factor is .104. These panels are effective as covers for spandrels and columns, and as mullions complete with windows.

Prefab steel walls hold down building costs

UP, up, up go the costs of new building construction. One bright spot in this picture is the more economical building method using factory-built wall panels of stainless or porcelain enamel steel. These curtain walls are *fast to erect*, provide *more usable floor space*, permit earlier occupancy and sharply *reduce maintenance*. For the architect, this versatile and economical exterior treatment offers floor-to-floor panels that can be designed to harmonize with any architectural expression.

Here in the West, a number of companies have developed their versions of packaged steel walls fabricated from United States Steel Sheets. These curtain wall systems are figuring prominently in recent Western construction . . . from skyscrapers on down to one-story industrial buildings. In Bellevue, Washington, for example, the new Puget Sound Power & Light Company building (above) used curtain wall panels fabricated and erected by Fentron Industries, Inc., Seattle, Washington.

ALL-FACE

SCR

dry press brick!

An Exclusive
Gladding, McBean & Co. Product

EQUAL PERFECTION ON ALL FACES. The dry press process is used by Gladding, McBean & Co., to produce SCR brick for partition walls that have both sides exposed. No kiln marking on one face as found in brick made by the stiff-mud process.

ENDURING BEAUTY WITH STRENGTH. Partitions have the warm color of burned natural clay with pleasing variations in shading, and with strength to support roof beams.

EASE OF INSTALLATION. Gladding, McBean's SCR dry press units are cored with 5 holes large enough for ⅜" reinforcing rods, and electrical conduits. Voids around reinforcing steel are slushed full with grout.

LOW COST AND MAINTENANCE. Gladding, McBean's dry press SCR brick was installed in the William Clark School at "in-the-wall" costs competitive with non-masonry construction. Total cost of this school was $11.54 per sq. ft. of floor area. SCR requires no extra surfacing and offers the extremely low maintenance associated traditionally with the beauty of brick.

2½ TIMES as many bricks by volume were used in interior walls as used in exterior walls for Portland's William Clark Elementary School. Note special bullnose SCR brick. Architect: HOLLIS JOHNSTON, A.I.A. General Contractor: A. C. EDMON. Masonry Contractor: M. W. SMALLEN.

I'm saving you up to $24 on every shower installation!

Yes, now your plumber installs a Dura Steel DURACEPTOR porcelain shower receptor just as easily and quickly as other standard bathroom fixtures. And you get a leak-proof, good looking installation to last a lifetime.

You save installation costs by avoiding "mopped in" pans . . . and special construction or reinforcing.

There's a style, modular size and color for every bathroom plan that accomodates glass, tile, plaster or hardboard walls. Meets W.P.O.A. and Uniform Building Code standards.

Write or phone for A.I.A. literature and name of distributor. Dura Steel Products Co., 1774 East 21st St., Los Angeles 58, California.

Introducing PA&B's architectural advisor

ON THE SECOND ANNIVERSARY of Pacific Architect and Builder's expanded coverage into California, we are happy to announce the appointment of an architectural advisor. A. O. Bumgardner, AIA, will head an informal advisory board which will review all design projects submitted for publication.

To help familiarize our readers with Bumgardner's work, we are featuring his Graham residence, winner of a 1956 Honor Award from the Washington State Chapter, AIA, as our cover story; across the page are four other examples from his drawing board. And for good measure, on page 24 we show the office which he shares with Gene Zema, AIA, who designed it. (The architects are associated in designing the Northwest house for the Homestyle Center in Grand Rapids, Mich.)

Bumgardner's primary source of practice is residential, divided into two general categories: houses for older people at or nearing the retirement age and houses for families with children bursting through early teens. For the past 1½ years he also has served as consultant to West Seattle General Hospital for a renovating program which varies from redesigned letterheads to functional changes such as surgery room remodeling.

We have chosen to feature the Graham house not only because we feel it expresses one of the finest house-to-site relationships in the Northwest but also because it reflects Bumgardner's basic philosophy —that a better design usually results when the architect takes his clients into his confidence through the design process. Thus an architect helps fulfill one of his missions in widening the aesthetic horizons of those whom he serves. When clients understand the house—or any building—and its design concepts, the house can wear well and grow old with some of the grace with which houses of an older generation did.

* * *

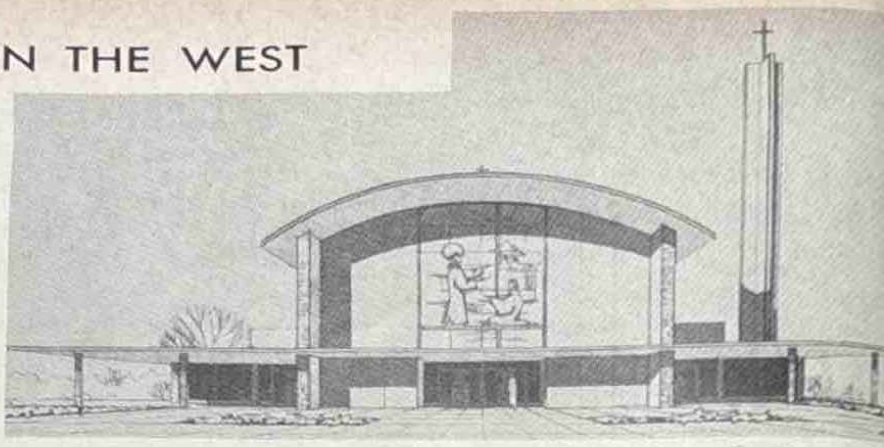
The appointment of an architectural advisor is part of our long-range program to better serve the entire building industry in the territory we cover: California, Oregon, Washington, Idaho, Montana, Alaska and Hawaii. In addition to raising our editorial standards, we also will more vigorously report news, methods and materials, making PA&B the practical working tool we intend it to be.

Perhaps it is fitting to quote from our editorial of February 1955, which we believe sums up the function of a regional building publication:

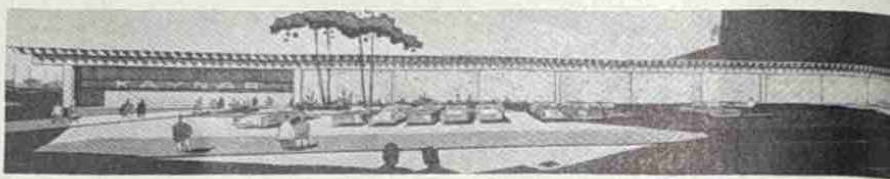
"Ours is the task of ferreting out the most feasible and satisfatcory new ideas, new building methods, design factors and adaptations of materials and products. We'll present them in practical capsule form, with pictures and cost units, so that our pages will provide an interchange of all that is worthwhile in Pacific Coast architecture and building methods.

"We are not unmindful of the challenge and responsibility that accrues in serving a $4 billion annual industry in an area of 1,140,000 sq. mi. wherein reside 15,795,000 of the country's most rugged individualists."

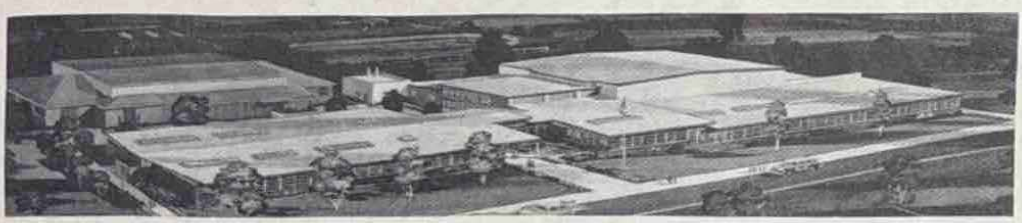
Robert E. Koehler



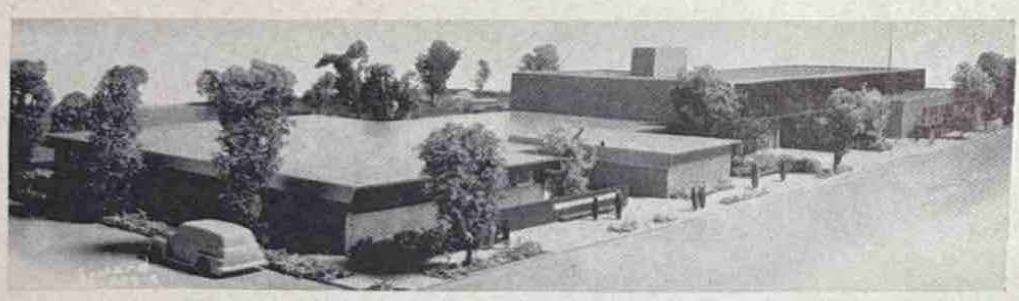
A. O. Bumgardner, AIA. Age 34. University of Illinois, 1949; part-time instructor in architectural design, 1948-49. Licensed in Washington, 1951; own practice on full-time basis, 1953. Treasurer, Washington State Chapter, AIA, past two years; chairman of committee which organized first series of seminars on professional growth of young practitioners. Honor Awards for design, 1954 and 1956, Washington State Chapter, AIA.



PROJECT PREVIEW IN THE WEST



FIRST WESTERN BUILDING will be one of Oakland's tallest when completed next year. Eighteen-story structure will be surfaced with colored porcelain insulated panels set in aluminum framework. Modular construction will be used throughout building, which will have radiant type heating and air conditioning in ceilings. Architects: Stone, Mulloy, Marraccini & Patterson.



LARGEST SINGLE THIN SHELL CONCRETE DESIGN to date will be incorporated i Edward's Church, Seattle, to cost nearly $600,000. Curved 42-ft. roof with its clere walls will carry side aisle roofs in addition to its own weight. Wilkeson stone ex will be accentuated with precast stone at ends of building and on 78-ft. free-stan tower. Precast stone will be repeated in mural panel on front of church depicting bolism related to patron of parish. Architect: John W. Maloney, AIA.

ALL-CONCRETE BUILDING being constructed for Kaynar Mfg. Co. in Rivera Calif., prestressed girders, perlins and roof slab. Although it contains few outside wind structure will be illuminated by natural overhead lighting through about 30,000 "l ports" spaced regularly throughout entire roof area and containing 8-in. dia. prism glass lenses developed by manufacturer. Completely flat roof will have constant l of water 2 in. thick which will be continuously treated, filtered and recirculating will, in conjunction with more than 1,000 roof water sprays, supplement refriger all-year air conditioning system. T. Y. Lin & Associates, consulting civil and struct engineers; architectural consultant, John Lautner, AIA.

ELEMENTARY AND HIGH SCHOOL PLANT nearing completion at Washtucna, Wash., contains 31,150 sq. ft., costing about $450,000 (includes razing old building, some equipment and ineligible items on state finance basis). In designing building to fit sloping site, multipurpose room also serves as stage when gymnasium—on same level as grade school portion—is used for auditorium purposes. Ramps in corridor connect sections. Architect: Victor Louis Wulff, AIA.

SPRINGFIELD, ORE., PROJECT, as represented in model shows library in foreground and remodeled city hall in background. Voters last fall approved $150,000 bond issue for former but not for latter. Library will have tilt-up concrete walls, flat wood roof, luminous ceilings and hot water in slab for basic heating. Architect Donald H. Lutes.

Building News - Trends - Views

NON-ARCHITECT CHARLES EAMES, who was slighted by the Southern California Chapter, AIA, when it issued an architectural guide for the 1956 national convention in Los Angeles, will be honored by the institute at its centennial program—as a designer of furniture. He will receive the Craftsmanship Medal awarded for achievement in the industrial arts (more details on opposite page).

THE PLANNED NEIGHBORHOOD IDEA will get its first big push in the Portland area this spring when 10 architects and designers combine their talents to plan a "junior community" of fine homes in the heart of a 60-acre site known as Raleighwood. Each of the participants is designing his own "ideal home" in the $25,000-$35,000 range but consulting with one another during the planning period.

REGISTRATION OF LANDSCAPE ARCHITECTS would be required in the state of Washington if a proposed bill is passed in Olympia.

A STATEWIDE MEETING held in the Hotel Statler, Los Angeles, earlier this month under the sponsorship of the California Council of Architects discussed "the most important legislation school architects in this state have ever had to deal with." Council president John Lyon Reid of San Francisco explained, "Bills have been introduced in the 1957 legislature which could drastically affect California's school building program for years to come." Among the bills he listed were measures which would limit architects' compensation on all public works; make use of a qualified architect or structural engineer optional on school projects; permit reuse of school plans without further compensation to the architect who prepared them.

SAN FRANCISCO "IS DEFACING ITSELF BY FREEWAYS" in the opinion of the architect who designed the City Hall and the Opera House. Addressing members of the Northern California Chapter, AIA, Arthur Brown Jr. declared that the elevated freeways across the front of the Ferry Building and at the rear of City Hall "are a shame and a disgrace." Brown added, "The trouble is that the freeways are all designed by engineers and they're looking for the cheapest way to do things. The elevateds have been torn down in New York and Chicago. But here we are planning to put the tangled skeins of those freeway ramps all over the city. It's a shame."

CALIFORNIA REAL ESTATE COMMISSIONER D. D. Watson reports that subdivision filings in the state fell off from 8 to 10% during 1956. Home builders blame the extremely tight money market for the drop.

The AIA centennial program really gets underway this month when New Yorkers dedicate a bronze table at 111 Broadway, site of the institute's founding, February 23. Meanwhile on the West Coast some celebrations already have taken place and others are being scheduled.

An example of the support that the profession is getting from the community is seen in Seattle where Mayor Gordon S. Clinton has tabbed February 17-23 as Architects' Week. His proclamation in part:

"In this, their centennial year of 1957, the American Institute of Architects have rededicated themselves to the high ideals and objectives of the founders and have pledged themselves to continue their work toward the improvement of our people's environment, helping them to express their hopes, ideals and aspirations through the fields of architecture and the allied arts and joining with them in their efforts toward achieving a happier and better world for mankind . . . "

AIA announces centennial awards

—Two West Coast men named

An unprecedented award, a special Centennial Medal, will be presented to Ralph T. Walker, New York architect and community planner, by the AIA at its annual convention in Washington, D. C., May 13-17.

Two West Coast men also will be honored during the institute's centennial program: for painter Mark Tobey of Seattle, the Fine Arts Medal; for furniture designer Charles Eames of Venice, Calif., the Craftsmanship Award.

The Gold Medal for 1957 will go to Louis Skidmore, senior partner of the architectural firm of Skidmore, Owings & Merrill. Other awards:

Citation of Honor: Foreign Buildings Operation of the U. S. Department of State, for distinguished achievement in directing the foreign building program; and to Milton Horn, Chicago sculptor, for achievements in the arts.

Honorary AIA Fellowships: Pier Luigi Nervi of Rome, Italy, and Christiano das Neves of Sao Paulo, Brazil.

Edward C. Kemper Award: David C. Baer of Houston, chairman of the AIA committee on office practice, for significant contributions to the profession.

A fellow and former president of the institute, Walker is a member of the architectural firm of Voorhees, Walker, Smith & Smith. In announcing the special award, AIA president Leon Chatelain Jr., said, "It is our belief that he has made the most significant contribution of any living American architect to humanity and the planning of human environment."

Walker designed the New York Telephone Co. headquarters in New York City and Brooklyn; Prudential Life Insurance building in Newark, N.J.; General Foods Offices building, White Plains, N.Y.; Union Carbide and Carbon Corp., New York; A.F.L.-C.I.O. building, Washington, D. C.; Charles Hayden Memorial Library, Cambridge, Mass.; Loyola Seminary, Shrub Oak, N.Y., Luxembourg American Cemetery; U. S. Army bases in the British West Indies; and a proposed community development to house workers for the Aswan fertilizer plant in Egypt.

An an inventor, he held the original patent on the Vitarama photographic process, the parent of Cinerama, and was the first to recognize the principal of peripheral vision.

TACOMA ARCHITECT Marshall Perrow (left) and restaurant owner Jack Meaker admire hardwood and birch wall that won national award.

Building products exhibit heads for Coast

The Home Building Caravan sponsored by Producers' Council will be wending its way up the West Coast this month and next. The itinerary: Los Angeles, Thursday, February 28, Biltmore Hotel; San Francisco, Tuesday, March 5, Fairmont Hotel; Portland, Tuesday, March 12, Multnomah Hotel; and Seattle, Friday, March 15, Norway Center.

The caravan has 30 booths displaying the products of 28 companies and associations for builders, architects and dealers. As a grand door prize for the entire tour of 38 cities from coast to coast, the council is offering some builder an all-expense airline trip to Europe for two.

Costing about $180,000 to build, transport and exhibit, the caravan will feature products shown by samples, models, cutaways, pictures and drawings.

Tacoma architect presented national design honor

Marshall Perrow, AIA, of Tacoma received one of two national awards given for architectural design by the Fine Hardwoods Association at its recent Chicago convention. He was cited for "a unique curved Philippine hardwood and birch wall" created for Johnny's Dock waterfront restaurant.

Thirty-six awards were made from 600 entries in all categories, including production furniture and miscellaneous, in addition to architectural installations. The latter division was defined as "both interior and exterior installations in which fine hardwoods play a dominant role in woodwork, paneling, flooring, built-ins, etc."

Award winners were displayed at Chicago's January furniture market.

Northern California plans design competition

The Northern California Chapter, AIA has launched its competition to select the most outstanding buildings and planning projects in the area designed since 1950 by members. The competition will be the most comprehensive of its kind ever held in the area and categories will include a commercial and industrial, public and institutional, religious, residential, site development and planning, interior design, and architectural painting and sculpture.

The competition will be restricted to works completed since January, 1950 in the area north to the Tehachapi Range and entries must be in the Sheraton Palace Hotel not later than March 1. Judging will end March 9. The jurors: Pietro Belluschi, dean, School of Architecture, MIT; Edgar Kaufman Jr., director, Museum of Modern Art, New York; James M. Fitch, professor, School of Architecture, Columbia University; Harry Bertoia, architectural sculptor; and Dr. J. Robert Oppenheimer, director, Institute of Advanced Studies, Princeton.

Following the presentation of awards, all models and exhibits will be placed on view in San Francisco in connection with the commemoration of the founding of the AIA and later will be exhibited in other northern California communities.

'Year of decision': NAHB has lively Chicago meet

Undaunted by the tight money market and a drop in housing starts, home builders from across the nation, Hawaii and Canada convened in Chicago January 17-24 for their 13th annual NAHB convention-exposition.

Nearly 300 speakers, panel participants and demonstrators combined their efforts to develop the theme "Target for Tomorrow" as the delegates approved one of the association's most significant policy statements (see p. 12). They also viewed the wares of 450 manufacturers displayed in 778 exhibition spaces and elected George S. Goodyear Jr. of Charlotte, N.C., as president.

Nels Serverin of San Diego was named first vice president and Edward P. Miller of Tacoma, Stanley C. Scott of La Mesa, Calif., and William Blackfield of San Francisco were among 21 elected regional vice presidents.

Speakers talked about mortgage money, house design, construction techniques and new materials (Some of these topics will be developed in later issues). But Sen. John J. Sparkman (D-Ala.) probably expressed the consensus when he said that "1957 is a year of decision for the home building industry."

Building volume climbs slightly in January

BUILDING PERMIT VOLUME in the five western states for January barely topped the December figure. The January dollar total was $179,686,836 for a 4% gain.

By states, the volume varies from an 8% drop in Washington to a 103% rise in Montana. Oregon, up 85%, and Idaho, up 57%, also showed good gains, while California rose a bare 2%.

The five-state total was down 9% from January 1956, with a drop of 13% in California pulling the grand total down. All other states recorded increases. Idaho was up 89%; Oregon, 36%; Montana, 19%; and Washington, 2%.

Among major reporting agencies, Los Angeles dropped $3 million from a year ago; Los Angeles County, $5 million; Orange County, $12 million; and San Francisco, $4½ million. Those showing good increases were San Diego, up $10 million; Portland $1¼ million; and King County, $2½ million.

The drop in housing starts, which is being offset by a steady increase being maintained in non-residential construction, caused the NAHB at its January convention to issue one of its strongest policy statements; and within 24 hours following the close of the sessions, newly elected president George S. Goodyear Jr. was in Washington, D.C., attending a House veterans affair committee hearing on a proposed VA interest hike. The home builders' program also calls for Congress to 1) increase FNMA secondary market funds; 2) expand FNMA special assistance; and 3) eliminate the $15,000 mortgage amount limit on FNMA purchases.

Following is a breakdown of building permits issued by several of the major agencies during January.

	DWELLING UNITS		COMMERCIAL & INDUSTRIAL		PUBLIC	
Portland	26	($ 698,250)	17	($1,632,330)

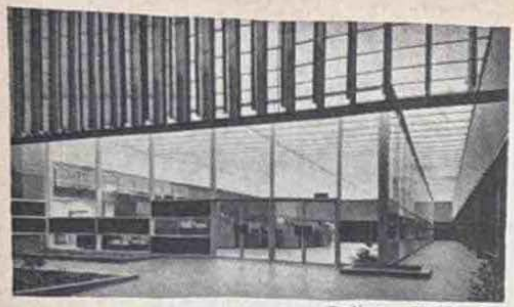
"Been settin' here, wettin' this fool stick for twenty years—and she ain't rotted yet." Paul Bunyan threw down the 12x12 Chemonited* timber in defeat. His disgusted sigh flattened 30 acres of prime Douglas fir. "Yessir, Babe, I been suckered again by a city slicker. That Baxter man bet me a year's free loggin' to a month in Frisco that that there stick would never rot—even in moist ground. On account of this new fangled presarvative, Chemonite* . . . Well come on, you lazy Blue Ox, let's get haulin' . . ."

Baxco

CHEMONITED



pressure treated lumber

*You WERE slickered, Paul. Because hundreds of installations prove that when you pressure treat wood with Chemonite, as the Baxter people do it, you've got a PERMANENT construction material protected from decay and termite attack. Just like the man said, Paul, even water and exposure won't take away that locked-in Chemonite protection. Baxco Chemonited wood is clean, odorless, paintable . . . Write for "Chemonited Forest Products," 28 page brochure on the development, testing, uses and service records of this wood preservative.

RECOMMENDED USES: *Building Foundations . . . Bridge Timbers . . . Wharf Timbers . . . Fence Posts . . . Septic Tanks . . . wherever wood is exposed to decay or insect attack.*

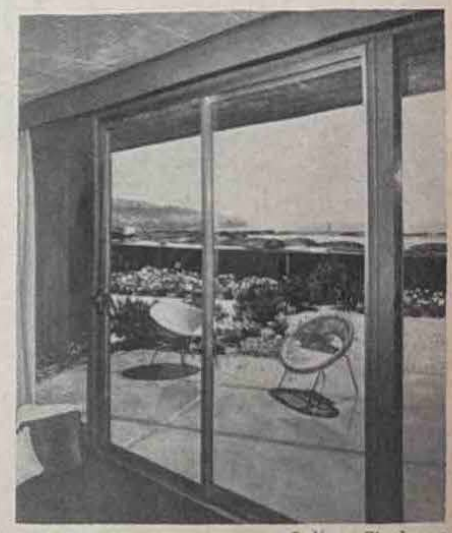
'Aluminum in modern architecture'

THE BUILDING SPOTLIGHT has been shining brightly on aluminum since last November when Reynolds Metals Co. introduced its two-volume work "Aluminum in Modern Architecture" and announced the juiciest plum ever offered in an architectural competition (see details below).



Shown on these pages are photographs from Volume I, a pictorial study by John Peter, although Volume II, by Paul Weidlinger, is perhaps the more significant. The latter is an engineering reference book for working designers, the most comprehensive ever undertaken of the structural applications of aluminum.

Volume I reviews 100 projects—factories, offices, residences, schools and general—which naturally employ aluminum somewhere in the structure. The treatment is similar to that afforded by the architectural press, which has widely publicized the majority of the buildings featured.

Most of the projects have been completed since 1950. For a study whose scope has been limited within the confines of one material, this volume presents a good cross section of American architecture. A small amount of foreign structures is featured.

Volume I has particular interest for West Coast readers, since this area has contributed 20 buildings or one-fifth of the total work shown. In addition to the 14 presented here, the book has these six projects:

- Katherine Finchy Elementary School, Palm Springs, Calif., 1950: Clark & Frey, architects.
- Kaufmann Residence, Palm Springs, Calif., 1948: Richard J. Neutra, architect.
- Northwestern Mutual Fire Insurance Office, Los Angeles, 1951: Richard J. Neutra, architect.
- Orange Coast College, Costa Mesa, Calif., 1946: Robert E. Alexander, architect.
- Standard Federal Savings Building, Los Angeles, 1954: Welton Becket & Associates, architects.
- White Oaks Elementary School, San Carlos, Calif., 1953: John Carl Warnecke, architect.

AIA ANNOUNCES RULES FOR $25,000 REYNOLDS PRIZE

Rules and a five-man jury for the first annual $25,000 R. S. Reynolds Memorial Award have been announced by the American Institute of Architects.

Closing date for nominations was February 15. Nominees will receive a special binder for displaying photographs, site plans and other descriptive data, which must be returned to the Octagon by March 25.

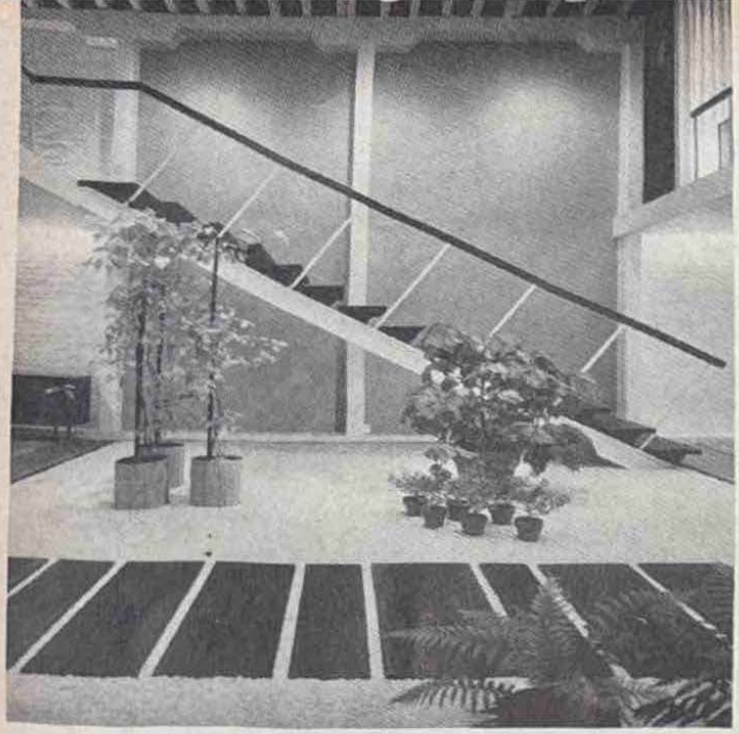
The jurors—George Bain Cummings, Percival Goodman, Ludwig Mies van der Rohe and Edgar I. Williams, all AIA fellows, and William Dudok, architect of Hilversum, Holland—will complete judging by April 13.

Rules set by the institute at the request of Reynolds Metals provide that "the award may be made for a structure of any classification." An entry may be one structure or a related group of structures forming a single project completed prior to January 1, 1957. "Nor is it necessary," according to the AIA, "for the structure to have been designed for human habitation; it may be entirely utilitarian or principally symbolic or decorative, or a structure featuring integral architectural sculpture.

"Prime consideration will be given to the creative value of the contribution and its potential influence on the architecture of our times, rather than to the size or type of structure."

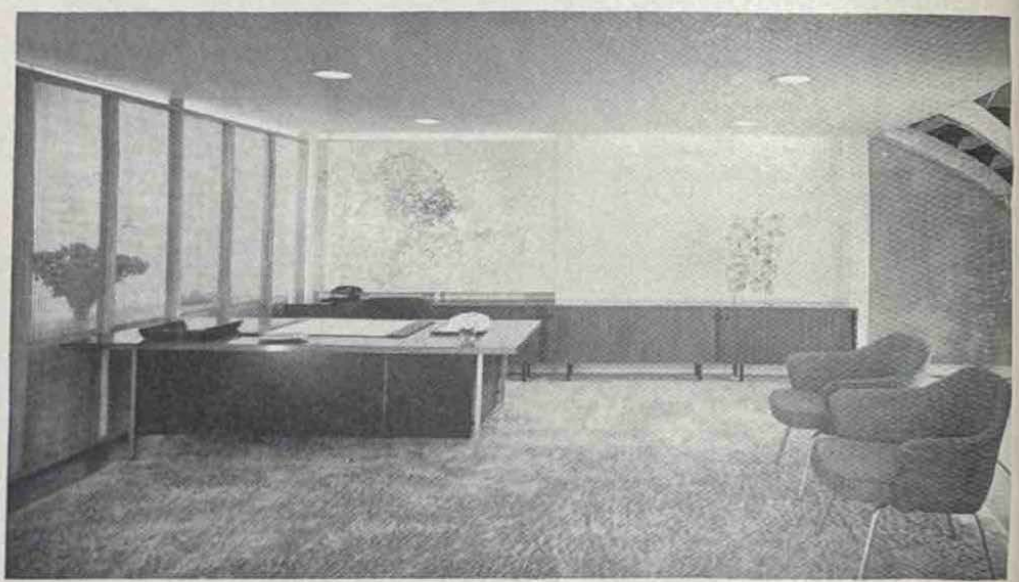
The $25,000 honorarium will be accompanied by a sculptured aluminum emblem.

Hedrich-Blessing



MID-WILSHIRE MEDICAL BUILDING, Los Angeles, 1951: Victor Gruen, architect.

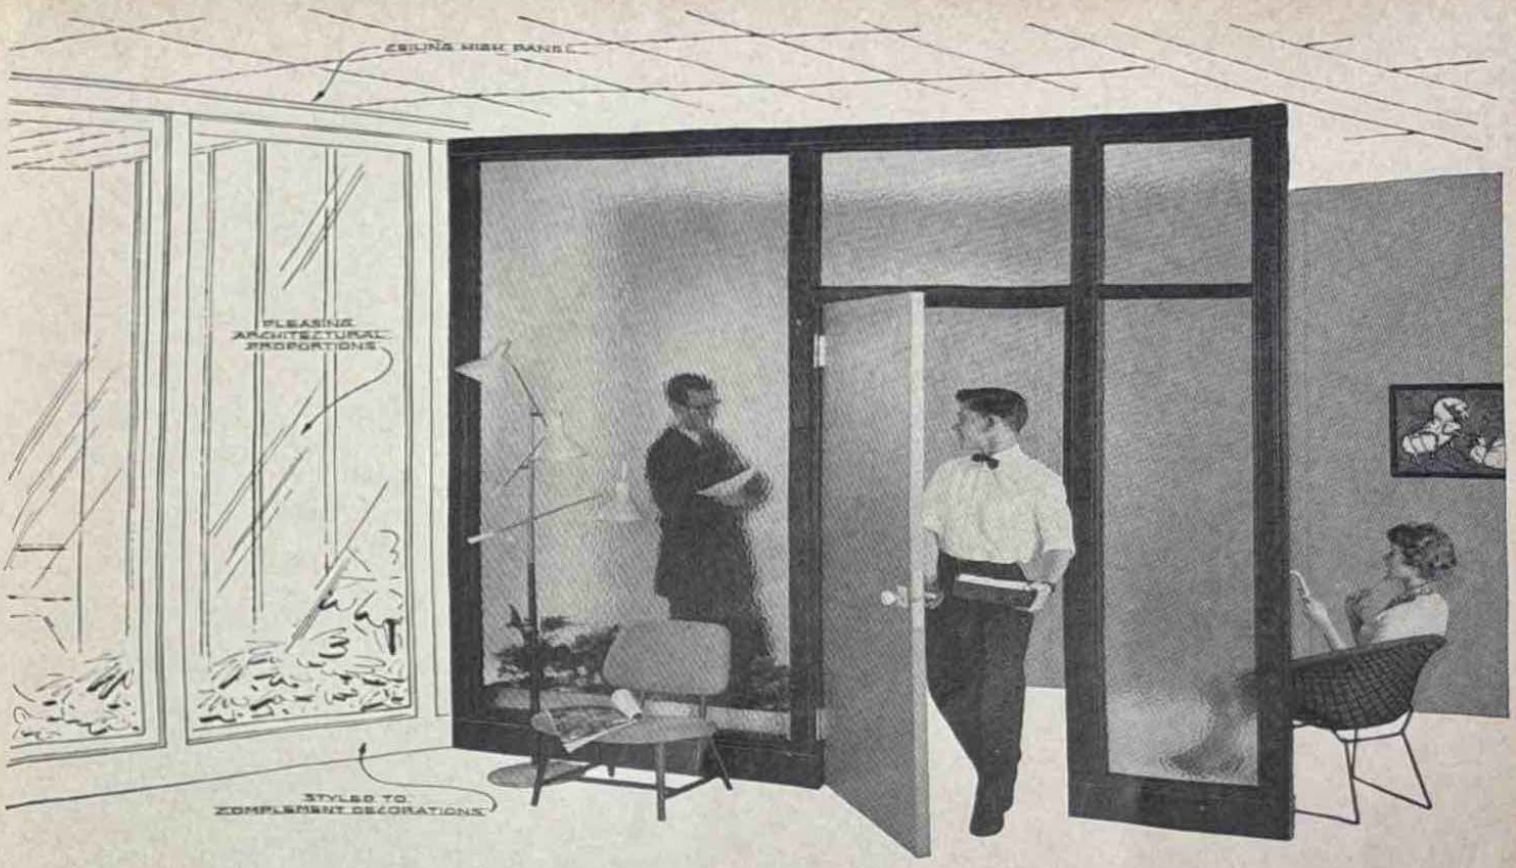
Florence Knoll designs own West Coast showrooms



THE WESTERN SHOWROOMS opened by Knoll Associates, Inc., in San Francisco are located in a building which dates back to 1857, a three-story structure with "party" walls, used as a warehouse for many years. Occupying the first two floors, the showrooms have been designed by the Knoll Planning Unit under the supervision of Florence Knoll, retaining the original character of the building.

In re-creating the space, the building was stripped down to the bones of the structure. The supporting columns and beams of heavy mill construction have been exposed and become part of the decorative element. The brick wall is left in its natural state and painted white. Colored panels added to walls are patterned to fit into this detailing. The floor is natural hemlock.

Focal point of the entrance is a free-floating staircase of structural steel leading to the twin mezzanines, established to provide a horizontal delineation in what is basically a long, narrow building extending 130 ft. from Montgomery Street to historic Hotaling Place. The walnut slab steps are repeated in a walkway, embedded in marble chips, which affords access to the two halves of the showrooms. Tall, informal greens accent the area.

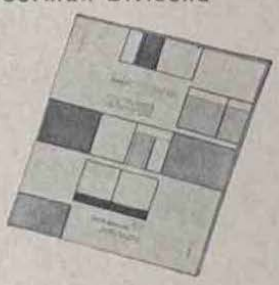


FREE-FLOATING STAIRCASE leads to twin mezzanines; walnut slab walkway is set in marble chip floor.

EXECUTIVE OFFICE GROUPING, above. Walnut topped desk sets on ebonized pedestal. Desk and walnut wall cabinets both are Florence Knoll designs. Eero Saarinen's chairs are covered in Rugby fabric, product of Knoll Textiles. Setting features taupe rug, woven cane transparent wall at left, white brick walls and metal sculpture by Harry Bertoia.

INFORMAL LIVING ROOM GROUPING, below. Coffee table uses structural T-frame with top finished in plastic laminated maple pattern. Chests by Knoll Planning Unit are natural teak with white plastic laminated tops and porcelain drawer pulls. Richard Stein's day bed is covered in linen flax fabric. Chairs by Pierre Jeanneret are natural maple frames with seat and back covered in yellow linen flax.

your new interior designs come alive with



MOVABLE *Hauserman* INTERIOR WALLS

Movable HAUSERMAN Walls give you new freedom to create imaginative interior designs . . . give your clients lifetime interior flexibility to handle inevitable floor-plan changes. HAUSERMAN's sound architectural engineering, expansive use of interesting glass patterns and wide choice of colors suggest applications as broad as the architectural horizon.

HAUSERMAN helps you save expensive drafting time by working closely with the architectural team to provide detailed working drawings. Time-stealing field supervision is also cut to a minimum with HAUSERMAN because there is just one source of supply, eliminating the need to coordinate the activities of several trades.

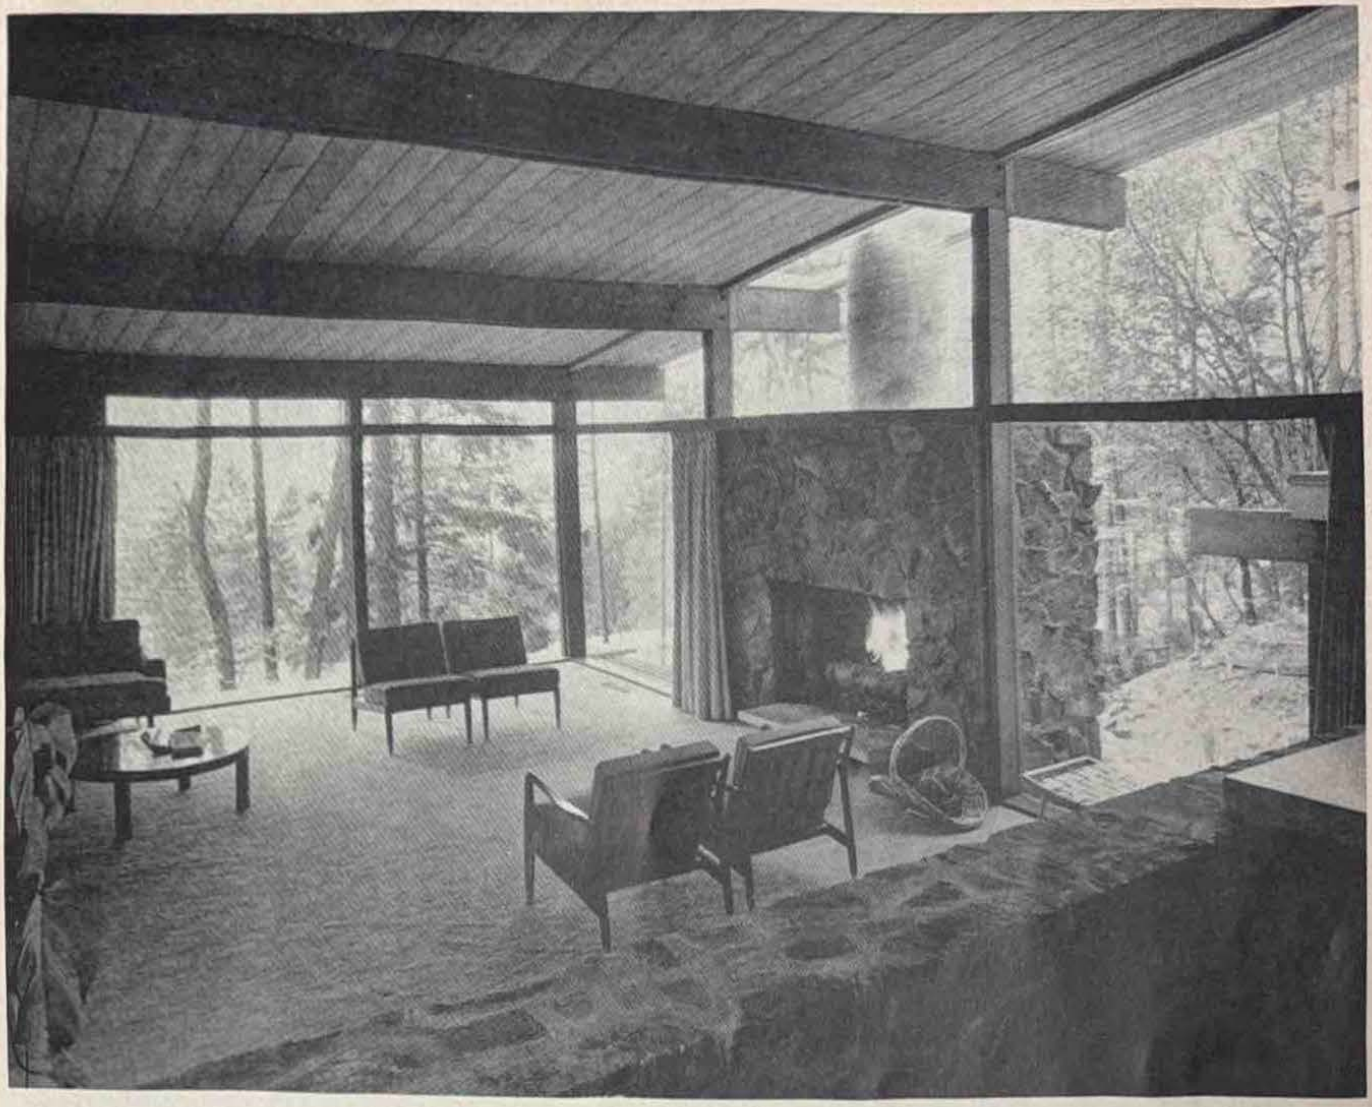
WHILE USING MANY NATURAL MATERIALS, house makes no attempt to merge into landscape; rather it is treated as insert with light wheat stain on siding and roof decking as effective contrast.

House that pays homage to the site

Thomas J. Graham Residence
Seattle, Washington



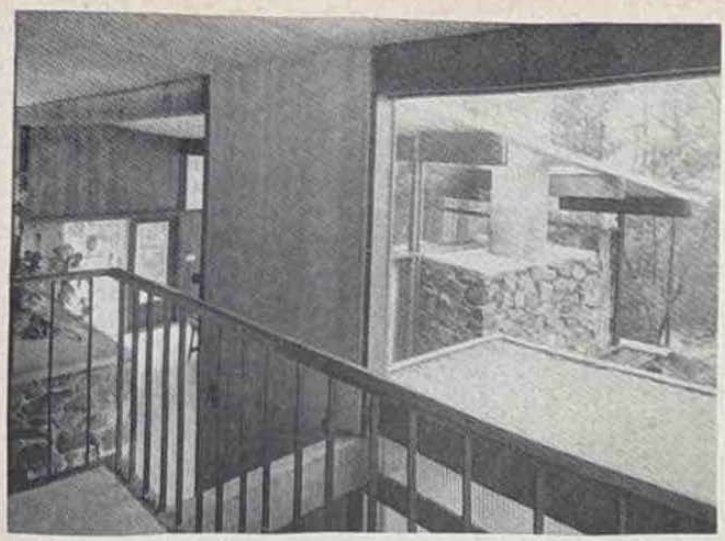
A. O. BUMGARDNER, AIA, Architect

THOMAS J. GRAHAM, Owner-Builder

KITCHEN-DINING-FAMILY AREAS look across terrace to deep wooded ravine to south sun.

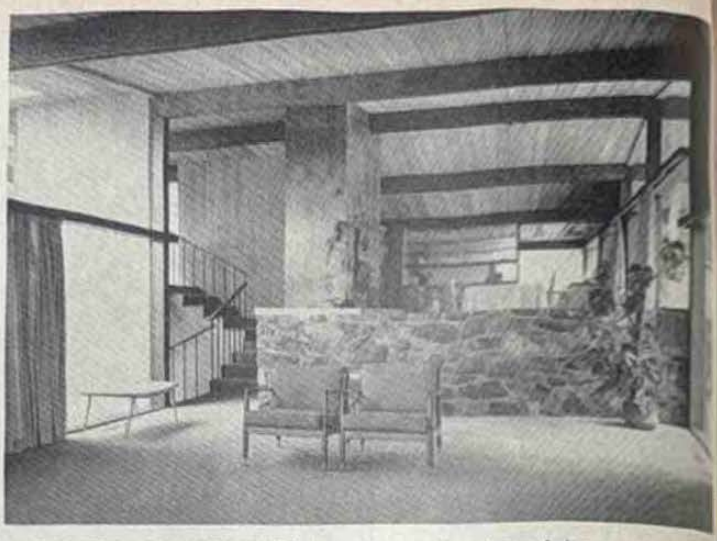
THE PUGET SOUND COUNTRY abounds in sites that are a challenge to the imagination but the house-to-site relationship itself often leaves much to be desired. Here the architect has used an honest, unapologetic approach in planning a residence for a family of three in suburban Three Tree Point.

The steeply sloping site of more than two acres had been passed by in subdivision growth because of terrain problems. Since plots of residential size can seldom be bulldozed or reshaped without violating the integrity of the site, the natural landscape was honored in the design thinking.



A scheme was developed with solid Shuksan walls retaining the terrace level, then continuing through the house so as to separate the principal living levels. Thus the stone walls created a flat base upon which the house proper was placed. The structure of the upper levels overhangs the stone-walled base in some areas, allowing an undisturbed flow of the natural site contours up to this smaller base. One also gets the sense of a tree house in looking out from the interior, heightening the drama of a real hillside house.

While the architect used many natural materials, he made no attempt to merge the house into the landscape. His philosophy: since the house is, after all, a geometrically simplified construction placed within a heavily wooded scene, treat it as an insert and use light wheat stain on the siding and roof decking as an effective contrast. By its stone wall appendages, terraces and built-up beam structural frame, the house does attempt to interlock convincingly with grade conditions.



The plan provides 1,980 sq. ft. (not including partial basement) in four levels following lot contours. The living room and bedrooms have a westerly view through trees to Puget Sound, noble and breath-taking; the kitchen-dining-family areas look across a terrace to a deep-wooded ravine to the south sun, intimate and friendly.

It is interesting to note that this is the second house of the exact design to be built on the site. The first was destroyed by fire in October 1954 after the clients had lived in it almost a year. Only the living room fireplace and concrete foundations could be reused.

The family has occupied the house since the spring of 1955 but it is not yet complete. The owner has done the greater part of the labor; if contracted, the house in its present state would cost beween $35,000 and $40,000 or $15 per square foot.

BALCONY LEVEL leads to bathroom, two small bedrooms and master bedroom which doubles as sitting room.

CARPENTRY AND MILLWORK done in construction of house won AIA craftsmanship award for Stewart Phillips.

GRAHAM HOUSE

OUTLINE SPECIFICATIONS

Type of Construction: Built-up post and beam on 8-ft. module, stained walnut brown; Shuksan stone retaining walls.

Exterior Walls: 1x4 rough sawn vertical cedar with wheat stain.

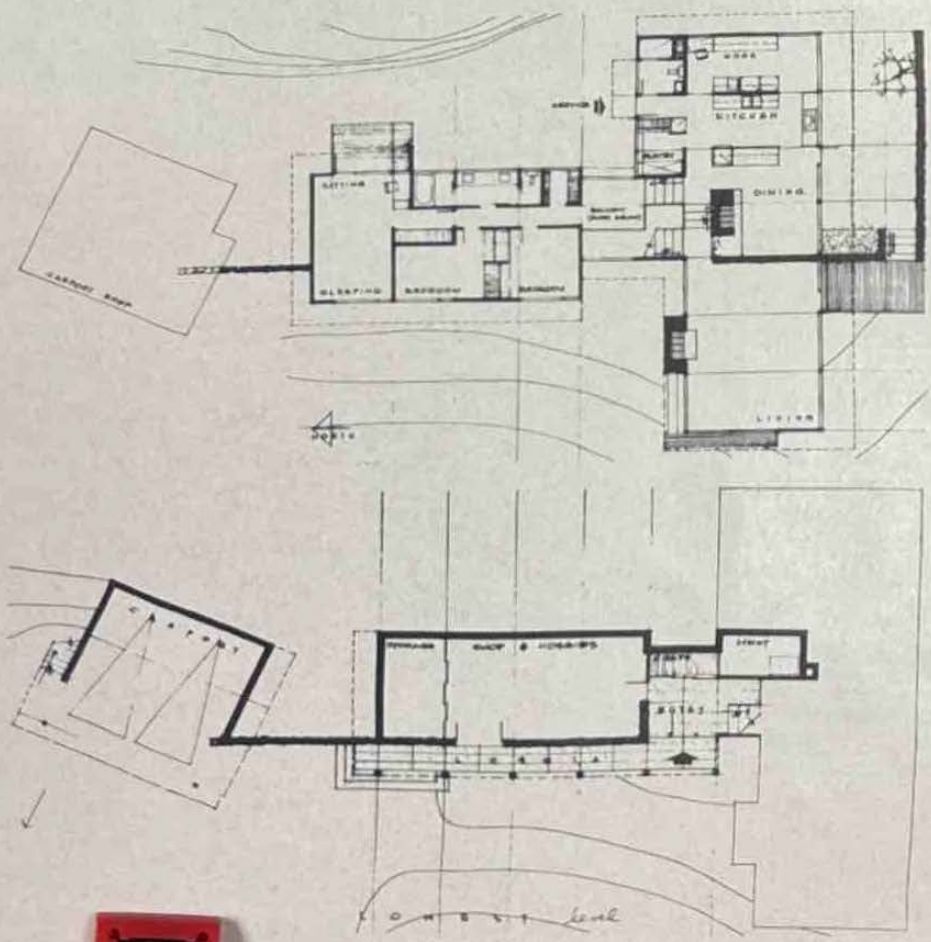
Roof: Low sloping 2x8 t&g cedar on built-up beams.

Floors: Concrete slab basement and entry with vinyl cork on latter; frame elsewhere with carpeting or cork.

Windows: Stopped in wood; aluminum vent sash.

Doors: Painted fir, exterior; white birch, interior.

Interior Walls: 1x4 rough sawn vertical cedar and walnut paneling or plasterboard; Shuksan stone separating living-dining areas.



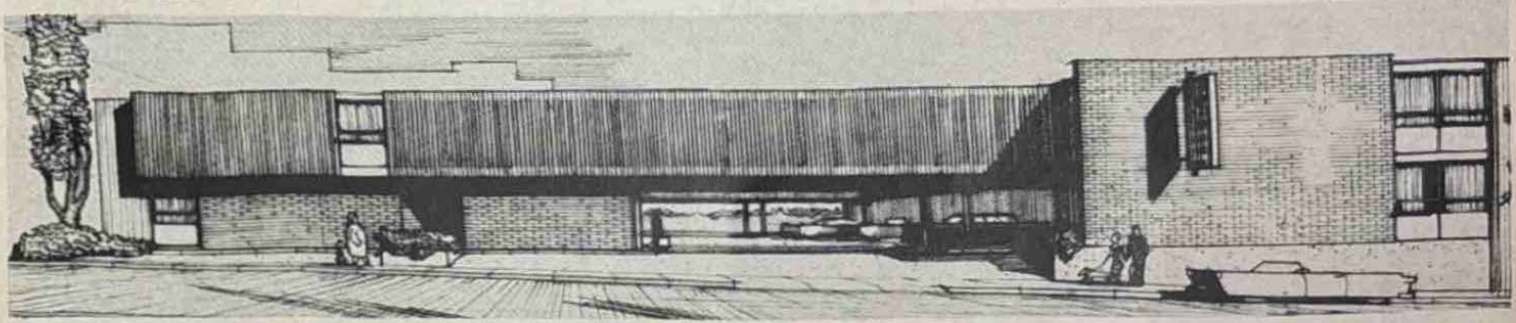
Ceilings: Exposed 2x8 cedar plank decking.

Insulation: Fiberglass rigid above t&g roof decking; batts in walls.

Heating: General Electric oil fired hot air.

Total Area: 1,980 sq. ft. (not including basement or ground level entry).

Cost per Square Foot: $15 (if contracted).



Ray Flamm photos

PARKING SPACE for 40 autos, 100% coverage, is made possible by reserving 60-ft. strip below overhang of second floor. Vertical wood slat screen assures privacy for guests.

Forty units on interior lot

Motel Doyle

San Francisco, California

AKOL, ANGELL & APAYDIN
Architects-Engineers

AMERICAN CONSTRUCTION CO.
General Contractor

OUTLINE SPECIFICATIONS

Type of Construction: Masonry; two-story, no basement.

Exterior Walls: Integrally colored concrete brick and California redwood.

Interior Walls: Philippine mahogany; mineral wood applied in staggered stud partitions.

Ceilings: Exposed beams and sheathing.

Special Equipment: General Electric kitchenettes with 24-in. Spacemaker range, refrigerator, steel sink, disposal, counters and cabinets in about 20 units.

Heating: Thermostatically controlled individual wall units.

Total Area: 13,000 sq. ft. usable space; 2,000 sq. ft. covered walks; 2,500 sq. ft. covered parking for 40 autos.

Date of Completion: Summer 1956.

THE SITE selected by the client was perfect for a tourist court in terms of its location—Union Street and Van Ness Avenue—, being only a short distance from Fisherman's Wharf and close to San Francisco's shops, theaters and night clubs. It posed a problem, however, in terms of design, being comparatively small—117x138—and surrounded by other structures. An additional complication was the heavy traffic of the area and the need for adequate off-street parking for guests.

The architects had these alternatives: to plan three full floors above a parking area, obtaining 75 units and utilization of the entire lot for parking; or to plan 40 units on two floors, using a 60-ft. parking strip and obtaining about 50% land coverage. They chose the latter because the cost per unit would be so much lower inasmuch as neither elevators nor an extensive substructure would be required.

What resulted was a 110x127-ft. open square with 28-ft. wide wings parallel to Union Street, presenting a unified front and the appearance of a single large building and giving greater access to the parking area. The plan provided 13,000 sq. ft. of usable space, plus 2,000 sq. ft. of covered walks and 2,500 sq. ft. of covered parking for at least 40 automobiles, 100% coverage.

To insure privacy of rental units within the court, the architects designed a wood screen of vertical slats on the corridors facing the street. Integrally colored concrete brick used for the base and entrance help to distinguish the motel from nearby buildings.

The shape of the court makes possible a variety of room sizes and shapes—roomettes, suites and small apartments, about 20 of which are equipped with kitchenettes. While all units have soundproof walls and ceilings, budget limitations did not permit soundproofing between the floors. To eliminate noise at its source, wall-to-wall carpeting is used over heavy rubber matting and cocoa straw matting on the exterior circulation decks.

Colors, textures and materials tastefully serve

Berliner's Restaurant, Los Angeles, California

IN AN AREA where such establishments tend toward the bizarre, this restaurant is noteworthy for its elegant simplicity and fine coordination of color, textures and materials. Entrance to the building is through unglazed ceramic tile columns which extend the length of the front wall, interrupted by plate glass windows.

The ceiling throughout the restaurant, which has a capacity of 200 diners, has been broken up into bays coincident with the column spacing by colorful framed baffles. Their job is two-fold: to control sound in the large dining room and to provide an interesting and dynamic visual continuity.

The entire east wall of the dining room was designed to serve as a sound baffling device using painted wood vertical members spaced ½ in. apart. The architect explains, "These boards were affixed to a layer of semi-rigid fiberglass covered with dyed black unbleached muslin. In no instance does wood come into contact with wood, helping to achieve the desired acoustical properties of the room."

The insulation sound-absorbent walls are of plaster, wood and fiberglass; ceilings of acoustical tile or plaster; floors of vinyl asbestos; columns of natural finished white oak. Blues, violets and bright orange are the highlighting colors.

All normally touchable areas or surfaces are covered with plastic laminates to produce a hygienic and easily maintainable condition at all times. The kitchen has unglazed ceramic tile wainscots, acoustical tile walls and ceilings, coved bases and curbs and stainless steel-clad interiors of the walk-in refrigerators. The restrooms also have ceramic tile wainscots and metal partitions.

The restaurant has year-round air conditioning, recessed incandescent light fixtures, architect-designed custom chandeliers, wall bracket fixtures and heat lamps at food surfaces.

The rear portion of the public area has family type booths and features five paintings done by a Swiss artist commissioned by the client.

CLOTH STRIP LOUVERS prevent sun glo striped charcoal and white plasticized cl awning minimizes brick of side buildings.

VICTOR GRUEN & ASSOCIATES
Architects

C. L. PECK CONSTRUCTION CO.
General Contractor

COLORFUL FRAMED BAFFLES break restaurant up into bays coincident with column spacing. Exhibition cooking equipment and work areas are in stainless steel.

Robert Cleveland photos

IN PUBLIC USE AREAS all counters, partitions and food service equipment are of solid colored plastic laminates, floor is of vinyl asbestos.

WOOD VERTICAL MEMBERS spaced ½ in. apart make up entire east wall, serve as sound baffling device.

WAIST-HIGH PANEL WALL separates dining and waiting areas. Chandeliers are architect-designed.

OUTLINE SPECIFICATIONS

Exterior: Unglazed ceramic tile columns and pilaster; windows encased in laminated and stained oak frames, with adjustable vertical plasticized cloth louvers.

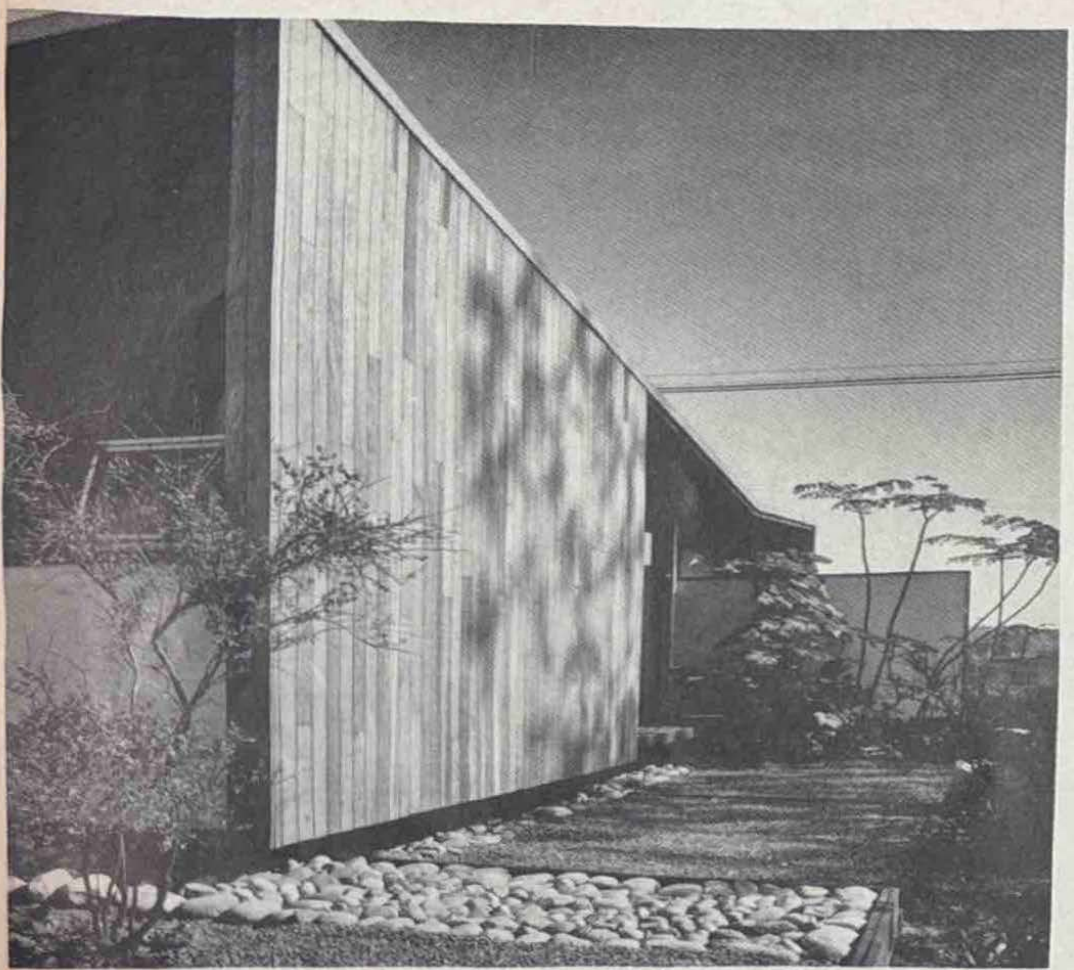
Doors: Tempered plate glass.

Floors: Vinyl asbestos finish.

Ceiling: Acoustical tile or acoustical plaster, broken into bays by framed baffles affixed to layer of semi-rigid fiberglass covered with unbleached muslin.

Interior: Natural finish white oak columns; painted plaster, painted wood and fiberglass sound-absorbent walls.

Equipment: Stainless steel exhibition cooking and work area; plastic laminated counters, partitions and food service equipment installed by Dohrman Hotel Supply; unglazed ceramic tile wainscots in kitchen.



Total Area: 5,310 sq. ft. (including 325 sq. ft. in basement used for storage and equipment).

Total Cost: $90,000, construction; $65,000, kitchen and dining room equipment.

Date of completion: August 1956.

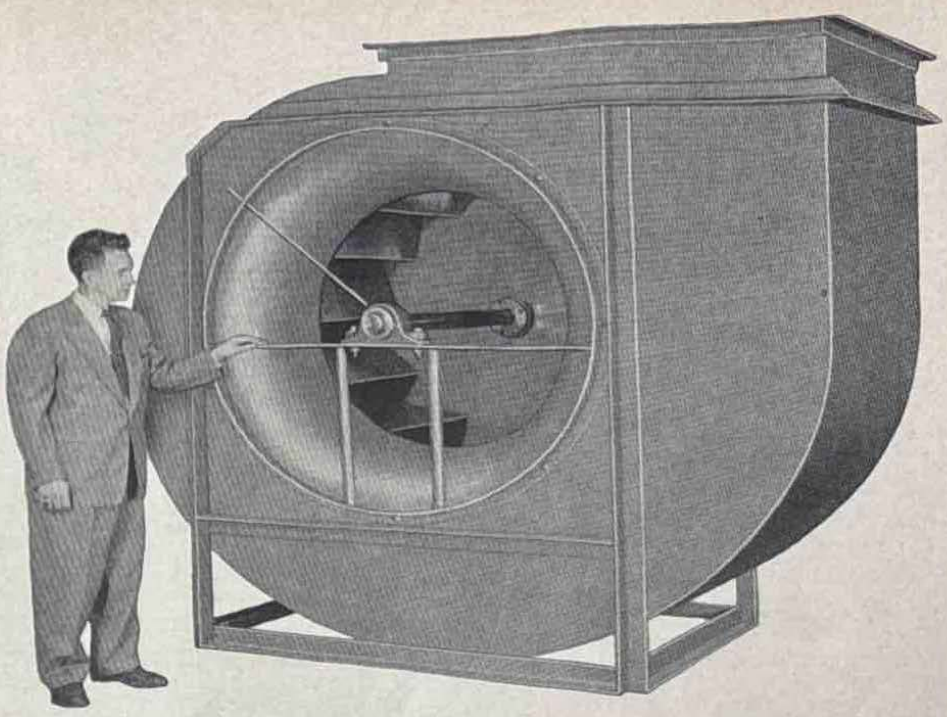
NEW FIRMS: Hollis Johnston and Robert J. Koch, both AIA, have formed a partnership under the firm name of Hollis Johnston & Koch, and will continue their location at 208 S.W. Stark St., Portland. Koch has been employed in Johnston's office since 1948 when he completed his architectural course at the University of Oregon. He became a registered architect in 1952. Johnston is a 1917 graduate of the University of Oregon. Charles R. Kaufman, AIA, and Frank E. Kelly are associate architects.

In Spokane the architectural firm of Funk, Murray & Johnson has been formed at 524 W. Fourth Ave. Former partners Albert H. Funk, AIA, and Carl H. Johnson, AIA, have been joined by a new principal, Donald H. Murray, who has been associated with the two men for the past 11 years.



Edwin W. Molander, AIA, 12 years with the firm of Funk, Molander & Johnson, has organized a new architectural firm at N. 5013 Division St. under the name of Edwin W. Molander & Associates. Other principals are his son, John B. Molander, and Aubrey H. Forsyth.

A new architectural partnership in Portland, Jensen & Gilham, has been formed at 2266 N.W. Lovejoy by John Jensen and Louis Gilham, who has been employed in Jensen's office for the past few years.

Principals in the new architectural-engineering firm of Rack & DeMasirevich, Inc., at 140 N. La Brea Ave., Los Angeles, are Robert E. Rack, formerly registered architect in Texas and Illinois, and George DeMasirevich, AIA. Rack served for six years as chief architect and land planning consultant for the FHA; DeMasirevich formerly was associated with the United States Legation in Budapest, where he directed the master plan for rebuilding the war-damaged city after World War II.

NEW OFFICE: Derk Vyn has opened an office for the practice of architecture at 651 Waverly St., Palo Alto, Calif. (DAvenport 2-2346).

DIED: Architect Harold Holmes, 74, of Everett, Wash., died January 5 after a brief illness. A native of Chicago, he established his own firm there and designed the Butler Brothers Building and the Masonic Temple. Coming to Seattle in 1941, he became associated with the architectural firm

BIG BLOWERS ARE BIG BUSINESS WITH PEERLESS

QUIET! TROUBLE-FREE! DEPENDABLE! HEAVY DUTY! GUARANTEED!

Versatility in size, application, and engineering has always been a Peerless strong point. Peerless builds its own motors and matches them to the specified blower requirements. Peerless blower frames and housings are usually heavier than any competitive products. Result—a quiet, vibration-free unit.

These are not "off-the-shelf" units, but built to customer rotation and discharge specifications. Each one receives 100% inspection before it leaves the Peerless factory. Each unit is built to NAFM standards. Motors are built to NEMA standards. Each unit is ready for operation when received at the installation site.

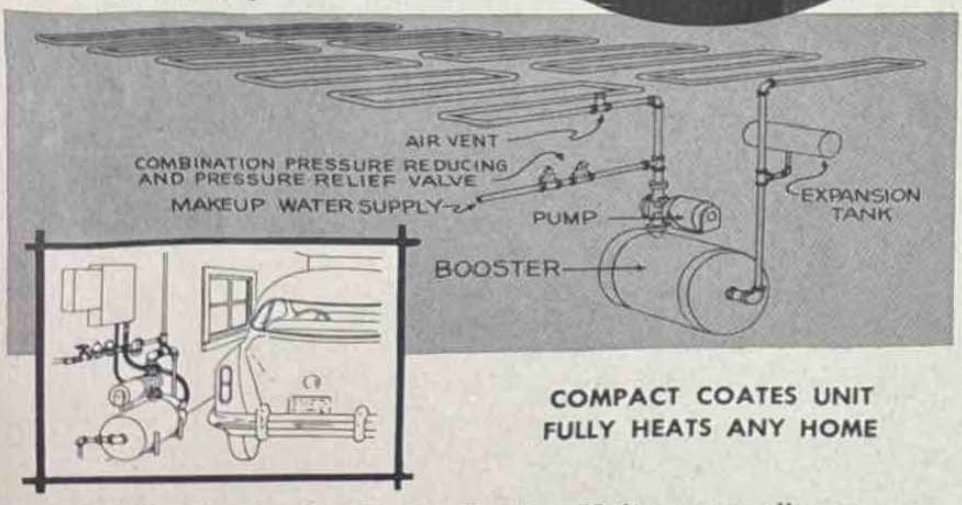
LOW COST Electric HOME HEATING



SUPERBLY DESIGNED FOR EASY INSTALLATION

Coates Electric HOME HEATING UNIT

FULLY AUTOMATIC
Aquastat controlled with temperature range of 85° to 194° F.

COMPACT COATES UNIT FULLY HEATS ANY HOME

Coates Electric Hot Water Heating Units are small, compact and "power packed." Install in any unused, out-of-the-way spot providing 12" x 12" x 24" floor space. Electric heat is clean heat—no chimney—no smoke—no fire danger. Sanitary Coates Heating Units comply with all city and state safety codes.

Coates Units meet the specifications for all floor, wall or ceiling hot water radiant panel systems or for cast iron hot water radiant heating. Hot water heat with a Coates Electric Home Heating Unit is dependable and trouble-free, yet low in cost.

UL and CSA approved . . . conforms to ASME code

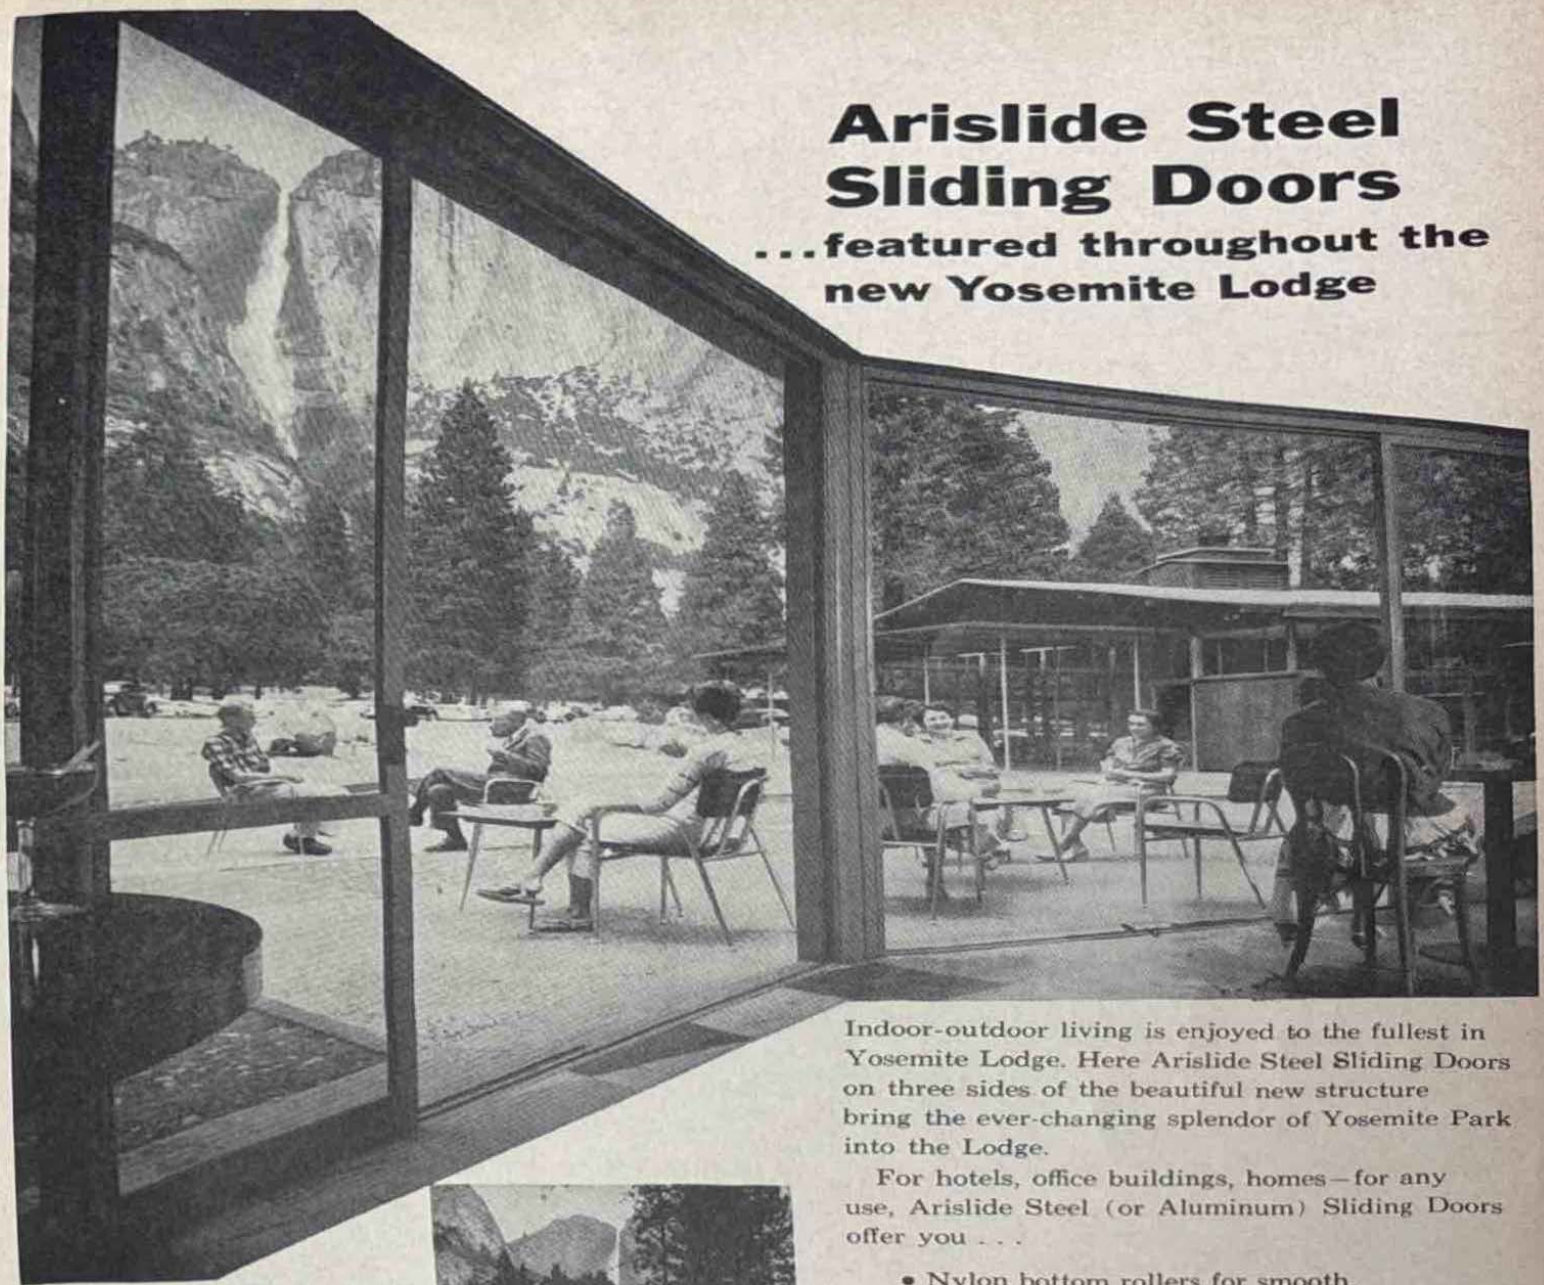
BACK IN HARNESS: Frank Stanton AIA, has resumed his specificatio service for architects and engineers a the College Club, 601 Spring St., Se attle (MAin 0624).

NEW JOB: A. M. Runtz, AIA, Port land architect who for the past year has been executive secretary of Ore gon Building Congress, resigned in January to take the position of archi tect in the Public Works Branch a the U. S. Naval Air Station located at Oak Harbor on Whidbey Island, Wash. He is succeeded by Martin Fitzgerald.

AIA activities

SOUTHERN CALIFORNIA: New chapter president is Cornelius W. Deasy, former secretary and director. Other officers are Robert Field, vice president; Stewart D. Kerr, treasurer, and Edward H. Fickett, secretary. Directors are Burnett C. Turner, three years; Stewart S. Granger, two; George Vernon Russell and past president Paul Robinson, one.

OREGON: Nathaniel A. Owings, AIA, of San Francisco will be guest speaker at the chapter's 46th annual banquet March 5 at Portland's Columbia - Edgewater Country Club. Richard W. Norman, banquet chairman, announced that a social hour will begin at 6:30, with dinner set for 8 p.m.



FRITSCH

Robert W. Fritsch was installed as president of the chapter at the annual meeting February 12, succeeding Donald W. Edmundson who becomes a director. Other officers are Earl P. Newberry, vice president; Charles Gilman Davis, secretary; and Thomas I. Potter, treasurer.

Arislide Steel Sliding Doors

...featured throughout the new Yosemite Lodge

Indoor-outdoor living is enjoyed to the fullest in Yosemite Lodge. Here Arislide Steel Sliding Doors on three sides of the beautiful new structure bring the ever-changing splendor of Yosemite Park into the Lodge.

For hotels, office buildings, homes—for any use, Arislide Steel (or Aluminum) Sliding Doors offer you . . .

- Nylon bottom rollers for smooth, quiet operation
- Full weatherstripping
- Precision-manufactured in popular sizes; special sizes to order

EIGHTY 50-FT. GIRDERS resting on poured columns form basis for stairlike stadium structure.

Prestressed, precast concrete members speed stadium job

Students at Portland's new Woodrow Wilson High School watched their athletic stadium mushroom to completion almost as fast as they changed classes. The secret: prestressed, precast concrete girders and slabs.

Eighty 50-ft. girders which rest on poured columns form the basis of the stairlike stadium structure. Upon these girders were placed horizontal slabs, 25 ft. 8 in. in length, 24 in. wide and 12 in. deep. In all 154 slabs were used to complete the giant risers.

Girders and slabs were supplied by Empire Building Material Co. for the contractor, Hoffman Construction Co. The project was planned by Edmundson & Kochendoerfer, architects — R. Evan Kennedy, engineer, with James & Honey, consulting engineers.

Special drilling technique whips ghost of San Francisco's past

Excavating crews, clearing a site for a $4 million underground exhibit hall, latest addition to San Francisco's Civic Center, expected to find only sand in the block-square park area across from City Hall. But they ran into brick walls and concrete foundations a few feet under the surface.

The debris turned out to be the long-forgotten remains of the previous city hall destroyed in ths disaster 50 years ago. One subcontractor has been able to drive through the rubble by employing a special drilling technique and using high-strength caissons.

In their drilling operations, Laufenberg Brothers use a unique rig which bores through the rubble-strewn sand to a depth of 10 ft., then drives a 12-ft. long caisson made of sheet steel down the hole.

The 28-in. dia. caisson is then filled with drilling mud and the hole drilled on to a depth of nearly 40 ft. The column of heavy mud and sand, together with the caisson at the top, form a shaft in which the upright is installed.

Montague Pipe and Steel Co. fabricate the caissons from No. 8 gauge Kai-Well sheet. General contractor is Theo. G. Meyer & Sons, with the firms of Wurster, Bernardi & Emmons and Skidmore, Owings & Merrill as joint architect team. H. J. Brunnier is structural engineer.

UNIQUE RIG BORES to depth of 10 ft., then drives 12-ft. long caisson made of sheet steel down hole and short distance past bottom.

TWO CRANES move 35-ton concrete slab into position (note equalizers). Panels are some of largest ever erected in southern California.

New approach to tilt-up slab and structural frame design

Some of the largest panels for tilt-up construction ever erected in the southern California area have been employed by the architect-engineer division of Aerojet-General Corp. in designing an engineering building for the company at Azusa. Each slab weigh about 35 tons and measures 20 ft. by 33 ft. and is 7½ in. thick.

In order to expedite construction due to the time required to install the main floor duct system, forms were built outside the structure and the tilt-up slabs were cast in stacks of five. The slabs were connected by cast-in-place columns which were used as the seats for the structural steel framing for the second floor and roof.

An interesting feature of the work was that the only entrance and exit to the building's interior for the erection of structural steel was through the lobby. This required an accurate steel shipping schedule so that when the last piece of steel had been set in place the crane could still leave the building.

Completely air conditioned, the building has been planned for a light intensity of 100 footcandles at desk height. In order to eliminate noises, the ceiling of the first and second floors will be treated with a sprayed acoustic material. No exterior openings have been provided except corridor and lobby exits as required for personnel use.

The air handling and distribution system is located in a penthouse on the flat built-up roof. Central core areas are directly underneath.

Material handling ideas can increase your profits

by GLENN M. CANADAY

BUILDING PLANS and specifications are often so precisely and minutely executed that a contractor seeking ingenious methods of operation is severely hampered. Material handling is not fettered by such restraints. The contractor with initiative and imagination will find many opportunities to reduce material handling costs.

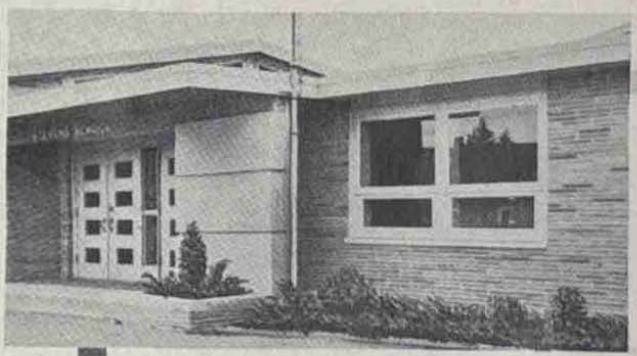
Much of the cost of labor is moving materials and fabricated items from one job location to another. The savings are to be found in using or devising methods of handling that reduce the time involved and require a minimum amount of labor.

The conventional method of assigning a truck and a crew of laborers to take care of the material handling on a job is no longer sensible nor profitable. Fork lifts, power buggies, elevators, hoists, conveyors and cranes are available in types and sizes to fit almost every operation. Renting or purchasing equipment suited to the job at hand can often mean the difference between profit and loss. Makeshift use of equipment in your yard, just because it is available, should be carefully considered. Often it pays to rent or purchase an item exactly fitted to the operation.

Survey your present jobs. Every time you see a man lifting or carrying material ask yourself if there isn't a faster, more economical way to do the job. Careful planning and coordination will reduce the number of times a unit of material must be moved to install it in its final location in the structure on any job operation; combined with the right equipment and the right methods, substantial savings will result.

Fork lifts are one of the most useful types of material handling equipment. They are made in a variety of types and sizes to suit almost any job. The fork lift can load itself, transport the load and unload itself, requiring only the operator. In comparison, a flat-bed truck must be loaded and unloaded, often requiring considerable hand labor. Only a few years ago it was common practice to unload the supplier's truck of lumber with laborers, stack the lumber in the storage yard, reload it by hand on a flat-bed truck, haul it to the building being constructed and again unload it with laborers. If used on the second floor or roof, it was often handed up piece by piece. This type operation is costly and time consuming.

Today's contractor will insist that the lumber be delivered in suitable sized units on a truck equipped with rollers. The load will be rolled onto dunnage previously positioned on the ground, the entire operation requiring only a few minutes of one man's time. When needed, the units of lumber will be picked up by a fork lift, transported to the required location and unloaded—again consuming only the time of one man.



Trash boxes that can be loaded on a truck with a fork lift, A-frame or crane are labor savers. Containers for miscellaneous items of form hardware save handling time. A flat-bed truck that dumps will cut your trash hauling costs in half.

I recently observed a job where laborers were hauling 2x4-ft. form panels from the interior of a building with concrete buggies, two panels per trip. One man with a flat-bed power buggy could have done the work of three or four.

Hand carts can save time in many small job operations. A rubber wheeled cart to hold a carpenter's tools, extension cords and a supply of hardware can increase his production 30%. A cart designed to haul metal doors, frames, etc., can double or triple a laborer's output.

Unusual conditions may make it profitable to devise and construct hoists, carts, rollers or conveyors particularly for a certain job. Careful analysis and sound advance planning combined with an inquiring mind are required if you are to provide the exact item of equipment that will get the job done fastest and most economically. Discussions with your superintendent and foremen will pinpoint problems and suggest solutions.

Forethought, planning, regular discussions with job supervisory personnel and a constant lookout for fresh material handling ideas will pay off, both in new jobs and added profits to jobs under construction.

FIRST OF 496 prestressed concrete roof panels is fitted in place (left) as part of General Electric warehouse, designed by Albert C. Martin & Associates. Panels were pretensioned and cast in specially fabricated beds located on building site.

Construction history is made in Los Angeles

On-the-site prestressing: less limitation and less cost

LESS RESTRICTIONS on the use of prestressed concrete will likely be achieved with the development of a building method employed on the million-dollar General Electric warehouse and offices in Los Angeles. Pretensioned, prestressed concrete roof panels were manufactured on the building site by the contractor.

Prestressed concrete presents a number of advantages. In many cases spans can be doubled in length as compared with reinforced concrete; fewer columns are needed; structural strength is achieved with far less dead weight; substantial time savings can be made; the architect is offered much greater design opportunities.

Up until now prestressed concrete has been limited by availability. In Los Angeles, for instance, only one company is equipped to furnish the panels as specified for the GE project. A similar situation exists in most large cities, while transportation costs are a prohibitive factor where this type of construction is being considered for outlying areas.

Among several contractors who bid on the job was the low bidder, Noyes Roach Co. in joint venture with C. L. Peck. Roach recognized that every competing contractor would likely be restricted to identical figures on the cost of prestressed concrete. Since this material was specified for 100,000 sq. ft.—more than 83% of the total area—it was agreed that here was the place to cut costs, if possible.

Calculations had to include the cost of designing, building and operating the pretensioning casting beds as well as the usual estimates concerned with the cost of the building itself. Even with these extra expenses, Roach could produce the specified panels and beams for less than the price quoted by the one Los Angeles prestress firm. A comparable firm, located in San Francisco, could not compete due to the $25,000 it would have cost to transport the 580 concrete sections to Los Angeles.

Designed by Albert C. Martin & Associates, architects-engineers, the plans called for 496 roof panels and 84 girders. Panel dimensions are 40x5 ft.; girders are 18 in. by 16 in. by 26 ft.

Engineering consultants T. Y. Lin & Associates worked with the contractor in designing and setting up the casting beds. These were built to meet the requirements of the immediate job, without much anticipation of future use.

However, some salvage is practical and Roach believes that his head start may give him a bidding edge on future work when on-the-site prestressing again makes sense.

For the GE project, Roach installed four panel beds and one girder bed each resting on a 4-in. concrete slab. Simply described, the casting beds consist of fabricated sheet steel forms supported by reinforced concrete beams. Sufficient anchorage is provided to handle calculated stress but the entire pretensioning plant was devised as a temporary facility, with a view to reasonably easy dismantling and removal.

High-tensile steel cables are strung the length of each casting bed and tensioned by hydraulic jack. Twelve wires are used in the girders, eight in the roof panels. Extreme care is taken to assure that each wire gets equal tension, while a unique method of harping controls the camber of each span.

Ground was broken for the warehouse and office building July 9. On September 14 concrete was first poured into a casting bed.

With all forms in use, 28 roof panels and seven girders were produced every three days. Meanwhile, as the stockpile of prestressed concrete sections grew, the building was taking shape. By the time the foundation and floor were finished and supporting columns were in place, Roach was ready to start erecting roof panels to cover 120,000 sq. ft. of area.

Here is one of the great advantages of prestress construction: a minimum of waiting time, still further abetted by the convenience of having the stockpile so close at hand.

Other builders will undoubtedly be encouraged to use a similar method where conditions warrent. Perhaps prestressed concrete subcontractors will develop portable casting beds which may be economically moved from site to site.

FINISHING CREW puts final touches on panels while another 350-ft. casting bed (right) is prepared for pour. Each bed accomodates eight 40-ft. panels, maintaining 56-ton stress during 2½-day curing period.

ANOTHER MACOMBER FIRST PRODUCES AN ALL COLD FORMED STRUCTURE THAT IS STRONGER,

FOR THE FIRST TIME IN THE HISTORY OF STEEL CONSTRUCTION — Macomber has made available cold formed framing members for every part of a structural frame.

These completely standardized framing members are ALL-INCLUSIVE. They represent advanced, improved engineering design to provide greater rigidity in a structural frame with members which are lighter and cost less.

If your organization designs or builds any type of commercial, institutional or recreational type of structures, the undisputed economy of the bowstring truss now places a new value on this Macomber achievement.

You will want the new V-BOWSTRING TRUSS CATALOG as close as your desk drawer to check loads and spans and a quotation through your nearest Macomber Representative.

See what 30 years of advanced structural engineering has done to lower construction costs and produce a better structural frame.

MACOMBER NOW PRODUCES

COLD FORMED

1. **V-BOWSTRING TRUSSES**
   FOR SPANS 50 TO 120 FEET
2. **V-GIRDERS**
   FOR SPANS 40 TO 76 FEET
3. **V-BEAMS**
   FOR SPANS 7 TO 48 FEET
4. **V-GIRTS (NAILABLE)**
   FOR ANY COLUMN SPACING
5. **V-EAVE STRUTS**
   FOR ANY COLUMN SPACING
6. **V-FLAT GATHERING TRUSSES**

Aesthetic value of materials in architecture

An address presented by an associate partner of Skidmore, Owings & Merrill before the 18th annual convention of the National Association of Architectural Metal Manufacturers.

by ROBERT K. POSEY, AIA

THE ART HISTORIAN of today sees maturing about him a great new style of architecture—an architecture not for Tudor England nor for classic Greece, but for America of the industrial 20th century.

In order to better understand this new style I should like to go back, if I may, in history to the dawn of our civilization and retrace briefly the path that has led to the present; and to recall some basic influences that have limited or affected us in this changing scene. Great changes came about because old cultures reached a stage of magnificence only to decline and finally give way to new intellectual concepts. The social pattern of each age was reflected in its architecture. The excellence of its buildings, in turn, were judged by originality of structure and the success with which they employed available materials.

Our oldest existing monuments—those of Chaldaea and Egypt—belonged to advanced civilization. Social man had already established rigid styles of aesthetic expression. The scarcity of timber and the lack of good building stone, the abundance of clay and the flatness of their desert country imposed upon the builders of Chaldaea tight restrictions of form and material. Their principal structural material was sun-dried brick of low tensile strength. Thick, windowless walls were necessary both for stability and for protection from the burning heat of the climate. They employed the brick arch and the barrel vault for roofing their narrow dimensioned rooms. Interior walls were paneled with alabastar slabs carved with low-relief scenes of battles and gods. Brilliantly colored enameled tiles, rugs and tapestries added richness to this simple architecture.

The pyramids of Egypt are elaborate outgrowths of an architectural technique of greatest antiquity: piling stone upon stone in an effort to form everlasting burial mounds. The narrow valley of the Nile was flanked by rocky heights which afforded an abundance of excellent building stone. The royal tombs of the Old Empire and the vast colonnaded temples of the more mature 20th century B.C. were built of stone. They were decorated with alabaster carvings and brilliantly colored reliefs. In their painting and sculpture the human figure was idealized in precise accordance with the custom of the day. The architect was allowed no freedom in either structure or decoration. There were no jurisdictional disputes amongst the hordes of forced labor.

The Greeks too built in accordance with hard and fast rules. They were forced to confine their efforts to a singleness of plan and facade. Their details were executed with the most extraordinary refinement and care. The seemingly straight lines of the Parthenon were all slightly curved and the vertical faces inclined. But this perfection was that of the sculptor rather than the architect—and it required many years of painstaking labor. Their materials were stone and wood. Glass and metal were still media of the minor arts.

Rome, at first deficient in culture, was yet able to recast Greek forms of architecture into new molds and to give it a flexibility by which it accommodated itself to a wide variety of materials and conditions. They made the arch and Etruscan vault the basis of their structural system. They brought engineering into the service of architecture and they developed planning into a fine art. Their materials were brick, concrete, plaster and stone. Their interiors were splendid in the color of mosaics, frescoes and precious materials. Masonry was the load-bearing material but sometimes the stones of heavily loaded piers were tied and clamped with iron. Glass was used sparingly except in Byzantine work.

During the Moslem interlude, in the evolution of our culture, stained glass made its appearance on a large scale. This medium was destined to reach great heights of glory in the new Western civilization born of the Christianizing of the Celtic and Germanic races. Gothic structural forms were rich and new. In an engineering sense, they were uninhibited. Masonry was still the prime load-bearing material and it held this position until the advent of our industrial revolution. This revolution has changed radically our social pattern and has made available new construction materials. We have found that these two great influences determine the character of the architecture of our age.

In the year 1847 the American inventor, James Bogardus, built in New York City a five-story factory which was the first cast iron frame structure.

The building of the Crystal Palace in London in the year 1851 established the practicability of building in cast iron and glass. This tremendous edifice was 1,851 ft. long and 178 ft. high (16 or 17 stories). On one occasion, it housed 93,000 people together with the trees which were already on the site and were simply left standing on the inside of the structure. It stood until 1937 when it was destroyed by fire. Although this life span of 86 years does not compare with the long life of the Pyramids, it does exceed that which we now deem economical or necessary in the light of the quick obsolescence of mechanical equipment which, in cost, represents one-half of the office skyscraper of today.

Although limited in acceptance, the development in the first half of the 19th century of this new building technique paralleled a very powerful industrial expansion throughout Europe and America. During that period, we began to design, build and use machine tools that were destined to replace completely the craftsman's handicraft long before our time.

Architects floundered through this transition to machine production without fully realizing the all-out completeness of its social and aesthetic upheaval. We took great pains in a misguided effort to make machines duplicate the art of the master craftsmen of old. Only dispirited imitations resulted and the artist was very nearly forgotten in a flood of mass production. Architects resorted to scholarly reproduction of old forms rather than inventive searching for new idioms of expression. They sold to their clients Neo-Greek or Neo-Gothic.

Forgotten were the lessons learned from the builders of the Crystal Palace. The challenging fact that wide spans could be attained by use of delicate steel framework was hidden behind heavy masonry facades disfigured in slavish imitation of the artistic decorations of the past. Glass, although now made in large sheets, was cut into small panes—painfully small panes—because there was no

continued on page 41

not specified

architects and building contractors: not such strange bedfellows after all

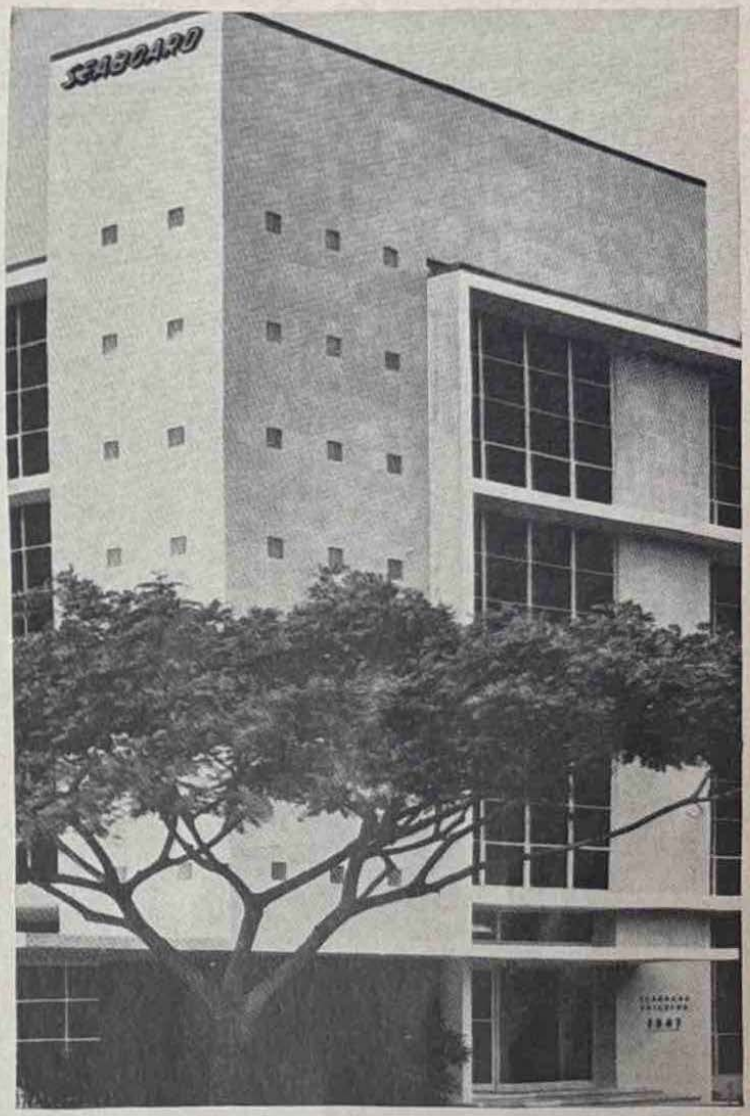
On one of those typical cold January mornings in the Inland Empire (Saturday, the 19th, to be exact), some 60 architects and building contractors sat down over coffee in the Spokane Club to take a look-see at their mutual problems. This sort of thing doesn't happen every day, of course, but there was something far more significant about this particular meeting.

The first annual Building Forum was co-sponsored by the Eastern Washington Builders Chapter, AGC, and the Inland Empire Chapter, AIA. This meant that neither group was the guest of the other, so that all concerned started out on an equal footing and didn't have to worry about stepping on somebody's toes—and more than one got bruised in the process!

After being welcomed by the presidents of both groups (Al Rudd of the AGC and Bill James of the AIA), each of five speakers was alloted 20 minutes to present his side of the building picture: Donald J. Stewart of Portland, Northwest regional director, AIA; D. J. O'Neil, chief of engineers, AEC, at Richland, Wash.; Cols. R. J. B. Page and Myron E. Page Jr., district engineers, Corps of Engineers, at Seattle and Walla Walla, respectively; and Willard G. Sweany, Seattle surety consultant. The two groups had a leisurely lunch, then heard the assistant manager of the Building Division, AGC, from Washington, D.C., John K. Bowersox. And finally contractor H. Halvorson moderated a panel, with all guest speakers as targets.

To report what was said is not our intention. But we do want to emphasize that here was a grass roots approach to better architect-builder relationships with give and take on both sides. Some of the questions—and some of the answers—proved a bit embarrassing; some of the queries went unanswered or at least were evaded; but a good many of them did stimulate further discussion or study after the session was over.

This editor felt that the forum was a definite success and apparently the participants did too, for they decided to hold another such meeting, very likely before year's end. Sure, there were some kinks which will have to be ironed out but that's true of any such first-run affair. For example, panel discussions always pose the danger of main issue becoming sidetracked or of one topic or personality hogging the floor.



The architects and builders returned with their wives to enjoy a buffet, entertainment and dancing—a most pleasant way to wind up a topnotch contribution to closer harmony in the building industry.

back to the roost

This month Glenn M. Canaday, a name with which PA&B readers are familiar, returns to our columns with his "Talks with Contractors." He is back in the states after spending more than a year in Alaska as project coordinator for the White Alice project. Now he's project manager for the Sage project near Tacoma, part of the link which will serve the Distant Early Warning (DEW) Line north of the Arctic Circle.

We still receive an occasional request for Glenn's popular series on preparing the building estimate, which ran two years ago, but unfortunately our supply has been exhausted. Other articles which he has in the hopper will enable us to present a more comprehensive picture of the building industry on the coast.

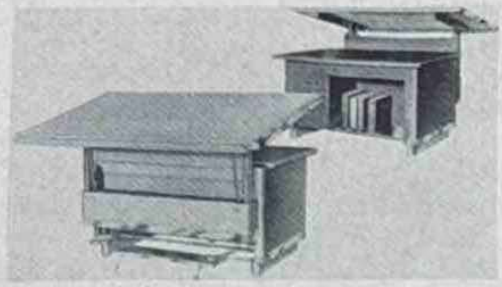
METAL FORM: A metal form for use in waffle type concrete joist construction is quickly blasted free of the hardened concrete with a jet of compressed air, leaving smoothly patterned ceiling surfaces. With Steeldome forms one man merely presses an air gun against a fitting set into the form, while another man stands by to grasp the form as it is blasted free. This method protects the smooth concrete surfaces from chips and scratches, leaving an attractive ceiling suitable for finished locations. Standard Steeldomes have a void of 30x30 in. and an overall plan size of 36x36 in., including flanges; standard depths are 8, 10, 12 and 14 in.—Ceco Steel Products Corp.

(Item No. 1)

STEEL BATHTUB: The Salem is a 5-ft. recess bathtub, made of 14-gauge deep-drawn enameled steel and available in white or one of five colors. A self-supporting or free-standing fixture, it is easy to install, has straight floor and wall tile lines and flanges at both back and ends for tiling. The tub can be obtained with either right or left outlet. — American-Standard Plumbing and Heating Division.



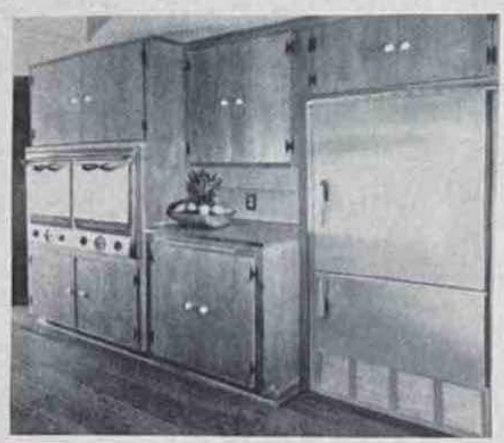
(Item No. 2)

CENTRAL HEATING: An inexpensive, easy-to-install central heating plant for schools, churches, warehouses, factories and other large area buildings has been introduced by Carrier in its line of direct-fired heat diffusers. No central boiler is required for this complete high capacity heating package, thus reducing the first cost below that of central systems. Factory wiring and prefiring make installation easy. Only fuel and electrical connections have to be made and the unit vented before it is ready for operation. A wide choice of installations is provided ranging from wall or ceiling suspensions to floor mounting. Ducts can be used to distribute heat into areas where direct circulation from diffuser outlets would not be adequate.—Carrier Corp.

(Item No. 3)

PLASTIC TILE: Builders can avoid the monotonous effect of butt-to-butt application of plastic tile with a new grout strip. Of white matte finish plastic 1/10-in. wide and 1/16-in. deep, the strips are just the depth of the beveled shoulder of a plastic tile. Tile and grout strips are applied alternately in the same bed of adhesive. Units for use with bull nose cap, outside corners and cove molding are supplied.—Artcraft Plastics Co.

(Item No. 4)



DRAFTING UNIT: To increase the efficiency of drafting and engineering operations, Stacor has introduced a combination drafting-reference unit which makes more flexible, productive use of existing floor space. A row of Stacor-Matic tables serves the men in front as reference facilities and the men behind as drawing tables, so that each has his own compact "office" and it is not necessary for him to leave his seat for reference. Reference surface is reinforced steel covered with desk-top linoleum. All units have island bases. — Stacor Equipment Co.

(Item No. 5)

HAND RAIL BRACKETS: Adjustable Ariston handrail brackets can be instantly aligned in any direction on the wall surface, eliminating installation problems caused by off-center anchor bolts. The anchorage is completely concealed. The design incorporates a shell-molded bracket that fits over a mounting plate and adjustment disc and is held firmly in place by a stainless steel socket set screw. Easily installed on any wall surface, the unit is finished in aluminum or bronze, either satin or polished. — Michel & Pfeffer Iron Works, Inc.

(Item No. 6)

REFRIGERATOR-FREEZER: Thermador's self-contained, built-in refrigerator-freezer has a stainless steel front

to complement any room decor; t grip handles are of polished chro with brass and midnight blue trim match the companion electric ra units. Planned for organized stora easy accessibility, simplified clean and slide-in installation, the la 14.2 cu. ft. model occupies no m space than a conventional refrige tor. It is 70½ in. high by 35½ wide by 24 in. deep, yet has a roo 22.3 sq. ft. shelf area. The separ freezer compartment stores up to lb. of food.—Norris-Thermador Co.

(Item No.

WIRING: Baseduct is a complete el tric wiring system at the baseboa level where it is most convenient a yet least conspicuous. It is instal directly on the floor and requires footers, trim nor capping of any kin To effect reduced installation ti and expense, only three fittings a required to mount the Baseduct sy tem—an end blank, a combination i ternal and external elbow for corn areas and a standard coupling. Ava able in 5-ft. lengths with duplex r ceptacles on 30- or 60-in. centers, measures 3 in. high and ¾-in. wi —National Electric Products Corp.

(Item No.

FOUNDATION PILE: Field tests ha proven that a new type of foundati pile has exceptional strength chara teristics, especially during drivi Foster pile is made from three ste rail sections welded together at ba edges to form, in cross section, a ho low equilateral triangle with ra heads extending outward at 120 de This design takes advantage of th high tensile, yield and compressi strengths of rail steel. No mandre or other equipment are necessary t drive rail piles.—L. B. Foster Co.

Latest Handbooks, Manual and Literature

Yours for the Asking

CLASSROOM COMFORT: How ther mal environment influences learning is described for architects, school ad ministrators and board members in a 24-page booklet in full color. It graphically presents the particular factors which require continuous con trol of heating, ventilation and cool ing, as well as the method by which a unit ventilator controls these fac-

tors. Also illustrated are two special problems created by cold window walls (excessive loss of body heat to cold surfaces and chilling window downdrafts) can be solved logically. —John J. Nesbitt, Inc.

(Item No. 10)

ASBESTOS-CEMENT PANELS: The variety of uses for fluted and ribbed decorative asbestos-cement panels are explained in Keasbey & Mattison's four-page brochure. Specific illustrations are presented for suggested applications in factories, carports, gables, facades, soffits and recreation rooms. —Keasbey & Mattison Co.

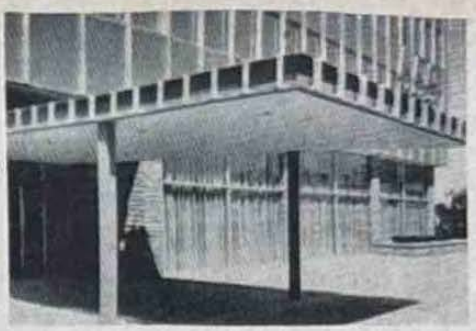
(Item No. 11)

STRUCTURAL ALUMINUM: Harvey Aluminum has issued two brochures to announce its role in the structural aluminum business. A 12-page publication discusses the advantages of utilizing aluminum for structural applications and outlines the design concepts pertaining to aluminum extrusions. Company facilities and history also are presented.

A 34-page publication on aluminum extrusions serves two basic purposes: to point out the vast uses to which they can be applied in new design and to aid those now using aluminum extrusions in improving existing designs.—Harvey Aluminum Structures.

(Item No. 12)

STEEL SUBFLOORING: Inland Steel describes its Milcor Celluflor, a steel subflooring in which the cells are used as electrical raceways and heating and air conditioning ducts, in a revised 20-page booklet. It features fire and load test data, section property tables, engineering details and architects' renderings of buildings in which the product has been used.—Inland Steel Products Co.



(Item No. 13)

GRILLE NOMOGRAM: The engineer's work in determining the grille size needed to project heated air to the floor is greatly simplified with a nomogram, available on an 8½x11-in. plastic sheet which can be conveniently hung on the wall. Pencil marks made on its face can easily be removed, allowing repeated use. The nomogram is based on the use of round openings but is sufficiently accurate for use with square and rectangular openings having an aspect ratio no greater than four. It is not recommended for use with long shots. —Barber-Colman Co.

(Item No. 14)

HI-FI SYSTEMS: A 16-page photo catalog helps answer questions about installation of high fidelity equipment in architectural applications. One section explains what high fidelity is and how each component functions; another has specifications for installation and technical descriptions of each component.—H. H. Scott, Inc.

(Item No. 15)

PORCELAIN PANELS: Davidson's 20-page reference catalog is really an idea book for architects, engineers and contractors, for it has complete detail drawings and specification data. Current applications in curtain wall construction and facing panels are shown, such as Denver's 655 Broadway Building seen in the photo, along with examples of structures that have been remodeled. — Davidson Enamel Products, Inc.

(Item No. 16)

FIREPLACE DAMPERS: Suggestions on fireplace construction, floor plan requirements and mason's instructions turn a 12-page booklet on the Universal Beneform dampers into more than just a product promotion. Described are several types of dampers, along with such items as fireplace opening supports, clean-out doors, ash dumps, lintel bars, fireplace forms and accessories. — Bennett-Ireland, Inc.

(Item No. 17)

PERLITE DESIGN: The 80-page, looseleaf "Perlite Design Manual" will enable architects and engineers to design and specify various components of a complete building section—roof and floor systems, curtain wall backups, etc.—in minimum time without restricting their freedom to make special adaptations. Extra copies of each of the 18 different specification and data units are available for use on the construction site and for preparing bids. Easy-to-use charts and tables eliminate the need for computing U-factors, dead loads and load-carrying capacity data for many types of construction. Covers of unit sections feature an architectural detail, perspective drawing of each system. And for good measure, the manual even contains a section giving advice to secretaries on the typing and preparing of specifications. — Perlite Institute.

(Item No. 18)

NUCLEAR BLAST DESIGN: "Blast resistance can often be attained with little or no additional construction cost; radiation shielding may be designed to also function as part of the structure, effecting further economies." These points are brought out in a paper put in booklet form which is not intended to get into the more technical design but to bring out items that would be pertinent to or possibly overlooked by any engineer, planner or industrialist pioneering in blast design. The author, David L. Narver Jr., is a structural engineer who has designed buildings to be used at AEC operations.—Holmes & Narver, Inc.

(Item No. 19)

ACOUSTICS: A comprehensive and concise illustrated story of architectural acoustics and acoustical materials is being used by students as reference material but also is intended for distribution to those actively engaged in the architectural and sound conditioning fields. The subject matter includes proposed remedies for excessive noise, data on the installation and maintenance of materials and problems of auditoriums, theaters, radio studios, offices and building corridors. — Acoustical Materials Association.

(Item No. 20)

SLIDING GLASS DOORS: Both aluminum and steel framed sliding glass doors are featured in Arcadia's 16-page 1957 catalog prepared especially for architectural use. Special reference charts for all stock doors furnish complete details. — Arcadia Metal Products.

A brick bench and lamp post from a manufacturer with imagination

A 4-ft.-wide bench was designed by Kraftile Co. of Niles, Calif., to support as much as 600 lb. on the front edge of the seat. It is built of modular size Kraftile Norman brick reinforced in the vertical joints with 2¼-in.-wide ladder reinforcing. Type A-2 mortar was used: one part cement, half part lime and 4½ parts sand.

This lamp post wired for electricity is so strong it would require at least six men to pull it down. Standing 8 ft. above the ground, it was constructed by San Francisco's Clay Brick and Tile Association of Kraftile standard 3⅝x 7⅝x2⅝ modular brick, reinforced with a post-tensioned ⅝-in., 155,-000-psi. steel bar. Mortar was a mixture of three parts cement to eight parts sand, mixed with very little water. Total tension on the steel rod is 30,000 lb., stretching it three-eighths of an inch.

Visit the Dynamic World of Plastics

An industry-wide trade show featuring new materials . . . new methods . . . new equipment . . . and new applications from the plastics industry. Plan now to attend.

Please request tickets on your company letterhead, since there are no general public admissions.

250 Park Avenue • New York 17, New York

TYPICAL COMPUTER ROOM has average illumination of 130 footcandles achieved with system of Sunbeam's open type recessed troffers installed in geometric patterns.

Integrated lighting system

An architecturally integrated lighting installation at Ramo-Wooldridge Corp. in Los Angeles has been engineered for maximum flexibility, utility and performance. The illumination was planned as a mobile system so that as partitions are moved to make new working areas, the lighting "moves" too—to perform just as efficiently in the new location.

More than 4,500 Sunbeam Visionaires have been installed in the several new buildings, designed by Eugene K. Choy, AIA. One has suspended ceilings with corrugated acoustical aluminum paneling. When partitions are moved, illumination can be directed where it is needed by simply replacing the fixtures where desired in the grid ceiling. Construction permits modular arrangements, geometric patterns and continuous row installations, all with equal ease.

In a typical computer room, part of which is shown here, an average illumination level of 130 footcandles was achieved with a system of Sunbeam's open type recessed 5600 series Visionaires installed in geometric patterns. The room, 65x29 ft., with a 12-ft. ceiling, contains seven rows of the two-light troffers running the length of the room with six 28-ft. rows crossing in a checkerboard fashion. Because the console boards must be read in semi-darkness, a special switching device has been installed to vary the lighting intensity.

The same two-lamp 5600 series troffer, chosen because of sturdy construction and ease of installation, has been used in drafting rooms in continuous rows. Still other areas have utilized the L5600 series equipped with metal louver diffusers.

Corridors are illuminated with shallow plastic- and louver-shielded L1280 series to a level which balances the transition from office to corridor. These units are readily removable to allow for changing floor plans in keeping with the buildings' built-in flexibility features.

The lighting operates on a 277-volt electrical system throughout the multibuilding plant, devoted to the development of systems in the field of guided missiles, fire control, etc.

WAFERWOOD WALL CABINETS designed by Henry Hill, AIA, for California interior. Tenex panels below and sliding doors above are 2 ft. wide; shelves are adjustable.

Textured waferwood panel

Tenex, Pack River's textured waferwood panel, is being used by architects and builders for walls, ceilings and cabinets. The 4x8-ft. ¼-in. thick panel has some unique finishing qualities, each color or finish giving it a different character or appearance.

Tenex differs from other manufactured interior panels in that no ground or defibrated wood is employed. The wood wafers extend through the thickness of the board, a strong panel with solid edges that require no special treatment, resulting in a pleasing three-dimensional appearance.

Builders report that Tenex has unusual structural stability.

Built-in telephone outlets are a must in today's homes

says ARTHUR K. EHRLICH, Arthur K. Ehrlich & Associates, Burbank, Calif. Builders, *Better Homes & Gardens* Idea Home for 1955 in Glendale, Calif. (pictured below)

"We wouldn't dream of building a home without concealed wiring and telephone outlets in the original plans. It's the kind of detail that sets the well-built home above the average. It just has to be there." Telephone outlets in rooms that are used most add much to the value of Ehrlich homes.

To successful builders like Mr. Ehrlich, who are setting living standards in the Pacific West, complete telephone planning is as basic as adequate electrical wiring. We are always ready to help you plan built-in telephone facilities. Just call us and ask for our *free* Architects and Builders Service.

Specify built-in telephone facilities —a sign of good planning

Pacific Telephone

PA&B Suppliers

• **Bethlehem Pacific Coast Steel Corp.** has promoted John G. White from assistant to district manager of sales in Seattle, succeeding Harold E. Gray who has retired.

WHITE

White will be in charge of all company products in Washington, northern Idaho, western Montana and Alaska. In making the announcement, S. S. Cort, vice president for sales, said: "With a big expansion program just revealed for the Seattle plant, which will increase its output of steel products by 70%, White's new assignment is especially important."

White began his career with Bethlehem in 1939.

Also retiring with Gray in December was H. Carroll Foxworth, Seattle senior salesman. The two men had contributed a combined service of 84 years to Bethlehem Pacific.

• **Worthington Corp.** has appointed E. Weston Hammond as manager of its Los Angeles district offices, replacing J. G. Murphy who has been named a special representative of the firm.

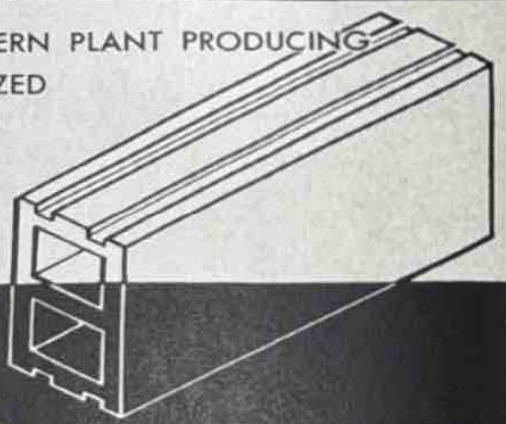
• **Olympic Stained Products Co.** of Seattle has named David M. Hughes to the newly created position of stain sales manager. He has been sales representative for Olympic since his graduation from the University of Washington in 1951.

• **Allmetal Screw Products Co., Inc.,** has announced details of its second annual steel awards totaling $1,500, to be presented for the best case histories describing the use of stainless steel fasteners as an ultimate cost reduction factor in product manufacturing. Deadline for all entries is July 1, 1957. Official entry blanks may be secured by writing: Awards Committee Secretary, Allmetal West Coast Division, 2978 Wilshire Blvd., Los Angeles 5, Calif.

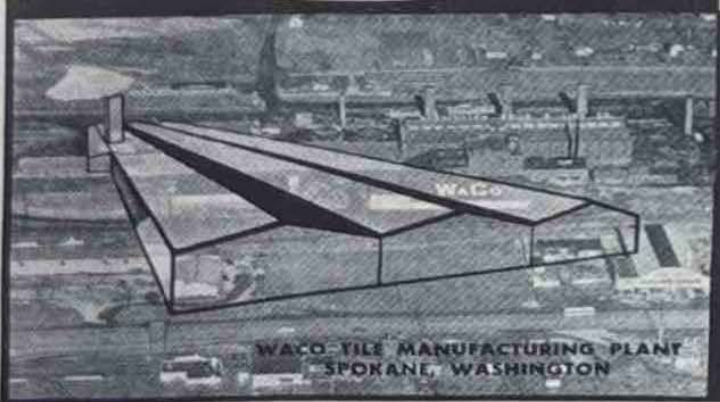
TRADE SHOW EXHIBITORS MEMO

A 16-page booklet designed to assist trade show exhibitors has been prepared by Poirot Exhibitors Service, Inc., describing the scope of the firm's activities which include erecting displays, maintenance, dismantling and shipping or storing them. Copies may be obtained by writing Reader Service, Pacific Architect and Builder, 2418 Third Ave., Seattle 1, Wash.

• **W. P. Fuller & Co.** officials honored S. H. Kline, general manager of the firm's central district, at a San Francisco luncheon upon his 50th anniversary with the West Coast company.



A. H. Brawner Jr., manager of Fuller's export sales division, is in the Orient for a month of business consultation, following the company's first year of operations there.



• **Graystone, Inc.,** Puget Sound building materials firm, has been acquired by Potlatch Yards, Inc., but does not involve any change in the corporate structure of Graystone. The firm manufactures and markets concrete products and allied materials in eight Washington plants; Potlatch Yards has been engaged in the distribution of building materials since 1905, with executive offices in Seattle and 4 branches in Washington and Idaho.

• **Owens-Corning Fiberglas Corp.** has announced several West Coast personnel changes. William H. Curtis Jr., Pacific Coast division sales man-

ager, is now a company vice president and Pacific Coast division general manager. He succeeds Louis R. Kessler, vice president, who is being transferred to headquarters in Toledo.

Howard H. Keech, currently comptroller of the Pacific Coast division, has been named assistant treasurer and assistant secretary.

Maurice B. Quillen, sales manager of Owens-Corning's Fenco Division for the past year, now heads the company's Los Angeles branch and has been succeeded by Edward B. MacNab, Fenco senior sales representative.

• **Steel Building Products, Inc.,** of Seattle has been appointed distributor for Milcor Ribform manufactured by the architectural products division of Inland Steel Products Co. The distributing firm also furnishes fabricating and erecting services, reports president Frank Hodge.

• **Pryne & Co., Inc.,** of Pomona, Calif., has named E. F. Kelly, formerly executive vice president, as president, succeeding Ralph Pryne, founder and president of the company since its inception in 1923, who will remain active as chairman of the board. Phillip D. Pryne, has been elected vice president in addition to his present duties as treasurer.

• **General Controls Co.,** of Glendale, Calif., has been merged with Production Instrument Co. of Chicago, which will be operated as a separate division.

• **Lasater Co.** of Studio City, Calif., has been appointed manufacturer of Lo-"K" insulation in southern California by Lockport Mills, Inc.

• **Columbia Hardboard Co.,** with offices in Seattle, has begun production of shavings board, made entirely from

FOR LIGHTING SALESMEN

A new lighting training course "Modern Illumination, Fundamentals, Techniques, Applications" has been prepared by the Westinghouse lamp and lighting divisions. The 18-lesson course consists of audio-visual presentations using sound films and records.

Marshall Waterman, manager of commercial engineering of Westinghouse's lamp department, states that the company first made a course of this nature available shortly after World War II. It was nsed extensively by utilities, distributors, jobbers and electrical contractors. Numerous requests prompted a re-revised, improved course, he comments.

NEW OFFICERS of Sliding Glass Door and Window Institute, which headquarters in Los Angeles, are (l. to r.): William Watkins, honorary vice president; Murrell Spence, first vice president; Frank B. Miller, president; George Radford, second vice president; and Lauro Bourland, secretary. Charles Walker, treasurer, is not shown.

cedar mill waste and marketed under the trade name of Cedawood, in its recently completed Everett plant. Don L. Johnson is sales manager.

• **Aluminum Company of America** has a new manager of its Northwest operations, Donald H. Tilson, succeeding C. S. Thayer whose retirement after a company career spanning more than 43 years became effective last December. Tilson, with Alcoa since 1920, will direct smelting and fabricating operations at Vancouver and Wenatchee, Wash.

• **Pomona Tile Manufacturing Co.** of Pomona, Calif., has appointed Dale Ranney to its Los Angeles sales staff in line with the company's program of opening or expanding regional sales offices "wherever the local market warrants it."

• **Woodall Industries** in a recent reorganization of its West Coast sales setup has named Ned Bardeen as sales manager for plants at San Francisco and El Monte, with headquarters at the former. Charles Francis is sales manager of the door division at El Monte.

• **Dura-Vent Corp.** of Redwood City, Calif., has elected Thomas D. Bromley as president. For the past 10 years he has been vice president in charge of sales of Peerless Manufacturing Corp of Louisville, which position he continues to hold.

• **B. F. Shearer Co.**, West Coast distributor of public seating equipment and school furniture, has named Roy A. Brobeck as manager of its Portland office.

• **Universal Form Clamp Co.** of Los Angeles has moved from 5855 S. Western Ave. to 13210 S. Figueroa, where a new plant provides three times as much space.

• **L. A. Young Spring and Wire Corp.** has entered into the manufacture and sale of aluminum honeycomb structures at its San Leandro, Calif., plant. President N. D. Ely reports that his firm has purchased machinery, tooling and complete assets for producing aluminum honeycombs from Flexo Manufacturing Co., Inc., of Los Angeles.

• **Metal Building Products Corp.** of North Hollywood, Calif., which has been established as a sales agency for eastern building products manufacturers, has named Richard O. Grinnel as district sales manager.

• **Day and Night Manufacturing Co.** of Monrovia, Calif., has promoted Frank R. Spratt to the post of assistant general sales manager and Craig Stirewalt to replace Spratt as California regional sales manager.

• **Pacific Tile and Porcelain Co.** Los Angeles has elected a sixth bo member, James W. Tetrault, pl manager since 1953 and with the fi since 1950.

• **Fuller Glass and Paint Co.** lost Spokane branch manager January when Walter H. Mills Jr., 43, d after a sudden illness. He had serv the company in its Idaho Falls a Salt Lake City branches.

• **Kawneer Co.** held the first annu dealer panel for its architectural pro ucts division in the company's hea quarters in Niles, Mich., January 11. Among those selected to atte was Fred S. Nobmann, glass manag of W. P. Fuller & Co., of Seattle.

• **Buensod-Stacey, Inc.**, has a nounced the first appointment sales representatives as part of a n tional network which will supply co sulting engineers, architects, and co tractors with its dual-duct air cond tioning equipment. West Coast repr sentatives include H. W. Baker C San Francisco; Cooling and Heati Engineers, Los Angeles; and Geor E. Mead Co., Seattle.

• **E. F. Hauserman Co.** has appointe Harold W. Noleen, formerly S Francisco branch manager, to a sim ilar post for the New York metropol tan area.

• **Utility Appliance Corp.** of Los An geles has named Leo Hungerford director of sales engineering for th firm's entire line of products.

• **Gladding, McBean & Co.** has appoint ed Carleton P. Adams as manager o advertising and public relations.

• **Unit Masonry Association** of Seattl has elected Donald E. Jordan, sale manager of Layrite Concrete Prod ucs, as president; C. L. Gerring, vic president; and E. J. Gill, relected secretary-treasurer.

• **Inland Steel Products Co.** has ap pointed Robert J. Morris, formerly with Harold E. Peterson, Inc., shee metal fabricators, as field enginee on its Los Angeles branch staff.

• **Fluor Products Co.**, of Whittier, Calif., a division of The Fluor Corp. Ltd., has formed a separate division to design, prefabricate and market a complete line of cooling towers for the air conditioning and refrigeration industry. Gordon M. Anderson, general manager of the new division, says that volume production of the first in a series of four basic models is now underway at the company's 155-acre mill in Santa Rosa, Calif.

• **Kaiser Engineers** of Oakland has named Robert J. Wolf as division manager.

PA&B Builders

• **Home Builders Association of Spokane** is urging passage of a Washington law requiring state licensing of contractors in one of three classifications: heavy construction, home and dwelling, and speciality. The law, as proposed by this group, would exempt persons who build their own houses, individuals working solely for wages and building material suppliers.

• **International Drywall Contractors Association** has been organized, with Sherwood M. Sitz of Los Angeles as executive director. Wayne Vaughan, who heads the West Los Angeles firm of Vaughan Movable Interior Walls, Inc., is the first president. Other officers from the West Coast are Melvin L. Scott of Seattle, vice president, and M. R. McColley of San Diego, treasurer.

• **Young Builders Council, Home Builders Institute** of southern California is offering a $500 annual scholarship to the most promising UCLA junior majoring in the construction field. In addition, the YBC educational committee has arranged with the Santa Monica Technical School to develop in its curriculum a construction course to take over where the union journeyman education stops.

Officers for 1957 are Carroll Brock, president; Robert Rikel, first vice president; Walter W. Kuesder Jr., second vice president; James Roberts, secretary; and Bill Guyant, treasurer.

• **Builders Exchange Cooperative** of Portland has elected Donald A. Robertson, secretary of Robertson, Hay & Wallace, as its president.

NEWLY ELECTED PRESIDENT Herbert A. Crocker (left) of Associated Home Builders, Inc.,—San Francisco and Marin—accepts gavel from outgoing president William Blackfield. Other officers are M. Douglass Couch, vice president; George McKeon, secretary; Rollin E. Meyer Jr., treasurer.

Aesthetic value of materials (cont'd from p. 32)

precedent for large ones.

During this period of blind groping, many of our works were carefully studied designs in good taste. But quoting Professor Alfred D. F. Hamlin's comment in his "History of Architecture," written in 1895 "they are like labored and scholarly verse in a foreign tongue, correct in form and language, but lacking the naturalness and charm of true and unfettered inspiration."

Toward the end of the 19th century, some American and European designers of spirit revolted against the commonplace form and historic style of that day. The Paris Exhibition of 1900 displayed in many remarkable buildings an amazing amount of originality and individualism of style.

Today we have divested ourselves of the feeling that a machine can be creative in an artistic sense. We now accept it as an effective producer of things that look machine-made rather than hand-made but still can be assembled into an aesthetically acceptable whole. Straight lines and rectang-

Cut hours of travel time to minutes...FLY WCA!

Serving Paul Bunyan's Empire. Fast, frequent service to 44 communities in Washington, Oregon, and Idaho. Fly West Coast Airlines... both passenger service and air freight.

ular forms can be done admirably, but curves and swirls should not be attempted.

The present-day architect is encouraging industry to make larger sheets of glass, truer surfaces of porcelainized sheet steel and to shop fabricate metal assemblies to the fullest possible extent. Today shop assembly is carried as far as prefabrication will permit so that on-the-site work with all of its improvisations and inefficiencies is held to a minimum. This marks the end of the period af transition and the beginning of fulfillment of the promise of good machine-made architecture. To reject this promise is but to ignore the repeated lessons of history.

There is no halt in the evolution of industrial processes. Our work-a-day world and our lengthened hours of leisure are geared to the maturing skills of American industry. Just as surely these skills, guided by the imagination and the sense of fitness of today's designers, are producing an architecture of vast intellectual brilliance.

One great departure—perhaps the most radical—in contemporary architecture is the complete separation of the structure from partitioning and from the exterior wall. Whether we employ a plastic structural form or the predominant grid frame, our walls are hung in curtain like manner between load-bearing elements. These curtain walls support no weight other than their own and they are designed to add only a minimum dead weight to the structure.

Architectural metals are ideal curtain wall materials. They afford great strength in comparatively lightweight sections, they can be prefabricated and they can be given many degrees of polish to contribute to the building a shining machine-made look. Our new style of architecture is gleaming rather than dull.

Metals and glass do not absorb moisture. Neither high nor low temperatures affect their hard surfaces. This same hardness precludes a design retrogression to an imitation of the handicrafts of the past.

Glass can be rolled into thin flat sheets of great length and breadth. It can be highly polished, colored or made heat-absorbent but it cannot be hand carved. If you want to carve it, you must use mechanically operated wheels or blasts of sand. Glass is a hard, brittle and inert building material.

Architectural metals, in their true industrial age applications, are too hard for the wood carvers' technique. They can be rolled or extruded into long pieces of varying sectional shapes and they can be cast into sculptured forms.

Sheet steel is admirably suited to porcelainizing: a thin surfacing of glass frit fused on to both sides. This happy union of metal and glass presents to the designer a colorful, long-lasting architectural material of great versatility.

Now if in retrospect we are sure that our social pattern and our new materials, brought to being in industry, are creating a new architecture, let us see how manufacturers and fabricators can contribute to the aesthetic excellence of this movement.

In the first instance, they must make sure that they understand and are sympathetic with the quality demands of the leaders in architectural design.

After they attain the required standard of quality, they must join with the architect in presenting their best products to the public in a convincing manner. It is my feeling that a competition fails in this purpose for it only reaches the student or young architect; it misses the consumer.

They must carry on continuous research and experimentation to insure freshness of design—design that is not only fresh but sound and econ ically competitive with other terials.

Unfortunately, it seems to metals manufacturers are disrega ing the architects' urgent cry purely aesthetic advancement. At moment I cannot recall one archi tural metal spandrel of real ar tectural significance. Aluminum ma ufacturers seem to have forgot the natural beauty of their mate and are exerting effort toward development of a coloring proce These products have all the prom found in the average cheap imi tion.

We must not become intrigued w our own cleverness. We must a higher if our new architecture i avoid decadence before it reach maturity.

It is necessary for us to perfect o materials and to develop cost-savi processes so as to contribute o share toward increasing the value the building dollar of today.

Riggers and fabricators must i vent techniques of installation order to improve the appearance assembled work. These methods mu be aimed at larger shop assembli so as to shorten the time requir for site erection.

Some building codes, still base upon the now obsolete bearing wa construction, actually operate again metal curtain walls. Where this unintentional, technical data must b so presented that permanent va ances may be granted lawfully.

And finally, may I repeat. Let you advertising convince the buying pub lic that the lightweight curtain wal is a part of practical American li of today and that it can be a thing of exquisite beauty. Without this, w may have buildings but we will hav no architecture. I hope that you wil abandon the slogan "Sell the me who write the specs" and sell th people who use the goods.

OREGON

SAFEWAY DISTRIBUTION CENTER— Clackamas, Ore.

Grading contract has been awarded to Frank Lyons & Co., 5200 N.E. Alberta St., Portland, for the 46-acre site for the Safeway distribution center just east of S.E. 82nd Ave., Portland, and south of the town of Clackamas. Bids on the construction of tilt-up concrete buildings totalling 541,650 sq. ft., along with streets and utilities (all under one contract) will be called about April by Bramwell Construction Co., division of Safeway Stores, Inc., 1208 S.E. 7th Ave., Portland. Plans underway by Max P. Willams and Robert B. Martin, architects, 1919 S.W. 19th Ave., Portland; utility plans by Carl Green & Associates, 510 Henry Bldg., Portland.

Buildings will include grocery warehouse, 460'x525', with 254,000 sq. ft.; meat warehouse, 265'x312', with 101,000 sq. ft.; perishable good warehouse, 305'x335', with 129,000 sq. ft.; 140'x150' frozen foods building with 35,000 sq. ft.; administration building, 40'x92', with 3,650 sq. ft.; truck repair facility, 75'x215', with 19,000 sq. ft. Development will also include railroad and spurs, truck receiving and shipping facilities, parking areas and utilities. The center will serve some 100 Safeway stores in Oregon and southwest Washington. The company also owns 54 adjoining acres, and eventually Safeway manufacturing plants, including bakery and creamery, will be moved from Portland to this site, making the total cost approximately $5,000,000, excluding equipment. TOURIST ACCOMMODATION EXPANSION— Crater Lake, Ore.

(Estimated cost $611,500)

Plans announced by National Park Service for expansion of overnight and dining accommodations at Crater Lake National Park, Klamath County, Ore., under Mission 66 of the park service. Work will be done by George Smith, concessioner who operates these facilities under contract with the park service, who will work with Thomas J. Williams, park superintendent, Federal Bldg., Medford. Plans include enlargement of the cafeteria, addition of 40 sleeping units with provision for 50 more if demand warrants them, and modernization of the lodge and cafeteria kitchens. Work will start this construction season and must be completed in 1966. Snow depth in the park is currently over 6' and June 15 has been set as tenttative date for the opening of the lodge. Some work may start before that date. ZZ 2-13

●GRADE SCHOOL— Culver, Ore.

Bids to be opened 8 p.m., February 21, by School District No. 4, Jefferson County, Martha Ross, clerk, Culver High School, Culver, Ore., for construction of a four-classroom, 32'x160', concrete block grade school building. Plans with John K. Smeed, architect, 8313 S.W. Barbur Blvd., Portland. $30 deposit. Bid guarantee 5%.

New classroom starter building to replace existing frame building; rectangular strip of four classrooms, toilets, health room, teachers' room and toilet, janitor's closet, storage and covered walk on three sides. Concrete slab floor with asphalt tile; glued laminated roof beams; wood structural deck; built-up roofing; roof insulation; acoustical tile ceilings; lightweight blocks painted both exterior and interior; enameled woodwork; built-ins; glass stopped in wood with metal ventilating sash; some metal doors and frames; steam unit ventilators from existing boiler in high school.

SWIMMING POOL— Dallas, Ore.

(Estimated cost $250,000)

Preliminary study has been completed by Stevens & Thompson, consulting engineers, 2234 S.W. 5th Ave., Portland, for covered swimming pool for the City, Hollis S. Smith, mayor, Dallas, Ore. The steering committee for the pool will now consider means of financing the project. Pool would be located on east side of Dallas High School gymnasium in a building designed to match the high school. Plans include 42'x100' pool, with sun deck and glass walls on north and south sides. WB 2-1. Previous report 11-16

▲HIGH SCHOOL ADDITION— Gold Beach, Ore.

Bids received by Union High School District No. 1, Curry County, Harold Stokes, clerk, Gold Beach, for construction of a classroom addition to the high school. Plans by Freeman, Hayslip, Tuft & Hewlitt, architects, 2040 S.W. 3rd. Ave., Portland. Bids opened February 7. Following are basic bids plus alts. 2 and 3. LOW BIDS: C. W. Hill & Son, Box 682, Salem, $85,068; Wiley Co., Box 414, Ashland, $88,502; Murphy Construction Co., Route 2, Box 627, Roseburg, $88,800. WB 2-12. Previous report1-24

SCHOOL ADDITION— Hillsboro, Ore.

Bond election for $225,000 approved for Hillsboro School District No. 7, Hillsboro, for construction of eight-classroom wing at Brookwood School, 25730 S.W. Pearson Road; covered playshed at Peter Boscow School, 452 N. 3rd St.; school equipment and site for another school. WB 2-13

★INSULATING BOARD PLANT— Klamath Falls, Ore.

(Estimated cost $12,000,000)

Three additional subcontract awards have been made by Robert Swan, project manager, Box 527, Klamath Falls, on projects included in construction of the insulating board plant in Klamath County, 28 miles north of Klamath Falls where Highway 97 crosses the Williamson River, according to H. R. Stokes, resident engineer for the Johns-Manville Corp., 22 E. 40th St., New York City. General contractor for the project is the George A. Fuller Co., 3100 W. 8th St., Los Angeles, Calif. Plans by Skidmore, Owings & Merrill, architects of New York, Chicago, San Francisco and Portland. Awards are as follows:

The Wand Corp., 380 W. Howard St., Pasadena, Calif., for applying 500,000 sq. ft. of Johns-Manville Corrugated Transite for siding and roof decking to the four main buildings of the plant. The superintendent for the corporation is expected to arrive in Klamath Falls about February 15 when the first shipment of Corrugated Transite will be delivered at the plant site from the Johns-Manville plant at Pittsburgh, Calif. After roof decking has been applied, a painting contract will be let covering painting of exposed portions of the 1,900 tons of structural steel which form the framework and beams for the first four buildings. After buildings are complete, a separate contract will be awarded to one of a list of contractors approved by the Johns-Manville Corp. for painting and decorating the interior of the buildings.

Subcontract award to C. B. Armpriest Co., 495 S. Church St., Salem, for build-up roof-

ing and roof insulation for the four main buildings at the plant. The four of the planned six buildings occupy 271,500 sq. ft. of ground area. Work will begin after the Wand Corporation has finished the roofing project mentioned above.

Subcontract award to Charles Hartley, 4479½ S. 6th St., Klamath Falls, for drilling two water wells at the site of the plant. Wells will be drilled close to the eastern line of the property, opposite the building area, and will produce 500 gal. water per minute. Later, a subcontract will be let for the laying of water mains and the water system for the plant.

Sub-bids have been invited from the approved list of contractors for miscellaneous metal work at the site, including steel inside stairways, skylights, window frames, and miscellaneous iron for interiors and to frame the loading dock.

ZZ 2-13. Previous report 1-19

● HIGH SCHOOL— Pendleton, Ore.
(Estimated cost $2,000,000)

Bids will be opened March 19 by Pendleton School District No. 16C, Wallace McCrae, superintendent, 515 S.W. 4th St., Pendleton, for construction of a new high school, to be located on the golf course at the site of the Pendleton Country Club, in Pendleton. Plans by Culler, Gale, Martell & Norrie, architects, Realty Bldg., Spokane. Completion expected by September, 1958.

The 30-room school will be constructed in six interrelated units on a modified campus plan and will have a 750-student capacity. One-story; reinforced concrete footings and foundations; 124,000 sq. ft.; slab on grade concrete masonry units, prefabricated curtain walls of glass and porcelain enamel; precast prestressed concrete beams, thin shell concrete barrels; concrete built-up roof, composition cover; concrete masonry partitions; concrete stairways between ground levels; painted interior and exterior wall finish, wood and metal trim; painted concrete masonry interior partitions; asphalt tile, ceramic tile (shower roms), quarry tile and stone (walls), terrazzo finish on stairs; acoustical tile ceilings on wood stripping; hollow metal exterior doors, wood slab or metal interior dors; special equipment includes 24'x110' mobile partitions in gymnasium, metal overhead doors in shop, folding wood partitions in cafeteria, flexible tack and chalk boards built as units; rigid board insulation in roof and walls; low pressure oil-fired steam heating system; unit ventilators, exhause fans; fluorescent and incandescent lighting.

SC 2-8. Previous report 1-16

BUILDING ADDITION— Portland, Ore.
(Estimated cost $750,000)

Construction will start thtis spring on a four-story, 38'x200' aluminum and glass addition to the Equitable Bldg., 421 S.W. 6th Ave., for the Equitable Savings and Loan Association, Ralph H. Cake, president, 421 S.W. 6th Ave. Plans underway by Skidmore, Owings & Merrill, architects, 2040 S.W. Jefferson St., Portland.

The addition will be on top of existing two-story portion of building and will be between Washington and Stark Sts. It will add 30,400 sq. ft., mostly office space, and will match existing structures with 95'x89', double-glass tinted windows and aluminum panels. Outside window panes are heat-resisting Solex glass. WB 2-13

★PHYSICAL EDUCATION BUILDING— Portland, Ore.

Award to Henry M. Mason Co., 2206 N.W. Thurman St., Portland, $89,818 (basic bid) by Order of the Jesuit Fathers, Father M. I. Wilhelm, S. J., supervisor of the Jesuit High School, 9000 S.W. Beaverton-Hillsdale Highway, for construction of a physical education building at the high school. Plans by John W. Maloney, architect, 754 Central Bldg., Seattle. The basic bid is for the gymnasium shell. Alternates for the dressing room shell and for finishing both sections of the building will probably be added later as funds are available. WB 2-13. Previous report 1-26

▲GRADE SCHOOL— Portland, Ore.

Bids received by Gilbert School District No. 45, Multnomah County, Mrs. Bessie H. Weaver, clerk, Gilbert School, 12500 S.E. Ramona Ave., Portland, for two-story, reinforced concrete and frame grade school at S.E. 128th Ave. and Holgate St. Plans by Warren Weber, architect, 610 Fenton Bldg., Portland. BIDDERS: Sterner Construction Co., 13845 S.E. Rhine St., (Basic) $374,572, (Deduct stage) $10,470, (Deduct drain tile) $500; Weston Construction Co., 7415 N.E. Glisan St., $374,997, $10,903, $498 (Weston is low if both alternates exercised); Blanchard Construction Co., 2546 S.W. Vista Ave., $376,000; Gene Settergren, 1625 S.E. Woodward St., $381,343; Contractors, Inc., 1101 N.E. 21st Ave., $384,648; Norman Builders, 2805 S.W. 3rd Ave., $386,100; C. M. Corkum Co., 2630 S.W. 2nd Ave., $397,766; Nieman Construction Co., 2001 Main St., Vancouver, $404,722. Of Portland except as noted.

WB 2-13. Previous report 2-1

BANK ADDITION— Portland, Ore.
(Estimated cost $2,000,000)

Stanton, Boles, Maguire & Church, architects, 208 S.W. Stark St., Portland, have been retained by First National Bank of Portland, C. B. Stephenson, president, 404 S.W. 6th Ave., to plan a 4-story, 100'x150' addition to the existing bank headquarters at the above address. The site, at the northeast corner of S.W. 6th Ave. and Washington St., is occupied by the Lafayette Bldg. and the old Century Theater. It is expected that destruction of the old building will start before the end of 1957.

Design of the addition will be more modern but will match as nearly as possible the white marble exterior of the existing building; the addition will be integrated with the existing, and interior finish will be similar. A portion of the street floor will be used to expand banking facilities, and the rest will be rented to other businesses; upper three floors will furnish additional space for a remodeled and expanded trust department, and head office administrative departments. WB 2-13

■ CHURCH ADDITION— Portland, Ore.

Planholers announced for one-story, reinforced concrete addition to Temple Beth Israel, 1931 N.W. Flanders St., Portland. Bids to be opened 2 p. m., February 18, in office of Dougan & Helms, architects, 401 Royal Bldg., Portland. Select list of bidders.

PLANHOLDERS: Vince Raschio, 7231 S.E. Clay St.; Teller Construction Co., 845 N. Graham Ave.; Frank Ralph & Son, 2204 N.E. Alberta St.; Henry M. Mason Co., 2206 N.W. Thurman St.; H. A. Starr Concrete Construction Co., 2425 N Commercial Ave.; E. Carl Schiewe, 1024 N.E. Davis St.; E. E. Settergren, 3723 S.E. 21st Ave.; Beebe Construction Co., 2134 N. Flint Ave. Of Portland. WB 2-13. Previous report 2-1

BRIDLEMILE GRADE SCHOOL— Portland, Ore.
(Estimated cost $681,000)

Working drawings under way by Hollis Johnston and Koch, architects, 603 Concord Bldg., Portland, for construction of Bridlemile Grade School at S.W. 45th Ave. and S.W. Hamilton St. Bid call to the issued about May by Portland School District No. 1, L. J. Baker, business manager, 620 N.E. Halsey St., Portland. School will be used jointly by Portand Park Bureau of Parks and the school will have use of adjacent ball field and apparatus belonging to park bureau.

Frame construction with brick veneer exterior; steel bar joists supporting slightly pitched roof, except glued-laminated beams in gymnasium and cafetorium; exposed SCR brick in corridors; built-up roofing; aluminum sash; asphalt tile flooring; plaster wall finish; acoustical tile ceilings; mostly fluorescent lighting; unit venilators for heating and ventilating from oil-fired, hot water system. SC 2-6

HOTEL-MOTEL— **Colfax, Wash.**

Tentative plans under consideration for

construction of a new hotel-motel structure to replace the Colfax Hotel which was razed by fire early last October, according to Town & Country, a Colfax organization. Plans by William James of Eddy, Carlson & James, architects, N. 1205 Washington, Spokane. It was originally planned by S. H. Butler, owner of the hotel, to construct a new two-story hotel on the site of the razed building but plans are now being handled by the Doric Co., hotel management and investment firm, Dexter Horton Bldg., Seattle, and Butler is responsible for the property only. Sketches call for a three-story building extending the full block from Main St. to Mill St. and bridging the alley in Colfax. Included are 50 guest rooms, banquet room seating 200, restaurant, lobby and other facilities.

SEWER SYSTEM— Klamath Falls, Ore.

The Oregon State Sanitary Authority has allocated $146,000 in federal funds to the City of Klamath Falls to finance improvement and enlargement of the city's sewer system and for construction of a new sewage treatment plant in Klamath Falls. The federal funds will be added to funds raised by the bond issue approved May, 1956. Bids will be called this winter by City Council, City Hall, Klamath Falls, for spring construction of the enlarged system and treatment plant, according to city engineer E. A. Thomas. Plans call for enlarging several of the main trunk lines to relieve pressure on existing lines. The present treatment plant on the west side of the Klamath River will be utilized as a pumping plant to move sewage from a large section of the city to a new treatment plant to be built on the east bank of the Klamath River. ZZ 2-7

●TURBINE TYPE PUMP— Lowell, Ore.

Bids rejected. Bids will be opened 2 p.m., February 18, by Corps of Engineers, Portland District, 628 Pittock Block, Portland, for designing, manufacturing and delivering fob Lowell, a turbine type or propellor type pump to be used in experiments by the Oregon State Fish Commission in the Lookout Point dam reservoir on Middle Fork Willamette River; CIVENG-35-026-57-155. Specifications with above office. Bids were previously opened January 29.

Bids received by city purchasing agent, L. W. Rayner, 208 City Hall, Portland, for furnishing automotive material loader. ONLY BIDDER: Nelson Equipment Co., 5251 S.E. McLoughlin Blvd., Portland, $7,398. Bids opened February 5.

WB 2-8. Previous report 1-30

▲TRACTOR— Portland, Ore.

Bids received by city purchasing agent, 208 City Hall, Portland, for furnishing gasoline power tractor. BIDDERS: Cramer Machinery Co., 1005 S.E. Stark St., Portland, $2,474, (alternate) $2,795; Casey Tractor & Equipment Co., 1800 S.E. Union Ave., Portland, $2,588. Bids opened February 5.

WB 2-8. Previous report

STREET WIDENING— Portland,
(Estimated cost $1,600,000)

Widening of S.E. Stark and S.E. Division streets during the 1958 construction year has been recommended to the Board of Multnomah County Commissioners, Jack Bain, chairman, Court House, Portland, by county roadmaster, Paul Northrup, 2115 N.E. Morrison St., Portland. Project would include widening Stark to 80' between 82nd Ave. and 122nd Ave., and widen Division to 90' between S.E. 82nd Ave. and 122nd Ave. Both would be developed as four-lane arterials east of the city limits.

The roadmaster also recommended widening 102nd Ave. from N.E. Glisan St. to Burnside or perhaps on south to Stark at estimated cost of $176,000.

●STATE HIGHWAY PROJECTS— Portland,

Bids will be opened 9 a. m., March 1, by Oregon State Highway Commission in the Queens Room of the Imperial Hotel in Portland on highway construction. Specifications with W. C. Williams, state highway engineer, Highway Bldg., Salem. $2 deposit. The following group of projects contains only a partial list of the jobs on which bids will be opened March 1. The remaining projects will be released for publication not later than February 14. Estimated cost of the projects to come before the commission at its two-day meeting February 28 and March 1 is $4,300,000.

CORVALLIS SLOPE PROTECTION—Intermittent river bank protection along 0.34 mi. of Albany-Corvallis Highway near Corvallis, Benton County; a State Project. Requires about 2,700 c.y. rock material.

FLAVEL ST.-GLENCOE ROAD FOOTPATH—Asphaltic concrete footpath on 1 mi. Cascade Highway (S.E. 82nd Ave.) near Portland, Clackamas and Multnomah counties; a State Project.

Quantities: 310 c.y. excavation; 280 c.y. crushed base materials; 280 ton class D asphaltic concrete pavement.

OLNEY - JEWELL ROCK PRODUCTION PROJECT—About 8,500 c.y. crushed material in stockpile on the Nehalem Highway about six mi. southeast of Astoria, Clatsop County; a State Project.

PRUNER BRIDGE—Construct two new bridge piers, 308' of reinforced concrete deck girder superstructure, and 252' of prestressed concrete girder superstructure over the South Umpqua River on Riddle County Road, Douglas County, two mi. north of Riddle; FAP No. S-302(2).

Quantities: 800 c.y. structure excavation; 490' steel pile shell; 1,000 c.y. class A concrete; 500 c.y. class A-A concrete; 245,000 lb. metal reinforcement; 33,000 lb. prestressed reinforcement; 90', 8" metal drain pipe.

ROCK POINT GUARDRAIL—About 1.8 mi. guardrail of design matching existing guardrail on Pacific Highway near Gold Hill, Jackson County; a State Project.

GRADING, OILING—Silver Lake Section —Grading and oiling 1.34 mi. on Fremont Highway about 11 mi. southeast of town of Silver Lake, Lake County; a State Project.

Quantities: 41,400 c.y. excavation; 6,[illegible] c.y. selected roadbed topping; placing [illegible] c.y. state-furnished aggregates; 60 ton [illegible] 300 asphalt.

LANE COUNTY GUARDRAIL PROJECT —About 3,100' guardrail at five locations on the McKenzie and Willamette highways east and southwest of Eugene; a State Project.

OILING—Boyd-Dufur Section—Oiling 6 mi. Boyd-Dufur Road northeast from Dufur, Wasco County; FAP No. S-117(1).

Quantities: 3,950 c.y. state furnished aggregates and shoulder materials; 86 ton RC asphalt; 234 ton 120-150 asphalt.

SHANIKO ROCK PROJECTION — About 10,000 c.y. crushed materials in stockpile on Sherman Highway, Wasco County; a State Project.

GRADING, OILING—Hopewell Section— Grading and oiling 0.28 mi. Bellevue-Hopewell Highway at Hopewell about 6.5 mi. southeast of Amity, Yamhill County; a State Project.

Quantities: 5,900 c.y. excavation; 52 c.

concrete in box culvert; 4,900 lb. metal reinforcement; 3,830 c.y. crushed base materials; 20 ton 120-150 asphalt. DM 2-9

WATERWORKS MATERIALS— Portland, Ore.

Bids rejected by Garden Home Water District, Donald W. Prairie, chairman of board, 7134 S.W. Garden Home Road, Portland, for 4,600' of 12" cast iron or steel pipe, 2,000 fittings, couplings, etc., for water supply line. Bids opened January 14. New bids will be called for later in combination with pipe, fittings, etc., for distribution system. Following the awarding of material contracts, bid call will be issued for construction of the water lines. Plans by Carl E. Green & Associates, consulting engineers, 510 Henry Bldg., Portland.
WB 2-8. Previous report 12-21

Lavin, Coulee City.

DM 2-12. Previous report 2-1

SEWAGE DISPOSAL PLANT— **Pacific Beach, Wash.**

(Estimated cost $45,000 to $50,000)

A consulting engineering firm has advised Grays Harbor County Commissioners, Courthouse, Montesano, that construction of a lagoon-type disposal plant would be feasible and most economical for the enlarged system made necessary by establishment of the 100-man Navy station at Pacific Beach. The engineers favored locating the lagoon at a gravel pit ¾ of a mile out of the community as it would require no outlet or chlorination. An alternate location would be west of Joe Creek near the highway bridge. Total cost would include $15,000 to $17,000 for extending the sewer lines to serve new areas, including the Naval station. Federal aid funds could be sought on the estimated $33,000 cost of the lagoon and pressure line leading to it.

SC 2-9

▲**FENCING—** **Paine AFB, Wash.**

Bids received by U.S. Air Force, Purchasing & Contracting Office, Paine AFB, for installation of security fencing at the base; Inv. No. 45-602-57-28. Bids opened February 6. LOW BID: D & A Construction Co., 1113 N. 100th, Seattle, $6,925. SEWAGE TREATMENT PLANT— **Palouse, Wash.**

The U.S. Government has just allocated $25,487 as its share toward an $84,958 sewage treatment plant to be constructed at Palouse. The funds will come from the Department of Health, Education and Welfare. Also, the Palouse City Council has accepted the bids of the State of Washington finance committee for sale of $30,000 general obligation bonds as another step in financing the project. This now enables the City of Palouse to award the contract for the project on which bids were opened January 8. Low bidder at that time was Hefte Construction Co., E. 11607 Trent, Spokane, $79,995. Plans and specifications by Walter L. Woodward, consulting engineer, Empire State Bldg., Spokane.

WATER SYSTEM EXPANSION— Pullman, Wash.

Plans approved by City Council, City Hall, Pullman, for a three-year expansion and improvement plan for the city's water system, providing financing can be arranged. This will require the floating of a probable $400,000 revenue bond issue, according to Joseph A. Street, city supervisor, City Hall. The following are basic phases included in the report submitted by Chet Waggener, city engineer, City Hall.

1—Construction of a 3,000,000-gallon reservoir on Pioneer Heights. 2—Installation of the necessary pipelines so that three high tanks can be erected on Sunnyside Hill, Military Hill and Landis' Addition. 3—Construction of the three tanks and completion of tie lines to separate the high and low level systems of supply (this last phase probably to be done in 1959). Tanks are planned with capacities of 30,000 gal. (Landis' Addition), 100,000 gal. (Sunnyside Hill) and 200,000 gal. (Military Hill). The plan in its intermediate stage calls for installation of about one mi. of 8" mains as leads from the new high tanks and the addition of larger mains than now exist in several parts of the city.

ELECTRICAL IMPROVEMENTS— **Kalispell, Mont.**

A $755,000 loan has been approved by Rural Electrification Administration for the Flathead Electric Cooperative, H. J. Miller, manager, 423 1st Ave. E., Kalispell, to be used for various system improvements and expansion. Among major items scheduled are a new 3,750-kva substation with related equipment at Martin City ($70,000), and conversion of the transmission line west of Kalispell to Boisvert Camp to a high voltage and installation of a 1,500-kva substation in that area ($35,000). New distribution facilities in Flathead and Lincoln counties scheduled for the next two years amount to about $155,000 and new transmission lines costing about $105,000 may be constructed. The Cooperative now serves approximately 2,000 customers and plans immediate expansion to serve 25 more.

NEW MINE FACILITIES— **Provo, Utah**
(Estimated cost $1,000,000)

Plans announced by Columbia-Geneva Division of U. S. Steel Corp., L. B. Worthington, division president, San Francisco, Calif., for construction of new mine facilities at the Columbia mine near Provo. A $1,000,-000 haulage tunnel will be built as part of the coal expansion program and will serve to eliminate a heavy grade from the working face to the mine portal. The 8,700' tunnel will be 13' wide and 9' high and will be driven from the level of the mine tipple to intersect the coal seam down pitch from its outcrop. Also planned as part of the multimillion-dollar program are modification of the tipple at the mine to include automatic dumping and better screening and picking facilities, permitting more efficient removal of foreign materials, and construction of a mine equipment maintenance shop near the entrance of the new haulage tunnel. A new coal mines and quarries general office building is also to be constructed at

11 Major Machinery and Equipment Items . . .

. . . Invitations To Be Issued by Bureau of Reclamation

Bids will be called within the next three months by Bureau of Reclamation on 11 major machinery and equipment items. Gate valves, governors, control equipment, generators, joist, transformer gates and control system are among the items listed. Additional information may be obtained from the chief engineer, Building 53, Denver Federal Center, Denver, Colo., by referring to title and number of item.

BID CALLS EXPECTED IN FEBRUARY

GATES, SEATS, GUIDES, Helena Valley Pumping Plant (2-2)—Missouri River Basin Project, Mont. Four 7'2"x4'8" bulkhead gates, seats and guides for turbine draft tube. Estimated weights, 5,875 lb. each. Delivery date October, 1957.

GOVERNORS, Fremont Canyon Powerplant (2-5)—Missouri River Basin Project, Wyo. Two oil pressure, cabinet-type actuator governors for regulating the speed of two 33,500 hp hydraulic turbines. Delivery date November, 1958.

MOBILE SPARE TRANSFORMERS (2-7)—Missouri River Basin Project, Mont. Three 5,000 kv, 110-69-34.5 kv mobile autotransformers complete with trailers. Delivery date April, 1958.

SUPERVISORY CONTROL EQUIPMENT, Glendo Powerplant and Guernsey Switch yard (2-8)—Missouri River Basin Project, Wyo. One duplex-type control board panel for Glendo powerplant (controlling station), one switchboard cubicle for Guernsey switchyard (controlled station). Delivery date September 1957.

MOTOR CONTROL EQUIPMENT, White Bluffs Pumping Plant No. 1 (2-10)—Columbia Basin Project, Wash. One indoor 2,500 volt, full voltage starting controller for four 600 hp synchronous motors. Delivery date February, 1958.

BID CALLS EXPECTED IN MARCH AND APRIL

JOIST (2-12)—Shoshone Project, Wyo. One 10-ton hoist for bulkhead gate. Estimated weight 95,000 lb. For Buffalo Bill Dam.

CONTROL SYSTEM (2-13)—Missouri River Basin Project, Mont. One hydraulic control system for two butterfly valves consisting of high pressure oil pump, pipe fittings and valves and necessary electrical controls enclosed in a metal cabinet. Estimated weight 5,000 lb. For Helena Valley pumping plant.

GATE (2-16)—Columbia Basin Project, Wash. One 15'x29' coaster gate for Grand Coulee Dam. Estimated weight 250,000 lb.

FRAMES (2-18)—Missouri River Basin Project, Wyo. One set each of frames with guides and anchorages for 14'x18' fixed wheel gate and for 14'x18' bulkhead gate at Fremont Canyon powerplant. Total estimated weight, 60,000 lb.

GENERATORS (2-20)—Missouri River Basin Project, Wyo. Two 25,263 kva, 0.95 power factor, 11,500 volt, 257 rpm, vertical shaft, hydraulic drive, indoor type, synchronous generators for Fremont Canyon powerplant.

TRANSFORMER (2-21)—Rogue River Basin Project, Ore. One 13,500/18,000 kva, OA/FA, 69-4.16 kv, three phase power transformer for Green Springs powerplant.

Dragerton, Utah, by American Bridge Division of U. S. Steel Corp. SC 2-13

COAL CLEANING PLANT— **Wellington, Utah**

(Estimated cost $5,000,000)

Construction will start soon by Allen-Garcia Co., Chicago, Ill., for the coal cleaning and blending plant to be located at Wellington, Carbon County, Utah, for Columbia-Geneva Division of the U. S. Steel Corp., L. B. Worthington, division president, San Francisco, Calif. The facility will be completed in mid-1958 and will have the capacity to wash 600 tons of coal hourly.

WHEN THE WORKING DRAWINGS HAVE BEEN APPROVED . . .

. . . you will want to start construction just as soon as possible.

First thing to do, of course, is to get *bids that are within the available funds,* and to get them from *responsible bidders.*

You owe it to yourself and to the taxpayer to hedge against the rising tide of prices by obtaining the lowest possible bid consistent with responsible workmanship.

WITHOUT QUESTION, the best and quickest way to accomplish this is to make sure that your advertisement for bids reaches *all* the contractors, subcontractors and suppliers who are qualified to bid on your project.

YOU CAN DO JUST THAT by placing your advertisements for bids in PACIFIC BUILDER & ENGINEER publications. They are the construction trade journals of the Northwest and reach more contractors, subcontractors and suppliers than any *twenty* newspaper-type publications.

THAT'S WHY more cities, counties, school districts, PUDs, state departments and federal bureaus—more architects and more consulting engineers—place their advertisements for bids in our columns than in any other publication in the region.

IF YOU WISH THE LOWEST *COMPETITIVE BIDS* CONSISTENT WITH RESPONSIBLE WORKMANSHIP we can get them for you, whether your job is located in the Willamette Valley or in the Blue Mountains . . . in Western Washington or the Inland Empire . . . in the Coeur d'Alenes or the Snake River Valley . . . in the Flathead or on the Yellowstone . . . in the Wasatch country or in Wyoming.

PACIFIC BUILDER & ENGINEER publications are the only true trade journals devoted to construction published in the six Northwest states. These publications penetrate deeply into every branch of the construction industry—carry more construction news than all daily and weekly newspapers in the six states combined—and as a consequence reach more contractors, subcontractors and suppliers than any *twenty* newspaper-type publications. They are also the only journals specializing in construction news that furnish their advertisers *audited* circulation reports.

YOU CAN HEDGE against the rising tide of construction costs by placing official advertisements for bids in the NORTHWEST'S construction trade journals—PACIFIC BUILDER & ENGINEER (1st Saturday of each month), PACIFIC ARCHITECT & BUILDER (3rd Saturday), and CONSTRUCTION NEWS BULLETIN (2d, 4th and 5th Saturdays). Rates, only 35c per line for the first insertion; 25c per line for subsequent insertions.

COPY RECEIVED WEDNESDAY MORNING REACHES OUR READERS SATURDAY.

PACIFIC BUILDER & ENGINEER, INC.
2418 Third Ave. Seattle, Wash.

Advertisements for Bids

Advertisements reaching us not later than Wednesday noon will appear the same week.

THE RATE for Advertisements for Bids is 35 cents per line for the first insertion; 25 cents per line for each insertion thereafter.

STATE HIGHWAY PROJECTS
BIDS CLOSE 10 A.M., FEBRUARY 19
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, February 19, 1957, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal funds have been allocated for items nos. 1 to 5 inclusive.

The improvements for which bids will be received follow:

1. Clearing, Draining, Grading and Constructing a Reinforced Concrete Box Girder Bridge on 4.200 miles of Primary State Highway No. 2 in King County, JUNCTION PSH No. 1 TO N.P. RAILWAY OVERCROSSING, FAP No. F-046-1(5), involving about 56 acres of Clearing, 968,590 cubic yards of Common Excavation, 476,790 units of Overhaul, 32,260 cubic yards of Excavation of Unsuitable Material, 21,110 tons of Selected Roadway Borrow, 400 tons of Crushed Stone Surfacing, 10,487 linear feet of Asphalt Lined Roadway Ditch and Spillway, 3,318 linear feet of Concrete Pipe, 1,540 linear feet of Corrugated Metal Pipe, 500 linear feet of Cast Iron Pipe, 1,168 cubic yards of Concrete, 285,240 pounds of Steel Reinforcing Bars and other items.
2. Constructing a Reinforced Concrete Box Girder Bridge on 0.052 mile of Primary State Highway No. 1 in Thurston County, MARTIN WAY OVERCROSSING, FAP No. I-001-2(47), involving about 200 cubic yards of Concrete, 41,100 pounds of Steel Reinforcing Bars, a lump sum bid for Reinforced Concrete Superstructure (about 680 cubic yards of Concrete and 207,000 pounds of Steel Reinforcing Bars) and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
3. Placing Top Soil on 29.952 miles of Primary State Highway No. 1 in Lewis and Thurston Counties, LACAMAS CREEK TO TUMWATER, FAP No. I-001-2(48), involving about 47,315 cubic yards of Top Soil. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
4. Clearing, Draining, Grading and Surfacing with Crushed Stone on 1.642 miles of a Lewis County Road, PE ELL-MCDONALD ROAD, FAS No. S-1280(1), involving about 52,710 cubic yards of Common Excavation, 33,600 tons of Crushed Stone Surfacing and Ballast, 714 linear feet of Concrete Pipe and other items.
5. Constructing Two Reinforced Concrete Flat Slab Bridges on 0.036 mile of Stevens County Roads, HALL BRIDGE AND BLUE CREEK BRIDGE, FAS Nos. S-1233 (1) and S-1235(1), involving about 270 cubic yards of Concrete, 59,800 pounds of Steel Reinforcing Bars, 1,279 linear feet of Concrete Piling and other items.
6. Stockpiling Crushed Stone Surfacing, Maintenance Rock and Mineral Aggregates on Secondary State Highway No. 3-H in Whitman and Spokane Counties, PINE CREEK AND WAVERLY JUNCTION VICINITIES, a State Project, involving about 41,600 tons of Crushed Materials and other items.
7. Draining, Grading and Surfacing with Crushed Stone Surfacing on 7.948 miles of Adams County Roads, BLOCK 87 FEEDER ROADS, a State Project, involving about 8 miles of Grading, 17,200 tons of Crushed Stone Surfacing, 782 linear feet of Corrugated Metal Pipe and other items.

E. C. HUNTLEY, Chairman
W. A. BUGGE, Director of Highways

DEEP DRAINS
BIDS CLOSE 10 A.M., MARCH 5
Ephrata, Washington
NOTICE TO CONTRACTORS

UNITED STATES DEPARTMENT OF THE INTERIOR, Bureau of Reclamation, February 1, 1957. Sealed bids, in single, (Specifications No. 117C-420) will be received at the office of the Project Manager, Bureau of Reclamation, Project Office Building, Division Avenue and C Street N.W., Ephrata, Washington, until 10:00 a.m., Pacific Standard Time, March 5, 1957, and then publicly opened for furnishing labor and materials and performing all work for construction of Deep Drains in Blocks 41, 42 and 43. This work will include 263,865 cu. yds. excavation; 4,800 cu. yds. backfill, part compacted or puddled; 145 cu. yds. rock lining; 135 cu. yds. gravel bedding; 950 cu. yds. gravel lining; 165 cu. yds. riprap; 190 cu. yds. coarse gravel protection; 80 cu. yds. sand and gravel or crushed rock bedding; 102 cu. yds. concrete; 153 barrels cement; 10,000 lbs. reinforcement bars; 7.5 M b.m. untreated and treated timber; 519 lin. ft. 24- to 48-inch concrete culvert pipe; 234 lin. ft. 18- to 48-inch asbestos bonded corrugated-metal pipe; and 1,146 lin. ft. 12- to 24-inch corrugated metal pipe. Time allowed for completion will be 60, 120 and 175 calendar days. For particulars address the Bureau of Reclamation, P. R. Nalder, Project Manager, P. O. Box 368, Ephrata, Washington.

5716—2-9

GRADING, DRAINING, SURFACING
BIDS CLOSE 11 A.M., FEBRUARY 21
Yakima, Washington
NOTICE TO CONTRACTORS

Notice is hereby given that sealed bids wil be received by the Board of County Commissioners at their office in the County courthouse at Yakima, Washington, at 11:00 A. M., February 21, 1957, for the letting of one contract involving the following work:

One Contract Only:

CRP No. 674, LCRP No. 675, LCRP No. 676 and CRP 686 for the grading, draining, ballasting and surfacing of approximately 10.6 miles of county roads southeast of Yakima, Washington, and the stockpiling of additional material with the following principle quantities: Unclassified Excavation 56,330 cubic yards; Structural Excavation 965 cubic yards; Finishing Roadway 557.7 (100 Ft.) Stas; Pit run Ballast in Place 5,190 cubic yards; Ballast in Place 61,620 Tons, Top Course in Place 14,460 Tons; Base Course in Place 17,480 Tons; Concrete culvert pipe in place 4,967 Lin. Ft. and stockpiling of 29,690 Tons of material.

A set of plans and specifications for each contract may be obtained from the County Road Engineers office in Yakima for $4.00 per contract.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check or cashiers check, payable to the County Treasurer in an amount equal to five percent (5%) of the amount bid.

The deposit will be forfeited to the county if the successful bidder fails to enter into a contract and furnish a satisfactory performance bond within ten (10) days from date of award.

The Board of County Commissioners expressly reserves the right to reject any and all bids or parts thereof.

HAROLD PURDIN,
County Auditor.
By Lois Mathus,
Deputy County Auditor.

DRAINS
BIDS CLOSE 10 A. M., P.S.T., FEBRUARY 19
Ephrata, Washington
NOTICE TO CONTRACTORS

United States Department of the Interior, Bureau of Reclamation, January 17, 1957. Sealed bids, in single, (Specifications No. 117C-418) will be received at the office of the Project Manager, Bureau of Reclamation, Project Office Building, Division Avenue and "C" Street N.W., Ephrata, Washington, until 10:00 a. m., Pacific Standard Time, February 19, 1957, and then publicly opened for furnishing labor and materials and performing all work for construction of DW33, DW38, and DW38A Drains, West Canal

Drains—Block 72. This work will include 234,200 cu. yds. excavation; 3,800 cu. yds. excavation and backfill of drain pipe trenches; 3,800 cu. yds. backfill about structures; 1,100 cu. yds. compacting backfill about structures; 1,600 cu. yds. puddling backfill about structures; 500 cu. yds. graded gravel; 100 cu. yds. coarse gravel protection; 4 cu. yds. concrete; 6 barrels cement; 300 lbs. reinforcement bars; 4,054 lin. ft. 8-, 10-, 12-, 15-, and 24-inch diameter drain pipe; 24 lin. ft. 10-inch diameter irrigation pipe; 500 lin. ft. 24-inch diameter standard-strength reinforced-concrete culvert pipe; 506 lin. ft. 12-, 15-, and 18-inch diameter, No. 16 gage corrugated-metal pipe; 318 lin. ft. 18- and 24-inch diameter, No. 16 gage, and 30-inch diameter No. 14 gage, asbestos-bonded corrugated-metal pipe; 24 lin. ft. salvaging and relaying 18-inch diameter corrugated-metal pipe; 5, 42-inch manholes; and 10 M.b.m. timber cradles. Time allowed for completion will be 130 calendar days. For particulars address the Bureau of Reclamation, P. R. Nalder, Project Manager, Box 368, Ephrata, Washington.
5713 1-26

OUTDOOR TRANSFORMER
BIDS CLOSE FEBRUARY 26
Denver, Colorado
NOTICE TO CONTRACTORS

DEPARTMENT OF THE INTERIOR, Bureau of Reclamation. Sealed bids (Invitation No. DS-4835) will be received at Denver, Colorado, until February 26, 1957, for furnishing one 5,000-kva, 110- to 34.5-kv, 3-phase, class OA, outdoor, power transformer, having tap-changing-under-load equipment and tank-mounted arresters for Watford City Substation, Missouri River Basin Project, North Dakota. Delivery is desired within 270 days. For particulars, address Bureau of Reclamation, Building 53, Denver Federal Center, Denver 2, Colorado. W. A. Dexheimer, Commissioner.
5710—1-19

CONCRETE DAM, ACCESS ROAD
BIDS CLOSE FEBRUARY 28
Thermopolis, Wyoming
NOTICE TO CINTRACTORS

DEPARTMENT OF THE INTERIOR, Bureau of Reclamation. Sealed bids (Specifications No. DC-4831) will be received at Thermopolis, Wyoming, until February 28, 1957, for furnishing labor and materials for Anchor Dam (concrete) and Access Road, Missouri River Basin Project, Wyoming. Location 35 miles west of Thermopolis, Wyoming. Principal items are 64,000 cu. yds. excavation for dam foundation; 63,000 cu. yds. concrete in dam; 60,000 bbls furnishing and handling cement; 78,000 cu. yds. excavation for roadway; and other work. Completion time 900 days. For particulars, address Bureau of Reclamation, P. O. Box 271, Thermopolis, Wyoming; or Building 53, Denver Federal Center, Denver 2, Colorado. W. A. Dexheimer, Commissioner.
5698—12-29

ELEMENTARY SCHOOL ADDITION
BIDS CLOSE 8 P.M., MARCH 5
Seattle, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by HIGHLINE PUBLIC SCHOOLS, DISTRICT NO. 401, at 253 South 152nd Street, Seattle 88, Washington, until 8:00 p.m., March 5, 1957, for the General, Mechanical and Electrical work for the construction of AN ADDITION TO THE SALMON CREEK ELEMENTARY SCHOOL, located at 614 S.W. 120th, Seattle, Washington, and will then and there be publicly opened and read aloud. Proposals on the work will be taken separately for General Construction, Mechanical Work and Electrical Work.

Bids received after the time fixed for opening cannot be considered. Bidders and others properly interested are invited to be present at the Bid opening.

Specifications, including bid and contract documents, and drawings, may be examined at the office of the architect, STEINHART, THERIAULT & ANDERSON, 1264 Eastlake, Seattle, Washington, SEATTLE CONSTRUCTION COUNCIL, 215 West Harrison Street, Seattle, Washington, and at PLAN BUREAU, 2413 Western Avenue, Seattle, Washington, and may be obtained at the Architect's office upon deposit of $25.00 for each set of General and $15.00 each for Mechanical and Electrical.

The full amount of deposit for one set of documents will be refunded to actual bidders upon return of the documents, unmutilated and without marks or annotations, at or before the time set for opening bids. Other deposits will be refunded with deductions for the actual cost of reproducing the documents under the same conditions. If plans and specifications, unmutilated and without marks and notations, are not returned within 10 days after the date of the bid opening, the amount deposited to obtain plans and specifications will be forfeited.

Each bid must be accompanied by a certified check, cashier's check or bid bond, with bonding company licensed to do business at the locality of the project as surety, in an amount not less than 5 per cent of the Base Bid.

No bidder may withdraw his bid after the time set for the opening thereof, unless the award of contract is delayed for a period exceeding 30 days. Highline Public Schools reserves the right to reject any or all bids and to waive informalities and irregularities.

By Order of THE SCHOOL BOARD.
HIGHLINE PUBLIC SCHOOL DISTRICT NO. 401
Carl O. Laudenbach
Assistant Superintendent
5720—2-14, 21, 28

SHOP BUILDING
BIDS CLOSE 4 P.M., FEBRUARY 21
Mercer Island, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Clerk of the School Board, School District No. 400, Mercer Island, King County, Wash., at the office of the School Superintendent at Mercer Crest School, 86th S.E. and S.E. 42nd, Mercer Island, Wash., until 4:00 p.m., February 21, 1957, for the construction of the Mercer Island High School Shop Building, and will then be opened there and publicly read aloud. Bids received after the time set for opening cannot be considered.

Separate bids should be submitted for General, Mechanical, and Electrical Work respectively. In addition each General Contractor is requested to submit a second bid covering General, Mechanical and Electrical Work in a single contract.

Plans and specifications and form of contract documents may be examined at the offices of the Architects, Bassetti & Morse, 1602 Tower Bldg., Seattle, at the office of the Associated General Contractors of America, 215 West Harrison Street, and at the Plan Bureau, 2413 Western Avenue, Seattle. Bona fide bidders may obtain one set of plans, specifications and documents upon deposit of a check payable to Bassetti & Morse in the amount of $25.00 each for General, Mechanical, and Electrical Work. Additional sets of plans may be obtained upon payment of the actual cost of blueprinting.

The deposit will be refunded to actual bidders upon return of the documents in good condition within ten (10) days after the time set for the opening of bids.

Each bid must be accompanied by a certified check, cashier's check, or bid bond with a State-licensed surety or sureties in an amount of not less than five per cent (5%) of the largest bid, payable to Mercer School District No. 400.

The right is reserved to accept or any or all bids and to waive all claim

No bidder may withdraw his bid af time set for the opening thereof, unl award of contract is delayed for a exceeding thirty (30) days.

By order of Mercer Island School No. 400, Mercer Island, King County, ington.

Signed: ROBERT S. STUDEBAKER
Clerk of School Dis

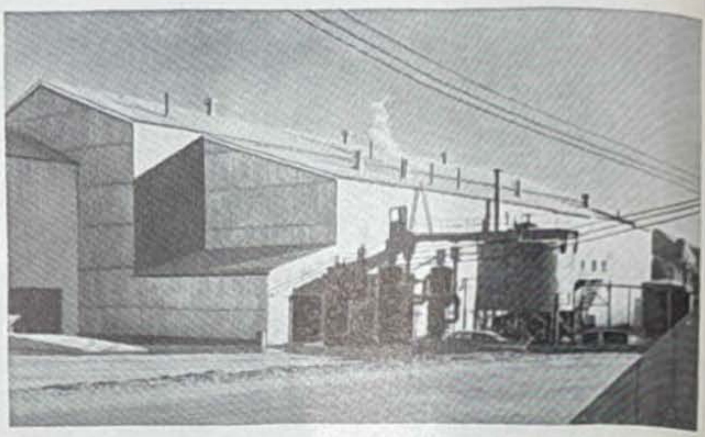
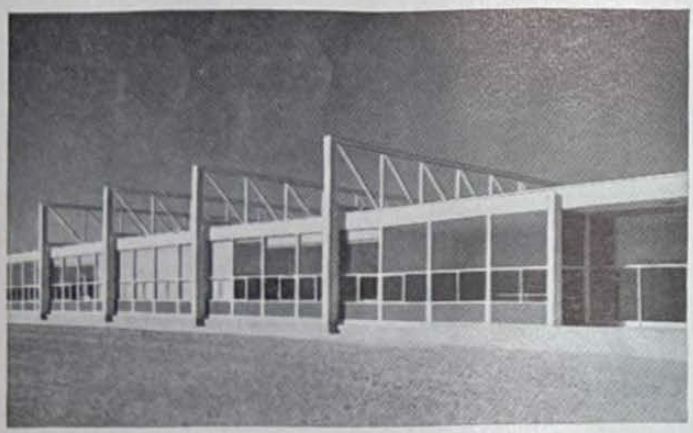
WITH CONSTRUCTION NEWS BULLETIN

100 YEARS, FRANK LLOYD WRIGHT AND US
—A candid report by Philip Johnson

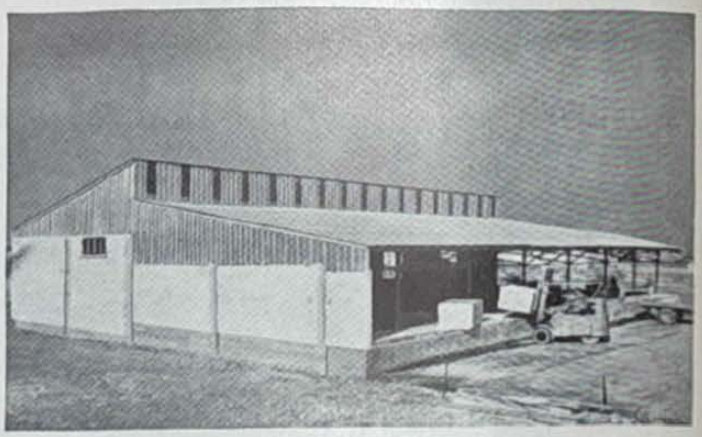


Design: church, experimental house, dental clinic

MARCH 1957



They're building with steel because it's permanent, economical, easy-to-maintain and fire-safe



FIRE PROTECTION was the number one reason this Oregon grain storage mill was built with steel. The owner lost his first mill to fire, so vowing it would never happen again, he specified USS Corrugated Roofing and Siding Sheets and USS Floor Plate for his new building. This also lowered his insurance costs.

NO COSTLY MAINTENANCE PROBLEM HERE: This new Uranium Mill on the Colorado Plateau is frequently attacked by sand and snow storms. For maximum protection and minimum maintenance, steel roofing and siding was the obvious answer for these buildings. Steel framework leaves interiors open and flexible.

MANY COST-SAVING POSSIBILITIES result from the use of steel framing and wall panels. Curtain walls, for example, are faster to erect and provide more usable floor space. Steel framing eliminates bearing walls and reduces amount of framing. The school pictured above features an all-welded frame which helped make it Utah's least expensive (per square foot) school.

THE STABILITY of rigid frame construction provides a greater capacity to withstand winds, snow, cranes and "bumps" from materials handling equipment. Steel spans also mean more clear working space. This is just what Hansen Lime & Stucco wanted for their new Salt Lake City warehouse and shipping shed . . . so they specified steel framing, and USS StormSeal roofing and siding.

For offices, plants, freight-handling, restaurants, theaters, churches, schools . . .

Give your buildings the advantage of steel

TRUE FACTS*
about
PUMICE
(expanded by nature)
BLOCKS
(properly manufactured and cured)

ONLY PUMICE BLOCKS can offer the following outstanding qualities—and at the same time: conform to ASTM standards of load bearing blocks (C-90); possess lasting BEAUTY; offer the other desirable qualities of lightweight blocks.

#1 LIGHTWEIGHT
ONLY PUMICE BLOCKS weigh as little as 20 to 22 lbs. for a standard 8"x8"x16".

#2 INSULATION
ONLY PUMICE BLOCKS have a "U" Factor of under .25 for a standard 8"x8"x16".

#3 FIRE-RETARDENT
ONLY PUMICE BLOCKS satisfy UNDERWRITERS LABORATORIES, INC., specifications for a 4-hour fire wall with a standard 8"x8"x16".

* *Supported by certified laboratory tests and research data. Copies gladly sent upon request.*

not specified

frank about philip & vice versa

You may wholeheartedly agree or violently disagree with what Philip Johnson has to say in "One Hundred Years, Frank Lloyd Wright and Us" but in any event we consider it "must reading." In fairness to all concerned, we would like to point out here, as we have done on page 13, that the article is based on a tape-recorded extemporaneous talk which consequently did not read very well. We have attempted to edit honestly those portions of the speech which we have included in this issue; we will also admit that Johnson's references to several other personalities were omitted because they serve no useful purpose in our presentation.

way the ball bounces

Speculation of the Brooklyn Dodgers leaving Flatbush (heaven forbid!) for Los Angeles has stirred interest among sports fans not only in southern California but up the entire coast. To the building industry, of course, it would mean a substantial construction project.

Mayor Norris Poulson after a visit with Dodger president Walter O'Malley said that the city could supply the team with a "brand new stadium" seating about 60,000 "one year from the day we get the okay for a move to the coast." Poulson's group presented the Dodgers with a plan to clear Chavez Ravine a mile from downtown Los Angeles, at a cost of about $1½ million and then construct a stadium for about $7½ million.

in the mood

The overall tone of AIA centennial celebrations up and down the coast has ranged from downright solemnity to fun and frolic. At Portland's Columbia Edgewater Country Club, for example, toastmaster Sidney W. Little, dean of the School of Architecture and Allied Arts, University of Oregon, set the stage for an evening of relaxation. Following suit, speaker Nathaniel O. Owings exchanged his more sedate tie for city commissioner William A. Bowes' red cravat. The architect admired Bowes' courage at a time when Portland is being investigated by Congress; Owings' home port, San Francisco, is next so he figured he needed the tie.

public taste

In relating her travels to other parts of the country, colleague Elisabeth Thompson commented about cab drivers and their reactions to architecture. An experience we had during Seattle's recent "winter" would seem to indicate that West Coast drivers may show a more esthetic appreciation. Upon passing one of the city's finest apartment buildings, the Skyline House (PA&B for November 1956), the cabby remarked, "That's sure a fancy building and I sure like it."

alaskan (w)omen

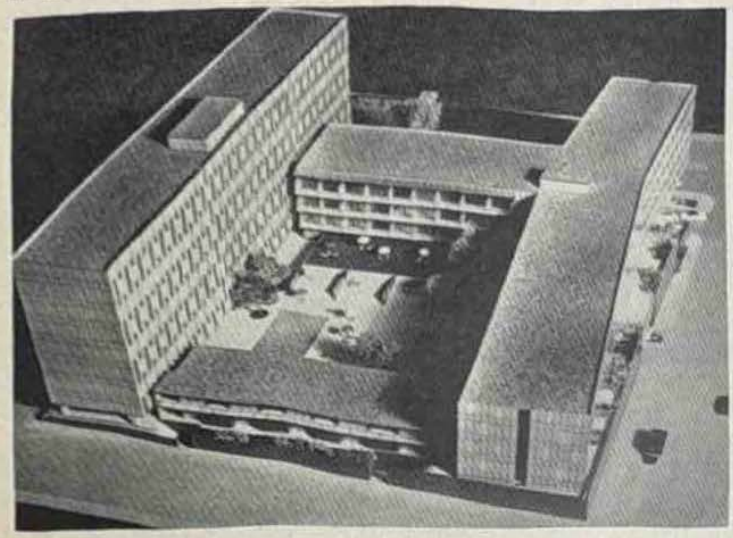
We have no desire to get entangled in the battle of the sexes regarding the practice of architecture but we do think it worthy of note that Joyce Smith Stevens is the first and only feminine registered architect in the Territory of Alaska. She has a brand new certificate of registration to display in her office where she is employed as an associate of Fairbanks architect M. R. McEntire.

Mrs. Stevens, who is also registered in Washington, received her BA from the state university there in 1954. She has lived in the territory since about 1931. Eight-year-old daughter Robin shares her mother's interest in design, especially now that she's helping to plan a home for themselves.

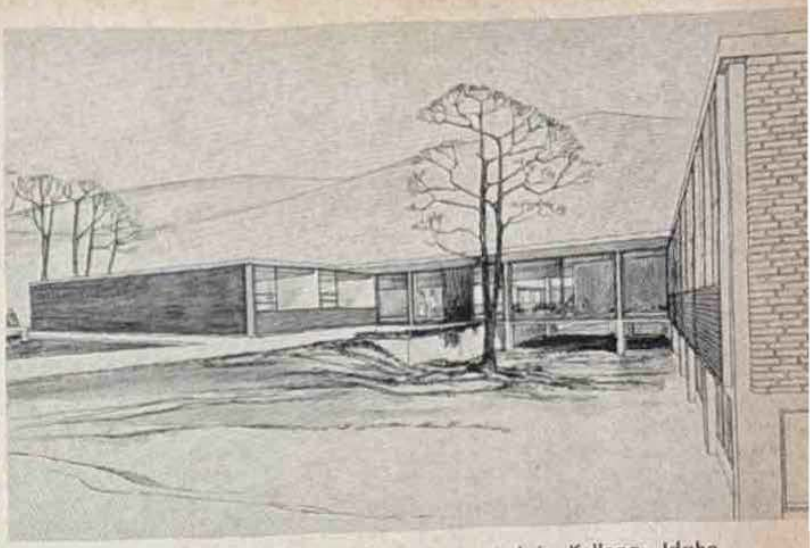
a stamp by any other name

By now most of us have had a chance to see—and use—the AIA centennial stamp issued in a shocking purple. For the uninformed we would like to explain that its design, so the post office says, is "composed of a modern mushroom type head and shaft superimposed on a Corinthian style capital, symbolizing the progress made in architecture during the last century." In other words, it is not a bird bath, a jazzed-up anvil or a shoe shine rest as some of our acquaintances have suggested!

curt comment



Richard J. Neutra upon receiving an honorary membership in the Industrial Designers' Institute in Los Angeles last month had a few things to say to its members. He told the designer to look within himself in his work and not let outside pressures distort what he knows to be right, pointing out that "God didn't consult the consumer when he created the world."

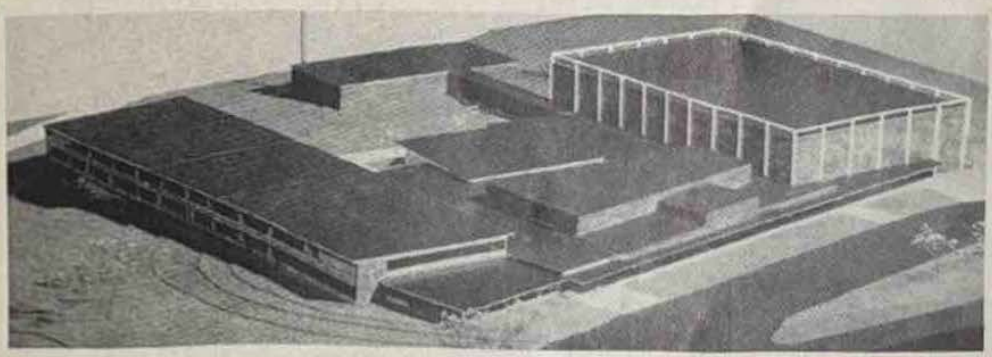


The architect showed slides of an ancient Indian village high in the mountains of South America which he compared with a scene of metropolitan Los Angeles. The former, he said, was well designed and took into consideration the nerves and organic makeup of the people who lived there; the latter, "Lousy."

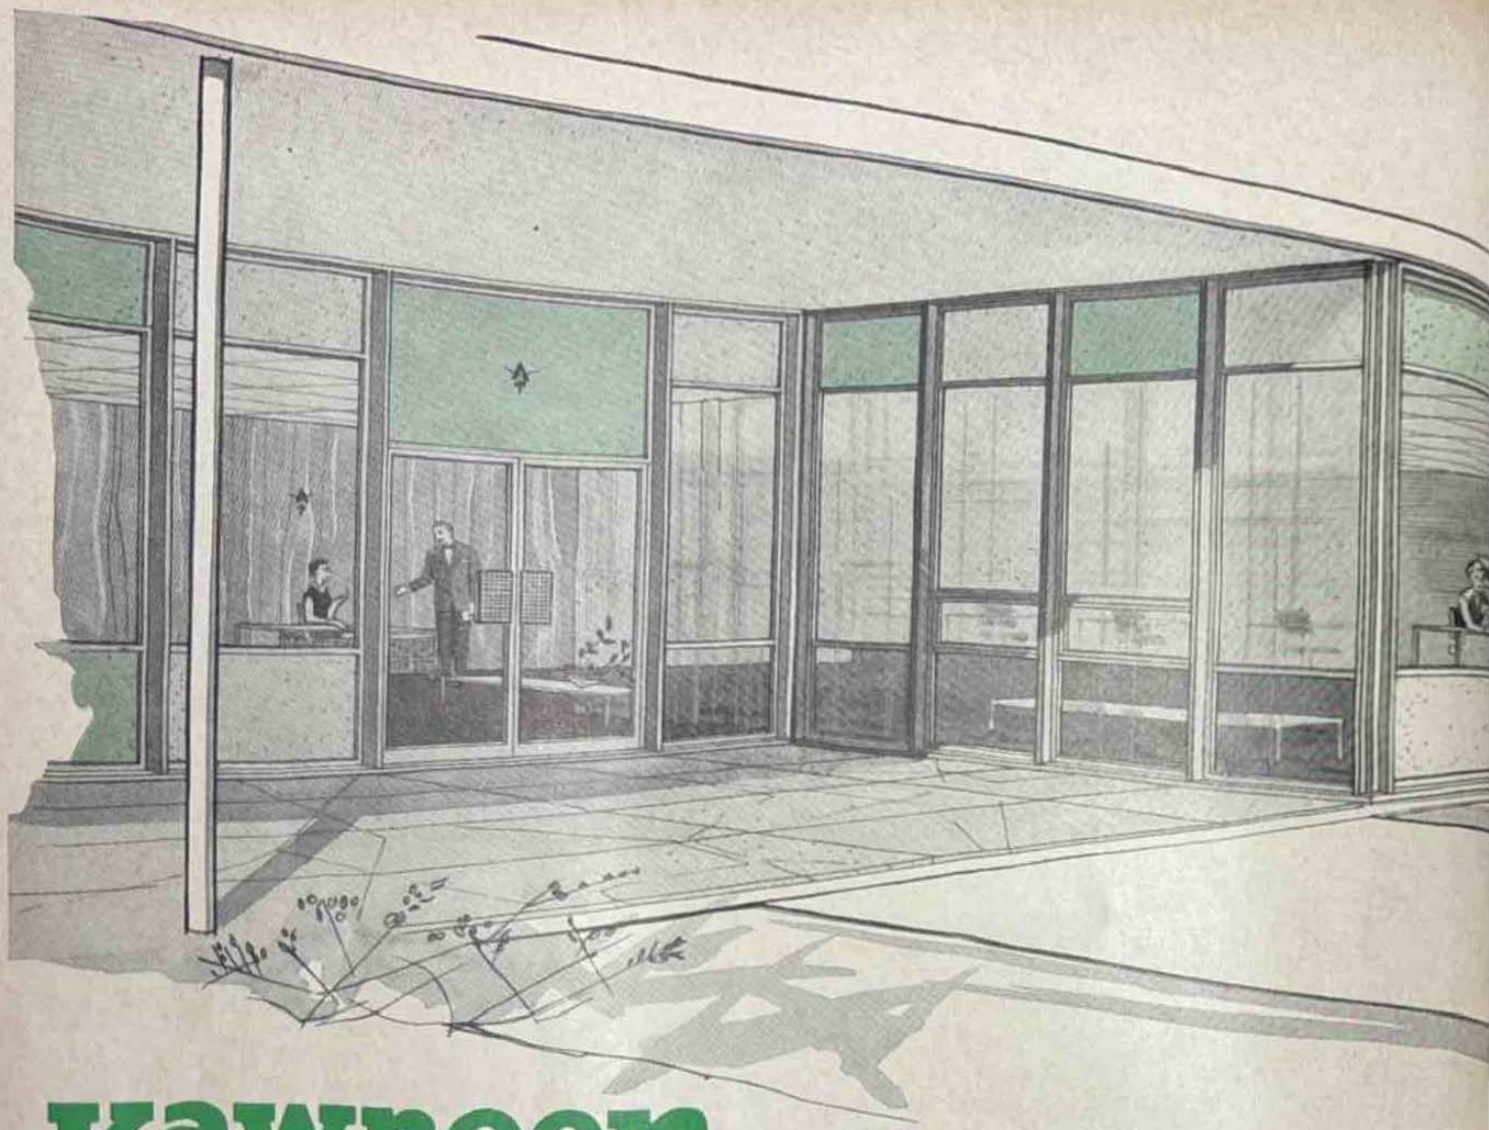
R.E.K.

PROJECT PREVIEW

MODEL OF $10 MILLION PROJECT scheduled to get underway this summer in downtown San Francisco. Development will include six-story, 400-room garden type hotel centered around heated pool and nine-story office building with 600-car garage. Architects: Thomas Price and Hertzka & Knowles.

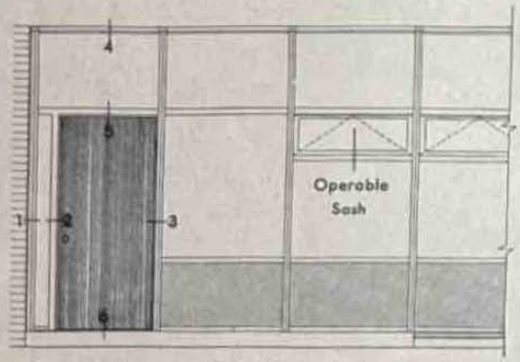


GENERAL HOSPITAL BUILDING to be constructed in Kellogg, Idaho, will be one-story, 60-bed structure, with partial daylight basement for kitchen, laundry, etc. Nursing and administration-outpatient wings will be connected by two links enclosing central court, walls on three sides of which will be glass. Exterior will have brick veneer panels. Architects: Skidmore, Owings & Merrill.



MUNICIPAL BUILDING for Beaverton, Ore., estimated to cost $250,000, will house fire station, library, police department, city offices and council chambers. Of reinforced concrete and window wall construction, three wings will be connected by covered promenade. Architect: James C. Gardiner, AIA.

HIGH SCHOOL PLANT shown in model will be built in Columbia Falls, Mont., where voters approved bond issue of $1,490,000 for constructing and equipping school. Main entrance will serve classroom wing at left and little theater and cafeteria in center; entrance to gymnasium will be on other end. Boiler plant and industrial arts will be housed in background where stack can be seen. Architects: Weed & Fehlberg.



MAXIMUM SECURITY UNIT at Wayside Honor Rancho, Castaic, Calif., is being enlarged by Los Angeles County Sheriff's Department with one-story infirmary-visitation wing and two-story dormitory wings of tilt-up construction. New acoustical ceiling treatment will be provided not only for dining hall and kitchen but for the main corridors to lower noise level from steel plate doors, steel bar gates and reverberating concrete walls. Architects: Albert C. Martin & Associates.

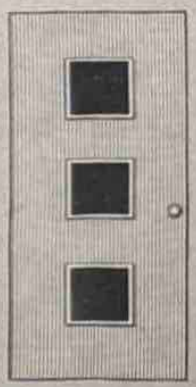
Kawneer unit wall

FEATURES MODULAR COMPONENTS...

Modular components are a creative building tool for the architect.

Typical Kawneer Unit Wall Application

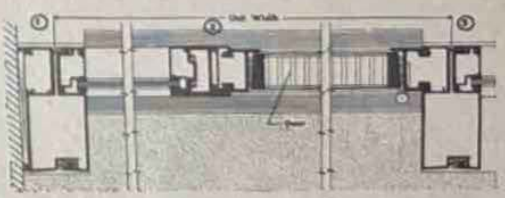
Versatility is built into this standardized exterior wall system by Kawneer. Wall modules are available in a range of heights and widths . . . fixed or operating sash can be provided . . . insulated panels can be finished in a choice of colored porcelain enamel or natural aluminum . . . a complete variety of flush or glazed doors are available and in a range of sizes. Whatever your needs, you'll find this flexible new wall system a truly creative and effective building tool.



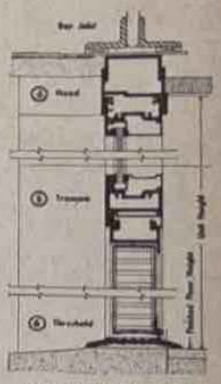
Kawneer welded doors . . . a "custom" touch at standard prices

The contemporary appearance of unit wall calls for a door that will enhance these installations without requiring an excessive investment in custom design and construction. The new Kawneer Welded Door meets these demands since it is produced under rigid production standards and held for "off-the-shelf" delivery. Its slim-line styling plus four interchangeable, stock push-pull hardware styles give it the "custom-tailored" look at standard door prices.

Triple-strength flush doors feature honeycomb core



Kawneer's flush doors can add a high degree of distinction to your unit wall applications. Standard door surface is a subtle ribbed aluminum . . . special surfaces in colored vinyl plastic can be provided. Exceptional strength of honeycomb core construction make it ideal for use in heavy traffic areas.



USES STANDARD KAWNEER DOOR UNITS

Modular standardized design assures economy and consistent high quality.

Standardization of all unit wall components provides high quality wall panels produced by the most modern assembly line production methods. These methods allow Kawneer to "build-in" the finest weathering features . . . features that give exceptional water resistance to Kawneer Unit Wall and practically eliminate air infiltration. The economies of mass production tooling, purchasing and assembly are also passed on to you . . . savings you can't afford to pass up. These modern methods are a guarantee that you will receive the product you specified . . . a product *consistent* in design, quality and workmanship.

The Building Month: Trends/Views

SPEAKERS AT THE LEGISLATIVE CONFERENCE OF SCHOOL ARCHITECTS held in Los Angeles February 9 told their listeners what they've known all along—they just aren't getting through to the public. Parents, school boards and legislators must have the simple facts—in a manner they can understand—as to the architect's vital role in providing efficient and economical schools, Donald Doyle, chairman of the assembly education committee, warned his audience of nearly 100. The day preceding the conference a wire service carried a story in which a legislator charged that the State of California is serving as "Santa Claus to provide architects with a grab bag of fat undeserved fees." Assemblyman Samuel R. Geddes charged, "California builds more schools than any other state and pays architects more than most other states. Their fees should be put on a sliding scale with the maximum fee not more than 6%."

THE CHURCH ARCHITECTURAL GUILD OF AMERICA, which in the past has often snubbed the unconventional in its annual design competition, this year has given top honors to a contemporary structure seating 300 or less persons. The only first award made in 1957 has gone to the Seattle architectural firm of Durham, Anderson & Freed for St. Elizabeth's Church in suburban Burien. The architects also won an honorable mention for combining existing and new buildings in St. James' Presbyterian Church, Bellingham, Wash. (Photos of these churches and other West Coast winners will appear in PA&B for April.)

SPEAKING OF "ARCHITECTURAL PRACTICE IN THE NEW CENTURY," Nathaniel A. Owings, FAIA, of San Francisco told Portland area architects that up to 1930 buildings were put side by side like building blocks but now "land is the thing. No building is anything unless it has a background of earth. . . . People either go to the country or you bring the country to them." He said that up to 1930 100% of the site was used for the building; now he recommends it should be not over 25 to 30%. In his address before the Oregon Chapter, AIA, at its 46th annual banquet March 5 he also asked the architects to seek out and use the artist and the sculptor in order to bring about a synthesis of art, nature and technology.

A BOARD OF ADVISORS HAS TAKEN OFFICE to keep San Francisco's building regulations adjusted to changing methods of construction. The group of five members will serve on a volunteer basis without salary and will scrutinize new materials and structural techniques. Members are William S. Meaney, architect; Norman G. Robinson, builder; John J. Gould, structural engineer; Dudley Deane, mechanical engineer; and Lyle Patton, electrical engineer. At its first meeting the board heard testimony favoring a type of metal fireplace now taboo.

IN ITS BOLDEST MARKET DEVELOPMENT SINCE IT LAUNCHED the age of metal-clad skyscrapers, Aluminum Company of America plans to greatly speed changes in home building. Alcoa's aim: better houses with much lower maintenance. The five-point program will include the promoting of about 50 model homes during 1957, designed by Charles M. Goodman, AIA, of Washington, D.C., and to be constructed by independent builders throughout the nation.

ANOTHER INDICATION OF GROWING COOPERATION between architects and home builders was apparent in Seattle last month when the NAHB held its third annual regional conference (more details across page). The builders invited five AIA architects to appear on the four-day program, each participating in a different seminar: "Build One to Twenty—There's Money in small Volume"; "Remodeling Horizons"; "Cost Analysis, Design, New Methods and New Products"; "Government Financing and Aids to Builders for Modernizing and Remodeling Buildings in Older Sections of Our Cities"; "Economic and Government Barriers to Successful Residential Development."

Northern California cites seven projects for design

Presentation of Honor Awards in seven categories was made to northern California architects at a public dinner March 9 at the Sheraton Palace Hotel in San Francisco. Winners in the competition, sponsored by five AIA chapters — Northern California, East Bay, Central Valley, Coast Valleys and Monterey Bay — follow:

- Commercial and industrial buildings: Boardwalk Shopping Center, Belvedere; John Lord King, architect.
- Apartments, hotels and motels: Studio Apartments, Sausalito; Campbell & Wong, architects.
- Site use: Mark Thomas Inn, Monterey; John Carl Warnecke, architect.
- Small house: Lawrence Livingston Jr. residence, Sausalito; John Carl Warnecke, architect.
- Large house: Mason B. Wells residence, Belvedere; Edward Page, architect.
- Public buildings and institutions: Sonoma Elementary School, Sonoma; Mario Ciampi, architect.
- Religious buildings: Chapel of the Holy Cross, Sedona, Ariz.; Anshen & Allen.

Housing secretary in cabinet advocated at NAHB sessions

"A secretary of housing and urban affairs, with full cabinet status, is necessary to the future of the home building industry, which has too often lacked support on representation at that level."

Thomas P. Coogan, past president of NAHB, in keynoting that organization's regional conference in Seattle February 14-17, also declared, "The FHA should be strengthened and its name changed to Federal Mortgage Insurance Corp., which is more in keeping with the actual function of the agency."

Among other recommendations he made to more than 350 builders from Washington, Oregon, Idaho, Montana, British Columbia and Alaska was the charging of a mortgage insurance premium which would bear a more realistic relationship to actual risks involved and should be paid as a single premium added to the mortgage rather than the flat one-half of 1% fee as at present.

Two Los Angeles architects get top AIA state, regional posts

New president of the California Council of the AIA (formerly known as California Council of Architects) is William Glenn Balch of Los Angeles.

Ulysses Floyd Rible, also of Los Angeles, has been nominated as director of the California-Nevada-Hawaii Regional Council, AIA, to succeed Donald Beach Kirby of San Francisco.

IN PORTLAND: Native red cedar home wins first prize for builder Jack C. Nunn in nationwide competition. Among electrical features in project, designed by Walter Gordon, is sunshine room which offers balanced quantities of infrared and ultraviolet radiation and pull-down unit for concentrated sunbathing.

Northwest 'electric' houses honored

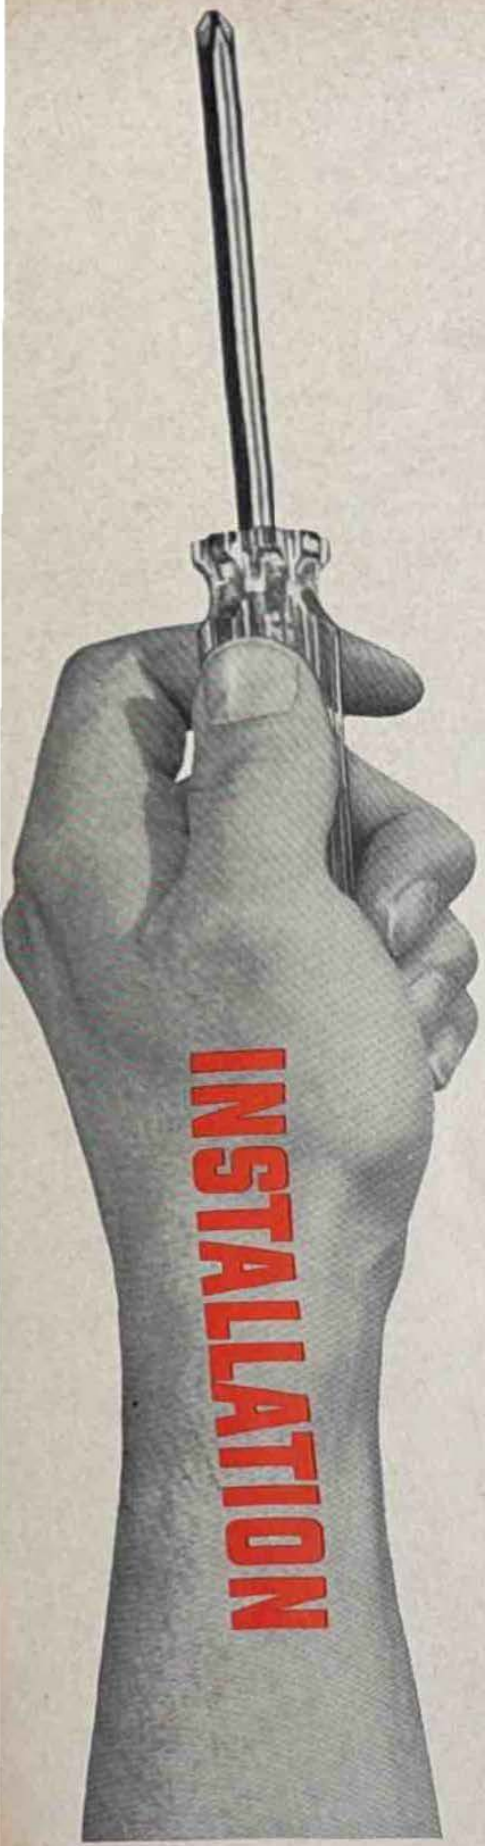
Two West Coast houses have been cited in the Electri-Living program in which Living for Young Homemakers and local utilities co-sponsored 23 projects in every region of the country.

Builder Jack C. Nunn and Portland General Electric Co. took top honors with a Portland house planned by Walter Gordon, AIA; and Paul Hayden Kirk, AIA, received a special Editor's Award for his Seattle design, built by Richard Robinson and co-sponsored by Puget Sound Power & Light Co.

Builders were judged both on their construction skill and on their ability to keep the cost of the home within the young homemaker price range. The Portland project was commended for its heating system which combines radiant heating with a heat pump for auxiliary winter heating and complete summer cooling.

The house, although not large — 1,700 sq. ft.—has a generous feeling, with space flowing from one area to another in the living, family and kitchen sections. A sound baffle in the corridor separates quiet areas from the active ones. The kitchen is the heart of the house, allowing for supervision of children whether they should be in the family room or in the yard.

Kirk's design particularly impressed the jurors with its family planning. The three-bedroom house is divided into two almost independent apartments, one for children and the other for adults. The children's wing includes a large recreation room which opens onto an enclosed play area. The master bedroom adjoins a formal living room and a walled patio. Separating the two areas are the family room, kitchen and dining room.



Some elements of the design are Japanese inspired. Glass paneled walls face gardens which are walled beyond with baffles of obscure glass. The structural interest of the home is heightened by enormous bricked fireplaces and flagstoned paved floors even indoors.

IN SEATTLE: Brick garden wall surrounds one wing of house which brings special design citation for Paul Hayden Kirk.

ENGINEERING
MANUFACTURING

Soulé one-company window service

With exclusive Soulé window service, you deal with one responsible source for your complete window job. Only Soulé offers all three of these important services: • free engineering service to help you with window size and shape problems • windows to your exact dimensions, with no limit to stock sizes • and fast installation of windows by skilled Soulé crews. The result: the windows you want, manufactured, installed on time and backed by Soulé—the West's largest manufacturer of steel and aluminum windows.

Building permit volume heads downward

FOR THE SECOND STRAIGHT MONTH building permit volume in the five western states has dropped substantially below a year ago. Reflecting the shaky home building situation, the total for February, $164,919,863, was the lowest since December 1955 and 11% below February 1956.

As in January, a big decrease in California, $21 million, pulled the overall total down, but there were heavy decreases in other states as well. Percentagewise, California was down 14%; Oregon, 30%; and Idaho, 52%. Washington, showing an upturn after nearly a year's slump, was up 22% and Montana, 114%.

Heavy decreases in unincorporated areas (where tract housing had been keeping the permit volume high) were responsible for the lower California total. Los Angeles County was down $2 million; San Bernardino County, $7¾ million; Orange County, $12½ million; Contra Costa County, $1¼ million. Those agencies reporting good increases were Seattle, up $2½ million; Spokane, $1½ million; Great Falls, $1¼ million; San Diego County, $1¼ million.

The February total is 8% below January's volume. Only two states, Washington and Montana again, showed increases over the previous month.

For the first two months of 1957, the building permit volume stands at $344,606,699, a 10% drop from the same period last year. However, the decrease is confined to California ($282,631,035), which is running 13% behind 1956. Oregon ($18,131,121) is up 0.8%; Washington ($38,615,331), up 12%; Montana ($3,131,465), up 71%; and Idaho ($2,097,747), up 16%.

Following is a breakdown of building permits issued by several major agencies during February for both new structures and remodeling:

	DWELLING UNITS	COMMERCIAL & INDUSTRIAL	PUBLIC
Portland	30 ($ 577,100)	18 ($ 497,915)	
King County	250 (2,834,376)	29 (248,562)	3 ($1,690,000)
Seattle	380 (1,986,960)	151 (4,324,505)	2 (460,000)
Tacoma	83 (354,515)	34 (320,165)	
Orange County	222 (2,741,917)	49 (1,336,455)	4 (301,000)
Sacramento Co.	308 (2,483,346)	74 (1,462,530)	9 (403,265)
Los Angeles Co.	2240 (18,495,483)	415 (4,761,937)	20 (863,250)

The message delivered by the collaborating architect with Mies van der Rohe of Manhattan's Seagram Building before the Washington State Chapter, AIA, in Seattle is probably as provocative as any heard at centennial celebrations across the land. The views expressed in this digest of the tape-recorded extemporaneous talk are not necessarily those held by Pacific Architect and Builder

100 YEARS, FRANK LLOYD WRIGHT AND US

by PHILIP C. JOHNSON, AIA

YOU HAVE to come to Seattle to get away from the hidebound East Coast to get the wholesome air which is the essence of any new century in architecture. In general I can say that I have never been in a city where the level is so high and so fresh.

I spent the day before in San Francisco, which is a somewhat larger and much older city and has had a long history—what with Maybeck and all—of great architecture. But in relation to what is being done now, in the last three years, at least, this is better.

You are newer; you aren't tied down by the traditions of San Francisco, which seems to be rather stuck with ordinary windows and ordinary walls. You do share the wood tradition, the great Maybeck tradition of using large enough wood so you can see it, unlike the easterners who seem to prefer to use ¾-in. thick boards or plywood. You do have that in common with California but I think you use it fresher and I think you mix it more with the strains that come from other parts of the world without fear for the future. But tonight I am not going to talk about the future.

* * *

I am very interested in Frank Lloyd Wright and would like to say a few things which have been on my mind for quite some time. I've known Mr. Wright for a number of years, I know he is still alive and I thought therefore that this in a sense is the right time to speak out because, were he dead, that old maxim of "nothing about the dead but the good" would tie my mouth—and I don't want to wait until that time and have to make only pleasant statements.

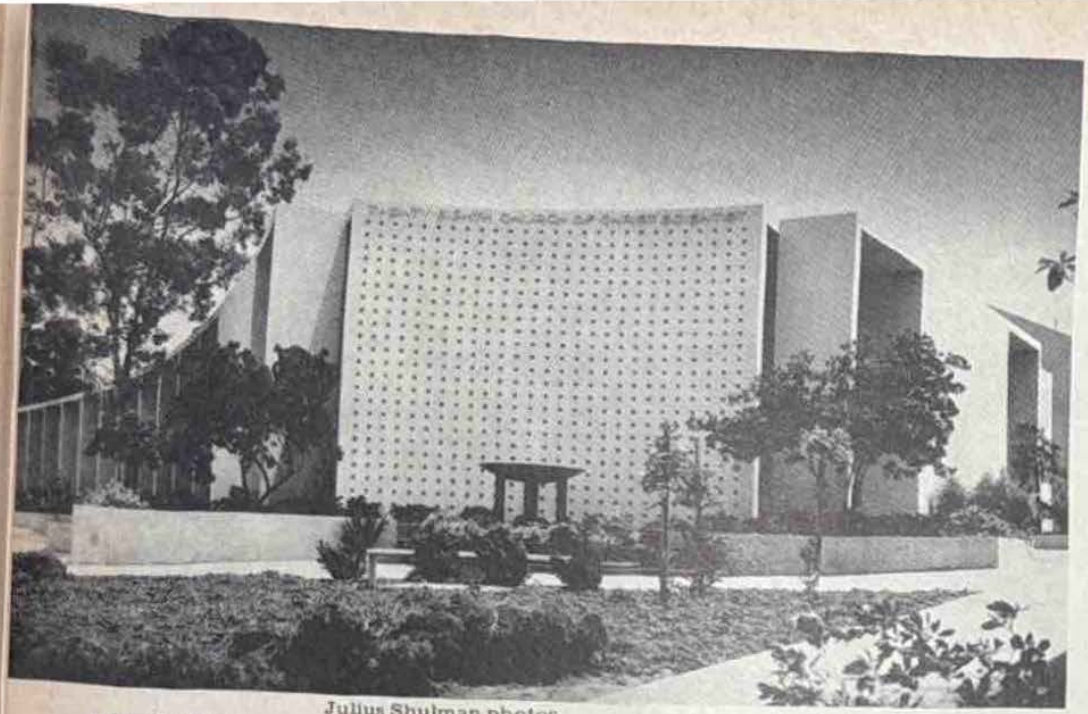
Mr. Wright has been annoying me for some time. (I didn't say that he wasn't a great architect.) He says that my house, especially the glass house that you may have seen pictures of, is not a house at all—it's not a shelter, it doesn't have any eaves, it's cold and it doesn't give you a feeling of comfort; it's a box. He once said (he's much cleverer, of course, than all the rest of us so you can't say these things as well as he does) that my house is a monkey cage for a monkey. Then he came to my house the other day, strode in and said, "Philip, should I take off my hat or leave it on? Am I indoors or am I out?"

I don't hope to keep up to him in anecdotes but I claim that it is a perfectly beautiful house to live in. And I would like to counter with a few remarks about some of his recent houses. I claim that they lack a lot of other things that are very valuable for living: they lack elegance completely, they lack all sense of clarity, they are confused in design, they have no consistency structurally. In the last house he did down our way, he was going around so many corners that he didn't have time to hold up the beams, so he said to the boys, "We'll put a lolly column there." Unfortunately it happened to be in the living room.

He makes the strangest use of materials. He will combine cinder blocks, to which he has now taken a fancy, with mahogany; the roofs, the facias are all mahogany, the decorations all copper but the house is made of cinder block, an awfully unpleasant material in the evening with a silk dress.

Then there's his open plan. I like open plans too but then I'm a bachelor, I can stand it. He opened the plan so far on this last house that the clients had to get rid of him and put the wall in between the living room and their bedroom because the children woke them up in the morning. So I think I can say that all these things are very bad.

The worst thing I ever said about Mr. Wright was that he was the greatest architect of the 19th Century. I thought it was a compliment but in a way if you think back, the houses that I'm speaking of are the recent ones. Think back, for instance, to the great Riverside Club of 1900: the clarity is there, the elegance is there and only one material is used in the entire project. The great brooding shingle hip roof that became his mark at that time was extremely dignified and very clear structurally.



Then I'm annoyed by Mr. Wright's talking a good deal. He uses words in an unusual way. For example, he talks about cities thus, "Cities are vampires living off the blood of the countryside and the villages, sterilizing humanity." Then he says that skyscrapers are "mollusks." This is wonderful prose, pure 19th Century prose—"the mollusks erected for the exploitation of the man in the street."

He can have his opinions. Whitman had them; Thoreau had them. It's a quite good American tradition for having a hatred of the cities. But then why, in light of these remarks, does he intend to build the tallest, the largest and the most inhuman skyscraper in the world if he could (fortunately he cannot) in Chicago.

I find very annoying too his contempt for the history books, for all architecture that preceded him. Was he born full blown from the head of Zeus that he could be the only architect that ever lived or ever will? I find it an undignified approach of our greatest living architect to talk about Michelangelo who, he says, created the greatest mistake of any architect that ever lived by building St. Peter's dome.

Then almost worse is his contempt for the people who are going to come after him—and this is where it hurts us most, we slightly younger, older architects. He is determined that there shall not be any architect after him. Have you ever heard him talk about his own disciples, those poor children who sweat over the garbage pails at Taliesen East and Taliesen

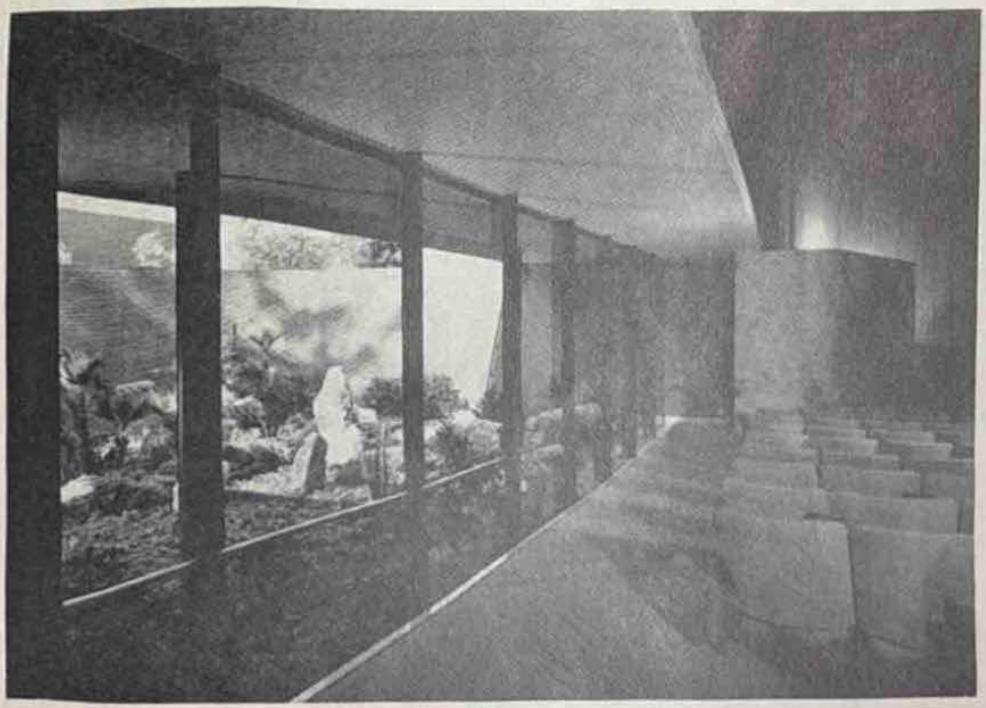
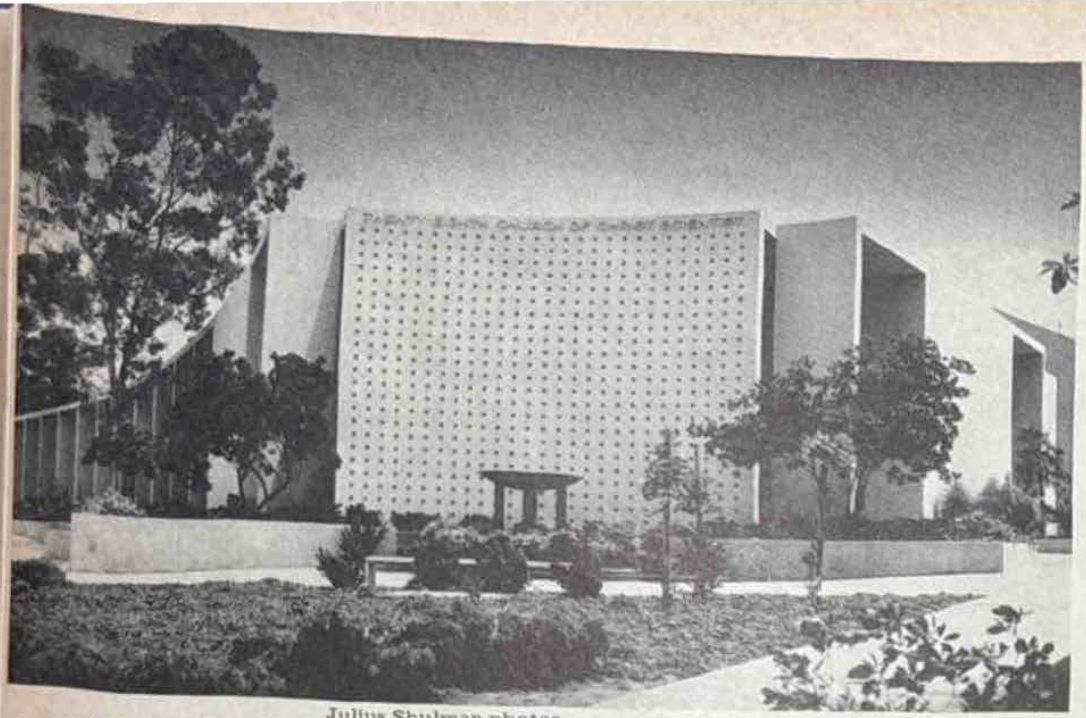
Irregular shaped site is design advantage

TO CREATE a spiritual concept in a religious building for a faith totally void of symbolism is in itself a challenge; but here the architect's problem was intensified by an irregular shaped site on which an existing church stood in Westwood Village. In meeting the building requirements, space was provided for a Sunday school assembly, classrooms and offices in the remodeled structure; main approaches to the new 800-seat auditorium were located at the apex of the triangle; and the two units were joined by a curved loggia which follows the contour of the bordering avenue.



The architect actually turned the site into a design advantage when he planned the auditorium with semicircular seating to emphasize the relationship between readers and audience, one of the program's criteria. This arrangement, with 36 in. of clearance between rows, also facilitates weekly testimonial services, since any participant can be more readily heard and seen. When not before the congregation, the readers are concealed by marble panels which flank the ebony desk; it in turn is backed by the organ grill of removable black walnut sections and fronted by the console, hidden from the audience's view. Recessed fixtures are set flush in the ceiling.

How the extensive landscaping—the walled gardens at either side of the auditorium, in particular — and the broad loggia contribute a sense of tranquility is aptly stated in the photographs on these pages. But this edifice, like any satisfying piece of church architecture, does more than serve its members: it has something to say to the community and is an expression of our times. Focal point of the monolithic concrete structure is the pierced wall section which helps to minimize traffic distractions, admits light into the foyer and adds a dramatic element of interest. This slightly concaved wall and columns are painted a shade lighter gray than the rest of the concrete mass.



TRIANGULAR SITE'S APEX is further dramatized by metal fountain and landscaping. Semicircular seating of auditorium, which accommodates 800, helps establish rapport between readers and audience. Desk is flanked by marble panels carrying denomination's customary quotations. Gardens seen through windows at either side of auditorium are floodlighted at night. Side entrance view is shown below.

SUNKEN, WALLED GARDENS, seen from interior on preceding page, are not strong elements in exterior planning. Curved loggia connects offices, classrooms and Sunday school assembly of remodeled building with new auditorium (shown alone in floor plan).

OUTLINE SPECIFICATIONS

Type of Construction: Reinforced concrete.
Exterior Walls: Exposed poured concrete, painted gray.
Roof: Steel trusses and poured concrete deck.
Floors: Concrete slab with some marble and carpeting.
Windows: Steel.
Doors: Glass and wood, exterior; wood, interior.
Interior Walls and Partitions: Metal lath and plaster, painted; perforated Transite, rear wall of auditorium.
Ceilings: Painted plaster.
Lighting: Direct recessed ceiling fixtures with lens controls.
Heating: Gas fired, forced warm air system.
Total Cost: $500,000 (approximately).
Date of completion: December 1955.

COVERED WALKWAYS lead to waiting room from parking lot and street. Fencing screens autos, heightens interest in basically simple framework.

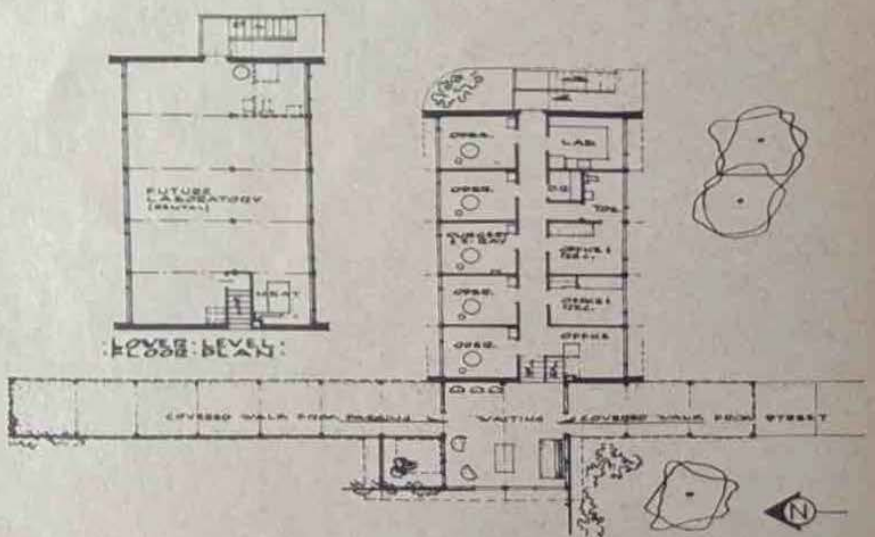
Limited budget, lots of design



Dr. Raymond L. Hess Dental Clinic, Portland, Oregon

THE SITE for this split-level project is in a residential neighborhood, with setback restrictions and parking lot requirements which include screening from the street. The basic program called for an attractive, workable building on a limited budget and relaxing surroundings to make "going to the dentist" a less formidable task.

In designing the clinic at $8.56 per square foot (construction costs and utilities), the architect used an 8-ft. module, with posts and beams and 2-in. t&g roof decking as a basic frame. The beams have a 2x4 on each side, with a ⅜-in. plywood facing and a 1x2 member as a cap, forming structure and window stop at the same time. The brick cavity end walls provide the necessary bearing for the two-story post and beam bracing and a visual anchor for an otherwise light and floating type of structure.

The covered walk and parking lot fencing gives a sense of size to the small building and creates an interplay of space penetration, light and shadow within the basically simple framework of posts and beams and glass areas.

OUTLINE SPECIFICATIONS

Type of Construction: Post and beam on reinforced concrete footings.

Exterior Walls: Cavity brick and glass, upper level; poured concrete under glass, lower level.

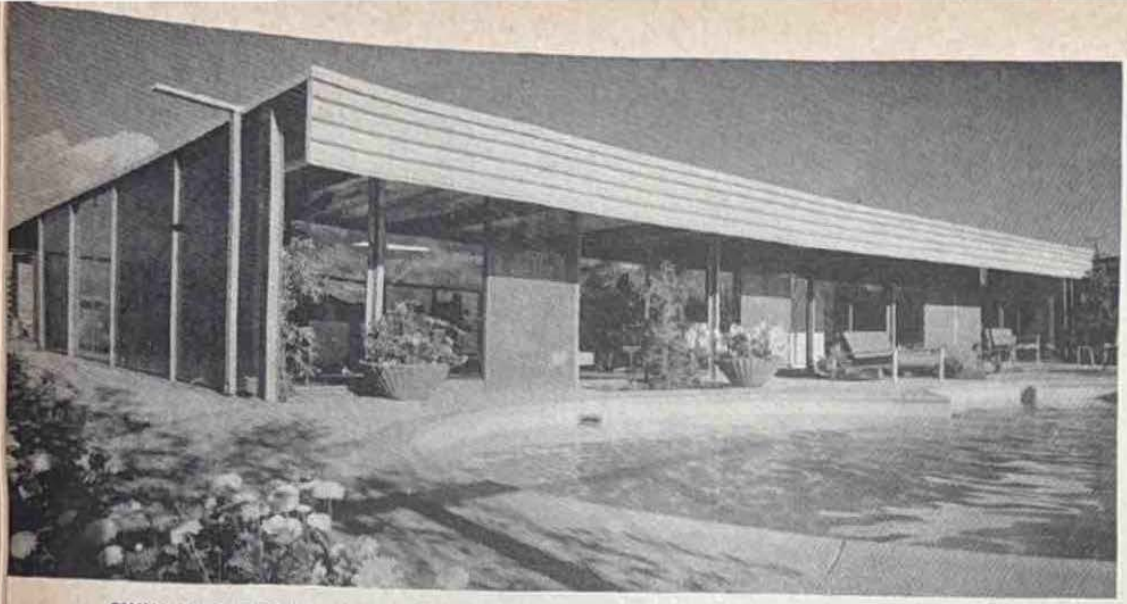
Roof: 2x6-in. t&g decking with rigid insulation.

Floors: Frame with plastic asbestos Amtico, upper level; concrete, lower level and entry.

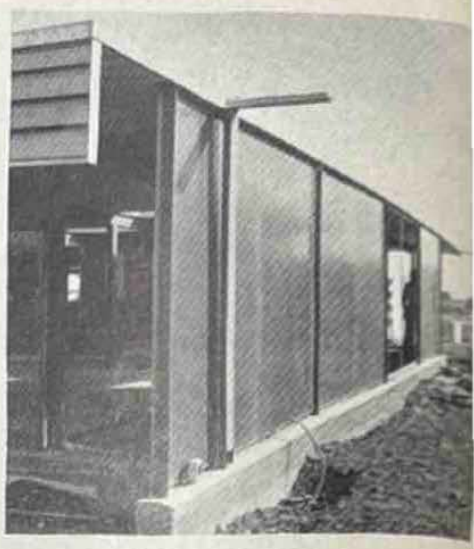
Windows: Soule Steel ventilating sash.

Doors: V-G fir solid core, exterior; faced hardboard, interior.

Interior Walls and Partitions: Exposed masonry on brick cavity wall; gypsum wallboard on non-bearing drywall partitions.

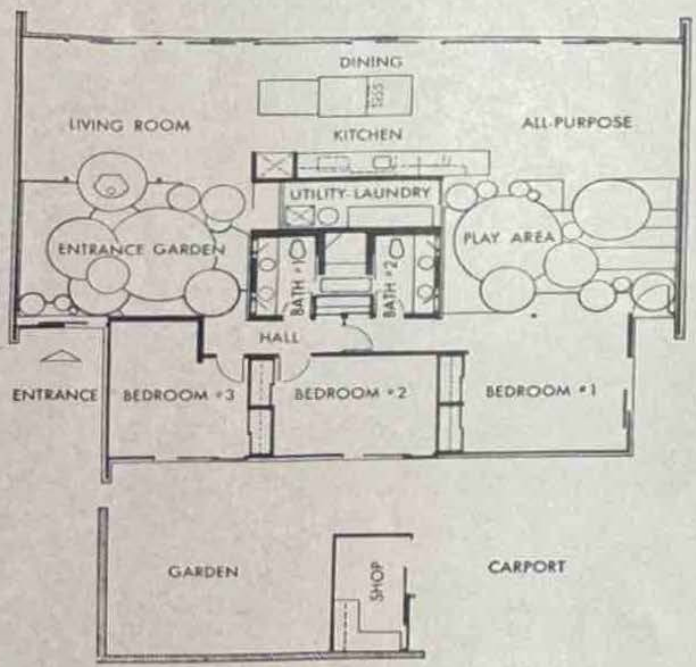


Ceilings: Exposed t&g decking.



Heating: Oil fired, forced warm air.

Special Equipment: Dark room, laboratory, Hi-fi music system.



Cost per Square Foot: $8.56 (construction, with covered walks at one-half, and utilities).

Date of Completion: October 1955.

SWIMMING POOL is shaped from disc motif to repeat pattern of floor in garden rooms of interior. Rear yard is incorporated as integral part of indoor space. Wall detail (right) shows high density overlaid fir plywood factory finished in olive drab green, marking first time it has been used on any big scale for residential construction.

EICHLER HOMES
Builder

Tomorrow's design, construction ideas today

EXPERIMENTAL PROJECTS often get caught in such a flood of advance publicity that the completed job is not fully reported. Such seems to be the case of the X-100 house, noteworthy because of its design and of its sponsor, a builder who has pioneered construction of architect-designed homes since 1949.

"To be truly contemporary a house must adapt its plan to the interests and normal movements of the occupants," Joseph Eichler asserts. "Our X-100 is simply the projection of this concept into the future, using factory finished, prefabricated sections wherever possible to cut down labor time on the job."

It must be remembered that this is an exhibition house, designed and built to display some of the latest ideas for creating more livable homes tomorrow. Some of the products may not be practical unless modified; some of the materials are desirable but may be too costly for today's construction; others are in early stages of research.

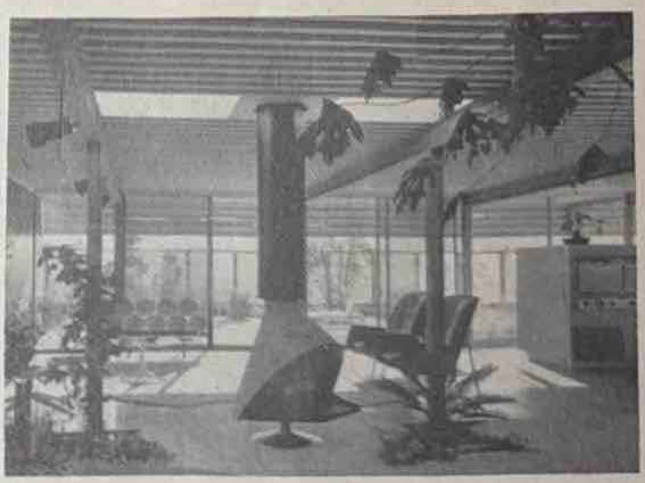
design

With an exposed light structural steel framework so engineered that no load-bearing walls are necessary, the house takes full advantage of every planning possibility. Floor-to-ceiling walls have been used only where they serve a specific purpose.

All rooms are placed along the perimeter to utilize outdoor space; side walls provide privacy from neighbors. Plumbing facilities for all functions, including bathrooms, kitchen, utility and laundry, are located in a rectangular core in the center of the structure.

Interior spaces have been planned for maximum flexibility of use and wide expanses of glass make the visual separation between indoor and out almost non-existent. This idea is carried even further by the inclusion of two inside living gardens as a part of the landscape architecture.

Instead of patios useful only part of the time, the two garden rooms—each 14x20 ft. — were added to the square footage of enclosed space within the house, whose overall dimensions are 56x64 ft. on an 80x110-ft. inside lot. The floors are discs of exposed aggregate concrete, radiant heated as is the rest of the house. These circles are interrupted with planted areas in which the greenery grows directly from the ground, rather than from containers.



An outdoor patio at the front of the house is enclosed with a concrete block wall for use as a children's play yard. One might question the emphasis of this material in a project which is experimenting with a structural steel system. A patio at the rear is tied in with a large living area and has been furnished with the same type of terrace furniture used inside for the garden rooms.

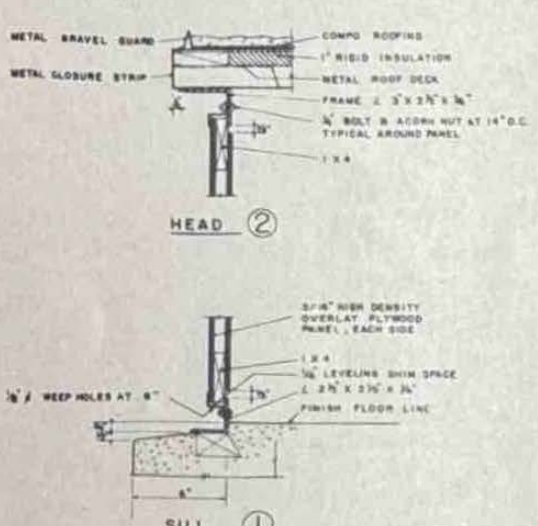
Skylights are introduced into the approximate center of the structure to lift the light level and compensate for the usual amount of discrepancy between the perimeter and interior natural lighting.

Rooms are not arbitrarily outlined by color. Exposed steel beams and columns are a deep-tone cinnamon, both inside and out; steel ceilings are gray.

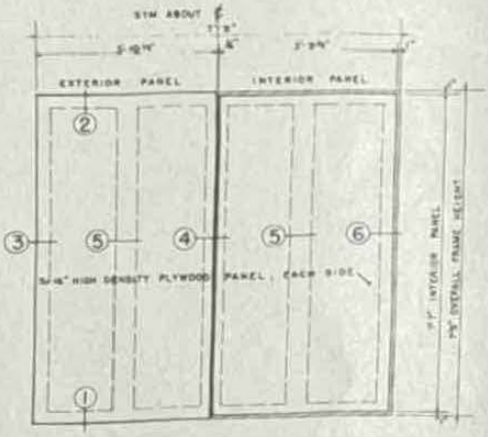
Special art pieces executed by Matt Kahn includes a 15x2-ft. relief sculpture in brass and glass resembling a delicate necklace along the end wall of the living room. A large circular medallion outdoors behind the swimming pool serves as decorative foil for the sculpture inside. Anne K. Knorr was the interior designer and Gump's furnished the accessories.

KITCHEN FORMS 16-ft. long side of plumbing area. Architects designed dining table with built-in two-burner unit. Reversible fireplace can be turned either to living room or to interior garden area. All-purpose garden room (below) is conceived as adult play area. Shop is off open carport.

X-100 HOUSE: building methods

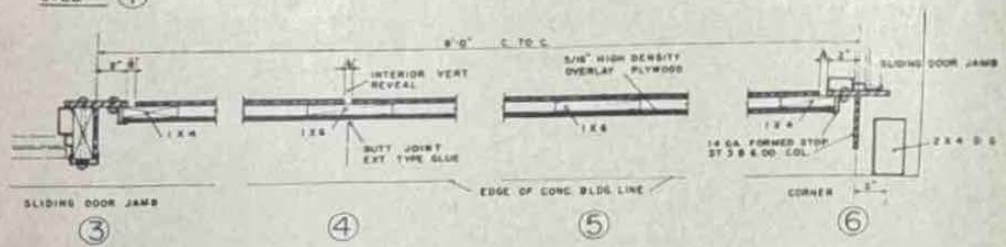


One of the new and more interesting building methods resulting from the X-100 is a system of detailing steel-supporting columns in combination with plywood walls surfaces, worked out by architect A. Quincy Jones. He developed a standard site-fabricated 4x8-ft. high density resin overlaid fir plywood wall section 5/16-in. thick. This is framed on 1x4 and 1x6 lumber to provide a 1½-in. panel, with a dead air space in the center for insulation.



These panels are laid up at the site with standard 4x8-ft. panels applied to the framing so that there is a setback at one side and an overlap at the other side of the wall section. The result: an exaggerated t&g open joint system.

The entire house was constructed with these panels and with steel framework, prefabricated in the shop and assembled on the job in three days. Using the steel and plywood sandwich system, the wall sections were laid into place in steel T- or H-columns and held with a metal angle stop, bolted into the column. All exterior wall sections were set in mastic first and held snugly in place with wooden shims which allow ample tolerance. The panels are finished a light olive green.



Builder Eichler believes that with the next 10 years the demand for ne homes will far exceed the labor su ply. He declares:

"To provide the quality and quan ity needed may require an entire new concept of design and develo ment of new methods of constructio Part of the answer may be in plannir homes so that walls may be move from one location to another witho structural alterations to provide ma imum flexibility within the perimet of the living area to meet changin requirements of the family."

TYPICAL PLYWOOD WALL PANEL ELEVATION

OUTLINE SPECIFICATIONS

Type of Construction: Structural steel framework by Columbia-Geneva Division, U. S. Steel Corp., with columns placed 8 ft. o.c. in one direction, 14 ft. o.c. in other; concrete foundation and footings with steel leveling plates by Herrick Iron Works.

Exterior Walls: Arcadia steel-framed sliding glass doors glazed with ¼-in. plate glass; high density resin overlaid fir plywood in job-fabricated built-up panels, held in place by non-structural T-sections which serve as mullions, resin-impregnated and finished olive drab green.

Roof: Built-up tar and gravel, with 1-in. Fiberglas insulation; steel channel gutters by Herrick Iron Works; galvanized iron flashing.

Doors: Arcadia steel-framed sliding glass, exterior; hollow core slab and sliding closet, all faced with Formica, interior.

Floors: Armstrong cork over concrete slab; poured concrete with exposed aggregate for garden rooms, with circular discs of varying sizes to provide texture and interest. (Cork floors fit into concrete discs by use of metal terrazzo dividers.)

Interior Walls: Double-faced perimeter, finish and material of which are identical for both interior and exterior.

Interior Partitions: Plywood faced with Formica, treated as furnishings rather than room boundaries.

Ceilings: Exposed Robertson No. 3-Q decking with corrugated appearance, welded to steel beams so that roof acts as diaphragm for transmitting both earthquake and wind loadings; decking spray-painted on job but future painting would be by brush.

Heating: Arro gas-fuel, hot water radiant floor system.

Special Lighting: 96 sq. ft. of Wasco Skydomes for natural overhead lighting—32-ft. continuous length in center of house extending from entry garden room across bathrooms and into all-purpose garden room; 8x21-ft. skylight over revolving fireplace between living room and entry garden; four additional installations, each two feet square: one over built-in cooking range unit, one in laundry area of utility room, two in bathrooms.

Kitchen Equipment: Plywood and Formica casework and cabinets; Norris-Thermador Bilt-in electric refrigerator, double oven and range; Waste-King garbage disposer and automatic dishwasher.

Utility Room: General-Electric built-in undercounter washer-dryer; A. O. Smith Permaglas water heater.

Swimming Pool: Circular disc shaped by Award Pool Division, Davis Products.

Total Area: 2,310 sq. ft. (enclosed living space, 2,226 sq. ft.; enclosed workshop, 84 sq. ft.).

Date of Completion: Fall 1956.

Client-architect-engineer-contractor relations

by FULTON G. GALE JR., AIA

ARCHITECTURE today extends its influence into almost every facet of the building industry—and especially so in the development of the complex traffic control of our modern cities.

We find that the individual architectural office becomes more and more diversified and we also find that a great number of architects and engineers are putting together teams, as partnerships, to handle all manner of design projects involving a great number of professional services such as architectural, structural, electrical, industrial, mechanical and civil engineering, rather than working under a joint venture to cope with the relatively large federal, state and municipal projects now underway or in the planning stage. We consider this type of organization a key to the success of the professional A-E service which is conversant with the demands of clients who insist on a more economical, functional and well designed program.

Heretofore it was necessary for clients to go to large centers of population and to pay additional travel fees for this type of service in order that the so-called experts would be available. This of course shut out the local firms due to the lack of experience and diversification.

It is important for the client to understand that in obtaining a professional service he is not just buying a commodity such as a set of blueprints but that he is buying ideas and talent. This talent is combined in many organizations to make a team of well integrated specialists all contributing ideas and each with a distinct capacity, giving us as a society a much higher standard of living. All this throws an additional responsibility upon the shoulders of the architect-engineers — a responsibility not only to the client or the contractor but a responsibility to the building industry as a whole.

There are five points in this service that I wish to touch upon because they seem to be uppermost in architect-engineer-contractor relation discussions: estimating, specifications, separate contracts, alternates and inspection.

Estimating

With the responsibility that I mentioned we sometimes do a disservice to both the client and the contractor in not estimating close enough. As a matter of fact, I recently had an estimator from a contractor's office inquire as to a position in our firm, saying that he felt we needed one as a result of a recent bid opening. We do have estimators but, in all respect to you contractors, our problem of estimating is a very difficult one and it stems from the insistence of the owner that a preliminary estimate be given far in advance of the actual bidding date. At times these estimates are revised but the original figure is still in the mind of the owner.

We find that occasionally, even though complete plans and specifications are provided for competitive bidding, contractural bidders often times are fairly widely dispersed in their final bids. We A-E's realize that cost estimating is very important from the industry's standpoint and that it also provides the architect-engineer with an additional burden of drawing up plans and specifications, which are readily and easily taken off by the estimator.

Specifications

The question of specifications is always controversial. It is my personal feeling that especially today, where there is so much competition in all endeavors and with the insistence of the "open specification" in the public work, it imposes a terrific burden on the A-E during construction to be fair with the contractor and the supplier and at the same time insist that he comply with the intent of contract. Under certain sections such as "miscellaneous metal specialties" the contractor is faced with uncertainty as to the extent of the supplier's bid and many times it either means that the contractor must, at his own expense, furnish the needed item or include a contingency for the total work.

Separate contracts

There has been much debate in regard to multiple contracts on work that is being segregated or could be segregated. However, a bid is generally accepted as including a reimbursement for coordination of work as part of the total contract.

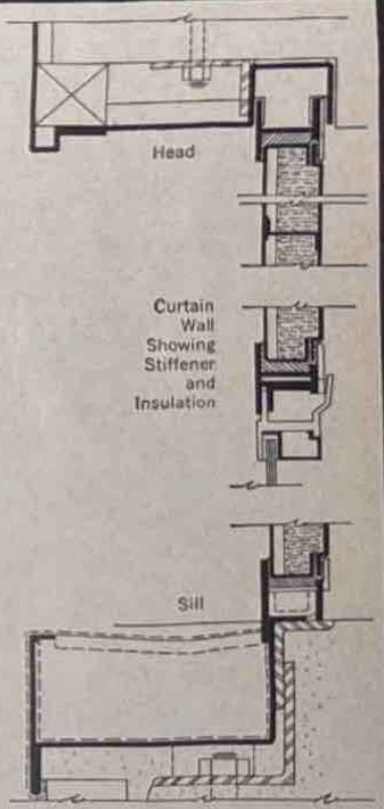
How to prevent the dangers of this method of contract in regard to bid shopping is a subject of controversy in our industry. There is a possibility of separate bidding when prior to the signing of the contract an additional fee for coordination will be negotiated and a general contractor will actually sign the final contract, using the subcontractors who were low in the bid.

Alternates

Then there is the question of alternates and this substantially stems from the reluctance of the architect-engineer to get himself out on a limb, so to speak, in regard to the owner's insistence that a budget be met and also from pressure being brought to bear not only by the owner but by the manufacturers' representatives. In this regard it stems from suppliers wanting to get in the final stages of the contract certain items which otherwise would not be included.

Just how this pressure is applied can be illustrated in regard to a recent project in which at the last minute a substitution of materials was requested. Here the owner was contacted by the manufacturer's representative and given to understand that this would mean a considerable saving. Fortunately, the individual who was talking to the owner was not representing the policies of the company. However, alternates do help prevent rebidding the work where, in a number of instances, if it were not included it would either cause negotiation or redesign and a rebid of the project.

Inspection



Finally, we come to inspection. We in our firm during this phase have tried our best to be as fair with the contractors and suppliers as possible. It is our endeavor to work with the job superintendent and foremen in assisting them in laying out their work rather than laying in wait in order to pounce upon them when some mistake or error is observed. This assistance greatly encourages the contractor in his relationship with the A-E and saves him time, cigars, whiskey and patience.

A digest of an address presented before the Pacific Northwest Branch, Associated General Contractors of America, in Spokane.

Puget Sound Power & Light Company Building
Harmon, Prey and Detrich; Architects & Engineers, Seattle
Cawdrey and Vemo; General Contractors, Seattle

The exterior face of the Fentron panel is porcelain enamel over 16-gauge USS Vitrenamel Sheet. Interior is 14-gauge USS Cold Rolled Sheet with insulation sandwiched between. "u" factor is .104. These panels are effective as covers for spandrels and columns, and as mullions complete with windows.

Prefab steel walls hold down building costs

UP, up, up go the costs of new building construction. One bright spot in this picture is the more economical building method using factory-built wall panels of stainless or porcelain enamel steel. These curtain walls are *fast to erect*, provide *more usable floor space*, permit earlier occupancy and sharply *reduce maintenance*. For the architect, this versatile and economical exterior treatment offers floor-to-floor panels that can be designed to harmonize with any architectural expression.

Here in the West, a number of companies have developed their versions of packaged steel walls fabricated from United States Steel Sheets. These curtain wall systems are figuring prominently in recent Western construction . . . from skyscrapers on down to one-story industrial buildings. In Bellevue, Washington, for example, the new Puget Sound Power & Light Company building (above) used curtain wall panels fabricated and erected by Fentron Industries, Inc., Seattle, Washington.

Only Steel can do so many jobs so well

STRUTS are painted pink.

All-aluminum dome first of its kind

- **Only 39,000 lb., it can withstand 100 psi.**
- **Built in 20 working hours at $4 per sq. ft.**

THE WORLD'S FIRST aluminum dome auditorium—49 ft. high and 145 ft. in diameter—is now in use at Honolulu's Hawaiian Village, having required only 20 working hours and a maximum crew of 38 men. Based on an unusual design which eliminates pillars or any other interior support, the shell includes a portable stage and will seat from 1,800 to 2,000 people.

Involving the creation of a spherical structure through the use of panels and struts, the clear span was designed by Kaiser Aluminum and Chemical Corp. engineers and was erected by Terminal Steel Co. of Honolulu. The panels vary in length from 9 to 11½ ft., are geometrically arranged and bolted together at their edges and form a rigid shell. Each panel is curved inward and is strengthened with the addition of an aluminum strut.

Cost of duplicating the dome would be $4 or less per square foot, Kaiser executives assert. Tests show that the 39,000-lb. dome can withstand over 100 psi.

1

No. 1: Initial installation of diamond shaped panels following erection of portable mast and rigging. Panels were fabricated in Permanente, Calif., assembled upon arrival at jobsite.

No. 2: Three-man crew is lining up panel holes with castings and inserting drift pins to hold panel in place until it is bolted.

No. 3: Interior view shows dome being lifted with hand winches at base of erection mast.

No. 4: Photo taken during second day of construction shows dome rapidly nearing completion. Panels are assembled around portable mast, then lifted so that others can be added.

No. 5: Dome is anchored to concrete piers with aluminum struts, extending from pier up to nearest gusset casting. Twenty-five piers around dome's circumference vary in height from 18 to 65 in. Pin end connection at base of strut allows dome to expand and contract.

No. 6: Star shaped gusset castings are bolted to inside of dome wherever six panels converge. Dome contains 175 of these, each 16½ in. in diameter.

No. 7: Completed dome with erection mast removed. Cover consists of five panels raised 3 in. above opening and overlapping edges.

Pointers on subcontractor relations and scheduling

by GLENN M. CANADAY

THE CONSTRUCTION of a building is a cooperative undertaking involving the joint efforts of a general contractor and many specialty contractors. The average contractor subcontracts almost everything but the concrete and carpentry work — and some even sub this. This establishes the general contractor's function on many jobs as primarily one of planning, scheduling, organization and coordination.

The scheduling and management of subcontractors' work has become increasingly important and more difficult. This has resulted from the profusion of materials being used, greater specialization among subcontractors, tighter time schedules and the multiplicity of manufactured specialties incorporated in the modern building.

The general contractor cannot undertake the scheduling of a project without carefully considering the requirements of his subcontractors and material suppliers. The ultimate construction timetable must reflect the composite needs and desires of general contractor, subcontractors and material suppliers.

Willingness to cooperate is an important contributor to job profits. The lathing contractor who finds the building ready to lathe requires less time to complete his part of the job. The plumber who is on hand at the proper time to install sleeves in the forms saves time both for himself and the general contractor. The excavating contractor, with slight additional care, can save the general contractor many hours of expensive hand excavation.

Recently on a large building job the general contractor poured the concrete roofs over small pipe tunnels without allowing the insulation subcontractor time to cover the steam pipes. Increased labor, several times his estimate, cost this subcontractor his profit.

The general contractor who turns each situation to his own advantage eventually finds himself the loser. Reputable specialty contractors find excuses for not bidding with him. Soon it begins to appear that there are fewer subcontractors bidding the jobs; he finds it increasingly difficult to assemble a successful competitive bid. If you expect to get low bids on the next job, make it easy for your subs to work with you on this one. Be as fair with them as you expect them to be with you. A subcontractor making a profit is cooperative and amenable to suggestions.

Proper scheduling of subcontractor activities promotes efficient utilization of the contractor's own labor forces. Accurate scheduling is difficult to achieve with the best of cooperation; it becomes impossible when relations are strained. Keeping the correct number of men of each trade and craft on the job doing the right work at the right time and at the proper rate of speed requires careful planning, competent supervision, frequent adjustments and above all the commensurate attitude and spirit of cooperation.

When the delivery of certain materials and manufactured items is fixed it becomes necessary for the general contractor and his subcontractors to fit their work into the construction schedule around the delivery of these strategic items. This may require the acceleration or deceleration of various phases of work. Many specialty contractors are not accustomed to making detailed schedules of their work. The preparation and study of manpower charts will point up fallacies and weak points in their construction schedules.

The construction and manpower schedules will also help eliminate time consuming and costly interferences between crafts. Seldom can any schedule be followed exactly. The schedule will establish a starting point and a goal. When work appears likely to get off schedule, the general contractor is responsible for informing his subcontractors; in turn, they must keep him informed. Frequent brief meetings will aid materially in coordinating and rescheduling work.

There is no adequate substitute for competent, cooperative subcontractors; but although the general contractor cannot always choose his associates, he can insist that they plan and schedule their work to fit in with the work of others on the job. With proper assistance in planning and scheduling, most subcontractors will perform satisfactorily.

The best way to get a man's cooperation is to make him want to cooperate. Convince your subcontractor that working to a schedule will put money in his pocket. Get him to agree to a plan of action and a definite timetable.

WHITE COAT FINISH PLASTER
... The Wall of Distinction

Whether used in modern or traditional construction, white coat finish plaster provides a wall surface that offers unlimited opportunity for decorative design, superior fire-safety, and life-time durability. It is truly the "Wall of Distinction."

For the finest of structures... for the most modest of homes... white coat finish plaster made with Ash Grove Veri-Fat Lime assures dependable soundness and attractiveness with maximum economy.

VINYL TILE: A floor tile that extends the scope of indoor-outdoor living can be installed on porches or patios with equal success to its traditional installation inside. Called Patio tile, the vinyl flooring may be laid over concrete, wood, steel or practically any existing surface. Felt is customarily used for a base indoors; outside, an exterior type plywood base is necessary. The tile is available in six color combinations, is unaffected by weather and impervious to oils, greases, acids, salt and ordinary solvents.—Robbins Floor Products, Inc.

(Item No. 1)

SCALE-DRAFTER: To speed the work of architects, draftsmen and engineers, Alvin is offering an adjustable scale-drafter of acrylic plastic, which can be used with a T-square or straight edge. Two beveled flat scales are securely attached to a specially designed swivel quadrant which rotates on a base form with protractor graduated on a shaped oval guide. —Alvin & Co.

(Item No. 2)

MOVABLE SHUTTERS: Paul Heinley has designed Wide Horizons movable shutters for contemporary window walls, sliding glass doors and room dividers. They can be finished to match any color becoming an important part of the decorating scheme of the interior. The 2½-in. wide louvers allow for greater ventilation when opened, for more retention of heat when closed. Panels pictured here are 30 in. wide and 7 ft. high, with the center panels double hung to fold back for full view.—Paul Heinley Movable Shutters.

(Item No. 3)

LIGHTING UNIT: Sunbeam's shallowest surface mounted luminaire, the Shallorama, is a structural element

with an apparent depth of only 2¼ in. and appears to be a recessed unit with a "dropped" Plexiglas diffuser panel extending below the ceiling line. Its width (24 in.) conceals the ballast housing above rather than within the fixture, eliminating a large, undesirable dark spot on the diffuser surface when illuminated. Normal two-screw mounting is used to secure the fixture to the ceiling; leads are pulled through a 2⅜x3-in. center knockout and connected; the diffuser is put in place without use of tools and installation is complete.—Sunbeam Lighting Co.

(Item No. 4)

COMPOUNDS: Of interest to architects, builders and interior decorators are two products being introduced under the name of 3Q compounds, which have different plastic combinations as binders and graduated sand and marble particles as fillers. They offer in one single material chemical and mechanical protection, surface texture, color and finish; they can be applied using either spray gun or hawk and trowel. Colors of unusual intensity can be attained because the pigments are not ground into the binder but rather concentrated to the filler materials.—B. M. Heede, Inc.

(Item No. 5)

ATTIC VENTILATION: Masonite has developed a method of ventilating attics through Shadowvent siding applied to gable ends, eliminating the need of louvered vents. Space sheathing — 1x3 lumber — is applied horizontally to the studs at about 1-ft. centers to accommodate the siding laps which are 12-in. wide. The vented aluminum mounting strips, on which the siding rests, are nailed to the 1x3s. Venting is held by 4-in gaps left in the aluminum strips at the midway point of the various 1x3s. Sufficient space is left by this single group of voids to ventilate the attic of a small house. In a larger residence, the voids may be left at intervals as frequent as 16 in. Upon completion of the gable end siding, it is recommended that pieces of screen be wedged in the voids from the inside to prevent the entrance of insects. —Masonite Corp.

(Item No. 6)

PUSH-PULL LATCH: Kwikset's low cost, push-pull latch for patio, porch and sun deck doors is available in brass, bronze or satin chrome finish. It can be quickly installed on doors ¾- to 1⅜-in. thick by boring only a single hole; the strike is flush mounted on the jamb without mortising.—Kwikset Locks, Inc.

(Item No. 7)

CONSTRUCTION PAN: The Jayhawk corrugated construction pan has weatherproofing built in with asphalt impregnation. Available in all standard sizes in lengths up to 12 ft., its original cost is lower than conventional types and the cores can be reused many times. The flange is cut to half joist width which makes for easy placement without undue measurement. The pan can be adapted to specific jobs and easily cut for installation of wiring and utilities.—Lawrence Paper Co., Construction Division.

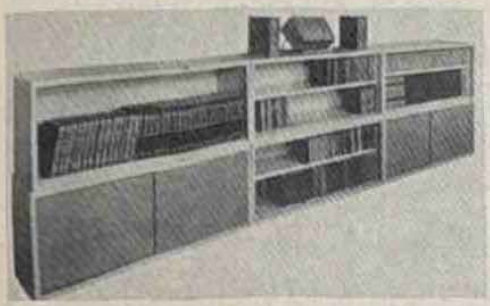
(Item No. 8)

Latest Handbooks, Manuals and Literature

Yours for the Asking

OVERHEAD DOORS: Believed to be the most extensive and detailed manual ever produced in the garage and industrial door field, "Barcol OVER-doors Design and Specification Guide" is a multiple-ring, loose-leaf book divided into six tab-indexed sections. Full discussion of application problems covers conditions under which equipment is and is not recommended. —Barber-Colman Co.

(Item No. 9)



GLASS MANUAL: "Glass for Construction" outlines the uses, qualities and specifications of LOF's flat glass and Blue Ridge patterned products. In the 28 pages are a number of photographs showing the glass in use. The booklet deals extensively with Thermopane glazing information, standard sizes of sliding doors, metal and wood sash data.—Libbey-Owens-Ford Glass Co.

(Item No. 10)

FIREPLACES: Any architect or builder engaged in residential work will find "Fireplaces of Stone" a welcome addition to his reference library. The 22-page booklet runs the gamut from traditional to contemporary and even suggests types that might be appropriate for the dining room, kitchen, family room or bedroom. Several fireplaces are shown in full color. — Building Stone Institute.

(Item No. 11)

STORAGE CABINETS: One answer to storage problems in today's classrooms is described in Bulletin 600-A10.

Herman Nelson cabinets were originally designed as matching equipment for Amervent and HerNel-Cool heating, ventilating and cooling units. They are available in 24-, 36- and 48-in. lengths and may be installed singly or nested together. In addition to schools, the cabinets are finding applications in offices, libraries and workrooms. — Herman Nelson Unit Ventilator Products, American Air Filter Co., Inc.

(Item No. 12)

PLASTER, ACOUSTICAL SYSTEMS: A lot of information on vermiculite plaster and acoustical systems can be packed in an eight-page brochure. This one contains a summary of fire tests on vermiculite systems, suggested specifications and data on all uses of vermiculite in plastering and acoustical treatment, including base coat gypsum plastering, fireproofing and insulating backup for spandrel walls. Special attention is given to machine methods of applying lightweight plaster.—Zonolite Co.

(Item No. 13)

KITCHENS: While "Kitchens Sell Homes" is primarily intended for the builder, the architect too will find some useful material in its 24 pages. Republic Steel has taken the booklet out of the strictly catalog category by incorporating a concise presentation on basic work centers and kitchen layouts. The company's products in use are shown.—Republic Steel Corp.

(Item No. 14)

ROOFING: Fifteen pages of color plates showing Fire-Chex shadow blends and solid tones highlight Carey's 20-page booklet which can be used as a selling tool to prospective home buyers. Descriptions and specifications for three of the manufacturer's products—strip shingle, individual shingle and built-up roofing—are included.—The Philip Carey Mfg. Co.

(Item No. 15)

CONVERSION CHART: As an aid to estimating the amount of material necessary to insulate cylindrical vessels, Armstrong has developed a chart for converting gallon quantities into square feet of surface area It eliminates complex mathematical calculations when vessels such as domestic hot water tanks and expansion tanks are designated only by gallon size or by length and diameter.—Armstrong Cork Co.

(Item No. 16)

METAL LATH: In treating the development of the product and its modern-day multiple usage, "History of Metal Lath" becomes an educational piece for architects, contractors and engineers. The 16 pages of tables, illustrations and copy outline its uses in conjunction with accessories, ceilings, centering, ceramic tile, fireproofing, partitions, stucco and vertical furring. One page is devoted to a listing of technical bulletins available through the booklet's sponsor. — Metal Lath Manufacturers Association.

(Item No. 17)

TOILET COMPARTMENTS: A variety of floor layouts for toilet compartments, shower stalls, dressing room compartments and hospital cubicles are found in Sanymetal's 28-page catalog. Simple diagrams give data regarding mounting of stalls to floors, walls, etc., as well as dimensions of standard designs. The catalog also contains a complete set of color samples and standard specifications. —The Sanymetal Products Co.

(Item No. 18)

MOVABLE WALLS: In its 68-page 1957 catalog Mills presents a new series of aluminum partitions based on an entirely new concept in modular integration of movable interiors. The Milluminum partitions are featured in four pages of perspective drawings. The catalog also has more than 50 photographs of typical installations in commercial, industrial and public buildings, laboratories, schools and universities and other non-residential structures.—The Mills Co.

(Item No. 19)

SOUND CONDITIONING: A guide to the acoustical properties of carpets and rugs has the interesting title "Sound Conditioning with Carpet." It presents the results of a study conducted under the supervision of Dr. Cyril M. Harris of the Acoustics Laboratory, Columbia University, and has particular significance for acoustical engineers, architects and builders.—Carpet Institute, Inc.

(Item No. 20)

CONCRETE FINISH: Properties, uses and methods of applying Vitricon cold glazed concrete finish are described in a four-page brochure which contains specifications, test data and color reproductions of several applications. Vitricon is a newly developed, fast-curing finish for concrete block, wall panels, pipes and other rigid surfaces. Simply sprayed on, the cold glazed concrete mixture becomes an integral part of the surface without bonding, baking or pressure casting. It cures completely in a few hours, with physical properties approximately equal to high-strength concrete. — Vitricon, Inc.

(Item No. 21)

ALUMINUM: The latest data on Kaiser's architectural products and services is found in a 16-page catalog. "Aluminum in Architecture" offers information on such mill products as extruded shapes, sheet, plate and foil and on such building products as corrugated roofing and siding, box ribbed embossed siding, field fabricated sandwich wall panels, electrical conductor and ShadeScreen. A section on specifications and an alloy selection table are other features.—Kaiser Aluminum and Chemical Corp.

'Upside-down' boiler installation solves space problem

When a $10 million shopping center in Bellevue, Wash., quickly outgrew its two 150-hp. firebox type boilers, heating engineers were faced with providing additional boiler power immediately and preparing for future expansion of the plant while utilizing existing fuel, water and power facilities. But ground space was too precious to build an annex to the original structure.

Consulting engineers Stern & Towne and Superior Engineering Co., both of Seattle, solved the situation by placing a 400-hp. Orr & Sembower Powermaster on the roof of the existing power plant. It has worked satisfactorily because:

1. The same square footage of ground space is being used as before although power output is more than double.

BOILER is delivered complete to its locatio hoisted into position with crane and put work as soon as power, water, flue and connections are made.

2. Putting the automatic packag boiler on the roof preserved the unit of the power plant. One operator ca handle both the old and new boiler at the same time.

3. Existing water, fuel, power an flue facilities were being used. The are to be improved soon when build ings around the plant are remodeled

4. The roof has room enough an is strong enough to hold a secon boiler of the same capacity when th need for more power arises.

5. The old boilers alone may b used during the summer months whe heating needs are light. During th winter the entire plant is operate around the clock in order to keep dis tribution lines heated.

6. The cost of putting the plant o the roof was much less than the cos of an annex to the boiler building ha space been available.

The roof installation of the Power master called for several ingeniou "upside-down" hookups. Generally de-aereating feed-water heaters ar located above the boilers they serve In this case they were placed on th lower level with the old boilers. Bull fuel pumps are placed even lowe in a pit.

With the aid of the two older aux iliaries, the new boiler provide abundant steam for the 320,000 sq. ft of stores and offices in the sprawlin Bellevue Properties during the cold est weather. Its automatic control adjust steam output to demand when outside temperatures fluctuate sharp ly.

The rear cover comes off as a unit when the chamber requires inspection. The insulated front cover also is designed for removal in sections so that the burner and other equipment need not be taken down during cleaning and inspection.

The Powermaster is a three-pass horizontal boiler. Flue gases pass through a combustion cylinder in the center, then reverse downward and pass through two passages at the top of the cylinder and to the gas outlet.

Cut hours of travel time to minutes...FLY WCA!

Serving Paul Bunyan's Empire. Fast, frequent service to 44 communities in Washington, Oregon, and Idaho. Fly West Coast Airlines... both passenger service and air freight.

"SCHEDULED LOCAL SERVICE"

Glass in building is more than skin deep

The term "glass clad" has been applied to many new buildings of late but in the case of the new $4 million headquarters office of the American Hardware Mutual Insurance Co. in Minneapolis the meaning goes even deeper.

For here—in addition to the large expanse of windows of insulating glass and the use of Pittsburgh Plate Glass' new Spandrelite in the areas above and below the windows — a cellular glass insulation called Foamglas is used behind the Spandrelite, behind the marble column facings and on the roof and promenade deck.

The construction of the wall was interesting in that the Foamglas remained exposed to the weather for some time until the opaque, colored Spandrelite was applied over it. Being of sealed cellular, non-fibrous construction it was not affected by moisture.

Two-inch blocks of Foamglas insulation were prefabricated in a back pan of galvanized sheet metal. The pans utilized a double rubber gasket around the outer edge and were installed in the wall framework of light structural steel members. An inch of dead air space separates the Foamglas from the Spandrelite panel, making the entire finished wall approximately 3½ in. thick.

Since the building is situated on a natural wooded knoll, overlooking Lake Calhoun, the building exteriors were developed with great concern for compatability with their surroundings. The walls were designed to be reflective panels to mirror the land, lake and sky around them. To complement the setting, materials were chosen in a range of subdued grays, greens and blues.

The building, which is designed for the addition of two floors at a future date, is completely air conditioned. Two inches of Foamglas cellular glass insulation was used on the roof and promenade area.

CELLUAR GLASS INSULATION is shown here exposed to weather. Its sealed structure does not allow penetration of moisture or vapor.

"GLASS CLAD BUILDING" is understatement in $4 million project designed by architects Thorshov & Cerny, Inc. Foamglas is used in 2-in. thickness behind glass spandrels, on roof and promenade deck and behind marble column facings.

PA&B T-square talk

DIED: Julia Morgan, whose architectural achievements were closely tied to California history, died at the age of 85 in her San Francisco home early in February. A pupil of Bernard Maybeck, she designed hundreds of homes and almost as many public buildings throughout northern California. Among her projects were the castle-like home of the late William Randolph Hearst at San Simeon and the reconstruction of the Fairmont Hotel following the earthquake and fire of 1906.

Born in San Francisco, Miss Morgan was the first woman to be graduated in mechanical engineering from the University of California in 1894. She received her master's degree from the Ecole des Beaux Arts in Paris where, it is believed, she was the first woman graduate in architecture.

A retired Seattle architect, William R. Grant, 67, died after a long illness February 22. A native of Detroit, he came to Seattle in 1907 and was associated with the architectural firm of Beezer Brothers for several years. In 1924 he bought the firm, which later became William R. Grant & Son. Grant retired in 1953 but still served as advisor to the succeeding firm, Grant, Copeland & Chevenak, of which his son, Austin Grant, is a principal.

NEW PARTNERS: The architectural firm of Cushing, Terrell & Associates of Billings, Mont., has announced the addition of two partners: F. Edward Jones and Charles D. Hall, both graduates of Montana State College. The firm is now known as Cushing, Terrell & Associated Architects.

ON THE MOVE: Architect W. B. Van Gelder is now located at 15 Poppy Lane, Berkeley, Calif.

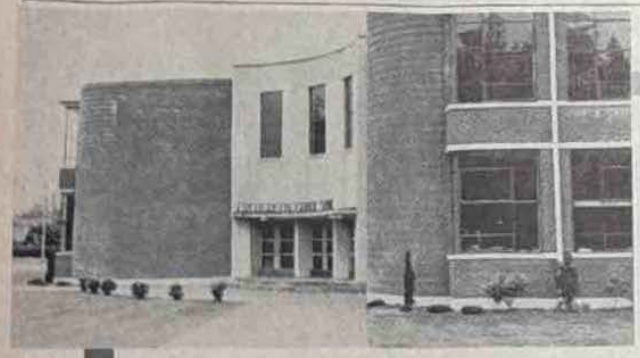
ELECTED: Kenneth P. Norrie, of Culler, Gale, Martell & Norrie, Spokane architects and engineers, has been elected president of the Spokane section, American Society of Civil Engineers. He served as 1956 president of the Spokane Construction Council.

ON PANEL: San Francisco architect Henry Hill, AIA, led a Bay area panel February 1 in a discussion of contemporary American design, held at the San Francisco Museum of Art under sponsorship of the Northern California chapter, AIA, and several design groups. Elisabeth K. Thompson, western editor of Architectural Record, also participated.

NAMED: John C. Narber, former associate with the management counseling firm of Turton Associates, Inc., Cleveland, has been appointed chief industrial engineer of the Los Angeles architectural-engineering firm of Pereira & Luckman. He attended Bucknell University and is a registered professional engineer in Pennsylvania.

Howard P. Hess has been named executive architect in charge of production for Austin, Field & Fry, Los Angeles architects-engineers.

SEMINARS: Why an architect's services are a basic necessity to building and what an architect has to offer even a low income prospective home owner were emphasized in the annual "Let's Build A House" series just finished at the Portland Oregonian Hostess House. The series of three weekly forums was sponsored by the Women's Architectural League of Oregon with Mrs. Clark Austen as chairman.



Richard W. Norman, AIA, acted as moderator. Panel members were Burton Goodrich, AIA; Thomas K. Welch, contractor; M. R. L. Smith, of the mortgage and loan department at U. S. National Bank; George Schwarz, interior designer and instructor at Portland State College; and Edward L. Erickson, who is with the Portland Bureau of Parks and also has a private practice in landscaping and site planning.

JAPANESE TOUR: The second architects' tour of Japan, patterned after the 1956 trip, has been set for next October, which is that country's most colorful season and ideal traveling weather. Starting from San Francisco, the tourists will spend a day in Hawaii en route and three weeks in Japan, flying both ways.

Kenneth M. Nishimoto, AIA, of Pasadena, who will lead the tour, will be assisted by English speaking guides. Those who wish more details may write to Nishimoto at 263 S. Los Robles, Pasadena, Calif.

PLANNER: Robert S. Baldwin has been appointed director of the Multnomah County (Ore.) Planning Commission, following the resignation of Lloyd Anderson at the year's end. Baldwin had been a senior planner with the commission and formerly was with the Portland Planning Commission and the Portland Housing Authority. Anderson is now with the Municipal Research Bureau at the University of Oregon.

A roundup of centennial celebrations of West Coast AIA chapters will appear in PA&B for April.

Bold Architectural Design Featuring

Chehalis Brick

Distinguishes Shelton Grade School Building

The warm colors and pleasing texture of Chehalis Brick, combined with a bold new design concept by the architect, has made the Evergreen Grade School at Shelton one of Washington's finest examples of contemporary school architecture. CHEHALIS SELECT COMMON BRICK—permanent, practical, fire-safe—is used in effective contrast to provide lasting dignity and quality to the structure.

SCPI

CHEHALIS BRICK and TILE Co.

BOX 868, CHEHALIS, WASHINGTON

Designed for 1,750 students, Hillsdale High School in San Mateo occupies more than five acres on an attractively landscaped site of 35 acres.

California school features exposed structural steel

New schools are going up fast. And it's heartening to see today's vastly improved buildings, in most of which steel has a vital part. An outstanding example, shown above, is the Hillsdale High School, San Mateo, California.

Using interior skylights instead of windows, this modern, one-story structure is planned so that classrooms and corridors can be partitioned in almost any way to meet changing conditions. New materials and new concepts in design have won the warm praise of teachers and parents.

As for the students, most of them never dreamed of the advantages they're now enjoying: functional, well-lighted classrooms; well-equipped shops; gymnasium and auditorium; cafeteria, swimming pools and even a theater!

Here, as in so many of today's new schools, the architects relied on structural steel to provide the rugged framework of the building. The structural steelwork was supplied by Bethlehem Pacific.

Strong, fire-resistant, and adaptable to a variety of architectural forms, structural steel greatly reduces the number of supporting columns required. And steel in many forms is helping to stretch tax dollars in planning more new schools.

Exposed structural steel, both exterior and interior, adds to the eye appeal.

School District Superintendent: Thomas F. Reynolds. *Architects and Engineers:* John Lyon Reid & Partners; Burton Rockwell, partner in charge; Dr. Alexander G. Tarics, structural engineer. *General Contractors:* Rothschild, Raffin & Weirick and Northern Constructors. Steelwork by Bethlehem Pacific.

TYPICAL OF LIVE-WIRE PUBLICITY issued by Producers' Council is photo of Seattle's Mayor Gordon Clinton being invited to Home Building Caravan by Ralph Yoder, who heads Washington State Chapter. Looking on are Gordon A. Mowatt, Seattle Chapter, AGC; Peter Hostmark, Structural Engineers Association of Seattle; James J. Chiarelli, Washington State Chapter, AIA; and Fred Dally, Home Builders Association of Greater Seattle—all presidents of their respective organizations.

Blueprint for better architect and producer relations

Here's how they do it in the Puget Sound country

THE ROLE of Producers' Council, Inc., in the construction industry is brought sharply into focus as the Home Building Caravan wends its way up the West Coast to display the ware of 28 manufacturers and associations to those who specify or purchase materials.

Organized 35 years ago as a producers' committee of the American Institute of Architects, the council now is a separate organization but works closely with its architect members, as well as home builders, general contractors and lumber dealers to provide the latest and most important data about building products. The caravan is just one method of achieving this objective.

Each month in 40 chapters across the land and in Hawaii producers break bread with architects, generally at a luncheon meeting. How to set up a successful informational program always presents a challenge.

That challenge has been met in Seattle where the Washington State Chapter last year doubled the attendance of architects at its meetings. The national organization was interested in learning how the Seattleites went about to accomplish this and invited Ralph Yoder to tell his story at the chapter presidents' conference in Cleveland last fall.

To reach its goal of increased attendance, the program committee early in summer decided on a program that would attempt to include the 45 members of the PC chapter. First, they grouped their members by interests and discovered that they could select several topics that might interest the architects and also include a number of producers. For example, the subject of metal covered about seven members; floor coverings seemed to include about five.

After several meetings between the PC program committee and the AIA construction industry relations committee, they agreed on six topics for the coming year: modern heating trends; resilient floors; metal curtain walls; glass, present and future; clay products for the atomic age; and, for a change of pace, a panel to consider architect-producer relationships.

The committee found that 30 members would be active participants in these six sessions. This left 15 who were divided into four committees to have charge of four special events —president's dinner, Christmas party, caravan and field day. After the year was over, the chapter reported that every member actively participated.

Briefly here are the details which go into a typical informational meeting. The PC program chairman, in conjunction with his equivalent in the AIA, contact members who will be interested in presenting the topic for the forthcoming session. Those who accept have a dry run with the PC coordinator. On the day of the program, displays are set up in the meeting room at least 15 to 30 minutes before the luncheon starts. The time schedule is as follows: 12—lunch; 12:45—program; 1:30—questions and examination of products. Those who wish to leave at 1:30 can feel free to do so.

The 45 minutes alloted to the program is divided by the topic group in any way that its panel desires. At one meeting seven members each covered a different phase of the general subject and aptly demonstrated what can be said in six minutes if the speaker is truly prepared.

BUILDING LITERATURE COMPETITION WINNERS

(The following list of winners in the 1957 national competition co-sponsored by Producers' Council and the AIA does not include honorable mentions.)

CLASS 1: Literature concerned primarily with basic technical information.

EXCEPTIONAL MERIT

Aluminum in Modern Architecture (2 Vols.), Reynolds Metals Co.

CERTIFICATE OF MERIT

Alloys and Mill Products, Aluminum Company of America.

Reinforced Concrete Floor Systems, Portland Cement Association.

Metal Lath, Metal Lath Manufacturers Association.

Wood Structural Design Book, National Lumber Manufacturers Association.

Fir Plywood, Douglas Fir Plywood Association.

Woodwork Brochure Portfolio (a series), Architectural Woodwork Institute, James Arkin, AIA, editorial consultant.

Class 2: Literature offering technical information confined to particular products of a single manufacturer.

EXCEPTIONAL MERIT

Grant Sliding Hardware—Catalog 1956, Grant Pulley and Hardware Corp.

Built-up Roof Specifications, United States Gypsum Co.

CERTIFICATE OF MERIT

Noise Control Products, Owens-Corning Fiberglas Corp.

Truscon Curtain Walls, Truscon Steel Division, Republic Steel.

Pittsburgh Doorways, Pittsburgh Plate Glass Co.

Facts and Data on Resilient Floors, Congoleum-Nairn, Inc.

Industrial Insulation Manual, Owens-Corning Fiberglas Corp.

Ceco Shortspan Open-Web Steel Joists, Ceco Steel Products Corp.

Brick Size Vents in Cast Aluminum, Construction Specialties, Inc.

Flour City Metal Windows, Flour City Ornamental Iron Co.

Class 3: Literature of primarily promotional character.

EXCEPTIONAL MERIT

Fir Plywood Design Ideas, Douglas Fir Plywood Association.

CERTIFICATE OF MERIT

Acme Brick in Colors, Acme Brick Co.

Beautiful Walls with Concrete Masonry, Portland Cement Association.

Tone (a series), Armstrong Cork Co.

Ceco Metal Products (a series), Ceco Steel Products Corp.

Palos Verdes Stone, Great Lakes Carbon Corp.

For Modern Exteriors, Masonite Corp.

Class 4: Space advertising directed primarily to the architect

EXCEPTIONAL MERIT

Mineral Acoustical Tile, United States Gypsum Co.

CERTIFICATE OF MERIT

Characteristics of Floor Tile (a series), Kentile, Inc.

Knoll Products (a series), Knoll Associates, Inc.

A Success Story (a series), Marble Institute of America.

Expanded Metal, United States Gypsum Co.

PA&B Suppliers

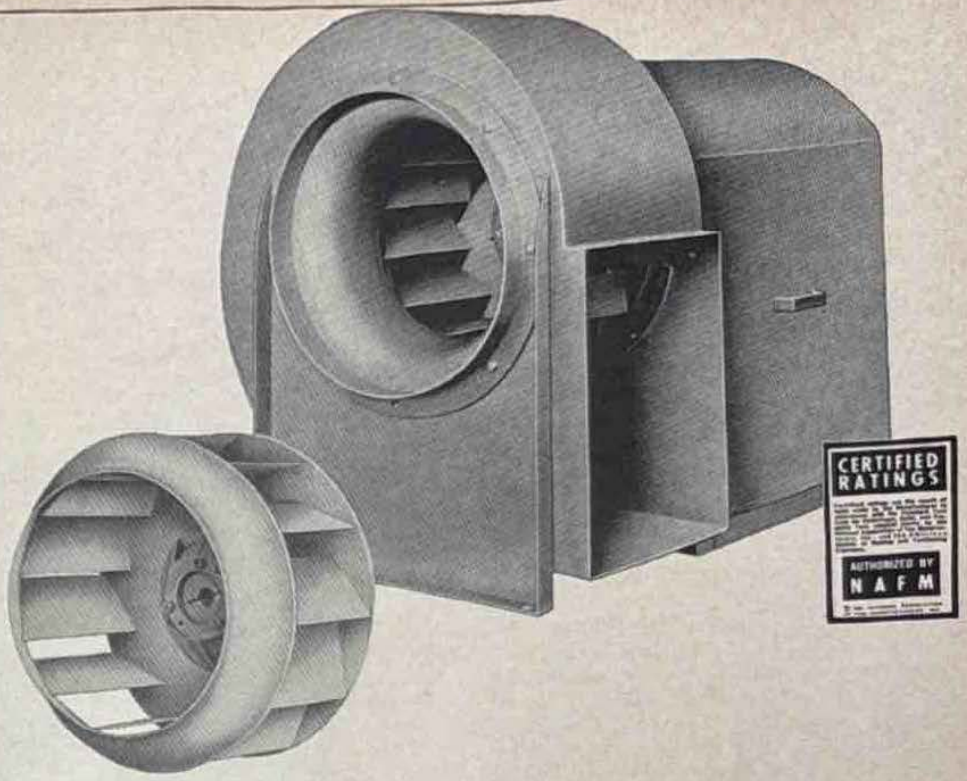
• **Bethlehem Pacific Steel Corp.** has purchased land to erect a building which will house its western headquarters on a site bounded by Davis, Sacramento and California streets in downtown San Francisco. The new offices, to accommodate 300 employees of the steel division, will allow the shipbuilding division to remain at its present site with necessary expansion at 20th and Illinois streets.

• **Unit Masonry Association** of Portland has elected Paul Nutt of Smithwick Concrete Products Co. as president. Other officers are Richard Carper, vice president; Ralph Holm, secretary; and Kenneth Bergstrom, treasurer.

• **California Redwood Association** has chosen Hugh J. Jacks of The Pacific Coast Co., Willits, as president, Philip T. Farnsworth, executive vice president, and Selwyn J. Sharp, secretary-treasurer, have been reelected.

• **Layrite Products Co.** of Spokane has named Robert H. Hopkins as treasurer and a director; Paul Grewell, assistant treasurer and assistant secretary. Hopkins has been manager of community operations for General Electric Co. at Richland, Wash., for the past six years.

• **Permanente Cement Co.** has appointed Frank L. Crosby of Oakland as manager of public relations for the firm and its subsidiaries. He has been public relations director for Kaiser Gypsum Co. for the past 1½ years.



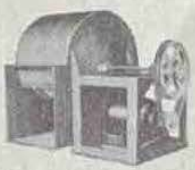
Permanente also has named William E. Viall Jr. as sales representative for the Fresno-Bakersfield area.

• **Triangle Steel and Supply Co.** has appointed Emery Johnston, formerly assistant sales manager of Southwest Steel Rolling Mills, to handle sales in the Los Angeles Airport industrial area.

• **Northwestern Portland Cement Co.** of Seattle has reelected its slate of officers, headed by president Gordon Tongue of Seattle and board chairman James D. Burns of Condon, Ore.

• **General Concrete Products, Inc.,** has opened warehouse facilities at 20345 Walnut Drive, Walnut, Calif.

• **Pleatwood Doors, Inc.,** of Everett, Wash., manufacturer of solid wood folding doors and room dividers, has



Backward Curve Blowers — Certified Ratings

Completely Designed, Engineered and Manufactured by Peerless Electric

Peerless Backward Curve Blowers are all Peerless—motor and all. We control the entire production of this versatile blower, from drawing board to finished product. We guarantee it unconditionally for quiet, trouble-free operation.

Peerless Backward Curve Blowers can be specified with confidence. They are thoroughly tested according to test codes. They meet NAFM and NEMA standards. Scores of them are operating in schools, churches, hospitals and government installations.

FORWARD CURVE BLOWERS

Made entirely by Peerless; arc-welded housings and frames; wheels designed for quieter operation; dynamically balanced.

CENTRIFUGAL ROOF VENTILATORS

Matching wheel cone accurately fits spun venturi for quieter, smoother air movement. All welded construction; material 16 ga. or over. Each unit air tested, and rated to assure certified PFMA ratings. Fits standard curbs.

appointed the following distributors: Lester E. Houser Distributing Co., Billings, Mont.; Allfir Lumber Co., Everett; Northwest Builders Hardware, Inc., Seattle; and Spokane Venetian Shade Co., Inc., Spokane.

• **Columbia-Geneva Steel Division** of United States Steel Corp., with headquarters in San Francisco, has appointed Leslie B. Worthington of Chicago as president, succeeding the late Alden G. Roach. For the past 11 years Worthington has headed the parent company's supply division, whose main offices are in Chicago.

WORTHINGTON

Following graduation from the University of Illinois, the new president began his career with U. S. Steel as a sales apprentice at the South Chicago works of Carnegie-Illinois Steel Corp. He later was attached to the Detroit and Pittsburgh sales offices and in 1942 was elected vice president of the supply division, becoming president in 1946.

Worthington is a member of the executive committee of the American Steel Warehouse Association and of the American Iron and Steel Institute.

• **Pacific Coast Engineering Co.** of Alameda, Calif., has named C. Dean Ramsden as vice president and general manager and Charles H. Zweifel as chief engineer.

• **Arcadia Metal Products** of Fullerton, Calif., has promoted William R. Mason from production to chief engineer and has named David F. Smith as sales representative for the San Gabriel Valley in southern California.

• **Westinghouse Electric Corp.** has appointed William G. Hinckley as Pacific Coast regional manager of its elevator division, with headquarters in San Francisco.

• **Insulation Board Institute** has elected G. L. Oswald of Simpson Logging Co., Shelton, Wash., as vice president.

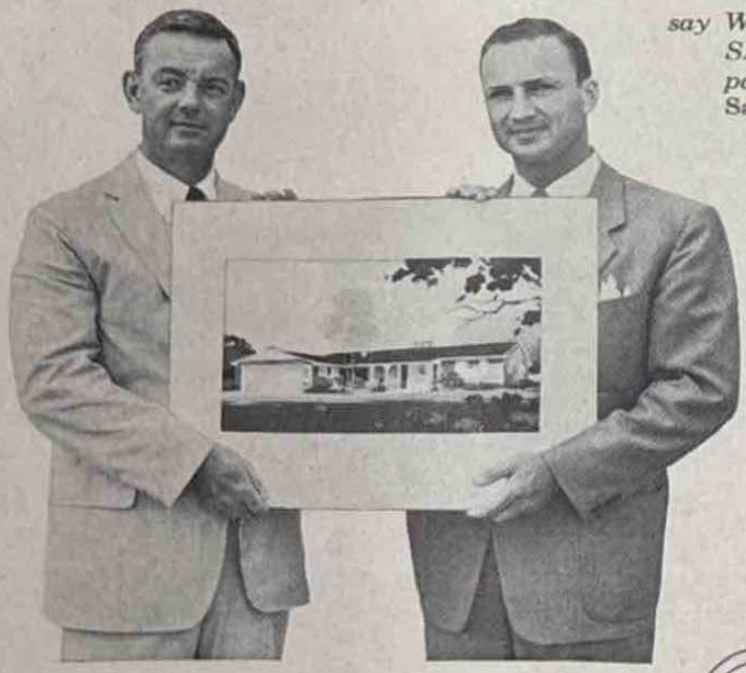
• **General Electric Supply Co.** has opened a 12,800 sq. ft. distribution center at 735 Coleman Ave, San Jose, Calif., with A. Rohl Barnes as sales manager and Phil E. Paul as store manager.

• **Vermiculite Manufacturing Co.** of Seattle has appointed Andre Baudat executive vice president of the firm, which plans to double production of brick at its plant in the Ballard district.

• **American Fabricators** has promoted its Seattle office manager, Wallace B. Wold, to general sales manager at the home office in Bellingham, Wash. Ray E. Fiedler will take over as Seattle office manager.

BUILDERS

• **Home Builders Institute** of Oran and Los Angeles counties has nam these officers: George M. Pardee J president; Milton J. Brock Jr., fi vice president; Ben C. Deane, secon vice president; John D. Griffith, se retary; Ray K. Cherry, treasurer.



• **Associated Home Builders of t Greater East Bay,** which has move to new headquarters in the Hot Claremont, Berkeley, has appointe Charles W. Hudson to direct a ne labor relations department.

• **Building Contractors Association California** has elected Bob F. Rober of San Bernardino as president. Com pleting the slate of officers are Fran Yates, first vice president; Leo Voll second vice president; Stuart L. Sey mour, secretary; and Warren Hanb treasurer.

• **Inland Empire Chapter, Nation Electrical Contractor Association,** h named these officers, all of Spokan Rod Anderson, president; Gordo Smith, vice president; Paul Brigg treasurer, L. M. Stewart, governor

• **Oregon Columbia Chapter, Nation Electrical Contractors Association,** h reelected its president, J. A. McCo and its governor, S. I. Jaggar. Othe officers are S. S. Adams, vice pres dent, and A. R. Johnson, treasurer.

Buyers look for telephone planning in today's homes

say *WELDON B. MANSFIELD and SHELDON W. PARKER,*
partners, Western Enterprises, Inc.
Sacramento, California

Buyers of new homes "just naturally expect" built-in telephone outlets in convenient locations, report builders Mansfield and Parker. The same goes for concealed telephone wiring. Western Enterprises' newest development offers these features—plus two color telephones and six-months' service *free of charge* for each home.

To successful builders like Messrs. Mansfield and Parker, who are setting living standards in the Pacific West, complete telephone planning is as basic as adequate electrical wiring. Pacific Telephone is always ready to help you plan built-in telephone facilities. Just call us and ask for our free Architects and Builders Service.

Specify built-in telephone facilities —a sign of good planning

100 years, Frank Lloyd Wright and us (Cont'd from p. 13)

West year in and year out? Have you ever visited that place—and I am second to none in those who admire his architecture in those two houses but he treats them like slaves.

I don't think there are any of us who can deny his position. I wonder if all of us realize exactly what we do get, and I mean from the earlier Wright naturally, in all our work. I wonder if we realize what it would have been had he not changed the course of architecture single-handed from 1900 to 1910. It was he, don't forget, who made roofs, walls, wainscoting and floor all independent of each other—independent elements of design.

But there is a gap which I still mean to point out and to me that happened in the architectural revolution of 1923, the internationalization of design which was based very much on Frank Lloyd Wright's own work. Of course I speak of the pioneers like Gropius and Corbusier and Mies van der Rohe who independently, after the first world war, came to a type of design which gradually has spread over the entire Western world. It was a great deal of synthesized Wright. The elements were Wrightian but they were something more: they regarded the structural elements more than Wright ever did or still does.

Mr. Wright is very careless about how his buildings are held up once he has the way of looking at them settled. We would not dare—even his admirers—to build a building as casually as he does. Fortunately his son-in-law is an excellent engineer and will see to it afterwards that there is enough steel put into the wood in houses to insure the cantilevers from drooping too much—but they still droop.

However, Mr. Wright is cavalier about that. The younger men coming along in 1923 were not cavalier about that. Mies, of course, is the most extreme. He insists that structure is the element, the essence of architecture, and the arrangement of the elements within that frame—to him steel, of course, since it is the most American material — is what architecture is all about. He takes a very strong stand against Wright's romanticism and I think that that has had an effect on every one of us; it has had its effect right here in the Northwest in spite of the much stronger influence of Wright here than anywhere else in the country.

Where are we now standing at this 100-year point? We ought to be standing at the threshold of the greatest architectural period in history; everything conspires to it. We have more buildings than the world has ever seen in a shorter time, more square feet. We have more money than any culture ever had at any time, within such a short time. We certainly have the architects.

Do we then have the principles that any of us can read in history books? Are we really convinced that right now are being designed the Taj Mahal, the Parthenon, the Chartres Cathedral? I don't think any of us will claim that we are in any such period and yet what elements are lacking?

There is only one lack and that is that there is no will in our culture to build; there is no desire in our culture that building be of any great importance.

Where did we get off the track, as I believe we are? To me, it's to be blamed on commercial committees, not on us. We don't mind spending money; rather it's the timidity of our culture in which we live, the setting up of dollar values for things which cannot be measured by dollars and cents—beauty. Our great corporate cliends, or government clients for that matter, give nothing for beauty.

One wonders sometimes if archi-

6 reasons why architects prefer **COLUMBIA BRICK** *for schools...*

1. Low maintenance saves school boards thousands of dollars each year.
2. Enduring beauty.
3. Flexibility of design — choice of many colors, texture and patterns.
4. Sound, fire-safe construction.
5. Creates feeling of pride and security in students and teachers.
6. Stands up to hard usage.

Add these features to Columbia Brick's superior craftsmanship, and unique clays, and you know why Columbia Brick is "specified" so often.

Columbia BRICK

1320 S. E. Water Ave., Portland

Phone BE 2-1101

tects will be necessary at all. Because of the economy, look what happens. If you build schools, what do the school boards say? "How many dollars per student, how many dollars per square foot and how many square feet per student"? And what do you spend your time doing: cutting costs or building beautiful buildings? It is now becoming so that if you build a religious building, they will say, "How many dollars per pew?" How many dollars per square soul, perhaps, as a starter.

I think maybe that we, as architects who shouldn't be, are getting a little bit influenced by the point of view of the world around us. We cannot be ivory tower artists. We cannot sit it out if people don't like our designs. We've got to go on building. We've got to go on because of our office, because of our children.

Do you think we ought to be quite so businesslike in our approach? We make our firms the way lawyers make theirs, not the way artists make firms. McKim, Meade & White are all dead. It's still a big firm because there's value in it, a dollars and cents value in writing Stanford White's name (he was shot in 1906), which is very strange—it's the only country in the world where this happens; it is the only civilization in which this has ever happened.

Now there are, of course, some architects willing to starve and sit it out.

There is a man like Louis Kahn of Philadelphia, of whom was said in the recent Harper's magazine that if there is a genius in Philadelphia it's Louis Kahn. He's built one building there since the war. There is a man like Bruce Goff in Oklahoma. There is a man like Alexander Girard—all right, he doesn't have an architectural degree; I'm afraid I don't think that's terribly important. I think that what's important is how to mold space excitingly. Perhaps you have seen those magnificent colors he used to organize his own home in Santa Fe, N. M. Sure, that's the only work he's ever done but that doesn't mean he's not a great architect—well, let's not use the word "architect"; let's say "a shaper of space."

Because, after all, what are we here for? One wonders exactly what is the purpose of being an architect? It surely isn't only to put food in our mouths. There are other ways of doing that—a great deal easier and more remunerative.

* * *

But I wish to end with the same man I started with: a man that never gave up; the great American that perhaps we can admire at the same time we dislike him as much as I do—Frank Lloyd Wright. There is a man who creates space for its own sake and has never paid any attention to any other thing.

Have you ever been to Taliesen in Arizona? I think that it is an experience which you can afford yourself. And I would plead with you to go before he is gone. He is 88; he is as brilliant and cantankerous and magnificant as ever. But the spirit will go out of the place when he is gone.

He has developed one thing which I will defy any of us to equal: the arrangements of secrets of space. I call it the hieratic aspects of architecture, the processional aspects. I would like to tell you about it briefly.

You drive up from Phoenix, about 20 miles out, up a dusty desert road, wondering why you came because it's terribly hot, and you go up a slight rise. Finally you turn into a piece of particularly dusty, nasty and ill-kept road. But there is a little sign that says "Frank Lloyd Wright."

You come to an conglomeration of tents and stones where the car stops. There is a low wall and you realize after you have been there and come back again, that he has been pushing out the spot where the car stops, further and further from his place. I'd like to recommend that to you and to me too. The car, of course, is one of the deaths of architecture. It's out of scale, it makes noise, it doesn't please the eye. And you cannot, from a sitting position, even look at architecture. It has to be by the actual use of the muscles of your feet.

He now makes you walk about 150 ft., until you get closer to this meaningless group of buildings. You've seen the plans many times and I'm sure you didn't understand them anymore than I did before I'd been there.

As you approach, he starts you off on a slight slope, with the mountains to your left, and so up the first steps you go, away from the buildings instead of toward them. And how he takes your eyes and makes them follow. You go down the steps this way but the buildings are over there.

Then the steps turn at right angles and you go between two low walls, very much narrower this time. You have the sensation that you are always changing your point of view on the buildings.

You turn, you pass his office, you climb four more steps and pass a great stone that he has put there with Indian hieroglyphics on it, which he found on his place. There is no door in sight. There is a tent roof on a stone base but no door; there is nothin in sight. You just begin to wonder.

Then the path takes you down a long walk, about 200 ft. perhaps, with this tent room on your right, the mountains on your left.

You begin to wonder what is happening when, at your right you pass the tent room, the building above goes on overhead. But the view separates—the two enormous piers—and you look again (a trick) through a dark room, a 6-ft. room, out into the terrace of Taliesen West: an enormous prow that sticks out over the mountains.

Now you've been climbing all this time and you never knew it because you never looked back; but for the first time, you realize you have been climbing and for 90 miles you look across the desert through that darkened hole. And again, of course, the steps start rippling. You go down three steps and then down three steps more and you are pulled out onto this prow of the desert. He calls it his "ship of the desert." That's where Frank Lloyd Wright is usually standing to greet you with his purple hair, his cape, and you say, "Now I've arrived at this magic place."

But you've just begun the trip. He then leads you through a gold-leaf concrete tunnel that turns three times and you are pushed out into the most single exciting room that we have in this country. It is indescribable except that you can say that the light, since it all comes from the tent above, has infiltered and mellowed.

You are just beginning to absorb this room when he opens a few of the tent flaps and this it when it really hits you. You look out—but not onto the desert. You look out this time on a little private secret garden that he has built beyond this room where water is playing unlike any water in the desert. The plants are 20 ft. high in this garden and there is a lawn such as you have seen only in New England.

You say, "Now I see what I've come to Taliesen for"; you have not. He makes one more turn, two more turns. This time the door is 18 in. wide and you have to go through sidewise. It is entirely an inside room, no desert or garden. One wall is of plants. To be sure, you cannot see them; that is, you can't see through them but that gives you the jungle light that comes into the room. There is a shaft of light that comes from 12 or 14 ft. above (this is a very high room now). The room is 21 by 14 ft., all stone. One entire length of it is the fireplace; on the other long wall is a table and two chairs—and that is where you have come to be. You sit down with Frank Lloyd Wright and he says, "Welcome to Taliesen."

My friends, that is the essence of architecture.

SC 3-13. Previous report 2-19

SEWER SYSTEM— Tacoma, Wash.

A report submitted to City Council, City Hall, Tacoma, by Brown & Caldwell, consulting engineers, 66 Mint St., San Francisco, Calif., has recommended a $30,000,000 construction program for sanitary and storm sewer trunks in the Tacoma metropolitan area by 1975. Highlights of the report are as follows: 1—Recommendation of a $20,283,000 sanitary sewer program to be financed largely by revenue bonds. 2—Recommendation of a $9,958,000 storm drain program to be financed by general obligation bonds. This would remove such projects as the proposed West End storm drain trunk system from the controversial LID category. The report lists projects in order of priority and divides the construction program into three phases: that to be completed by 1958, by 1965, and by 1975.

PRE-1958—STORM DRAINS: Sprague Ave. and Portland Ave. programs which wil be affected by the route of the Tacoma-Seattle-Everett Freeway; West End-Fircrest-Leach Creek program ($1,285,000). SANITARY SEWERS: St. Paul Ave., S. 19th St., S.E. Tacoma Ave. and Portland Ave. extension programs. PRE-1965: Enlargement of the present 13,000,000-gallon-per-day sewage treatment plant to a 40,000,000-gallon plant, with a possible temporary plant on the east side of the tideflats. Specifications with above office. Bid bond 10;%. Completion time 210 calendar days.

Quantities: 150 c.y. excavation for structures; 30' excavation for foundations; 100 c.y. compacting backfill; 60 c.y. gravel and gravel surfacing; 70 bbl. cement; 50 c.y. concrete; 3,250 lb. reinforcement bars; 12,000 steel structures; 50' vitrified clay pipe; 920' copper cable; 65' rigid metal conduit; 3,700' insulated cable. SP 3-6

●CHIP SEALING— Wind River Indian Reservation, Wyo.

Bids will be opened April 4, by U.S. Bureau of Indian Affairs, Billings, for chip sealing 6.2 mi. of the Fort Washakie-Arapahoe Road, Wind River Indian Reservation, Fremont County, Wyo. Specifications with above office. EE 3-13

UTAH

★WATER SYSTEM IMPROVEMENTS— Circleville, Utah

Award to Ace Plumbing & Heating Co. and King Welding Co., Hurricane, $23,603 (joint venture), by Town Council, Circleville, for waterworks system improvements at Circleville. Specifications by Hansen Engineering Co., 305 Commercial Bank Bldg., Richfield. GH 3-13. Previous report 3-5

●TRANSFORMER BANK INSTALLATION— Hill AFB, Utah

Bid opening extended from 10 a. m., March 1, to 1 p. m., May 20, by U.S. Air Force, Commander, Ogden Air Materiel Area, Directorate of Procurement & Production, Attn: OOPPCS, Hill AFB, for installation of a new transformer bank in Bldg. 265 for additional power at Hill AFB; IFB 42-600-57-259. Specifications with above office. Bid bond 20%. GH 3-8. Previous report 2-27

POWERPLANT ADDITIONS— Magna, Utah
(Estimated cost $16,000,000)

Engineering bids will be sent soon to a select list of contractors, by Utah Copper Division of Kennecott Copper Corp., A. J. Thull, chief engineer for the division, Kearns Bldg., Salt Lake City, for construction of a 75,000 kilowatt powerplant addition to the central generating facilities at Magna. Later, a prime contract will be let for the construction of the facilities. Work should start by next fall with the completion of generating equipment installation being within 2½ years.

The project entails installation of the generator in the turbine-generator department of the present buildings at the central power station. The new 75,000-kw generator will join two 25,000-kw and 50,000-kw generators in the four-story structure. The building will be extended north about 40' to 50' to provide additional working room. To the east of the central power station will be built six-story cooling towers, the water for which will be supplied from existing reservoir systems at the company's operations. Changes and additions in coal handling facilities will also be a part of the additions. SC 3-12

●OUTLET SEWER— Ogden, Utah

Bids received by Central Weber Sewer Improvement District in the office of the city manager, City County Bldg., Ogden, for construction of Section 6, Outlet Sewer No. 2 in Ogden, involving 9,596' of reinforced concrete pipe, 204' tunnel lining plate, 9,397' gravel fill. Specification by Grix & Mueller - Henningson, Durham & Richardson, Inc., 393 Riverdale Road, Ogden. LOW BIDS: Knudson Construction Co., 602 North, $119,644; Smedley Plumbing and Heating Co., Syracuse, $120,247; Wheelwright Construction Co., 2300 E Ave., $124,252. All of Ogden. Bids opened March 4. DM 3-12. Previous report 2-6

★STATE HIGHWAY PROJECT— Salt Lake City, Utah

Award announced by Utah State Road Commission, State Capitol, Salt Lake City, for a highway construction project on which bids opened February 19. For previous awards on this bid opening, see PCD 3-7.

UNDERPASS—DEVILS SLIDE: Concrete underpass 45.25' 0 to 0, about .009 mi. on U. S. No. 30-S situated ¼ mi. easterly from Devils Slide, Morgan County; FAP No. F-023-1(1) 2nd Contract.

AWARD: Max Jones Construction Co., 956 N. 900 East, Provo, $42,446. SP 3-8. Previous report 2-26

▲GOVERNORS—Weber Basin Project, Utah

Bids received by Bureau of Reclamation, Bldg. 53, Denver Federal Center, Denver, Colo., for furnishing and delivering three governors for regulating speed of hydraulic turbines, Schedules 1 and 2, for Wanship Powerplant and Gateway Powerplant, Weber Basin Project, Utah; DS-4843. Bids opened March 7. ONLY BID: Woodward Governor Co., Rockford, Ill., $41,414 fob Rockford. SP 3-13. Previous report 2-1

ALASKA

■MICROWAVE— Anchorage, Alaska

Planholders announced for 50 mi. of microwave communication system between Anchorage and Portage, on which bids will be opened 2 p. m., March 22, by Alaska Railroad, in the office of F. W. Shellhern, superintendent of communications, Anchorage.

Planholders: Motorola Communications & Electronics, Chicago, Ill.; Collins Radio Co., Inc., Burbank, Calif.; Radio Corporation of America, Camden, N. Y. SP 3-13. Previous report 3-5

SEWERS, STREETS, BULKHEADS— Cordova, Alaska
(Estimated cost $240,000)

Bids will be called about March 20 by Alaska Public Works, Box 1181, Juneau, for construction of sewers, streets, bulkheads in Cordova; Proj. Aaa 50-A-43. Plans have been completed with the exception of obtaining easements. JU 3-13. Previous report 1-26

ELECTRICAL DISTRIBUTION SYSTEM— Eielson AFB, Alaska

Project on which bids were to have been opened 2 p. m., March 15, has been cancelled by Corps of Engineers, Alaska District, in the office, Seattle district, 4735 E. Marginal Way, Seattle, for construction of about 37 mi. of 7,200-volt overhead electrical distribution lines from the powerhouse at Eielson AFB to four outlying Air Force facilities to provide an electrical distribution system for the Nike sites to be constructed near Eielson AFB; ENG-95-507-57-31. This invitation number will be redesigned and readvertised sometime in April. SP 3-8. Previous report 3-1

WATER LINE EXTENSION— Fairbanks, Alaska
(Estimated cost $100,000)

Project delayed until 1959 by City Council, City Hall, Fairbanks, for extension of city water lines to south Fairbanks. Plans and specifications by R. W. Beck & Associates, consulting engineers, Tower Bldg., Seattle. It has been announced by Alaska Public Works, Box 1181, Juneau, that funds will not be available for the work this summer as previously planned. SP 3-9

ELECTRICAL DISTRIBUTION SYSTEM— Fort Richardson, Alaska

Project on which bids were to have been opened 2 p. m., March 26, has been cancelled by Corps of Engineers, Alaska District, in the Seattle office, 4735 E. Marginal Way, Seattle, for construction of an electrical distribution system, consisting of a 7,200 volt primary overhead line, from the Fort Richardson heat and powerplant along Ski-Bowl road to site Summit, a distance of about 7 mi.; ENG-95-507-57-61. This invitation number will be redesigned and readvertised sometime in April. SP 3-8. Previous report 2-14

●RUNWAY EXTENSION, ACCESS ROAD, LIGHTING SYSTEM— Galena Airport, Alaska

Bid opening extended from March 12 to 2 p. m., March 22, by Corps of Engineers, Alaska district, in the Seattle branch, 4735 E. Marignal Way, Seattle, for construction of runway extension, access road and high intensity runway and approach lighting at Galena Airport ;ENG-95-507-57-39. SP 3-12. Previous report 3-8

HYDROELECTRIC POWER PROJECT— Juneau, Alaska
(Estimated cost $400,000,000)

The Aluminum Co. of America, Leon E. Hickman, vice president and general counsel, 1411 4th Avenue Bldg., Seattle, has abandoned all plans for a hydroelectric power development in southeastern Alaska which would have required the turning of the headwaters of the Yukon. The proposed project would have delivered 1,000,000 kilowatts in electrical power from one of the world's natural resources and was cancelled because Canada refused to consider any diversion of the Yukon headwaters. SC 3-8

★POWER, WATER FACILITIES— Ketchikan, Alaska

Award to Scheumann & Johnson, 1001 Lloyd Bldg., Seattle, $815,915, by Ketchikan Public Utilities, Elmer B. Titus, manager, Ketchikan, for construction of three rockfill dams, concrete spillway, diversion structure, intake structure, penstock and installation of owner-furnished equipment and other related work of the Ketchikan power system. Work will be located at the Ketchikan powerhouse, Granite Basin and at Ketchikan and Fawn lakes. Plans and specifications by R. W. Beck & Associates, consulting engineers, 1505 Tower Bldg., Seattle. SP 3-8. Previous report 2-19

▲PAINTING STEEL TOWERS— Ketchikan, Alaska

Bids received in the office of the contracting office, Alaska Communications System, 4735 E. Marginal Way, Seattle, for painting two 300' steel towers at Ketchikan; DA 45-041-sc-57-19. Bids opened March 7. LOW BIDS: Albright Paint Co., Anchorage, $5,994; Warren Painting Co., Box 1124, Anchorage, $9,872; American Service, Inc., Box 877 Spenard, $10,750. SP 3-12. Previous report 2-7

Bureau of Reclamation Lists 46 Major Projects . . .

. . . Scheduled for Bid Call Within Next Three Months

Forty-six major construction projects will be among bid invitations issued by the Bureau of Reclamation during March, April and May. Community housing and utility structures rate high among the proposed bid calls. The largest is the government community at Flaming Gorge, to house about 1,000 persons in connection with the upper Colorado River Storage Project north of Vernal, Utah. Listed below are some of the projects scheduled for March bid call.

BID CALLS EXPECTED IN MARCH

CANALS, DIVERSION DAM, Howard Prairie Delivery and Feeder Canals, Soda Creek Diversion Dam (3-2)—Rogue River Basin Project, Ore. Near Ashland, Ore. Construct about 10.3 mi. open canal including 2.3 mi. rectangular reinforced concrete flume section, 7.5 mi. unreinforced concrete lined canal, 0.5 mi. of 48" precast concrete pipe siphon; a small rockfill type diversion dam with sluiceway and canal headworks, about 1.65 mi. unreinforced concrete lined canal.

Quantities: 173,000 c.y. excavation for canal; 23,400 c.y. compact embankments; 11,500 c.y. excavation for structures; 420 c.y. concrete in structures; 5,860 c.y. concrete in canal lining; 2,280 c.y. concrete in rectangular flume; 2,763', 48" precast concrete pipe, noncylinder, steel cylinder or modified prestressed. Completion time 690 days. Bids will be called by chief engineer, Denver.

WASTEWAY WB5 (3-4)—Columbia Basin Project, Wash. Fifteen mi. west of Mesa, Wash. Construct 165 cfs to 29 cfs capacity wasteway channel about nine mi. long, including road crossings, drops, dikes, small storage reservoir, terminal chute into Columbia River.

Quantities: 300,000 c.y. wasteway excavation; 39,000 c.y. structure excavation; 4,300 c.y. compact embankment; 440 mi. c.y. overhaul; 1,530 c.y. concrete in structures; 300', 24" to 54" concrete pressure pipe. Completion time 450 days.

Bids to be called by chief engineer, Denver.

CANAL, Main Canal East (3-5)—Michaud Flats Project, Idaho. Near American Falls, Idaho. Earthwork, structures for about 10 mi. unlined canal and wasteway channel.

Quantities: 465,000 c.y. canal excavation; 38,000 mi. c.y. overhaul; 190,000 c.y. compact embankments; 6,000 c.y. structure excavation; 12,000 c.y. compacted earth lining; 450 c.y. concrete in structures; 10,500', 15" to 60" precast concrete pipe. Completion time 330 days.

Bids will be called by chief engineer in Denver.

PIPE LINES, Davis Aqueduct Trunk Lines (3-8) — Weber Basin Project, Utah. Near Salt Lake City, Utah. Construct about four mi. precast concrete pipeline and concrete lined equalizing reservoir.

GOVERNMENT COMMUNITY, Flaming Gorge (3-24) — Colorado Storage Project, Utah. North of Vernal, Utah. Construct about 90 residences and facilities including streets, sewage collection system, water distribution system for 1,000 person community. Completion time 240 days.

HOUSING, Blocks 46, 77, 79 and Burke Watermaster Headquarters (3-25)—Columbia Basin Project, Wash. Near Quincy, Burke, Moses Lake, Wash. Construct two two-bedroom frame residences with attached garages and full basements complete with water and sewerage facilities in Blocks 46 and 79; construct office building, storehouse, general purpose shop, equipment shelter and one two-bedroom frame residence with attached garage and full basement for additions to Burke Watermaster Headquarters.

HOUSING, Wanship Dam (3-26)—Weber Basin Project, Utah. About 38 mi. east of Salt Lake City, Utah. Construction two six-room, brick veneer, residences about 1,175 sq. ft. each with full basements and double garage. Completion time 210 days.

WAREHOUSES, Flaming Gorge (3-30)—Colorado River Storage Project, Utah. North of Vernal, Utah. Furnish, erect a one-story steel building about 70'x200' with structural steel rigid frame bents. Install one 25-ton overhead traveling crane. Involves 320,000 lb. structural steel.

CAMP FACILITIES, Mason Addition (3-31—Columbia Basin Project, Wash. Coulee Dam, Wash. Construct water and sewer service lines to about 145 residences.

LIGHTING, Coulee Dam (3-36)—Columbia Basin Project, Wash. Coulee Dam, Wash. Install street lights on South Marine Way involving 2,100' of partly rock excavation and 4,400' electric cable, direct burial. Completion time 30 days.

Advertisements for Bids

Advertisements reaching us not later than Wednesday noon will appear the same week.

THE RATE for Advertisements for Bids is 35 cents per line for the first insertion; 25 cents per line for each insertion thereafter.

SCHOOL ALTERATIONS, PLAYSHED
BIDS CLOSE 8 P. M., MARCH 20
Centralia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the undersigned until 8:00 p.m., March 20, 1957, at the office of the Superintendent of Schools, Centralia School District No. 401, Centralia, Lewis County, Washington, for the general contract, including architectural, mechanical and electrical trads, for construction of a play shed and alterations to Galvin Elementary School.

Plans, specifications and contract documents may be obtained by bidders at the office of William Arild Johnson & Associates, 3506 Broadway Avenue, Everett, Washington.

Each prime contractor will be allowed one set of drawings and specifications upon deposits as follows: Complete plans and specifications, $20.00.

Planholders who do not enter a bona fide bid and who do not return, unmarked and unmutiliated, plans and specifications prior to bid opening, will forfeit their deposits. Additional sets of drawings and specifications may be secured at the cost of printing. Such sets remain the property of the Architect and shall be returned.

Each bid shall be accompanied by a certified check, cashier's check, or bid bond, made payable to Centralia School District No. 401, in an amount not less than five percent (5%) of the bid, plus all alternates.

School board directors reserve the right to waive any informalities or irregularities in any bid or in the bidding, and may reject any or all bids.

No bidder may withdraw his bid after the hour set for opening thereof, or before award of the contract unless said award is delayed for a period exceeding thirty (30) days.

STEEL SUPERSTRUCTURE OF BRIDGE
BIDS CLOSE 10 A. M., MARCH 26
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Director of Highways of the State of Washington at the Transportation Building, Olympia, Washington, until 10:00 A. M., Tuesday, March 26, 1957, for the construction of the steel superstructure of the Port Washington Narrows Bridge across the Port Washington Narrows on Secondary State Highway No. 21-B in the City of Bremerton, Kitsap County, Washington, and will then and there be opened and publicly read. Bids received after the time fixed above for opening will not be considered.

This improvement consists of the following elements:

1. Constructing 609.5 linear feet of steel plate girder spans and miscellaneous expansion dams and bearings.
2. The principal approximate quantities involved are:
   Structural Steel in Place ..... Lump Sum
   (1,147,000 Pounds, Carbon Steel)
   (916,000 Pounds, Low Allow Steel)

The foregoing quantities are approximate only and the State does not, expressly or by implication, agree that the actual amount of work will correspond therewith, but reserves the right to increase or decrease the amount of the work or to omit portions of the work, as may be deemed necessary or expedient by the Engineer.

Submission of a bid will be acceptable in no other manner than on the proposal form that will be furnished for that purpose.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

SCHOOL ADDITIONS, ALTERATIONS
BIDS CLOSE 8 P. M., MARCH 20
Centralia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the undersigned until 8:00 p.m., March 20, 1957, at the office of the Superintendent of Schools, Centralia, Lewis County, Washington, for Architectural, Mechanical and Electrical Trades contracts for construction of additions and alterations to the Edison Elementary School for Centralia School District No. 401, Centralia, Lewis County, Washington.

Contractors must submit a separate bid on the Architectural, Mechanical and Electrical Trades Contracts; or they may also submit a combination bid to include Architectural, Mechanical and Electrical Trades under a general contract.

Plans, specifications and contract documents may be obtained by bidders at the office of William Arild Johnson & Associates, 3506 Broadway Avenue, Everett, Washington.

Each prime contractor will be allowed one set of drawings and specifications upon deposit as follows: Architectural, $15.00; Mechanical, $10.00 and Electrical $10.00.

Planholders who do not enter a bona fide bid and who do not return, unmarked and unmutilated plans and specifications prior to bid opening, if no bid is to be submitted, will forfeit their deposits. Additional sets of drawings and specifications may be secured at the cost of printing. Such sets remain the property of the Architect and shall be returned.

Each bid shall be accompanied by a certified check, cashier's check or bid bond made payable to Centralia School District No. 401, in an amount not less than five percent (5%) of the bid, plus all alternates. School board directors reserve the right to waive any informalities or irregularities in any bid or in the bidding, and may reject any or all bids.

No bidder may withdraw his bid after the hour set for the opening thereof or before awards of the contract, unless said award is delayed for a period exceeding thirty (30) days.

SCHOOL AND SHOP BUILDING
BIDS CLOSE 8 P. M., MARCH 13
Valleyford, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Board of Directors of Freeman School District No.

358 of Spokane County, Washington, at the office of the Superintendent of Lindberg School at Valleyford, Washington, up to 8:00 p.m., March 15, 1957, for the construction of a one-story masonry and wood frame building and a masonry, metal frame and sheet metal shop building. All bids will then and there be opened and publicly read aloud. Separate sealed bids will be received for the: General Construction; Mechanical work; and Electrical work.

Each bid shall be in accordance with the plans, specifications and other contract documents now on file in the office of the Architect, Kenneth D. Storment, 709 Hutton Bldg., Spokane, Washington; where copies may be obtained upon deposit of $25.00 per set of General Construction and $15.00 per set of Mechanical or Electrical work. The deposit for one set of plans will be refunded to actual bidders upon return of the plans and specifications, unmutiliated and without marks or annotations, within ten days of the date set for bid opening; and deposits of non-bidders will be refunded only if the plans and specifications are returned, on the condition noted above, not later than one week before the bid opening.

For the convenience of bidders, plans will be on file at the offices of the: A.G.C. Builders Chapter, 1207 N. Washington, Spokane; Construction Council, 933 W. 3rd., Spokane; Plan Bureau, 2413 Western Ave., Seattle; Builders Exchange, 317 Builders Exchange Bldg., Portland.

Each bid must be made out in the form of the appropriate Bid Form bound in the specifications, and must be accompanied by a certified check, Cashier's Check, or a satisfactory bid bond in favor of Freeman School District No. 358 of Spokane County, Washington, executed by the bidder and a surety company licensed to do business in the State of Washington, in an amount equal to five percent of the bid.

Each proposal shall be sealed and addressed to the Board of Directors, Freeman School District No. 358, Spokane County, Washington, Freeman, Washington; and the envelope shall bear the title of the project, the words "Sealed Bid", and the appropriate designation of General Construction, Mechanical, or Electrical.

The School District reserves the right to reject any or all bids, to waive informalities, and to accept any bids or combination of bids and/or alternates which they deem to be in the best interest of the District.

No bidder may withdraw his bid after the hour set for the opening thereof, unless the award of contract is delayed for a period exceeding thirty days.

ICE PREVENTATIVE HEATING SYSTEM
BIDS CLOSE APRIL 17
Kennewick, Washington
NOTICE TO CONTRACTORS

DEPARTMENT OF THE INTERIOR, Bureau of Reclamation. Sealed bids (Specifications No. DC-4817) will be received at Kennewick, Washington, until April 17, 1957, for furnishing labor and materials for ice preventative heating system at Roza Diversion Dam and Headworks, Yakima Project, Washington. Location near Yakima, Washington. Principal items are furnishing and installing radial gate heating system; furnishing and installing roller gate heating system; furnishing and installing electrical systems; modification of East Selah Substation; and other work. Completion time 150 days. For particulars, address Bureau of Reclamation, P.O. Box 937, Boise, Idaho; P.O. Box 516, Kennewick, Washington; or Building 53, Denver Federal Center, Denver, Colorado. W. A. Dexheimer, Commissioner.

5735—3-9

ELEMENTARY SCHOOL
BIDS CLOSE 8 P.M., P.S.T., MARCH 28
Wiley City, Washington
NOTICE TO CONTRACTORS

Seaed bids will be received by The Board of Directors of the West Valley School District No. 208, Yakima County, Washington, in the Cafeteria at the West Valley High School, until 8 P.M., P.S.T., March 28, 1957, for the construction of a six classroom addition to the Ahtanum Valley Elementary School located at Wiley City, Washington.

The building is 56 feet by 109 feet, single story, with a 10 foot by 16 foot furnace room—to be of brick construction with glulam beams and tim-deck roof covered with gravel coated composition roofing. To contain six individual classroom toilets. Finish floors to be asphalt or vinylt tile on concrete slab.

The bid is to be a combined bid including all sub-contracts such as heating, electrical, plumbing, etc.

Electrical to be standard classroom lighting fed through service of existing building.

Heating to be perimeter hot air with oil fired furnace.

Plumbing to be individual classroom toilets.

The basic bid provides for the building structure with finishes and built-ins provided in a series of additional bids.

Plans and specifications may be obtained at the office of the Architects, Don Gochnour and Ed Marble, 612 Miller Building, upon deposit of $25.00 per set. Plans and specifications will be on file at the plan centers in Seattle, Tacoma, Spokane, Yakima, Tri Cities and Portland, Oregon.

A combined bid is requested embracing general construction, heating, electrical, plumbing, etc. Each bid is to be accompanied by cash, cashiers check or bid bond in the amount of 5% of the amount of the basic bid, exclusive of alternate bids.

A contract will be awarded on the above mentioned project upon approval by the Board of Directors of the local school district and upon final approval by the office of the Superintendent of Public Instruction, Olympia, Washington.

These two bodies reserve the right to accept or reject any or all bids and to waive informalities.

The Board of Directors of West Valley School District No. 208 will open the bids in the office of the Superintendent at West Valley High School at 8 p.m., P.S.T., March 28, 1957, at which time the bid will be read in public.

Harold C. Griffith,
Superintendent,
School District No. 208,
Yakima County, Washington

STATE HIGHWAY PROJECTS
BIDS CLOSE 10 A.M., MARCH 26
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, March 26, 1957, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvement listed below.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalificatons of bidders is required.

Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal funds have been allocated for items Nos. 1 to 6 inclusive.

The improvements for which bids will be received follow:

1. Clearing, Draining and Grading on 5.556 miles of Primary State Highway No. 2 in Spokane County, PINES ROAD TO GREENACRES, FAP No. IN-002-6(18) Unit 2, involving about 348,870 cubic yards of Common Excavation, 16,240 cubic yards of Solid Rock Excavation, 41,960 cubic yards of Excavation of Unsatisfactory Material, 152,080 units of Overhaul, 73 cubic yards of Concrete, 539 pounds of Steel Reinforcing Bars, 4,376 linear feet of Concrete Pipe, 80 linear feet of Corrugated Metal Pipe, 6,237 linear feet of Asbestos Cement Pipe, 3,324 linear feet of Steel Pipe, 742 linear feet of Galvanized Iron Pipe, 53,855 linear feet of Chain Link Fence and other items.

2. Draining, Grading, Surfacing, Paving with Cement Concrete and Installing an Illumination System on 0.619 mile of Primary State Highway No. 1 in King County, ALASKAN WAY, HOLGATE STREET TO HANFORD STREET, FAP No. U-001-3(13), involving about 100 cubic yards of common Excavation, 33,500 cubic yards of Sand Borrow, 3,340 tons of Crushed Stone Surfacing, 660 tons of Asphaltic Concrete, 26,800 square yards of Cement Concrete Pavement, 11,920 linear feet of Integral Cement Concrete Curb, 779 cubic yards of Concrete, 24,760 pounds of Steel Reinforcing Bars, 4,785 linear feet of Concrete Pipe, 2,650 linear feet of Beam Guard Rail, a lump sum bid for Installation of an Illumination System and other items.

3. Constructing a Reinforced Concrete Slab Bridge on 0.026 mile of Primary State Highway No. 1 in Whatcom County, IOWA STREET OVERCROSSING, FAP No. I-001-5(16), involving about 1,000 cubic yards of Concrete, 227,000 pounds of Steel Reinforcing Bars, 9,600 linear feet of Concrete Piling, 136 linear feet of Steel Pipe and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.

4. Clearing, Draining and Grading on 2.369 miles of a Kitsap County Road, MULLENIX ROAD EXTENSION, FAS No. S-1283(1), involving about 22 acres of Clearing, 103,940 cubic yards of Unclassified Excavation, 2,103 linear feet of Concrete Pipe and other items.

5. Draining, Grading and Surfacing on 3.132 miles of a Stevens County Road, LOON LAKE-DEER LAKE ROAD, FAS No. S-1237(1), involving about 85,700 cubic yards of Unclassified Excavation, 12,950 cubic yards of Selected Roadway Borrow, 1,332 linear feet of Corrugated Metal Pipe and other items.

6. Surfacing with Light Bituminous Surface Treatment on 3.674 miles of a Columbia County Road, THORN HOLLOW ROAD, FAS No. S-1134(1), involving about 12,870 cubic yards of Crushed Stone Surfacing and Crushed Cover Stone, 118 tons of Asphalt Cement and other items.

7. Surfacing with Crushed Stone and Stockpiling Crushed Stone Surfacing, Maintenance Rock, Crushed Cover Stone and Mineral Aggregates on 2.636 miles of Secondary State Highway No. 1-S in Cowlitz County, YALE VICINITY, a State Project, involving about 42,045 tons of Crushed Material and other items.

8. Stockpiling Ballast, Crushed Stone Surfacing, Maintenance Rock and Mineral Aggregates on SSH No. 1-R in Cowlitz County, CASTLE ROCK EAST, a State Project, involving about 23,950 tons of Crushed Material and other items.

9. Clearing, Draining, Grading and Surfacing with Light Bituminous Surface Treatment on 0.248 mile of Primary State Highway No. 8 in Clark County, FISHER ROAD TO CAMAS-SACAJAWEA ROAD EXTENSION, a State Project, involving about 4,680 cubic yards of Common Excavation, 1,360 tons of Crushed Stone Surfacing and ballast, 8 tons of Asphalt Cement, 80 cubic yards of Crushed Stone, 123 linear feet of Concrete Pipe and other items.

EARTHWORK, STRUCTURES
BIDS CLOSE APRIL 18
Rupert, Idaho

NOTICE TO CONTRACTORS

DEPARTMENT OF THE INTERIOR, Bureau of Reclamation. Sealed bids (Specifications No. DC-4872) will be received at Rupert, Idaho, until April 18, 1957, for furnishing labor and materials for earthwork and structures for Main Canal East, Michaud Flats Project, Idaho. Location near American Falls, Idaho. Principal items are 487,000 cu. yds. excavation; 190,000 cu. yds. compacting embankments; furnishing and laying 10,480 lin. ft. reinforced concrete culvert and pressure pipe; and other work. Completion time 330 days. For particulars, address Bureau of Reclamation, Rupert, Idaho; or Building 53, Denver Federal Center, Denver 2, Colorado. W. A. Dexheimer, Commissioner.

5741—3-16

STATE HIGHWAY PROJECTS
BIDS CLOSE 9:30 A. M., MARCH 28
Helena, Montana

NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the offices of said Commission in the City of Helena until 9:30 A. M., on March 28, 1957. The proposals will be publicly opened and read immediately thereafter.

1. **F 2(14)**—Grade, gravel surfacing, bituminous surface treatment, and drain 10.261 miles on the Baker-Wibaux Road in Fallon County involving about 620,892 cu. yds. excavation; 68,878 mi. yds. overhaul; 169,607 tons crushed gravel; 41,537 cu. yds. sand base; 12,693 M gals. watering; 2,140 units rolling; 62,173 gals. liquid asphalt; 62,173 gals. emulsified asphalt; 1,850 lin. ft. reinforced concrete pipe; 876 lin. ft. relay pipe culverts; 74 cu. yds. gravel backfill and other items. Project to be completed in 300 calendar days.
2. **F 242(14)**—Construction of a 23.25' steel and concrete bridge over Basin Creek in the town of Basin on the Butte-Boulder Road in Jefferson County involving about 13,206 lbs. reinforcing steel; 97.6 cu. yds. class "A" concrete; 46.4 cu. yds. class "AD" concrete; 47.5 lin. ft. steel bridge rail; 450 cu. yds. structure excavation and all L. Sum remove existing structure and maintain traffic. Project to be completed by September 30, 1957.
3. **F 267(7)**—Grade, gravel surfacing, bituminous surface treatment and drain 4.104 miles on the Ovando-Rogers Pass Road near Cadotte Creek in Lewis and Clark County involving about 110,081 cu. yds. excavation; 5,302 mi. yds. overhaul; 41,693 tons crushed gravel; 47,287 gals. liquid asphalt; 2,483 M gals. watering; 537 units rolling; 100 cu. yds. gravel backfill; 278 lin. ft. reinforced concrete pipe culvert and other items. Project to be completed in 100 calendar days.
4. **F 387(7)**—Construction of a dyke, riprap and a 19' treated timber pile bridge on 0.034 mile on the Dillon-Twin Bridges Road in Madison County involving about 8,653 cu. yds. excavation; 174 cu. yds. riprap; 130 M gal. watering; 16 units rolling; 52 lin. ft. relay pipe culverts; 14.266 MBM treated timber; 0.374 MBM untreated timber; 530 lin. ft. treated timber piles and all L. Sum maintain traffic. Project to be completed by August 31, 1957.
5. **F 391(4)**—Grade, gravel surfacing, bituminous surface treatment and drain 10.615 miles on the Circle-Sidney Road in Richland and Dawson Counties involving about 853,591 cu. yds. excavation; 3,279 cu. yds. gravel backfill; 62,967 mi. yds. overhaul; 201,106 tons crushed gravel; 63,325 gals. liquid asphalt; 63,325 gals. emulsified asphalt; 16,735 M gal. watering; 2,818 units rolling; 2,964 lin. ft. corrugated metal pipe culvert; 1,464 lin. ft. structural plate pipe culvert and other items. Project to be completed in 400 calendar days.
6. **S 36(6)**—Construction of 1,512.5 lin. ft. of steel guard rail on the Drummond-Helmville Road in Granite County involving about 1,512.5 lin. ft. steel guard rail. Project to be completed in 60 calendar days.
7. **S 154(2) and S 288(3) Unit 1**—Grade, gravel surfacing, road mix oiling and drain 0.759 mile on the Columbus Southeast and Red Lodge-Columbus Road in Stillwater County involving about 56,400 cu. yds. excavation; 2,342 mi. yds. overhaul; 11,578 tons crushed gravel; 17,014 gals. liquid asphalt; 4,204 gals. emulsified asphalt; 0.650 mile processing; 834 sq. yds. processing; 1,053 M gal. watering; 181 units rolling; 214 lin. ft. corrugated metal pipe culvert; 100 cu. yds. gravel backfill; 630 cu. yds. random riprap and other items. Project to be completed in 120 calendar days.
8. **S 183(2)**—Grade, gravel surfacing and drain 5.259 miles on the Raynesford-South Road in Cascade and Judith Basin Counties involving about 183,257 cu. yds. excavation; 214 cu. yds. gravel backfill; 5,535 mi. yds. overhaul; 31,162 tons crushed gravel; 3,343 M gals. watering; 184 units rolling; 654 cu. yds. binder; 1,308 mi. yds. overhaul on binder; 1,796 lin. ft. reinforced concrete pipe culvert; 74 lin. ft. concrete sewer pipe; 180 lin. ft. structural plate stockpass and other items. Project to be completed in 200 calendar days.
9. **S 188(2)**—Grade, gravel surfacing and drain 8.857 mies on the Galata-North Road in Toole County involving about 199,548 cu. yds. excavation; 4,312 mi. yds. overhaul; 38,523 tons crushed gravel; 1,205 cu. yds. binder; 2,410 mi. yds. overhaul on binder; 3,744 M gal. watering; 151 units rolling; 2,226 lin. ft. corrugated metal pipe culvert and other items. Project to be completed in 200 calendar days.
10. **S 340(3)**—Grade, gravel surface and construction of two 38.0 foot treated timber bridges and drain 7.225 miles on the Cleveland-Chinook Road in Blaine County involving about 239,824 cu. yds. excavation; 79 cu. yds. gravel backfill; 6,139 mi. yds. overhaul; 47,662 tons crushed gravel; 4,520 M gals. watering; 283 units rolling; 1,049 cu. yds. binder; 2,098 mi. yds. overhaul on binder; 2,771 lin. ft. corrugated metal pipe culvert; 87 lin. ft. structural plate pipe culvert; 36,180 MBM treated timber; 1,214 MBM untreated timber; 1,010 lin. ft. treated timber piles; 1,292 lbs. structural steel and other items. Project to be completed in 180 calendar days.

The above listed quantities are approximate ony.

All bid proposals shall be accompanied by a certified or cashier's check, cash, postal money order, bank money order, or bid bond in the amount of at least 5% of the bid. Should the successful bidder fail to enter into his contract and furnish a satisfactory performance bond within the time stated in his proposal, the bid deposit shall be forfeited to the State Highway Commission of Montana.

Prequalification of bidders at least 72 hours prior to the opening of bids is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission in Helena, Montana. Plans and specifications for all Federal Aid Projects are also on file and may be examined in the office of the Bureau of Public Roads at Missoula.

STATE HIGHWAY PROJECTS
BIDS CLOSE 10 A. M., APRIL 2
Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, Apil 2, 1957, until 10:00 A. M. and will then and there be opened and publicly read for the construction of the improvements listed below.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of amount of such bid proposal. Should successful bidder fail to enter into such tract and furnish satisfactory perform bond within the time stated in the sp cations, the bid proposal deposit shal forfeited to the State of Washington.

Prequalification of bidders is requ Maps, plans and specifications may be tained from this office upon written req therefor and payment to the Director Highways by cash, certified check, cash check or money order in the sum of dollars ($2.00) for each copy of such m plans and specifications as a rental for use of them. Plans will be forwarded First Class Mail.

Informational copies of maps, plans specifications are on file in the office the County Engineer of the County in wh the work is situated, the Chapter office the General Contractors of America Seattle, Spokane, Tacoma and Portland the offices of the District Engineers of Department of Highways where they m be inspected.

Federal funds have been allocated items Nos. 1 and 2.

The improvements for which bids will received follow:

1. Clearing, Draining, Grading and C structing Two Reinforced Concrete Slab Bridges on 1.708 miles of Prim State Highway No. 1 in Thurston Cou LACEY ROAD TO MARTIN WAY, F No. I-001-2(43), involving about 56 ac of Clearing, 421,420 cubic yards of Co mon Excavation, 75,980 units of Overha 4,220 cubic yards of Excavation of U suitable Material, 16,050 tons of Selec Roadway Borrow, 3,010 tons of Crush Stone Surfacing, 26 tons of Asphalt (ment, 240 cubic yards of Crushed Co Stone and Mineral Aggregates, 680 tons Asphaltic Concrete, 6,085 linear feet Concrete Pipe, 510 linear feet of Cor gated Metal Pipe, 234 linear feet of Be Guard Rail, 580 linear feet of Chain Li Fence, 1,075 linear feet of Asbestos C ment Pipe, 490 linear feet of Galvani Iron Pipe, 1,407 cubic yards of Concre 269,000 pounds of Steel Reinforcing Ba and other items. Minimum Wage Rat for this project have been predetermin by law and are set forth in the bid pr posal.
2. Clearing, Draining, Grading, Surfaci and Paving with Type I-1 Asphaltic Co crete on 0.922 mile of Secondary Sta Highway No. 15-B in Snohomish Count HASKELL SLOUGH AND SKYKOMIS RIVER BRIDGE APPROACHES, FAS N S-0225(5), involving about 52,550 cub yards of Common Excavation and Bo row, 9,475 tons of Selected Roadway Bo row, 4,440 tons of Crushed Stone Surfa ing, 40 tons of Asphalt Cement, 350 cub yards of Crushed Cover Stone and Mi eral Aggregate, 2,430 tons of Asphalti Concrete, 850 linear feet of Asphalti Shoulder Curb, 285 linear feet of Cemen Concrete Curb and Cement Concrete Cur and Gutter, 92 cubic yards of Concret 20,800 pounds of Steel Reinforcing Ban 174 linear feet of Concrete Pipe, 362 linea feet of Corrugated Metal Pipe, 1,233 linea feet of Beam Guard Rail, 65 Guide Post 190 square yards of Cement Concret Sidewalk and Driveway, 16,000 tons o Heavy Loose Riprap and other items.
3. Stockpiling Crushed Stone Surfacing Maintenance Rock and Mineral Aggre gates on State Highways Nos. 8 and 8-C in Skamania County, STEVENSON VI CINITY, involving about 29,100 tons o Crushed Materials.
4. Draining, Grading and Surfacing with Light Bituminous Surface Treatment on 28.790 miles of Franklin County Roads BLOCK 18 FEEEDER ROADS, a State Project, involving about 33,540 cubic yards of Common Excavation, 20.9 miles of Grading, 95,700 tons of Crushed Stone Surfacing and Crushed Cover Stone, 20 tons of Asphalt Cement, 2,012 linear feet of Corrugated Metal Pipe, 2,784 linear feet of Concrete Pipe, 55 cubic yards of Riprap and other items.

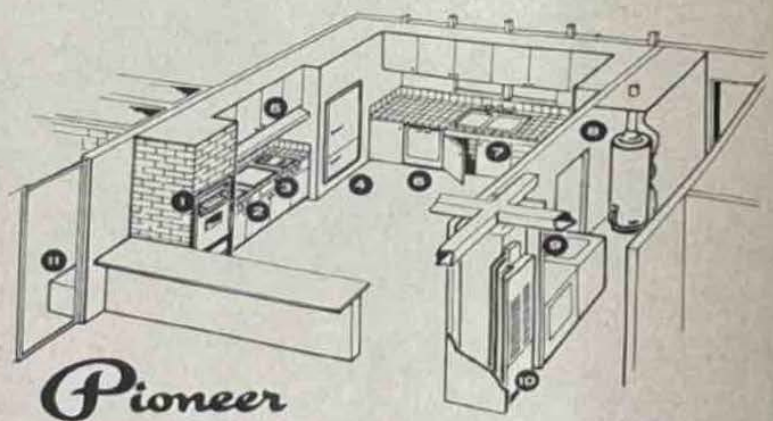
Pioneer

Sets exciting trends for modern living!



with the first complete line of home appliances

The most exciting feature of today's new home is the built-in kitchen... and the most exciting kitchens are equipped with advance styled Pioneer appliances!

Pioneer is specified for water heating, home heating and air conditioning, too, because Pioneer appliances are more economical, more convenient and always dependable.

The trend is to Pioneer, because Pioneer is first in the west with a complete line of appliances—1 dependable source of supply, 1 reliable guarantee, 1 factory service plan.

The Building Month: Trends/Views

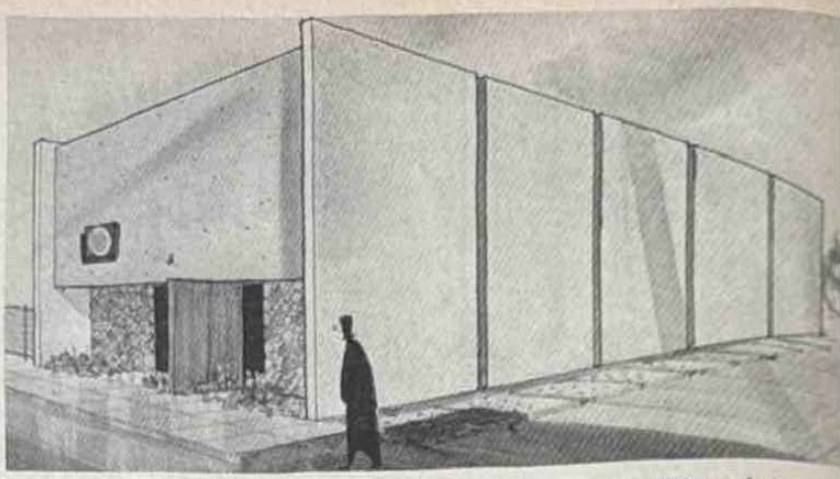
CALIFORNIA EARTHQUAKE EXPERTS agreed that the March shakeup in San Francisco proved that "a properly designed and properly constructed building will survive almost anywhere, although there is no such thing as a completely earthquake-proof structure." (For more details see p. 41.)

FIRST-QUARTER HOUSING STARTS FOR THIS YEAR totaled 213,000 nationally, less than any other corresponding period since 1949. (PA&B's building permit tabulation is on p. 13.) The March total, as compiled by the Labor Department, of 83,000 units was 16% under the same month last year and also the lowest March total since 1949. Builders have called for immediate action to ease mortgage credit with NAHB president George S. Goodyear urging Congress and the administration to "stop gambling with the welfare of the American people."

FIRST WINNER OF THE $25,000 R. S. REYNOLDS MEMORIAL AWARD is an architectural firm in Madrid, Spain, Cesar Ortiz-Echague, Manuel Barbero Rebolledo y Rafael de la Joya, for the new visitors and factory lounge center of the S.E.A.T. automobile plant in Barcelona.

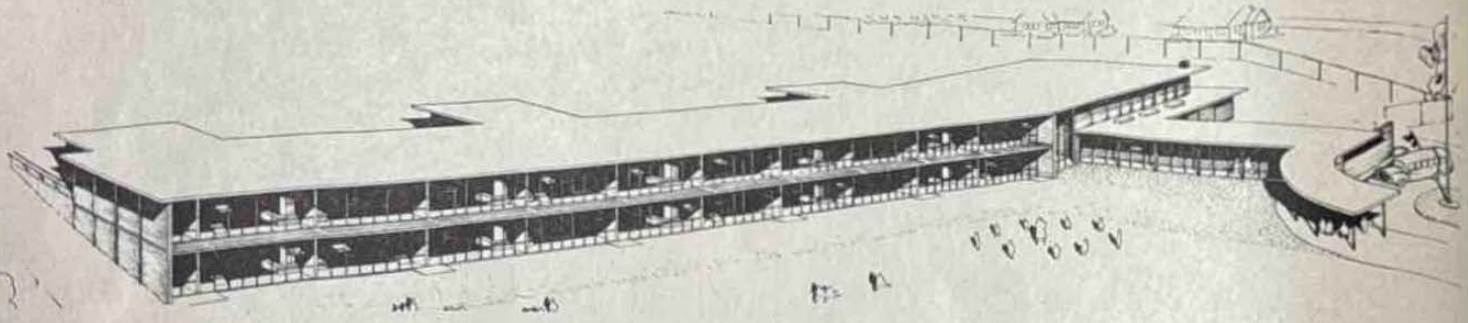
EXECUTIVE DIRECTOR OF THE PHILADELPHIA PLANNING COMMISSION, Edmund Bacon, appearing in Seattle on one of the finest programs ever held by the Washington State Chapter, AIA, underscored functional site development which ignores in the early planning stages the subjective qualities of individual building designs; the need for architects to be sympathetic with each other's work; and the desirability of preserving historic monuments, orienting contemporary urban development to them. The meeting was notable too for the presence of a half dozen city officials, and members of both the Seattle Planning Commission and the American Institute of Planners.

ADDRESSING THE AMERICAN SOCIETY OF PLANNING OFFICIALS in San Francisco last month, John T. Howard of MIT declared that a highway so designed and built that it produces land-development patterns which "worsen the livability and efficiency of a metropolitan area is a disservice to the community."



PLUGGING ANEW FOR HIS CLASSROOM CONSTRUCTION PROGRAM, President Eisenhower in a nationwide radio address before the National Education Association early this month said that the nation's schools are more important than Nike anti-aircraft batteries and "more powerful than the energy of the atom." Meanwhile, in Los Angeles, the school housing chief reported that the city's building program is several months ahead of schedule. And in Washington State proposed legislation which centered around standardized plans for school construction died in committee.

THE $126 MILLION BUILDING PROGRAM of the United States Air Academy appears to have bogged down in the eyes of the Board of Visitors, with its chairman, Representative Scrivner (R-Kan.) voicing "disappointment" on progress made thus far.



THE TOUR OF HOMES, annually sponsored by the Women's Architectural League in a number of communities, seems to be in season, and at least two groups have scheduled such events. The WAL of Oregon has set its tour in Portland for May 11, while the San Francisco group has tentatively planned its Marin County junket for May 23.

MAY CONFERENCES AND EXHIBITIONS: Western Air Conditioning, Heating, Ventilating and Refrigeration Exhibit and Conference, Shrine Exposition Hall, Los Angeles, May 4-8; 19th annual convention of the National Association of Architectural Metal Manufacturers, Fairmont Hotel, San Francisco, May 7-12; first clinic of the International Council of Shopping Centers, Palmer House, Chicago, May 13-14; Centennial Celebration of the American Institute of Architects, Shoreham and Sheraton-Park hotels, Washington, D.C., May 14-17.

PROJECT PREVIEW

HEALTH AND WELFARE OFFICE BUILDING of International Union of Operating Engineers, Local No. 12, in Los Angeles will be windowless for compete accurate control of light. Two-story structure of precast, prestressed steel and concrete members, using gunited exterior walls above floor level, will have full basement to provide storage area for electrical and mechanical equipment. Facade will be composed of Italian glass mosaic tiles on second floor, river-washed stone and plate glass at street level. Architects-engineers: Caldwell, Mason & Muntz.

TWO-STORY DESIGN of 20-classroom project (10 are being built initially under $223,000 bond issue) for Gilbert School District in Portland was dictated by desire to save level area of small sloping site for play. Access to both floors will be provided at ground level. Study areas with luminous plastic ceilings will be adjacent to corridors, activity areas next to floor-to-ceiling windows. Architect: Warren Weber, AIA.

ONE-STORY PLANT with balcony and partial basement for Crown Lutheran Church in Seattle will have glued-laminated arches, cedar siding and brick veneer exterior. To cost about $135,000, project will have 11,000 sq. ft. Architect: Oliver Olson.

GLASS MOSAIC SPANDRELS of varying shades of turquoise, terra cotta and beige and elevator tower sheathed with gray-blue tile will form colorful exterior of $1,250,000 office building in downtown Riverside, Calif., for developers Miller, Saucke & Associates. Completely air-conditioned, reinforced concrete structure will be served by covered parking area accommodating 110 autos below ground level. Architects: Victor Gruen & Associates.

not specified

about this issue

One of the most stimulating papers delivered at the national AIA convention in Los Angeles last spring as far as we're concerned, was part of a seminar devoted to preservation of historic buildings, presented in a room which could accommodate only a handful of listeners. For some unknown reason Paul Thiry's probing remarks about "Progress' Dilemma" went almost completely unnoticed in the architectural press. We decided to save his talk for the same issue in which we publish the weekend house he designed for his family of four (including two boys) east of the Cascades.

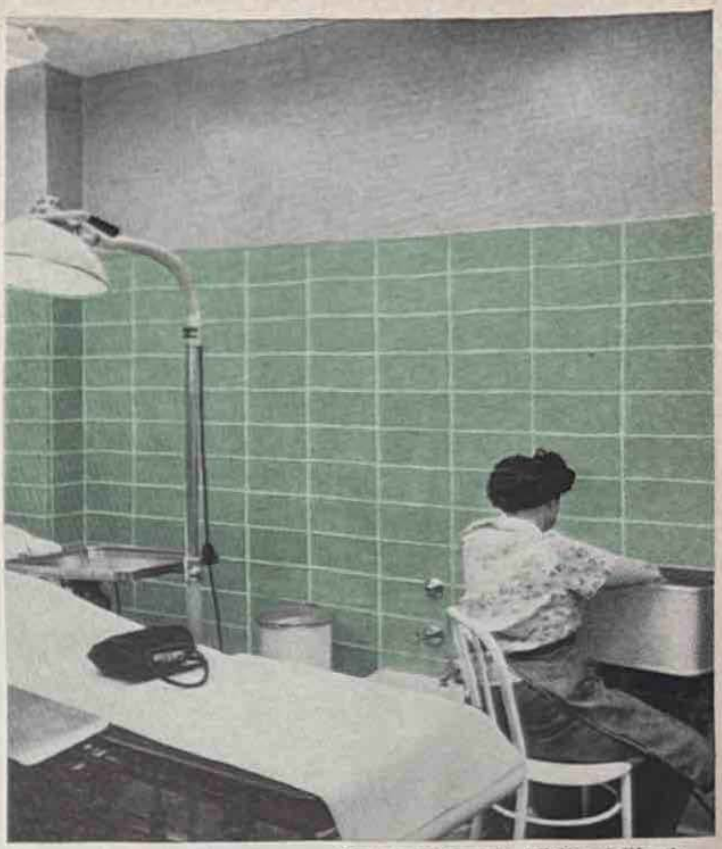
Mr. Thiry is also in the news this month, having won an AIA Award of Merit for his branch library in Seattle. In addition to photos of all West Coast winners—one Honor Award and five Awards of Merit—, we have rounded up those which won recognition in three other design competitions.

What is believed to be the world's largest clear span timber structure has been built, not in Texas, but in Bozeman, Mont., a striving community of some 15,000 citizens plus students at Montana State College where the fieldhouse is located. We regret to note that one of the architects on the project and one of the first to enroll at MSC, Fred F. Willson, passed away last summer.

p.r. in l.a.

In Los Angeles an architectural graduate of Southern California and his brother, who also attended the school although he received his engineering degree from Illinois, have embarked on a program which should reap public relations benefits not only for the firm—Albert C. Martin & Associates—but for the entire profession as well. Albert C. Martin Jr., FAIA, and J. Edward Martin have set up grants for advanced study and research for two fifth-year graduating students at SC.

Another phase of the program provides for extension of the firm's facilities, consultation with key staff personnel and access to reference and research data to aid students in the solution of their projects. It is this aspect that is perhaps the most important in the eyes of Dean Arthur B. Gallion. "This very well demonstrates a means for a closer relationship between architectural education and the practice of architecture and is a method for improving the general development of architecture through student participation with professionals."



on the right track

In view of the plight of passenger rail travel as reported in the nation's press, we sat up and took notice the other day when Great Northern Railway in Seattle announced the opening of a new Edmonds suburban station. We began to wonder even more when we learned that the same line is now constructing a station in New Westminster, B.C. just a stone's throw from Vancouver.

Upon further investigation we found that Great Northern's optimism about its rail passenger travel has been expressed to the tune of a predicted 10% (at least) increase above last year. P. G. Holmes, general passenger traffic manager, who conferred in the Northwest recently with key passenger men from Vancouver, B.C., to Los Angeles, said that he was outlining a "fresh approach" to this chronic railroad problem.

R.E.K.

Ford Motor Company, Milpitas, California
Albert Kahn, Associated Architects & Engineers
Walls of Glazed Structural Tile

first aid for ford

What Ford does, Ford does *right!* Their cheery First Aid Room shown here is only one of many facilities thoughtfully provided in their giant new Milpitas plant. There are first aid rooms, kitchens, cafeterias, shower and locker rooms —all with generous expanses of gleaming, smooth Western structural tile.

In these rooms which do not yield direct profit or production, building and maintenance costs came under extra close scrutiny. Western *Structural* Tile is speedily installed as combined wall and finish by only one trade (masonry). A damp cloth cleans it. Glowing, harmonious colors cannot fade. Smooth, marble-hard finish fends off chemicals, acids, grease and steam. Offers no shelter to dirt, vermin, bacteria or rodents. 12 colors plus clear glaze in standardized sizes and shapes.

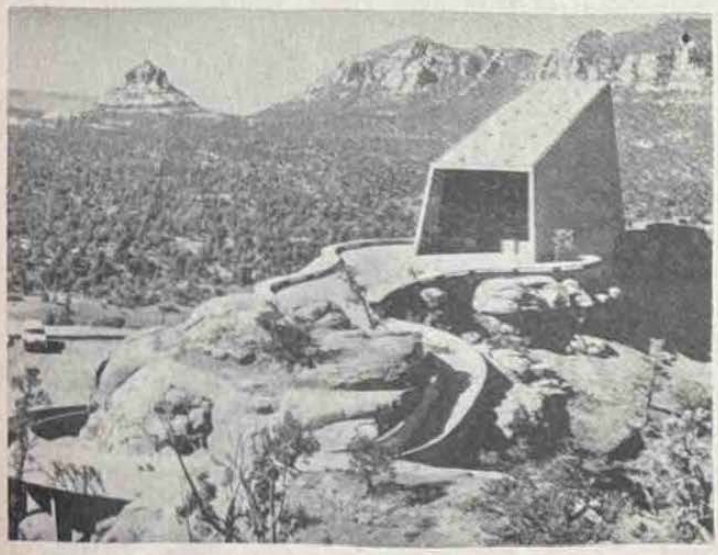
WESTERN STRUCTURAL TILE INSTITUTE

Design award winners (and trees) are bustin' out all over



"I think that I shall never see
An award winner without a tree."

Springtime brings with it a bevy of design award competitions, including those sponsored by the American Institute of Architects, five northern California AIA chapters (across page), the Church Architectural Guild and Church Property Administration magazine (both on p. 12). Most significant perhaps is the California program, distinguished by its lay jury and public judgments.

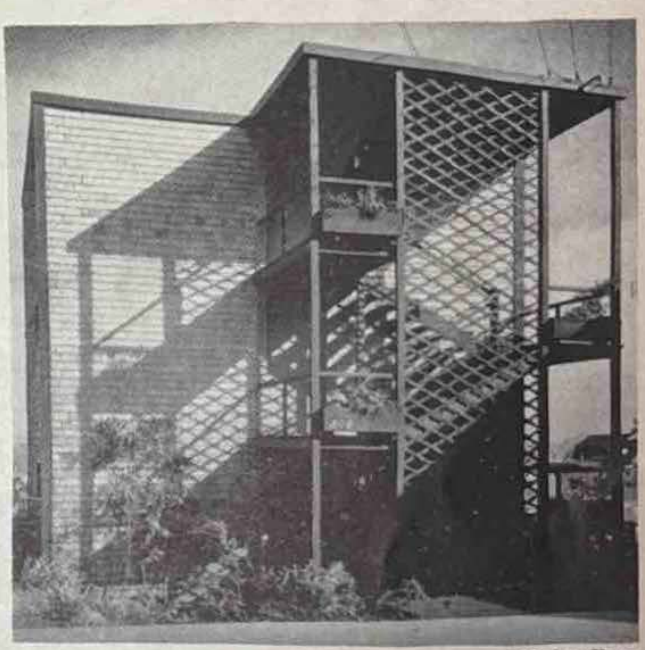
AWARD OF GREAT DISTINCTION: Boardwalk Shopping Center, Belvedere (above and left); John Lord King, architect; Sharp & Robinson, general contractors.

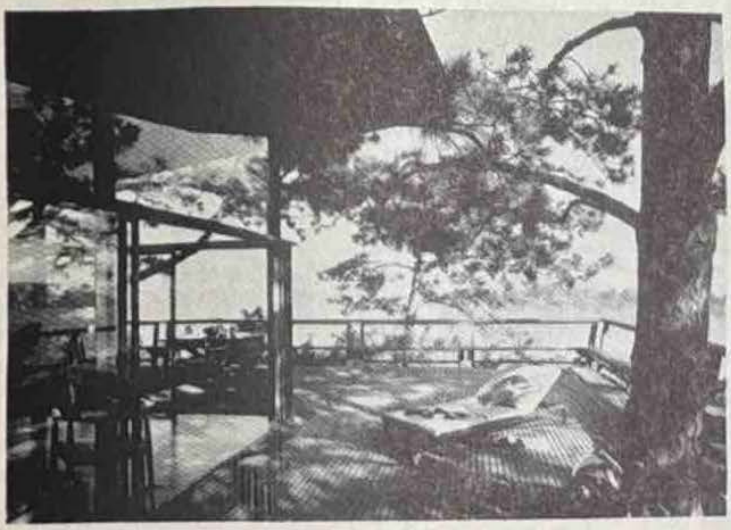


NORTHERN CALIFORNIA AIA HONOR AWARDS PROGRAM FEATURES LAY JURY

Twenty-two projects from a total of 160 submissions won citations in the most comprehensive design competition ever undertaken in northern California, with five chapters participating in the program. The sole architect on the jury, Dean Pietro Belluschi of the School of Architecture, Massachusetts Institute of Technology, was joined by Edgar Kaufman Jr., director of the Museum of Modern Art, New York; James M. Fitch, professor, School of Architecture, Columbia University; Harry Bertoia, architectural sculptor; and Dr. J. Robert Oppenheimer, director, Institute of Advances Studies, Princeton. The jurors in public judgment at the awards dinner commented upon the winning designs and summarized their reasons for the selections.

Top awards went to the buildings shown here and to the Chapel of the Holy Cross and a house in Belvedere (across pags), which also won national honors. Other winning projects and their designers:

AWARDS OF MERIT: Office building for Insurance Company of North America, San Jose, Wurster, Bernardi & Emmons; Fullerton mill for Kimberly-Clark Corp., Skidmore, Owings & Merrill; San Francisco apartments for Vera and Irene Brynner, Frank O. Merwin; Los Angeles apartments for L. H. Colby, Raphael Soriano; Surf-Rider Hotel, Honolulu, Gardner A. Dailey & Associates; Olympia Primary School, Daly City, Mario J. Ciampi; Frederic Burk School, San Francisco, John Lyon Reid & Partners; Office building for the Modesto Irrigation District, Mitchell Van Bourg & Associates; development house in Marin County, Herbert A. Crocker Co., Anshen & Allen; Mrs. Alexandra Curtis residence, Los Angeles, Raphael S. Soriano; Paul Bissinger residence, Kent Woodlands, Wurster, Bernardi & Emmons; Vernon De Mars residence, Berkeley, Vernon De Mars; Harry Reif residence, Los Angeles, Aaron G. Green; Miss Caroline Schrodes residence, Sausalito, Marquis & Stoller. **AWARD FOR SITE USE:** Mark Thomas Inn, Monterey, John Carl Warnecke. **CALIFORNIA REDWOOD ASSOCIATION CASH AWARD:** Walnut Creek School, John Lyon Reid & Partners.



"At least one Chinese wall has been knocked down around here. Instead of keeping the Honor Awards dinner a closed professional affair, the architects not only have thrown it open to the public but brought in an all-star cast of judges that includes only one architect."—Columnist Arthur Caylor in the San Francisco News.

Morley Baer

AWARDS OF HONOR: Studio Apartments, Sausalito (above); Campbell & Wong, architects; Wilson & Wedekind, general contractors. METAL CURTAIN
WALL
the creative
building tool
Commercial building built of 3 central core units enclosed in metal curtain wall. Apartment buildings use curtain wall recessed in balcony enclosures. End walls of anodized aluminum panels.
Design by Ray Stuermer, A.I.A.

KAWNEER a single source for a complete metal wall system

analysis, engineering, fabrication, installation

ANALYSIS AND ENGINEERING—Kawneer engineers will translate your architectural metal wall design in terms of factory fabricated units that will speed erection of your building, and assure client satisfaction. You gain the know-how Kawneer has accumulated through 50 years of architectural metals experience.

FABRICATION—Kawneer has extensive fabricating facilities available for application to your job. These modern facilities and production techniques allow Kawneer to give the most effective execution to your metal wall requirements . . . regardless of the blend of expression and function you may have in your design. Porcelain faced aluminum, stainless steel, colored Alumilite finished aluminum, insulated mullions for condensation and heat control, operating or fixed sash . . . whatever you demand, Kawneer can supply in its metal wall system.

INSTALLATION—Kawneer metal wall contracts are usually direct subcontracts with architect, general contractor or owner. This places complete responsibility for fabrication and erection with one responsible firm. This responsibility allows tight control over anchoring devices, sealing methods and materials, and expansion provisions . . . control that assures you and your client complete satisfaction. Since Kawneer has this control, an effective and adequate guarantee is provided at no extra cost.

Guarantee Mutual Life Co., Omaha, Nebraska.
Architect: Leo A. Daly Co.
Contractor: Peter Kiewit Sons' Co.

Geigy Chemical Co., Greenburg, N. Y. Architect: Skidmore, Owings & Merrill. Contractor: Vermilya Brown Co.

Equitable Life Building, San Francisco, California. Architect: Loubet & Glynn. Contractor: Dinwiddie Construction Company.

IF YOU ARE PLANNING construction that calls for metal wall, any Kawneer district office or the home office in Niles, Michigan, will be pleased to discuss the advantages and characteristics of Kawneer's complete metal wall system with you.

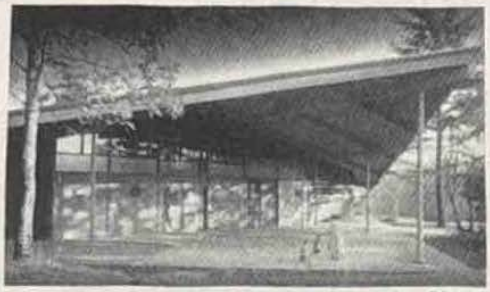
CHURCH ARCHITECTURAL GUILD (West Coast)

Art Hupy



FIRST PRIZE (seating 300 or less)—St. Elizabeth's Episcopal Church, Seahurst, Wash.: Durham, Anderson & Freed, architects.

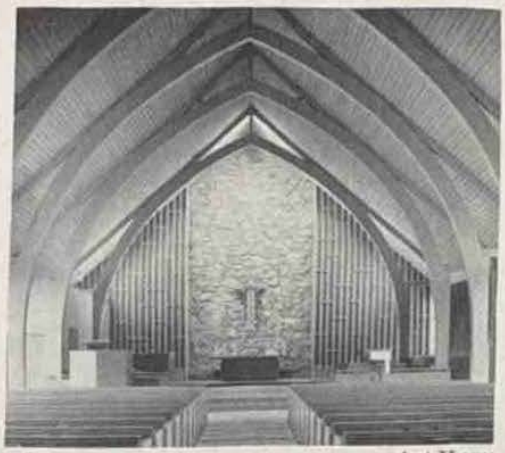
HONORABLE MENTION (seating 300 or less)—Chapel of the Holy Cross, Sedona, Ariz.: Anshen & Allen, architects (see p. 8.).

Phil Fe

HONORABLE MENTION (seating more than 300)—First Congregational Church, Palo Alto, Calif. Bolton White-Jack Hermann, architects.

Art Hupy

HONORABLE MENTION (seating 300 or less)—Eastshore Unitarian Church, Bellevue, Wash.: Bassetti & Morse, architects.

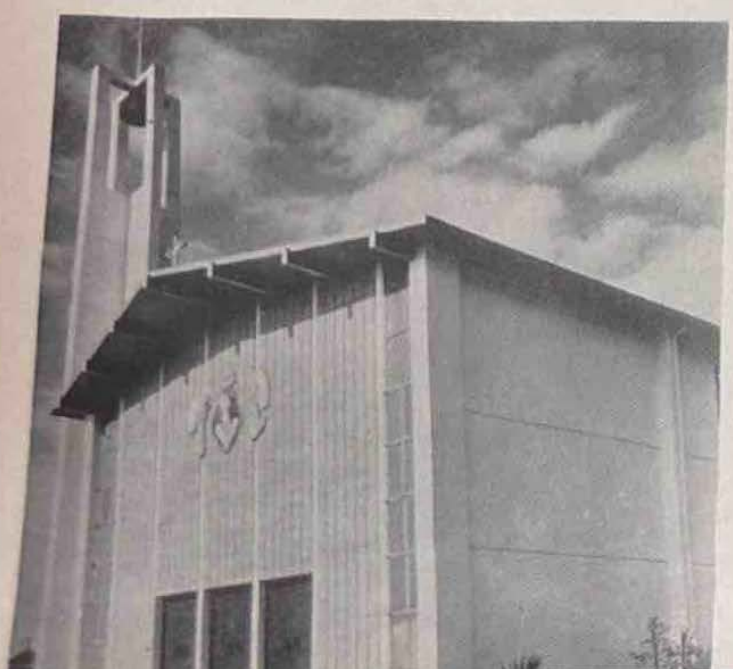


Julius Shulman

HONORABE MENTION (additions)—Neighborhood Church, Pasadena, Calif.: Smith & Williams, architects.

Dean Stone-Hugo Steccati

THIRD PRIZE (additions)—First Presbyterian Church, Burlingame, Calif.: Alfred W. Johnson, architect.



Art Hupy

HONORABLE MENTION (additions)—St. James Presbyterian Church, Bellingham, Wash.: Durham, Anderson & Freed, architects.

Julius Shulman

HONORABLE MENTION (seating more than 300)—Claremont Congregational Church, Claremont, Calif.: Theodore Criley Jr., architect.

CHURCH PROPERTY ADMINISTRATION (West Coast)

FIRST AWARD (complete parish plant, including a minimum of church, rectory, elementary school, convent and parish activities space)—St. Ignatius Parish Group, Sacramento, Calif.: Harry J. Devine, architect.

FIRST AWARD (seating more than 400 and completed since 1951)—Church of the Navitity, El Monte, Calif.: Chaix & Johnson, architects (see PA&B for March 1956).

Volume for first quarter drops 11%; two states show gain

BUILDING PERMIT VOLUME at the end of the first quarter of this year totaled a healthy $564,464,855 for the five western states; nevertheless this is an 11% drop below the same period in record-breaking 1956. California showed the biggest decrease percentagewise, while Idaho chalked up a substantial gain.

State totals for the first quarter and percentages of increase or decrease are as follows: California, $462,643,815, down 13%; Oregon, $27,602,749, down 5%; Montana, $5,703,087, down 0.9%; Washington, $63,934,560, up 4%; and Idaho, $4,580,644, up 15%.

While the March total for the five-state area shows a seasonal increase of 33% over February, the dollar volume is 14% under March of last year. On a statewide basis, only Idaho (up 5%) reported an increase. California was down 14%; Oregon, 15%; Washington, 6%; and Montana, 30%.

Among individual reporting agencies with substantial decreases were Long Beach, down $13 million; Los Angeles County, $11 million; Contra Costa County, $4¾ million; Fullerton, $3½ million; and Seattle, $2¾ million. Those showing good-sized increases were Los Angeles, up $11¾ million; Stockton, $4 million; San Francisco, $2½ million; Orange County, $2 million; and King County, $2 million.

Housing continues to be the stumbling block. For example, among the seven agencies listed below whose building permits are divided according to categories, all but one show substantial decreases in dollar value of residential construction compared to a year ago.

Following is a breakdown of building permits issued by several major agencies during March.

	DWELLING UNITS		COMMERCIAL & INDUSTRIAL		PUBLIC	
Portland	39	($ 584,800)	16	($1,077,135)	3	($ 415,000)
King County	341	(3,318,910)	50	(792,145)	5	(3,513,000)
Seattle	649	(2,825,870)	211	(924,225)	5	(260,400)
Tacoma	113	(487,637)	30	(415,535)	3	(1,270,000)
Orange County	602	(7,543,732)	61	(587,043)	2	(41,200)
Sacramento Co.	334	(2,258,839)	57	(3,366,041)	5	(65,567)
Los Angeles Co.	2689	(23,915,340)	377	(5,249,814)	37	(1,072,700)

A new century beckons architects to nation's capital

"Since our interest is directed to the future rather than the past and to the influences of society upon architecture rather than to the practice of architecture itself, these discussions will explore . . . our new technology; the international problems created by the shrinkage of time and distance; the pressures placed upon resources by changing economies and expanding population; the status of the arts in a dynamic civilization; and the impact of these interrelated movements upon our environment of tomorrow."

For at least five days next month—May 13-17—Washington, D.C., will double as the nation's capital of architectural discussion when the American Institute of Architects celebrates its centennial. The Shoreham and Sheraton-Park hotels will serve as headquarters.

The tentative list of program speakers reads like a "Who's Who in America" with leaders in a number of related fields invited to appear, headed by President Eisenhower. (As we go to press it has not yet been established whether he will accept.)

Among the multiude of participants will be three West Coast architects, John S. Detlie of Seattle, Nathaniel Owings of San Francisco and Charles Luckman of Los Angeles, all of whom will serve as session chairmen; and a former Portland architect, Pietro Belluschi, will give one of the principal architectural addresses.

Detlie will moderate a panel which will explore the question, "Should art be subsidized by government?" Three viewpoints will be expressed by Lillian Gish, actress; Dr. Howard Mitchell, conductor of the National Symphony Orchestra; and U. S. Sen. Homer Capehart of Indiana.

Preceding the panel will be a discussion of "The Arts in Modern Society" by Bennett Cerf, director of Random House and well known to television viewers for his weekly appearance on "What's My Line?"

A session on technology, chair-

DETLIE

BELLUSCHI

manned by Owings, will feature talks by Dr. Detlev W. Bronk, president of the National Academy of Sciences, and Paul G. Hoffman, U. S. delegate to the United Nations.

Luckman will head a session devoted to the world of economics—population trends; the expansion of business and its responsibility to the community; the role of labor in the new society. Panelists will include Dr. Emerson P. Schmidt, director of economic research, U. S. Chamber of Commerce; Brewster Jennings, chairman of the board, Socony-Mobil Oil Co.; and Walter Reuther, chairman, Economic Council, AFL-CIO.

The convention theme, "A New Century of Architecture," will be discussed by Belluschi, dean of architecture at Massachusetts Institute of Technology. He will look at the development of American architecture over the last 100 years, its relationship to new technology and the needs of our changing environment, and the path it will follow in the foreseeable future.

Keynoting the institute's 89th annual convention will be the editor of the Atlantic Monthly, Edward A. Weeks, who in examining "The World of Nations" will consider such aspects as the impact of politics upon native environment. His address will follow the opening remarks by AIA president Leon Chatelain on Monday evening, May 13.

Dean John E. Burchard of the School of Humanities, MIT, whose keynote address was the highlight of the 1956 convention in Los Angeles, will chair a session on "Environment and the Individual." He is also writing a book on the interrelation of society and architecture in the nation during the past century.

Others scheduled to appear on the program are John Knox Shear, editor of Architectural Record; Carl Feiss, architect and planning—urban renewal consultant; David Rockefeller, executive vice president, Chase Manhattan Bank; and U. S. Sen. Joseph Clark of Pennsylvania.

Other events will include the presentation of the Gold Medal and a special Centennial Medal (see PA&B for February) at the annual dinner, the Honor Awards luncheon (see p. 8) and the investiture of new fellows. Exhibition Hall of the Sheraton-Park Hotel will house the building products display.

Cultural center for capital gets presidential nod

A move to enable Washington, D.C., to take its place culturally among other capitals of the world has taken a giant step ahead with approval of President Eisenhower of initial plans and recommendations for a $40 million National Civic and Cultural Center.

A planning board, headed by Los Angeles architects-engineers Pereira & Luckman, envisions the center as a multipurpose structure with auditoriums and halls of varying size to accomodate events ranging from international conferences to ballet and musical programs, both large and small.

THE WINDOWS YOU WANT

made and installed on time by Soulé

Soulé Intermediate Window Wall and Windows in
Hamilton Recreation Center, San Francisco.
W. G. Merchant, A.I.A., M & K Corp., Contractor.

Soulé Intermediate steel windows impose no limit to stock sizes. When you design a window or window wall job, specify the opening sizes you want. Soulé sales engineers will work with you, help assure you the exact window you design at the price you want to pay. All Soulé metal windows are made in the West, for fast transmission of details and delivery to your job on time. A big plus advantage is installation by our own crews, guaranteeing you a workmanlike job. You deal with one responsible Company for the manufacture and the installation of your intermediate steel windows.

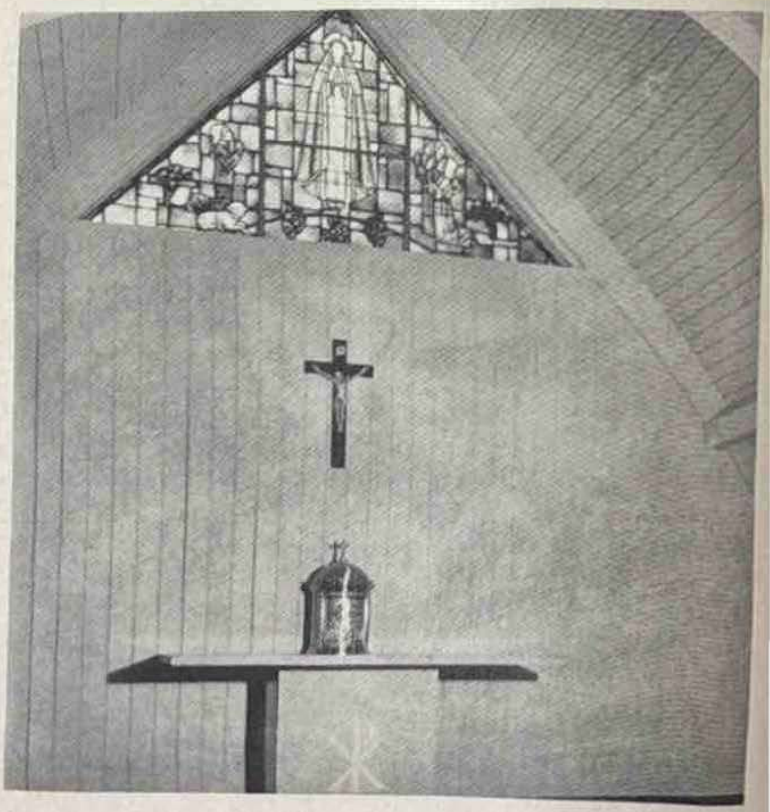
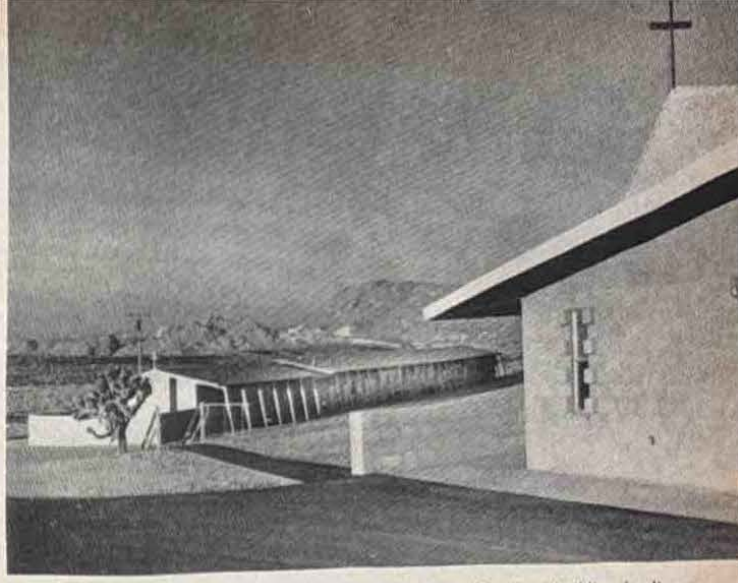
Religious plant takes its cue from the desert

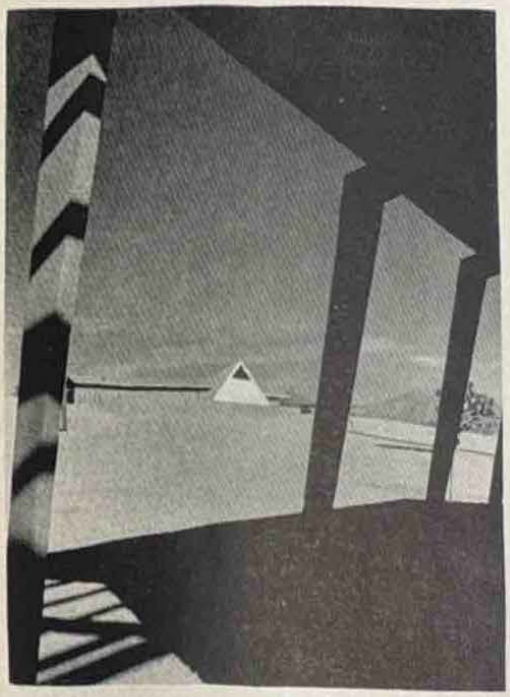


St. Mary's Academy School and Convent
Apple Valley, California

Douglas Simmonds photos

CONVENT BUILDING HOUSES CHAPEL with stained glass window executed by Judson Studios in soft desert tones. Chapel interior is gray, has polished granite altar and Florida shell stone alter rail.



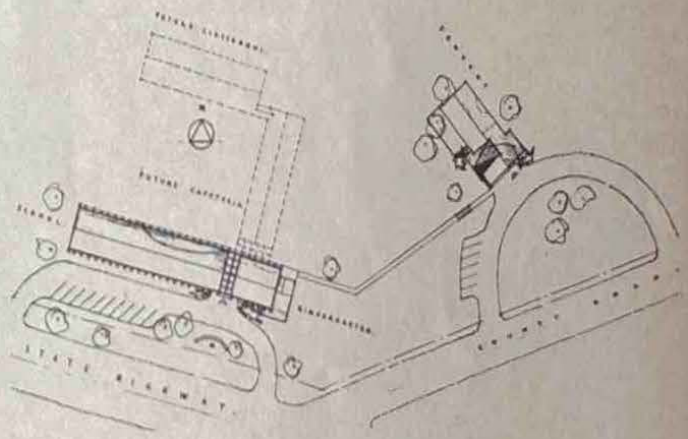


McFARLAND-BONSALL-THOMAS, Architects

WILLIAM T. WHEELER, Structural Engineer

FRED SCHWARTZ, Mechanical Engineer

BENNINGTON & SMITH, General Contractors



ENTRANCE TO CONVENT (above) with school building in distance down hill. Each classroom has outside entry from covered walk. Arcade effect was almost lost because of need for $1,000 for supporting post structures; but in separate campaign posts were "sold" to contributors at $20 each.

PLANS AND MATERIALS have been so coordinated that the first two buildings in this religious plant—a school consisting of four elementary classrooms and kindergarten and a convent housing six nuns and chapel—seem to grow out of the sandy bush-covered hills. The major design problem was to arrange the initial structures on the 25-acre site between Apple Valley and Victorville with the idea of future development constantly in mind. Eventually the project will have four more classrooms, cafeteria, considerably enlarged convent, high school and church, and necessary play areas and game fields.

As in similar building programs, the budget was another pressing matter but here it was further accentuated. Normally some 300 to 400 families are considered necessary to support a parochial school, as against this parish with less than 200 families within a 28-mile radius. Construction costs, exclusive of property and landscaping, totaled $107,000; totally equipped the project represents $143,000.

Exteriors of both buildings are of coral-colored, lightweight cinder block, with roofs of crushed red stone. The convent trim is painted soft yellow; the school, soft green. The chapel end wall of 2x6 t&g solid sheathing repeats the yellow, while its roof is of white cement tile. Soft tones also dominate the interiors: grays for the convent and chapel, tans for the school.

OUTLINE SPECIFICATIONS

Type of Construction: Reinforced concrete.

Exterior Walls: Coral Vibro-Tile lightweight cinder block; chapel end wall of 2x6 t&g solid sheathing.

Roofs: Heavy crushed red stone on asphalt paper-mopped; chapel of white cement tile over asphalt paper-mopped.

Floors: Asphalt tile over 4-in. concrete slab.

Windows: Metal Window Corp. aluminum casements (some transom style); stained glass window by Judson Studios.

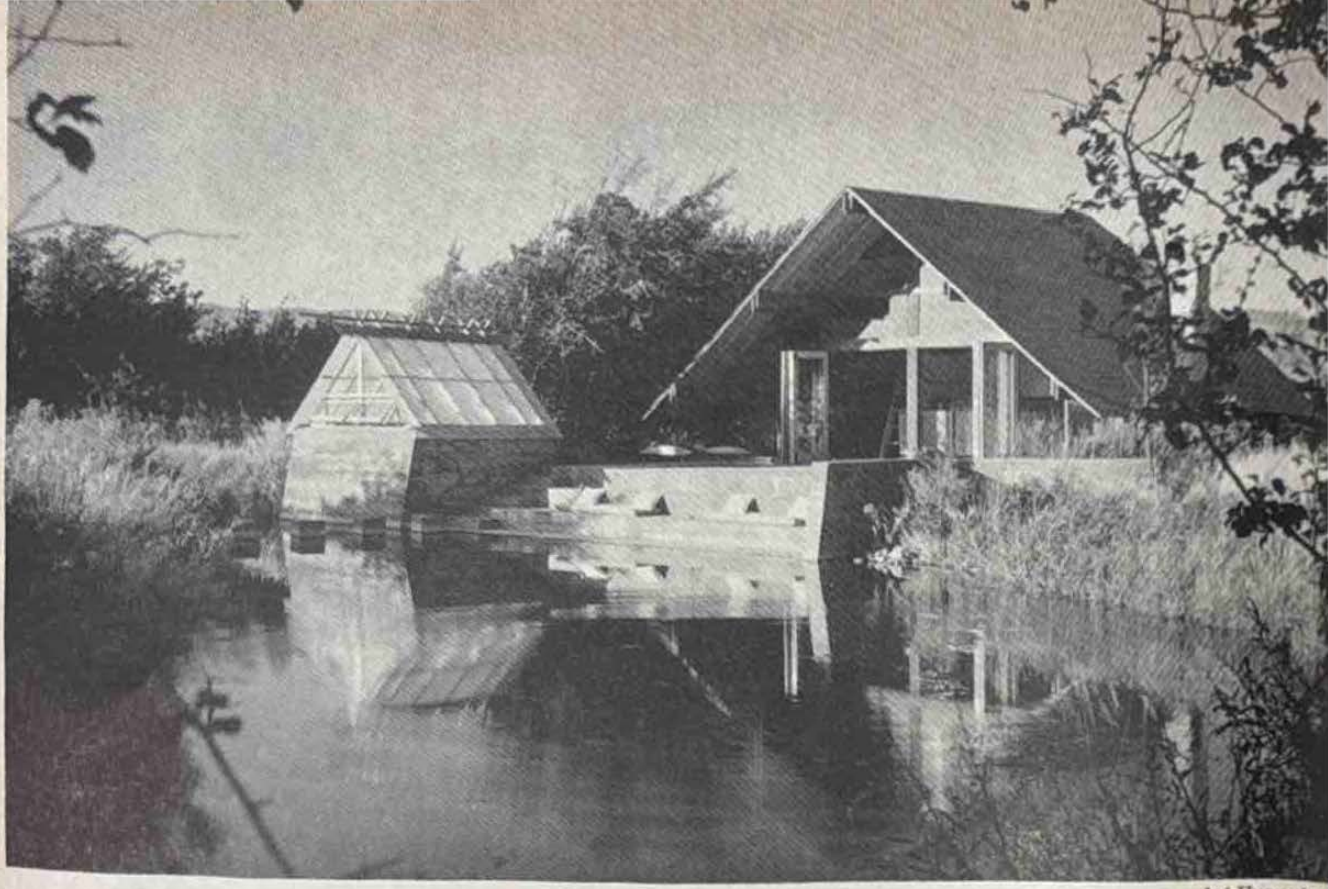
Interior Walls and Partitions: Plaster on 2x4 studding; some cinder block cross walls.

Ceilings: Acoustical tile in school; 2x6 t&g solid sheathing on 6x8 scissor beams in chapel.

Insulation: Rockwool bats in ceilings, with ventilated attic space above.

Lighting: Incandescent pendant concentric ring fixtures in school; recessed and bullet type in main rooms of convent; special pendant and indirect fixtures in chapel.

Heating: Payne forced air unit.



Cooling: Laid out for individual room coolers in attic of school; cooler and blower fans installed in convent to serve chapel and main corridor.

Plumbing: American Standard throughout with copper water supply lines under slab.

Total Area: 120,726 cu. ft. (82,026 cu. ft., school; 38,700 cu. ft., convent).

Total Cost: $107,000, exclusive of property and landscaping.

Date of Completion: 1953.

An architect's own weekend retreat

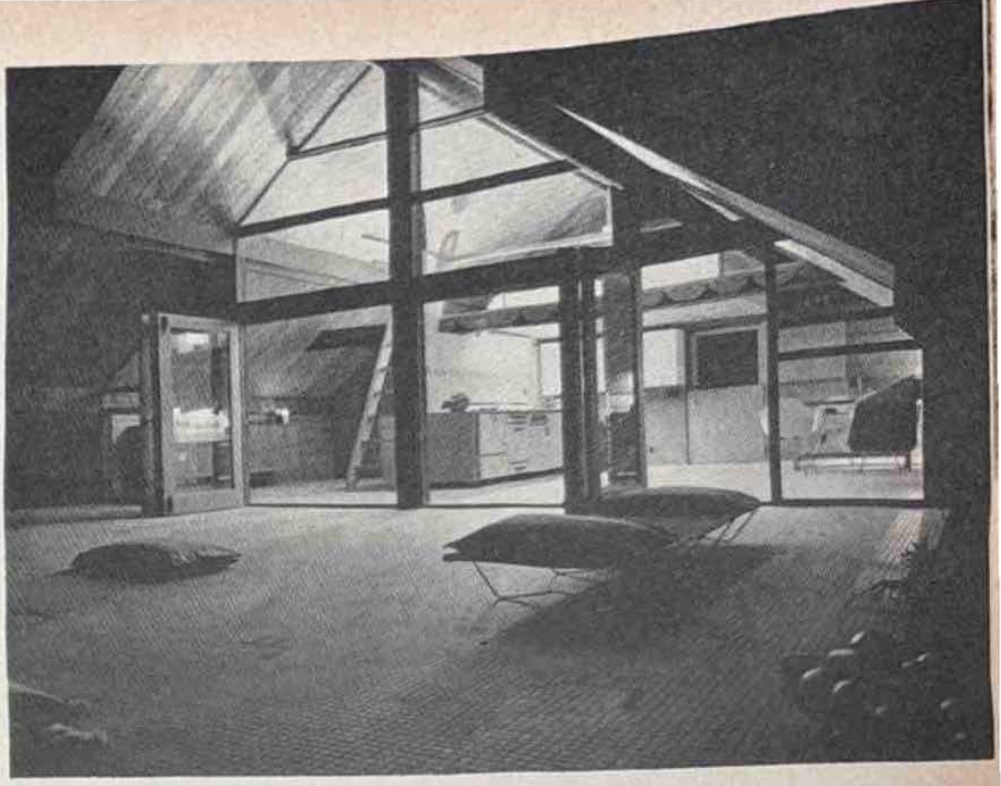
Ellensburg, Washington

PAUL THIRY, FAIA, Architect

"JUST A SHELTER" is the way the architect describes this weekend house he designed for his family of four. Sited in the middle of a valley adjacent to a mountain-fed creek in the cattle country of eastern Washington, it looks out to the fields and snow-capped peaks. The nearest neighbor is one-fourth mile down the road; the nearest city of Ellensburg, five miles away.

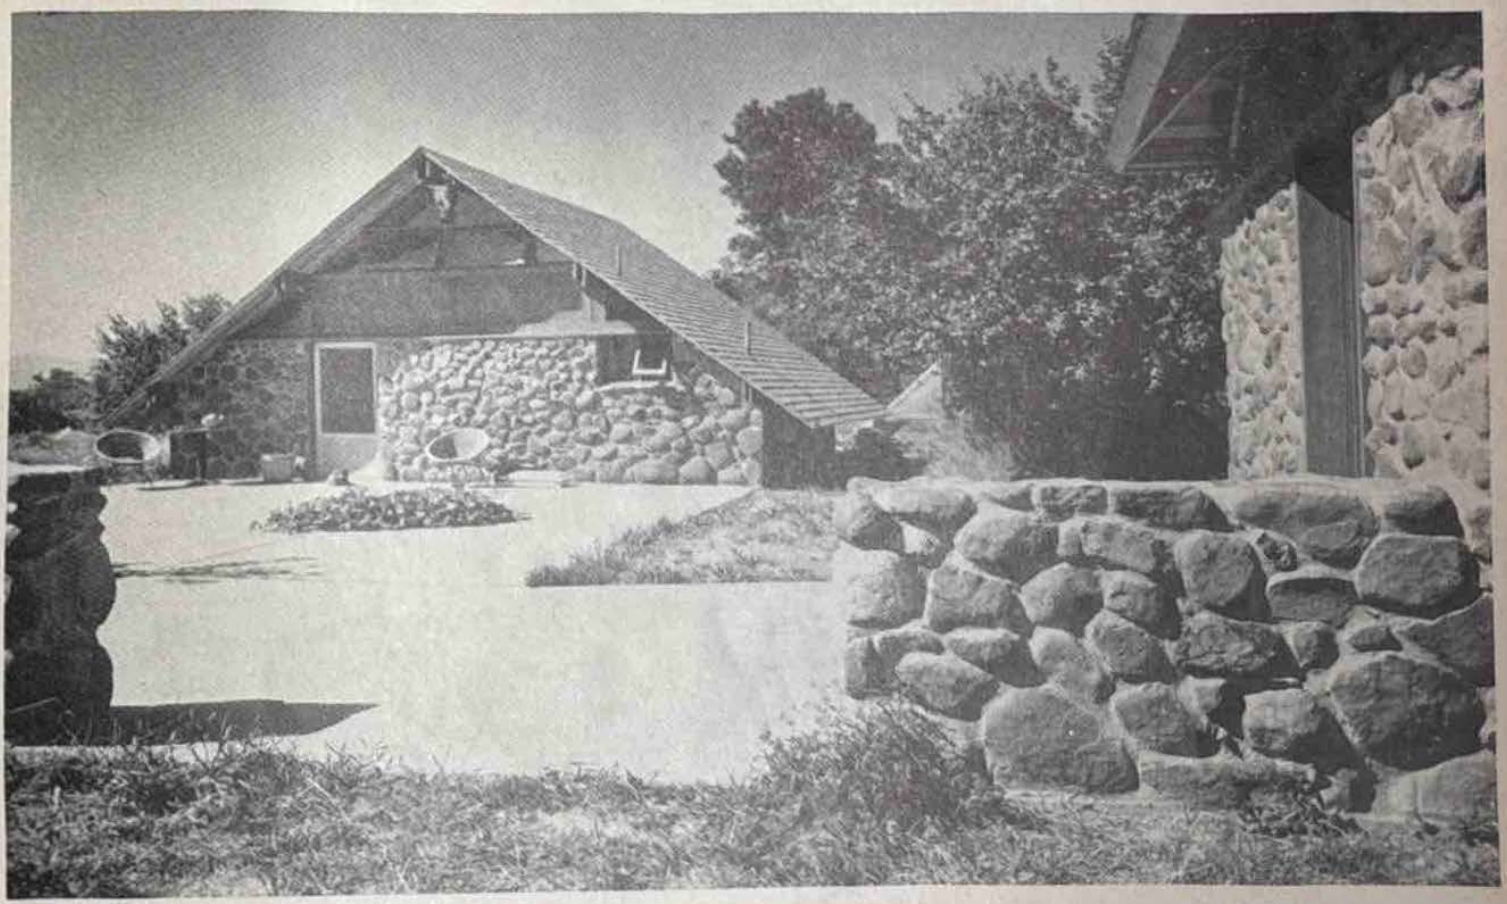
To complement this setting for rest and play, the small house has been planned for a minimum amount of housework and maintenance—enameled fixtures, tile floors and walls, etc.—while providing such conveniences as dishwasher, refrigerator and electric radiant heat. It is divided into two distinct units: kitchen-sitting area with fireplace and cleanup-dressing area, which has drawer space and washing facilities separated from the toilet and shower. The parents sleep on the balcony, the boys in a plastic-roofed structure (in shadow until 8:15 a.m.) at the edge of the terrace. More sleeping houses can be added as requirements demand.

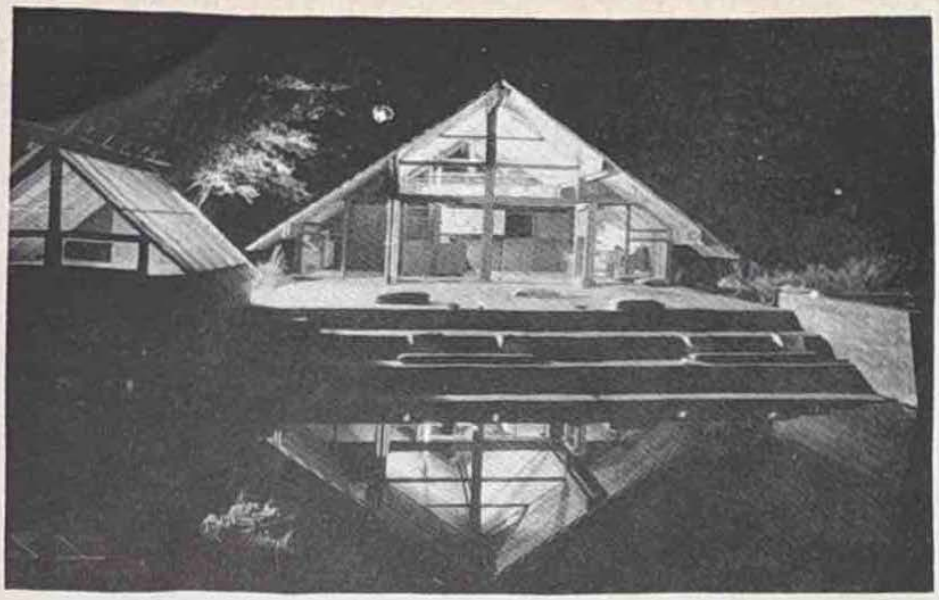
While at the weekend retreat, most of the family living is done out-of-doors—fishing, hiking, hunting or just plain lounging. Thus the members arrive dressed for the occasion, eliminating the need for closets, which only collect dirt and insects and get musty when the house is vacant.

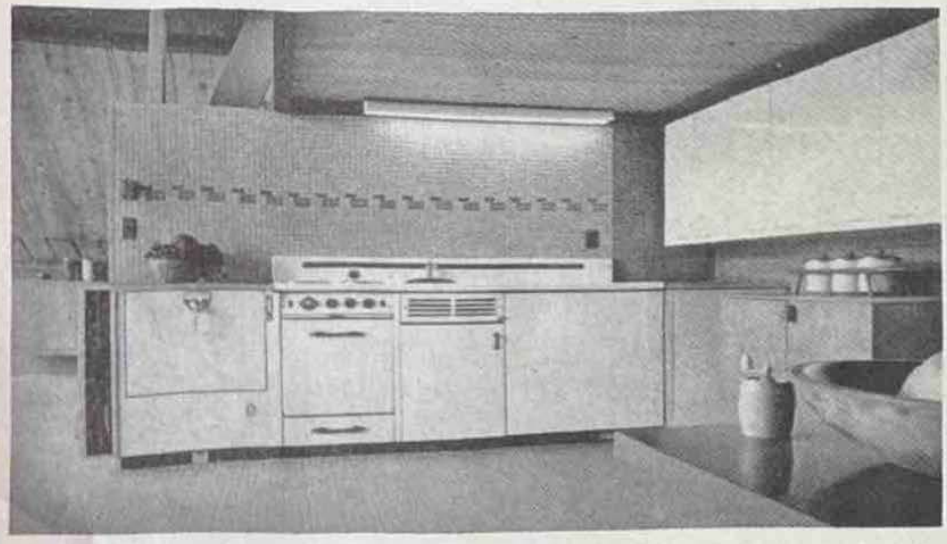


Orientated against a strong wind, the house takes its shades of yellow, red and brown from the surrounding countryside.

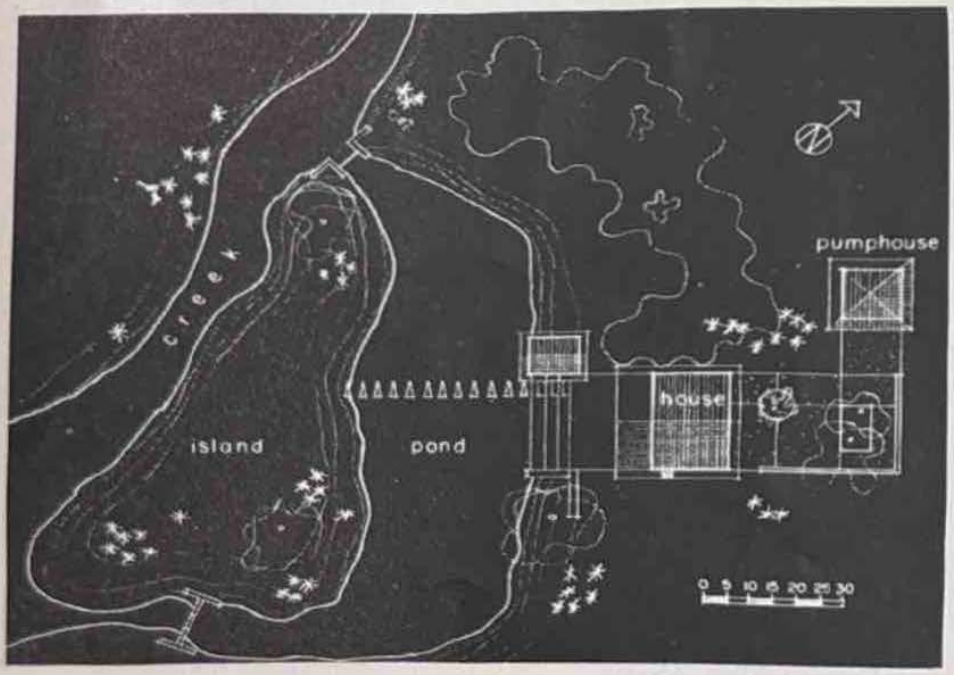
PASTORAL CHARM REFLECTED IN POND by day takes on dramatic impact in clear night so typical of eastern Washington. Since house is located on game preserve property, ducks add to enjoyment of pond, separated from mountain-fed creek by small island.



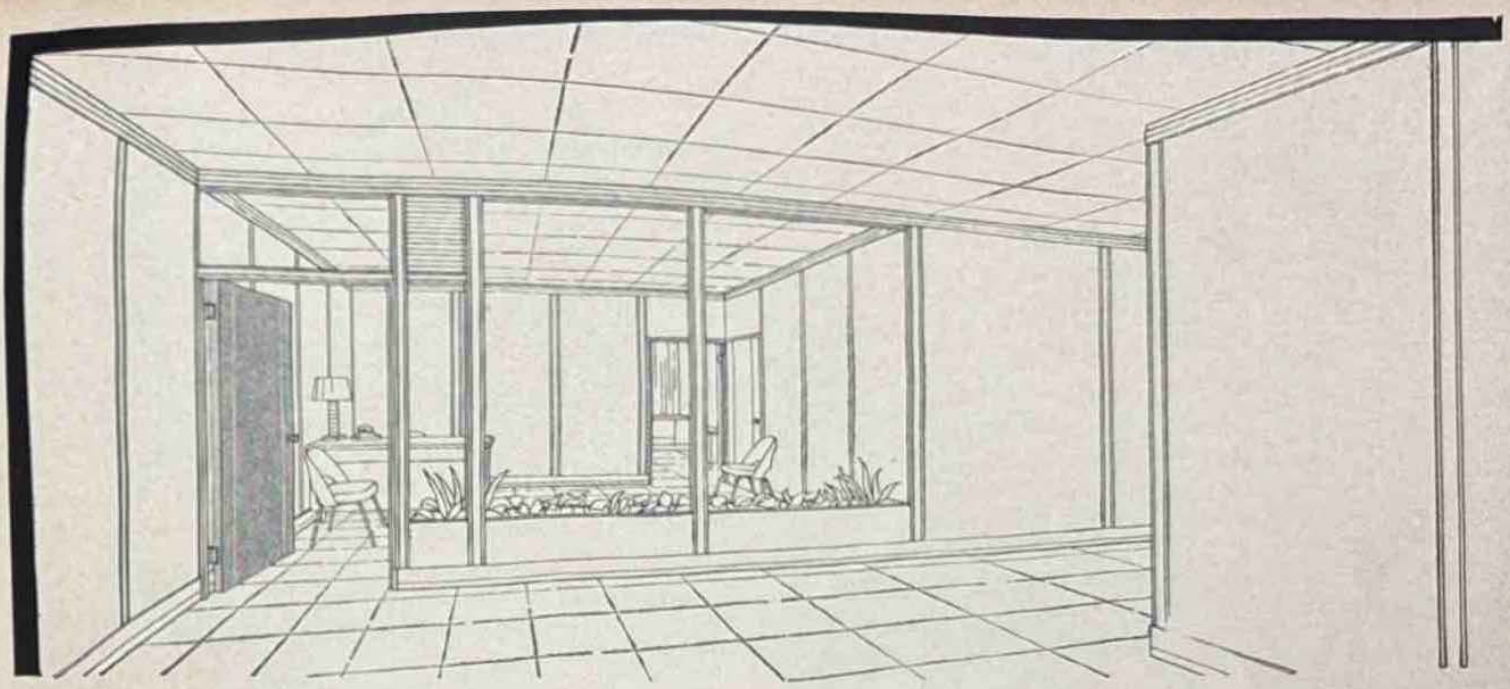




CLOSEUP of yellow tiled floor used thraughout house for easy maintenance. Designs executed by architect's wife are replicas of those found on Indian basketry in area. All-purpose area is seen in right foreground, with cleanup-dressing area to left of kitchen core.



FIELD STONE VENEER ties house to countryside about, offers privacy from road. Shadow is thrown on patio side in heat of day. Pumphouse at right contains water tank, work bench, garden tools, food supplies.



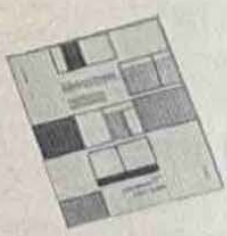
TERRACE ITSELF is tiled throughout. Drudgery of cooking tasks is lessened since kitchen is core of plan, facilitating conversation with rest of family. Cleanup area is behind kitchen partition.

OUTLINE SPECIFICATIONS

Type of Construction: Wood frame.
Exterior Walls: Field stone veneer and glass.
Roof: Mill type 2x6 t&g, asbestos shingles.
Floor: Concrete slab over 6-in. gravel fill, with Mosaic tile surface.
Interior Finish: Mosaic tile and mahogany casework.
Insulation: Fiberglass.
Heating: Heatsum electric radiant cable in slab.
Date of Completion: Summer 1956.

For efficient, modern offices and low maintenance costs, specify beautiful HAUSERMAN Interior Walls

Where interior arrangements must change as tenants come and go or as tenant requirements change, Movable HAUSERMAN Interiors offer architect and building owner an ideal solution. Compare these benefits with other types of partitioning . . .



COMPLETE FLEXIBILITY—Regardless of tenant demands or time schedules, HAUSERMAN Interiors can be rearranged quickly by skilled HAUSERMAN erection crews with virtually no inconvenience to nearby offices. There is no demolition, so there is no dust or dirt, and all materials are reusable. Designed to fit most modular plans, HAUSERMAN Interiors can be moved without changing heating, lighting or ventilating systems. Simple lay-in wiring channels in HAUSERMAN panels permit inexpensive changes in telephone positions and easy addition or relocation of electrical outlets.

EARLIER OCCUPANCY—HAUSERMAN partition construction involves just two planes: the finished floors and ceilings. With no obstruction to slow work, the HAUSERMAN Walls literally flow into place as experienced HAUSERMAN crews erect hundreds of feet of wall and wainscot a day.

BEAUTY INEXPENSIVELY MAINTAINED—Refinement of detail, precision-fitted parts and true flat surfaces permit easy and low-cost maintenance. The factory-applied, baked-enamel finish retains its original beauty indefinitely with mild soap-and-water washing. A choice of 140 standard colors or wood grain finishes is offered.

FIRE SAFETY AND SOUND CONDITIONING—Built of reinforced steel and fully insulated, a HAUSERMAN Wall will not burn . . . will stop more sound than a 5½" tile and plaster wall.

INTEGRATED ENGINEERING SERVICE—HAUSERMAN engineers work closely with the architectural team to provide detailed working drawings. Further, with Movable HAUSERMAN Interiors, field supervision is cut to a minimum because there is just one source of supply, eliminating the need to coordinate the activities of several trades.

RAISING SECTION of dome into place after assembly of arch ribs purlins, strippers and cross bracing on ground. Pole shoring supports dome section during erection; when completed, shoring is removed, leaving completely unobstructed space. Note size of workmen on top of dome section, joining sections together.

LATERAL BRACING of reinforced concrete is poured integral with pilasters. Wall sections are filled with brick-colored concrete blocks.

TWO-STORY WING nearing completion in foreground will house entrance lobbies and administrative offices.

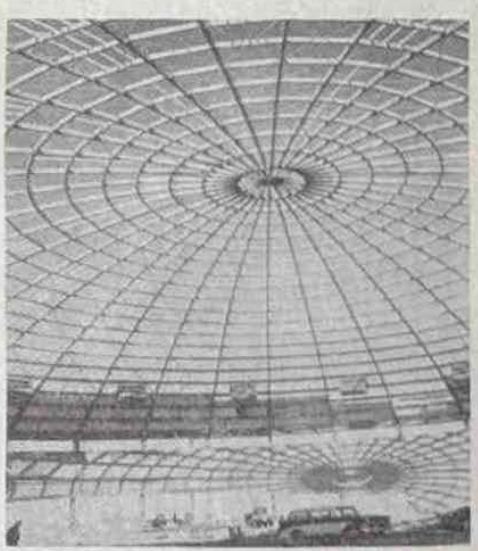
Fieldhouse spanned by largest timber dome

MOST SPECTACULAR aspect of this physical education center is the fieldhouse main arena, whose dome—300 ft. in diameter, 40 ft. high at the perimeter and 90 ft. high in the center — is believed to be the world's largest clear span timber structure in the world.

The lower ends of the glued-laminated Douglas fir arch ribs are connected to a circumferential tension ring which rests upon reinforced concrete pilasters with a pumice block wall between columns. Upper ends of the ribs frame into a heavy compression ring. Nineteen lines of timber purlins extend around the dome, spaced at 8 ft. on center. The laminated members used to span the 300-ft. diameter are amazingly small. The 36 main ribs are 7x16¼; the compression purlins vary from 7x16¼ to 7x11⅜.

The arch ribs were assembled on the ground in pairs with purlins in place. The assembled sections, weighing about four tons each, were hoisted into place with two cranes and supported by pine poles until the dome was completely assembled in place. Poles were then removed.

On top of the block wall and between the roof line is a continuous band of glass around the complete periphery of the arena. Topping this structural system are sub-purlins, 2-in. wood fiber roof decking, 2-in. rigid insulation, a 20-year built-up roof and a coat of white paint.



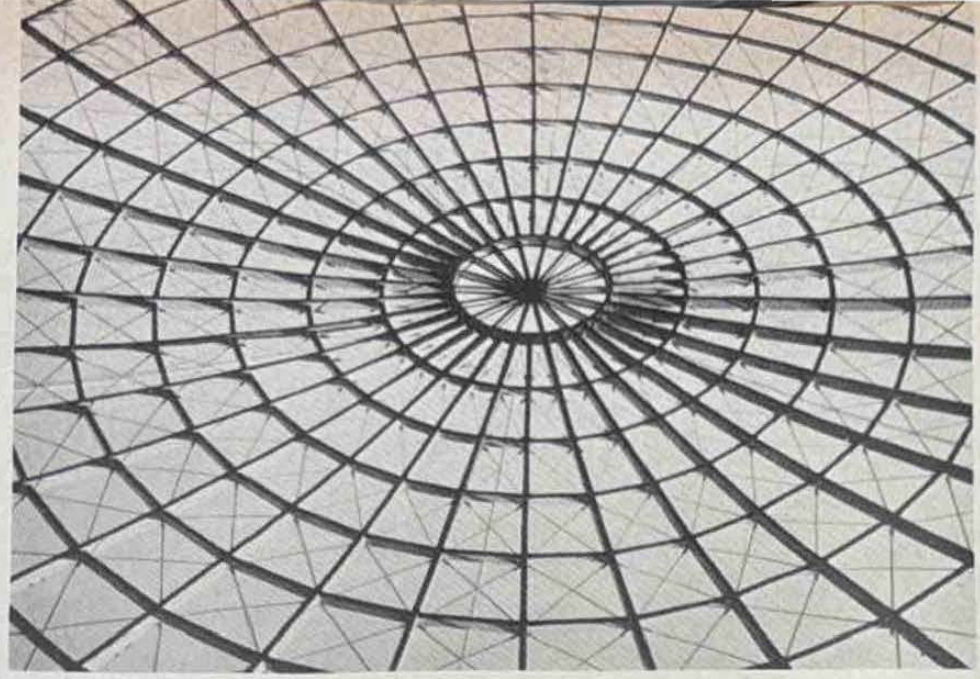
design criteria

Why the architects (Oswald Berg Jr. and the late Fred F. Willson) selected this type of construction is explained in the following paragraphs:

"When we first began working on this building, we fully realized the problem of enclosing an immense area without internal support. We studied many different types of structures and shapes in our search for a striking form to enclose space and still accomplish our objective within a limited budget. This research and design was done on a tight time schedule.

"After numerous sketches and studies of various and some radical approaches to the problems of design, speed of construction and economy, we decided that a dome shell would be the most economical and practical. We immediately discarded concrete shell construction because of its weight, erection time and an end result of higher costs. We made preliminary estimates on the use of wood and steel and from these estimates we found laminated wood to be the less expensive.

"In making our final selection in the use of laminated wood, we not only considered the economy features but many other values, such as its beauty in its final form and color, low maintenance, favorable fire insurance rates, permanency and ease of erection. Other factors we had to consider were humidity effects on the structure, dimensional stability under changing temperatures, elimination of painting by prestaining, time element in erection and availabilty of materials."



TOP OF DOME is 92 ft. above floor level. Heating units are suspended from arch ribs. Lights and heating units are serviced from catwalk suspended from dome.

The complete cost of this structural system in place, including the top compression ring and bottom perimeter tension ring, with fittings was about $2.60 per square foot. (The architects point out that bid figures to erect this same structure in steel were about 9% higher.)

facilities

The main arena is treated acoustically by the use of the wood fiber roof deck on the entire ceiling of the dome, of the pumice block wall on the perimeter and of clay earth on the floor, as well as depending upon the natural absorption of sound by the spectators. A semi-low level sound system with 52 speakers can control the sound required in any area of the building.

The lighting system provides 100 ft.-candles on the main playing floor for competitive games, 50 ft.-candles for practice periods, 35 ft.-candles on the main arena and 20 ft.-candles on the

ARCH RIBS, PURLINS AND CROSS BRACING form pattern resembling giant spider web. Ends of arch ribs frame into compression ring at top.

FIELDHOUSE

spectator area—all regulated by a low voltage control system in groups or singly.

The air is changed in the main arena about every 20 minutes by huge heat and vent and exhaust units; the locker room air is changed every two minutes.

Two circular catwalks suspended from the roof afford maintenance of the sound, electrical, heating and ventilating systems and serve as spotlight stations for effect lighting. An extensive telephone intercommunications system also has been put in operation.

Steam requirements to properly heat and ventilate this building were almost equal to those of the remainder of the Montana State College campus. Therefore the capacity of the central heating system had to be increased almost double, as likewise the elecrical requirements.

A gay holiday effect is achieved by the use of colors: heating and ventilating units, bright coral; catwalks and the main compression ring in the center of the dome, light blue; sound boxes, yellow. The bright blue of the air intake and exhaust units contrasts with the white roof exterior; the beams are prestained light red.

construction stages

The building has been designed for two stages of construction. The first phase, to be completed this coming June, consists of the main arena, its playing area, locker facilities, spectator seats and six concession stands on the mezzanine; plus the main entrance concourse, administrative offices, coaches' office, one classroom and public lavatories. The arena will accommodate 12,000 for basketball games and about 15,000 for boxing matches, small stage events and rallies. Permanent precast concrete risers with stadium type seats are above the mezzanine on either side.

The second stage of construction will include physical education classroms, a women's swimming pool with spectator area, dressing rooms, auxiliary basketball gymnasium, handball courts, wrestling room, etc. All of these items have been planned in the original scheme and many of the mechanical and electrical facilities have been installed at this time.

It is interesting to note that the physical education center has been promoted and financed by the students themselves — enrollment now exceeds 3,000 and is expected to double by 1965—and by revenue received from activities within the building.

OUTLINE SPECIFICATIONS

Type of Construction: Reinforced concrete.
Exterior Walls: Brick-colored pumice block, with band of glass around periphery between wall and roof line.
Roof: 36 Douglas fir glued-laminated arch ribs, fabricated and erected by Timber Structures, Inc., connected to circumferential tension ring resting on reinforced concrete pilasters. Structural system is topped by sub-purlins, 2-in. Tectum roof decking, 2-in. rigid insulation and 20-year built-up roof painted white.
Floors: Concrete slab with asphalt tile in some areas; clay in main arena.
Interior Walls and Partitions: Exposed masonry; glazed tile in locker and shower rooms.
Ceilings: Tectum acoustical roof decking in main arena; concrete elsewhere.
Sound: Stromberg-Carlson semi-low level system with selective controls.
Heating: American Blower fans heated by gas fired steam central plant.
Ventilation: Air exhausted in arena every 20 minutes when filled to capacity; changed in locker rooms every two minutes.
Lighting: Low voltage system controlled in groups or singly.
Total Area: 138,080 sq. ft.
Total Cost: $1,453,115.
Cost per Square Foot: $11.10.
Date of Completion: June 1957.

BUILDING IS USED in semi-completed condition during basketball season, with seating capacity of 12,000.

Structural engineers look at wood, steel, concrete

—MSC fieldhouse discussed

Wood, steel and concrete all had their day in court, parading new design and construction accomplishments before Far Northwest structural engineers at their first areawide conference, held March 18 and 19 on the Washington State College campus at Pullman.

A session was devoted to each. Verne Ketchum, director of engineering, and Charles Woodworth, development engineer, Timber Structures, Inc., led off with the story for engineered timbers. Laminated timber beams are now being used for spans over 100 ft., far beyond anything which can be done with sawn lumber, Woodworth observed during his talk on "Construction Practices in Glulam."

Woodworth used the new 300-ft. diameter dome field house at Montana State College to illustrate the possibilities of following to its ultimate the principle that the strength of wood runs parallel to the grain. Another example was a bridge, under design now, intended to take such stresses as two railroad tracks, plus ability to handle the weight of an 850,000-lb. gantry crane.

Ketchum, talking on "Recent Developments in the Laminating Industry," stressed fire resistant advantages of timber construction, using a film to show how heavy timbers when exposed to fire char, but are still capable of resisting ordinary loads.

The second session, organized by the American Institute of Steel Construction, was presented by a panel discussion of "Light Occupancy Multistory Steel Structures." Panel members were Chauncey Morse, Bethlehem Steel Co. and president of the Washington Structural Engineers, presiding; A. L. Miller, professor of structural engineering, University of Washington; Rowland Rose, structural engineer, Cooper & Rose, Portland; and Charles Corbit, regional engineer, Los Angeles, American Institute of Steel Construction, Los Angeles.

Professor Miller discussed analysis of a steel frame with particular emphasis on his approach to side-sway moment distribution; Rose talked on use of steel centering around three types of members, the split wide flange beam, the truss and the rigid frame; and Corbit covered the flooring systems.

Third sessions covered "Ultimate Strength Design of Concrete Struc-

The steel framing of this building has an 8-inch WF 48-pound member running through the center, supported on a 5 x 16-pound column. The front and rear members are 12-inch 10.6-lb. steel channels. These are supported on the 5 x 5 cent column and masonry end walls. Intermediate roofing members are 6-inch channels and 8-inch wide flanges.

Steel frame houses fit every building bud

Forget for a moment the structural and architectual advantages of steel frame houses. What about costs? Steel frame homes need not be more expensive than conventional construction. Judicious use of steel framing can prove a real money-saver. Steel framing means *less framing...faster erection...less labor.* Steel framing can also eliminate the cost of bearing walls leaving interiors wide open and flexible.

The Salt Lake City homes shown here are three examples of how steel framing can be effectively used to reduce costs. Architects Cannon, Smith and Gustavson, had the framework shop welded (in four sections). The welding and grinding took one day in the case of the house in the large picture. Erection time, using three men, was just five hours. Total cost (including built-in furniture and kitchen equipment): $10.50 a square foot.

A distinguishing feature of these Cannon, Smith & Gustavson homes is steel columns riding outside the structure so that loads are carried in shear. The exposed frame presents a clean consistent rhythm that becomes the basic element of the architecture. By introducing some moment into the columns, the architects were able to use lighter steel members.

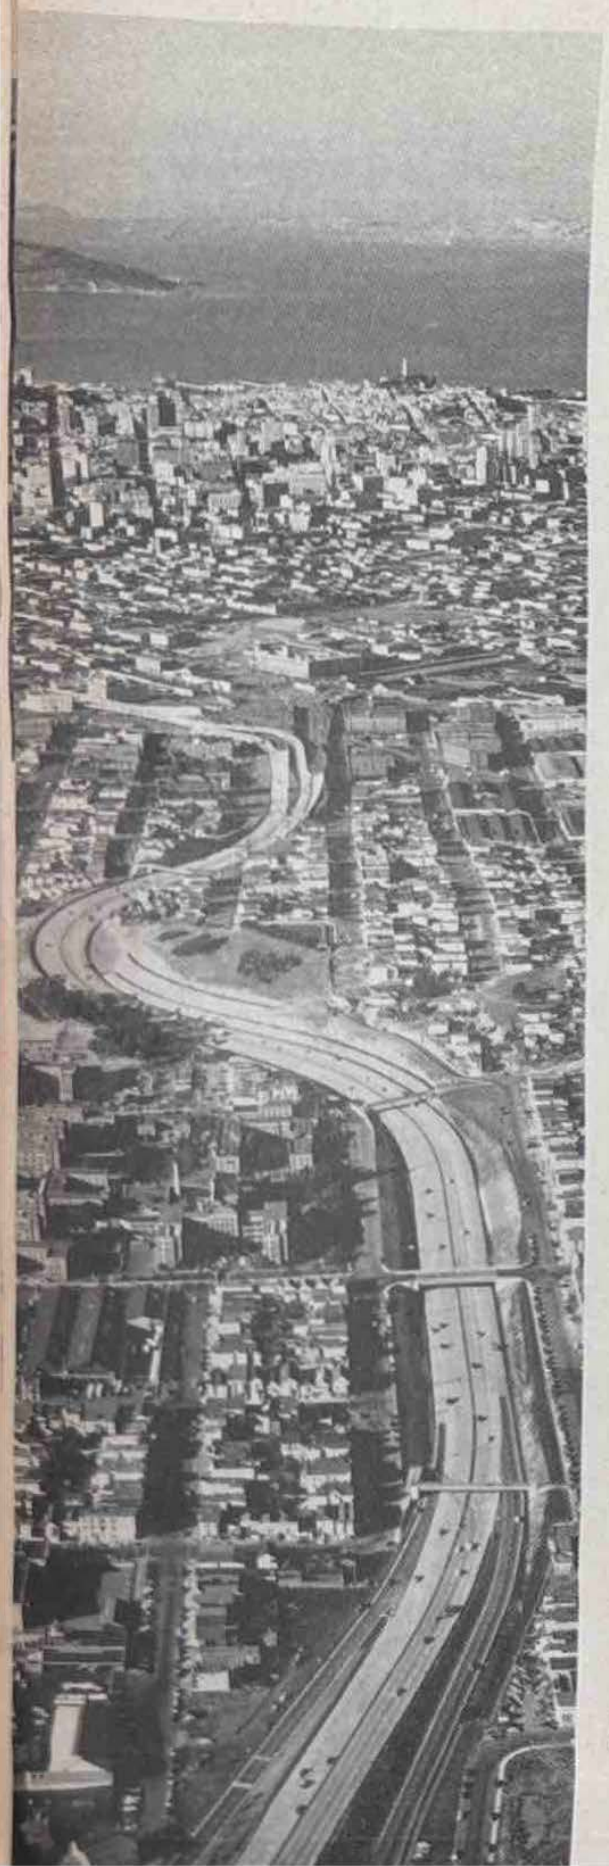
Architect: Dean L. Gustavson, AIA
John W. Sugden, Associate
Cannon, Smith & Gustavson, Salt Lake City

Transverse Section at Steel Column

Steel framing leaves interiors open to such possibilities as this plumbing core, a compact gathering of kitchen, laundry, bath and mechanicals. This also serves as an island separating living and bedroom areas. The ceiling is a simple plaster panel suspended from the steel frame.



Steel is complementary to any building material. Here the steel frame is set off at either end with English Bond brick bearing walls. The architects favor white painted frames so that shadows will give the structures a "sculptured look."

Western homes of the future are now building with steel... **UNITED STATES STEEL**

Here is some real food for thought by one of th West Coast's leading architects who long ha been active in regional planning and preser vation activities

PROGRESS' DILEMMA

by PAUL THIRY, FAIA

THERE IS a natural instinct in man to build. It also seems there is an insidious impulse to destroy. The process of nature and of history parallel one another in birth and death.

We all know of the ravages of Attila the Hun, of Tamerlane, of the sacking of Rome. We are familiar with the exploits of Alexander, Hannibal and Genghis Khan and with the campaigns of Caesar and Napoleon. These have been pointed out by some as barbaric rampages and by others as glorious victories.

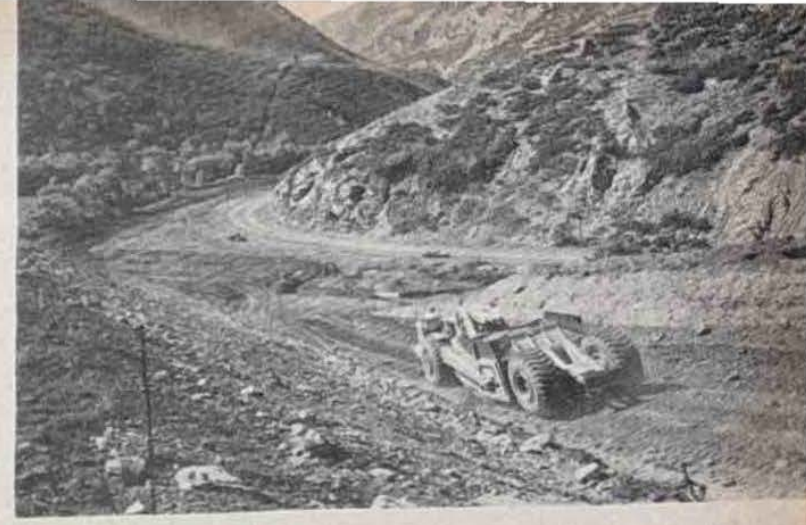
However, out of pillage and devastation, these conquerors did leave ruins to be cherished or rebuilt. In many cases, the victor brought a new culture, a rebuilding upon the ruins of the old. In others, the sacked cities accumulated the dust of time and vanished under the earth. Out of all this, the archaeologists and historians have brought down to us the story of the past: a story of the rise and fall of cultures, of the appearance and disappearance of peoples. These ancient, impassioned destructions were born out of hate, or lust for power, or for the greater glory of man before God, or even for the greater glory of God Himself.

Today our destruction is more bizarre. We employ no childish battering ram, hot oil or blunt bludgeon. We do not cross the plains by horse nor the mountains by elephant. We suffer no hate, no victory, no cultural trepidations.

Now we move at an ever-increasing tempo. Paths that were followed by countless generations of men are no longer wide enough for the pace generated in the matter of a few years. Bulldozers and carryalls remake the surface of the earth, and across and over it we move with terrifying speeds by automobiles and busses, fast trains and freights and airplanes. With a new but obviously imperious attitude, we push out beyond our boundaries with ruthless abandon, feeling that whatever we do is inevitable.

"Abruptly, everything seems to be in the way of progress. Or is it the arterial, the highway or the factory that is in the way? They could be."

In the past, the processes of the world moved in cadences sometimes rythmic, at other times eruptive, but apparently always in a direction that could be measured and evaluated. Suddenly these processes have accelerated a millionfold. Now we seem to be on the threshold of deciphering the secrets of nature itself. We stand at a crossroad akin to what the phalanx was to ancient warfare, or the use of gunpowder to the Byzantine emperors.



Apart from our concern about atomic bombs—of the big blast that may terminate our stay on earth—we should consider what we are doing to our towns and cities and our precious countryside. However annihilating the atomic blast, pavement can destroy our heritage from the past and our promise for the future just as certainly. We are now in peril of losing our historical and architectural inheritance. It behooves us to face the fact we must differentiate between progress and exploitation as we plow up everything before us.

We are proud of our ability to develop and to build and to solve very difficult problems. We legislate for urban renewal, we speak of redevelopment, of slum clearance, of the movement and funneling of traffic, of industrial parks. We find our cities objectionable for work so we move our factories to the country, surround them with housing, parking lots, railroad spurs, water tanks and wires. Gone are the citrus groves and the vineyards, asphalted and cemented over are the fertile fields, harrassed and despoiled are the historic towns and villages. Suburbia, which never escapes from the city, finds the free life by digging for foundations, for water, for power, for sewers and for roads in a form of escape—escape, one wonders, from what?

Going, if not gone, is a way of life and a culture that spoke of the dignity of man, of thrift, of accomplishment and of reward for work well done. Uprooted are the trails of the missionary padres, of the Pilgrim Fathers. Byways and courses that served this country since colonial times are bypassed, crossed over, leveled to make

"Bulldozers and carryalls remake the surface of the earth, and across and over it we move with terrifying speeds by automobiles and busses, fast trains and freights and airplanes."

way for horizontal blight and economic poor judgment.

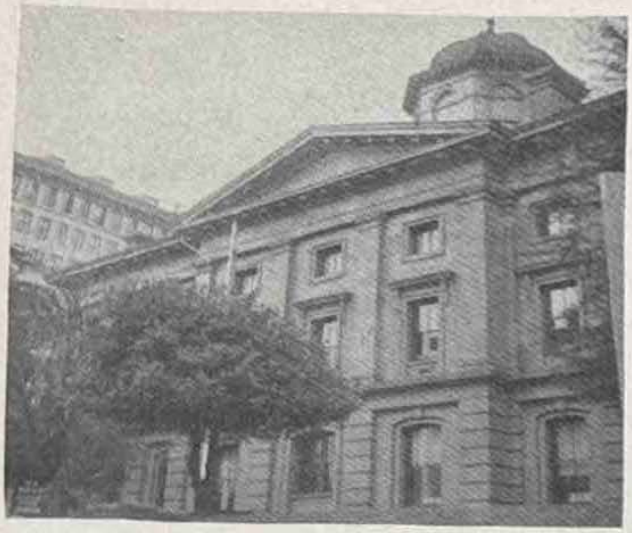
Our country is rich in historic places, both in towns and countryside. We are rich in an architectural heritage of houses large and small, plantation mansions and town houses, churches and town halls. The beauty of their architecture is impregnated with the spirit of men and women who were and are America. These places have stood since the founding of the country, some beyond into Indian origin.

Abruptly, everything seems to be in the way of progress. Or is it the arterial, the highway or the factory that is in the way? They could be. It's worth thinking about. If we demolish our architectural heritage merely because it is in the way of the highway, the arterial, the supermarket or the superservice station, we are the losers. The intruders may contribute to our immediate needs, but leave us impoverished in the end.

It would be safe to say that our architecture is the very epitome of what America stands for. It, almost alone, expresses our way of life and stands as a symbol of what we are doing. More than any other manifestation, it indicates living standards, social customs and economic techniques. We might be so brash as to say that if we destroy architecture, we destroy the record. When architecture is without culture, the people are without culture.

There is a tendency among us and among our younger generation to write off all that has been done in the past. This is wrong. It is not to our credit and most certainly is not our prerogative. We are disinclined to take the matter of preservation seriously and, in the flush of economic aggrandizement of the last few years, we have lost a sense of values.

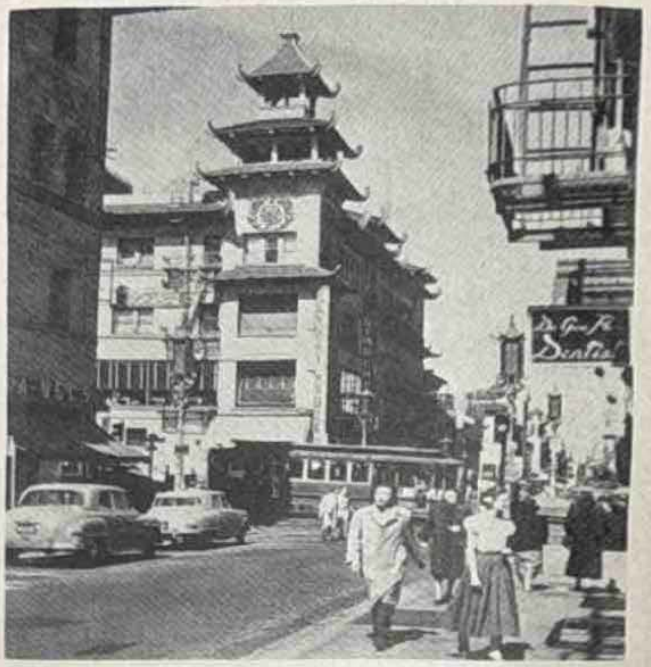
Conceivably, through concerted and intelligent thought, we should be able to figure out how to save the old while building the new. Somehow, instead of creating an ever-increasing conglomeration, we should be able to build the most magnificent environment of all time.



Think of the elegant town houses that were built along New York's Fifth Avenue that since have been destroyed, leaving St. Patrick's Cathedral and St. Thomas' Church surrounded by strange giants. One could say this was necessary if we did not witness the present shift of office buildings to Park Avenue and the construction of the United Nations Building on the East River. Possibly had the builders looked to the dilapidated areas of the East Side in the first place, we might now have the town houses and the skyscrapers too.

Preservation means "to take care of—make lasting." But first, before we get carried away with the idea, let us consider what is worth preserving in architecture. We do not speak of row upon row of slums and dark alleys or of the brick piles built during the turn of the century; antiquity in itself does not give reason to cherish a building or a group of buildings. Naturally, we must be discriminating when we speak of the preservation of historic buildings.

As Americans, we look to a building's worth in the light of the part it played in our historic development. As architects, we look at buildings in the light of their architectural importance and to what extent they contribute to the background and progress of architecture. We want to preserve both types where possible. When a building possesses a combination of historic and architectural qualities it becomes in our eyes singularly important. In fact, without it we lose



"Suburbia, which never escapes from the city, finds the free life by digging for foundations, for water, for power, for sewers and for roads in a form of escape—escape, one wonders, from what?"

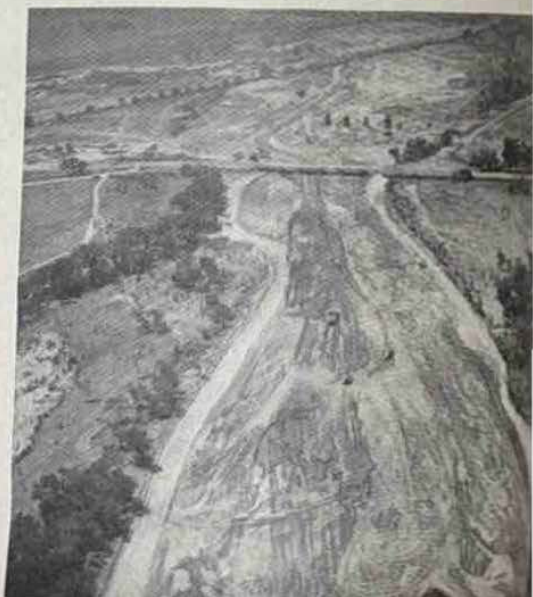
"We must begin to look with more sympathy upon the desires of some citizens to preserve historic Boston, our national Capitol in Washington, the old Patent Office designed by Robert Mills, Portland's Post Office (above) and other buildings now threatened."

"We can be sure that historic towns, and even sections of towns, such as Olvera Street in Los Angeles, San Francisco's Chinatown and New York's Greenwich Village, have their own economic values."

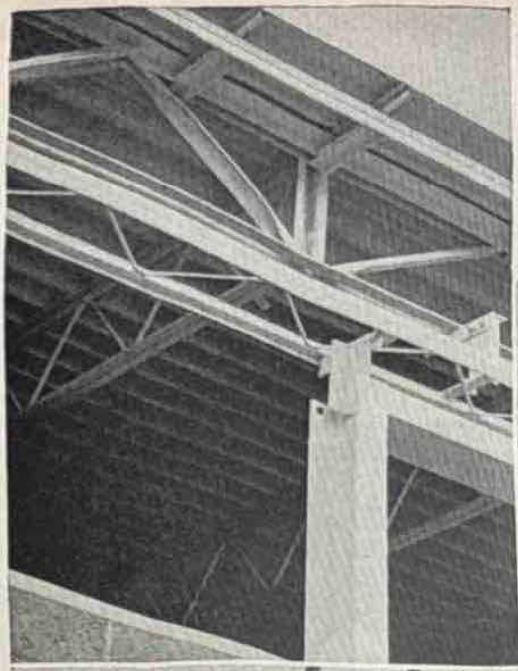
our tangible evidence of continuity and inheritance.

When we speak of preservation, we may also include restoration or renovation. We must realize the difference between preservation and modernization. Modernizing alters the physical appearance and shape. So-called "modernizing" seldom contributes to a subject's historic worth but most often destroys its value as such. When we update a structure, we must do it intelligently with an eye to accomplishing our purpose without destroying its intrinsic qualities.

We must begin to look with more symphathy upon the desires of some citizens to preserve historic Boston, our national Capitol in Washington, the old Patent Office designed by Robert Mills, Portland's Post Office, and other buildings now threatened. We must give support to those who would preserve and restore old Georgetown. When highway engineers and others propose to demolish historic plantation houses such as Delord Sarpy in New Orleans, we should ask why and insist that bridge and highways be routed to respect such places.



We know in order to maintain a building or place in its historic appearance, we must also give some thought to its surroundings. For instance, let us ask ourselves what would the Cathedrals of Ulm or Chartres be without the town square and the medieval buildings in juxtaposition to them. Would they, preserved alone, engulfed by commercial structures, maintain their integrity or time sequence? Obviously not. Would the world be richer without them?



Picture any of the great structures of history under the same circumstances—the Pyramids, the Temples of Luxor, the Taj Mahal—surrounded by the parking lot, the used-car lot, the gas station, the drive-in cleaner, the hamburger drive-in and the animated billboard. Would it be asking too much to keep these dire necessities a half mile away? If these examples are too distant, too European or foreign, let us ask ourselves and consider would New Orleans be richer

Continued on p. 41

"Our greatness will be measured in how we meet progress' dilemma—the problem of preservation and exploitation—and how we cope with the apathetic and irresistable forces of destruction which, strangely enough, move through construction."

If You Have a Large Warehouse To Design and Early Occupancy and Cost Are Important Factors..

FROM A DESIGN STANDPOINT: V-LOK Interlocking Steel Framing meets all design variables, collateral material attachment and design adaptability requirements of the Structural Engineer.

FROM ERECTION STANDPOINT: The positive interlocking of structural members (without bolts, rivets or welding) not only produces a more rigid frame but reduces man hours to a record low not possible with any other type of construction.

FROM THE COST STANDPOINT: A building erected, ready for occupancy months earlier because the steel frame is up and the roof on in a matter of days or weeks, proves its economy to any Builder in one V-LOK job. Let us prove it.

TWO-CLASSROOM LABORATORY on which construction begins this month at Washington State College will serve as clearing house for school construction data. Designed on demountable space frame theory, structure will "float" above ground.

Steel frame project to bolster school research in Northwest

SOME NEW WRINKLES in school planning may be uncovered when a two-classroom experimental classroom building gets under construction this month on the Washington State College campus in Pullman. The 45-x65-ft. steel frame structure is being developed to:

- Experiment with and conduct research on the use of materials, methods and equipment that may be used in school design, construction, maintenance and operation.
- Experiment with various types of lighting systems, both daylighting and electrical, for different conditions of classroom use.
- Study classroom uses and their effect on shape, size proportion, color, lighting, acoustics and environment control; and study room arrangements for different uses with new types of furniture.

Known officially as the Washington State Regional School Laboratory, the building will "float" above the ground, with no permanent foundation other than precast concrete footings, 4 in. high by 18 in. square, on a gravel base. And since it is to be built on the demountable space frame theory, the structure with a relatively small amount of work can be expanded, contracted, moved externally and altered internally as needs of space and design may change.

Thus the research project is designed to sit on one steel space frame, while its roof rests on another. Variable in any direction by units four feet square, the basic structural elements are considered to be "100% adjustable and 100% reusable" through the device of a patented spring nut with rounded edges which can be placed anywhere along the continuous slot of the steel channels provided. All parts are put together without drilling and welding.

The building will include a lobby, washrooms and storage area in addition to the two classrooms. It will be elevated on a 70x80-ft. base platform to make possible the later extension or contraction of the classroom portion.

Unistrut Corp., headed by president Charles Attwood and an architect in his own right, is the originator of the construction method used at WSC. The company's interest in developing school building procedures led to a gift of materials to the University of Michigan in 1954 and the resulting project has been in use since the summer of that year for staff offices and research and display conducted by the department of architecture.

A public school in service now using the Unistrut space frame system houses 120 students in Wayne, Mich., the company's home town. School directors there have ordered two more such adjustable schools, each individually designed for specific sites and educational requirements.

Robert P. Darlington, assistant professor in the department of architectural engineering at WSC, has been freed half time from his teaching duties to direct the project. Students from the sophomore level up will have the option of assisting with erection of the laboratory near the cooperating School of Education for which they will earn class credits.

In preparation for actual construction, the precast concrete footings were readied indoors during the winter, with the aid of commercially available cardboard molds.

WSC officials have made it crystal clear that there is no actual or implied endorsement by the college of any materials, equipment or structural systems involved in the project. Primary effort will be made to develop and utilize Northwest products.

Darlington points out that although some consideration must be given to the first-come, first-served approach, careful selection will be exercised to make gifts fit into the reasearch program so that the building will in no way become a monstrosity.

Among a number of individuals and companies who are contributing toward the project is Dr. Robert Boyd, research physicist who has spearheaded school daylighting tests at the University of Michigan (see PA&B for June 1956). He is working through Kimble Glass Products Co. to suggest locations and uses for glass blocks.

The college believes, as Darlington expresses it, that "excellent school design is being done cooperatively by the Northwest's educators and architects." The purpose of the project then is not to replace school building or other architects nor to furnish architectural design assistance; but rather to develop and make available information on materials, equipment and other items that can be used in school design, construction, maintenance and operation.

Darlington is looking past the coming season of construction toward the opportunities for maintenance studies. Part of his recently completed master's degree work at the University of Illinois was in this area and may be developed into a forthcoming WSC publication in its school series.

whatever you need

build it better...faster...for less...with steel

Service Station by Fentron Industries

Plant Office by Calcor Corporation

Potato Cellar by Boise Payette Lumber Co.

Warehouse by owner

Steel is the one material that gives you ALL these important building advantages

GREATER STABILITY and longer life can be expected when you build with steel, the versatile metal.

LOW COST: Steel construction is precise, simple and fast. You get more usable space per dollar.

PROTECTION: Steel is your best protection against fire, wind, snow loads and stress from cranes. Steel is permanent!

VERSATILITY: Steel buildings are being used for every purpose. If you need a new building fast; one that will last . . . specify steel.

For offices, plants, stores, schools, farms, warehousing...

Give your buildings the advantage of steel

Are you getting your share of cost-plus contracts?

by GLENN M. CANADAY

THE AVERAGE building job is awarded on a competitive bid basis; yet it often could be negotiated as a cost-plus or fixed-fee job by a contractor who is on the ball. If you're not getting your share of cost-plus jobs you haven't sold yourself on the positive advantages of this method of contracting for construction.

Cost-plus and fixed-fee agreements are generally accepted as the best methods of awarding remodeling and repair jobs, jobs where time does not allow for completing plans or letting bids, jobs with incalculable difficulties and jobs where highest quality is of utmost importance. Cost-plus is also advantageous on run-of-the-mill jobs.

Cost-plus offers the owner many savings and advantages not available to him under lump-sum competitive bid contracts. Among these are the services of a highly paid organization of construction cost experts: no other group knows construction costs as well; no group can advise with more authority on the comparative costs of various materials in place nor more competently aid the designer in selecting the exact material-equipment-labor combination which will produce the desired result at lowest possible cost.

The contractor, to be effective and of most service, must work with the architect on comparative design and construction details from the inception of the building. When plans and specifications are already completed, major opportunities to effect economies are gone.

Nearly every building is built around a price. The owner knows what he requires and has a price range in mind. Estimates made by the architect and contractor after the first preliminary sketches should point the way to ultimate cost and design. Preliminary estimates must be accurate; and they can be if the contractor has a clear conception of the proposed structure and the d sired details.

The owner should realize that co struction, like merchandise, comes several price ranges. A Cadillac ca be had for the price of a Chevrol but a good architect-contractor tea may be able to produce a Pontia Both contractor and architect mu have the complete confidence of th owner if they are to predict cos with a reasonable degree of accurac There is a tendency for the contract to base his preliminary estimate minimum construction and the sim lest of details to make the price loo attractive; owners and architects ma ask for inexpensive details in th preliminary estimate and later insi upon expensive treatment. This r sults in distrust and contention. Th thinking of owner, architect and co tractor must be in harmony befo the job is started.

Recognition and observance of few production principles can much to control production costs. Th most cost-favorable architectural a structural details compatible with t required appearance and utility c best be established by the archite and contractor working togethe Climate, site and foundation cond tions, labor rates, material price availability of the various types labor material, building regulatio and other local conditions do not a fect different designs and methods construction in like degree. It do not follow that because a type construction is economical in one l cality it is economical in anothe The rates and supply of labor a material items vary widely betwe areas. Choosing the right combinati of material and labor for the parti ular locality and conditions involv can result in considerable savings.

The length of time required to co plete a job influences cost. The rig combination of materials will redu the number of operations on a jo resulting in shorter construction tim Design that requires the services many crafts complicates productio coordination and lengthens the co struction period. Material items th are not readily available may al delay progress.

Cost is not an absolute measure value. High cost does not necessaril indicate superior construction, n does low cost always result in lo quality. Money can be wasted on ex

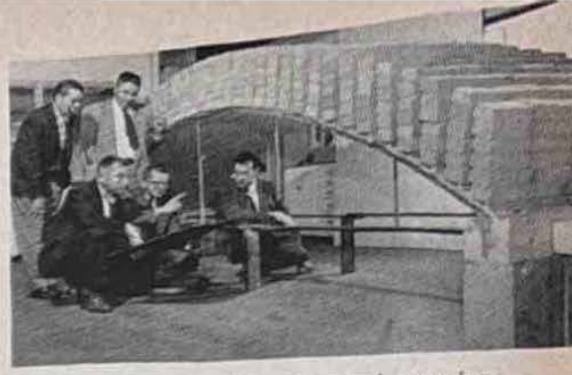
Chehalis Buff Roman Brick

. . . adds warmth, color, durability to the clean, functional design of this new Elementary School at Toledo, Washington.

More and more architects are specifying the Northwest's most distinctive brick—Chehalis Brick—for school construction. Chehalis Brick combines the appealing colors and textures that are typical of the area with all the natural advantages of brick: attractive design, permanence, and fire-safety—plus long-range economy and lower maintenance costs.

SCPI



CHEHALIS BRICK and TILE Co.

BOX 868, CHEHALIS, WASHINGTON

pensive but useless details, poor choice of materials, inefficient production and a hundred other items. Underdesign can be as costly as overdesign. The building constructed for the bottom dollar can prove progressively expensive, for exhorbitant heating, lighting, cleaning, painting and air conditioning bills are often the result of ill-considered design and construction.

Getting the utmost in value for the dollar spent is not easy to achieve but streamlined construction methods, competent design and engineering and a wise choice of details and materials will reduce costs without sacrificing quality or value. The contractor with his unequaled knowledge in the fields of costs, production and scheduling has much to offer the owner who is planning the construction of a building.

Properly handled, the cost-plus or fixed-fee job is highly satisfactory to both owner and contractor. The owner gets the most possible for his investment; the contractor receives a reasonable and safe profit in the final analysis.

ARCHITECT PRICE points to panel carrying 7,500 psf., some four times design load. Deflection is only 0.38 in.

Structural engineers meet (Cont'd from p. 25)

tures," with Robert Van Epps and Alfred Parme, both of the Chicago office of the Portland Cement Association, presenting papers. Van Epps traced the history of the development of the ultimate strength design theory and Parme emphasized similarity in dimensions between ultimate strength design and elastic design in final results.

In closing sessions, William L. Shannon of Shannon & Wilson, Seattle, talking on "Compacted Fill for Structure Foundations," said that often a properly compacted fill is both superior and more economical than other methods of improving natural foundation conditions. And Dr. William Enkeboll, resident partner of Dames & Moore, Seattle, showed how settlements could be predicted with sufficient accuracy in many cases to give proper designs, particularly in rigid frame structures.

Success of the gathering, which drew 70 engineers to Pullman, has prompted plans for an annual meeting, according to Loren B. Almy, professor of civil engineering at WSC and arrangements chairman.

School gym features new plywood vault

A fir plywood arched sandwich panel which will easily bear weights up to four times the design load are being used for construction of a Tacoma junior high school. The architect, Robert Billsbrough Price, AIA, calls the arch a "stressed skin panel vault."

The unit consists of two scarf-jointed plywood panels just over 17 ft. long and 4 ft. wide, bonded together with an impregnated honeycomb paper core between them. The top skin of the vault is 5/16-in. fir plywood and a ¼-in. bottom skin forms the ceiling.

Today's homebuyers are sold on complete telephone planning

Elmer V. Moss, award-winning Seattle builder, says "I wouldn't think of building a home without telephone plans." His 250 homes, ranging from $13,250 to $30,000, feature concealed wiring and most of them have three conveniently-located telephone outlets.

Concealed wiring, built-in outlets, color telephones, kitchen and bedroom phones — these are features your buyers look for! Leading architects and builders include some or all of these in every new home. They know how much telephone planning adds to the value of a home . . . that it makes for better-built homes and satisfied buyers.

Pacific Telephone

We'll be glad to help you plan built-in telephone facilities. Just call our business office and ask for our free Architects & Builders Service.

It pays to include Telephone Planning in every home you build!

and the latest literature

LOAD CALCULATOR: Mitchell's combination pencil and load calculator determines heat load for residential air conditioners. It calculates temperature differential, square footage and tonnage for any given floor area from 750 to 2,500 sq. ft. At the pencil top is a window where the design conditions for the particular areas are permanently set, from 15 to 30 deg. F. The remainder of the pencil is comprised of red figures on an adjustable column indicating the air conditioner tonnage required, ranging from 1.5 to 5.4 tons.—Mitchell Manufacturing Co.

(Item No. 1)

BRICK SWIMMING POOL: Specifications have been developed for a prototype reinforced brick masonry swimming pool, designed to meet requirements of quality construction, yet remain within the price range of most budgets. Measuring 16x34 ft. and ranging in cost from $2,500 to $3,000, the pool offers structural strength, flexibility of design, low moisture and thermal expansion. — Pacific Northwest Brick and Tile Association.

(Item No. 2)

ACOUSTICAL TILE: To permit rapid and error-free application, Forestone acoustical tile now has t&g edges and

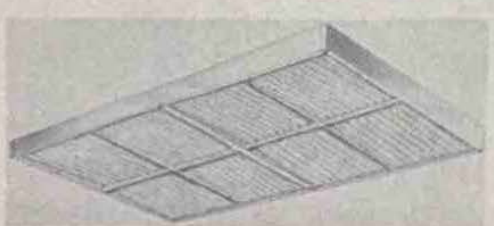
an extended flange for hidden nailing or stapling. Made of a woodfiber material fissured to resemble travertine 9/16-in. thick, the 12x24-in. tiles are center scored to simulate 12x12-in. units.—Simpson Logging Co.

(Item No. 3)

BATHROOM FIXTURES: Crane's Crestmont line of enameled steel bathroom fixtures includes six types of bathtubes, five style of lavatories and twelve different models of kitchen sinks Offered in vitreous china, Duraclay, enameled cast iron and enameled steel. the fixtures are available in white and six other colors—French gray, pale jade, shell pink, sky blue and sun tan. Five of the tubs have aprons designed by Henry Dreyfuss.—Crane Co.

(Item No. 4)

ROUND TABLE: Ideal for institutional use, a Knoll round table by Isamu Noguchi employs a column of steel wire set on a caste iron base with black porcelain finish. Light, airy and strong, this column replaces the usual heavy black column and base found on restaurant tables. The table, which comes in two sizes—one seating three persons, the other four to six—, is made of burn- and stain-resistant white plastic laminate. Edges are beveled giving the table an even lighter appearance.—Knoll Associates, Inc.



(Item No. 5)

SEALING COMPOUND: Sonolastic sealing compound is a synthetic rubber caulking and sealing compound developed to meet the needs of today's increasingly popular curtain and panel wall construction. It is furnished with an activating agent which cures the liquid to a rubberlike substance after it is introduced to the joint to be sealed. The compound thus becomes a resilient part of the joint structure for the life of the building. Tests show that beads about ⅜-in. deep can be stretched to four times their width without damage to adhesion or continuity.—L. Sonneborn Sons, Inc.

(Item No. 6)

LIGHTING: A prism pattern of concave shaped lens set in the Spacelighter housing for the first time has been applied to 24-in. square modules, permitting the use of 250 ft.,-candles with no visual discomfort. The fixture is directed toward the field of institutional lighting, especially in such areas as computer and drafting rooms where plenty of illumination is necessary.—Leadlight Fixture Co.

(Item No. 7)

CEDAR SHAKE PANELS: Having an ease of application that reportedly cuts labor costs up to 65%, Olympic Quik-Fit panels consist of machine-grooved red cedar shakes bonded to cedar shingle undercoursing. The double-coursing and tight bonding with a veneer strip produces a dead air space as an added insulation feature. Production of the panels includes prestaining by Olympic in eight colors which are most in demand and most durable, as determined by a survey of architects and builders.—Olympic Stained Products Co.

(Item No. 8)

INVISIBLE DOOR: Sulzer has produced a door that cannot be seen by the naked eye because it is made of thin air, yet under all types of weather conditions, even the most adverse, is said to give unobstructed access from the street while fully insulating the interior. The Doorless door, first introduced in Switzerland in 1952, is an invisible screen of air which moves slowly downward, sealing the entrance against the outside. It stabilizes a difference in pressure between the inside and out created by the so-called chimney effect and the wind pressure. Since doors are required to lock at night, they can be installed at the outside of the air curtain, inside of the floor grating or anywhere in between if desired.—Sulzer Bros.

(Item No. 9)

WALL TILE: Pomona has used a triple-glaze process in embedding varicolored crystals — red, blue, green, amber — in a gold background which is fired onto its ceramic tile. The Jewel series is manufactured in standard 4¼x4¼-in. and 6x6in. sizes for use in various rooms of the home.—Pomona Tile Co.

(Item No. 10)

JOINT FASTENER: The Tite-joint fastener for assembling wood panels, laminated sink tops, counters and other wood installations where a tight, flush joint is required has been improved for even easier use with a new bolt. The fastener distributes clamping pressure uniformly over the entire mating surfaces and since the mating pieces are drawn together internally, there is no twisting, no buckling. Nothing extends above the joint to prevent a close fit to other surfaces.—E. L. Cederquis Co.

(Item No. 11)

FORCED AIR FURNACES: Referred to as the "first new idea in central heating since the advent of forced air,"

Holly's 1957 line of forced air furnaces are designed specifically to be part of an all-year air conditioning system. Each model is planned to meet the requirements of the job whether for straight heating, for use as a combination heating and cooling air conditioner or for the addition of cooling at a later date. Four models, from 70,000 through 100,000 Btu., use the same size plenum and the latter is only 16 in. wide and 58½ in. high.—Holly-General Co.

(Item No. 12)

Latest Handbooks, Manuals and Literature

Yours for the Asking

HI-FI REPRODUCTION: The casual approach used by most architects to the problem of reproducing original music is comparable with providing a broom closet in a church for installing a four-manual pipe organ, so one manufacturer believes. In attempting to explain some of the fundamental facts of life about high fidelity sound reproduction, Klipsch has produced a 16-page booklet devoted to its corner horn loudspeaker system, based on the principle of mirror images which employ reflections of sounds from the walls and floor or ceiling of a corner. —Klipsch & Associates.

(Item No. 13)

WOOD TREATMENT: A pocket-size handbook of specifications for pressure treatment of woods has been designed for architects, engineers, builders and others in the West. It marks the first time a handbook devoted to western woods has been issued in the pressure treating field.—American Wood Preservers' Institute.

(Item No. 14)

METAL LATH: The 1957 edition of "Specifications for Metal Lathing and Furring" covers such phases as solid and hollow partitions; wall furring; metal lath attached directly to wood suports; contact, furred and suspended ceilings; beam and column protection for fireproofing; and reinforcing for exterior stucco. One of the 20 pages is devoted to fire-resistive ratings and descriptions of construction depicting the protection of structural steel members and assemblies. Various spans and spacings for supporting metal lath and plaster ceilings have been summarized in descriptive tables. —Metal Lath Manufacturing Association.

(Item No. 15)

TEMPERATURE CONTROLS: How to automatically control building temperatures from outdoors is described in a four-page brochure, including a simple chart which recommends the type of weather control to be used under varying conditions. Descriptions and specifications of both the Weather-Man and Weather-Chron regulators round out the booklet.—Automatic Devices Co., Inc.

(Item No. 16)

PROTECTIVE COATINGS: Architects and construction engineers will find some pointers on how to lick industrial corrosion problems and how to permanently weatherseal all types of building materials in a 12-page reference folder with tab indexes. Features, functions, performance and instructions for application of DEL products are outlined and examples of on-the-job results are shown.—David E. Long Corp.

(Item No. 17)

SCHOOL CABINETS: The first in a series of brochures dealing exclusively with architectural woodwork in school cabinets is devoted to the under-window type and is intended to provide the designer with practical information which will simplify his drafting problems. Details and elevation drawings of typical installations throughout the United States and Canada should make it possible for any architect, with modifications, to create a suitable design for this type of cabinet.—Architectural Woodwork Institute.

(Item No. 18)

GRATING AND TREADS: Descriptions on electroforged, riveted, rectangular, diagonal, U-type and T-interlocked grating and treads make up a 26-page catalog, along with tables on safe loads and data necessary to specify.—Blaw-Knox Co.

(Item No. 19)

WALL-HUNG CLOSET: Specifications and installation instructions for the reportedly first wall-hung closet for residential use are found in a four-page brochure. The reverse trap bowl and concealed tank combination can be installed in any 6-in. wall and requires neither the expense of special floor construction nor the conventional chair carrier. Providing savings of from 6 to 9 in. space through the elimination of the tank from the bath or powder room, the compact bowl is easy to clean. Both bowls and access panels are available in white and six pastel colors. — Ingersoll-Humphryes Division, Borg-Warner Corp.

(Item No. 20)

ROOF DECKING: The fundamental qualities of Tectum, a multipurpose material used for roof decking, for suspended acoustical ceilings, for wall insulation and as form board for poured concrete floors and roofs, is concisely described in 16 pages of illustrations and drawings. The product is shown as used in a half dozen projects, along with specifications and design details. — Tectum Division, Peoples Research and Manufacturing Co.

(Item No. 21)

SCHOOL HEATING, VENTILATING: The components and operating principles of a new concept in classroom

heating and ventilating are explained in detail in a 24-page booklet. The Lennox Comfort Curtain system is incorporated in a two-classroom laboratory, shown above, designed by R. C. Ovresat, AIA, with Perkins & Will, consulting architects, and constructed in Des Moines, Iowa. Heart of the system is the air processing unit installed in each room which contains the blowers, air filters, dampers and controls, holding temperatures within 1 deg. of the thermostat setting, according to engineering tests. Air processing unit and shelf or wall ducts are made of 16-gauge furniture steel, enameled in a mar-resistant finish of biege.—Lennox Industries, Inc.

NEW OFFICES: Thomas A. Hayes has opened an office for the practice of architecture at 1442 Lincoln St., Oroville, Calif. (LEnox 3-6145).

Tacoma architect A. E. Jensen, formerly a partner in the firm of Jensen & Mills, is maintaining his own practice at 252 Broadway. E. F. Mills continues to operate his office at 308 S. Tacoma.

The San Francisco architectural firm of Frank W. Trabucco, architect, and Lewis H. Hurlbut has been dissolved and Trabucco will continue to practice under his own name at 355 Stockton St. He was associated for many years with Frank T. Georgeson & Associates of San Francisco and Eureka.

MERGER: Karl F. Tuttle Engineering Co. has merged with the office of Harold Field Kellogg, AIA of Pasadena to form Tuttle-Kellogg Architectural and Engineering Co. The Tuttle firm operates offices in Arcadia, San Diego and Temple City, Calif.; Anchorage and Fairbanks, Alaska; and Washington, D. C. Kellogg has maintained offices in the East and was one of two architects who laid out Fairless Hills, Pa., for United States Steel Co.

NEW PARTNERS: William Ostheimer of Helena, Mont., has a new partner and the firm is now known as Wm. Ostheimer & N. J. Campeau, architects. A native of Butte, Campeau is a graduate of Montana State College and was formerly with the Kalispell architectural firm of Brink & Lennon.

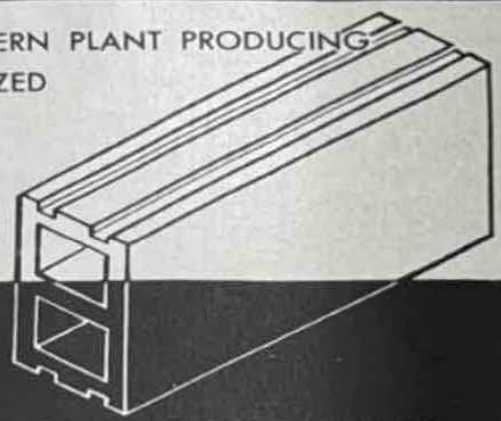
NEW ASSOCIATES: Charles E. Morgan, for the past two years a member of Blaine McCool & Associates, has become an associate of the Seattle architectural firm. Following his graduation from the University of Washington in 1953, he spent a year studying architecture in Europe.

In Honolulu George V. Whisenand, AIA, has been made an associate of the architectural firm of Wimberly & Cook. He was previously chief underwriter in the Hawaii office of the FHA, a post he resigned last February after seven years. Before coming to the islands in 1950, Whisenand was associated with a number of projects in southern California, including Kaiser Community Homes for which he was chief engineer.

DIED: Graham B. Smith, AIA, Euge architect for more than 30 yea passed away March 10 at the age 60. A native of Indiana, he attend the University of Oregon and start practice in partnership with Joh Hunsaker, one of Eugene's early arch tects. Among projects he design was Eugene's present high school an the Register-Guard Building.

Donald Woodhouse Bagley Jr., 7 charter member of the San Francis Architectural Club, died March 20 a heart attack in his office.

Seattle architect Earl Franci Montgomery, supervisor for the offic of John W. Maloney, died March 2 at the age of 58. He was born i Indiana, attended Wabash Colleg and the University of Washington an came to Seattle in the early 1920s.



Franklin Don Riha, 60, architec who designed numerous buildings fo the Miracle Mile along Wilshir Boulevard in Los Angeles, died i that city February 27.

ON THE MOVE: Architects Frank I Shell and Charles Hoyt are no sharing office space at 4444 S.W. Co bett Ave., Portland.

Seattle architect Alfred F. Simon son is now located at 11728 Auror Ave. (EMerson 0642).

West Coast AIA chapters celebrate the first 100

While the AIA centennial celebration will reach its climax at the annual convention in Washington, D. C., next month, chapters across the land have been honoring the institute's 100th birthday in their own way.

Perhaps the most elaborate of these occasions thus far took place March 9 in San Francisco where 550 persons, including a large number of local and state governmental officials, gathered in the Garden Court of the Sheraton Palace Hotel to witness the 1957 Honor Awards program (see p. 9 for photos of top-winning projects). Five chapters in the northern half of the state co-sponsored the competition. C. M. Deasy, president of the Southern California chapter, was chairman of the affair, which for the first time was opened to the public.

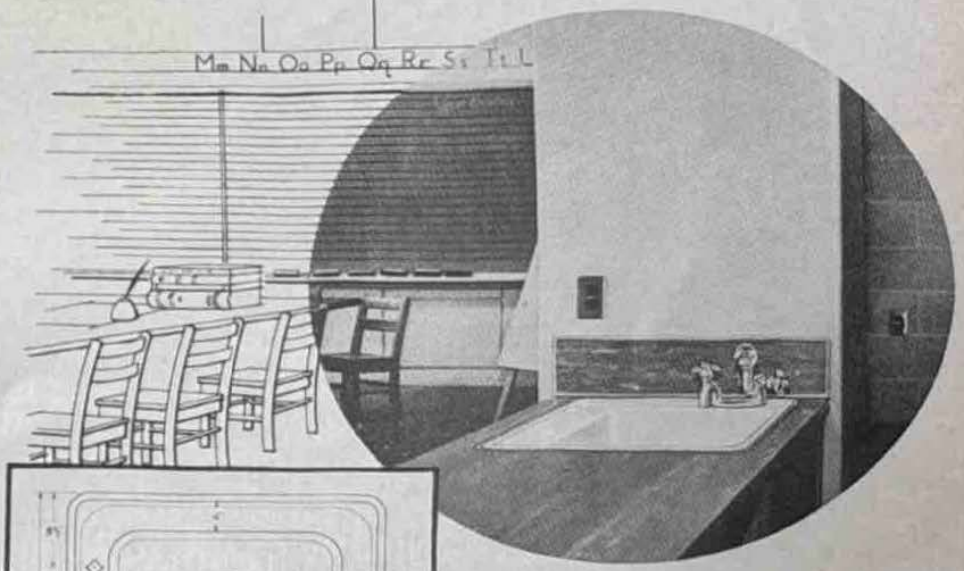
In Honolulu, Hawaii's chapter sponsored a month-long celebration, opening with its annual dinner and presentation of Honor Awards (to be featured in a later issue of PA&B). Austin Faricy, instructor of philosophy and semantics at the University of Hawaii College of General Studies, told the some 200 architects and guests about the findings of research relating to people and architecture in a talk entitled "Club, Barracks and the Cloister."

New officers installed at the annual dinner by AIA regional director Donald Beach Kirby are Richard N. Dennis, president; Howard L. Cook, vice president; Douglas W. Freeth, secretary; Frank Slavsky, treasurer.

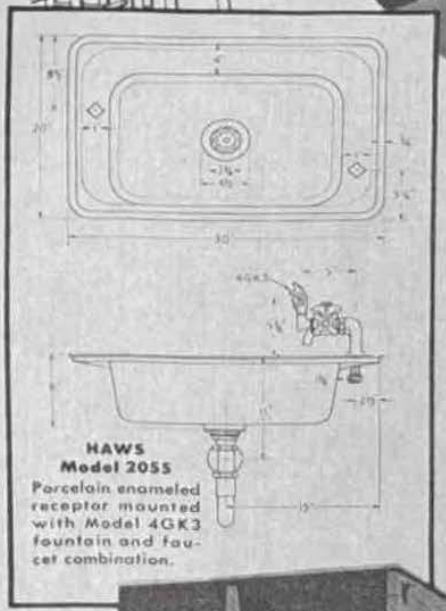
A second speaker was Fred Hauserman, national president of Producers' Council, who came from the mainland with past president E. C. Spratt to present an operating charter to the Hawaii group. Other activities of the February centennial, headed by Alfred Preis, were a series of free lectures on architecture at the university, an exhibit of local architectural achievements and a reception at the Honolulu Academy of Arts.

Here is a roundup of what other chapters have reported to PA&B regarding their birthday observances:

Washington State: A dinner in Seattle's Olympic Hotel February 23, with president James C. Chiarelli presiding. Philip C. Johnson of New Canaan, Conn., presented his "expose" of "One Hundred Years, Frank Lloyd Wright and Us." (A digest of his remarks appeared in PA&B for March.)



Southwest Washington: A dinner at the University-Union Club in Tacoma February 20, with AGC president Lewis Jones presiding. The head of the College of Puget Sound, Dr. R. Franklin Thompson, in discussing the future of the profession and its relationship to the country and the world, pointed out that the atom bomb has come as a psychological negation and that architects must face the challenge of the birth pangs of a new age—a building renaissance, as he called it.



Spokane: A dinner-dance in the Davenport Hotel February 16, with architect Richard Eddy presiding. Frank Emery Cox of Berkeley, Calif., sales and business analyst with Kawneer Co., told his listeners that they were charged with conceiving ideas of rehabilitation of down-graded properties and areas and stressed the need of integrated urban planning, including perimeter cities.

Idaho: A dinner at the Owhyee Hotel in Boise February 23. Theodore Pritchard, dean of the School of Architecture, University of Idaho, by the use of colored slides, explained the progress of architecture during the past 100 years.

San Diego: A dinner in El Cortez Hotel February 21 with past president Frank L. Hope presiding. AIA regional director Donald Beach Kirby of San Francisco declared that in facing the nuclear age, architects will plan entire communities not just individual homes.

right where it belongs... IN THE CLASSROOM!

HAWS Model 2055
Porcelain enameled receptor mounted with Model 4GK3 fountain and faucet combination.

HAWS DECK-TYPE FOUNTAINS

MODERN school design recognizes the necessity for versatile drinking facilities within the classroom ... HAWS famous deck-type receptors may be equipped with a wide choice of HAWS faucets and fountains, and are attractively styled in porcelain enamel or stainless steel for lifetime wear and sanitation. • **Kaiser Gypsum Co., Inc.**, has promoted key men in three sales divisions. Pacific Northwest, covering Washington, Oregon, Idaho, western Montana and Alaska—Walter E. Lord Jr., division manager; Charles R. Watson, gypsum products manager. Northern California, northern Nevada, Utah, Wyoming and Colorado—Joseph M. Angelo, division manager; Sidney J. Smith, gypsum products manager; Richard C. Crowle, insulating products manager. Southern California, southern Nevada, Arizona, New Mexico and Texas—James J. Hague, division manager; Hugh G. Ferguson and Walter T. Smith, gypsum products managers; Galen M. Thomas, insulating board products manager.

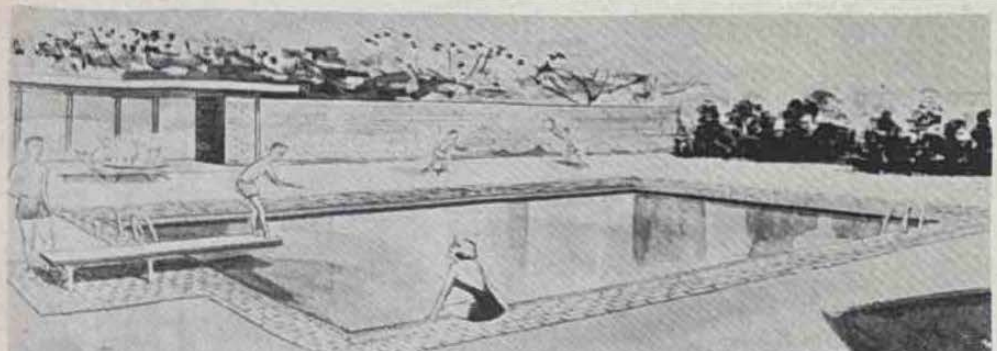
Kaiser Gypsum and the Lumber and Sawmill Workers Union (AF of L) signed a long-term contract covering hourly production and maintenance workers at the firm's insulating board plant at St. Helen's Ore., early this year. Prior to the acquisition of the facilities by the firm last November, a strike had existed for 19 months. The new contract extends through May 1960.

PLAN SERVICE OPENED

The Home Builders Association of Greater Seattle has opened its Architects and Builders Plan Service at association headquarters, 170 Mercer St. E. E. Roman, committee chairman, comments, "These facilities are designed specifically to provide a service to the light construction industry in the fields of residential, multiple-family and commercial construction."

• **Universal Window Co.** of Berkeley, Calif., has opened an office in Los Angeles. James H. Gormley, formerly manager of Nelson Adams Co. of El Monte, Calif., has been named sales manager for the southern California district.



• **M. Greenberg's Sons** of San Francisco has a new sales manager, Martin R. (Mac) McLaughlin, previously vice president in charge of sales at Josam Manufacturing Co., Michigan City, Ind. He succeeds Elmer K. Ross, in charge of sales since 1938, who retired March 1.

• **Seattle Construction Council** is being headed in 1957 by Fred S. Nohmann of W. P. Fuller & Co. Other officers: P. F. DelMissier and Warren C. Brown, vice presidents; Paul Jacobsen, secretary; and Gordon Anderson, treasurer.

• **Georgia-Pacific Corp.** has appointed William H. Hunt as vice president in charge of plywood and specialty sales, with headquarters in Portland. He has relinquished his post as vice president in charge of sales and a director and member of the executive committee of United States Plywood Corp. with whom he has been associated for 22 years.

• **Superior Portland Cement, Inc.** and its plants in Seattle and Concrete, Wash., have been acquired by Lone Star Cement Corp., which now has 2 plants with a rated capacity of 47 million barrels. The Northwest facilities are being operated as the Superior Division.

• **Smoot-Holman Co.** of Inglewood, Calif., has appointed G. A. (Jake) Hochenauer as sales engineer, servicing the southern California area. He is currently chairman of the Southern California Section, Illuminating Engineering Society, and has spent the last 17 years in sales engineering work on the West Coast.

Earthquake tests Bay area structures

Good design and modern construction methods proved themselves in San Francisco March 22 when that city suffered the heaviest earthquake since the disastrous 1906 upheaval. Damage was restricted to minor breaks and there were no deaths or serious injuries.

Starting with a comparatively mild tremble the morning of March 22, followed a few hours later by a quake of 5.5 intensity on the Richter scale, the San Andreas Fault rumbled and shook for a total of more than 300 quakes during a weekend which left residents ready to run whenever a heavy truck passed by.

Plumbers throughout the area went on an emergency basis over the weekend, during which they responded to more than 45,000 calls for broken or cracked gas and water lines.

The most violent shocks were felt in the southwest corner of San Francisco. Both the 1906 quake and that of March 22 apparently originated at the same spot, near Mussell Rock, just south of the city limits.

Coast and Geodetic Survey seismograph records indicated that the most recent quake followed the pattern of that of 1906, with the big exception related to design and construction—comparatively minor damage.

A big skyscraper on a mud fill near the San Francisco Embarcadero shook less than another building in the Civic Center, because the skyscraper rested on a man-made foundation of 150-ft. piles.

San Francisco's Westlake area, built by Henry Doelger on what used to be sand flats near the ocean, was the hardest hit by damage. Even here, however, there were very few homes which suffered more than $250 in damage.

One downtown structure known to weigh 15 million pounds has two heavy shock seismographs located in it. The March 22 tapes revealed that the base of the building moved a quarter-inch horizontally for about 20 seconds. The 16th floor moved a full inch for 30 seconds.

The State Building, of a different type construction and with a different foundation, moved a half inch horizontally.

The average San Francisco residence 25 ft. wide and 50 ft. deep has been estimated to weigh only 75,000 pounds, in contrast to the 15 million of the skyscraper. The home, however, where built on solid foundation, would move no more than the skyscraper.

Progress' dilemma (Cont'd from p. 30)

without the Vieux Carre; IS America profitting by the disfiguration of sacred places like Charleston and Savannah?

Possibly instead of destroying the cores of our historic and ancient towns and cities we should strive to shift our activities to establish new cores that are not handicapped by the physical aspects of old structures, narrow streets and limitations beyond our ability to cope with, short of complete demolition. We can be sure historic towns, and even sections of towns, such as Olvera Street in Los Angeles, San Francisco's Chinatown and New York's Greenwich Village, have their own economic values. Can anyone think of a good reason to exploit or modernize such isolated villages as Provincetown or Nantucket, or would it seem more intelligent to maintain and preserve them for the generations of the future so that they may not only read of their forbears but may as well share their environmental experience.

At its 83rd convention, the Ameri-

Department D-3

OLYMPIC

can Institute of Architects recognized the acute problem that faces us in part, and by resolution declared its concern in genteel form as follows:

> WHEREAS, recent jeopardy to and disfigurement of certain historic American buildings of merit has recently occurred, arising from widespread and general ignorance of their cultural, architectural and historic value; and
>
> WHEREAS, such jeopardy, disfigurement and also destruction continues to threaten our architectural heritage; and
>
> WHEREAS, the architectural profession is peculiarly fitted and in duty bound to meet this menacing situation;
>
> THEREFORE, BE IT RESOLVED that the board of the American Institute of Architects initiate a nationwide educational campaign through its chapters, in order to protect our historic buildings, in advance of possible destruction and preserve them for posterity.

In cooperation with the National Trust for Historic Preservation and the Department of the Interior's National Park Service, the AIA has put into motion a preservation program under the sympathetic and forthright leadership of Earl Reed, FAIA. It has established an institute committee and has named preservation officers for each of its chapters.

We know buildings of historic significance privately owned are difficult to preserve unless their proprietors have a sense of responsibility. We know buildings publicly owned can be retained if the government agency in charge has an attitude to do so.

The works of l'Enfant, Strickland, Upjohn, Latrobe, Hunt, Renwick, Bulfinch, Richardson and countless other architects who contributed to our historicity should not be obliterated.

Further, we must consider more than just the preservation of buildings and places of long ago. We have within this century the much heralded Sullivan and such cultured gentlemen as Cram, Goodhue, McKim, Meade, White, Hobart, Cret and Saarinen, to mention the names of a few whose works, whether we agree with revivals and renaissance, are milestones in our progress.

As architects, we are dedicated to the purpose of building for the betterment of mankind. In building we must also preserve what is worthy and what is well done for in these are measureable economic, cultural and historical wealth. Through preservation we keep alive past epochs through visible form and association. Modes of life, culture and history are retained through material contact.

The passing of time which separates us from other generations enables us to see in retrospect the broad aspects of historical change. It provides us with a measuring stick to gauge our own development.

As architects, it is essential we maintain a broad outlook and that we no detach ourselves from our unique po sition in the scheme of things.

Architecture is a continuing proces and the works of such living archi tects as Frank Lloyd Wright, Mies van der Rohe, Gropius, Neutra and others will be our preservation problem of tomorrow. Let us not be too sure fu ture generations will not find these men old fashioned and out of date.

We must be aware of the continuity of architecture and that we are constantly producing structures of architectural significance. We can never go back to relive or reshape an era; new techniques are constantly changing the methods and modes of planning and construction. Each generation then must of necessity express its own character and seek to solve for it own needs and way of life. We wear the wig and silken breeches only to the costume ball: why should we try to apply the Georgian Pediment to 20th century processes?

We must be aware of the counterfeit. A copy seldom does credit to its counterpart. In fact, too often the copy detracts from the original. The original has authenticity in history whereas the imitation drifts in time without heritage.

What we destroy can never be replaced, only simulated. Our wealth lies in the tangible things we have and in our creative ability. That which we create today adds to the inheritance of tomorrow. It behooves us to proceed carefully and with concern for what we do, for the generations to come will be our historians. Let us hope they will not find the need to cast aside our works or criticize us for disregarding those of our predecessors. We hope that those who seem so eager to eliminate the past will be sufficiently conscientious not to be completely eliminated themselves. Let us not indulge in the contemporary aspect to the extent that we feel it is the beginning and the end.

When we speak of "improvement," we should ask ourselves "improvement over what?" It would seem a little hard to know where we are going if we do not know where we have been. Man has produced some tremendous architectural works. It would seem stupid to be satisfied with something less than what we had.

Our greatness will be meaured in how we meet progress' dilemma—the problem of preservation and exploitation—and how we cope with the apathetic and irresistible forces of destruction which, strangely enough, move through construction.

A paper presented at the 1956 national AIA convention in Los Angeles

WHEN WALLS LEAK

. . . the water rarely goes through mortar or units — it goes through cracks or channels between them. Therefore, a tight, continuous bond between mortar and unit is all-important to prevention of leakage. How can you get that kind of bond? Use lime-cement mortar made with high-calcium lime!

The high plasticity of mortar containing SLIK "Hydraclaved" Lime or Veri-Fat Lime putty contributes to better workmanship . . . its superior water-retention reduces shrinkage, cures joints better.

FOR TROUBLE-FREE MORTAR . . .
specify SLIK Type S Lime on Veri-Fat Pulverized Quicklime in mixtures with portland cement. They're both high calcium limes.

Offices in Principal Cities throughout the United States

6 reasons why architects prefer **COLUMBIA BRICK** *for schools...*

1. Low maintenance saves school boards thousands of dollars each year.
2. Enduring beauty.
3. Flexibility of design — choice of many colors, texture and patterns.
4. Sound, fire-safe construction.
5. Creates feeling of pride and security in students and teachers.
6. Stands up to hard usage.

Add these features to Columbia Brick's superior craftsmanship, and unique clays, and you know why Columbia Brick is "specified" so often.

INVESTMENT OPPORTUNITY

Make your money earn real profits for you by investing in EFCO Steel Forms for your concrete construction. Original cost is low. Lifetime steel faces should never need replacing.

Owners of EFCO Forms are furnished form erection drawings without cost. These forms are adaptable to wide use, including construction of house foundations, and other large and small form requirements. They are easily and quickly assembled, and can be moved economically from job to job.

Although EFCO Steel Forms are available only on a purchase basis, other forms from Economy are available on a rental basis. Write Economy Forms Corporation, H. P. Station, Box 128, Des Moines 13, Iowa, for catalog and full address of office serving your area.

Other offices are in St. Louis, Mo.; Kansas City, Mo.; Lincoln, Nebr.; Minneapolis, Minn.; Ft. Wayne, Ind.; Milwaukee, Wisc.; Chicago, Ill.; Cincinnati, Ohio; Cleveland, Ohio; Metuchen, N. J.; Rochester, N. Y.; Springfield, Mass.; Waltham, Mass.; New York, N. Y.; Washington, D. C.; Decatur, Ga.; Charlotte, N. C.; Dallas, Texas; Tulsa, Okla.; Houston, Texas; Los Angeles, Cal.; Oakland, Cal.; Denver, Colo.

Yardley; James Crick & Sons, Spokane; Curtis Construction Co., Spokane; F. H. DeAtley & Co., Lewiston, Idaho; Max J. Kuney, Spokane.

SURFACING—GLAD NORTH ROAD—Surfacing with light bituminous surface treatment on 18.912 mi. Franklin County Road; FAS No. S-1035(3). Involves 32,550 ton crushed stone surfacing, crushed cover stone; 756 ton asphalt cement.

Planholders: American Bitumuls and Asphalt Co., Portland; Frank G. Baulne, Inc., Yardley; C & E Construction Co., Inc., Yakima; Carbon Bros., Spokane; J. C. Compton Co., McMinnville, Ore.; Materne Bros. Co., Spokane; McAtee & Heathe, Inc., Spokane; D. A. Sullivan, Spokane; J. W. Hardison, Yakima; Clifton & Applegate, Yardley; Curtis Construction Co., Spokane; F. H. DeAtley & Co., Lewiston, Idaho; Standard Asphalt Paving Co., Inc., Spokane.

GRADING — SALMON CREEK ROAD — Clearing, draining, grading 3.559 mi. Okanogan County Road, FAS No. S-1145(1) involving 60,870 c.y. unclassified excavation; 76' corrugated metal pipe; 1,041' concrete pipe.

Planholders: P. J. Anderson & Sons, Seattle; Russell J. Boe, 9685 Empire Way, Seatle; C & E Construction Co., Inc., Yakima; W. J. Halleran, Seattle; Russell-Gillett Co., Cle Elum; I. M. Saimons, Route 1, Box 788, Alderwood Manor; James Crick & Sons, Spokane; Murphy Bros., Inc., Spokane.

SURFACING—QUIGLEY ROAD—Clearing, draining, grading, surfacing with crushed stone on 2.397 mi. Island County Road; FAS No. S-0356(3).

Planholders: Russel J. Boe, Seattle; J. M. Bruch Co., Port Angeles; W. J. Halleran, Seattle; R. L. Moss & Co., Box 37, Zenith; Nelson Construction Co., 1433 30th N.E., Seattle; I. M. Saimons, Alderwood Manor; C. W. Thomas & Sons, Box 402, Winlock.

SEAL TREATMENT—COLFAX-STEPTOE—Constructing non-skid seal treatment on 141.48 mi. State Highways Nos. 3, 6, 18, 3-J, 6-A, 6-B, 11-F, Lincoln, Pend Oreille, Spokane, Stevens, Whitman counties; a State Project.

Planholders: American Bitumuls and Asphalt Co., Portland; Acme Construction Co., Redmond; Carbon Bros., Spokane; J. C. Compton, Box 86, McMinnville, Ore.; Doolittle Construction Co., 510 Adams, Seattle; N. G. Johanson, E. 1828 Trent, Spokane; McAtee & Heathe, Inc., Spokane; D. A. Sullivan, Spokane; Standard Asphalt Paving Co., Inc., Spokane.

STOCKPILING—MONROE, SNOHOMISH VICINITIES—Stockpiling sand, maintenance rock, mineral aggregates on PSH No. 15, Snohomish County, a State Project, involving about 57,500 ton crushed materials.

Planholders: Sjoboen Bros., 3205 Hoadley Road, Olympia; Acme Construction Co., Redmond; J. Arlie Bryant, Spokane; N. Fiorito Co., Inc., Seattle.

STOCKPILING—COULEE CITY, LAKESIDE VICINITIES — Stockpiling crushed stone surfacing, crushed cover stone, maintenance rock, mineral aggregates on PSH Nos. 2, 10, 2-F, Grant and Chelan counties, a State Project, involving about 8,000 c.y. stripping borrow, surfacing pits and 44,050 ton crushed material.

Planholders: Frank B. Baulne, Inc., Yardley; Carbon Bros., Spokane; F. R. Hewett Co., Spokane; Materne Bros. Co., Spokane; C. J. Painter, 947 W. Court, Pasco; Clifton & Applegate, Yardley; Curtis Construction Co., Spokane; F. H. DeAtley & Co., Lewiston, Idaho; Maurice Gredvig, Box 301, Yakima.

ILLUMINATION SYSTEMS — FISHER ROAD INTERCHANGE—Installing nine illumination systems on PSH Nos. 8 and 1 in Clark, Cowlitz and Lewis counties, a State Project involving nine lump sum bids.

Planholders: G. S. Electric Co., 4727 Findlay, Seattle; Line Material Industries, 1333 N.W. 12th, Portland; Northwest Engineering Electric Co., 616 6th Ave. S., Seattle; Rochat Electric, 4636 N. William, Portland, Ore.; The Tide Co., 1512 Center, Tacoma.

BUILDING REHABILITATION—Rehabilitation of state highway building at State and Franklin in Olympia, Thurston County, a State Project.

Planholder: Cascade-Olympic Construction Co., Roue 2, Box 1313, Shelton.

STATE HIGHWAY PROJECTS
BIDS CLOSE 10 A.M., APRIL 23
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, April 23, 1957, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal funds have been allocated for items Nos. 1 to 13 inclusive.

The improvements for which bids will be received follow:

1. Clearing, Draining and Grading on 1.014 miles of Primary State Highway No. 2 in Kittitas County, KEECHELUS INN TO SUNSET LODGE, FAP No. I-002-2(7), involving about 4 acres of Clearing, 21,980 cubic yards of Common Excavation, 163,-140 cubic yards of Solid Rock Excavation, 453 linear feet of Concrete Pipe and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
2. Clearing, Draining and Grading on 2.169 miles of Primary State Highway No. 2 in Kittitas County, SUNSET LODGE TO KEECHELUS DAM, FAP No. I-002-2(8), involving about 32 acres of Clearing, 393,-600 cubic yards of Common Excavation and Borrow, 255,130 cubic yards of Solid Rock Excavation, 62,080 units of Overhaul, 186 cubic yards of Concrete, 31,930 pounds of Steel Reinforcing Bars, 1,554 linear feet of Concrete Pipe, 234 linear feet of Corrugated Metal Pipe, 71,030 tons of Riprap and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
3. Clearing, Draining, Grading and Constructing Reinforced Concrete Bridge Abutments and Moving Steel Bridge on 4.164 miles of Primary State Highway No. 2 in Kittitas County, KEECHELUS DAM TO MIDWAY, FAP No. I-002-2(9), involving about 120 acres of Clearing, 565,-260 cubic yards of Common Excavation and Borrow, 61,100 cubic yards of Solid Rock Excavation, 89,230 units of Overhaul, 46,390 cubic yards of Excavation of Unsuitable Material, 1,805 cubic yards of Maintenance Rock and Ballast, 2,991 linear feet of Concrete Pipe, 400 cubic yards of Riprap, 1,219 cubic yards of Concrete, 160,420 pounds of Steel Reinforcing Bars, a lump sum bid for Moving Steel Span and other items. Minimum Wage Rates for this project have ben predetermined by law and are set forth in the bid proposal.
4. Clearing, Draining and Grading on 4.261 miles of Primary State Highway No. 2 in Kittitas County, MIDWAY TO KACHESS RIVER, FAP No. I-002-2(10), involving about 62 acres of Clearing, 261,520 cubic yards of Common Excavation, 162,170 cubic yards of Solid Rock Excavation, 42,280 units of Overhaul, 135 cubic yards of Concrete, 21,050 pounds of Steel Reinforcing Bars, 3,063 linear feet of Concrete Pipe and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
5. Draining, Grading, Surfacing, Constructing a Cement Treated Base, Paving with Type 1-1 Asphaltic Concrete and Constructing Three Reinforced Concrete Slab Bridges on 3.388 miles of Primary State Highway No. 18 in Grant County, MOSES LAKE BRIDGE EAST, FAP No. I-002-4(5) Unit 1, involving about 554,270 cubic yards of Common Excavation, 94,980 units of Overhaul, 980 cubic yards of Excavation of Unsuitable Material, 32,500 cubic yards of Stripping Borrow and Surfacing Pits, 46,240 tons of Selected Material, 22,820 tons of Crushed Stone Surfacing, Ballast and Crushed Cover Stone, 292 tons of Asphalt Cement, 12,930 tons of Asphaltic Concrete, 120 cubic yards of Mineral Aggregate, 47,200 tons of CTB Aggregate, 5,390 barrels of Portland Cement, 3,536 linear feet of Cement Concrete Gutter, 1,382 linear feet of Cement Concrete Curb, 1,454 linear feet of Concrete Pipe, 988 linear feet of Corrugated Metal Pipe, 1,192 linear feet of Cast Iron Pipe, 270 linear feet of Galvanized Conduit Pipe, 8,572 linear feet of Beam Guard Rail, 34,450 tons of Riprap, 28,060 linear feet of Wire Fence, 1,952 cubic yards of Concrete, 339,080 pounds of Steel Reinforcing Bars, 840 linear feet of Concrete Piling and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
6. Clearing, Draining and Grading on 1.798 miles of Primary State Highway No. 1 in Skagit County, ANACORTES VICINITY, FAS Nos. S-0964(3) and US-0964(4), involving about 36 acres of Clearing, 378,830 cubic yards of Common Excavation, 139,-780 cubic yards of Solid Rock Excavation, 126,750 units of Overhaul, 2,310 cubic yards of Crushed Stone Surfacing, Crushed Cover Stone and Mineral Aggregate, 35 tons of Asphalt Cement, 2,780 tons of Asphaltic Concrete, 1,794 linear feet of Asphaltic Shoulder Curb, 1,509 linear feet of Concrete Pipe, 2,182 linear feet of Corrugated Metal Pipe, 2,955 linear feet of Iron Pipe and other items.
7. Clearing, Draining, Grading and Constructing a Reinforced Concrete Box Girder Bridge on 7.666 miles of Secondary State Highway No. 1-A in Snohomish County, GETCHELL ROAD TO ARLINGTON, FAS No. S-SG-0202(6), involving about 96 acres of Clearing, 448,835 cubic yards of Common Excavation, 36,260 units of Overhaul, 38,130 cubic yards of Excavation of Unsuitable Material, 7,330 cubic yards of Selected Roadway Borrow, 218 cubic yards of Crushed Stone Surfacing, 160 tons of Bituminous Mix, 3,375 linear feet of Asphalt Lined Roadway Ditch, 5,336 linear feet of Concrete Pipe, 700 linear feet of Corrugated Metal Pipe, 1,486 linear feet of Wire Fence, 1,120 cubic yards of Concrete, 228,200 pounds of Steel Reinforcing Bars and other items.
8. Surfacing, Constructing a Cement Treated Base and Paving with Type 1-1 Asphaltic Concrete on 4.838 miles of Primary State Highway No. 11 in Adams County, HATTON COULEE TO LIND COULEE, FAP No. F-033-2(5), involving about 6,750 cubic yards of Common Excavation, 350 cubic yards of Solid Rock Excavation, 55,725 tons of Crushed Stone Surfacing and Crushed Cover Stone, 240 tons of Asphalt Cement, 11,575 tons of Asphaltic Concrete, 3,130 barrels of Portland Cement, 18,180 tons of CTB Aggregate, 46 cubic yards of Concrete, 10,220 pounds of Steel Reinforcing Bars, 4,777 linear feet of Beam Guard Rail, 240 linear feet of Cement Concrete Curb, 34 Guide Posts and other items.
9. Draining, Grading and Constructing a Reinforced Concrete T-Beam Bridge on 1.199 miles of Primary State Highway No. 12 in Pacific County, WILLAPA RIVER BRIDGE AND APPROACHES, FAP No. F-006-2(4) Unit 1, involving about 43,520 cubic yards of Common Excavation and Borrow, 1,070 cubic yards of Excavation of Unsuitable Material, 2,070 tons of Crushed Stone Surfacing and Ballast, 1,188 linear feet of Corrugated Metal Pipe, 188 linear feet of Corrugated Metal Cattle Pass, 94 linear feet of Iron Pipe, 150 linear feet of Plastic Pipe, 404 cubic yards of Concrete, 77,000 pounds of Steel Reinforcing Bars and other items.
10. Clearing, Draining, Grading and Surfacing with Crushed Stone on 4.293 miles of Whitman County Road, ENSLEY CHANGE IN ALMOTA ROAD, FAS No. S-1154(1), involving about 152,230 cubic yards of Common Excavation, 18,430 cubic yards of Solid Rock Excavation, 16,140 units of Overhaul, 62,400 tons of Crushed Stone Surfacing, 1,806 linear feet of Corrugated Metal Pipe, 600 cubic yards of Riprap and other items.
11. Surfacing with Light Bituminous Surface Treatment on 18.912 miles of a Franklin

County Road, GLADE NORTH ROAD, FAS No. S-1035(3), involving about 32,550 tons of Crushed Stone Surfacing and Crushed Cover Stone, 756 tons of Asphalt Cement and other items.

12. Clearing, Draining and Grading on 3.559 miles of an Okanogan County Road, SALMON CREEK ROAD, FAS No. S-1145(1), involving 60,870 cubic yards of Unclassified Excavation, 76 linear feet of Corrugated Metal Pipe, 1,041 linear feet of Concrete Pipe and other items.
13. Clearing, Draining, Grading and Surfacing with Crushed Stone on 2.397 miles of an Island County Road, QUIGLEY ROAD, FAS No. S-0356(3), involving about 20,760 cubic yards of Unclassified Excavation, 1,340 cubic yards of Common Borrow, 9,380 cubic yards of Selected Roadway Borrow, 3,025 cubic yards of Crushed Stone Surfacing, 1,003 linear feet of Concrete Pipe, 40 linear feet of Corrugated Metal Pipe and other items.
14. Constructing Non-Skid Seal Treatment on 141.48 miles of State Highways Nos. 3, 6, 18, 3-F, 3-J, 6-A, 6-B and 11-F in Lincoln, Pend Oreille, Spokane, Stevens and Whitman Counties, COLFAX TO STEPTOE, ET AL, a State Project, involving about 2,328 tons of Asphalt Cement, 29,235 cubic yards of Mineral Aggregate and 94 M gallons of water.
15. Stockpiling Sand, Maintenance Rock and Mineral Aggregates on Primary State Highway No. 15 in Snohomish County, MONROE AND SNOHOMISH VICINITIES, a State Project, involving about 57,500 tons of Crushed Materials and other items.
16. Stockpiling Crushed Stone Surfacing, Crushed Cover Stone, Maintenance Rock and Mineral Aggregates on Primary State Highways Nos. 2, 10, and 2-F, in Grant and Chelan Counties, COULEE CITY AND LAKESIDE VICINITIES, a State Project, involving about 8,000 cubic yards of Stripping Borrow and Surfacing Pits and 44,050 tons of Crushed Material.
17. Installing Nine Illumination Systems on Primary State Highways Nos. 8 and 1 in Clark, Cowlitz and Lewis Counties, FISHER ROAD INTERCHANGE, ET AL, a State Project, involving 9 lump sum bids for Installation of Illumination Systems.
18. Rehabilitation of Building in Thurston County, REHABILITATION OF STATE HIGHWAY BUILDING AT STATE AND FRANKLIN IN OLYMPIA, a State Project, involving a base bid for the Entire Improvement.

HOMER HIGH SCHOOL
BIDS CLOSE 10 A.M., P.S.T., MAY 8
Juneau, Alaska
NOTICE TO CONTRACTORS

Reference, Project Aaa. 50-A-234, High School, Homer, Alaska. March 25, 1957. Homer High School, Project Aaa. 50-A-234, Homer, Alaska. Department or Agency, Alaska Public Works, Office of Territories, Department of the Interior. By (Issuing office), Thomas G. Mooney, Director, Alaska Public Works, Office of Territories, Department of the Interior, Post Office Box 1181, Juneau, Alaska. Sealed bids in single copy for furnishing all labor, equipment, and materials and performing all work for the project described herein will be received until 10:00 A.M. Pacific Standard Time May 8, 1957, in the mailroom of the office of the Director, Alaska Public Works, Office of Territories, Department of the Interior, 123 West Third Street, Post Office Box 1181, Juneau, Alaska, and then publicly opened and read aloud. Information regarding bidding material, bid guarantee, and bonds follows: Plans and specifications and other proposed contract documents are open for public inspection at the Director's office, Juneau, Alaska; at Room 2723, Interior Bldg., Washington 25, D.C.; at the Area Engineer's office, Alaska Public Works, Reliable Ser-

vice Bldg., Anchorage, Alaska; and Associated General Contractor's of America offices as follows: Seattle Chapter, Construction Center, 215 West Harrison St., Seattle, Wash.; Mountain Chapter, 220 West Harrison St., Seattle, Wash.; Tacoma Chapter, 1605 Center Street, Tacoma, Wash.; Portland Chapter, Suite 112, Multnomah Hotel, Portland, Oregon; the Alaska Chapter, 306 Central Bldg., Anchorage, Alaska, and the Plan Bureau, 2413 Western Ave., Seattle, Wash.; and the Builders Exchange Cooperative, 317 Builders Exchange Bldg., Portland, Oregon. A set of such documents may be procured from the office of the Director at Juneau, Alaska, upon deposit of $25.00, all of which will be refunded upon the return of the plans and specifications in good condition within twenty (20) days from date of bid opening. Each bid must be accompanied by a satisfactory bid security (certified check or bid bond) in an amount not less than 5 per cent of the total bid in dollars and cents. No bid will be withdrawn until thirty days after the scheduled closing date for the receipt of bids. The successful bidder will be required to furnish a performance bond and payment bond, each in the amount of 100 per cent of the contract price. The Government reserves the right to award a contract for the project on the basis of the acceptance of any or all of the alternates, whichever course is in the best interest of the Government. DESCRIPTION: The construction of a reinforced concrete, steel and wood frame high school building containing approximately 12,000 sq. ft. with alternates to provide extra classroom space containing approximately 4,000 sq. ft. An opportunity will be given in the bid documents of this project and Project Aaa. 50-A-195, High School, Kenai, Alaska, to permit a reduction in the base bids, should both projects be awarded to the same contractor.

STATE HIGHWAY PROJECTS
BIDS CLOSE 9:30 A.M., APRIL 25
Helena, Montana
NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the offices of said Commission in the City of Helena until 9:30 A. M., on April 25, 1957. The proposals will be publicly opened and read immediately thereafter.

1. F-IN 117(11) Unit 3—Seal coat oiling 15.727 miles on the Livingston-Big Timber Road in Park and Sweet Grass Counties involving about 3,395 tons hauling and placing state furnished cover material; 102 hours watering; 131 units rolling; 38,463 gals. emulsified asphalt; 38,463 gals. rubberized asphalt; and L. sum furnishing and maintaining facilities for watering. Project to be completed in 60 calendar days. Minimum wage rates for this project have been predetermined by the Secretary of Labor and are set forth in the advertised specifications.

2. F 157(14) Unit 1—Grade, gravel surfacing, bituminous surface treatment and drain 1.505 miles on the Miles City-Jordan Road in Custer County involving about 77,566 cu. yds. excavation; 640 cu. yds. riprap; 100 cu. yds. gravel backfill; 2,947 mi. yds. overhaul; 6,591 tons crushed gravel; 26,687 tons uncrushed gravel; 1,816 M Gal. watering; 305 units rolling; 11,247 gals. liquid asphalt; 11,851 gals. emulsified asphalt; 948 lin. ft. corrugated metal pipe culvert; 166 lin. ft. relay pipe culverts; 600 lin. ft. steel beam guard rail and other items. Project to be completed in 75 calendar days.

3. F 191(16) Unit 1—Grade, gravel surfacing, bituminous surface treatment and drain 7.488 miles on the Pablo-Kalispell Road in Lake County involving about 314,622 cu. yds. excavation; 5,261 cu. yds. riprap; 100 cu. yds. gravel backfill; 366 cu. yds. sand backfill; 17,059 mi. yds. overhaul; 133,529 tons crushed gravel; 42,748 tons uncrushed gravel; 8,238 M gal. watering; 1,391 units rolling; 57,437 gals. liquid asphalt; 57,488 gals. emulsified asphalt; 2,576 lin. ft. corrugated metal pipe culvert; 3,496 lin. ft. reinforced concrete pipe culvert; 400 lin. ft. relay pipe culverts; 750 lin. ft. steel beam guard rail; 9,096 lin. ft. new concrete integral curb and gutter; 2 each reflectorized railroad crossing sign; 2 each reflectorized railroad advance warning sign; and other items. Project to be completed in 300 calendar days.

4. IN 211(12)—Plant mix oiling, seal coat oiling and construction of new steel beam guard rail on 13.783 miles of the Vaughn-Conrad Road in Teton County involving about 2,961 tons crushed gravel; 28,610 tons plant mix; 437,428 gals. asphalt cement; 89 hours watering; 109 units rolling; 26,403 gals. liquid asphalt; all L. sum furnish and maintain water plant; and 200 lin. ft. guard rail. Project to be completed in 90 calendar days. Minimum wage rates for this project have been predetermined by the Secretary of Labor and are set forth in the advertised specifications.

5. F 333(18)—Grade, road mix oiling, and drain 16.376 miles on the Grass Range-Malta Road in Phillips County involving about 1,136,133 cu. yds. excavation; 964 cu. yds. gravel backfill; 57,131 mi. yds. overhaul; 16,997 M gal. watering; 2,266 units rolling; 5,572 lin. ft. corrugated metal pipe culvert; 865 lin. ft. structural plate pipe culvert; 100 lin. ft. relay pipe culverts; 4.63 acres clearing; 1.81 acres grubbing and other items. Project to be completed in 300 calendar days.

6. U-UG 405(2)—The construction of a new 551.6 steel and concrete combination bridge and overpass over the Chicago, Milwaukee, St. Paul & Pacific Railroad and the Clark Fork River on the Madison Street, Fifth & Sixth Streets in the City of Missoula in Missoula County involving about all L. sum structural steel; 1,103.71 lin. ft. steel bridge rail; 263,896 lbs. reinforcing steel; 3,026.6 cu. yds. concrete; 3,890 cu. yds. structure excavation; 181.36 lin. ft. guard fence; 862.1 sq. ft. corrugated transite sheet; 14 [illegible] floor drains; and all L. sum shoring cribs. Project to be completed by July 1959.

7. S 15(9)—Bituminous surface treatment 15.005 miles on the Poplar-Flaxville [illegible] in Roosevelt County involving about 15[illegible] tons crushed gravel; 3,785 M gal. water 917 units rolling; 77,215 gals. liquid asph 77,217 gals. emulsified asphalt; 90 [illegible] blading and 90 hours scraping. Project be completed in 120 calendar days.

8. S 35(7)—Grade, drain and construct of one 50.0' treated timber pile bridge Grasshopper Creek on 7.500 miles on Jackson-Dillon Road in Beaverhead Cou involving about 449,992 cu. yds. excavati 283 cu. yds. gravel backfill; 31,046 mi. overhaul; 6,728 M gal. watering; 360 lin. corrugated metal pipe culvert; 62 lin. structural plate pipe culvert; 2,364 lin. reinforced concrete pipe culvert; 100 lin. relay pipe culverts; 21.680 MBM treat timber; 0.778 MBM untreated timber; lin. ft. treated timber piles and other ite Project to be completed in 150 calendar da

9. S 94(4)—Grade, gravel surfacing drain 5.849 miles on the Chester-Northw Road in Liberty County involving abo 293,118 cu. yds. excavation; 714 cu. y binder; 156 cu. yds. gravel backfill; 1,4 mi. yds. overhaul on binder; 31,358 mi. y overhaul; 20,927 tons crushed gravel; 4,2 M gal. watering; 123 units rolling; 1,018 l ft. corrugated metal pipe culvert; 136 lin. structural plate pipe culvert; 100 lin. relay pipe culverts; and other items. Proje to be completed in 100 calendar days.

10. S 219(1)—Grade, cement stabilized ba bituminous surface treatment and dra 6.006 miles on the Big Sandy-Rubyard Ro in Hill County involving about 127,277 c yds. excavation; 75 cu. yds. gravel backfil 8,987 mi. yds. overhaul; 2,683 tons crushe gravel; 2,979 M gal. watering; 299 uni rolling; 75,146 gals. liquid asphalt; 9 lin. ft. corrugated metal pipe culvert; lin. ft. structural plate pipe culvert; 1 lin. ft. relay pipe culverts; 34,069 cu. yd soil aggregate; 7,421 barrels portland cemen 91,610 sq. yds. processing and other item Project to be completed in 100 calendar day

11. S 359(3)—Grade, gravel surfacing an drain 0.723 mile on the Marsh-Glendive Roa in Dawson County involving about 43,964 c yds. excavation; 127 cu. yds. riprap; 1 cu. yds. binder; 259 cu. yds. gravel backfil 218 mi. yds. overhaul on binder; 4,715 m yds. overhaul; 4,185 tons crushed grave 725 M gal. watering; 16 units rolling; 2 lin. ft. corrugated metal pipe culvert; 1 lin. ft. structural plate pipe culvert; 62 li ft. relay pipe culverts; and other item Project to be completed in 60 calendar day

12. SMP 2299—Crushing and stockpilin crushed gravel surfacing from nine crush set-ups in Beaverhead, Broadwater, Jeffe son and Silver Bow Counties involvi about 97,500 tons ¾" crushed gravel; 149,2 ton miles haul on stockpiled material. Pro ject to be completed by October 31, 1957.

13. SMP 0801-01-01-42—Construction of new 50' by 18' office extension building Miles City in Custer County involving on lump sum for the complete construction.

The above listed quantities are approx mate only.

All bid proposals shall be accompanied b a certified or cashier's check, cash, post money order, bank money order, or b bond in the amount of at least 5% of th bid. Should the successful bidder fail t enter into his contract and furnish a sati factory performance bond within the tim stated in his proposal, the bid deposit sha be forfeited to the State Highway Commis sion of Montana.

Prequalification of bidders at least 7 hours prior to the opening of bids is re quired.

Plans, specifications, forms of contra and bond, proposal blanks, and full instruc tions are on file for examination and ma be obtained at the offices of the State High way Commission in Helena, Montana. Plan and specifications for all Federal Aid Proj ects are also on file and may be examine in the offices of the Bureau of Public Roads at Missoula.

Ceramic Veneer

Pacific Mutual Building, San Francisco, shows how Ceramic Veneer — in a special custom-made grey green mottled color — compliments design appearance. Architects: Loubet & Glynn, A.I.A. General Contractor: MacDonald, Young & Nelson, Inc.

In Honolulu, the F. W. Woolworth Store reveals a unique combination of a bevel shape, tooled and smooth Ceramic Veneer. Striking "Polynesian print" design exemplifies wide range of patterns now possible through the "silk screen" glazing technique. Designers: F. W. Woolworth Co., San Francisco. General Contractor: Walker Moody Co., Ltd., Honolulu.

UNLIMITED freedom of expression, within the bounds of good design, is an architectural advantage in planning and building. So great is the range of colors and styles in *custom-made* Ceramic Veneer, architects are more and more specifying this modern facing material. Indoors or outdoors, Ceramic Veneer enables you to achieve the kind of dramatic effects that are so desirable.

VERSATILITY is the major reason Ceramic Veneer earns the recommendation of leading architects. Its unique permanence, lower cost of maintenance, and the wide variety of colors, textures and sizes offer a combination of major advantages to consider in planning.

A 32-PAGE CATALOG, illustrating the many advantages of Ceramic Veneer is now available and can be mailed to you quickly. Write today... or ask the CV representative near you to demonstrate how Ceramic Veneer can enhance the beauty and practicability of your projects

Steel opens new horizons in school design

STEEL FOR BEAUTY! Kellogg High School, Kellogg, Idaho, is a dramatic example of the functional beauty that can be achieved through steel. Fabricated by Gate City Steel, Boise, Idaho, using United States Steel angles, plates, and structurals, it contains 68,000 square feet of space. The contemporary design provides maximum lighting for students and is a permanent structure, economical to maintain. Culler, Gale, Martell, Norrie, of Spokane, Wash., and Perkins and Will, of Chicago, Ill., were associated architects.

STEEL FOR ECONOMY! The Green River School in Utah was built at a cost of less than $10 per square foot . . . one of the most economical school buildings in the Intermountain West! This modern structure features an all-welded frame . . . one of the first in this area. Architects were Cannon, Smith & Gustavson, Salt Lake City. Dean L. Gustavson—partner in charge.

STEEL FOR VERSATILITY! Exposed steel trusses solved a problem in the construction of the Green River School's gymnasium . . . and saved about $30,000 in building costs! Since soil conditions required the building to be founded on pilings, the gym could be recessed half its height into the ground. This unique design allowed for a continuous roof plane. For *your* next project, consider the advantages of steel—United States Steel.

The Building Month: Trends/Views

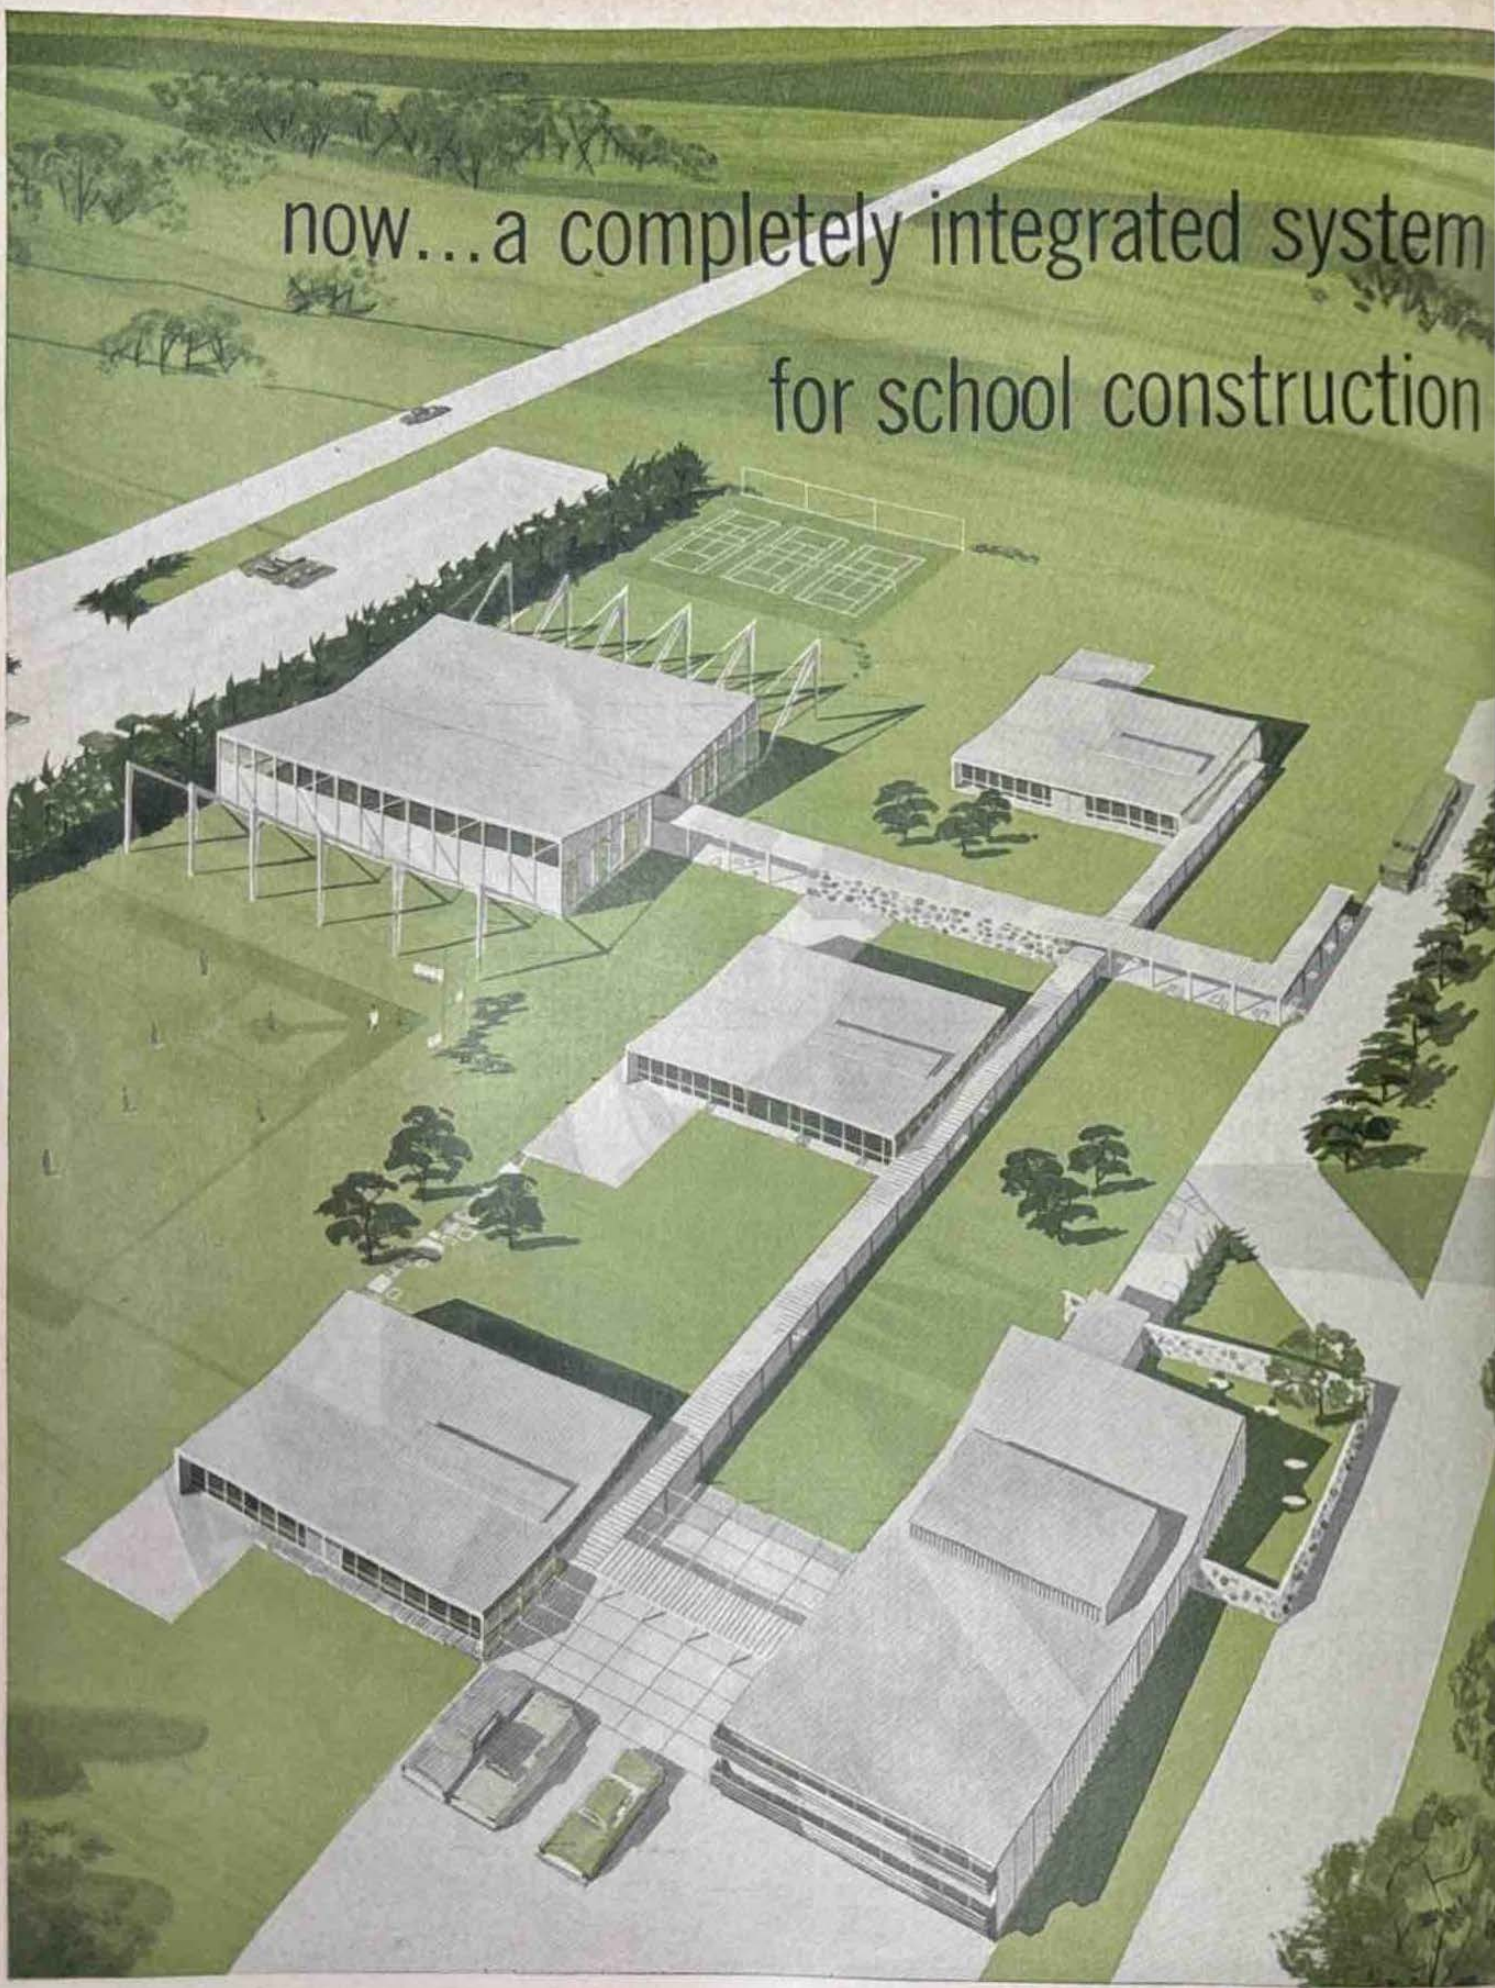
WEST COAST ARCHITECTS took the lion's share of honors in the sixth annual competition for better school design conducted by The School Executive magazine. Top awards went to Mario J. Ciampi, San Francisco, for Sonoma Elementary School, Sonoma; Neutra & Alexander, Los Angeles, for the Orange Coast College Science Building, Costa Mesa; John Lyon Reid & Partners, San Francisco, for Walnut Creek Elementary School, Walnut Creek. Honorable mentions went to Ciampi for Olympia Primary School, Daly City; Cox, Hagman & Meyer, Los Angeles, for Death Valley High School, Shoshone; and Waldron & Dietz, Seattle, for Woodway Elementary School, Edmonds.

THE SEATTLE ARCHITECTURAL FIRM of Naramore, Bain, Brady & Johanson has been named winner of a contest to design a 200-ft.-high battle monument on Corregidor Island at the entrance of Manila Bay. With the $10,000 prize goes a commission to supervise construction of the memorial, to include an auditorium seating 500 persons, a library and seminar rooms, when plans are approved by the Philippine government. Fifty-four firms entered the competition, sponsored by the Corregidor-Bataan Memorial Commission, created by Congress in 1953.

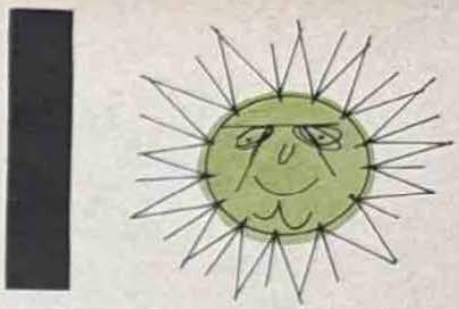
THE STATE OF CALIFORNIA IS EXPECTED TO SPEND $174,123,000 during the coming fiscal year for new buildings, broken down as follows: state colleges, $88,800,000; University of California, $21,370,000; Corrections and Youth Authority, $20,196,000; mental health, $20,000,000.

INTERNATIONAL COUNCIL OF SHOPPING CENTERS held its first clinic and annual meeting in Chicago May 13-14. Robert F. Cavin, owner of Town and Country Shopping Center, Sacramento, and James A. Douglas, manager of Northgate Shopping Center, Seattle, are among the directors who helped to form the association, which will establish standards as one of its objectives.

METAL CURTAIN WALL DIVISION of the National Association of Architectural Metal Manufacturers was organized at the group's 19th annual convention in San Francisco May 7-12. One of its main goals will be to establish minimum standards and specifications.

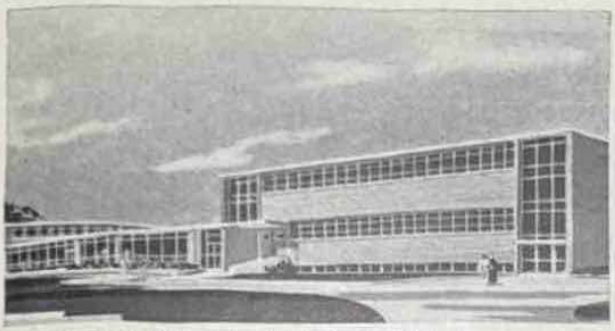


ARCHITECTS AND ENGINEERS CONFERENCE COMMITTEE of California has elected Henry L. Wright, FAIA, of Los Angeles as its first chairman. Wesley T. Hayes, structural engineer of San Francisco is vice chairman and Melton Ferris, executive director of the California Council, AIA, is executive secretary. Chairman Wright calls the joint committee "a milestone in the traditionally close relationship between the architectural and engineering professions in California."



ABOUT ONE OF EVERY 50 VACANT HOUSES in the 16 southern states is so dilapidated it cannot be considered part of the housing supply, the Census Bureau says, which is twice the national average and nearly three times the percentage in the West.

IMPORTANCE OF STRESS ANALYSIS in our modern technology is evident in the announcement of a two-week special summer program devoted to the subject at Massachusetts Institute of Technology June 17-28.



ONE-STORY HOMES ARE BAD FOR HEALTH, the executive director of the President's Council on Youth Fitness told 1,500 delegates to a health and recreation conference in Long Beach, Calif., last month. Dr. Shane MacCarthy, Washington attorney, declared, "The lack of stairs kills benefits formerly received from knee exercise."

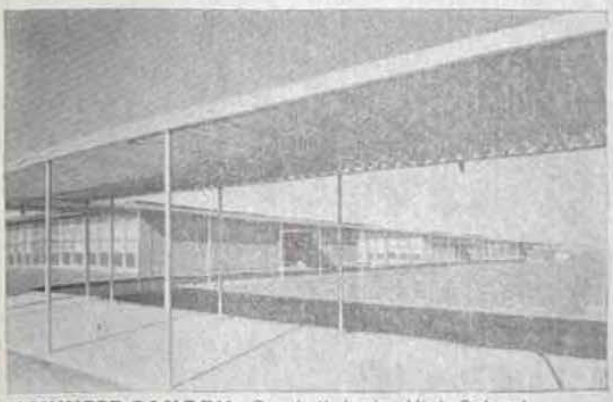
A BRIGHT FUTURE FOR PLASTICS IN THE BUILDING INDUSTRY is visualized by The Dow Chemical Co. of Midland, Mich., which has set up a building products group as part of its plastics technical service.

now...a completely integrated system
for school construction

Kawneer unit wall and sun control products

KAWNEER UNIT WALL—Madonna High School, Chicago, Illinois. C. I. Krajewski, Architect-Engineer.

KAWNEER UNIT WALL



This *standardized* exterior wall system offers the built-in versatility so necessary in school construction. Wall modules are available in a range of heights and widths . . . fixed or operating sash can be provided . . . insulated panels can be finished in a choice of colored porcelain enamel or alumilited aluminum . . . flush or glazed doors are available. This flexible system is engineered to provide unusual weathering features to resist water and air infiltration. Investigate—you'll find the clean, contemporary design of Kawneer Unit Wall an economical answer to school building problems.

KAWNEER K-LOUVER—Rowland Union School, Puente, California. Lee B. Kline, A.I.A., Foster Simpson, Illuminating Engineer.

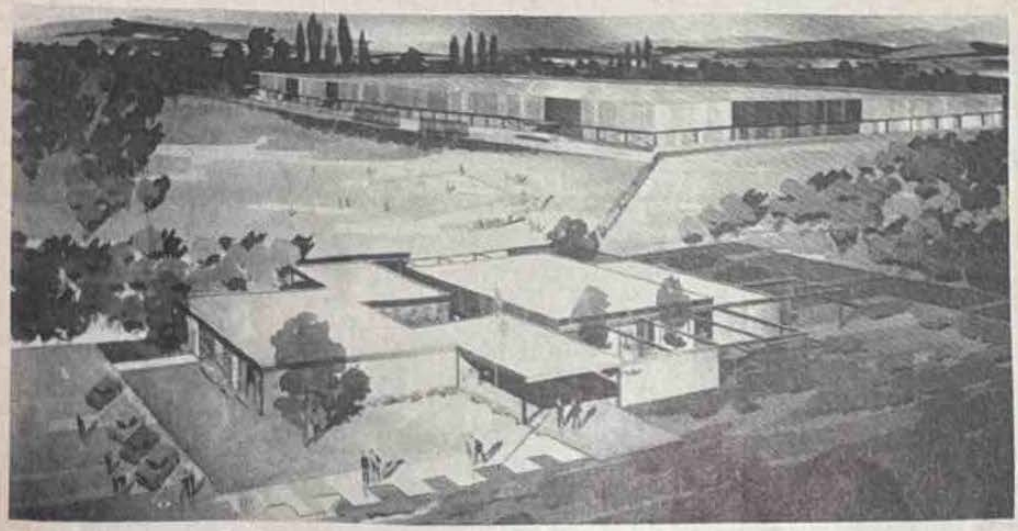
KAWNEER K-LOUVER

Direct sun light, reflected glare and intense sun heat sap student and teacher interest and initiative. Effective control of all these elements is easily achieved through Kawneer K-Louver applications regardless of climate characteristics, building orientation or building size or design. Open louver design allows natural air circulation . . . eliminates heat pockets. Concave-convex louver shape diffuses harsh sun rays . . . provides soft, uniform light throughout the room. Available in fixed or operating form for vertical or horizontal applications that meet any sun control requirement.

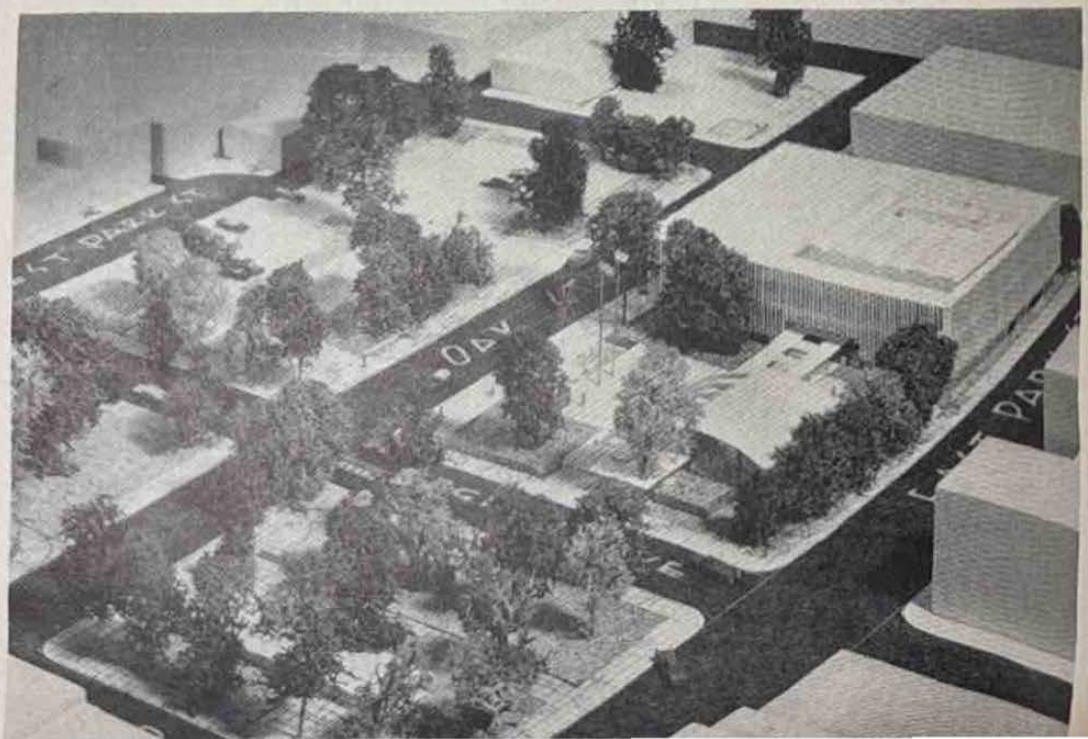
KAWNEER CANOPY—Crockett Junior High School, Irving, Texas. Wyatt-Hedrick, Architects.

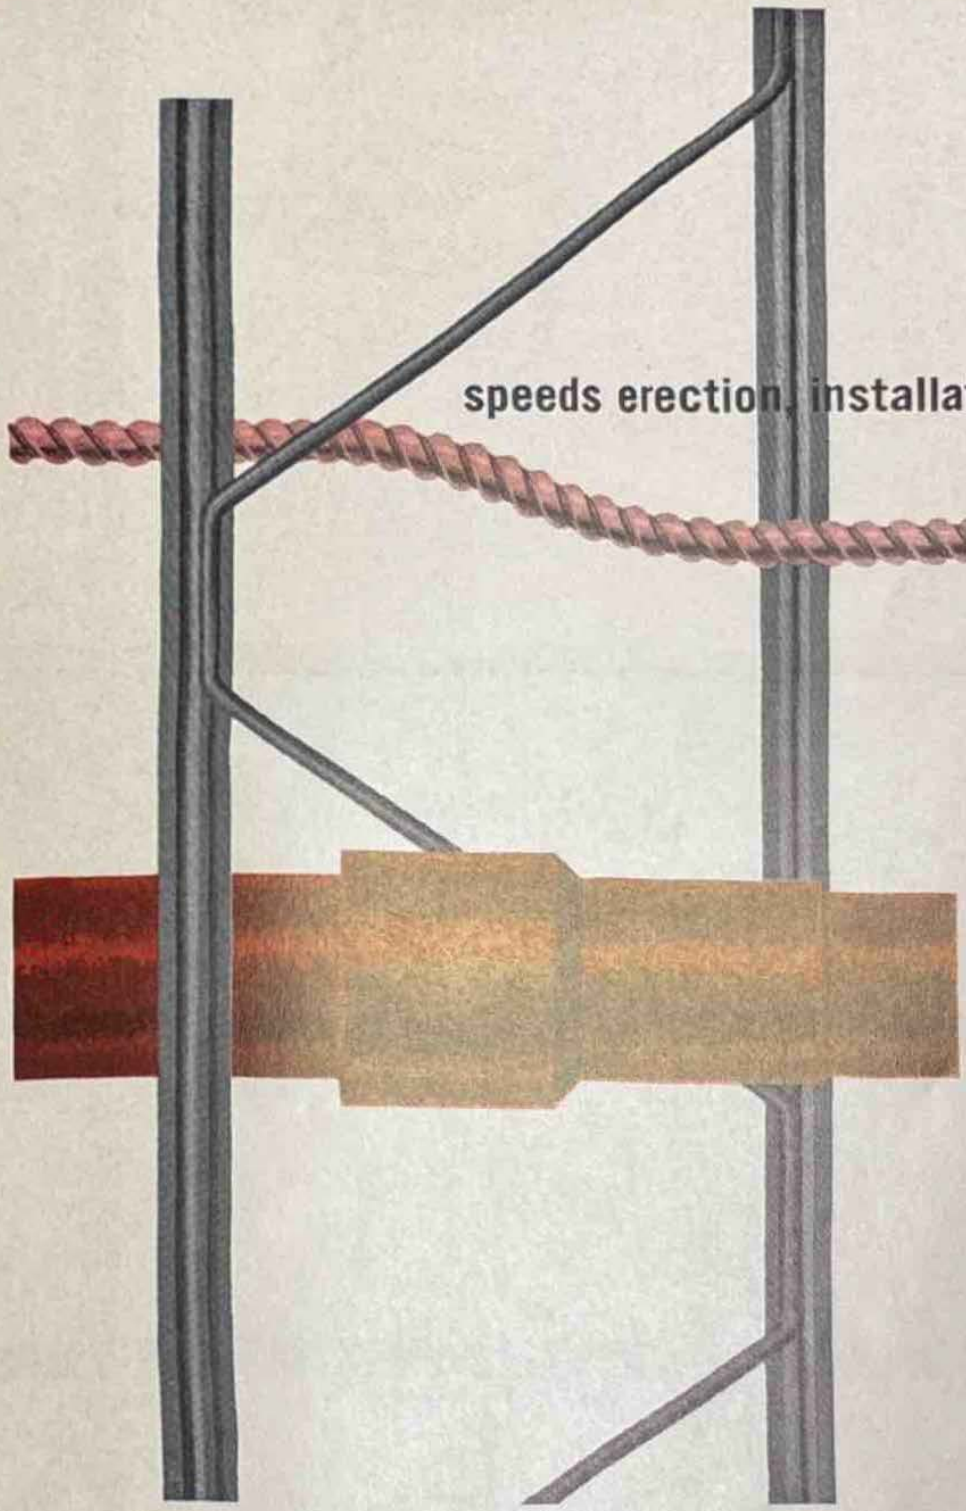
KAWNEER CANOPY

Year 'round light and weather control is a simple exercise for Kawneer Canopy. Bus loading points, entranceways and walkways between school buildings can be effectively sheltered regardless of climate demands. Open overlap of Kawneer's distinctive "W" shaped sections allows diffused light to filter through, but provides positive protection against wind, rain and snow. Range of widths offers enough flexibility to meet most sheltering requirements.



PROJECT PREVIEW





ISLAND PARK ELEMENTARY SCHOOL on Mercer Island, Wash., will be of steel frame and concrete block wall construction. Twelve-classroom plant will have 27,500 sq. ft., acoustical treated suspended ceilings in corridors. Architects: Bassetti & Morse.

DISTRIBUTION CENTER AND WAREHOUSE being built for General Fireproofing Co. in San Luis Obispo, Calif., will have removable tilt-up panels and fluted steel in red, white and navy blue color scheme. Inside garden in lobby area will be enclosed by glass on three sides, with back wall of red mosaic. Architects-engineers: Albert C. Martin & Associates.

FIRST BUILDING to get underway in master plan for civic center in Eugene, Ore. (PA&B for March 1955) will be nearly square county courthouse, just north of existing structure. When estimated $2 million project is completed, old courthouse will be razed to make ready for plaza, including public meeting hall. Architects: Wilmsen & Endicott.

Another Soulé First

SOULÉ STEEL STUD

speeds erection, installation of pipe and conduit

This time-saving and cost-cutting steel stud design was pioneered and perfected by Soulé. It features wide web openings for faster installation of pipe and conduit. The Soulé design also makes the stud easier to handle on the job—hand cutting is faster, speeding erection. Soulé steel stud is available in 2″, 2¼″, 3¼″, 4″, and 6″ widths. Call your nearest Soulé office for complete specifications and details.

April hits $232 million, 9% increase over same month in '56

FOR THE FIRST TIME THIS YEAR the monthly building volume for the five western states rose above last year, halting the downward trend of the first three months.

The April dollar volume is $232,570,474, an increase of 9% over the total for April 1956. This compares with a 9% decrease in January, 10% decrease in February and 14% decrease in March. Only two states, however, reported increases. California is up 16% and Montana, 9%. Oregon dropped 24%; Washington, 29%; and Idaho slid to 35% below last year.

Compared to March, the April total is a 5% increase. Washington and Idaho dropped slightly, while the other three states showed fair increases.

While the first three months of 1957 were slow compared to 1956, western cities still were among the leaders in the nation for building permit volume. The six western cities in the top 25 for the first two months of 1957 and their standing compared to the rest of the country were Los Angeles, second (topped only by New York); San Diego, fifth; Seattle, 11th; Long Beach, 15th; San Francisco, 16th; and San Jose, 25th.

The January through April total for the area is $797,125,329, down 6% from last year. Montana is the lone state recording an increase, up 8%. California is down 6%; Oregon, 11%; Washington, 8%; and Idaho, 6%.

Following is a breakdown of building permits issued by several major agencies during April.

	DWELLING UNITS		COMMERCIAL & INDUSTRIAL		PUBLIC	
King County	444	($ 4,137,235)	66	($ 287,215)	6	($ 608,500)
Seattle	570	(3,481,614)	184	(1,484,061)	5	(388,600)
Tacoma	115	(544,220)	45	(593,535)	1	(25,000)
Orange County	439	(4,917,157)	50	(387,043)	3	(210,480)

Vertical housing: back to the city core

Phoenix co-op is prototype for $60 million program

A $3 million 14-story luxury cooperative building in downtown Phoenix is particularly noteworthy because 1) more than half of 60 apartments were sold before ground was broken and two-thirds before the roof was put on and 2) it is spearheading a proposed $60 million plan to build 20 similar projects in 20 cities across the land.

The families who have made down payments in the neighborhood of $20,000 each and are scheduled to move in during June feel that the Phoenix Towers is an answer for those who want to combine the privacy and space of a house with the carefree convenience and central location of a city apartment. Chicago architect Ralph C. Harris describes his design as "a collection of modern air conditioned ranch homes, grouped together in a vertical plane."

Sponsors of the project are Del E. Webb, head of the Phoenix construction firm bearing his name and co-owner of the New York Yankees; Arnold M. Johnson, vice chairman of Automatic Canteen Company of America and owner of the Kansas City Athletics; Ralph W. Applegate, Chicago realtor and head of Casualty Mutual Insurance Co.; and J. Arthur Friedlund, Chicago attorney and secretary-general counsel for the New York Yankees.

Architectural features

Applegate says that the buildings in the expanded $60 million program will follow principles used in planning the Phoenix Towers, with each cooperative taking its influence from local scenic and climatic conditions.

The Phoenix project is the tallest and largest residential structure ever built in Arizona, consisting of four wings to take advantage of outdoor living possibilities and to assure maximum views of surrounding mountains. Its construction marks the transition in the city from strictly horizontal growth out and into the valley to a beginning in the vertical plane.

Each floor landing is open to the outside and residents do not completely enter the building proper until they turn their latchkey in their own front door.

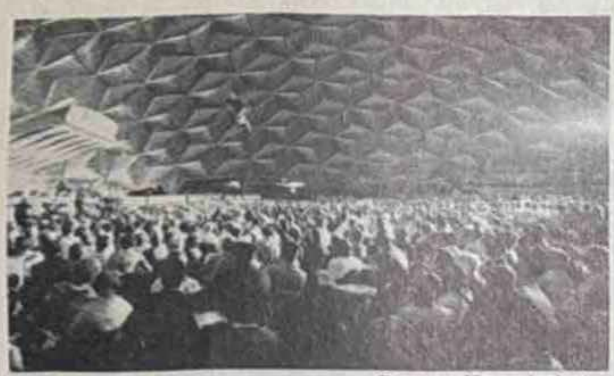
Apartments consist of 5 and 5½ rooms with two bedrooms (1,210 sq. ft. and 1,809 sq. ft.) or 6½ rooms with three bedrooms (2,357 sq. ft.). Each unit has a balcony terrace opening off the dining area.

Financial features

Applegate explains that each structure in the overall plan would cost about $3 million, following a pattern set by the Phoenix Towers. "The entire project, if carried to its completion, would total more than 2,000 apartment homes, ranging from $32,000 to $61,000. A preliminary study made by the sponsors revealed a market exists in smaller cities in every section of the country," he continues.

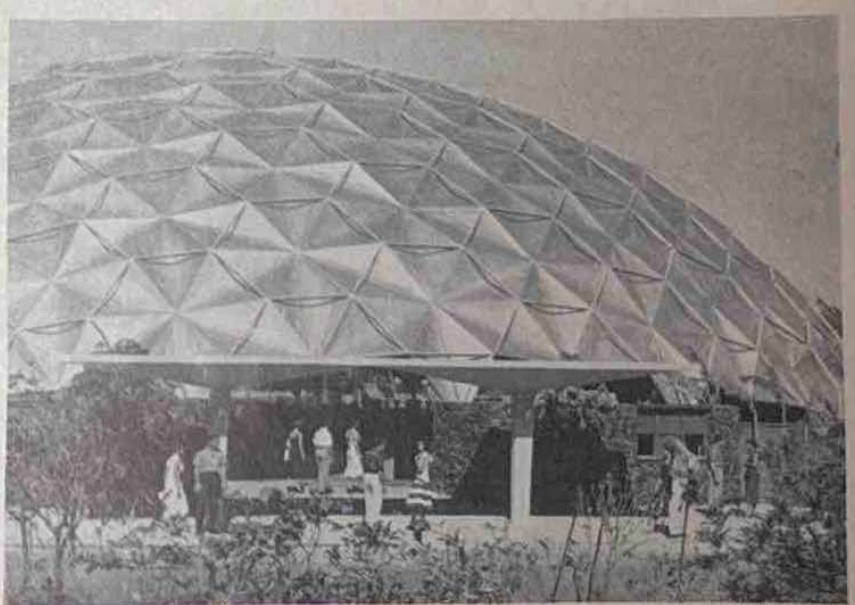
"It is such smaller cities as Indianapolis, Tulsa, Atlanta, Palm Beach and Dallas, where the benefits of cooperative apartment ownership are not yet available but where a demand has recently begun to exist, that we are considering building to take advantage of this market."

In addition to the convenience of living close to centers of business and social activity, tax advantages possible through cooperative financing are another incentive for such a purchase, Applegate points out.



"Our policy, chosen from several possibilities, is based on strict compliance with federal regulations. A 'cooperative corporation' as defined by the Internal Revenue Act, assures apartment owners of tax deductions of mortgage interest and real estate taxes, which will amount to considerably more than 50% of their monthly payments."

News continued on p. 42



FIRST COOPERATIVE apartment building in $60 million, 20-city project is Phoenix Towers. Situated on three-acre site, it has swimming pool and putting green; first underground residential garage in Southwest; shuffleboard courts; large roof terrace atop 14th floor.

Much publicized aluminum dome in Honolulu gets first public use at concert

Camera Hawaii photos

CAPACITY OPENING NIGHT AUDIENCE of 2,000 enjoy Honolulu Symphony Orchestra in aluminum stressed-skin dome at Hawaiian Village Hotel. (For construction details see PA&B for March 1957.) Concert marked first public use of dome, designed by Kaiser Aluminum and Chemical Corp. Acoustical material was applied to only one-third of interior surface and was placed directly on panels, retaining their geometric pattern. Bolt, Beranek & Newman, Cambridge, Mass., were acoustical consultants.

ARCHITECTURE--an ART

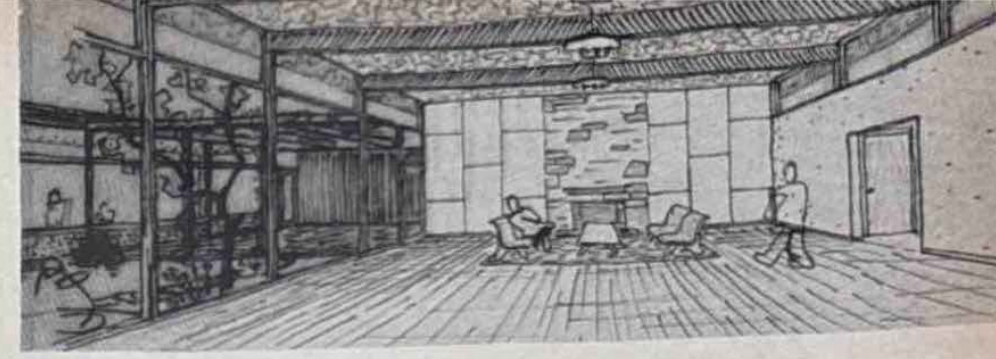
by H. H. WAECHTER, AIA

An address delivered in connection with an exhibition of renderings, sketches and models, sponsored by the Eugene Art Center last November

IN THIS COUNTRY we place much emphasis on our constitutional rights to govern ourselves, to provide for the general welfare of the nation and to develop our cultural pursuits. We are filled with zealous prayer that this social background will give the nourishing soil from which the full life will sprout. We entertain the vision of a social and physical environment which will allow us to give to such full life proper space and a frame of reference.

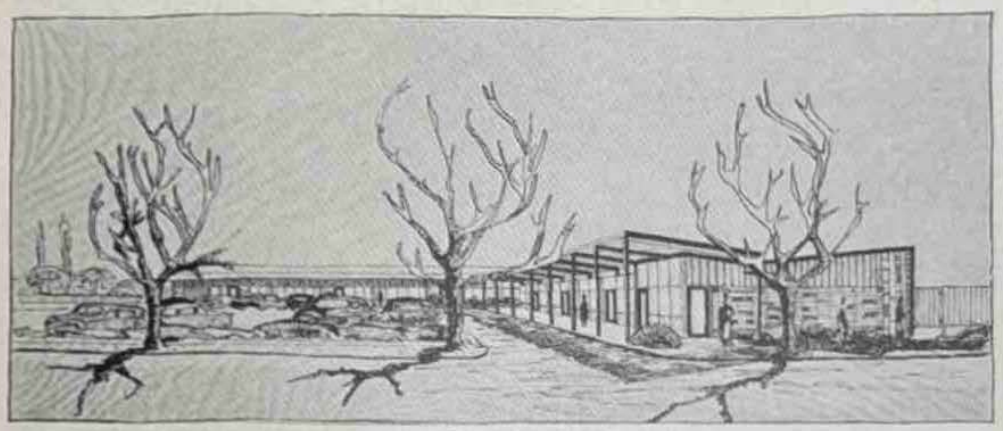
This concept has been boosted and disturbed simultaneously by the imposing forces of technological development. Increasing specialization within the professions has produced a great number of often influential people who are highly skilled in a very limited field while losing sight of all other fields, all of which should be interrelated.

In addition, the populace as a whole has been subjected to an overemphasis of the spoken and printed word. Since the Renaissance this development led gradually to the crippling of visual expression of the individual. This happened at a time when the skill of professional designers was continually developed into their routine virtuosity of today.



What has suffered most in this development is the individual's ability to communicate freely by visual means and at times to participate in creative processes. While every person is learning how to read and write, which opens to him avenues to literature and the sciences, the language of vision is neglected to such a degree that even simple communication is made difficult. This sort of illiteracy is, of course, standing in the way of creating the kind of environment which we need for a full life.

While we expect from the arts to make our environment beautiful and inspiring for such full life, we have to beware of thoughtless expediency and of trivial or frivolous architectural treatment which may lead us to the false impression of progress in design.



Naturally, if many of us are afflicted by undernourishment of visual impulses, our powers of visual communication and discernment must suffer.

Architecture has been considered to be the mother of the arts through the ages. Being an all-embracing art and giving shelter to all the other arts, architecture has been of great significance for the shaping of our physical environment, particularly if the art of building became an activity within the realm of the fine arts.

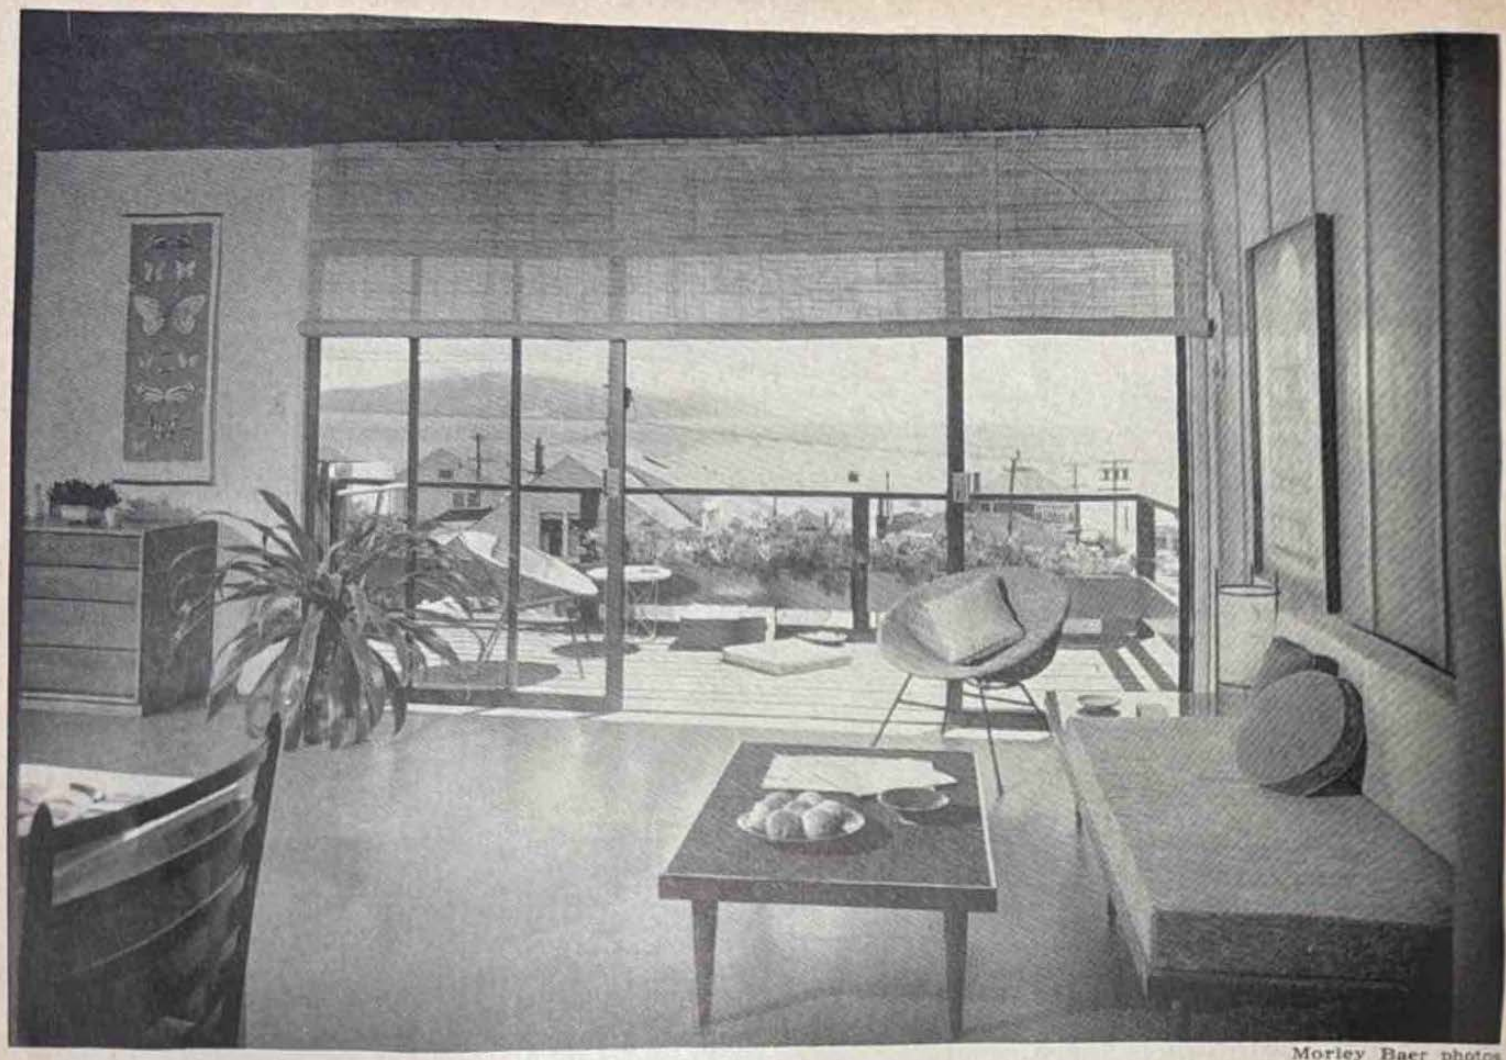
For this reason the architect is not a specialist in the narrow sense of the word and can never be one as long as he is concerned with the comprehensiveness of every building and planning problem. Art in architecture has no quotation marks, is nothing added for insignificant embellishment and most certainly is not a luxury. Primarily it is the way in which the artist is handling and assembling the sticks and stones to fuse them organically into space, in order to create beautiful space and to make every function within a building well operating. Art is actually something enormously practical. It is at the same time the essence and the expression of the things we are doing in a full life. It is significant if we can make a statement of our philosophy of life and all its practical functions. Art is a function of building and cannot be separated from other functions.

SYNAGOGUE AUDITORIUM INTERIOR, Eugene, sketch by architect H. H. Waechter.

MEDICAL-DENTAL BUILDING, Eugene, sketch by architect Phil Gilmore.

Speaking to you about architecture as an art imposes on me severe limitations for various reasons. In the first place, our subject is so vast and complicated in nature that it would be rather confusing than illuminating if I would make an attempt to illustrate my broad statements by giving detailed examples. I do not propose to expound all the various aspects of architectural practice within the short time allotted to me. I am very well aware that architecture today is practiced not only as a profession and an art but also as a business. I am also aware that the architect has to be many persons wrapped into one, such as an engineer, a craftsman, a psychologist, a sociologist, a technical and executive organizer, a public relations man, etc.

All those characteristics are important and architects have pronounced talents in some of these fields but not necessarily in all of them. They usually can be outdone in any of these fields by specialists. Yet, architects have to understand the problems involved in all those fields without which they could not coordinate the work of the specialists and weld all information together into one design.



There is, however, one quality, which is genuine with the architect, and that is his talent for design, in planning, in space organization, in handling form and color and in solving the problems of the building program to assure beautiful functioning. Nobody can relieve the architect from his leadership in design. It takes an artist to understand fully the problems of functional building. Technical information is dead without the vitalizing effect of imagination. If a client is looking for this design qualification, he is protecting himself from the commercialism of cliches and the riddle of styles and decorations.

At present we are in great danger that the personal service of the architect and thus architecture itself will be obscured and possibly obliterated by our seeming inability to grasp the problems posed by industrialization. We have not yet learned to master the machine. Building always has been teamwork among all concerned. The designer has to be the leading mind within this team because of his job to make a whole out of parts.

The simple relationship between client, architect and builder is being vastly expanded in the case of anything larger than a house or small business structure. Industry is supplying us with more and more prefabricated and predesigned building parts which can be ordered and assembled by unimaginative people. We are perilously near the condition pictured in the cartoon where the customer is directed by the floor manager to a machine, the "architector," which looks perhaps somewhat like a giant IBM electric brain. The customer voices his requirements and has only to receive his set of plans at the other end of the "architector."

In this exhibition you see drawings, sketches, renderings, models and photographs, which have been assembled for you against a background of thinking, which I tried to sketch in a few bold and, I am sure, insufficient strokes. We in the Eugene Art Center are interested not only in buildings as artistic expressions but also in the graphic efforts of the architect. To be sure, the architect is producing his work on paper not for the sake of drawing; the building itself is the desired product.

The architect's talent to draw and paint should not be confused with his talent to design a building. In fact, the world has seen a few outstanding architects who were no brilliant draftsmen. A certain amount of drawing skill, however, is absolutely necessary if communication between architect, builder and client shall take place. Also, the architect needs drawing to study the problems involved and to adjust his ideas. Sketches are the by-product of the developmental thinking of the architect. He thus evolves on paper one idea which is followed by another. With regard to some of the projects shown, which will never be executed, the sketches remain as the only tangibles and may help stimulate interest in the graphic expression of architectural ideas.

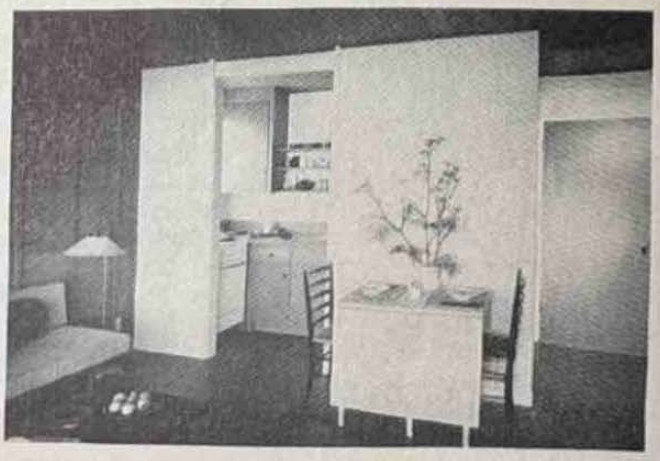
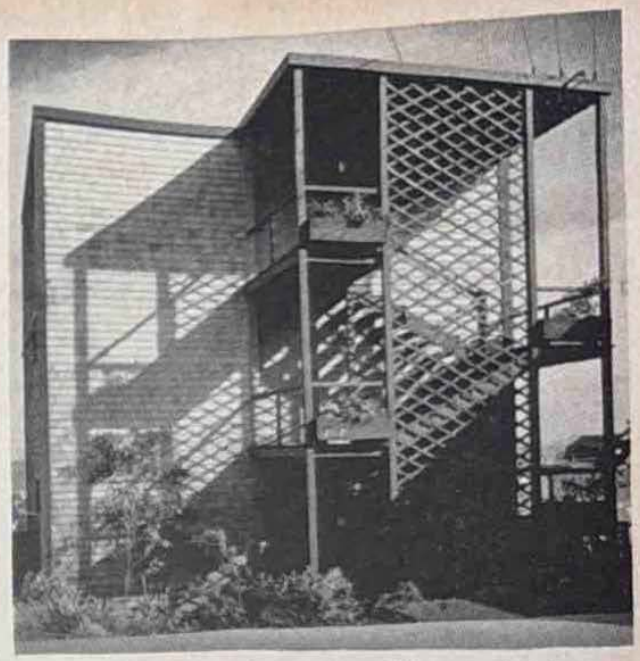
Studio Apartments
Sausalito, California



CAMPBELL & WONG, Architects

W. GILBERT, Structural Engineer

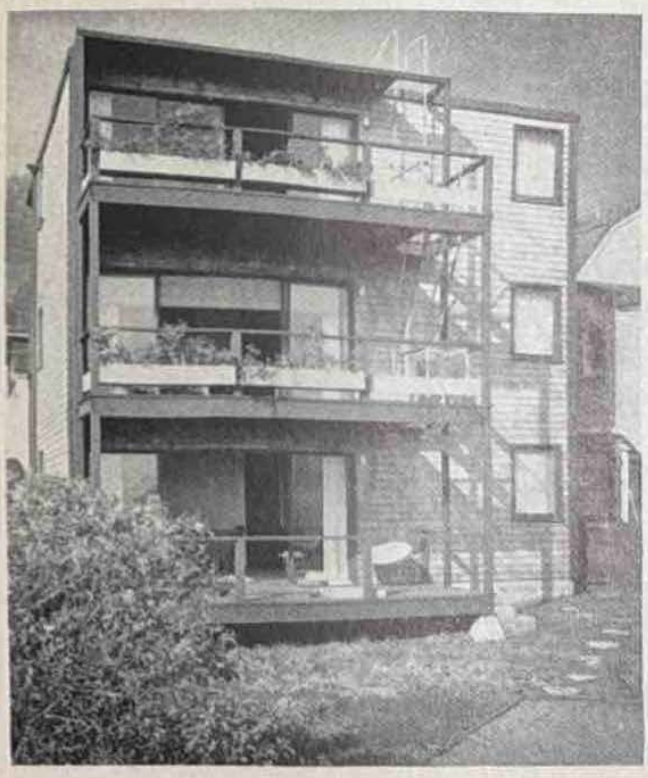
WILSON & WEDEKIND, General Contractors



APARTMENTS TAKE ADVANTAGE of view and sun to rear; sliding glass doors open onto deck for outdoor living. Tiny kitchen is marvel of efficiency.

OUTLINE SPECIFICATIONS

Type of Construction: Wood frame.
Exterior Walls: Cedar shingles with stained redwood trim and steel sliding.
Floors: Kencork asphalt tile; concrete, lower only.
Interior Walls: Sheetrock and Plyscord plywood with wood trim.
Ceilings: Sheetrock and Celotex; 2x6 exposed fir, top only.
Total Area: 1,296 sq. ft.
Total Cost: $23,420 (complete and furnished).
Cost per Square Foot: $11.
Date of Completion: July 1955.

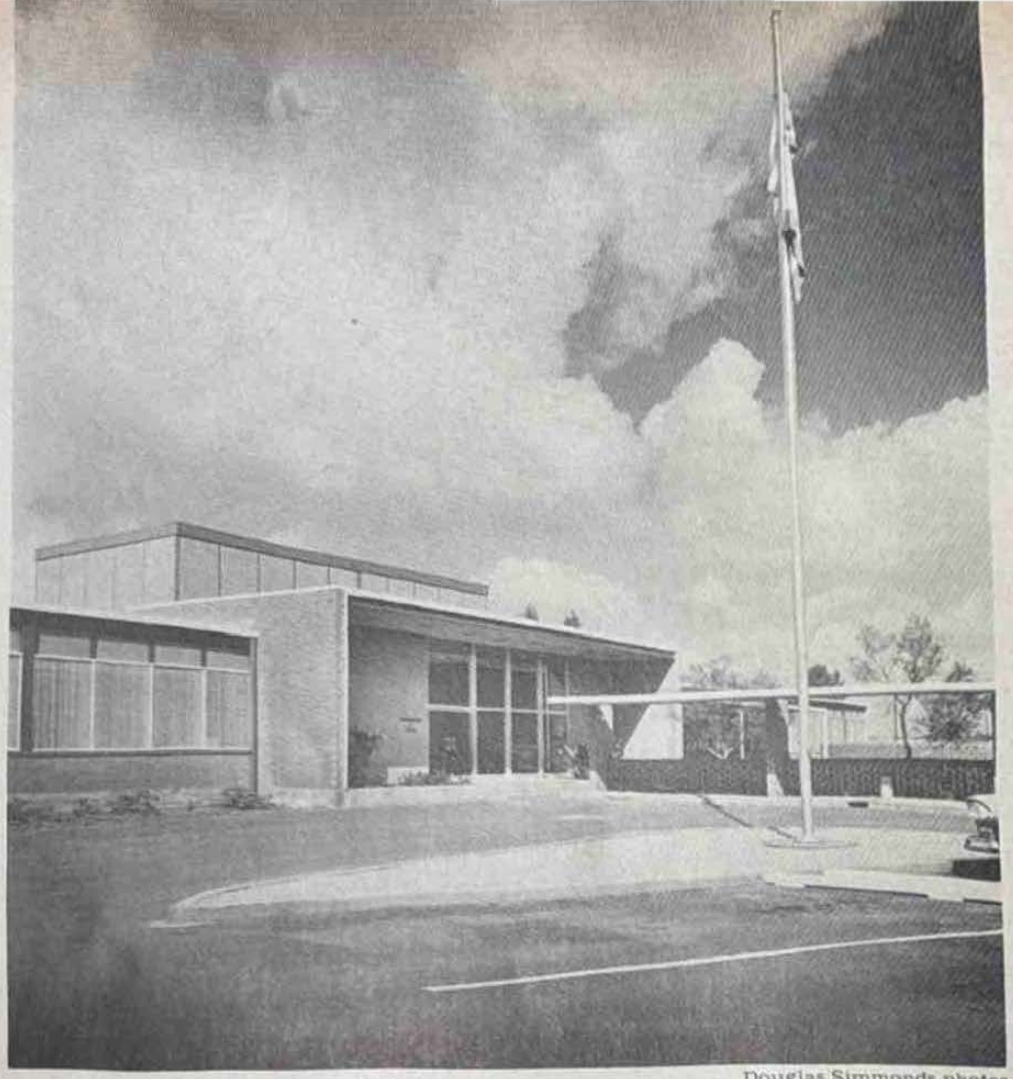


"The jurors were so careful in appraising the solving of problems in the face of reality. Everyone was very much taken by this project. Particularly after reading the explanation by the architects, as we did with all entries, we were in absolute accordance on this award. The tremendous low cost of the budget was carefully considered by architects."—Pietro Belluschi.

ENTRANCE is via wood stairway artfully concealed by inexpensive latticework.

Three-unit project at $11 per square foot

FRAME BOX STRUCTURE is almost Oriental in its classic simplicity; redwood trim accents cedar shingles.



"It is commonly assumed that large budgets make for good design and scanty budgets produce mediocre results. This apartment building is more superior because of its low budget."—James M. Fitch.

CITED for an Award of Honor in the recent northern California AIA competition, this three-unit structure totaling 1,296 sq. ft. was built at $11 per square foot. In clarifying that figure, the architects point out that the building—completed nearly two years ago—is on a level lot with a slab first floor and could not be duplicated for the same price today. But the $11 figure is all the more remarkable when one analyzes the cost breakdown: building only, $13,200; architects' fee, $1,320; lot, $3,500; parking and garden, $650; and furnishings, $4,750.

To achieve such economy, the architects designed a simple frame box set on a reinforced foundation within the measurements of 18x24 ft. The apartments are small, with only 432 sq. ft. on each floor. The units, however, are compact and efficient and take full advantage of the flat site with a view and sun to the rear.

The architects chose materials that would be both economical and handsome, starting with a cedar shingle exterior, accented by stained redwood trim, to provide texture and color and little maintenance. Interiors are of gypsum formboard and driftwood gray plywood with wood trim. Shoji doors conceal a closet, whose wall separates the sleeping area from the kitchen and dining spot.

Industrial flexibility takes on a new meaning

PRINCIPAL DESIGN AIM in developing plans for this three-building project was to provide flexible, functional space for a growing electronics business. In accomplishing this end, the architects have made a substantial contribution to industrial architecture: they have produced continuity and esthetic appeal in an area where it is sadly lacking.

The facility offers not only flexible use of the client's present space but correlated plans for expansion. The buildings are placed on the site so that each can grow as future needs dictate—the manufacturing plant to the west, the laboratory to the east, the office building to the north and south.

The west wall of the plant has a 75% removable wall consisting of steel trusses to carry the roof and even the steel columns are temporary. The steel sash is bolted so it can be taken out easily, while below the sill wall is an aluminum sandwich construction composed of two layers of ribbed aluminum sheathing with 1-in. fiberglass insulation between.

The same aluminum construction is found in the laboratory's east wall. And in the office building a full width door at each end assures continuance of the corridor into any additions to the north and south.

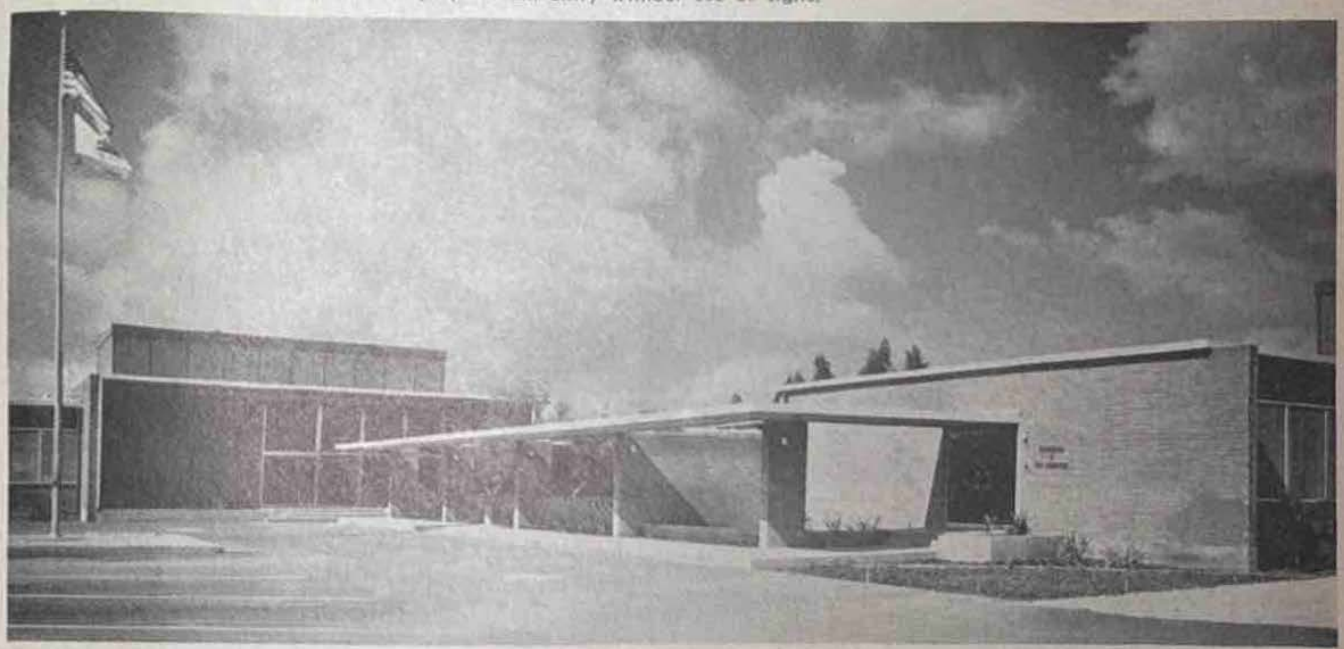
Because of the fluid nature of the electronics field, flexibility of use in terms of present facilities was another design criterion. The laboratory ceiling can be adjusted to one of three levels—9, 10 or 14 ft.—without any alteration in construction of the roof, walls or windows or of principal mechanical equipment. Sash and lighting fixtures were especially designed to permit these changes with the greatest possible economy.

Main services coming into the laboratory—water, gas, compressed air and electricity—are laid out with outlets 5 ft. on center to enable equipment to be placed at will. Lighting fixtures hang from conduits which support them and then can be plugged in at any 5-ft. intervals and adjusted for the ceiling height in use.

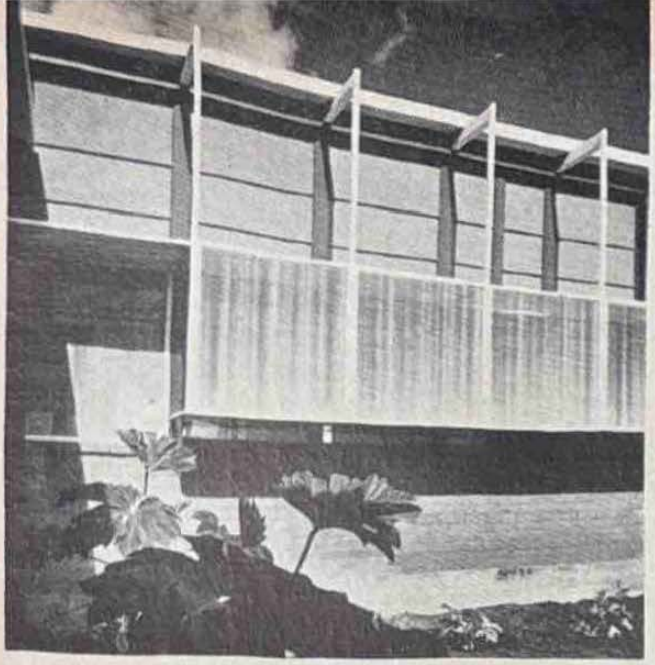
Only permanent installation on the production floor of the plant are the washrooms. All offices immediately concerned with production are located in the neck connecting the office building with the plant.

This same concept of flexible use of space also prompted the design of interior partitions. Because of the many different types required in this project, the chief advantage of shop-fabricated units was lost. The partitions used in all three buildings, developed by the architects' office some years ago, are based on a 4-ft. module, site-fabricated, demountable and consequently 90% salvageable, making them adaptable to any length and layout at a low cost.

Steel frames in 40x60-ft. bays support the manufacturing plant. Primary and secondary framing are combined to allow placement of columns 40 ft. apart for the same cost as a conventional system with columns 20 ft. apart. Exterior walls are precaste concrete tilt-up, with the exception of the removable west wall.



Laboratory and office structures employ a clear span steel frame, with brick exterior walls. Suspended ceilings are covered with acoustical tile.



Company executives desired to face both the office and the laboratory entrance onto the parking lot, to direct all visitors to the office building without the use of signs and to connect the entrances with a covered walk. The architects scaled down the laboratory entrance and located it under the covered walk roof. In addition, the steel decking was repeated as a partial screen for a garden area, defining the approach to the office doors.

For security reasons it was desired to funnel as much traffic as possible through one gate. The principal road through the property starts at the main gate, bisects the site and turns to meet the only other street that leads to the property on the north. The site permits all personnel and materials to feed off the main road where a guardhouse is found.

The three buildings are located at the center of the

EXPOSED STEEL DECKING of covered walk connects buildings. By designing entrance to laboratory in smaller scale than that of office building, visitors are directed to proper main entry without use of signs.

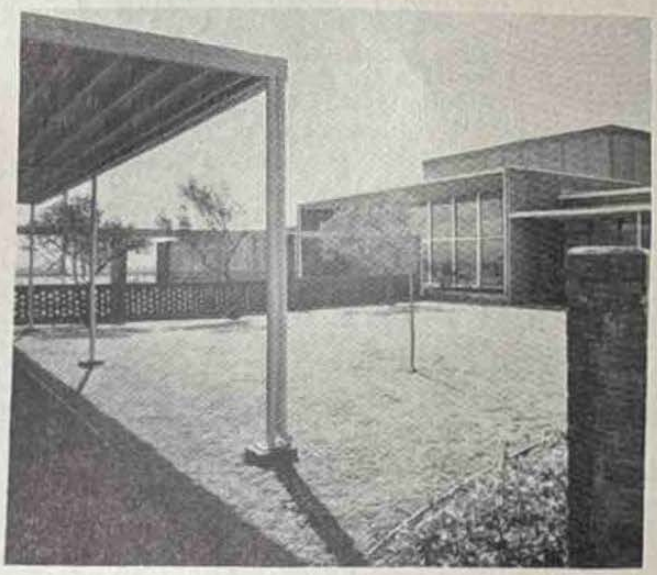
BRONZE LOUVERED SCREENS for sun control are adjustable, depending on which ceiling height is used in laboratory so that clear glass always can be covered. Suspended by outriggers, installation can be changed as needed without any structural alterations.

OUTLINE SPECIFICATIONS

Type of Construction: Steel frame in 40x60-ft. bays.

Exterior Walls: Brick, laboratory and office buildings; precast concrete tilt-up, manufacturing plant; bolted steel sash and aluminum sandwich construction with 1-in. fiberglass insulation between layers of sheathing, east wal of laboratory and west wall of plant.

Interior Partitions: Site-fabricated, non-bearing and demountable, based on 4-ft. module.



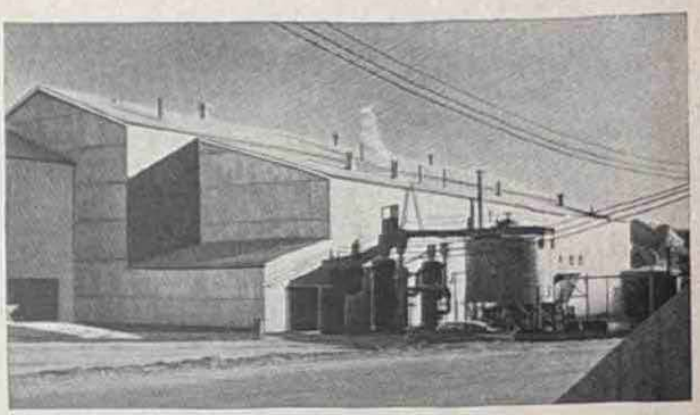
Ceilings: Suspended, covered with acoustical tile and movable to one of three heights in laboratory and offices.

Total Area: 90,000 sq. ft. in three buildings.

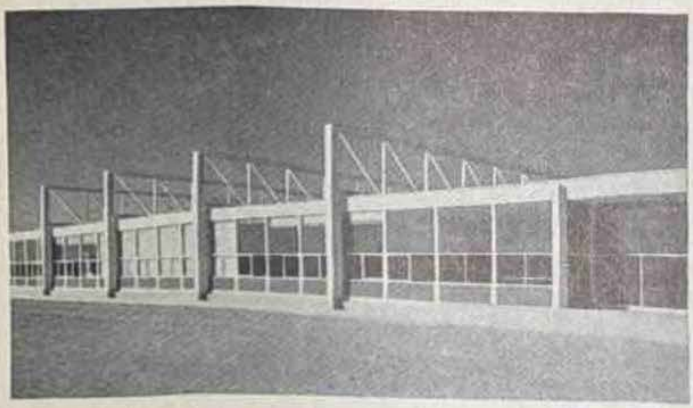
INDUSTRIAL PLANT

site, with parking around the entire perimeter. Production personnel parking is in a non-security area at both ends of the site, with laboratory and research workers parking adjacent to their building in a security zone. Production personnel then are checked at a guarded gate before entering the manufacturing plant.

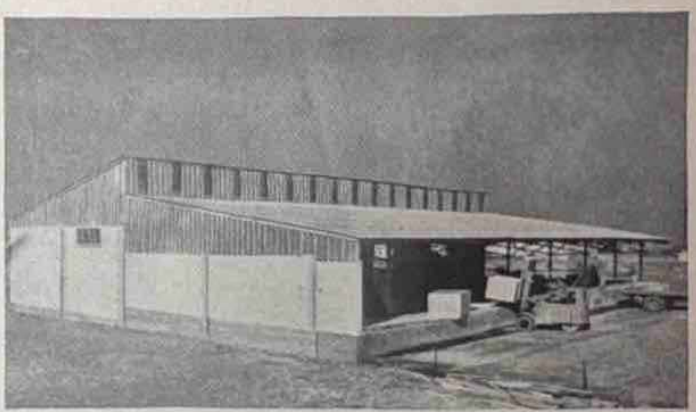
The employment office can be reached from the non-security parking area, allowing applicants to go directly to the personnel office without procuring a pass or going through the guarded gate. The laboratory has a two-stage security setup: the first wing containing all services, stockrooms, washrooms and conference rooms; the second, its own shipping and receiving, its own stockrooms, forming a completely separate security zone.



GARDEN AREA is visible from lobby of office building, provides pleasant outlook for administration and engineers' offices. Ceiling in laboratory can be adjusted to one of three heights—9, 10 or 14 ft.—without any change in lighting, mechanical equipment or basic structure. Non-bearing partitions also are movable, are based on 4-ft. module.



They're building with steel because it's permanent, economical, easy-to-maintain and fire-safe

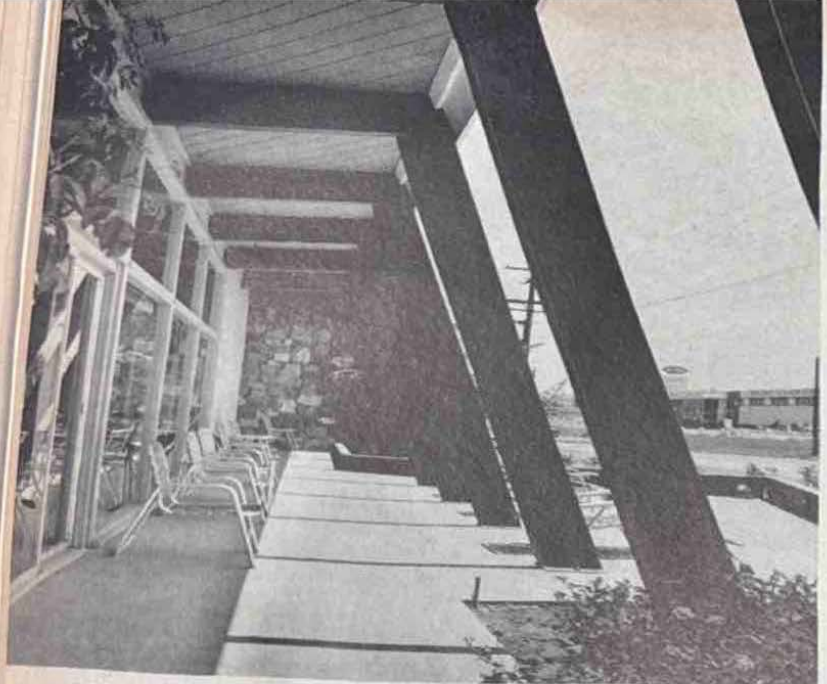


FIRE PROTECTION was the number one reason this Oregon grain storage mill was built with steel. The owner lost his first mill to fire, so vowing it would never happen again, he specified USS Corrugated Roofing and Siding Sheets and USS Floor Plate for his new building. This also lowered his insurance costs.

NO COSTLY MAINTENANCE PROBLEM HERE: This new Uranium Mill on the Colorado Plateau is frequently attacked by sand and snow storms. For maximum protection and minimum maintenance, steel roofing and siding was the obvious answer for these buildings. Steel framework leaves interiors open and flexible.

MANY COST-SAVING POSSIBILITIES result from the use of steel framing and wall panels. Curtain walls, for example, are faster to erect and provide more usable floor space. Steel framing eliminates bearing walls and reduces amount of framing. The school pictured above features an all-welded frame which helped make it Utah's least expensive (per square foot) school.

THE STABILITY of rigid frame construction provides a greater capacity to withstand winds, snow, cranes and "bumps" from materials handling equipment. Steel spans also mean more clear working space. This is just what Hansen Lime & Stucco wanted for their new Salt Lake City warehouse and shipping shed . . . so they specified steel framing, and USS StormSeal roofing and siding.



For offices, plants, freight-handling, restaurants, theaters, churches, schools . . .

Give your buildings the advantage of steel

United States Steel Corporation · Columbia-Geneva Steel Division

UNITED STATES STEEL

PROJECT ROUNDUP

TWELVE STRUCTURAL I-BEAMS are supporting framework of building. Left exposed and painted dark brown, they form architectural motif.

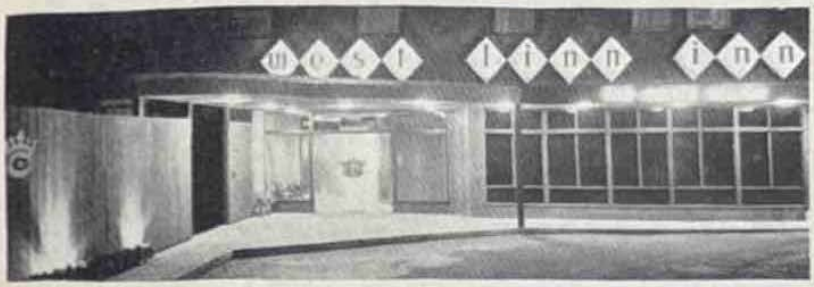
Trailer court gets a lobby

MEAD TRAILER COURT HEADQUARTERS, MISSION VALLEY, CALIF.: A somewhat unusual project not far from San Diego is a lobby and main office building particularly designed for trailer court residents. The single-story, no basement structure serves as a recreational center where the trailerites, mainly tourists, can relax or make new friends. The court has a capacity of 160 trailers and the owner is making provisions for 40 more. About 350 trailers of all types and sizes are parked in a typical year.

In addition to a 40x60-ft. lobby area with a huge fireplace, there is a registration desk with mailing conveniences, a private business office, a general business office for trailer sales, a general storage room and restroom and limited kitchen facilities. The architect has made generous use of glass, stucco and field stone in the building, which has exposed steel bents and a butterfly roof of crushed rock. A terrace at the front creates a pleasant entrance, with a sheltered patio at one side. The interior color scheme is dusty rose, brown, turquoise, black and white. The structure was built at a cost of $22,096 for its 1,985 sq. ft. of space, or $11.20 per square foot. Richard George Wheeler, AIA, architect; Doughty Construction Co., general contractor.

MAIN WING IS FACED with limestone and decorated with nine colophons and watermarks of famous printers and typographers, ranging from 15th to 20th century.

Northwest Photographic Illustrators



Campus gets a new neighbor

SCHOOL OF JOURNALISM, UNIVERSITY OF OREGON, EUGENE: T-shaped Eric W. Allen Hall, one of the largest journalism education buildings in the nation and one of the few specifically planned for such training, incorporates the original three-story brick structure at the rear of the new scheme. The floor heights had to be adjusted to those of the existing school to which they were connected and it was desirable not to exceed the three stories of the adjacent buildings on either side. The planning was further limited from practically every direction since the new building was to house the university press on the ground floor, partially below grade, and the campus layout provided only one place for delivery of the large paper rolls.

Brick was selected to conform with the original and neighboring structures; however, it was decided to make the new hall of a more contemporary character. To better express its journalistic function, the front is a rectangle of light colored limestone crossed horizontally by the dark lines of strip windows, suggesting the formalized shape and design of the printed page crossed by lines of type. Large windows in the lower story wall afford views of presses and linotype machines; the two upper floors are given to classrooms, library, auditorium, laboratories, etc., and to offices of the student daily newspaper. With new furniture and equipment, the building cost nearly $600,000. Church, Newberry & Roehr, architects; Cooper & Rose, structural engineers; Thomas Taylor, mechanical engineer; Pettingell-Kelley & Co., electrical engineers; J. G. Watts Construction Co., general contractor.

up and down the coast

IDENTIFICATION SIGN is architectural asset to remodeled entry. Dining area has custom-designed furniture and symbolized map of natural wood portraying company holdings in U. S. and Canada of firm which owns hotel; coffee house has murals of sculptured plaster and solid brass.

Remodeling program for $70,000

WEST LINN INN, WEST LINN, ORE.: One of the Pacific Northwest's most successful hotel operations when built in 1919 was not designed for public use and has been owned and operated by a company whose interests are far afield from hotel management. Crown Zellerbach Corp., manufacturer of timber products, has used its hotel in West Linn (and one in Camas, Wash.) to house mill employees, visiting firemen, local residents and only on occasion the traveler in search of a night's lodging.

Today, however, West Linn Inn has a highly professional look as a result of a $70,000 remodeling program. One of its major aims was to define the hotel entry, a feature which had been almost entirely lacking in the original building. The project also called for a new coffee shop, barber shop, restroom and direct entry to the lobby of the inn. All of this has been achieved in a manner which harmonizes with the existing wood frame structure and provides an expression of warmth and intimacy of natural woods and bronze tinted glass.

The driveway now sweeps up to a custom-milled California redwood wall and hotel marquee. The new entry has a rockwood tile ceiling and cork tile floor; the glass entry doors have custom bronze push plates in the form of the Zellerbach emblem. The coffee shop has been finished with warm redwoods and a patterned ceiling for interest.

The stained glass in the windows and interior screens was custom made to obtain a bronze hue. Wall murals depicting forest activities and river boats of sculptured plaster and solid brass were executed by artist Samuel C. Nichols. All of the custom seating in quality caning and natural leather, as well as the hotel identification from roof and entry signs to menus, table mats and china, was done by the designers of the remodeled building. R. K. Grubb & Associates, designers.

Remodeling program for $10,000

Robinson photos

GENUINE REMODELING—altering existing elements without major structural changes—can be a satisfactory, economical solution to a problem area as before and after photos show.

KNIGHTS OF COLUMBUS BUILDING LOBBY, SEATTLE: The object of this remodeling project—$10,058 for construction plus $2,800 for furnishings—was to initiate a program for renovation of the entire building. At the same time the architects were attempting to turn an area which up to that time had been relatively unused into one which would be habitable and inviting to the membership, as well as to the public that would rent the facilities.

Involving about 1,600 sq. ft., the work consisted of renovation of the entrance from the exterior and the complete remodeling of the lobby, including office, cloak room and ladies lounge. Materials used were hardwood paneling, acoustical plaster on all ceilings, asphalt tile flooring and ornamental visual screens combining steel and fiberboard. Johnston-Campanella, architects; Palmer Shops, general contractor.

Julius Shulman photos: above; below, right

THREE PROJECTS by architect Soriano shown on this page include Julius Shulman residence, Los Angeles.

OBSERVATIONS by RAPHAEL S. SORIANO, AIA

IN ARCHITECTURE, among the points of consideration one focuses itself quite brightly: how to arrive at the most useful solution for a particular performance—the most successful architecture for an architect.

What is useful architecture? It is a performing architecture which serves well its occupants from the unified point of view of their total sense experiences. I do not mean the detached usefulness of particular parts; I mean a unified concept achieved through the use of significant relationships, the most natural relationships of every day's activities.

Is this performance achieved by interpreting within the design all of the wishes of the occupant? Wishes which might include not only daily living requirements and color and textural likes and dislikes but also many obscure "feelings" about high and low, straight and curved, warm and cold, etc.? Is this performance achieved by interpreting within the design the architect's own feelings about high and low, straight and curved, warm and cold? By which route will the problem be solved most simply, directly and with the least waste—by arbitrary, subjective thinking or by cognate, objective reasoning?

In arbitrary thinking there will be involved preconceived notions, personal whims, isolated tricks, a series of unrelated parts perhaps sometimes cleverly executed and quite charming texturally or full of color, but unrelated parts cannot be recognized as a concept. They can be of only momentary appeal, as a feather dropped from a bird's wing is texturally, colorfully and structurally appealing but unable to perform alone. In objective reasoning there will be involved constant evaluation and integration of the relations of the constructive elements for performance. The smallest semblance of a personal feeling, trick or whim inflicted upon the work can destroy the natural concept.

From point of analytical observation we find that progress in architecture has come from the architect using his knowledge and sensitivity in relating the newest materials of technological advancement into the simplest possible terms for top performance.

The question will probably be asked at to what is the sensitivity of the architect if it is not a feeling—sensitivity comes from knowledge—, knowing when to remain behind the series of evaluations rather than putting oneself ahead of them. By this is meant, in evaluating the relationships of any architectural solution, each decision, each material in comparison to another at once gives the architect its own intrinsic value. When one violates these natural intrinsic values by imposing upon them personal values, then "feeling" is involved, not "sensitivity."

In summing up we find that the attitude of the client, his or her sensitivity and objectivity, is equally important for a successful end result. Many times the client comes forth with an idea of great value. These ideas when on the plane of objective requirements should be taken seriously as a challenge of integration into the whole. In this case the client has helped to contribute as much to the performance of the project as the architect. This is the way it should be; this is the way to architecture.

Home building: some design aspects and related topics

Excerpts from the NAHB convention of general interest

The picture window

Paul Neeland, real estate editor, Boston Globe

(Upon accepting the NAHB's Certificate of Appreciation for excellence in reporting of real estate and home building industry.)

Sociologists have been hammering away at what they delight in calling "suburban slums" — subdivisions — since the late 1890s when trolley car tracks first started heading in the general direction of two- and three-deckers sprouting up in the weeds. Today it's the freeway that leads to a subdivision and the two's and three's have been replaced by single homes.

But the tune played by the sociologists—pseudo and otherwise—is the same. The latest verse is contained in a book just published, "The Crack in the Picture Window," a sweeping indictment of the post-World War II home building industry (to be reviewed in an early issue of PA&B).

"A man in a development has no need," the author claims, "to socialize with the other men in the development, his socializing takes place in the city where he works." Therefore, "development men" are apt to nod to one another or borrow things from one another and their relationships in borrowing hammers, say, are no deeper than the relationships you have with the man who comes to fix the plumbing in a city apartment.

"Development women," the book goes on to say, "socialize because they can't escape one another and most of their acquaintance is based on service needs—the borrowed cup of sugar and the spoonful of cornstarch for the baby's sore bottom. "Development people lack a basis of deep friendships for one another."

Are we to conclude then that non-development people—people living in farmhouses, cooperative apartments, public housing projects, custom-built homes, pre-World War II construction—are all buddy-buddy? Is the logic then to conclude that the only guarantee of friendship is to know someone living in a house with soft-wood floors, a black coal stove in the kitchen and a soapstone sink? We had no idea that friendship was ever based on prescribed standards of frontage, setbacks and floor space.

Home builders and schools

Philip Will Jr., FAIA, Chicago

The basic contribution of home builders to the solution of the school problem lies in creation of communities that are healthy—both economically and socially. Such communities must be complete and in balance between housing of all types; commercial, industrial, institutional building and recreational facilities.

Such communities can offer full amenities for the full American life with economic strength and long-range stability—and they will demand good schools. Furthermore, they will have the capacity to plan, operate and pay for such schools.

Basic facts about the cost of education must be kept in mind:

1. Calculated on a reasonable life span, the cost of the physical plant is actually only 7 to 15% of the cost of educating a child. Teachers' salaries and operations should be and still are the major expenses.

2. The major economies in physical plant derive from:

a) Careful and early educational, architectural and regional planning.

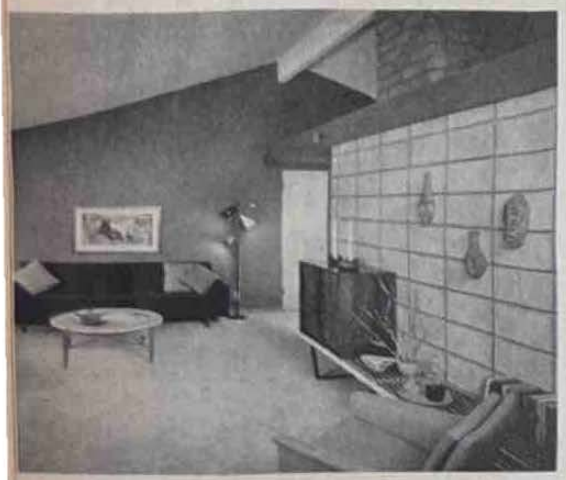
b) Careful and early site selection and acquisition.

c) Low cost financing. On a 20-year bond issue at 4%, the taxpayer pays 42 cents for the use of every dollar he borrows.

d) Aesthetic delight. People quickly rationalize the destruction of an ugly building but will go to extreme lengths to preserve those they love.

Housing technology

Buckminster Fuller, engineer-designer



Modern housing must be seen in its relationship to a world which is constantly contracting due to modern technological improvements. Modern design is taking the same resources we have been utilizing for years and upping their production performances.

In terms of shelter this means builders must utilize more fully this country's industrialization. Our overall economy is operating at only 4% efficiency. It is technically possible for the nation as a whole—and builders in particular—to speed up and increase performance.

This acceleration has already speeded up man's standard of living. The motel building program now growing up in this country is an example of utilization of the benefits of our more and better roads. To this natural advantage of increased travel, motels have added the sales incentive of housing that looks brand new: frequency modulation or the use of the same space for the same purpose by many different people.

America today is upping its groups

THE MACOMBER V-BEAM

QUICKEST, MOST CONVINCING WAY

To Prove To Yourself THIS IS THE FINEST, MOST ECONOMICAL OPEN WEB FLOOR AND ROOF SUPPORT AVAILABLE

SEND FOR YOUR V-BEAM CATALOG

And after you have that V-BEAM Catalog you will discover the greater reserve strength provided by these lighter, stronger framing members — so popular — coast to coast.

Cold formed chords and webs provide this greater strength, build a stronger floor or roof at savings — per member — your General Contractor will be very happy about.

Look at that floor system in the photo above. Then look in your V-BEAM Catalog and contact your nearest Macomber Representative for quotation on your loads and spans.

In one job — you will prove to yourself that V-BEAMS are the most outstanding structural framing buy on the market.

JUST WRITE — V-BEAM — ACROSS YOUR LETTERHEAD

REINFORCEMENTS and flooring base are checked prior to pouring of cement and addition of emery aggregate. View shown is second floor of plant.

A million sq. ft. of emery aggregate

Here's how a floor surface hardener, applied to concrete slab shortly after pouring, yields a hard, durable, non-skid surface for a big new automotive assembly plant

CASTING OF MIX, after which it is "floated" into wet concrete. Ripples and lumps to left are how aggregate mixture appears after casting and before floating.

MIX IS FLOATED into wet slabs by long handled wooden floats shown above.

MORE THAN a million square feet of surface hardened flooring was laid for the new Rosemead assembly plant of Ford Motor Co. at Rivera, Calif., set up to turn out Mercury automobiles at the rate of 10,500 per month.

To meet heavy duty, high traffic requirements, an emery aggregate hardener was worked into the surface of a still wet, regular steel reinforced 6-in. concrete base, designed to have a 3,000-psi. compressive strength. The surface hardener, called Emeri-Topcrete, is a special mixture of type "SH" Cortland emery and a good grade of Portland cement, producing a diamond-like resistance to abrasion, withstanding shock and insuring lateral stability.

Laying procedure

James W. Huston, project manager for the contractor, J. H. Pomeroy & Co., Inc., San Francisco, in describing how the floor was laid, says that the surface hardener is drymixed in a regular concrete mixer and then is cast on the still wet underslab with shovels. The workman casts the "SH" in one direction, say to his left, and then from a few feet to his left he casts to his right, creating a criss-cross of the mixture over the concrete base.

At the rate of 90 lb. of hardener per square foot of slab, the hardener is worked into the concrete with wooden floats which are manipulated by hand. After the concrete slab with its worked-in surface hardener has set for half an hour, the top is gone over with circular finishing machines.

Curing procedure

The last step in putting down the floors is the application of a membrane curing compound, which is sprayed on the surface as soon as it has been gone over by the finishing machines. Because the weather is hot and dry in southern California, curing must be applied quickly to prevent the moisture from evaporating from the concrete. If it dries too rapidly, concrete loses strength, is apt to become criss-crossed with shrinkage cracks and develop a soft dusting, crumbling structure.

The membrane curing compound which is sprayed on the floor surface has a waxy texture and closes the floor surface and cures the slab by preventing the moisture in the concrete from evaporating; thus the chemical process may continue, yielding a strong bond between aggregate and cement. After 28 days the concrete is considered cured.

The construction crew laid an average of 9,000 sq. ft. every six working hours. This included the pouring of the concrete, working in the surface hardener, finishing off the slab and applying the curing compound.

Benefits

Plant engineers cite these advantages in the use of an emery admixture to a floor surface:

1. It remains smooth because of the tough, dense emery particles at the surface.

2. It is non-skid because the emery is abrasive.

3. It is non-porous, non-dusting, moisture resistant and non-rusting because of the extreme denseness of the emery.

4. It is uniform because the emery particles have a natural affinity for cement.

The emery used in Emery-Topcrete is found only on the East Coast of the United States, particularly near Peekskill, N.Y., where it is mined, crushed, graded and sacked. According to the processor, Walter Maguire Co., Inc., the shipment of "SH" to the Rosemead plant was one of the largest in the firm's history.

Silicones: one answer to masonry protection

ARCHITECTS AND BUILDERS have long sought for materials which might be specified with confidence to give above-grade masonry walls real protection from water in its various forms.

Until a few years ago, the traditional way to give masonry a protective coating was to cover the surface with waxes or metal stearates. This amounted to sealing or varnishing the structure with a continuous film. This type of treatment had several disadvantages, the three principal ones being:

1. Discoloration of the treated surface.
2. Subsequent damage caused by moisture entrapped in the masonry at the time of application.
3. Relatively short period of useful surface, generally only a few months.

Architectural uses of these solutions is a thing of the past. Today there is a much more effective way of putting an "invisible rain-coat" on a masonry surface. This has been done through the development of the chemical family of silicones. Research chemists at the laboratories of Union Carbide and Carbon Corp. developed a special silicone resin which is particularly well suited as the basic ingredient for the formulation of above-grade water repellents. It has stood the test of many experiments and actual service in the United States, Canada and other countries.

The essential differences between the silicone water repellents and the earlier waterproofing materials are these:

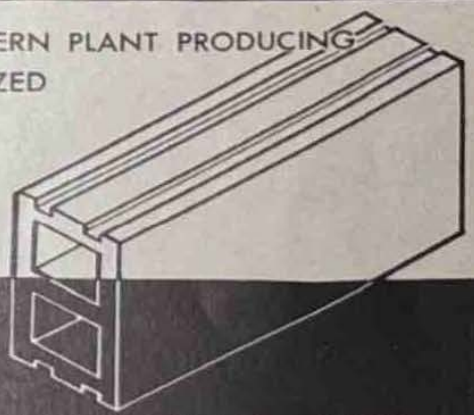
1. The silicones cause no change in the appareance of the structure when applied.
2. The silicones allow the masonry wall to "breathe," so that any moisture which is inside the building at the time of application can later escape.
3. Because of the chemical nature of the stillicone resin developed for this purpose, the useful life of a properly applied silicone water repellent runs up to 10 years.

All forms of masonry have one common characteristic that has caused an untold amount of damage and discomfort: the fact that masonry is porous and can absorb large quantities of water. Here are some of the things that happen:

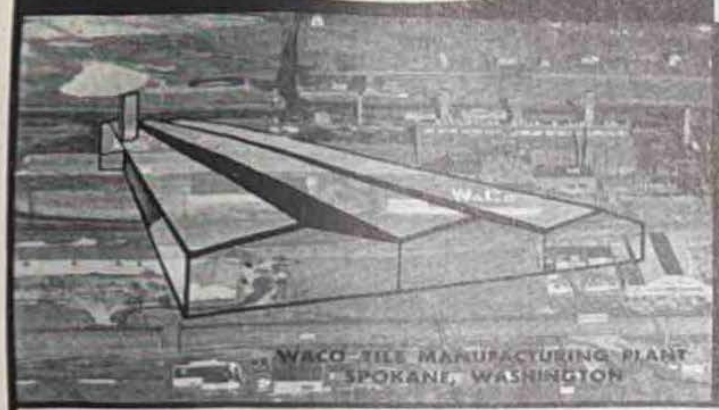
Water creeps into the masonry pores in cold weather and freezes. Expansion of the water when it turns into ice causes little pieces to crack off. This is the process of weathering and spalling.

Water comes in through the pores from the outside, into the inside of a structure, causing paint to peel, woodwork to crack and warp, plaster to stain and fall apart. In warehouses, high indoor humidity can be produced by water-soaked walls, with consequent damaging of stored materials.

Water also carries dirt into the pores where it lodges and defaces the outside walls, often in streaks.



On brick walls especially, efflorescence, with its ugly white streaks, appears as water leeches salts out of the masonry material.



Experience over the years plainly indicates that masonry walls do need protection against water. And, up to the present, nothing has been found with the degree of water repellency which the silicones provide.

Silicone water repellants can be applied from solutions prepared by formulators. Spraying with a low pressure spray gives excellent results. Brushing with a good wall paint brush also does a good job. Any hairline cracks in the masonry wall will be penetrated and treated by the solution.

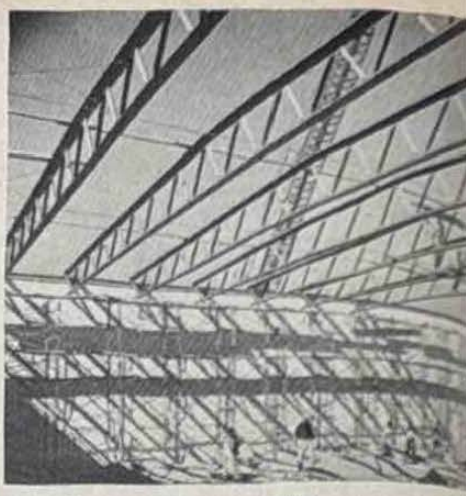
Rubber tubes for prestressed concrete

In recent years there has been a growing use of prestressed concrete in building projects. The system makes use of cables in the concrete made up of many fine wires which are stressed before the structure is subjected to the loading of its normal use.

Ducts have to be preformed in the concrete to receive these cables and the use of pneumatic rubber tubes dispenses with costly expendable types avoiding the inconvenience of tapered cores or withdrawable metal tubing. Many concrete designers prefer the ducts to be formed by removable cores, because when the cable is subsequently grouted it bonds well with the concrete walls of the duct, whereas the same bond cannot be anticipated where formers are left in as a permanent lining.



Pneumatic rubber tubes are shown to their best advantage in prestressed concrete work, where constant repetition of the process demands the use of a non-expendable former. Among the advantages:

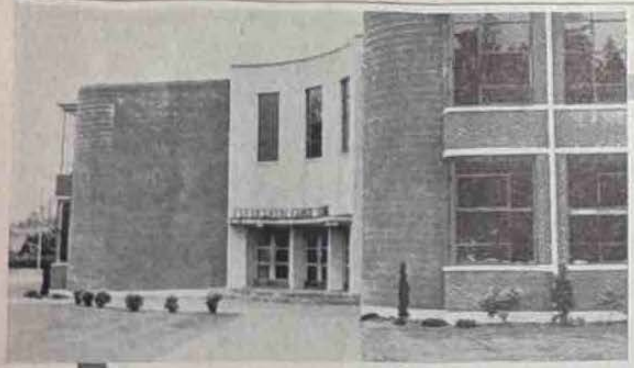
1) The duct so formed in the concrete enables a first-rate bond to be established between grout and concrete.
2) Casting can be done prior to delivery of the prestressed cables and, owing to the excellence of the duct, no difficulty should be encountered in threading the cables.
3) Speed of operation.
4) Easy storage, the tubes being rolled up and housed in a small space.

In addition to the tube procedure, another method of forming ducts is by use of rubber formers of rectangular section which are made rigid in the framework by a mild steel bar inserted in a central hole throughout its length. When the concrete is cast, the steel rod is pulled out first and then the rubber former is extracted.

Precast concrete

For precast concrete products, rubber pneumatic tubing is used to form continuous ducts in hollow concrete slabs and beams for floors and roofs to save weight and increase thermal insulating capacity and also for piles and other precast elements. In this type of work the tubes should be held at intervals along their length either by temporary locating devices suitable for withdrawal while the concrete is green or by permanent means such as wires attached to the mild steel reinforcement.

LARGEST LONG-SPAN JOISTS yet made by Arcweld Manufacturing Co. for Pacific Northwest are being used for Clover Park High School gymnasium-auditorium south of Tacoma. Building was designed by Charles Rueger & Associates, architects, and William Rueter, structural engineer.



Long-span steel joists

Architects who are attempting to create modern schools at reasonable cost are getting a boost these days from such firms as Arcweld Manufacturing Co. of Seattle.

Long-span joists, essential in the economical construction of auditoriums, gymnasiums and multipurpose rooms, can be made to span up to 96 ft. Largest produced by Arcweld for use in this part of the country—82 ft. long—were just erected at Clover Park Junior High School's new gymnasium-auditorium south of Tacoma. The result will be a structure with no supporting columns.

Arcweld recently invested more than $10,000 in what's called a Zig-Zag Bender, the only one of its kind north of Los Angeles and west of the Mississippi. At the push of a button this 30-ft.-long machine starts at one end to fold up like an accordion. As the folds are made, a steel bar in the machine is bent to form the zig-zag pattern of the web for a steel joist. In seconds a steel bar 20 ft. long and from ⅜ to 1 in. in diameter is bent perfectly. Counting the time it takes to place the steel in the machine, which is done manually, the Zig-Zag Bender can turn out 50 web bars an hour. They are ejected from the machine automatically.

Steel bars and angles that go into the prefabricated joists come from the Seattle plant of Bethlehem Pacific Coast Steel Corp. A local source for joists is important to architects who want to design in steel because the high freight costs involved in shipping these big trusses from other manufacturers in California or the East would normally be prohibitive, particularly for schools. Arcweld is able to deliver from two to ten long-span joists to any jobsite in Washington four days after the order is placed.

NAHB convention excerpts (Cont'd from p. 25)

financially and moving forward into other areas and other housing. Experimentation is now opening new territories in this country and abroad which have yet to be fully developed.

In the Arctic, for example, Fuller-designed domical structures were set up to house our radar defenses. Tested for 210-mph. winds, they still had to be light enough to be transported and assembled quickly in sub-zero weather.

U. S. government pavilions for trade fairs in areas like Oran, Casablanca, etc., 10,000 ft. across and light enough to fit in one DC-4, have been installed in two days. At the South Pole, similar domes were erected by Marines in 135 man-minutes. Other domes, strong enough to withstand pressure changes in atomic blast areas, have also been tested and developed. They were easily adaptable for disaster areas and could be dropped from planes along with packaged energy for refrigeration, light and cooking.

Addition to All Saints Episcopal Church, Portland, Oregon. Architect: Stuart B. Mockford, Oregon City, Oregon. Contractor: Anfelt B. Hanson Company, Portland, Oregon. Arch span: 34'; center height 33'4"; 3 arches 5¼" x 7" x 17" at tangent point; 2 arches 5¼" x 7" x 10" at peak base.

"... A THING OF BEAUTY..."

"... ECONOMICAL"...
$11.34 A SQUARE FOOT

Low cost combined with spaciousness makes this church addition truly noteworthy. The open feeling is enhanced by graceful laminated-wood arches leading to a skylight at the ridge. The purlin and deck construction accent this openness.

Besides bringing a feeling of quiet and reverence, the Rilco members helped keep costs down to a "very reasonable price for this construction," according to the architect — helped to develop an "existing busy design into a thing of beauty."

Rilco members — engineered to your specifications — could be the answer to one of your problems. For more information call or write

Room 207A Tacoma Bldg., Tacoma, Wash.

1 to 20 builder

James T. Lendrum, director of Small Homes Council, University of Illinois

(Analysis of 150 homes submitted in a design contest for builders who build 1 to 20 houses a year.)

The average home built in 1956 was one-story, rectangular in shape, had three bedrooms, 1 or 1½ bathrooms, awning or double-hung windows, low-pitched roofs and was conservative in glass expanse.

Providing adequate outdoor living facilities was one of several weaknesses, with only a few having terraces, porches and patios. Indoor living provisions were generally good.

A total of 127 entries had fewer than two bathrooms, which seems to indicate that low volume builders are not as close to their suppliers or subcontractors as the development builders. The 1-20 builder apparently does not get as low a price on plumbing from his subcontractor as a larger volume builder so he compensates by leaving out some plumbing. This is bad merchandising.

Only 39 entries provided kitchen exhaust fans, less than 25% had built-in ranges and fewer than 10% had garbage disposals.

Plastic insulation

R. P. Courtney, Bakelite Co. new product engineering department

The idea of using plastic foam for thermal insulation in home building is not new but it still requires a healthy exchange of ideas between builders and people in the plastics field to find the most profitable ways and means for using this material.

Phenolic resin foam is produced by the simple combination of a liquid resin containing certain modifying agents and an acid catalyst. During the foaming process, the resin changes rapidly from a free flowing liquid to an infusible cellular solid. Proper balance of reaction and expansion results in the formation of a foam having a volume as much as 200 times greater than the original liquid resin.

In practice phenolic resin foam can be made which will expand into foam of densities ranging from ½ lb. per cubic foot to the density of a non-porous resin, about 80 lb. per cubic foot. As one would expect, all cellular materials tend to be poor conductors of heat or conversely, good insulators against heat. Phenolic resin foam of commercial grades has its best insulating property at a density of about 2 lb. per cubic foot.

There are several methods of installing this material. Phenolic foam can be installed by preparing it before hand, like any other insulating

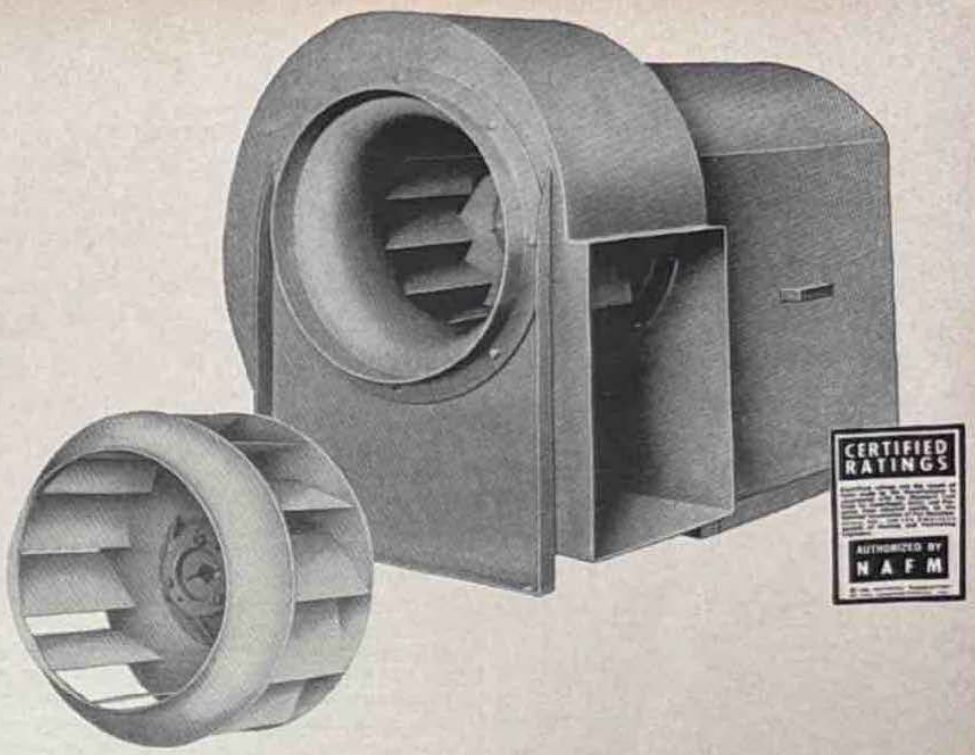
material which is shipped from the manufacturer to the constructor and filled into the wall space as a batting. One of the most interesting and economical possibilities for installing this insulating material is a foaming-in-place operation. In such a method, the ingredients which would produce foam are mixed together rapidly and while still liquid, before foaming starts, introduced into the wall space of a stud frame wall and foamed to whatever height the wall happens to be—normally 8 ft.

The cost of the raw materials for phenolic foam can be competitive in price with even the most inexpensive insulating materials used for home installation today. The greatest saving can be accomplished in installation costs by the development of proper methods.

Urban renewal

Mort Saber, NAHB staff member

Cities cannot continue using millions in federal funds to fatten slum landlords and still stay solvent. Instances of project site selection influenced by slum profiteers leaves no question that enforcement of minimum housing standards and condemnation of unsafe dwellings should precede clearance and redevelopment.



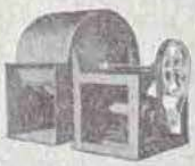
If condemnation proceedings were instituted before clearance negotiations, slum owners would be compelled to tear hovels down at their own expense and would be more inclined to sell the vacant site at a reasonable market value.

There has been a great deal of theorizing about city costs increasing where minimum housing standards compelled improvements to structures that were later included in clearance projects. This has not been proven or even convincingly demonstrated. Where such a situation has developed the fault is with city planning and lack of coordination between city agencies related to urban renewal.

What has been proven by the six years of experience since redevelopment aid appeared in the Housing Act of 1949 is that it gets very expensive when the city has to negotiate for slum properties, tear them down and sell at a reduced figure. It gets even more expensive when there are holdouts who force court action and delay projects while interest payments on loans and salaries for personnel pile up.

Far more fundamental to this issue than the dollar amount is the fact that many cities still have not taken the same action against rotten housing that they take against rotten food.

If we are honestly concerned about



Backward Curve Blowers — Certified Ratings

Completely Designed, Engineered and Manufactured by Peerless Electric

Peerless Backward Curve Blowers are all Peerless—motor and all. We control the entire production of this versatile blower, from drawing board to finished product. We guarantee it unconditionally for quiet, trouble-free operation.

Peerless Backward Curve Blowers can be specified with confidence. They are thoroughly tested according to test codes. They meet NAFM and NEMA standards. Scores of them are operating in schools, churches, hospitals and government installations.

FORWARD CURVE BLOWERS

Made entirely by Peerless; arc-welded housings and frames; wheels designed for quieter operation; dynamically balanced.

CENTRIFUGAL ROOF VENTILATORS

Matching wheel cone accurately fits spun venturi for quieter, smoother air movement. All welded construction; material 16 ga. or over. Each unit air tested, and rated to assure certified PFMA ratings. Fits standard curbs.

the living conditions of the people in our communities, then a first expenditure must be to provide inspectors and housing code enforcement machinery to see that every living unit in the city meets minimum standards of health and safety. This is more than a health and safety hazard for the people concerned. It is lost tax revenue and spiraling city service costs that rob the homeowner, landlord, tenant, businessman, taxpayer.

Nuclear heating

Dr. Ralph Lapp, nuclear scientist

America as a nation has reached the turning point in atomic energy. We must shift our emphasis from military to civilian useages which up until now have played third fiddle in our atomic energy program.

According to the atomic energy budget for June 1957-June 1958, almost 90% of the $300 million allocated is designed for military application. Of this amount, atomic bombs get the biggest share, with reactors for the armed forces running a poor third.

However, I believe 1957 will see a turning point in emphasis with the development of central power plants

Briefs of papers presented here do not necessarily consist entirely of direct quotations.

run on uranium. In addition to providing an increasing amount of electrical power, these new plants will furnish energy which can compete with coal for home heating purposes.

Entire new communities can be created through the use of new fuels in high cost areas. Since uranium is virtually a weightless fuel, it may cut the expense of maintaining a suburban home and make possible the development of new suburban areas.

If we take a very long-range view of the future, remembering that today's plans may be the pattern for future centuries, we may accept as fact that scientists have within their grasp a source of hydrogen power that will be available long after such standard power resources as oil and coal have been exhausted.

This country has not yet developed any extensive shelter program—not through government, industrial or indiviual application. No adequate civil defense is possible without an extensive multibillion dollar shelter program; and although such a program would eventually cost at least $30 billion, this amount, spread out over a number of years, would cost less than one-tenth of the present military atomic budget.

Profits in prefabs

George E. Price, president of Prefabricated Home Manufacturers' Institute

Prefabrication has become the most effective means of combating these rising costs, which otherwise threaten to push home prices beyond the ability of a vast number of American families to buy. Through a continual development of our methods, we are achieving a greater degree of prefabrication —a more complete house package being the result.

Prefabricated homes are today the style leaders in the housing industry. they are planned and designed by the country's finest architects, who have given them the utmost in charm and livability. It is important to remember that this superior styling is a quality feature that is found in a wide range of prefabricated houses. An American family that might not otherwise be able to afford architectural service can get it in even the most modest prefabricated home.

There is a great variety of floor plans and exterior designs in every price range. Furthermore, a prefabricated home can now be customized as easily as any other and at a considerable saving.

Component technique

R. F. Schmitt, Berea, Ohio, builder

Throw the book out of the window every day and ask: "Is this the best method, design and material for the job?" Local codes and conditions frequently dilute the import of a specific approach. However, I should like to describe briefly our operation in which we have made a modest progress in applying some of the foregoing principles.

We build houses by a method commonly known as a standardized component technique. This has been applied over a period of four years with an annual production from 20 to 70 houses. In total, we have used it on about 250 houses. Its effect is a sales price $4,000 under the market and $3,000 under the FHA appraisal.

Our component technique has permitted us to gain considerable cost saving from a production and method standpoint and to retain a considerable degree of custom building and freedom of planning. In our system we attempt to project component thinking into every phase of the production of a home, beginning with land development on through the final completion of the house.

The use of this approach opens many opportunities for cost savings in method and particularly in the integration of the production system.

not specified

home was never like this

It is likely that all this talk about architects and home builders holding hands has been overworked of late; that a litle more action at this stage of the game might make a sizable contribution to the housing situation. And yet there are signs that some progress—on the West Coast, anyhow—has been made in design and tract planning. At the NAHB convention earlier this year, the four design awards all went to California architects and at least one of the projects cited is worthy of note and will be featured in a later issue of PA&B.

This month we are carrying some excerpts from the home builder sessions, not because the statements in themselves are world-shaking but because architects once in a while ought to get an inkling of what builders are talking about. We certainly do not agree with some of the statements, such as, "Prefabricated homes are today the style leaders of the housing industry." Nevertheless, neither architect nor builder can close his eyes to the fact that prefabrication is becoming an important element in the housing picture.

Among non-published comments, there are several we cannot swallow. For example, the implications made by a Minnesota home builder when he told his colleagues of the significant role their business plays in the nation's home life because "nine of every 10 divorced couples lived in rented units at the time of separation." We are reminded that a while back Richard Neutra related good architecture to happy and harmonious marriage but that's another matter.

Nor do we feel than an eastern marketing and building consultant made much of a contribution to the program when, addressing a women's builders panel, he divided potential home buyers into four classes, depending on the type of appeal which meets their desires and wants. The first, he said, is the appeal of the rose-covered cottage. "This is for the family which desires that little dream house in the country, the yard for the kids, the garden, flowers, trees, generally a quiet atmosphere."

The second appeal is that of minimum shelter. "These are the people who spend more money for food and clothing and automobiles than they do for shelter." And the third class are the "fun and frolic" group, the people who love big subdivisions. "They want to be where there are lots of people, swimming pools, parks, civic clubs, volunteer fire departments, big shopping centers."

The fourth is that of "snob appeal," with location the primary consideration. "A snob is the type of person who will pay $25,000 for a $20,000 house in the 'right' neighborhood."

So much for the marketing expert. We'll put our money on the Michigan builder who declared, "There ought to be not only a TV room but one to get away from TV."

Anyone for tennis?

100 candles—aia!

As our May issue goes to press we are in the nation's capital to join in on the AIA's centennial celebration. A complete report of the convention, with emphasis on the activities of West Coast architects, will be found in PA&B for June—provided we can sneak that editorial task in between a weekend trip to New York City and a vacation in our home state of Wisconsin.

Speaking of the AIA, we note that of the 48 members advanced to fellowship in this centennial year, only 20 have been cited for design. We hope this is not indicative of what is to come in the century that beckons.

A much more encouraging note is found in the institute's announcement of the annual journalism awards competition, which finds Cranston Jones of Time taking top honors in the general circulation magazine category with his cover story on Eero Saarinen of July 2, 1956.

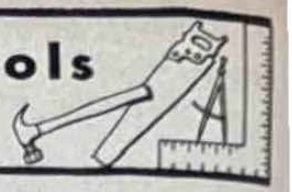
78% of School Officials say*

"GLAZED STRUCTURAL WALLS ARE EASIER TO CLEAN"

OK—so everyone already *knows* tile is easier to clean. But, some people don't yet realize that installed cost of Western Glazed Structural Wall Units is *competitive*.



It's structural wall and ceramic finish combined. Masons do the whole job—fast. No other trades required. Resists wear, stains, odors—never needs painting. Clear glaze plus 12 attractive colors. Standardized sizes and shapes for every requirement.

* *Naturally, it's our own survey. Like to see the full report? Shape chart and specification details also available for the asking from* KRAFTILE CO., *Niles, Calif.; or* WASHINGTON BRICK & LIME CO., *Spokane, Wash., members of*

Materials – Products – Tools

and the latest literature

LIGHTING SYSTEM: In its third contribution to wall-to-wall fluorescent ceiling lighting, Sylvania has introduced Sylva-Lume which permits creation of a variety of custom designs from a few standard parts. The system features interchangeable plastic panels that may be designed in an almost limitless number of overall patterns and color, form, texture and style. Sylva-Lume is adaptable to offices, stores, hotels, schools and public buildings. — Sylvania Electric Products, Inc.

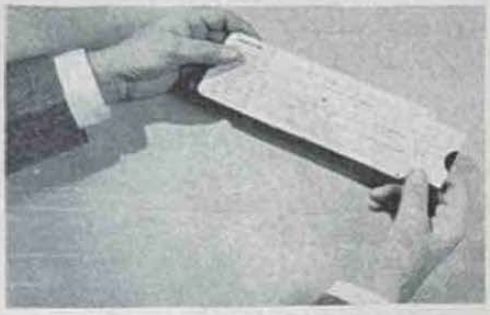
(Item No. 1)

ROOF VAPOR SEAL: Celotex insulating roof slabs provide protection by employing a vapor seal at joints as well as a built-in asphalt membrane vapor barrier. Effecting the vapor seal is a rubber gasket inset premanently along the long tongue edge and continued across one short edge of the slab, resulting in a roof deck construction in which all four edges of the slabs are sealed by the gaskets. The roof slab units (also available without vapor barrier) are made of Celotex 2x8-ft. insulation board with a choice of 2- or 3-in. laminated thicknesses.—The Celotex Corp.

(Item No. 2)

BASE MOLDING: A molded rubber cove base, 2½ in high, that forms a curved surface rather than a joint or right angle between floor and wall is especially practical for facing the toe space of modern kitchen cabinets and counter units. Heretofore it has been necessary, in most cases, to cut down the height of a standard 4- or 6-in. molding in order to get a cove curve in the toe spaces of such pieces. The base comes in 4-ft. lengths, has a highly polished, durable outer surface and a sanded back for better adhesion.—B. F. Goodrich Co.

(Item No. 3)



CURTAIN WALL GLASS: Vitrolux, a ¼-in. spandrel plate glass, is heat-strengthened with permanent color fused onto the inner side of the polished plate. Sixteen standard colors plus black and white are offered in 60x84-in. units. The surfacing material, which hides from view structural framework and building service facilities, is expected to find its most natural architectural use with ribbon windows of plate glass providing color contrasts in entire walls of glass.—Libby-Owens-Ford Glass Co.

(Item No. 4)

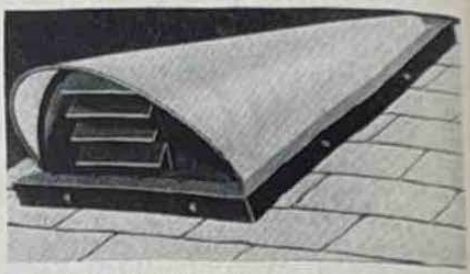
WEATHER STRIPPING: Inlock's self-sealing weatherstrip of Neoprene presents an economical way to install such components of contemporary architecture as curtain walls and ribbon walls, while assuring a positive, leakproof seal. It requires no special cement, binders or sealing or caulking compounds, presents a uniform appearance and may be removed and reused whenever necessary. The strip is fused into a continuous, one-piece, cushion-sealed setting for any size pane of glass, plastic sash or panel.—Inland Manufacturing Division, General Motors Corp.

(Item No. 5)

ROOF INSULATION SELECTOR: Selecting the correct roof insulation is made easier with Armstrong's slide

rule, based on the new certified C-values recommended by the U. S. Department of Commerce and Bureau of Standards. One side of the selector determines the C-value than an insulation must have to meet a specified U-value; the other side determines the U-value necessary to prevent condensation. A few minutes' practice should enable anyone to use the slide rule with ease.—Armstrong Cork Co.

(Item No. 6)



ALDER PANEL: Especially suited to rumpus rooms, cottages, lodges and motels, native alder is being used as a ¾-in. solid V-joint interior paneling, lightly finished in spar varnish with its golden and rich brown tones showing through. This is just one of the new uses which Pacific Coast architects and builders are finding for hardwoods from Washington, Oregon and California.—Northwest Hardwood Association.

(Item No. 7)

WARDROBE DOORS: Originated for schoolrooms, WARDROBEdoors facilitate neat, easily accessible cloak closets in minimum space for offices, plants, churches, hospitals and other buildings. Fingertip pressure raises and lowers the doors, consisting of two upward-acting sections, suitable for mounting chalkboard, chalk-rail and tackboard. The design permits ample wardrobe space in 2 ft. of depth and leaves floor and aisle completely clear for supervision and traffic when the door is open. The hardboard facing is scuff resistant.—Barber-Colman Co.

(Item No. 8)

SKYLIGHT: Daylite's plexiglass skylight fan and fluorescent light fixture are combined in one packaged unit and

come in three colors—natural, white and gray. The fan is concealed from view showing only the skylight from room below and a vented translucent plexiglass ceiling panel offers a flush ceiling appearance. Designed to flow with the pitch of the roof, the skylight rises only 12 in. from base to top and can be used on a flat roof or with a 5 and 12 pitch.—Daylite Engineering Co.

(Item No. 9)

VENEER BASE: Timboard, produced from prime wood formerly discarded as waste, has been designed not to replace plywood sheathing or wall surfacing but as a base for veneers and plastics. Wood veneers as thin as 1/42 in. can be applied without using crossbanding and with no telegraphing of core texture. Timboard has an edge-glueing strength almost twice that of plywood and comes in thicknesses from ⅜ through 1⅛ in.—Roddis Plywood Corp.

(Item No. 10)

ALUMINUM GRATING: For heavy and versatile usage in construction and maintenance industries, Klemp aluminum grating combines the advantages of a rectangular opening and riveted models. A 79% clear opening makes it practically nil for dirt, oil or scum to accumulate in corners. In addition to customary applications, the grating is finding use as room dividers and window visors.—Klemp Metal Grating Corp.

(Item No. 11)

SLIDING DOOR: Main feature of the improved Model G-1 steel sliding door is a black and lucite full-grip pull which harmonizes with just about any decorative scheme. Continuous channel mohair on all sides of the sliding section completely seals the door against infiltration of any weather.—Slide-View Door and Window Co.

(Item No. 12)

Latest Handbooks, Manuals and Literature

Yours for the Asking

CHALKBOARDS: Performance specifications for porcelain enamel chalkboards cover such specific qualifications as design and fabrication, finish, test procedures and packing. The wearability test used by manufacturers to measure their performance consists of a machine that slides a chalk-loaded eraser across a porcelain enamel specimen at 35 cycles per minute. This test, maintained for 30 hours with the gloss of the specimen measured at the beginning and end of the period, has shown that the approved enamels will not increase in gloss by more than three units.—Porcelain Enamel Institute.

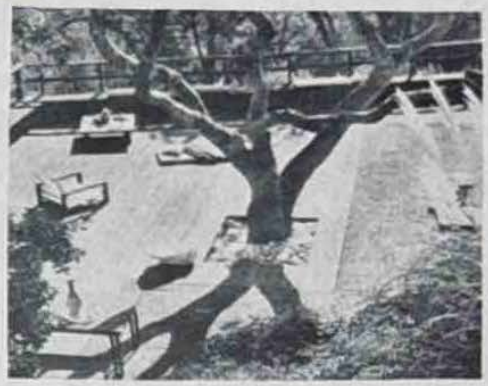
(Item No. 13)

SEALERS: A four-page brochure lists the various types of Weatherban sealers available for sealing curtain walls, building panels and expansion joints, together with information on surface and joint preparation, application procedures and sealer properties. Drawings illustrate suggested minimum and maximum sealer joint sizes for curtain wall panels, methods of sealing curtain walls and sections of typical curtain wall structures.—Minnesota Mining and Manufacturing Co.

(Item No. 14)

ILLUMINATED CEILINGS: The story of Luve-Tile is told in a 16-page catalog which provides illustrated material on how to plan, how to install and how to maintain the illuminated ceilings. Also included are typical installations, specifications and description of the basic elements of the louvered tiles, molded in 12-in. squares of light-stabilized Polystyrene plastic, which can be used for complete ceilings or arranged in smaller sections to complement the architecture.—J. A. Wilson Lighting and Display, Inc.

(Item No. 15)



ADHESIVES CHART: A lot of application and descriptive information, including data on adhesives, coating and sealers, is packed into an easy-to-read industrial materials selection chart. It is divided into six sections: reclaim rubber, synthetic rubber, latices, plastic, epoxy resins and calkings.—Miracle Adhesives Corp.

(Item No. 16)

METAL SIGNS, SYMBOLS: "Graphic Design in Eternal Metals" provides four pages of illustrations of the variety of letters, signs, plaques, tablets and other art symbols made by Bayer to identify and decorate buildings. These architectural products are executed in bronze, aluminum, nickel-silver, brass and stainless steel.—A. J. Bayer Co.

(Item No. 17)

LANDSCAPING IDEAS: How to expand living space with landscaping structures is beautifully described in

the 1957 edition of "Garden Redwood Ideas from California." Ilustrated in the 16 pages, several of which are in color, are decks and terraces, fences and privacy barriers, garden shelters and potting sheds, retaining walls and raised planting beds, lanai rooms and poolside areas, benches and planters. Landscape architect Robert Royston designed the furniture which is pictured in terrace scenes on the front and back covers.—California Redwood Association.

(Item No. 18)

STEEL ROOF DECK: Truscon's 36-page catalog gives technical data, construction and erection details and specifications for its Ferrobord steel decking and accessories. Loading tables for all types of construction are included, along with photos of typical installations.—Truscon Steel Division, Republic Steel Corp.

(Item No. 19)

TIMBER DOME: Readers who are interested in seeing additional construction photos of the Montana State College Health and Physical Education Center (PA&B for April 1957) will find them in the monthly bulletin issued by Timber Structures, fabricator of the members used in the world's widest span timber building. There is also a cutaway section of the arena, along with details of such features as the tension ring, compression ring, arch rib splice and radial arch rib.—Timber Structures, Inc.

(Item No. 20)

SAFETY BARS: Hospital architects will be interested in "Reach for Safety," a 60-page body mechanics manual demonstrating the use of Reach Grab bars for patient maneuverability. More than 50 action drawings accompany the explanatory text.—National Steel Products Co.

(Item No. 21)

MARBLE: To acquaint the architect, builder, building owner and general public with its company, product and philosophy of operation, Carthage Marble has produced "A Story about Man and His Search for Beauty." The 52-page king-size presentation features illustrations of some of the world's greatest architecture, of present-day examples of the varied use of marble and of scenes depicting phases of marble production. Physical characteristics of marble are included but technical data is kept to a minimum.—Carthage Marble Corp.

(Item No. 22)

ALUMINUM WINDOWS: Universal is offering a comprehensive file of full- and quarter-scale window and screen details designed for convenient tracing. The file also contains a 16-page catalog giving standard aluminum window dimensions and details, as well as specifications for awning, projected, casement and window wall units.—Universal Window Co.

(Item No. 23)

PLASTIC LAMINATE: A 22-page booklet devoted to Micarta is tabbed an architect's reference manual and it is exactly that. Especially helpful are construction and application details for walls, commercial fixtures, sink and countertops, doors and movable and patterns offered are reproduced in full color.—United States Plywood Corp.

T-square talk

NEW FIRM: Tacoma architects Alan Liddle, AIA, and Robert M. Jones, AIA, have combined separate practices under the firm name of Liddle & Jones, with offices at 1716 Pacific Ave. Both are graduates of the University of Washington. Liddle did a year of advanced study in Switzerland and entered private practice in 1952; Jones most recently was an associate in the office of Robert Billsbrough Price.

NEW OFFICE: John Harvey Carter has opened an office for the general practice of architecture at 1401 21st St., Room 201 Kaiser Building, Sacramento (GIlbert 3-1175).

NEW PARTNER: The Billings, Mont., architectural firm of Loners & Stroebe has added a third partner, Willard D. Johnson, AIA, and is now practicing under the name of Loners, Stroebe & Johnson.

ON THE MOVE: Charles Gilman Davis, AIA, has moved his office from the Loyalty Building to 2035 S.W. 58th Ave., Portland, where he is sharing space with another architect, Thomas G. Vadnais.

DIED: George B. McDougall, one-time California state architect, died in San Rafael April 20 after a brief illness at the age of 88. A past president of the Northern California Chapter, AIA, he had been a state architect for a quarter of a century when he retired 18 years ago.

John L. McCauley, 78, who during his active career designed some of Seattle's civic buildings and hotels, passed away late in March in San Diego, where he had lived for 27 years.

NEW ASSOCIATES: Salem, Ore., architect William I. Williams has advanced Roy H. Trask and W. Reginald Walker to associates of his firm.

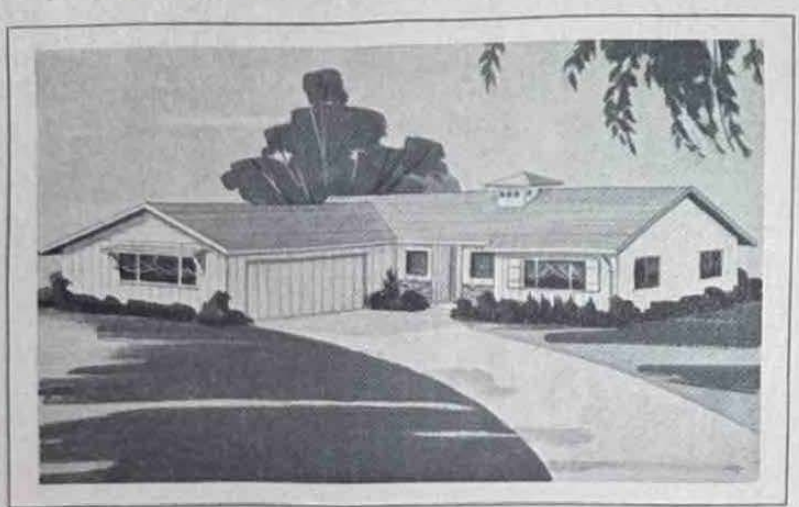
MONTANA EXAMINERS: A. V. McIver of Great Falls is the new president of the Montana State Board of Architectural Examiners. Sigvald Berg of Helena is vice president and C. C. Cohagen of Billings, secretary.

TRADE FAIR: May 25 has been set aside as Architects' Day at the Washington State International Trade Fair in Seattle's National Guard Armory. Members of the profession will be admitted without charge from 1-10:30 p.m. on the day before the annual event ends.

Two Seattle architects are associated with the 1957 fair. John S. Detlie, AIA, designed decorations and Carl F. Gould, AIA, is serving on a panel to appraise displayed merchandise which will be shown later at the Seattle Art Museum and elsewhere in the state.

Miss Dayis Holcomb, former executive director of the Washington State Chapter, AIA, is publicity director.

MEMORIAL FUND: To honor the memory of the late Julia Morgan, one of the state's pioneer architects, a fund of $10,000—nucleus of an endowment to aid architectural students—has been established at the University of California. Gifts may be sent to the regents, either in checks, securities or other negotiable form.

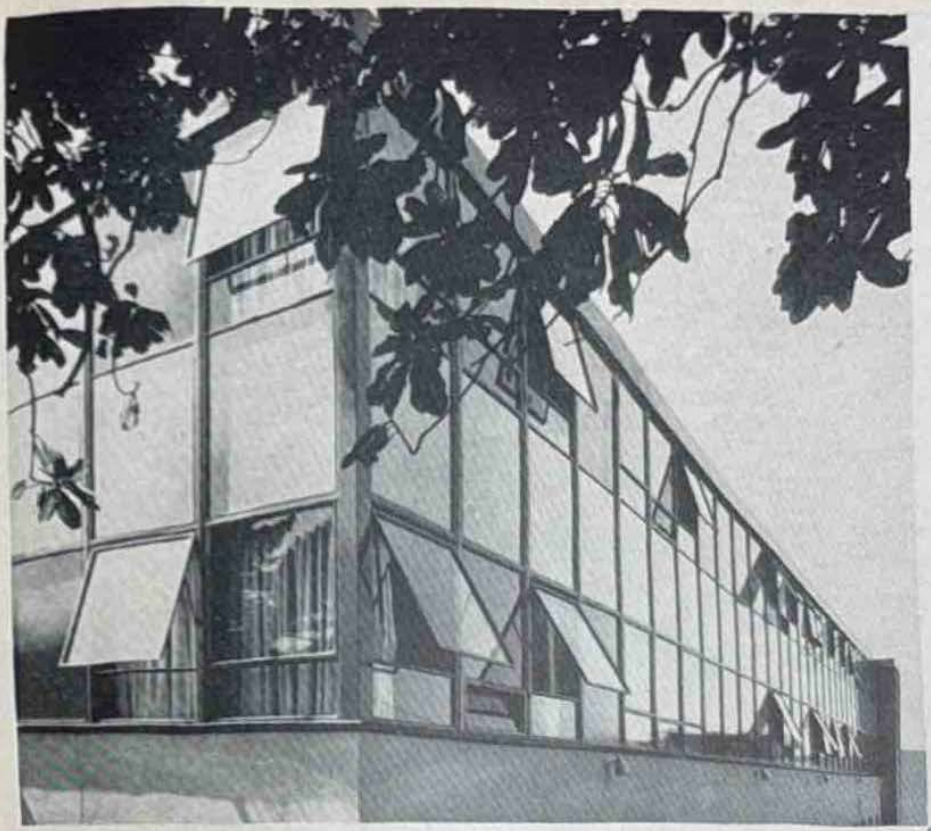


HONORED: Richard J. Neutra, FAIA, of Los Angeles has been voted an honorary member of the Accademia Nazionale di San Luca of Rome, comprised of Italy's most distinguished painters, sculptors and architects.

APPOINTED: Prof. Harry C. Weller, chairman of Washington State College's department of architectural engineering, is one of four new members named to the national education committee and the only representative from the West.

"We build convenience into every home... from dishwashers to telephones!"

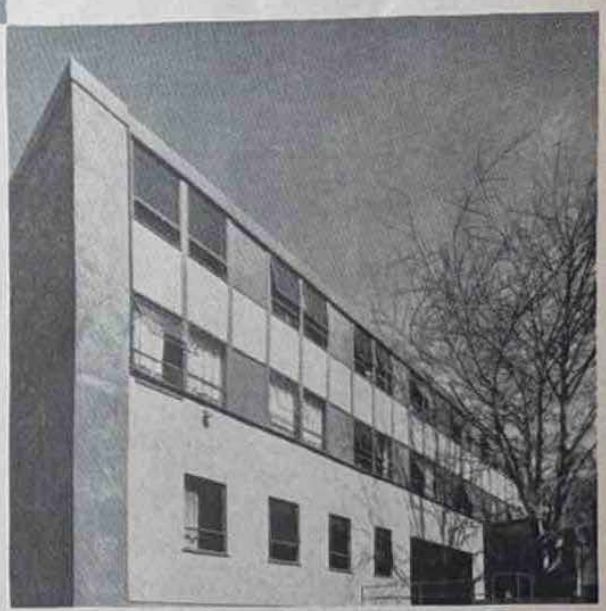
...says George Artz, President of Alcan Realty Co., well-known Sacramento and Fresno builders. Their newest development includes color phones in bedroom and kitchen, and a month's free service with each home.



Today's homes are built with the buyer in mind . . . and one thing buyers want is complete telephone planning. That's why leading architects and builders, like Alcan Realty, include plenty of telephone outlets, and concealed wiring, as a matter of course. They know how much Telephone Planning can add to the all-around value of a home . . . that it makes for better-built homes and satisfied buyers.

Pacific Telephone

We'll be glad to help you plan built-in telephone facilities. Just call our business office and ask for our free Architects and Builders Service.



It pays to include Telephone Planning in every home you build!

Curtain Walls by Michel & Pfeffer

Speed of construction and consequent low-cost installation make Ariston Curtain Walls highly desirable in contemporary construction.

For assistance with your preliminary and final window designs, call Michel & Pfeffer.

• **Unit Masonry Association** of Seattle will hold its annual scholarship and awards banquet May 28 at the Washington Athletic Club. Speaker will be Frank Tufaro of New York, executive secretary of the Building Stone Institute and past president of the New York State Home Builders Association.

• **Laminated Panels, Inc.**, president C. Ray Smith, 72, of Seattle and former vice president of Morrison-Knudsen Co., Inc., died April 1 after a long illness.

• **Pomona Tile Manufacturing Co.** has named Richard L. Scherbacher to the newly created post of director of sales to coordinate activities of all branches throughout the country. Scherbacher, a graduate of the University of California, was general manager of the Los Angeles and Beverly Hills stores of Parmelee Dohrmann Co. for five years before joining Pomona Tile.

Among four new district offices set up by Pomona Tile are two on the West Coast—Sacramento, headed by Bab Touros, and Colton, by Dee Brown.

• **Gridwall Co.** of North Hollywood, Calif., which is now operating independently of its parent organization, Glide Window Co., has announced plans to expand its manufacturing and warehouse facilities.

• **United States Steel Corp.** supply division has created a Pacific Northwest district to expand operations and service in Oregon and Washington, with Edward C. LaBart as manager and Richard M. Padden, assistant manager. The division will continue to operate its warehouses in Portland and Seattle but office sales service functions will be centralized in the latter.

• **Empire Erection Co.** has been established at E. 8205 Marietta, Spokane, and is handling operations previously covered by Steelfab, Inc. Under the management of Earl Harris, Empire is an authorized dealer for Armco Steelox buildings.

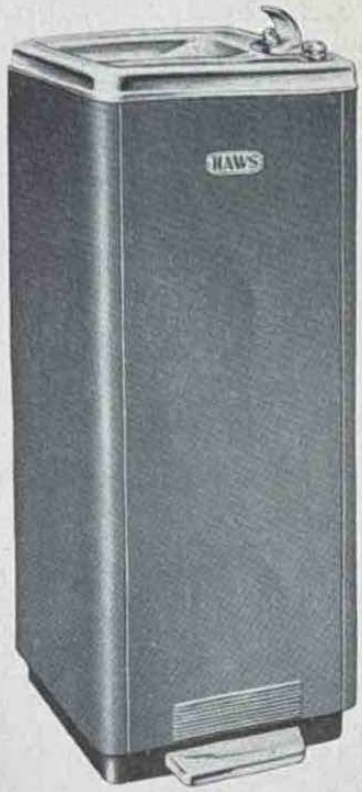
• **Pack River Tree Farm Products** of Spokane has announced plans to construct two more plants for manufacture of Tenex, a waferwood textured panel, increasing production from a current 60 to 300 or more tons daily. Construction of a new plant at Sandpoint, Idaho, site of the present Tenex facility, is slated to begin next fall and another at Coeur d'Alene, Idaho, a few months later.

• **Robertshaw-Fulton Controls Co.** will begin construction of a $250,000 western research center this spring, which will be merged with the firm's research facility near the Los Angeles International Airport.

Ralph J. Davidson has been named sales representative of the Pacific Southwest, with offices in Long Beach, Calif.

• **General Controls Co.** has named Stan Osborne as field representative for its Los Angeles branch.

• **Holly-General Co.** with headquarters at 875 S. Arroyo Parkway, Pasadena, Calif., is the name of a new division formed by combining the administrative and sales activities of Holly Manufacturing Co. and General Water Heater Corp.



Arthur Drucker is San Francisco district manager for Holly-General.

• **Calaveras Cement Co.** of San Francisco has appointed William G. Jeffery as sales manager.

• **Day and Night Manufacturing Co.** of Monrovia, Calif., has appointed Owen McComas to the position of

1443 FOURTH STREET (Since 1909) BERKELEY 10, CALIFORNIA

national manager of new construction sales. Before joining the company in 1956 as product promotion manager for heating and air conditioning, he was director of merchandising for Arcadia Metal Products.

• **Sun Valley Industries, Inc.,** has appointed Ed Davison to manage its newly established Pacific Northwest branch in Seattle, serving Washington, Oregon, Idaho and Montana.

• **W. P. Fuller & Co.** has named Paul Anderson to the newly created post of manager of public relations.

• **Meg-A-Therm Corp.** of Los Angeles has been purchased by Edwin L. Weigand Co. and the firm is now known as Pacific Chromolax, Inc., located at 19119 S. Hamilton St., Gardena. Calif. Montgomery Brothers is the West Coast representative for all Meg-A-Therm products.

• **Armstrong Cork Co.** building products division has appointed W. A. Mixon as resident sales representative in Sacramento, Calif.

• **National Electric Products Corp.** has opened its new warehouse at 6400 Corvette St., Los Angeles (Raymond 3-4654), with 25,000 sq. ft. of floor area.

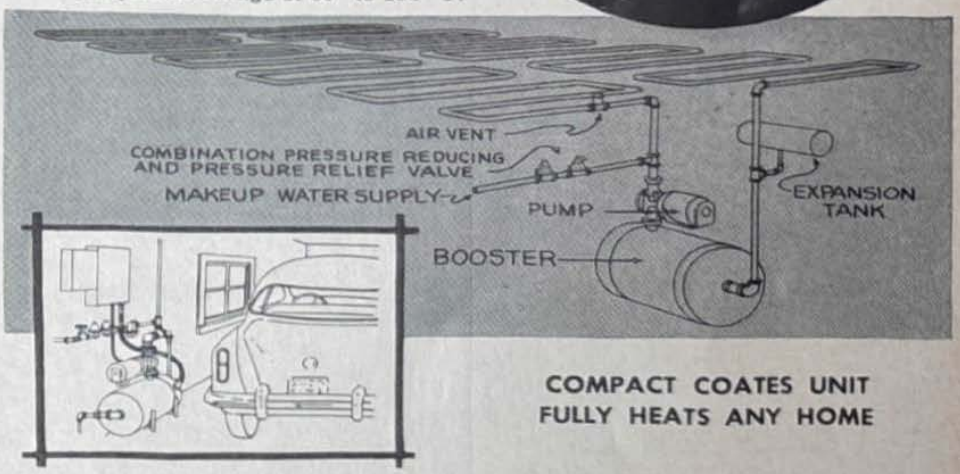
Laminated wood wholesale operation is unique

The nation's first residential laminated wood wholesale warehouse has been opened in Seattle, stocking and cutting beams to customer specifications.

Major stumbling block in similar operations across the land has been the necessity of stocking many different sizes. Bob Andrews and Bob Borneman, in forming Laminated Woods, Inc., set up their own size standardization.

In addition to questioning scores of residential designers, the two men studied reams of old solid timber beam order files from past years. From the many possible laminated wood combinations and sizes, only seven were selected. The initial order was made up of 50- and 64-ft. lengths in 3¼- and 5¼-in. widths and 4⅞- to 14⅝-in. depths.

"By stocking and cutting these standard sizes to the exact lengths needed, we can supply beams to lumber dealers in the western states at a moment's notice for the majority of the residential and small to medium sized commercial and industrial jobs," Andrews comments. "Not only are laminated beams available in sizes difficult to obtain from solid timber but they are thoroughly kiln-dried before laminating to resist checking, warping, twisting and other seasoning characteristics."



LOW COST Electric HOME HEATING

SUPERBLY DESIGNED FOR EASY INSTALLATION

Coates Electric HOME HEATING UNIT

FULLY AUTOMATIC
Aquastat controlled with temperature range of 85° to 194° F.

COMPACT COATES UNIT FULLY HEATS ANY HOME

Coates Electric Hot Water Heating Units are small, compact and "power packed." Install in any unused, out-of-the-way spot providing 12" x 12" x 24" floor space. Electric heat is clean heat—no chimney—no smoke—no fire danger. Sanitary Coates Heating Units comply with all city and state safety codes.

Coates Units meet the specifications for all floor, wall or ceiling hot water radiant panel systems or for cast iron hot water radiant heating. Hot water heat with a Coates Electric Home Heating Unit is dependable and trouble-free, yet low in cost.

UL and CSA approved . . . conforms to ASME code

NEWS—con't from p. 12

AIA fellowship goes to 16 West Coast architects

Sixteen or one-third of the AIA members advanced to fellowship during the national convention in Washington, D. C. are from the West Coast and Hawaii. They are, along with their chapters and fields of achievement, as follows:

Waldo Barrickman Christenson, Washington State, service to the institute.

Albert Frey, Southern California, design.

Arthur Banta Gallion, Southern California, literature.

Samuel Wood Hamill, San Diego, public service.

William Henry Harrison, Southern California design.

Douglas Honnold, Southern California, design.

Donald Beach Kirby, Northern California, service to the institute.

Charles Franklin Masten, Northern California, public service.

Charles Ormrod Matcham, Southern California, public service and service to the institute.

Frank Veach Mayo, Central Valley of California, public service.

Francis Joseph McCarthy, Northern California, public service.

John Frederic Murphy, Santa Barbara, public service.

Ulysses Floyd Rible, Southern California, design and service to the institute.

Whitney Rowland Smith, Pasadena, design.

Paul R. Williams, Southern California, public service.

George James Wimberly, Hawaii, design.

FLLW gives lecture series on California campus

Frank Lloyd Wright soon will leave for Iraq "and the first commission of my career that carries no financial limitations—giving me a certain sense of paralysis."

In Berkeley for a series of lectures at the University of California, Wright explained that in Iraq he will design an opera house and a "worldwide resort in the Garden of Eden . . . kind of a nice finish for an old American architect."

He also unveiled plans for a "Wedding Chapel in the Sky" to stand on stilts over the north garden of the Claremont Hotel in Berkeley. The 88-year-old architect said the projected $50,000 chapel will be an octagonal glass and steel structure with a peaked and gabled copper roof. Murray Lehr, owner of the Claremont, announced that construction on the Chapel is expected to start late this year.

"It will be a gay little thing," Wright commented, "with a certain sprightly spirit. Wedding bells can ring and the population can go forward. A fountain will play beneath the chapel, which will connect with the hotel lobby via an enclosed passageway."

Wright said he was "disappointed" that California had not accepted his plans for a reinforced concrete butterfly bridge for the projected second crossing of San Francisco Bay.

"The butterfly bridge," he declared, "is real 20th century architecture. But after all, we're still living in the 19th century despite the fact that we're seven years past the middle of the 20th. Reinforced concrete would make sense, instead of all that exposed steel, the life of which depends on paint.

"Architecture is becoming dehumanized," Wright asserted, "producing buildings without fragrance: lean urbanistic and sidewalk-happy structures."

Award to Seattle AGC

SAFETY FIRST—Seattle Chapter, AGC, receives plaque for having 100% of its members cooperating in national accident prevention program during past year. Allen R. Anderson (l.), who heads campaign in 1957, presents first award to Arthur Hainsworth (r.), 1956 chairman, while chapter president Gordon A. Mowat looks on.

Structural engineers elect

NEW PRESIDENT of Structural Engineers Association of Northern California, Henry J. Degenkolb (right), receives gavel from retiring president Walter L. Dickey. Other officers are J. Albert Paquette vice president; Donald A. Teixeira, secretary; and Samuel H. Clark, assistant secretary.

OREGON

HOSPITAL ADDITION— Albany, Ore.
(Estimated cost $400,000)

Bids will be called about July by Albany General Hospital, Haldon Sexton, superintendent, 606 Elm St., Albany, for construction of a three-story 18-bed wing addition to the hospital. Plans by James L. Payne, architect, 725 S. Commercial, Salem.
SC 5-8. Previous report 1-23

● PAINTING— Astoria, Ore.

Bids will be opened 2 p.m., May 28, by 13th Coast Guard District, 618 2nd Ave., Seattle, for painting the main industrial wood storage and oil storage buildings at U.S. Coast Guard Base, Tongue Point, Astoria; Bid No. 1568. Specifications with above office. Bid bond 5%. SP 5-15

NEW HIGH SCHOOL— Beaverton, Ore.
(Estimated cost $1,500,000)

Preliminary plans by Freeman, Hayslip, Tuft & Hewlitt, architects, 2040 S.W. 3rd Ave., Portland, approved by Union High School District No. 10Jt., Washington County, D. Herbert Armstrong, superintendent, Beaverton, for the new high school on 33-acre site near the Sunset Valley school. Initial unit would house 800 sophomores and freshman by fall of 1959; includes lower class wing, central classrooms and administration section, cafeteria, gynmasium and outer shell of upper class section. With later addition of band and choral areas, stage and auditorium, and finishing of upper class section, cost would be approximately $2,000,000.

A bond election for $1,500,000 will be held May 28, to finance construction.
WB 5-2. Previous report 12-4

▲MUNICIPAL BUILDING—Beaverton, Ore.

Bid received by City of Beaverton, City Hall, Beaverton, for construction of a one-story, 18,000 sq. ft., reinforced concrete municipal building between Hall and Tucker streets on 5th St. in Beaverton. Plans by James G. Gardiner, architect, 3158 S.W. 87th Ave., Portland. Bids opened May 13. LOW BIDS: Charles S. Camplan, 2035 S.W. 58th Ave., Portland, $249,000; Gene Settergren, 1625 S.W. Woodward St., Portland, $251,586; H. G. Carl Construction Co., Box 387, Salem, $257,237.

6 reasons why architects prefer COLUMBIA BRICK for schools...

1 Low maintenance saves school boards thousands of dollars each year.
2 Enduring beauty.
3 Flexibility of design — choice of many colors, texture and patterns.
4 Sound, fire-safe construction.
5 Creates feeling of pride and security in students and teachers.
6 Stands up to hard usage.

Add these features to Columbia Brick's superior craftsmanship, and unique clays, and you know why Columbia Brick is "specified" so often.

ALASKA

★**FUEL STORAGE— Adak, Alaska**

Award to Swalling Construction Co., Box 1039, Anchorage; M-B Contracting Co., Lloyd Bldg., Seattle; Patti-McDonald Construction Co., Pouch 6, Anchorage, $4,386,000 (joint venture), by 17th Naval District, Captain R. B. Krum, Kodiak, for construction of petroleum handling and storage facilities at Adak, Aleutian Island, involving a pier, underground tanks, buildings, roads, utilities; Spec. No. 24159/56.
SP 5-10. Previous report 4-27

STREET IMPROVEMENTS, SEWERS—
Anchorage, Alaska

No work will be done during 1957 on street improvements and sewer construction in Anchorage, according to George O. Matkin, city engineer, City Hall, Anchorage.
SP 5-10. Previous report 4-12

●**SUBSTATION ADDITION—**
Anchorage, Alaska

Bids will be opened 10 a.m., June 11, by

Bureau of Reclamation, Pouch 5, Star Route, Alaska, for the addition of 34.5-kv bay X8 to the Anchorage substation, near Anchorage; DC-4827. Specifications with above office. Bid bond 10%.

SCHED. 1—FOUNDATIONS, STRUCTURE: Involves construction of concrete foundations and erecting steel structures. SCHED. 2—ELECTRICAL INSTALLATIONS: Installation of major electrical equipment; furnishing and installing outdoor electrical materials; furnishing and installing cable and control board section; furnishing and installing 2 unmounted terminal blocks.

SP 5-15

● TOPSOILING, SEEDING—
Eielson, Ladd AFB, Alaska

Bids will be opened 2 p.m., June 4, by Corps of Engineers, Alaska District, D-E Bldg., Anchorage, for topsoiling and seeding approximately 70,000 sq. yd. at Ladd AFB and 178,000 sq. yd. at Eielson AFB; ENG-95-507-57-52. Specifications with above office and with Seattle branch office, 4735 E. Marginal Way, Seattle. Bid bond 20%. Approximately 15,000 c.y. excavation involved at Ladd AFB and 30,000 c.y. at Eielson AFB. Also included in the work at Ladd AFB is the adjustment of two manholes with vents. Separate bids on Ladd and Eielson work. Completion time September 15. SP 5-11

★ELECTRICAL DISTRIBUTION SYSTEM—
Fort Richardson, Alaska

Award to Connolly Construction Co., 400 Sitka, Anchorage, $134,715, by Corps of Engineers, Alaska District, in the Seattle branch office, 4735 E. Marginal Way, Seattle, for construction of an electrical distribution system, consisting of a 7,200-volt primary overhead line from the Fort Richardson heat and powerplant along Ski Bowl Road to site Summit, a distance of about 7 miles; ENG-95-507-57-75. SP 5-11. Previous report 5-2

★DREDGING, BREAKWATER CONSTRUCTION—Elfin Cove, Craig and Pelican Harbors, Alaska

Award by Corps of Engineers, Alaska District, D-E Bldg., Anchorage, to Manson-Osberg Co., 1132 N. 128th, Seattle, $792,535 for dredging and breakwater construction at Craig Harbor, Elfin Cove and Pelican Harbor; CIVENG-95-507-57-5. Individual bids were $313,595 for Craig, $147,020 for Elfin and $331,920 to Pelican.

DM 5-15. Previous report 4-29

▲SURFACING— Juneau, Alaska

Bids received by Bureau of Public Roads, Box 1961, Juneau, for surfacing on the Nome-Kougarok Road; Proj. No. S-0141(1). Bids opened May 7. LOW BIDS: A & A Garage & Construction & Bronson Water Delivery, Nome, $137,882; Q-Trucking Co., Box 24, Nome, $161,254; Lee & Reader Construction Co., Box 226, Nome, $195,965.

▲COATING, FLOODLIGHTING GUYING— Whittier, Alaska

Bids received by Corps of Engineers, Alaska district, D-E Bldg., Anchorage, for testing protective coating (Sched. A) and floodlighting guying (Sched. B) at permanent docking facilities at Whittier; ENG-95-507-57-73. Bids opened May 10. BIDDERS: Warren Painting Co., Inc., Box 2091, Anchorage, $4,440 (Sched. A), $6,671 (Sched. B); Inlet Plumbing & Heating Co., Box 3095, Fairview, Anchorage, $15,934, $4,800. Government estimate, $12,180, $5,553.

STATE HIGHWAY PROJECTS
BIDS CLOSE 9:30 A.M., MAY 23
Helena, Montana
NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the office of said Commission in the City of Helena until 9:30 A.M., on May 23, 1957. The proposals will be publicly opened and read immediately thereafter.

1. F 58(22), U 257(14) & F 270(7) Unit 1—Grade, gravel surfacing, plant-mix oiling, and drain 2.241 miles on the Manicke-Kalispell, Kalispell-West Glacier and Kalispell-Whitefish Roads in Flathead County, involving about 70,281 cu. yds. excavation; 86 cu. yds. gravel backfill; 16,011 cu. yds. sand-base material; 19,697 mi. yds. overhaul; 80,880 tons crushed gravel; 2,320 M gals. watering; 559 units rolling; 72,697 gals. liquid asphalt; 169,410 gals. asphalt cement; 23,023 gals. emulsified asphalt; 1,057 lin. ft. corrugated metal pipe culvert; 366 lin. ft. copper water pipe; 3,860 lin. ft. concrete sewer pipe; 20 each drop inlets; 18 each drop inlets to remove; 4,058.6 sq. yds. concrete structures to be removed; 2,455.6 lin. ft. concrete structures to be removed; 4,152.9 lin. ft. new median curb; 2,304.6 sq. yds. new concrete sidewalk; 14,098.5 lin. ft. new concrete integral curb and gutter; 8 each new manholes, and other items. Project to be completed in 220 calendar days.

2. F 103(9)—Grade, gravel surfacing, bituminous surface treatment and drain 9.962 miles on the Lewistown-Roy Road in Fergus County, involving about 498,511 cu. yds. excavation; 520 cu. yds. gravel backfill; 67,102 mi. yds. overhaul; 258,059 tons crushed gravel; 12,579 M gals. watering; 2,174 units rolling; 57,386 gals. liquid asphalt; 57,386 gals. emulsified asphalt; 100 lin. ft. corrugated metal pipe culvert; 408 lin. ft. structural plate pipe culvert; 3,994 lin. ft. reinforced concrete pipe culvert; 330 lin. ft. relay pipe culverts; all lump sum clearing and grubbing and other items. Project to be completed in 230 calendar days.

3. F 217(9) Unit 1—Grade, gravel surfacing and drain 11.529 miles on the Gardiner-Livingston Road in Park County, involving about 646,267 cu. yds. excavation; 10,434 cu. yds. riprap; 655 cu. yds. gravel backfill; 141,413 mile yds. overhaul; 141,744 tons crushed gravel; 12,486 M gals. watering; 1,854 units rolling; 380 lin. ft. corrugated metal pipe culvert; 422 lin. ft. structural plate pipe culverts; 4,040 lin. ft. reinforced concrete pipe culvert; 4.20 acres clearing; 1.49 acres grubbing; and other items. Project to be completed in 300 calendar days.

4. F 217(9) Unit 3—Construction of one 90.0' steel and concrete bridge over Big Creek on the Gardiner-Livingston Road in Park County, involving about 185 cu. yds. excavation; 177.5 lin. ft. steel bridge rail; 46,838 lbs. reinforcing steel; 201.5 cu. yds. concrete; and 170 cu. yds. structure excavation. Project to be completed by October 31, 1957.

5. F 241(15)—Grade, gravel surfacing, plant-mix oiling, and drain 1.364 miles in the City of Dillon on the Dillon-Butte Road in Beaverhead County, involving about 36,276 cu. yds. excavation; 100 cu. yds. gravel backfill; 697 sq. yds. new concrete sidewalks and driveway; 48,885 tons crushed gravel; 6,343 tons plant mix; 1,344 M gals. watering; 257 units rolling; 12,808 gals. liquid asphalt; 82,064 gals. asphalt cement; 10,669 gals. emulsified asphalt; 6,049 lin. ft. concrete sewer pipe; 100 lin. ft. relay pipe culverts; 2,027.8 lin. ft. concrete median curb; 11,130.8 lin. ft. concrete integral curb and gutter; 2,802.4 lin. ft. concrete struc-

tures in place to be removed; 29 new drop inlets; 17 new manholes; 1,308 sq. yds. concrete to be removed; 15,641 lbs. reinforcing steel; 133.92 cu. yds. concrete; all lump sum removal of existing structure and maintaining traffic and other items. Project to be completed in 160 calendar days.

6. S 218(1) & 220(1)—Grade, gravel surfacing, bituminous surface treatment and drain 2.456 miles on the 29th street-Middlesex Avenue Road and the Higgins Ave. Extension south of Missoula Road in Missoula County, involving about 43,723 cu. yds. excavation; 100 cu. yds. gravel backfill; 42,935 tons crushed gravel; 18,616 tons uncrushed gravel; 1,880 M gals. watering; 361 units rolling; 15,326 gals. liquid asphalt; 15,326 gals. emulsified asphalt; 1,966 lin. ft. corrugated metal pipe culvert; and other items. Project to be completed in 100 calendar days.

7. S 178(2)—Grade, gravel surfacing, bituminous surface treatment and drain 4.825 miles on the Moiese-Charlo-Nine Pipe Road in Lake County, involving about 93,999 cu. yds. excavation; 121 cu. yds. gravel backfill; 50,726 mi. yds. overhaul; 91,997 tons crushed gravel; 18,251 tons sand base; 3,236 M gals. watering; 596 units rolling; 27,998 gals. liquid asphalt; 27,998 gals. emulsified asphalt; 308 lin. ft. corrugated metal pipe culvert; 72 lin. ft. structural plate pipe culvert; 2,750 lin. ft. reinforced concrete pipe culvert; and other items. Project to be completed in 100 calendar days.

8. S 206(1) Unit 2—Construction of one 110.0' steel and concrete bridge over Big Muddy Creek on the Homestead East and West Road in Sheridan County, involving about 310 cu. yds. excavation; 1,280 lin. ft. furnish treated timber piles; 1,248 lin. ft. driving treated timber piles; 217.5 lin. ft. steel bridge rail; 45,040 lbs. reinforcing steel; 219.6 cu. yds. concrete; 150 cu. yds. structure excavation; and all lump sum removal of existing structure and maintaining traffic. Project to be completed by October 31, 1957.

The above listed quantities are approximate only.

All bid proposals shall be accompanied by a certified or cashier's check, cash, postal money order, bank money order, or bid bond in the amount of at least 5% of the bid. Should the successful bidder fail to enter into his contract and furnish a satisfactory performance bond within the time stated in his proposal, the bid deposit shall be forfeited to the State Highway Commission of Montana.

Prequalification of bidders at least 72 hours prior to the opening of bids is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission in Helena, Montana. Plans and specifications for all Federal Aid Projects are also on file and may be examined in the offices of the Bureau of Public Roads at Missoula.

NOTICE IS HEREBY GIVEN, that sealed bids will be received by the City Clerk of the City of Coeur d'Alene, Idaho, up to five o'clock P. M., on the 27th day of May, 1957, and said bids will be opened at a meeting of the City Council to be held on said day at 7:30 o'clock P. M., in the presence of such persons as see fit to attend such meeting for the paving of: College Drive between Garden Ave. and Hubbard St.; Lakeside Ave. between 150' West of 10th St. and 11th St.; Coeur d'Alene Ave. between 150' W. of 10th St. and 11th St.; Indiana Ave. between 10th St. and 11th St.; Wallace Ave. between 150' W. of 10th St. and 11th St., Garden Ave. between 150' W. of 10th St. and 11th St.; Tenth St. between Sherman Ave. and 110' N. of Garden Ave.; Pennsylvania Ave. between 150' W. of 9th St. and 10th St.; St. Maries Ave. between 150' W. of 9th St. and 10th St.; Ninth St. between 130' S. of Penn. and Mont. Ave., and for curbing minor portions of said streets and avenues, also for the construction of standard concrete curbs on both sides of Dollar St. between Ash Ave. and Young Ave. Such paving to be from curb to curb with a permanent type 2 inch asphaltic concrete pavement. All subgrade excavation work, gravel base, adjustment of manholes and catch basins to be done by the City of Coeur d'Alene.

A general description of the kind and amount of labor and material to be furnished is as follows: Construct Standard Curb 3,913 lineal feet.; Fine grade and compact gravel base; Furnish, lay and compact 2 inch Asphaltic Concrete Pavement on 29,000 square yards. The estimate of the City Engineer on the cost of said work is $40,000.00. (This does not include cost of work or labor to be done by the City of Coeur d'Alene.) All according to plans and specifications on file with the City Clerk and City Engineer and made a part of this notice.

Proposals must be plainly marked "Proposal for the Paving and Curbing of Local Improvement District No. 81 in the City of Coeur d'Alene," and shall be a lump and unit bid for the performance of such work and furnishing such material, and must be accompanied by a Certified Check in the amount of five (5) percent of the amount bid on some reliable bank payable to the City Treasurer of the City of Coeur d'Alene. In the event that the bidder to whom the contract is awarded shall refuse for ten (10) days after the contract is awarded to him to enter into the contract with the City and give bond for the faithful performance of the contract as called for in the plans and specifications, such check will be forfeited to the City.

The Certified Check of the lowest and next lowest acceptable bidder will be held until the contract is signed.

The bidder shall have a Class "A" State of Idaho Contractors License.

The right is reserved to reject any and all bids. Dated this 6th day of May, 1957.

D. E. Nedry,
City Clerk.
Elmer E. Soniville,
City Engineer.

STRUCTURAL STEEL WORK
BIDS CLOSE 2 P.M., P.S.T., JUNE 6
Portland, Oregon
NOTICE TO CONTRACTORS

Sealed bids will be received by the Oregon State Board of Higher Education at Room 119, Old Main Building, Portland State College, 1620 S.W. Park Avenue, Portland, Oregon, until 2:00 P.M., PST, on Thursday, June 6, 1957, for structural steel work relating to the proposed five-story Classroom Building at Portland State College.

Briefly, the work includes furnishing, fabricating, erecting and painting all structural steel, including base plates, required for the construction of the Southeast Unit of State Hall, 100 feet by 110 feet, and estimated to require approximately 400 tons of steel.

Two sets of drawings, specifications and forms of contract documents may be obtained after May 20, 1957, by prime bidders only from Lawrence, Tucker & Wallmann, Architects, 912 Failing Building, Portland 4, Oregon, upon deposit of $25.00. Additional sets may be obtained from the Architects for the cost of reproduction.

The deposit made upon the procurement of the drawings, specifications and forms of contract documents will be refunded upon the return thereof in good condition within two weeks after the opening of bids by actual bidders, but to non-bidders only if returned no later than the date of the bid opening.

The drawings, specifications and forms of contract documents may be examined at the Builders Exchange in Portland or at the office of the Architects.

All bidders must comply with Chapter 279, Oregon Revised Statutes, relating to the qualification of bidders. Prequalification forms are immediately available at the office of the Architects.

No bid may be considered unless fully completed in the manner provided in the "Instructions to Bidders" upon the bid form provided by the Architects and accompanied by a certified check or a bid bond executed in favor of the State of Oregon and Oregon State Board of Higher Education in an amount not less than ten per cent of the total amount of the bid, to be forfeited as fixed and liquidated damages should the bidder neglect or refuse to enter into a contract and provide suitable bond for the faithful performance of the work in the event the contract is awarded to him.

The Oregon State Board of Higher Education reserves the right to reject any or all bids and to waive all informalities.

No bidder may withdraw his bid after the hour set for the opening thereof until after the elapse of 30 days from the bid opening.

OREGON STATE BOARD OF
HIGHER EDUCATION

SCHOOL ALTERATIONS
BIDS CLOSE 2 P.M., MAY 29
Olympia, Washington
NOTICE TO CONTRACTORS

Separate sealed bids for General, Mechanical and Electrical Work will be received by Olympia School District No. 1, at the School District Office, 116 North Columbia Street, Olympia, Washington, until 2:00 P.M., Wednesday, May 29, 1957, for the construction of Alterations to the Existing Classroom and Gymnasium Buildings for Washington Junior High School, Eastside Street and Legion Way, Olympia, Washington.

Bids will then and there be publicly opened and read aloud. Bids received after

the time fixed for opening cannot be considered.

Specifications, including Contract Documents, and Drawings may be examined and may be obtained at the office of the Architects, WOHLEB & WOHLEB and ASSOCIATES, Architects and Engineers, 713 South Washington Street, Olympia, Washington, and may be examined at the Associated General Contractors' Offices in Seattle and Tacoma, Washington, and at the Plan Bureau in Seattle, Washington, and the Association of Subcontractors of Washington, Tacoma, Washington.

Plans may be obtained at the Architect's office upon deposit of Fifty and No/100 Dollars ($50.00) for each set of General, or Mechanical or Electrical plans and specifications. The full amount of the deposit for one set of documents will be refunded to actual bidders upon return of the documents, unmutilated and without annotations, within 3 days after the time set for opening bids. Other deposits will be refunded with deduction for the actual cost of reproducing the drawings and specifications under the same condition.

Each bid must be accompanied by a certified check, cashier's check or bid bond, with state-licensed surety company as surety, in an amount not less than five per cent (5%) of the total amount of Base Bid No. 2, all made payable to Olympia School District No. One.

The right is reserved to reject any or all bids and to waive informalities in connection with said bids.

STATE HIGHWAY PROJECTS
BIDS CLOSE 10 A.M., MAY 21
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission, Olympia, Washington, on Tuesday, May 21, 1957, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal funds have been allocated for items Nos. 1 to 7 inclusive.

The improvements for which bids will be received follow:

1. Clearing, Draining and Grading on 7.165 miles of Primary State Highway No. 10 in Okanogan County, MALOTT TO OKANOGAN, FAP No. F-029-2(13), involving about 230,420 cubic yards of Common Excavation, 55,120 cubic yards of Solid Rock Excavation, 17 cubic yards of Concrete, 3,641 linear feet of Concrete Pipe, 244 linear feet of Corrugated Metal Pipe, 90 linear feet of Corrugated Structural Plate Pipe, 43,790 linear feet of Wire Fence and other items.
2. Clearing, Draining and Grading on 1.241 miles of Primary State Highway No. 2 in Chelan County, G. N. RY. UNDERCROSSING TO HAY CANYON, FAP No. F-028-1(11), involving about 401,330 cubic yards of Common Excavation, 15,590 tons of Riprap, 5,515 tons of Crushed Stone Surfacing, Ballast and Crushed Cover Stone, 48 tons of Asphalt Cement, 10 cubic yards of Concrete, 660 pounds of Steel Reinforcing Bars, 1,817 linear feet of Concrete Pipe, 400 linear feet of Galvanized Iron Pipe, 815 linear feet of Steel Pipe, 268 linear feet of Corrugated Structural Plate

Pipe, 19 Reinforced Concrete Spot Posts and other items.

3. Constructing Two Reinforced Concrete Slab Bridges and a Reinforced Concrete Box Girder Bridge on 0.013 mile of Primary State Highway No. 1 in Pierce County, NEW YORK AVENUE UNDERCROSSING, ET AL, FAP No. I-001-3(16), involving about 2,275 cubic yards of Concrete, 510,000 pounds of Steel Reinforcing Bars, 2,000 linear feet of Concrete Piling and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
4. Draining, Grading and Constructing a Reinforced Concrete Box Girder Bridge on 0.109 mile of Primary State Highway No. 2 in Chelan County, DIVISION STREET BRIDGE OVER WENATCHEE RIVER-CASHMERE, FAP No. F-028-1(12), involving about 2,960 cubic yards of Common Borrow, 48 linear feet of Corrugated Metal Pipe, 5,560 tons of Riprap, 1,202 cubic yards of Concrete, 235,000 pounds of Steel Reinforcing Bars and other items.
5. Constructing Two Reinforced Concrete Slab Bridges on 0.031 mile of Primary State Highway No. 1 in Whatcom County, WHATCOM CREEK BRIDGE, FAP No. I-001-5(18), involving about 5,000 linear feet of Concrete Piling, a lump sum bid for Reinforced Concrete Superstructures (about 931 cubic yards of Concrete and 224,700 pounds of Steel Reinforcing Bars) and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
6. Constructing a Reinforced Concrete T-Beam Bridge on 0.025 mile of a Skamania County Road, LITTLE WHITE SALMON RIVER BRIDGE, FAS No. S-0493(2), involving about 282 cubic yards of Concrete, 65,850 pounds of Steel Reinforcing Bars and other items.
7. Constructing Reinforced Concrete Approaches and Reinforced Concrete Deck on Existing Steel Bridge on 0.038 mile of a Lewis County Road, TEITZEL BRIDGE, FAS No. S-0625(2), involving about 142 cubic yards of Concrete, 27,000 pounds of Steel Reinforcing Bars and other items.
8. Clearing, Draining, Grading, Surfacing, Paving with Type I-1 Asphaltic Concrete and Stockpiling Selected Roadway Borrow, Maintenance Rock, Crushed Cover Stone, Crushed Stone Surfacing and Mineral Aggregates on 1.866 miles of Primary State Highway No. 5 in Lewis County, KOSMOS TO GLENOMA, a State Project, involving about 6 acres of Clearing, 1.8 miles of Scarifying and Reshaping Roadway, 20,190 tons of Selected Roadway Borrow, 45,050 tons of Crushed Stone Surfacing, Maintenance Rock, Crushed Cover Stone and Mineral Aggregates, 4,585 tons of Asphaltic Concrete, 35 tons of Asphalt Cement, 93 linear feet of Concrete Pipe, 50 linear feet of Corrugated Metal Pipe and other items.
9. Cleaning and Painting Three Bridges on PSH Nos. 2 and 15 in King and Snohomish Counties, G. N. RY. OVERCROSSING, ET AL, a State Project, involving about 122 hours of Sand Blast Cleaning and 3 lump sum bids for Cleaning and Painting.
10. Constructing Ventilation System on Primary State Highway No. 14 in Pierce County, TACOMA NARROWS BRIDGE TOLL PLAZA VENTILATION, a State Project, involving a lump sum bid for the Entire Improvement.

E. C. HUNTLEY, Chairman
W. A. BUGGE, Director of Highways

5790—5-4, 11

TOLL COLLECTION FACILITIES
BIDS CLOSE 10 A.M., MAY 21
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Director of Highways of the State of Washington at the Transportation Building, Olympia, Washington, until 10:00 A.M., Tuesday, May 21, 1957, for furnishing and installing toll collection facilities at the Maple Street Bridge across the Spokane River in the City of Spokane, Spokane County, Washington, and will then and there be opened and publicly read. Bids received after the time fixed for opening will not be considered.

The principal items of equipment to be provided and maintained for this improvement are as follows:

Toll booth	1 only
Fully-automatic collecting unit and accessories	4 only
Semi-automatic collecting unit and accessories	2 only
Remote register (fully automatic lanes)	4 only
Remote register (semi-automatic lanes)	2 only
Time system	1 only

The work on this improvement will be awarded on either one of the two following alternates:

Alternate A provides for the rental of the toll collection facilities to the State of Washington on a monthly basis for five year contract periods. Alternate A also provides for maintenance services for the same contract periods.

Alternate B provides for the sale of the completed toll collection facilities to the State of Washington and for maintenance services by the Contractor for five year contract periods.

A bidder may submit a bid or bids, on the proposal form included herewith, for the performance of either one or both of the alternate proposals.

The award of the contract, if made, will be to the lowest and best bidder whose proposal complies with all the prescribed requirements of the plans and specifications. The award may be on either Alternate A or Alternate B, whichever is deemed most advantageous to the Director of Highways.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond. Deposits for Alternate A shall be not less than three times the total monthly rental and maintenance rates bid in the proposal. Deposits for Alternate B shall be not less than 5% of the total amount bid shown on the proposal for the sale of toll collection equipment plus a sum equal to three times the monthly maintenance rate bid on the proposal.

If a bidder bids on both alternates, only one deposit is required, in the larger of the amounts produced by the above computations.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. In addition, bidders shall submit with their proposals and as a part thereof a statement of experience concerning the manufacture and operation of the equipment proposed to be furnished. This statement shall be in accordance with the section "Experience Requirements" of the special provisions.

Informational copies of maps, plans and specifications are on file in the office of the City Engineer in the City of Spokane, the Chapter Offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma, and Portland, Oregon, the offices of the District Engineers of the Department of Highways and Tudor Engineering Company, 74 New Montgomery Streets, San Francisco, California, where they may be inspected.

E. C. HUNTLEY, Chairman.
W. A. BUGGE, Director of Highways.

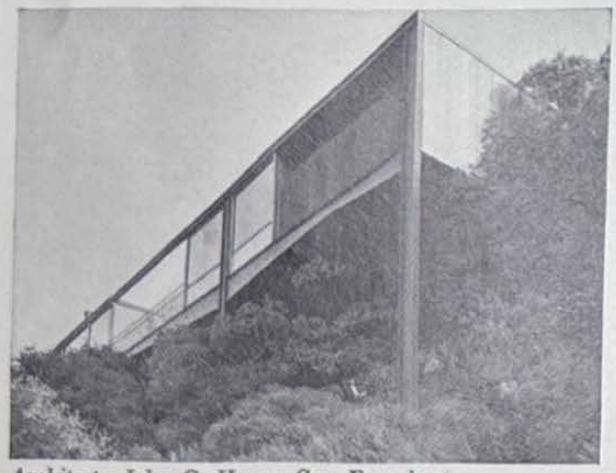
A REPORT ON THE AIA CENTENNIAL
—with the keynote address



What's new in expansion bolts?

JUNE 1957

Architect: Appleton and Walford, San Francisco; Steel fabricator: Golden Gate Iron Works, Inc., San Francisco
Structural engineer: Ira S. Kessey, San Francisco

Exposed Steelwork in California

Architect: John C. Hoops, San Francisco
Steel fabricator: Schrader Iron Works, San Francisco
Civil engineer: John Brown, San Francisco

Here are two recent examples of how steelwork is left exposed for its beauty. In the Eureka Valley Recreation Center gymnasium in San Francisco the structural steel spans the 70 by 107 ft room in a bold grid pattern made up of interlacing diagonal steel beams 18 in. wide.

The attractive home "with a view" in Sausalito, Calif., has an exposed structural steel framework. Built on an "impossible" lot with a slope ranging from 50 to 70 per cent, structural steel was used as supporting columns. Erected in one day, the steelwork made it unnecessary to provide a continuous system of foundation walls.

Glazed structural tile by Kraftile

CHEER FOR THE ILL & INJURED

A sense of cleanliness brings a feeling of comfort and security to the ill or injured. Color gives them optimism and quiets their fears. In this First Aid Room, cheerful attractiveness and hospital cleanliness will go hand in hand for the life of the building. Walls are colorful, gleaming Kraftile, chosen because of its low annual cost. Harsh, heavy-duty soaps and detergents, cleansing powders, bleaches and antiseptics cannot dull the sheen of Kraftile surfaces. Repeated scrubbings throughout the day, year in and year out, cannot wear it out. Chemicals and bleaches cannot change or fade its glowing colors. Construction with Kraftile goes with astonishing speed. When you specify Kraftile glazed *structural* tile, costs are competitive. Kraftile construction requires no carpentry, plastering or finishing. Standard sizes and shapes for every need, in 12 architect-selected colors and clear glaze. Write for specifications, graphic standards, and color samples.

about this issue

The AIA Centennial program in the nation's capital last month was so complex that we can only touch the surface in our convention coverage in this issue (p. 10). We present simply a roundup of highlights, along with the complete text of the keynote address (p. 13). Additional convention material will appear in July and at least three other important addresses will be offered either in their entirety or in digest form in future months.

Bob Karolevitz, whose byline appears on PA&B's first special report, got the material for his article on the Minimum Security Building at the Washington State Penitentiary while handling an editorial assignment for the Department of General Administration. His 48-page booklet summarizes the progress made during the past eight years in the construction of state buildings and certainly constitutes first-rate public relations with taxpayers. To quote from the foreword:

"In making this special report, it is the department's intent not only to set forth the statistics of construction and of construction costs but, in addition thereto, to outline points of policy followed by the department in the allocation of construction funds and in the setting of standards of design for each of the individual building projects.

"Also, because the subject matter of this report will be reviewed by many whose interests are in facets other than the techniques of construction the editor has used terminology generally descriptive in nature rather than limiting comment to statistical matter and technical description."

The foreword points up the importance of preliminary planning too. "Countless conferences with heads of the operating departments, design studies by experienced, competent architects and engineers together with consultations with national research agencies have afforded a comprehensive background on which to base working drawings and specifications."

cruising down the river

For a good many AIA conventioneers, one of the most pleasant memories was the cruise down the Potomac to Mount Vernon. Although the boat was packed with more than 1,700 sightseers, the trip was an enjoyable one and a welcome relief from Washington's sweltering heat. At Mount Vernon the architects had an opportunity to see a special exhibition of drawings of the mansion, outbuildings, etc. In addition to refreshments, a buffet supper was served aboard, a full orchestra provided music for dancing and a calypso band performed on another deck. It was the sort of event which every convention needs to bring people together for a really successful meeting.

megalopolis

Our recent trip back east has helped us to understand the term Megalopolis which Dr. Jean Gottmann has given to the continuous urban area running from a line north of Boston to south of Washington. The area, with a population of close to 30 million, or almost one-fifth of the entire nation, is more than 600 miles in length and is gaining many of the characteristics of a single city. It will be the subject of a study to be made by the French scholar-author-geographer for the Twentieth Century Fund.

Megalopolis, of course, has implications for the rest of the country too. We see the many-city groupings around Los Angeles which already have reached to San Bernardino Island and, in Dr. Gottmann's opinion, may some day be united with San Diego on the coast. Around Chicago, on the shore of Lake Michigan, another impressive urban continuity is shaping.

The Building Month: Trends/Views

THE LOS ANGELES METROPOLITAN AREA in 1956 led the country in building permit tabulation for the first time in its history. U.S. Department of Labor figures show that building construction there exceeded $1.5 billion, or $38 million more than the New York and New Jersey metropolitan areas.

FIVE SEATTLE AREA BUILDINGS have been cited in the seventh annual Honor Awards competition sponsored by the Washington State Chapter, AIA. They are, along with the architects: Lewis J. Dowell and John Russell residences, both by Paul Hayden Kirk & Associates; Bellevue Branch, Seattle-First National Bank, Mithun & Nesland, Ridenour & Cochran, Associates; office building for the Washington Conference of Seventh-Day Adventists, Robert J. Burman; and Olympic View Junior High School, Mukilteo, Waldron & Dietz (cover photo and p. 18).

THE WORLD'S FIRST SOLAR-HEATED OFFICE BUILDING, located in Albuquerque, N.M., survived its initial winter trials "satisfactorily," the American Society of Mechanical Engineers learned at its June meeting in San Francisco. Three engineers said that a system installed in their own offices last year "performed satisfactorily through the worst part of the winter including a much cloudier than normal January." They added that economic evaluation of their unit is not yet possible.

SOLUTION OF MANY PROBLEMS involving combustibles in buildings, the size and shape of structures, hazards from heat, smoke and poisonous gases and the use of automatic sprinkler systems "must be done on the drawing boards," chief engineer Horatio Bond of the National Fire Protection Association told that group's 61st annual meeting in Los Angeles May 25. He called upon architects and others concerned with building design to provide intelligent and imaginative solutions, adding that "eventually the content of courses in architectural and engineering schools must cover these areas of ignorance."

THE BEST IN CONTEMPORARY SWISS ARCHITECTURE AND DESIGN is being displayed for the first time in the U.S. at the National Housing Center in Washington, D.C., and will later tour the country under the auspices of the Smithsonian Traveling Exhibit Service.

SHOPPING CENTERS NOW IN OPERATION in this country total about 1,500 and an estimated 2,300 more are being constructed. These figures were given at the first annual meeting of the International Council of Shopping Centers, Inc., in Chicago last month. Delegates also were told that while national and local chain stores are essential attractions, if it weren't for the specialty shops every one of the nation's shopping centers would look exactly alike.

AMONG THE HOME BUILDERS TOURING POLAND THIS MONTH to study housing construction, design and conditions are three Californians: Charles Lee, Hayden-Lee Development Co., Beverly Hills; Carl Lawrence, Sacramento; and Ray K. Cherry, Hadley-Cherry, Inc., Los Angeles. The trip is part of an exchange of building experts arranged last year by the U.S. Department of State.

WORLD CONFERENCE ON PRESTRESSED CONCRETE in San Francisco July 29-August 2 will have a "sky's the limit note" when two structural engineers presently planning construction of buildings as high as six stories by the prestressed concrete lift-slab operation outline their methods. General arrangements chairman is Prof. T. Y. Lin of the University of California, conference sponsor.

SOUTHERN CALIFORNIA ARCHITECTS AND BUILDERS will compete for the best design in the field of health and comfort conditioning. First annual presentation will be made in December by the Institute of Heating and Air Conditioning Industries.

California 9% increase gives May volume shot in the arm

Bolstered by the feverish pace set in California, building permit volume for the second month in 1957 kept ahead of the total for the corresponding period last year in the five western states. A 9% increase in the Golden State offset drops in Washington (13%), Idaho (35%), Oregon (37%) and Montana (38%), adding up to $241,836,143 or a 1% overall increase.

Los Angeles chalked up a whopping $13¾ million gain in May over last year, although Los Angeles County went down $10¼ million. Other substantial jumps were Palo Alto, $7½ million; Pasedena and Fresno, each $4½ million; San Diego, $3 million; and San Diego County, $2 million. Decreases included Spokane, $3 million; Pomona, $2½ million; San Francisco, $2¼ million; and Portland, $1¼ million.

The total for May surpassed the April figure by an even greater margin, more than $9 million, with all states but Montana recording gains.

The January through May totals show that 1957 is running behind last year by close to $50 million but the trend of the last two months lends some justification to a more optimistic outlook concerning year-end tabulations.

	Jan.-May 1957	Jan.-May 1956
California	$ 855,073,588	$ 879,120,860
Oregon	49,726,083	61,419,693
Washington	113,963,424	125,265,200
Montana	11,027,062	11,707,721
Idaho	9,161,315	10,977,478
	$1,038,951,472	$1,088,490,952

Following is a breakdown of building permits issued by several major agencies during May.

	DWELLING UNITS		COMMERCIAL & INDUSTRIAL		PUBLIC	
King County	441	(4,300,940)	72	(1,112,480)	7	(822,740)

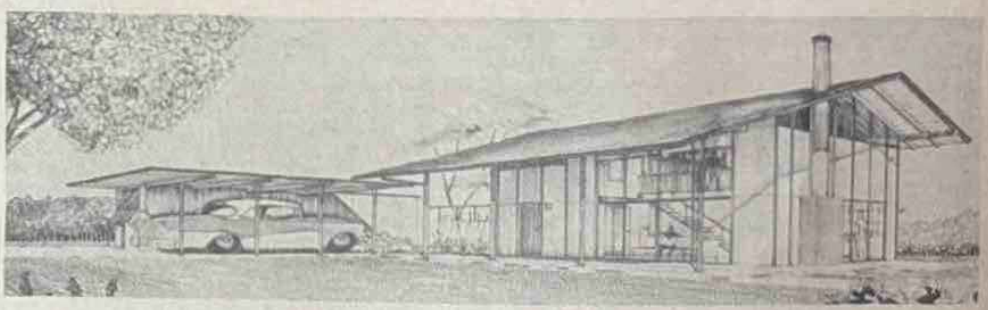
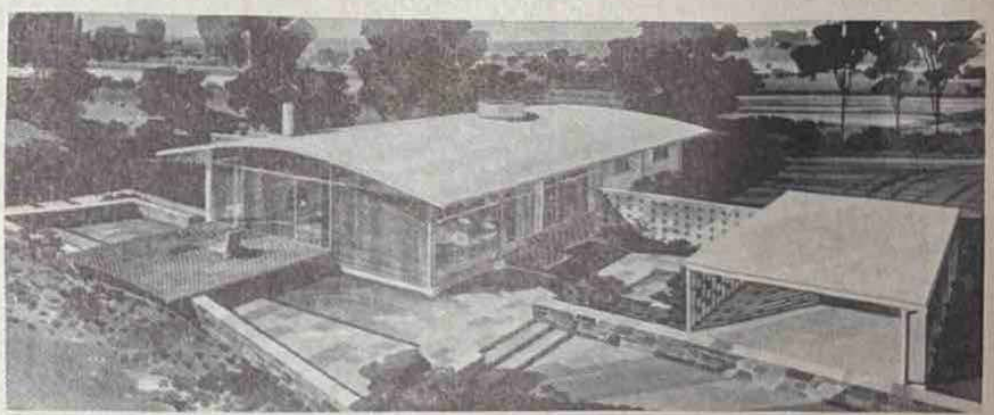
Homestyle Center leaves Grand Rapids, seeks new site

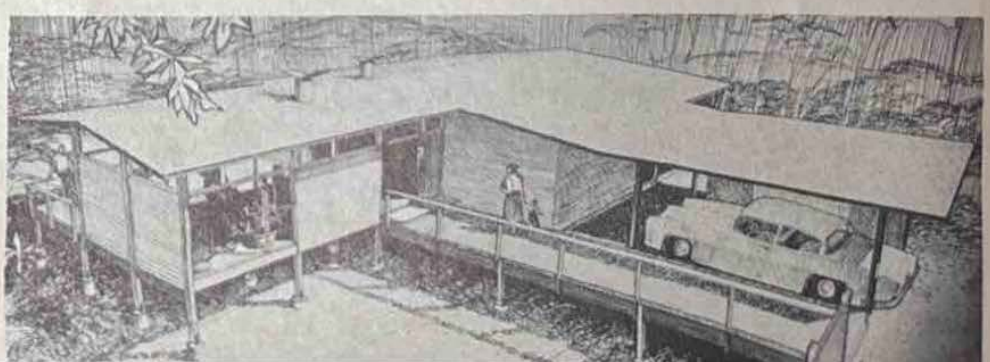


Groundbreaking for the Homestyle Center was scheduled for this spring on the outskirts of Grand Rapids, Mich., but all operations have been discontinued at that site. Arleigh C. Hitchcock, executive vice president, late last month announced, "We are presently discussing this move with groups from various cities who are interested in seeing the Homestyle Center brought to fruition."

A project of Home Research Foundation, Inc., it was conceived to become a permanent display and research center aimed at raising the level of home design, construction, furnishings and equipment.



During the past two years the center has commissioned the services of architects, interior designers, landscape architects and consultant builders from all sections of the country. Four of the West Coast designs are shown on this page.



Steel-framed house providing utmost flexibility, with long-span roof beams eliminating interior bearing walls; exterior walls of thin plywood or plastic panels, double thickness of fixed glass or sliding glass doors; 1,200-1,500 sq. ft., costing about $17,000; three bedrooms, two baths. Jones & Emmons, architects; Harry Saunders, interior designers; Garrett Eckbo, landscape architect; Joseph Eichler, builder.

Tract-built type house for San Francisco Bay area, using mostly local materials; two-story plan for economy and to free as much of site as possible for outdoor living; 1,200-1,400 sq. ft., costing $16,000-18,000; three bedrooms, two baths. Wurster, Bernardi & Emmons, architects; Knorr Interior Planning, Inc., interior designer; Lawrence Halprin, landscape architect; August H. Rahlves, builder.

Retirement house for southern California demonstrating Oriental influence and minimizing housekeeping requirements; glued-laminated wood beams, arch shaped for form and good drainage, frame 27-ft. width in 10-ft. bays; 1,250 sq. ft. costing about $15,000; two bedrooms, two baths. Kazumi Adachi, architect; Norman Hansen, interior designer; Francis Dean, landscape architect; Ray K. Cherry, builder.

Budget house for young, growing family in Pacific Northwest, using natural materials and 8-ft. module framing for roof and floor; skylighted central kitchen; 1,290 sq. ft. costing $12,000-15,000; three bedrooms, two baths. Zema & Bumgardner, architects; Walt L. Kerr, interior designer; William G. Teufel, landscape architect; Albert Balch builder.

Symphony leader steals top billing

Registration exceeds 4,000 at Washington, D. C. sessions which produce several surprise stars

by ROBERT E. KOEHLER, Editor

A NEW CENTURY BECKONED a record-breaking number of registrants—4,300 in all—to the centennial celebration of the American Institute of Architects in Washington, D.C., May 13-17.

The architects and guests gathered in the Sheraton-Park and Shoreham hotels to hear leaders in the fields of technology, government, education, business, labor and the arts discuss the complex forces which shape human environment, or what re-elected president Leon Chatelain Jr. called "a reexploration of America," rather than the practice of architecture or the technical aspects of building.

It is only natural that such an unconventional approach to the national meeting would produce varying amounts of enthusiasm. But in the final analysis, to the architect who attended the majority of the sessions, the convention must have been a satisfying and at times quite stimulating experience.

Highlight of the program, to this writer at least, was a musical lecture presented by Dr. Howard Mitchell who proved to be as adept in analyzing architecture as he is in wielding his baton. Conducting the National Symphony Orchestra, he traced the parallel paths of "Music and Architecture in the Environment of Man."

Midway in the sessions the program got a real shot in the arm when Bennett Cerf gave a delightfully funny talk about the problems of publishing in general and Random House in particular.

The 89th annual convention got off to an auspicious start with a keynote address by Edward A. Weeks Jr., editor of the Atlantic Monthly, who discussed the social climate which is producing today's architecture. (See p. 13 for complete text.) And in the closing session Pietro Belluschi, FAIA, dean of architecture, Massachusetts Institute of Technology, expressed some doubts that architects are prepared for the enormously challenging task ahead. (A digest of his talk will appear in an early issue.)

Centennial banquet speaker Henry R. Luce, editor-in-chief of Time, Inc., called upon the federal government to set a standard of architectural excellence in its own buildings that would be an example for the rest of the country.

Of the several panel sessions, the one devoted to economics, or more specifically labor-management relations, was without a doubt the best organized, with Walter Reuther aptly demonstrating why he has risen to the chairmanship of the Economic Council of the AFL-CIO; and of the individual seminar papers, a discussion of environment by Dr. Paul Tillich, Harvard University professor, was perhaps the most provocative. (PA&B will carry this talk in July.)

In two other addresses of particular interest, actress Lillian Gish called for a Secretary of Art and Science in the nation's capital and Sen. Joseph S. Clark (D-Pa.) proposed creation of a Department of Urban Affairs with cabinet status.

Business sessions

The meeting became a "delegates' convention," as one AIA chapter president put it, when by a two-thirds vote they agreed to set aside a ruling from the chair that subjects read by the secretary could not be reopened for discussion at subsequent business sessions. Of the 20 legislative resolutions introduced, 16 were carried, including support of an advisory commission of the arts; two failed; and two were referred to the board. All by-law changes were carried.

The entire slate of national officers was retained and the nomination of Ulysses Floyd Rible of Los Angeles to succeed Donald Beach Kirby of San Francisco as director of the California-Nevada-Hawaii district was officially approved. The term of Donald J. Stewart as Northwest district director expires in 1959.

Music and architecture

"Architecture, we are told, is frozen music," Dr. Mitchell began. "Sir Joshua Reynolds has told us that architecture applies itself, like music, directly to the imagination.

"Music and architecture are more closely allied, perhaps, than any of their sister arts. They have certain

COMMEMORATIVE CENTENNIAL MEDAL is presented to President Eisenhower by AIA president Leon Chatelain Jr.

at AIA Centennial celebration

NEW WORLD OF ECONOMICS: James Ashley, Dr. Emerson P. Schmidt, chairman Charles Luckman, AIA, of Los Angeles and Walter Reuther.

GOVERNMENT AND THE ARTS; chairman John S. Detlie, AIA, of Seattle, Dr. Howard Mitchell, Miss Lillian Gish and Dr. Leo Friedlander.

ENVIRONMENT AND THE INDIVIDUAL: Dr. George H. T. Kimble, Dr. Mildred C. McIntosh, Dr. Paul Tillich and chairman Dr. John E. Burchard.

basic things in common—good proportion, conformity among mass movements, flowing melodic line, high and low points of interest and a climactic focus of action which produces an emotional as well as intellectual impact. Both have abstract forms. Often musicians and architects employ the same terms in describing these forms—expressions such as warmth, texture, energy, movement, space and beauty.

"Of course musicians have advantage over architects in one respect. We can express our thoughts more safely. A good piece of music may receive the stamp of public approval and be played forever. Its composer, if he is living, and his descendants, if he is not, need not blush if his work proves to be worthwhile. On the other hand, a bad piece of music need never be played again. It can be locked away. It can easily be burned. It can even be eaten if the need is sufficiently desperate. Architecture is far more indigestible. A building is there for you to see and if it is a well constructed building but badly designed, it will outlive all our apologies. Like Mount Everest, it is there!"

Dr. Mitchell commenced his historical analysis with the cultural climax that took place in Greece in the latter half of the fifth century B.C. Concerning most recent developments, he had this to say:

"In the beginning of this 20th century many things were tried, both in architecture and in music. Some turned out seemingly well; some turned out very bad, even horribly. Le Corbusier, as an example, deliberately turned his back on the past, saying shockingly that a house is a machine—'a machine for living.' He had a musical counterpart, Arnold Schoenberg and his 12-tone scale, which to many is nothing but a machine for musical listening. Both have received much attention. It's difficult sometimes to know whether what they've done will have lasting beauty, or is simply bizarre. There is one point of agreement: the work is certainly different and to the professional artist, it's often interesting."

The conductor explained that today we have extremes in both architecture and music. "We have the architectural proponents of the International style—the one world, so to speak, who create the simplest possible design, abhore ornamentation and revere industrial materials. Their work often has an emotionless quality.

"There are, at the other extreme, the organic architects. They have few prejudices as to new or old. They employ natural materials, and harmony with nature. To them the site is everything. There are still other creative geniuses who pass through the battlelines of both sides."

NATIONAL SYMPHONY ORCHESTRA assists Dr. Howard Mitchell in musical lecture.

In his closing remarks, he declared that music and architecture both belong to the people of the world and they will have to decide what is good and what is bad. "This moves me to make a prediction. The pendulum is swinging away from mechanistic expression. We are entering a new romantic field of inspiration. It is abundant with individuality. To be great, architecture must be liveable, beautiful and of the earth. This is the same thing as saying that music must be listenable. The ability to startle is not enough. The performance must stand the test of time."

The city and architecture

If any one issue discussed during the AIA Centennial looms as the most important architecturally in the next 100 years, it is, as Belluschi put it, "whether the city itself can be saved as a social entity. Not the city alone but the whole visual world brought about by modern man's growing arsenal of technology has been up to now an insult to man's own nature. We see mostly disorder and ugliness everywhere, the obvious signs of a society still in a state of transition, a society which no longer places value on permanence, therefore on grace, because it assumes that improvements brought by a still advancing technology will continue to produce obsolescence.

"The central fact is that a new era is upon us and that none of the previous social experiences can quite guide us; we must find our way."

Government and architecture

"Predicting a staggering mass of building" over the next 25 years, the editor-in-chief of Time told the Cen-

tennial banquet audience that the United States was on the verge of creating architecturally the first "modern technological, prosperous and reverent civilization." The American revolution in architecture has been accomplished, he added.

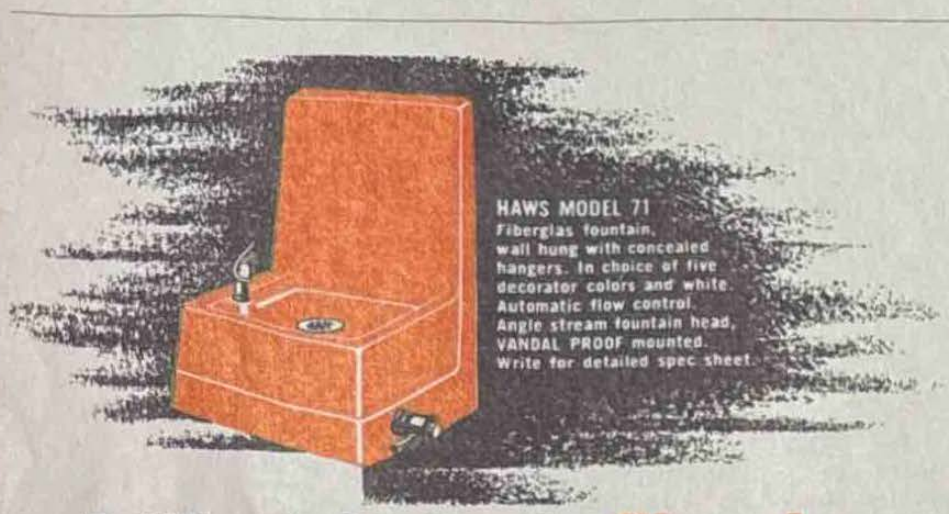
Luce explained that good architecture is not only good economics but it is good government. Recalling that all the good architectures of the past had been sponsored by autocratic governments, he urged the architectural profession to demonstrate that real political freedom is not "uncompatible with persuasive beauty." Luce continued:

"Modern architecture did not grow up in the palaces of emperors or maharajas. It was not designed to proclaim pomp and glory—except the glory of a free and self-respecting people. Modern architecture, or at least a large part of it, grew up in response to the people's needs. They were badly housed; let us build good, clean, economical housing. That is only one example of the fact that modern architecture is not the servant of imperial luxury or of aristocratic vanity; it had to meet an economic test and its chance for freshness and vitality was in making use of the vast wealth of material and technology produced in a profit-and-loss economy.

"To be sure, a great deal of bad building is being done and people make money out of bad building. But the affirmation remains. I am speaking of the idea which is now implanted in our civilization: good architecture is good economics.

"But government is more than economics. Government must stand for things, for principles, for ideals. Government must be a symbol. And architecture is, above all the symbolizing art.

"I would be the last ever to agree that human life is bounded and prescribed by economics. Let us clearly reject the economic interpretation of history or of life—a narrow wretched philosophy shared by Marxists and robber barons. Life is more than economics! And so is architecture.



"But will you be given the chance to transcend economics, the chance to express the non-economic, the more-than-economic character and aspirations of the American nation? That is what we must mainly strive for, now—to get buildings, many of them, big and little, which point beyond themselves to the best in American life. The chance to express more than economics must be given you by the home builders of America, by the industrial corporations, by the universities and notably by government in all its many branches, federal and local.

"The relation of government to architecture may be put under two heads. Most importantly perhaps is the effect of government laws and policy on architecture. Government's influence for better or for worse is enormous in terms of urban renewal, city planning, housing policy, even the lowly local building codes. All Americans who wish to build a better America must learn how to teach politicians that bad architecture is bad politics."

In urging the government to sponsor an architecture characteristic of democracy and dignity, Luce applauded the State Department for its new policy in the designing of its embassy buildings. He said:

"Some of the new embassies are triumphs of modern architecture. They are also great acts of statesmanship. The Department of State deserves, I think, an award from this institute not only for the buildings themselves but for the magnificent directive under which they are being built. The Department of State has written a Magna Carta of fresh, imaginative architecture—an architecture of symbolism, symbolizing the dignity of this republic and its profound concern for all mankind.

"What we have done abroad we must do at home. We must do it here in Washington and down to every country courthouse and post office."

In his keynote address at the AIA centennial, the editor of the Atlantic Monthly serves as a 'spiritual weathervane, pointing where the wind is blowing'

by EDWARD A. WEEKS JR.

Buildings which shape our lives

SPEAKING as one centenarian to another, let me begin by congratulating you on looking so much younger than your years. In America where we discard what we don't like with such devasting swiftness, any institution which has lived to be 100 must have endeared itself to the country at large. This is true of the American Institute of Architects just as I like to think it is true of the Atlantic.

When a man or woman has lived to the ripe age of 100, we ask them to tell us their secret of life. Well, I think one reason for the Atlantic's longevity is that we have changed our editors more frequently than any of our competitors. Whenever there was a sag in our circulation, we brought in a new editor. He was always a young man and his first duty was to attract young writers and young readers.

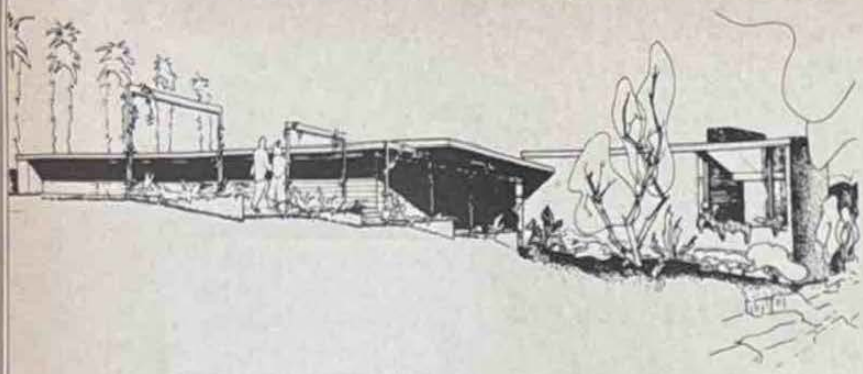
I suspect that the reason why the AIA is so alive today is that you have managed to keep together in an outspoken but happy family the Traditionalists, the Transitionalists and the Modern architects. This must have take firmness and tact, for you could so easily have broken apart as the art institutes have done. Instead, and very wisely, you have chosen to rub off on each other; you have pooled your resources and your fiercely differing tastes, and there is no doubt in my mind that you have all gained in vitality by so doing.

Ahead of us "A New Century Beckons," and all this week you will be peering forward, seeking to determine the new aspirations, the new opportunities, the new dangers which will call out your talent and forethought in the years immediately ahead. I am honored that you should ask me to be your keynoter; I had such a happy time with you at the Boston convention when you came to hear me at the Hotel Statler with the breakfast coffee hot on your breath. This evening I am going to try to be a kind of spiritual weathervane, pointing where the wind is blowing and showing what architects and editors, those arbiters of taste and thinking, need to do if they are to construct a life worth living in this ever-multiplying America.

For the past year I have enjoyed the sensation of living in two centuries. For part of each day I have been looking forward planning the contents of those special 20th century issues of the Atlantic which will celebrate our centennial in the autumn, and for the other part—usually in the evening—I have been looking back, back to the 19th century, familiarizing myself with the early editors and reading those contributors whose work gave luster to the magazine long before I was born. I think what strikes me most is the leisurely way in which they did things.

The Atlantic was founded and christened at two gargantuan feasts which were held at the Parker House in the spring of 1857. A group of gentlemen, including Emerson, Longfellow, Oliver Wendell Holmes, James Russell Lowell, Underwood and Phillips, sat down to dine at three in the afternoon, and they did not rise—perhaps they were unable to—until eight in the evening. Under the stimulus of oysters, steak, burgundy and brandy, money for the new periodical was found, the policy defined, the first editor Mr. Lowell (who was then 38) was chosen and the baby was formally christened the Atlantic Monthly. Just to make sure they hadn't been dreaming, they assembled at the same hour the following afternoon, ate and drank their way through another five-course meal and tidied up the details.

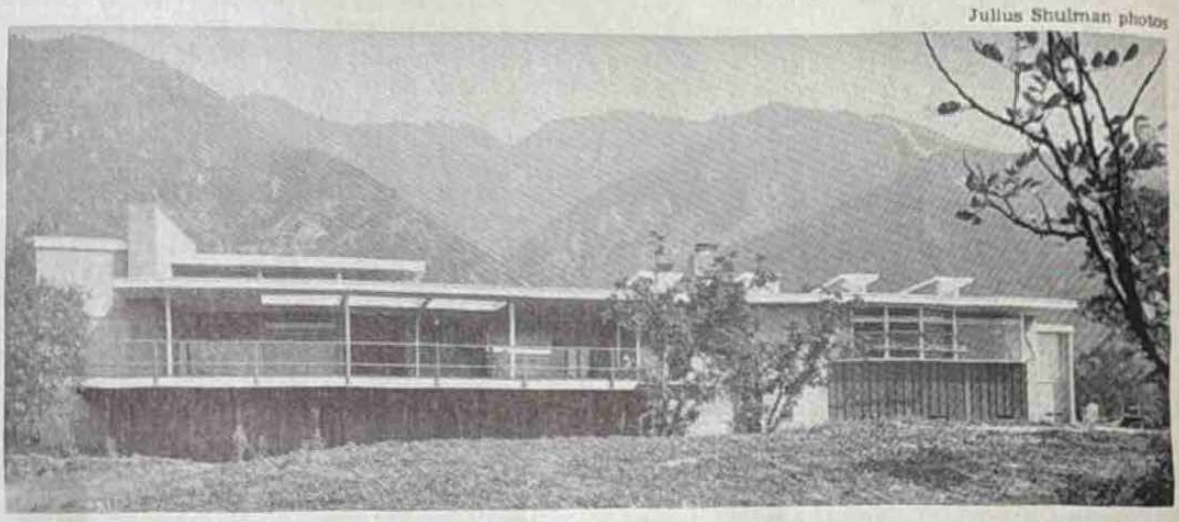
Two of their decisions were unique: first, they decided to make this an American periodical, and that was a daring thing to attempt when all our competitors were busily engaged in pirating or importing English authors; secondly, it was decided that the entire contents should be published anonymously. When you think of the fame of their leading contributors—Hawthorne, Thoreau, Emerson, Longfellow, and Lowell—you will see how magnificently confident they were and how little they cared for publicity. "The names of contributors will be given out," said Emerson, "when the names are worth more than the articles."



Remember that this was taking place at a time of great tension when the Union was in jeopardy and passions were running high. It was a year of financial depression; money was tight; and people were worried. Abraham Lincoln was unknown outside Illinois. There was no trans-Atlantic cable and no telephone. "Our age is an age of daring and doing," wrote an Atlantic contributor. "The world has advanced from a speed of five miles an hour to 20 or 30 or more." (He meant of course by railway.)

Darwin's provoking book, "The Origin of Species," was still in manuscript; not until two years later would it challenge all orthodox belief. Dr. Sigmund Freud, who was to have such a profound effect on all 20th century writers, had just been born. Thanks to Horace Mann, girls were at last admitted to our high schools on an equal footing with the boys. A woman teacher in the Boston public schools was paid $6.50 a month; a full professor at Harvard, such as our first editor, James Russell Lowell, received $1,200 a year.

In the architecture of that year Boston was capable of the very good, of the audacious and of the very bad. The Boston Athenaeum, that cool, spacious, beautifully lighted library on the top of Beacon Hill, is an example of the very good. It is an oblong Italianate building designed by Cabot & Cabot, which you will recognize as a Boston firm, and it distills as conducive an atmosphere for reading as I have ever found. True it looks out on a burying ground but then so do many of the public buildings in Boston. Burying grounds provide us with breathing room, air space, trees and flowering shrubs in the close confines of old Boston, and it might amuse you to know that in the cellar of the Athenaeum are some of the old tombs and gravestones. The architects needed the space and instead of changing their drawings, they decided not to worry the city fathers—they just arched a bay over the encroaching graves, and no one was the wiser.



In the 1850s we were beginning to fill in with oyster shells the foundation of the Public Garden and the long mall

Continued on p. 31

APPROACH SIDE is made up of blank walls but redwood trellises guide step down to roofed deck entry. Covered wood balcony off living room and den and expansive use of glass make most of scenery on view side.

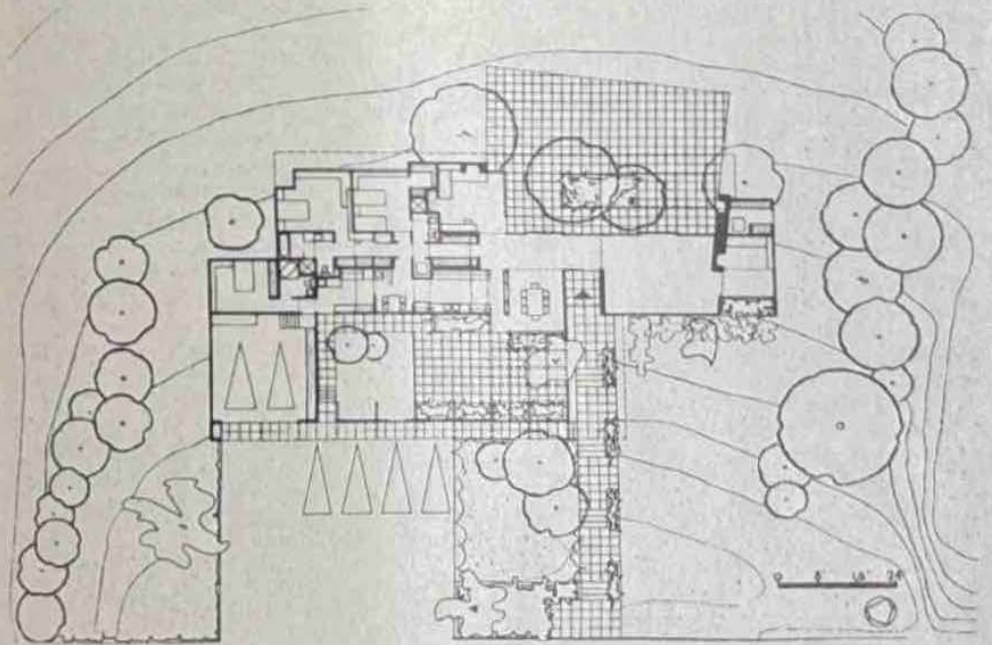
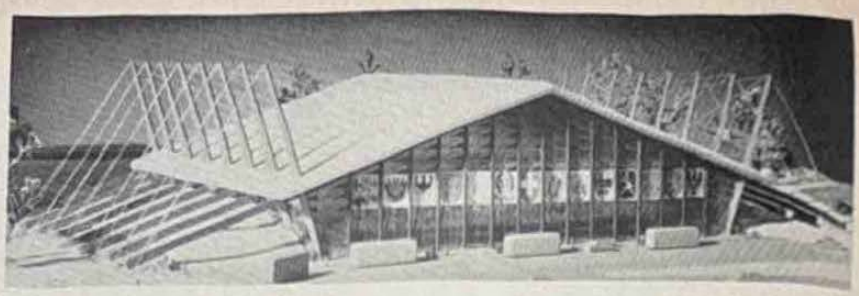
Windows for looking out--not for looking in



LIBERAL USE of wide sliding wall elements has helped to achieve a real graciousness of living in this long, narrow house on a spacious and gently sloping orchard lot overlooking the city and approached by a private road.

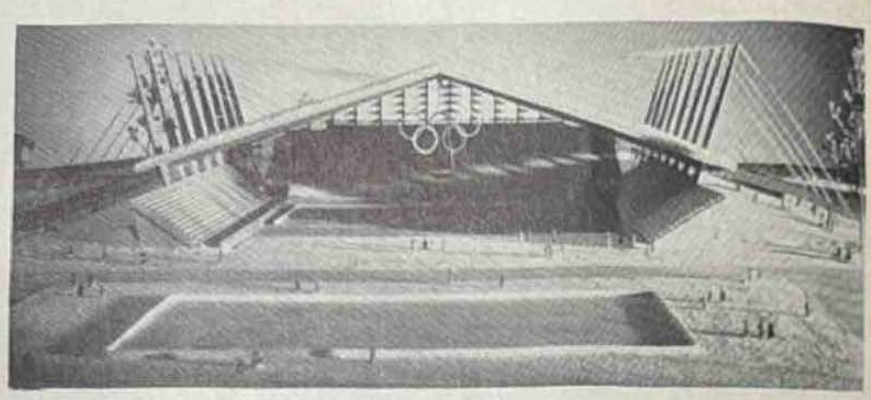
The clients wanted to take full advantage of what nature had accomplished with their location. Sliding walls were used, therefore, so that the living room, den and dining room could be opened into one another or shut off. The dining room opens directly onto its own outdoor patio but also commands another magnificent view across a glassed-in loggia by means of a 12-ft. sliding wall.

The house is largely glass on the view side, while the entrance side consists of blank walls. The windows, the architects make clear, are for looking out—never for looking in." Among the techniques used to aid the transition from inside to out is a planting well in the slat deck (1,176 sq. ft.) off the living room. Ornamental strawberry, with juniper for contrast, covers the slope in the approach area.



Four skylight bulkheads over the low-roofed portion provide light and ventilation for the bathrooms and dressing rooms, giving interior circulation and bringing the morning sun into the kitchen where the other main windows face north.

A two-way fireplace in the 22x52-ft. living room juts out to provide a semi-secluded alcove which doubles as a television area.



OUTLINE SPECIFICATIONS

Type of Construction: Wood frame on concrete footings.
Exterior Walls: Redwood and stucco.
Roof: Composition and gravel.
Floors: Wood finished in cork.
Doors: Slab.
Interior Walls: Plaster and wood over gypsum lath, with Milcor plaster stops for trim.
Ceilings: Plaster.
Insulation: Alcoa aluminum foil in roof and west walls.
Heating: Forced air gas system.
Total Area: 2,984 sq. ft., floor; 1,512 sq. ft., roofed deck and entry porch; 1,176 sq. ft., covered wood balcony.
Total Cost: $36,000 (including utilities and sales tax).

ENCLOSED ON THREE SIDES, north elevation exterior will display decorative seals of participating nations. Fourth side will be completely open to sun from south, offering view of speed skating rink and ski jumps beyond (see model below) and placing in silhouette Olympic symbol and flame suspended from roof.

SQUAW VALLEY IS SITE of small and comparatively undeveloped ski resort. Parking areas at right.

Phil Palmer photos

GREAT SNOW DEPTHS at Squaw Valley, Calif., posed a major problem in planning the enclosed ice arena which will house the opening and closing ceremonies of the 1960 Olympic Winter Games, along with figure skating and ice hockey events. It was necessary to design the 300-ft. clear span roof to carry loads up to 100 psf. or to develop a means of snow removal.

Two other problems arose: condensation occurs in such arenas, creating icicles and dripping from roof members on the spectators and on the skating surfaces; and the Olympic Arena, to seat about 8,000 persons, will be used for special events which may take place in extremely cold weather.

In considering the heating of the entire building and/or roof, the possibility of using reverse cycle refrigeration for a heat source was studied. The contemplated refrigerating plant has a capacity of 600 tons, which would produce 9,000,000 Btu., much more heat than required. (About 15,000 Btu. of heat per ton must be dissipated or wasted in a normal refrigeration system.) A complete analysis indicates that such a system can be used economically to melt snow, reduce condensation and partially heat the entire building.

Economical methods were sought to distribute the air. The roof deck of formed cellular steel spanning about 12 ft. is used to carry heated air for melting the snow and preventing condensation. Areas under the bleachers are used to carry the main air, partially warming the seats and permitting such ducts to be completely concealed.

In addition to the steel deck, the roof structure consists of rolled steel beam purlins spanning 33 ft. and the main supporting frames spanning 300 ft. The latter are tapered columns built up from steel plates, tapered steel box girders and inclined cable tension members. Each half of the main frame acts independently in somewhat the manner of a guy derrick, with the roof girder functioning as the boom, the column as the mast and the inclined cables as the guys. Cable anchorages are provided by deadmen of concrete and masonry, the extended roof girders resisting the horizontal thrust.

The ridge of the roof being located perpendicular to the long axis of the rink permits the maximum rise and number of choice seats parallel to the rink and facing the open vista of the valley. It also offers an unobstructed view over the entire arena for press, radio and television facilities.

Main access to the arena is through the lobby which extends the full length of the north elevation. Access to the main seating section is through openings at the mezzanine level, eliminating the need for cross aisles. Bleacher seats can be removed from above or below.

Gay colors—yellows, greens and reds—used both inside and out will be set off by the white snow.

Bring a little outside inside

With Soulé Intermediate steel windows, you specify the opening dimensions, and we'll supply the exact windows you want. There's no limit to stock sizes with Soulé steel windows. And with our design-engineering service to help you with problems concerning materials, sizes and shapes, there's no premium cost either. Big bonus advantages include Western manufacture and installation by Soulé crews—on time! You deal with one major source for windows and installation, get maximum job protection and guarantee. Call or write your nearest Soulé office for details and specifications. Our sales engineers will gladly supply you with data for your files.

School that looks to an orderly future

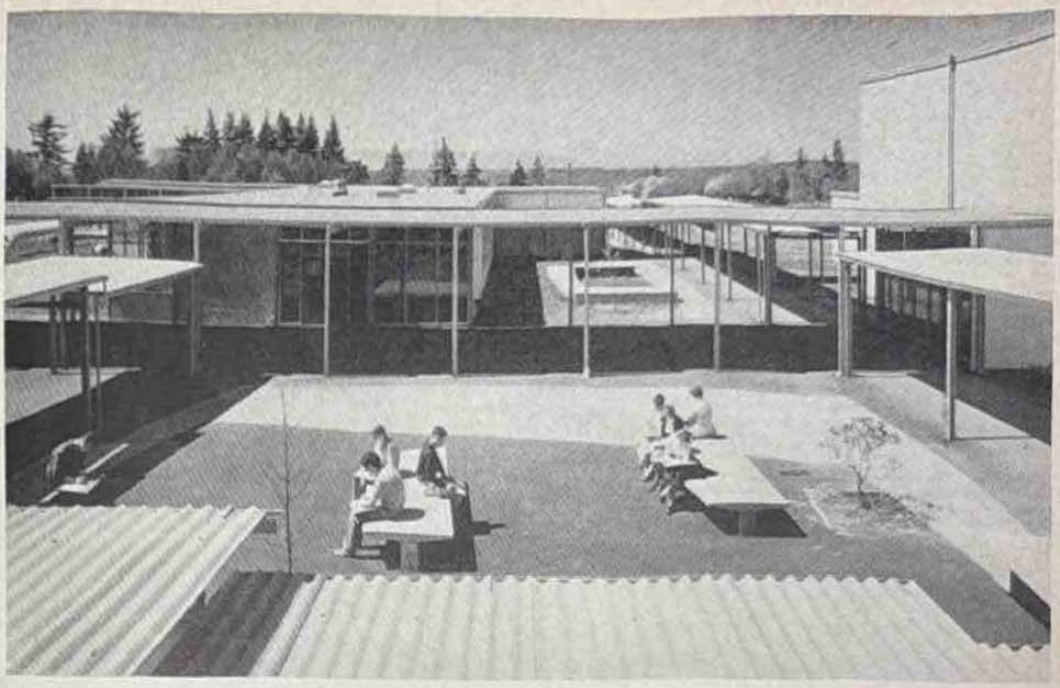
Olympic View Junior High School
Mukilteo, Washington

WALDRON & DIETZ
Architects

ROBERTA WIGHTMAN
Landscape Architect

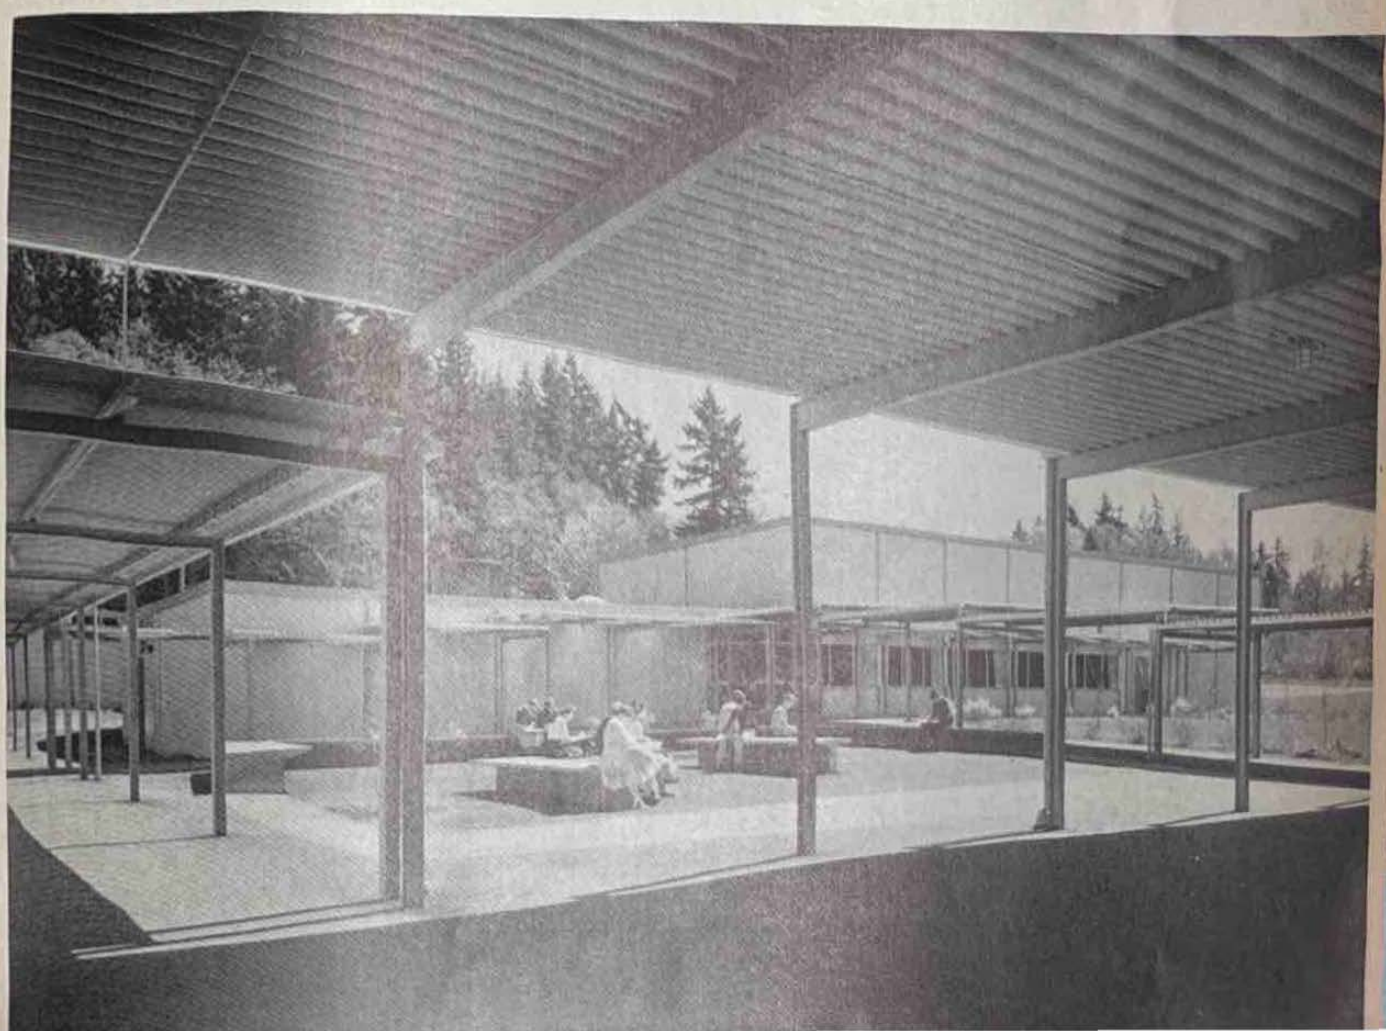
HEDEEN CONSTRUCTION CO.
General Contractor

INITIALLY DESIGNED to accommodate 400 students, this school plant has been planned to allow for ultimate population twice that size. The architects, who were awarded the contract prior to the purchase of the site, are quick to commend school officials (headed by Superintendent Olin Simpson) for "such a farsighted and comprehensive outlook toward their planning problem" in achieving an orderly, coordinated expansion program.



Consultations between the designers and school board members, which eliminated more than one difficulty sitewise, led to the purchase of 27 acres, about 20 of which will be intensively used for building, parking, bus loading and unloading, football and baseball fields and tennis courts, with the remaining seven for future bus terminal garage facilities.

The simple campus type plan connects the main building blocks with an outside corridor of steel frame supports and a covering of corrugated cement-asbestos board; the main entry corridor is of steel frame and steel decking. In addition to tying the units together, this network of walkways form courts in which have been placed some seating and planting. These hubs in turn serve as an interesting nucleus for social relations and as a pleasant transition from one building block to another.



The first unit of the total plant consists of nine general classrooms and seven others for home economics, art, science, woodworking, music and physical education (two teaching stations); two locker and shower rooms and auxiliary spaces; multipurpose unit; library; two offices; health unit; kitchen; teachers' room; conference room; heating plant; storage areas; and six toilet rooms. Expansion provisions call for nine to eleven more classrooms and additional space for music and chorus, home economics, science and woodworking.

Primarily a concrete structure, the exterior walls are of reinforced concrete and structural steel combined in such a manner as to enable the contractor to cast lift panels on poured concrete floors, tilt and weld all joint connections.

The architects collaborated in part with the landscape architect during preliminary planning and construction and as soon as the latter was completed, landscaping was begun. As a result, the school took on a finished look at once and many serious water and ground erosion problems were avoided.

In selecting this project for an Honor Award in the 1957 competition of the Washington State Chapter, AIA, the jurors commented: "A junior high school simple in plan and details in which provision has been made for an orderly and coordinated expansion program. The jury was particularly impressed with the central student court that appears to form a hub of all activity centers."

LIBRARY CAN ACCOMMODATE 70 students at one time, is indicative of overall airy feeling found in school.

JUNIOR HIGH SCHOOL

OUTLINE SPECIFICATIONS

Type of Construction: Reinforced concrete.

Exterior Walls: Painted tilt-up reinforced concrete and structural steel.

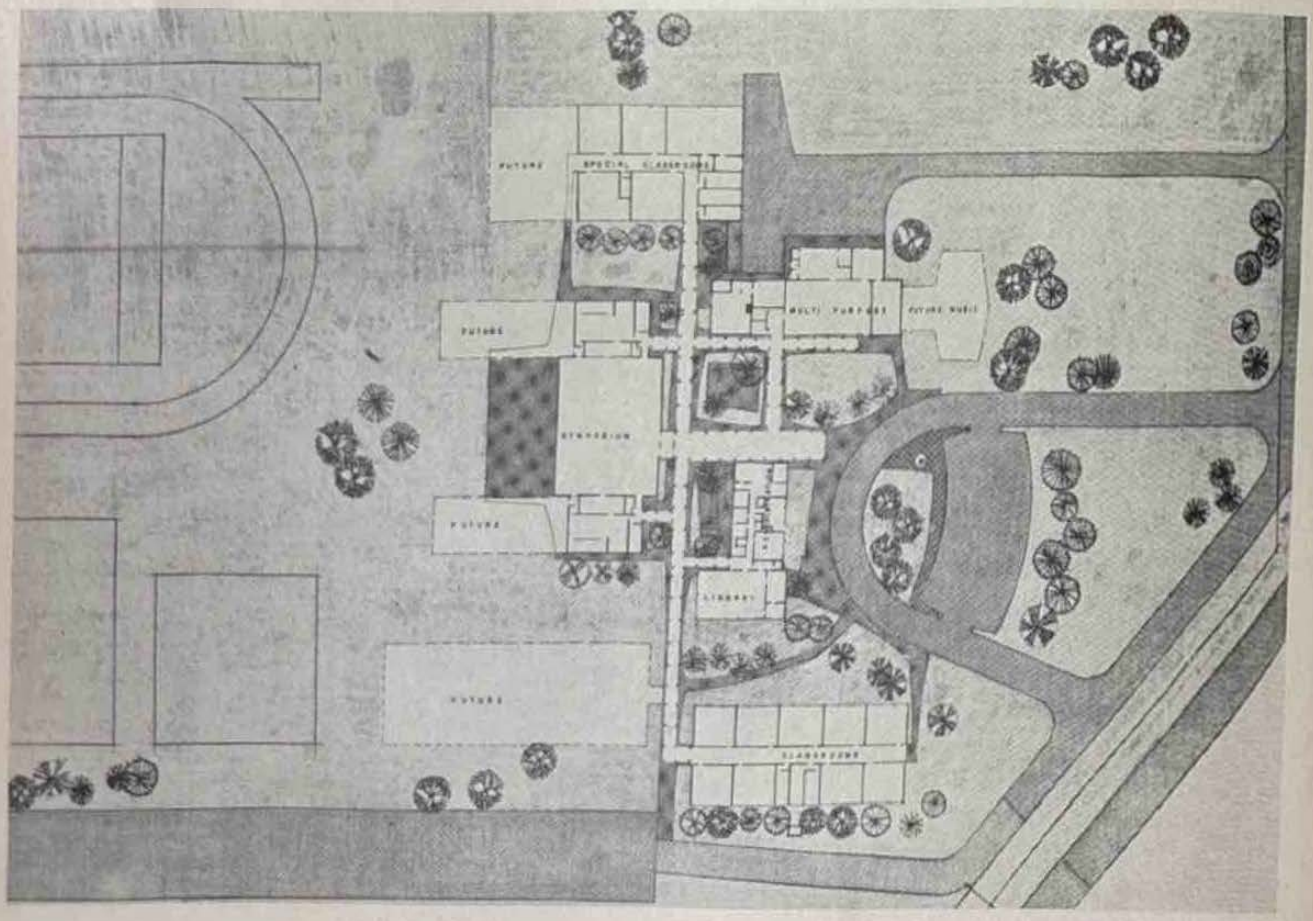
Roof: Wood with supporting members of steel bar joists.

Floors: Concrete slab covered with asphalt tile except maple in gymnasium and quarry tile in toilets and kitchen.

Interiors: Plaster over wood stud partitions.

Ceilings: Acoustically treated perforated cane board.

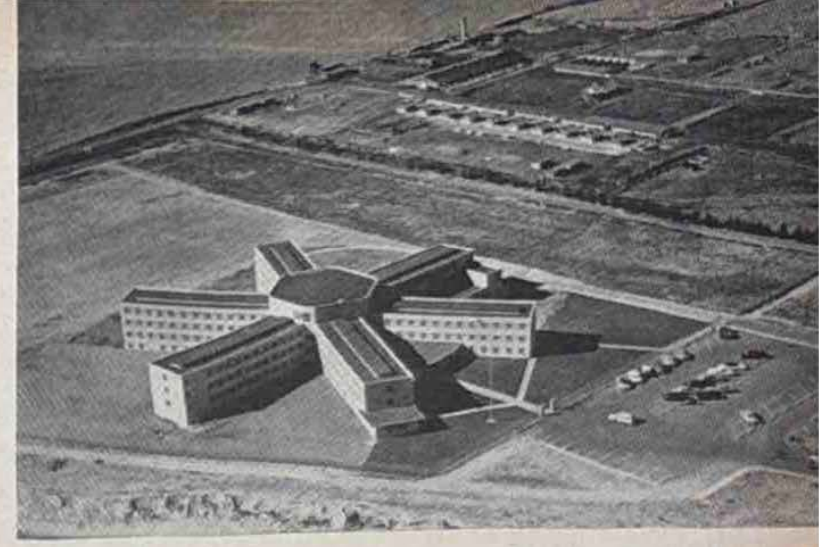
Heating: Oil fired hot water.



Ventilation: Central fan units providing air exchange in all rooms.

Lighting: Incandescent except fluorescent in administration office and kitchen; corridors naturally lighted by patterned wire glass set in O'Keefe skylights.

Total Cost: $685,000 (including architects' fee and sales tax).



Total Area: 48,387 sq. ft.

Date of Completion: September 1957.

PA&B special report

Washington State's Minimum Security Building is a harbinger of advancements to come in replacing medieval custodial facilities with those better suited to modern techniques of penology

JOHN W. MALONEY, AIA
Architect

HENRY GEORGE & SONS
General Contractors

New thinking in prison construction

by BOB KAROLEVITZ

WHEN THE STRANGE six-wing radial type building began to rise on the flatlands outside the walls of the Washington State Penitentiary at Walla Walla, there were doubts in the minds of a few citizens.

Weren't iron bars and high walls the only **real** answers to prison construction?

Was the state about to launch on a coddling campaign of her lawbreakers?

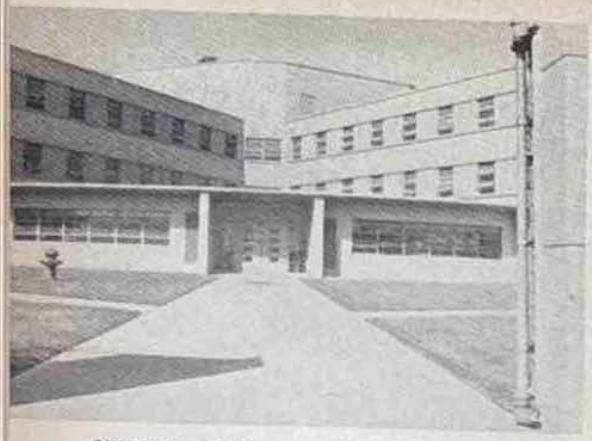
Possibly those questions were legitimate at the time but since then the Minimum Security Building at the penitentiary has been completed and has had adequate time to test the philosophies of those who were instrumental in the design of the institutional structure. Those citizens who had doubts about the building's functional values fortunately found their fears without foundation.

Through the years the theories of custody, treatment and rehabilitation have undergone considerable change. It would readily follow that the facilities in which these programs were practiced should also be part of the evolution.

Washington State Penitentiary had its beginning before statehood when the new territorial prison received its first prisoner on May 18, 1887. In those days custody—often cruel and inhumane—was the only reason for a prison or jail of any sort. The buildings were erected specifically to accomplish that end: to lock men up and keep them there.

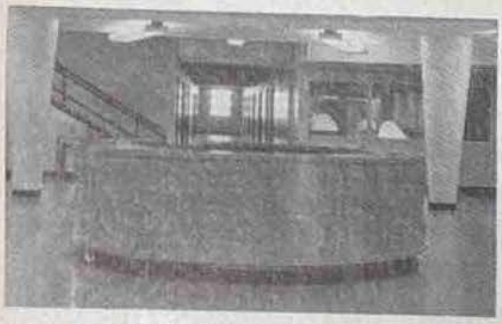
Unfortunately, while the students of penology were making long strides forward, the money was never available to destroy the old strap front, bucket type cell blocks entirely and erect modern structures designed to meet the advances of prison management and control. So it is that the penitentiary at Walla Walla has become the scene of the widest of extremes in prison architecture.

When money became available under a $20 million bond issue program for the 13 state institutions, prison authorities got their opportunity to achieve a most important goal. Their needs were actually three-fold: 1) to obtain more housing units, 2) to make possible the segregation of prisoners and 3) to facilitate a pre-parole training period.



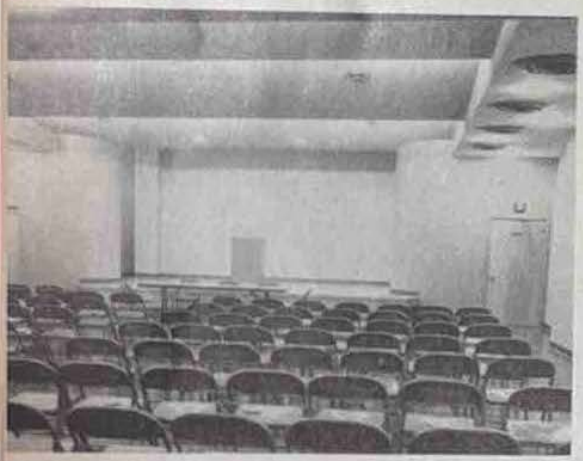
The $1½ million building which eventually resulted took into consideration each of those needs. First of all it provided domiciliary facilities for 296 more prisoners. Being located outside the wall of the prison proper, it was designed to assure the warden and his associates the segregation program they so sorely needed.

Segregation of prisoners can best be described by the old saw, "One rotten apple will spoil the bushel." Neither the best interests of society nor the individual are served by dumping into a single cell block inmates of varied security risk, criminal tendencies and rehabilitative potential.



Thirdly, it has been learned through the years that failure to prepare "short-time" prisoners for ultimate release often resulted in their quick return into custody. A transitional period under conditions of minimum restraint and maximum personal responsibility provides this needed step to help the prisoner make a successful return to society. Again the new building made such a program possible.

The wheel-like design of the new eastern Washington installation is not just a whim off the drawing board of the architect. It was so conceived for economies in both first cost and cost



SIZEABLE AREA around building is enclosed with 8-ft. chain link fence.

GUARD CAN OBSERVE each of six wings from central desk.

MULTIPURPOSE AUDITORIUM is among special facilities found in basement.

CRAFTS-AND-HOBBIES SHOP is well lighted and spacious.

of operation.

The housing portion of the building figured out at a cost to build of approximately $2,790 per inmate. This is roughly one-half the current cost of building a jail cell block of like capacity. The savings resulted in many extras for the structure.

Economies in guard personnel and ease of security control result from the building design. From his position in the rotunda or hub, a single guard can oversee the corridors of all six wings on his floor. The design also provides a maximum number of outside rooms, a factor which has a notable psychological effect in preparing men for their ultimate freedom.

Though psychiatric type detention windows are used throughout, there are no bars on doors to the individual rooms. Each prisoner is charged with the upkeep of his own small area which is modestly furnished with table, chair, steel cot, mirror and built-in drawer space.

Such accomodations after a prisoner may have spent years in a cell block existence fall into the too-good-to-be-true category and few, if any, men risk the chance of jeopardizing their stay in the building by breaking regulations or failing in the housekeeping department.

Built primarily of reinforced concrete, the Minimum Security Building has three stories and basement. Besides the dormitory-like accomodations for the individual prisoners, the structure also boasts such basement facilities as a multipurpose auditorium with moveable seats, gymnasium, crafts-and-hobbies shop and kitchen and dining area.

The latter, is one of the highlights of the building, with terrazzo floors and completely tiled walls for easy maintenance. Stainless steel is used throughout the kitchen area which serves both in a production and training capacity. The kitchen also features walk-in freezing units, bakery and butcher shop. The in-prison freedom for the men is further evident in the dining area where food is served cafeteria style and the prisoners eat, not at the usual benches but at prison-made tables for four.

Bright, cheery colors have been used almost entirely in the decorating scheme. It's this departure from the usual drab penitentiary hues which strikes a visitor when he first enters the building's spacious lobby area. The same feeling prevails in the adjoining glass-enclosed visiting lounge.

Prisoners who have qualified for entry into the Minimum Security Building are generally assigned to outside-the-wall tasks in the garden, the dairy, the hog ranch, the poultry farm and the harvest fields. The operation of the building itself, including the kitchen force, requires other work details.

These work assignments, coupled with the general atmosphere of life in the new building, really offer a preparatory school for the return to society.

Of course, the usual hard-headed comment about being soft with our convicted criminals continues. But when it is considered that upwards of 500 men are released from the Washington State Penitentiary each year, then the problem of their adjustment to life on the "outside" looms to considerable importance.

Buildings alone do not make a successful prison; but there are times when specialized facilities become extremely valuable. It all boils down to the fact that dollars spent to accomplish successful releases prove a much greater economy than dollars expended for additional cell blocks to house maladjusted returnees.

OUTLINE SPECIFICATIONS

Type of Construction: Reinforced concrete, fireproof and earthquake resistant.

Exterior Walls: Painted monolithic concrete.

Roof: 20-year bonded tar and gravel over 2-in. rigid, insulation, copper flashing.

Windows: Psychiatric type steel detention sash glazed with clear sheet glass.

Doors: Hollow metal equipped with electric locks controlled from officers' stations, exterior and stairs; solid core unselected birch with hollow metal frames, interior.

Floors: Concrete slab with terrazzo in kitchen and dining room, asphalt tile in corridors and rooms, ceramic tile in toilet and shower rooms.

Interior Walls and Partitions: 2-in. solid plaster on metal lath, rooms; exposed concrete, stairs; exposed concrete block, basement; structural glazed tile, kitchen, dining hall and shower room.

Ceilings: Perforated acoustical tile, kitchen, dining hall, corridors and visitors' area; painted concrete, elsewhere.

Elevator: Plunger electric freight type connects kitchen receiving area with basement.

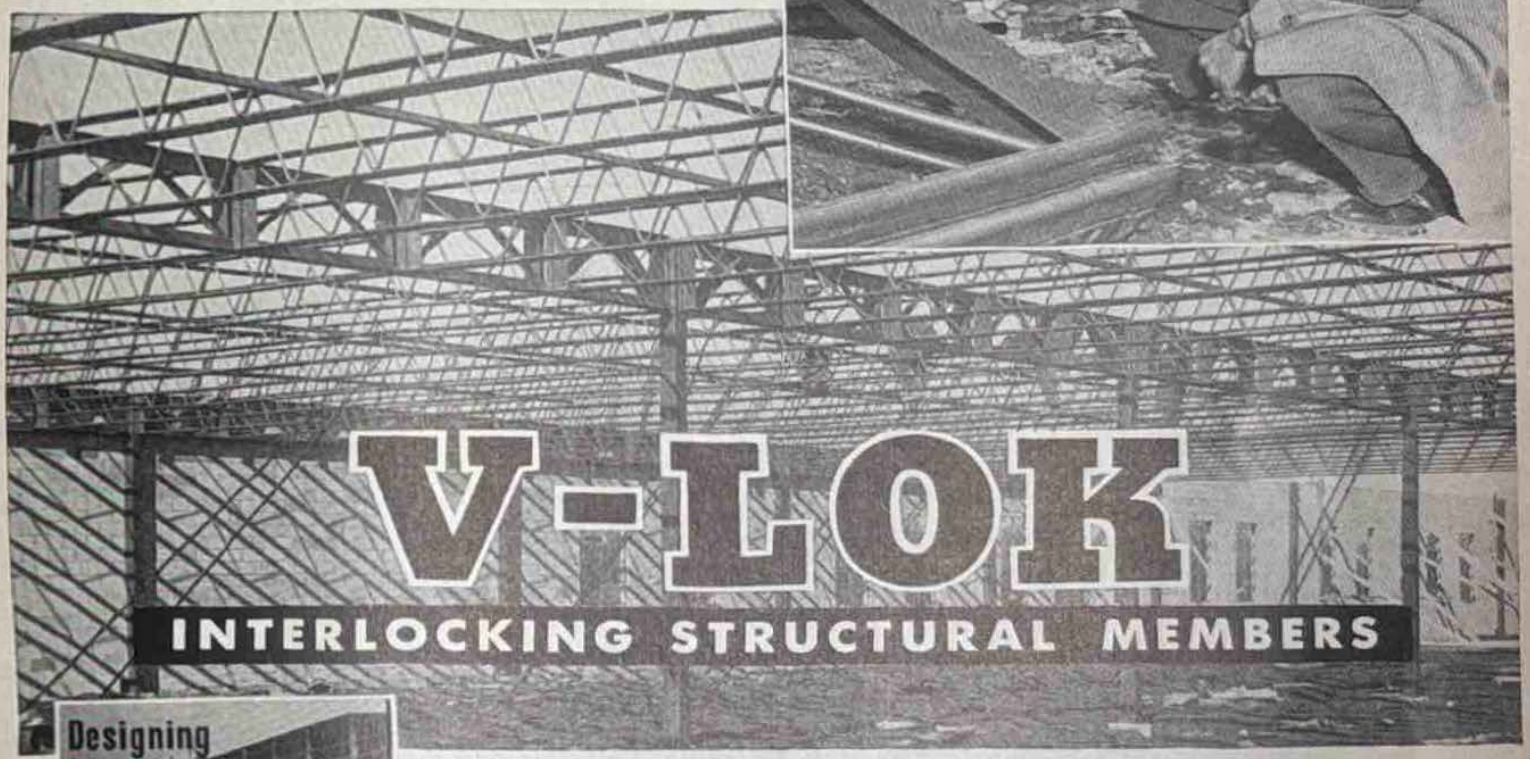
Heating: Oil fired boiler plant in basement provides circulating hot water for room convectors.

Ventilating: Supply fans in penthouse distribute filtered and washed air to rotundas, dining hall and other public areas; forced exhaust systems for kitchen, toilet and shower rooms.

Electrical: Basement transformer vault is served by 2,400-volt primary underground service; engine driven generator provides current for emergency lighting.

Total Area: 111,400 sq. ft.; 1,356,000 cu. ft.

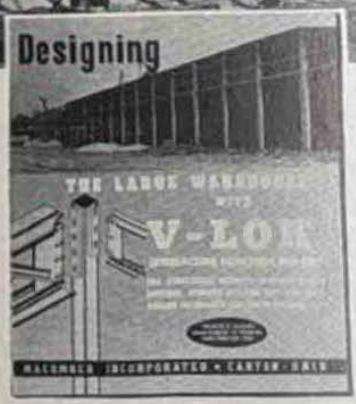
Total Cost: $1,639,000 (including services, roads and 8-ft. chain link fence enclosure).



Date of Completion: January 1954.

THIS STEEL ERECTION CONTRACTOR SAYS:

"We were able to erect the steel for the Green Manufacturing Company plant and office 50% faster with V-LOK than ordinary steel and steel joists. We saved up to one-third on our erection costs, per square foot and the materials cost less also. Incidentally, the men liked the work better and we believe V-LOK produces a more rigid structure than ordinary erection materials."



Joseph O. Divell, Perry Truck & Erection Co., Erie, Pennsylvania
Roland A. Ketzel, General Contractor, Erie, Pa.

What's new in expansion bolts?

by LYNE S. METCALFE

'In the minds of the building contractor as well as the architect there has been a deep concern for load limits on any type of fastening'

AMONG the many advances made in construction and building techniques, materials and devices may be counted those which have to do with the fastening to masonry and later, to the various wall and partition materials which have been available.

The job of fastening to masonry has been a problem since building began. The first important progress in this field was the issuance of a patent on the first successful expansion bolt shortly before the turn of the century. Until this new basic principle was conceived the general practice was to laboriously cut a hole in masonry by means of crude tools or star drill and insert an iron rod or bolt in the hole and pour hot sulphur or hot lead around the bolt.

This, of course, was easy enough in floors but presented a real problem in making attachments to walls. In this case, the general practice was to insert a piece of wood and make a fastening to the wood plug by means of a wood screw or a nail. Attachments to ceilings became even more of a problem and the failure of these primitive methods has always been a source of considerable concern to building and construction activities.

Not only was it necessary to provide a means of attachment to this type of wall but also to hollow tile, plaster, plaster over lath, plasterboard and the new type of building construction known as dry wall construction. In the minds of the building contractor as well as the architect there has been a deep concern for load limits on any type of fastening, both on sheer loads such as fixtures hanging from walls and direct pull or axial load sometimes called tensile load for fastenings to ceilings. In addition there has been the problem of vibration in such instances as the attachment of motors.

The word expansion bolt is something of a misnomer as it has been developed in recent years. A more descriptive term, less generally used in the trade, would be expansion shield or expansion anchor.

Since the turn of the century, when the basic mechanical principles were conceived the first commercially accepted expansion shield was granted by the U. S. Patent Office, a considerable amount of engineering development in masonry fasteners has been accomplished; and with the resultant improvement in expansion shields such organizations as the Bell Telephone companies and public utility firms concerned about the permanency of their installations on masonry and hollow walls have set up standard procedures in the use of expansion shields.

Says Carleton H. Bunker, president of Diamond Expansion Bolt Co., Inc., pioneer in the engineering and design of masonry fasteners: "The greatest problem in masonry attachments has been to make the hole in masonry in which to insert the expansion shield or bolt. The cost of drilling a hole has far exceeded the cost of any expansion shield and under today's high labor rate, this factor is proportionately greater."

"With this in mind, our company and others in the field have concentrated on the development of anchors with small outside diameters which will sustain sufficiently heavy loads. The outstanding example of this development is without question the nail type expansion shield which (in the case of our product) is made of a forged aluminum shell with an inside core designed to expand longitudinally when the proper size nail is hammered into the shell. An anchor of this type properly installed and using only a ¼-in. hole drilled 1-in. deep in a good grade of concrete will develop a tensile or axial load of one ton.

"Another important development in connection with the use of expansion shields has been that of the carbide tipped masonry drill which is used in a rotary electric drill and which, under average conditions, will drill at a satisfactory speed and consequently reduce the labor cost in the installation of expansion shields. Unfortunately, when this drill was introduced it sounded like the answer to all drilling problems. Good percussion type drills are available and percussion drilling is the real solution in some types of particularly hard concrete or bluestone mix."

Many unique ideas have been developed for making attachments to

masonry that eliminate the uses of expansion shields or drilled holes; however, for permanency of installation and for high holding power, these other devices have not always proven adequate.

Research continues to want to improve the holding power of expansion shields and develop them to a point where the possibility of failure through human elements in the case of poor installation has been reduced to an utmost minimum. It is too infrequently realized that the care in drilling a hole has the greatest bearing upon the ultimate load that can be sustained by an expansion shield or the weakness in the masonry to which the attachment is made.

Another important factor frequently overlooked is that the holding power is increased as the depth of the installation is increased (Figures 1 and 2). All too frequently the failure of an expansion shield is due to the concrete or masonry breaking away. When this happens, it breaks away in a 45-deg. angle from the base of the drilled hole. Obviously, if the hole is deeper, a greater mass of concrete or masonry must give way before the attachment will fail.

Holding power tests, as given in some cases, can be misleading and indicate freak conditions. Expansion shields as presently manufactured by the leading companies in the industry will, when properly installed, withstand a load greater than the breaking strength of the bolt as issued by the bolt industry, the published tensile strength being as follows:

¼" - 2202	½" - 8803
⅜" - 3427	⅝" - 13754
¾" - 4950	¾" - 19779

Reliable manufacturers hesitate to claim holding power of expansion shields because of the high element of the human factor involved in a poor installation. Secondly, as previously mentioned, the type of masonry is a main factor. Obviously, an expansion shield if given a deep insertion in 1-2-4 mixture of well-aged concrete is going to hold a lot more than the same installation set a surface depth in a brick wall or, as too frequently happens, in the mortar between the bricks.

Here a point should be made in identifying or pointing out the difference between a fixed type of expansion shield and one that has variable amount of expansion (Figures 2 and 3). A good example of the former is the popular lag screw expansion shield. This is basically two shells with a core having a gradually decreasing diameter toward the back end. The tapered lag screw as it is turned into the shield starts to expand it and creates the maximum expansion when the lag screw is turned all the way in.

In order to fasten work securely with this type of shield, obviously the lag screw must be turned "home." This means that the hole must be almost perfect so that the maximum amount of expansion must concide with complete insertion of the lag screw. If the hole is too large maximum expansion will not be reached; consequently, the holding power will be less.

A good example of the variable type of expansion shield is the double machine bolt shield. This has a tapered nut on the inner end and a tapered cone on the outer end. After the machine bolt is turned all the way home, it begins to pull the shield forward against the tapered cone, expanding the front end of the shield and pulling the nut in at the back, thus setting up a parallel expansion which can be increased as the bolt is tightened. Again, this type of expansion shield is going to develop a greater holding power. The holding power is the resistance against withdrawal of the sides of the shield against the sides of the hole and the greater the surface contact between the shield and the hole, the greater its resistance to withdrawing.

In addition to these types of expansion shields, there are many others for fastening to masonry, the lead type for both wood screws and machine screws. The wood screw type has a variable amount of expansion due to the inner core construction which has been patented. The machine type screw anchor is basically a lead sleeve over a tapered hard metal cone. This type of anchor is set in the wall and calked in with a tool provided for the purpose.

In the case of attachments to hollow wall, probably the most popular fastening device has been the toggle bolt, the first of this kind being known as the gravity type toggle which was a pivoted bar on the end of a bolt, riveted loosely with one arm being longer and consequently heavier. As it was inserted in a drilled hole and pushed forward enough into the hollow space in back of the wall, the heavy end toppled over and became a cross bar which was pulled tightly against the back wall and a nut threaded on the outer side for making attachments.

A later development brought out the spring type toggle wherein the two arms were pivoted and actuated by a spring, which assured positive opening on the inside of the wall.

"This has developed into the most popular method of fastening until just recently when we introduced a new one-piece fastener under the trade name of Wing-Ding," Bunker explains.

In spite of the seeming perfection of expansion shields and anchors as developed today, research continues to look for a still better way to make permanent, secure and dependable fastening to masonry.

Materials – Products – Tools

and the latest literature

MOVABLE WALLS: A movable interior wall system called Horizon offers almost unlimited design possibilities in shape, color, materials and textures while retaining the functional and economic advantages of modular construction and mass production. Any type of wall panel surface—wood, metal, plastic, vinyl fabric, glass—and any type of combination may be used. Posts may be round, oblong, fluted, oval or they may be hidden. All components are based on the 4-in. module. First installation of the system will be made this summer in the House of Seagram in New York.—E. F. Hauserman Co.

(Item No. 1)

FASTENERS: For rapid installation and high-tensile preload, the Huckbolt fastener has proved itself in the Kaiser aluminum dome where 19,000 were installed by a 38-man crew in just over 20 on-the-job working hours. They are recommended as a replacement for hot or cold driven conventional rivets, bolts, welding or other customary joining methods. No clamps or fit-up bolts are required. Consisting of a pin and a collar, the Huckbolt fastener is available with pin diameters of 3/16, 1/4, 5/16, 3/8 and 1/2 in.—Huck Manufacturing Co.

(Item No. 2)

METAL PANEL: A pattern with 4,032 reflective levels per sq. ft. that creates an ever-changing composition of lights and shadows has been developed for Rigid-tex Metal. Designed in 48-in. width, it is suitable for large surfaces

such as the exterior of curtain wall panels or for interior applications. Since repeat of the pattern is not obvious, 1-RL can be used for large surfaces without fear of monotony. Available in all metals and colors, the pattern is said to strengthen the metal both horizontally and vertically. Maximum gauge is .062 in., maximum pattern depth, .073 in.—Rigidized Metal Corp.

(Item No. 3)

LIGHTING FIXTURES: A line of stainless steel lighting fixtures are designed to harmonize with the trim metals of modern institutional and commercial buildings. The wall pocket and bracket lantern models are available in either the embossed pattern surface or in the smooth satin surface; the ceiling light and half cylinder pocket models only in the latter.—The Novelty Lighting Corp.

(Item No. 4)

STORE FRONTS: To eliminate at-the-site cutting and fitting of store fronts, Overly is offering a service that factory fabricates the sections to the architect's specifications. Sections are

locked together at the site and tilted into place. Overline Tilt-A-Front is available in bonderized steel with baked enamel color finish or stainless steel in any style. Colored glass or insulated steel panels may be substituted for the ¼-in. plate glass or thermopane.— Overly Manufacturing Co.

(Item No. 5)

ROOF DECKING: Designed for use with open beam or cathedral ceiling construction, Armstrong's Cushiontone combines in one material roof decking, acoustical efficiency, insulation, vapor barrier and interior finish. It is composed of layers of asphalt-impregnated insulation board laminated to an interior surface of insulation board which has been perforated to muffle noise and painted with a flame resistant finish. Made in 2x8-ft. planks, 2 or 3 in. thick, it is also available without a vapor barrier (2-in. thickness only) for use in sections of the country where the average January temperature is 40 deg. F. or above.—Armstrong Cork Co.

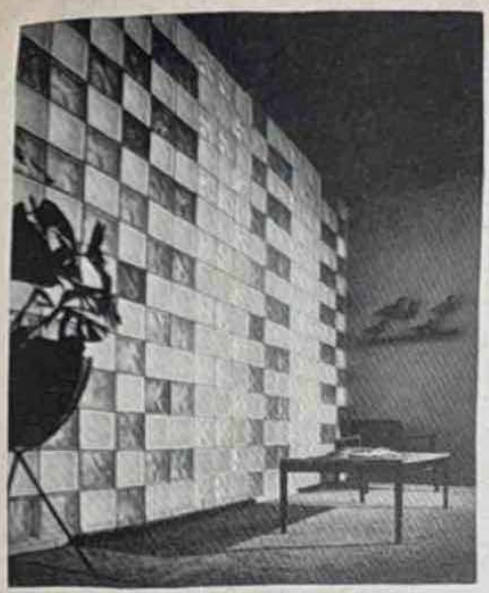
(Item No. 6)

WALL HEATER: Designed for motel and apartment installations, the Safti-Vent gas wall heater is one answer to the problem of adding some heating to single family dwellings. The 16,000-Btu. model fits under standard modular windows and its combustion chamber is completely sealed from room air. The heater fits in a 7¼-in. hole through the wall and operates on natural, mixed, manufactured or propane gas.—H. C. Little Burner Co., Inc.

(Item No. 7)

HIP-ROOF VENTILATOR: Designed for maximum ease of installation, the Series 50 low-silhouette, hip-roof ventilator incorporates a baffle under the rear of the hood and a weather flange around the top of the stack to keep out the rain and snow. The wide 4-in. flange makes for a quick, weather-tight installation and the 8-in. diameter stack readily accomodates round duct for kitchen fan applications. Available in .025-in. aluminum or 26-gauge galvanized steel, the vent provides 41 sq. in. of free area.—Leslie Welding Co., Inc.

(Item No. 8)



ELECTRIFIED FLOORS: Reinforced concrete floors that provide complete electrification for modern office buildings are now possible with a system which features Type E-R (electrically ready) Cofar cells. These units are wide troughs capped to form raceways through which wiring for office equipment and telephones may be pulled to any desk or office machine no matter where it is located. The cells are used between conventional Cofar units, deep corrugated, high-strength steel sheets 2½ ft. wide and up to 14 ft. long with traverse wires welded across the corrugations. The steel serves as a tight form for wet concrete and becomes the main positive reinforcement when the concrete sets.—Granco Steel Products Co.

(Item No. 9)

WOOD-STEEL FENCE: California redwood is combined with steel chain link to produce a sturdy fence with the attractive features of the redwood and the ventilating qualities of the chain link. The rustic redwood pickets are woven in the steel links with both sides presenting an equally trim appearance. Rustakes fence is available in heights up to 6 ft.—Cyclone Fence Department, United States Steel Corp.

(Item No. 10)

COLOR GLASS BLOCKS: All sorts of intriguing design possibilities are opened up with the introduction of color glass blocks by Pittsburgh Corning. To start with, the company is offering blue, green, yellow and coral with a median light transmission range of about 25%. Blocks have a fired-on translucent ceramic finish which tests have shown to be non-

fading and unaffected by acids, alkalis and sulfides. The company expects the color blocks to give new impetus to use of glass blocks in curtain wall construction since they offer the advantage of installation by one trade, little maintenance, a finished wall both inside and out and now color. Limited production is underway on the 8-in. square size.—Pittsburgh Corning Corp.

(Item No. 11)

Latest Handbooks, Manuals and Literature

Yours for the Asking

STAINLESS STEEL: The winning entries in Allmetal's first annual awards program—three magazine articles of most value and interest to those who specify or buy stainless steel parts or components—have been assembled in a 16-page brochure. The titles: "Design of Stainless Steel Curtain Walls"; Selection and Application of Stainless Steel in the Chemical Process Industry"; "How to Form Stainless Steel."—Allmetal Screw Products Co., Inc.

(Item No. 12)

WATER HEATERS: Data File 16 contains all you need to specify and select P-K copper-lined hot water storage heaters for any industrial or commercial installation. Found within the file cover are 1) diagram of construction details and recommended minimum specifications; 2) eight-page tabular section of dimensions, heating capacities and engineering data; 3) installation suggestions and piping arrangements; and 4) advertised case histories of typical installations.—The Patterson-Kelley Co., Inc.

(Item No. 13)

ROLLING GYMSTANDS: Wayne's 16-page catalog does more than just show installations of its four basic types: standard, recessed, movable and balcony. It lists complete architectural specifications and planning aids, including typical floor plans; provides dimension tables giving floor space requirements, open and closed, and seating capacity for each gymstand model; and has a sight-line study indicating correct rise per row for good visability. A section on accessories illustrates special equipment for customizing these units to particular applications—Wayne Iron Works.

(Item No. 14)

SCHOOL TABLE SEATING: How to solve shortages that exist in many school buildings are treated in two booklets issued by Sico. Illustrated with installation photographs, the 24-page piece shows how the company's tables can convert gymnasiums, hallways and other multipurpose rooms into eating areas. The experiences of four school administrators are outlined in the 12-page booklet.—Sico Manufacturing Co., Inc.

(Item No. 15)

WATERPROOFING: An eight-page brochure on Glasfab tells the purpose of a reinforcing membrane in below-grade waterproofing work and also gives job history reports of field applications. It also contains specifications on both hot and cold process methods of application.—Twinsburg-miller Corp.

(Item No. 16)

AIR DIFFUSERS: An 80-page manual has diagrams, tables and photographs to aid in the selection of Anemostat diffusers and accessories for all-air high velocity as well as conventional air conditioning systems and units in hotels, hospitals, schools, stores, theaters, churches, restaurants and commercial office buildings. All types of round, square and straight line diffusers are illustrated by more than 90 photographs. Other features: air distribution definitions, sound level characteristics, static pressure factors and typical installations.—Anemostat Corporation of America.

(Item No. 17)

WOOD PRESERVATIVE: "Now Wood Gets a 'Vaccine' Too" is the provocative title of a four-page brochure which shows how wood, impregnated with preservative by what is known as the Dri-Vac method, is protected against moisture absorption, swelling, shrinking, grain raising, checking, decay and termite and fungi attack. Virtually any type of wood up to 16 ft. long, including flooring, framing, dimension, decking, siding, doors and trim, can be subjected to the controlled vacuum according to predetermined specifications and come out fully treated.—Robbins Flooring Co.

(Item No. 18)

FIR PLYWOOD IN SCHOOLS: Illustrations and text in an eight-page brochure delineate advantages of using fir plywood in school construction. Discussed are applications as roof decking, subflooring, etc., for concrete forms, for exterior siding and interior paneling and for built-ins. Specialty products also are described.—Douglas Fir Plywood Association.

(Item No. 19)

INSULATION: The results of a study on mineral wool insulation at the NAHB experimental project in Austin, Texas, have been published in a booklet that includes detailed cost information on each house. According to the data, actual construction costs were reduced by application of thick mineral wool insulation rather than the minimum amount required by FHA because smaller air conditioning units were needed. Operating costs for heating and cooling also were considerably lowered. Author of the booklet is John R. Watt, associate professor of mechanical engineering at the University of Texas and formerly chief analyst for NAHB at the experimental village built in 1954.—National Mineral Wool Association.

NEW PARTNERS: Richard Doudna and A. Robert Williams have formed a partnership for the practice of architecture in Yakima, Wash. Doudna received his degree from the University of Michigan in 1952, Williams from the University of Washington in the same year. Both formerly were employed by the firm of Maloney & Whitney and later by its successor, Cowan & Paddock.

In Los Angeles Robert Kliegman, AIA, has formed an association with M. Tony Sherman, AIA, of Miami, for the design of buildings on the West Coast. The two architects collaborated on projects 10 years ago when they practiced in New York City.

REORGANIZED FIRMS: Charles O. Matcham, FAIA, of Los Angeles has reorganized his firm, to be known as Charles O. Matcham, Stewart S. Granger & Associates. Granger, who has been with the office for the past year, has become a partner, while Matcham continues as senior member of the firm. Both are active in the Southern California Chapter, AIA.

Associates in the firm are Ira Tron, AIA, and Edla Muir, AIA. Tron practiced in New York City before coming to California in 1946 and Miss Muir had her own office in Los Angeles and in Ellensburg, Wash., before becoming associated with Matcham this year.

Two Seattle architectural and engineering offices have joined forces under the name of Nickum, Lamont & Fey, at 71 Columbia St. Principals are George C. Nickum, managing partner of W. C. Nickum & Sons who will carry on marine design work under their present name; Daniel Lamont, AIA; and Lester Fey, AIA.

ON THE MOVE: The Missoula, Mont., architectural firm of Fox-Ballas-Barrow has moved to 614 Savings Center Building, 110 E. Broadway.

NEW ASSOCIATES: The architectural firm of Wurster, Bernardi & Emmons of San Francisco has announced three new associates: George R. Kennaday, Geoffrey W. Fairfax and Don E. Stover, AIA.

NEW OFFICE: Frank Kendall has opened an architectural office in the Washington National Building, 1132 S.W. 13th Ave., Portland. Kendall had been with Freeman, Hayslip, Tuft & Hewlett, architects, for 11 years, and was their chief draftsman the past eight years.

ON BOARD: Walter Gordon, AIA, of Portland has been appointed to succeed Walter E. Church, AIA, of Portland on the Oregon State Board of Architect Examiners.

Ralph E. Panhorst, AIA, has been appointed to the new Portland housing code board of appeal. Among alternate members are two other architects: Paul H. Wallwork and Robert J. Koch, AIA.

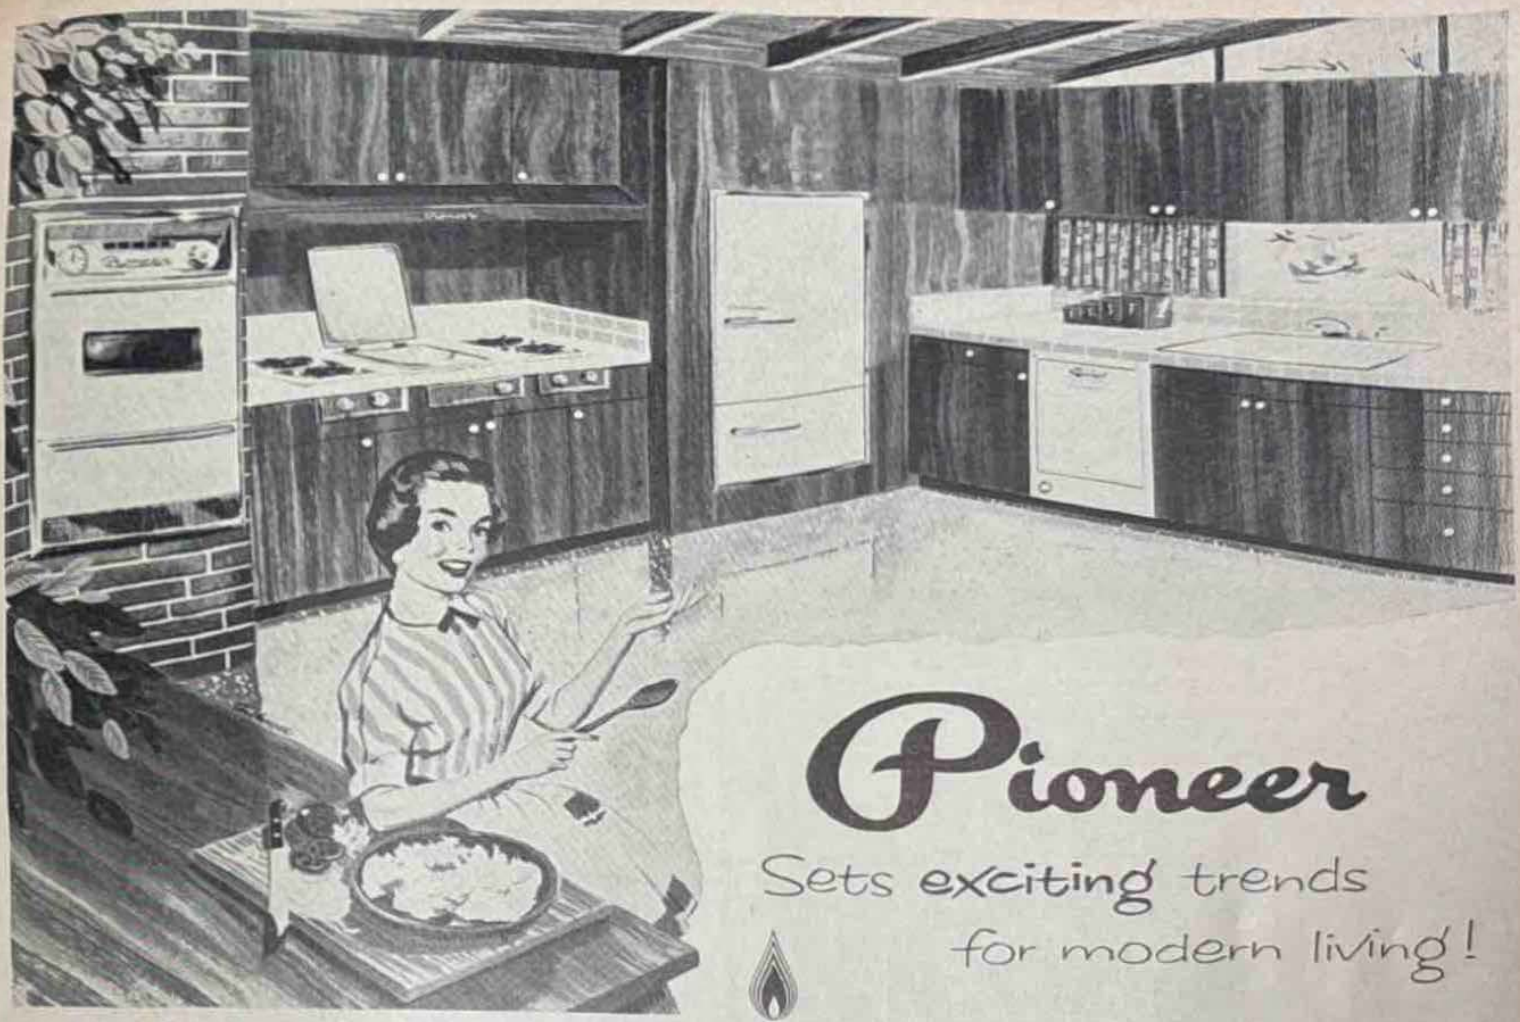
ON TOUR: San Francisco architect John S. Bolles is in the Far East as the city's official representative on a Chamber of Commerce business tour of Japan, Hong Kong and the Philippines.

APPOINTED: James D. Mount, AIA, has been named head of the design and production departments in the office of Kegley, Westphall & Arbogast, Los Angeles architects. He was graduated from the University of Southern California in 1950.

New director of research and planning for L. W. Davidson & Associates, Los Angeles architects-industrial engineers, is George T. Hayman.

"Built-in telephone outlets are a definite selling point"

...says John MacLeod, President of Macco Corporation, Paramount, California developers. "Built-in telephone outlets and underground wiring throughout our latest Newport Beach development have enhanced the value of these homes."



Ask any leading architect or builder—he'll rate Telephone Planning among the basic features of the well-built home. "It's a definite selling point," says Mr. MacLeod, "one that buyers look for." And he's right. Concealed wiring and built-in outlets are features buyers recognize as marks of quality homes. That's why Telephone Planning pays off in increased value, a better-built home and a satisfied buyer.

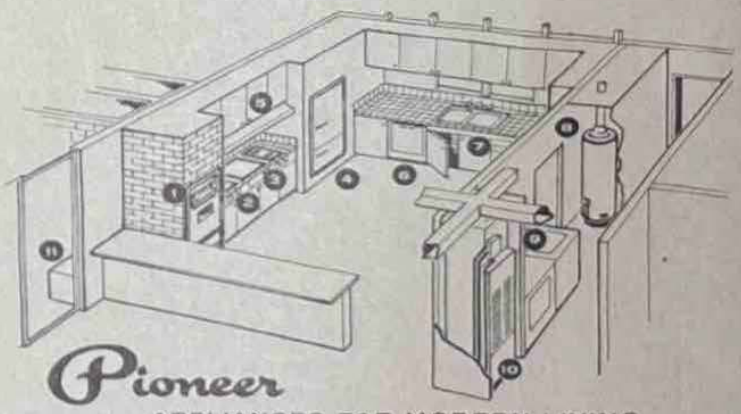
Pacific Telephone

We'll be glad to help you plan built-in telephone facilities. Just call our business office and ask for our free Architects and Builders Service.

It pays to include Telephone Planning in every home you build!

Pioneer

Sets exciting trends for modern living!



with the first complete line of home appliances

The most exciting feature of today's new home is the built-in kitchen . . . and the most exciting kitchens are equipped with advance styled Pioneer appliances!

Pioneer is specified for water heating, home heating and air conditioning, too, because Pioneer appliances are more economical, more convenient and always dependable.

The trend is to Pioneer, because Pioneer is first in the west with a complete line of appliances—1 dependable source of supply, 1 reliable guarantee, 1 factory service plan.

• **American Seating Co.** has appointed George M. Stanfield as western division manager with offices at 1010 S.W. 14th St., Portland. He will coordinate distributor activities in all states west of the Rockies, except California, where the company maintains two branch offices.

• **Weberwall Division** sales manager, A. Edsel Curry, is the new president of the Los Angeles Junior Chamber of Commerce.

• **Westinghouse Electric Corp.** has named John R. Ford as Seattle branch manager of its elevator division, replacing Russell J. Hurt who has been appointed assistant to the general service manager at the division's headquarters in Jersey City, N.J.

• **Monolith Portland Cement Co.** of Los Angeles has appointed Ben E. Teschner, with the firm for 29 years, as sales and service manager, succeeding the late R. B. MacNee.

• **Washington Plywood Co., Inc.**, of Everett, Wash., formerly known as Walton Plywood, has named A. H. (Dewey) Lung as manager. He most recently was in charge of Linn Plywood Co. of Albany, Ore.

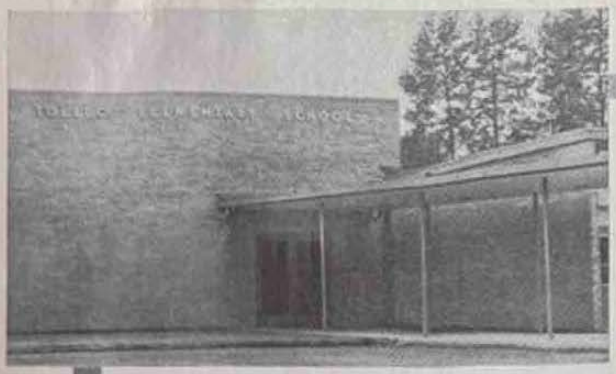
• **Graystone, Inc.**, has elected a new chairman, John Hauberg Jr. of Seattle, president of Potlatch Yards, Inc., which recently purchased controlling stock in Graystone.

• **Great Lakes Carbon Corp.**, in a move involving its Palos Verdes stone department which quarries decorative building stone in southern and central California, has consolidated its dicalite and perlite divisions into a newly organized mining and mineral products division, headed by D. Loring Marlett.

• **Golco, Inc.**, has opened two warehouses in the Bay area, bringing its tile outlets in California to five. New locations are at 1559 Howard St., San Francisco, and 4022 Transport St., Palo Alto.

• **Cold Storage Door and Supplies, Inc.**, is a new company formed by Gene Hunter, with offices in the Produce Building, Los Angeles. Earlier Hunter was associated with Jamison Cold Storage Door Co. and Thermal Products Co., both of Los Angeles.

• **American Gilsonite Co.** of Salt Lake City has begun publication of a quarterly magazine for engineers, contractors and architects called "Pipe Insulation News."



• **General Electric Appliances Co.** has opened its 130,000-sq. ft. combination regional warehouse, sales and service facility at 1649 Adrian Road, Burlingame, Calif.

• **Gunite Contractors Association** of Los Angeles has elected Don W. Shupp of Macco Corp. to head its slate of officers for 1957. James Enbody is vice president; J. A. Moore, secretary; J. A. Fredericks, treasurer; Stanley G. Zynda, recording secretary and manager.

• **General Electric Co.** apparatus sales division has a new manager of user industries sales for the Pacific Northwest, Howard H. Bullock of Los Angeles.

• **Westinghouse Electric Corp.** has opened a southern California headquarters office at 600 St. Paul Ave., Los Angeles, for its newly formed air conditioning wholesaling department, with William L. Constance as manager.

• **Lord Electric Co., Inc.**, has elected William R. McCabe, in charge of its Portland office, to the office of vice president.

Chehalis Buff Roman Brick

. . . adds warmth, color, durability to the clean, functional design of this new Elementary School at Toledo, Washington.

More and more architects are specifying the Northwest's most distinctive brick—Chehalis Brick—for school construction. Chehalis Brick combines the appealing colors and textures that are typical of the area with all the natural advantages of brick: attractive design, permanence, and fire-safety—plus long-range economy and lower maintenance costs.

Buildings which shape our lives (Cont'd from p. 13)

of Commonwealth Avenue and that was audacious. And in the Boston City Hall and in the old Post Office, which was removed under Cal Coolidge, Boston showed how truly dreadful public buildings could be.

In the best and the worst, the characteristic which was carried over so conspicuously from the 1850s was the element of spaciousness. This element was just as decisive in the reading habits of the time as it was in the architecture. The educated, conscientious American of that time regarded reading not only as a necessity but as a privilege and a delight. He had a room just for reading—my Grandfather had one, and as I describe it, please check off the items in the libraries you remember as a child. My grandfather, Charles Crook Suydam, was lieutenant colonel of the Second New Jersey Cavalry in the Civil War, and he stood 6 ft. 2. His bookshelves lined the room to the height of his chin and on top of them were displayed his spurs, his saber, horse pistols and faded Brady photographs of bearded officers seated before Meade's and Burnside's tents.

Grandfather's favorite chair — and you were never fool enough to sit in it—was to the left of the library table. On the table was a Confederate shell, a dud which had narrowly missed him; pens and ink; a spread of gray blotting paper; and at his shoulder a brass, gooseneck kerosene lamp with a green shade. By that soft mellow light, Granfather Suydam could read aloud without needing a drink for 50 minutes at a sitting. There isn't a man in this room who could do that today. We're too restless. But I sometimes think that I inherited more than my long nose from Grandfather Suydam; I wonder if my love of books, my zest for the printed word, did not begin with the voice, the lamplight, the feeling of repose in that room.

You realize that the editors of my grandfather's generation had no doubt that their readers would spend leisurely evenings by the library lamp. That is why they never hesitated to publish long articles. The stories and essays in the early issues of the Atlantic are twice or three times what my readers will tolerate today. Books then had few competitors and people weren't so eager to get out of the house.

Reading habits are a nice index of American taste. People today read with a nervous expectancy and they almost never read aloud. They have no patience for those endless passages of description in which Sir Walter Scott excelled; on the other hand, they have much more tolerance than their grandparents in matters of sex and violence. In this they have been conditioned by the two world wars. They have been trained to expect dialogue which will be rapid-fire and characterization which will be revealed without moralizing. They are interested in the intricacies of the subconscious mind and bored to death by "purple passages." They read their books in snatches at intervals of seldom more than an hour or two, and they read their magazines on planes, or while commuting, or waiting for the barber. "Nervous expectancy" has taken the place of leisure and spaciousness. This change may hint something to you about the homes of tomorrow.

I visit a number of college campuses each year in my quest for young writers. Last week I was at the University of Richmond and while there I had a talk with Charles Van Doren who had just flown back from his honeymoon. This tall young man who thinks aloud more attractively than

and this is just part of the story!

Rilco laminated-wood beams not only helped keep construction costs low for this school, but speeded building time — "beams were raised and bolted in place in one day," reports the architect. And Rilco members "give such a warm and cheerful feeling" inside the finished school.

Because Rilco laminated arches, beams and trusses allow virtually unlimited freedom, you can design better, yet hold costs down — for every Rilco member is engineered to your specification, then carefully factory fabricated — ready for fast erection at the jobsite.

For complete information and specification data, just write

Saint Joseph School, McPherson, Kansas; Architect: Robert Marr, McPherson, Kansas; Contractor: Frank Jackson, McPherson, Kansas. Rilco Wood Roof Deck of Western Red Cedar spans the 5¼" x 17⅞" x 40' laminated beams spaced 14' o.c.

anyone else in television was talking about his reading. Se says he reads incessantly and whenever possible to the accompaniment of music: "When you read poetry," he told me, "against the background of the Ninth, it all means so much more to you." Charles speaks for the best educated generation of music lovers this country has produced. The present undergraduates are spending as much for their library of records as they do for their library of books. Music they must have—and this is something more permanent than a fad.

The girls must have not only music but music and the ballet. They have rhythm in their blood, much more of it than our generation, or their grandmothers. More than three million of them are presently studying ballet and those who are not built for it dream of having daughters who will be. They express their aspiration by dressing like ballerinas off stage.
