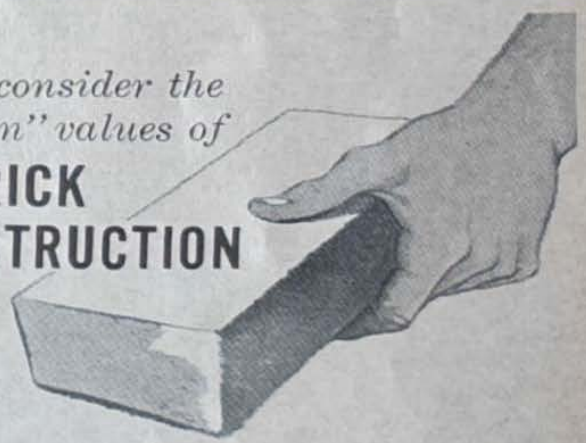
consider the "hidden" values of

BRICK CONSTRUCTION



There are so many sound reasons why brick construction is popular these days . . . but how about the "unseen" values? Brick creates a feeling of pride and security . . . a safe, secure feeling . . . a pride in "belonging" to a brick building . . . a brick school or church or office building.

And brick goes so well with other materials . . . it is flexible, easy for designers to work with. Next time you're designing a building . . . consider the "hidden" values of Columbia Brick.

★CONCRETE BRIDGE—
King County, Wash.

Award to Lee T. Dulin, Box 35-A, Lakebay, $57,431, by Bureau of Public Roads, 760 Morgan Bldg., Portland, Ore., for constructing 220' reinforced concrete bridge, Washington Forest Development Road Project Snoqualmie 2601-A, Money Creek Road, Money Creek Bridge, Snoqualmie National Forest, King County, Wash. Six bids received June 11. 2ND LOW: Dale M. Madden, 3010 E. 163rd St., Seattle, $59,352. HI BID: Wayne Construction Co., 3810 Stoneway, Seattle, $69,614. Government estimate, $61,685. WB 6-13. Previous report 6-6

▲TIMBER, CONCRETE BRIDGE—
Lewis County, Wash.

Seven bids received by U. S. Forest Service, regional supply office, 729 N.E. Oregon St., Portland, for constructing treated timber (with concrete substructure) Big Creek Bridge on Snoqualmie National Forest, Lewis County, Wash. Bids opened June 12. TWO LOW: Balkwell & Furber, 1217 S.W. 10th Ave., Portland, $8,183; MacKenzie & Smith, 618 13th W., Seattle, $8,472. HI BID: H. & W. Construction Co., Randle, $12,471. WB 6-14. Previous report 6-11

★GRADING, SURFACING—
Mt. Rainier National Park, Wash.

Award has been recommended to Hamer Corp., Box 428, Roseburg, $488,544, by Bureau of Public Roads, 760 Morgan Bldg., Portland, for grading and surfacing 2.385 mi. Nisqually entrance road, Mt. Rainier National Park Proj. 1-B10, Lewis and Pierce counties, Wash. Six bids received for June 13 opening. 2ND LOW: Alfred DeCoria, Box 241, Auburn, $539,945. HI: Babler Bros., 4617 S.E. Milwaukie, Portland, $815,029. BPR estimate, $532,338. WB 6-14. Previous report 6-7

▲WATER TREATMENT FACILITIES
Oak Harbor, Wash.

Bids received by 13th Naval District, room 107B, Bldg. 250, U.S. Naval Station, Seattle, for constructing additions to water treatment facilities, U.S. Naval Air Station (Ault Field), Whidbey Island, Oak Harbor; Spec. No. 12362/58.

Nine bids received at June 17 bid opening. LOW BIDS: Newland Construction Co., Box 230, Everett, $107,949; G. W. Barr, 8824 John Dower Road S.W., Tacoma, $108,377. HI: Pacific Mechanical Constructors, Inc., Lloyd Bldg., Seattle, $138,000. PD 6-18. Previous report 5-31

●WATER MAIN— Olympia, Wash.

Bids will be received until 8 a.m., July 9, by Public Utility District No. 1, 208 First National Bank Bldg., Olympia, for furnishing and installing 6,950' of 4" to 8", Class 150, asbestos cement pipe, valves hydrants and necessary appurtenances; and 90 of ⅝"x¾" water meter services with necessary appurtenances. Plans and specifications with Howard Harstad & Associates, consulting engineers, 1000 Lenora St., Seattle. [illegible] deposit. Certified check, cashier's check or bid bond, 5%. PD 6-[illegible]

●STATE HIGHWAY PROJECTS—
Olympia, Wash.

Bids to be opened 10 a.m., July [illegible] Washington State Highway Commission, Transportation Bldg., Olympia on ten highway construction projects.

PAVING, Steptoe to Cashup—Draining, grading, bituminous surfacing, cement concrete and asphaltic concrete paving [illegible] mi. PSH 3 and 18, Whitman County; [illegible] DF-037-2(6) and DS-0289(5).

Quantities: 642,780 c.y. com. excavation; 111,125 ton crushed stone filler, surface and cover stone; 80 c.y. prime coat aggregate; 331 c.y. riprap; 193 ton asphalt cement; 1,670 ton asphaltic concrete; 48,023 sq. yd. cement concrete pavement; 215' cement concrete curb; 255 c.y. concrete; [illegible] steel reinforcing bars; 2,336' concrete pipe; 182' metal pipe; 268' metal pipe arch; [illegible] beam guard rail.

PAVING, Johnsons Landing North—Clearing, draining, grading, bituminous surfacing, asphaltic concrete paving, [illegible] illumination 2.179 mi. PSH 12, Pacific County; FAP DF-004-1(6), DF-003-1(8).

Quantities: 27 acre clearing; 230,000 c.y. com. excavation; 86,180 ton crushed surfacing, ballast; 100 c.y. riprap; 875 c.y. crushed cover stone, aggregate; 102 ton asphalt cement; 5,910 ton asphaltic concrete; [illegible] precast traffic curb; 79 c.y. concrete; [illegible] 925 lb. steel reinforcing bars; 2,775' concrete pipe; 448' metal pipe; 3,925' beam guard rail.

PAVING, Hedrick-Coleman Road to Kelton Coulee—Draining, grading, cement treated base, bituminous surfacing, asphaltic concrete paving 5.347 mi. PSH 11 Adams County; FAP DF-033-2(7).

Quantities: 235,970 c.y. com. excavation; 10,830 c.y. solid rock excavation; 63,500 ton crushed surfacing, stone, screenings; [illegible] c.y. prime coat aggregate; 1,400 c.y. riprap; 314 ton asphalt cement; 13,415 ton asphaltic concrete; 5,840 bbl. portland cement; [illegible] ton cement treated base; 540' concrete pipe; 3,112' metal pipe; 100' structural plate pipe arch.

PAVING, BRIDGE, Parker to Wapato—Draining, grading, bituminous surfacing, asphaltic concrete paving; reinforced concrete slab bridge; 5.870 mi. SSH 3-A, Yakima County; FAP DF-048-1(3).

Quantities: 16,305 c.y. com. excavation; borrow; 46,740 ton crushed surfacing, ballast, cover stone, screenings; 450 c.y. prime coat aggregate; 285 ton asphalt cement; [illegible] 410 ton asphaltic concrete; 273' concrete pipe; 74' beam guard rail.

PAVING, BRIDGE, Thomle Bridge and Approaches—Draining, grading, asphaltic concrete paving, reinforced concrete slab bridge 0.681 mi. Snohomish County road; FAS S-0329(3).

Quantities: 21,751 c.y. com. excavation; borrow; 4,700 c.y. select road borrow; [illegible] c.y. crushed surfacing; 200 ton riprap; 1,430 ton asphaltic concrete; 45' concrete pipe; 630 c.y. concrete; 177,000 lb. steel reinforcing bars, 490' aluminum bridge rail; 1,100' treated timber piling; 2,640' concrete piling.

PAVING, Quilcene-Center Road Et Al—Bituminous plantmix paving 7.230 mi. Jefferson County roads; FAS DS-0497(6), S-0215(1), S-0496(2).

Quantities: 13,935 ton bituminous plantmix; 4,950' asphaltic concrete curb.

SURFACING, Pullman-Busby Road—Bituminous surfacing 17.240 mi. Whitman County roads; FAS DS-0669(2), DS-0667[illegible] DS-0658(2), S-1154(2).

Quantities: 16,065 c.y. crushed surfacing stone; 468 ton asphalt cement.

PAVING, Bucklin Hill Road to PSH 5—Bituminous plantmix paving 4.070 mi. Kitsap County road; FAS DS-1268(1).

Quantities: 1,060 c.y. crushed surfacing; 12 ton asphalt cement; 5,460 ton bituminous plantmix.

SURFACING, Blockhouse-Canyon Creek—Bituminous surfacing 6 mi. Klickitat County road; FAS S-0398(3).

Quantities: 6,000 c.y. crushed surfacing cover stone; 220 ton asphalt cement.

SURFACING, North Touchet-Fourth St. —Bituminous roadmix surfacing 1.449 mi. Columbia County road; FAS DS-0457(1). Quantities: 2,420 c.y. crushed surfacing, aggregate; 100 ton asphalt cement. DM 6-14

●STATE HIGHWAY PROJECTS— Olympia, Wash.

Planholders announced on 19 highway construction projects on which bids will be opened 10 a.m., June 24, by Washington State Highway Commission, Transportation Bldg., Olympia.

SURFACING, PSH 5 and SSH 1-P Interchanges—Clearing, draining, grading, bituminous surfacing, installing signs on PSH 1, Lewis County; FAP I-5-2(36)59 Unit 1.

STATE HIGHWAY PROJECTS
BIDS CLOSE 9 A.M., JUNE 25
Helena, Montana
NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the offices of said Commission in the City of Helena until 9:00 A.M. on June 25, 1958. The proposals will be publicly opened and read immediately thereafter. YOUR ATTENTION IS DIRECTED TO THE 9:00 A.M. HOUR SET FOR THE OPENING OF BIDS IN ROOM 151 OF THE STATE HIGHWAY DEPARTMENT BUILDING.

1. **IN 90-9(5)498U1 & IN 90-9(7)508U1**—Grade, aggregate surfacing, plant-mix surfacing, seal coating, and drain 11.594 miles on the Crow Agency-Hardin Road in Big Horn County, involving about 1,156,486 cu. yds. excavation; 40 cu. yds. riprap; 716 cu. yds. gravel backfill; 993,519 mi. yds. overhaul; 336,381 tons crushed aggregate; 307,700 tons uncrushed aggregate; 30,010 M gals. watering; 5,203 units rolling; 1,185 tons cutback asphalt; 1,134 lin. ft. corrugated metal pipe; 764 lin. ft. structural plate pipe; 3,874 lin. ft. reinforced concrete pipe; 512 lin. ft. relay pipe culverts; 177 each metal fence panels; 160 hours watering; 22 each stockguard; 8,111 rods wire fence; all lump sum weigh station; 742 lin. ft. jiggle bars; 13.5 stations obliteration of old roadway; 4,540 tons asphalt cement; 82,449 tons plant mix; 293.4 sq. yds. reinforced concrete pavement; 1,814 sq. ft. galvanized metal-bin-type retaining wall; 9,370.5 lin. ft. steel beam guard rail; 32 lin. ft. steel beam bridge rail; 24,527 lbs. reinforcing steel; 286.8 cu. yds. concrete; 170 cu. yds. structure excavation; 1,058 lin. ft. driving treated timber piles; 1,150 lin. ft. furnishing treated timber piles; all lump sum treated timber test piles; 390 lin. ft. integral concrete curb & gutter; 10,293 lin. ft. median concrete curb; 200 sq. yds. concrete sidewalk, 2 each median inlet cover; and other items. Project to be completed in 400 calender days.

2. **DF 98(9)**—Aggregate surfacing, plant-mix surfacing, and seal coating 10.962 miles on the Whitefish-Stryker Road in Flathead County, involving about 8,560 cu. yds. excavation; 195,762 tons crushed aggregate; 3,873 M gals. watering; 960 units rolling; 241.20 tons cutback asphalt; 201.03 tons emulsified asphalt; 1,515.04 tons asphalt cement; 27,534 tons plant mix; and 63 hours watering. Project to be completed in 70 calendar days.

3. **DF 164(11)**—Plant-mix surfacing and seal coating 11.995 miles on the Philipsburg-Anaconda Road in Deer Lodge County, involving about all lump sum furnish and maintain water plant; 2,629 tons crushed aggregate; 88 units rolling; 95.92 tons cutback asphalt; 250.25 tons emulsified asphalt; 1,875.75 tons asphalt cement; 34,150 tons plant mix; 79 hours watering; and 8,609.5 lin. ft. steel beam guard rail. Project to be completed in 130 calendar days.

4. **F 193(9) & F 273(10)**—Grade, aggregate surfacing, plant-mix surfacing, seal coating, and drain 7.842 miles on the Culbertson-Plentywood and the Sidney-Culbertson Roads in Roosevelt County, involving about 531,963 cu. yds. excavation; 445 cu. yds. gravel backfill; 115,541 mi. yds. overhaul; 18,100 tons crushed aggregate; 102,157 cu. yds. crushed aggregate; 10,162 M gals. watering; 1,604 units rolling; 206.46 tons cutback asphalt; 171.94 tons emulsified asphalt; 1,234.11 tons asphalt cement; 3,469 lin. ft. corrugated metal pipe; 214 lin. ft. struct. plate pipe culverts; 54 hours watering; 22,457 tons plant mix; 1,637.6 lin. ft. remove concrete curb; 64 sq. yds. remove concrete sidewalk; 6,112.5 lin. ft. integral concrete curb & gutter; 4 each standard drop inlets; all lump sum remove existing structures; and other items. Project to be completed in 250 calendar days.

5. **DF 284(9)**—The construction of one 143.0′ concrete bridge and one 101.5′ concrete bridge and aggregate surfacing, and the bituminous surface treatment of 0.657 miles on the Broadview-Lavina Road in Golden Valley County, involving about 3,252 cu. yds. excavation; 277 cu. yds. riprap; 301 mi. yds. overhaul; 7,463 tons crushed aggregate; 143 M gals. watering; 41 units rolling; 32.47 tons cutback asphalt; 8 hours watering; all lump sum remove existing structures and maintain traffic; 487 lin. ft. steel bridge rail; 50,624 lbs. reinforcing steel; 422.8 cu. yds. concrete; 555 cu. yds. structure excavation; 1,015 lin. ft. driving treated timber piles; 1,060 lin. ft. furnishing treated timber piles; all lump sum treated timber test piles; and 1,320 lin. ft. precast prestressed con-

crete beam. Project to be completed by September 15, 1959.

6. DF 333(19)—Aggregate surfacing, plant-mix surfacing, and seal coating 14.943 miles on the Grass Range-Malta Road in Phillips County, involving about 2,059.90 tons asphalt cement; 221,901 tons crushed aggregate; 4,381 M gals. watering; 1,022 units rolling; 331.21 tons cutback asphalt; 276.22 tons emulsified asphalt; 37,448 tons plant mix; and 86 hours watering. Project to be completed in 150 calendar days.

7. DF 333(20)—Grade and drain 12.936 miles on the Grass Range-Malta Road in Fergus County, involving about 1,199,229 cu. yds. excavation; 584 cu. yds. gravel backfill; 94,678 mi. yds. overhaul; 17,949 M gals. watering; 2,393 units rolling; 5,054 lin. ft. corrugated metal pipe; 480 lin. ft. structural plate pipe; 100 lin. ft. relay pipe culverts; and other items. Project to be completed in 300 calendar days.

8. DS 115(4)—Aggregate surfacing, plant-mix surfacing, and seal coating 9.190 miles on the Hilger-Winifred-Big Sandy Road in Chouteau County, involving about 17,111 tons plant mix; 940.98 tons asphalt cement; 56,955 tons crushed aggregate; 1,438 M gals. watering; 373 units rolling; 178.17 tons cutback asphalt; 148.23 tons emulsified asphalt; 46 hours watering; and 60 hours use of Motor grader. Project to be completed in 150 calendar days.

9. DS 176(4)—Plant-mix surfacing and seal coating 7.429 miles in the Molt-Billings Road in Stillwater and Yellowstone counties, involving about all lump sum furnish and maintain water plant; 2,422 tons crushed aggregate; 20 M gals. watering; 60 units rolling; 193.43 tons cutback asphalt; 801.57 tons asphalt cement; 41 hours watering; 74 hours use of Motor grader; and 14,571 tons plant mix. Project to be completed in 70 calendar days.

10. DS 204(2)—Plant-mix surfacing and seal coating 8.465 miles on the Echo Lake-East and West Road in Flathead County, involving about all lump sum furnishing and maintaining water plant; 1,553 tons crushed aggregate; 44 units rolling; 55.51 tons cutback asphalt; 141.35 tons emulsified asphalt; 932.34 tons asphalt cement; 16,955 tons plant mix; and 44 hours watering. Project to be completed in 100 calendar days.

11. S-SG 272(1)—Grade, aggregate surfacing, bituminous surface treatment, drain, and construction of 180.0' steel and concrete overpass on 1.730 miles on the northwest of Frenchtown Wye-Westerly road in Missoula County, involving about 187,686 cu. yds. excavation; 40 cu. yds. riprap; 221 cu. yds. gravel backfill; 25,372 mi. yds. overhaul; 21,986 tons crushed aggregate; 26,283 tons uncrushed aggregate; 3,753 M gals. watering; 594 units rolling; 44.26 tons cutback asphalt; 44.67 tons emulsified asphalt; 120 lin. ft. corrugated metal pipe; 214 lin. ft. structural plate pipe; 998 lin. ft. reinforced concrete pipe; 100 lin. ft. relay pipe culverts; 23 hours watering; 3,841 lin. ft. steel beam guard rail; 155 cu. yds. structural excavation; 367.92 lin. ft. steel beam bridge rail; 35,796 lbs. reinforcing steel; 293.2 cu. yds. concrete; all lump sum structural steel; 1,146 lin. ft. driving treated timber piles; 1,210 lin. ft. furnishing treated timber piles; all lump sum treated timber test piles; 210 lin. ft. prebored holes for piles; other items. Project to be completed in 230 calendar days.

12. S 289(6) & S 346(3)—The construction of one 110.0' steel and concrete bridge and one 153.0' steel and concrete bridge on the Red Lodge-Columbus Road in Carbon County and Stillwater County, involving about 430 cu. yds. excavation; 81,433 lbs. reinforcing steel; 470 cu. yds. structural excavation; 525.04 lin. ft. steel bridge rail; 497.9 cu. yds. concrete; and 600 lin. ft. precast prestressed concrete beam. Project to be completed by July 31, 1959.

The above listed quantities are approximate only.

All bid proposals shall be accompanied by a certified or cashier's check, cash, postal money order, bank money order, or bid bond in the amount of at least 5% of the bid. Should the successful bidder fail to enter into his contract and furnish a satisfactory performance bond within the time stated in this proposal, the bid deposit shall be forfeited to the State Highway Commission of Montana.

Prequalification of bidders at least 72 hours prior to the opening of bids is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission, Helena, Montana. Plans and specifications for all Federal-aid projects are also on file and may be examined in the offices of the Bureau of Public Roads, Missoula.

PAVING

BIDS CLOSE 11 A.M., P.S.T., JULY 1

Juneau, Alaska

NOTICE TO CONTRACTORS

Department of Commerce, Bureau of Public Roads, Region 10. June 6, 1958, Juneau, Alaska. Sealed bids in single copy, for furnishing all labor, equipment and materials and performing all work for Project F-035-1(1), Palmer-Wasilla Highway, Third Judicial Division, Territory of Alaska, described herein will be received until 11:00 a.m., PST, July 1, 1958, in Room 319, Federal Building, Juneau, Alaska. The project consists of 4000 feet of bituminous concrete paving. Principal items of work are unclassified excavation—12,000 cubic yards; borrow excavation, case 2—11,000 cubic yards; crushed aggregate base, grading D-1—5,000 tons; hot bituminous concrete pavement—1,600 tons; cover aggregate, grade C, type 3 seal coat—140 tons; 4 inches concrete sidewalk—1,090 square yards. Plans and specifications may be obtained free of charge by all who have a bonafide need for them for bidding purposes at Room 311, Federal Building, Juneau, Alaska. It is requested that plans be returned to the Division Engineer, Bureau of Public Roads, Anchorage, Alaska. A bid guaranty in a minimum amount of 5% of the bid amount and conforming to the requirements of Standard Form 22 shall be required with each bid. If the bidder fails to accompany his bid with the required bid guaranty, his bid will not be read or otherwise considered. Telegraphic notification of execution of a Bid Bond does not meet the above requirement of a bid bond accompanying a bid. E. H. Swick, Regional Engineer.

STATE HIGHWAY PROJECTS

BIDS CLOSE 10 A.M., JULY 1

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, July 1, 1958, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

Bid proposals delivered in person will be received only at the Reception Desk located on the first floor of the Transportation Building.

All bid proposals shall be accompanied by a bid deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District

Engineers of the Department of Highways where they may be inspected.

Federal funds have been allocated for items Nos. 1 to 10 inclusive.

The improvements for which bids will be received follow:

1. Draining, Grading, Surfacing, Constructing Bituminous Surface Treatment and Paving with Cement Concrete and Asphaltic Concrete on 3.685 miles of Primary State Highways Nos. 3 and 18 in Whitman County, STEPTOE TO CASHUP, FAP Nos. DF-037-2(6) and DS-0289(5), involving about 642,780 cubic yards of Common Excavation, 111,125 tons of Crushed Stone Filler, Crushed Surfacing and Crushed Cover Stone, 80 cubic yards of Prime Coat Aggregate, 331 cubic yards of Riprap, 193 tons of Asphalt Cement, 1,670 tons of Asphaltic Concrete, 46,025 square yards of Cement Concrete Pavement, 215 linear feet of Cement Concrete Curb, 255 cubic yards of Concrete, 66,910 pounds of Steel Reinforcing Bars, 2,336 linear feet of Concrete Pipe, 182 linear feet of Metal Pipe, 268 linear feet of Metal Pipe-Arch, 6,258 linear feet of Beam Guard Rail, 24 Guide Posts and other items.
2. Clearing, Draining, Grading, Surfacing, Constructing Bituminous Surface Treatment, Paving with Asphaltic Concrete and Installing Illumination on 2.179 miles of Primary State Highway No. 12 in Pacific County, JOHNSON'S LANDING NORTH, FAP Nos. DF-004-1(6) and DF-003-1(8), involving about 27 acres of Clearing, 230,080 cubic yards of Common Excavation, 86,180 tons of Crushed Surfacing and Ballast, 100 cubic yards of Riprap, 875 cubic yards of Crushed Cover Stone and Prime Coat Aggregate, 102 tons of Asphalt Cement, 5,910 tons of Asphaltic Concrete, 150 linear feet of Precast Traffic Curb, 79 cubic yards of Concrete, 10,925 pounds of Steel Reinforcing Bars, 2,775 linear feet of Concrete Pipe, 448 linear feet of Metal Pipe, 3,925 linear feet of Beam Guard Rail, 77 Guide Posts, a lump sum bid for Illumination System and other items.
3. Draining, Grading, Surfacing, Constructing Cement Treated Base and Bituminous Surface Treatment and Paving with Asphaltic Concrete on 5.347 miles of Primary State Highway No. 11 in Adams County, HEDRICK-COLEMAN ROAD TO HATTON COULEE, FAP No. DF-033-2(7), involving about 235,980 cubic yards of Common Excavation, 10,830 cubic yards of Solid Rock Excavation, 63,560 tons of Crushed Surfacing, Crushed Cover Stone and Crushed Screenings, 620 cubic yards of Prime Coat Aggregate, 1,400 cubic yards of Riprap, 314 tons of Asphalt Cement, 13,415 tons of Asphaltic Concrete, 5,840 barrels of Portland Cement, 25,390 tons of Cement Treated Base, 540 linear feet of Concrete Pipe, 3,112 linear feet of Metal Pipe, 100 linear feet of Structural Plate Pipe-Arch and other items.
4. Draining, Grading, Surfacing, Constructing Bituminous Surface Treatment, Paving with Asphaltic Concrete and Constructing a Reinforced Concrete Slap Bridge on 5.870 miles of Secondary State Highway No. 3-A in Yakima County, PARKER TO WAPATO, FAP No. DF-048-1(3), involving about 16,305 cubic yards of Common Excavation and Borrow, 46,740 tons of Crushed Surfacing, Ballast, Crushed Cover Stone and Crushed Screenings, 450 cubic yards of Prime Coat Aggregate, 285 tons of Asphalt Cement, 14,410 tons of Asphaltic Concrete, 273 linear feet of Concrete Pipe, 74 cubic yards of Concrete, 11,500 pounds of Steel Reinforcing Bars, 569 linear feet of Beam Guard Rail and other items.
5. Draining, Grading, Surfacing, Paving with Asphaltic Concrete and Constructing a Reinforced Concrete Slab Bridge on 0.681 mile of a Snohomish County Road, THOMLE BRIDGE AND APPROACHES, FAS No. S-0320(3), involving about 21,715 cubic yards of Common Excavation and Borrow, 4,700 cubic yards of Selected Roadway Borrow, 1,500 cubic yards of Crushed Surfacing, 200 tons of Riprap, 1,430 tons of Asphaltic Concrete, 45 linear feet of Concrete Pipe, 630 cubic yards of Concrete, 177,000 pounds of Steel Reinforcing Bars, 490 linear feet of Aluminum Bridge Railing, 1,100 linear feet of Treated Timber Piling, 2,640 linear feet of Concrete Piling and other items.
6. Paving with Bituminous Plant Mix on 7.230 miles of Jefferson County Roads, QUILCENE-CENTER ROAD, ET AL, FAS Nos. DS-0497(6), S-0215(1) and S-0496(2), involving about 13,935 tons of Bituminous Plant Mix and 4,950 linear feet of Asphaltic Concrete Curb.
7. Surfacing and Constructing Bituminous Surface Treatment on 17.240 miles of Whitman County Roads, PULLMAN-BUSBY ROAD, ET AL, FAS Nos. DS-0669(2), DS-0667(1), DS-0658(2) and S-1154(2), involving about 16,065 cubic yards of Crushed Surfacing and Crushed Cover Stone, 466 tons of Asphalt Cement and other items.
8. Surfacing and Paving with Bituminous Plant Mix on 4.070 miles of a Kitsap County Road, BUCKLIN HILL ROAD TO PSH NO. 21, FAS No. DS-1268(1), involving about 1,060 cubic yards of Crushed Surfacing, 12 tons of Asphalt Cement and 5,460 tons of Bituminous Plant Mix.
9. Surfacing and Constructing Bituminous Surface Treatment on 6.00 miles of a Klickitat County Road, BLOCKHOUSE-CANYON CREEK, FAS No. S-0398(3), involving about 6,000 cubic yards of Crushed Surfacing and Crushed Cover Stone, 220 tons of Asphalt Cement and other items.
10. Surfacing and Constructing Bituminous Road Mix on 1.449 miles of a Columbia County Road, NORTH TOUCHET-FOURTH STREET, FAS No. DS-0457(1), involving about 2,420 cubic yards of Crushed Surfacing and Mineral Aggregate, 100 tons of Asphalt Cement and other items.

DEPARTMENT OF COMMERCE, BUREAU OF PUBLIC ROADS, June 16, 1958. SEALED BIDS will be received at the office of the

When You Want Bids —

Architects and public officials charged with responsibility of getting competitive bids on construction projects have found for 53 years that our **CONSTRUCTION NEWS** publications provide the most effective and economical way through which to advertise for bids.

Year after year, more projects are advertised in CONSTRUCTION NEWS BULLETIN, in PACIFIC ARCHITECT AND BUILDER, and in PACIFIC BUILDER AND ENGINEER than in any other Northwest publications.

Rates are thirty-five cents per line for the first insertion; twenty-five cents per line for subsequent insertions. Copy received up to Wednesday noon reaches our readers the following Saturday.

BITUMINOUS SURFACING
BIDS CLOSE 11 A.M., JULY 2
Juneau, Alaska
NOTICE TO CONTRACTORS

Department of Commerce, Bureau of Public Roads, Region 10, Date: June 10, 1958, Juneau, Alaska. Sealed bids in single copy, for furnishing all labor, equipment and materials and performing all work for Project DF-062-1(3), Alaska Highway, Third Judicial Division, Territory of Alaska, described herein will be received until 11:00 A.M., PST, July 2, 1958, in Room 319, Federal Building, Juneau, Alaska. The project consists of 35.038 miles of bituminous surface—treated. Principal items of work are crushed aggregate base, grading D-1—4,000 tons; aggregate, designation AT-35—11,600 tons; bituminous curb—7,000 tons. Plans and specifications may be obtained free of charge by all who have a bonafide need for them for bidding purposes at Room 311, Federal Building, Juneau, Alaska. It is requested that plans be returned to the Division Engineer, Bureau of Public Roads, Anchorage, Alaska. A bid guaranty in a minimum amount of 5% of the bid amount and conforming to the requirements of Standard Form 22 shall be required with each bid. If the bidder fails to accompany his bid with the required bid guaranty, his bid will not be read or otherwise considered. Telegraphic notification of execution of a Bid Bond does not meet the above requirement of a bid bond accompanying a bid. E. H. Swick, Regional Engineer.

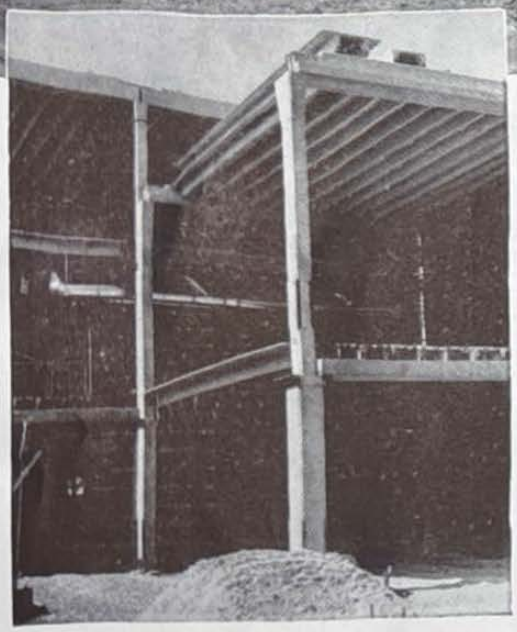
PRESTRESSING Adds New Values to Modern Warehousing

...'Incor' Adds Extra Quality



● Prestressed concrete is part of the answer to a designer's dream! Utilizing its amazing flexibility, he can plan vast areas of unobstructed floor space, combining the functional with the economical.

An impressive example is the new, modern fire-proof warehouse owned by the Allison Erwin Company in Charlotte, North Carolina.

Centered in the heart of the growing wholesale distribution industry in the Carolinas, the building contains a total area of 170,000 square feet. In it are stored thousands of household products—hardware, floor coverings, major appliances.

The framework—floors, girders and columns—is entirely of prestressed, precast concrete tied together with high strength concrete. All prestressed members were made with 'INCOR.'

Girders weigh three tons each; floor members up to four tons each. Columns were precast in one piece from footings to roof. All were trucked and erected in thirty days.

Here is another example of 'INCOR'* at work in the field of prestressed concrete. It makes possible new economies, new structural strengths, and new speed of erection that challenge any other construction method.

BUILDING PERMITS

Six-month total well above 1957

Building permit volume for the five western states totals $1,297,705,031 for the first six months, topping last year by a good $62½ million. The pickup in construction activity is fairly widespread. Biggest increase is in Oregon, up $34 million. California and Washington are up $14½ million each and Idaho, $1 million. Only the dollar volume in Montana, down $1¾ million, is running behind last year.

A look at the figures for the 10 key building permit agencies in the PA&B territory shows most of them staying well ahead of 1957 at mid-year. Los Angeles reports a $26 million increase, San Francisco, $7 million; Sacramento County, $4½ million; King County, $6¾ million; Seattle, $10 million; Portland, $32½ million; Multnomah County, $¾ million; Boise, $106,069. Los Angeles County dropped $51½ million; Great Falls, $¾ million. State-by-state tabulations:

	Jan.-June 1958	Jan.-June 1957
Calif.	$1,029,100,875	$1,014,674,729
Ore.	93,905,435	59,803,247
Wash.	150,442,556	135,772,981
Mont.	11,609,757	13,381,720
Idaho	12,646,408	11,495,279
Total	$1,297,705,031	$1,235,136,956

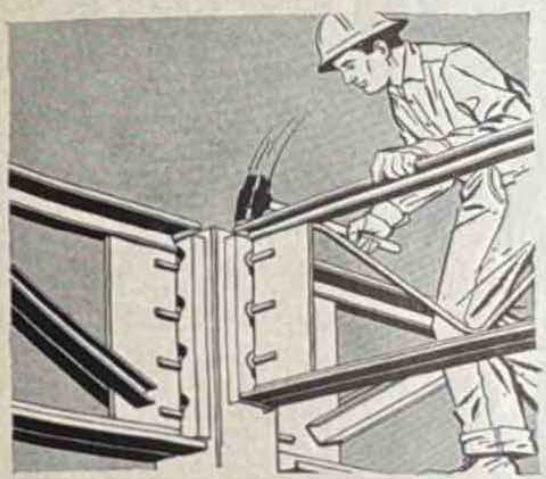
In Beaverton, Oregon, 108,000 square feet of steel framing was erected in 19 days...



V-LOK framing is hoisted into place, interlocked and hammered down for permanent placement. No bolting, on-the-job welding or riveting.

V-LOK

TRADE MARK REGISTERED

made the BIG difference!

Tektronix, Inc., Beaverton, Oregon, profited by using speedy, structurally sound, Macomber V-LOK construction for the framing of their new production building.

Five 21,600 square foot units were constructed. Steel framing with the Macomber V-LOK interlocking system meant no on-the-job bolting, riveting or welding. Each unit was erected in three to four working days . . . at substantial savings.

Recently, the company reordered steel twice for additions totaling 28,800 square feet. By duplicating plans, steel could be delivered more promptly, and completion time reduced.

Building Design—Tektronix, Inc., Mel Lofton, designer
Structural Engineer—I. A. Cooper
Contractor—W. E. McChord

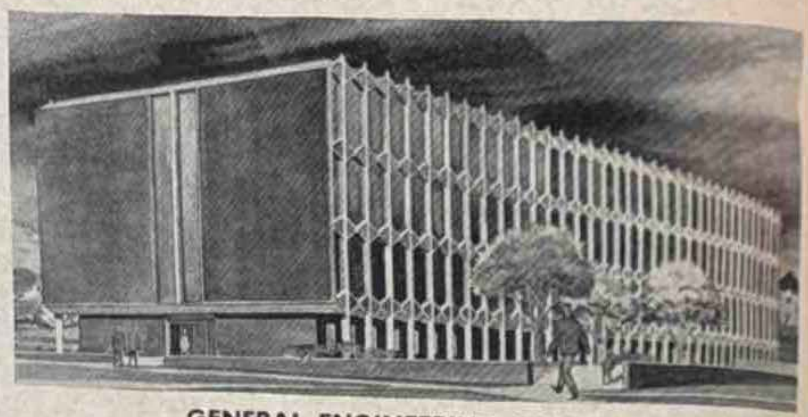
MACOMBER

CANTON 1, OHIO

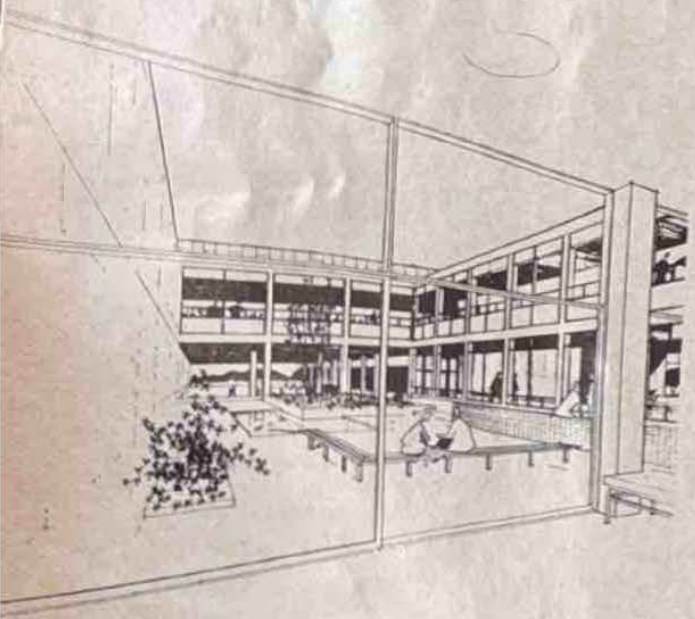
ALL-YEAR RESORT HOTEL

to be built on Mammoth Mountain in California's High Sierras has been planned with particular reference to family recreation. It will consist of 70 rooms—35 doubles and 35 split-level chalet suites with accommodations for four—and dormitories to house 40. Wood building's basic design will provide easy access to public areas and maximum exposure to spectacular views. Beams forming A-shape of central core will be anchored in steel reinforced foundations faced with native stone. Architect: Theodore T. Boutmy.



GENERAL ENGINEERING BUILDING

on University of Washington campus in Seattle will attempt to harmonize contemporary and Gothic architectural styles through use of unusual window design. Four-story steel and concrete structure, to cost $970,000, will have cast stone and brick exterior. Architects-engineers: Harmon, Pray & Detrich.



STUDENT UNION ADDITION

at University of Idaho in Moscow, as seen in sketch from lobby, shows enclosed court with covered skating rink at one end and lounge. With two stories and basement, poured concrete and metal wall building will contain 60,000 sq. ft. Total cost, including furnishings, is estimated at $1.8 million. Architects: Dropping, Kelley & Finch; associate architects: Wayland & Cline.

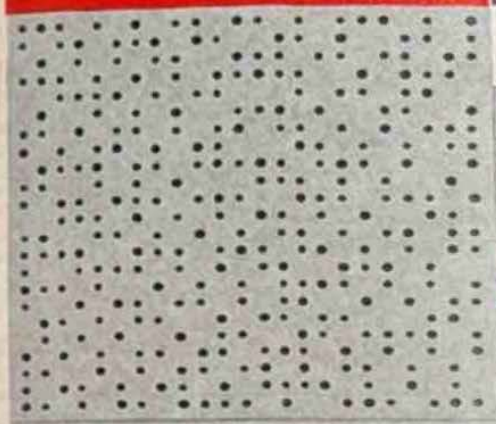
LUXURY APARTMENT HOUSE

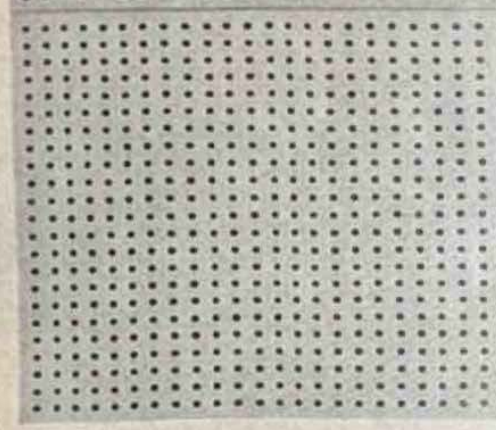
facing Balboa Park in San Diego will have 30 units and penthouse, its glass frontage spreading over 210 ft. Some features: central patio and heated swimming pool; roof garden; radiant heat with individual room controls; subterranean garage for two cars per apartment. Architect: Henry H. Hester.

FIRST HILTON INN

will be located one-half mile from main terminal building at San Francisco International Airport. Covered passageways will connect 300 guest rooms and circular central building housing restaurants. Exteriors will combine wood, glass and cement plaster. Landscaped patio will have two swimming pools. Cost of construction and furnishings: about $2.5 million. Architect: William B. Tabler.

2 SOUND ACHIEVEMENTS





NEW KAISER FIR-TEX ACOUSTICAL TILES

Even the holes are new in Kaiser Fir-Tex acoustical tiles! Our unique new drilling process produces more and cleaner holes per tile, assures high Noise Reduction Coefficients. Two new patterns—Regular (529 holes/sq. foot) and Casual (316 holes/sq. foot—in three diameters)—combine with smaller beveled edges to help you achieve continuous perforated ceiling effects. Available now in ½", ⅝", ¾", and 1" thicknesses, in 12" x 12", 12" x 24" or 24" x 24" tiles. Contact your nearest Kaiser Fir-Tex Representative for data bulletins for your tiles.

Wright elected AIA 2nd vice president

• Regional status for California approved

Convention-goers were returning from the annual meeting of the American Institute of Architects, which wound up July 11 in Cleveland, as PA&B went to press and the consensus seemed to be that the whole affair was somewhat uneventful. But the West Coast had a bigger stake than usual in the 1958 sessions, with Henry L. Wright of Los Angeles winning the post of second vice president and California winning approval as a region in the AIA structure—not to mention the fellowships and design award winners (PA&B for June).

In his victory, Wright defeated two other candidates: Austin W. Mather of Bridgeport, Conn., and Herbert C. Milkey of Atlanta. Also elected: John N. Richards, Toledo, president; Philip Will Jr., Chicago, first vice president; Edward L. Wilson, Fort Worth, secretary; and Raymond S. Kastendieck, Gary, Inc., treasurer.

WRIGHT

With the establishment of California as an independent unit, Hawaii will become affiliated with the Northwest states, including Alaska, while Nevada will join the Western Mountain District. Procedure of handling the regional status issue—Florida also got the nod—brought sharp criticism from some delegates whose areas were involved.

The convention in general drew little fire, but the controversial extension of the East Front of the U.S. Capitol caused the hottest debate. When it was all over, the AIA went on record reaffirming its previous stand of opposition to the proposed move.

The program itself was far from stimulating. Most rewarding perhaps was Philadelphia architect Vincent Kling's talk, "Are Architects Becoming Technicians?" Dr. Margaret Mead in her address, "The Anthropologist Looks at Architecture," managed to needle the profession. And keynoter William Tabler, New York's hotel architect, made newspapers across the country with his lambasting of the nation's "Chaotic Building Codes." (For his complete address, see p. 10.)

The Gold Medal, highest honor bestowed by the AIA, went to John Wellborn Root of Chicago. Merle Armitage of Yucca Valley, Calif., graphic arts designer, received a new award, an Industrial Arts Medal. Others:

Fine Arts Medal to Viktor Schreckengost of Cleveland, sculptor and ceramist.

Craftsmanship Medal to Francois Lorin of Chartes, who designed and executed the stained glass window given to the French cathedral by American architects through the institute several years ago.

Allied Professional Medal (new award) for achievement in the design professions related to architecture to Frederic Severud of New York, structural engineer.

Citation to an Organization to United States Steel Corp. in recognition of its sponsorship of the "Chicago Dynamic" program.

Edward C. Kemper Award to Edmund R. Purves, AIA executive director.

The 1959 convention will be held in New Orleans.

ALUMINUM EMBLEM

presented during AIA convention to six Belgian architects who won $25,000 R. S. Reynolds Memorial Award for design of Transportation Pavilion at Brussels World Fair is work of Jose de Rivera (left). Starting with rigid rod of high-purity aluminum, ¾-in. in diameter, sculptor used vise, hammer and file to shape rod in abstract form. Finished piece was anodized, then rubbed and polished.

San Francisco adopts first housing code

San Francisco has taken a major step toward a higher standard of living in its 270,000 houses, flats and apartments when the Board of Supervisors adopted the city's first housing code, a 60-page document which has been 11 years in preparation. It replaces the state law under which the city has been setting minimum standards for housing.

Originally the code required two stairways leading to the ground from any floor of more than 12 ft. in height, a stipulation opposed by both the Chamber of Commerce and the AIA. A compromise requirement will permit two rooms and a bath to be built on an upper floor with only one access.

Women's role expounded at Los Angeles sessions

Representatives of the Association of Women in Architecture, meeting in Los Angeles June 30-July 2, were told that they must toot their own horn; and they did just that at the national convention, during which photographs, renderings and models of the work of members were displayed at the Building Center.

Speaking at the final dinner session, Rita Lawrence, founder of the firm named Architectural Pottery which creates ceramic ideas in plant containers, declared: "Women's prime attributes of greater sensitivity, understanding and emphasis upon the human element is of inestimable value in a men's world of competitiveness and aggression. We must avoid the warfare of an atomic age so that we may enter a new era in which the releasing of women's attributes will become vital to the development of a humanistic society.

"Greater emphasis will be placed upon such population problems as housing, disease and population control, and social planning. The changing solutions to these increasing problems may well be found by women, who constanly need to be reminded of their area of contribution."

THE BUILDING MONTH: BRIEFS

● Problems of government, city planning, finanace, public transportation, water supply and recreation in western cities and their suburbs will be discussed at a two-day conference to be held in Berkeley's Claremont Hotel July 24-25. Governmental representatives and civic leaders from California, Oregon, Washington and Arizona are expected to attend. Conference chairman: Harold S. Shefelman, Seattle attorney and chairman of the Washington State Tax Advisory Council.

● Ultimate development of 4 sq. mi. of land surrounding Los Angeles Memorial Coliseum under a $100 million long-term master plan has been approved by the City Planning Commission. Proposal provides parking for 450 buses and 32,000 cars, with pedestrian traffic passing through tunnels.

● A ruling that a house design becomes public property just as soon as it has been recorded will be appealed in the San Francisco Court of Appeals. The precedent-shattering verdict, which presumably would make all architectural plans public property, was handed down last May by Marin Superior Court Judge Thomas F. Keating. Albert B. Carr of Mill Valley filed suit two years ago against Marin county contractor David Paul, charging that Paul had copied his house plans drawn by San Francisco architect Ernest Manfred Smith.

● In the first such move by any large municipality, Cleveland has approved plastic pipe for street-to-house water service lines and has amended its building code accordingly.

● The free world's largest and most modern facility for the manufacture of long-range missiles and space vehicles is now in operation north of San Diego. The $40 million plant for Convair-Astronautics was built by McNeil Construction Co. of Los Angeles on a 252-acre site on Highway 395.

● Emerson Goble, managing editor of Architectural Record since 1941, has been named editor, succeeding the late John Knox Shear.

Chaotic building codes

by WILLIAM B. TABLER, AIA

AS WE BEGAN the second century of the American Institute of Architects, buildings illustrate what we can't do rather than what we can do. If ever a problem begged for action by the AIA, it is the chaotic state of building codes and building regulations in most U. S. cities today. Practically every city in America has its own code governing building design and materials, and the codes vary enormously — and unpredictably — from city to city. To compound the confusion, labor unions have working rules, rigidly enforced, which are frequently irrational and nearly always frustrating to builders and architects.

Now rules in themselves are not bad. Public health and safety obviously require that some curbs be imposed on builders. But we have created such an unholy mess of regulations and have mixed so much antiquated nonsense in with the good, that our building efficiency has been seriously impaired. Unless we can make our building rules more uniform —and uniformly sensible—American construction is never going to realize its full potential. I am convinced that in many parts of the U.S., construction costs as much as one-third more than it should, mainly because our building codes are antiquated and anachronistic.

Stranger than Fiction: Consider these peculiarities in union regulations and big-city codes that I have encountered in designing hotels:

The preferred location for a hotel ballroom is usually on the second floor. But in Hartford, Conn., the exit requirements of the building code make the roof about the only feasible place for the ballroom. In Dallas the ballroom cannot be placed above the sixth floor; in San Francisco it must go on the ground floor; and in New York it is almost impossible to put it anywhere but underground. (New York's ballroom rule is somewhat academic, for under the present building codes and zoning laws you simply could not build a profitable convention hotel in New York, and not one has gone up in the last 26 years.)

Plumbing regulations across the country are really weird. New York is still in the "brass age." You cannot use copper pipe with ordinary soldered fittings for water piping in New York City. You can use iron pipe, for iron was the age before brass. As for plastic pipe, in most cities the word has not even entered the building lexicon yet.

Or consider drum traps for bathtubs—i.e., the oversized catch basins used in place of the more common P-trap. In Boston, New York, Washington, D. C., and Los Angeles they are prohibited. But in Dallas, Denver and hundreds of other cities, drum traps are still required, or have been until recently. Added cost of drum traps to the house owner: about $50 per bathroom.

The Pittsburgh plumbing code requires about 400% more vent piping in bathrooms than is specified by the National Plumbing Code. You can see that they like plenty of iron in Pittsburgh.

Incidentally, although I design hotels I often have a tough time getting a hotel room at the desk. But thanks to the old-fashioned, easily punctured lead-bends that some plumbing codes require be put on toilet bowls, I always manage to get a room. What I do is go around to the back of the front desk to find out what rooms are out of service because the lead-bends are leaking. The toilet bowl may be sitting in the bathtub, but I can brush my teeth and have a bed for the night. This room reservation system has not failed me once in 12 years. Throw away your hotel guide and use a plumbing code.

Doorway and room-size requirements are wonderfully inconsistent, too. My wife is from Massachusetts and I tease her about the fact that people must be pretty broad-hipped up there. Exit units on buildings in Massachusetts have to be 24 in. wide if the buildings have public assembly rooms. This compares with a mere 20 in. in Pittsburgh. On the other hand, you could also argue that people must be thin in Massachusetts, for they require only 6 sq. ft. of assembly room space under the Massachusetts code as against the 15 sq. ft. per person required in Jacksonville, Fla.

Suprisingly, in Texas, where men are supposed to grow so tall, ceilings need to be only 8 ft. high with portions dropped to 7 ft.; in Puerto Rico, by contrast, the minimum ceiling height is 9 ft.

The Massachusetts Department of Public Safety required that we provide 136 ft. of swing-door egress from the lobby-area public rooms of the Boston Statler Hilton, which had a maximum occupancy of 2,863. By comparison, the Empire State Building, with 22,000 tenants, has a swing-door egress of only about 31 ft.

Stairway requirements are also peculiar. Because of hotel fires, codes generally prohibit transoms into bedrooms on the theory that a fire in the corridors gets air and oxygen through the transoms. Yet today in fire-tower stairs, which are reached only by opening a door to the outside, air and oxygen are poured onto the fire each time the door is opened. Further, some cities which require fire-tower stairs in new construction still allow open interior stairs to exist, though these inside stairs are obviously fire avenues. Perhaps most of New England is right, for there you can have a rope at the window to shinny down. Why worry about stairways?

Obviously, satisfying all these peculiar code requirements takes a tremendous toll of time and efficiency. Let me cite just one example. The plans of the Statler Center in Los Angeles had to conform to 21 different city, county, and state codes, and more than 200 appeals for modification had to be made. And Los Angeles and California are, relatively speaking, progressive. Try to build a hotel—or any other big building—in cities or states where there are no appeal provisions.

Union-Made Snarl: For sheer irrationality and induced inefficiency, of course, the rules of many construction trade unions are even worse than the provisions embedded in our building codes. It is virtually impossible to install sheet metal in New York, for example, unless it was fabricated by New York sheet metal workers. It is likewise taboo to install electrical fixtures that were not wired by New York electrical workers.

For buildings in Pittsburgh, manufacturers of electrical equipment, such as fans, have to remove the equipment's motors at the factory, ship them separately to Pittsburgh where there are reinstalled by the electrical workers and then realigned by the mechanical workers.

The jurisdictional labor situation, I am told, is improving, but if so, it must be improving awfully slowly. In Dallas, when we were building the Statler Hilton in the summer of 1955, the plasterers claimed that they should do the painters' spackling on the ceiling slabs. After the plasterers walked off the job a couple of times, the National Joint Board for Settlement of

SOUTH BAY BANK

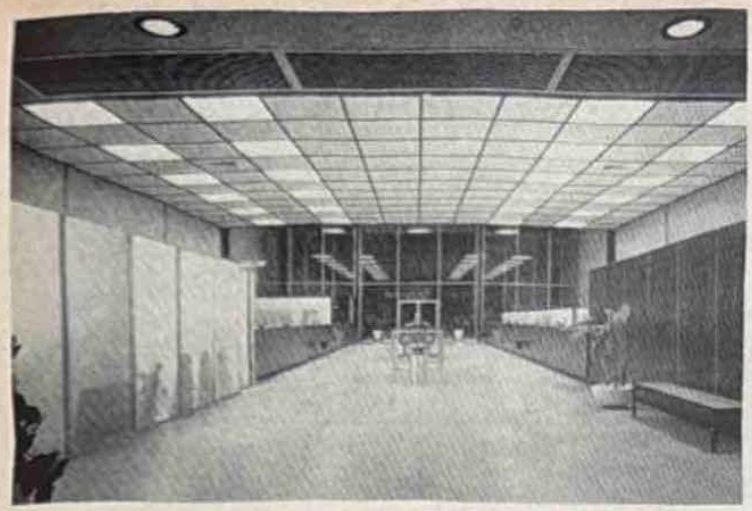
A BUILDING that would help to sell the bank since it is a new institution; that would at the same time suggest integrity; and that would make a genuine aesthetic contribution to the community: these were the main objectives spelled out by the client. The highly satisfactory solution has been expressed through the use of materials—exposed steel, aluminum and concrete block—and through the standard in-line type plan of arranging and apportioning space.

The 70x300-ft. lot is a level excavated corner, with a slope from 4½ to 12 ft. within the building area, bordering the south property line and necessitating a retaining wall. To achieve the desired clear spans, the structure is a modular steel frame of inverted tapered girders spanning 50 ft. and 8-in. columns on 16½-ft. centers. A rigid frame, required for seismic forces at the open face of the building, is placed on the module, 16½ ft. from the glass line. Constructed of 20-in. I-beams and a parallel chord type steel truss 3 ft. 4 in. in height, its open triangular sections are filled with tempered hardboard.

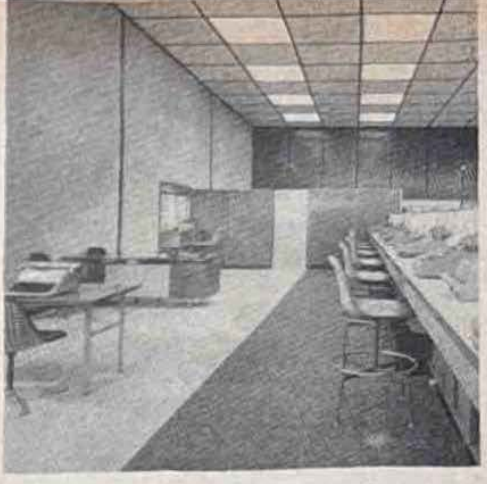
Since the structure faces west, it was desired to filter early afternoon sunlight. The concrete block walls extend 12 ft. 8 in. beyond the glass walls of the facade; and within the lightweight steel framework at the outer ends, each side of center, are two 16x20-ft. aluminum grills. Draperies (not yet installed when the building was photographed) are required to obscure the interior to the public after banking hours. Thus the grills are intended only to control early afte noon sun, allowing a laciness in d sign which produces effective shado patterns.

Between grills and glass are cour of specimen planting. The north cou is adjacent to the public waiting are the south court to the presiden private office. Further sun protectio without sacrificing light, is provid with canopies of heat absorbing tra lucent wireglass over each court. T glass and grill combination has duced heat gains by 67% and c sequently air conditioning requi ments by eight tons.

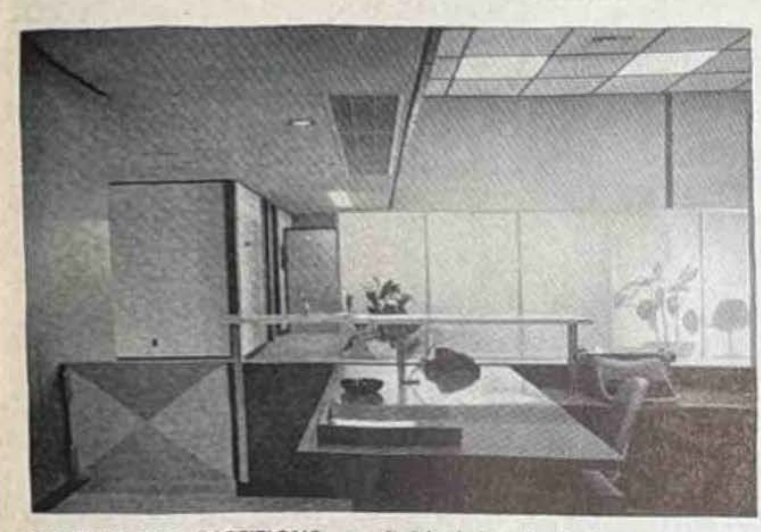
Interior planning, from the sel tion of furniture, fabrics, carpet and accessories to the design of sets, form holders and signs, was work of Craig Ellwood Associate



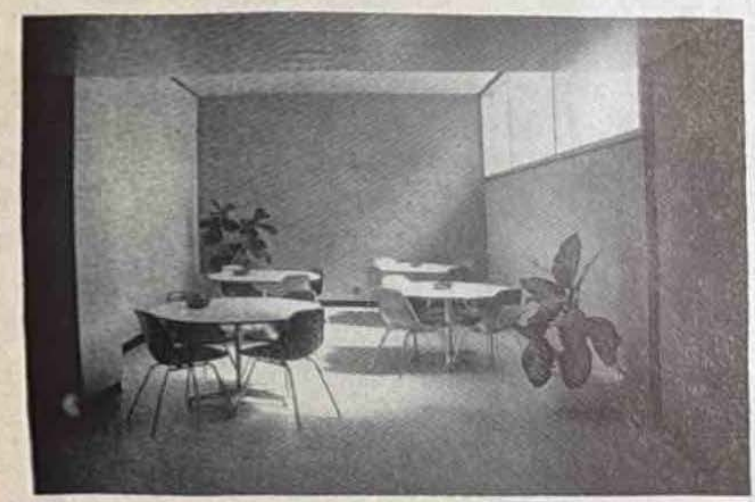
CEILING GRID has recessed 4-ft. square fluorescent fixtures spaced with acoustical paneling to provide 60 footcandles of light over office areas and counters, 30 footcandles over public areas.



CONTINUOUS COUNTER accomodates eight tellers who perform tasks at standard counter height. When aluminum framed wireglass gates are closed, cages are not apparent; when opened, cages are properly defined.



FIXTURES AND PARTITIONS are finished in plastic laminates, sheet cork, walnut plywood and translucent wireglass, framed with rectangular aluminum tubing and rectangular aluminum bar.



EMPLOYEE FACILITIES consist of kitchen-dining room and lounge area.

OUTLINE SPECIFICATIONS

Structure: foundation: 12x20-in. continuous concrete footing, 4½- to 12-ft. high reinforced concrete retaining wall at south side; **frame:** 8-in. columns 16½ ft. o.c. with 50-ft. tapered steel beams and 20-in. I-columns with steel truss rigid frame—Bethlehem Pacific Coast Steel Corp., fabricated by Builders Steel Corp.; **roof:** 2x10-in. wood joists 16 in. o.c. with 1x6-in. diagonal sheathing; **walls:** 8-in. concrete block—Rocklite Products Co.; **floors:** 4-in. concrete slab.

Exterior Finish: exposed concrete block with one coat of water-resistant color (Cemelith), one coat of vinyl acetate emulsion with color pigments (Chromalith)—Super Concrete Emulsions, Ltd.

Roof Surfacing: built-up, 20-year—Pabco Products, Inc.

Doors: entrance: tubular aluminum frame—Acme Metal Molding Co.; **interior:** solid core with paint grade hardwood facing—General Veneer Co.

Insulation: acoustical: ¼-in. sheet cork—Gold Seal Division, Congoleum-Nairn, Inc.; acoustical plaster; ¼-in. perforated tempered hardboard (Presdwood)— Masonite Corp.; 2-in. roll blanket (Sonocor)—Owens-Corning Fiberglass Corp.; **thermal:** aluminum foil-enclosed medium-thick roll blanket (Fiberglas) between joists —Owens-Corning Fiberglas Corp.

Floor Surfacing: terrazzo; asphalt tile (Holiday, Tile-Tex) —Pioneer Division, The Flintkote Co.; vinyl tile —Robbins Floor Products, Inc.; vinyl sheet—Armstrong Cork Co.; carpeting.

Interior Finish: exposed concrete block with two coats of vinyl acetate emulsion (Chromalith)—Super Concrete Emulsions, Ltd.; hardwall plaster over gypsum wallboard—United States Gypsum Co.; Keene's cement waterproof plaster in toilet rooms; glazed ceramic tile around urinals, toilets—Gladding, McBean & Co.

Ceilings: ¼-in. perforated hardboard (Preswood)—Masonite Corp.; gun acoustic vermiculite-hardwall plaster (Hi-Sorb)—Highland Stucco and Lime Products, Inc.

Lighting Fixtures: recessed fluorescent (Visionaire) with ⅝-in. square, ⅝-in. deep white plastic louvers except three in front lobby with white plastic dome covers—Sunbeam Lighting Co.; recessed louvered incandescent in toilet rooms, lobby, halls, stairs; polished aluminum wall brackets—Century Lighting, Inc.

Heating: three-zone, gas-fired, forced warm air system—Reznor Mfg. Co.; controls — Minneapolis-Honeywell Regulator Co.

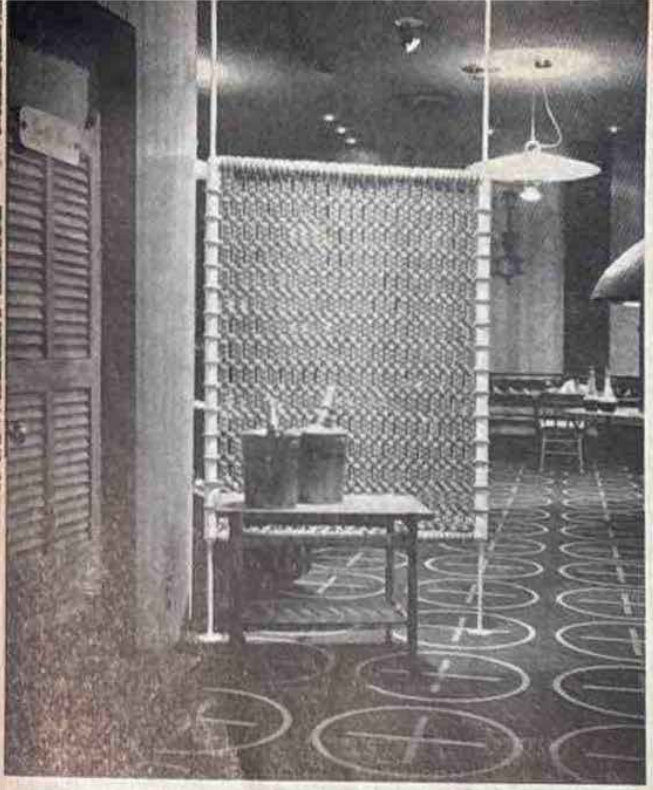
Air Conditioning: 20-ton refrigerated unit—Carrier Corp.; controls—Minneapolis-Honeywell Regulator Co.

Plumbing and Sanitary: water closets, lavatories—Crane Co.; 75-gal. glass lined water heater—General Water Heater Corp.; medicine cabinets, paper holders—Hallmack Co.; water fountains—Haws Drinking Faucet Co.

Total Area: 7,740 sq. ft., excluding courts.

Cost per Square Foot: $17.06.

Date of Completion: March 1958.



MAIN ENTRANCE is embellished with square-knotted rope screen, framed charts, native stone wall and metal lemon tree. Display barbecue has two roasts turning in view from lobby and lounge. Old ship's door leads to powder room.

In the Northland: authentic mood for dining

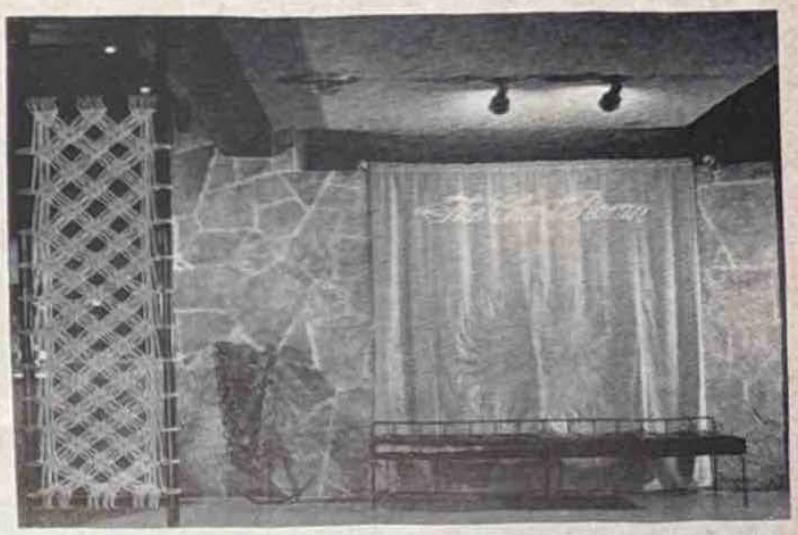
THE PROBLEM was threefold: to provide the major hotel in Alaska's largest city—Greater Anchorage, 63,000*—with wining and dining facilities that would be 1) suitable to the local patronage of an expanding community; 2) adequate to a growing cosmopolitan and well-educated Alaskan clientele; and 3) worthy of tourists traveling the Alcan Highway from all parts of the United States and Canada, by air to the vast fishing and hunting resources of the Kenai Peninsula or via the Polar routes to the four corners of the earth. Heretofore only a small coffee shop and lounge were made available by the client.

Within a new concrete shell erected adjacent to the hotel, the designer located a 300-seating capacity restaurant, two banquet rooms, lounge, broiler, rotisserie and the renovated coffee shop. The sailing vessel was chosen as the motif for its reference to Alaska's historical past and its psychological connotations of mood and elegance; for its emphasis on the use of highly durable materials such as oil finished teak and oak, brass and leather; for its adaptability to a fresh, contemporary approach.

Color and interest were further added by the selection of authentic marine memorabilia—framed 17th Century sailing charts and engravings, ships' fittings and running lights combed from the waterfronts of the world. The low-keyed color scheme depends for warmth upon vivid accents, the textural contrast of polished brass, the patina of leather and wood, square-knotted and cedar float screens and dividers, custom wool carpeting and carefully devised lighting.

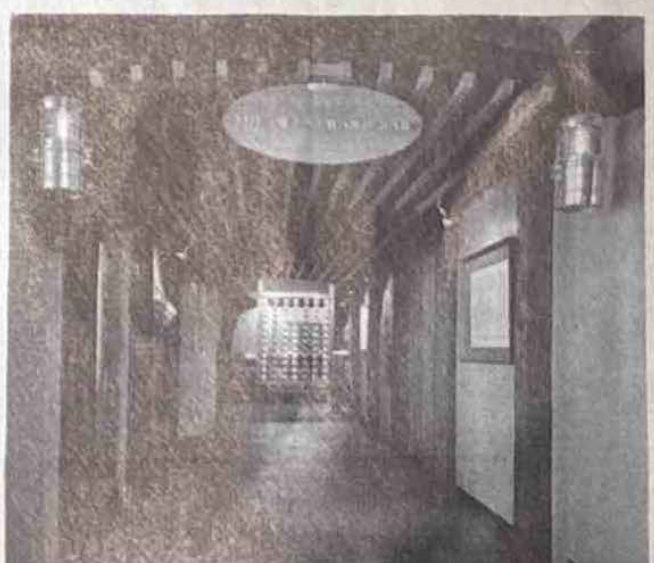
In keeping with the character of the operation, service and accessories down to the last teak-handled steak knife and Danish pepper mill; all graphic materials (menus, place mats, coasters, etc.); and even employees' uniforms were designed and/or supplied by the designer himself.

*Corps of Engineers estimate, not including adjoining Fort Richardson and Elmendorf Air Force Base, largest military installations in Alaska.



VELVET DRAPE embroidered with compass, custom bench and slate floor compliment stone wall at approach to dining area.

ENGRAVINGS on rough sawn columns and ship's fender decorate lounge, with fish net float screen at entryway (below).



OUTLINE SPECIFICATIONS

Structure: foundation: concrete; **frame:** concrete block; **roof:** long-span steel joists, concrete slab; **walls:** concrete block and stud; **floors:** cement slab.

Exterior Finish: exposed concrete.

Roof Surfacing: built-up asphalt.

Doors: steel, wood.

Floor Surfacing: slate; vinyl tile—Robbins Floor Products, Inc.; carpeting—James Lee.

Interior Finish: oiled rough sawn cedar; vertical grain fir.

Ceilings: acoustical plaster; oiled t&g fir.

Special Equipment: folding partitions—(Modernfold) New Castle Products, Inc., (Space-Saver) Wood Specialty Products, Inc.; rope screens—Warren Scholl.

Heating: hot air system—Anemostat Corp. of America.

Lighting Fixtures: incandescent—Camber Lighting, (custom) Svend Wohlert.

Total Area: 7,038 sq. ft.

Total Cost: $250,000.

Date of Completion: June 1957.

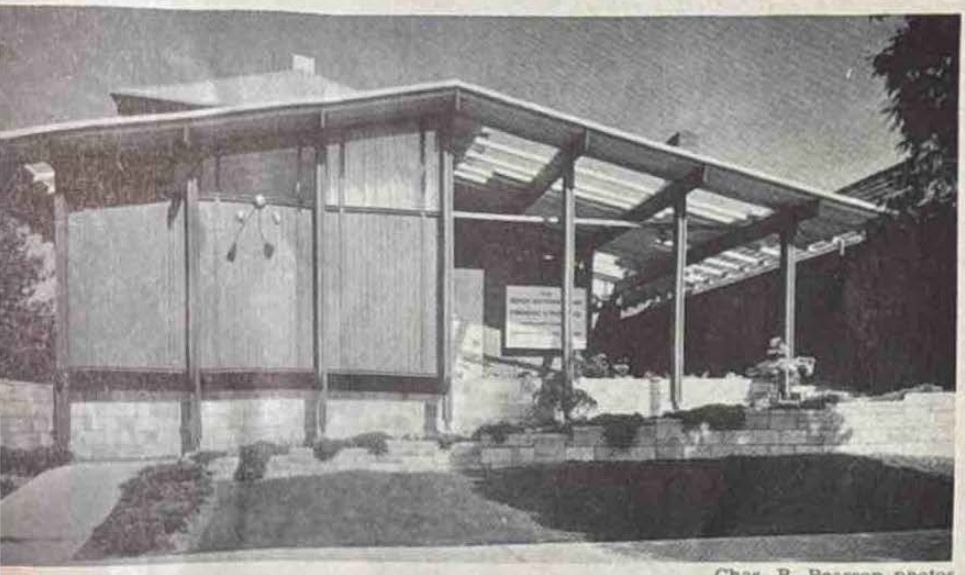
General Contractor

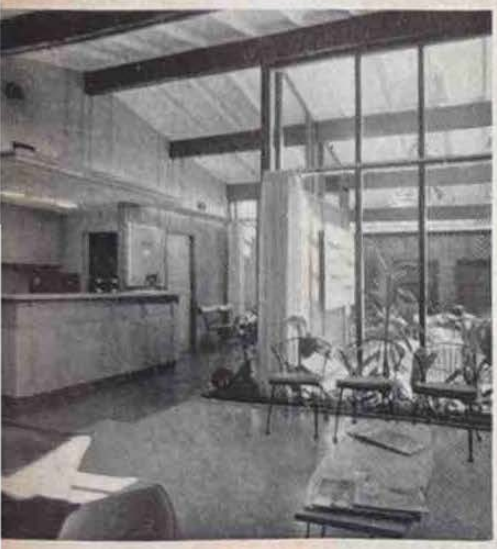
Two clinics: a remodeled hous

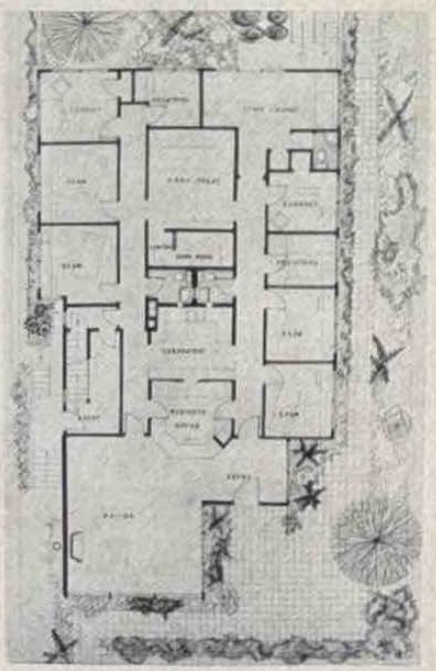


Chas. R. Pearson photos

IN PURCHASING an inside piece of property which contained an old two-story house, the clients desired to convert the structure through alterations and additions into a clinic for their own practice and to retain three small apartments on the second floor. Most serious problem encountered was devising an access to the clinic, due to the main floor of the existing house being about 4 ft. above sidewalk level. The solution: a series of ramps formed by planting areas and retaining walls. Interior is finished with gypsum wallboard and hardwood paneling. Bright tones are utilized sparingly, allowing the furnishings to create their own color scheme. David M. Hopkins was mechanical engineer; Walter S. Gordon, electrical engineer.

SERIES OF RAMPS defined by plantings and retaining walls lead to spacious waiting area. Plywood and fir trim of exterior, wallboard and hardwood paneling of interior establish clinic's residential character.





OUTLINE SPECIFICATIONS

Structure: foundation: concrete footings; **frame:** glued-laminated members; **roof:** glued-laminated members; **floors:** wood.

Exterior Finish: Douglas fir plywood (Texture One-Eleven); exposed concrete masonry; fir trim.

Windows: aluminum.

Doors: exterior: plywood slab; **interior:** hardwood plywood slab.

Insulation: blanket (Fiberglas) in all walls, ceiling of new portion—Owens-Corning Fiberglas Corp.

Floor Surfacing: plywood; asphalt tile; cork.

Partitions: concrete masonry; drywall.

Interior Finish: gypsum wallboard (Sheetrock)—United States Gypsum Co.; hardwood paneling.

Ceilings: acoustical tile (Acousti-Celotex)—The Celotex Corp.

Heating: hot air, oil fired.

Total Area: 4,100 sq. ft., first floor; 1,240 sq. ft., second.

Total Cost: $41,000.

Cost per Square Foot: $10, first floor only.

Date of Completion: July 1955.

KORSMO BROS.
General Contractors

and a central garden room

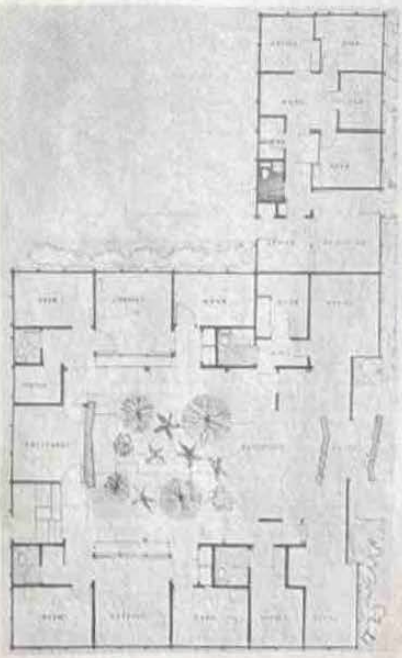
THE PROGRAM for two doctors—a neurological surgeon and a plastic surgeon—called for a building that, in view of the nature of their practices, would have a genial character both inside and out. It further required than an additional wing be incorporated as rental space for a dentist on the comparatively level 75x120-ft. lot.

Working unusually close with their clients, the architects designed a structure in which the offices, consultation rooms, etc., are located around a spacious central reception and garden room. Introduction of the garden with its rare tropical plantings was especially desirable because one of the surgeons is an amateur horticulturist. This portion is entirely covered with a glass roof, equipped with bamboo shades operated by draw cords, and contains a series of small pools in which the water is recirculated.

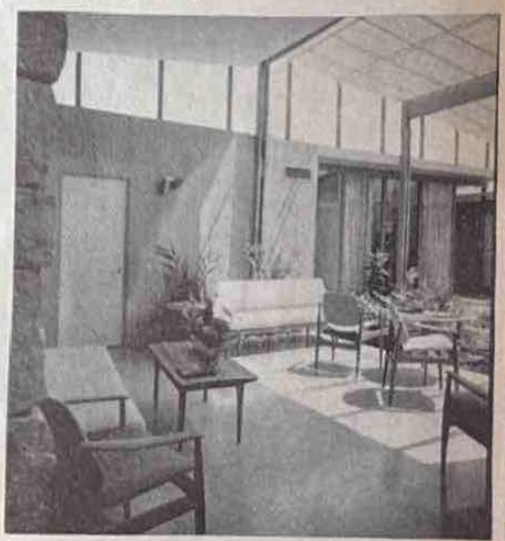
Exterior fenestration provided high in the walls admits light but insures privacy. Offices are separated from the garden area by clear glass partitions which can be covered with draw curtains. Possibility that the large amount of plantings and pools might create a humid condition has been overcome by strategically placed air supply and exhaust vents. There has been no condensation to date and all glass areas have remained completely clear.

Wall, floor and roof construction consists of stressed-skin fir plywood panels, a simple and economical framing system (see next page). Interior combines painted gypsum board, driftwood-stained vertical cedar and stone. David M. Hopkins was mechanical engineer; Walter S. Gordon, electrical engineer.

Chas. R. Pearson photos



U-SHAPED STRUCTURE has varying levels of roof design to avoid boxy feeling, is planned around central court. Raised shed roof of reinforced glass admits light to garden featuring rare tropical plantings.



OUTLINE SPECIFICATIONS

Structure: foundation: concrete footings; frame: post and beam; roof, walls, floors: stressed-skin plywood panels — Panelbilt Systems, Inc.

Exterior Finish: ½-in. t&g cedar laid vertically; sandstone; wood, aluminum trim.

Roof Surfacing: built-up with gravel finish.

Windows: aluminum.

Doors: flush plywood.

Insulation: blanket (Fiberglas) in roof, wall panels—Owens-Corning Fiberglas Corp.

Floor Surfacing: rubber tile; terrazzo.

Partitions: drywall.

Interior Finish: gypsum wallboard (Sheetrock)—United States Gypsum Co.; ½-in. t&g cedar; metal trim.

Ceilings: acoustical tile (Acoustone)—United States Gypsum Co.; striated tile.

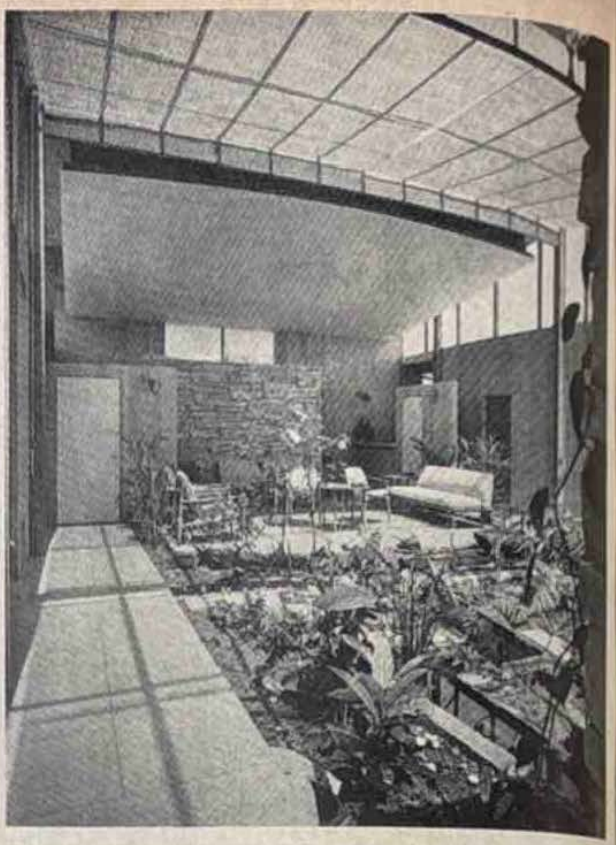
Heating: split hot water and hot air, oil fired.

Total Area: 3,975 sq. ft., including basement.

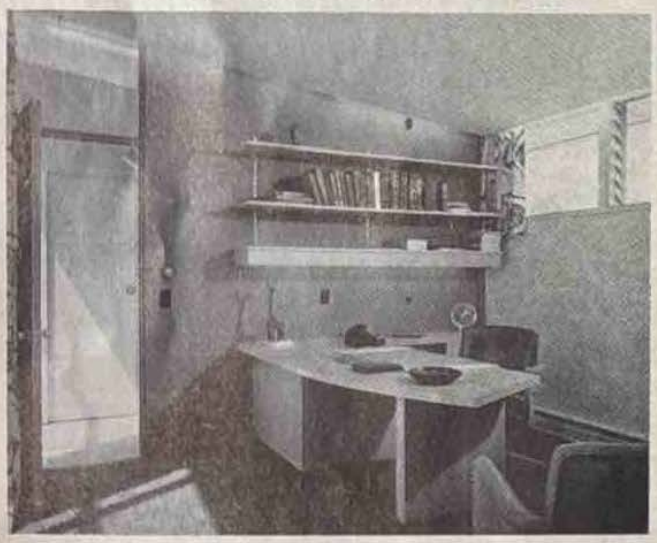
Total Cost: $72,600, including furniture except in reception room.

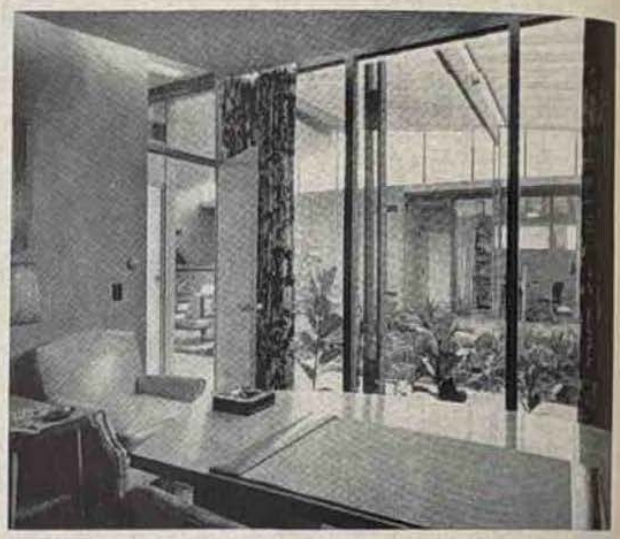
Cost per Square Foot: $18.25.

Date of Completion: June 1956.



RECEPTION AREA combines wood, masonry and glass. Driftwood and brown are dominant colors inside and out, accented by variety of bright tones. Offices are grouped around court.





Structure: The post and beam U-shaped clinic rests on conventional concrete footings which are laid out so that they serve in most instances on the supporting members for the floor panels without further framing. Where the floor plan requires it, this system is augmented with a few 4x6 girders and piers; otherwise, the spans are dictated by the footings which are generally on 14-ft. centers. Exterior walls are framed with 4x4s on 4-ft. centers, with 4x6 beams across the posts. Roof is supported on these beams and on glued-laminated beams for longer spans where required. Spans for roof panels are ordinarily 16 ft.

Panels for floor, wall and roof surfaces are assembled with a top and bottom skin of plywood glued to appropriate framing depending upon the purpose. They are laid up with the surfaces slightly off center along the length, providing an exaggerated t&g joint in which the side framing on one panel acts as a tongue that fits inside a wide groove on the adjacent panel formed by slightly overhanging plywood edges. Extra spacing is allowed in the groove of the logitudinal joint to provide a wiring chase and to permit slight variations in placement of supporting members. Plywood surfaces, however, butt solidly in all cases. Glass insulation with an aluminum reflective surface is applied to the underside of the top skin of the panels while in the shop.

Chilled water piping for IBM campus

• More than 8,000 ft. is underground

WHEN International Business Machines Corp. decided to use a 3,450-ton central unit to air condition its new plant in San Jose, Calif., the problem arose of how to handle the extensive network of chilled water pipe lines running through the 190-acre site to six other buildings.

Consulting engineers Keller & Gannon considered four solutions: 1) overhead or above-ground piping; 2) concrete tunnel method; 3) presealed steel conduit; 4) direct burial unjacketed technique.

Overhead or above-ground piping was eliminated both because of its unsightliness and because it would obstruct traffic patterns in the plant grounds. The supporting structure for overhead piping would add considerably to the overall cost.

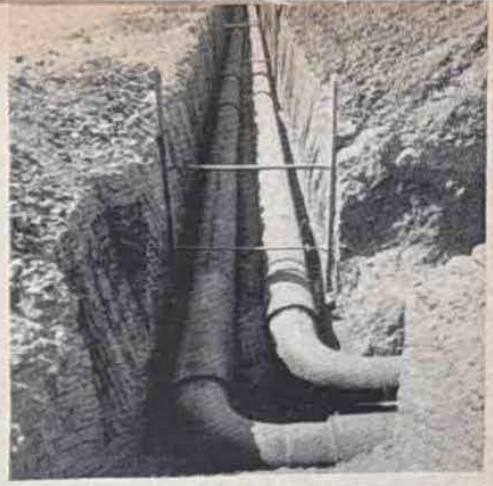
In the concrete tunnel method, 6- to 8-ft. rectangular or round tunnels are built underground and the insulated pipes are generally supported along the roof and walls of the tunnel. Cost studies indicated this method to be 200% to 300% higher than direct burial.

Presealed steel conduit, which has molded insulation surrounded with a jacket of steel, would have cost 30% to 60% more than the direct burial unjacketed method. In addition, presealed seamless conduit would require tests to be made of the pipe and jacket before it was covered. The jacket would have to be welded after the pipeline was installed in the trench.

The direct burial unjacketed method was chosen because of considerable cost savings and a much simpler installation procedure. Foamglas, Pittsburgh Corning's cellular glass product, was specified as a multiduty type insulation that would cut heat gain, protect the pipe from corrosion, support the weight of the filled pipe and be proof against soil chemicals and moisture.

Easy Does It: Says Perry Holmes vice president of Plant Asbestos Co., insulation contractor: "We simply insulated the 40-ft. lengths of pipe as they rest at waist height of wooden dunnage along the topside of the trench. After the pipe was welded and tested, we covered the weld with Foamglas and the trench was ready for backfilling. Working overhead when insulating pipe (as we would have to do in utility tunnels) is extremely uncomfortable. The hot asphalt drips down, the men become tired and the whole job becomes really hard work."

Between 8,000 and 10,000 ft. of the chilled water piping is underground and this amounts to 60% of the total amount of chilled water pipes. The two main line pipelines are each over 3,000 ft. in length with the longest branch line running 150 ft. Pipes range in nominal size from 18 to 8 in. on main lines and from 14 to 4 in. on the branch lines. All pipe is seamless steel meeting ASTM specification A53.



CHILLED WATER LINES ready for test.

The bottom of the earth trench, which is 6 to 11 ft. deep and up to 6 ft. wide, is covered with a 6-in. bed of sand. This is compacted with high-frequency vibrating equipment to provide a flexible carrier protecting the pipe against excessive shock in case of earthquake. After the pipe is lowered into place, it is covered with a backfill of sand on all sides. Each trench contains supply and return pipes.

In insulating the pipe, the pipe surface was first covered with an asphalt cutback. Foamglas was then cemented to the pipe with an asphalt cutback staggering and sealing the longitudinal joints. Stainless steel bands further secure the insulation after which a 1/6-in. asphalt coating was applied. Into this a glass fabric membrane was imbedded and a hand troweled mastic applied to complete the installation.

Three 1,150-Ton Units: York air conditioning equipment rated at 3,450 tons has been installed in the powerhouse building and will supply chilled water at a minimum of 45 deg. to air blowers in each structure—two manufacturing buildings, engineering laboratory, research building, education building and cafeteria. Parts of the system will operate on a seasonal basis but a portion is required to be in use constantly to maintain comfortable temperatures in manufacturing areas where heat is generated by machinery. In addition to the three 1,150-ton units, space is provided for still another should it become necessary.

John S. Bolles was architect; A. S. Peters & Son and Scott Co., mechanical engineers; Carl N. Swenson & Son and Haas & Haynie Corp., general contractors.

- **Racing fans insured clear view of track**

Steel plate girders cantilever 60 ft.

A THREE-LEVEL GRANDSTAND, featuring a cantilever roof supported by huge fabricated steel plate girders to give spectators an unobstructed view, is taking shape at the Stockton, Calif., fairgrounds in preparation for the August racing season.

Fifteen horseshoe shaped fabricated steel frames, standing 65 ft. high and set on 25-ft. centers, will form the framework for the 350-ft. pavilion, one of the first of its type to be built in the West. Ten-inch I-beams are being used as the purlins between the upright frames. Each of the sections is fabricated in four parts, bolted together at the jobsite before being erected.

Cantilever sections, fabricated by National Iron Works, extend about 60 ft. out from the back wall to form the roof cover. Use of this design makes possible the elimination of supporting columns usually associated with covered pavilions, permitting a clear view of the track and fairgrounds Metal louvers in the roof will facilitate air circulation.

The structure incorporates a mezzanine under the stands to house concessions and pari mutual windows. Other concessions and windows are located on the ground level under the mezzanine. In addition to horseracing, the grandstand will be used for rodeos, motorcycle races, outdoor stage shows and other events throughout the year. Seating 3,776, it is part of a multimillion-dollar modernization underway at the Stockton fairgrounds.

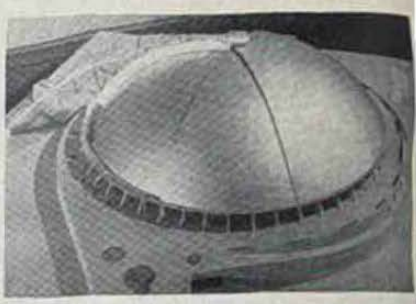
Architect and engineer for the pavilion is the California State Division of Architecture; structural engineer, Edwin A. Verner; and general contractor, M & K Corp.

AT STOCKTON FAIRGROUNDS cantilever sections eliminate columns, permit clear view of track.

Retractable steel dome for $20 million arena

The $20 million Pittsburgh Civic Arena, a key structure in the city's civic redevelopment program, will have a retractable stainless steel dome, largest in the world. When retracted, six movable sections (three on each side) of the 415-ft diameter roof will roll over the two fixed sections to open the arena to the skies.

The stainless steel sheathing and mechanical seals will cost an estimated $890,000; the structural steel that forms the dome, $4 million. Mitchell & Ritchey are architects for the arena; Amman & Whitney, engineering consultants.



LARGEST MOVABLE DOME in world will provide Pittsburgh with open air stadium that can be converted to weatherproof auditorium at press of button. Seating arrangement will accommodate from 7,500 to 14,000 persons depending upon event.

Idaho dry kiln has upside-down roof

Extreme humid conditions in dry kilns prompted an engineer to transpose the usual positions of vermiculite roof insulation and roofing at the Emmett, Idaho, mill of Boise Cascade Corp., as a means of assuring maximum protection for the insulation and thus reducing heat loss through the deck. An asphalt mastic "roofing" was applied under the structural concrete roof and then an insulating concrete fill was placed, thickness varying from 3 to 8 in. for drainage purposes. Its surface is protected with a clear silicone to act as a watershed.

Four thousand bags of Zonolite concrete aggregate (1:6 mix) were required for the 26,500 sq. ft. of roof area. C. M. Lovested was engineer.

Aluminum roof, glass walls

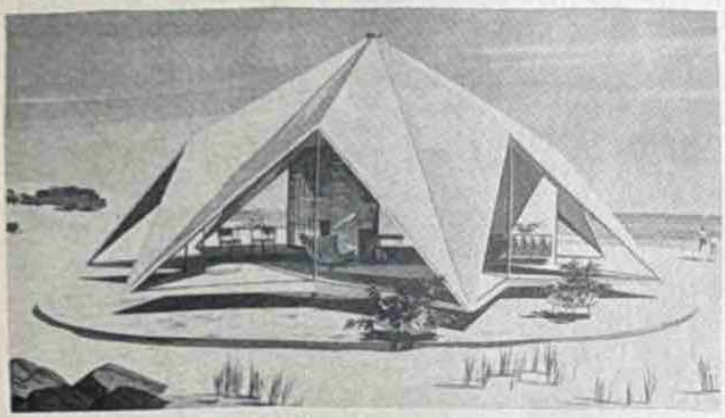
A BEACH HOUSE composed of colored aluminum and glass can now be fabricated and erected anywhere in the U. S. through arrangements made by its sponsor, Aluminum Company of America. The star shaped, luxury residence was introduced last year as part of Alcoa's collection of designs of the future.

Planned by Robert Fitzpatrick of the architectural firm of Harrison & Abramovitz, the 1,330-sq. ft. structure currently is priced by builders in the $25,000-and-up range. These quotations have covered fabrication and complete installation on the owner's lot. Construction would be by local contractors. Alcoa will not manufacture the dwelling but will supply aluminum to the fabricators. Thus far, one Pennsylvania firm has announced its readiness to produce the beach house.

Engineered around a central aluminum column, the floor plan is based on a circle of 37-ft. diameter, formed by small identical triangular sections. A peaked aluminum roof fits over the house like a conical cap, 15½ ft. above the floor at its central point. Walls are triangular glass panels which fit snugly into the inverted V shaped grooves formed by the roof.

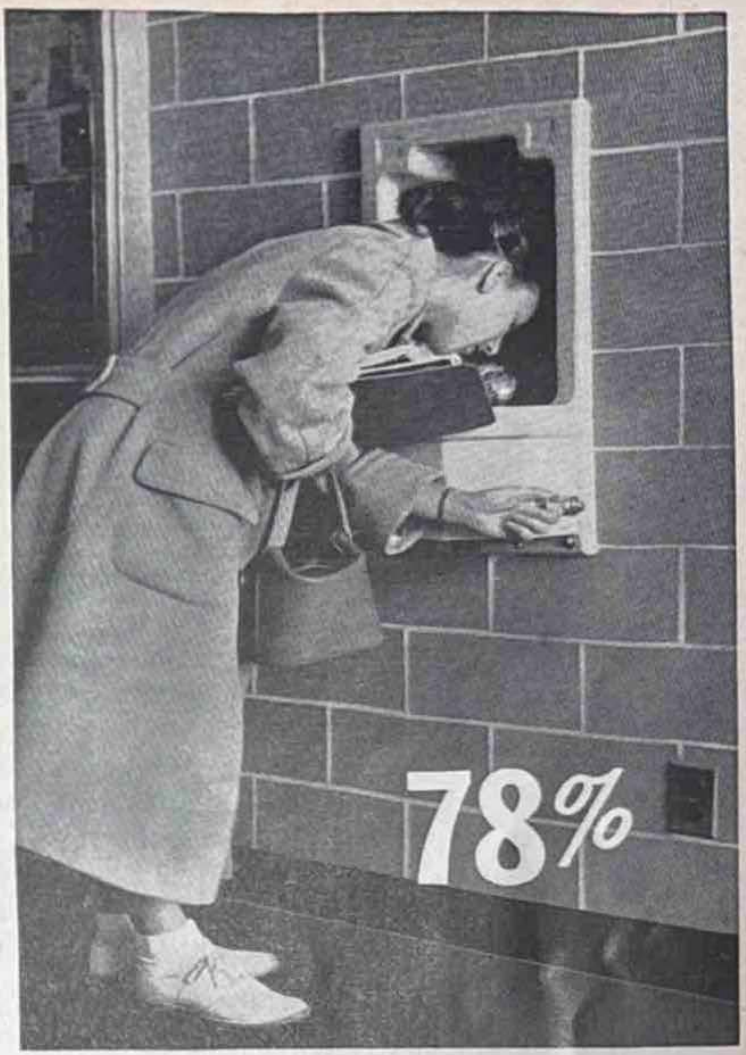
One concept, not planned for immediate availability, calls for the central column to be mounted on a turning mechanism so that the entire house can move with or away from the angle of the sun.

METAL AND GLASS STRUCTURE, displayed in scale model at 1958 Los Angeles Home Show, may soon be fabricated commercially.



Product developed from wood residues

"One of the most significant developments in the Wood Technology Section in years" is the way that Dr. George Marra, who heads that section at State College of Washington, decribes Flapreg, a new product composed of wood flakes and resin. In appearance and physical properties, it resembles Compreg and Impreg, two products made from high-grade veneer. In contrast, Flapreg is inexpensive to produce because flakes can be made from wood residues and can be handled mechanically throughout the process. The finished product has a shiny, varnished appearing surface and is strong and suitable for many uses, including table, counter and furniture tops and wainscoting in public buildings. It has been developed by John W. Talbott, wood technologist with the college's Industrial Research Division. Report No. 5 explaining the process can be obtained by writing to Technical Extension Services at Washington State in Pullman.



78% of School Officials say*

"GLAZED STRUCTURAL WALLS ARE EASIER TO CLEAN"

OK — so everyone already *knows* tile is easier to clean. But, some people don't yet realize that installed cost of Kraftile Glazed Structural Wall Units is *competitive*.

It's structural wall and ceramic finish combined. Masons do the whole job — fast. No other trades required. Resists wear, stains, odors — never needs painting. Clear glaze plus 12 attractive colors. Standardized sizes and shapes for every requirement.

* *Naturally, it's our own survey. Like to see the full report? Shape chart, Graphic Standards for Glazed Tile and specification details also available for the asking.*

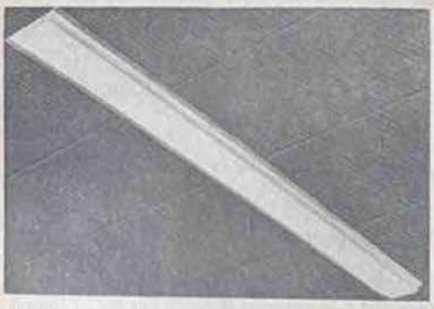
KRAFTILE

KRAFTILE COMPANY · NILES, CALIFORNIA

PRODUCTS

high output troffer

First recessed troffer to use the high output 800- and 1,500-milliamp lamps, the Argus produces custom high level



lighting at low cost. It is especially suited for large offices, drafting rooms and merchandising areas where long continuous lines of unbroken light are desirable. The troffer is available in widths up to 12 in. (8 in. is standard) and in units up to four lamps (slimline only); standard lengths are 4, 6 and 8 ft.—Lighting Dynamics.

(Item No. 1)

form tie

Plasticone, designed to produce a positive breakoff 1 or 1½ in. back from the surface of the finish concrete, incorporates a molded polyethylene cone which is inserted in each end of the form tie. It envelopes the tie from the point of breakoff out to the surface of the wall, thus preventing excess bleed at the tie-slot. Since concrete cannot adhere to its glass-smooth surface, the cone can be removed and tie broken back immediately after stripping the forms.—Gates & Sons, Inc.

(Item No. 2)

semitransparent stains

An entirely new series of Olympic semitransparent stains for both redwood and cedar range from an off-white through 14 varied hues of grays; from light and dark browns to a near-black. (Sample color fans are available.) Stains are offered in two consistencies: heavy bodied for use on new woods and for restaining and recoloring side walls and roofs; penetrating for use on new woods only. They are free of creosote and wax resins and can be restained or painted easily.—Olympic Stained Products Co.

(Item No. 3)

plywood form coating

Formsaver is a coating to be applied by brushing, spraying or dipping to plywood concrete forms to permit them to be used over and over again without loss of effectiveness. By coating and sealing the faces and edges of the form, it prevents water or moisture absorption, delamination of the plywood, checking and warping. Formsaver covers 200 gal. per square foot, requires no thinner and is quick drying so that forms may be stacked at once.—A. C. Horn Co., Inc.

(Item No. 4)

office machine enclosure

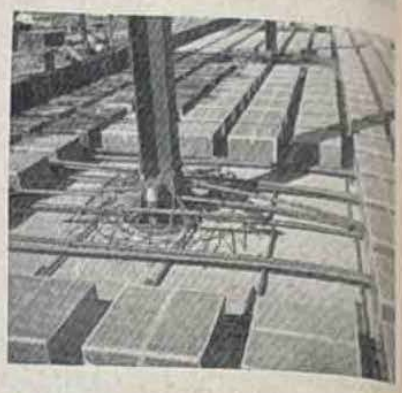
An all-steel office machine enclosure is reported to reduce machine noise by more than 50%. Among GSC features: level adjustment on legs; optional lighting; standard office gray and white colors, with special painting on request. Metal glides on bottom of legs permit easy moving in the office.—General Sound Control, Inc.

(Item No. 5)

post-beam connector

A simple and inexpensive way to firmly connect wood posts to beams or concrete, the Teco-Cal Ank-R-Cap has special appeal to the architect and engineer because it can be completely concealed by ordinary means, leaving a neat finish to the exposed members. Formed from 16-gage galvanized steel, the connector is produced in two sizes —4 and 6 in.—which fit most connections and reportedly has a dependable resistance to uplift and is adequate for all directions of loads.—Timber Engineering Co. of California, Inc.

(Item No. 6)



fiberboard void form

Use of Formavoid, initially employed in concrete lift slab construction, has now been extended to include poured-in-place, precast and prestressed concrete construction. The fiberboard void form has a special plastic coating which resists moisture penetration from wet concrete and affords good stripping. Its adaptability in shape and size variations presents broader design possibilities to architects and engineers.—Container Corporation of America.

(Item No. 7)

sliding glass doors

Arcadia's Series 102 sliding glass door introduces several engineering features: complete watertightness due to a unique sill design and outside slider that eliminate interior and exterior pressure problems; removal of the screen to the inside of the door which means unusually clean sight lines; replacement of metal tracks with nylon; and a neoprene glazing channel which eliminates putty. Especially designed for economical installation, Series 102 is manufactured in aluminum.—Arcadia Metal Products.

(Item No. 8)

plastic pipe

After several years of research, Quaker has made a move toward lowering the price of flexible plastic pipe without sacrificing wall thickness, pipe weight or burst strength. By adding a pure white polyethylene core, the pipe also takes on eye appeal and has excellent corrosive resistance to any type water.—Quaker Rubber Division, H. K. Porter Co., Inc.

modular cap

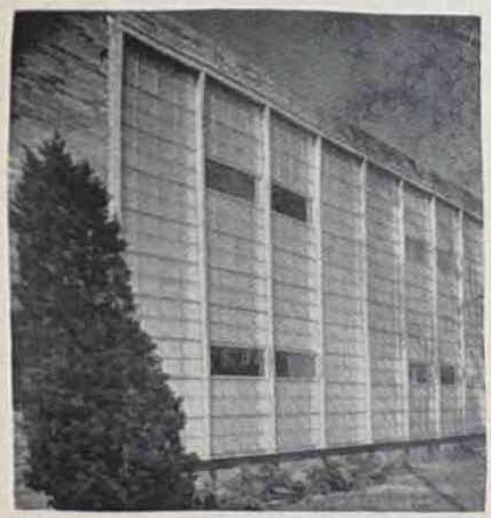
Redondo's continuous molded surface between cap and deck eliminates hard-to-clean grout joints of a two-piece installation on kitchen decks, bathroom counters and pullmans; answers the designers' demand for linear objectivity — grout lines continuing unbroken throughout. The 6-in. sides of the modular cap are being duplicated in all trim shapes in the 900 Series Wear-Ever glazes. — Redondo Tile Co. **(Item No. 10)**

forced air furnace

Payne's Series 10 Imperial forced air furnace line includes five sizes of downflow models in capacities from 80,000 to 160,000 Btu. and nine sizes of upflow models from 75,000 to 200,000 Btu. All are available with either black iron or the new Astrogard coated heating elements. The latter is described as "a patented formula which includes boron and 22 other elements combined for scientific fusion to metal by a cermet process developed for jet engines, air frames and missile parts exposed to sudden thermal shock changes in temperature," resulting in corrosion resistance and other protective qualities.—The Payne Co. **(Item No. 11)**

curtain wall system

Thinlite curtain wall system, a complete enclosure element with both exterior and interior finish, insulation, structural independence and a means of attachment to the building, is said "to allow the architect complete freedom to express his own individuality of design." The daylight-controlling glass units are hollow, 2 in. thick and 12 in. square, planned for either a 4- or 5-ft. horizontal module. Basic panels are available in three colors—white for general use; blue-green for severe sunlight exposures; sunlight yellow for non-sun exposures. As a means of design expression, basic panales are supplemented with ceramic-face glass, decorative glass, porcelain and other special types.—Owens-Illinois Glass Co. **(Item No. 12)**



low voltage systems

Low voltage, multiple switching systems for residential and commercial installations in all price ranges now are a practical reality. Touch-Plate offers prewired units, color coded leads to provide a color matching method of wiring; pigtails installed at the factory on all components; switches preassembled at the factory; and multiple sections controlling a single circuit wired in parallel. No conduit is required and switches mount in switch plaster rings, eliminating boxes, and are designed with only ½-in. depth.—Touch-Plate Manufacturing Corp. **(Item No. 13)**

CRAFTSMANSHIP *for*
America's most beautiful homes

Split by hand from one of Nature's most durable woods—the giant Western Red Cedar—these rugged shakes are the aristocrats of roofing and siding materials. Their quality, however, depends upon the care and ability of the man who makes them. *For shake-splitting is truly a craft.* That is why the Certi-Split label is supremely important to you. Insist that this label appear beneath the bandstick of every shake bundle. It is your assurance of *top quality, uniform quality* that has been examined by experienced, impartial Bureau inspectors.

deaths

Clyde Grainger, 71, a fellow of the AIA, died June 21 after several weeks' illness. A graduate of the University of Washington, he joined the firm of Thomas, Grainger & Thomas in 1924, designing such buildings as Harborview County Hospital, Rhodes Department Store and the university's Bagley Hall. The architect was a member of the Seattle Planning Commission from 1944-50 and a past president of the Washington State Chapter, AIA.

retirements

P. T. Poage, assistant architect for a third of a century in the California State Division of Architecture, will retire August 1.

elections

Montana State Board of Architectural Examiners has elected these officers; Sigvald L. Berg, Helena, president; Chandler C. Cohagen, Billings, secretary; Angus V. McIver, Great Falls, treasurer; and H. C. Cheever, Bozeman, reelected executive secretary-treasurer.

John B. Morse, architect, has been elected president of the Greater Seattle Housing Council.

awards

Recipient of an honorary Doctor of Fine Arts degree from the California College of Arts and Crafts, Los Angeles architect Charles Luckman delivered the commencement address at the Oakland institution last month.

Gregory Ain, Los Angeles architect and visiting critic in the School of Architecture at the University of Southern California since 1949, has received the Silver Medal, annual award of the SC student chapter of Scarab. The fraternity recognized Ain's "great contribution to contemporary architecture and the sincerity of his continuing efforts to bring to young people in the field the benefits of his experience as an outstanding architect."

lecturers

Richard J. Neutra presented a series of lectures on "Architecture Today and Tomorrow" at the Uni-

versity of Witwatersrand in Johannesburg last month. The Los Angeles architect was sponsored by the Students' Visiting Lecturers Fund, administered by students who select personalities to discuss the fields in which they have won world recognition.

✔ Myer R. Wolfe, professor of urban planning at the University of Washington, has been awarded a Fulbright grant to lecture in Denmark and is expected to leave Seattle about January 1.

architectural tours

✔ The annual Mexican architectural seminar-tour will get underway September 21, the 13-day trip including visits to the finest homes and architects' offices. Address inquiries to T. H. Hewitt, 2413 Driscoll St., Houston 19, Texas.

✔ Kenneth M. Nishimoto, Pasadena architect, will again lead an architectural tour to Japan, flying from Los Angeles or San Francisco to Honolulu October 9 and then on to Tokyo. (Accomodations by ship also will be available.) Three weeks will be spent visiting landmarks, architecturally famous structures and model Japanese gardens. For further details write the architect at 263 S. Los Robles Ave., Pasadena, Calif.

campus notes

✔ Chairman Harry C. Weller has announced several changes in the teaching staff of the department of architectural engineering at the State College of Washington. Fred G. Rounds, associate professor, is retiring after many years of service, both in the department and as supervisor of buildings and grounds. He is remaining in Pullman to open his own office for the practice of architecture. Rounds will be succeeded by Albert D. Poe, assistant professor, from the School of Architecture and Allied Arts at the University of Oregon. Charles D. Peterson will go into private practice in Salt Lake City, being replaced by Donald R. Heil of Chicago, most recently associated with the office of Skidmore, Owings & Merrill.

AIA activities

✔ Washington State Chapter has elected these officers: Harrison J. Overturf, president; Lawrence G. Waldron, first vice president; Thomas F. Hargis Jr., second vice president; Talbot Wegg, secretary for his second term; and David R. Anderson, treasurer. All are from Seattle except Hargis of Yakima.

Chaotic building codes (Cont'd. from p. 10)

Jurisdictional Disputes in Washington was notified. The National Joint Board notified John E. Rooney, president of the Plasterers Union in Cleveland, to order the men back to work. Instead, we got word that they had "gone fishing." Those Texas plasterers must certainly like to fish, for they fished, off and on, for about six weeks until Mr. Rooney just happened to stop off at the Dallas Airport between flights.

Working tools are another source of jurisdictional trouble. I learned that if you attach a handle to a blade in the same direction as the blade, you have a trowel and you are a plasterer. If you attach the same handle at right angles to the blade, you have a broad knife and you are a painter. Now a trowel happens to be a more efficient tool for spackling, but the painters cannot use it. Far worse, in New York we cannot spray paint or roll it on without special permission from the union. But do not laugh. In New York we can at least use a brush 5 in. wide. In many cities you can use

new perimeter insulation

SCORBORD

TRADEMARK

cuts costs—speeds construction

Scorbord* is a Dow plastic foam insulation specifically designed for use along the edges of foundations. Scorbord substantially reduces building costs—cuts sawing, cutting and fitting time up to 80 per cent. An FHA "materials release" has been issued.

Big 8-foot x 2-foot, easy-to-handle sections of Scorbord are pre-scored and snap quickly to almost any desired width. Lightweight Scorbord lasts a lifetime. It resists moisture, heat, cold and deterioration and will not attract rodents or vermin. It can withstand weights of 2,000 pounds per square foot.

*Scorbord is a trademark of The Dow Chemical Company.

Warehouses in Seattle, Portland, Spokane

only a 4-in. brush.

All these restrictions cannot help but affect costs—and they do. The electrical subcontract bid on our Pittsburgh Hilton Hotel last year, with 815 rooms, no boiler or refrigeration plant, and with no laundry to connect, was twice as high as the electrical bid on our Dallas hotel in 1953. And the Dallas job had 1,000 rooms, a complete boiler and refrigeration plant, and a laundry. There had been some inflation in the interim, to be sure, but prices had not risen that much.

Progress Denied: The point that emerges is this: American building, with all the technical developments and mass production methods supposedly at its command, actually can use only a small portion of the available technology. Why? Because of the provincialism and isolationism of local interests. In Pittsburgh when I tried to quote a nationally recommended code on ventilation recently I was advised, in effect, that "you are in Pittsburgh now." Contrast this featherbedding and restrictionism with our experience in countries abroad where we are building five hotels. In every case the foreign governments wanted to capitalize on the latest technical developments of the U.S. On each of the jobs, for instance, we are following the recommendations of the National Plumbing Code and consequently we are using only a fraction of the amount of pipe that we would have to use here.

Masters or slaves? How can we solve this problem of anarchic codes and restrictive union practices? This is no job for one architect, certainly, or even for a dedicated group of architects. It is a job for the entire architectural profession. Are we to be master builders, or are we to be pliant slave builders who will accept the tyranny of senseless codes? What we need is joint action. If one doctor advises the use of a new vaccine, his voice will probably not carry far. But if the American Medical Association announces that a certain vaccine is beneficial, the public listens. Why does not the AIA emulate the AMA? Why does not the AIA speak out on codes?

What the AIA must do is clear. It must: 1) proselytize local governments to adopt and follow the national codes proposed by various national organizations and other groups; 2) undertake a well-organized campaign to educate the public to just how damaging restrictive union practices are.

The AIA should adopt forthwith a resolution calling on the cities and states to prescribe that builders meet the specifications of recommended national codes such as the National Electric Code, the National Plumbing Code, the codes of the American Concrete Institute and the American Institute of Steel Construction, and the standards of either the Building Officials Conference of America or the Uniform Code of the International Conference of Building Officials. Later, the AIA should propose amendments and improvements to these codes and make sure that local appeal boards are set up to correct the more serious flaws that show up.

The second task — educating the public to the harm done by restrictive union practices—is more difficult of achievement. The public must be told through a vigorous public relations campaign waged by the AIA, through institutional advertising and through local chapter action, just how much these practices are costing home owners and citizens generally. And the public must also be told which practices are causing the most damage—a list of the 20 or 25 worst rules could readily be drawn—and what must be done about them.

Clearly, this is a tremendous challenge. To meet it will not only require great effort but a unity of purpose rarely achieved by the architectural profession. Yet is there really an alternative?

"Additional telephone outlets are a big plus when making a sale!"

says E. D. Gardiner, President, Gardiner Construction Co., Mission San Jose, California

"Our clients have learned to look for the 'important extras' when buying a home—and complete telephone planning is one of the things at the top of the list. Wise buyers want a home that will meet their telephone needs today—and tomorrow. That's why we include built-in outlets in all the busiest rooms."

To quality home builders like E. D. Gardiner, telephone planning is as important as adequate electrical wiring. It insures a home that will grow in value over the years—along with the builder's reputation!

We'll be glad to help you plan built-in telephone facilities. Just call our business office, and ask for our free architects and builders service.

Pacific Telephone

It pays to include Telephone Planning in every home you build!

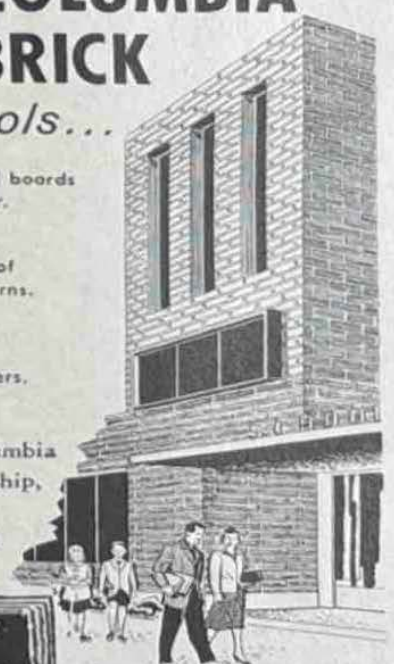
6 reasons why architects prefer COLUMBIA BRICK for schools...

1 Low maintenance saves school boards thousands of dollars each year.
2 Enduring beauty.
3 Flexibility of design — choice of many colors, texture and patterns.
4 Sound, fire-safe construction.
5 Creates feeling of pride and security in students and teachers.
6 Stands up to hard usage.

Add these features to Columbia Brick's superior craftsmanship, and unique clays, and you know why Columbia Brick is "specified" so often.



Columbia BRICK

write for this new book on America's newest fireproof insulation board—

ASBESTOLUX

Asbestolux is a unique inorganic board made of special long fiber asbestos. A third the weight of ordinary asbestos cement boards, Asbestolux is as workable as wood with standard carpenter's tools. Asbestolux is completely incombustible and will help you solve an unlimited number of construction, maintenance and fire protection problems more efficiently. Why not write today for your copy of the book, a sample and the name of your nearest distributor?

ONTANA

VING— Billings, Mont.
(Estimated cost $33,400)
A hearing will be held at 11 a.m., July
at the Courthouse, by the Yellowstone
unty Commissioners, Billings, on pro-
sed creation of rural SID No. 408, for
stalling blacktop paving in Wyoming Ave.,
ellowstone Ave., Clark Ave., Lewis Ave.,
urlington Ave., Lillis Lane, and 25th St.
., all west from 24th St. W., also instal-
tion of two catch basins at east end of
Wyoming Ave., with connections to a pipe
rain in 24th St. W., Billings. EE 7-16

WATER SYSTEM— Columbia Falls, Mont.
Plans for improvements to the municipal
water system have been approved by the City Council, City Hall, Columbia Falls. Installation of a new 10" main to serve the new Columbia Falls High School is the first improvement, estimated at $40,000. Engineers: Morrison-Maierle, Inc., 910 Helena Ave., Helena. RB 7-3. Previous report 6-13

HIGHWAY CONSTRUCTION—
Columbia Falls, Mont.

A proposed new highway connecting Glacier National Park with adjoining Waterton Lakes National Park in Canada on the west side of the Continental Divide was approved recently by the U.S. Senate. Construction is scheduled for two segments of the proposed highway within the U.S. by the National Park Service. Work may be started late this summer on a new 13-mi. section from Apgar, inside Glacier Park near west entrance, up Camas Creek to vicinity of Big Creek Ranger Station of the U.S. Forest Service, connecting with existing Forest Service North Fork road just outside western park boundary. A roadless area of about 34 mi., most of which is in British Columbia, must be built to complete the new highway. Construction of this project would create a loop road about 130 mi. in length connecting the two units of Waterton-Glacier International Peace Park on the west.

Cost estimate for the Camas Creek cut-off road, including a bridge over the North Fork of the Flathead River, is about $3,000,000, which will provide a highway to replace the existing 30 mi. truck trail between Apgar and Polebridge on the proposed Glacier-Waterton road connection. RB 7-12

SATELLITE TELEVISION STATION—
Columbia Falls, Mont.

Television engineers have recently been making tests with a view toward erecting a satellite television station to rebroadcast Spokane and Missoula television programs in this mountainous area. Video Utility of Spokane has completed tests on Teakettle Mountain, just east of Columbia Falls, and indicates that a satellite there would provide reception for Columbia Falls, Hungry Horse, Martin City and West Glacier communities. Other surveys have been made on Big Mountain, near Whitefish; on Lone Pine Mountain, just southwest of Kalispell; and Buffalo Hill, north of Kalispell. Tests were made for Teakettle Television Association. Cost of building a satellite station, erecting the necessary power line and building an access road is estimated at between $5,000 and $10,000. RB 7-15

▲TANK FOUNDATION—Great Falls, Mont.
Six bids received by City Council, City Hall, Great Falls, for construction of elevated tank foundations under Contract No. 6. Bids opened July 7. Advertisements for Bids

Advertisements reaching us not later than Wednesday noon will appear the same week.

THE RATE for Advertisements for Bids is 35 cents per line for the first insertion; 25 cents per line for each insertion thereafter.

STATE HIGHWAY PROJECTS
BIDS CLOSE 10 A.M., AUGUST 5
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, August 5, 1958, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

Bid proposals delivered in person will be received only at the Reception Desk located on the first floor of the Transportation Building.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashiers' check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payments to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal Funds have been allocated for items Nos. 1 to 8 inclusive.

The improvements for which bids will be received follow:

1. Constructing Bridge Piers on PSH No. 1 in King County, SEATTLE FREEWAY-LAKE WASHINGTON SHIP CANAL BRIDGE PIERS NOS. 18 TO 24 INCLUSIVE, FAP No. I-5-3(34)169, involving about 5,890 cubic yards of Common Excavation, 1,105 tons of Ballast and Crushed Surfacing, 40 cubic yards of Crushed Cover Stone, 5 tons of Asphalt Cement, 319 square yards of Cement Concrete Pavement and Sidewalk, 230 linear feet of Cement Concrete Curb, 19,120 cubic yards of Concrete, 1,755,000 pounds of Steel Reinforcing Bars and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
2. Draining, Grading, Surfacing, Constructing Bituminous Surface Treatment, Paving with Asphaltic Concrete, Installing Illumination and Signing on 4.528 miles of Primary State Highway No. 1 in Grant County, EPHRATA TO SOAP LAKE FAP No. DF-031-1(8), involving about 267 stations of Grading, 51,500 tons of Crushed Surfacing and Ballast, 239 stations of Bituminous Surface Treatment, 26,015 tons of Asphaltic Concrete, 4,836 linear feet of Cement Concrete Curb, 1,196 linear feet of Metal Pipe, 78 linear feet of Concrete Pipe, a lump sum bid for Three Illumination Systems, a lump sum bid for Signing and other items.
3. Constructing Two Reinforced Concrete Bridges on 0.021 mile of Primary State Highway No. 2 in King County, F STREET AND M STREET OVERCROSSINGS IN AUBURN, FAP No. F-046-1(9), involving about 486 linear feet of Standard Bridge Railing, 962 cubic yards of Concrete, 150,000 pounds of Steel Reinforcing Bars, a lump sum bid for Two Superstructures (about 306 cubic yards of Concrete and 33,200 pounds of Steel Reinforcing Bars) and other items.
4. Clearing, Draining, Grading and Surfacing with Selected Roadway Borrow on 1.542 miles of a Skagit County Road, EAST SAUK ROAD, FAS No. DS-0758(3), involving about 15 acres of Clearing, 33,720 cubic yards of Common Excavation and Borrow, 7,520 cubic yards of Solid Rock Excavation, 3,002 cubic yards of Riprap, 13,430 cubic yards of Selected Roadway Borrow, 470 linear feet of Concrete Pipe, 355 linear feet of Metal Pipe, 124 linear feet of Structural Plate Pipe-Arch, 112 Guide Posts and other items.
5. Surfacing and Constructing Bituminous Road Mix on 4.730 miles of a Spokane County Road, MONROE ROAD, FAS No. DS-0473(1), involving about 12,325 tons of Crushed Surfacing and Mineral Aggregate, 13,300 tons of Selected Roadway Borrow, 580 cubic yards of Crushed Cover Stone, 330 tons of Asphalt Cement and other items.
6. Draining, Grading, Surfacing, Paving with Asphaltic Concrete and Stockpiling on 1.380 miles of a Spokane County Road, GRAHAM ROAD, DAP No. R-AD-19(1), involving about 8,460 cubic yards of Common Excavation, 43,920 tons of Crushed Surfacing, Crushed Cover Stone and Maintenance Rock, 2,540 tons of Asphaltic Concrete, 208 linear feet of Metal Pipe and other items.
7. Surfacing and Constructing Bituminous Surface Treatment on 2.960 miles of a Klickitat County Road, GOLDENDALE-BICKLETON, FAS No. DS-0396(6), in-

volving about 5,290 cubic yards of Crushed Surfacing and Crushed Cover Stone, 110 tons of Asphalt Cement and other items.

8. Draining, Grading and Surfacing on 0.889 mile of Thurston County Roads, MULLEN ROAD AND JOHNSON POINT ROAD, FAS Nos. S-0982(2) and DS-0504(1), involving about 24,990 cubic yards of Unclassified Excavation and Borrow, 3,710 cubic yards of Crushed Surfacing and Ballast, 448 linear feet of Concrete Pipe and other items.

9. Grading, Surfacing and Paving with Cement Concrete and Asphaltic Concrete on 0.600 mile of a Bellingham City Street in Whatcom County, ACESS ROAD TO WESTERN WASHINGTON COLLEGE OF EDUCATION, a State Project, involving about 11,470 cubic yards of Unclassified Excavation, 1,560 cubic yards of Selected Roadway Borrow, 470 cubic yards of Crushed Surfacing, 210 tons of Asphaltic Concrete, 9,620 square yards of Cement Concrete Pavement, 6,225 linear feet of Cement Concrete Curb, 845 square yards of Cement Concrete Sidewalk, 36 cubic yards of Concrete, 1,510 pounds of Steel Reinforcing Bars, 729 linear feet of Concrete Pipe and other items.

10. Stockpiling Crushed Surfacing, Crushed Screenings and Maintenance Rock on Primary State Highway No. 22 in Lincoln and Stevens Counties, DAVENPORT TO JST, PSH No. 3, a State Project, involving about 69,500 tons of Crushed Materials and other items.

STATE HIGHWAY PROJECTS
BIDS CLOSE 9 A.M., JULY 22 and 23
Helena, Montana
NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the offices of said Commission in the City of Helena until 9:00 a.m. on July 22, 1958 and July 23, 1958. The **Form For Bid Bond** is no longer included in the **Instructions to Bidders**, and no bid bond will be acceptable. No proposal will be considered unless accompanied by a proposal guaranty in an amount of at least (5) per cent of the bid, made unconditionally payable to the State Highway Commission of Montana, which at the bidder's option may be cash, cashier's check, or certified check. This letting has been divided into two sections, and bids will be opened on two consecutive dates as shown below:

BID PROPOSALS TO BE OPENED JULY 22, 1958

(Bids will be received until 9:00 a.m. on July 22, 1958. The proposals will be publicly opened and read immediately thereafter. YOUR ATTENTION IS DIRECTED TO THE 9:00 A. M. HOUR SET FOR THE OPENING OF BIDS IN ROOM 151 OF THE STATE HIGHWAY DEPARTMENT BUILDING.)

1. **I-IG-ING 15-8(3)351** — Grade, aggregate surfacing, plant-mix surfacing, seal-coat oiling, drain, and construction of one 276' steel interchange and one 360' combination steel railroad overpass concrete interchange on 5.623 miles on the Shelby-West Side Road in Toole County, involving about 1,287,008 cu. yds. excavation; 424 cu. yds. gravel backfill; 233,696 mi. yds. overhaul; 233,208 tons crushed aggregate; 228,275 tons uncrushed aggregate; 52,950 tons plant-mix bituminous surfacing; 28,426 M gals. watering; 4,620 units rolling; 2,918 tons asphalt cement; 384 tons cutback asphalt; 319 tons emulsified asphalt; 374 lin. ft. structural plate pipe; 4,082 lin. ft. reinforced concrete pipe; 170 lin. ft. relay pipe culverts; 9,087.5 lin. ft. guard rail; 97 hours watering; 4,041 rods wire fence; 142 each fence panels; 3,098 lin. ft. concrete curb and gutter; 9,560 lin. ft. concrete median curb; 1,304 sq. yds. concrete sidewalk; 6 each 24' stockguards; 823 lin. ft. prebored holes for piles; all lump sum structural steel; all lump sum electrical conduit system; 1994 lin. ft. steel bridge rail; 235,502 lbs. reinforcing steel; 1,717.7 cu. yds. concrete; 10.50 cu. yds. structure excavation; all lump sum drainage system; 10,819 lin. ft. driving treated timber piles; 11,345 lin. ft. furnishing treated timber piles; all lump sum treated timber test piles; 3,770 lin. ft. precast prestressed concrete beam; and other items. Project to be completed in 300 calendar days.

2. **I 90-3(3)157 U2**—Construction of one 113' and one 153' concrete dual structures and four 17.25' concrete minor structures on the Bearmouth-Deer Lodge Road in Granite and Powell counties, involving about: 610.56 lin. ft. steel beam bridge rail; 300,957 lbs. reinforcing steel; 2,610.4 cu. yds. concrete; 2,565 cu. yds. structure excavation; 8,360 lin. ft. driving treated timber piles; 8,800 lin. ft. furnishing treated timber piles; all lump sum treated timber test piles; 3,060 lin. ft. precast prestressed concrete beam; and 610 lin. ft. steel bridge rail. Project to be completed by July 31, 1959.

3. **DF 176(6)**—Grade, aggregate surfacing, plant-mix surfacing, seal-coat oiling, and drain 5.720 miles on the Augusta-Sun River Road in Cascade County, involving about: 149,943 cu. yds. excavation; 32 cu. yds. riprap; 100 cu. yds. gravel backfill; 68,135 mi. yds. overhaul; 149,052 tons crushed aggregate; 16,056 tons plant-mix bituminous surfacing; 5,000 M gals. watering; 900 units rolling; 882.17 tons asphalt cement; 150.61 tons cutback asphalt; 125.47 tons emulsified asphalt; 1,108 lin. ft. corrugated metal pipe; 266 lin. ft. structural plate pipe; 3,102 lin. ft. reinforced concrete pipe; 100 lin. ft. relay pipe culverts; 80 hours watering; 4,450 lbs. reinforcing steel; 44.5 cu. yds. concrete; and other items. Project to be completed in 180 calendar days.

4. **DF 198(4), F 334(15)U2 and DF 334(16)**—Grade, soil cement stabilization, plant-mix surfacing, seal-coat oiling, and drain 9.417 miles on the Broadus-Olive and Crow Agency-Broadus, and seal-coat oil on 10.980 miles on the Crow Agency-Broadus Road in Powder River County, involving about: 553,620 cu. yds. excavation; 104 cu. yds. riprap; 2,500 cu. yds. scoria; 386 cu. yds. gravel backfill; 49,024 cu. yds. soil aggregate; 41,783 mi. yds. overhaul; 5,660 tons crushed aggregate; 25,048 tons plant-mix bituminous surface; 9,415 M gals. watering; 1,257 units rolling; 2,003.97 tons asphalt cement; 619.93 tons cutback asphalt; 186 lin. ft. corrugated metal pipe; 386 lin. ft. structural plate pipe; 1,736 lin. ft. reinforced concrete pipe; 1,414 lin. ft. relay pipe culverts; 181 hours watering; 17,152 bbls. Portland cement; 191,752 sq. yds. processing; and other items. Project to be completed in 190 calendar days.

5. **U-UG 405(3) U2**—Grade, aggregate surfacing, plant-mix surfacing, seal-coat oiling, and drain 0.832 mile on Fifth Street, Sixth Street and Madison Street, Missoula Road in Missoula County, involving about: 91,278 cu. yds. excavation; 250 cu. yds. riprap; 100 cu. yds. gravel backfill; 1,141.8 sq. yds. concrete sidewalk; 60,210 mi. yds. overhaul; 35,810 tons crushed aggregate; 6,868 tons plant-mix bituminous surfacing; 2,061 M gals. watering; 350 units rolling; 378.39 tons asphalt cement; 55.23 tons cutback asphalt; 45.98 tons emulsified asphalt; 2,625 lin. ft. reinforced concrete pipe; 100 lin. ft. relay pipe culverts; 2,437.5 lin. ft. guard rail; all lump sum traffic-signal system; 15 hours watering; 8,994 lin. ft. remove concrete curb; 700.9 sq. yds. remove concrete sidewalk; 21 each remove drop inlets; 14,858.9 lin. ft. concrete curb and gutter; 1,720.2 lin. ft. concrete median curb; 42 each drop inlets; and other items. Project to be completed in 120 calendar days.

6. **S 127(3) U1**—Grade, aggregate surfacing; and drain 6.383 miles on the Philipsburg-West Road in Granite County, involving about: 508,026 cu. yds. excavation; 135 cu. yds. riprap; 715 cu. yds. binder; 100 cu. yds. gravel backfill; 1,430 mi. yds. haul on binder; 192,493 mi. yds. overhaul; 38,113 tons crushed aggregate; 8,363 M gals. watering; 151 units rolling; 2,926 lin. ft. corrugated metal pipe; 28 lin. ft. reinforced concrete pipe; 100 lin. ft. relay pipe culverts; and other items. Project to be completed in 200 calendar days.

7. **S 127(3)U2**—Construction of one 101.5' reinforced concrete bridge on the Philipsburg-West Road in Granite County, involving about: 205.1 lin. ft. steel beam bridge rail; 19,571 lbs. reinforcing steel; 160.2 cu. yds. concrete; 175 cu. yds. structure excavation; and 400 lin. ft. precast prestressed concrete beam. Project to be completed by July 31, 1959.

8. **S 219(3)**—Plant-mix surfacing and seal-coat oiling on 6.006 miles on the Big Sandy-Rudyard Road in Hill County, involving about: 1,098 tons crushed aggregate; 11,982 tons plantmix bituminous surfacing; 35 units rolling; 659.75 tons asphalt cement; 38.94 tons cutback asphalt; 99.43 tons emulsified asphalt; all lump sum furnish and maintain water plant; and 31 hours watering. Project to be completed in 100 calendar days.

9. **S 245(1)**—Grade, aggregate surfacing, bituminous surface treatment, and drain 6.728 miles on the Gildford-South Road in Hill County, involving about: 203,187 cu. yds. excavation; 102 cu. yds. gravel backfill; 58,687 mi. yds. overhaul; 77,919 tons crushed aggregate; 4,543 M gals. watering; 815 units rolling; 156 tons cutback asphalt; 157 tons emulsified asphalt; 1,052 lin. ft. corrugated metal pipe; 116 lin. ft. structural plate pipe; 100 lin. ft. relay pipe culverts; 79 hours watering; and other items. Project to be completed in 180 calendar days.

10. **DS 251(2)**—Grade, aggregate surfacing, bituminous surface treatment, and drain 6.342 miles on the Helena North and East Road in Lewis and Clark County, involving about: 106,404 cu. yds. excavation; 100 cu. yds. gravel backfill; 4,596 mi. yds. overhaul; 105,531 tons crushed aggregate; 3,640 M gals. watering; 728 units rolling; 148 tons cutback asphalt; 148 tons emulsified asphalt; 600 lin. ft. corrugated metal pipe; 986 lin. ft. reinforced concrete pipe; 1,078 lin. ft. relay pipe culverts; 75 hours watering; and other items. Project to be completed in 150 calendar days.

11. **DS 302(14)**—Grade, aggregate surfacing, road-mix surfacing, seal-coat oiling and drain 2.197 miles on the Terry-Brockway Road in Prairie County, involving about: 298,147 cu. yds. excavation; 2,285 cu. yds. riprap; 100 cu. yds. gravel backfill; 48,608 mi. yds. overhaul; 9,469 tons crushed aggregate; 22,164 tons uncrushed aggregate; 5,031 M gals. watering; 746 units rolling; 241.92 tons cutback asphalt; 1,057 lin. ft. corrugated metal pipe; 100 lin. ft. relay pipe culverts; 4,075 lin. ft. guard rail; 12 hours watering; 2.041 miles processing; 556 sq. yds. processing; and other items. Project to be completed in 150 calendar days.

12. **DS 304(4)**—Aggregate surfacing, plant-mix surfacing, and seal-coat oiling 2.84 miles on the Galen-Anaconda Road in Deer Lodge County, involving about: 28,096 tons crushed aggregate; 5,403 tons plant-mix bituminous surfacing; 551 M gals. watering; 135 units rolling; 297.45 tons asphalt cement; 56.56 tons cutback asphalt; 47.2 tons emulsified asphalt and 15 hours watering. Project to be completed in 90 calendar days.

BID PROPOSALS TO BE OPENED JULY 23, 1958:

(Bids will be received until 9:00 a.m. on July 23, 1958. The proposals will be publicly opened and read immediately thereafter. YOUR ATTENTION IS DIRECTED TO THE 9:00 A.M. HOUR SET FOR THE OPENING OF BIDS IN ROOM 151 OF THE STATE HIGHWAY DEPARTMENT BUILDING.)

13. **I 90-1(4)60 U1**—Grade, aggregate surfacing, plant-mix surfacing, seal-coat oiling, and drain 4.991 miles on the Tarkio-Missoula Road in Mineral County, involving about: 1,117,099 cu. yds. excavation; 241 cu. yds. gravel backfill; 758,945 mi. yds. overhaul; 324,465 tons crushed aggregate; 34,139 tons plant-mix bituminous surfacing; 23,177 M gals. watering; 262.26 tons cutback asphalt; 218.88 tons emulsified asphalt; 1,874.49 tons asphalt cement; 650 lin. ft. corrugated metal pipe; 204 lin. ft. structural plate pipe; 3,401 lin. ft. reinforced concrete pipe; 100 lin. ft. relay pipe culverts; 7,037.5 lin. ft. guard rail; 102.79 acres clearing; 3,684 units rolling; 30.82 acres grubbing; 67 hours watering; 3,209 rods wire fence; 87 each fence panels; 9 each 24' stockguards; and other items. Project to be completed in 300 calendar days.

14. **I 90-1(4)60 U2**—Construction of two 128' concrete highway-over-highway overpasses and one 17.25' concrete machinery underpass on the Tarkio-Missoula Road in Mineral County, involving about: 550.86 lin. ft. steel beam bridge rail; 117,817 lbs. reinforcing steel; 991.1 cu. yds. concrete; 1,015 cu .yds. structure excavation; 1,798 lin. ft. driving treated timber piles; 1,860 lin. ft. furnishing treated timber piles; all lump sum treated timber test piles; and 1,500 lin. ft. precast prestressed concrete beam. Project to be completed by June 30, 1959.

15. **I 90-3(3)157 U1**—Grade, aggregate surfacing, plant-mix surfacing, seal-coat oiling, and drain 9.623 miles on the Bearmouth-Deer Lodge Road in Granite and Powell

counties, involving about: 2,158,144 cu. yds. excavation; 1,817 cu. yds. gravel backfill; 823,588 mi. yds. overhaul; 560,256 tons crushed aggregate; 530,020 tons uncrushed aggregate; 87,649 tons plant-mix bituminous surface; 53,963 M gals. watering; 9,115 units rolling; 4,865.13 tons asphalt cement; 775.43 tons cutback asphalt; 647.96 tons emulsified asphalt; 998 lin. ft. corrugated metal pipe; 2,018 lin. ft. structural plate pipe; 9,508 lin. ft. reinforced concrete pipe; 100 lin. ft. relay pipe culverts; 1,962.5 lin. ft. guard rail; 178 hours watering; 6,486 rods wire fence; 1,758 sq. ft. bin-type retaining wall; 23 each median inlet covers; 8 each 12' stock guards; and other items. Project to be completed in 400 calendar days.

16. **DF 62(10) & DF 225(4)**—Grade, aggregate surfacing, plant-mix surfacing, and seal-coat oiling 20.146 miles on the Shelby-Chester and Main Street Shelby Road in Toole County, involving about: 27,151 cu. yds. excavation; 100 cu. yds. gravel backfill; 2.724 cu. yds. concrete; 53,630 tons crushed aggregate; 1,008 M gals. watering; 58,927 tons plant-mix bituminous surfacing; 340 units rolling; 3,240.68 tons asphalt cement; 247.57 tons cutback asphalt; 428.62 tons emulsified asphalt; 94 lin. ft. concrete sewer pipe; 100 lin. ft. relay pipe culverts; 95 hours watering; and other items. Project to be completed in 170 calendar days.

17. **DF 258(11)**—Grade, aggregate surfacing, plant-mix surfacing, seal coat oiling, and drain 5.773 miles on the Wyoming Line-Bridger Road in Carbon County, involving about: 284,992 cu. yds. excavation; 819.8 cu. yds. riprap; 1,243 cu. yds. gravel backfill; 53,930 mi. yds. overhaul; 145,319 tons crushed aggregate; 15,680 tons plant-mix bituminous surfacing; 7,060 M gals. watering; 1,198 units rolling; 862.34 tons asphalt cement; 268.42 tons cutback asphalt; 272 lin. ft. corrugated metal pipe; 928 lin. ft. structural plate pipe; 598 lin. ft. reinforced concrete pipe; 100 lin. ft. relay pipe culverts; 38 hours watering; all lump sum remove existing structure; and other items. Project to be completed in 180 calendar days.

18. **F 270(8)**—Grade and drain 0.266 mile on the Kalispell-Whitefish Road in Flathead County, involving about: 83,949 cu. yds. excavation; 1,820 cu. yds. riprap; 100 cu. yds gravel backfill; 855 M gals. watering; 114 units rolling; 95 tons cutback asphalt; 994 lin. ft. corrugated metal pipe; 936 lin. ft. structural plate pipe; 100 lin. ft. relay pipe culverts; all lump sum remove existing structure; all lump sum maintain detour; and other items. Project to be completed in 90 calendar days.

19. **DS 9(8)**—Reshape, aggregate surfacing, and bituminous surface treatment 5.614 miles on the Cardwell-Boulder Road in Jefferson county, involving about: 48,723 tons crushed aggregate; 12,180 tons uncrushed aggregate; 1,247 M gals. watering; 332 units rolling; 124.10 tons cutback asphalt; 124.10 tons emulsified asphalt; 63 hours watering; 225 hours use of motor grader; and 56 hours use of scraper. Project to be completed in 100 calendar days.

20. **DS 54(5)**—Aggregate surfacing, plant-mix surfacing, seal-coat oiling, 9.121 miles on the Wyoming Line-Broadus Road in Powder River County, involving about: 78,231 tons crushed aggregate; 17,139 tons plant-mix bituminous surfacing; 2,086 M gals. watering; 470 units rolling; 943.57 tons asphalt cement; 326 tons cutback asphalt; 47 hours watering; 365 hours use of motor grader; 91 hours use of scraper; and 55 each guide posts. Project to be completed in 130 calendar days.

21. **S 98(2)**—Reshape, aggregate surfacing, plant-mix surfacing, seal-coat oiling, 12.703 miles on the Wolf Point-North Road in Roosevelt County, involving about: 102,310 tons crushed aggregate; 23,547 tons plant-mix bituminous surfacing; 3,215 M gals. watering; 775 units rolling; 1,295.5 tons asphalt cement; 242.55 tons cutback asphalt; 204 tons emulsified asphalt; 64 hours watering; 509 hours use of motor grader; and 127 hours use of scraper. Project to be completed in 130 calendar days.

22. **S 167(5)**—Grade, aggregate surfacing, bituminous surface treatment, and drain 4.54 miles on the Cardwell-Southeast Road in Madison County, involving about: 245,978 cu. yds. excavation; 405 cu. yds. gravel backfill; 42,342 mi. yds. overhaul; 60,735 tons crushed aggregate; 4,840 M gals. watering; 798 units rolling; 106.39 tons cutback asphalt; 106.39 tons emulsified asphalt; 4,180 lin. ft. corrugated metal pipe; 154 lin. ft. structural plate pipe; 100 lin. ft. relay pipe culverts; 54 hours watering; all lump sum remove miscellaneous items; and other items. Project to be completed in 150 calendar days.

23. **S 223(1) U1**—Grade, aggregate surfacing, bituminous surface treatment, and drain 6.003 miles on the Fairfield-Power Road in Teton County, involving about: 124,045 cu. yds. excavation; 254 cu. yds. gravel backfill; 24,799 mi. yds. overhaul; 77,181 tons crushed aggregate; 60,861 tons uncrushed aggregate; 4,554 M gals. watering; 873 units rolling; 159.02 tons cutback asphalt; 159.02 tons emulsified asphalt; 2,454 lin. ft. corrugated metal pipe; 46 lin. ft. reinforced concrete pipe; 94 lin. ft. relay pipe culverts; 47 hours watering; all lump sum remove existing structures; and other items. Project to be completed in 150 calendar days.

24. **S 223(1) U2**—Construction of two 57' treated timber bridges on the Fairfield-Power road in Teton County, involving about: 43.312 MBM treated timber; 1.29 MBM untreated timber; 1,230 lin. ft. treated timber piles; and the removal of two existing structures. Project to be completed by May 31, 1959.

25. **DS 366(4)**—Grade, aggregate surfacing, and drain 6.569 miles on the Sunburst-Sweetgrass-Westerly Loop Road in Toole County, involving about: 259,816 cu. yds. excavation; 1,142 cu. yds. binder; 100 cu. yds. gravel backfill; 2,284 mi. yds. overhaul on binder; 18,484 mi. yds. overhaul; 51,435 tons crushed aggregate; 4,910 M gals. watering; 1,019 units rolling; 1,854 lin. ft. corrugated metal pipe; 118 lin. ft. relay pipe culverts; and other items. Project to be completed in 180 calendar days.

The above-listed quantities are approximate only.

All bid proposals shall be accompanied by a certified or cashiers' check or cash in the amount of at least 5% of the bid. Should the successful bidder fail to enter into his contract and furnish a satisfactory performance bond within the time stated in this proposal, the bid deposit shall be forfeited to the State Highway Commission of Montana.

Prequalification of bidders at least 72 hours prior to the opening of the bids is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission, Helena, Montana. Plans and specifications for all Federal-aid projects are also on file and may be examined in the offices of the Bureau of Public Roads, Helena.

SCHOOL ADDITIONS

BIDS CLOSE 10 A.M., P.S.T., AUGUST 20, 1958

Juneau, Alaska

NOTICE TO CONTRACTORS

Invitation for bids (construction contract). Reference: Project Aaa. 50-A-238, Gymnasium and Auditorium Additions, Juneau, Alaska. Date: July 9, 1958. Name and location of project: Juneau-Douglas Gymnasium and Auditorium Addition, Project Aaa. 50-A-238, Juneau, Alaska. Department or Agency: Alaska Public Works, Office of Territories, Department of the Interior. By (Issuing office): Thomas G. Mooney, Director, Alaska Public Works, Office of Territories, Department of the Interior, Post Office Box 1181, Juneau, Alaska. Sealed bids in single copy for furnishing all labor, equipment, and materials and performing all work for the project described herein will be received until 10:00 A.M., Pacific Standard Time, August 20, 1958, in the mailroom of the Office of the Director, Alaska Public Works, Office of Territories, Department of the Interior, 123 West Third Street, P.O. Box 1181, Juneau, Alaska, and then publicly opened and read aloud. Information regarding bidding material, bid guarantee, and bonds follows: Plans and specifications and other proposed contract documents are open for public inspection at the Director's office, Juneau, Alaska; at Room 6070 Interior Bldg., Washington 25, D.C.; and Associated General Contractors of America offices as follows: Seattle Chapter, Construction Center, [illegible] West Harrison St., Seattle, Wash.; Mountain Chapter, 220 West Harrison St., Seattle, Wash.; Tacoma Chapter, 1605 Center St., Tacoma 3, Wash.; Portland Chapter, [illegible] S.W. Third Avenue, Portland, Oregon; and the Alaska Chapter, Anchorage, Alaska; at the Plan Bureau, 2413 Western Ave., Seattle, Wash., and Builders Exchange Cooperative, 317 Builders Exchange Bldg., Portland, Oregon. A set of such documents may be procured from the office of the Director at Juneau, Alaska, upon deposit of $25.00, of which will be refunded upon the return of the plans and specifications in good condition within twenty (20) days from date of bid opening. Each bid must be accompanied by a satisfactory bid security (certified check or bid bond) in an amount not less than 5 per cent of the total bid in dollars and cents. No bid will be withdrawn within thirty days after the scheduled closing date for the receipt of bids. The successful bidder will be required to furnish a performance bond and payment bond, each in the amount of 100 per cent of the contract price. The Government reserves the right to award a contract for the project on the basis of the acceptance of any or all of the alternates, whichever course is in the best interest of the Government. DESCRIPTION: GYMNASIUM AND AUDITORIUM ADDITIONS, Project Aaa. 50-A-238, Juneau, Alaska. Contract "A"—The construction of a reinforced concrete and steel gymnasium addition. Contract "B"—The construction of a reinforced concrete and steel auditorium addition. An opportunity will be given in the bid documents of this project to permit a reduction in the base bids should both contracts be awarded to the same bidder. Information regarding liquidated damages (if any), payments, etc., is attached or made a part of the specifications. Bids shall be submitted on the forms furnished or copies thereof.

6229—7-19, 26, 8-2

JUNIOR HIGH SCHOOL BUILDING

BIDS CLOSE 4 P.M., JULY 29, 1958

Opportunity, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Clerk of the Central Valley School District #356 at the offices of the School District, on or before Tuesday, July 29, 4:00 P.M., P.S.T., for the construction of a New Junior High School Building of frame and masonry construction. The bids will then and there be publicly opened and read aloud.

Bids received after the time fixed for opening cannot be considered.

Separate bids will be received for the following contracts: a. General; b. Mechanical work; c. Electrical work.

Drawings and specifications including contract documents may be examined at the office of the Architect, Victor Louis Wulff, 1526 West Riverside Avenue, Spokane, Washington, and may be obtained there, upon the deposit of $40.00 per set for General, and $25.00 for Mechanical and Electrical.

The sets of plans and specifications will be on file at the following places: Construction Council, 933 West 3rd, Spokane, Wash.; AGC Builders' Chapter II, 1207 Washington, Spokane, Wash.; Builders' Exchange, 317 Builders' Exchange Bldg., Portland, Ore.; Plan Bureau, 2413 Western Ave., Seattle, Wash.; Tri-City Construction Council, 34 Vista Way, Kennewick, Wash.; Basin Construction Council, 515 W. Broadway, Moses Lake, Wash.; AGC Builders' Chapter, 432 St. Helen's, Tacoma, Wash.

The full amount of the deposit for one set of documents, will be refunded to actual bidders upon the return of the documents, unmutilated and without marks and annotations, within 10 days after the time set for opening of bids, but to non-bidders only if returned no later than 10 days before the bid opening.

No bid will be considered unless fully completed in the manner provided in the "Instructions to Bidders" and on the bid form provided by the Architect and each bid must be accompanied by a certified check, cashier's check or bid bond with State-licensed surety or sureties in an amount of not less than five per cent (5%) of the bid for which security is given, made payable to Central Valley School District #356.

The right is reserved to accept or reject any or all bids and waive all claims, or any informalities or irregularities in the bids or in the bidding.

The School District reserves the right to award a contract for this project on the basis of the acceptance of any or all of the alternates, whichever course is in the best interests of the School District. No bidder may withdraw his bid after the time set for the opening thereof, unless the award of contract is delayed for a period exceeding 30 days.

By order of Central Valley School District #356.

North 607 Pines, Opportunity, Wash.

GRADING

BIDS CLOSE 11 A.M., P.S.T., JULY 29

Juneau, Alaska

NOTICE TO CONTRACTORS

Department of Commerce, Bureau of Public Roads, Region 10, Date: July 2, 1958, Juneau, Alaska. Sealed bids in single copy for furnishing all labor, equipment and materials and performing all work of completion of 3.014 miles grading Alaska Forest Development Road Project Chugach 153-B, Snug Harbor Road, Kenai Peninsula, Chugach National Forest, Third Judicial Division Territory of Alaska described herein will be received until 11:00 a.m. PST, July 29, 1958. This project consists of the following principal items of work: completion clearing—lump sum; completion grubbing—lump sum; excavation—32,000 cubic yards; install culvert pipe—510 linear feet; overhaul—15,000 cubic yard mile. Plans and specifications may be obtained free of charge by all who have a bonafide need for them for bidding purposes at Room 311, Federal Building, Juneau, Alaska. It is requested that plans be returned to the Division Engineer, Bureau of Public Roads, Anchorage, Alaska. A bid guaranty in a minimum amount of 5% of the bid amount and conforming to the requirements of Standard Form 22 shall be required with each bid. If the bidder fails to accompany his bid with the required bid guaranty, his bid will not be read or otherwise considered. Telegraphic notification of execution of a Bid Bond does not meet the above requirement of a bid bond accompanying a bid. E. H. Swick, Regional Engineer.

GUARDRAIL

BIDS CLOSE 11 A.M., P.S.T., JULY 23

Juneau, Alaska

NOTICE TO CONTRACTORS

Department of Commerce, Bureau of Public Roads, Region 10, Date: July 2, 1958, Juneau, Alaska. Sealed bids in single copy for furnishing all labor, equipment and materials and performing all work for Project F-031-1(3), Seward-Anchorage Highway, Territory of Alaska described herein will be received

Mr. Architect . . .

you can counteract the high costs of construction

. . . by placing your official advertisements for bids in the construction trade journals of the Northwest—PACIFIC BUILDER & ENGINEER (1st Saturday of each month), PACIFIC ARCHITECT AND BUILDER (3rd Saturday of each month), and CONSTRUCTION NEWS BULLETIN (2d, 4th and 5th Saturdays).

They reach more contractors, subcontractors and suppliers than any twenty newspaper-type publications.

That's why more consulting engineers — and more school districts, cities, counties, state departments, PUDs and federal bureaus — place their advertisements for bids in our columns than in any other publication in the entire Northwest.

IF YOU WISH THE *LOWEST COMPETITIVE BIDS CONSISTENT WITH RESPONSIBLE WORKMANSHIP* we can get them for you, whether your job is located in the Willamette Valley or in the Blue Mountains . . . in Western Washington or the Inland Empire . . . in the Coeur d'Alene or the Snake River Valley . . . on the Flathead or the Feather . . . in the Puget Sound country or in San Francisco.

PACIFIC BUILDER & ENGINEER, Inc.

2418-Third Ave., Seattle 1, Wash.

until 11:00 a.m., PST, July 23, 1958. This project consists of constructing .971 miles of Beam-type Guardrail at various locations between Miles 11 and 37. The principal item of work is beam-type guardrail—5125 linear feet. Plans and specifications may be obtained free of charge by all who have a bonafide need for them for bidding purposes at Room 311, Federal Building, Juneau, Alaska. It is requested that plans be returned to the Division Engineer, Bureau of Public Roads, Anchorage, Alaska. A bid guaranty in a minimum amount of 5% of the bid amount and conforming to the requirements of Standard Form 22 shall be required with each bid. If the bidder fails to accompany his bid with the required bid guaranty, his bid will not be read or otherwise considered. Telegraphic notification of execution of a Bid Bond does not meet the above requirement of a bid bond accompanying a bid. E. H. Swick, Regional Engineer.
6223—7-12, 19

EARTHWORK, DRAINS

BIDS CLOSE 10 A.M., P.S.T., AUGUST 7

Ephrata, Washington

NOTICE TO CONTRACTORS

UNITED STATES DEPARTMENT OF THE INTERIOR, Bureau of Reclamation, July 8, 1958. Sealed bids, in single, (Specifications No. 117C-515) will be received at the office of the Project Manager, Bureau of Reclamation, Project Office Building, Division Avenue and C Street N.W., Ephrata, Washington, until 10:00 a.m., Pacific Standard Time, August 7, 1958, and then publicly opened for furnishing labor and materials and performing all work for construction of Drains in Block 87. This work will include earthwork for about 8 miles of drains, detention dike and for access ramps, construction of structures along drains including pool drops, baffled pipe outlet, drain inlets, inlet structure, headwalls, concrete pipe chute; road, lateral and ditch crossings, and gravel lining for about 5.3 miles of drains, involving 65,660 cu. yds. excavation; 2,300 cu. yds. backfill, part compacted or puddled; 250 cu. yds. riprap; 150 cu. yds. sand and gravel or crushed rock bedding; 110 cu. yds. coarse gravel; 7,200 cu. yds. gravel lining; 12 cu. yds. concrete; 18 barrels cement; 1,000 lbs. reinforcement bars; 130 lin. ft. 15-inch diameter concrete irrigation pipe; 826 lin. ft. 12-, 15- and 18-inch diameter No. 16 gage, and 638 in. ft. 24-inch diameter No. 14 gage, corrugated-metal pipe; 124 lin. ft. 18-inch diameter No. 16 gage, and 222 lin. ft. 24-inch diameter, No. 14 gage, asbestos bonded, corrugated-metal pipe; and 150 lbs. miscellaneous metalwork. Time allowed for completion will be 220 calendar days. For particulars address the Bureau of Reclamation, P. R. Nalder, Project Manager, P.O. Box 368, Ephrata, Washington.
6230—7-19

STATE HIGHWAY PROJECTS

BIDS CLOSE 10 A.M., JULY 29

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, July 29, 1958, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

Bid proposals delivered in person will be received only at the Reception Desk located on the first floor of the Transportation Building.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the office of the District Engineers of the Department of Highways where they may be inspected.

Federal Funds have been allocated for items nos. 1 to 12 inclusive.

The improvements for which the bids will be received follow:

1. Draining, Grading, Surfacing, Constructing Bituminous Surface Treatment and Bituminous Road Mix, Constructing Two Reinforced Concrete Bridges, Fencing and Installing Illumination on 2.145 miles of Primary State Highways Nos. 10 and 16 in Okanogan County, OKANOGAN VICINITY, FAP Nos. F-029-2(16) and F-FG-052-3(1), involving about 206,970 cubic yards of Common Excavation and Borrow, 4,500 tons of Riprap, 27,930 tons of Crushed Surfacing, Ballast and Crushed Cover Stone, 940 cubic yards of Mineral Aggregate, 105 tons of Asphalt Cement, 651 cubic yards of Concrete, 84,820 pounds of Steel Reinforcing Bars, a lump sum bid for Two Superstructures (about 1,218 cubic yards of Concrete and 330,000 pounds of Steel Reinforcing Bars), 1,042 linear feet of Standard Bridge Railing, 14,000 linear feet of Untreated Timber Piling, 2,218 linear feet of Concrete Pipe, 314 linear feet of Metal Pipe, 3,127 linear feet of Beam Guard Rail, 84 Guide Posts, 14,970 linear feet of Wire Fence, 2 lump sum bids for Illumination Systems and other items.
2. Draining, Grading, Surfacing, Constructing Cement Treated Base and Bituminous Surface Treatment and Paving with Asphaltic Concrete on 2.436 miles of Primary State Highway No. 1 in Snohomish County, JCT. PSH NO. 1 TO JCT. SSH NO. 2-J, FAP Nos. F-001-4(19) and DF-001-4(18), involving about 31,170 cubic yards of Common Excavation, 540 cubic yards of Top Soil, 17,970 tons of Selected Roadway Borrow, 6,000 tons of Crushed Surfacing, 790 cubic yards of Crushed Cover Stone and Prime Coat Aggregate, 141 tons of Asphalt Cement, 13,495 tons of Asphaltic Concrete, 2,710 barrels of Portland Cement, 11,080 tons of Cement Treated Base, 9,170 linear feet of Extruded Traffic Curb, 523 linear feet of Concrete Pipe, 96 Guide Posts, 3 lump sum bids for Illumination Systems and other items.
3. Constructing a Precast Prestressed Concrete Girder Bridge on Primary State Highway No. 1 in Cowlitz County, LONGVIEW WYE UNDERCROSSING, FAP No. 1-5-1(19)37, involving about 280 cubic yards of Common Excavation, 400 cubic yards of Crushed Surfacing, Ballast and Prime Coat Aggregate, 110 tons of Asphaltic Concrete, 90 linear feet of Metal Pipe, 432 linear feet of Standard Bridge Railing, 2,331 linear feet of Prestressed Concrete Girders, 905 cubic yards of Concrete, 192,000 pounds of Steel Reinforcing Bars, 14,800 linear feet of Treated Timber Piling, a lump sum bid for Remodeling Existing Illumination System and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
4. Installing Signing on 20.058 miles of Primary State Highway No. 18 in Grant County, MURPHYS CORNER TO MOSES LAKE—SIGNING, FAP No. 1-90-4(19)148, involving 2 lump sum bids for Signing. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
5. Draining, Grading, Surfacing and Paving with Asphaltic Concrete on 3.206 miles of a King County Road, S.E. 216TH STREET-MAPLE VALLEY TO 276TH AVENUE S.E., FAS No. DS-0908(1), involving about 56,850 cubic yards of Common Excavation, 1,200 cubic yards of Unsuitable Foundation Excavation, 200 tons of Riprap, 26,190 tons of Selected Roadway Borrow, 11,880 tons of Crushed Surfacing, 450 cubic yards of Prime Coat Aggregate, 49 tons of Asphalt Cement, 5,720 tons of Asphaltic Concrete, 100 cubic yards of Concrete, 597 linear feet of Concrete Pipe, 1,272 linear feet of Metal Pipe, 550 linear feet of Beam Guard Rail, 134 Guide Posts and other items.
6. Surfacing and Constructing Bituminous Surface Treatment on 8.099 miles of Ferry County Road, INCHELIUM-FERRY LAKES, FAS Nos. S-1230(1) and DS-1230(2), involving about 27,200 cubic yards of Selected Roadway Borrow, 13,000 cubic yards of Crushed Surfacing and Crushed Cover Stone, 325 tons of Asphalt Cement and other items.
7. Clearing, Draining, Grading and Surfacing with Selected Roadway Borrow on 0.785 mile of a Clallam County Road, LA PUSH ROAD, FAS Nos. S-1240(2) and DS-1240(1), involving about 7 acres of Clearing, 32,000 cubic yards of Unclassified Excavation, 5,900 cubic yards of Selected Roadway Borrow, 405 linear feet of Concrete Pipe, 36 Guide Posts and other items.
8. Surfacing and Constructing Bituminous Surface Treatment on 7.638 miles of Ferry County Roads, KETTLE RIVER TORODA CREEK AND KETTLE FALLS-CHELIUM ROADS, FAS Nos. S-0923(4), S-1143(2) and S-0963(4), involving about 8,080 cubic yards of Crushed Surfacing and Crushed Cover Stone, 258 tons of Asphalt Cement and other items.
9. Surfacing and Paving with Asphaltic Concrete on 3.259 miles of a Pierce County Road, OLD MILITARY ROAD, FAS No. DS-1310(1) and County Project, involving about 785 cubic yards of Crushed Surfacing, 4,830 tons of Asphaltic Concrete and other items.
10. Surfacing and Constructing Bituminous Surface Treatment on 5.236 miles of an Okanogan County Road, TWISP RIVER ROAD No. DS-1149(2), involving about 2,620 cubic yards of Crushed Surfacing, 7,590 tons of Crushed Cover Stone, 111 tons of Asphalt Cement and other items.
11. Constructing a Reinforced Concrete Slab Bridge on 0.020 mile of a Grant County Road, RED ROCK BRIDGE, FAS No. DS-1404(1), involving about 165 cubic yards of Concrete, 28,400 pounds of Steel Reinforcing Bars, 209 linear feet of Concrete Bridge Railing, 1,020 linear feet of Concrete Piling and other items.
12. Grading, Surfacing and Paving with Asphaltic Concrete on 0.135 mile of a Klickitat County Road, MAIN STREET-TOWN OF WHITE SALMON, FAS No. DS-6291(1), involving about 2,100 cubic yards of Unclassified Excavation, 1,350 cubic yards of Crushed Surfacing and Ballast, 615 tons of Asphaltic Concrete and other items.
13. Draining, Grading, Surfacing and Paving with Asphaltic Concrete on 1.625 miles of Primary State Highway No. 1 in King County, ENUMCLAW CITY STREETS, a State Project, involving about 4,230 cubic yards of Common Excavation, 2,820 cubic yards of Selected Roadway Borrow, 890 cubic yards of Crushed Surfacing and Prime Coat Aggregate, 16 tons of Asphalt Cement, 4,435 tons of Asphaltic Concrete, 283 square yards of Asphaltic Concrete Driveway, 5,965 linear feet of Cement Concrete Curb and Gutter, 72 square yards of Cement Concrete Sidewalk, 339 linear feet of Concrete Pipe and other items.
14. Constructing Bituminous Surface Treatment on 22.05 miles of Secondary State Highway No. 10-B in Douglas County, FARMER TO MANSFIELD, a State Project, involving about 285 tons of Asphalt Cement, 2,670 cubic yards of Mineral Aggregate and 20 M gallons of Water.
15. Paving with Asphaltic Concrete, Constructing Curb and Bumper Median, Fencing and Installing Illumination for the Washington State Toll Bridge Authority in Kitsap County, WASHINGTON STATE FERRY SYSTEM - WINSLOW FERRY TERMINAL, a State Project, involving about 122 tons of Asphaltic Concrete, 1,150 square yards of Concrete Curb and Bumper Median, 435 linear feet of Chain Link Fence, 7 Lighting Standards, 11 Luminaires and Ballasts, 1,010 linear feet of Burial Cable and other items.

ERNEST J. KETCHUM, Chairman
W. A. BUGGE, Director of Highways

6227—7-12, 19

until 11:00 a.m., PST, July 23, 1958. This project consists of constructing .971 miles of Beam-type Guardrail at various locations between Miles 11 and 37. The principal item of work is beam-type guardrail—5125 linear feet. Plans and specifications may be obtained free of charge by all who have a bonafide need for them for bidding purposes at Room 311, Federal Building, Juneau, Alaska. It is requested that plans be returned to the Division Engineer, Bureau of Public Roads, Anchorage, Alaska. A bid guaranty in a minimum amount of 5% of the bid amount and conforming to the requirements of Standard Form 22 shall be required with each bid. If the bidder fails to accompany his bid with the required bid guaranty, his bid will not be read or otherwise considered. Telegraphic notification of execution of a Bid Bond does not meet the above requirement of a bid bond accompanying a bid. E. H. Swick, Regional Engineer.
6223—7-12, 19

EARTHWORK, DRAINS

BIDS CLOSE 10 A.M., P.S.T., AUGUST 7

Ephrata, Washington

NOTICE TO CONTRACTORS

UNITED STATES DEPARTMENT OF THE INTERIOR, Bureau of Reclamation, July 8, 1958. Sealed bids, in single, (Specifications No. 117C-515) will be received at the office of the Project Manager, Bureau of Reclamation, Project Office Building, Division Avenue and C Street N.W., Ephrata, Washington, until 10:00 a.m., Pacific Standard Time, August 7, 1958, and then publicly opened for furnishing labor and materials and performing all work for construction of Drains in Block 87. This work will include earthwork for about 8 miles of drains, detention dike and for access ramps, construction of structures along drains including pool drops, baffled pipe outlet, drain inlets, inlet structure, headwalls, concrete pipe chute; road, lateral and ditch crossings, and gravel lining for about 5.3 miles of drains, involving 65,660 cu. yds. excavation; 2,300 cu. yds. backfill, part compacted or puddled; 250 cu. yds. riprap; 150 cu. yds. sand and gravel or crushed rock bedding; 110 cu. yds. coarse gravel; 7,200 cu. yds. gravel lining; 12 cu. yds. concrete; 18 barrels cement; 1,000 lbs. reinforcement bars; 130 lin. ft. 15-inch diameter concrete irrigation pipe; 826 lin. ft. 12-, 15- and 18-inch diameter No. 16 gage, and 638 in. ft. 24-inch diameter No. 14 gage, corrugated-metal pipe; 124 lin. ft. 18-inch diameter No. 16 gage, and 222 lin. ft. 24-inch diameter, No. 14 gage, asbestos bonded, corrugated-metal pipe; and 150 lbs. miscellaneous metalwork. Time allowed for completion will be 220 calendar days. For particulars address the Bureau of Reclamation, P. R. Nalder, Project Manager, P.O. Box 368, Ephrata, Washington.

STATE HIGHWAY PROJECTS

BIDS CLOSE 10 A.M., JULY 29

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, July 29, 1958, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

Bid proposals delivered in person will be received only at the Reception Desk located on the first floor of the Transportation Building.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the office of the District Engineers of the Department of Highways where they may be inspected.

Federal Funds have been allocated for items nos. 1 to 12 inclusive.

The improvements for which the bids will be received follow:

1. Draining, Grading, Surfacing, Constructing Bituminous Surface Treatment and Bituminous Road Mix, Constructing Two Reinforced Concrete Bridges, Fencing and Installing Illumination on 2.145 miles of Primary State Highways Nos. 10 and 16 in Okanogan County, OKANOGAN VICINITY, FAP Nos. F-029-2(16) and F-FG-052-3(1), involving about 206,970 cubic yards of Common Excavation and Borrow, 4,500 tons of Riprap, 27,930 tons of Crushed Surfacing, Ballast and Crushed Cover Stone, 940 cubic yards of Mineral Aggregate, 105 tons of Asphalt Cement, 651 cubic yards of Concrete, 84,820 pounds of Steel Reinforcing Bars, a lump sum bid for Two Superstructures (about 1,-218 cubic yards of Concrete and 330,000 pounds of Steel Reinforcing Bars), 1,042 linear feet of Standard Bridge Railing, 14,000 linear feet of Untreated Timber Piling, 2,218 linear feet of Concrete Pipe, 314 linear feet of Metal Pipe, 3,127 linear feet of Beam Guard Rail, 84 Guide Posts, 14,970 linear feet of Wire Fence, 2 lump sum bids for Illumination Systems and other items.
2. Draining, Grading, Surfacing, Constructing Cement Treated Base and Bituminous Surface Treatment and Paving with Asphaltic Concrete on 2.436 miles of Primary State Highway No. 1 in Snohomish County, JCT. PSH NO. 1 TO JCT. SSH NO. 2-J, FAP Nos. F-001-4(19) and DF-001-4(18), involving about 31,170 cubic yards of Common Excavation, 540 cubic yards of Top Soil, 17,970 tons of Selected Roadway Borrow, 6,000 tons of Crushed Surfacing, 790 cubic yards of Crushed Cover Stone and Prime Coat Aggregate, 141 tons of Asphalt Cement, 13,495 tons of Asphaltic Concrete, 2,710 barrels of Portland Cement, 11,080 tons of Cement Treated Base, 9,170 linear feet of Extruded Traffic Curb, 523 linear feet of Concrete Pipe, 96 Guide Posts, 3 lump sum bids for Illumination Systems and other items.
3. Constructing a Precast Prestressed Concrete Girder Bridge on Primary State Highway No. 1 in Cowlitz County, LONGVIEW WYE UNDERCROSSING, FAP No. I-5-1(19)37, involving about 280 cubic yards of Common Excavation, 400 cubic yards of Crushed Surfacing, Ballast and Prime Coat Aggregate, 110 tons of Asphaltic Concrete, 90 linear feet of Metal Pipe, 432 linear feet of Standard Bridge Railing, 2,331 linear feet of Prestressed Concrete Girders, 905 cubic yards of Concrete, 192,000 pounds of Steel Reinforcing Bars, 14,800 linear feet of Treated Timber Piling, a lump sum bid for Remodeling Existing Illumination System and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
4. Installing Signing on 20.058 miles of Primary State Highway No. 18 in Grant County, MURPHYS CORNER TO MOSES LAKE—SIGNING, FAP No. 1-90-4(19)148, involving 2 lump sum bids for Signing. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
5. Draining, Grading, Surfacing and Paving with Asphaltic Concrete on 3.206 miles of a King County Road, S.E. 216TH STREET-MAPLE VALLEY TO 276TH AVENUE S.E., FAS No. DS-0908(1), involving about 56,850 cubic yards of Common Excavation, 1,200 cubic yards of Unsuitable Foundation Excavation, 200 tons of Riprap, 26,190 tons of Selected Roadway Borrow, 11,880 tons of Crushed Surfacing, 450 cubic yards of Prime Coat Aggregate, 49 tons of Asphalt Cement, 5,720 tons of Asphaltic Concrete, 100 cubic yards of Concrete, 597 linear feet of Concrete Pipe, 1,272 linear feet of Metal Pipe, 550 linear feet of Beam Guard Rail, 134 Guide Posts and other items.
6. Surfacing and Constructing Bituminous Surface Treatment on 8.099 miles of a Ferry County Road, INCHELIUM-TWIN LAKES, FAS Nos. S-1230(1) and DS-1230(2), involving about 27,300 cubic yards of Selected Roadway Borrow, 13,080 cubic yards of Crushed Surfacing and Crushed Cover Stone, 325 tons of Asphalt Cement and other items.
7. Clearing, Draining, Grading and Surfacing with Selected Roadway Borrow on 0.785 mile of a Clallam County Road, LA PUSH ROAD, FAS Nos. S-1240(2) and DS-1240(1), involving about 7 acres of Clearing, 32,000 cubic yards of Unclassified Excavation, 5,900 cubic yards of Selected Roadway Borrow, 405 linear feet of Concrete Pipe, 36 Guide Posts and other items.
8. Surfacing and Constructing Bituminous Surface Treatment on 7.638 miles of Ferry County Roads, KETTLE RIVER, TORODA CREEK AND KETTLE FALLS-INCHELIUM ROADS, FAS Nos. S-0983(4), S-1143(2) and S-0963(4), involving about 8,080 cubic yards of Crushed Surfacing and Crushed Cover Stone, 258 tons of Asphalt Cement and other items.
9. Surfacing and Paving with Asphaltic Concrete on 3.259 miles of a Pierce County Road, OLD MILITARY ROAD, FAS No. DS-1310(1) and County Project, involving about 785 cubic yards of Crushed Surfacing, 4,830 tons of Asphaltic Concrete and other items.
10. Surfacing and Constructing Bituminous Surface Treatment on 5.236 miles of an Okanogan County Road, TWISP RIVER ROAD No. DS-1149(2), involving about 2,620 cubic yards of Crushed Surfacing, 7,590 tons of Crushed Cover Stone, 151 tons of Asphalt Cement and other items.
11. Constructing a Reinforced Concrete Slab Bridge on 0.020 mile of a Grant County Road, RED ROCK BRIDGE, FAS No. DS-1404(1), involving about 165 cubic yards of Concrete, 28,400 pounds of Steel Reinforcing Bars, 209 linear feet of Concrete Bridge Railing, 1,020 linear feet of Concrete Piling and other items.
12. Grading, Surfacing and Paving with Asphaltic Concrete on 0.135 mile of a Klickitat County Road, MAIN STREET-TOWN OF WHITE SALMON, FAS No. DS-0399(1), involving about 2,100 cubic yards of Unclassified Excavation, 1,350 cubic yards of Crushed Surfacing and Ballast, 610 tons of Asphaltic Concrete and other items.
13. Draining, Grading, Surfacing and Paving with Asphaltic Concrete on 1.035 miles of Primary State Highway No. 5 in King County, ENUMCLAW CITY STREETS, a State Project, involving about 4,230 cubic yards of Common Excavation, 2,820 cubic yards of Selected Roadway Borrow, 890 cubic yards of Crushed Surfacing and Prime Coat Aggregate, 16 tons of Asphalt Cement, 4,430 tons of Asphaltic Concrete, 263 square yards of Asphaltic Concrete Driveway, 5,965 linear feet of Cement Concrete Curb and Gutter, 72 square yards of Cement Concrete Sidewalk, 339 linear feet of Concrete Pipe and other items.
14. Constructing Bituminous Surface Treatment on 22.05 miles of Secondary State Highway No. 10-B in Douglas County, FARMER TO MANSFIELD, a State Project, involving about 285 tons of Asphalt Cement, 2,670 cubic yards of Mineral Aggregate and 20 M gallons of Water.
15. Paving with Asphaltic Concrete, Constructing Curb and Bumper Median, Fencing and Installing Illumination for the Washington State Toll Bridge Authority in Kitsap County, WASHINGTON STATE FERRY SYSTEM - WINSLOW FERRY TERMINAL, a State Project, involving about 122 tons of Asphaltic Concrete, 1,150 square yards of Concrete Curb and Bumper Median, 435 linear feet of Chain Link Fence, 7 Lighting Standards, 11 Luminaires and Ballasts, 1,010 linear feet of Burial Cable and other items.

Gateway TO THE STARS

Dramatic Concrete Ramp at New York International Airport Provides Graceful Access to Arrival Building

• "Gateway to the Stars"—at Idlewild Airport—is a curving reinforced concrete promenade which connects with a prestressed concrete bridge leading to the Arrival Building.

Imaginative and daring in design, this strikingly modern ramp, set on widely spaced concrete columns, skirts the edge of the broad circular reflection pool in a graceful sweep.

The bridge which leads through the 11-story control tower, is fabricated of prestressed concrete channel beams made with 'Incor'*, America's FIRST high early strength portland cement, and also utilizes widely spaced columns.

Well-integrated designs, coupled with concreting know-how, make this a quality job of highest order. Artistry in concrete has been achieved, plus an all-important economy that lasts for the life of the structure, making the most of today's construction dollars.

pa&b makes two announcements

1. A new contributing editor

IN DEVELOPING its role as "The Magazine of West Coast Architecture," Pacific Architect and Builder is pleased to announce the appointment of a contributing editor stationed in Los Angeles. Marvin Hanks joins two others—Ward Lindbeck (replacing Kenneth R. MacDonald) in San Francisco and Win Romtvedt in Portland—, which means that PA&B, with headquarters in Seattle, has editors located in the four largest cities on the West Coast plus correspondents in 21 building centers throughout California, Oregon, Washington, Idaho, Montana and Alaska.

2. A proposed new home

PA&B expects to be editing from offices in a spanking new building within 2½ years, thanks to its publisher, Pacific Builder & Engineer, Inc. A subsidiary firm, Printers Building & Equipment Co., will actually build the structure, just one mile from downtown Seattle with a picturesque waterfront view and blessed by cooling summer breezes off Lake Union. The odd shaped lot, curving around a corner at Yale Avenue North and East Newton Street and dropping rapidly from the front sidewalk, is considered "challenging" by the architect, A. O. Bumgardner, AIA. As architectural advisor to PA&B since February 1957, he already is oriented to the peculiar requirements of a publishing and printing organization. As the design and construction of the building progresses, PA&B will keep its readers informed with reports in the form of a continuing case study.

Disease of 'negative thinking' strikes profession

Pacific Architect and Builder:

I am becoming rather tired of watching the architectural profession develop into a disease of self-criticism and self-doubt. When we are not able to say something good about what we do and what other architects are developing, perhaps we should say nothing. Architects should know by this time that what man creates is never perfect; however, man always strives toward a continuing degree of perfection.

Have you ever seen the editors of Fortune, The New Yorker or Atlantic Monthly printing a story prefaced like this: "This is not a very good story but here it is anyway."? I believe we are doing exactly that with our architecture today.

Our nation and the world has been stricken with the disease of "negative thinking." Recently there were three books published, all of which have as the basic theme, "What Is Wrong with Architecture." A recent AIA journal picked up the rhythm and published derogatory and deprecatory remarks about Saarinen, LeCorbusier and Wright. In fact, the only thing good it had to say was about the Roman baths at Ostia built during Roman times.

The so-called "secular" journals are likewise voicing criticism of the architectural profession. I mention a few of the things they say about architects. We do not have social responsibility; no sense of the total scope of our work. We are sloppy businessmen lacking in organizational efficiency and business knowhow. We follow rather than lead. We rest on our laurels and take no steps to further better ourselves and our profession. We do not originate, but rather copy what has gone before us.

Over the past several years the architectural profession has embarked on a program of achievement which has not been matched since the beginning of history until now. We are on the threshold of producing an architecture which will equal and surpass that of the Golden Age of Greece, that of Rome and that of the Renaissance.

Architects are administering billions of dollars of the nation's top businesses such as General Motors Corp., IBM Corp., Lever Brothers. I believe this requires top business knowhow, efficiency and foresight on the part of the architect. Architects have spearheaded urban renewal, the development of regional shopping centers and extensive progress in public and private housing. I believe this points out the architect's responsibility to his society and his ability as a leader.

Seminars and workshops have become increasingly more important in the continued training of the architect. He is keeping abreast of the latest materials in the industry. Through this, he renders a better service to his client and his community.

We are making great strides and we realize there is much yet to be done. However, it is not wrong to pat each other on the back and say admirable and advantageous things about each other. This tends to give the other fellow a lift and raises the stature of the entire profession.

I don't think that the architect should be held completely responsible for not achieving all that may be desired. He has been doing everything within his power to bring about the wishes of the world's people. Through continued experience we shall learn to be more mature and we will find greater variety within the framework of our present-day achievements.

NEWS

Construction boom seen for 49th state

• Military work to hit $250 million annually

"Alaska is giving Americans an emotional and spiritual boost, rekindling the pioneer spirit."—Dr. Ernest Gruening, former territorial governor.

Tremendous increase of military and civil works construction in Alaska was forecast by the Corps of Engineers simultaneously with news that the territory would become the 49th state. Although the two actions are not related, the additional construction activity will be a great shot in the arm for the economy of the new state.

"You are about to become a part in an enormous expansion," Col. P. V. Kiefer Jr., retiring district engineer, told district employees early in July. "I anticipate this district will expand two, three, fourfold. You are coming into a period where the work of the Alaska district may climb to $250 million per year."

Such a figure would help restore Alaska to a position of primary importance as a construction market, a position she enjoyed as recently as the military boom years of 1951-54.

A check of construction dollar volume figures for Alaska compiled by PA&B's companion publication, Pacific Builder & Engineer, during recent years shows a rising and falling trend.

1950		$181,000,000
1951		195,000,000
1952		306,000,000
1953		353,000,000
1954		378,000,000
1955		146,000,000
1956		124,000,000
1957		118,000,000
1958	(Est.)	114,000,000

A reversal of the latest downward trend is apt to develop swiftly if expanded Corps of Engineers work is added to the more slowly developing private construction that is certain to gain impetus in the first few years of Alaska's statehood.

The outlook

The feeling in Alaska is that statehood will open the door to venture capital that will be attracted by tax structures entirely different from the existing ones. Before this venture capital can be made to pay off, however, a good chunk of it will have to go for construction of roads, airstrips, utilities, railroads and buildings.

The machinery by which all of this will be accomplished is by no means certain. There will be extensive changes in the governmental setups for awarding public construction contracts. No one knows what form this will take, or what the timetable may be.

In the past the principal awarding agencies for work in Alaska have been the Bureau of Public Roads, the

FACTS about ALASKA

- If Alaska had been a state in 1954 it would have ranked No. 4 in the nation in construction dollar volume. Last year it would have ranked No. 23.
- There are only 5,000 mi. of roads in all of Alaska's 586,400 sq. mi.
- One-quarter of the population of Alaska (total 235,000) is transient military.
- Construction is the largest single industry in Alaska. Next come fishing ($93 million), lumber, tourism.
- Oil exporation and mining will be fields of most immediate expansion. Alaska is known to have 31 of the 33 most strategic minerals.
- The Corps of Engineers has mapped 91 major potential power sites, and the Bureau of Reclamation has its eye on 12 major damsites.
- Anchorage is the third busiest airport in the U.S., surpassed in landings and takeoffs only by New York and Chicago. Its airfield, built in 1953, is already overtaxed.
- Only 5% of Alaska has been surveyed. The U.S. owns 99% of the land, but 100 million acres will be put up for public acquisition.
- Largest private construction project in Alaska at the moment is the $55 million pulp mill at Sitka where 1,500 men will be working until July 1959.
- As a state, Alaska can boast not only of having the largest area, but the longest shoreline, tallest waterfalls, highest mountain (Mount McKinley, 20,300 ft.), coldest temperatures, biggest glaciers, northernmost city (Point Barrow), easternmost city (Adak). Amidst these stern and imposing natural wonders, construction stiffs will have to hack out new roads, railroads, airstrips, power plants and damsites.
- Anchorage, the largest city in Alaska, has an estimated population of 63,000, not including the transient military populations of Fort Richardson and Elmendorf Air Force Base, the two largest military installations in Alaska.
- With low temperatures of 50 deg. below zero, Glasgow and Great Falls, Mont., have boasted some of the coldest weather in the country. Alaska will now take these honors going away, with many recorded lows of 90 deg. However, the principal cities of Alaska have climates that compare closely with the rest of the Pacific Northwest.

Alaska Public Works Commission, the Corps of Engineers and various army and air force maintenance centers, 17th Naval and Coast Guard districts, the Alaska Railroad, Alaska Department of Lands, Alaska Aeronautics and Communications Commission, Bureau of Reclamation, Alaska Territorial Department of Aviation, the Civil Aeronautics Administration, the Rural Electrification Administration, the Alaska Territorial Department of Education, and the city governments of Anchorage, Fairbanks, Juneau and Ketchikan.

Some of these will be changed to state offices with little ceremony. Some will continue as federal offices.

As PA&B goes to press there are signs of some mighty stirrings in the Northland. Some 600 men are being hired to work on the nation's largest missile detection center to be built at Shemya at a cost in excess of $300 million. The Anchorage City Council has sold its bonds to start major construction early next year on an $8,200,000 municipal port. The Department of Interior has just okayed funds for another $5,299,890 in public projects, and congressmen are promoting a bill to provide $11 million per year for the next six years to build a new highway to Alaska.

And to show how really big they are about all this, Alaskans have officially given Texans the right to go on singing "The Yellow Rose of Texas" which proclaims that Texas is the "largest" state in the Union, even if it isn't so.

CANDID CAMERA IN ANCHORAGE: residence, civic auditorium and elementary school designed by Edwin Crittenden & Associates, one of eight architectural firms in Alaska.

National parley to study home building code

A major attempt toward the development of uniform residential building code requirements for one- and two-family residences will be made in New York City next month. The American Standards Association has called a general conference for September 9 of all national groups that would be substantially concerned with the scope and provisions of such codes.

The meeting is the result of a request which the ASA received on behalf of 14 organizations associated with home building from publisher Henry R. Luce, who declared: "Conflicting and often archaic codes are adding at least $1,000 to the cost of the average new home built this year. This is a figure too dramatic and urgent to be ignored.

"Specific wastes are small compared to what could be saved if conflicting local codes were not blocking economies of nationwide standardization and discouraging the efforts of architects and builders to develop new ways to build better for less," he added.

Luce based his statement on the findings of an industry conference on home building codes last May, which listed common wastes enforced by many local codes that add more than $1,000 to the price of a home. Among them: 1) wiring installations more costly than necessary; 2) over-engineered framing lumber sizes; 3) a ban on trusses; 4) trusses and studs spaced more closely than necessary; 5) needlessly heavy sheathing; 6) needlessly heavy subflooring; 7) vents spaced more closely than necessary; 8) oversized or overweight pipes; 9) useless housetraps on waste lines.

The proposal submitted to the ASA includes the following specific requests:

- That the ASA institute the necessary procedures to develop and approve American Standard code requirements for the construction of one- and two-story residences.
- That, in order to speed development and approval of these requirements, the first stage of this procedure be limited to consolidating in a single American Standard the already almost identical one- and two-family house construction requirements of the Building Officials Conference of America, Southern, International and New York State codes. One exception: from the beginning the new code should permit the framing lumber sizes approved by the most up-to-date stress tables of the National Lumber Manufacturers Association.
- That the ASA make these requirements applicable to three- and four-family residences as well, if that extension proves practicable.
- That the ASA set up the machinery for an annual revision of the proposed code.

The 14 groups on whose behalf the proposal was drawn up are American Council to Improve Our Neighborhoods (ACTION), American Institute of Architects, Building Research Advisory Board, Building Research Institute, Construction and Civic Development Department of the U. S. Chamber of Commerce, Home Manufacturers Association, Lumber Dealers Research Council, Mortgage Bankers Association of America, National Association of Home Builders, National Association of Mutual Savings Banks, National Association of Real Estate Boards, National Retail Lumber Dealers Association, Mortgage Lending Policy Committee of the Life Insurance Association and the United States Savings and Loan League.

Half billion building program proposed for California

A five-year, $500 million building program has been announced at Sacramento by the State of California, with three-fourths of the construction to be devoted to state colleges and the University of California.

State finance officials describe the program, which has been submitted to the joint legislative budget committee, as comprising only the "hard core" of needed construction if California is to keep up with population growth. To accomplish the state's full needs, the finance report indicates, approximately $900 million worth of building would be required by mid-1964. It estimates that California's population will reach 15 million by 1959 and 17,847,000 by mid-1964.

The building program is contingent upon approval by the voters of a proposed $200 million state construction bond issue on the November ballot. It would be up to the legislature to appropriate additional funds as needed on a year-to-year basis.

The program would allocate $214

million to University of California construction; $165 million to state colleges; $50 million to mental hospitals; $58 million to correctional facilities; $15 million to miscellaneous agencies. Of the UC funds, $77 million would go to the Berkeley campus and $16.7 million to the San Francisco Medical Center.

10.3 million predicted in L. A. area by '75

Greater Los Angeles will have a population of 10.3 million by 1975 and is destined to become the No. 1 metropolis of the world. These predictions have been made in a study by a consulting economist, Dr. Robert R. Dockson, professor in the School of Commerce at the University of Southern California.

Just what this will mean to the construction industry, one of the most important segments of the area's economy, is as staggering to the imagination as the projected statistics themselves.

Looking ahead through 1975, Dr. Dockson makes these observations concerning population trends:

- It is expected the Los Angeles area will have a population approximating 7.7 million by 1965, 8.7 million by 1970, 10.3 million by 1975.
- For the most part (about 85%), the population explosion in the metropolitan area has been due to in-migration rather than to an increase in births.
- In-migration is expected to continue in large numbers and many of the in-migrants will be in the child-bearing age bracket between 20 and 35 years.
- Sections in the metropolitan area with the greatest amount of undeveloped land, such as East San Gabriel Valley, North Los Angeles County, West San Fernando Valley and Orange County, will absorb a large part of the new in-migrants.

Regarding the use of automobiles, the study points out that the per capita use is not expected to greatly increase; however, it is estimated that the total number of cars using the streets by 1975 will be around 4.8 million compared to an estimated 2.8 million in 1957, a 71% increase.

In Dr. Dockson's opinion, the Los Angeles area is well on its way to becoming the No. 1 metropolis of the world. Whether this is accomplished in this century he does not say.

For the latest developments on the selection of an architect for Seattle's 1961 "World Fair," see page 35.

THE BUILDING MONTH: BRIEFS

- San Francisco architects have agreed to "go along" with downtown business interests on a proposed limitation of building size in order to get the city's new zoning ordinance adopted. Donald Powers Smith, president of the Northern California Chapter, AIA, told the City Planning Commission his organization still thinks a 16 to 1 ratio to be a "sound, economic solution, but the AIA will not object to a 20 to 1 limit." Downtown groups proposed a rule that a building's total floor area should not exceed 20 times the size of its site.

- Portland's proposed Hilton Hotel probably will be the last new convention type to be built in the U. S. by the hotel chain. Conrad N. Hilton, in the Rose City last month to address a group which is attempting to raise $3 million in local financing for the $10 million, 17-story project, explained that "we have about run out of desirable cities to be in," adding that expansion in this country likely will be confined to smaller inns at airports, such as the one recently launched at San Francisco.

- Los Angeles industrialist Emil Brown, 79, founder and president of Emil Brown & Co., steel products firm, and Dura Steel Products Co., who was once described as "California's great humanitarian," died July 15.

- Largest community ever constructed in the West by a single builder, a $150 million collection of 10,000 homes to be known as Tropicana Village in San Jose, Calif., is now underway by A. L. Branden. When completed within five years, the development will boost the city's population by 35,000 to 40,000. Price range of the homes, designed by Oakland architect David T. Johnson, will be from $11,500 to $14,900.

- First office building for general leasing to be erected in downtown Los Angeles since the end of World War 2 will be built by the city's largest land owner, Tishman Realty and Construction Co., on Wilshire Boulevard between Flower and Lebanon streets.

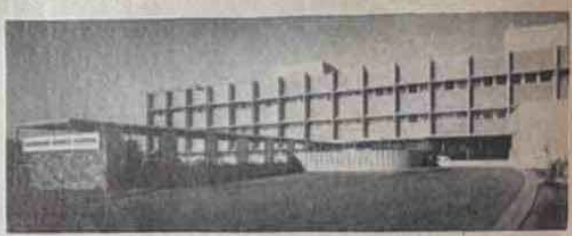
- Oakland, upon receiving a grant of $1,431,606 for its Clinton Park slum clearance project, has become the first city on the West Coast to obtain federal funds for urban renewal work. The 80-block area has been acquired by the city at a cost of $2,142,759 for sewer and street work and building recreation centers, playgrounds and the new Franklin Elementary School. Another $97,000 will go into a recreation center adjoining the school.

- The architectural team of Wurster, Bernardi & Emmons and Skidmore, Owings & Merrill, working with consulting engineers De Leuw, Cather & Co., have completed a $5,000 survey on the feasibility of modernizing San Francisco's Civic Auditorium. The survey indicates it would cost the city $8 million to turn the auditorium into a first-rate convention hall but that this would be "just a good start toward providing the facilities San Francisco needs to continue competing for large conventions."

- Seven review courses in engineering and one in architecture (structural design) will be offered this fall by the University of California at extension centers in San Francisco, Berkeley and Santa Clara.

- Los Angeles Beautiful Committee has given civic recognition to Young's Market Co. metropolitan distribution center, designed by Albert C. Martin & Associates and built by Twaits-Wittenberg Co. The complex of buildings is sited in a formerly blighted area.

- To continue the booming anti-recession housing program of the Federal National Mortgage Association, President Eisenhower late last month released another $150 million, raising to $750 million the amount made available since the program was launched in April.



HOSPITAL OF YEAR

is distinction given Grossmont District Hospital in La Mesa, Calif., designed by Pereira & Luckman, Los Angeles architects-engineers. In making award, Modern Hospital magazine cited solutions for nursing wing and medical core, two basically different problems, planned so that one element would not hamper what was done in other. Project was built for $22.41 per square foot by Trepte Construction Co. of San Diego.

Practicing architect gets nod as Oregon dean

Walter L. Gordon, an architect who has practiced in Portland since 1947, is the new dean of the University of Oregon's School of Architecture and Allied Arts. He has been a visiting professor on the Eugene campus the past year.

GORDON

Gordon succeeds Sidney W. Little who, following his resignation July 1, became dean of the College of Fine Arts at the University of Arizona.

Receiving his bachelor's and master's degrees from Princeton University, the new Oregon dean studied at the University of Paris and at Yale University's Graduate School. He left his post as curator of the San Francisco Museum of Art in 1939 to become assistant director of the Portland Art Museum and joined the office of Pietro Belluschi a year later. He lectured in the history of architecture at Portland's Reed College from 1940-41.

A Phi Beta Kappa, Gordon has held offices in the Oregon Chapter, AIA, and has been a member of the Portland Art Commission since 1955. He was the first to receive an award from the Oregon Chapter of Artists Equity for his crusading for art in architecture (PA&B, Feb. '58).

Architectural department at Arizona this fall

The five-year curriculum for the new department of architecture at the University of Arizona has been outlined by Sidney W. Little, newly appointed dean of the College of Fine Arts.

The first two years of the program, which leads to a bachelor of architecture, will go into effect this fall. The third and fourth years will be available to students in September 1959; the final year in 1960. Courses on problems of architecture in desert regions will be offered.

Dean Little, who comes to Tucson from the University of Oregon, explains that "the new program will include all the accepted courses normally found in architectural curricula, but the emphasis will be on design rather than on technical skills alone. Technology will be considered as a resource for design rather than an end unto itself."

The fifth year, adds the dean, will allow maximum time for advanced study in guided elective courses.

T-SQUARE TALK

new offices

James O. Brummett and Torben Strandgaard have opened an architectural office at Jackson Square, San Francisco.

Stanley Goldin has opened an office for the practice of architecture at 233 W. Seventh St., Long Beach, Calif. A graduate of the University of California, he had been associated with the architectural office of Warren Dedrick.

J. Warren Carkin, Portland architect, will open an office in Salem next month in the Masonic Building, corner of State and High streets. Most recently associated with Edmundson-Kochendoerfer, architects, and R. Evan Kennedy, structural engineer, he received his degree from the University of Oregon.

Robert C. Williams and Jane M. Parug, architects, have become associated for the preparation of construction specifications under the firm name of Robert C. Williams & Associates, with offices at 1091 Keith Ave. and 1628 Walnut St., both in Berkeley.

new addresses

James Mount, architect, to 5729 Cahuenga Blvd., North Hollywood, Calif.

Heitschmidt & Thompson, architects, to 617 W. Seventh St., Los Angeles.

'ARCHIE' MAKES DEBUT

at California State Polytechnic College when student architects present first award for contribution to physical environment to Ben B. Breslow, whose firms make the Gaffers & Sattler line of home appliances. Los Angeles industrialist was honored for development of one of world's first practical evaporative coolers and for research that helped create year-round living centers out of desert communities like Palm Springs, Las Vegas and Phoenix. Breslow (center) is shown receiving "Archie" from George Hasslein, Cal Poly dean of architectural engineering, and Paul R. Neel of San Bernardino, Calif., campus AIA chapter president.

new associates

James H. Van Dyke & Associates, architect-engineers, who are now located in the firm's new building at 3912 Oakwood Ave., Los Angeles, have named the following associates: Paul M. White, Ronald Hendrickson, Colvin B. Childs Jr., Harry Foard, and Coleman Mullin.

appointments

Robert L. Durham, architect, has been appointed chairman of the Cultural Arts Advisory Board for the newly named Century 21 Exposition, scheduled for Seattle in 1961. His 55-member committee includes four architects: James J. Chiarelli, Victor Steinbrueck and Nathan Wilkinson Jr., all of Seattle, and Robert W. Evans of Tacoma. Evans spearheaded the recent formation of Allied Arts of Tacoma, patterned after the Seattle organization.

James H. Langenheim has been named vice president and director of design of Pereira & Luckman, Los Angeles architects-engineers; and Otto H. Kilian also has been elected vice president.

H. Lee Higley, who has been associated since 1945 with Adrian Wilson & Associates, architects-engineers of Los Angeles, has been appointed director of business development. He became chief architect for the firm's Far Eastern offices in Nagoya, Japan, in 1953 and two years later was promoted to project manager there; and in 1956 he assisted in establishing a Manila office, staffed by 150 people.

Robert E. Alexander, architect and former president of the Los Angeles City Planning Commission, has been named by the FHA to serve on a special advisory committee for revision of minimum property requirements for three or more living units. The group will hold six meetings in Washington, D. C., within the next nine months.

campus notes

Partners of the Los Angeles architectural-engineering firm of Daniel, Mann, Johnson & Mendenhall have established a mentorship award for architectural students at the University of Southern California, the first award going to third-year Clifford Wayne Moles. In addition to the payment of his tuition and fees, he will receive training in the DMJM home office as a special employee for eight hours of work per week during the academic year and full time during vacations.

FROM ESCO... PATTERNS FOR TOMORROW IN STAINLESS STEEL

Permanent beauty and structural strength for tomorrow's designs can be achieved *today* with a wide variety of decorative, long-lasting stainless steel shapes and finishes.

Real economies can be accomplished with stainless and PVC (polyvinyl chloride) plastic sheet and plate for ductwork, walls, stairways, counter tops and building skins. Stainless tubing is available in many unusual shapes, as well as standard shapes in all sizes, for railings and decorative trim. Stainless castings, bar, wire, fittings and fastenings furnish complete freedom of design. Plastic extrusions are also available.

Increase your freedom of design. Ask your nearest ESCO representative for available literature, specifications and samples.

Ask to see samples of the two newest stainless sheet finishes, Soft-tone and 2w.

BUILDING PERMITS

July shows biggest gain of year

Sparked by a record-smashing high for permit valuations in Los Angeles, building in the five western states is not only healthier than it's been all year, but has made a definite recovery. July volume is almost $50 million ahead of the same month in 1957 and actually comes within $12½ million of equaling the entire increase for the first half of 1958.

Last month's whopping $79,751,578 chalked up by Los Angeles tops the previous record set in March 1953 by $14 million. Statewise, California, Washington, Montana and Idaho all show gains over July 1957, while Oregon lags behind by a bare $74,787.

Comparative figures for July and the preceding month reveal the same pattern except that Oregon's drop is more than $5 million. State-by-state tabulations for the first seven months:

	Jan.-July 1958	Jan.-July 1957
Calif.	$1,246,685,342	$1,184,628,088
Ore.	106,416,321	72,388,896
Wash.	177,613,957	161,814,100
Mont.	14,444,086	15,501,512
Idaho	15,302,172	13,765,222
	$1,560,461,878	$1,448,097,915

ANALYSIS OF TYPICAL AREAS — JULY

(Number of permits is followed by total dollar volume)

	Dwelling		Commercial & Industrial		Public	
Portland	73	$ 996,135	23	$1,802,100	3	$ 560,000

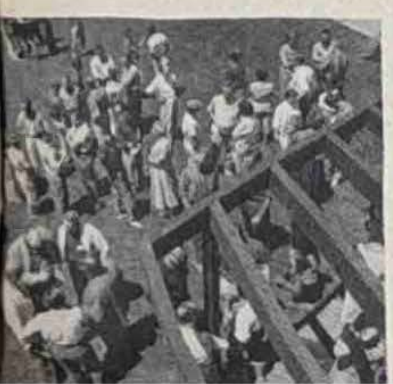
Design and human problems



THE WEST COAST, which has always been an enthusiastic supporter of the unique Aspen design sessions, played an even greater role in the 1958 conference held in the latter part of June. Garrett Eckbo, landscape architect of San Francisco, was chairman of the program, which included partner Ed Williams, architect Henry Hill of San Francisco, engineer-planner Edgardo Contini of Los Angeles and economist-conservationist Walter Packard of Berkeley. Only woman participant was sculptor Claire Falkenstein, onetime California art teacher and critic, now living and working in Paris and Rome. And for good measure, out of a registration of 245, close to 100 conferees came from the states of Washington and California.

Over the past eight years, the conference has evolved the following method of operation. The entire membership meets in the tent amphitheater in the Aspen Meadows to hear a round table discussion among the panelists of one of three individual cycles (based on papers which have been circulated earlier). Because of the size of the audience and the complexity of the subject matter, there is no discussion from the floor at these sessions. Later, three seminars are held simultaneously, with the panelists rotating through each so that conferees have ample opportunity to question them at length during the course of a morning or an afternoon. Excerpts below are taken from papers and/or notes prepared by some of the panelists.

DESIGN AND HUMAN PROBLEMS

How Does Our World Look Today?—Keynoter Dr. E. A. Gutkind, Institute for Urban Studies, University of Pennsylvania, Philadelphia.

First reaction to the subject is "who looks at our world today and from where?"

Is it the man in the street or the architect and city planner or a scientist or one of the innumerable experts on something who have reached a high standard of mediocrity and yet are admired as our so-called leaders? To anticipate the answer: how does our world look today to any one of these fractional men is of secondary importance. What matters is how full man reacts to the tremendous challenge of our natural and man-made environment.

And the answer to the second question is: we should look at the world from a detached standpoint and, at the same time, remain engaged; in other words we should look at the world simultaneously through the microscope and the telescope.

If we want to understand the problems which are involved in looking at our world today, the approach has to be seemingly abstract. But let me make it quite clear from the beginning that the so-called abstract approach is the truest and the only reality, although this may not be to the liking of the hard-boiled pragmatists who always miss the bus and are always too late; when they have finished their task, or rather when they believe they have finished it, what they have done then is already out of date.

* * *

We live in cities, towns and villages but we do not live within densely knit communities. Our cities and towns are not creative communities. They are conglomerations of human beings and showpieces of technical achievements—but they are not communities in a social sense.

The result is a side by side of individual entities but not an integrated whole. This explains why our environment is confused, confusing and uncreative and why artists and architects and designers work in watertight compartments.

In the tempestuous development of the Insurgent Centuries, the social foundations have been neglected in favor of practical and, above all, technical aspirations and achievements.

It is still the analytical spirit that has formed our urban and rural, our personal and functional environment and which keeps the individual arts apart. This same analytical spirit is evident in the relationship of the arts; again a side by side, no oneness as, for instance, in Egyptian temples and Gothic cathedrals. You may ask: is this necessary and should we look to the past for guidance? It is essential —and moreover art for art's sake is an anomaly. There is only total art, or no art at all, for ART is the interpretation of the sum total of all cultural trends of an epoch through the visual language of form.

* * *

The new feeling of space which has not yet been condensed into a clearly definable idea of space is everywhere at work. The enormous sculpture by Naum Gabo at Rotterdam; every painting by Picasso; a few of our best buildings—they all have in common: a widening out, a new awareness of spatial relation; an urge to emerge from a stale isolation.

The designer of furniture follows the same direction when he designs light, movable and colorful chairs, tables and lamps and adapts their form to the needs of efficient and multiple use not fixed to one place only.

The city planner begins to break down the rigid limitations of the

at work . . .

"How does our world look today? The mere fact that we are here together and discuss the interaction of the manifold individual factors which make up and act on our environment is hopeful. We are not the only ones who do this. All over the world the spirit of synthesis is gaining momentum and everywhere men are longing for closer and more intimate relationships; for a clearer and more fertile use of the environmental forces; and for a new pattern of living."—Keynoter Gutkind.

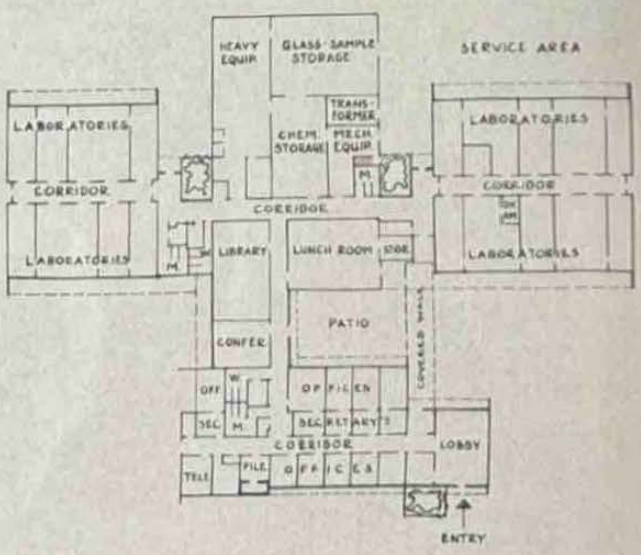
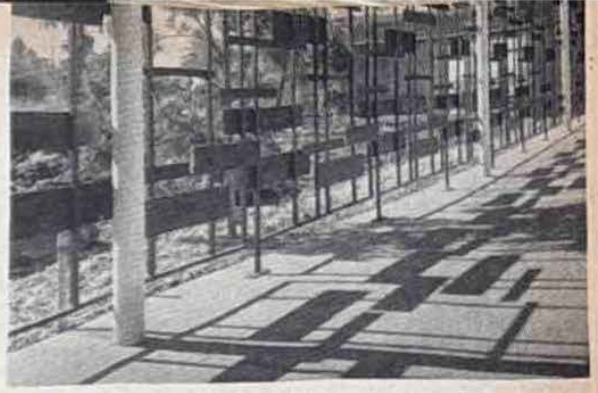
For science: plant with pleasant plusses

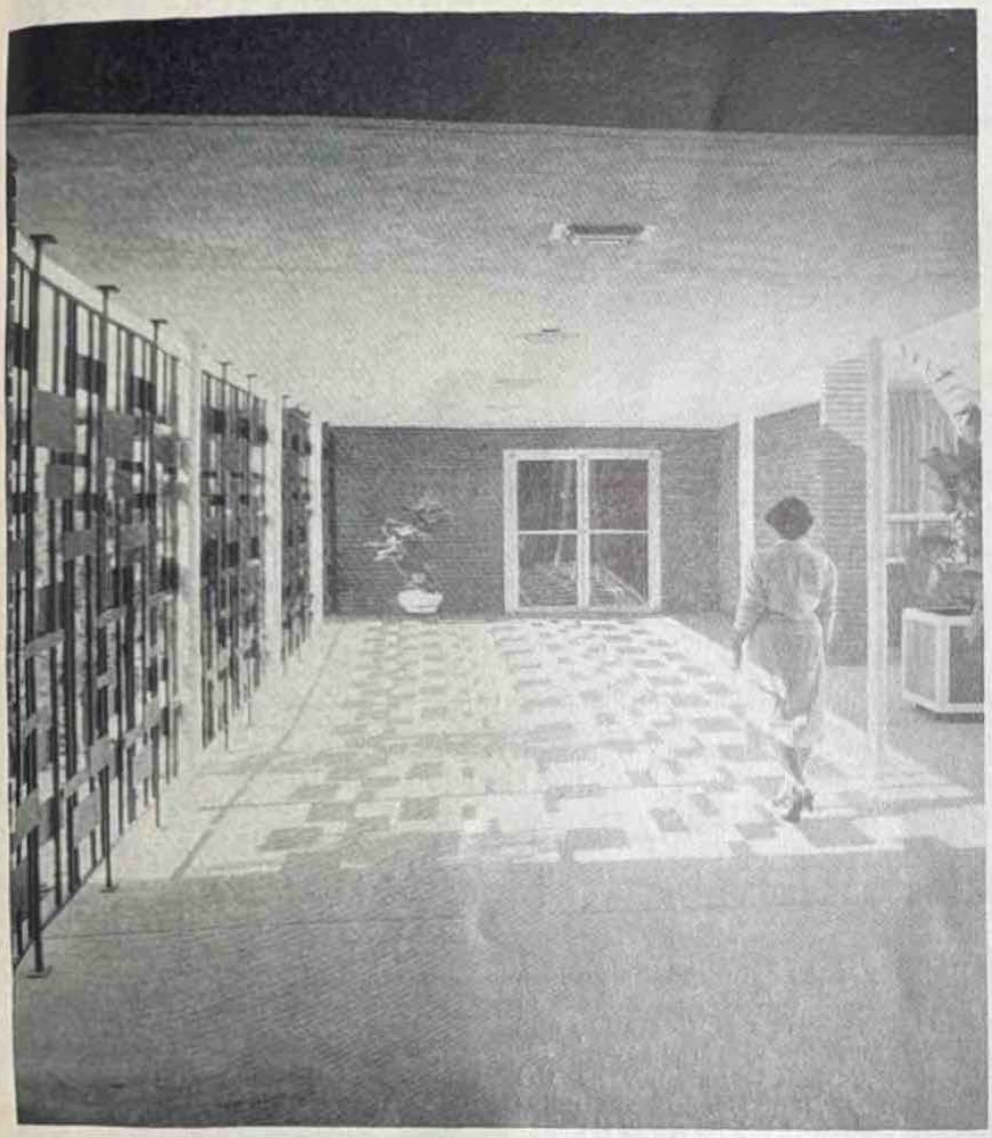
MOST IMPORTANT specific requirement set forth by the client was the need for a building which would house all the varied activities related to a research program, but that would allow for future expansion. This criterion was met by dividing the structure into four semi-separate segments, built around a court which is highlighted by an interesting screen treatment. Each unit accommodates a particular function: storage and utilities in the center; laboratory wings on either side; and a connecting administration wing.

General design objectives: to use materials appropriate to the natural surroundings—five acres of a well-kept orange grove located in what might be termed a rural area; to produce an atmosphere with human scale and warmth; to secure maximum use of space for functional efficiency; to attract and retain high-level personnel with comfortable physical facilities.





METAL SCREEN that borders walkway aids plant safety precautions, screens patio from public access and provides visual break and aesthetic depth to central core of structure. Random size and shaped black panels are welded to rounded stringers in pattern which personifies theme of scientific accuracy in architecturally abstract form.



Jack Laxer photos except as noted

OUTLINE SPECIFICATIONS

Structure: frame, walls, floors: reinforced concrete; roof: steel decking.

Exterior Finish: exposed concrete; face brick; lift-in type window walls with lower portions of porcelain enamel panels.

Doors: exterior: hollow metal; interior: rolling steel.

Floor Surfacing: ceramic tile; vinyl tile; carpeting.

Partitions: metal studs and plaster.

Interior Finish: plaster; walnut paneling.

Ceilings: plaster; acoustical tile.

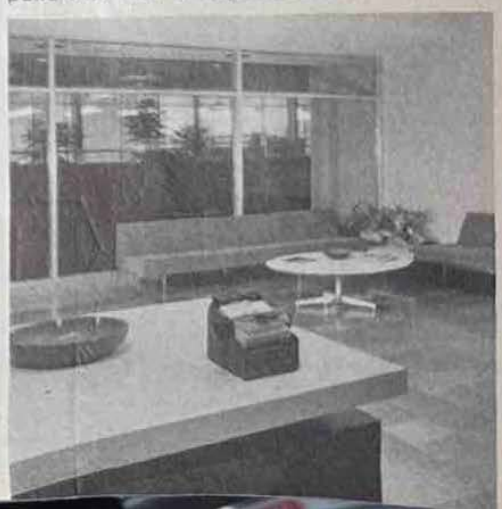
Special Equipment: aluminum sunshades; welded metal patio screen.

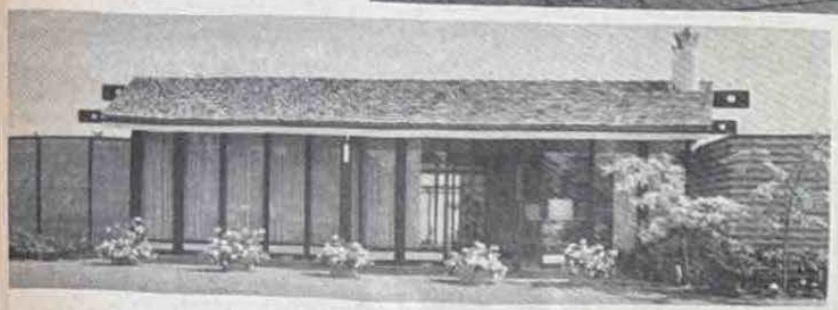
Total Area: 29,700 sq. ft.

Total Cost: $809,678.

Date of Completion: October 1957.

VISITORS' LOBBY and conference room open through draped glass wall onto private paved patio with view of adjacent citrus orchard.





ENTRY WALL is series of wood framed glass pivot doors, repeated in gallery wall which opens onto patio and joins three units of house. Double carport provides access to heating plant and storage room.

Model Home, Bellevue, Washington

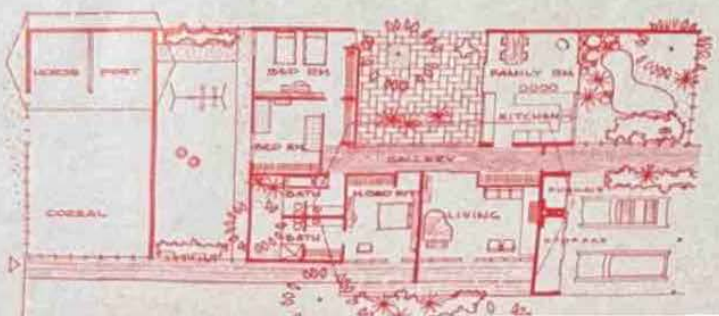
ELDON PERRINE, Landscape Architect

HOME BUILDERS ASSOCIATION
of GREATER BELLEVUE, Contractor

Designed for exhibition--and worth showing

THE MAJORITY of model homes shown up and down the coast leave much to be desired, both from an architectural and a construction standpoint, but here's a refreshing exception. This 1957 version was built in three units—living room and master bedroom, kitchen-dining area, bedroom wing—for exhibition at an East Side community across Lake Washington from Seattle and later moved to a wooded country site.

Because of the nature of the project, easy circulation of large numbers of people was a prime consideration and the architects incorporated several interesting design techniques, as the photographs indicate. Most noteworthy aspect of the house is its spatial relationships achieved principally through the integration of gardens with the interior. The court to the street side is enclosed by an obscure glass fence which gives complete privacy to the kitchen-family unit. This is primarily a planting area to provide a pleasant but intimate outlook. The central garden, with more hard surfacing and less planting, is intended for more actual use—sun bathing, dining, etc.—and is an extension of the kitchen-family, living and bedroom areas. It offers both sun and shade, along with wind protection. The third enclosed patio is purely a space extension of the two bathrooms.



OUTLINE SPECIFICATIONS

Structure: foundation: concrete footings and concrete block walls; frame: wood, post and beam; roof, walls, floors: wood.

Exterior Finish: 1x4 bevel siding with 1x2 batts laid vertically; stain—(PAR) Protection Products Mfg. Co.; paint—Cowman-Campbell Paint Co.

Roof Surfacing: resawn cedar shakes.

Windows: aluminum Z-bar ventilators—Bilt-Rite Aluminum Co.

Doors: center-hinged, job-built; sliding aluminum—Arcadia Metal Products.

Hardware: lock sets (Lok-Set) Screw Machine Products; bath accessories, fans, chimes, food center — Nu-Tone, Inc.

Floor Surfacing: cork tile—Armstrong Cork Co.; ceramic tile—(Hermosa) Gladding, McBean & Co., (Ceratile) Pacific Tile & Porcelain Co., Pomona Tile Co.

Insulation: 4-in. batts.

Partitions: lath and plaster.

Interior Finish: cedar siding; walnut paneling—United States Plywood Corp.; stain (PAR) Protection Products Mfg. Co.; paint—Cowman-Campbell Paint Co.

Ceilings: plaster; acoustical plaster on high portions and soffits—Zonolite Co.

Heating: forced warm air furnace—General Electric Co.; electric panels in baths — Electro-Ray Manufacturing Co.

Lighting Fixtures: incandescent—Litecraft Mfg. Co., Lightolier, Inc., Prescolite Manufacturing Co., A. W. Pistol, Inc.

Electrical Distribution: 24-circuit center—(Pushmatic Electri-Center) Bulldog Electric Products Co.; low voltage system—Bryant Electric Co.; light controls—Superior Electric Co.

Plumbing and Sanitary: water closets, lavatories—Briggs Mfg. Co.; shower control—(Hydroguard) Powers Regulator Co.

Special Equipment: built-in electrical appliances—Westinghouse Electric Co.; shoji screens—Carlton Products; front entrance sandwich panel—Architectural Plastics Corp.; cork bulletin board (Goldseal) Congoleum Nairn, Inc.; skylights—Filon Plastics Corp.; fireplace stack and hood—Condon King Co.

Total Area: 2,000 sq. ft. (heated space).

Date of Completion: August 1957.

FIREPLACE WALL consists of colonial face brick in dark and light tones, used alternately in running course to produce shadowed effect. Dining area looks out on intimate garden. Floating cabinets give kitchen floor-level illumination. Upper cupboards are lighted, have sliding glass doors.

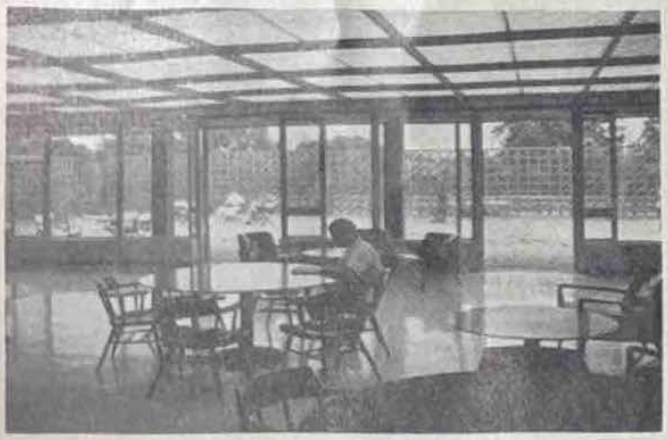
Library without institutional inhibitions

ONLY INTERIOR COLUMNS support arches forming gable over main reading room. Troughs running along both sides provide indirect lighting. Diffuser panels in other areas also serve as sound baffles. North side of reading room opens on to informal patio, screened by pierced terra cotta grill.



THE PROGRAM called for the integration of this library, a one-story structure covering 29,700 sq. ft. and seating 160, with the design of the new, adjacent city hall in Palo Alto's redeveloped Civic Center. A structural steel skeleton serves the dual purpose of permitting floor-to-ceiling glass walls along the entire perimeter and of carrying the load of the domestic shake roof which matches that of its neighbor. The open plan allows maximum flexibility and escape from the summer heat; in the fall and winter visitors can enjoy the warmth of an open fireplace.

Only interior columns in the building support the arches which form the gable over the main reading room. First rise of the hipped roof is pitched low, permitting an overhang up to 11 ft. to shade terraced areas. Toward the center line, the roof rises steeply. Glazed, glass dormers at the south and north ends of the gable allow filtration of natural light.

An indirect lighting and planter overhang at 9 ft.—same height as the ceiling of the wing and entryway—produces a well around the perimeter of the triangular room, which is further lighted by chandeliers hung from the apex. Ceiling in the wing, which accommodates a lounge, offices and workroom, is covered with double plastic light diffuser panels, providing an air space of nearly 2 ft. and serving as a sound baffle over those areas which bear more traffic than the rest of the library. Resawn redwood is used as a contrasting material over the entrance lobby and service desk. A basement houses closed stacks and general storage.

The light diffuser panels repeat the pattern of pierced terra cotta grill which surrounds the redwood building as a patio screen on all sides and softens the sunlight. Developed by the architect, the tile consists of 11½x11½x 6-in. blocks of intersecting open curves, installed between 6-in. wide flange steel sections and imbedded in a concrete grade beam. Tile is grouted into the opening between the flanges and a 6-in. steel channel running along the top of the wall gives lateral or shear strength.

Human use of synthetic materials

by TED BOWER

The use of synthetics need not separate us more from nature, says this architect; rather it places the responsibility and the choice in our relationship to nature more completely with us

ARCHITECTS sometimes say there has been in the last 50 years a revolution in the field of building design and construction. Some have said the revolution is now over—but the architect or builder who studies the possibilities and potentials of our technology will come, I believe, to a different conclusion: the revolution has scarcely begun.

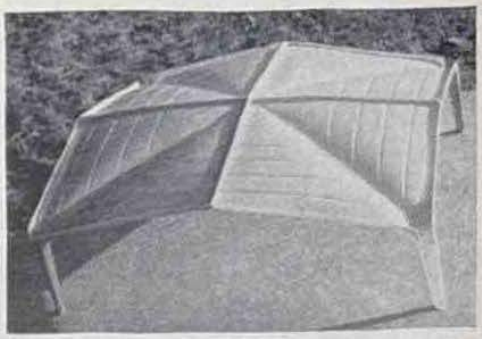
Synthetic materials are one of the significant indications of changes in building construction. Consider for a moment the history of building construction materials. Throughout the period of human civilization until about 100 years ago, building materials were largely natural, used as found in nature. There were exceptions, notably ceramics, which occasionally at different times in different cultures were brought to levels of high technical and artistic development. Then during the past 100 years building technology moved into another phase: transmuted natural materials, which had been known previously but had been too expensive for common use in construction, became available in large supplies of reliable quality. The "revolution" of the past 50 years was made possible to a large degree by the coming of modern steel, modern glass, modern reinforced concrete and modern laminated wood.

As the pace of progress accelerates, it seems we now enter still another era of construction materials—the **chemical-mechanical era,** it might be called. There is a revolutionary difference in this new area: **we can now design the very materials we use.** We are not limited to natural nor to transmuted natural materials; now we are beginning, through science, to start with the very elements and combine them by complex processes to produce synthetic materials entirely unknown before. It is already possible with many types of synthetics to specify the qualities, the performance desired and then have the material synthesized to order. This seems to be notably true in the fields of alloys, ceramics and plastics, all of which are in a sense synthetics. This capacity to create materials is sure to increase and its effect on architecture and on human life is just as sure to be revolutionary.

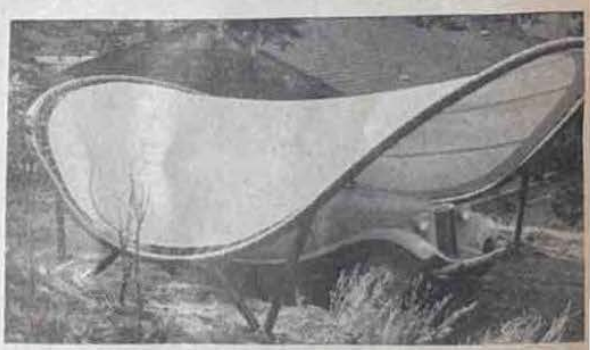
At present, plastics, of all new materials, seem to have the greatest potential application in building construction. A large variety of plastics bring to architecture many qualities entirely new, such as reinforced plastic structures that are strong, durable, light weight, translucently colorful and easily fabricated in complex shapes. Another new quality comes to architecture with the plastic membrane, as clear, colored, or opaque films and coated fabrics or laminated combinations make possible (among other things) inflated structures supported by slightly increased interior air pressure. Many uses of plastics are less dramatic. Often they replace another material for a familiar purpose because of superior quality. There are sprayed plastic coatings that replace paint, plastic components in hardware that replace metals or rubber, plastic flooring materials, laminates for cabinetwork, waterproofing membranes, etc. The list is long.

The growth of the use of plastics will bring eventually a **plastics civilization, a civilization of synthetics** in which most of the materials we use, for whatever purpose, will be the synthetic product of our chemical industry.

- Our clothing from head to foot will be synthetic.
- Our vehicles, whether wheel-less automobiles or helicopters, or some-



REINFORCED PLASTIC SHELTER SYSTEM (also on cover): 20x20x9 ft.; model: one-eighth scale. Square in plan, system is extendable to cover any flat area. Proposed uses: open and patio shelters, covered walkways, carports, marinas.



CARPORT: consists of steel pipe frame within which is stretched vinyl coated glass cloth fabric. Designed to carry 25-psf. load, it achieves considerable stability because of double-curved shape. Alternative: flexible strips of reinforced polyester could be joined with heavy duty zippers to form more durable version.

UMBRELLA ASSEMBLY: 16x16x8½ ft. Tested with uniform load of 40 psf., average deflection of tension plates (midpoint of each edge)—1¾ in.; rise of outer corners—¼ in. With load increased to 52 pfs., excessive deflection increased and deformation occurred, caused by inadequate but easily correctable design of joints and fastenings between panels.

The writer, who designed the structures shown here, is an instructor in the College of Architecture and Urban Planning at the University of Washington.

thing else, will be largely synthetic.

• The very buildings we inhabit and all their furnishings will be largely plastics or synthetics, and all this within our lifetimes—all this before 2000 A.D.!

There are many good reasons for these changes and one has already been mentioned: plastics are materials that can be designed specifically for each use. Such materials will tend to be superior to other materials which have merely been **appropriated for** or **adapted to** a use. The use-designed material, having only and exactly the qualities specified, will eventually be cheaper both to purchase and to work with.

Another important reason for the coming change is that on this planet there are no limits to the supply of some important materials, mainly metals, but there are practical limits to the sources of raw materials for plastics. Metal alloys will continue to be used through the immediate future, but scarcity or cost of the material will in some cases encourage replacement by plastics. Metals and plastics are already being combined in new ways in children's toys and in decorative materials.

It seems inevitable that the synthetic civilization of the future will be light weight, if we stop to consider the quality of **heaviness.** As it becomes possible to specify qualities of materials, how often is heaviness going to be specified? Who wants heaviness for its own sake? The engineer designing a drawbridge counterweight; the naval architect who puts lead in the keel of a sailboat; the civil engineer designing a gravity dam.

The uses of heaviness are comparatively few. Architects exploit the heaviness of some natural materials to counterbalance dramatic cantilevered structures of lighter materials, but this may be a passing technique of building design. In most fields where materials of any sort are used, from aeronautics to architecture to clothing manufacture (and even including perhaps food production!) it is desirable to reduce weight.

In architecture in conventional structures today we use many heavy materials which may be obsolete sooner than we suspect. Ordinary concrete can today be reduced in weight by one-third to one-half and in the near future even more.

In buildings the advantages of lightness vs. heaviness are many. Transportation, handling and storage costs of materials are less. Prefabrication becomes much more practical with lightweight materials, and prefabrication promises the economies of shop mass-production. The **thickness** of walls, roofs and floors will reduced. Fewer main supports for a building are necessary and consequently we shall have smaller and simpler foundation structures.

* * *

To many people the words "synthetic" and "plastic" do not connote superior quality. The prospect of a synthetic civilization will not, until its benefits are better known and understood, be anticipated with enthusiasm. The house buyer who dreams of shakes on the roof and stone veneer on the front has a change to make: eventually he will come to understand that new techniques and synthetic materials will make it possible for us all to live much closer to nature than at present, if we choose. We shall be able to live out-of-doors in private gardens open to the sky, sun and breezes when we wish, sheltered from hot sun, rain, cold or wind. Our shelter may be a mechanically operated plastic roof, or it may be simply a mechanically created and controlled current of air! Perhaps our gardens will provide increasingly the means of contact with natural materials and opportunities to use them. Wood and stone as materials for human use may simply return to nature. All this is possible and perhaps probable. We cannot say all natural materials will be excluded from human use, but we can say this: synthetic materials and advanced techniques—the chemical-mechanical era—promise things to humanity that could not be promised without this revolution. They promise freedom from want.

The use of synthetics places the responsibility and the choice in our relationship to nature more completely with us. We in the U.S.A. are fortunate enough to have a choice between a wool or an orlon sweat and in the future we may have choice between beef hamburger or synthetic yeastburger, a wood or plastic dwelling. But most of people in the world are not and h never been so fortunate. Most of people of the world have always b hungry, poorly clothed and poo sheltered; they have never known problem of choice. World populati is increasing rapidly and will co tinue, so in effect we must face eith the increasing impoverishment most of humanity or we must welcom the chemical-mechanical revolution.

I believe the human qualities a aspects of this revolution are t responsibility of us all. It is not i evitable that technological progre will force upon us the grim world w have been warned of by Geor Orwell in "1984" or by Aldous Huxl in "Brave New World." The "mi acles" of atomic fission and fusio provide perhaps the archetypal ex amples of the alternatives we fac Here man has potentially fantast power: we have heard a little of ho destructive it can be and a little h how constructive it could be, but w have not heard enough of either. Wit this power we could certainly destro ourselves and this planet and wit this power we also could help ou selves to a future of limitless creativ ity. (Imagine for a minute what migh be done by and for mankind wit free and unlimited electrical or othe power available to every man i every part of the world! This is onl one promise of atomic power.) I would seem that if we were all t realize the vast, literally planet transforming potential of atomic en ergy, we would find more and mor irrational the enormous expenditur of time, money and energy directe towards its destructive use.

Smaller analagous choices must b made in the use of materials, natura as well as synthetic. All the material we use are what we make them. Woo is warm if we make it so; it can b cold. Stone is rich if we make it so it can be plain and stark.

The same with synthetic materials they will be what we make them, bu the responsibility is more wholly our than with natural materials. Where natural materials require little more than our respect to bring out inherent beauty, synthetic materials require the impress of our full creative energy. Their very strength, their durability, their suitability and all their sensual qualities must come from the brain, the heart and the hand of man. Responsibility will be completely ours—and the possibilities? Let us set no limit.

Plastics house for a sunny climate

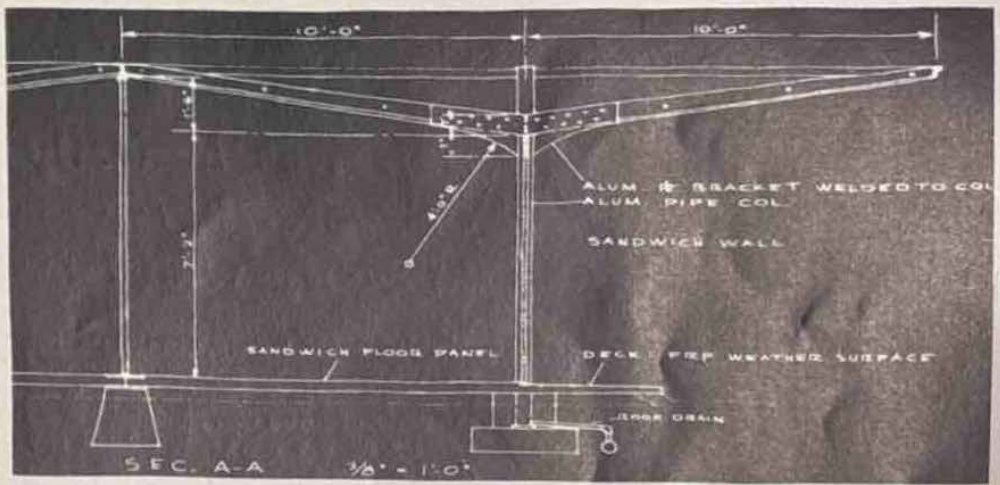
"Plastics are essential because the world is not well enough supplied with natural materials to feed, shelter, clothe and equip its future population to a standard equal even to ours in the U.S. in 1958. In the near future, with unlimited power from hydrogen fusion to transform earth, rock and sea water into materials of every type, we may hope that not only all Americans, but Africans, Asians and Europeans—all the peoples of the world—may enjoy a far better, more abundant life. A world entirely free of poverty is now conceivable."—The Architect.

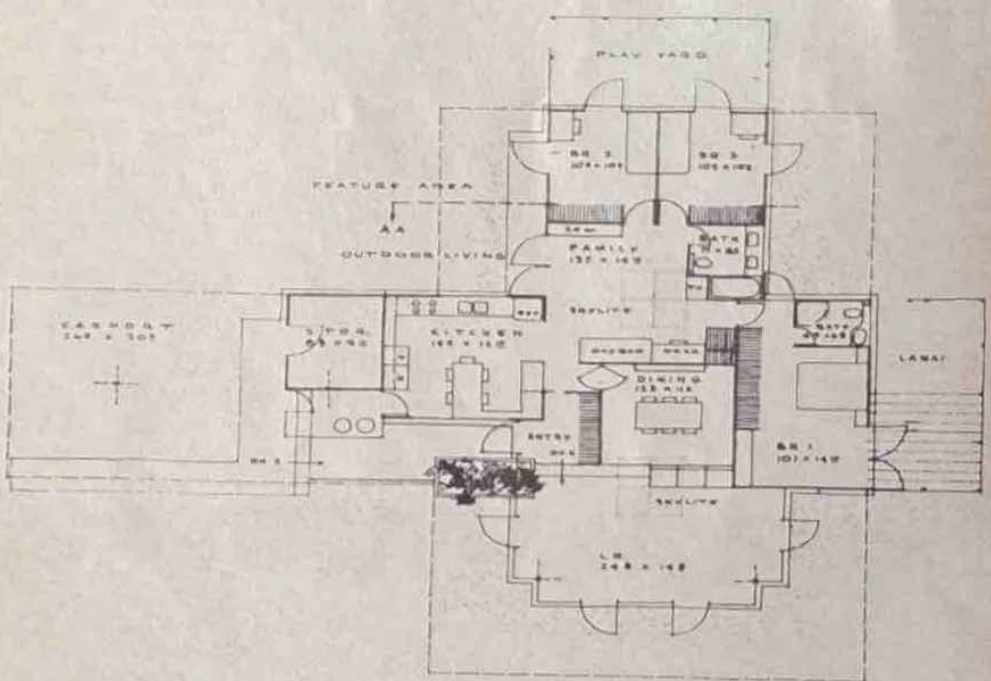
ROOF STRUCTURE of this experimental design by Ted Bower would consist of eight umbrellas, each made up of four identical 10x10-ft. hyperbolic paraboloid panels fabricated of fiberglass-reinforced polyester resin. Total thickness of the foam plastic core would be 1⅛ in. Columns would be black anodized aluminum but could also be plastic. Floor and wall panels would be a sandwich type of tough transparent plastic skins over decorative paper sheets and foam cores.

The architect comments: "We shall not know how plastic houses will look until we start to make them. Then, as we begin, methods and design will rapidly develop. There is one prediction concerning design: sculpture and surface enrichment will return to architecture, not as fads but as structural necessities. Possibilities of molded synthetics are various and seem naturally to include extremely thin shells—¼ in. for synthetic resins vs. 3 in. for concrete, for instance, but strengthened 'sculpturally.'

"So, in a sense, the rough 'hand-molded' concrete of Corbusier and the ornamented 'tool-shaped' concrete sculpture of Wright are prophetic, even though the materials and methods used are crude compared to the synthetic materials and mechanical methods of a chemical era.

"One final note. The foregoing article might be interpreted as an expression of materialism: that an abundance of goods will solve all human problems. This is not intended. The chemical-mechanical era will create many new ones, but it will remove the largest traditional excuse for war —the division of humanity into haves and have-nots. There are other causes of human discord; in a world without poverty we should be better able to recognize them."





thing else, will be largely synthetic.

• The very buildings we inhabit and all their furnishings will be largely plastics or synthetics, and all this within our lifetimes—all this before 2000 A.D.!

There are many good reasons for these changes and one has already been mentioned: plastics are materials that can be designed specifically for each use. Such materials will tend to be superior to other materials which have merely been **appropriated for** or **adapted to** a use. Total thickness of the foam plastic core would be 1⅛ in. Columns would be black anodized aluminum but could also be plastic. Floor and wall panels would be a sandwich type of tough transparent plastic skins over decorative paper sheets and foam cores.

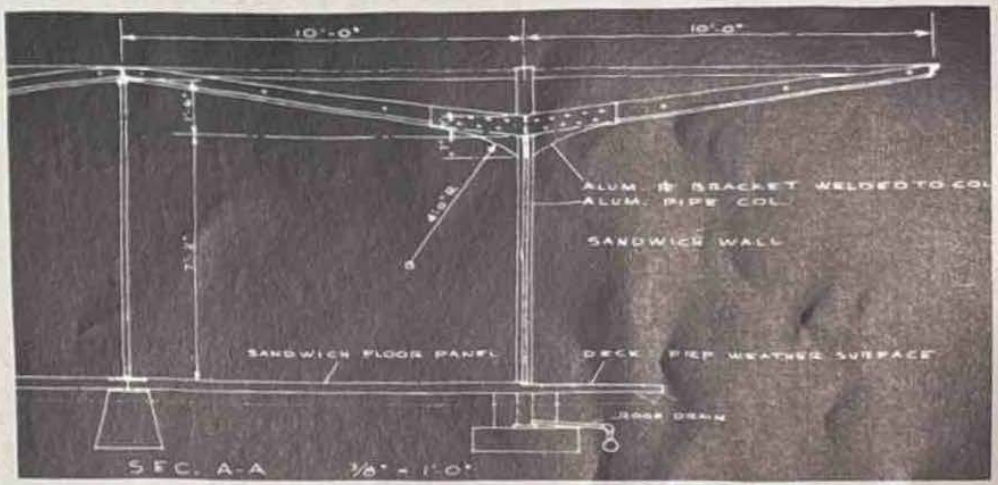
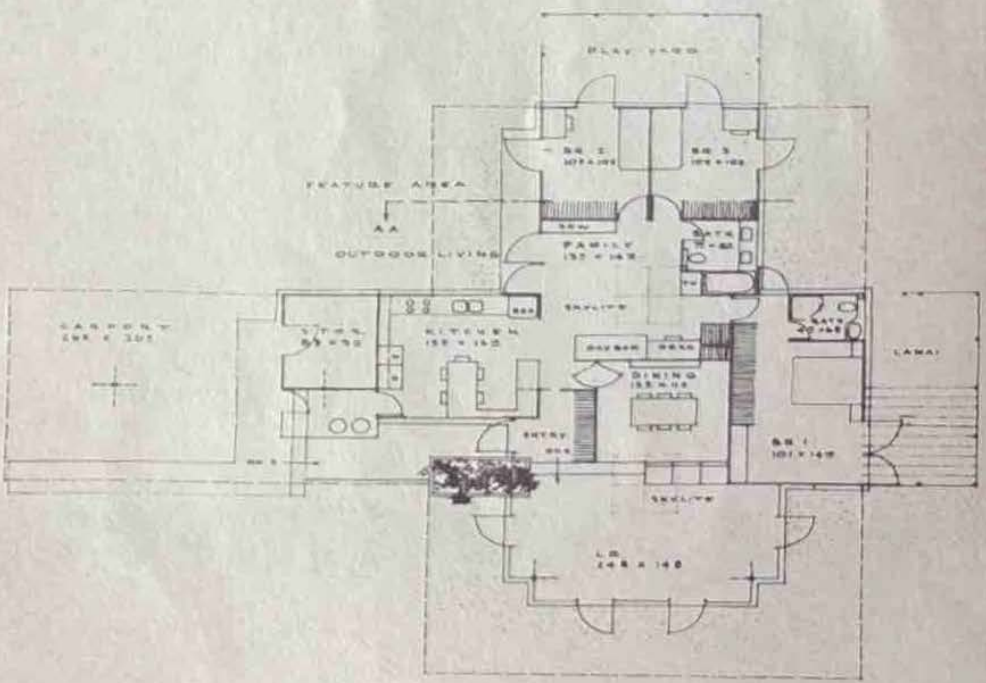
The architect comments: "We shall not know how plastic houses will look until we start to make them. Then, as we begin, methods and design will rapidly develop. There is one prediction concerning design: sculpture and surface enrichment will return to architecture, not as fads but as structural necessities. Possibilities of molded synthetics are various and seem naturally to include extremely thin shells—¼ in. for synthetic resins vs. 3 in. for concrete, for instance, but strengthened 'sculpturally.'

"So, in a sense, the rough 'hand-molded' concrete of Corbusier and the ornamented 'tool-shaped' concrete sculpture of Wright are prophetic, even though the materials and methods used are crude compared to the synthetic materials and mechanical methods of a chemical era.

"One final note. The foregoing article might be interpreted as an expression of materialism: that an abundance of goods will solve all human problems. This is not intended. The chemical-mechanical era will create many new ones, but it will remove the largest traditional excuse for war—the division of humanity into haves and have-nots. There are other causes of human discord; in a world without poverty we should be better able to recognize them."



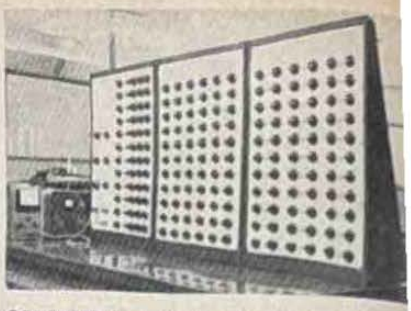


Analogue computer makes lighting calculations

Lighting engineers at Smoot-Holman Co. of Inglewood, Calif., have taken much of the guesswork out of lighting design with a luminous analogue computer that makes lighting calculation a matter of science.

This new machine, which was built by research engineer Bill F. Jones, determines exactly how light is distributed within a room by setting up electrically inside the computer the same lighting conditions as those in the room. By doing this the computer is able to make calculations that determine the brightnesses and amount of light.

The basic working principle of the computer was formulated by Philip F. O'Brien of UCLA where the first of this type was built. The Smoot-Holman computer is an adaptation of the O'Brien design.



COMPUTER is indicative of continued growth of lighting industry.

The computer forms an electrical network analogue of the distribution of light flux within a room. It does this by using voltages to represent surface brightness and by using variable resistances to represent functions of the area and reflectance of each surface and of the per cent of flux transferred from one surface to another. In this way the computer is able to analyze the flux distribution, including interreflections, of any enclosure within its range. It can analyze enclosures having up to 12 surfaces and can handle more complex enclosures by use of equivalent reflectances for parts of an enclosure.

Any lighting problem involving primarily diffusely reflecting surfaces can be solved by the computer. Among them: determining fixture design and analysis; calculating coefficients of utilization; calculating illumination at any specific location within an area; calculating brightness of room surfaces; determining distribution of illumination and brightness in asymmetrical rooms; solving daylighting problems; and determining effects of partitions and other obstructions.

QUAKEPROOF IS WORD

for this 43-story Mexico City skyscraper, Latino-Americana Tower, which sat unharmed through worst quake on record in Mexico last year. American Institute of Steel Construction has given its annual Award of Merit to owners of structure.

After 6 years users know

Invisible DARACONE

performs honestly in protecting masonry walls!

Architects and builders in the Pacific Northwest have now experienced over six years protection with DARACONE and can report—**it does exactly as the advertised facts say it will.**

This clear, colorless, silicone-based liquid was developed as an all-climate, all-weather protection and has proven to be **fully effective.**

DARACONE forms a strong, invisible lining for the pores, gets deep into cracks and fissures, still allowing breathing. It is applied quickly on both new and old walls without affecting appearance.

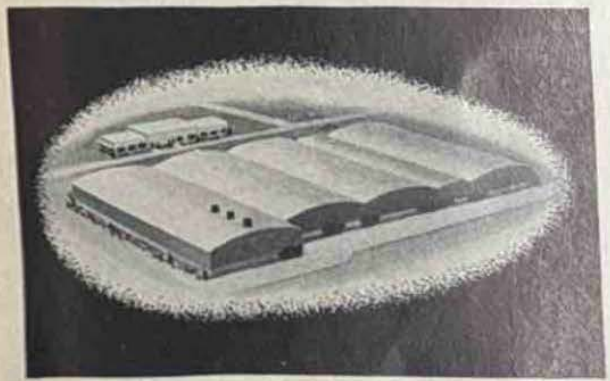
"Industria de Cafe S. A." plant under construction in Guatemala City.

Clear spans up to 110 feet, designed for hurricane wind loads with...



Completed Reynolds Aluminum Company of Cuba plant located near Havana.

MACOMBER V-BOWSTRING TRUSSES

The new all-aluminum, 73,600 square foot plant of Reynolds Aluminum Company of Cuba, near Havana is an example of the use of Macomber steel framing featuring V-Bowstring Trusses designed to meet hurricane wind-load requirements. Another recent Latin-American structure incorporating V-Bowstring Trusses is the Industrial de Cafe, S. A., 52,000 square foot plant in Guatemala City.

The inherent strength of the Macomber V-Bowstring Trusses, incorporating the greater structural values of cold-rollformed chords and webs, permits clear spans up to 110 feet for large unobstructed bay areas. The use of standard Macomber steel framing units simplifies design to speed erection and cut costs.

This new Macomber V-Bowstring design Manual is just off the press. Write for your copy.

MACOMBER

CANTON 1, OHIO

PRODUCTS

air conditioners

Cabinet design has been given particular attention in the Zone Air series of room unit air conditioners, in eight models ranging from 1½- to 10-ton capacities. Like their concealed type counterpart, the cabinet units are planned for direct expansion, hot or cold water, or direct expansion and water. No ductwork or tearing out partitions for installation is required. Stressing quietness of operation, the units are recommended for hotels, motels, hospitals, offices, stores, restaurants, etc.—A. H. Witt Co., Inc.

(Item No. 1)

rolling door hardware

Washington's "647" by-passing wardrobe rolling door hardware uses Teflon coated hangar axles to provide lifetime lubrication for the nylon wheels. Aluminum track is heat treated to give a 50% increase in yield strength without increasing weight. Doors from ⅝- to 1⅜-in. thick can be hung with one standard set of hangars.—Washington Steel Products, Inc.

(Item No. 2)

industrial fixtures

The All-Brite line of industrial fixtures consists of RLM Series 81, semi-direct with upward component, and Series 80, totally direct, equal in quality to the former but not designed for RLM specifications. Heavy return flanges on lower edge of porcelain enamel reflectors preserve longitudinal straightness. Metal-clad and metal-backed sockets are seated in tapered die-formed housings which can be instantly removed in continuous row installations for socket replacements. Joiner provides perfect

alignment of fixtures in continuous rows. Fully metal-framed 35-30 deg. metal louvers are available and all models may be mounted on surface, chains or stems.—Fluorescent Fixtures of California.

(Item No. 3)

reflective insulation

With the increasing use of low pitched roofs and open-eave construction in today's homes, architects and builders are taking a fresh look at insulating materials. Reflective insulation has come into favor because of its advantages for combatting summer heat gain and aluminum foil has the added feature of being highly wind-resistant. Four types of Alfol insulation have a boxlike design that provides full edge-to-edge coverage. Self-expanding blankets completely fill framing spaces, with the innermost reflective surface extending fully to the edge of each framing member. —Reflectal Corp.

(Item No. 4)

storage covers

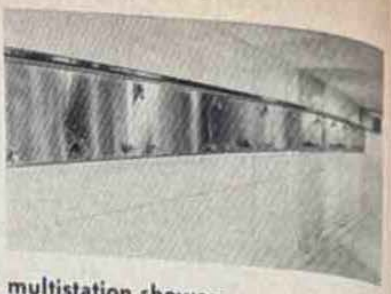
Originally developed for Northwest lumber mills, waterproof Sisalkraft storage covers provide inexpensive protection for all building materials from sun and rain. They are prefabricated in sizes from 4 to 20 ft. long and in varying widths.—American Sisalkraft Corp.

(Item No. 5)

bathroom fixtures

Mat finished floors reduce the hazards of wet surface slipping in the Glaceramic bathroom fixture line. Walls and sides of the stall showers, septor bases and bathtubs are satinlike to the touch, but a soft chamois finish is used where foot contact is made. Completely seamless nature of the designs eliminates accumulation of bacteria and discolorations caused by the disintegration of porous joining mastics.—Dudley Industrial Corp.

(Item No. 6)



multistation showers

The Arvin type multistation shower fixtures for schools, colleges, institutions and industrial plants present the architectural advantages of concealed piping yet retain the ease of accessibility normally found only in exposed piping installations. In units of one, two, three or four shower stations, basic module combinations have showers on 36-in. centers. Overlay connections, access panels and right angle corner units provide adequate combinations for most design requirements.—The Logan Manufacturing Co.

(Item No. 7)

cathedral materials

In establishing a distribution program of significant cathedral materials, a Northwest plastics firm has gathered materials from throughout the country, in addition to those of its own manufacturing subsidiary. Included are a variety of structural glazing products in thermoplastics and reinforced plastics in special cathedral colors, along with decorative and colorful translucent sandwich panels in standard and custom configurations. An extensive custom composite series employing all suitable media such as glass, plastics, ceramics and metals is available under the direction of James Bartell, artist now on the company staff.—Architectural Plastics Corp.

(Item No. 8)

architectural letters

Vogue style architectural metal letters for identifying buildings utilize small, subtle serifs and a slight contrast of thick and thin strokes. In sizes from 1½ to 18 in. high, they are custom cast in brass, bronze, aluminum or nickel-silver and fabricated for larger lettering needs in stainless steel. Chrome and gold plated letters also are offered.—A. J. Bayer Co.

LITERATURE

Readers are requested to write directly to manufacturers for the following literature.

Curtis Aluminettes: shows the custom appearance that can be obtained with partitions; illustrates typical office layouts, construction of panels, method of installation: 8 pp.—Curtis Office Partition Co., Inc., 103 Union St., Brooklyn 13, N.Y.

Railings in the Modern Manner: shows detail drawings that are helpful to those who design, specify or install railings for home, commercial and industrial purposes; 8 pp.—Julius Blum & Co., Inc., Carlstadt, N.J.

Granco Product Manual (AIA 17-A): covers Tufcor, a new concept in roof construction, and Structur-Acoustic; discusses details, selection, specifications; 16 pp.—Granco Steel Products Co., 6506 N. Broadway, St. Louis 15, Mo.

D&H PyroDor Catalog (AIA 16-A): describes line of integral door, frame and hardware units; covers Underwriters requirements and limitations; 24 pp.—Dusing & Hunt, Inc., 53 Lake St., Leroy, N.Y.

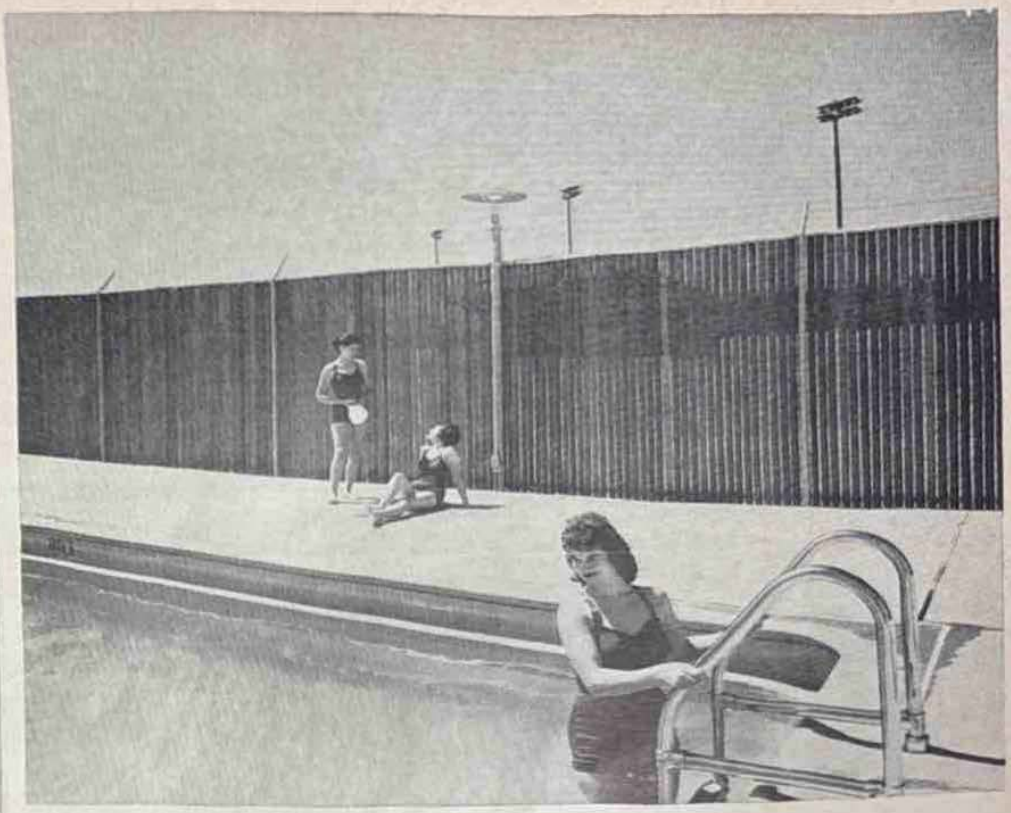
In-Sink-Erator Garbage Disposers (AIA 29-H-61): illustrates all units; has rough-in dimension charts, labeled cutaway and closeup photos of parts; 12 pp.—In-Sink-Erator Mfg. Co., Racine, Wis.

Dwyer Snack Bar (AIA 35-C-1): illustrates several models; gives dimensions and finishes; 4 pp.—Dwyer Products Corp., Michigan City, Ind.

Waterloo Air Diffusion Equipment (AIA 30-J): has 40 photos and 35 drawings of complete line of grilles and registers, section tables for each of 26 standard sizes and for new grilles with curved louvers; 54 pp.—Waterloo Register Co., Inc., P.O. Box 72, Waterloo, Iowa.

Koroseal Vinyl Coated Fabrics (AIA 28-C): has several installations shown in colorful photos; includes color chart; 8 pp.—B. F. Goodrich Industrial Products Co., Coated Fabrics Dept., Marietta, Ohio.

Resolite Daylighting Products (AIA 26-A-9): contains general data, specifications, architectural and engineering details, suggested applications on line



When protection alone is not enough . . .

USS Cyclone Rustake Fence

This attractive swimming club needed protection. Good, strong fence was required to exclude trespassers and gate-crashers, to prevent unguarded after-hours swimming parties.

But this fence had another job to do, too—it had to preserve privacy. And that's why USS Cyclone Rustake Fence was selected. Sturdy Cyclone Fence, with its heavy steel framework and barbed wire, will discourage the most intrepid intruder. And those slender strips of glowing California Redwood, inserted in the special wide mesh of Cyclone Chain Link fabric, keep out prying eyes, let the bathers swim in privacy, add to the pool's good looks.

USS Cyclone Rustake Fence is ideal for use on every type of installation where protection, plus privacy, is essential. Cyclone Rustake Fence has all the strength of steel, and at the same time it gives the over-all appearance of redwood picket fence.

LITERATURE

of Fiberglas reinforced plastic products; 22 pp.—Resolite Corp., Zelienople, Pa.

Glass for Construction (AIA 26-A): covers flat and patterned glass; has specifications, cross sections, details; 36 pp.—Libbey-Owens-Ford Glass Co., Toledo 3, Ohio.

Rosboro Timber Fabrication (AIA 19-B): illustrates truss and lamella roof construction and applications of engineered timber construction to commercial and industrial buildings, schools and churches; 12 pp.—Rosboro Lumber Co., Springfield, Ore.

Haws-Kramer Flush Valves (AIA 29-H-21): describes complete line; has rough-in drawings for 40 combinations of Nyla-Phragm and piston type installations, operational and repair parts drawings, etc.; 20 pp.—Haws-Kramer Flush Valves, 819 Bryant St., San Francisco 3, Calif.

Wood Educational Laboratory Furniture (AIA 35-E): helpful as a planning aid for secondary schools and junior colleges, with dimension drawings and specifications; describes complete line; 68 pp.—Kewaunee Mfg. Co., 5124 S. Center St., Adrian, Mich.

Structural Sealing with Elastomeric Type Sealants: serves as reference manual for all types of building applications, from curtain wall to conventional structures; has case histories; shows applications as sealing copings, expansion joints, tile and masonry; 12 pp.—Thiokol Chemical Corp., 780 N. Clinton Ave., Trenton 7, N.J.

Form Board for Poured-in-Place Roof Decks (AIA 37-B): includes specification tables for heat transmission coefficients, painting and ventilating instructions, architectural specifications and drawings of typical gypsum roof deck sections, subpurlin design table; 8 pp.—Owens-Corning Fiberglas Corp., Toledo 1, Ohio.

Highlights of Faries Research on Student Lighting: summary of study covering factors relating to good dormitory lighting—size and location of desk, color of desk top, light distribution, eye relaxation; 4 pp.—Faries Lamp Division, Elwood, Ind.

Today's Better Schools Are Made of Wood (AIA 19-A-1): follows school construction projects step by step with picture stories in full color; has maintenance cost figures, sketches of labor and cost saving wood floor systems; 12 pp.—West Coast Lumbermen's Association, 1410 S.W. Morrison St., Portland 5, Ore.

Comfort Everybody Can Afford: results of a two-year independent study conducted by the National Bureau of Standards, making possible for the first time accurate calculations of the value of aluminum-clad insulations; aimed at securing data to determine heat transmission values when aluminum is used either alone or in combination with other insulating materials in any confined space; 48 pp.—Aluminum Company of America, Pittsburgh 19, Pa.

The Radiant Heating and Cooling Story (AIA 30-C-44): explains key features of system, with typical sections for concrete and wood floors or ceiling installation; 6 pp.—The Radiant Heating and Cooling Institute, 5657 Wilshire Blvd., Los Angeles 36, Calif.

Painting Asbestos-Cement Products: discusses types of paint that can be used, advantages of each, surface preparation of material to be painted,

Forty-one Rilco purlins: 9"x13"
Twelve Rilco dormer valley beams:
7"x13"

Photos: Hedrich-Blessing

"HAPPY WITH COST ERECTION APPEARANCE"

". . . we were completely happy with the cost, the erection, the appearance and the grade of the Rilco laminated members in this church," writes the architect. The Rilco arches, purlins and dormer valley beams contributed greatly to the church's functional and aesthetic appeals, for the warmth and symbolism of wood helps raise man's thoughts from himself upward.

And there are other reasons why wood is especially suitable for churches: Laminated wood allows virtually complete design freedom—blends with any church style, any church concept—offers warmth, friendliness, reverence—plus economy and all-important fire-safety.

Before you build your church, discover how Rilco laminated members can help you build a larger more attractive structure—yet stay within the budget. For complete information contact your nearest Rilco office.

works wonders with wood

recommended procedures of applying paint; 12 pp.—Asbestos-Cement Products Association, 509 Madison Ave., New York 22, N.Y.

A Question of Value and Your Community Dollars: provides in photos and non-technical language extensive information about engineered timber; 16 pp.—American Institute of Timber Construction, 1757 K St., N.W., Washington 6, D.C.

Practical Answers to Common Questions about Central Air Conditioning: helpful reference describing major types of systems and how they are installed in the home; 24 pp.—Minneapolis-Honeywell Regulator Co., Minneapolis 8, Minn.

Acrylic Emulsion Paints for Exterior Masonry: based on lectures prepared by Gerould Allyn for the University of Florida's 1958 Short Course in Paint Technology; companion booklet to author's "Basic Concepts of Acrylic Emulsion Paint Technology" published last year; 8 pp.—Rohm & Haas Co., Washington Square, Philadelphia 5, Pa.

Why and Where to Specify Latex Paint: "fills a gap of missing technical background, explains basic terms, states simply what these products are good for and what they are not good for, doesn't presume to say the last word on the subject and in effect appeals to the much vaunted reason and hardheadedness of architects and specification writers," says introduction by an architect; 18 pp.—The Dow Chemical Co., Midland, Mich.

Specifications for Metal Lathing and Furring (AIA 20-B-1): 1958 version includes a page devoted to fire-resistive ratings, along with specifications for solid and hollow partitions, wall furring, metal lath attached directly to wood supports, contact, furred and suspended ceilings; beam and column protection for fireproofing; reinforcing for exterior stucco; 20 pp.—Metal Lath Manufacturers Association, Engineers Building, Cleveland 14, Ohio.

How to Sell Homes Faster with Armstrong Floors: new edition of 1957 booklet has descriptive sections on latest advances in resilient flooring and complete range of merchandising aids available to builders; 48 pp.—Armstrong Cork Co., Lancaster, Pa.

Noise Control for Bowling Lanes (AIA 39-B): designed to aid bowling lane planners and owners in recognizing extent of acoustical problems and taking effective control measures in either new construction or remodeling; 4 pp. plus 3 installation detail sheets.—Reynolds Metals Co., Richmond 18, Va.

Data Sheets for Vermiculite Concrete Roof Insulation and Roof Decks: cover 1:6 and 1:8 mixes over vented galvanized steel roof decks and over structural or precast concrete decks; vermiculite decks over fiber insulation and acoustical form boards, glass fiber acoustical form board, cement-asbestos form board, paper-backed wire lath; 8 sheets plus long-form specification.—Vermiculite Institute, 208 S. LaSalle St., Chicago 4, Ill.

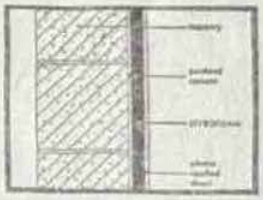
The George Nelson Sketchbook: presents in sketch form current and projected uses of expanded metals such as sunshade and decorative front, sliding screen, screen for patio, air conditioner; 10 pp.—United States Gypsum Co., 300 W. Adams, Chicago 6, Ill.

Home Planners: contains striking illustrations of interior and exterior redwood usage, principally in color; prepared as special edition of quarterly publication entitled Redwood News; 16 pp.—California Redwood Association, 576 Sacramento St., San Francisco 11, Calif.

new construction method with

STYROFOAM®

cuts building costs!



Styrofoam*, a Dow plastic foam insulation, is now available for a completely new construction method. Fully insulated masonry homes with plaster interiors can now be built without the usual furring and lathing. And the finished plaster wall is warm and dry.

Styrofoam is clean, lightweight, easy to handle insulation that does not lose its effectiveness. It resists moisture, heat, cold and deterioration; assures lower fuel bills. And it's easy to cut and shape Styrofoam, even around pipes, windows and electrical outlets.

*Styrofoam is a registered trademark of The Dow Chemical Company

Warehouses in Seattle, Portland, Spokane

MANUFACTURERS/SUPPLIERS

• **Day-Brite Lighting, Inc., of California** has promoted Bernard J. Gaerling to the post of sales manager, replacing Stanley H. Bixler who has been named senior vice president and general manager of the company's national operations in St. Louis.

• **Arcadia Metal Products** of Fullerton, Calif., has formed an architectural sales division to act in a technical advisory capacity to architects and contractors regarding applications of sliding doors, windows and window walls. Heading the division is Lloyd O. Johnson, who is also assistant sales manager.

• **Permanente Cement Co.** has purchased the English-owned Olympic Portland Cement Co., Ltd., which includes a 1,750,000-bbl. capacity plant in Bellingham, Wash., and storage facilities in Seattle. Permanente's existing Pacific Northwest division and Olympic will be operated as separate divisions and will market their present brands of cement individually.

• **Fluidmaster, Inc.,** of Anaheim, Calif., has named Fred E. Schmuck as national sales manager. The company was recently formed by Adolf Schoepe, founder and former president of Kwikset Locks, Inc., to develop new systems of fluid controls and is in production on its first application—a stainless steel, hydraulic ball cock for toilets.

• **Fiddes-Moore & Co.,** subsidiary of Evans Products Co., has opened a new office in Portland, headed by Emory Moore, as another step in the expanding building materials marketing program of the two companies.

• **Pioneer Manufacturing Co.** of Los Angeles has purchased a 2½-acre tract on Andrita Street adjoining its present facilities in a move to increase production capacity. The property includes a 25,000-sq. ft. office building and several smaller structures.

• **Ador Sales** of Fullerton, Calif., has named Henry (Bud) Woodward as special assistant to C. E. Munson, vice president in charge of sales.

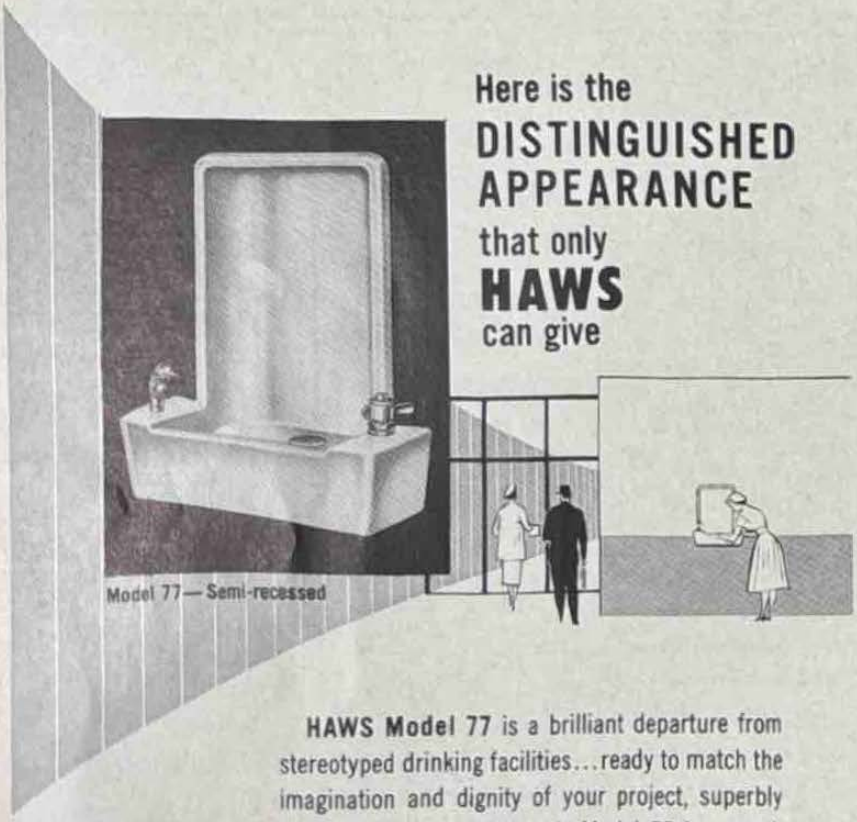
• **Glide Windows, Inc.,** and **The Gridwall Co.** of North Hollywood, Calif., have appointed Robert J. Fay as vice president and general manager.

• **A. C. Horn Company** of San Francisco has appointed its general manager, Stanford R. Horn, to a vice presidency.

• **Touch-Plate Mfg. Corp.** of Paramount, Calif., has added two representatives to its sales staff, Harvey L. Laughlin Jr. and John R. (Mac) Hunter, as part of its nationwide expansion program.

• **Crane Co.** has appointed a new West Coast sales district manager in Los Angeles, Robert E. Penney, succeeding Darrell R. Nordwall who goes to Chicago as general manager of merchandising.

• **Ramco Manufacturing and Engineering** of Portland has begun production of a complete line of residential and commercial electrical heating equipment, including baseboard, wall and bathroom type units, at 5413 N.E. Columbia Blvd. In partnership as



HAWS Model 77 is a brilliant departure from stereotyped drinking facilities...ready to match the imagination and dignity of your project, superbly styled, precision-engineered. Model 77 is a semi-recessed wall fountain—in durable vitreous china, available in striking colors, with automatic volume and pressure controls. And the same design is available in stainless steel (Model 73); or in remarkably tough, lightweight fiberglass (Model 69, in choice of colors at no extra cost).

WRITE FOR DETAILS
Ask for HAWS complete new catalog, too!

For nearly 50 years, HAWS has provided finer drinking facilities to match forward-looking architectural design. Here's a design in vitreous china, stainless steel and fiberglass worthy of your attention.

HAWS DRINKING FAUCET COMPANY
1441 FOURTH STREET (Since 1909) BERKELEY 10, CALIFORNIA

FIRST ANNUAL AWARD
of Spokane Chamber of Commerce is received on behalf of Gladding, McBean & Co. by president C. W. Planje (left) from chamber head Joseph W. Kipper (center), while Washington's Gov. Albert D. Rosellini looks on. Company recently completed $2 million heavy clay products plant at Mica, Wash.

•

owners of the firms are brothers Lester V. and Emil A. Ramberg, who plan to diversify the plant's output later by producing other types of electrical equipment.

• **Cleaver-Brooks Co.** has appointed Richard F. Gray as sales representative in the state of Oregon and southern Washington.

• **Acme Industries, Inc.,** has named Thomas Davenport as sales engineer in the San Francisco territory.

• **Basalt Rock Co.** of Napa, Calif., has established a new consulting service on the manufacture of plant cast, prestressed concrete products.

• **Robbins Floor Products, Inc.,** has opened a permanent showroom in the newly constructed Furniture Mart in Los Angeles, where regional manager H. V. Fitzpatrick also has office facilities.

• **Kaiser Steel Corp.** is now using facilities designed to increase tin plate production by 85% at its Fontana, Calif,. plant.

• **Radford Supply Co.** of Santa Maria, Calif. has added three California distributors for its aluminum sliding glass window line: Bermuda Door Co., Inc., San Leandro; Hogan Wholesale Building Materials Co., Oakland; and McLeod Glass Co., Mountain View.

• **Simpson Timber Co.** of Seattle has appointed C. H. Bacon Jr. to the newly created position of executive vice president. Harold W. McClary, formerly manager of lumber, plywood and door products, succeeds Bacon as vice president and general manager of Simpson Logging Co. of Shelton, Wash.

• **North American Asbestos Corp.** has appointed United States Plywood Corp. as distributor for Asbestolux, fireproof insulating board, with initial warehouse stocks on the West Coast in Seattle, San Francisco and Los Angeles.

• **Koppers Co.** has presented a fifth-year scholarship to John G. Foti of the University of California, as winner at one of five schools participating in the Architectural Student Design competition.

• **Drayer-Hanson,** Division of National-U. S. Radiator Corp. has appointed Pacific Monitor of Seattle as its representative in the states of Washington and Oregon.

• **Cast Iron Soil Pipe Foundation** of Los Angeles has issued a 50-year written guarantee on the cast iron soil pipe and fittings manufactured by its members and used in residential construction in the states of California, Oregon,

McDowell & Craig, Norwalk, chose 12 COLT CO-2046 Clear-Opening Adjustable Louver Ventilators for all-year comfort.

WHEN YOU SPECIFY COLT, you provide your client with natural ventilation equal in performance to a mechanical system, yet with no motors or running costs! Ask for a consultation. COLT will be glad to help you plot the ventilation system of your next building, without obligation.

ECONOMICAL! COLT natural Ventilation is always competitive with other quality lines, costs less to maintain, and often costs less to buy.

EFFICIENT! Even in Southern California, COLT Clear-Opening Ventilators get rid of heat fast. They are hand-controlled and require no power.

LOWER! COLT'S low profile, in keeping with modern architectural standards, blends with the attractive silhouettes of newer industrial buildings.

LIGHTER! COLT Ventilators are seven times lighter than galvanized units giving comparable efficiency! No special bracing required!

WIDE RANGE OF VENTILATORS TO SUIT EVERY NEED — IN STOCK NOW

FIRE CONTROL
In event of fire, a simple additional feature drops COLT louvers open, lets heat and smoke escape without spreading.

Design and human problems Cont'd. from p. 14

canyon streets and plays with the contrasting values of low and high buildings, of glass and concrete, and of trees and flowers.

* * *

The present interaction between man and environment has been debased to a utilitarian conquest of nature and an economic megolomania of man. It is not a mutual adaptation guided by empathy and wisdom which alone can produce great works of architecture, city planning and all the other arts. If these present conditions continue, if Economic Man perseveres, our landscape will remain at best a tolerated appendix of haphazardly dispersed and isolated buildings and technical feats and, at worst, a commercialized chaos.

If the present trend persists, the landscape of this country, just as that of many other countries, will have been reduced within one generation's time to a chaotic mess of suburbias —or rather subtopias—surrounding work-centered, disjointed and anti-human conglomerations called cities, metropoleis or megalopoleis connected by a vast network of superhighways running as billboard canyons through the country.

* * *

This is the answer to: how will our world look tomorrow, if we do not muster the courage to go beyond timid, fractional and insufficient reforms. "Can our cities survive"? The answer to this wrong question is: they cannot.

What should be done? The aim is: to create a dignified environment in which man can live a full life that frees him from the satanic power of the rhythm of work; to create an integrated culture in which every human emanation is deeply embedded in the fertile humus of social consciousness; to bring order, a sublime and stimulating order, out of the present jungle of man-made works; to imbue a unity of purpose and expression into every human manifestation.

* * *

Our cities have run their course. The conception of a city is too limited for our widening idea and experience of space. Our cities are like the elephantiasis of small towns and therefore antiquated.

THE END OF CITIES MEANS THE RISE OF COMMUNITIES. OUR ENVIRONMENT IS EXPANDING.

Therefore, our cities are to be dispersed; our industries and commercial concentrations are to be decentralized; our landscape has to be recreated; small communities spread systemat-

ically over the country and filled with a genuinely social coherence and awareness are to be developed; work and home are to be related in a new proximity and traffic is to be reduced, not expanded; a new landscape is to be shaped covering the country like a continuous green carpet interrupted by small community units distinct in character, limited in size and each serving a different function.

• • •

We should not try to make the coming era the American Century or the Atomic Age. The future will not be the age of any one country, of any one invention, nor will it be the Age of the Common Man or the Age of the Outer Spaces. The world is one and there is only one goal: to pave the way toward the AGE OF MAN.

Architecture in the Landscape—Henry Hill, architect, San Francisco.

Today's architect should have the understanding and realization of the fundamental differences in approach and thinking, and the consequent results of his basic two choices—two concepts: 1) design **from** the problem and the site, or 2) design **to** the problem and the site.

The latter is, I believe, arbitrary and at best a brilliant intellectual application **to** the problem and the site, and is, in result, **to** the human being. The former, I believe (and am primarily concerned with this) is a three-dimensional concept which grows **from** the problem and the site and is, in result, **of** the human being.

Architecture and landscape—all that is encompassed by the eye—must be of a unity, accomplished through understanding — natural and human, and sensitivity. What man creates in three dimensions is, of course, not of nature, but an architect's truly valid contribution of his disciplined order of space within and understanding of nature—or architecture in the landscape.

• • •

I take the architect, firstly, to mean in reality a full man. The realization of the profession really does embrace and encompass all of man's physical activities and embodies all of his thinking and aspiration. Thus the architect by his very nature must be an understanding person. According to his individual ability, he participates fully on the highest plane.

Today as we are approaching a momentous change in our techniques and possibly our concepts (i.e., atomic power, new materials such as featherweight plastic beams, new space relationships) there may be a feeling of escape from it; there may be possibly a contemporary baroque, serious or otherwise. But with all of this, as of now, there is the intellectual application of a concept to the land, to the problem and to the people; and there is in contrast to this the other extreme of the development from the human being, from the land, from the needs. This is what I interpret Frank Lloyd Wright's "organic growth" to mean.

With the understanding of these, there comes the question of the architect's repsonsibility to himself, to his profession and **to his fellow professional.** If there is not the understanding, the result can only be the mediocre and I believe that this we are threatened to be engulfed by. Western civilization (some plus or minus 23 centuries) from say, the Parthenon to the UN, and the outrage of all peoples (Corbusier having called the UN a "battlehold"): is this good enough?

The English language is a fairly stable and clarified method of communication and therefore I assume it is in order to use the dictionary definition of landscape. Among the definitions there is the phrase "all that is encompassed by the eye." Obviously, this opens to almost limitless ramifications and implications and brings up immediately the question of the interplay of personalities, the interweaving of ideas and thinking, and in its fullest expression the participation of realization between the architect and the landscape architect.

What man does is of its nature an intellectual concept applied to; **but with understanding,** this in reality comes from. What is worth realizing must be beautiful: man's ability of order, controlled by discipline (i.e., Bach); fullest development, Gropius' "stabilized society" (i.e., the surety and knowledge of a Mozart); the unstable quality of our society, the searching and groping (i.e., Hindsmith); more profound knowledge (i.e., Sessions).

Each to his capacity of participation and this to be shared. The sharing between a client and an architect becomes much more profound; and searching between the architect and the landscape architect can be a participation to the full. But in its very best sense, and in no way an offensive sense, I believe it must be under the ultimate guidance and direction of the architect, in the same way that the profession of engineering developed as a servant of the architect; and the landscape architect is to a fuller extent still the same.

All in all, this comes to its ultimate in Eric Mendelsohn's "the courage of action" and Albert Schweitzer's "man belongs to man—man's responsibility is to man."

House in the Garden—Ed Williams, landscape architect, San Francisco.

The vine-covered cottage is a symbol of man's great desire for security, peace and pleasure. The exact picture conjured up by the phrase will vary with each individual's architectural dreams, but the dream is significant to use here in that the cottage is vine-covered, more or less enveloped by vines (rose perhaps) and probably in a garden.

This implies that man's main desires in life—security, peace and pleasure—are closely bound up in his home and in nature as represented by the vine. That man can build a house of glass and steel and plastic is a miraculous achievement of his nature. That man must symbolically cover his house with a vine is a subconscious recognition of his dependence. The vine-covered cottage symbol will probably disappear with the advance of mankind. Another symbol will take its place. Let us hope it is not a vine-covered bomb shelter.

The boundaries of the profession of landscape architecture are at this time rather nebulous. City and regional planning fades into landscape design which in turn fades into architecture and engineering in the field of site development.

How does the landscape architect achieve his goal? Design and construction processes translate these requirements into a physical environment. Landscape design is the process of solving the known human and known site requirements by predetermining the arrangement of space and materials most sympathetic and best suited to the people and site involved. Since the final arrangement of elements will be experienced physically and psychologically by those for whom the design is made, it must provide pleasurable experiences through the senses of feeling, sight, sound and smell.

The designer must depend upon his knowledge and/or sense of people's reactions to space, mass, texture, color, line, sound and fragrance and seek to arrange the materials and spaces so as to achieve maximum pleasurable response. Pleasurable response seems to spring from two sources: that which is familiar and easily understandable; and that which is new, exciting and adventuresome. In the arrangement of landscape materials and spaces, human response is anticipated by contrasts such as large and small spaces, course and refined materials, opposition of planes and lines, tension and relaxation of lines, emphasis and de-emphasis of elements, contrasts in color, etc.; and by similarities such as repetition of elements, repetition of textures, repetition of lines and forms.

Since everyone is more or less conditioned by everything seen, the basic lines, masses, spaces, shapes and textures most common in the most familiar products of our society arouse easy and familiar response when transferred into the garden. But the designer who is always in advance will continually test new arrangement of masses, spaces, lines, textures and colors. It is by such experimentation that the boundaries of the knowable world are continually pushed back.

In a sense the whole world is a garden. Because so much of the world in its natural state is not comfortably inhabitable and because so much that social man creates is ugly, confused anti-nature and anti-man, people tend to create in their private gardens a small world of peace and pleasure. Why does not skillful man with his knowledge of nature and human needs create a garden of all of his living and working environment? Our cities, suburbs and countryside can become a continuously pleasurable man-made landscape. Our challenge is to find the way to do this.

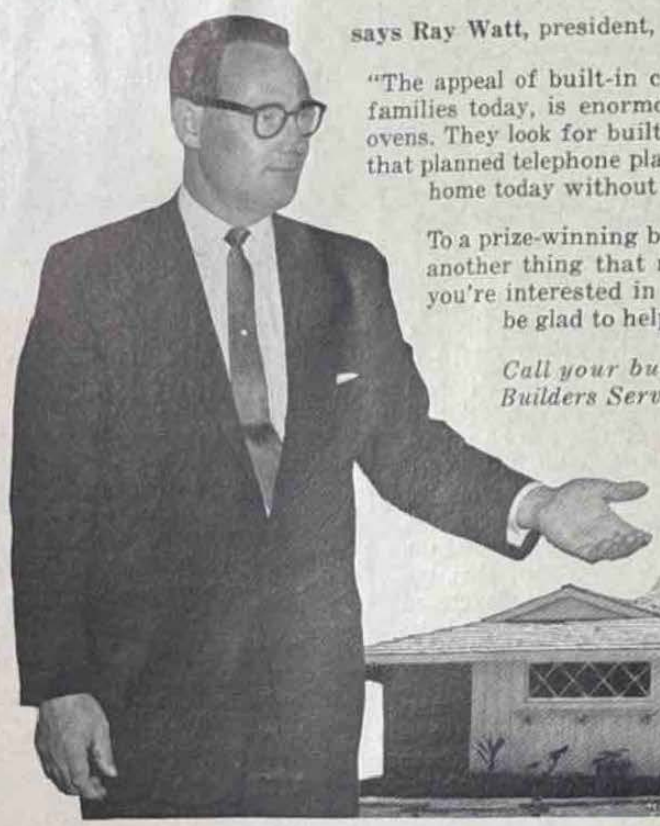
"Built-in telephone outlets are a must for any new home"

says Ray Watt, president, R. A. Watt Construction Co., Los Angeles, Calif.

"The appeal of built-in conveniences, especially to young, middle-income families today, is enormous. They want homes with built-in ranges and ovens. They look for built-in disposal and dishwasher units. And we know that planned telephone placement is every bit as essential. We never build a home today without at least two telephone outlets."

To a prize-winning builder like Ray Watt, added telephone planning is another thing that makes one home more saleable than the next. If you're interested in this plus value in the next home *you* build we'll be glad to help you plan built-in phone facilities.

Call your business office and ask for free Architects and Builders Service.



Pacific Telephone

It pays to include Telephone Planning in every home you build!

OREGON

●TELEPHONE BUILDING ADDITION— Albany, Ore.

Bids will be opened 2 p.m., August 20, by Pacific Telephone and Telegraph Co. in office of Charles Twelves, chief engineer, 509 S.W. Oak, Portland, for construction of a one-story, 30'x61' addition to the company's central office building in Albany. Plans with Jacobberger, Stanton, Franks & Norman, architects, McKay Bldg., Portland.

Reinforced concrete; brick veneer; framed for a future second story and for lateral growth. Provision will be made for a 60'x112' parking area.

Planholders: Robert C. Wilson, 1275 N. 9th, Corvallis; Vik Construction Co., 160 Madison, Eugene; Erwin E. Batterman, 147 N. Commercial, Salem; John Carrick & Son, Route 3, Box 950, Albany; Teeples & Thatcher, 8850 S.E. Otty, Portland. DC 8-1

●ELEMENTARY SCHOOL ADDITION— Baker, Ore.

Bids will be opened 8 p.m., September 2, by Baker School District No. 5, Baker County, Ore., for construction of a concrete slab-on-grade, 16,500 sq. ft. addition to North Baker elementary school between 7th and 8th on B St., Baker. Plans with Hayslip, Tuft, Hewlett & Jamison, 2040 S.W. Third Ave., Portland. $25 deposit. An alternate would provide for remodeling the present school.

Included will be a classroom wing, administrative facilities, gymnasium, kitchen with cafeteria, and a small sub grade dressing room under platform in gym. Work includes removal of some bearing walls, installation of cabinet work and new work alcoves; one coat of paint; installing a plywood underlayment of floors; acoustical tile for ceilings; fluorescent fixtures for classrooms; install toilets on second floor; minor revisions to heating system; install minor partitions and finish work in basement.

Block exterior walls, paint finish; glued laminated beams; rigid insulation; built-up roofing with gravel topping; plastic and glass block skylights; aluminum and translucent sash; stopped-in glass wood frames; hollow metal exterior doors and frames; exposed block or gypsum wall board; acoustical type ceiling; fir cabinets; metal wardrobes; gas-fired boiler. LC 8-12

▲SHOP BUILDING— Brookings, Ore.

Bids were rejected by Brookings School District No. 17C, Curry County, Brookings, for construction of a 3,800 sq. ft. concrete slab-on-grade, shop wing addition to Brookings High School. Plans by Hayslip, Tuft, Hewlett & Jamison, architects, 2040 S.W. 3rd, Portland. Bids will be re-invited after changes have been made in specifications. A tentative bid opening date has been scheduled for August 26.

The low bid was submitted August 5 by Bessonette Construction Co., 608 E. Main, Medford, $48,700. Six firms submitted bids, ranging to a high of $53,794.

■ELEMENTARY SCHOOL—Brookings, Ore.

Planholders announced for construction of a one-story, 28,000 sq. ft. elementary school near the present high school on Easy St., in Brookings. Bids will be opened 8 p.m., August 26, by Brookings School District No. 17-C, Curry County, Mrs. Dora C. Beaulieu, clerk, at Administration Office. Plans by Hayslip, Tuft, Hewlett & Jamison, architects, 2040 S.W. Third Ave., Portland.

Planholders: Hampton C. Platt, Box 27, Salem; Horton Bros., Box 1272, Brookings; Johnston Construction Co., 260 Luther St., Salem; Besonette Construction Co., Box 709, Medford; Waldo S. Hardie & Son, Box 422, Eugene; H. G. Carl Construction Co., Box 387, Salem; Industrial Building Co., Box 869, Eugene; Cummings Construction Co., Box 865, Grants Pass; C. W. & Willis A. Hill, Box 682, Salem; A. T. Fox, Box 831, North Bend; H. Barnhart, Box 68, Medford; LeRoy Weideman, Brookings; Riverman & Sons, 1230 N.E. 63rd Ave., Portland; Ausland Construction Co., Box 437, Grants Pass.

LC 8-13. Previous report 8-9

●PAINTING— Burns, Ore.

Bids will be opened 2 p.m., September 5, by U.S. Air Force, procurement office, Geiger AFB, Wash., for painting exteriors of buildings at the 634th ACWRON in vicinity of Burns; IFB 45-614-59-13. Plans with above office.

THIRY NAMED ARCHITECT FOR SEATTLE EXPOSITION

Seattle has found a supervising architect for its integrated Civic Center-Century 21 Exposition site development right in its own back yard, with the selection of Paul Thiry as the last pages of PA&B go to press. The choice was made by two groups—the Civic Center Advisory and World Fair commissions—who earlier had recommended an advance planning fee of three times the drafting cost, allocating $100,000 for this assignment. Also adopted was a concept which includes multilevel exposition buildings grouped around open landscaped courtyards and terraces.

Planholders: E. B. Penning, 1122 E. 32nd, Spokane, Wash.; Charles A. Stapleton & Son, N. 603 Ash, Spokane; Arthur N. Syverson, 449 N. Kearney, Bend; Richard L. Adams, 1014 LaPointe St., Boise, Idaho; Jones & Co., 4536 N.E. 41st, Portland, Ore.; A & F Painting Co., 3844 E. 16th, Spokane; Springer Painting Co., W. 2104 13th Ave., Spokane; Ned Avers, 1703 2nd Ave., Spokane. LL 8-13

★SCHOOL ADDITION—Central Point, Ore.

Award to H. Barnhart, Box 68, Medford, $46,891, by School District No. 6, Jackson County, Central Point, for construction of a new music building to be joined to the present Crater High School at Central Point by a roof. Plans by Hayslip, Tuft, Hewlett & Jamison, architects, 2040 S.W. 3rd Ave., Portland. Bids opened August 7.

OTHER BIDS: R. J. Batzer Construction Co., Box 689, Medford, $47,923; Slater & Klein, 925 S.W. Greenwood Drive, Grants Pass, $47,935; Meyers D. Jones, Box 161, Medford, $49,200; Bessonette Construction Co., Box 709, Medford, $51,460; Hamilton C. Platt, Box 27, Salem, $51,500; Ausland Construction Co., Box 437, Grants Pass, $56,860; E. J. Fordyce, 202 Olwell Way, Medford, $61,312. LC 8-13. Previous report 7-30

▲COURTHOUSE ADDITION— Coquille, Ore.

Bids were opened August 6 for construction of three-story, 50'x100' addition to Coos County Courthouse in Coquille. Plans by R. D. Kennedy, architect, 1220 S.W. Stark, Portland. LOW BASIC BIDS: George A. Moore & Associates, 923 S.W. 17th, Portland, $248,632; Jack Bruer, 1283 N. 13th, Coos Bay, $262,744; A. T. Fox, Box 831, North Bend, $268,631. DC 8-9. Previous report 7-30

WAREHOUSE— Cottage Grove, Ore.

The warehouse owned by Wayne Cannon in Cottage Grove, that was destroyed by fire earlier this year, will be rebuilt. Damage was estimated at $50,000. DC 8-12

★SCHOOL ADDITION— Crabtree, Ore.

Award to Abe & Post, 404 E. Isabella St., Lebanon, $13,484, by Crabtree School District No. 110-C, Linn County, Crabtree, for construction of one-classroom addition to existing school. Architect is Chris Jeppsen, Benton Hotel, Corvallis.

Other bids: R. C. Wilson, 1275 N. 9th St., Corvallis, $14,667; Starr Builders, 1765 S. Main St., Lebanon, $15,069.

DC 8-12. Previous report 7-24

★PARK STRUCTURES— Crater Lake National Park, Ore.

Award to Freeland Construction Co., Columbia City, Ore., $39,240, by Tom Williams, park superintendent, Crater Lake National Park, 307 Federal Bldg., Medford, for construction of a comfort station at Mazama camp ground; entrance station at Annie Spring; and 1,000 sq. ft. covered entrance way to the administration building, all in Crater Lake National Park. The three items were taken from the original bid invitation of June 24 on which bids were rejected.

ZZ 8-8. Previous report 8-6

SWIMMING POOL— Dallas, Ore.

It has been recommended to the City Council to place a $125,000 bond issue on the November 4 ballot, to finance construction of a public swimming pool. The pro-

posal suggests a site on park property located north of Levens St. Bridge. DC 8-13

HOUSING PROJECT— Eugene, Ore.
(Estimated cost $1,500,000)

Lane County is planning to sponsor a project for low-cost housing for persons over the age of 60. Federal funds will probably finance the construction. The Public Housing Authority has waived a survey which is usually required before federal funds can be used.

An architect will be retained and plans on the 150-unit project will be started in the near future. Site selected is on the property of the County Poor Farm on Coburg Road. DC 8-9

COMMISSARY; HEATING PLANT— Kingsley Field, Ore.

Action by House Appropriations Committee in Washington, D.C., approved funds for a new heating plant at Kingsley Field, Klamath Falls, in amount of $76,000. The committee rejected recommendation for construction of a commissary at the field. ZZ 7-31

★MOTEL ADDITION— Lakeview, Ore.

Award to Eldon N. Alt, Midland Road, Klamath Falls, $57,790, by Lakeview Lodge, W. R. Jennings, owner, 301 N. G St., Lakeview, for construction of 12 additional units to the Lakeview Lodge. Plans by Morrison and Howard, architects, 203-05 Williams Bldg., Klamath Falls. Electrical engineer: Carroll C. Colvin, 346 Riverside St., Klamath Falls. Mechanical engineer: John W. Merryman, 225 Grant St., Klamath Falls. Bids opened August 8.

Other bids: Gibbons & Zick Construction Co., Alturas, Calif., $62,663; Lakeview Building Materials Co., 1301 N. 4th St., Lakeview, $64,129. Among special features in new units will be safety glass tub enclosures for showers. The 12 units will be built on steel platform as second floor above parking space at ground level.

ZZ 8-13. Previous report 8-6

● ELEMENTARY SCHOOL ADDITION— Medford, Ore.

Bids will be opened 8 p.m., August 18, by School District No. 549-C, Jackson County, School Administration Bldg., 500 Monroe St., Medford, for construction of an addition to the West Side elementary school in Medford. Plans with R. J. Keeney, architect, 210 Fluhrer Bldg., Medford. $50 deposit.

Planholders: R. J. Batzer, 933 S. Holly St., Medford; Harold Salter, Rogue River; Klein Construction Co., 925 S.W. Greenwood St., Grants Pass, joint venture; Myers D. Jones, 34 S. Fir St., Medford. LC 8-13

★RESEARCH INSTITUTE— McMinnville, Ore.
(Estimated cost $150,000)

Preliminary groundwork has started and actual construction will begin later in August by H. G. Carl Construction Co., 1210 S. 22nd, Salem, on a new building for Linfield College's Research Institute. Present headquarters of the institute are in Colonial Hall, campus of Linfield College, in McMinnville.

Building will provide 12,000 sq. ft. of floor space for the institute, and will be constructed on the 35-acre tract next to the college campus. DC 8-9

● POST OFFICE REPAIRS— McMinnville, Ore.

Bids will be opened 3 p.m., P.S.T., August 29, by General Services Administration, Federal Office Bldg., 909 First Ave., Seattle, Wash., for a new marquee and miscellaneous repairs to the U.S. Post Office, Evans and 4th Streets, McMinnville; SEA-868. Plans with above office. LB 8-12

★ELEMENTARY SCHOOL ADDITION (Sub-Contracts)— North Bend, Ore.

Sub-contract awards announced by North Bend School District No. 13C, Box 847, North Bend, for a multi-purpose room kitchen addition to Hillcrest School, North Bend. Plans by Hamlin & Martin, 519 W. 12th, Eugene. General contract was awarded to Industrial Building Co., Box 869, Eugene, $85,815. AWARDS: Chambers Heating, 282 S. 2nd, Coos Bay, heating; Bick Plumbing & Heating, 135 Curtis, Coos Bay, plumbing; International Paper Co., lumber; Eddie Sherwood, 358 N. 3rd, Coos Bay, painting; Joseph F. Boldrer, 1237 Ferry, Eugene, brick; Hansen Electric, wiring and electrical fixtures; Leslie Jake, 100 Tandy Turn W., Eugene, plastering; Portland Wire & Iron, 4644 S.E. 17th, Portland, wire and iron; Mercer Steel Co., Inc., 2636 N.W. 26th Ave., Portland, reinforcing and structural steel; Acme Roofing Co., 436 Wilkie, Eugene, roofing; Chambers Heating, sheet metal; J. O. Olsen Manufacturing Co., 41 Denebo Ave. N., Eugene, mill work; Pioneer Hardware, 241 S. Broadway, Coos Bay, glass and glazing; Oster Floor Covering, asphalt tile; Bay Art Tile, 287 S. 7th, Coos Bay, ceramic tile; Commercial Tile, 2095 Cross, Eugene, acoustical tile; Marion Butler, Swan Island, Portland, aluminum sash.

LC 8-9. Previous report 7-18

■ ELEMENTARY SCHOOL ADDITIONS— Oregon City, Ore.

Additional planholders announced for construction of an addition of six classrooms at Park Place elementary school near the south bank of the Clackamas River, opposite Gladstone. Bids will be opened 8 p.m., August 19, by Luther King, clerk of School District No. 62-C, Clackamas County, Ore., in office of Superintendent at High School in Oregon City. Plans with Annand, Boone & Lei, architects, 1530 S.W. Taylor St., Portland.

Additional planholders: Norman Builders, 2805 S.W. Third Ave., Portland; Hampton C. Platt, Box 27, Salem.

LC 8-13. Previous report 7-30

HOSPITAL— Pendleton, Ore.

Construction has started on the 40-bed Pendleton Convalescent Hospital to be located about one mi. east of Pendleton on old U.S. Highway 30. DC 8-12

● COURTHOUSE ALTERATIONS— Portland, Ore.

Bids to be opened 10:30 a.m., August 21, by Multnomah County Commissioners, Courthouse, Portland for remodeling to provide two new courts in the county courthouse. Plans with county roadmaster, 2115 S.E. Morrison St., Portland. $2 deposit. Certified check 10%.

Work involves division of two existing courtrooms to provide four rooms. The present rooms are two stories high. Remodeling will involve cutting the two two-story areas into four one-story courts. DC 8-12

● ■ MAINTENANCE SHOP—Portland, Ore.

Bids will be opened 2 p.m., August 19, by U.S. Air Force, procurement office, Portland, for construction of a maintenance shop for the 337th Fighter Group at Portland Air Base. Plans with above office.

Planholders: A. C. Bardi, 8105 S.E. Duke St.; Frank C. Ralph & Sons, 2204 N.E. Alberta St.; Mason & Robinson, 2004 N.E. 137th Ave.; Charles S. Camplan Co., 2035 S.W. 58th Ave.; R. L. Greene Construction Co., 5103 N.E. 42nd Ave.; Eilson & Dean, 1016 N.E. 61st Ave.; Gulde Construction Co., 4831 N.E. 42nd Ave.; Bingham & Sons, 437 N.E. 11th Ave.; Raymond B. Ems, 13385 S.W. 72nd Ave.; W. H. Stahl Corp., 1985 S.W. Sixth Ave.; Teeples & Thatcher, 8850 S.E. Otty Road; Harold R. Muhs, 1480 Madison, Salem; Hayden Bros. Construction Co., Route 3, Box 446, Gresham; Ivard J. Broderson, Route 2, Box 470A, Vancouver, Wash. Of Portland except as noted. LC 8-12

★SOUTHEAST HIGH SCHOOL— Portland, Ore.

Award to Ross B. Hammond, Box 3901, Portland, $4,737,788 ($8,888 deductive alt. 1), by Portland School District No. 1, L. J. Baker, business manager, 620 N.E. Halsey St., Portland, for construction of 260,800 sq. ft., two and three-story, reinforced concrete high school at S.E. 91st Ave. and Bush St., on 21-acre site. Plans by Stanton, Boles, Maguire & Church, architects, 208 S.W. Stark St., Portland.

Six bids received August 6. OTHER BIDS: Hoffman Construction Co., 715 S.W. Columbia, Portland, $4,779,000 ($11,000 deductive alt. 1). HI: Smith-Phillips Co., 7402 S.W. Macadam Ave., Portland, $4,942,881 ($2,36 deductive alt. 1).

CG 8-8. Previous report 7-11

★BRANCH LIBRARY— Portland, Ore.

Award to Teeples & Thatcher, 8250 S.E. Otty Road, $114,000, by the Library Association of Portland, Bernard Van Horne, librarian, 801 S. 10th Ave., Portland, for construction of an 8,000 sq. ft., one-story, reinforced concrete structure for the Hollywood Branch Library, at 3930 N.E. Hancock. Architect is Stewart & Richardson, 219 S.W. Stark, Portland. DC 8-8. Previous report 8-1

MOTEL— Portland, Ore.
(Estimated cost $200,000)

Plans have been completed by owners, Travelodge Corp., 3045 Moore St., San Diego, Calif., on the proposed three-story motel to be erected at 949 E. Burnside St. in Portland.

Plans call for 10,200 sq. ft. of floor space on ground floor; the top level will be set back; rooms with connecting balconies; concrete slab with 8" concrete block walls; some brick veneer; aluminum sash; frame partitions with gypsum lath and plaster finish; frame with joists and plywood sheathing on upper floors. DC 8-12

▲GROCERY STORE— Portland, Ore.

Four bids received by Lloyd Corp., Ltd., Lloyd Center, Portland, for construction of a 25,000 sq. ft., grocery store facing N.E. Broadway at about 13th Ave., Portland. Plans by John Graham & Co., architect, 1426 5th, Seattle. Bids opened August 12. LOW BIDS: Henry M. Mason, 2206 N.W. Thurman, Portland, $494,533; Juhr & Sons, 1339 S.E. Gideon, Portland, $516,800. HI: Max J. Kuney, N. 120 Ralph, Spokane, Wash., $555,000. WB 8-13. Previous report 8-2

★CHURCH ADDITION— Portland, Ore.

Award to Norman Builders, 2805 S.W. 3rd, Portland, $101,197, by St. Davids Episcopal Church, 2800 S.E. Harrison, Portland, for construction of a one-story and basement addition to the existing structure. Architects are Edmundson & Kochendoerfer, and structural engineer is R. Evan Kennedy, 225 Henry Bldg., Portland.

Four firms submitted bids August 11. 2ND LOW: E. Carl Schiewe, 1024 N.E. Davis, Portland, $102,562. HI: Anfelt B. Hansen, 4115 S.E. Ogden, Portland, $113,710. WB 8-13. Previous report 8-2

CONVALESCENT HOME— Prineville, Ore.

Working drawings underway by Wicks & Brown, architects, 1129 Commercial, Astoria, for the 20-bed brick and glass Crook County convalescent home in Prineville. The Oregon State Board of Health has approved $83,000 in Hill-Burton funds to finance construction. A $20,000 tax levy over a three-year period will complete financing, which will bring the total funds to $160,000. The contract will be awarded sometime in December. LC 8-13

POST OFFICE— Roseburg, Ore.

Specifications for bids to furnish lease space for a new post office at Roseburg will be available August 14 by S. G. Schwartz, regional operations director, Post Office Dept., Box 3703, Portland. The building is to cover about 13,900 sq. ft. with space for mailing platform and maneuvering area. It is to be constructed on a site on the northwest corner of Kane and Washington streets in Roseburg. DC 8-13

MOTEL— Salem, Ore.
(Estimated cost $200,000)

A 38-unit motel is being designed and will be built by Joseph A. Kitzke, 628 Winter N.E., Salem, on a site at the Salem By-Pass and Market St. on Pacific Highway in Salem. Completion time, summer of 1959. Plans have been announced for construction of a drive-in restaurant, trailer court and service station to be erected by owner. E. H. Pedwell, on 6½ acres adjoining the motel property. DC 8-5

▲CHURCH— Salem, Ore.

Bids were opened August 5 by Englewood Evangelical United Brethren Church, 1783

Nebraska Ave., Salem, for construction of a 1,200 sq. ft. addition and remodeling of existing building, above address. Plans by Benjamin E. Cave, architect, 3240 Triangle Drive, Salem. BIDS: E. E. Batterman, 147 N. Commercial, Salem, $63,000; Mills Construction Co., 502 Kingwood Drive, Salem, $71,400; Robert D. Morrow, 3365 S. Commercial, Salem, $72,050. DC 8-9. Previous report 7-26

LABOR AND INDUSTRIES BUILDING— Salem, Ore.
(Estimated cost $3,000,000)

Approval has been made by the Capitol Planning Commission, Salem, of plans for the exterior of the proposed Labor and Industries Building to be erected on the Capitol Mall in Salem. The structure will occupy the site north of the state library, now occupied by Salem's First Presbyterian Church. The latter is being moved to a new location. Bids will probably be opened early in 1959.

Architect is Skidmore, Owings & Merrill, 2040 S.W. Jefferson St., Portland. Marble and bronze will be a feature of the new structure, in keeping with present Mall construction. DC 8-7. Previous report 3-8

★DUPLEX— Silver Lake, Ore.

Award to N. Chavis, Contractor, 526 E. Quimby, Bend, $15,500 by Lake County School District No. 14, Silver Lake, for construction of a duplex teacherage in Silver Lake. Bids were opened July 28.
DM 8-9. Previous report 7-17

COURTHOUSE— Vale, Ore.
(Estimated cost $500,000)

Bids will be called about September 1 by Malheur County Commissioners, Courthouse, Vale, on construction of two-story with partial basement, 23,000 sq. ft. courthouse on site of the existing structure, which will be razed. Plans by Roald, Schmeer & Harrington, architects, Portland Trust Bldg., Portland. DC 8-6. Previous report 6-11

WASHINGTON

CIVIC CENTER— Aberdeen, Wash.

The City Council, City Hall, Aberdeen, is considering extensive plans for a new civic center. A committee headed by John Yearout, of the Aberdeen Chamber of Commerce, has asked the Council to consider construction of a civic center which would involve building a new city hall, reconstructing the central fire station, installing a fire sub-station, building a combination auditorium-gymnasium and swimming pool, making playground improvements, and enlarging the city library. MH 8-1

HOUSING, SHOPPING CENTER— Bellevue, Wash.

Site clearing is underway by Jack Morris, Bellevue, so that a survey of grading and site preparation needs can be made by Earl Amick, owner, Bellevue, for proposed construction of a waterfront community on a 14-acre tract between Bellevue and Houghton, on Lake Washington. Stevens and Thompson, consulting engineers, 2234 S.W. 5th Ave., Portland, Ore., designed the project, which will include 185 residences, a shopping center, paved streets, sewer and water lines, bulkheads, covered moorage for 400 boats. PD 8-8

STUDENT UNION BUILDING— Bellingham, Wash.

Bid call tentatively set for August 18, with bid opening September 18, by Western Washington College of Education, Bellingham, for construction of the four-story, 82'x117' student union building in the 500 block on High St., across from the knoll in front of the Old Main building in Bellingham. Plans by Bassetti & Morse, architects, Tower Bldg., Seattle.

Roof will be series of flat gables, built-up roofing, rigid insulation in roof; reinforced concrete, pan joists, pre-stressed concrete beams; brick masonry, brick veneer exterior; aluminum sash, glass stopped in wood; aluminum entry doors; partitions of plaster on gypsum lath and steel stud; magnesite, terrazzo, oak, plastic rubber, vinyl asbestos tile flooring; ceramic tile wainscoting; suspended acoustical ceilings; hot air heating, multi-zone system; magnesite stairways; wood railing with steel supports. Plans include complete kitchen, utilizing existing equipment and adding new.
PD 8-12. Previous report 7-30

SCIENCE BUILDING— Bellingham, Wash.
(Estimated cost $2,000,000)

Bid call tentatively set for August 18, with bid opening September 18, by Western Washington College of Education, Bellingham, for construction of the 142'x241', reinforced concrete, three-story plus partial fourth floor science building to be located behind the college library at High St. and Campus Drive in Bellingham. Separate contracts will be bid for general, mechanical, electrical work, and for movable laboratory equipment and furniture.

Above fourth floor will be a penthouse and walking deck for class work, and a mounting deck for instruments. Building will include general sciences rooms, classrooms, laboratories and faculty offices. Plans by Paul Thiry, architect, 800 Columbia St., Seattle.

Flat roof, built-up roofing over rigid insulation; columns and pan joist system; Mosai exterior; aluminum awning type windows; louvres on east and west exposures; concrete interior walls, and plaster partitions over steel studs; concrete floors; finished concrete flooring; suspended ceilings; steam heating from central system, convectors, unit heaters, central ventilating system. Fixed laboratory equipment included in general contract. Plans include mechanical rooms on first and fourth floors, two greenhouses on roof, plant room on third floor, science library and museum, planetarium, aquarium, a seismograph and four tiered lecture rooms with 75-100 capacity each. PD 8-12. Previous report 7-25

STORE BUILDING— Bothell, Wash.

Working drawings will soon be started by T. M. Carstensen Co., designers, Alaska Bldg., Seattle, for a 41'x250' concrete block or tilt-up concrete structure to house five businesses, to be located on land now occupied by Keeney Lumber Co., in Bothell. Plans include a 41'x256' asphaltic concrete parking lot. PD 8-12. Previous report 6-3

●SENIOR HIGH SCHOOL ADDITION (General Contract)— Bothell, Wash.

Bids will be opened 2 p.m., August 19, for the second time by Bothell School District No. 46, Box 128, Bothell, for general contract for construction of a three-building, 23,814 sq. ft. addition to existing Senior High School in Bothell. Plans and specifications have been revised, with deletion of prestressed concrete beams and concrete roof slab, substitution of laminated beams and wood decking, revision of skylight details and miscellaneous smaller items. Plans with Ralph Burkhard, architect, 2129 S.W. 152nd, Seattle. $50 deposit. Low bid on general contract at August 4 bid opening was from Noel Construction Co., 11014 Main, Bellevue, $253,745.

CITY BUILDING EXPANSION, REMODELING— Bremerton, Wash.

Preliminary plans are underway by B. Dudley Stuart, architect, 712 Lloyd Bldg., Seattle, for expansion of city hall, and adjacent buildings, into new city administrative offices for City Council, City Hall, Bremerton. The old Burks Bldg., Washington and 4th streets, across alley from existing City Hall, will be razed, and a parking garage constructed in basement space. Roof of garage will be street level, and plans include landscaping this area. The old Harlow Bldg., adjacent to City Hall will be almost completely demolished, leaving only exterior walls, floors, and supporting columns. This structure will be incorporated with existing city hall into a two-story building to house City administrative offices. First floor of remodeled building will provide space for administrative offices, public works and utilities department, police department, police court and traffic division facilities. Second floor will be for city council chambers and city engineering offices. Funds for site surveys, structural examination of buildings and architects fee for preliminary plans were provided by U. S. Housing and Home Finance Agency. Approval of $350,000 general obligation bonds will be voted in November election. PD 7-31

▲ROOF REPAIRS— Bremerton, Wash.

Seven bids received by 13th Naval District, Bldg. 250, U. S. Naval Station, Seattle, for removing existing roof structures, skylights and ornamental cornices and re-roofing and replacing sheet metal work at Bldg. 66, Puget Sound Naval Shipyard, Bremerton; Spec. No. 18386/58. Bids opened August 7. LOW BIDS: Commercial Builders, 114 Shore Drive, Bremerton, $42,450; Wayne Construction Co., 3810 Stone Way, Seattle, $42,965. HI BID: Holaday & Edworthy, 6240 S. Tacoma Way, Tacoma, $64,910. Government estimate $43,000. PD 8-8. Previous report 7-29

STORE— Camas, Wash.

Construction underway for a store building to replace the McKever building on N.E. Adams between N.E. 3rd and 4th streets, in Camas, by Dr. A. E. Bird, owner, 403 N.E. 5th, Camas. The old McKever building will be razed. MH 8-12

HIGH SCHOOL— Cashmere, Wash.
(Estimated cost $600,000)

Purchase has been completed by Cashmere School District No. 122, Cashmere, of a site for the proposed new high school. The property is located adjacent to the ball park and covers nine acres. An additional five acres, including the park, has been bought by the board for use as athletic and recreational purposes.

The new building will face on Pioneer Ave. and will be bounded by Tigner Road on one side. Completion has been set for the 1959-1960 school year. Plans by Alvin S. Erickson, architect, Central Bldg., Wenatchee, call for a building to house 15 teaching stations and a gymnasium.

Bids will be called on construction of the school, in the early fall.
DC 8-12. Previous report 3-29

SCHOOLS— Chehalis, Wash.

School bonds totaling $408,000 will be voted on by voters November 4 for approval of a $210,000 classroom and district office addition to Chehalis high school and for $198,000 for building a Chehalis high school outdoor athletic plant and for improving the athletic plant at Cascade grade school, including extensive blacktopping, for Chehalis School District No. 302, Chester V. Rhodes, superintendent, R. E. Bennett Bldg., Chehalis. MH 8-13

POSTOFFICE— Chelan, Wash.

Tentative plans have been recommended by Post Office Department for a 160'x100' area, and a 5,320 sq. ft. building, for the proposed new postoffice at Johnson and Emerson streets in Chelan. It is hoped that bids will be called before the first of the year on the construction contract. Chelan postmaster is John Crow.
DM 8-6. Previous report 7-16

SWIMMING POOL— Cheney, Wash.

An architect will be retained soon by City Council, City Hall, Cheney, to prepare drawings for a city swimming pool. Nolan Brown, mayor, hopes that the authorization for such a pool can be placed on the November 4 ballot. MH 8-6

ELEMENTARY SCHOOL— Cheney, Wash.

An election will be held September 9 by Cheney School District on a proposition to raise local funds to match $442,341 in Federal money which has been conditionally alloted to Cheney for construction of an elementary school near the Geiger Field housing project. The school board says annexation of two areas, Four Lakes and Glenora, must be delayed in consideration until their September election. MH 8-13

HIGH SCHOOL AND GYM— Cle Elum, Wash.

Cle Elum School District 104, Cle Elum, has retained William Arild Johnson & Associates, architects, 3506 Broadway, Everett.

to prepare plans for a high school and gymnasium in Cle Elum. MH 8-7

SCHOOL CONSTRUCTION— College Place, Wash.

An election will be held September 9 by College Place Public School Board, 31 S.E. Ash, College Place, (Walla Walla) to raise funds for completing the work on the $100,-800 wing to the elementary school. Approval of the issue was given at the April election, but the action was later called invalid due to technical reasons. Construction by Elmer Holsten, general contractor, 309 E. Main, Walla Walla, is at a standstill until after the September election. MH 8-7

BUILDINGS, UTILITIES FOR RAILWAY YARD— Eagle Gorge, Kanaskat, Wash.

Bids will be opened late in August, approximately the 28th, by Corps of Engineers, Seattle District, 1519 S. Alaskan Way, Seattle, for construction of brick station building, frame scale house, unloading platform and utilities and relocation of 17 small buildings at Kanaskat; construction of metal station building, operators' quarters, pumphouse and utilities at Eagle Gorge; CIVENG-45-108-59-7. Completion time 360 calendar days.

Kanaskat—Construction of 20'x56' brick station building; 7'x20' frame scale house; timber unloading platform complete with utilities, grading, curbing, gravel surfacing, asphaltic concrete surfacing; relocation of 17 small buildings and facilities.

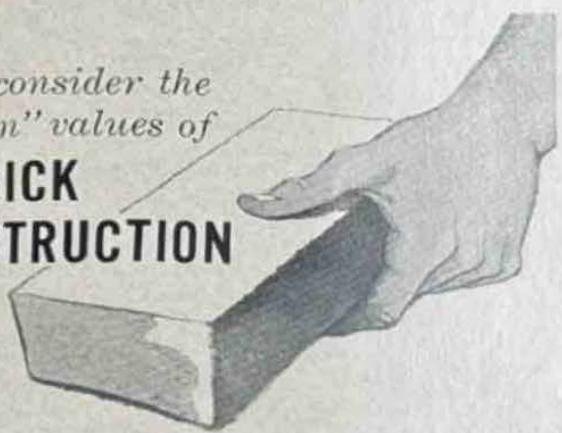
School District offices are located in Central Bldg., Yakima. Plans by Thomas F. Hargis, Jr., architect, and Clark Goldsworthy, associate, Miller Bldg., Yakima.

Structure will have eight classrooms, multipurpose room, lockers and showers, lavatory facilities. Exterior of building to be brick and concrete; frame to be frame

consider the "hidden" values of

BRICK CONSTRUCTION



There are so many sound reasons why brick construction is popular these days . . . but how about the "unseen" values? Brick creates a feeling of pride and security . . . a safe, secure feeling . . . a pride in "belonging" to a brick building . . . a brick school or church or office building.

And brick goes so well with other materials . . . it is flexible, easy for designers to work with. Next time you're designing a building . . . consider the "hidden" values of Columbia Brick.

Manchester Ave., Los Angeles, Calif., for conversion of existing mountain top VOR to a VORTAC facility near Spokane, about two mi. west of Four Lakes, Wash.; Proposal 4-59-903. Bids opened August 4. LB 8-13. Previous report 7-22

ART CENTER— Tacoma, Wash.

A proposal to turn Tacoma's police station into a Fine Arts Center, has been referred by the City Council to David Rowlands, city manager, City Hall, Tacoma. The police department plans to move to the County City Bldg next year. The proposal calls for the city to turn the structure over to Allied Arts of Tacoma for remodeling. The latter group will furnish $45,000 for renovations if the city will provide maintenance.

Sketches have been made by Liddle & Jones, architects, 1716 Pacific Ave., Tacoma, calling for the face of the building to be changed by using a steel screen from the second floor up with the first floor faced by a solid material. The City Hall Annex which adjoins the station to the north, would be torn down, under the above proposals.
DC 8-8

■ Planholders—Prospective Bidders

OREGON

RESERVOIR— Albany, Ore.

Pacific Power and Light Co. are planning construction of a new 2,000,000-gal. reservoir that will double Albany's water storage capacity. It will be built adjacent to existing water plant at 4th Ave. and Maple St. in Albany. Completion is set for early summer of 1959. DC 8-13

●**GAS LINES— Astoria, Ore.**

Bids will be opened 2:30 p.m., August 19, by U.S. Naval Station, Tongue Point, for altering existing gas line entrances of buildings at the U.S. Naval Station; Spec. No. 18302/58. Plans with officer in charge of construction, above address. Work will provide above grade expansion loops for 62 quarters buildings, and involve pipe fitting, excavation and backfill. LC 8-8

BALD MOUNTAIN HYDROELECTRIC PROJECT— Coquille, Ore.

A license to construct the $29,479,000 Bald Mountain hydroelectric power project on the Illinois River in Curry and Josephine counties, Ore., has been requested of the FPC by Coos-Curry Electric Cooperative, Inc., 74 W. 1st, Coquille. The site is located 25 mi. east of Gold Beach. A preliminary permit was issued May 1, 1955, but has

expired. The 124' high, 600' wide, concrete gravity dam would produce 92 kw. Project would also include automatic spillway gates, 225 acre reservoir, 3.9 mi. concrete tunnel, underground penstocks and powerhouse 12 mi. below dam. MH 8-8

WATER SYSTEM EXPANSION— Corvallis, Ore.

Plans for water system expansion in Corvallis have been presented by Cornell, Howland, Hayes & Merryfield, 1600 Western Ave., Corvallis, to the City Council, City Hall. Estimated cost over a 15-year period is $3,900,000.

Initial phase of program involves a three-year, $1,400,000 development which includes a 5,000,000-gal. reservoir north of the city and another unit to provide an additional 4,000,000 gal. daily added to Willamette treatment plant. Additions will be required to distribution grid, and replacement of transmission lines. Hill areas will require additional pumping stations and storage tanks. LC 8-8

WATER STORAGE DAM— Dallas, Ore.

A bond issue will be placed on the November 4 ballot by Dallas City Council, to finance construction of a storage dam on Rickreall Creek. The council has decided to increase the amount of the proposed issue from $260,000 to $290,000. DC 8-13

★**SIGNAL SYSTEM—** **Wenatchee, Wash.**

Award to Chapman Electric, 103 Williams, Renton, $8,859, by Washington State Highway Commission, I. B. Munson, district engineer, Box 98, Wenatchee, for installing a traffic actuated signal system at Wenatchee Ave. and Miller St. in Wenatchee; PSH No. 2, Chelan County; a State Project. DC 8-9. Previous report 8-2

●**PUMPING ENGINE—** **Wenatchee, Wash.**

Bids to be opened 7:30 p.m., August 25, by City Council, City Hall, Wenatchee, for furnishing 1250 GPM two stage, centrifugal combination pumping engine. Specifications with city purchasing agent, Public Works Bldg., Wenatchee, and at City Fire Department. DC 8-9

APPROACH LIGHTING SYSTEM— **Yakima, Wash.**

Time limit extended by Civil Aeronautics Administration, to December 31 for a $96,132 federal grant for airport improvement, which includes acquistion of land. Federal allocation is for: extension of ramp and runway, $25,870; installation of standby power, $45,174; acquiring a 2,700′ tract of land and 1,000′ wide at East end of Main runday for $62,000. A narrow strip is also needed down the center for the approach lighting system.

IG 8-13. Previous report 7-12

STATE HIGHWAY BID OPENING POSTPONED

Due to the existing unsettled conditions in the heavy construction industry of Oregon, the State Highway Commission has deferred the opening of bids on projects advertised for bid opening on August 19.

The Highway Commission will announce the new dates for bid openings when conditions are more satisfactory for the receiving of bids which can be based on known labor cost factors.

The Bureau of Public Roads has taken similar action in the southwest area of Washington as well as on a forest highway project near Reedsport on Highway 38 in Oregon. Likewise, the United States Reclamation Service has deferred the opening of bids on the Ochoco Dam project in Crook County, Oregon.

IDAHO

SEWAGE COLLECTION, TREATMENT FACILITIES— **Boise, Idaho**

A bond issue of $4,350,000 to provide sewage collection and treatment facilities will be voted upon August 26 by property owners in the 4100 Bench Sewer District adjacent to Boise. If approved, funds will be used to install main and sewer laterals, sewer interceptor lines extending from the bench area to the Boise sewage treatment plant, and supplementary facilities at the treatment plant. DC 8-12

■**BRIDGE—** **Clearwater County, Idaho**

Planholders announced on construction of steel and concrete bridge known as Bungalow Bridge over North Fork of Clearwater River and on Pier-Kelly Creek Road No. 418, about 28 mi. northeast of Pierce, Idaho, Clearwater National Forest, Clearwater County; Inv. No. 40-59. Bids to be opened 2 p.m., M.S.T., August 20, by U.S. Forest Service, 1036 Federal Bldg., Missoula, Mont.

Planholders: Hansen & Parr Construction Co., W. 315 Boone Ave., Spokane, Wash.; H. Flechsing & Co., McKinley Park, Alaska; MacGregor Triangle Co., Box 4128, Boise, Idaho; Ruud Construction Co., 602 Realty Bldg., Spokane. DM 8-13. Previous report 8-6

■**SEWAGE TREATMENT PLANT—** **Idaho Falls, Idaho**

Planholders announced on construction of a sewage treatment plant on which bids will be opened 8 p.m., M.S.T., August 26, by City Council, City Hall, Idaho Falls. This is phase 3 of a city wide sewer program. Plans obtainable from Cornell, Howland, Hayes & Merryfield, consulting engineers, 628 Idaho Bldg., Boise, and from Roy C. Barnes, city clerk, Idaho Falls.

Planholders: Davis Construction Co., Box 326, Provo, Utah; Intermountain Co., Box 1869, Boise; Waterworks Equipment Co., 502 W. 3rd, Salt Lake City, Utah; Lee Hoffman, Inc., Box 37, Beaverton, Ore.; Pacific Water Works Supply, 2900 1st S., Seattle, Wash.; Watkins Construction Co., Box 1786, Boise; West Coast Contractors, Inc., Box 25, Milton, Wash.; R. H. Brown & Co., 5825 N.W. Front, Portland, Ore.; H. D. Fowler Co., Inc., 9th Ave. S. and Lane, Seattle; William S. Turner & Co., Pacific Bldg., Portland; Pacific Industrial Engineering, Inc., 607 Security Bldg., Pasadena, Calif.; Dorr-Oliver Co., 2705 Smith Tower, Seattle; Teller Construction Co., Box 435, Idaho Falls; Bingham Plumbing and Heating, 429 W. 18th, Idaho Falls; Detweiler Bros., Inc., Box 870, Twin Falls; A. J. Zinda, 2349 N.W. 22nd, Portland.

DM 8-13. Previous report 7-29

INTERCEPTOR SEWERS (Phase 2)— **Idaho Falls, Idaho**

Tentative bid date of August 18 has been extended to later in August by City Council, City Hall, Idaho Falls, for phase 2 of the interceptor sewer program. Bids on phase 1 were opened on July 7 with contract awarded to Kloepfer Construction Co., Box 352, Logan, Utah, $372,139. (See PCD 7-22.) Plans by Cornell, Howland, Hayes & Merryfield, consulting engineers, Idaho Bldg., Boise.

Quantities—Phase 2: 7,000′ of 48″, 4,200′ of 30″, 2,400′ of 24″, 1,400′ of 18″ sewer; 7,400′ of 8″, 10″, 12″ and 15″ concrete pipe; manholes. GH 8-8. Previous report 6-21

AIRPORT RUNWAY— **Idaho Falls, Idaho**

Plans and specifications are being prepared by Claud Black, city engineer, City Hall, Idaho Falls, for extending the Northeast-Southwest runway by installing a 694′ box-type concrete culvert over a branch of the Great Western Canal. The state has set aside $200,000 to reimburse the city for relocation of runways made necessary by the proposed new interstate highway.

The CAA has already allocated participating funds of $120,539 for new aprons and taxiways plus $46,181 for runways and $103,000 for a landing system. DC 8-9

FLOOD CONTROL— **Kendrick, Idaho**
(Estimated cost $110,000)

Work may be started by fall on a flood control project requested by the Village of Kendrick. Work will involve clearing the channel of the Potlatch River and reinforcing the river bank for about a mile and a half. Cost of project will be paid by federal government. Completion time three to four months.

Bids will be called by Corps of Engineers in Walla Walla. The village will bear the cost of obtaining the rights-of-way and easements and relocating the railroad lines, a total of about $1,700.

Work will be undertaken between Kendrick-Leland highway bridge and the Bear Creek bridge, about a mile and a half upriver. Dikes and reinforcements will be built on the Latah County side of the river. Channel clearing work will involve the elimination of several sandpits and blasting several bluffs on Nez Perce County side. DC 8-9

RELOCATED 21ST STREET GRADE— **Lewiston, Idaho**
(Estimated cost $323,000)

Bids will be called soon by Nez Perce County Commissioners, Courthouse, Lewiston, for relocation of the 21st St. grade between Lewiston and Lewiston Orchards. County, state and federal funds will be used.

The relocation work would route the street on the north bank of the canyon through which the road now passes. At a point near the top of the grade the route will cross the old roadway and follow a gulch to radio station KRLC, cut in front of the station and join Thain Road at Stewart Ave. DC 8-12

GAS LINE— **Lewiston, Idaho**

If Lewiston-Clarkston facilities of Cascade Natural Gas, Inc., 319 Main, Lewiston, are purchased by the Washington Water Power Co., E. 1411 Mission, Spokane, Wash., WWP will spend an estimated $80,000 before January 1, 1959, on a construction and installation program. Hearings have been held in Clarkston and Lewiston before regulatory bodies of both states in advocating approval of the proposed sale. MH 8-9

SEWAGE SYSTEM, TREATMENT PLANT— **Pocatello, Idaho**

Bids will be called soon by City Commission, City Hall, Pocatello, for constructing sewage treatment plant and additional sewage lines within the city. Plans by Hamilton & Voeller, consulting engineers, 110 N. 2nd, Pocatello.

LB 8-12. Previous report 7-3

CLEARING— **Rupert, Idaho**

Bids rejected by Bureau of Reclamation, Rupert, for clearing 73 acres at Little Wood River upstream from the Little Wood Dam, approximately 9 to 12 mi. northwest of Carey, Blaine County; Spec. No. 100C-332. Twelve bids received July 22. Bids will be readvertised soon under a new invitation number, 100C-341.

LB 8-9. Previous report 7-25

DAM— **Snake River, Idaho**

Plans announced for a proposed 938' high dam at the Nez Perce site on the Snake river, near the confluence of the Salmon and Imnaha river, by Idaho-Oregon-Washington Hells Canyon Association, Lynn Tuttle, 908 10th, Clarkston, Wash. An alternate for a 823' dam was also suggested by the Association. MH 8-9

★FURNISH PUMP— **Terreton, Idaho**

Award to Cope Drilling & Pump Co., Airport Road, Idaho Falls, $5,993, by Ted Cramer, State Purchasing Agent, room 225, State House, Boise, for furnishing a deep well turbine pump for Fish and Game Department, Boise. Bids opened July 25. ONLY OTHER BID: Peerless Pump Co., 301 West Ave. 26, Los Angeles, Calif., no amount noted. LB 8-12. Previous report 7-23

MONTANA

●CURBS, GUTTERS, PAVING— **Billings, Mont.**

Bids to be opened 10 a.m., August 26, by Yellowstone County Commissioners, Courthouse, Billings, for curb and gutter installation and street paving on Wingate Lane from Poly Drive to Colton Blvd., in RSID 409. Plans with Sage Engineers and Land Planners, Inc., 706 Central Ave., Billings. Certified check 10%. EE 8-13

★DAM— **Ennis, Mont.**

Award to J. J. Reese Construction Co., Noxon, $120,000 (approximate), by Norwegian Creek Reservoir Co. of Ennis, for construction of a 100' high and 700' long dam near Ennis. Award was also made to Gilbert Jonas, Golf St., Thompson Falls, for concrete work. Completion time December 31. LC 8-9

●AUTO-TRANSFORMERS— **Glendive, Mont.**

Bids to be opened 2 p.m., M.S.T., September 25, by Bureau of Reclamation, Bldg. 53, Denver Federal Center, Denver, Colo., for furnishing and delivering fob cars at Glendive, three, 20,000-kva, single-phase, outdoor, auto-transformers, each to be equipped with tank-mounted arresters; for use at the Dawson County substation, Fort Peck Proj., Mont.; Inv. No. DS-5092. DM 8-9

WATER PLANT— **Glendive, Mont.**

Petitions are being circulated to place on the ballot November 4 a $600,000 bond issue to finance construction of a new city water plant. EE 8-13

SEWAGE TREATMENT PLANT— **Glendive, Mont.**

A bond issue will be voted upon November 4, by City Council, City Hall, Glendive, on $420,000 to finance the city's share of cost of proposed $600,000 project for sewage treatment plant and sewer system. Federal funds would pay remainder of cost. EE 8-13

▲SEWER PROJECTS— **Glendive, Mont.**

Apparent low bid was submitted by Holm Sutherland Co., 19 Foster Lane, Billings, $75,056 (SID No. 10), $13,739 (SID No. 11), by Dawson County Commissioners, Courthouse, Glendive, for two sewer projects—rural SID No. 10 on west Glendive and SID No. 11, known as Forest Park District. Bids will have to be approved by U.S. Department of Health and Sanitation before acceptance. EE 8-13

SEWERS— **Great Falls, Mont.**

An executive veto was made at a city council meeting in Great Falls, on a resolution calling for a special $1,620,000 sewer revenue bond election for September 30. Some favor was given to a general obligation bond issue to be held in conjunction with the city election next spring. The State Board of Health has ordered the city to move toward construction of a sewage treatment plant or it will not be given approval for sewage line extension. DC 7-31

BRIDGE— **Great Falls, Mont.**

(Estimated cost $1,700,000)

Voters at the general election in November will consider a proposal for Cascade County to expend $400,000 over a six-year period for participation in building the proposed Fifteenth Street Bridge. Under the plan, the state would put up an additional $400,000 and the Federal government would provide 53 per cent of the cost of the structure. DC 8-2

●STATE HIGHWAY PROJECTS— **Helena, Mont.**

Bids will be opened 9 a.m., August 27, by Montana State Highway Commission, State Highway Bldg., Helena, on 17 highway construction projects. Plans with above office. Certified check or cashier's check 5%. (Bid bond is no longer acceptable.)

SIGNS, Monida-North Road — Furnish, place signs and delineators on 17.1 mi. in Beaverhead County; I 15-1(7).

Quantities: 1,399 cu. ft. sheet aluminum; 1,729.3 sq. ft. extruded aluminum; 217 sq. ft. plywood; 11,902 lb. steel I-sign posts; 19,152 lb. steel U-sign posts; 7,174 MBM treated timber sign posts; 84' treated timber sign posts; 1,340 delineators and one changeable copy sign. Completion time 45 calendar days.

SIGNS, DELINEATORS, Cascade - Ulm Road—Furnish, place signs and delineators on 12.5 mi. in Cascade County; I 15-5(8)250.

Quantities: 1,047 sq. ft. sheet aluminum; 628 sq. ft. extruded aluminum; 114 sq. ft. plywood; 2,650 lb. steel I-sign posts; 11,732 lb. steel U-sign post; 4.854 MBM treated timber sign posts; 252' treated timber sign poles; 794 delineators. Completion, 45 calendar days.

PLANTMIX PAVING, Sun River - Great Falls Road—Grading, aggregate surfacing, plantmix bituminous surfacing, seal coat oiling, draining 8.337 mi. in Cascade County; I 15-5(9)275, Unit 1.

Quantities: 2,860,399 c.y. excavation; 912,745 mi. yd. overhaul; 9,077 units rolling; 58,009 M gal. watering; 334,562 ton crushed aggregate; 427,452 ton uncrushed aggregate; 4,218 ton penetration asphalt; 568.84 ton cutback asphalt; 474.80 ton emulsified asphalt; 76,625 ton plantmix; 604 c.y. gravel backfill; 431' structural plate pipe; 5,548' reinforced concrete pipe; 5,779 rods wire fence; 33,850' guard rail; 293.4 sq. yd. concrete pavement; 988' concrete median curb. Completion 380 calendar days.

CONCRETE STRUCTURES, Sun River-Great Falls Road—One 108' dual and one 218.9' single concrete structure, three 17.25' concrete junior grade separations in Cascade County; I 15-5(9)275 Unit 2.

Quantities: 1,260' precast prestressed concrete beam; 1,935 c.y. structure excavation; 1,929.8 c.y. concrete; 219,064 lb. reinforcing steel; lump sum for structural steel and treated timber test piles; 11,350' furnish treated timber piles; 10,958' drive treated timber piles; 550.42' steel beam bridge rail; 440' steel bridge rail. Completion September 30.

BRIDGE, Superior-East and West Road—One 620.92' and one 800.92' steel and concrete bridge in Mineral County; I 90-1(5)46.

Quantities: 1,195 c.y. excavation; 56 floor drains; 4,755 c.y. structure excavation; lump sum for shoring and cribs; 3,309.9 c.y. concrete; 365,473 lb. reinforcing steel; lump sum for structural steel, untreated timber test piles and treated timber test pile; 9,811.5' drive untreated timber piles; 3,442' drive treated timber piles; 3,540' furnishing treated timber piles; 2,847' steel bridge rail. Completion July 31,1960.

SIGNS, DELINEATORS, Springdale-W Road—Furnish, place signs and delineators on 11.8 mi. in Park County; I 90-7(5)339.

Quantities: 628 sq. ft. aluminum; 260 sq. extruded aluminum; 58 sq. ft. plywood; 18,938 lb. steel U-sign posts; 2,888 MB treated timber sign posts; 168' treated timber sign poles; 884 delineators. Complete 45 calendar days.

BRIDGE, Yellowstone River — One steel and concrete bridge over Yellowsto River about 6.5 mi. east of Reedpoint, Stillwater County; I 90-8(7)354.

Quantities: lump sum for shoring, cri and test piles; 1,485 c.y. structure excavation; 1,344.4 c.y. concrete; 97,099 lb. reinforcing steel; lump sum for structural ste 24,990 lb. furnish steel bearing piles; 9 drive steel bearing piles; 1,156.22' ste bridge rail. Completion November 30, 19

Surfacing, Gardiner - Livingston Road. Grading, aggregate surfacing, draining mi. in Park County; F 217(10).

Quantities: 623,571 c.y. excavation; 1,2 units rolling; 12,277 M gal. watering; 119,4 ton crushed aggregate; 26,503 ton uncrushe aggregate; 21' relay pipe culverts; 344 c gravel backfill; 285' corrugated metal pip 460' structural plate pipe; 2,240' reinforce concrete pipe; 114.6 ton bentonite canal li er. Completion 220 calendar days.

PLANTMIX PAVING, Dillon-Twin Bridg Road—Grading, aggregate surfacing, plan mix bituminous surfacing, seal coat oilin 10.449 mi. in Beaverhead and Madison cou ties; DF 387(6).

Quantities: 3,018 c.y. excavation; 70 un rolling; 101 M gal. watering; 6,831 t crushed aggregate; 1,408.37 ton penetratio asphalt; 5.51 ton cutback asphalt; 165.82 t emulsified asphalt; 25,625 ton plantmi Completion 100 calendar days.

SURFACING, Brandenberg-Garland-Mil City Road — Grading, aggregate surfacin draining 5.668 mi. in Custer County; S 45(1

Quantities: 329,858 c.y. excavation; 32,7 mi. yd. overhaul; 165 units rolling; 5,749 gal. watering; 41,320 ton crushed aggregat 175 c.y. riprap; 105' relay pipe culverts; 3 c.y. gravel backfill; 1,344' corrugated met pipe; 192' structural plate pipe. Completio 150 calendar days.

SURFACING, White Sulphur Springs-We Road — Aggregate surfacing 3.268 mi. Meagher County; DS 49(6).

Quantities: 519 c.y. binder; 1,038 mi. y overhaul on binder; 102 units rolling; 509 gal. watering; 25,474 ton crushed aggregat Completion 80 calendar days.

SURFACING, Knobs-Webster-Baker Ro —Grading, aggregate surfacing, drainin 4.597 mi. in Fallon County; S 51(4).

Quantities: 151,475 c.y. excavation; 5,5 mi. yd. overhaul; 104 units rolling; 2,7 M gal. watering; 26,029 ton crushed aggr gate; 483 c.y. binder; 87 c.y. gravel back fill; 1,005' corrugated metal pipe; 116' stru tural plate pipe. Completion 120 calend days.

SURFACING, BRIDGE, Shawmut-Hedge ville Road — Grading, aggregate surfacin draining, constructing one 57' treated tim ber bridge on 8.709 mi. in Wheatland Cou ty; DS 64(2) and S64(3).

Quantities: 357,114 c.y. excavation; 69,8 mi. yd. overhaul; 171 units rolling; 6,195 gal. watering; 42,752 ton crushed aggregat 252' relay pipe culverts; 180 c.y. grave backfill; 2,788' corrugated metal pipe; 190 structural plate pipe; 0.879 MBM untreate timber; 20.616 MBM treated timber; 63 treated timber piles. Completion 160 cal endar days.

BITUMINOUS SURFACING, Wolf Creek-August Road—Grading, aggregate surfacing bituminous surface treatment, draining 17.789 mi. in Lewis and Clark County; S 228(1).

Quantities: 677,825 c.y. excavation; 5,96 mi. yd. overhaul; 2,573 units rolling; 14,10 M gal. watering; 230,023 ton crushed aggregate; 18.265 ton uncrushed aggregate; 408.68 ton cutback asphalt; 406.68 ton emulsified asphalt; 225 c.y. riprap; 485 c.y. gravel backfill; 394' corrugated metal pipe; 374' structural plate pipe; 5,930' reinforced concrete pipe. Completion 200 calendar days.

ROADMIX SURFACING, Big Spring-North Road—Grading, aggregate surfacing,

roadmix bituminous surfacing, seal coat oiling, draining 2.15 mi. in Fergus County; DS 261(2).

Quantities: 104,117 c.y. excavation; 6,265 mi. yd. overhaul; 380 units rolling; 2,208 M gal. watering; 38,055 ton crushed aggregate; 255.35 ton cutback asphalt; 39.88 ton emulsified asphalt; 2.144 mi. processing; 1,193 sq. yd. processing; 24.5 c.y. riprap; 310 c.y. gravel backfill; 798' corrugated metal pipe; 250' structural plate pipe. Completion time 90 calendar days.

SURFACING, Red Lodge—Columbus Road—Grading, aggregate surfacing, draining 7.676 mi. in Carbon and Stillwater counties; DS 289(7) and DS 346(4).

Quantities: 231,193 c.y. excavation; 24,830 mi. yd. overhaul; 599 units rolling; 4,142 M gal. watering; 36,523 ton crushed aggregate; 310.14 c.y. riprap; 100' relay pipe culverts; 300 c.y. gravel backfill; 1,256' corrugated metal pipe; 424' structural plate pipe; 4,169' reinforced concrete pipe. Completion 150 calendar days.

SURFACING, Flathead, Lake and Lincoln Counties—Crushed and stockpile ⅝" aggregate surfacing from ten crusher set-ups involving about 105,000 ton crushed aggregate and 28,650 ton mi. haul; SMP 1599. Completion June 30, 1959. DM 8-12

★**ASPHALT—** **Laurel, Mont.**

Award to Long Construction Co., Lockwood Flats, Billings, $18,520, by City Council, City Hall, Laurel, for furnishing 4,000 tons hot mix asphalt surface course in Laurel. Bids opened July 24.

will be considered unless accompanied by a proposal guaranty, in an amount of at least (5) per cent of the bid, made unconditionally payable to the State Highway Commission of Montana, which at the bidder's option may be cash, cashier's check, certified check, bank, postal or express money order, or bank draft.

1. **I 15-1(7)9**—Furnish and place signs and delineators on 17.1 miles on the Monida-North Road in Beaverhead County, involving about 1,399 sq. ft. sheet aluminum; 1,729.3 sq. ft. extruded aluminum; 217 sq. ft. plywood; 11,902 lbs. steel I-sign posts; 19,152 lbs. steel U-sign posts; 7,174 MBM treated timber sign posts; 84 lin. ft. treated timber sign poles; 1,340 each delineators and 1 changeable copy sign. Project to be completed in 45 Calendar Days.

2. **I 15-5(8)230**—Furnish and place signs and delineators on 12.5 miles on the Cascade-Ulm Road in Cascade County, involving about 1,047 sq. ft. sheet aluminum; 628 sq. ft. extruded aluminum; 114 sq. ft. plywood; 2,650 lbs. steel I-sign posts; 11,732 lbs. steel U-sign posts; 4,854 MBM treated timber sign posts; 252 lin. ft. treated timber sign poles and 794 each delineators. Project to be completed in 45 Calendar Days.

3. **I 15-5(9)275 Unit 1**—Grade, aggregate surfacing, plant-mix bituminous surfacing, seal-coat oiling, and drain 8.337 miles on the Sun River - Great Falls Road in Cascade County, involving about 2,860,399 cu. yds. excavation; 912,745 mi. yds. overhaul; 9,077 units rolling; 58,009 M gal. watering; 147 hours watering; 334,562 tons crushed aggregate; 427,452 tons uncrushed aggregate; 4,218.77 tons penetration asphalt; 568.84 tons cutback asphalt; 474.80 tons emulsified asphalt; 76,627 tons plant mix; 876 lin. ft. remove concrete curb; 100 lin. ft. relay pipe culverts; 604 cu. yds. gravel backfill; 431 lin. ft. structural plate pipe; 5,548 lin. ft. reinforced concrete pipe; 5,779 rods wire fence, 162 each fence panels; 33,850 lin. ft. guard rail; 293.4 sq. yds. concrete pavement; 868 lin. ft. concrete median curb; 21 each inlet covers; all lump sum weight station; all lump sum conduit system; 249 lin. ft. jiggle bars; and other items. Project to be completed in 380 calendar days.

4. **I 15-5(9)275 Unit 2**—The construction of one 108' dual and one 218.9' single concrete structure, and three 17.25' concrete junior grade separations on the Sun River-Great Falls Road in Cascade County, involving about 1,260 lin. ft. precast prestressed concrete beam; 1,935 cu. yds. structure excavation; 1,929.8 cu. yds. concrete; 219,064 lbs. reinforcing steel; all lump sum structural steel; all lump sum treated timber test piles; 11,350 lin. ft. furnishing treated timber piles; 10,958 lin. ft. driving treated timber piles; 550.42 lin. ft. steel beam bridge rail; 440 lin. ft. steel bridge rail; and all lump sum conduit system. Project to be completed by September 30, 1959.

5. **I 90-1(5)46**—The construction of one 620.92' and one 800.92' steel and concrete bridge on the Superior-East and West Road in Mineral County, involving about 1,195 cu. yds. excavation; 56 each floor drains; 4,755 cu. yds. structure excavation; all lump sum shoring and cribs; 3,309.9 cu. yds. concrete; 364,573 lbs. reinforcing steel; all lump sum structural steel; all lump sum untreated timber test piles; all lump sum treated timber test piles; 11,770.0 lin. ft. furnishing untreated timber piles; 9,811.5 lin. ft. drive untreated timber piles; 3,442.0 lin. ft. driving treated timber piles; 3540.0 lin. ft. furnish treated timber piles; and 2,847 lin. ft. steel bridge rail. Project to be completed by July 31, 1960.

6. **I 90-7(5)139**—Furnish and place signs and delineators on 11.8 miles on the Springdale-West Road in Park County, involving about 628 sq. ft. sheet aluminum; 260 sq. ft. extruded aluminum; 58 sq. ft. plywood; 18,938 lbs. steel U-sign posts; 2.888 MBM treated timber sign posts; 168 lin. ft. treated timber sign poles; and 884 each delineators. Project to be complete in 45 calendar days.

7. **I 90-8(7)394**—The construction of one 576' steel and concrete bridge over the Yellowstone River abopt 6.5 miles east of Reedpoint on the Reedpoint-Columbus Road in Stillwater County, involving about 20 each floor drains; all lump sum shoring and cribs; all lump sum test piles; 1,485 cu. yds. structure excavation; 1,344.4 cu. yds. concrete; 97,009 lbs. reinforcing steel; all lump sum structural steel; 24,990 lbs. furnishing steel bearing piles; 569 lin. ft. driving steel bearing piles; and 1,156.22 lin. ft. steel bridge rail. Project to be complete by November 30, 1959.

8. **F 217(10)** — Grade, aggregate surfacing and drain 9.7 miles on the Gardiner-Livingston Road in Park County, involving about 623,571 cu. yds. excavation; 1,832 units rolling; 12,277 M gals. watering; 119,674 tons crushed aggregate; 26,503 tons uncrushed aggregate; 21 lin. ft. relay pipe culverts; 544 cu. yds. gravel backfill; 285 lin. ft. corrugated metal pipe; 460 lin. ft. structural plate pipe; 2,240 lin. ft. reinforced concrete pipe; 114.6 tons bentonite canal liner; all lump sum remove existing structures; and other items. Project to be completed in 220 calendar days.

9. **DF 387(6)** — Grade, aggregate surfacing, plant-mix bituminous surfacing and seal-coat oiling 10.449 miles on the Dillon-Twin Bridges Road in Beaverhead and Madison counties, involving about 3,018 cu. yds. excavation; 79 units rolling; 101 M gals. watering; 54 hours watering; 6,821 tons crushed aggregate; 1,408.37 tons penetration asphalt; 5.51 tons cutback asphalt; 169.82 tons emulsified asphalt; 25,625 tons plant mix; 43 each remove guide posts and 2,150 lin. ft. guard rail. Project to be completed in 100 calendar days.

10. **S 45(8)**—Grade, aggregate surfacing, and drain 5.668 miles on the Brandenberg-Garland-Miles City Road in Custer County, involving about 329,858 cu. yds. excavation; 32,768 mi. yds. overhaul; 165 units rolling; 5,749 M gals. watering; 41,320 tons crushed aggregate; 175 cu. yds. riprap; 105 lin. ft. relay pipe culverts; 263 cu. yds. gravel backfill; 1,344 lin. ft. corrugated metal pipe; 192 lin. ft. structural plate pipe; and other items. Project to be completed in 150 calendar days.

11. **DS 49(6)**—Aggregate surfacing 3.268 miles on the White Sulphur Springs-West Road in Meagher County, involving about 519 cu. yds. binder; 1,038 mi. yds. overhaul on binder; 102 units rolling; 509 M gals. watering; and 25,474 tons crushed aggregate. Project to be completed in 80 calendar days.

12. **S 51(4)**—Grade, aggregate surfacing, and drain 4.597 miles on the Knobs-Webster-Baker Road in Fallon County, involving about 151,475 cu. yds. excavation; 5,538 mi. yds. overhaul; 104 units rolling; 2,785 M gals. watering; 26,029 tons crushed aggregate; 583 cu. yds. binder; 100 lin. ft. relay pipe culverts; 87 cu. yds. gravel backfill; 1,005 lin. ft. corrugated metal pipe; 116 lin. ft. structural plate pipe; and other items. Project to be completed in 120 calendar days.

13. **DS 64(2) and S 64(3)**—Grade, aggregate surfacing, drain, and construction of one 57.0' treated timber bridge on 8.709 miles on the Shawmut-Hedgesville Road in Wheatland County, involving about 357,114 cu. yds. excavation; 69,852 mi. yds. overhaul; 171 units rolling; 6,195 M gals. watering; 42,752 tons crushed aggregate; 252 lin. ft. relay pipe culverts; 180 cu. yds. gravel backfill; 2,768 lin. ft. corrugated metal pipe; 190 lin. ft. structural plate pipe; 0.872 MBM untreated timber; 20.616 MBM treated timber; 630 lin. ft. treated timber piles; and other items. Project to be completed in 160 calendar days.

14. **S 228(1)**—Grade, aggregate surfacing, bituminous surface treatment, and drain 17.789 miles on the Wolf Creek-Augusta Road in Lewis and Clark County, involving about all lump sum clearing and grubbing; 677,825 cu. yds. excavation; 5,903 mi. yds. overhaul; 2,573 units rolling; 14,741 M gals. watering; 206 hours watering; 230,023 tons crushed aggregate; 18,265 tons uncrushed aggregate; 408.68 tons cutback asphalt; 408.68 tons emulsified asphalt; all lump sum remove miscellaneous items; 225 cu. yds. riprap; 108 lin. ft. relay pipe culverts; 485 cu. yds. gravel backfill; 394 lin. ft. corrugated metal pipe; 374 lin. ft. structural plate pipe; 5,930 lin. ft. reinforced concrete pipe; and other items. Project to be completed in 200 calendar days.

15. **DS 261(2)**—Grade, aggregate surfacing, road-mix bituminous surfacing, seal-coat oiling, and drain 2.150 miles on the Big Spring-North Road in Fergus County, involving about all lump sum clearing and grubbing; 104,117 cu. yds. excavation; 6,264 mi. yds. overhaul; 380 units rolling; 2,208 M gals. watering; 12 hours watering; 38,055 tons crushed aggregate; 255.35 tons cutback asphalt; 39.88 tons emulsified asphalt; 2.144 miles processing; 1,193 sq. yds. processing; 24.5 cu. yds. riprap; 160 lin. ft. relay pipe culverts; 310 cu. yds. gravel backfill; 798 lin. ft. corrugated metal pipe; 250 lin. ft. structural plate pipe; 614 lin. ft. remove guard rail; all lump sum remove existing structure; and other items. Project to be completed in 90 calendar days.

16. **DS 289(7) and DS 346(4)**—Grade, aggregate surfacing, and drain 7.676 miles on the Red Lodge-Columbus Road in Carbon and Stillwater counties, involving about all lump sum clearing and grubbing; 231,193 cu. yds. excavation; 24,830 mi. yds. overhaul; 599 units rolling; 4,142 M gals. watering; 36,523 tons crushed aggregate; 310.14 cu. yds. riprap; 100 lin. ft. relay pipe culverts; 300 cu. yds. gravel backfill; 1,256 lin. ft. corrugated metal pipe; 424 lin. ft. structural plate pipe; 4,169 lin. ft. reinforced concrete pipe; all lump sum remove existing structures; and other items. Project to be completed in 150 calendar days.

17. **SMP 1599**—Crushed and stockpile ⅝" aggregate surfacing from ten crusher setups in Flathead, Lake, and Lincoln Counties, involving about 105,000 tons crushed aggregate and 28,650 ton-mile haul. Project to be completed by June 30, 1959.

The above listed quantities are approximate only.

Prequalification of bidders, at least 72 hours prior to the opening of bids, is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission, in Helena, Montana. Plans and specifications for all Federal Aid Projects are also on file and may be examined in the offices of the Bureau of Public Roads, in Helena, Montana.

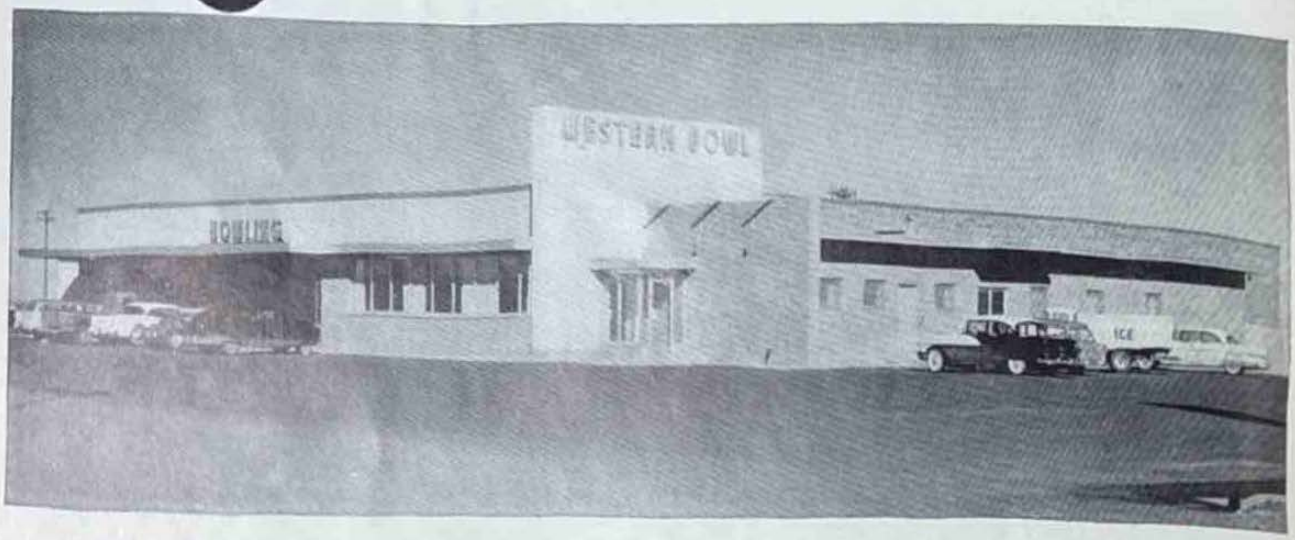
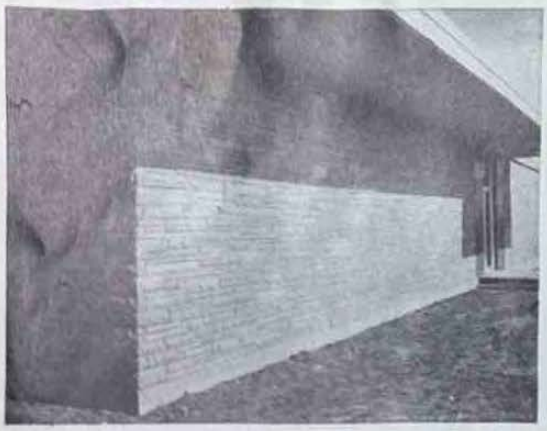
BOWLS 'EM OVER



Lone Star Masonry Cement is High Scorer on Texas Panhandle's Largest Bowling Alley



WESTERN BOWL BOWLING ALLEY
Architect: EDWIN N. BLISS
General Contractor: FLOYD RICHARDS
Sub-Contractor for Masonry: VAN DORAN BRI-TICO CO.
Concrete Supplied by: CROWE-GULDE CEMENT CO.
Lone Star Masonry Cement Supplied by
PANHANDLE CONCRETE CO.
All of Amarillo

● Top quality masonry, with durability to match attractive appearance, confirms the judgment of Architect, Mason, and Owner in using Lone Star Masonry Cement on Western Bowl Bowling Alley, Amarillo, Texas.

Lone Star Masonry Cement assures uniformly high-quality mortar, from batch to batch, for these reasons:

1. Highest water retention—utmost workability, plasticity and bond.
2. Adequate strength.
3. Soundness—no delayed expansion.
4. Low absorption and high water repellency, safeguard against unsightly efflorescence.
5. Negligible shrinkage.
6. Makes the addition of water-proofing material unnecessary.

Six good reasons why more and more Masons favor Lone Star Masonry Mortar—for economy in construction and economy through extra durability and life-time satisfaction.

LONE STAR CEMENTS COVER THE ENTIRE CONSTRUCTION FIELD

BUILDING PERMITS

August volume well ahead of '57

Building permits continue to draw an encouraging picture in the five western states. The August total is $37½ million higher than last year and marks the fourth consecutive month that the volume has shown a gain over 1957. As in previous months, California leads the way, this time with a $29 million increase. Gains in Oregon, Washington, Montana and Idaho range from $¾ million to $3¼ million.

As the tabulation below shows, the August total is $25½ million less than the preceding month. But the drop can be attributed primarily to a leveling off in California which enjoyed an exceptional boom during July. Figures for the other four states are above July.

By the end of August, permits had been granted for $1,798,734,622 worth of buildings in the five states, a $151 million increase over 1957.

	Jan.-Aug. 1958	Jan.-Aug. 1957
Calif.	$1,432,517,096	$1,341,449,807
Ore.	120,303,967	83,777,027
Wash.	208,456,650	189,548,174
Mont.	19,033,545	16,853,824
Idaho	18,423,364	16,084,320

ANALYSIS OF TYPICAL AREAS — AUGUST

(Number of permits is followed by total dollar volume)

	Dwelling		Commercial & Industrial		Public

CEDAR SHAKE WALLS

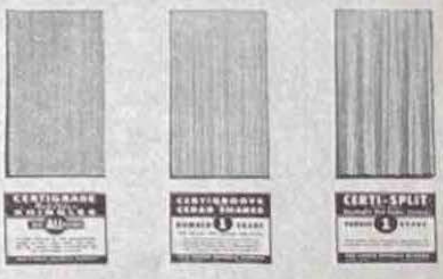
an ageless integrity...

...in the clean, crisp idiom of today

The modern cedar shake is a shingle that has been squared and striated to fulfill the need for *line and texture* in exterior home design. Cedar shake walls, with their clean-cut striations and dramatic shadow accents, enhance any area where a natural material is desirable. That is why *genuine red cedar shakes* have become the dominant wall material in so many of the better communities.

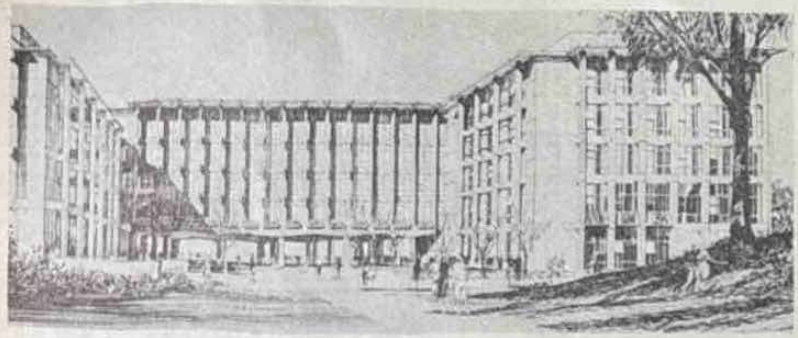
RED CEDAR
SHINGLE BUREAU

5510 White Building, Seattle 1, Washington
550 Burrard Street, Vancouver 1, B. C.



METHODIST RETIREMENT HOME

sited on ridge in Spokane will be $3 million, eight-story reinforced concrete structure faced with aluminum frame, porcelain enamel curtain wall. Rockwood Manor will provide 281 resident apartments in varying size, each with private bath and storage facilities and some with bedrooms and kitchenettes. Besides main lounge (seen in foreground), three others will be available. Other facilities: library, chapel, recreational center, roof deck, beauty salon, 15 two-bed ward infirmary with pharmacy. Architect-engineers: Culler, Gale, Martell & Norrie.

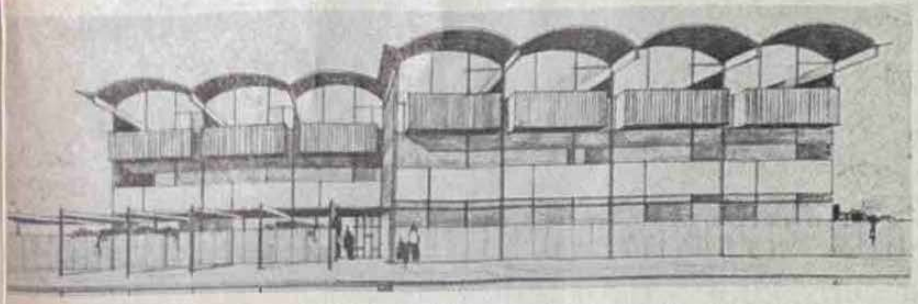


EDUCATION-PSYCHOLOGY BUILDING

on which University of California will begin construction next spring will harmonize with other structures on Berkeley campus, marked by free-standing, disengaged columns on face of building, backed by glass and metal curtain wall. H-shaped plan of $7 million project generally will comprise five stories, but reaching to seven in some sections. Architect: Gardner A. Dailey.

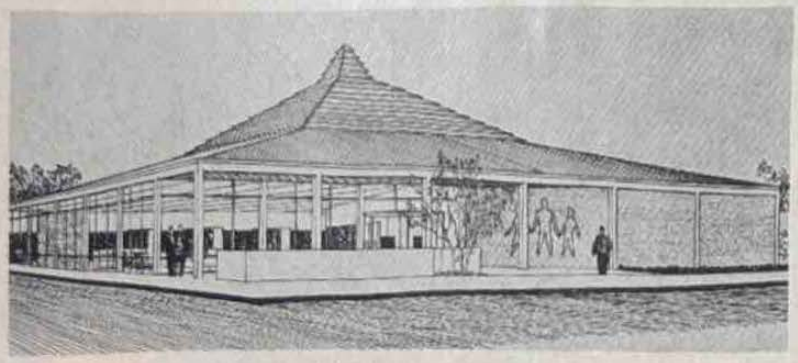
COOPERATIVE APARTMENTS

facing ocean in Long Beach, Calif., will be housed in $3 million, 12-story steel and concrete structure with 44 units, roof terrace and 33,000 sq. ft. of glass. Apartments in Marina Tower will range in cost from $57,000 to $76,000; in size from 2,372 to 3,129 sq. ft., with 36-ft. living rooms and fireplaces. Architects-engineers: Killingsworth-Brady-Smith.



CLINIC AND APARTMENT BUILDING

to be built in Seattle will feature built-up roof of prefabricated insulated, slightly curved plywood panels. Frame structure will have some brick and stone veneer as well as prefinished panels. Ground floor will be devoted to office space for four doctors, second and third floors to 10 apartment units for a total of 13,000 sq. ft. Architects: Johnston-Camponella & Associates.



BRANCH LIBRARY

in Portland's Hollywood district will be colorful affair incorporating three solid panels in brilliant red Venetian glass mosaic; entry sculpture in black painted steel; near-white terrazzo on exposed concrete around columns and beams and at head of windows. Roof design, which developed from two-story buildings surrounding site, began as double hip, point at top being added to meet city requirement for chimney height. Exhaust for gas fired unit will be concealed, running out top. Architects: Stewart & Richardson.

YOU SPECIFY THE THERMAL VALUE

KAISER FIR-TEX
TAILORS THE ROOF INSULATION

Kaiser is the West's specialist in rigid roof insulation, whatever the job requirements. Kaiser Fir-Tex can deliver a complete line of standard or special boards to meet the thermal value architects specify. Call or write for technical bulletins incorporating latest thermal values. And remember, always look to Kaiser Fir-Tex for exciting new quality, performance and economy achievements in roof insulation, acoustical and other insulating products.

home builders, housing and human values

September brings with it, to a number of West Coast communities, at least, promotional schemes which carry such tags as Parade of Homes, Pageant of Homes or what have you. To kick off the fall program in the Puget Sound area, home builders and realtors banded together to almost fill the Olympic Hotel's Grand Ballroom and to get a shot in the arm from Stanley Edge of Pittsburgh. The home marketing specialist is a forceful and enthusiastic speaker and when it was all over, one could only wish that he were "selling design" instead of "merchandising houses."

In all fairness to Mr. Edge, it must be reported that he did make several casual references to design and received a ripple of applause when he stated that "more Seattle builders use architects than anywhere in the country." But his statement that "people want to conform," in explaining the No. 1 buying motive of the American public, cannot go unchallenged. Isn't it the other way around, with the home building industry unconsciously helping to reduce our culture to the lowest common denominator?

* * *

In line with all this, the Home Builders Association of Greater Seattle requested that the Washington State Chapter, AIA, select an architect to write an article for its monthly bulletin. The executive committee handed the assignment to A. O. Bumgardner, PA&B's architectural advisor, who wasn't bashful about speaking his piece, as the following excerpts indicate:

"Too often the builder meekly trails along behind the real estate salesman who 'knows what the people want.' Let the builder beware: does he remember how Detroit's auto industry thought it knew what the people wanted? Foreign cars are demonstrating that well-designed products—products of integrity at fair prices—sell!

"As an architect doing residential commissions, I am frequently asked to recommend between buying a speculative house and buying an old one. For all their defects and lack of labor-saving devices, old houses sometimes are more suitable domiciles for rearing families than many of the new ones. More thoughtful planning could increase livability of houses considerably more than all the gimcracks of false fronts, planter boxes and the hodgepodge of siding materials that are supposed to make the house sell.

"Stock plans to fit everyone between eight and eighty, situated on hills scraped and scarred, show little consideration for human values. Our newly created suburbs are rapidly becoming urbanized. Do they solve any of the problems left behind in the city—or will they be tenfold worse in ten years? We brag about democracy; can't we create an environment that stimulates the individual instead of lulling him into conformity at a mediocre level?"

* * *

As a final word, we suggest that you read an architect's probing review (p. 10) of two books which consider housing and its effect on our society—not necessarily the most recent works but certainly among the most significant.

R.E.K.

Los Angeles Editor Has New Address, Phone

PA&B had no sooner announced the appointment of Marvin Hanks as contributing editor for southern California than he up and moved to a new address: 823 Isabel St., Los Angeles 65 (CApitol 1-8115).

NEWS

Los Angeles leads in home building

Los Angeles continued to lead all metropolitan areas in home building nationally in 1957 despite a 10% drop over the year to 80,700 new dwelling units. U.S. Department of Commerce statistics show that three other California areas made the first 10: San Francisco-Oakland, sixth; San Bernadino-Riverside-Ontario, eighth; and San Diego, ninth.

The New York-northeastern New Jersey area, which had yielded the top position to Los Angeles in 1953, continued in second place with 66,300 units in 1957. Chicago, Detroit and Philadelphia followed in that order, with Miami coming in seventh.

Joining the ranks of the top 50 were four other West Coast areas: San Jose, 13th; Seattle, 23rd; Sacramento, 32nd; and Portland, 45th. Largest 1956-57 increases were in San Diego, one of three areas in the country gaining consistently throughout the 1954-57 period, and in San Jose.

Majority of the housing in the 50 leading areas continued to be constructed in the suburbs. Although the majority of the units in multifamily structures were located in the central cities, substantial increases in this type of housing occurred in the suburban fringes in 1957. In Los Angeles and San Francisco, for example, more units in two-family and apartment houses were built in the outlying areas than in the central city sections during 1957.

LEADING WEST COAST AREAS IN HOME BUILDING, 1955-57

Rank				New Dwelling Units		
1957	1956	1955	Metropolitan Area	1957	1956	1955
1	1	1	Los Angeles	80,700	89,300	103,700

Meeting will consider new hardwood uses

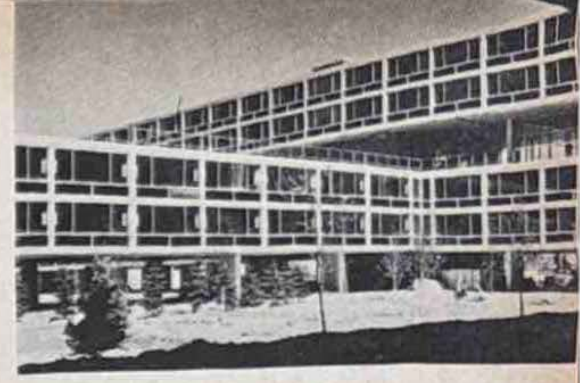
Architects and builders have been invited to hear Burdett Green, authority on hardwoods and their application to interior design, at the annual meeting of the Northwest Hardwood Association September 27 in Portland's Hotel Congress.

While serving for many years as executive vice president of the Fine Hardwoods Association in Chicago, Green assembled what is probably the world's finest collection of hardwood specimens from all parts of the U.S. and abroad. He now is located in Palo Alto, Calif., where as vice president of Elmendorf Research, Inc., he is investigating new uses for Pacific Coast hardwoods.

Other speakers scheduled for the association's third meeting: Marshall N. Dana, former editor of the Oregon Journal, with the United States National Bank; and Ralph V. Backstrom of Great Northern Railway's agricultural and industrial development department.

Art competition slated

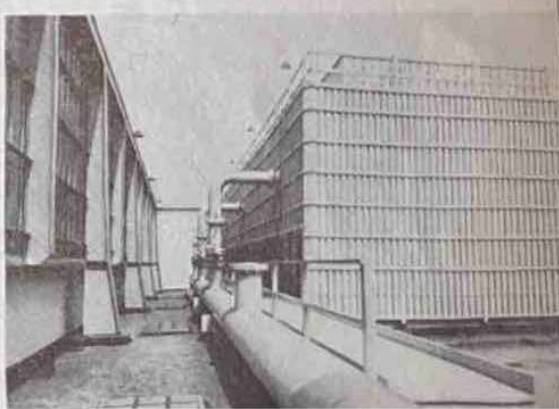
Competition for the design of a bas-relief, mosaic or free-standing sculpture for the lobby of the Logan Building now being constructed in downtown Seattle will be open to all artists and architects in the 11 western states and Alaska. The client, Antero Co., will award $4,500 to the winner, plus costs of executing and supervising installation, with $250 each for second through fifth places and $100 each for sixth through tenth.



INNER COURTYARD
of Cadet Quarters Building is bustling with activity since Air Force Academy moved from its temporary home in Denver to Colorado Springs for beginning of fall term. Skidmore, Owings & Merrill are architects for aluminum curtain wall and glass buildings; Robert E. McKee, Inc., is general contractor for structure shown here.

PORTLAND'S AIRPORT TERMINAL
is now open to traffic, its 18 plane loading positions (designed for expansion up to 34) doubling capacity of old facility. Initial stage is planned to handle one million passengers annually, this peak expected to occur about 1963. Exterior of $5.8 million concrete structure is faced primarily with porcelain enamel panels, with some brick and aluminum sash trim. Architects: Burns, Baer, McNeil & Schneider; prime contractor: Ross B. Hammond Construction Co.

LARGEST FACILITY
of its kind west of Mississippi, $3.5 million structure will eventually provide complete heating and air conditioning service for all county buildings in Los Angeles Civic Center. Automatically engineered plant requires crew of only six operators per shift. Five gas-oil fired boilers, which produce 160,000 lb. of steam hourly, supply heat in winter, power four refrigerator compressors in summer. Plant was designed by M. A. Nishkian & Co., consulting engineers; constructed by Haas-Haynie-Frandsen, Inc.; mechanical installations by Scott Company of Southern California.



Tract housing: 'more philistine aspects'

BOOKS

THE CRACK IN THE PICTURE WINDOW
By John Keats
Houghton Mifflin Co., Boston
The Riverside Press, Cambridge
1957, 196 pp. $3.

THE ORGANIZATION MAN
by William H. Whyte Jr.
Simon & Schuster, New York
1956, 429 pp. $5.

by H. H. WAECHTER, AIA

JOHN KEATS' BOOK, which is written in a zestful journalistic style, is exposing life in our new and vast suburban housing developments and thus is reflecting on our tract builders' accomplishments as designers and planners.

While doing this in an often entertaining manner, Keats cannot suppress his anger at conditions which also to this reviewer appear distasteful, but which are so generally accepted that they need to be explained as part of our present day sociological make-up. While taking a stab at the "identical boxes" in our new "fresh-air slums," Keats is talking about the square miles which are covered by some developers with poorly built, ill-designed and wrongly oriented "homes" of fellow citizens who would be deserving of something better for their money. His criticism of the creation of "stratified societies of singular monotony" is not new, yet no less justified. Indeed, there is one outstanding fact in the postwar housing picture, namely the loud outcry against the living habits and housing conditions in suburbia and in exurbia. We have witnessed "counter-attack against subtopia" and we read learned sociological studies of living conditions under "social pressures" in those architectural wastelands which used to be fruitful acres and orchards. While some observers see our economy threatened by housing cutbacks, others imagine people returning to the big cities in order to find bearable conditions as refugees from suburbia.

Margaret Mead of anthropological fame summed up the situation at the recent AIA convention by saying that "some of our suburbs are concentrations of people of one race, one religion and one mass of prejudices."

After that much has been said, however, to this reviewer, Keats becomes unconvincing in the way he is trying to generalize his findings. This is particularly the case when he is describing how innocent buyers are deceived by cunning salesmen and their profiteering masters. Unless one wants to be blind toward the existence of the profit motive, which is underlying any business transaction, there is no reason to assume that every tract builder is a past master of dishonest practices, fraudulent breach of specifications and other unkind disregards of the buyers' interests.

Another misconception is the assumption that life in the suburbs is considered detrimental by most of the suburbanites. If the author is having Mrs. Drone say that "deep inside her she knew perfectly well that the house she inhabited had helped spoil her day; that it was harming her marriage and corroding her life," he is touching upon true psychological and physiological problems in architecture, but he is also guilty of implying that many people in those developments are actually conscious of the problem and feel like Mrs. Drone.

Continued on p. 32

Tract housing: 'the forces at work'

MOST COMPREHENSIVE and intelligible discussion of the forces at work behind our housing production and thus our housing dwellers is, without doubt, William H. Whyte's "The Organization Man."

Whyte levels a great deal of criticism against conditions as they are; in fact, some of it alarming while coming from an enthusiast of our capitalistic organization. But his criticisms are deeply probing and helpful in understanding the underlying causes of our dilemma. Limiting ourselves to aspects of housing, we cannot dwell on what Whyte calls his theory on Social Ethic. Yet one needs to go through his discourse in order to understand that it is "the new suburbia, the packaged villages that have become the dormitory of the new generation of organized man" and that we are getting in this new suburbia "a preview of the direction the Social Ethic is likely to take in the future."

Whyte feels that we have tried to carry on the Protestant Ethic by which this country was dominated while actually the country had changed. The Organization has created a reality which became more and more divergent from the Protestant Ethic. The small and self-made business man is characterized as a counterrevolutionist, making the industrial corporation a revolutionary force. It is depressing to see in subsequent chapters on the social influences, which are exerted by this revolutionary force, that this new development has to lead to conformism, a situation where "belongingness" is substituted for individual independence. The complex training of Organization Man is revealing the creation of a generation of bureaucrats. The fight against genius takes place because unorthodoxy can be dangerous. Ideas deemed desirable are coming from the group.

Besides training, psychological testing and bureaucratic systematizing are the major tools named as shaping our productive society. Describing the "Organization Man at Home," Whyte finds organization life of tomorrow expressed best in the new suburbia because there it is concentrated most visibly. I found his explanation of a new kind of "rootlessness" among the suburbanites most illuminating. Because they all live more or less as transients, they have to find a certain kind of environment wherever they are moving to. Furthermore, class stratification is leading to movements among certain types of ready-made environment. As one of the studies quoted is making clear, "It now appeared that the American system was finally shaking down into a fixed order of things in which achievement was more and more closed to the lower classes." This, of course, leads to the necessity that the individual "should not cherish illusions that he was going up but instead adjust to the realities of a fairly static environment." The actual location and even the sets of friends become interchangeable. There are no roots in actual soil. The "new roots" are in the package suburbs as such. Despite the general acceptance of this new sociological foundation there are, of course, some grumblings, some of which have characteristic coinages such as "sorority house with kids" or "a Russia, only with money."

In explanation it is said that the great expansion of the middle class

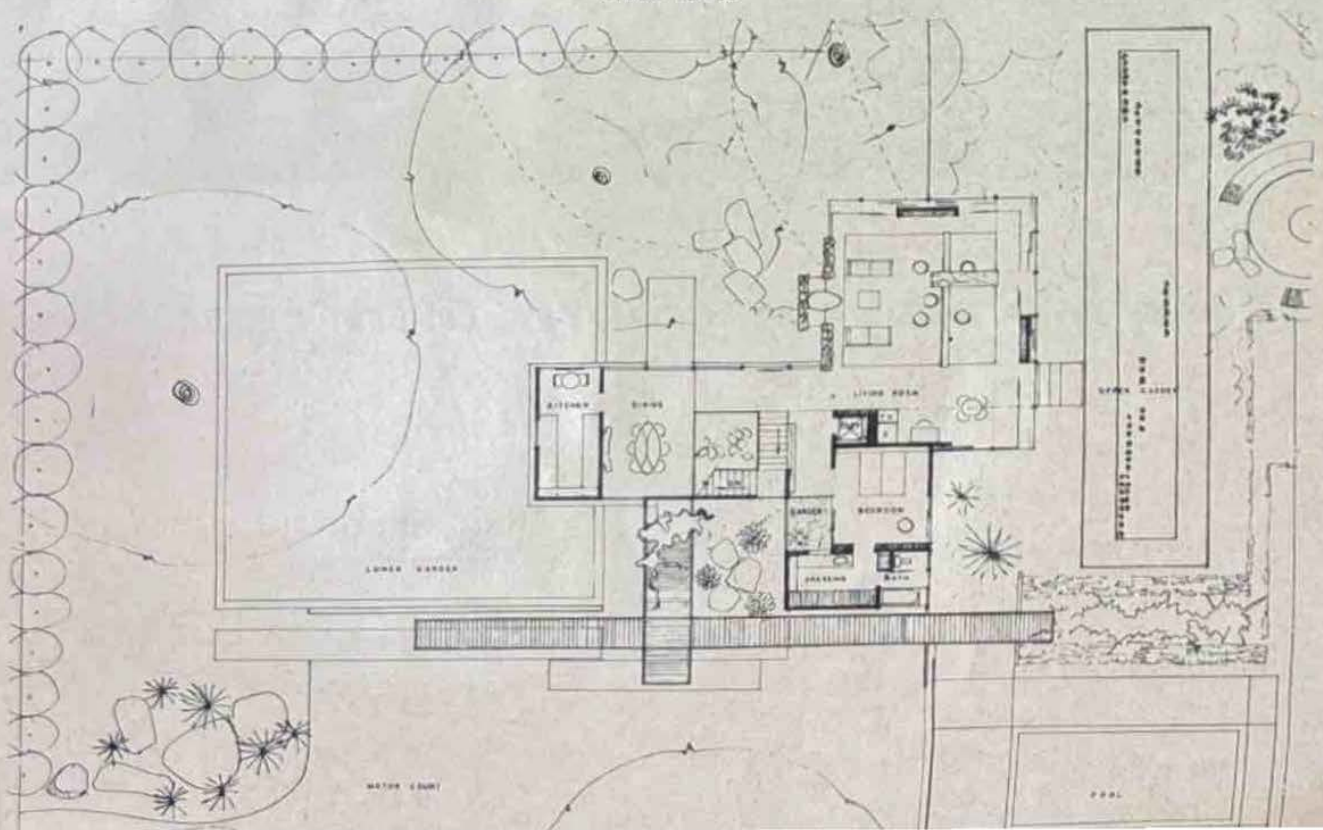
SOUTHERN CALIFORNIA RESIDENCE

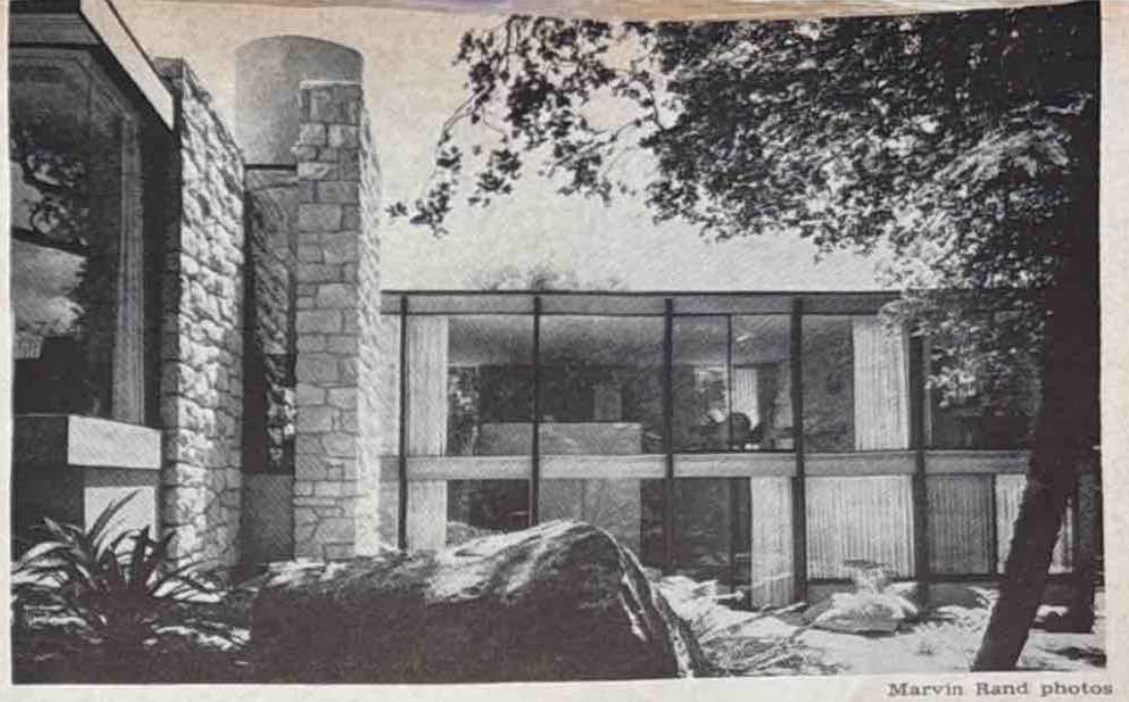
FUSION of indoor and outdoor space into a single environmental complex is evident throughout this spacious residence (3,818 sq. ft.) for a writer. The two-level scheme has guest quarters, secretary's area and main entrance through hand-carved Spanish Gothic doors on the lower level; kitchen, dining room, living-work area and master suite on the upper. Entry stairway leads up to a galleria of glass looking into giant oaks. Dining area is a part of this space, thereby giving added dimension.

The client desired desk and files (specially designed, along with other furnishings, by Paul Tuttle) centrally located so that he could do his daily work and still be a part of the hub of activity. This portion of the house is levitated above the private upper garden onto which the living area opens. Opposite wall of Santa Barbara stone has the fireplace expressed as a void with an oval chimney stack in the center. Natural light from a skylight above and full-length glass panels on either side combine to make a dramatic experience in form, light and shadow. Master bedroom, dressing room and bath suite open onto the upper garden, as well as onto a small enclosed area veiled by metal mesh and overlooking the entrance court.

Extensive landscaping by the architects incorporates a variety of plantings and devices, ranging from existing wistaria trained over the entrance trellis to Hawaiian tree ferns to native rocks. The lower garden lawn is retained by a crisp concrete form, with a wide, decomposed granite path around its periphery. Kentia palms serve as a privacy screen for the pool.

UPPER LEVEL





COLORFUL EXTERIOR has silver green plaster, purple-black steel columns, Santa Barbara stone quarried on site, natural finish redwood fascias, redwood and steel entrance trellis, light green terrazzo.

OUTLINE SPECIFICATIONS

Structure: foundation: concrete; frame: steel columns; roof: wood joists; floors: concrete (lower level) and wood joists.

Exterior Finish: painted plaster.

Roof Surfacing: gray rock over four-ply built-up — Owens-Corning Fiberglas Corp.

Windows: steel sliding—Bellevue Metal Products.

Doors: specially fabricated limba hardwood.

Floor Surfacing: terrazzo, pale green and white carpeting, pale green vinyl (kitchen and baths).

Insulation: 4-in. rock wool batts—Johns-Manville Corp.

Partitions: stud and plaster.

Interior Finish: painted plaster and limba hardwood paneling—United States Plywood Corp.

Ceilings: painted plaster.

Lighting Fixtures: recessed—Marvin Electric Manufacturing Co.

Heating: gas fired, forced air unit—Day & Night Division, Carrier Corp.

Total Area: 3,818 sq. ft.

Date of Completion: February 1957.

Photographs of the six pieces of art—all in Portland buildings unless otherwise noted—shown on these pages were part of an exhibition which hung at the Portland Art Museum this spring.

'The artist in architecture'

Excerpts from an article by Walter Gordon, AIA, of Portland, recipien of the first award from the Oregon Chapter, Artists Equity, for "outstand ing contribution toward the use of painting and sculpture in architecture" and newly appointed dean, School of Architecture and Allied Arts, Uni versity of Oregon*

ENCOURAGING SIGNS of greater opportunity for artists in the field of architectural commissions are becoming more apparent these days. If these indications are not very noticeable in Portland to the casual observer, still it is a fact that important work is being done here; and in the country as a whole there is no denying the evidence that is accumulating. It would be absurd, of course, to be overly optimistic about this phenomenon and to expect anything like a renaissance of of integrated arts and architecture tomorrow.

Tremendous obstacles to any "flowering of the arts" continue to exist. But the trend in contemporary architecture is unmistakably away from concern with purely architectural forms. Wherever possible, today's best architects try to include works especially designed by artists for specific architectural spaces. Sculpture and mural paintings are slowly reappearing in public buildings, churches and schools. Architectural periodicals are publishing commercial projects which show good use of murals, original lighting fixtures and more carefully considered signs and lettering. Modern houses call for the appropriate draperies, carpets, wallpaper, lamps and furniture.

During the past 50 years the tempo of change in modern architecture has been rapid. At first, as a reaction against Victorian gingerbread, pioneering architects deliberately excluded ornamentation and the artist who made it. There was a period of preoccupation with "pure" forms, engineering and a reexamination of new materials. Characteristic buildings in the international modern style of the 1920s and '30s, influenced by the cubist esthetic, had an impersonal, machine-art look. But in the '40s, after the war, one could observe an increasing awareness of a need for pattern and for the fantasy, animation and human touch that had been present in great architecture of the past.

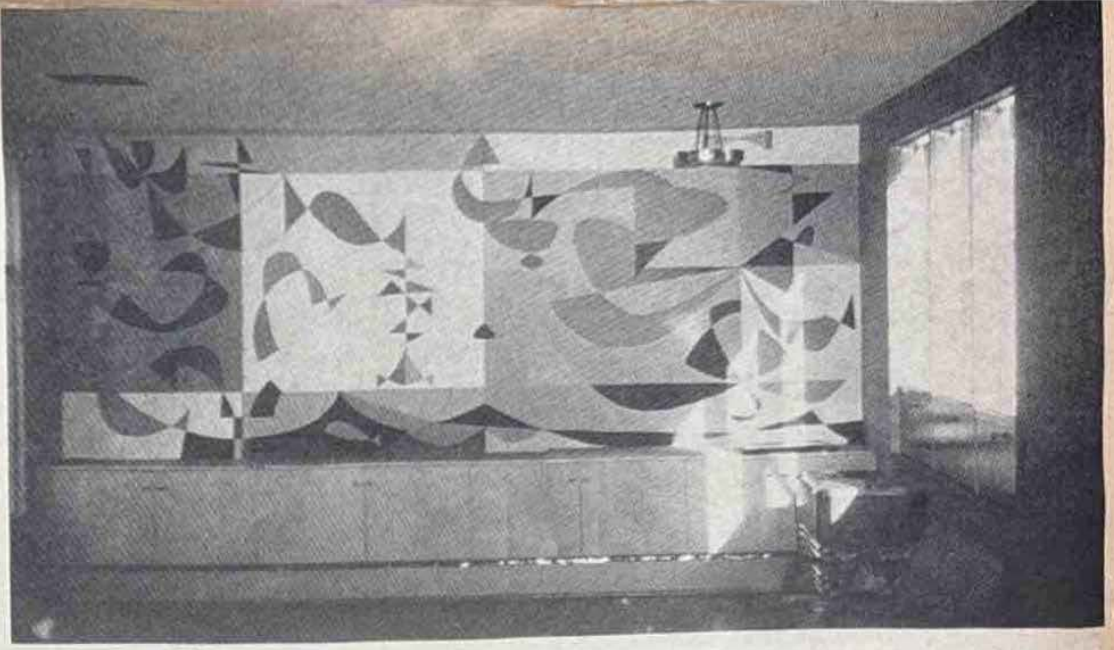
In addition there seemed to be a deeper understanding of the full meaning of functionalism and a realization that there are values in architecture beyond beautiful engineering and efficient mechanical function. It was seen that art forms in architecture have a positive functional value in conditioning the emotional climate of a design.

The architectural field then is comparatively open to artists, but the principal difficulty today lies in the economic dilemma that arises when an architect tries to include the artist in his designing project. It is perfectly obvious that the artist should be brought in at the inception of the design in order that architect and artist can work together on matters of form, scale, color and location. But in the general framework of high building costs, the average client is reluctant to allocate funds for art work until the physical necessities are paid for. In such an atmosphere of uncertainty, the artist must wait until the completion of a building, if indeed he has not already become a casualty in the process of elimination which so frequently takes place before construction is begun.

In this matter is seems to me that the architect must be recognized as being the key figure. It must first of all be his desire and intention to include the work of artists in the design. It is also up to him to persuade the client that the art work is essential. We can assume, with reason, that artists are ready to come out of their studios and to design for schools, churches, homes, for all types of projects in commercial and private buildings. A lot of technical problems are involved in such commissions, in addition to the financial ones, and the artist will have to struggle with client-contractor-architect relationships which are always complex. It is quite clear now that architects—convinced that the arts must be brought back to mutually advantageous relationship with architecture—have at least two tasks of the first importance. They must work out ways of cooperating with artists and they must educate the clients who pay the bills.

*"Art Reenters Architecture" appeared in the Oregon Artist for Winter 1954.

WOOD CARVING by Frederic Littman. Rickbeil Residence, Klamath Falls, Ore.; late Sheldon Brumbaugh, architect.



FAMILY ROOM MURAL by Rick Norwood. Nemer Residence; Walter Gordon, architect.

A statement by George Johanson, president of the Oregon Chapter, Artists Equity, and faculty member of the Museum Art School

THERE HAS EXISTED generally a belief that the artist is concerned only with the traditional materials of the sculptor and easel painter. Actually the reverse of this is true. For many years the artist has been experimenting with new uses for materials such as mosaics, sand-cast sculpture, stained glass, welded metal and plastics.

It was the purpose of the exhibition, "The Artist in Architecture," at the Portland Art Museum to show how the artist can make use of these materials in decorative motifs in architecture. The artist has something to contribute that is highly suitable to modern buildings. Indeed, a work of art can accentuate the design of the building while adding a human warmth which those without art work often lack.

There is nothing new in the idea of an integration of art and architecture. Art began by being an integral part of architecture, and it is their present separation that is really new. Many architects and artists desire a new integration of the two arts. The architect must feel free to call in the artist to talk over the possibilities of the use of art in any building which he is designing. Most artists would welcome the opportunity of being consulted by the architect and even though a commission might not always result, a closer relationship and understanding of mutual problems would develop.

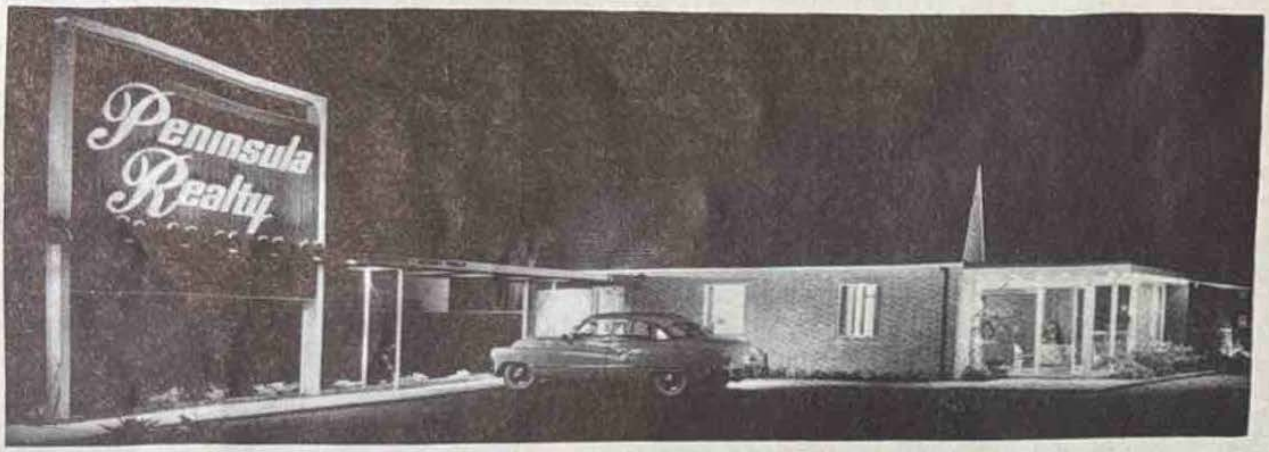
PICTURESQUE PUMPHOUSE, denuded of years-old ivy and sandblasted to warm, soft pink, stands parallel to highway, with flat roofed addition joining it at angle. Egg-crate lattice connects old portion with sign constructed of steel box frame and white three-dimensional letters on dark brown vertical slats.



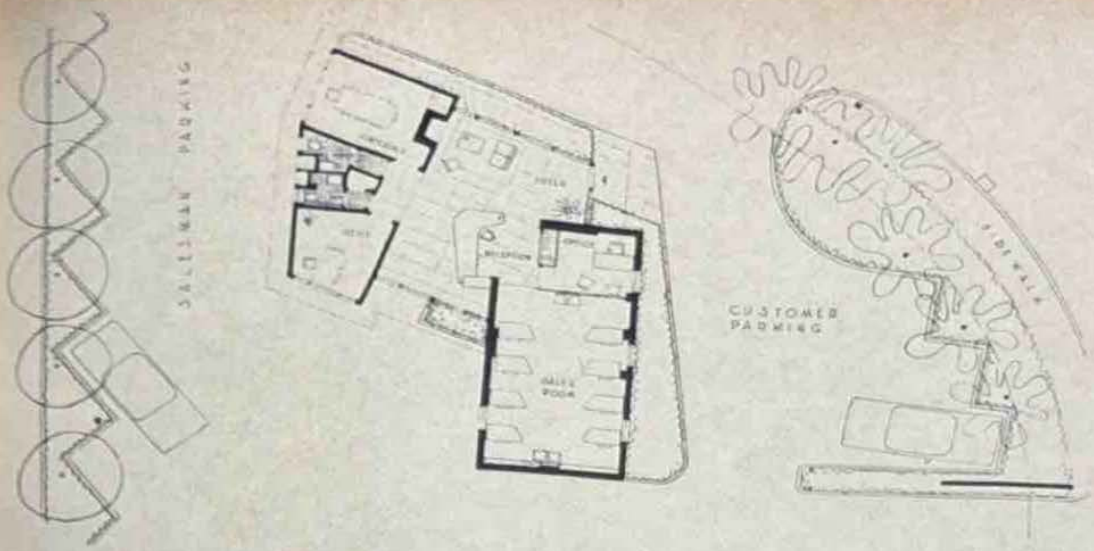
Pumphouse is dressed up to sell real estate

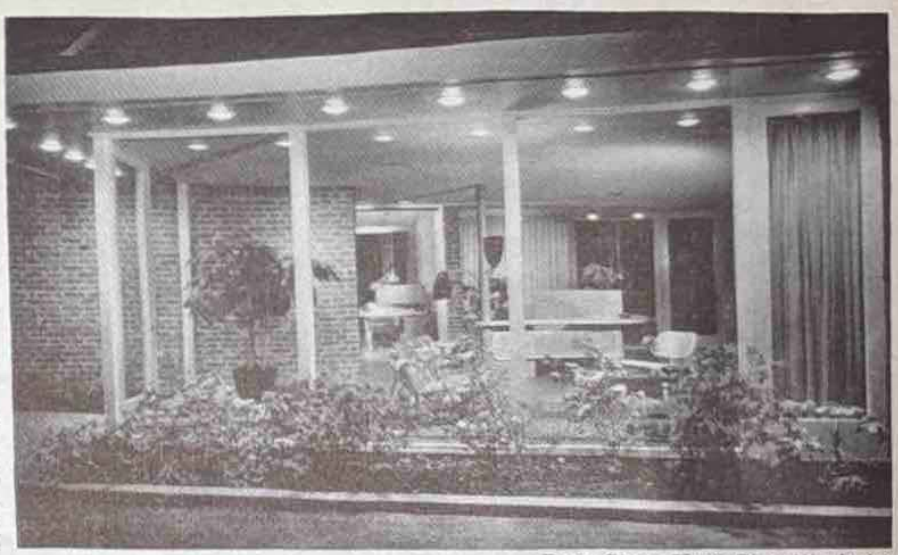
THE CLIENT, upon deciding to move out of inadequate quarters, turned to an adjacent corner lot occupied only by a pumphouse, a kind of landmark which once was part of a great peninsula estate. Resulting problem: how to retain the historical and pictorial values of the old structure and at the same time achieve an up-to-date office building to serve 13 employees.

It was decided to allow the pumphouse to remain essentially as it was and to incorporate a contemporary addition. To provide access from the old portion to the new, the architect knocked out an inner corner and replaced the support with a 4-in. column which, with two exposed brick walls, is an integral part of the design.

The landscape architect was brought into the planning from the very start to insure maximum use of the site for both building and parking, with a secondary consideration of hiding an unsightly structure and sign right next door. A zigzag board fence stained light brown delineates the parking spaces, three of which are in front. A long driveway which parallels the lot line leads directly to additional parking in the rear. For ease of upkeep, plantings are of permanent varieties, including ground cover of variegated ivy, junipers, Lombardy poplars and an existing apple tree.

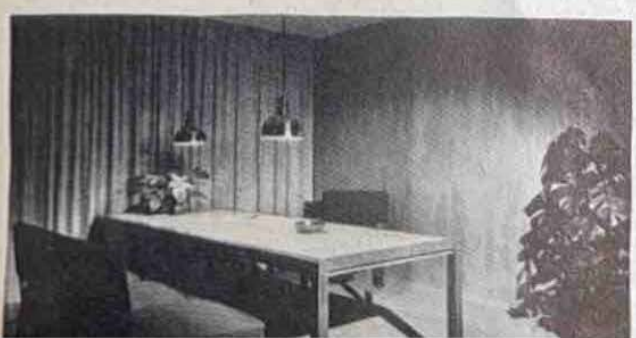
Located between the sales and executive offices, the receptionist's desk is the nerve center of the operation, housing a central listing in 26 drawers, letter size files and typewriter. From her desk she is able to face both entrances, customer lounge and all of the offices. Main salesroom, accommodating eight and an equal number of customers, and a small closing office occupy the space of the old pumphouse. The two long walls, ceilings, desk cabinets and curtains are in a gray-green color scheme; floor is of beige asphalt tile; half of the chairs are upholstered in beige plastic, half in coral. Vertical redwood siding stained a blackish brown conceals storage cupboards in the salesroom, closing office and lounge, as does similar paneling of elm, sycamore and cedar in the executive office.





Dean Stone-Hugo Stecatti photos

GLASS WALLS, each with door, provide access to customer lounge and unobstructed view across front. Home-like lounge has textured casement curtains, terra cotta floor scored in 2-ft. squares, and woven cotton and jute rug. fireplace bordered with black and gold glazed brick. Slab floor extends outside to form walks around exterior. Conference room features custom-made desk which, along with others, was designed by Whitney Atchley.



OUTLINE SPECIFICATIONS

Structure: foundation: reinforced concrete footings; frame: Douglas fir; roof: Douglas fir joists, t&g diagonal sheathing; floors: Douglas fir.

Exterior Finish: existing building: standard brick; addition: 1x8 t&g resawn redwood.

Roof Surfacing: built-up asbestos—Pabco Products, Inc.

Windows: clear sugar pine.

Doors: exterior: clear sugar pine; interior: vertical grain Douglas fir.

Floor Surfacing: asphalt tile—Kentile, Inc.

Partitions: wood stud.

Interior Finish: 1x8 t&g resawn redwood, ¼-in. plywood, brick, gypsum wallboard—(Sheetrock) United States Gypsum Co.

Ceilings: acoustical plaster.

Heating: horizontal forced air, gas fired furnace—(Biltwel) Fraser & Johnston Co.

Total Area: existing building: 384 sq. ft.; addition: 714 sq. ft.

MEMORIAL COURT at far right is created by new auditorium and two existing sections of high school. Granite shaft rising out of long, reflecting pool is inscribed with names of community's war dead. Traffic from school to auditorium moves through court.

Cooperative approach to community needs

Acoustical Consultant

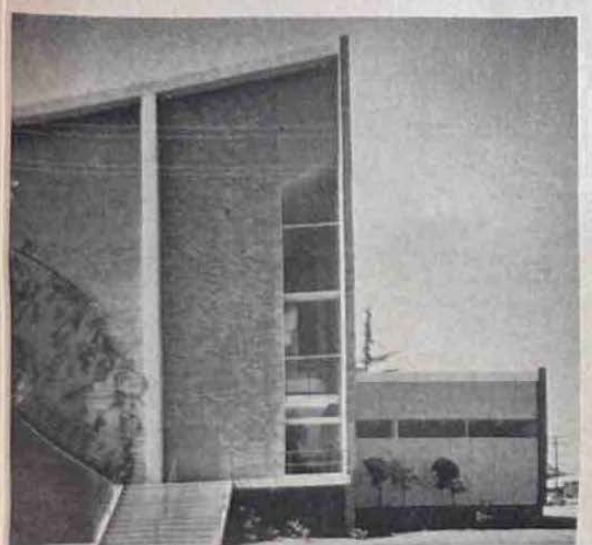
MAINO CONSTRUCTION CO.
General Contractor

FOLLOWING the 1952 earthquake in the San Joaquin Valley, Porterville High School found itself without an educational plant. A crash program took care of building temporary classrooms but left no money for replacing the auditorium. At the same time the Porterville Memorial District, committed to the construction of a community auditorium to honor its war dead, was looking in vain for a suitable site. The logical decision: meet the need jointly, with the school board supplying the land on a long-term lease and the Memorial District constructing a building which would be available for school activities.

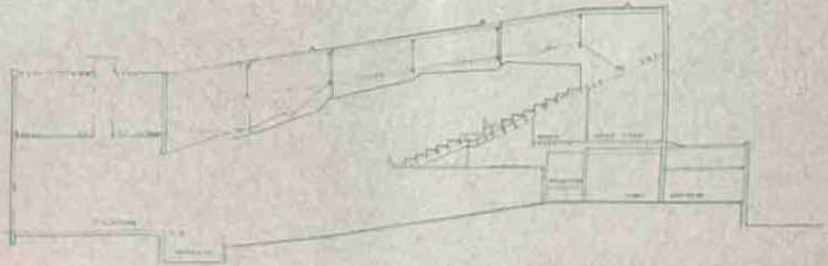
The 250x380-ft. leased site included two sections of the old high school building which were structurally sound and which, because of the desperate shortage of classroom space, had to be incorporated in some manner with the new auditorium. It was determined that there were adequate community facilities for banquets, dances and other group gatherings which demand a flat floor. The real need was for a 1,850-seating capacity auditorium to accommodate drama, concerts, lectures and public assemblies. Thus it was possible to work at optimum sight lines, floor slopes and acoustical conditions without the compromises which are inherent in a multipurpose building.

By establishing a maximum spectator to stage distance close enough to permit identifying facial expressions and using side aisle lines well within distortion limits, the division of seating into one-third balcony, two-thirds orchestra was determined. This resulted in an extremely high structure and the architects point out that a larger site permitting a deeper setback would have been more desirable. Since funds were lacking for a traditional high stage with fly loft, this area was planned to permit use of scene carts where quick changes are required. Stage shop, rehearsal rooms, dressing rooms and other operational requirements are housed in the old classroom wing which was remodeled for that purpose.

The structure is simply the minimum envelope which would enclose the necessary functions. Steel trusses are carried on exposed concrete columns with common brick filler walls between.

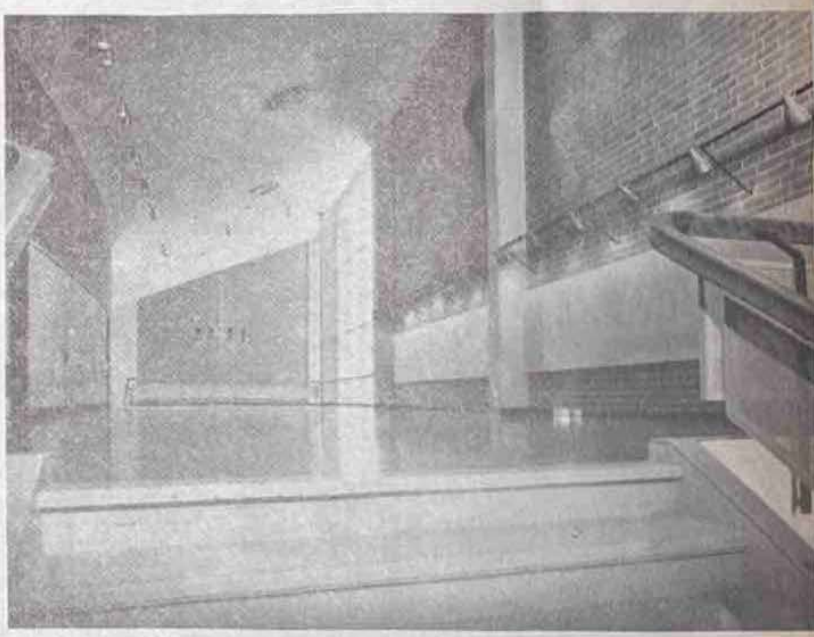


BUTTERFLY INVERTED ROOF tops building, nearly six stories high at facade.



Julius Shulman photos

ACOUSTICAL CONDITIONING consists of rear wall of glass fiber insulation surfaced with perforated cement-asbestos board; small areas on side walls covered with narrow hardwood strips to control echo in center seats; and horn shaped walls of proscenium. Broad upper lobby, besides functioning as conventional passageway and intermission-gathering spot, can be transformed into gallery for art exhibits, industrial and commercial mobile shows.



OUTLINE SPECIFICATIONS

Structure: foundation: concrete caissons—Permanente Cement Co.; frame: steel trusses on concrete columns—Permanente Cement Co.; walls: brick filler—Castaic Brick Co.; floors: concrete (orchestra) and wood.

Exterior Finish: exposed concrete columns and brick filler.

Roof Surfacing: built-up asbestos—Johns-Manville Corp.

Windows: aluminum frame—Kawneer Co.; plate glass—Libbey-Owens-Ford Glass Co.

Doors: exterior: aluminum frame—Kawneer Co.; plate glass—Libbey-Owens-Ford Co.; interior: plywood—(Weldwood Sta-Straite) United States Plywood Corp.

Floor Surfacing: asphalt tile—(Matico) Mastic Tile Corporation of America.

Insulation: acoustical: glass fiber surfaced with perforated cement-asbestos board—(Acousti-Celotex Corp.); thermal: mineral wool—United States Gypsum Co.

Partitions: metal stud and plaster.

Interior Finish: painted plaster.

Lighting Fixtures: incandescent—Century Lighting, Inc.

Heating: forced air unit heater—Trane Co.

Air Conditioning: water cooled unit—Trane Co.

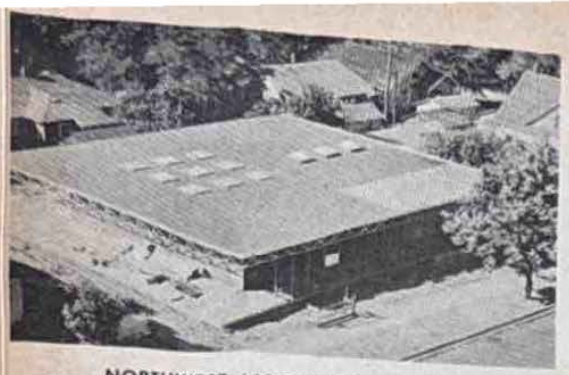
Plumbing and Sanitary: water closets and lavatories—American Standard.

Special Equipment: sound—Altec Lansing Corp.; seating—Heywood-Wakefield Co.

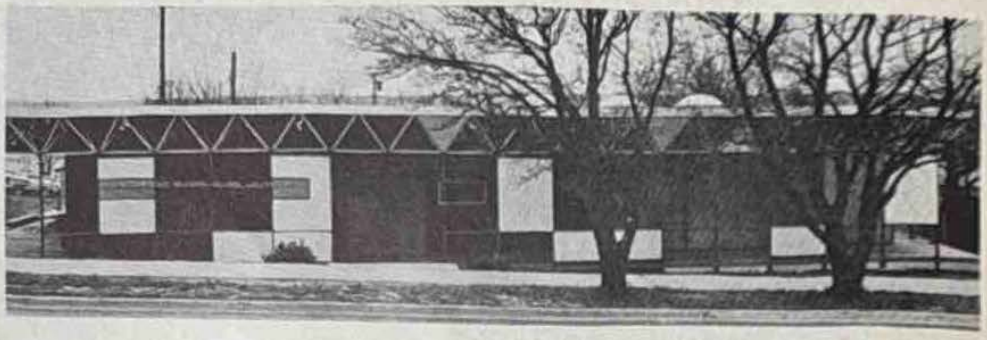
Total Area: about 50,000 sq. ft.

Total Cost: $722,000, including furnishings, landscaping, Memorial Court, remodeling of old school building.

Date of Completion: March 1957.



NORTHWEST LABORATORY, consisting of two classrooms situated on space-frame bolted steel platform, provides place where new ideas and materials can be tested by hard knocks of today's children. Section of roof is coated with recently developed neoprene compound rather than built-up layers of plies and asphalt.



Flexible framework for school research

CURRENT MAJOR PROJECT in the school building research program at the State College of Washington has had, in the words of its sponsors, "a successful shakedown cruise and is moving forward to the serious task of bringing the ultimate benefit to the region's future citizens." Known officially as the Washington State Regional School Laboratory, whose construction got underway on the Pullman campus a year ago last spring (PA&B for April '57), the project went into initial operation this summer with the holding of a demonstration class and a reading clinic.

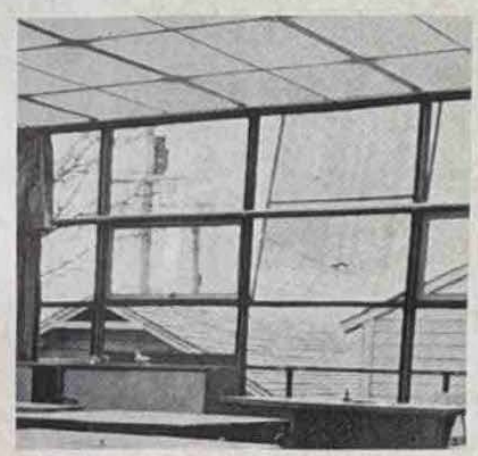
Basically the structure is a reasonably flexible framework which can be adopted to make use of various floor, wall, ceiling and roofing materials and which can be expanded or contracted in size with a minimum of effort and skilled labor. Designed by Robert P. Darlington, assistant professor in the department of architectural engineering who heads the program, it consists of a Unistrut bolted steel space-frame platform, about 80x70 ft., on which two 32-ft. square classrooms are situated. Other facilities: a teachers' lounge and workroom, two toilet rooms and a 16x80 ft. play porch.

In addition to changes in size of the overall building, the Unistrut system allows wall, floor and ceiling panels, windows and doors to be clipped in or out. Almost any environmental condition may be achieved, ranging from rooms with one or two walls completely glazed to totally windowless rooms, with or without skylights, of any size and proportions desired, with any combinations of materials and with a wide range of lighting systems. Regional products have been used as far as possible in the construction, with contributions from more than 60 manufacturers.

Here is a summary of the initial classroom experiments as explained by Darlington and his assistant, Orville G. Lee, junior research architect:

"The two classes conducted in the laboratory in the summer of 1958 are good examples of the possibilities inherent in the project. The two classrooms themselves are very different in character and design, which was taken into consideration in preparing for the demonstration classes scheduled for the building by the School of Education.

"The laboratory is entered from the north and both classrooms are oriented to the south. Classroom A, the east unit, is primarily a daylighted room. Classroom B, on the west, although it has twice as many windows, is electrically lighted. The south wall of A is all glass; the other three walls are solid. Overhead are nine 4-ft. square solar-selecting glass block Toplites by Kimble Glass. American Window Glass Lustagray in the windows controls sky glare. Both the windows and Toplites can be covered with audio-visual blinds. The Unistrut space-frame ceiling construction is exposed, with nine Smoot-Holman P-V luminaires hanging from the bottom plane which is 9½ ft. from the floor. These fixtures employ a total of 18 8-ft. high-output fluorescent tubes.



CLASSROOM B has south and west walls glazed in attempt to study ways of combating afternoon sun. Artificial lighting is in space-frame plenum above aluminum grid ceiling.

"Classroom B has its south and west walls glazed. This difficult condition was set up purposely to study ways of combating the afternoon sun. Houze Glass Lo-Tran, a 12½% transmission glass which cuts down sun glare, is used. The ceiling at the 9½-ft. level is Columbia Electric's new Koldbond aluminum grid, composed of ½-in. cubes. Electric lighting is in the space-frame plenum above. Directly beneath the roof deck are fastened 32 rows of fluorescent fixtures, 1 ft. o.c., each row containing eight 4-ft., 40-watt tubes for a total of 256.

"The lights are controlled by eight switches, each operating every eighth row. Alternate rows are cool and warm lights. This arrangement permits a wide range of lighting levels to be studied. The aluminum grid ceiling prevents direct view of the lights, creates a glare-free lighting condition throughout the room and gives a completely different visual character from that in Classroom A. It is difficult to imagine two identically shaped rooms with a greater difference of character.

"In the early stages of planning for the summer classes, A was to to contain an eighth grade demonstration

IRREGULAR SHAPED BUILDING has no expansion joints. Usual hot weather concreting problems of cold joints, loss of slump, honeycombing were overcome by addition of retarding densifier.

Concreting Wright's museum

SPIRALING UPWARD one level each month, Frank Lloyd Wright's $3 million Solomon R. Guggenheim Museum facing New York City's Central Park required casting of concrete in irregular forms because of its many curved surfaces. The two-wing building has ramps, domes, cantilevers, tapered columns and other unusual shapes for its main structural elements.

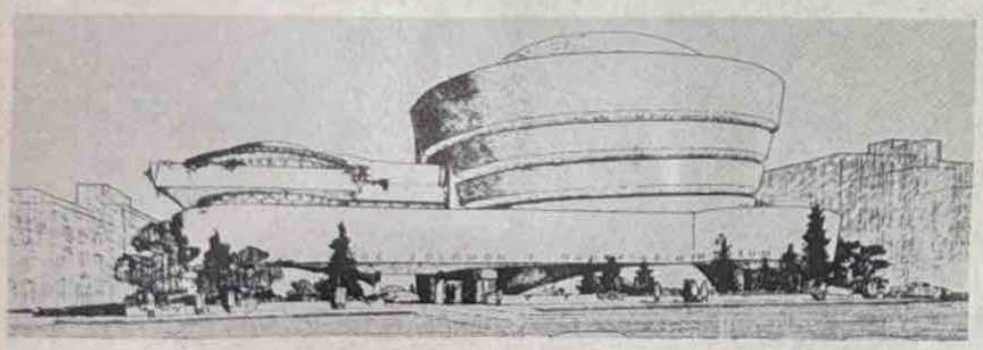
Superior and crack-free concrete was essential to the construction of the museum, slated for completion this year. Much of the structure above ground level was placed during the hot summer of 1957. To achieve high-strength, dense and smooth concrete, Euclid Contracting Co. added a retarding densifier (Sika Chemical Corp.'s Plastiment) at its own expense.

Architectural features such as curved wrought iron doors and windows which fit directly against the concrete frame called for almost perfect accuracy in laying out the framework. Engineers worked side by side with the carpenters. Only about one-third of the 4x8-ft. plywood panels were used full size for the framework. The rest had to be cut into smaller pieces. Because there are few straight lines, masonite as thin as ¼" was used for small radii surfaces and plywood for other curved portions.

During hot summer temperatures the increased proportions of the admixture (3,500 psi. lightweight concrete with a 3- to 4-in. slump) kept shrinkage to a minimum. In hot weather, concrete usually sets within one to two hours and almost immediately at 90-deg. temperatures. Ease of placement was especially important in sections such as the cantilever room on the south wing's second floor level. Here the mix had to be worked between the multilayered reinforcement. The plasticizing densifier (14 oz. per cubic yard during hot weather) kept the concrete from hardening long enough for it to be vibrated into place. The building is designed without any expansion joints so that it will expand and contract as a unit—unusual for a concrete structure this size.

Each day's concreting varied from 40 to 200 cu. yd. The circular wings were placed one level at a time. For each ramp level, an average of three separate concreting operations were required and 10 additional ones for the 11-ft. high interior wall. Ramp formwork was supported directly on the level below. The 5-in. exterior wall, which rests on a slab connected to the ramp, was gunited on the interior against curved plywood forms.

The concrete exterior will be painted.



TWO CIRCULAR TOWERS rise at museum's north and south ends from 201x128-ft. rectangular first floor. Each of south exhibition space's six levels is connected by ramp which corkscrews upward, broadening from 16 to 36 ft. Glass dome in roof lights main gallery on first floor. Cantilevering outward from ramp of wing's second level is circular room. Administrative offices are housed in three-level north wing, similar in shape but smaller than south unit.

Laboratory (Continued from p. 20)

class and B a third grade class. Furniture and equipment for these classes were obtained. Ultimately A wound up with a seventh grade class and B with a reading clinic. The school laboratory staff soon learned to look on developments such as these as evidence of the building's ability to adapt to changing conditions and as chances to study the effects on classes of operating in an environment not specifically designed for them.

"The reading clinic, for example, with only four to six students attending at a time, was held in the room designed for a third grade class. Pupils were from second grade through high school. Publication of a study of this situation is scheduled for fall or winter of 1958. Dr. Ester Mack of the School of Education, in charge of the reading clinic, had few early reservations about the feasibility of the classroom for her purposes. The school laboratory staff, however, worked with Dr. Mack to develop the best possible environment for her class."

A 31-page booklet describing the laboratory in detail can be obtained by requesting Bulletin No. 243 from the Washington State Institute of Technology, State College of Washington, Pullman.

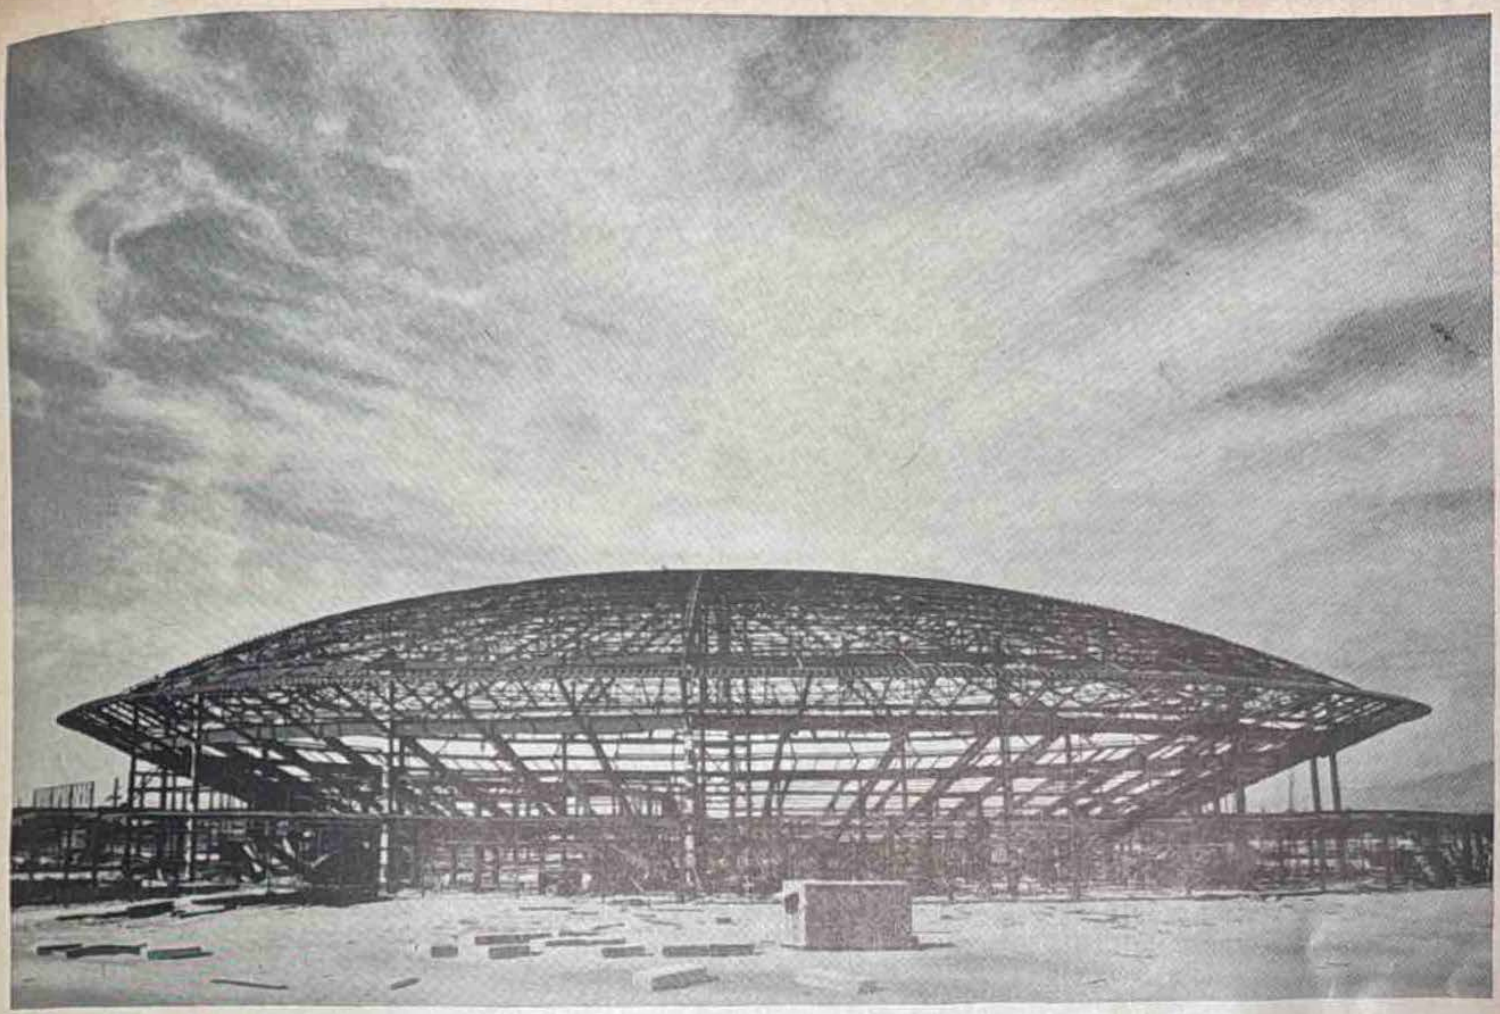
Following the summer session, two more modules along the east wall were enclosed to house the proposed School Planning Research Center, a library of materials including books, articles, films, slides, photographs, plans and other references.

Four West Coast cities have fast rust rate

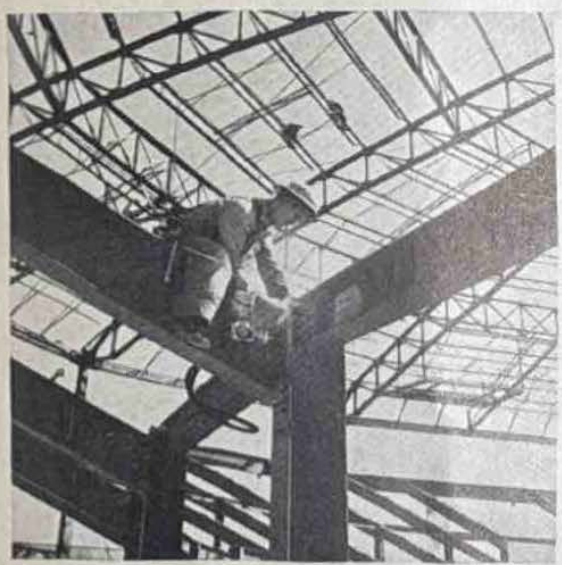
An index of comparative rates at which rust proceeds for all U.S. cities over 10,000 population lists four on the West Coast among the top 50. They are, with the rate expressed in years and months: Los Angeles, 3.02; Portland, 3.04; Seattle, 3.05; and Bellingham, Wash., 3.06.

It takes three years, the fastest rate in the country, for rust to corrode a standard, uncoated steel test panel, the size of an auto license plate, in four different cities—Buffalo and Rochester; Erie, Pa.; and Miami. Slowest rust rate, more than 15 years, is in Tucson, Ariz., and Roswell and Santa Fe, N.M. In all the nation's major industrial centers the rate is under four years.

The index, the result of a 25-year research program conducted by Rust-Oleum Corp., covers 523 cities.



It's big and it's bolted



Bolting goes fast—an iron worker uses an impact wrench to draw up Bethlehem Pacific High-Strength Bolts. They save time, make tighter joints than rivets. The nearest Bethlehem Pacific sales office can give you full facts and figures about high-strength bolting.

This is the steelwork for the Convention Center, a spectacular structure that will enable Las Vegas to accommodate the largest gatherings. The dramatic dome, 316 ft in diameter and rising 80 ft, spans a column-free auditorium seating 9500. There will be 22 meeting rooms and exhibit spaces totalling over two acres. The entire 300,000-sq-ft area will be air-conditioned.

COMPLETED 48 DAYS AHEAD OF SCHEDULE

The complex job of fabrication and erection of the 1700 tons of structural steel was completed 48 days ahead of schedule. Credit goes to the fabricator's efficient work, and to the use of high-strength bolts in steel erection.

Chief components of the steelwork (fabricated mostly from Bethlehem Pacific shapes) are sixteen 9-ton roof trusses radiating like spokes from the "hub"—a 13-ton compression ring 20 ft in diameter. Bethlehem 14-in. H-columns support the roof and the sloped seating structures.

The $4.5 million Center is scheduled for completion early in 1959.

Architect: Adrian Wilson and Associates; *consulting architect:* Harry Hayden Whitely; *general contractor:* Lembke Construction Company of Nevada, Inc.; *fabricator:* Vinnell Steel; *erector:* Taylor Steel.

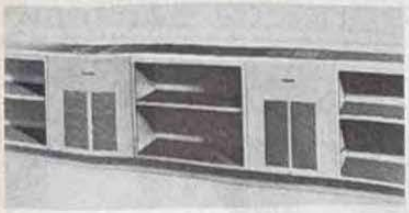
BETHLEHEM STEEL

PRODUCTS

School electric heating

Installation, controls and automatic operation of electric school heating all are simplified by separate units for



parallel functions of heating and ventilating. One warms and recirculates inside air as controlled by room or zone thermostat; the other draws in outside air continuously as determined by code requirements and warms it depending upon the inside-outside temperature differential. Units offer interchangeable cast aluminum grids with capacities up to 6,000 watts. Matching shelving and a wireway base are provided for continuous below-sill level installations in a variety of classroom colors.—Electromode, Division of Commercial Controls Corp.

(Item No. 1)

Snap-on thermal insulation

Ideal for refrigeration work and low-pressure steam lines, Urethane is a snap-on thermal insulation with a low K-factor. It does not fray, crumble or break in handling; neither does it disintegrate when subjected to water or many other liquids. Preformed to fit pipelines and fittings, its outside diameter is such that it will nest correctly with a second layer in case heavier thicknesses of insulation are desired. Dual-layer procedure also permits staggering of joints to reduce heat loss to a minimum.—National Aniline Division, Allied Chemical Corp.

(Item No. 2)

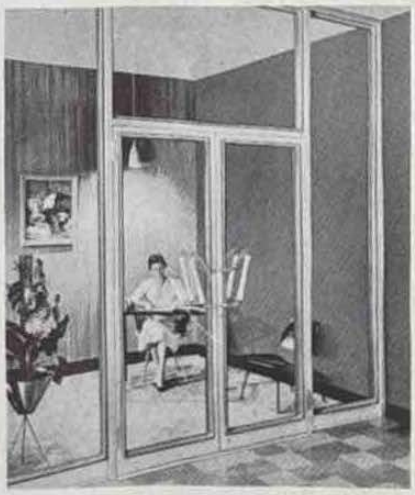
Shower panels

Actual foliage and seal life are embedded in decorative fiberglass panels created by Cardenas for shower doors and tub enclosures. Panels are about ⅛-in. thick and weigh 16 oz. per square foot, making them easy to handle and operate. Patterns set against natural translucent backgrounds are called Marine Life, Nature, Abstract Fishes and Autumn Leaves. — Evergreen States Forest Products.

(Item No. 3)

Colorful store fronts

The entire building facade can now be constructed or remodeled in porcelain color with Kawneer's ColorWare.



Hardware, door glass stops and frame glass stops come in four harmonizing colors—teal, sunlight yellow, black and sunset red. Porcelain finish fused on the aluminum products gives a completely permanent and maintenance-free color application.—Kawneer Co.

(Item No. 4)

Lavatory-dressing table

For hotel, motel, tourist court and restaurant construction, the Ledgend combines a dressing table and lavatory in a single unit of vitreous china. Completely free of joints, the unobstructed slab gives generous storage space for toilet articles. The unit is equipped with all-brass fittings; can be furnished with a three-water fitting for either hot, cold or ice water; is available with the dressing table on either side and in white or seven colors. A Welland closet can be installed under the lavatory to serve as a dressing table seat.—Kohler Co.

(Item No. 5)

Brightness control glass

A gray sheet glass substantially reduces the need for supplementary light control measures from blinds, hoods, louvers or other shading devices. Known as Pennvernon Graylite, it is produced in two thicknesses: ⅛ in., providing visible light transmittance of 31%; and 7/32 in., providing 13%. It can be used in ribbon windows and ventilator units in conjunction with light-directing glass block installations.—Pittsburgh Plate Glass Co.

(Item No. 6)

Gas appliance wall

An all-gas Multimatic Wall is a one-piece unit combining five basic household functions: cooking, refrigeration, laundering, hot water heating and house heating. The furnace is readily adaptable to gas air conditioning. The wall, 8 ft. high, 10 ft. long and 33 in. deep, can be used to replace one interior partition. Self-contained automatic venting through the side of the house eliminates need for construction of a chimney. Designed by Walter Dorwin Teague Associates, the unit can be purchased fully assembled.—American Gas Association.

...Quality Control is CONTINUOUS

Macomber insists every steel framing member must exceed the strength requirements for its job. To assure this, the company employs a crew of trained inspectors who are continuously checking workmanship at every step in production.

In addition, Pittsburgh Testing Laboratory maintains Resident Inspectors to supervise the program. These inspectors are daily load-testing products chosen at random from production runs.

This Continuous Quality Control program is your assurance of the outstanding structural ruggedness of Macomber products.

Specific catalogs are available on all Macomber products.

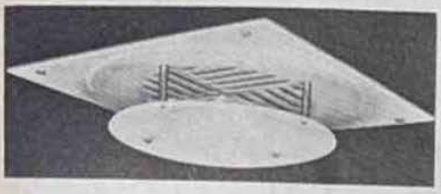
CANTON 1, OHIO

PRODUCTS

Fiberglass speaker baffles

Highlight of a series of fiberglass architectural speaker baffles is the Spiral-Jector for 8-in. speakers. Sound



dispersed by the diffusion plate gives an overall feeling of "presence" so that it seems to fill the entire area in which the speakers are located. Baffles have a two-tone finish with desert sand faceplates and milk white diffusers.—Fourjay Industries.

(Item No. 8)

'Packaged' offices

Ready-to-use "packaged" offices, completely equipped with wall components and furniture built to the same module, incorporate Hauserman's movable steel and glass partitions and Remington Rand's Aristocrat furniture line. The latter includes desks with end panels, tables, credenzas, tops, file and storage cabinets. Divider wall system, available in a variety of color combinations compatible with the furniture, allows creation of semi-private offices which can be easily altered as space requirements change. —E. F. Hauserman Co. (Item No. 9)

Low-cost storage units

Stratapanel, a combination of modular drawers and slide panels molded of high-impact styrene plastic, eliminates the inner frame and center-slide case construction of ordinary storage units. Key to the system's simplicity and versatility is the development of the slide panel, a thin strong sheet of plastic with all the slides for a 24-in.

high case deformed into its surface. Attached to vertical sides of any firm material such as wood, concrete, plasterboard, etc., with a contact adhesive supplied by the manufacturer, the storage unit is complete with the insertion of the drawers. The latter are available in a standard depth of 17⅛ in., in heights of 3 and 6 in., in five widths from 16 7/16 to 46 7/16 in. Standard color is beige and drawers are supplied with or without fronts of walnut or birch.—Molded Structures Division, Robert A. Schless & Co., Inc. (Item No. 10)

Shower door handles

Bathrooms are becoming more elegant every day and to keep pace with the times, an inlaid mosaic tile handle has been designed for shower door and tub enclosures. It may be finished in gold, silver, black, polished or satin. If desired, colorful plastic centers may be substituted for the tile. —American Shower Door Co.

(Item No. 11)

LITERATURE

Readers are requested to write directly to manufacturers for the following literature.

1958 Form Engineering by Williams: shows latest engineering products and methods of concrete forming devices for both light and heavy construction; has tab indexes for easy reference; 68 pp. — Williams Form Engineering Corp., 1501 Madison Ave. S.E., Grand Rapids 7, Mich.

How Architects Met Client's Special Needs (AIA 14-1). describes special requirements for a small business office designed by Kitchen & Hunt and George T. Rockrise, associated architect, of San Francisco; shows details, elevations, floor plans; 6 pp.—Armco Drainage and Metal Products, Inc., Middletown, Ohio.

Thermal Chart of Insulations: helps select at a glance the insulation required to meet any one or more of 112 different U-, C- and R-factors; assembles 75 thicknesses and types of non-metallic and multiple aluminum air-space insulations; single sheet.—Infra Insulation Inc., 525 Broadway, New York 12, N.Y.

Take a Peek Into Tomorrow with Hewitt-Robins: describes three types of passenger conveyors—carrier bed (Glide Ride), slider bed and roller bed—with specifications and sc matic drawings for each; 8 pp.—He itt-Robins, Inc., 666 Glenbrook Ro Stamford, Conn.

Lightweight Aggregate Concrete: f tures 13 construction projects cov ing use of lightweight concrete structural material for column beams and floor slabs, in multisto structures, thin shell concrete a bridge decks; 20 pp.—The Mast Builders Co., 7016 Euclid Ave., Clev land 3, Ohio.

Elegance for Moderns in the Use Byzantile (AIA 23-A): beautifully il lustrated in full color, it shows sev eral design patterns, number of actua installations and gives physical de tails of size, shape and color of in dividual tiles; 24 pp.—The Mosaic Til Co., Zanesville, Ohio.

Questions and Answers about Insulrock Slabs: describes fireproof product used for combination roof decks and ceilings, floor slabs, structural insulation, interior sheathing, stucco base, interior plaster base and as acoustical material; 3 pp.—Insulrock Co., Division of The Flintkote Co., East Rutherford, N.J.

Food Waste Removal System: package of literature describing redesigned Waste King commercial garbage disposer line includes 4-page brochure outlining benefits to specifiers, 8-page folder listing overall features and complete set of specification sheets.— Waste King Corp., 3300 E. 50th St., Los Angeles, Calif.

The Modern Stone Age is Here (AIA 22-83): depicts every type of quarried stone in natural color; reviews use of stone through the ages, closing with 22x32-in. panorama of the City of the Future; 16 pp.—Building Stone Institute, 420 Lexington Ave., New York 17, N.Y.

NuTone Electrical Built-ins for Homes: reference folder with architects' specifications for hood fans, exhaust fans, food centers, ceiling heaters, intercom radio music system, door chimes.—NuTone, Inc., Madison and Red Bank Roads, Cincinnati 27, Ohio.

Plumbing Layouts That Save Materials, Time and Money: details dozen designs for single, one-and-a-half and double bathrooms in conventional and slab constructions, located side by side, back to back, over and under; 8 pp.—Ingersoll-Humphryes Division, Borg-Warner Corp., Mansfield, Ohio.

LETTERS

A reply to Mr. Tabler

Pacific Architect and Builder:

I have read with considerable interest an article appearing in your July issue entitled "Chaotic Building Codes" by William B. Tabler.

As I read the article I wondered whether the writer had a "pet peeve" over some local incident or whether he was speaking for the construction industry as a whole. He tells of having trouble getting a hotel room at the desk, even though he has designed some hotels. I fail to see the special privilege that the writer thinks he should be entitled to because of the fact that he has designed hotels.

I, too, am in the construction business but I don't have any such special privileges. Also, by the greatest stretch of the imagination, what does this have to do with the uniformity or standardization of a building code?

Further on in the article he speaks of labor disputes and union jurisdiction. Again I ask, what have union jurisdictional disputes to do with building codes?

A lot has been said about building codes and the effect of restrictive codes on building costs. A great deal of this criticism is based on politics and is brought to light purely for political purposes. Other criticisms of building codes are made by the professional people themselves because of the fact that they want a free hand at design, without regard to public safety. All too often a building code is referred to as being restrictive to a degree that buildings costs are materially increased. In my study of this subject, I fail to find the statement to be an actual fact.

However, there is marked room for uniformity and improvements in many of the construction codes. If we ever expect to accomplish this, we must look back to the basic reasons for writing a code. The purpose of any code is to set forth minimum requirements of construction to guarantee a certain degree of protection to the public regarding health, safety and general welfare.

There are several national organizations which sponsor national building codes. All of these codes are based on national standards and practices. These various organizations are ready, willing and able to help on this question. Each of these organizations have code changes committees who meet periodically to study and recommend revisions.

It is my recommendation that in the interest of national uniformity of building codes and standards, all the various organizations of the construction industry affiliate themselves with one of the national groups.

We in the Seattle Building Department have a Class A membership in the International Conference of Building Officials. This organization publishes the Uniform Building Code and several other books on building and building standards. There are over 800 cities, towns counties and states that belong to this organization.

Many cities either adopt these national codes and amend them to suit local conditions or write a new code using the uniform code as a guide or format.

Some cities are reluctant to spend the time and money required to write a modern up-to-date code, either because of lack of funds or because of lack of interest or understanding of the problem by city officials.

Any resistance to adopting one of the national codes or basing a local code on national standards can be overcome by establishing a Citizens' Advisory Board composed of people from all phases of the construction industry. We have such advisory groups here in Seattle. They consist

SPECIFY HAWS FROM A COMPLETE LINEUP OF...

You can specify water coolers for any specific requirement from the complete lineup of HAWS ELECTRIC WATER COOLERS! Pressure bubbler types, bottle-types, freezing compartment models, hot and colds, restaurant and cafeteria models of all sizes, remotes, wall inserts . . . they're ALL in the HAWS lineup with custom styling and advanced designs that guarantee client satisfaction.

Specify HAWS! Get *Complete* Water Cooler specification data from one *dependable source* . . . write today, for the new 1958 HAWS Catalog!

HAWS DRINKING FAUCET CO.

1441 FOURTH STREET (since 1909) BERKELEY 10, CALIFORNIA

of the Electrical Review Board, Building Code Advisory Board, Plumbing Code Advisory Board and Fire Prevention Code Advisory Board. These boards are composed of people very much concerned with code requirements and the effect on the construction industry.

The Building Code Advisory Board is composed of a mortgage banker, a structural engineer, an architect, a labor representative, a building materials supplier, a city councilman, the superintendent of buildings and a member from each of the following: Chamber of Commerce, Puget Sound Engineering Council, Apartment Owners Association, Home Builders Association, Building Owners and Managers Association, Associated General Contractors and the Fire Department.

It is my opinion that the unfounded and unjust criticisms will cease by having a code drawn up following the pattern and standards set forth in the national codes, by having such a code written with the advice and support of a Citizens' Advisory Board, and by participation and affiliation with a national building organization.

FRED B. McCOY
Superintendent of Buildings
City of Seattle

Plug for Aspen

Pacific Architect and Builder:

The Aspen conference (Aug. '58) is always a wonderful experience for those who are fortunate enough to be able to attend. The board of directors is working out ways and means now of expanding the organization to provide more contact of this sort on a regional basis. Your interest in publishing the report on the conference should help a lot toward getting people interested in the sessions, not only on the basis of supporting it, but also for what it would mean to them.

EDWARD A. WILLIAMS
Landscape Architect
Eckbo, Dean & Williams
San Francisco, Calif.

Case study of a church

Pacific Architect and Builder:

I have read Bob Durham's article (May '58) with a great deal of interest. His experiences, including the loss of money, parallel many situations which we who devote ourselves to ecclesiastical architecture often experience. However, I have not as yet seen them described so lucidly and Bob is to be congratulated not only for his skill in writing, but for having produced a building which is a milestone in the creation of religious structures.

HAROLD E. WAGONER
President, Church Architectural Guild of America
Philadelphia, Pa.

T-SQUARE TALK

new offices

Eckbo, Dean & Williams, landscape architects, have opened a Seattle office at 1314 E. 43rd St., directed by Francis Dean. The firm also has offices in San Francisco (Edward Williams) and in Los Angeles (Garrett Eckbo).

Robert E. Des Lauriers has opened an office for the practice of architecture at 4052 Calavo Drive, La Mesa, Calif.

Albert Sigal Jr., formerly partner of Sigal, Johnson & Hawley, architects, has established his own firm at Stanford Professional Center, 800 Welch Road, Palo Alto, Calif.

Victor O. Gray has opened an office for the practice of structural engineering at 1210 Stewart St., Seattle.

Walter J. Pappas has opened his own architectural office in Klamath Falls, Ore., in the old Pine Grove schoolhouse which was remodeled into a studio by the late Sheldon Brumbaugh.

firm changes, additions

Frederick H. Furer, who has practiced architecture in Los Angeles for the past 10 years, has returned to Honolulu to join his father, William C. Furer, in the firm of Furer & Furer.

J. D. Kesterson has become the third partner in the architectural firm of Carson & Moe in Kennewick, Wash.

Dan G. Gillham has joined the consulting engineering firm of Dudley Deane & Associates of San Francisco as vice president and chief electrical engineer.

new addresses

J. Lloyd Conrich, architect, to 45 Second St., San Francisco.

Stuhr & Hicks, architects, to 3121 California Ave., Bakersfield, Calif.

Frank Stanton, architect-specification consultant, to the Town House, 1400 Hubbel Place, Seattle.

Ernest M. Hicks, architect, to 316 Elder Building, Coeur d'Alene, Idaho.

Orange County Chapter, AIA, to 325 Spurgeon Building, Santa Ana, Calif.

deaths

Milton H. Caughey, partner in the Los Angeles architectural firm of Caughey & Ternstrom, died July at the age of 47. After receiving degrees from Amherst College ('34) and Yale University ('38), he was associated with several eastern firms and later with Marsh, Smith & Powell and Gordon B. Kaufman in California. A member of the Southern California Chapter, AIA, he maintained his own office from 1946-53.

appointments

Richard A. Patrick has been appointed architectural coordinator and general manager of Heitschmidt & Thompson, Los Angeles architects, following three years as executive secretary of the California State Board of Architectural Examiners.

Walter Gordon, Portland architect and newly appointed dean of the School of Architecture and Allied Arts at the University of Oregon, has been named to the state's Capitol Planning Commission.

James Kesler has been appointed chief structural engineer of Daniel, Mann, Johnson & Mendenhall, Los Angeles architects-engineers. He has been with DMJM since 1950 except for a brief period as partner in his own firm.

Portland architect Gordon E. Trapp has been appointed to the Multnomah County Planning Commission.

Architect John S. Bolles has been elected president of the San Francisco Art Association.

William G. Brownie has been appointed vice president in charge of construction management for Pereira & Luckman, Los Angeles architectural-engineering firm.

elections

Originally elected officers of the Washington State Chapter, AIA, headed by president Harrison J. Overturf (PA&B, July '58), were again voted into office in a special election held in August. The entire slate had resigned because of a dispute concerning procedures in the June election.

campus notes

The newly created School of Architecture at Montana State College in Bozeman, headed by Prof. H. C. Cheever, has received provisional accreditation by the National Architectural Accrediting Board.

Regional AIA meetings set for Northwest, California

Getting the fall conference schedule off to an auspicious start will be the Northwest (Washington, Oregon, Idaho, Montana and Alaska) and California AIA regional councils, both convening in October and lining up substantial programs.

At Harrison Hot Springs

When the Northwest architects meet at Harrison Hot Springs, B. C., October 9-12, they will be joined by their colleagues from across the border in exploring the theme, "Toward a Better Environment." The Washington State Chapter and the Architectural Institute of British Columbia will act as co-hosts.

Headlining the list of speakers will be Louis I. Kahn, Philadelphia architect and Yale University design critic. Others who will look at the problem of evolving a better environment, both in individual buildings and in the broader landscape into which these buildings must fit, will be C. E. Pratt, Vancouver, B. C., architect; Gideon Kramer, Seattle industrial designer; and Melvin Rader, University of Washington philosophy professor. National AIA president John Noble Richards of Toledo also will attend.

Conference chairman is A. O. Bumgardner of Seattle.

At Monterey Fairgrounds

"Creativeness in Architecture" will be considered by more than a dozen speakers when the 11 California chapters meet October 15-19 at Monterey County Fairgrounds. The professional program will begin Wednesday afternoon with a panel discussion on "The Creative Mind." Participants: Dr. Donald McKinnon, psychologist and director of the Institute of Personality Assessment and Research, University of California; Jo Sinel, industrial and graphic designer; and Charles Eames, best known for his designs for Herman Miller Furniture Co.

Other seminars: "Materials as Creative Tools"—Robert Billsbrough Price, Tacoma architect; David Countryman, Douglas Fir Plywood Association research engineer; Elmer Gunnette, Seattle district engineer for the American Institute of Steel Construction; "Creativeness in Architecture"—Victor Lundy, Sarasota, Fla., architect; Walter A. Netsch Jr., chief of design for the San Francisco office of Skidmore, Owings & Merrill; and Paul Thiry, Seattle architect; "Structure in Creative Design"—Fred N. Severud, senior partner in the New York firm of Severud-Elstad-Krueger, consulting engineers; "Creativeness in Architecture: Synthesis" — Harry Weese, Chicago architect.

Winding up the professional program will be a junior associate and student seminar featuring analyses of specific buildings by three project designers: Richard Hein of Anshen & Allen, San Francisco; James Langenheim of Pereira & Luckman, Los Angeles; and Neill Smith of John Carl Warnecke, San Francisco.

Philip Douglas Creer, architect of Providence, R. I., will address the regional luncheon. Loy Chamberlain of Oakland heads the convention advisory committee.

HAWAII IN '59

The Californians will hold their 1959 conference at Henry J. Kaiser's Hawaiian Village Hotel, with architects from the entire Pacific area invited to participate. Probable dates will be October 7-14 and all travel arrangements will be handled by the Andrew L. Lerios agency, whose principal offices are in San Francisco and Los Angeles.

"Planned telephone convenience marks the well-built home!"

says Jim Fitzpatrick, partner, Fitzpatrick-McIntyre, Tacoma, Wash.

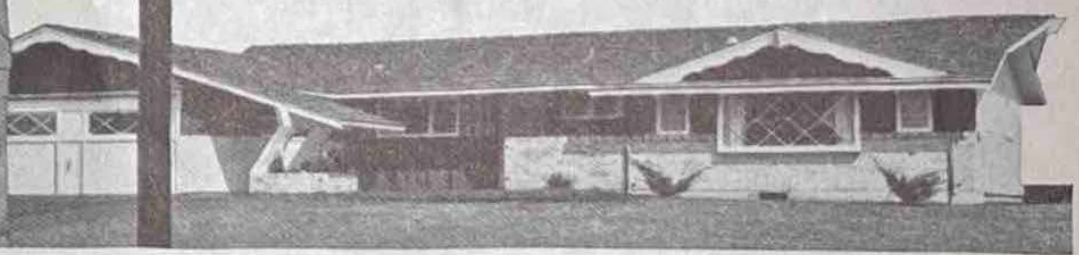
"Telephone surveys show where people want added phone convenience in their homes today. Kitchen, master bedroom and den all rate high. And when our prospective customers find built-in telephone outlets in those rooms, they are more than ever convinced that ours are quality homes.

"To sell a house today, we believe we have to show real and obvious value. Planned telephone outlets and concealed telephone wiring help us do just that. We wouldn't build a home without these features."

This added sales aid can be a distinctive mark of the homes *you* build. Find out about telephone planning—

Call your telephone business office and ask for Free Architects and Builders Service

Pacific Telephone



It pays to include Telephone Planning in every home you build!

MANUFACTURERS/SUPPLIERS

• **Sani-Top Mfg. Co.** has appointed two manufacturer's representatives for its line of bathroom vanity pullmans and medicine chests: Clyde E. Keeler & Associates of Seattle, in Washington, Oregon and British Columbia; and E. E. Gundaker and E. J. Frye of Sacramento, in northern California.

• **Leadlight Fixture Co.** of Oakland has introduced a policy of providing engineered layouts for new luminous ceiling installations, showing how the framework will be laid out, type of plastic recommended, light level and fixture arrangement.

• **Day & Night Mfg. Co.** of La Puente, Calif., has promoted Frank R. Spratt from assistant to general sales manager. Other promotions: Craig C. Stirewalt to assistant general sales manager and Ralph Langley to California regional sales manager.

• **Security Control Co.** has opened offices and warehouse facilities at 401 Elliot Ave. W., Seattle, to supply a complete physical security service to Washington, Oregon, Montana, Idaho and Alaska. Partners in the new firm are Blaine Highfield and Mark Jensen, who have been in the safe and lock business for a number of years.

• **Calaveras Cement Co.** has appointed Lowell Garrett, with Reno headquarters, as representative for western Nevada, southern Oregon and the Sierra Nevada counties of California.

• **National Gypsum Co.** has named Kaiser Gypsum Co. as representative for its new line of metal lath products in 11 western states, Alaska and Hawaii.

• **General Tire & Rubber Co.** has a new West Coast manager for its building materials division, Richard E. Gardner.

• **Stacor Equipment Co.** has appointed A. Lietz Co. of San Francisco and Los Angeles as distributor in five states, including California and Oregon.

• **Goodyear Tire & Rubber Co.** has assigned Paul E. Mulvehill to Los Angeles as flooring representative.

• **Columbia-Geneva Division,** United States Steel Corp., is constructing a major addition to its Pittsburg, Calif. plant—a continuous annealing (heat treatment) line which will require more than 1½ years to complete.

• **Thermador Electrical Manufacturing Co.,** Division of Norris-Thermador Corp., has promoted Anthony A. Celio from advertising to sales manager of the Los Angeles district; and Richard F. Gamble from assistant advertising to advertising manager.

• **WasteKing Corp.'s** director of consumer relations, Mrs. Sylvia White of Los Angeles, has been named southern California's "Woman of the Year."

• **Ideal Cement Co.** will construct a $2 million cement storage and distribution facility in Vancouver, Wash.

• **Durox of Southern California, Inc.,** has been organized in Los Angeles to produce a lightweight cellular concrete which is as light as wood but has the characteristics of stone, licensed under a Swedish patent.

• **Nevamar Carefree Kitchens** has appointed Miss Lucille Gardner as factory sales representative in the Greater Los Angeles area, with offices in the firm's new showroom at 1150 De-Forest Ave., Long Beach.

•

LUMINOUS CEILING

employed in Lincoln High School in Stockton, Calif., is composed of 3x3-ft. plastic panels suspended from Unistrut channels. Space above ceiling, produced by Benjamin Electric Manufacturing Co., is also plenum for heating and for plumbing and electrical conduits. Slight pressure built up in plenum prevents accumulation of dust on upper side of panels, through whose edges heating and ventilating air enters classrooms. Ceiling design by architect Dana D. Carrough won second prize, institutional class, in international lighting competition sponsored by National Electrical Manufacturers Association.

• **Gates & Sons of Washington, Inc.,** formerly United Distributors, at E. 3003 Courtland Ave., Spokane, is the recently formed subsidiary of Gates & Sons, Inc., of Denver. Secretary and general manager of the new firm is Garrett Matthews.

• **Pabco Building Materials Division** of Fibreboard Paper Products Corp. has appointed J. C. Croudace as manager of its Portland roofing plant, succeeding Walter Simon who has been promoted to company headquarters in San Francisco.

• **W. P. Fuller & Co.** of San Francisco has appointed E. R. MacMillan to the newly created position of assistant to the president.

• **Timber Engineering Company of California, Inc.,** of San Francisco and Los Angeles has a new corporate name, Timber Fasteners, Inc., and a new brand designation, Timfast.

• **Kraftile Co.'s** vice president in charge of production, Leslie R. Alt, of Niles, Calif., has been made a fellow of the American Ceramic Society.

• **Simplex Forms System, Inc.,** has appointed a new Far West assembly and distribution outlet in Seattle, headed by Richard Nyman. He joined with his brother, Donald, in 1955 to found Nyco, Inc., of Denver, western distributor and fabricator for Simplex.

• **Armstrong Cork Co.** has assigned William J. Quigley of Spokane as field salesman for its general line of building products.

• **Unistrut Products Co.** has established a company-owned subsidiary, Unistrut Northern California of Berkeley, formerly operated as an independently-owned distributorship, and has named George McKay as general manager.

• **The Trane Co.** has assigned M. L. Franzel to its Los Angeles office as sales engineer.

• **Westinghouse Electric Corp.** is building a product distribution center in San Lorenzo, just south of Oakland.

• **Spanall of the Pacific, Inc.,** of Oakland has elected these officers: Graeme K. MacDonald, president; Charles Edward Nelson, vice president; and Frederick C. Whitman, director. The firm has a franchise for five western states, Alaska and Hawaii

for a newly developed horizontal shoring for concrete floor slabs called Spanall.

• **The Fluor Corp., Ltd.**, has purchased the assets of Summerbell Roof Structures of Los Angeles, one of the nation's largest manufacturers of glued-laminated timber products and wood roof trusses. Summerbell is being operated as a division, with Harold S. Bender, assistant to the president of Fluor, as general manager.

• **Plextone Corporation of America** has a new West Coast distributor: Far West Paint Co. of Seattle.

• **Electro Silv-A-King Corp.** of Redwood City, Calif., is now known as Electro Lighting Corp.

• **Weber Showcase & Fixture Co., Inc.**, of Los Angeles has named Richard S. Testut as vice president in charge of sales for its store fixture, WeberWall partition and laboratory equipment divisions.

• **Insto-Gas Corp.** has appointed W. Blaine Martin Co. of Salt Lake City as its manufacturer's representative in the Mountain States territory, including eastern Washington, eastern Oregon and the states of Montana and Idaho.

FABULOUS SWAPS

with all four feet off ground and jockey Willie Shoemaker in saddle will run forever at Hollywood Park where he set all his records. Statue was cast in bronze by A. J. Bayer Co. of Los Angeles from model created by southern California sculptor Albert Stewart. Using plan drawings made by Millard Sheets, director of Los Angeles County Art Museum, Stewart worked for more than year perfecting model.

•

• **K-Lath Corp.** of Alhambra, Calif., has appointed architect Edward F. Wantland, formerly associated with Pereira & Luckman and Gordon B. Kaufman, as consultant to assist architects, engineers and builders.

NATIONAL ASSOCIATIONS

• **Sliding Glass Door and Window Institute**, with headquarters in Los Angeles, has announced construction in Santa Maria, Calif., of the nation's first research and test facility designed exclusively for sliding glass doors and windows.

• **Douglas Fir Plywood Association** has named Douglas Walker to the dual capacity of regional manager in Tacoma and assistant to Stanley A. Taylor, field promotion director.

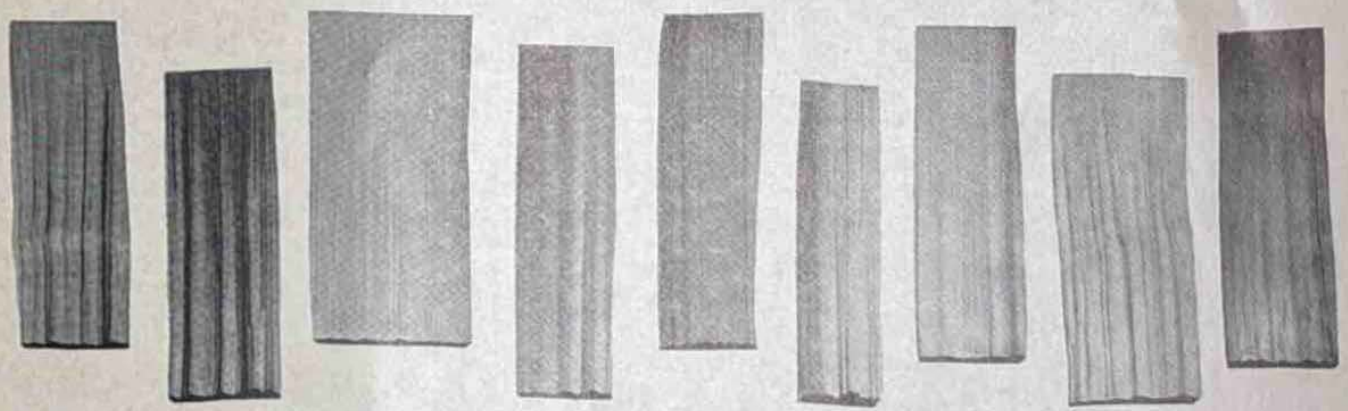
• **Hardwood Plywood Institute** of Chicago has elected a new managing director, Clark E. McDonald, who leaves his position as vice president and general manager of the Miami division of Logan Lumber Co.

• **Metal Curtain Wall Division** of the National Association of Architectural Metal Manufacturers has chosen Ralph L. McKenzie of Flour City Ornamental Iron Co., Minneapolis, as president.

• **Wire Reinforcement Institute, Inc.**, of Washington, D.C., has elected as president, Earl C. Planett, head of Planett Manufacturing Co. of Downey, Calif.

like fingerprints . . .

NO TWO SHAKES ARE ALIKE



In making handsplit shakes—as with any truly hand-crafted material—uniform appearance is *not* desirable, nor is it even possible! Uniform quality, however, is another matter. *Quality can be controlled.* When you see the Certi-Split label beneath the bandstick of handsplit cedar shake bundles, you know that quality *has been* controlled. Specify and insist on Certi-Split. It is your assurance of *top grade, full count* and *uniform quality.*

STEEL SEMINAR PANELISTS J. P. Silvestri, director AGC; John A. Blume, past president, SEA of California; Donald Powers Smith, president, Northern California Chapter, AIA; Stephen G. Herrick, director, AISC; Weldon Richards, president, Central Chapter, AGC; and Michael Prognoff, past president, SEA of Northern California.

Steel's role cited in California's building boom

A statewide, record-breaking building boom during the next 10 years has been predicted by two leaders in California's construction industry. Addressing a structural steel seminar sponsored by the American Institute of Steel Construction in Oakland recently, John A. Blume, San Francisco consulting engineer, and C. M. Gilliss, state director of public works and chairman of the California Highway Commission, envisioned future private and public construction activity that will eclipse all previous records.

Blume labeled the next decade as the "Sailing Sixties" and predicted that private construction in the next 10 years will double and possibly triple. He based his optimism on the West's growing population and on the needs of the postwar bumper crop of babies which will be marrying and establishing families during the '60s. He said that future spending on private construction in California should average as high as $2 billion a year compared to the record high of $1.2 billion in 1956.

Gilliss told the group that the structural steel requirements of the California Highways and Architecture divisions will be about 28,000 tons during the fiscal year beginning next month.

"Put the crystal ball readings for the two divisions together and it is easy to see a state requirement for 50,000 tons of structural steel a year sometime before 1964," Gilliss declared. "That does not take into account any of the steel requirements for the reconstruction of the San Francisco-Oakland Bridge or for any of the talked-of-improvements to any other of the state's toll bridges. Nor have I even considered the possibilty of building a new Bay bridge.

"Fifty thousand tons a year is a pretty big figure, especially when one recalls that the state used only some 2,000 tons of structural steel in 1938, just 20 years ago."

Referring to the destiny of California, Gilliss explained. "When we designed the four-level Hollywood Freeway interchange or mixmaster for 100,000 vehicles per day, we were accused of being visionaries, of wasting the taxpayers' money. We made a mistake all right. The structure carried 180,000 vehicles within four years after construction. Our sights were simply not high enough."

Stephen G. Herrick, president of Herrick Iron Works in Hayward and an AISC director, pointed out that expanded production of structural steel had finally caught up with the unprecedented demand that had kept the product in short supply for a number of years.

Architect will keynote national PCI meeting

Keynoter Charles Luckman, Los Angeles architect, will share the podium with seven other Californians during the annual convention of the Prestressed Concrete Institute in Chicago September 22-25. As institute president, Ben C. Gerwick Jr. of San Francisco will preside at the sessions.

Others who will participate in the four-day program are Ralph E. Knight, Kaiser Aluminum & Chemical Corp., Oakland; Robert Singer and William J. Talbot Jr., Ben C. Gerwick, Inc.; Jack Streblow, Basalt Rock Co., Napa; Felix Kulka, T. Y. Lin & Associates, Los Angeles; and Prof. T. Y. Lin, University of California.

Luckman's talk will be devoted to marketing, one of the major topics to be considered during this year's convention. Professor Lin, recently returned from Russia, will report on prestressed concrete in the U.S.S.R. relative to U.S.A. practice.

Other subjects for discussion: yard handling, transportation and erection techniques; quality concrete for prestressing; interpretation of specifications in relation to inspection; proposed PCI certifications of prestressing plants.

Keats (Cont'd from p. 10)

By describing vividly the adventures of the Drone family, who bought a house advertised as a "California Cape Cod Rambler" in a development called Rolling Knolls, the wife is becoming increasingly irritated by house and neighborhood, thus becoming a nag, and the husband cannot understand the problem because he doesn't live in the house.

This reviewer was much amused by the way the author pictures the more philistine aspects of living in development housing and the more stupid aspects of much of our housing architecture and planning. Yet, the author is not always making it clear at what he is driving except for exposure as such.

Keats, after complaining about the foul design, finds that Mary Drone's day "might have been more bearable than it was—but only if her house had not been built in Rolling Knolls." We remember, of course, that Rolling Knolls had houses but not yet any parks, schools, churchyards or community centers. Because of insufficient space between the ill-conceived houses, we see how familiarity breeds contempt. Mary Drone had fallen into a world of women without men, nay, she "dwelt in vast communistic female barracks" where the husband arrives just for eating and sleeping and where the house could never be a home.

In his criticism of architecture Keats is justly recognizing weak sides of much of our tract housing, but his specific gripes do not necessarily betray his own good understanding of design. While quoting from such designers and critics like Robert Woods Kennedy and T. H. Robsjohn-Gibbings, he also makes some questionable hints at the proverbial old three-story family houses on Elm Street which, of course, have basements. Instead of comparing developments like Rolling Knolls with some outstanding ones like Park Forest, the housing slum is juxtaposed by some exurbanite or semirural idyl where our rugged individualist is rearing his all-American family and can have real friends. But even such an ideal condition is not very well circumscribed.

Our two books under review are most valuable in an increasingly heated debate. There is no doubt that the physical aspects of our vast housing developments are largely terrifying. They are the more terrifying because Keats' implied generalization, that incompetent and dishonest builders are the culprits, is just not true. There have been some farsighted builders who have profited from the help of competent architects. However, rarely

is the architect-planner called in early enough in the game, given sufficient artistic authority or given the opportunity to guide planning research in a way that it yields results which are useful for advanced environmental design. We have seen developments where the individual unit was carefully designed by an architect to provide for simple but beautiful living, but the units were crowded together into a potential slum. Natural beauty of a site, not always favoring equal sized lots, is often neglected. Self-consciousness about obvious monotony leads often to silly notions of "variety" by curving streets in an inane manner or by changing orientation and "trimmings" of the same types from house to house. Despite these devices, the monotony is usually unbearable. Then, there is much wrong with today's housing as far as detailing is concerned. Time-honored horrors of malpractice together with cheap ideas of cutting corners at every detail are not any more confined to the few units done every year by untalented individual builders, but are characterizing a good many large-scale developments. Another alarming fact is that these poorly designed houses in monotonous neighborhoods are not entirely restricted to low-cost housing; some reach into the $12,000 plus bracket.

What is the explanation to all this? John Keats' brilliant journalistic effort doesn't provide for the answer.

That the barbecue block parties are dull and senseless, that conversations touch upon "safe" subjects only, that sex life turns perverted in such steamy culture, that unnecessary gadgets are constantly and thoughtlessly purchased on time payment while making some people rich, and that deep friendships cannot develop in homogenous communities with homogenous physical environment—all that is very true and cannot be condemned sharply enough. But, why is Keats picturing us as the Drone family whose slight mental deficiency, indulgence and naivete' is beyond doubt?

It seems that our proverbial provincialism found just the appropriate setting which had to be provided by someone. Furthermore, our provincialists are not pioneering any more in an individualistic frontier setting. They are well integrated in the mandarin system of corporate industrialism which is exploiting applied psychology to the end of such homogenous living.

Keats is erring when he thinks that "housing developments are a new world, one in which sociologists are just becoming profoundly interested." The literature on housing is tremendously rich with contributions from all the professions concerned. Modern housing has been a by-product of industrialism since the industrial revolution. Even the most recent phenomenon of suburban tract building by merchant builders has been described and scrutinized widely. In fact, Keats is quoting some sources himself. As far as financial practices are concerned including "psychological ownership," which is pulling the rug under your feet as soon as you fail to pay your monthly installment, there is nothing unique about it. It is part and parcel of our present way of doing business in any branch of our economy for whose defense we pay most of our tax dollars.

Keats' critical eyes have not only seen keenly the shortcomings of our life in Rolling Knolls but he has also seen some of the advantages of Japanese housing culture. Yet what could be the implication as well as the application of such comparison? That the Japanese have cultivated open house plans, beautiful proportions down to the last detail and a deep devotion to the arts is not the result of them all being artists. It is the matter of a long cultural tradition which is at least partially on the wane under the influence of the same industrial developments in which we have excelled for some decades. Industrial standardization is not imbued with the spirit of Zen. This would not mean, however, that there is no lesson to learn from this comparison with the Japanese house. Creative artists like Wright were inspired by Japanese tradition and showed the way to planning and design of healthy housing.

Finally, the question of planning and designing of better housing should be attacked on a very broad front. To accuse some corrupt builders and bankers doesn't get us anywhere. But let me not be unfair to Keats. He proves to have recognized a major point under discussion. The last 20 pages cite men like Gutkind, Neutra, Kennedy and Stein. The quote from Gutkind sums up this point very well, saying that our condition "is a total victory of a laissez faire insensibility and recklessness over organic growth and even over organized development." But perhaps even this statement is somewhat outdated. Modern industrial organization is powerful in its systematization of human life and becoming less and less laissez faire. Wealth and managerial power are becoming frightfully concentrated in the hands of relatively few people. Housing has become part of this development. This has been recognized for some time, but discussion about it is not always very frank, which is quite in line with conformist thinking.

Whyte (Cont'd from p. 10)

has shaped these communities in which Organized Man has found a way station in his wanderings. As Whyte puts it, it is Organization Man "who sets the tone, and if he is as uncertain as any in keeping up with the Joneses, it is because he is the Joneses." Keats' Droneses did not realize this. They are partially unhappy, not because of the housing business, but because they could not adjust to what they were supposed to adjust. They could not comprehend the machinery of tax withholding, package mortgages, credit buying and all the other devices which are taking care of us without having much choice. In other words, the Droneses complained about symptoms. If they had wanted to recognize the true situation and do something about it, they would have to revise the major dominating social and economic practices of our day. Although not everybody really likes this situation, Keats does not realize how many actually do. As Whyte sums up this condition, "Perhaps not since the medieval town have there been neighborhood units so well adapted to the predilections and social needs of its people."

This condition actually does not lead to identical patterns as far as social groupings in neighborhoods are concerned. Detailed studies of Whyte show a number of characteristics. Within the general framework of existing planning layouts there are interesting differences which reveal the power of design. Physical layouts in planning as well as the design of the housing type can produce happy or unhappy conditions in groups and thus in families. It seems to this reviewer that Whyte could at this point have stressed more the importance of the architect as planner and designer. Many of the current complaints could have been eliminated from the discussion if imaginative artistry would have been at work. After all, we have very few housing developments with the relatively high design standards of Park Forest where most of Whyte's studies were made.

In conclusion, Whyte is pleading for a good balance between individualism and the forces of Social Ethic which appear authoritarian and demand adaption to the point of conformity. In striving for this, we should look ahead, we should reinterpret because we cannot return, we should apply to our problems the basic idea of individualism, not ancient particulars. The tomorrow is already here.

Maybe the main criticism one could level at Whyte is that there is always a tomorrow and that we should already give some thought to the question of what lies beyond the one of Organization Man. In any event, both books reviewed are raising important questions of contemporary social organization and its expression in housing. Both books make for fascinating reading.

The Structures of Eduardo Torroja. By Eduardo Torroja. F. W. Dodge Corp., 119 W. 40th St., New York 18, N. Y. 1958. 198 pp. $8.50.

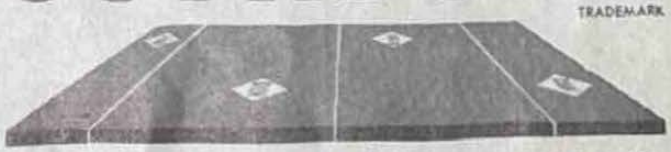
In his first published summation, the Spanish architect-engineer describes and explains 30 of his most significant works, organized into five major sections: large shells, viaducts and aqueducts, special structures, steel and composite structures, churches and chapels. Engineering details are given and in some cases alternate designs which were later discarded are shown. Over 275 illustrations are included.

Very little has been published by or about Torroja, whose work has felt the effects of the Spanish Civil War and the lack of prosperity that followed. But in his foreword Mario Salvadori says: "As has so often been true in the history of creative achievement, the limitations themselves—the very factors interfering with the solution of a problem—enhance the intrinsic value of the final product."

new perimeter insulation

SCORBORD

TRADEMARK



cuts costs—speeds construction

Scorbord* is a Dow plastic foam insulation specifically designed for use along the edges of foundations. Scorbord substantially reduces building costs—cuts sawing, cutting and fitting time up to 80 per cent. An FHA "materials release" has been issued.

Big 8-foot x 2-foot, easy-to-handle sections of Scorbord are pre-scored and snap quickly to almost any desired width. Lightweight Scorbord lasts a lifetime. It resists moisture, heat, cold and deterioration and will not attract rodents or vermin. It can withstand weights of 2,000 pounds per square foot.

*Scorbord is a trademark of The Dow Chemical Company.

OREGON

★ELEMENTARY SCHOOL ADDITION— Baker, Ore.

Award to DeGree Construction Co., Box 383, Bend, $196,975 (basic plus alternates), by Baker School District No. 5, Baker County, Ore., for construction of a concrete and concrete block, 16,500 sq. ft. addition to North Baker elementary school between 7th and 8th on B St., Baker. Plans by Hayslip, Tuft, Hewlett & Jamison, architects, 2040 S.W. 3rd Ave., Portland.

Five bids received September 10. OTHER BIDS: Witham Bros., 1403 Broadway, Baker, $201,995; Riverman & Sons, 1230 N.E. 63rd Ave., Portland, $207,642; Bechtel Bros., Box 792, LaGrande, $212,782; McCormack Construction Co., S.W. 3rd and Goodwin, Pendleton, $217,806.

WB 9-13. Previous report 9-6

●HOSPITAL— Bandon, Ore.

Bids will be opened 2 p.m., September 30, by Southern Coos General Hospital District, Carl Lorenz, chairman of the board, City Hall, Bandon, for construction of 22-bed, one-story, 11,500 sq. ft. frame and brick veneer hospital. Plans with Dougan & Heims and Howard Glaisyer, associated architects, 401 Royal Bldg., Portland. $25 deposit. Certified check or bid bond 10%. Separate bids for kitchen equipment, and for sterilizing equipment.

Site is overlooking the bay near Bandon. Hospital will include surgeries, delivery rooms, X-ray and kitchen facilities, etc. Some cedar siding on exterior; concrete slab floor; aluminum windows; stainless steel flashings; built-up roof; plastic skylight domes; vinyl tile floor coverings; plaster walls; acoustical plaster ceilings; ceramic tile walls and floors in surgeries and other areas; hardwood millwork and doors; two boilers for heating, ventilation system; built-in cooler; call and paging systems; some blacktop paving. WB 9-13

●SCHOOL IMPROVEMENTS— Coos Bay, Ore.

Bids will be opened 8 p.m., September 24, by Coos Bay School District No. 90, 7th and Hall streets, Coos County, Coos Bay, for heating, plumbing and electrical work on the classroom addition to the Summer school in Coos Bay. Specifications with above office. LC 9-12

●RANGER STATION BUILDINGS— Douglas County, Ore.

Bids will be opened 2 p.m., P.S.T., October 2, by U.S. Forest Service, Frank Walisch, regional supply officer, 729 N.E. Oregon St., Portland (Box 4137), for construction of one-story, frame buildings, a 50'x27' office building, three 50'x40' residences, and a gas and oil house, at the Toketee Ranger Station, Umpqua National Forest, Douglas County, Ore.; Bid No. R6-59-100. Plans with above office, or with Forest Supervisor, Post Office Bldg., Roseburg. WB 9-17

●PAINTING— Eugene, Ore.

Bids will be opened 3 p.m., P.S.T., September 30, by General Services Administration, Federal Office Bldg., 909 1st Ave., Seattle, Wash., for interior and exterior painting, miscellaneous improvements and repairs, to the U.S. Post Office, 5th Ave. and Willamette, Eugene. Specifications with above office. LB 9-16

●PAINTING BUILDING— Eugene, Ore.

Bids to be opened 2 p.m., September 22, by State Department of Finance and Administration, 1225 Ferry, Salem, for interior and exterior painting of the State Office Building, Department of Motor Vehicles, Pacific Highway and Walnut St. in Eugene; Inv. S-5043-58. DC 9-17

★ST. MARY'S CHURCH— Florence, Ore.

Award to Frank Rose, Florence, no amount announced by St. Mary's Church, for new church to be located two miles south of Florence. Plans by Jacobberger, Stanton, Franks & Norman, architects, McKay Bldg., Portland.

The 36'x90' structure will seat 224 persons; future additions of sacristies and choir rooms will bring capacity to 266. Wood frame structure with glued laminated arches; concrete slab floor; aluminum and wood sash; cathedral glass; exterior finish of fir texture plywood (combination sheathing and siding); 2" tongue and grove fir deck with double stripping and cedar shingles; gas hot air perimeter heating; covered porch connected with cross tower of interpiercing, triangular forms made of 6x6 timbers. Interior nave finish and painting will be done later. WB 9-12

●BUILDING REPAIRS— Gresham, Ore.

Bids will be opened 3 p.m., P.S.T., September 30, by General Services Administration, Federal Office Bldg., 909 1st Ave., Seattle, Wash., for new marquee and miscellaneous repairs to the U.S. Post Office, Powell Blvd. and N.W. Miller St., Gresham; SEA-1119. Specifications with above office. LB 9-16

●SIX-STALL GARAGE— Hines, Ore.

Bids will be opened 2 p.m., September 25, by Oregon State Game Commission, 1634 S.W. Alder St., Portland (Box 4136), for construction of a wood frame, 25'x100' six-stall garage at the commission's regional office at Hines, near Burns, Ore. Plans with above office. Certified check or bid bond 10%.

Concrete foundation and floor; wood siding; wooden overhead doors; truss roof; composition roofing. WB 9-16

●RANGER STATION BUILDINGS— Jackson County, Ore.

Bids will be opened 2 p.m., P.S.T., September 30, by U.S. Forest Service, Frank Walisch, regional supply officer, 729 N.E. Oregon St., Portland, for construction of four frame residences, an office building, and a gas and oil house, all one-story frame buildings, at Prospect Ranger Station, approximately 62 mi. northeast of Medford, Rogue River National Forest, Jackson County, Ore.; Bid No. R6-59-92. Plans with above office or with Forest Supervisor, Post Office Bldg., Medford.

Overall dimensions of the residences are approximately 50'x40' and 64'x40', and the office building, 50'x28'. Septic tanks, drainage fields, water lines and other utilities are required. Completion time 160 calendar days. WB 9-12

★BANK ADDITION— Klamath Falls, Ore.

Contract negotiated with Duncan Construction Co., Box 1088, Klamath Falls, by Elton W. Smith, manager, Town & Country Branch, United States National Bank of Portland, 3618 S. 6th St., Klamath Falls, for construction of a 20'x16' extension of the bank's roof to form a canopy for drive-in banking window facilities. Work also includes approximately 20' of 6" concrete curbing. ZZ 9-12

●ROOFING, INSULATION— Klamath Falls, Ore.

Bids will be opened 3 p.m., P.S.T., September 25, by General Services Administration, Federal Office Bldg., 909 1st Ave., Seattle, Wash., for new roofing and thermal insulation to the U.S. Post Office, 7th and Oak St., in Klamath Falls; SEA-1206. Specifications with above office. LB 9-16

STATE INSTITUTE BUILDINGS— Klamath Falls, Ore.

(Estimated cost $5,300,700)

A building program has been recommended to the 1959 State Legislature by the State Board of Higher Education, for Oregon Technical Institute, on a 120-acre site at the edge of Klamath Falls. The program includes construction of an engineering and science building, an allied arts and medical associates building, an architects-engineering building, administration building and a dormitory and cafeteria building. Also included, are family housing units which will cost an estimated $2,408,000. Only 50% of this amount would be included in the budget, the rest to be obtained on a long-term loan from a private lending agency. Eighty acres of land will be donated by local organizations and the rest will be purchased by the state at an estimated cost of $13,000.

The recommendations approved above cover the 1959-61 biennium, the first two years of a 10-year program. The 1961-63 biennium recommendations submitted include: agriculture building, $760,000; warehouse and maintenance building, $589,000; an auditorium and physical education building, $871,500; engineering laboratories and shops, $2,565,000; family housing units, $1,100,000. Only 50% is included in the state cost estimates, the remainder would be borrowed. LC 9-17

★REMODEL HIGH SCHOOL— Klamath Falls, Ore.

Award to Brosterhous Construction Co., 1541 Elm St., Klamath Falls, $22,300, (basic), by Klamath Union High School District No. 2, Harold Ashley, clerk, room 200, Klamath Union High School, Mon Clair St., Klamath Falls, for remodeling the basement of

Klamath Union High School, in Klamath Falls. Plans by Howard R. Perrin, architect, 1121 Main St., Klamath Falls.
ZZ 9-17. Previous report 9-11

●BUILDING ALTERATIONS— **Medford, Ore.**

Bids will be opened 3 p.m., P.S.T., September 29, by General Services Administration, Federal Office Bldg., 909 1st Ave., Seattle, Wash., for structural alterations to the Federal Office Bldg., Riverside and 6th, Medford; SEA-1116. Specifications with above office.
LB 9-16

▲OFFICE BUILDING— **Medford, Ore.**

Five bids ranging from a low of $43,890 (100 calendar days completion time) by Cummings Construction Co., 1050 Belle Aire Drive, Grants Pass, to a high of $50,843 (120 days), were opened in the office of the architect, Robert J. Kenney, Fluhrer Bldg., Medford, for construction of a 5,200 sq. ft. frame, office building in Medford to house offices for Jackson County public welfare and the state tax commission groups, and others. This is first unit of extended project of offices which will eventually cover the entire block which is owned by Wilson & McCabe Refrigeration Co.

Other bids opened September 9 were: Myers D. Jones, 34 S. Fir, Medford, $46,890, 100 days; R. J. Batzer, 933 S. Holly, Medford, $48,413, 129 days; Don L. Jacobs, 307 N. Peach, Medford, $48,425, 110 days; Salter & Klein, Rogue River, $50,843, 120 days.

★CAFETERIA COMPLETION— **Portland, Ore.**

Award to Wilson & Dean, 1016 N.E. 61st Ave., Portland, $16,433, by School District No. 27, Multnomah County, 740 S.E. 182nd Ave., for completion of cafeteria at North Rockwood Primary School, 330 N.E. 172nd Ave., Portland. Plans by Logan & Murtaugh, architects, 1940 S.W. 4th Ave., Portland.
WB 9-12. Previous report 9-4

HIGH SCHOOL ADDITION— **Portland, Ore.**

Donald W. Edmundson, and Neil R. Kochendoerfer, architects, and R. Evan Kennedy, structural engineer, 325 Henry Bldg., Portland, have been retained by Portland School District No. 1, 620 N.E. Halsey St., Portland, to design an addition of 12 general and four science classrooms to Woodrow Wilson High School, 1151 S.W. Vermont St. Preliminary plans are to be completed by November 10, 1958, and working drawings by March 30, 1959.
WB 9-13

PRIMARY SCHOOL— **Portland, Ore.**

W. H. Gilmore, architect, Governor Bldg., Portland, retained by Portland School District No. 1, 620 N.E. Halsey St., Portland, to design a six-classroom primary school at N.E. 74th Ave. and Pacific St., Portland. Preliminary plans are to be complete by October 13, and working drawings by December 29. The school, which will be designed for expansion, will include kindergarten room, teachers' lounge and lunch room, heating plant, administrative unit, store rooms, lavatory facilities and playroom.
WB 9-13

▲FINISHING BUILDING— **Portland, Ore.**

Seven bids received by Multnomah County Commissioners, John W. West, purchasing agent, 504 County Courthouse, Portland, for finishing the northwest corner of the second story of the Multnomah County Health & School Bldg., 12440 N.E. Glisan St., Portland. Bids opened September 11. BIDS: Gene Settergren, 1625 S.E. Woodward St., $17,477; Supreme Builders, Inc., 4232 N. Williams Ave., $17,662; Wilson & Dean Construction Co., Inc., 1016 N.E. 61st Ave., $17,746; A. C. Bardi, 4200 S.W. 103rd Court, $17,932; Raymond Ems, 13385 S.W. 72nd Ave., $18,324; Associated Building Contractors, Inc., 7117 S.E. Main St., $18,544; E. Carl Schiewe, 1024 N.E. Davis St., $19,818. All of Portland.

CENTENNIAL PAVILION—Portland, Ore.

Plans are underway by Donald Blair, architect, 1328 S.W. 14th Ave., for a triangle-shaped, steel, wood, plastic, and lightweight block pavilion to be constructed for Portland General Electric Co., Electric Bldg., Portland, at the Oregon Centennial Exposition and International Trade Fair at the Pacific International site in North Portland.

The main structure will be punched open web steel; the three walls, 100' wide on each side, will be of a lightweight block screen; center roof structure, three-sided, conical dome of lightweight steel sections covered with strips of cathedral plastic in various colors; flat roof areas of vaulted, prestressed plywood; the 25' high building will have 500 sq. ft. of exhibit space, plus a balcony for viewing exhibits; 100' steel tower on top; outdoor garden landscaped areas; no windows or doors. This exhibit will be located across the main mall from the Forest Products Pavilion.
WB 9-13

▲MEDICAL CLINIC **Portland, Ore.**

Bids received September 12 for construction of a wood frame medical clinic in Cedar Hills Shopping Center are a on S.W. Park Way, Portland (near Beaverton) are being analyzed by Skidmore, Owings & Merrill, architects, 2040 S.W. Jefferson St., Portland. The bids were very close, and alternates will affect the determination of the low bidder. The owner is C. H. Parkway Co., 1695 S.W. Marlow Ave., Portland.
WB 9-16. Previous report 9-5

PRIMARY SCHOOL— **Portland, Ore.**

Williams & Martin, architects, 1919 S.W. 12th Ave., Portland, have been retained by Portland School District No. 1, 620 N.E. Halsey St., Portland, to design a nine-classroom primary school at N. Gantenbein and N. Humboldt streets. Preliminary plans are to be complete by October 13 and working drawings by December 29. The school will be planned for later expansion into complete elementary school and will include one kindergarten room, playroom, heating plant, lavatory facilities, storerooms, teachers' lounge and lunch room, and administrative unit.
WB 9-17

★PARTITIONING— **Portland, Ore.**

Award to C. M. Emeis & Co., 2519 N. Mississippi Ave., Portland, $1,425, by Corps of Engineers, Portland District, 628 Pittock Block, Portland, for temporary partitioning on the sixth floor of the Pittock Block; Inv. CIVENG-35-026-59-37. Bids opened August 25.

●SWIMMING POOL— **Salem, Ore.**

Bids will be opened 4 p.m., September 30, in office of executive director of YWCA, 768 State, Salem, for construction of a 28'x60' swimming pool wing to be added to the YWCA building at Winter and State streets in Salem. Plans with John Grimmer Groom, architect, 2390 S. 12th St., Salem.

The building housing pool will have a curtain wall facing the street, other walls will be reinforced concrete; aluminum sash; built-up roofing. Interior wall against the existing building will be plastered, other will be smooth concrete. All will be finished with a multi-colored plastic surfacing material; undulating corrugated aluminum ceiling.

Plans call for ceramic tile to line pool, deck and wainscoting. Water will be heated by a heat exchanger, which, in turn, will be heated from the present heating plant. Stainless steel items will be required. The pool will also have underwater lighting. Contract also calls for mechanical equipment, including a diatomaceous filter, finishing dressing rooms, showers, directors' room and attendants' space in existing building.
LC 9-12

HOSPITAL, NURSING HOME— **Toledo, Ore.**

Lincoln Hospital District, Dr. O. N. Callender, chairman, Bank Bldg., Toledo, will place a $485,000 bond issue on the November ballot' for financing a 20-bed hospital and also a 20-bed nursing home in Toledo.

A proposal was defeated at the May election for a new hospital and nursing home. At that time $500,000 was asked for the hospital and $190,000 for the nursing home. The new bond issue proposition has been trimmed.

SWIMMING POOL— Edmonds, Wash.
(Estimated cost $50,000)

A bond issue in amount of $50,000 will be placed on the November 4 ballot by City Council, City Hall, Edmonds, for a swimming pool in Edmonds. Sponsor for the project is Greater Edmonds Area Service Association, Thomas A. Purton, chairman, Edmonds. Planned is a 40'x75', outdoor heated pool with dressing rooms and a filtered water plant. MH 9-12

SCHOOL BUILDINGS— Edmonds, Wash.

A special levy and a bond issue will be placed on November 4 ballot by Edmonds School District 15, Edmonds, to raise funds to assist in financing new school buildings needed during the next biennium. The levy would raise about $200,000 and the bond issue $800,000. These amounts plus a similar special levy slated for next year, would total about $1,105,000.

Surveys indicate that the district will need one new junior high school, two elementary schools in addition to the schools now existing, under construction or in planning stage. DC 9-12

SCHOOLS— Ellensburg, Wash.

Two bond issues were passed by voters in the Ellensburg School District No. 401, Edward K. Erickson, superintendent, 200 S. Sampson, Ellensburg, for 1—improvements to facilities at three schools in the district, $80,000, 2—finish and improve high school facilities, $38,000. LC 9-16

CATHOLIC COLLEGE— Issaquah, Wash.
(Estimated cost $4,000,000)

Bids will be called in October by Sisters of Charity of the House of Providence for construction of the eight-building 200,000 sq. ft. Providence Heights College on a 240-acre site on the summit of a hill two and a half mi. north of Sunset Highway, midway between Pine Lake and Issaquah. Working drawings are nearing completion by John W. Maloney, architect, 754 Central Bldg., Seattle. College will train Catholic sisters. Present address of owners is Mount Saint Vincent's Home, 4831 35th S.W., Seattle.

Buildings will center around a chapel, and will be connected by covered walkways. Plans include an administrative unit' 16-classroom unit, library, complete dining and dormitory facilities, a 400-capacity chapel, a recreation building including gymnasium and a swimming pool. The development will have its own water and sewage disposal systems.

Chapel will have vault-type roof; full basement; 55' center height; reinforced concrete tapered fins, acting as window frames and structural supports; roof and side walls sheathed in a batten system with copper sheets; radiant heat slab floor; wall back of altar faced with brick, other walls panelled in wood. Windows of chipped stained glass, made in France, will be owner furnished.

Other buildings will be one- to four-level structures; reinforced concrete frames; steel trusses over gymnasium, some other buildings; flat built-up roofs, rigid insulation in roof, some exterior walls; brick exterior, some ceramic glazed, some natural brick; aluminum sash; terrazzo flooring, some resilient tile, some finished cement flooring; maple flooring in gymnasium, platforms; masonry and steel stud partitions, plaster finished; hot water steam heating, oil-fired boiler.

Cement concrete connecting - walkways will have aluminum poles supporting plastic roofs. Indoor, heated 24'x60' poured concrete swimming pool will be finished in ceramic tile. A large central indoor court and several smaller courts will be paved in cement concrete. Asphaltic concrete will surface extensive parking facilities and access roads.

Construction may be started in November.

PD 9-16

SCHOOL CONSTRUCTION— Kelso, Wash.
(Estimated cost $1,000,000)

General obligation bonds in amount of $700,000 were approved by voters in Kelso School District No. 403, to help finance construction of a junior high school building and an elementary school building. Plans are underway by E. L. Mills & Associates, architects, 308 S. Tacoma Ave., Tacoma.

LC 9-16

CAFE— Vancouver, Wash.
(Estimated cost $135,000 to $150,000)
Construction planned by Leo Jaroff, manager, Vancouver, for reconstructing the Zutz Cafe, 106 E. 7th St., Vancouver. The cafe was destroyed by fire. LC 9-13

OIL REFINERY— Vancouver, Wash.
(Estimated cost, initial phase, $2,000,000)
Construction has started by Fluor Corp., engineers and contractors, Los Angeles, on the initial phase of a petroleum refinery on 110-acre tract in West Vancouver on Fruit Valley Road near Vancouver city limits. The owner is Pacific Cooperatives, Charles Baker, general manager, Box 1004, Walla Walla. The ultimate cost is estimated at $15,000,000.
The first phase will include a tank farm with storage capacity of 14,000,000 gal. of petroleum, a new dock west of the Port of Vancouver dock, a 1½-mi. pipeline to carry both crude and finished products to and from the river, an office and maintenance building, truck loading racks, and blending tanks and equipment. The tank farm will include double-decked, floating roof tanks for storage of all evaporative products; the Columbia River dock will have facilities for unloading tankers and loading barges, and will handle one tanker and one river barge at a time. These facilities will provide a distribution and storage center for the petroleum products until the refinery is completed. Processing equipment will not be installed until petroleum import quotas have been arranged, probably within one to two years. WB 9-13

Lloyd Blvd., Portland, for furnishing 40 metal gates, single swing, 50" minimum height to fit 16' gate opening; Inv. 8862. Delivery, Eavan Spur, Vancouver, Wash. Bid opening was August 28.
WB 9-12. Previous report 8-13

★INSTALL CONDUIT— **Portland, Ore.**

Award to Serge R. Perrin, 405 Ogden Drive, Oregon City, $2,986, by 337th Fighter Group, Portland International Airport, Portland, for installation of signal conduit in the alert area at Portland International Airport; Inv. 35-608-59-13. Bids opened September 8.
WB 9-12. Previous report 8-27

★FURNISH INSULATOR PEDESTALS— **Portland, Ore.**

Award to King Bros., Inc., 3500 S.E. 17th Ave., Portland, $3,703, by Bonneville Power Administration, 1001 N.E. Lloyd Blvd., Portland, for furnishing insulator pedestals; Inv. No. 8838. WB 9-12. Previous report 8-1

★COAXIAL CABLE— **Portland, Ore.**

Award to British Insulated Callenders Cables, Ltd., London, WC1, England, $1,064, by Bonneville Power Administration, 1001 N.E. Lloyd Blvd., Portland, for furnishing 10,000' of coaxial cable fob Eavan Spur, Vancouver, Wash.; Inv. No. 8846. Four higher bids were received August 7.
WB 9-12. Previous report 7-23

★CULVERT PIPE— **Portland, Ore.**

Award to Beall Pipe & Tank Corp., 12005 N. Burgard St., Portland, $722, by Bonneville Power Administration, 1001 N.E. Lloyd Blvd., Portland, for furnishing 36' of 48" culvert pipe, 8-gauge, zinc coated, and two connecting collars, fob East Vancouver Warehouse, Vancouver, Wash.; Inv. 8864. Beall was lowest of four bids received August 18.
WB 9-12. Previous report 9-13

▲TRACKAGE IMPROVEMENT— **Portland, Ore.**

Two bids received by Port of Portland, John J. Winn, Jr., general manager, 5848 N. Lagoon Ave., Swan Island, Portland (Box 4099), for improvement of railroad tracks on Swan Island. Bids opened September 10. BIDS: A. D. Ford & Son, 2535 N.W. Upshur St., Portland, $6,629; B. H. Samuel & Sons, 5253 N.E. Sandy Blvd., Portland, $8,640. Enginer's estimate, $5,141.
WB 9-12. Previous report 8-23

WILLAMETTE RIVER BRIDGE— **Portland, Ore.**

A bond issue for $7,000,000 will be submitted to voters in the November election by Multnomah County Commissioners, Jack Bain, Al Brown and M. James Gleason, for construction of a three-lane bridge parallel to the Ross Island Bridge across the Willamette River. Westbound traffic would use the new bridge, and eastbound traffic, the old bridge. The bridge would have 40' between curbs and a 5' sidewalk. WB 9-13

HYDROELECTRIC FACILITIES— **Portland, Ore.**

A charter amendment will be on the City of Portland ballot in the November 4 election to allow the city to install power generating facilities in the water system dams on the Bull Run reserve near Mt. Hood. Up to $5,000,000 in general obligation bonds may be sold to finance the project. The bonds would be paid by sale of power and of timber on the watershed, and a tax levy if necessary.

Preliminary studies have been made by Stevens & Thompson, consulting engineers, 2234 S.W. 5th Ave., Portland. The City Council, Terry D. Schrunk, mayor, City Hall, Portland, decided to get voter approval before conducting further studies to determine if revenues from the project will be sufficient to pay off the bonds.

Generating equipment would be installed in the existing Bear Creek Dam and the new dam under construction. The project would generate 98 kw a year. Transmission lines would also be built to deliver the power to private utilities, industries or Bonneville Power Administration. The power might instead be used for street lighting in the city.
WB 9-13. Previous report 9-25 (Storage Dam)

▲DOZER— **Portland, Ore.**

Two bids received by City Purchasing Agent, 208 City Hall, Portland, for pneumatic-tired, four-wheel dozer with controlled angle dozer blade. Bids opened September 11. BIDS: Wagner Tractor, Inc., 8027 N.E. Killingsworth St., Portland, $14,000; Cramer Machinery Co., 1140 S.E. 7th Ave., Portland, $14,370.
WB 9-13. Previous report 9-3

★COPPER WIRE— **Portland, Ore.**

Award to North Coast Electric Co., 625 N.W. Everett St., Portland, $749, by U.S. Forest Service, 729 N.E. Oregon St., Portland, for furnishing 15,000' of single conductor, copper wire; Inv. No. R6-59-87. Eleven bids were received September 11.
WB 9-13. Previous report 9-11

★BRIDGE— **Portland, Ore.**

Bids were opened September 12 by Bureau of Public Roads, Portland for constructing 85' reinforced concrete bridge (Upper Deer Creek Bridge) on Deer Creek Road, Willamette National Forest, Linn County, Ore.; FDRP 1451-C.

AWARD: George W. Millett, Jr., 330 Sunset Drive, Eugene, $16,090. 2ND LOW: Sweet Home Construction Co., Sweet Home, $18,592. HI BID: Orlando C. Bennard, 6937 N. Fiske Ave., Portland, $24,120. Engineer's estimate, $19,805.
WB 9-16. Previous report9-6

▲INSTALLING LINER PLATES— **Portland, Ore.**

Three bids received by City Purchasing Agent, 208 City Hall, Portland, for installation of approximately 142.5' of steel liner plates in S.E. Alder St. trunk sewer. Bids opened September 12. BIDS: Armco Drainage & Metal Products, Inc., 1320 S.W. Broadway, $7,708; Lord Bros., 9233 N. Calvert Ave., $11,171; George W. Lind, 5000 N.E. Killingsworth St., $12,470. Of Portland.

● GRADING— **Portland, Ore.**

Bids to be opened 10 a.m., October 3, by Bureau of Public Roads, 824 Morgan Bldg., Portland (Box 3900) for grading 2.832 mi. Oregon Coast Highway, Siuslaw National Forest, Lincoln and Tillamook counties, FHP 3-A3, Ore. Plans with above office.

Quantities: 5 acre clearing; 40 acre grubbing; 827,000 c.y. excavation; 783,000 sta. yd. overhaul; 153 c.y. concrete; 20,600 lb. reinforcement steel; 4,800' culvert pipe.
DM 9-17

● GRADING, CONSTRUCTION POSTS— **Portland, Ore.**

Bids to be opened 10 a.m., October 3, by Bureau of Public Roads, 824 Morgan Bldg., Portland (Box 3900) for grading 0.637 mi. and constructing posts for 0.228 mi. on Oregon Coast Highway, Siuslaw National Forest, Tillamook County, FHP 3-A4, Ore. Plans with above office.

Quantities: 5 acre clearing; 15 acre grubbing; 480,000 c.y. excavation; 481,000 sta. yd. overhaul; 2,700' culvert pipe. DM 9-17

★SEWAGE TREATMENT PLANT— **Rainier, Ore.**

Awards announced by City Council, Rainier, on construction of sewage treatment plant (Sched. 1) and about 3,500' of interceptor sewers (Sched. 2). Bids were opened for the second time September 10. AWARDS: 1—Riverside Construction Co., Box 3853, Portland, for sewage treatment plant. The firm bid $82,767 using standard clarifier and $84,417 on degritting clarifier. Selection of alternate has not yet been made. 2—Trio Construction Co., Eugene, $27,090.

Other bids—PLANT: Packard Pipe and Pump Co., 554 14th, Longview, $86,311 (standard), $88,151 (degritting); L. B. Read, 2607 S.W. Sunset Blvd., Portland, $87,150, $89,150; George W. Lind, 5000 N.E. Killingsworth, Portland, $89,584, $91,887; Everett L. Wiggins, 5622 N. Delaware, Portland, $92,816, $94,816; DenHerder Construction Co., Inc., Box 307, Lebanon, $111,475, $113,101. SEWERS: DenHerder Construction Co., $27,236; Paul Ferneding, 2115 E. 27th, Vancouver, $27,887; Packard Pipe and Pump, $40,215; Riverside Construction Co., $40,825; Atlas Construction Co., Portland, $41,556; George W. Lind, Portland, $42,363; P. S. Lord, Portland, $44,631. DC 9-16. Previous report 9-6

★STATE HIGHWAY PROJECTS— **Salem, Ore.**

Thirteen contracts were awarded and six projects held with awards recommended to the low bidder on the 19 highway construction projects for which bids were opened on August 26 by Oregon State Highway Commission in Salem.

ROCK PRODUCTION, Dooley Mountain—About 6,000 c.y. crushed sanding material in sand shed and stockpile on Baker Unity Highway, about 15 mi. south of Baker, Baker County; a State Project. AWARD: Cartwright Construction Co., Durkee, $20,700.

CONCRETE DECK, Shipley Bridge over Tualatin River — Construct 300' reinforced concrete deck and handrail on pile supported precast beams to replace existing trestle approaches to steel truss span on Market Road 12, three mi. southwest of Oswego and ½ mi. north of Stafford, Clackamas County; FAP No. DS-399(1). AWARD: Inland Construction Co., 6202 S.E. Harmony Road, Milwaukie, $59,058.

GRADING, PAVING, Hunter Creek-Buena Vista Wayside Section—Grading 1.45 mi., paving 1.3 mi. on Oregon Coast Highway about one mi. south of Gold Beach, Curry County; FAP No. BD-124(15). Award recommended to Peter Kiewit Sons' Co., Box 1777, Vancouver, Wash., $406,586.

BRIDGE, Hunter Creek—Constructing 360' concrete bridge on Oregon Coast Highway near Gold Beach, Curry County; FAP No.

BF-124(15). AWARD: Tom Lillebo, Reedsport, $171,368.

GRADING, PAVING, Elkton-Smith Bridge Section—Grading and stone base on 3.75 mi. and paving 3.36 mi. on Elkton-Sutherlin Highway, Douglas County, southerly from Elkton. FAP Nos. DS-217(6) and S-217(7). Award recommended to M. J. Brassfield Co. and J. M. Purcell Construction Co., Salem, $555,810.

GRADING, PAVING, O'Shea Creek Section—Grading 0.46 mi.; paving 0.49 mi.; constructing 156' reinforced concrete bridge; furnishing material in stockpile, on Tiller-Trail Highway, 0.8 mi. east of Canyonville, Douglas County; FAP No. S-80(3). AWARD: Thornton-Bell, Roseburg, $125,859.

BRIDGES, McKenzie River Overflow—Three precast concrete structures on treated timber piles near Coburg on Harrisburg-Eugene Road (total length 399') in Lane County; FAP No. DS-137(2). AWARD: Inland Construction Co., Milwaukie, $96,558.

FENCING, Beverly Beach Park—Approximately 470 rods type 3 fence along boundaries of State Park, Oregon Coast Highway, about six mi. south of Depoe Bay, Lincoln County; a State Project. AWARD: Bennett & Hickey, Burns, $6,195.

GRADING, BRIDGES, Belts Road-Lane County Line Section—Grading 6.86 mi.; constructing two 105' pile trestle bridges, Pacific Highway, about four mi. north of Coburg, Linn County; FAIHP I-5-4(19)204. Award recommended to Roy L. Houck & Sons, 1585 N. 20th, Portland, $739,796.

BRIDGES, Lebanon Section—Three pile-founded, precast beam, reinforced concrete bridges—one 66' three-span bridge over Willow Creek on McDowell Creek Road, six mi. southeast of Lebanon; one 84' three-span bridge over McDowell Creek on McDowell Creek Road nine mi. southeast of Lebanon; one 100' four-span bridge over Oak Creek on Market Road 11, two mi. south of Albany and 8½ mi. northwest of Lebanon, in Linn County; FAP Nos. DS-178(4), C-378(2). AWARD: James F. Turner, 2655 Taylor, Corvallis, $40,334.

APPROACH SPAN, Bates Park bridge over South Santiam River—One 160' continuous two-span welded steel plate girder approach to existing truss on McDowell Creek Road about three mi. southeast of Lebanon, Linn County; FAP No. S-178(3). AWARD: James F. Turner, Corvallis, $51,287.

ILLUMINATION, Highlands Interchange—Install mercury-vapor and fluorescent luminaires on Sunset Highway in Portland, Multnomah County; FAP U-3-8(4). AWARD: W. R. Grasle, 437 N.W. 16th, Portland, $13,200.

ROADSIDE IMPROVEMENT, Interstate Bridge-Oregon Slough—Improvements on Pacific Highway north of Portland, Multnomah County; Toll Bridge Project. AWARD: E. P. Baltz & Son, 8716 E. Burnside, Portland, $14,330.

PAVING, Sundial-Multnomah Falls Section—Paving 14.3 mi. Columbia River Highway, 15 to 30 mi. east of Portland, Multnomah County; FAIHP I-82-1(11)14 and I-82-2(7)15. Award recommended to Rogers Construction Co., 11760 N.E. Glisan, Portland, $1,699,492.

STONE BASE, OILING, West Unit, Ukiah-Forest Boundary Section—Stone base and oiling 3.59 mi. Ukiah-Hilgard Highway east of Ukiah, about 50 mi. south of Pendleton, Umatilla County; FAP DS-57(6). AWARD: E. H. Itschner, Box 316, Molalla, $41,234.

BRIDGE, Thornhollow Bridge over Umatilla River—One 182' concrete bridge on Adams-Cayuse Road, 18 mi. east of Pendleton, Umatilla County; FAP DS-428(2). Babler Bros., Inc., 4617 S.E. Milwaukie, Portland, $45,019.

STONE BASE, OILING, Forest Boundary-Hilgard Section—Stone base and oiling 16.69 mi. on Ukiah-Hilgard Highway southwest from Hilgard, about 8 mi. northwest of La Grande, Union County; FAP DS-57(6). AWARD: E. H. Itschner, Mollalla, $172,328.

GRADING, PAVING, North Plains Interchange Section—Grading 1.25 mi., paving .98 mi. on Sunset Highway about 15 mi. west of Portland, Washington County; FAP DF-186(18). Award recommended to Warren Northwest, Inc., Box 5072, Portland, $290,489.

GRADING, PAVING, Middleton-Yamhill County Line Section—Grading and asphaltic concrete paving 3.45 mi. Pacific Highway West about four mi. north of Newberg, Washington County; FAP DF-73(13). Award recommended to Fred H. Slate Co., Ore. Ltd., and E. C. Hall Co., Portland, $497,258.

DM 9-13. Previous report 8-27

★STATE HIGHWAY PROJECTS—

Salem, Ore.

Eight awards were made by Oregon State Highway Commission, Salem, on 18 projects on which bids were opened September 9. The commission also recommended awards on nine projects and rejected bids on one job. One project, the Porter Street Undercrossing in Portland, Multnomah County, was withdrawn prior to bid opening and proposals were returned to the bidders. It will be readvertised at a later date.

TRAILER CAMP SITES, Fort Stevens State Park—Construct 14 trailer and 69 camp sites, access roads, utility building, latrine, pumphouse, water, sewer and electrical systems, in Clatsop County; a State Project. AWARD: Eugene Gardens, 1515 Sylvan, Eugene, $65,982.

BRIDGE, Saspal Slough—240' reinforced concrete precast timber bridge on treated timber piling on Brownsmead Loop Road at M.P. 4.1, Clatsop County (FAS 757) FAP No. S-398(2). Award recommended to Workman & Wilson, Route 1, Box 30, Canby, $47,689.

BRIDGE, Nehalem River—180', three-span, reinforced concrete deck girder and welded steel plate girder bridge, 17 mi. south of Vernonia, with roadway detour and detour bridge, Columbia County; FAP No. S-213(3). AWARD: Babler Bros., Inc., 2617 S.E. Milwaukie, Portland, $75,805.

GRADING, OILING, North Bend Airforce Station Access Road—Grade widening 0.77 mi. and oiling 1.14 mi. on Lungren County Road about 7.5 mi. north of North Bend, Coos County; FAP No. R-AD-7(2). Award recommended to Robert Angell, North Bend, $63,284.

BRIDGES, Crook Creek, Edson Creek—Two precast concrete panel bridges, three spans each, one 45' long to carry Pistol River County Road over Crook Creek, 11 mi. south of Gold Beach; and one 51' long to carry North Rogue River County Road over Edson Creek, four mi. north of Gold Beach, Curry County; FAP No. DS-400(1). Award recommended to Sig Andersson, 1371 Bayview, North Bend, $23,814.

GRADING, PAVING, Comstock-Aunlauf Section—About 1.38 mi. on Pacific Highway, south of Cottage Grove, Douglas County; FAIP I-5-3(5)163. Award recommended to White Bros. Construction Co., Inc., Box 376, Walla Walla, Wash., $270,577.

GRADING, PAVING, N. Oakland Jct.-Sutherlin Jct.—Grading and paving 2.03 mi., shoulder oiling 3.68 mi. on Pacific Highway about 12 mi. north of Roseburg, Douglas County; FAIHP No. I-5-3(7)137. AWARD: White Bros. Construction Co., Inc., Walla Walla, $351,967.

ROCK PRODUCTION, Santiam Jct.-Suttle Lake—About 10,000 c.y. crushed rock or gravel in stockpiles on Santiam Highway near Hogg Butte about 13 mi. northwest of Sisters, Jefferson and Linn counties; a State Project. Bids rejected as too high. Low bidder was Roseburg Sand and Gravel Co., Roseburg, $38,700.

GRADING, PAVING, North Grants Pass Interchange—Grading, paving Pacific Highway at Grants Pass, Josephine County; FAIHP No. I-5-1(2)58. AWARD: Hughes & Dodd Co. and Tru-Mix Equipment Co., Medford, $114,340.

BRIDGES, Rough and Ready Creek-Dwight Creek—Three-span reinforced concrete deck girder bridges, 170' at Rough and Ready Creek, 144' at West Fork Illinois River, 139' at Elk Creek, on Redwood Highway about 5.2 to 11.9 mi. south of Cave Junction, Josephine County; FAP No. F-127(8). Award recommended to Peter Kiewit Sons' Co., Box 1777, Vancouver, Wash., $329,936.

BRIDGE, Grave Creek—118' reinforced concrete bridge using precast beams and prestressed precast beams on existing piers and abutments, on Josephine County Road No. 5 at Leland about three mi. west of Pacific Highway and 15 mi. north of Grants Pass, Josephine County; FAP No. DS-396(1). Award recommended to Ausland Construction Co., Box 437, Grants Pass, $22,191.

GRADING, Linn County Line-McKenzie River—Grading 6.07 mi. Pacific Highway from five to 11 mi. north of Eugene, Lane

●**STATE HIGHWAY PROJECTS—** **Salem, Ore.**

Bids to be opened 9 a.m., September 30, by Oregon State Highway Commission, 418 State Highway Bldg., Salem, on 18 highway construction projects. Plans with above office.

Award of contracts will be made at the October 23 meeting of the commission in Salem.

BRIDGE, Clear Creek—Reinforced concrete 144' structure on County Road No. FAS 810 at Viola about 12 mi. east of Oregon City, Clackamas County; FAP No. DS-395(1).

Quantities: 325 c.y. structure excavation; 300 c.y. class A concrete; 70,000 lb. metal reinforcing; removal and stockpiling existing truss.

BRIDGE, PAVING, Bear Creek—Reinforced concrete 84' bridge and 0.07 mi. grading, paving on Bear Creek County Road, 1.3 mi. south of Svensen, Clatsop County; FAP No. DS-405(1)21.

Quantities: 1,400 c.y. excavation; 850 c.y. crushed material; 8 ton asphalt; 148 c.y. class A concrete; 40,000 lb. metal reinforcing.

TRAILER SITES, Sunset Bay State Park—Construct 12 trailer sites, 50 campsites, access roads, utility building, latrine, water, sewer and electrical systems, Coos County; a State Project.

Quantities: 10,000 c.y. special borrow; 6,500 c.y. excavation; 400' of 12" corrugated metal pipe; 1,000 c.y. crushed material; 40 tons fence; 3,200' plastic pipe; 1,500' sewer pipe; 3 septic tanks; 63 tables, stoves, guard logs.

GRADING, BITUMINOUS SURFACING, Bullards Bridge-Bandon Section—Grading and bituminous surfacing 1.8 mi. Oregon Coast Highway near Bandon, Coos County; FAP No. DF 109(8).

Alternate bids to be received on surfacing—Alt. A: 24,300 ton plantmix asphaltic stabilized base; 1,390 ton 200-300 asphalt; 2,940 ton oil aggregates; 58 ton RS-2 asphalt. B: 29,000 ton crushed materials in base and oiling; 69 ton RS-3 asphalt; 96 ton 200-300 asphalt; 36 ton RS-2 asphalt; 8,890 ton asphaltic concrete mix in pavement; 530 ton 85-100 asphalt in mix. Other quantities: 218,000 c.y. excavation; 100 c.y. concrete in culvert 18,900 lb. metal reinforcing; 2,500' guardrail.

GRADING, PAVING, East Unit, Garden Valley Road Section—Grading, asphaltic concrete paving 0.52 mi. Garden Valley County Road north of Roseburg, Douglas County; FAP No. DUS 402(1).

Quantities: 7,320 c.y. excavation; 230 c.y. concrete in curbs, box culverts, walls; 6,900 c.y. crushed materials in base and oiling; 18 ton RC-3 asphalt; 2 ton RS-1 asphalt; 2,680 ton asphaltic concrete pavement.

ROCK PRODUCTION, Santiam Jct.-Suttle Lake—About 10,000 c.y. crushed rock or gravel in stockpiles on Santiam Highway near Hogg Butte, about 13 mi. northwest of Sisters, Jefferson and Linn counties.

GRADING, PAVING, BRIDGE, Redwood Highway Jct.—Grading, asphaltic concrete paving, constructing one 51'x100' reinforced concrete structure on Pacific and Redwood highway at Grants Pass, Josephine County; FAP U-131(19) and F-127(9).

Quantities: 169,000 c.y. excavation; 1,230 c.y. concrete in culverts, curbs et al; 2,400' guardrail; 55,370 ton crushed materials; 90 ton RC-3 asphalt; 80 ton 120-150 asphalt; 24 ton RS-1 asphalt; 13,600 ton asphaltic concrete pavement; 450 c.y. structure excavation; 1,603 c.y. concrete in structures; 503,050 lb. metal reinforcing; 130 sq. yd. waterproofing; 220' metal handrail; 380 sq. yd. slab riprap.

PAVING, N. Albany Jct.-Lebanon Road—Portland cement and asphaltic 6.96 mi. Pacific Highway, south from Albany, Linn County; FAIP I-5-4(22)228.

Quantities: 67,800 c.y. excavation; 500 c.y. concrete in curbs, gutters, islands; 32,000' guardrail; 500 guide posts; 80 tons fence; 325,000 ton crushed materials; 180 ton RC-3 asphalt; 110 ton 120-150 asphalt; 34 ton RS-asphalt; 34,600 ton asphaltic concrete pavement; 194,000 sq. yd. reinforced portland cement concrete pavement.

STRUCTURES, South Santiam Jct.-Lane County Line—Two undercrossings and six twin drainage structures on Pacific Highway from about 2.5 mi. to 17 mi. south of Albany, Linn County; FAIHP I-5-4(23)218.

Quantities: 1,500 c.y. structure excavation for reinforced concrete deck girder and slab span bridges; furnish, drive 8 test piles; 1,100' steel piling; 5,052' treated timber piling; 16,228' precast or prestressed concrete piling; 3,876 c.y. class A concrete; 1,085 class A-A concrete; 1,239,700 lb. metal reinforcing; 665' of 8" metal drain pipe.

GRADING, PAVING, STRUCTURES, Gwynn Undercrossing-Jonesboro and Tunnel-Namorf Sections—Grading and paving 10.7 mi., constructing two reinforced concrete deck girder bridges, stockpiling on Central Oregon Highway, 12 mi. east of Juntura and 30 mi. west of Vale, Malheur County; FAP F-326(6).

Quantities: 347,600 c.y. excavation; 85 c.y. concrete in culvert; 14,000 lb. metal reinforcing in culvert; 10,000' guardrail; 300 sight posts; 1,500 rods fence; 5,000 ton riprap; 104,300 ton crushed materials in base and oiling; 11,500 c.y. crushed material in stockpile; 160 ton MC-2 asphalt; 170 ton 120-150 asphalt; 70 ton RS-1 asphalt; 30,100 ton asphaltic concrete mix in pavement; 1,800 ton 85-100 asphalt in mixture; 340 c.y. structure excavation; 440' steel piling; 385' treated timber piling; 670 c.y. concrete in structures; 157,455 lb. metal reinforcing in structures.

MAINTENANCE BUILDING, Detroit—Construct 36'x11' masonry block building with asbestos shingle roof, one mi. east of Detroit, Marion County; a State Project.

ROADSIDE IMPROVEMENT, Battle Creek Jct.-N. Albany Jct.—Roadside improvement 14.12 mi. on Pacific Highway north of Albany, Marion and Linn counties; FAIHP I-5-4(24)235.

Quantities: 300 c.y. excavation; 4,100 c.y. topsoil; 900 trees; 11,000 shrubs; 19,000 vines; 1,000 lb. grass seed; 12,000 lb. organic fertilizer; 14,600 lb. inorganic fertilizer; 310 units sawdust.

LEVELING, OILING, N. Unit, Bomber Range Road Section—Stone leveling course and oiling 9.34 mi. Bomber Range Road about five mi. east of Boardman, Morrow County; FAP DS-406(1), S-406(2).

Quantities: 34,660 ton crushed material; 170 ton MC-2 asphalt; 200 ton 120-150 asphalt; 120 ton RS-1 asphalt.

GRADING, PAVING STRUCTURES, Hillsdale-Barbur Blvd.-Hamilton St.—Grading, paving, structures on Beaverton-Hillsdale and Pacific West Highways involving 0.63 mi. highway roadbed, 0.67 mi. widening, three reinforced concrete partial viaducts totaling 654' in length, one 315' retaining wall, one 553' reinforced concrete structure, steel overcrossing in Multnomah County; FAP DUS-190(6), DU-203(6).

Quantities: 42,000 c.y. embankment; 500' sewer pipe; 60' corrugated metal pipe; 620 c.y. concrete curbs, islands; 800' metal guardrail; 19,000 ton crushed material; 28 ton asphalt; 4,200 ton asphaltic concrete; 1,200 c.y. structure excavation; 3,800' steel piling; 2,700' treated timber piling; 1,675 c.y. class A concrete; 405,000 lb. metal reinforcing; 67,000 lb. structural steel; 1,770' pipe parapet rail.

GRADING, Tillamook Bay-Coleman Creek—Grading 0.87 mi. Cape Meares Loop Road about 3.5 mi. north of Oceanside, Tillamook County, involving about 53,330 c.y. excavation; FAP DS-1(6), S-1(7).

GUARDRAIL, Wallowa Lake Section—Construct about 20,500' of galvanized metal guardrail on 3.85 mi. of Joseph-Wallowa Lake Highway about two mi. southeast of Joseph, Wallowa County; FAP S-258(3).

PAVING, STOCKPILING, Big Eddy-Rufus Section—Asphaltic concrete paving 15.6 mi. and furnish crushed materials in stockpile on Columbia River Highway, east of The Dalles, in Wasco and Sherman counties; a State Project.

BRIDGE, Sunset Highway Undercrossing—Construct 236' reinforced concrete bridge of four prestressed beam spans on 1st St. in North Plains, Washington, FAP DS-186(18).

Quantities: 400 c.y. structure excavation; 7,370' treated timber piling; 477 c.y. class A concrete; 196 c.y. class A-A concrete; 89,500 lb. metal reinforcing; 16,000 lb. prestressing steel; 500' metal handrail; 200' of 8" metal drain pipe; 300 sq. yd. concrete slab riprap.

METRO PLAN— Seattle, Wash.

A meeting will be held October 9 by representatitves of the 10 cities within the Metropolitan Municipal Corporation which was authorized in the September election. A Metro Council will probably borrow operating funds on a temporary basis from King County or from one of the cities, pending receipt of authorized funds. First consideration of the council will be detail designs and plans for two projected sewage treatment plants, one servicing most of Seattle and north county areas which will be located at West Point, and the other processing sewage from East Lake Washington and South Seattle which will be placed near Renton.

Completion of the $80,000,000 Metro program will require 10 years. Principal source of operating funds will be charges to cities and sewer districts for use of Metropolitan sewage disposal facilities. Brown & Caldwell, consulting engineers, Jones Bldg., Seattle, made the surveys for the Metro plan.

WC 9-13

Advertisements for Bids

Advertisements reaching us not later than Wednesday noon will appear the same week.

THE RATE for Advertisements for Bids is 35 cents per line for the first insertion; 25 cents per line for each insertion thereafter.

STATE HIGHWAY PROJECTS
BIDS CLOSE 9 A.M., SEPTEMBER 24
Helena, Montana
NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the offices of said Commission in the City of Helena until 9:00 a.m. on September 24, 1958. The proposals will be publicly opened and read immediately thereafter. Your attention is directed to the 9:00 a.m. hour set for the opening of bids in Room 151 of the State Highway Department Building.

The Form for Bid Bond is no longer included in the "Instruction to Bidders" and no Bid Bond will be acceptable. No proposal will be considered unless accompanied by a proposal guaranty, in an amount of at least five (5) per cent of the bid, made unconditionally payable to the State Highway Commission of Montana, which at the bidder's option may be cash, cashier's check, certified check- bank- postal- or express money order, or bank draft.

1. **I-15-5(9)275 Unit 1**—Grade, aggregate surfacing, plant-mix bituminous surfacing, seal-coat oiling, and drain 8.337 miles on the Sun River-Great Falls Road in Cascade County, involving about 2,860,399 cu. yds. excavation; 912,745 mi. yds. overhaul; 9,077 units rolling; 58,009 M gals. watering; 147 hours watering; 334,562 tons crushed aggregate; 427,452 tons uncrushed aggregate; 4,-218.77 tons penetration asphalt; 568.84 tons cutback asphalt; 474.80 tons emulsified asphalt; 76,627 tons plant mix; 876 lin. ft. remove concrete curb; 100 lin. ft. relay pipe culverts; 604 cu. yds. gravel backfill; 431 lin. ft. structural plate pipe; 5,548 lin. ft. reinforced concrete pipe; 5,779 rods wire fence; 162 each fence panels; 33,850 lin. ft. guard rail; 293.4 sq. yds. concrete pavement; 988 lin. ft. concrete median curb; 21 each inlet covers; all lump sum weigh station; all lump sum conduit system; 249 lin. ft. jiggle bars; and other items. Project to be completed in 380 calendar days.

2. **I-15-5(9)275 Unit 2**—The construction of one 108.0' dual and one 218.9' single concrete structure, and three 17.25' concrete junior-grade separations on the Sun River-Great Falls Road in Cascade County, involving about 1,260 lin. ft. precast prestressed concrete beam; 1,935 cu. yds. structure excavation; 1,929.8 cu. yds. concrete; 219,064 lbs. reinforcing steel; all lump sum structural steel; all lump sum treated timber test piles; 11,350 lin. ft. furnishing treated timber piles; 10,958 lin. ft. driving trated timber piles; 550.42 lin. ft. steel beam bridge rail; 440 lin. ft. steel bridge rail; and all lump sum conduit system. Project to be completed by October 31, 1959.

3. **F 87(10) Unit 1 and DF 87(11)**—Grade, aggregate surfacing, plant-mix bituminous surfacing, seal-coat oiling, and drain 9.893 miles on the Plains-Elmo Road in Sanders County, involving about 233,625 cu. yds. excavation; 74,991 mi. yds. overhaul; 226,688 cu. yds. subgrade compaction; 799 units rolling; 3,423 M. Gals. watering; 58 hours watering; 173,063 tons crushed aggregate; 37,394 cu. yds. sand surfacing; 1,379.49 tons penetration asphalt; 222.39 tons cutback asphalt; 185.24 tons emulsified asphalt; 25,-082 tons plant mix; 130 cu. yds. riprap; 652 lin. ft. relay-pipe culverts; 1,626 cu. yds. gravel backfill; 2,391 lin. ft. corrugated metal pipe; 800 lin. ft. structural plate pipe; 5,158 lin. ft. reinforced concrete pipe; all lump sum remove existing structures; and other items. Project to be completed in 160 calendar days.

4. **F 87(10) Unit 2**—Construction of one 50.0' steel and concrete bridge on the Plains-Elmo Road in Sanders County, involving about all lump sum remove existing structure and maintain traffic; 300 lin. ft. precast prestressed concrete beam; 80 cu. yds. structure excavation; 88.9 cu. yds. concrete; 12,564 lbs. reinforcing steel; 1,100 lin. ft. furnishing treated timber piles; 1,080 lin. ft. driving treated timber piles; 105.46 lin. ft. steel beam bridge rail; and other items. Project to be completed by July 31, 1959.

5. **I 90-1(5)46**—The construction of one 620.-92' and one 800.92' steel and concrete bridge on the Superior-East and West Road in Mineral County, involving about 1,195 cu. yds. excavation; 56 each floor drains; 4,755 cu. yds. structure excavation; all lump sum shoring and cribs; 3,309.9 cu. yds. concrete; 364,573 lbs. reinforcing steel; all lump sum structural steel; all lump sum untreated timber test piles; all lump sum treated timber test piles; 11,770 lin. ft. furnishing untreated timber piles; 9,811.5 lin. ft. drive untreated timber piles; 3,442 lin. ft. driving treated timber piles; 3,540 lin. ft. furnish trated timber piles; and 2,847.0 lin. ft. steel bridge rail. Project to be completed by July 31, 1960.

6. **S 14(8)**—Grade, aggregate surfacing, plant-mix bituminous surfacing, seal-coat oiling, and drain 11.859 miles on the Ringling-Martinsdale Road in Meagher County, involving about 168,112 cu. yds. excavation; 60, 849 mi. yds. overhaul; 667 units rolling; 3,603 M gals. watering; 50 hours watering; 57,723 tons crushed aggregate; 1,009.56 tons asphalt cement; 193.58 tons cutback asphalt; 161.49 tons emulsified asphalt; 18,355 tons plant mix; 261 lin. ft. relay pipe culverts; 280 cu. yds. gravel backfill; 328 lin. ft. corrugated metal pipe; 340 lin. ft. structural plate pipe; 1,370 lin. ft. reinforced concrete pipe; and other items. Project to be completed in 160 calendar days.

7. **S 51(4)**—Grade, aggregate surfacing, and drain 4.597 miles on the Knobs-Webster-Baker Road in Fallon County, involving about 151,475 cu. yds. excavation; 5,538 mi. yds. overhaul; 104 units rolling; 2,785 M gals. watering; 26,029 tons crushed aggregate; 583 cu. yds. binder; 100 lin. ft. relay pipe culverts; 87 cu. yds. gravel backfill; 1,005 lin. ft. corrugated metal pipe; 116 lin. ft. structural plate pipe; and other items. Project to be completed in 120 calendar days.

8. **DS 64(2) and S 64(3)**.—Grade, aggregate surfacing, drain, and construction of one 57' treated timber bridge on 8.709 miles on the Shawmut-Hedgesville Road in Wheatland County, involving about 357,114 cu. yds. excavation; 69,852 mi. yds. overhaul; 171 units rolling; 6,195 M gals. watering; 42,752 tons crushed aggregate; 252 lin. ft. relay pipe culverts; 180 cu. yds. gravel backfill; 2,788 lin. ft. corrugated metal pipe; 190 lin. ft. structural plate pipe; 0.872 MBM untreated timber; 20.616 MBM treated timber; 630 ft. treated timber piles, and other items. Project to be completed in 160 calendar days.

9. **DS 178(4) and S 178(5)**—Grade, aggregate surfacing, plant-mix bituminous surfacing, seal-coat oiling, draining, and construction of one 75' timber bridge, a total of 7.759 miles on the Moiese-Charlo-Nine Pipe Road in Lake County, involving about 128,414 cu. yds. excavation; 7,995 mi. yds. overhaul; 874 units rolling; 3,462 M gals. watering; 42 hours watering; 78,994 tons crushed aggregate; 12,445 cu. yds. crushed aggregate; 836.43 tons penetration asphalt; 159.18 tons cutback asphalt; 132.79 tons emulsified asphalt; 15,775 tons plant mix; 100 lin. ft. relay pipe culverts; 31 cu. yds. gravel backfill; 2,668 lin. ft. corrugated metal pipe; all lump sum remove existing structure; 1.144 MBM untreated timber; 35.497 MBM treated timber; 1,540 lin. ft. treated timber piles; and other items. Project to be completed in 160 calendar days.

10. **S 185(1)**—Grade, aggregate surfacing, and drain 3.909 miles on the Santa Rita-Del Bonita Road in Glacier County, involving about 175,473 cu. yds. excavation; 43,141 mi. yds. overhaul; 484 units rolling; 3,298 M gals. watering; 33,541 tons crushed aggregate; 33 lin. ft. relay pipe culverts; 100 cu. yds. gravel backfill; 1,550 lin. ft. corrugated metal pipe; and other items. Project to be completed in 120 calendar days.

11. **DS 187(5)**—Grade, aggregate surfacing, and drain 6.394 miles on the Armells Creek-Hays-Harlem Road in Phillips County, involving about 545,407 cu. yds. excavation; 68,044 mi. yds. overhaul; 1,289 units rolling; 9,167 M gals. watering; 50,438 tons crushed aggregate; 1,178 cu. yds. binder; 2,356 mi. yds. overhaul of binder; 37 cu. yds. riprap; 100 lin. ft. relay pipe culverts; 378 cu. yds. gravel backfill; 1,966 lin. ft. corrugated metal pipe; 256 lin. ft. structural plate pipe; and other items. Project to be completed in 180 calendar days.

12. **S 192(2) Unit 2**—Grade, aggregate surfacing, plant-mix bituminous surfacing, seal-coat oiling, and drain, and construction of one 19', one 25' and one 29' treated timber bridge on 6.837 miles on the Adobe (Laurel) Road in Yellowstone County, involving about all lump sum clearing and grubbing;

114,956 cu. yds. excavation; 314,758 mi. yds. overhaul; 843 units rolling; 4,379 M gals. watering; 43 hours watering; 46,641 tons crushed aggregate; 88,995 tons uncrushed aggregate; 771.75 tons asphalt cement; 284.34 tons cutback asphalt; 14,058 tons plant mix; 440 cu. yds. riprap; 162 lin. ft. relay pipe culverts; 120 cu. yds. gravel backfill; 972 lin. ft. corrugated metal pipe; 122 lin. ft. structural plate pipe; 2,790 lin. ft. reinforced concrete pipe; all lump sum remove existing structure; 1,217 MBM untreated timber; 36.288 MBM trated timber; 1,320 lin. ft. treated timber piles; and other items. Project to be completed in 160 Calendar days.

13. **S 248(2) Unit 1**—Grade, aggregate surfacing, plant-mix bituminous surfacing, sealcoat oiling, and drain 12.143 miles on the East of Blackfoot-Northerly Road in Glacier County, involving about 771,325 cu. yds. excavation; 89,542 mi. yds. overhaul; 2,319 units rolling; 14,838 M gals. watering; 65 hours watering; 165,412 tons crushed aggregate; 1,264.41 tons penetration asphalt; 242.25 tons cutback asphalt; 201.40 tons emulsified asphalt; 22,991 tons plant mix; 100 lin. ft. relay pipe culverts; 82 cu. yds. gravel backfill; 4,510 lin. ft. corrugated metal pipe; 84 lin. ft. structural plate pipe; and other items. Project to be completed in 300 calendar days.

14. **S 248(2) Unit 2**—Construction of one 19.0' and 38.0', one 50.0' and one 100.0' treated timber bridge on the East of Blackfoot-Northerly Road in Glacier County, involving about 400 cu. yds. excavation; all lump sum remove existing structure and maintain traffic; 3,096 lbs. structural steel; 3.213 MBM untreated timber; 94.257 MBM treated timber; 2,245 lin. ft. treated timber piles; and other items. Project to be completed by June 30, 1959.

15. **DS 289(7) and DS 346(4)**—Grade, aggregate surfacing, and drain 7.676 miles on the Red Lodge-Columbus Road in Carbon and Stillwater counties, involving about all lump sum clearing and grubbing; 231,193 cu. yds. excavation; 24,830 mi. yds. overhaul; 599 units rolling; 4,142 M Gals. watering; 36,523 tons crushed aggregate; 1,256 lin. ft. corrugated metal pipe; 310.14 cu. yds. riprap; 424 lin. ft. structural plate pipe; 4,169 lin. ft. reinforced concrete pipe; all lump sum remove existing structures; 100 lin. ft. relay pipe culverts; 300 cu. yds. gravel backfill; and other items. Project to be completed in 160 calendar days.

The above-listed quantities are approximate only.

Prequalification of bidders, at least 72 hours prior to the opening of bids, is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission, in Helena, Montana. Plans and specifications for all Federal aid projects are also on file and may be examined in the offices of the Bureau of Public Roads, at Helena, Montana.

STATE HIGHWAY PROJECTS
BIDS CLOSE 10 A.M., OCTOBER 7
Olympia, Washington
NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, October 7, 1958, until 10:00 A.M., and will then and there be opened and publicly read for the construction of the improvements listed below.

Bid proposals delivered in person will be received only at the Reception Desk located on the first floor of the Transportation Building.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashiers' check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payments to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal Funds have been allocated for items Nos. 1 to 9 inclusive.

The improvements for which bids will be received follow:

1. Clearing, Draining, Grading, Surfacing, Constructing Bituminous Surface Treatment and Cement Treated Base, Paving with Asphaltic Concrete and Fencing on 1.799 miles of Primary State Highway No. 1 in Pierce County, SOUTH 72ND STREET TO SOUTH 40TH STREET IN TACOMA, FAP No. I-5-3(33)130, involving about 78 acres of Clearing, 774,980 cubic yards of Common Excavation and Borrow, 134,310 cubic yards of Unsuitable Foundation Excavation, 10,100 tons of Gravel Surfacing, Selected Roadway Borrow and Crushed Surfacing, 245 cubic yards of Crushed Cover Stone and Prime Coat Aggregate, 30 tons of Asphalt Cement, 2,860 tons of Asphaltic Concrete, 510 barrels of Portland Cement, 2,100 tons of Cement Treated Base, 3,680 linear feet of Cement Concrete Curb and Gutter, 1,350 square yards of Cement Concrete Sidewalk, 980 linear feet of Mountable Cement Concrete Curb and Gutter, 2,560 linear feet of Precast Traffic Curb, 27 cubic yards of Concrete, 27,502 linear feet of Concrete Pipe, 18,884 linear feet of Metal Pipe, 114 linear feet of Steel Pipe, 200 linear feet of Galvanized Pipe, 17,570 linear feet of Chain Link Fence and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
2. Draining, Grading, Surfacing, Constructing Bituminous Surface Treatment, Fencing and Constructing a Steel Plate Girder Bridge on 1.921 miles of Primary State Highway No. 18 in Adams County, RITZVILLE VICINITY, FAP No. I-IG-90-4(10)214, involving about 366,550 cubic yards of Common Excavation, 113,740 cubic yards of Solid Rock Excavation, 36,660 cubic yards of Top Soil, 2,000 tons of Selected Roadway Borrow, 7,110 tons of Crushed Surfacing, 65 tons of Asphalt Cement, 2,974 linear feet of Concrete Pipe, 237 linear feet of Metal Pipe, 8,635 linear feet of Chain Link Fence, 17,285 linear feet of Wire Fence, 2,082 cubic yards of Concrete, 231,180 pounds of Steel Reinforcing Bars, a lump sum bid for Structural Carbon Steel (about 660,000 pounds), a lump sum bid for Wrought Iron Plates (about 123,000 pounds), 629 linear feet of Welded Pipe Railing, 2 MBM of Treated Timber Planking, a lump sum bid for Painting Bridge Steel and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
3. Constructing Two Precast Prestressed Concrete Girder Bridges on Primary State Highway No. 1 in King County, N.E. 8TH STREET UNDERCROSSING-BELLEVUE, FAP No. I-B5-3(37)168, involving about 1,161 linear feet of Standard Bridge Railing, 3,432 linear feet of Prestressed Concrete Girders, 1,245 cubic yards of Concrete, 250,000 pounds of Steel Reinforcing Bars and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
4. Draining, Grading, Surfacing and Constructing Bituminous Surface Treatment on 1.579 miles of Primary State Highway No. 10 in Chelan County, KNAPPS HILL NORTHERLY, FAP No. F-029-1(5), involving about 63,800 cubic yards of Common Excavation, 42,820 cubic yards of Solid Rock Excavation, 15,270 tons of Ballast, Crushed Surfacing and Crushed Cover Stone, 63 tons of Asphalt Cement, 862 linear feet of Concrete Pipe, 2,796 linear feet of Beam Guard Rail, 50 Guide Posts and other items.
5. Grading, Surfacing, Paving with Bituminous Plant Mix and Widening an Existing Reinforced Concrete Arch Bridge on 0.128 mile of Primary State Highway No. 9 in Clallam County, ELWHA RIVER BRIDGE, No. 9/306 AND APPROACHES, FAP No. F-007-3(7), involving about 1,730 cubic yards of Common Borrow, 125 tons of Crushed Surfacing, 450 tons of Bituminous Plant Mix, 456 linear feet of Reinforced Concrete Cribbing Headers and Stretchers, 408 cubic yards of Concrete, 147,220 pounds of Steel Reinforcing Bars, 906 linear feet of Special Bridge Railing, 177 linear feet of Beam Guard Rail and other items.
6. Installing Illumination on Primary State Highway No. 1 in Pierce County, BRIDGEPORT WAY TO SOUTH 72ND STREET IN TACOMA—ILLUMINATION, FAP No. I-5-3(32)126, involving 4 lump sum bids for Installing Illumination. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
7. Signing on State Highways Nos. 2 and 2-A in King County, PSH No. 1 TO AUBURN AND N.E. 132ND STREET TO JCT. PSH No. 2—SIGNING, FAP Nos. F-046-1(7) and U-025-1(14), involving 2 lump sum bids for Signing.
8. Constructing a Through Steel Truss Bridge with Plate Girder and Reinforced Concrete Approach Spans on 0.095 mile of a Skagit County Road, SAUK RIVER BRIDGE, FAS No. S-0798(4), involving about 200 tons of Loose Riprap, 690 cubic yards of Concrete, 100,000 pounds of Steel Reinforcing Bars, a lump sum bid for Structural Carbon Steel (about 348,000 pounds), 1,300 linear feet of Untreated Timber Piling, 880 linear feet of Concrete Piling, 1,005 linear feet of Metal Bridge Railing, a lump sum bid for Steel Grid Floor and other items.
9. Draining, Grading and Surfacing on 2.797 miles of a Spokane County Road, MARTIN ROAD RECONSTRUCTION, FAS No. S-0671(2) and County Project, involving about 24,180 cubic yards of Common Excavation, 19,830 cubic yards of Solid Rock Excavation, 19,860 tons of Crushed Surfacing, 566 linear feet of Metal Pipe and other items.
10. Constructing a Frame Building with Metal Covering in Clark County, DISTRICT 4 MATERIALS LABORATORY, a State Project, involving a base bid for the Entire Improvement.
11. Surfacing and Stockpiling Crushed Surfacing on 1.000 mile of a State Park Road in Spokane County, MOUNT SPOKANE STATE PARK-LINDERS RIDGE TO SKI AREA, a State Project, involving about 10,400 cubic yards of Stripping Quarries and Pits, 10,400 cubic yards of Crushed Surfacing and other items.

STATE HIGHWAY PROJECTS

BIDS CLOSE 10 A.M., SEPTEMBER 23

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, September 23, 1958, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

Bid proposals delivered in person will be received only at the Reception Desk located on the first floor of the Transportation Building.

All bid proposals shall be accompanied by a bid proposal in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from the office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal Funds have been allocated for items Nos. 1 to 6 inclusive.

The improvements for which bids will be received follow:

1. Clearing, Draining, Grading, Surfacing, Constructing Cement Treated Base and Bituminous Surface Treatment, Paving with Asphaltic Concrete and Fencing on 1.334 miles of Primary State Highway No. 5 in Lewis County, SALKUM TO MILL CREEK, FAP No. DF-016-1(8), involving about 9 acres of Clearing, 85,510 cubic yards of Common Excavation, 19,100 tons of Selected Roadway Borrow, 5,150 tons of Crushed Surfacing and Crushed Cover Stone, 380 cubic yards of Mineral Aggregate and Prime Coat Aggregate, 47 tons of Asphalt Cement, 4,100 tons of Asphaltic Concrete, 1,710 barrels of Portland Cement, 5,790 tons of Cement Treated Base, 30 cubic yards of Concrete, 5,620 pounds of Steel Reinforcing Bars, 1,970 linear feet of Concrete Pipe, 630 linear feet of Galvanized Iron Pipe, 854 linear feet of Beam Guard Rail, 85 Guide Posts, 2,280 linear feet of Wire Fence and other items.
2. Constructing a Reinforced Concrete Box Girder Bridge on Primary State Highway No. 1 in Cowlitz County, LONGVIEW WYE INTERCHANGE—A AND H LINES SEPARATION, FAP No. I-5-1(21)37, involving about 50 cubic yards of Common Excavation, 5,630 cubic yards of Unclassified Borrow, 445 cubic yards of Crushed Surfacing and Ballast, 95 tons of Asphaltic Concrete, 188 cubic yards of Concrete, 29,000 pounds of Steel Reinforcing Bars, a lump sum bid for Superstructure (about 396 cubic yards of Concrete and 118,000 pounds of Steel Reinforcing Bars), 351 linear feet of Standard Bridge Railing, 3,300 linear feet of Treated Timber Piling and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
3. Draining, Grading and Surfacing on 4.727 miles of Yakima County Roads, WANETA ROAD AND FORSELL ROAD, FAP Nos. DS-0702(1) and DS-1383(1), involving about 23,690 cubic yards of Common Excavation, 56,210 tons of Ballast, Crushed Surfacing and Crushed Stone, 1,935 linear feet of Concrete Pipe and other items.
4. Draining, Grading and Surfacing on 2.588 miles of a Thurston County Road, ENDICOTT ROAD, FAS No. S-1062(1), involving about 20,650 cubic yards of Unclassified Excavation, 10,530 cubic yards of Selected Roadway Borrow, 3,430 cubic yards of Crushed Surfacing, 579 linear feet of Concrete Pipe and other items.
5. Clearing, Draining, Grading and Fencing on 1.441 miles of an Okanogan County Road, JOHNSON CREEK ROAD, FAS No. S-1165(1), involving about 23,460 cubic yards of Unclassified Excavation, 60 cubic yards of Loose Riprap, 604 linear feet of Metal Pipe, 3,600 linear feet of Wire Fence and other items.
6. Draining, Grading and Surfacing on 4.437 miles of a Walla Walla County Road, MIDDLE WAITSBURG ROAD, FAS No. S-0635(3), involving about 4.5 miles of Excavation of Shoulders, 9,400 cubic yards of Selected Roadway Borrow, 3,900 cubic yards of Crushed Surfacing, 50 linear feet of Metal Pipe and other items.
7. Draining, Grading, Surfacing, Constructing Bituminous Surface Treatment and Paving with Asphaltic Concrete and Cement Concrete on 0.310 mile of Primary State Highway No. 1 in Skagit County, KINCAID STREET TO DIVISION STREET IN MOUNT VERNON, a State Project, involving about 880 cubic yards of Unclassified Excavation, 1,100 cubic yards of Selected Roadway Borrow, 305 cubic yards of Crushed Surfacing, Crushed Cover Stone and Prime Coat Aggregate, 8 tons of Asphalt Cement, 920 tons of Asphaltic Concrete, 150 linear feet of Asphaltic Concrete Curb, 123 square yards of Cement Concrete Pavement and Driveway, 60 square yards of Cement Concrete Sidewalk, 382 linear feet of Cement Concrete Curb and Gutter, 80 linear feet of Concrete Pipe and other items.

BRIDGES

BIDS CLOSE 11 A.M., P.S.T., OCTOBER 7

Juneau, Alaska

NOTICE TO CONTRACTORS

September 10, 1958, Juneau, Alaska; Department of Commerce, Bureau of Public Roads, Region 10. Sealed bids in single copy for furnishing all labor, equipment and materials and performing all work for Project AFH 11-E1, bridges at Granite Creek and Station 355+00, Sitka, Alaska, First Judicial Division, Territory of Alaska, described herein, will be received until 11:00 a.m., P.S.T., October 7, 1958, in Room 319, Federal Building, Juneau, Alaska. The project consists of construction of two bridges located approximately 4.5 and 7 miles northwest of Sitka on the Sitka Highway. Principal items of work consist of the following: structural steel piles 10BP42, furnished—1,400 lineal feet; structural steel piles 10BP42, driven—38 each; Class "A" concrete, 259.3 cubic yards; reinforcement steel, intermediate grade—47,160 pounds. Plans and specifica-

tions may be obtained free of charge by all who have a bonafide need for them for bidding purposes at Room 311, Federal Building, Juneau, Alaska. It is requested that plans be returned to the Division Engineer, Bureau of Public Roads, Juneau, Alaska. A bid guaranty in a minimum amount of 5% of the bid amount and conforming to the requirements of Standard Form 22 shall be required with each bid. If the bidder fails to accompany his bid with the required bid guaranty, his bid will not be read or otherwise considered. Telegraphic notification of execution of a Bid Bond does not meet the above requirement of a bid bond accompanying a bid. E. H. Swick, Regional Engineer.

STATE HIGHWAY PROJECTS

BIDS CLOSE 9 A.M., SEPTEMBER 30

Salem, Oregon

NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received and opened by the State Highway Commission, Room 418, State Highway Building in Salem, Oregon, at 9:00 a.m., on Tuesday, September 30, 1958. No award of contractors will be made on September 30 but all bids will be referred to the Highway Commission for award at its next meeting in Salem on October 23, 1958.

BIDS TO BE OPENED AT 9:00 A.M. ON TUESDAY, SEPTEMBER 30, 1958.

CLACKAMAS COUNTY: Clear Creek Bridge. FAP No. DS-395(1). 144' reinf. conc. structure on County Road No. FAS 810 at Viola, about 12 mi. east of Oregon City. Requires approx. 325 cu. yds. excav.; 300 cu yds. Class "A" Concrete; 70,000 lbs. metal reinf.; and removal and stockpiling of existing truss.

CLATSOP COUNTY: Bear Creek Bridge Section. 84' reinf. conc. bridge and 0.07 mi. grading and paving on Bear Creek County Road, 1.3 mi. south of Svensen. FAP No. DS-405(1)21. Includes following approx. quantities: 1,400 cu. yds. gen. excav.; 850 cu. yds. crushed material; 8 tons asphalt; 148 cu. yds. Class "A" Concrete; and 40,000 lbs. metal reinf.

COOS COUNTY: Sunset Bay State Park Extension. State project. Construct 12 trailer sites, 50 campsites, access roads, utility bldg., latrine, and water, sewer and electrical systems. Involves clearing and grubbing and approx. 10,000 cu. yds. special borrow; 6,500 cu. yds. gen. excav.; 400 lin. ft. 12" corr. metal pipe; 1,000 cu. yds. crushed material; 40 rods fence; building material; 32,00 lin. ft. plastic pipe; 1,500 lin. ft. sewer pipe; 36 faucets; 3 septic tanks; and 63 tables, stoves and guard logs.

COOS COUNTY: Bullards Bridge-Bandon Section of the Oregon Coast Highway, near Bandon. FAP No. DF109(8). 1.8 mi. grading and bituminous surfacing. Alternate bids will be received on two types of surfacing. Requires approx. 218,000 cu. yds. excav.; 100 cu. yds. conc. in box culvert; 18,900 lbs. metal reinf.; and 2,500 lin. ft. guardrail. Alternate "A" requires approx. 24,300 tons plant-mix asphaltic stabilized base; 1,390 tons 200-300 asphalt; 2,940 tons oil aggregates; and 58 tons RS-2 asphalt. Alternate "B" requires approx. 29,000 tons crushed materials in base and oiling; 68 tons RC-3 asphalt; 96 tons 200-300 asphalt; 36 tons RS-2 asphalt; 8,890 tons asphaltic conc. mixture in pavement; and 530 tons 85-100 asphalt in mixture.

DOUGLAS COUNTY: East Unit, Garden Valley Road Section of the Garden Valley County Road, just north of Roseburg. FAP No. DUS 402(1). 0.52 mi. grading and paving. Requires approx. 7,320 cu. yds. excav.; 230 cu. yds. conc. in curbs, box culverts and walls; 6,900 cu. yds. crushed materials in base and oiling; 18 tons RC-3 asphalt; 2 tons RS-1 asphalt; and 2,680 tons asphaltic conc. pavement.

JEFFERSON AND LINN COUNTIES: Santiam Jct.-Suttle Lake Rock Production Project on the Santiam Highway, near Hogg Butte, about 13 mi. northwesterly of Sisters. State project. Requires approx. 10,000 cu. yds. crushed rock or gravel in stock piles.

JOSEPHINE COUNTY: Redwood Highway Jct. Section of the Pacific and Redwood Highways, at Grants Pass. FAP Nos. U-131 (19) and F-127(9). Grading, paving and construction of one 51' and one 100' reinf. conc. structure. Requires approx. 169,000 cu. yds. excav.; 1,230 cu. yds. conc. in box culverts, walls, curbs, walks and islands; 2,400 lin. ft. guardrail; 55,370 tons crushed materials in base and oiling; 90 tons RC-3 asphalt; 80 tons 120-150 asphalt; 24 tons RS-1 asphalt; 13,600 tons asphaltic conc. pavement; 450 cu. yds. struct. excav.; 1,603 cu. yds. conc. in structures; 503,050 lbs. metal reinf.; 130 sq. yds. waterproofing; 220 lin. ft. metal handrail; and 380 sq. yds. conc. slab riprap.

LINN COUNTY: N. Albany Jct.-Lebanon Road Section of the Pacific Highway, south from Albany. Federal Aid Interstate Highway Project No. I-5-4(22)228. 6.96 mi. paving. Requires approx. 67,800 cu. yds. excav.; 500 cu. yds. conc. in curbs, gutters and islands; 32,000 lin. ft. guardrail; 500 guide posts; 80 rods fence; 325,000 tons crushed materials in base and oiling; 180 tons RC-3 asphalt; 110 tons 120-150 asphalt; 34 tons RS-1 asphalt; 34,600 tons asphaltic conc. pavement; and 194,000 sq. yds. reinf. portland cement conc. pavement.

LINN COUNTY: South Santiam Jct.-Lane County Line (Structure) Section of the Pacific Highway in Linn County. Construction of two undercrossing and six twin drainage structures from approx. 2.5 mi. to 17 mi. south of Albany. Federal Aid Interstate Highway Project No. I-5-4(23)218. Reinf. conc. deck girder and slab span bridges require approx. 1,500 cu. yds. struc-excavation; furnishing and driving 8 test piles; 1,100 lin. ft. steel piling; 5,052 lin. ft. treated timber piling; 16,228 lin. ft. of precast or prestressed conc. piling; 3,876 cu. yds. Class "A" Conc.; 1,085 cu. yds. Class "A-A" Conc.; 1,239,700 lbs: metal reinf.; and 665 lin. ft. 8" metal drain pipe.

MALHEUR COUNTY: Gwynn Undercrossing-Jonesboro and Tunnel-Namorf Sections of the Central Oregon Highway, 12 mi. east of Juntura and 30 mi. west of Vale. FAP No. F-326(6). 10.7 mi. grading and paving; construction of two reinf. conc. deck girder bridges; also furnishing crushed materials in stock pile. Requires approx. 347,600 cu. yds. excav.; 85 cu. yds. conc. in box culvert; 14,000 lbs. metal reinf. in box culvert; 10,000 lin. ft. guardrail; 300 sight posts; 1,500 rods fence; 5,000 tons riprap; 104,300 tons crushed materials in base and oiling; 11,500 cu. yds. crushed materials in stock pile; 160 tons MC-2 asphalt; 170 tons 120-150 asphalt; 70 tons RS-1 asphalt; 30,100 tons asphaltic conc. mixture in pavement; 1,800 tons 85-100 asphalt in mixture; 340 cu. yds. struct. excav.; 440 lin. ft. steel piling; 385 lin. ft. treated timber piling; 670 cu. yds. conc. in structures; and 157,455 lbs. metal reinf. in structures.

MARION COUNTY: Detroit Maintenance Building. State project. 36'x111' masonry block building with asbestos shingle roof, one mi. east of Detroit.

MARION AND LINN COUNTIES: Battle Creek Jct.-N. Albany Jct. Section of the Pacific Highway, north of Albany. Federal Aid Interstate Highway Project No. I-5-4(24) 235. 14.12 mi. roadside improvement. Requires approx. 300 cu. yds. excav.; 48 hrs. tractor and dozer time; 4,100 cu. yds. of topsoil; 900 trees; 11,000 shrubs; 19,000 vines; 1,000 lbs. grass seed; 12,000 lbs. organic fertilizer; 14,600 lbs. inorganic fertilizer; and 310 units of sawdust.

MORROW COUNTY: N. Unit, Bomber Range Road Section of the Bomber Range Road, about 5 mi. east of Boardman. FAP Nos. DS-406(1) and S-406(2). 9.34 mi. stone leveling course and oiling. Requires approx. 34,000 tons crushed material in leveling course and oiling; 170 tons MC-2 asphalt; 200 tons 120-150 asphalt; and 120 tons RS-1 asphalt.

MULTNOMAH COUNTY: Hillsdale-Barbur Blvd.-Hamilton St. Structures, Grading and Paving on Beaverton-Hillsdale and Pacific West Highways. 0.63 mi. highway roadbed, 0.67 mi. widening, 3 reinf. conc. partial viaducts totaling 654' in length, one 315' retaining wall, and one 553' reinf. conc. and setruct. steel overcrossing. FAP Nos. DUS-198(6) and DU-203(6). Requires approx. 42,000 cu. yds. embankment; 500 lin. ft. sewer pipe; 60 lin. ft. corr metal pipe; 620 cu. yds. conc. curbs. and islands; 800 lin. ft. metal guardrail; 19,000 tons crushed material; 28 tons asphalt; 4,200 tons asphaltic conc., 1,200 cu. yds. struct. excav.; 3,800 lin. ft. steel piling; 2,700 lin. ft. treated timber piling; 1,675 cu. yds. Class "A" Conc.; 405,000 lbs. metal reinf.; 67,000 lbs. struct. steel; 1,770 lin. ft. pipe parapet rail.

TILLAMOOK COUNTY: Tillamook Bay-Coleman Creek Section of the Cape Meares Loop Road, about 3.5 mi. north of Oceanside. FAP Nos. DS-1(6) and S-1(7). 0.87 mi. grading. Requires approx. 53,330 cu. yds. of excav.

WALLOWA COUNTY: Wallowa Lake Section of the Joseph-Wallowa Lake Highway, about 2 mi. southeast of the City of Joseph. FAP No. S-258.(3). 3.85 mi. metal guardrail. Requires approx. 20,500 lin. ft. galv. metal guardrail.

WASCO AND SHERMAN COUNTIES: Big Eddy-Rufus Section of the Columbia River Highway, east of The Dalles. State project. 15.6 mi. paving; also furnishing crushed materials in stock piles. Requires approx. 5,400 cu. yds. gravel borrow; 19,800 tons crushed materials in base and oiling; 10,000 cu. yds crushed materials in stock piles; 16 tons RC-3 asphalt; 560 tons 120-150 asphalt; 210 tons RS-1 asphalt; 37,600 tons asphaltic conc. mixture in pavement; and 2,260 tons 85-100 asphalt in mixture.

WASHINGTON COUNTY: Sunset Highway Undercrosisng of First St. at North Plains. 236' reinf. conc. bridge of 4 prestressed beam spans. FAP No. DF-186(18). Requires approx. 400 cu. yds. struct. excav.; 7,370 lin. "A" Conc.; 196 cu. yds. Class "A-A" Conc.; 89,500 lbs. metal reinf.; 16,000 lbs. prestressed beam spans. FAP No. DF--186(18). Requires approx. 400 cu. yds. struct. excav.; 7,370 lin. ft. treated timber piling; 477 cu. yds. Class "A" Conc.; 196 cu. yds. Class "A-A" Conc.; 89,500 lbs. metal reinf.; 16,000 lbs. prestressing steel; 500 lin. ft. metal handrail; 200 lin. ft. 8" metal drain pipe; and 300 sq. yds. conc. slab riprap.

THE MINIMUM HOURLY WAGE RATES TO BE PAID TO LABOR EMPLOYED ON THE ABOVE ADVERTISED AID INTERSTATE PROJECTS HAVE BEEN PREDETERMINED BY THE SECRETARY OF LABOR AND ARE SET FORTH IN THE SPECIAL PROVISIONS APPLICABLE TO THOSE RESPECTIVE PROJECTS. THE MINIMUM HOURLY WAGE PAID TO LABOR EMPLOYED ON FEDERAL AID PRIMARY AND FEDERAL AID URBAN PROJECTS SHALL BE AS FOLLOWS: SKILLED LABOR, $2.85 PER HOUR; INTERMEDIATE LABOR, $2.60 PER HOUR; UNSKILLED LABOR, $2.50 PER HOUR.

Prequalification of bidders will be required in accordance with the provisions of ORS 279.010 to 279.024, inclusive. Full information for bidders may be obtained at the office of the Oregon State Highway Commisison, State Highway Building, Salem, Oregon. Plans and specifications may be inspected at the same place and may be obtained by eligible bidders upon payment of $2.00 for each set.

Plans and specifications may also be inspected at the office of the Associated General Contractors in Portland, Seattle, Spokane, and Boise; and at the Builders Exchange Cooperative, Portland.

The right is reserved to reject any and all proposals or to accept the proposal deemed best for the State of Oregon.

Model Motel

Deluxe Seattle Motel Combines Unusual Design with High Quality Methods and Materials

TOWNE MOTEL, Seattle, Washington
Owner: **TOWNE MOTEL, INC.**
Architect: **DOUGLAS VICARY**
General Contractor: **MORRIS MILROY**
Masonry Contractor: **ERNEST LUCKER**
'Incor' Pumice Concrete Blocks Supplied by
LAYRITE, INC.
All of Seattle

● You'll find new ideas galore in Seattle's new Towne Motel—built to meet the growing tourist demand, and with an eye on 1960, when the city plans its own World Fair.

Three full floors . . . ground-level parking . . . elevator service . . . central location . . . 100 luxurious rooms . . . 33,690 square feet of rentable space in a 47' x 239' building . . . these are some of the Towne Motel's outstanding features.

Sound, attractive masonry walls throughout are made of 'Incor'® pumice concrete blocks, bedded with Lone Star Masonry Cement mortar—assuring fire-safety, weather protection, and low-cost upkeep.

Why is Lone Star Masonry Cement specified so often?

SAVES WORK—Add only sand and water, get a good buttery mortar that works easier and faster, finishes up smoother.

SAVES MONEY—Inherent water repellency and low absorption *make the addition of any waterproofing material unnecessary.*

ASSURES QUALITY PERFORMANCE—Product quality is rigidly controlled at the plant . . . your mortar quality is easy to control because only sand and water are added. *Uniformity is the key to quality.*

The mason's skill is at its best—and the owner's satisfaction is greatest—when Lone Star Masonry Cement is on the job!

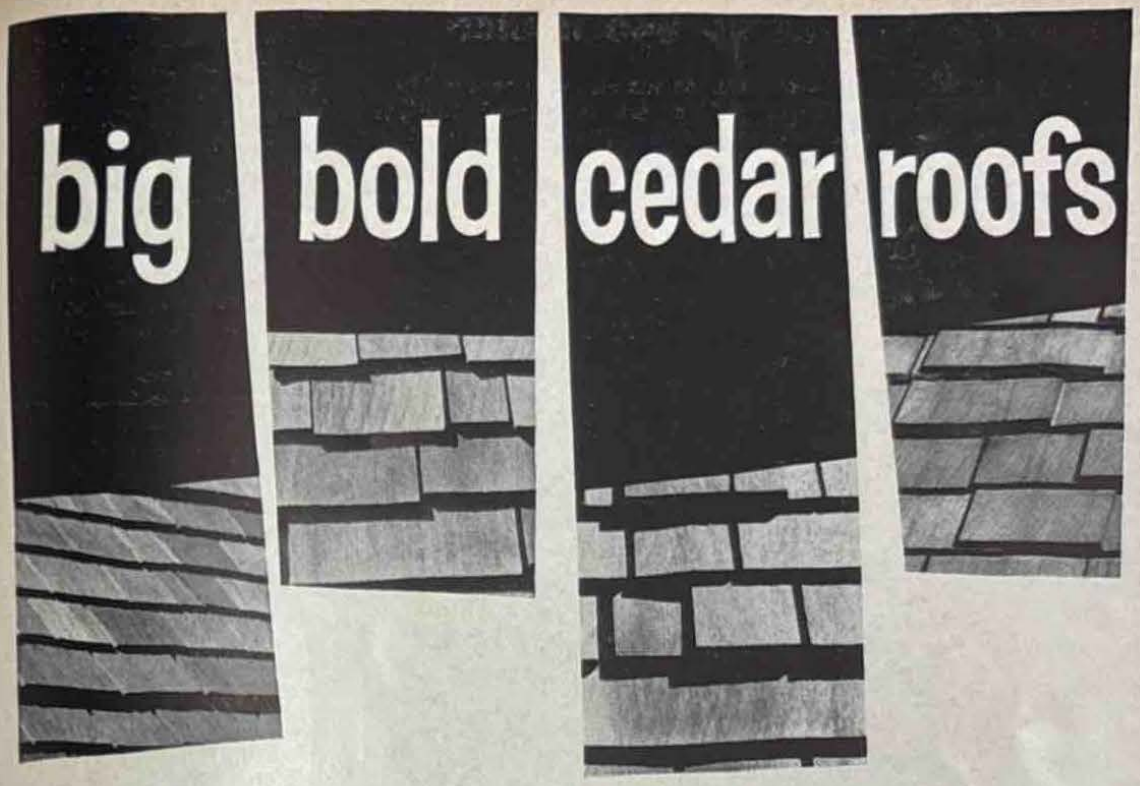
THE COVER

Westmoor High School, Daly City, Calif. Mario J. Ciampi, Architect; Karl Riek photo.



The qualities of cedar shingle roofing transcend passing fancy. Custom home designs–*of any period*–are characterized by expansive roof areas, distinctive roof textures, important roof pitches. The versatility and integrity of natural materials–notably cedar shingles for exteriors–afford the designer limitless scope, infinite expression.

Shingles of Western Red Cedar have that vital *third dimension* . . . the thick butt-lines that catch the sun and create shadow accents of dramatic depth. Only cedar shingles offer the natural graining and rich texture of the genuine. Because only cedar *is* the genuine.

When you think of roof design . . . think *big* . . . think *bold* . . . *and you will think of cedar!*

RED CEDAR SHINGLE BUREAU

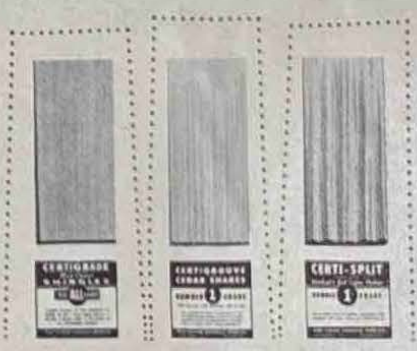
550 Burrard Street, Vancouver 1, B. C.



September volume up $46 million

For the fifth consecutive month western building permits show an impressive gain over last year's dollar volume. Total for September is $225 million, topping September 1957 by $46¼ million and also well head of 1956.

Gains are widespread. California, up $20¼ million, and Washington, up $20¾ million, lead the way. Oregon shows a $4 million increase and Montana and Idaho, each $½ million.

The figures at the end of the third quarter are even more impressive. The nine-month total is $2,023,917,633, an increase of $197¼ million over the corresponding period in 1957. If the permit values for the last three months maintain a bare average level, the 1958 total will be well above 1957 and will even pass the 1956 volume.

California is now running $111¼ million ahead of last year. The other four states also are well ahead.

	Jan.-Sept. 1958	Jan.-Sept. 1957
Calif.	$1,595,512,941	$1,484,242,453
Ore.	134,835,300	94,180,278
Wash.	251,334,948	211,563,681
Mont.	21,174,893	18,525,581
Idaho	21,059,633	18,165,848

The qualities of cedar shingle roofing transcend passing fancy. Custom home designs—*of any period*—are characterized by expansive roof areas, distinctive roof textures, important roof pitches. The versatility and integrity of natural materials—notably cedar shingles for exteriors—afford the designer limitless scope, infinite expression.

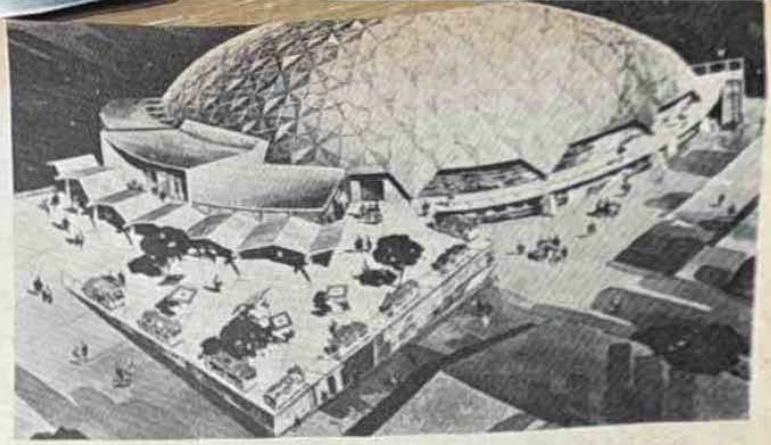
Shingles of Western Red Cedar have that vital *third dimension* . . . the thick butt-lines that catch the sun and create shadow accents of dramatic depth. Only cedar shingles offer the natural graining and rich texture of the genuine. Because only cedar *is* the genuine.

When you think of roof design . . . think *big* . . . think *bold* . . . *and you will think of cedar!*

RED CEDAR SHINGLE BUREAU

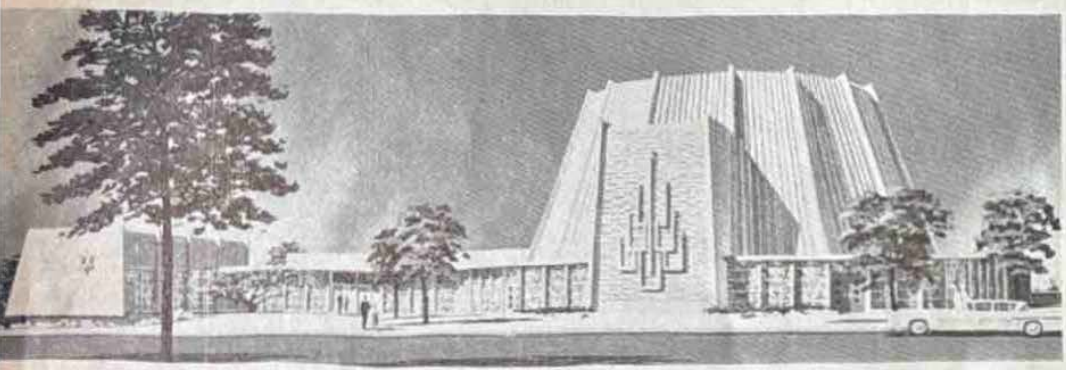
5510 White Building, Seattle 1, Washington
550 Burrard Street, Vancouver 1, B.C.

PROJECT PREVIEW



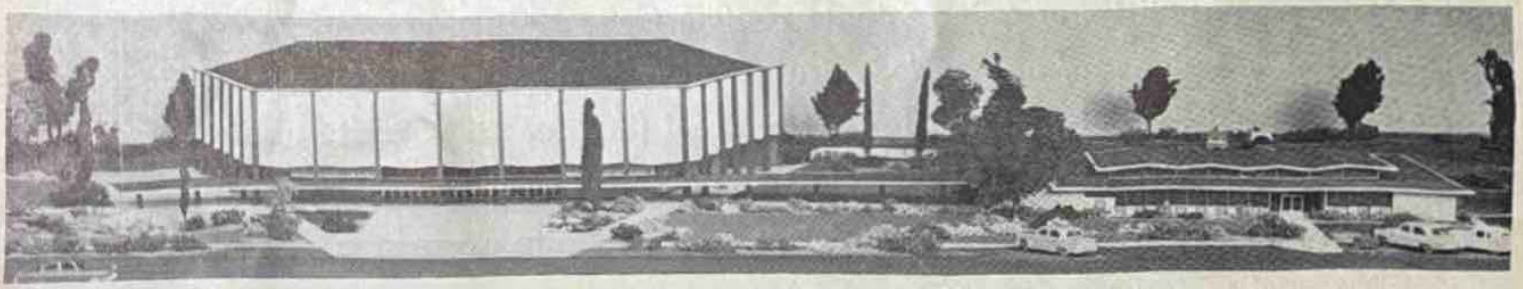
ALUMINUM DOME

will house physical education plant at Palomar College in San Marcos, Calif. Kaiser-developed shell (seventh to be erected in U. S. and Hawaii) will feature 575 curved, diamond shaped panels integrally strengthened with aluminum struts. Brick will be used to enclose perimeter and walls of classrooms, lobby, office and dressing rooms extending from front semi-circle. Architects: Paderewski, Mitchell & Dean.



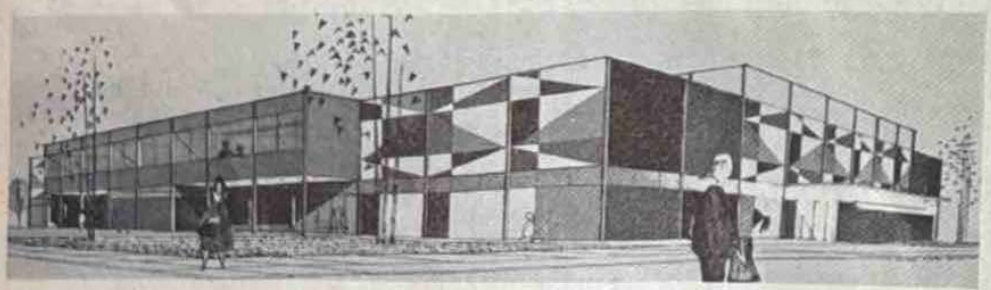
MAIN SANCTUARY

of Temple de Hirsch in Seattle will be roughly circular plan, 14-sided structure with 14 columns placed on edge of seating to afford clear view of ark (center of worship). Entrance court will open into foyer lounge connecting to intimate patio and to small proposed chapel. Stained glass grills and quartz aggregate will decorate exterior. Architects: B. Marcus Priteca and Detlie & Peck.



ARMORY-AUDITORUIM

to be constructed in Salem, Ore., will consist of two buildings connected by covered walkway to provide community, military and state fair facilities. Masonry and concrete project will have glued-laminated beams, wood and steel trusses. Auditorium will provide seating for 3,900 sports events, 4,300 for stage plays, concerts, etc., with space underneath for exhibitions. Architect: James L. Payne.



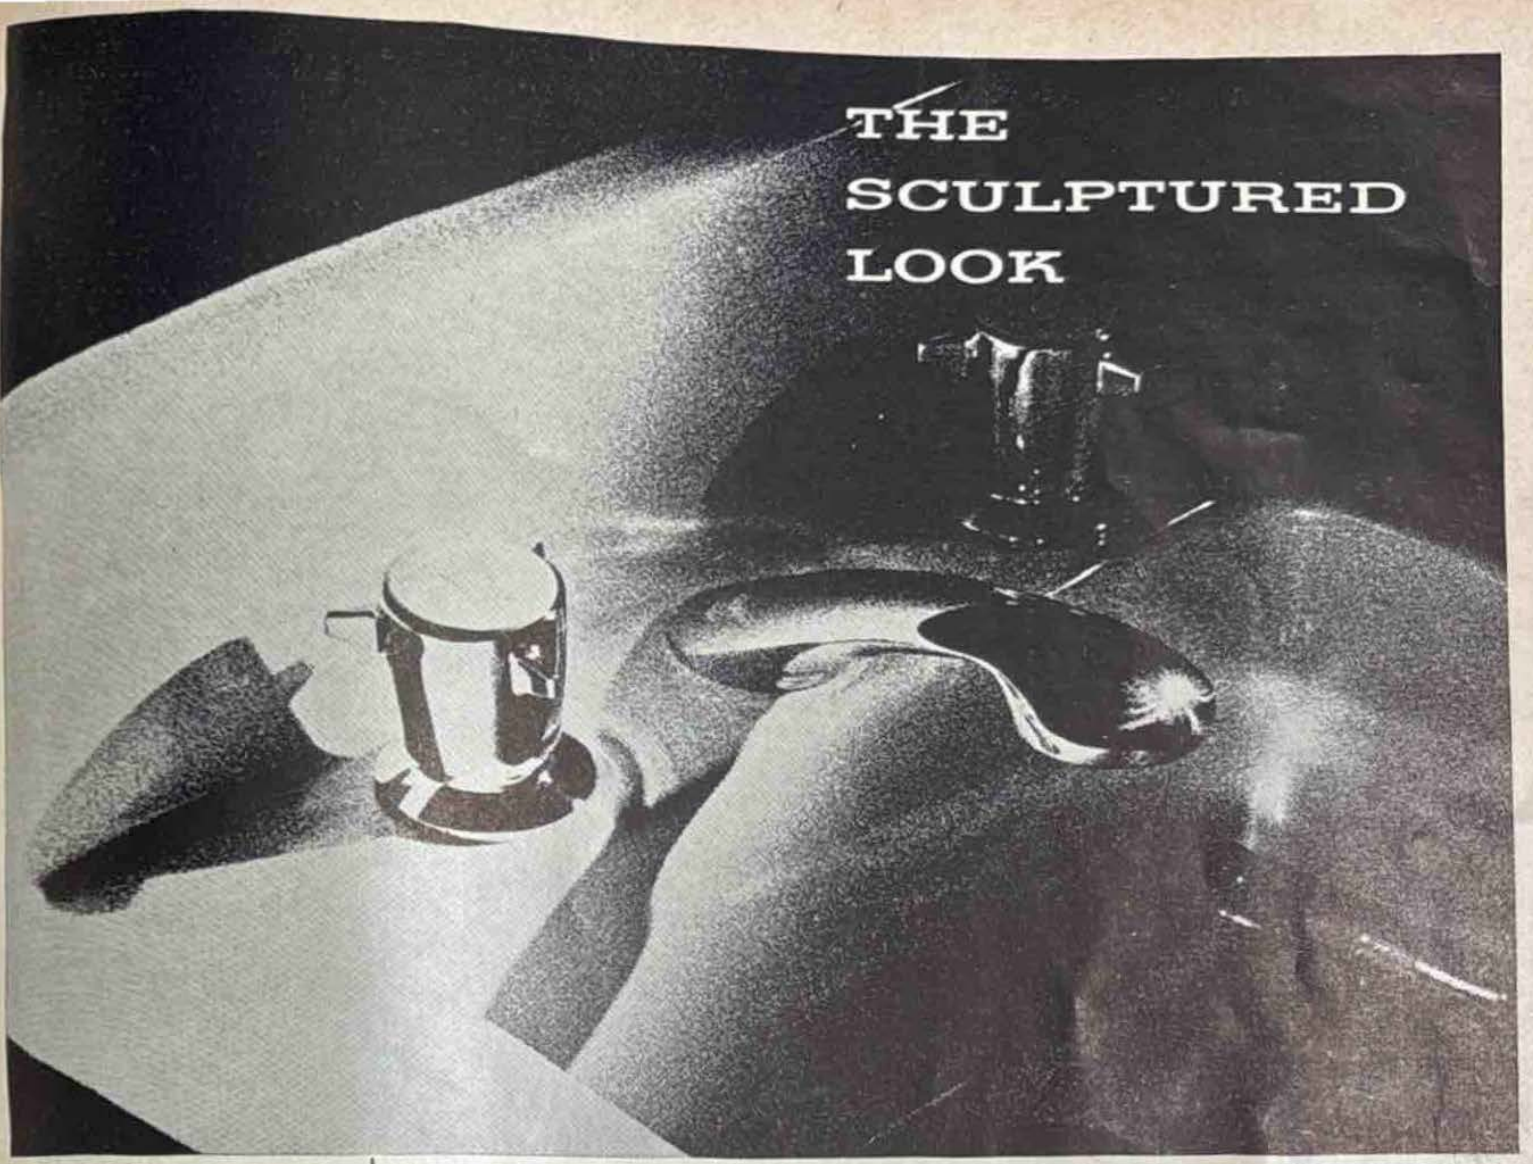
PHY ED BUILDING

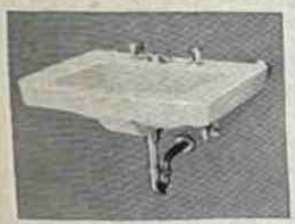
for senior high school in Puyallup, Wash., will be basically wood laminated frame with steel and concrete curtain wall, wood fiber roof deck and steel sash. Its 46,977 sq. ft. will include three playing floors, seating for 3,000 fans, three classrooms and two science laboratories. Architects: Robert Billsbrough Price; structural engineer: Horace J. Whitacre.

MASTER PLAN

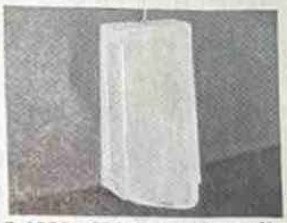
for development of $5 million campus at Southern California School of Theology in Claremont will have chapel as focal point of spiritual and educational plant for about 300 graduate students. First unit to be constructed will contain classrooms, offices and library. Architects-engineers: Pereira & Luckman; associate architects: Criley & McDowell.

THE SCULPTURED LOOK





B-3662—DRYDEN: 24" x 20" vitreous china lavatory with 8" combination fitting.



B-6901—SPARTON: Vitreous china 18" wide stall urinal with integral flushing rim.

B-4002-H—MARS: Wall-hung exposed vitreous china drinking fountain.

B-6700—QUIETON: Vitreous china syphon jet quiet-action floor-outlet bowl.

Briggs completely new design concept for commercial plumbing fixtures and fittings is backed by more than 70 years experience in manufacturing vitreous china.

Now, Briggs brings to its new line of commercial plumbing fixtures and fittings the contemporary look of sculptured form. Each unit and fitting, designed by Harley Earl, Inc., incorporates the same clean, simple lines—giving your plans a continuity of design. And the entire line is backed by more than 70 years experience in producing fine vitreous china of constant quality. Available in Briggs six colors or white. Complete specifications are available to you on request.

National AGC nominates Seattleite to top post

James W. Cawdrey of Seattle, vice president of the Associated General Contractors of America, was nominated to the top post at the midyear meeting of the governing and advisory boards in Atlanta last month. Tapped to succeed the building contractor was John A. Volpe, former federal highway administrator. Following a mail ballot, installation will take place at AGC's 40th annual convention in Miami Beach in January.

CAWDREY

Long active in AGC, Cawdrey has served as president of the Seattle Chapter and as chairman of the Building Contractors' Division of the national association. A member of the firm of Cawdrey & Vemo, he has been in the construction industry since 1934 and is a graduate of the University of Washington.

In other business at the Atlanta sessions, the 500 delegates gave several important reports. Among them was a disaster relief plan for use of the industry, which is expected to be spelled out in detail in Miami Beach. Still another was a report on labor problems which noted that local representatives of labor unions generally have not followed through on the 10-point program for increased productivity and removal of featherbedding announced at the last AGC convention in Dallas. It further charged that "the growing power and aggression of industrial unions and their leaders poses a serious threat to the construction industry."

AGC president Fred W. Heldenfels Jr. of Corpus Christi, Texas, remarked that economic activity appears to be "on the upgrade" and called attention to the responsibilities borne by AGC members "as leaders of the nation's largest industry and the high opportunity they have for serving the public good as well as their own interests."

Other speakers included Jerome D. Fenton of Washington, D. C., general counsel for the National Labor Relations Board, who addressed the contractors on the question of legality of hiring halls; and Dean J. Barron, assistant director of the Audit Division, Internal Revenue Service, who spoke on equipment depreciation.

Building code parley ends in stalemate

Representatives of 83 organizations—probably the largest gathering of national groups interested in home building ever to assemble in one room—met in New York in September to discuss whether an American Standard Association project on building code requirements for one- and two-family residences should be initiated.

When the meeting broke up, no conclusion had been reached and the general feeling seemed to be that such a proposed code would never come to be. Fifteen of the organizations present said they would cast their vote by letter. Count on the others: yes, 24; no, 17; not voting, 27.

Original request for the development of residential building codes was made to ASA last July by publisher Henry R. Luce on behalf of 14 groups concerned with home building.

Housing conference set for Hawaii next month

Home builders from Hawaii and the mainland will gather in Honolulu November 3-6 for the second annual Mid-Pacific Housing Conference, with the Hawaiian Village Hotel as convention headquarters. It will be jointly sponsored by the Home Builders Association of Hawaii and the Home Builders Institute of Los Angeles, Orange and Ventura counties, together with the National Association of Home Builders.

Highlight of the meeting will be a mortgage clinic conducted by Hugh Askew, NAHB director of mortgage and finance. A workshop session devoted to conventional loans, procedures and requirements will find builders, architects and bankers exchanging ideas. David Bohannon, president of the Urban Land Institute, will discuss hillside developments; Bill Ridgeway, the development and management of shopping centers.

Briefs

• Stanford University has received a $50,000 grant from the Ford Foundation to study a community center for older people in Menlo Park, Calif., in an effort to help set minimum standards for developing facilities of this kind.

• Central Association of Seattle has been organized by a group of businessmen interested in revitalizing the downtown core area, with particular reference to freeway development, mass transportation, off-street parking, beautification, renewal of fringe areas and provision for convenient recreational and cultural activities. Executive vice president is Paul W. Siebert, for the past three years director of the public relations division of Frederick E. Baker & Associates, advertising agency.

• Rehabilitation of 890 acres for a patch of Los Angeles southeast of the intersection of Main Street and Washington Boulevard will have "priority" among future urban renewal projects. An estimated 67% of the homes and buildings in the area are adjudged "substandard to the extreme" by the City Health Department, while 74% of all structures have certain deficiencies.

• Showers in new home construction must have subfloors which are pitched ½ in. per foot to weep holes in the subdrain in order to pass inspection standards set by the 1958 Uniform Plumbing Code enforced by the majority of municipalities and county building departments in the 11 western states.

• Nation's building industry has made a strong comeback from its 1957 slump, Norman P. Mason, FHA commissioner, said in San Francisco last month, using that area office as an example. Applications for loans for the first six months were up 145% compared with the same period last year. New home applications gained 88%; repairs to existing homes gained 222%.

• Boom in construction of shopping centers is dwindling after 10 years of unprecedented building and developers now must search diligently for a feasible site, reports the Urban Land Institute of Washington. It cites the trend toward bigger supermarkets as one factor discouraging new projects.

• Building Research Institute has re-elected president Charles H. Topping, senior architectural and civil consultant of E. I. duPont de Nemours & Co., Inc., and the Building Research Advisory Board has named William Gillett, vice president of Fenestra, Inc., to succeed E. X. Tuttle as president.

• Average injury frequency rate (number of disabling injuries per million man-hours) for employees of construction companies submitting reports to the National Safety Council showed a 3% increase in 1957 over the previous year. Average injury severity rate (number of days lost per million man-hours) jumped 10%.

PATENTED

For Fast, Low-Cost Steel Framing ONE METHOD STANDS OUT!

MACOMBER **V-LOK** provides a strong, rigid connection that needs no on-the-job bolting, riveting or welding. An entire building can be framed and under roof a few days after steel delivery. Finishing work can start immediately, regardless of weather. Completion and occupancy can be months sooner than with any other framing system.

To reduce cost per square foot and have the structural ruggedness of cold-rollforming, design with Macomber **V-LOK**.

V-LOK Design Manual is available.

# of American architecture'

Selected in a national survey of 500 architects, the "Seven Wonders of American Architecture" (shown across page but not necessarily numbered in order of preference) include three designed by Frank Lloyd Wright. Among the runners-up: Wainwright Building, St. Louis, Louis Sullivan; Lincoln Memorial, Washington, D.C., Henry Bacon; Seagram Building, New York, Ludwig Mies van der Rohe and Philip Johnson; University of Virginia (old campus), Charlottesville, Thomas Jefferson; Monticello, Charlottesville, Jefferson; The Auditorium, Chicago, Sullivan; and Trinity Church, Boston, H. H. Richardson.

The survey was conducted by Asher B. Etkes Associates of New York, public relations counsel to a number of building industry organizations. "The top seven represent our architects' finest achievements," Etkes comments. "They are buildings that people like to live in and work in. They are unchallenged masterpieces whose dynamic scope, smoothness and clarity reflect the mood and tempo of our times."

1. S. C. Johnson & Son Research and Development Tower, Racine, Wis.: Frank Lloyd Wright. With 17 miles of glass tubing, it was described on completion in 1939 as "the greatest contribution to business housing since the skyscraper." It is the tallest building (150 ft.) without foundations directly under the side walls.

2. General Motors Technical Center, Warren, Mich.: Eero Saarinen & Associates. This project consists of 25 buildings on 330 acres, north of Detroit, and has been cited as a prototype of the industrial development of the future.

3. F. C. Robie House, Chicago: Frank Lloyd Wright. A milestone in the history of modern architecture because of its organically flowing space in which rooms were no longer conceived as boxes, it recently was saved from demolition and soon will be turned over to a national historical society.

4. Lever House, New York: Skidmore, Owings & Merrill. The tower of glass and steel on Park Avenue reflects the comfort and the convenience, the relaxed and pleasant atmosphere of a well-appointed home.

5. Rockefeller Center, New York: Reinhard & Hofmeister; Corbett, Harrison & MacMurray; Hood & Fouilhoux; Harrison & Abramovitz. Ranging from Fifth Avenue to the west side of the Avenue of the Americas, its 16 buildings stand on 15 acres and represent a planned community rather than a canyon of skyscrapers. The center includes Rockefeller Plaza, RCA Building and Radio City Music Hall; and No. 16—Time-Life's new headquarters—is now under construction.

6. E. J. Kaufmann House, Bear Run, Pa.: Frank Lloyd Wright. This is undoubtedly the most famous house in the world, a series of masses balancing and counterbalancing space in space.

7. Carson Pirie Scott Store, Chicago: Louis Sullivan. Begun in 1899 and completed in 1904, it stands as the unchallenged masterpiece by the master of the skyscraper. Its every line and surface foretold the esthetic quality of distinguished building.

Glazed structural tile by Kraftile

CHEER FOR
THE ILL & INJURED

A sense of cleanliness brings a feeling of comfort and security to the ill or injured. Color gives them optimism and quiets their fears. In this First Aid Room, cheerful attractiveness and hospital cleanliness will go hand in hand for the life of the building. Walls are colorful, gleaming Kraftile, chosen because of its low annual cost. Harsh, heavy-duty soaps and detergents, cleansing powders, bleaches and antiseptics cannot dull the sheen of Kraftile surfaces. Repeated scrubbings throughout the day, year in and year out, cannot wear it out. Chemicals and bleaches cannot change or fade its glowing colors. Construction with Kraftile goes with astonishing speed. When you specify Kraftile glazed *structural* tile, costs are competitive. Kraftile construction requires no carpentry, plastering or finishing. Standard sizes and shapes for every need, in 12 architect-selected colors and clear glaze. Write for specifications, graphic standards, and color samples.

Planning board of today has depth in its thinking, activity, staff—and here's why

Journeyman planner--'have pencil, will travel'

by JOHN AGUIRRE JR., AIA

NEW DIRECTIONS in city planning have been ushered in by municipalities, yet they have failed to recognize or reward them. These directions include the planning board of depth and the use of outside consultants or "journeyman planners."

This movement has been spearheaded by two strange allies: the journeyman planners themselves and the relatively high wages in the architectural field. The journeyman planners, with their slogan "Cities are for people," were usually ignored except for a few crusading writers such as Lewis Mumford and as a topic at monthly dinner meetings. These men fighting for their ideas insisted that cities were more than simply buildings surrounded by streets. Their failure, except in a few isolated cases, is easily explained: no one would hire them to do a job of city planning. It is the same dilemma confronting an architect with great ideas and no clients.

This depth or social consciousness to planning was something that everyone agreed was a job to be done "when we get caught up with immediate tasks at hand." Meanwhile the American city proceeded on its happy road of haphazard planning. Thousands of homes were allowed to be constructed in subdivisions, often without provisions for school, street, park and even sewage disposal facilities. However, these subdivisions always included in their master plan the glittering shopping center with its labyrinth parking lots.

Freeways were allowed to amputate cities, cutting off neighborhoods, destroying community values and giving small communities a split personality. The few cities that did hire the idealistic planner to head their planning board often failed because the existing planning staffs usually consisted of retired politicians and the young untrained draftsman, or because the planner lacked authority or a cooperative city council.

The breakthrough for planning came, first of all, with the postwar emergence of the journeyman consultant. An old professional, he was given new blood when cities, large and small, discovered that they could do better planning by retaining outside consultants. Outsiders were also free from local partisan thinking and the normal pressures of living in the same community. These consultants provided still another feature: they were more economical to use for the taxpayer, as opposed to hiring a comparable staff on the public payroll. The happy results were that the cities, after their master plans were designed, could then hire a small staff for administrative purposes.

The planning board of today has new muscles in its staff, which now consists of sociologists, economists, geologists, statisticians and engineers in addition to the traditional architect-planner. Comparing this staff with the customary planning board that usually was headed by an architect or a retired politician and staffed by young draftsman helpers, the change is great.

Second cause for the new face in planning was that the high wages of the construction industry precluded the exclusive use of the trained architect-planner. Civil service then turned to what appeared to be a second best choice—the social scientist, the economist, the geologist and the business school graduate for its expanding staffs.

Among the leaders in this movement were the Los Angeles area planning boards. The Los Angeles County Planning Commission in 1950-51, during the enlargement of its professional staff, hired about 20 young college graduates. Only two of this group were architects, the remainder being sociologists, economists, business administrators and geographers. Fifteen of these people are now planning directors or principal planners for small cities in the southern California area. The scope and enrichment of planning can be seen from this single illustration.

The journeyman planner has thus added to the depth and prestige that planning needed. It is more difficult for a legislator to ridicule or ignore an expert's recommendations that are costing several thousands of dollars of tax money. This same legislator's attitude toward a civil servant, whose position is often at stake, is usually different and sometimes detrimental to the desired result.

These consultants have approached their planning assignments with the zeal of a freshman and the judgment of a professional. Occasionally, this zeal has overwhelmed their client cities, who had thought they were getting a slum clearance study and were presented a few months later with a master plan for a downtown area.

A slogan among these dedicated planners appears to be "Have pencil, will travel," for these peripatetic professionals will go anywhere for a commission. One prominent Los Angeles office has numbered as its clients at least three foreign organizations, among them the United Nations, in addition to planning studies throughout California. Another consultant in Los Angeles travels up and down the state designing or revising master plans with the regularity of the seasons.

For the well-known planners, the field appears lucrative as a retainer of $25,000 per year plus expenses is not an unusual fee for a large study. In addition, the architect-planner is often selected to design one or more of the proposed major civic buildings. One prominent architect designed an award-winning master plan and later received a major share of the architectural commissions for the new metropolis. The vigor and creativeness of these journeymen planners has established well their roll in civic design and has partially alleviated some of the ills that irresponsible enterprise and unsuspecting government sometimes foster on the city.

The question arises, however, if the best planning under the most capable administrators is enough to combat the future blight of the substandard tract, the dense business area and the cancerous surgery of the freeway. Can the planner cure traffic by creating more streets? Can he tamper with the tax structure by calling a halt to commercial over development? Can he prohibit 1,000-unit apartment developments in 25-ft. access streets with little parking provisions? The journeyman planner has his pencil and will try; but he still needs the support of the citizen and the businessman.

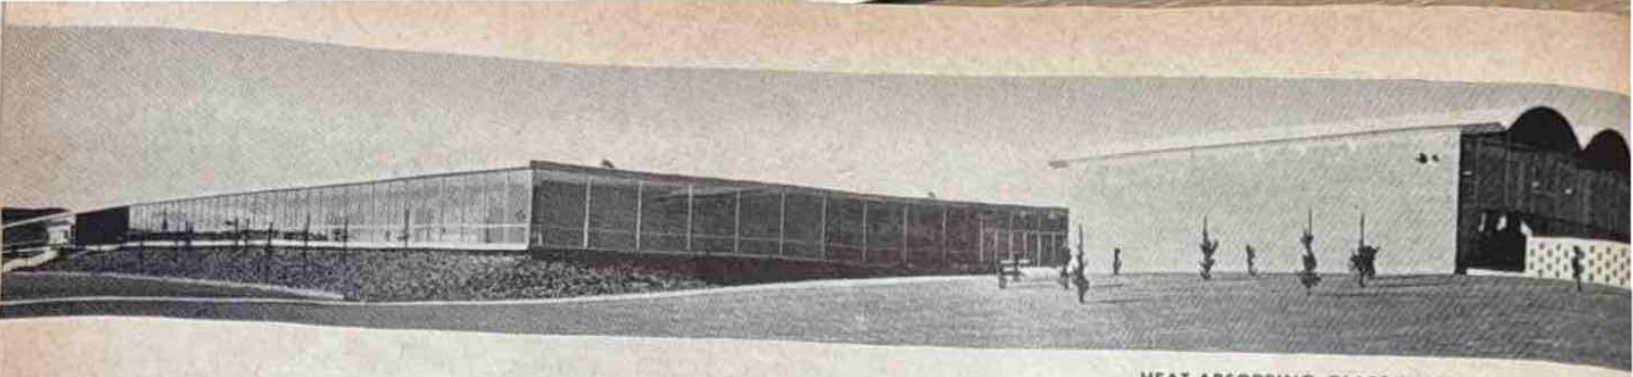
THEO G. MEYER & SONS, General Contractors

Bold use of materials, colors, conceptions



HEAT-ABSORBING GLASS WALLS surround outside of school under cantilevered corridor roof. Precast concrete barrel vaults—24 in all—roof gymnasium.

WESTMOOR HIGH SCHOOL

ATOP A HIGH PLATEAU overlooking Daly City, the Pacific Ocean and most of the Santa Clara Valley sits one of the most provocative educational plants of our day, representing the architect's effort to meet what he calls the "challenge of not only solving in a technical way all the material considerations necessary for the construction of a secondary school but, more important, an approach which takes into account psychological and philosophical considerations.

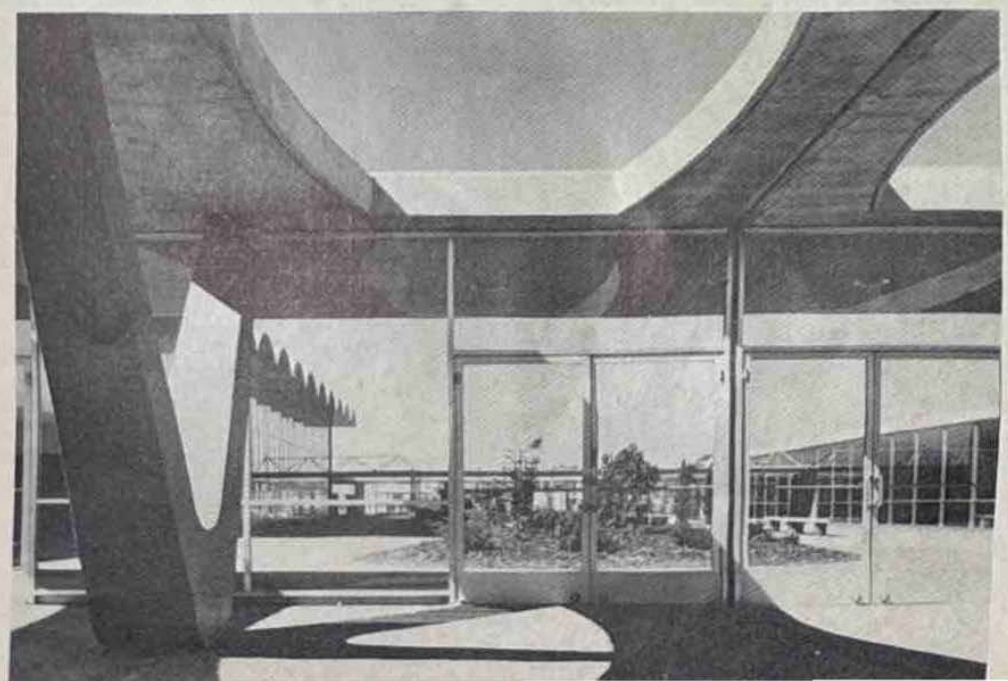
"This challenge obliges the architect to attack the problems in the design of a school plant with the fundamental concern of creating an appropriate teaching environment. This environment must not only provide for the demands which are manifest at the time of construction but must also anticipate the probable course of our future cultural development. The school plant must be utilized as a motivating force which will offer educational opportunities for students and will orient the community in its broadest concept."

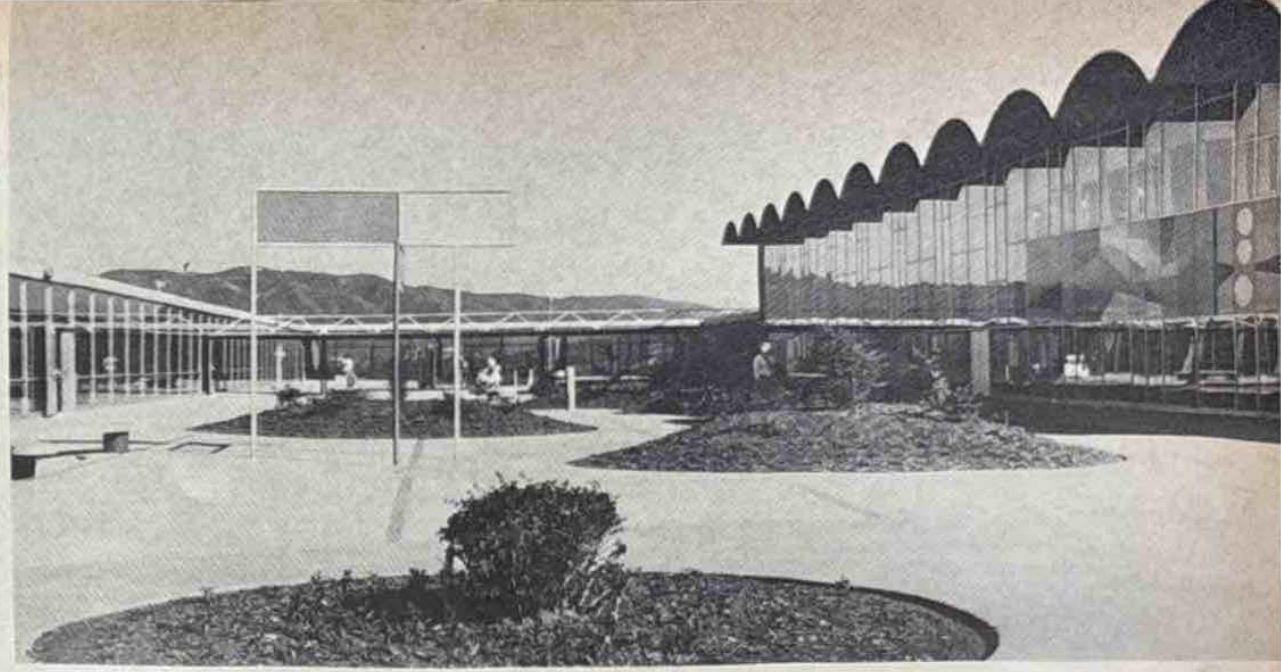
For several years, the architect explains, the trend in the design of secondary schools has followed a pattern beginning with the wing and finger type plans—concepts which have resulted in complex problems for the designer and the client. "The finger type plans require considerably greater land area, create maintenance problems with their many courts, increase heat losses through glass, create expensive light control conditions and add to the general cost of utilities."

The architect's aim for Westmoor was to design a tight, compact structure to provide students a maximum of comfort under all weather conditions (fog and wind abound) and permit the use of interior classrooms as viewing rooms or controlled work areas. Concentration of classrooms made it possible to introduce mechanical cores between them, housing all of the heating and ventilating equipment, plumbing, electrical and utility lines. Non-structural partitions may be moved if desired. Omission of natural light (in an area where schools generally use artificial lighting 90% of the time) eliminates solar heat problems and light brightness contrasts and reduces maintenance costs. In addition to the spacious central mall, several small open courts off such areas as the library and science, homemaking, mechanical drawing and teachers' rooms create a change of pace and help to relieve the tightness of the plan.

Exterior of the main structure consists of a cantilevered precast concrete roof and a glass skin which forms the principal freeway of circulation and feeds into secondary aisles and adjoining areas. Low, flat cast-in-place spaces are broken by high, long-span rooms roofed with thin shell concrete precast barrel vaults. The 145,000-sq. ft. school was built on a 65-acre site, 42 of which are devoted to the high school, permitting 113 sq. ft. of floor area per student for the 1,300 enrollment housed in the first increment of the program. Cost per square foot, excluding site work, was $14.72, an economical figure in light of the end result. James MacConnell and the School of Education at Stanford University acted as consultants.

PRECAST CONCRETE ARCHES (light blue) and roof overhang (light brown underside, white trim) are set off by brick walls (red). Glass areas are framed in aluminum.

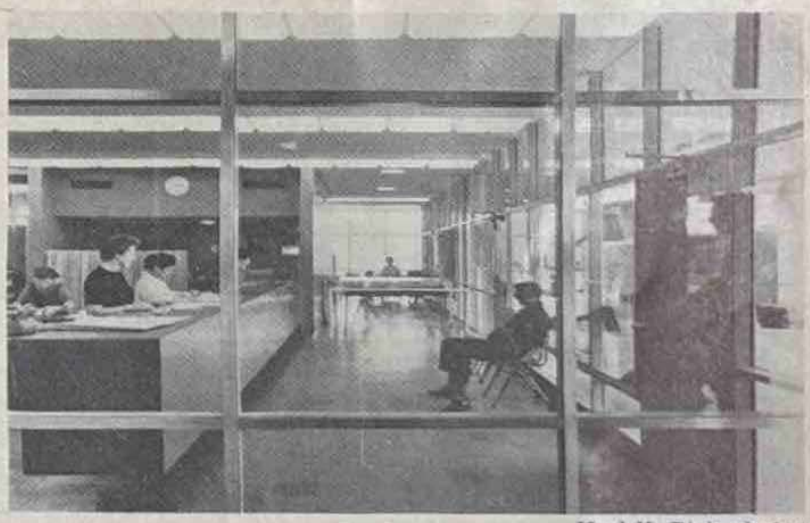




ENTRANCE COURT provides large outdoor space for student gatherings, helps to define public and academic-vocational areas. Gymnasium's abstract mural combining orange, red, purple, blue, green, yellow and black is work of Anne Knorr.

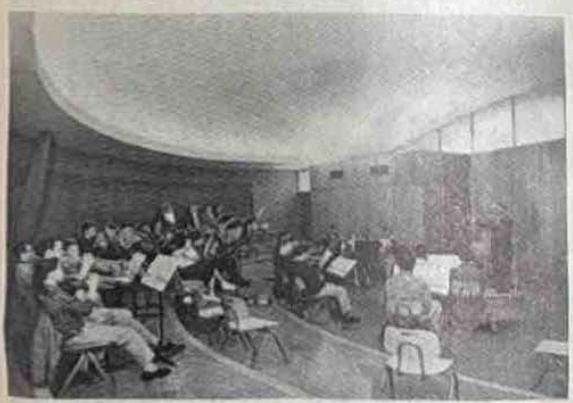
STEEL AND GLASS CORRIDOR uses colored panels to create visual interest, isolate teaching spaces.

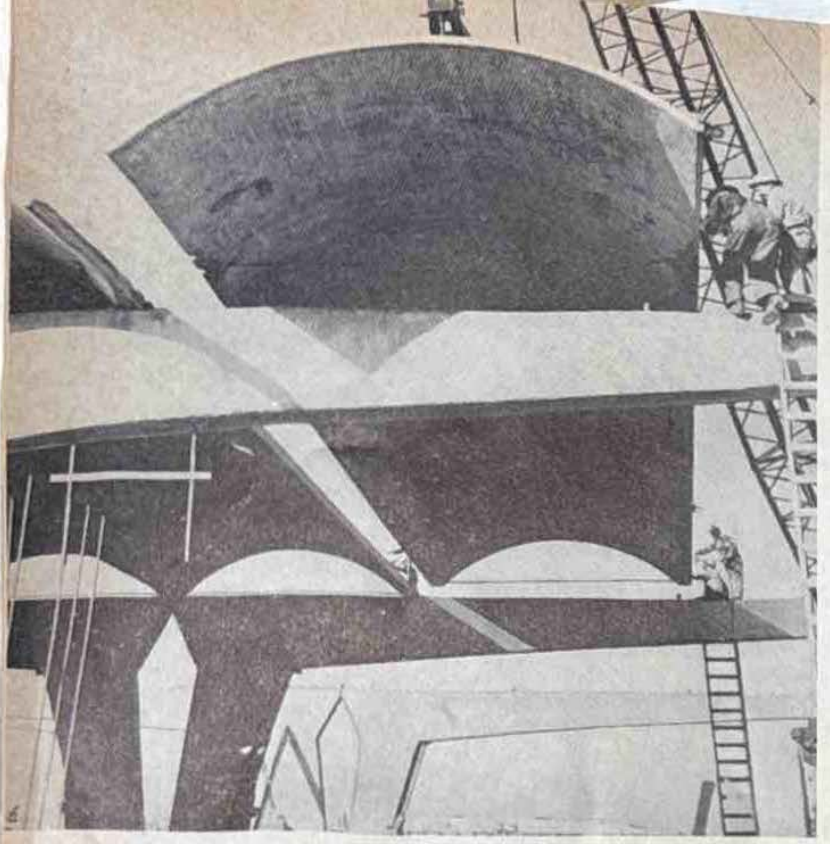
WIRE SAFETY GLASS separates offices, classrooms from corridor. Room partitions are soundproof.



Karl H. Riek photos

CIRCULAR MUSIC ROOMS have depressed floor of varying levels for band and orchestra. Thin concrete domed roof offers change in environment.





THIRTY-THREE BARREL VAULTS, each 61 ft. long by 3½ in. thick and weighing 20 tons, are world's largest. Precast in groups of six, they were erected exactly to tolerance of ½ in., covering 35,000 sq. ft. of floor space in four days. Repetitive forming of shells reduced construction cost to considerably less than would have been possible with conventional design.

WESTMOOR HIGH SCHOOL

OUTLINE SPECIFICATIONS

Structure: foundation and frame: reinforced concrete—cement for all concrete supplied by Permanente Cement Co.; roof: lightweight cast-in-place concrete and thin shell precast barrel vaults over gymnasium and shops; structural walls: brick—Port Costa Brick Works; concrete block—(Basalite) Basalt Rock Co.; curtain walls: aluminum—Aluminum Company of America; steel mullions—United States Steel Corp.; heat-absorbing glass—Owens-Illinois Glass Co.

Exterior Finish: exposed red brick and painted concrete.

Roof Surfacing: composition—Flintkote-Pioneer Division.

Doors: aluminum—Kawneer Co.; wood—painted Douglas fir slab.

Floor Surfacing: asphalt tile—Kentile, Inc., ceramic tile in toilets—Gladding, McBean & Co.; maple in gymnasium.

Partitions: metal lath and plaster; porcelain enamel—Apco Porcelain Co.; wire glass—(Misco) Mississippi Glass Co.

Interior Finish: painted plaster; tile wainscoting in toilets—Gladding, McBean & Co.

Ceilings: acoustical plaster—California Stucco Products Co.

Heating: unit ventilators—Carnes Corp.; unit heaters in gymnasium and shops—Western Blower Corp.

Lighting Fixtures: low brightness fluorescent—All-Brite Fluorescent Fixtures of California.

Plumbing and Sanitary: water closets and lavatories—American-Standard; drinking fountains—Haws Drinking Faucet Co.

Total Area: 145,000 sq. ft.

Total Cost: $2,530,000.

Cost per Square Foot: $14.72 (excluding sitework).

Date of Completion: September 1957.

FLAT SLAB CONSTRUCTION is broken only by barrel vaults shops (in foreground) and gymnasium (adjoining central mall). Among proposed projects in building program: community auditorium (at left) and swimming pool (at rear).

Planned around largest 'floating floor'

BEHIND six 72-ft. pylons and a beehive grillwork of precast concrete is an auditorium designed to accommodate athletic events and trade shows as well as symphonies and operas. It is actually planned around the nation's third and largest "floating floor," two-thirds of which is a hydraulically operated tilting platform, lowering at the stage and rising near the rear of the house to give a 5-ft. difference in elevation. When the floor is tilted (accomplished through the use of concrete slab on steel frames and metal pans) in "full auditorium" position for stage presentations, it will seat 2,700 persons; or it can be adjusted to level position for basketball, tennis or boxing.

Tests show that acoustically the auditorium meets its wide range of functions in a highly satisfactory manner. Comments Dr. Verne O. Knudsen: "In respect to its reverberation properties, it deserves a rating even higher than that of the Royal Festival Hall in London, which has been acclaimed by acoustical critics and orchestral conductors." Back wall of the main auditorium consists of hollow-rib perforated panels and 2-in. glass fiber insulation; remainder of this area is finished with hardwall plaster, curved surfaces deflecting sound.

Orchestra pit, 65 ft. long and 12 ft. wide at the center of the house, serves as an elevator to bring large sets up from storage areas below. Hydraulically operated, it may be stopped at four positions.

A committee room located in one of two wings on either side of the auditorium has a capacity of 700 and dining facilities for about 500. It may be separated into smaller units with sound-retarding folding partitions or the entire area may be opened up to the auditorium for exhibition purposes, totaling 31,500 sq. ft.

Entrance lobby, containing 7,500 sq. ft. and two circular concession stands at either end, has acoustical tile ceilings. Ticket booth, incorporating eight outside and inside windows, and two lounge areas also are provided in the main lobby. An upper level concourse, also with a concession stand, is reached by two grand staircases.

Public parking provided for 500 cars in well-lighted areas around the building may be increased to 870 by employing attendants.

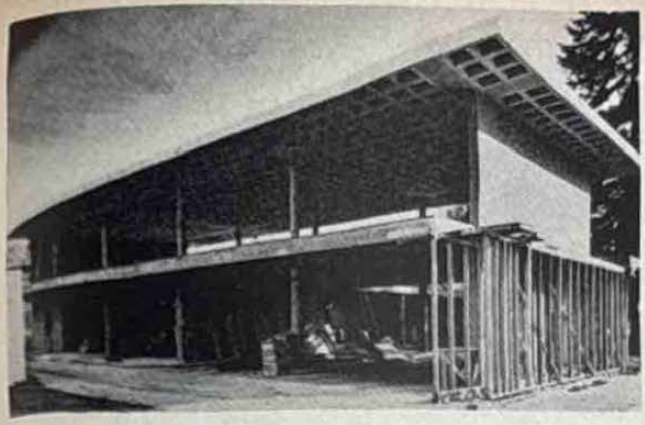
Design honestly interprets the structure

THE CLIENT insisted that its building be constructed of materials reflecting "permanency, substantiality and stability," as indicated by the final cost—$18.72 per square foot. A reinforced concrete structure was planned to express the flat slab floor and roof construction, chosen to avoid the heavy deep beams and joists which suggest an industrial character.

The building is rigidly designed to a 4-ft. module which carries through to the 16-in. waffle; to the 48-in. aluminum wall mullion spacing; to the suspended 1-in. fiberglass ceilings; and to the 48-in. grid into which recess 4-ft. troffer fluorescent fixtures. Cement-asbestos panels in the window wall conceal a maze of ductwork and piping for the heating and cooling units above the window glass. Individual offices and second floor leased quarters (to be eventually used by the owner for its new group health and life insurance department) can control their own temperatures by zoning the air conditioned package units in the space above the suspended ceilings. The second floor covered balcony, introduced 12 years ago in the architects' first project, is a common adjunct of two-story office buildings in Eugene, which has proven itself because of the moderate winters.

To meet a requirement for ample parking, the layout provides for six under-cover stalls at the front for customers and 14 at the rear for employees and tenants. A fence separates a small landscaped area from the rear parking lot; a front court takes advantage of an existing Douglas fir and creates a pleasant approach to the public entrance. The charcoal panels, exposed gray concrete and aluminum windows, flashings and railings are relieved by the red-brown brick and yellow-green doors.



WAFFLE FLAT SLAB CONSTRUCTION gives texture to soffits of roof and second floor overhangs, makes it possible for small concrete building to appear light and in scale with its occupants. Round columns help to create this effect. Reinforced brick walls carry second floor and roof slabs.

OUTLINE SPECIFICATIONS

Structure: foundation: reinforced concrete footings; frame: reinforced concrete beams, joists and columns; roof: concrete waffle flat slab; walls: reinforced brick—Hebron Brick Co.; floors: concrete waffle flat slab.

Exterior Finish: exposed red-brown brick and gray concrete.

Window Wall System: aluminum projected sash—(Lupton) Michael Flynn Mfg. Co.; 11/16-in. cement-asbestos sandwich board—(Cemesto) Celotex Corp.

Roof Surfacing: 20-year built-up asbestos gravel—Pabco Products, Inc.; extruded aluminum gravel stops—Aluminum Company of America.

Doors: steel—M. Rueter & Sons.

Floor Surfacing: rubber tile—Armstrong Cork Co.; ceramic tile—Gladding, McBean & Co.

Insulation: 1-in. impregnated wood fiber rigid—Simpson Logging Co.

Partitions: steel stud and wood fiber gypsum plaster—United States Gypsum Co.

Interior Finish: Keene's cement plaster; ceramic tile—Gladding, McBean & Co.

Ceilings: 4-ft. acoustical fiberglass board—Owens-Corning Fiberglass Corp.; aluminum T-sections.

Lighting Fixtures: 4-ft. troffer fluorescent—Smithcraft Lighting Division, A. L. Smith Iron Co.

Heating: fire tube heater—National-U. S. Radiator Corp.

Air Conditioning: package chiller—(Heat-X) Dunham-Bush Co.

Plumbing and Sanitary: water closets and lavatories—American Standard.

Special Equipment: aluminum flush fitting pipe rails—Aluminum Company of America; sign—Oregon Brass Works.

Total Area: enclosed: 6,483 sq. ft.; balconies, stairways and covered parking: 2,516 sq. ft.

Total Cost: $137,070 (exclusive of land, landscaping, paving and fees).

Cost per Square Foot: $18.72 (using outside covered areas at one-third).

Date of Completion: March 1957.

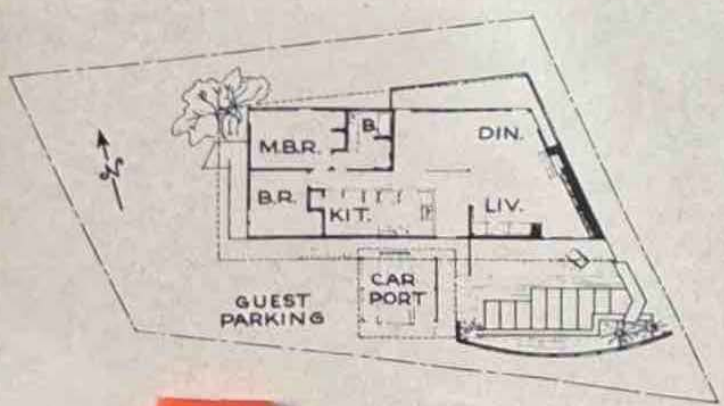
Orientation problem becomes an advantage



MAIN CONSIDERATION in planning this residence was to make provision for the view and outdoor sun exposure on a steep site sloping to the north and laterally to the west. The architects fitted the design to the contour of the lot, placing carport entrance, kitchen and living-dining area at the street level and allowing the bedrooms to follow the slope down a half level. A broad wood deck with concrete apron was used to span the gap between the sharp slope away from the street and the house itself. The result: a terrace where the young family of three can enjoy both the sun and the view through glass wall areas of the living room, which is finished in redwood, as is the exterior. Rest of the house, including ceilings, has ½-in. gypsum board.

M. Halberstadt

OUTLINE SPECIFICATIONS

Structure: foundation; continuous concrete; frame, roof and floors; wood.
Exterior Finish: redwood and stain—Samuel Cabot, Inc.
Roof Surfacing: tar and gravel—Pabco Products, Inc.
Windows: wood sash.
Doors: sliding steel—Arcadia Metal Products; wood.
Floor Surfacing: oak hardwood; tile—Kentile, Inc.
Insulation: rock wool batts.
Interior Finish: ½-in. gypsum board—(Sheetrock) United States Gypsum Co.; redwood.
Ceilings: ½-in. gypsum board—(Sheetrock) United States Gypsum Co.
Lighting Fixtures: incandescent—Prescolite Manufacturing Co., Boyd Lighting Co.
Heating: forced air furnace—Kresky Manufacturing Co., Inc.; controls—Minneapolis-Honeywell Regulator Co.
Plumbing and Sanitary: lavatory and water closet—American Standard.
Total Area: 1,500 sq. ft.
Date of Completion: February 1957.

Thin shells in the United States

by MARIO SALVADORI

FOR SOME mysterious reason I find that people in the United States are afraid of thin shells. About two years ago I gave a talk in Kansas City and afterwards threw on the screen a slide showing a shell. A gentleman got up and asked, "Would you dare to stand under one of those things?" So I responded, "Do you happen to know what is the acceleration of gravity in the United States?" He said, "Do you mean G?" and I answered "Yes." "That's 32 point something, isn't it?" "That is right. Do you happen to know how much is G in Europe?" "I don't know, but it's the same the world over, isn't it?" "You are correct, sir. And if these things stand up in Europe, there is no reason why they should fall in the United States."

I am happy to say that since then a lot of shells have been built in this country. They have stood up. In fact, I believe that the danger at the present time is that too many are going up and when I say too many, I mean too many shells that are not right. One of the tragedies in the development of new structures today is that a structure needs both architect (essentially an architect) and then an engineer. And while I presume that both architects and engineers talk English, they just don't understand each other at all. So the architect comes up and says, "I would like to define space by means of a shell." And the engineer says "Huh?" Then he adds, "Well, look, what do you really want?" This goes on and on, and there is a complete lack of understanding, so that what we get is not lovely shells, but horrors, and I am against horrors whether they are thin or thick. I would like to say that I am delighted to have in this room, for once, both architects and engineers, and that I hope that, having met, you will continue meeting, so that at long last you will develop a common dictionary and will understand each other.

Let's go back to the fundamental problem. You have a weight up here, which you want to support. Now if you are a good engineer, you will put a beam under it. Of course. How can you support something unless there is a beam under it? Now we have a load and a beam, and what do you do with it? Why you put two columns under the ends of the beams. Now we have two columns, so we put one beam here and one beam here. Then four columns and four beams until we get down to Mother Earth because, after all, we've got to get down to earth. This is the brute way to do things because as you come down, the beams get heavier and heavier; and the heavier the beam, the heavier the column, and the heavier the beam under the column. If instead, you want to do it by means of thin shells, you must completely change your outlook and perhaps become a bit Japanese. When the Japanese fight they use judo, which consists essentially of giving in. And shells are so thin that they give in. They don't fight like beams and columns do.

I would like to perform an experiment which I am sure you have seen before. I have a piece of paper which you will notice cannot even support its own weight. It's so thin that it just has no strength at all. But the moment I give it a curvature like this, you notice that not only can the sheet of paper carry itself, but I can put a load on it and the load will be carried by this very thin sheet of paper. What we do is take the material and give it strength, not by increasing the amount of material that is being used, but by giving it the proper form.

'Form-resistant'

I believe that the terminology created by my good friend Pier Lugi Nervi is quite right. He calls these structures "form-resistant—structures which are strong because of their form. As soon as you accept the concept that a structure can be strong, not because it has a lot of material, but because it is properly formed, you realize that the material with which to build these things is concrete. Concrete can be poured in an infinite variety of shapes and provided the shape is correct, you can actually have

---

An address by Mr. Salvadori, professor of engineering at Columbia University, given before a joint meeting of the Structural Engineers Association and the Northern California Chapter, AIA, in San Francisco.

terrifically strong structures with a very small amount of material.

Some very lovely shapes unfortunately have no structural meaning. Quite often an architect may come to an engineer with a drawing which shows a lovely shape for a structure and the question he comes up with is, "Can I build this structure?" The tragedy is that the answer is "Yes." By now we know so much about structures, we have such materials that we can build almost anything, and the question is not, "Can I build this structure?" but rather, "Should I build this structure?" At this point I believe that the engineer, although he is obviously the servant of the architect, should fight back. He should say, "I am sorry, I will not build this structure." Of course, he has no right to say so unless the modifications he proposes are not only correct structurally, but are also beautiful—at least as beautiful as the one proposed by the architect.

Let's assume that you encounter this architect who is ready to listen. And let's assume that you encounter this engineer who is capable of saying no and telling the architect what modifications to bring to his structure. Will this team achieve the goal? The answer is "No." After all, we are not dreamers; we are builders and therefore we need contractors. We very badly need contractors because they eventually will do your job. So it is also extremely important that a certain amount of education should be given the contractor.

Now, we do have these three people: we have the architect (and I repeat, he is the boss); and we have the engineer (on a large job you are going to have both the structural and the mechanical and possibly the acoustical engineer); and we have the contractor. In my work I usually get all these people together at the very beginning of the job. What should they be trying to do? They should try to get a client in the first place and then they should try to convince the client that a shell is feasible and economical.

Economy possible

As soon as economy is mentioned, we run into trouble. Although we have built numerous shells in the United States on a competitive basis, although there are jobs on which shells are so cheap that they cannot be beaten economically, apparently many people still feel that thin shells are too costly. Why are these wrong theories going around? The reason is that there are many ways of building shells and if you build shells the usual way, sometimes you get a very costly

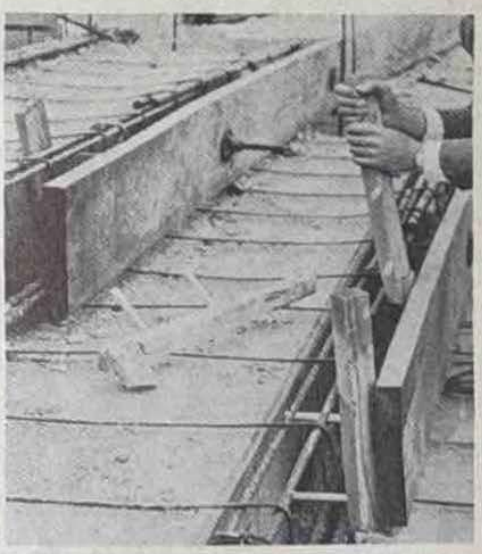
California's finest swimming pool

CONSTRUCTION PHASE of the Sea Arena at California's Marineland of the Pacific on the Palos Verdes Peninsula is now completed, but the general contractor, Paul W. Speer, Inc., encountered a good many problems along the way. The company head says that he "expected the unforeseen" when starting the $500,000 job last December. He didn't have long to wait, as unpredictable soil conditions, including massive beds of solid granite, slowed site preparations.

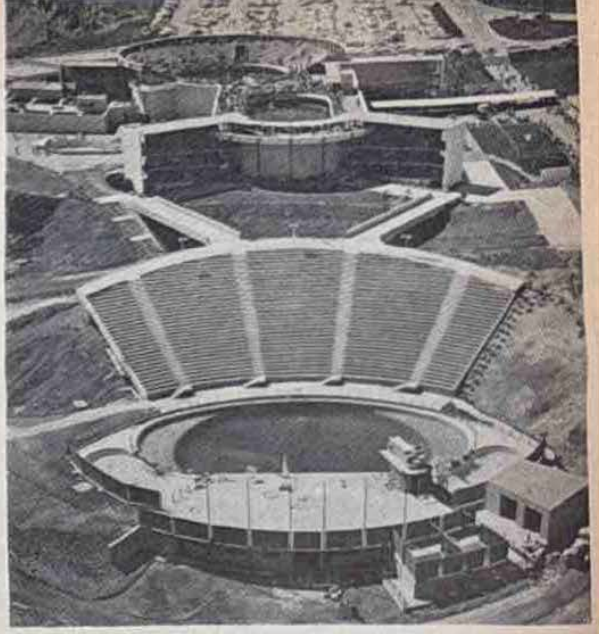
Excavation for the 3,000-seat stadium, which at times ran as high as $150 per yard, became a tortuous process and dynamite often was the only solution. The structure rests on 25 bell caissons and four shear walls which go down as much as 15 ft. to reach solid footing. Bells are 4 to 8 ft. in diameter; footings under the shear walls are 8 ft. wide.

Although serious consideration was given to using precast components for the stadium, the final decision favored pouring in place, since the pie-slice shape of the structure demanded seat rows of varying lengths plus a variety of transition contours. One factor in the success of that particular phase was a removable spreader invented by job superintendent Ken Damon.

The purpose was to maintain a constant 6-in. thickness along the poured vertical section directly underneath the bench seats. Damon took an 18-in. length of 2x2, with one corner beveled in order to reduce width and provide for easier removal following the pour.



REMOVABLE SPREADER maintains 6-in. beam width (foreground). Note how one-quarter turn permits spreader to be lifted from form.



CONCRETE STADIUM in foreground looks down on main pool, 15 ft. deep and 120 ft. across, flanked by smaller pools at each end which serve as holding tanks for aquatic "actors." Beneath open air stage, large windows inside of pool provide ideal conditions for underwater photography. Pereira & Luckman, architect-engineers, designed all Marineland structures, continue to develop master plan.

A vertical support for the exterior riser form was secured to the bottom of the spreader. Two dowels were fitted in to holes drilled about 6 in. apart, parallel to the flat beveled surface.

Inserted between form and rebar at 4-ft. intervals, the dowels butted at right angles against the inner plywood form and maintained the desired beam width. After the pour, the spreader simply was grasped at the top, given a one-quarter turn and easily withdrawn.

Besides being removable, the spreaders were reusable. And time also was saved in the extremely simple system of erecting and dismantling plywood forms, the sections being quickly dropped away by removal of one cleat.

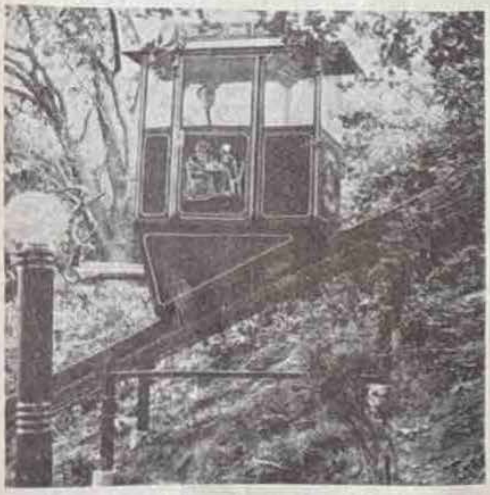
While workmen were pouring the final sections of the stadium, the main pool already was in use by porpoises darting through the water, retrieving rubber ducks and jumping through hoops. The 7-in. floor slab is poured concrete; the walls are gunite. Where the two meet, the joint is secured by a water-stop device. Thickness of the contoured wall varies according to the amount of water pressure it must contain, reaching a maximum of 10 in.

The gunited walls kept forms at a minimum and permitted concrete to be quickly wrapped around steel tubing where required. An untidy excavation left by a confusion of boulders and earth was corrected by employing a lean mix, gunite shaped fill prior to placing the pool's steel reinforcement.

PRODUCTS

hill climber

The Hil-A-Vator, which has been used by hillside residents, particularly in the Bay area, for the past 10 years, now is available in a heavier duty commercial model. (Photo shows an installation at Shadow-Brook Restaurant near Santa Cruz, Calif.) Easily adapted to fit most hillside conditions or requirements, the car is attached to a ball bearing rubber tired chassis for comfort and quietness of operation. Car wheels cannot escape the specially formed track and the controls may be key-locked to prevent unauthorized use.—Hil-A-Vator Division, Dwan & Co. **(Item No. 1)**



asphalt roof

Described as "roofing's newest material in half a century," Perma Ply glass felt combines with asphalt to provide a non-rotting, monolithic roof. Hot moppings of bitumen soak through the porous sheet of fibrous glass to make a single-layered roof which resists cracking and blisters, assures long life and low maintenance. Perma Ply, on mopping, becomes an integral part of the bitumen, which is reinforced by the glass fibers.—Owens-Corning Fiberglas Corp.

(Item No. 2)

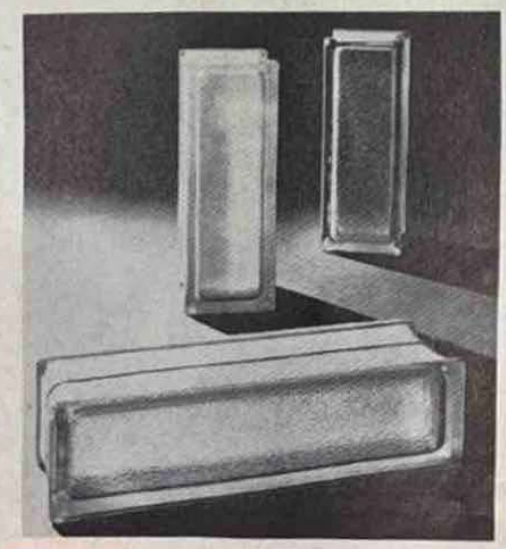
exit light

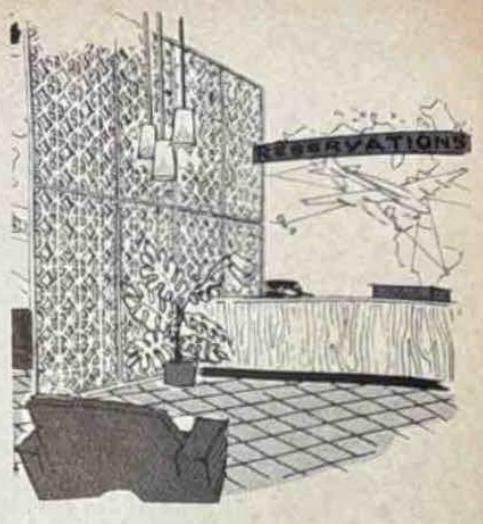
Prescolite has introduced a line of surface exit lights in which the complete housing as well as the frame is of diecast Zamac alloy, free of porosity and offering corrosion-resistant properties. Inner frame with concealed hinge simplified relamping and cleaning. Standard exit letters are 6 in. high; lens panels are of unbreakable fiberglass.—Prescolite Manufacturing Corp. **(Item No. 3)**

glass blocks

First change in the shape of glass blocks in the past two decades—a 4x12-in. model—has been introduced by Pittsburgh Corning. It has an acid-etched appearance on its inner faces and smooth outer faces. In addition to the standard block, the 4x12, as it is called, is available with a white fibrous glass screen in the center and with a blue-green Suntrol screen. The new shape may be used in combination with the company's 12-, 8- and 6-in. square blocks and is offered in the same colors: blue, green, red, yellow and orange. The 8-in. size only also can be obtained in walnut and charcoal. — Pittsburgh Corning Corp.

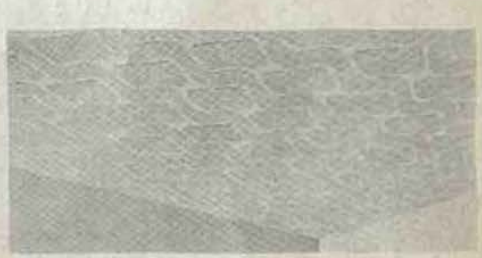
(Item No. 4)





aluminum screens, grills

Color-anodized aluminum screens and grills can be reproduced in virtually any design an architect creates or selects, in thicknesses ranging from ¼ to ¾ in. and in sizes from 2x2 to 4x12 ft. Panels can be finished in red, green, blue, gold, brass, bronze or copper; special colors are available on request. They can be installed, through use of standard window mullions, as easily as glass partitions.—Morris Kurtzon, Inc. **(Item No. 5)**



'sculptured' ceiling tile

Intended to make acoustical ceilings an integral part of the decor of restaurants, hotels, department stores and offices, a mineral wool tile with a three-dimensional finish has been introduced by National Gypsum. Three patterns (French Curve is shown here) are now available in what will become an extensive Sculptured Travacoustic series. Each design may also be combined with smooth or fissured tile for ceiling border trim.—National Gypsum Co. **(Item No. 6)**

cloak closet

Upward-sliding sectional Wardrobe-door permits design of a behind-chalkboard cloak closet wholly unobstructed for both traffic and supervision. Minimum depth of 2 ft. from chalkboard surface to back of closet is ample provision for the typical installation.—Barber-Colman Co.

(Item No. 7)

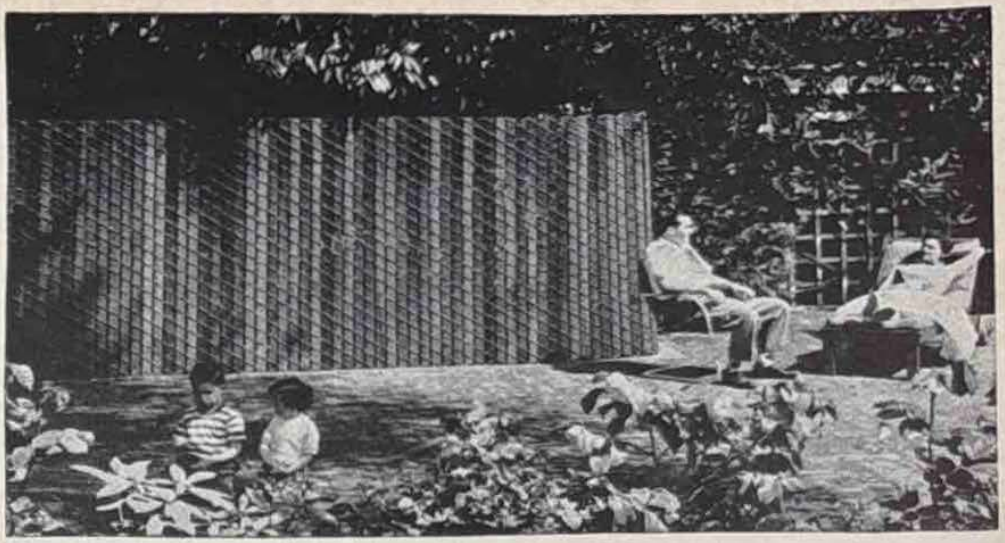
What Price Schools?: features pictures and data on pre-engineered steel school buildings from gymnasiums to bus garages throughout country; 8 pp.—Stran-Steel Corp., Detroit 29, Mich.



USS Cyclone Rustake

the fence designed
to complement modern architecture
to provide protection and privacy

The great majority of West Coast homeowners are interested in fencing their properties. This provides an excellent opportunity for you to include fence in the specifications of the homes you design. And an especially good fence for you to recommend is Cyclone Rustake Fence.

Rustake Fence is made by inserting slender strips of California Redwood into special wide mesh Cyclone Chain Link Fence. This fence has all the sturdy strength of steel, yet gives the appearance of redwood picket. Rustake Fence keeps out trespassers, establishes boundary lines and preserves privacy. Its attractive design and warm, glowing color make an effective background for shrubbery and blend well with the contemporary designs of Western architecture.

For more information on Cyclone Rustake Fence, send for our free booklet, "Cyclone Rustake Fencing." Then when your clients ask about suitable fencing for their property, you'll be ready with complete information on Cyclone Rustake Fence.

USS and Cyclone are registered trademarks

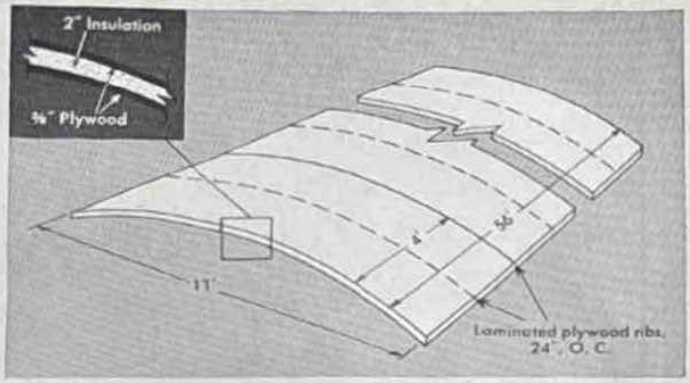
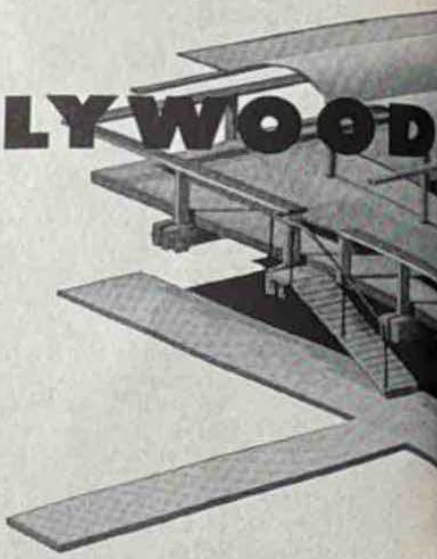
new approaches to structural design with fir plywood



Prefabricated roof vaults are 11 feet wide at the chord, and 56 feet long (40 foot span plus 8 foot cantilever both ends). Key to system is the outstanding shear strength of the stressed fir plywood skins.

FIR PLYWOOD



ARCHITECT: Theodore T. Boutmy, A. I. A.
George Kosmak, Consultant
John E. Brown, Structural Engineer

PLYWOOD VAULTS designed and engineered by Berkeley Plywood Co., Oakland

THESE lightweight fir plywood stressed skin barrel vaults designed for a California yacht club provide large clear floor areas at low cost plus an attractive profile and interior.

Combining roof decking, insulation and ceiling, the prefabricated vaults span 40 feet from front to rear and 11 feet from valley to valley, without use of beams or trusses. Vaults are cantilevered 8 feet front and rear; spouts which join units at the spring lines extend an additional 10 feet to act as gargoyles in carrying off water.

The roof system provides complete freedom in interior arrangements. Additions can be made simply by adding new vaults or extending the existing ones.

Structurally, the entire roof acts as a rigid plywood diaphragm in transferring lateral loads to the plywood end and shear walls. Two test vaults were successfully used at the San Francisco Arts Festival. Berkeley Plywood is contemplating mass producing the vaults as a standard construction component.

SEND FOR YOUR COPY OF "SCHOOLS OF THE FUTURE"

BOOKS

Architects' Year Book 8. Edited by Trevor Dannatt. Philisophical Library, 15 E. 40th St., New York 16, N.Y., 1957. 223 pp. $10.

The title of this work may be somewhat misleading for, unlike customary annual publications, this one is not concerned with the presentation of statistics, lists of names or summaries of achievements in its field. Rather it contains 17 articles of original thought and of critical outlook stimulating to both the practicing architect and to those who, less professionally involved, have an interest in the development of modern architecture and those subjects that affect or are affected by it. A few of the subject headings: "Style in Architecture," "Notes on a Domestic Style," "Alvar Aalto," "Design and the Creative Process," "Precast Concrete."

Student Annual. Edited by John Cremona. American Institute of Architects, 1735 New York Ave. N.W., Washington 6, D.C., 1958. 102 pp. $3 ($2 for students and libraries).

A collection of illustrations and photographs of work in more than 50 schools of architecture in the U.S., selected by the students themselves. "Our school projects today," says the editor, of the University of Syracuse, "should give a good indication of our buildings, our art and our cities to come."

The Weather Conditioned House. By Groff Conklin. Reinhold Publishing Corp., 430 Park Ave., New York 22, N.Y., 1958. 320 pp. $16.50.

Anyone exclusively interested in "the house" and nothing but "the house" should read this book. An analysis of the thermal environment, humidity, winds, sun, sound, odors and the deteriorating influence of moisture, pests and fire on the materials which make up the house is thoroughly delineated and simplified for the specific use of architects, builders and intelligent home buyers.

Design of Concrete Structures. By Leonard Church Urquhart, Charles Edward O'Rourke and George Winter. McGraw-Hill Book Co., Inc., 330 W. 42nd St., New York 36, N.Y., 546 pp. $8.

This sixth edition gives a sufficient development of the theory of concrete design to insure the beginner a thorough understanding of the fundamentals. The authors cover the entire field of customary reinforced concrete design with the exception of some highly specialized structures. Complete designs of some of the more common structures are given and emphasis is placed on a thorough discussion of basic structural performance, fundamental mechanics and physical explanation. The work reflects all the changes introduced in the revision of the American Concrete Institute's building code which was issued in 1956.

Building Construction Handbook. Edited by Frederick S. Merritt. McGraw-Hill, 327 W. 41st St., New York 36, N.Y., 1958. 906 pp. $15.

Composed of 29 sections written by 25 architects, engineers and contractors, the handbook presents the latest developments in design theory and construction practices. Each topic is developed in detail so as to be useful to the student and the non-specialist as well as the specialist.

Reinforced Concrete in Architecture. By Aly Ahmed Raafat. Reinhold Publishing Corp., 430 Park Ave., New York 22, N.Y., 1958. 240 pp. $15.

In dealing with the architecture of this versatile material, the author, a Fulbright scholar from Egypt who won his doctorate at Columbia University, discusses three components: structure, planning and aesthetics. Here is shown the cycle of growth from where it started a century ago, which paths were taken and where recent developments are leading. For the first time a thorough analysis of the importance of reinforced concrete as a main building material in all corners of the world is complete.

Distionary of European Art. By Emerich Schaffran. Philosophical Library, 15 E. 40th St., New York 16, N.Y., 1958. 283 pp. $4.75.

A handbook for all who wish to study or add to their enjoyment of the artistic landmarks of Western culture, this volume incorporates the significant figures, terms, movements and masterpieces in the fine arts. A comprehensive introduction traces the evolution of art forms and the rise and fall of art styles, from Greek classicism to modern expressionism, cubism and surrealism.

The Moderns and Their World. Introduction by Sir John Rothenstein. Philosophical Library, Inc., 15 E. 40th St., New York 16, N.Y., 1958. 128 pp. $12.

Half of the 96 full-page reproductions of works of 20th century artists are in fine color. About 50 painters are represented—some by several pictures—from the beginnings with Cezanne through Picasso, Matisse, Dali, Rivera and others, along with brief biographies of each, a note on each work and a bibliography. In his introduction, the director of the Tate Gallery analyzes the cultural and environmental influences that played upon the development of the individual artists and the shaping of the schools and styles.

T-SQUARE TALK

new offices

Lorand West has opened an office for the practice of architecture at 7233 Beverly Blvd., Los Angeles.

firm changes

John Rushmore and Jack Woodman have dissolved their architectural partnership in Bellevue, Wash. Rushmore continues to practice in the J. S. Ditty Building under the firm name of John Rushmore & Associates; Woodman is now consulting architect with Interlake Properties, Inc., Bellevue commercial developers.

new partners

Donald R. Ericson, who has been with Culler, Gale, Martell & Norrie, architects-engineers of Spokane, since 1955, has been named a junior partner, filling the position of design coordinator.

deaths

Albert R. Walker, 77, architect-engineer, who participated in the design of more than 350 buildings in the Los Angeles area and was instrumental in the westward development along Wilshire Boulevard, died September 17 after a prolonged illness. His last major work before retiring in 1954 was the St. Sophia Greek Orthodox Cathedral. He was a senior partner in the firms of Walker & Vawter (1910-17), Walker & Eisen (1918-41) and Walker, Kalionzes & Klingerman (1941-54).

elections

Idaho Chapter, AIA, has elected these officers: Ed Jones, Boise, president; Clinton Sundberg, Idaho Falls, vice president; Rodney Grider, Boise, secretary-treasurer; and Curtis Finch, Boise, to the executive board.

Portland planning director Lloyd Keefe has been named president of the Pacific Northwest Chapter, American Institute of Planners.

AIA MAY MEET IN WEST

San Francisco may possibly replace Denver as the site for the national AIA convention in 1960. Director Ulysses Floyd Rible of the California-Nevada-Hawaii Region reports that the Denverites have requested a postponement because of delay in construction of a new hotel.

appointments

Architects Philip Daniel of Los Angeles and Corwin Booth and John S. Bolles of San Francisco have been appointed to make a survey of the functioning of California's State Division of Architecture, working with the management consultant firm of Ernst & Ernst.

Robert A. Williamson has been promoted to chief structural engineer and Harold Soliday to chief electrical engineer by Holmes & Narver, Inc., Los Angeles engineers-constructors.

Architect Winston Cordes is serving as chairman of the construction industry division of the Community Chest for the Los Angeles area.

Floyd A. Cosmi has been named manager of the San Francisco architectural office of John S. Bolles.

travelers

Beverly Hills architect Victor Gruen left last month on a six-week trip to Europe where he will visit Germany, France, Italy and Austria and will address several professional groups on shopping centers and planning in his native Vienna.

FOUR DISTINCTIVE HAWS FOUNTAINS
SMARTLY STYLED IN VITREOUS CHINA

HAWS

"The Series 60"...refreshing new styling with the durable beauty of gleaming vitreous china, permanently in good taste. All are wall-hung models, based on the same appealing design. Choose the model that best fits your plans...or choose several to complement each other in varied locations. Sanitation? Only HAWS has the exclusive M fountain head...raised, shielded, anti-squirt angle stream. Automatic flow control, too. Get detailed specs from HAWS. Write today.

Model 62-GF: HAWS glass filler faucet installed on back of Model 62, for double-duty convenience.

Ask for your free copy of the new HAWS Catalog.

HAWS DRINKING FAUCET COMPANY
1441 FOURTH STREET (Since 1909) BERKELEY 10, CALIFORNIA

MANUFACTURERS/SUPPLIERS

• **Architectural Plastics Corp.** has named a director of architectural services for its new San Francisco office at 260 Kearny St., Clayton Lewis, who for the past four years has worked in the Bay area as a designer for several architectural offices and for himself.

• **Cascade Pumice Corp.** lost its president when Lloyd A. Williamson died July 29 at the age of 61. A native of Muncie, Ind., he came to the Northwest 16 years ago and founded the company which bore his name and preceded the present firm. He served as first vice president of the National Pumice Institute in 1955.

• **Fabricon Products** of Los Angeles has appointed William B. Clayton Jr. as vice president in charge of West Coast operations; and James Pendry as sales manager of the laminated products division.

• **Olympic Stained Products Co.** of Seattle has appointed George C. Oistad as sales promotion manager.

• **United States Plywood Corp.** has elected a new president, Gene C. Brewer of Redding, Calif., in charge of the firm's West Coast operations since 1954. He succeeds S. W. Antoville who has become chairman of the board. Brewer joined the company in 1937 in Seattle, was transferred to South Carolina and returned to the West in 1949 to serve as plywood plant manager and a year later as president of Shasta Plywood, Inc., a U. S. Plywood subsidiary. During his time with the company on the West Coast, its operations have grown from the original Seattle plant to a complex which includes six plywood plants, eight sawmills and remanufacturing facilities, two green veneer plants, one box factory and a plant which produces Novoply.

BREWER

• **Fluorescent Fixtures of California** has appointed Kenneth R. Taylor as sales engineer servicing the Northwest territory.

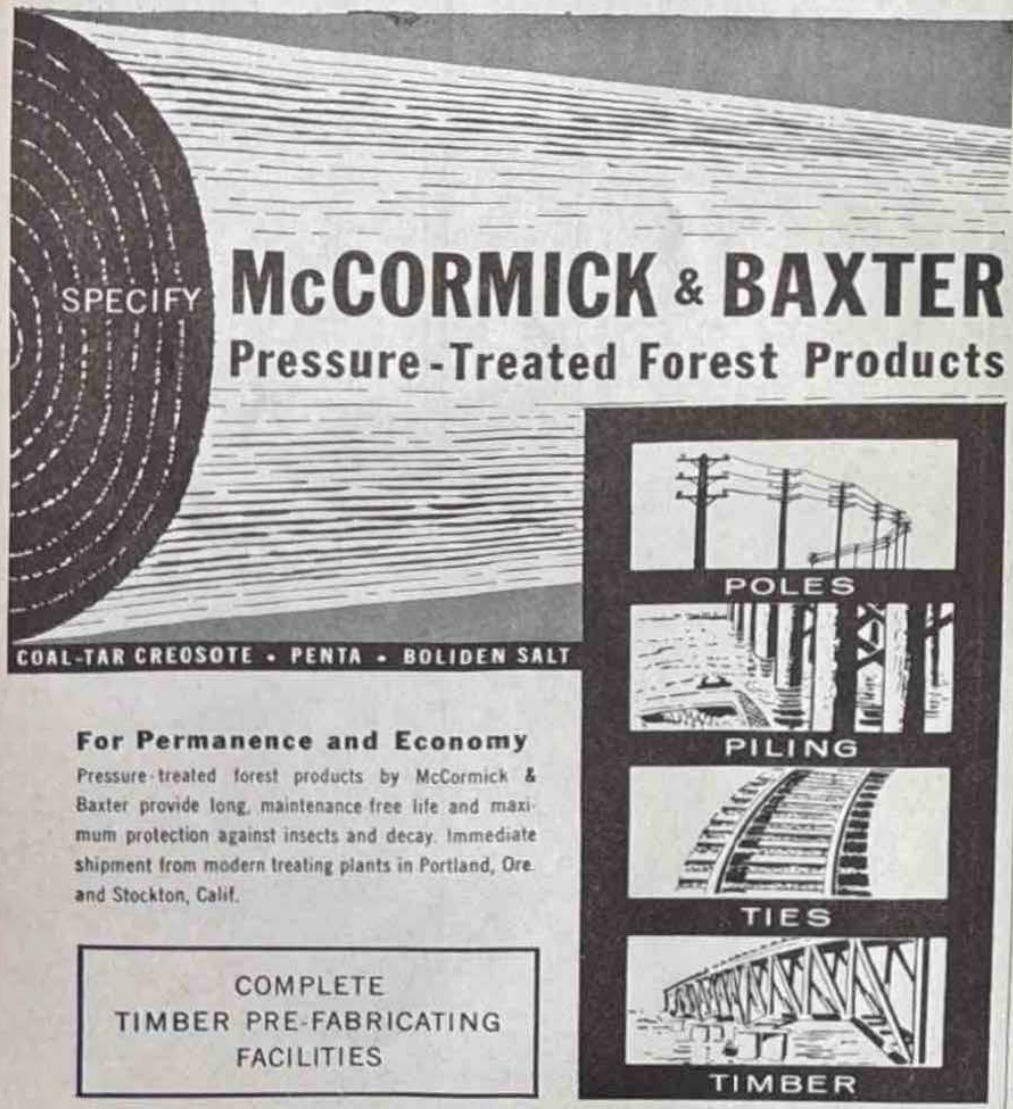
• **Harvey Aluminum** has started production at its aluminum reduction facility at The Dalles, Ore.

• **Silvray Lighting, Inc.,** has appointed Matt Cabot of Honolulu to service the Territory of Hawaii.

• **Michael Flynn Manufacturing Co.** has purchased the extrusion equipment of Western Extrusion Co. located in Gardena, Calif., as part of a long-range program to produce aluminum extrusions, windows and curtain wall on the West Coast.

• **Fibreboard Paper Products Corp.** of San Francisco has created a new service organization known as the technical services department, with William A. Wiedersheim, graduate architect and the company's market analysis manager, in charge. Five technical service representatives have been appointed: Edgar F. Carney, southern California; Robert Conant, Northwest; Henry M. Ferree, central California; Allan Paterson, Los Angeles; David H. Williams, Intermountain.

• **Graystone, Inc.,** held a recent open house at its new prestressed concrete plant in Redmond, Wash., which included a briefing on latest developments in the field by Harold Price, San Francisco representative for Freys-



For Permanence and Economy

Pressure-treated forest products by McCormick & Baxter provide long, maintenance-free life and maximum protection against insects and decay. Immediate shipment from modern treating plants in Portland, Ore. and Stockton, Calif.

TIMBER PRE-FABRICATING
FACILITIES

FOR DEPENDABLE PRESSURE-TREATED FOREST PRODUCTS RELY ON

McCORMICK & BAXTER CREOSOTING CO.

P. O. Box 3344, PORTLAND, ORE. | 485 California St., SAN FRANCISCO, CALIF. | 144 W. Broadway, GLENDALE, CALIF.

sinet Co. Graystone holds the Freyssinet affiliation for engineering and design consultation in Washington.

• **Clad-Rex Corp.** has a new Portland representative for its vinyl metal panels: Johnson Acoustical & Supply Co.

• **Construction Fabricators, Inc.,** has opened for business at 9442 S.W. Barbur Blvd., Portland, with Bob Propst and Terry White as principals, specializing in heavy timber frame buildings.

• **Soule' Steel Co.** will erect a new several-million dollar steel rolling mill in Los Angeles.

• **Evans Products Co.** will expand and relocate its wood products research and development laboratories from Coos Bay, Ore., to Corvallis and has promoted two western division executives: Dr. Piotr Zenczak, director of wood research laboratories, now also in charge of production of hardboard and battery separators in Corvallis; and Arthur VanderSys, up to now hardboard plant manager, with new duties as director of sales promotion.

• **Pomona Tile Manufacturing Co.** of Los Angeles has appointed Richard G. McGandy as director of public relations and advertising.

• **The Stanley Works** has a new western corporate office and warehouse in Los Angeles, with Harvey A. Clark as manager.

• **Permanente Cement Co.** has completed a $500,000 cement grinding facility at its northern California plant that will permit increased production of finished cement during the peak construction season.

• **National Electric Products Corp.** has appointed a veteran sales executive, Norman L. Bost of Seattle, to the newly created post of assistant vice president.

• **Peerless Heater Co.** has appointed Hardesty-Favero & Co. of Seattle to represent its line in Washington, Oregon and Idaho.

• **Payne Co.** of La Puente, Calif., has appointed Don Driver as a sales engineering representative in southern California.

• **Rilco Laminated Products** has named Albert M. Stringer of Great Falls, Mont., as representative for the entire state and northern Wyoming.

• **Bethlehem Pacific Coast Steel Corp.** has appointed H. A. Schirmer as manager of fabricated steel construction sales. He has been succeeded in his former post as contracting manager for the San Francisco district by B. B. Dunwoody.

• **Chelsa Fan and Blower Co.** has appointed John A. Scott Co. of Los Angeles as its southern California representative.

• **Consolidated General Products, Inc.,** has named O. O. Taylor & Son, consulting engineering firm of San Francisco, to handle its line of roof ventilators and fans throughout northern California and the Reno, Nev., area.

• **Chase Brass & Copper Co.** has instituted an advisory service to builders and plumbing contractors to assist them in determining the best techniques for installing copper tube plumbing and drainage systems. It is available on the West Coast through offices in Los Angeles, San Francisco and Seattle.

• **Klemp Metal Grating Corp.** has opened a manufacturing plant at 538 Eastshore Highway, Albany, Calif.

Puts the Air Itself to Work for You!

COLT NATURAL VENTILATION

Cools Your Plant Without Motors

This triumph of aerodynamic design actually creates an unfailing circulation of air without any mechanical aids of any kind! You must see an installation to believe it!

Recent installation of Colt CO/2046 Clear-opening Adjustable Louver Ventilators at BINER-ELLISON MACHINERY CO., LOS ANGELES.

40,000 INSTALLATIONS AROUND THE WORLD PROVE COLT BREAKS THE "HEAT BARRIER"

No matter what the climate, COLT's practical application of exact scientific principles vents heated process air with efficiency equal to mechanical systems, but with no motors or running costs. COLT is a profitable morale-booster that can be installed quickly without structural changes in your plant. Write for estimate TODAY.

COLT "CO/2046" CLEAR-OPENING VENTILATORS

- 7 times lighter than comparable galvanized units! Just 23 pounds each, can be installed in any type of factory roof
- Gives unrestricted passage to air, immediate release of concentrated process heat
- Removes heat from source before it can spread throughout plant
- Permits loss to atmosphere of building and body heat where this radiant heat, being of low frequency, could not normally pass through walls and roof
- Built-in hand-operated control . . . no power required
- Full, clear opening gives maximum extraction
- Unique top and side drain channels on louvers guard against rain
- Adjustable louvers 100% rainproof when closed
- Strongly built of anti-corrosive aluminum

A Few Recent Installations:

Aldine Printing Co., *Los Angeles*
All American Cutter Co., *Hawthorne*

structure. Some of you might know, for example, that the forms for the shells that were built at MIT were extremely costly. No one has ever said how much, but I think that they cost around $3 or $4 a square foot, and one of my students once remarked that he didn't see the point of building a lovely wooden structure to pour a concrete structure on it and destroy the former. And he was right.

I have been very lucky inasmuch as I have had experience in building shells in Europe, in South and Central America and in the United States, and I must say frankly that unless you visualize the job from the economical viewpoint and unless you are very inventive and very creative so as to beat this problem, then you should not be designing and building shells.

Now for a few details. One of the first things to be noted is this: the stress analysis of a thin shell at the elementary level is extremely simple. Thin shells have this beautiful property: that whatever their shape and whatever their load, they are internally statically determinate. So you don't have to solve for any statically indeterminate quantities; you don't have to solve numerous simultaneous equations. Three equations of equilibrium will solve for the three unknowns in the problem. Now I emphasize that this is true only at the elementary level. It is perfectly true that this state of stress exists in the largest part of the shell, if the shell is properly designed and properly supported. But even if you have a proper design and a proper support, there are certain regions of the shell in which the state of stress is extremely complicated.

For example, take a barrel shell. It has a state of stress which, if analyzed correctly, requires a solution of a differential equation of the eighth order. A differential equation is a nasty beast and the higher the order, the nastier the beast, so this is a fairly nasty one we have to fight with. But mathematicians (who are kind of mad and like to fight this kind of beast) fought this one. They now have it corraled and it is available to you without any danger. So you can build barrels, but you must remember that behind the stress analysis of a simple barrel there is a tremendous amount of mathematics. You must not forget that these structures are in essence the fruit of our modern technological culture, that they are the result of some of the purest mathematics applied to problems that are of interest to those who love beauty and those who love sound structures.

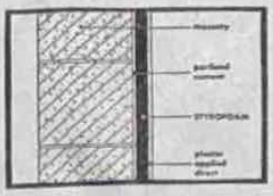
Non-forumla curves

Now suppose you had done the stress analysis of such shells either by use of such formulas as are available to you or by actually solving the problem. Most of the time we have to solve each problem anew because there are very few shells that look like other shells, so that a lot of creative mathematics has to be worked out if you really want to know what goes on. Suppose you as an engineer had done that. How would you answer the architect who came to you with a barrel shell which, instead of having a circular cross-section or an eliptical cross-section, had a cross-section which he just drew? He just lays a drawing on your table and says, "I would like to build it this way." Well, now I must fight my colleagues in engineering because very often when an architect comes up with a curve which does not have an accepted formula (it's not a circle, it's not an ellipse, it's not a parabola), the engineer says, "I'm sorry, I cannot do it." Now that is wrong because as soon as you acquire a thorough

new construction method with

STYROFOAM®

cuts building costs!



Styrofoam*, a Dow plastic foam insulation, is now available for a completely new construction method. Fully insulated masonry homes with plaster interiors can now be built without the usual furring and lathing. And the finished plaster wall is warm and dry.

Styrofoam is clean, lightweight, easy to handle insulation that does not lose its effectiveness. It resists moisture, heat, cold and deterioration; assures lower fuel bills. And it's easy to cut and shape Styrofoam, even around pipes, windows and electrical outlets.

*Styrofoam is a registered trademark of The Dow Chemical Company

knowledge of the behavior of shells, then they become alive to you, and you ought to be able to take care of curves which do not respond to any simple mathematical formula. So I will remind the architect to come up with sound shapes, but not necessarily mathematical shapes, and I would like to ask the engineer to be ready to solve problems even if the curves involved do not appear in any elementary book on geometry.

The moment you have analyzed the problem by hook or crook (and I may say that to this day many of the shells you see are analyzed by crook), you are now ready to present your drawing to the contractor who is going to build the structure. This is where one of the most difficult problems comes up and that is the problem of forms. In countries where labor is rather inexpensive, like Italy and Central America, you can afford to build some very complicated forms. But if you are to do the job here, can you lick the problem of forms? The answer is "Yes." There are a variety of ways of solving this problem. The first is, of course, to have a structure in which the same shape appears over and over again so that either you have a form that moves (which can be put up, lowered, shifted, etc.); or you can have the same form used on the ground (you can build the shells one on top of the other so that the first serves as a form for the second, the second for the third, etc.); or you can even go one step further and build your shells on the ground on a single form and then lift them up. The other idea which I think has not been explored too much is the use of cables and prefabricated elements that you lay on the cables.

I presume that prefabrication is one of the key words in the United States behind the use of shells. You well know that Pier Lugi Nervi has brought prefabrication to a very fine point of perfection. It is true that he has a very special material with which he prefabricates and although Ferro Cemento is an ideal material, I do not believe that you can use it in the form in which Nervi uses it in Italy, simply because the workers actually pour the concrete with a spoon. This, of course, would be impossible for us and much too costly.

If the form problem is licked by any of the methods I have mentioned, there is no question but that the economy aspect of shells can be completely ignored and you can proceed to the other problems that appear in the study of shells.

What are the other problems? I would like to talk first about some of the very practical ones. Until about a year ago, for example, the problem of weatherproofing a roof was almost an insurmountable one in the United States. To put up a built-up roof on top of the shell is quite a problem. Moreover, a built-up roof does cost money. I don't know what one costs in California, but certainly it is on the order of 50 or even 60c a square foot. Since we are aiming at shells that cost altogether $1.50 a square foot, we can't afford to spend 50c on weatherproofing. I am glad to say that at long last we have the answer. There are at least two products that are available. One is an acrylic paint and one is a neoprenic paint to spray. I have experimented with both and they both work very well. We can now weatherproof large shells or small shells for as little as 5c a square foot for one layer. We recommend three layers, so that 15c will do the job. At most, in 10 or 15 years we may have to spray one additional layer, which may be considered as just normal maintenance on the job.

The next thing is what do we do about shrinkage? We do just what we do about any other concrete structure. First we pour the kind of concrete that is right, we cure it the right way and we are bound to get no problems in shrinkage—in fact, we're going to

"More and more buyers are demanding built-in telephone outlets."

says **Jack McLeod**, President of the Portland Home Builders Association, Portland, Oregon.

"Our clients want a home that will meet their telephone needs today—and tomorrow. So we install telephone outlets and concealed wiring in all the busiest rooms. Telephone planning increases the long-range value of a home—and is a real plus in making a sale!"

To successful builders like Jack McLeod, who are meeting the modern living standards of the Pacific West, complete telephone planning is as basic as adequate electrical wiring.

We'll be glad to help you plan built-in telephone facilities. Just call our business office, and ask for our free Architects and Builders Service.

Pacific Telephone

It pays to include Telephone Planning in every home you build!

have less problems than if we had a flat slab. The problems of shrinkage and the problems of temperature stresses (which, by the way, are theoretically very complicated) depend very essentially on how you support the shell.

Perhaps here I should say that we usually think of a structure being a shell because of its form. It is true that the form has a lot to do with the stress pattern in the shell, but the latter depends also very essentially on how you support the shell. For example, if you have a barrel and the barrel is cylindrical and is supported all along the edges, this is not a shell; it's just a series of arches. You get exactly the same behavior that you would get in regular arch. The moment instead that you hang your shell from some very heavy stiffeners—rigid stiffeners—at the ends, then you get the behavior that we call shell behavior. To indicate to you the difference between the two behaviors, may I just say this. If you have the barrels supported along the edges and you load the shell by means of any vertical load, you know that the thrust will push the edges of the shell out. If the shell behaves like an arch, that is what happens. But if you do hang the shell from two very stiff elements (diaphragms or arches), you may be amazed to find that your edges not only do not go out, but they move inward.

'Democratic institution'

Once the difficult mathematical problems have been solved and the shell is up, can we be sure that it will behave exactly as we expect it to? The answer is "No." I am not sure at all that the shells I have built will resist the loads the way I say they do, but there is a very wonderful factor in shells which makes me sleep without any fears. And it is this. Suppose you had a beam and suppose it were just simply supported. You have a load on it—a uniform load. Well, you all know that the maximum moment occurs in the middle; therefore, that the stresses are highest at the middle. And if the beam is underdesigned, at first it will try to stand up as best it can, but eventually after the beam has become plastic, it will collapse. And there is nothing that the adjoining section of the beam can do. Now suppose that I had underdesigned a shell. And suppose that one section, one portion, of my shell has stresses that are too high. Well, you see, a shell is a very democratic institution. If a certain part is overworked, the other parts pitch in and help. There is what we call a redistribution of stresses which can only occur because you have a distributional stress in a two-dimensional body rather than in a one-dimensional body. Hence it is very, very seldom that, even if you overload a shell in a certain region, it will collapse.

Three examples

I would like to mention to you three outstanding examples. One is very well known and if you have met that wonderful engineer and good friend Torroja of Madrid, Spain, you know that he was one of the pioneers in thin shells and designed the beautiful jai alai court in Madrid. During the Civil War this thin shell was pierced by a bomb which put a hole in it about 45 ft. in diameter. (The shell was about 120 ft. long and about 60 ft. wide). Apparently the stresses just went around the hole and the shell stayed up without much trouble until further bombs brought it down.

Another that I think is quite lovely is an example of a shell built in Germany that was supported by four columns. During the war it was hit by a gun shell which cut off one leg. This shell, which was designed to stand on four legs, stood on three and didn't mind at all.

There is a third example that I would like to mention to you, particularly those of you who are interested in foundations. You all know that if any part of the foundation sinks in an inch further than another, there is going to be trouble ahead. In most structures that is true. But a French engineer not long ago built a shell about 30x30 ft. and then put a jack under one of the four colunms that supports the shell. For three weeks he had the jack go 1 ft. up and 1 ft. down, 1 ft. up and 1 ft. down and nothing happened! In other words, shells are very insensitive to displacement of the foundations, they are very insensitive to overloads in local regions and therefore have a factor of safety which is incomparably higher than the actual factor of safety of a frame structure. So not only do I think they are easier to design, if they belong to a standard type, but they are safer and they are more economical than most other structures you can compare them with.

Every school of architecture in the country is clamoring for a short cut to the understanding and solution of shells, but there is no such thing. In my opinion, every decent job is obtained by blood, sweat and tears. If you are willing to give them, you will get good shells.

An illustrated article on thin shell construction in southern California prepared by an architect will appear in a later issue of PA&B.

BUILDING NEWS

Oregon, Washington, Idaho, Montana, Alaska

- ● Bids Called
- ★ Contract Awards
- ▲ Low Bids—Bids Received
- ■ Planholders—Prospective Bidders

OREGON

●HOSPITAL ADDITION— Burns, Ore.

Bids will be opened for the second time 2 p.m., October 31, by Harney County Commissioners, Courthouse, Burns, for construction of a wood frame addition, and alterations to Harney County Hospital in Burns. Plans with county clerk, $10 deposit. Plans by Roald, Schmeer & Harrington, architects, 1104 Portland Trust Bldg., Portland.

The one proposal submitted by Mann Construction Co., City Limits, Redmond, at the October 8 bid opening, was rejected due to lack of competitive bidding.

Addition will provide larger doctors' quarters, increase size of laboratory and cover the existing ambulance entrance. Concrete slab floor on grade; frame walls with brick veneer; built-up roof, plaster interior finish; asphalt tile flooring; incandescent lighting; radiant heating.

DM 10-14. Previous report 10-7

HOSPITAL— Canyonville, Ore.

Funds in amount of $170,600 have been alloted by the federal Hill-Burton Act to the Blue Mountain Hospital District, to aid in construction of a 30-bed hospital in Canyonville vicinity. The board is considering sites in the John Day and Canyonville district. Grant county voters have already approved $400,000 for the proposed hospital. April 1 is the deadline for awarding construction contracts or the federal funds will be allocated to other hospital projects. Plans are being prepared by Charles Johnston, architect, 13 N. 8th, Payette, Idaho. DC 10-11

●■TELEPHONE BUILDING ADDITION— Corvallis, Ore.

Bids will be opened 2 p.m., October 21, by Pacific Telephone & Telegraph Co., Charles Twelves, chief engineer, 509 S.W. Oak St., Portland, for construction of a 34'x75', one-story reinforced concrete addition to the company's central office building at 401 Jackson St., Corvallis. Plans by Stanton, Boles, Maguire & Church, architects, 208 S.W. Stark St., Portland.

Planholders: Wood, Johnson & Rose, Inc., Box 127; Robert C. Wilson, 2301 N. Highway 99-W; Quentin Greenough, Box 868. Of Corvallis: Albert Vik & Son, 160 Madison St.; Waldo S. Hardie & Son, 858 Pearl St.; Industrial Building Co., Box 869. Of Eugene: John Carrick & Son, 3531 S. Pacific Blvd., Albany.

The building will be located directly behind the company's present central office building, and will provide space for local and long distance switching equipment. Completion is scheduled for middle of 1959.

WB 10-10

★STORAGE BUILDING— Enterprise, Ore.

Award to Bill Dunn & Co., Enterprise, $3,686, by City Council, City Hall, Enterprise, for construction of a storage building to be located near the city sewage disposal plant.

MH 10-11

★ROOFING— Klamath Falls, Ore.

Award to C. Fitzgerald Roofing Co., 247 Hillside, Klamath Falls, $2,961, by State Department of Finance & Administration, 1225 Ferry, Salem, for construction of new roof and repairing roofs on medical storage building at Oregon Technical Institute, Klamath Falls; Inv. No. S-5300-58. Bids opened September 18.

CA 10-14. Previous report 9-16

●RESIDENCES, WAREHOUSE— Lane County, Ore.

Bid opening extended from October 9 to 2 p.m., P.S.T., October 30, by U.S. Forest Service, Regional Supply Officer, 729 N.E. Oregon St., Portland, for construction of three residences and a warehouse at Oakridge Ranger Station, and two residences at Lowell Ranger Station, Willamette National Forest, Lane County, Ore.; Bid No. R6-59-112. Plans with above office or with Forest Supervisor, Willamette National Forest, Post Office Bldg., Eugene.

All buildings will be one-story ,frame construction; dimensions will be approximately 50'x40' and 64'x30' for the residences, and 65'x32' for the warehouse.

WB 10-11. Previous report 9-24

PARKING FACILITY— Medford, Ore.
(Estimated cost $510,800)

A proposal by Robert J. Kenney, architect, Fluhrer Bldg., Medford, has been submitted to the city council for construction of a 400-car parking facility over the Southern Pacific railroad tracks in downtown Medford. Plans provide for expansion to 1,600 parking spaces.

The initial unit would extend from 5th to Main and have circular entrance and exit ramps at 6th and Front. Plans call for steel and concrete.

DC 10-14

MEDICAL CLINIC— Molalla, Ore.

ALASKA

WESTCHESTER URBAN RENEWAL— Anchorage, Alaska
(Estimated cost $1,200,000)

Plans are in the final stage on the Westchester Urban Renewal Project in Anchorage; Proj. T.A.R.-8. Planning is under direction of Alaska Housing Authority, 11th and I streets, Anchorage, for the city and individual property owners.

Approximately 36 acres will be redeveloped for residential uses with an area set aside for a park. Location is between 16th Ave. and Chester Creek on both sides of Spenard Road bounded by H St. and the Anchorage High School. Construction estimates will be available in January or February of 1959. AL 10-8

RESIDENCES, UTILITIES— Anchorage, Alaska
(Estimated cost $750,000)

Acquisition program has started and it is hoped that the Alaska Housing Authority, 11th and I streets, Anchorage, can start selling land for private re-use and/or individual development beginning around March 15, 1959, in preparation for an urban renewal project on the east side of Government Hill in Anchorage; Proj. T.A.R.-3.

It is proposed that existing quonsets will be replaced with about 70 new homes, costing from $15,000 to $30,000 each, on the east end of the hill. Street and utility improvements are also planned. The Alaska Housing Authority will act as redevelopment agency for the city and individual property owners.

Cost estimates on improvements contemplated in conjunction with the urban renewal include the following: $290,000 for paving streets, constructing sidewalks, curbs, gutters; $50,000 for storm sewers; $4,300 for sanitary sewers; $12,000 for water lines; $8,000 for street lights; $16,000 for electrical distribution; $14,800, telephone lines and facilities; $25,000, new park.
AL 10-8. Previous report 4-18

SCHOOL— Bethel, Alaska

Bids will not be opened in January of 1959 as previously announced, on construction of a one-story, no basement, 20,000 sq. ft. L-shaped school building at Bethel. Plans are being prepared by Linn A. Forest, architect, 622 Hemlock Way, Juneau.

As the structure will be a territorial school, part of its cost will be paid by Commission of Education. However, bids will be opened by Alaska Public Works, Juneau. Plans are not in working drawing stage, so it will be late January or February or even March before bids are called.
JU 10-10. Previous report 10-4

●**PAINTING, FLOORING— Elmendorf AFB, Alaska**

Bids to be opened 3 p.m., November 3 by base procurement office, Bldg. T22-057, Elmendorf Air Force Base, Anchorage, for cleaning, painting, decorating and floor finishing in 220 family apartments at the base; IFB-65-501-59-44. Plans with above office. AL 10-15

●**ELECTRICAL WIRING— Fort Richardson, Alaska**

Bids to be opened 2 p.m., October 24 by purchasing and contracting officer, U.S. Army Supply and Maintenance Center, Room 112, Bldg., 977, Fort Richardson, for installation of electric wiring at the curling rink in Fort Richardson, IFB-ASK-95-508-59-11. Plans with above office. AL 10-15

ELEMENTARY SCHOOL— Fort Richardson, Alaska

Working drawings are under way by Manley & Mayer, architects, Loussac-Sogn Bldg., Anchorage, on an elementary school at Fort Richardson; Proj. AAA-59-C-FED-A-9. Construction will be under jurisdiction of Housing and Home Finance Agency (John Nichols, acting territorial representative, Anchorage).

Eleven classrooms; multipurpose room with kitchen; storage unit, dressing rooms, offices, teachers' room, toilets, service unit, transformer vault, storage area. AL 10-15

URBAN RENEWAL— Ketchikan, Alaska
(Estimated cost $2,300,000)

Engineer will be retained soon by City Council, City Hall, Ketchikan, to survey a proposed urban renewal project in Ketchikan Creek adjacent to downtown section of Ketchikan; Proj. No. T.A.R.-2. Planning is under direction of urban Reneral Planning Director Victor Fischer, Alaska Housing Authority, 11th and I streets, Anchorage.

No major public works are included in this renewal project, but substantial earthmoving, building of retaining walls, filling, and construction of large municipal parking lot, as well as private commercial development, will be involved. It is hoped that work can start late in 1959. AL 10-7

▲**SCHOOL ADDITION— North Pole, Alaska**

Award is still pending on construction of an addition to the school at North, Pole, Alaska on which bids were opened September 29. Of the seven bids submitted, the low was $53,400 (base), $2,001 (deductive alt.) by Arctic Builders, Box 305, Fairbanks. Second low was Consolidated Construction Co., Box 1574, Fairbanks, $54,351, $2,061. Hi bid was $73,500, $3,000. Plans prepared by McEntire & White, architects, 201 Chena Bldg., Fairbanks. AL 10-11. Previous report 9-27

SCHOOL ADDITION— Palmer, Alaska

Plans are waiting final approval of Housing and Home Finance Agency, (John Nichols, acting territorial representative, Anchorage), on an addition to the Swanson School in Palmer for Palmer School District; Proj. No. AAA-58-C-4A-8. Drawings and specifications were prepared by Edwin Crittenden & Associates, architects, 845 9th, Anchorage.

Addition of six-classrooms, multipurpose room, stage, administrative unit, kitchen, storage space, caretaker's apartment.
AL 10-15

■ **VORTAC FACILITIES (Buildings, Utilities)— Sisters Island, Alaska**

Planholders announced on construction of VORTAC facility consisting of engine-generator building, quarters' building, supplemental facilities, seaplane ramp, disposal of clearing material on Sisters Island, Alaska; Inv. 5-59-30. Bids to be opened 2 p.m., A.S.T., October 30, by Civil Aeronautics Administration, Region 5, Contract and Purchase Section, AN-170-C, Box 440, Anchorage. Plans available in Anchorage office. $20 deposit. Bid guarantee 10%. Completion time 184 calendar days.

Planholders: Allen Electric Co., Box 1523, Anchorage; City Electric, Box 3698, Eastchester Branch, Anchorage; Continental Construction, Inc., 900 E. 9th, Anchorage; Patti-MacDonald Construction Co., Pouch 6, Anchorage; Burgess Construction Co., Box 1410 Fairbanks; Fairbanks Builders, Inc., 1446 Turner, Fairbanks; Nordin Construction Co., Box 1771, Fairbanks; C & R Builders, Inc., 1619 8th N., Seattle, Wash.; Eyak Construction Co., Box 696, Cordova; Western Equipment and Supply Co., Box 1456, Kodiak; Modern Electric Co., Box 4515, Spenard; Chisum & Langlais, Box 1, Kenai.

Sched. 1—(a) 490 c.y. excavation; 100 c.y. rock excavation; 6,850 c.y. borrow excavation; 36'x36' concrete block equipment building with concrete foundation and floor slab plus utilities. (b) antenna system; concrete support for antenna; 16' support shelter; field detector support; 24 ground check supports; conduit, cable, other electrical installations and related work. (c) frame living quarters including utilities; 14,000 gal. wood stave water storage tank with supply lines; 1,000 gal. fuel storage underground tank; septic tank; 100' of 4" sewer pipe; 102' effluent line; 200' of 600 volt underground electric service cable; 50' electric service to VHR Bldg. (d) 30'x62' prefabricated metal engine-generator building on concrete foundation plus utilities; 515 gal. fuel storage tanks; 3,000 gal. steel water storage tank; two, engine generators in powerhouse; three, transformer substations; 2,700' underground power cable; 20,000 gal. fuel storage tank with fuel lines; (e) communication system; 700' underground control cable; 2,510 c.y. borrow excavation; 24' of 11"x18" CMPA for roads and drainage; engine generator in VORTAC Bldg.

Sched. 2—Seaplane Ramp: 150 c.y. rock excavation; 2,500 c.y. common excavation; 1,100 c.y. grading; 232 c.y. reinforced concrete for pavement; 1,430 bbl. cement for grouting base course of ramp; relocate buildings.

Sched. 3—disposal of clearing material.

★SANITARY SEWER— Albany, Ore.

Award to Quilliam Ditching Co., 727 E. 14th Ave., McMinnville, $6,736, by City Council, City Hall, Albany, on construction of about 1,976' of sanitary sewer. Bids opened October 1.

Quantities: 1,470' of 8" concrete sewer pipe; 470' of 8" asbestos-cement sewer pipe; 7 manholes; 36' of 36" concrete pipe.

CA 10-14. Previous report 9-24

★GAS LINE— Albany, Ore.

Award to Harbert Construction Co., Longview, Wash., $25,923, by Northwest Natural Gas Co., (Gasco), 920 S.W. 6th Ave., Portland, for construction of 2½ mi. of gas pipeline in and just east of Albany. Eight bids ranging to a high of $43,784 were received October 8. OTHER LOW BIDS: Salem Sand & Gravel Co., Salem, $26,323; Loy Clark Pipeline Co., Salem, $29,012.

Work includes 9,900' of 8" and 3,800' of 10" pipe. Materials, furnished by owner total $35,000, will start October 13 and be completed by Nov. 14.

WB 10-10. Previous report 10-7

▲UTILITY SYSTEMS Camp Adair, Ore.

A low bid of $64,221 was submitted by Hennen & Von-Willis, 450 Figuera, Eugene, when the 337th Fighter Group, procurement office, Portland International Airport, Portland, opened bids October 9 for construction of utility systems including water, sewer and electrical, to serve 150-unit family housing project, Camp Adair Air Force Base near Corvallis; IFB-35-608-59-7.

WB 10-11. Previous report 9-26

CANALS, DIVERSION DAMS, WASTEWAYS, DRAINS— Camp White, Ore.

Bids will be called in April, 1959 by Bureau of Reclamation on construction of the second sections of the Southfork and Daley Creek collection canals and the Grizzly Creek Canal, Talent Division, Rogue River Basin Project, Ore. As weather conditions may make it difficult to make physical examination of the site at the time of the invitation issuance, the Bureau is inviting prospective bidders to inspect the site of the work in the immediate future. Prospective bidders wishing to visit the site are advised to contact J. A. Callan, Project Construction Engineer, Bureau of Reclamation, Box 386, Camp White, Ore. Reference: Map Drawing No. 415-D-490.

Southfork Collection Canal, Second Section—Construction of about 3.8 mi. of 6' bottom width canal from the diversion dam on South Fork Little Butte Creek to the Beaver Dam Creek Siphon. Structures to be constructed will include two rock-fill type diversion dam structures, two overflow wasteways, a drain inlet, and two road-crossing culverts.

Daley Creek Collection Canal, Second Section—Construction of about 2.6 mi. of canal with bottom width varying from 6' to 4' from the diversion dam on Daley Creek to the Deadwood Creek Siphon. Structures to be constructed will include two rock-fill type diversion dams, three overflow wasteways, a drain inlet, a drop, and three road-crossing culverts.

Grizzly Creek Canal—Construction of about 1.6 mi. of 10' bottom width canal including a gaging station, three road-crossing culverts, three chute drops and two turnouts.

DM 10-14

●ELECTRICAL SERVICE— Corvallis, Ore.

Bids to be opened 2 p.m., P.S.T., November 7, by Oregon State Board of Higher Education, in Administrative Council Room, 106 Commerce Bldg., Oregon State College, Corvallis, for installation of electrical work, Phase 1—Primary Distribution System at the college. Plans obtainable from W. Bruce Morrison, engineer, 918 Cascade Bldg., Portland. $50 deposit. Certified check or bid bond 10%.

Work involves installation of primary electrical service from load center in Weatherford Hall to buildings along and adjacent to Jefferson Way. Distribution cable is to be located on electrical ducts provided in a previously constructed utility tunnel. In general, the electrical ducts for service to the major portion of the buildings have been provided with the tunnel construction. Some revision and modernization of transformer vaults and building services is included. General and mechanical work is negligible and the entire project will be covered by a single bid.

DC 10-15

▲DREDGING— Coos Bay, Ore.

Four bids ranging from a low of $181,755 by Willamette Tug & Barge Co., Foot of N. Portsmouth St., Portland, for a high of $226,800, were submitted to Corps of Engineers, Portland District, 628 Pittock Block, Portland, for approximately 630,000 c.y. dredging the channel in Coos Bay to a depth of 30' at mean lower low water and disposing of all excavated material, in Coos Bay; CIVENG-35-026-59-47. Bids were opened October 9.

OTHER BIDS: Puget Sound Dredging Co., 2929 16th Ave. S.W., Seattle, $204,758; Manson & Osberg, 1132 N. 128th, Seattle, $224,910; General Construction Co., Box 3845, Portland, $226,800. Engineer's estimate, $201,600.

WB 10-10. Preivous report 10-8

▲SANITARY SEWER— Empire, Ore.

Five bids ranging from a low of $11,968 by Tripp Construction Co., Eugene, to a high of $14,631, were submitted to City Council, City Hall, Empire, on construction of a sanitary sewer. 2ND LOW: Fred Stubbert, Springfield, $13,421. 3RD LOW: Sig Andersson, Coos Bay, $13,446.

DC 10-14

RETAINING WALL— Empire, Ore.

Bids rejected by City Council, City Hall; Empire, on construction of reinforced concrete retaining wall at Grant and Commercial in Empire. The low bid at October 7 opening was Johnson Cement Products, Bayshore Drive, Coos Bay, $1,990. A contract may be negotiated at a later date.

DM 10-15. Previous report 9-24

▲MILLRACE PUMPS— Eugene, Ore.

Seven bids were opened by City Council, City Hall, Eugene, on furnishing two pumps and installing one to divert Willamette River Water in the millrace through the University of Oregon campus, Eugene. LOW: Johnston Pump Co., 3272 E. Foothill Blvd., Pasadena, Calif., $4,323 each pump. 2ND LOW: Mi-Van Co., 524 S.E. Main, Portland, $4,640 each. HI: Brod & McClung, 9800 S.E. McBrod Ave., Portland, $7,789 for one, $15,174 for two. Bids opened October 6.

■OFF-SITE UTILITIES— Klamath Falls, Ore.

Planholders announced on providing additional off-site utilities for the Armed Services Housing Project at Kingsley Field, Klamath Falls; Bid No. 59-9. Bids to be opened 11 a.m., October 23, by Harry F. Keating, purchasing and contracting officer, 408th Fighter Group, Kingsley Field.

Planholders: John Kovtynovich, 295 Skyline Loop, Eugene; Phoenix-Matthews Construction Co., Box 484, Klamath Falls; American Pipe and Construction Co., Box 1898, Portland. ZZ 10-14. Previous report 10-9

★GRADING, GRAVELING— Klamath Falls, Ore.

Award by Civil Aeronautics Administration, 5651 West Manchester Ave., Los Angeles, Calif., for grading, ditching, graveling and installing culverts on an existing road, constructing 5'x13' concrete block storm porch addition and 4'x4' wood frame outside chemical toilet building, relocating electric meter box at VHF-UHF A/G Communciation Facilities on Stukel Mountain about six mi. east and eight mi. south of Klamath Falls, Ore.; Prop. No. 4-59-947, to George R. Stacy, Oreg. Ltd. ,Box 853, Klamath Falls, on low bid of $17,173. Bids were opened on September 29. Work starts on the project October 13.

ZZ 10-15. Previous report 10-2

●BRIDGE— Linn County, Ore.

Bids to be opened 2 p.m., October 24, by Bureau of Public Roads, 824 Morgan Bldg., Portland, for constructing a 176' reinforced concrete bridge on Cooper's Ridge Main Line Road, Willamette National Forest, Linn County; FDRP 1059-A. Plans with above office.

Quantities: 80 c.y. structure excavation, 223 c.y. concrete; 56,000 lb. reinforcement steel; 365' steel bridge railing.

DM 10-15

WATERTANK ROOF— McNary Lock and Dam, Ore.

Bids will be called soon by Corps of Engineers, Bldg. 602, City County Airport, Walla Walla, Wash., for construction of a new roof for the existing 250,000-gal. water tank at McNary Lock and Dam, near Umatilla, Umatilla County, Ore.; CIVENG-45-164-59-20. Completion time 60 calendar days.

DM 10-14

●SANITARY SEWERS— Milwaukie, Ore.

Bids to be opened 8 p.m., October 27, by R. E. Osborne, city recorder, City Hall, Milwaukie, for construction of sanitary sewers to serve part of the Ardenwald area of the city. Plans with Stevens & Thompson, consulting engineers, 2234 S.W. 5th, Portland. $15 deposit.

Quantities: 834' of 18", 170' of 12", 1,354' of 10" and 8,522' of 8" concrete sewer pipe; 41 standard manholes.

DC 10-15

★TRACTORS, GRADER— Portland, Ore.

Award to Hessell Implement Co., 1925 E. Powell Blvd., Gresham, $8,876 (net, including trade-in), by Multnomah County Commissioners, 504 County Courthouse, Portland, for furnishing four new current model four-wheel industrial type tractors equipped with hydraulic operated highway mowers. Award on grader was previously reported.

WB 9-14. Previous report 9-24

★PUMP, LOADER, ROLLER, SPREADER— Portland, Ore.

Award by City Purchasing Agent, 208 City Hall, Portland, for furnishing one gasoline-driven, 10 gpm fuel oil pump; one automotive front-end material loader with 1 c.y. bucket; one gasoline-powered, 2½ to 4-ton tandem asphalt roller; one four-wheel, trailer type spreader box. AWARDS—PUMP: Brod & McClung, 9800 S.E. McBrod Ave., Milwaukie, $919. LOADER: Nelson Equipment Co., 955 N.E. Union Ave., Portland, $8,037. ROLLER: Balzer Machinery Co., 2136 S.E. 8th Ave., Portland, $2,595. SPREADER BOX: Columbia Equipment Co., 1240 S.E. 12th Ave., Portland, $2,219.

WB 10-14. Previous report 9-30

SEWAGE DISPOSAL SYSTEM— Portland, Ore.

(Estimated cost $30,000,000)

Plans are nearing completion by Stevens & Thompson, consulting engineers, 2234 S.W. 5th Ave., Portland, on the Tryon and Fanno

Creek temporary treatment plants for the Tri-County Authority (formerly Tri-County Sanitary Committee), M. James Gleason, chairman, Multnomah County Commissioner, Courthouse, Portland. Bid calls will be issued by Multnomah County, acting for the authority, which also includes the county courts of Washington County at Hillsboro, and Clackamas County at Oregon City.

The Tri-County master plan of sewerage disposal, drawn by Stevens & Thompson, was adopted by the authority in December, 1956, and since that date the three counties have had the authority to require that any new sewerage system or treatment facilities proposed in the Tri-County metropolitan area conform to the master plan. The plan locates proposed trunk and interceptor sewers irrespective of political boundaries, and provides for a single secondary treatment plant at Oswego. Only one major pumping station, located on the east bank of the Willamette River at Oak Grove and across from the treatment plant, will be required. Sites for the pumping and treatment plants have been acquired. The area covered by Tri-County is bounded on the north by the Columbia River, extends beyond the City of Beaverton on the west, beyond the City of Gresham on the east, and to the city of Gresham on the south.

The Fanno Creek sewage treatment plant, to be located near Denny Road near Beaverton in Washington County, is estimated to cost $525,000, and one-third of the cost will be paid from federal funds. It will be a temporary structure, designed with steel tanks which can be salvaged, and will serve a 15,000 population load in portions of western Multnomah and eastern Washington counties, until a permanent plant is constructed.

The Tryon Creek sewage treatment plant, estimated to cost $420,000, will be located on the site of the permanent plant at Oswego, and will eventually be expanded. It will handle a population of 10,000.

Plans for the Tryon Creek interceptor sewer, to serve the above plant, are underway by Moffatt, Nichol & Taylor, consulting engineers, 1845 N.E. Couch St., Portland. Estimated to cost $258,000, the 4-mi. sewer will run between the plant and S.W. 26th Ave. and Taylors Ferry Road, to serve the south slope of the Tualatin hills in northwest Clackamas and southwest Multnomah counties.

An interceptor sewer from the Fanno Creek plant, running about five mi. along S.W. Bertha - Beaverton Highway to 30th Ave., is planned for construction in the summer of 1959. Estimated cost is $460,000.

Until permanent financial arrangements can be made, Multnomah County will put up the bulk of construction funds from a special revolving fund. Costs will be retired by a proposed $250 connection fee.

Stevens & Thompson are also preparing plans for sewage systems for West Slope and Oak Lodge, both to tie in with the Tri-County system.

Plans will be completed early in 1959 for a sewer system, including trunk lines and laterals, for Oak Lodge Sanitary District, Joseph W. Davies, chairman, 3033 S.E. Marguerite Lane, Milwaukie. The district, located south of Milwaukie on the east bank of the Willamette River in the Oak Grove-Jennings Lodge area, approved a $1,200,000 bond issue last spring. An interceptor will carry sewage across the river to the Oswego plant. A federal grant of $80,400 has been made to the district. (Previous report 5-9, Sewerage System, Oak Grove, Ore.)

Construction is expected to start next spring on the system for West Slope Sanitary District, Herbert A. Schink, secretary, district office, 3105 S.W. 89th Ave., Portland. The district approved a $1,500,000 bond election, and has received a $249,200 federal grant. Interceptor sewers will connect with the Fanno Creek plant, and lateral sewers will be built. (Previous report 10-31, Sewage System, Portland, Ore.) WB 10-2

▲WHARF FLOODLIGHTING— Portland, Ore.

Three bids received by Port of Portland, 3848 N. Lagoon Ave., Swan Island, Portland (Box 4099), for furnishing and installing pole-mounted mercury-vapor floodlights along the ship repair wharf at Swan Island. Alternate bids received October 8 for installing six, five or four poles and banks of lights complete. BIDS: Tice Electric Co., 2139 S.E. Belmont St., Portland, $9,070; $7,765; $6,459; W. R. Grasle Co., 437 N.W. 16th Ave., Portland, $9,284; $8,000; $6,716; Olson Electric Co., 710 W. 8th St., Vancouver, Wash., $9,577; $7,907; $6,637.

★**STATE HIGHWAY PROJECTS—** **Salem, Ore.**

Two awards announced by Oregon State Highway Commission, Salem, on highway construction projects on which bids were opened September 9.

GRADING, PAVING, Comstock-Aunlauf Section—About 1.38 mi. on Pacific Highway, south of Cottage Grove, Douglas County; FAIP I-5-3(5)163. AWARD: White Bros. Construction Co., Inc., Box 376, Walla Walla, Wash., $270,577.

BRIDGES, Rough and Ready Creek-Dwight Creek—Three-span reinforced concrete deck girder bridges, 170' at Rough and Ready Creek, 144' at West Fork Illinois River, 139' at Elk Creek, on Redwood Highway about 5.2 to 11.9 mi. south of Cave Junction, Josephine County; FAP No. F-127(8). AWARD: Peter Kiewit Sons' Co., Box 1777, Vancouver, Wash., $329,936.

CA 10-10. Previous report 9-13

●**STATE HIGHWAY PROJECTS—** **Salem, Ore.**

Bids to be opened 9 a.m., October 21, by Oregon State Highway Commission, 418 State Highway Bldg., Salem, on 22 highway construction projects. Plans with above office. $2 charge.

Contracts will be awarded at the October 23 meeting of the commission in Salem.

BRIDGE, Eagle Creek—Construct 170' reinforced concrete bridge on county road No. FAS-511, 1.3 mi. south of Richland, about 40 mi. east of Baker, Baker County; FAP No. DS-404(1).

SHED, State Highway Maintenance Site—Construct 60'x79' pile and timber-framed sand storage shed on Mt. Hood Highway at easterly limits of Sandy, Clackamas County; a State Project. Building to have aluminum roofing and board and batten siding.

BRIDGE, Fairview Bridge over North Fork Coquille River—Construct 217', four-span continuous reinforced concrete deck girder bridge on concrete column and pile bents on Myrtle Point-Fairview Highway, seven mi. northeast of Coquille, Coos County; FAP No. DS-374(3).

TRAFFIC SIGNALS, Cape Arago Highway—Install traffic signals at Newmark Ave. and Ocean Blvd. in Empire, Coos County; a State Project.

GRADING, OILING, Access Road at Bend Truck Scale Site—Grading, oiling 0.52 mi., The Dalles-California Highway about four mi. south of Bend, Deschutes County; FAP No. F-108(9).

BRIDGE, Deschutes River—Construct 168' bridge of eight precast panel spans on treated timber pile bents on Century Drive Highway about 16 mi. southeast of Bend, Deschutes County; a County Project.

GRADING, OILING, Fairgrounds Interchange in Roseburg—Grading, oiling 1.15 mi. frontage road on Pacific Highway, Douglas County; FAIP No. I-5-3(8)124.

GRADING, PAVING, East Unit, Garden Valley Road—Grading, asphaltic concrete paving 0.52 mi. on Douglas County road, north of Roseburg; FAP No. DUS-402(1).

WIDEN STRUCTURE, Calapooya and Stearns Lane—Widening existing structure about 18' on each side, Pacific Highway about 2 mi. west of Oakland, Douglas County; FAIHP No. I-5-3(7)-137.

ROADSIDE IMPROVEMENT, South from Myrtle Creek—on Pacific Highway, Douglas County; FAIHP No. I-5-2(18)104.

ROADSIDE IMPROVEMENT, Jumpoff Joe Creek-Louse Creek—On Pacific Highway from 4 to 10 mi. north of Grants Pass, Josephine County; FAIHP No. I-5-2(19)62.

STRUCTURES, Klamath Falls Section—Three bridges of prestressed precast concrete beam construction on steel pile and concrete column bents, The Dalles-California Highway, on Nevada Ave. Interchange in Klamath Falls to carry highway over Nevada Ave. and U.S.B.R. Canal and southwest leg of interchange over U.S.B.R. Canal, Klamath County; FAP No. DU-205(8).

BRIDGE, Lost River—Reinforced concrete deck girder bridge on concrete column bents, 120', three-span, on Langell County Road about six mi. southeast of Bonanza, Klamath County; FAP No. DS-186(2).

FENCING, Oregon Coast Highway—About 470 rods type 3 fence, Beverly Beach Park, about six mi. south of Depoe Bay, Lincoln County; a State Project.

PARK EXTENSION, Devils Lake State Park—Construct 16 trailer sites, 48 camp sites, access roads, utility building, latrine, water, sewer and electrical systems, on Oregon Coast Highway between Ocean Lake and DeLake, Lincoln County; a State Project.

TWO BRIDGES, Rock Creek, Mill Creek—Construction 100' reinforced concrete deck girder bridge supported on timber pile bents on county road FAS No. 150, about 4.6 mi. east of Logsden; construct 92' bridge with four 23' precast concrete panel spans with 23.4' clear roadway, precast curbs and wood handrails on timber pile bents on county road FAS No. 584 about 3.3 mi. southeast of Toledo; both in Lincoln County; FAS Nos. DS-135(3) and DS-176(4).

NINE UNDERCROSSING STRUCTURES, South Santiam Jct.-Lane County Line—Seven structures will be 243' long, have four spans and 24' roadways; two structures will be 245' long, have four spans and 48' roadways. All structures may be continuous reinforced concrete deck girder spans poured in place, or all may utilize prestressed precast beams. Structures will carry county roads over Pacific Highway from about five to 21 mi. south of Albany, Linn County; FAIP No. I-5-4(27)212.

GRADING, PAVING, Access Road at Fort Hill Truck Scale Site—Grading, asphaltic concrete paving 0.5 mi. Salmon River Highway about five mi. west of Willamina, Polk County; FAP No. F-300(15).

GRADING, Grass Valley-Rutledge Section—Grading 5.86 mi. easterly from Sherman Highway at a point about 0.5 mi. south of Grass Valley, Sherman County; FAP No. DS-408(1).

GRADING, Deadmans Pass-Meacham Section—Grading 9.26 mi. Old Oregon Trail Highway about 18 mi. easterly of Pendleton, Umatilla County; FAIHP No. I-90N-6(14)227; (Old-I-82-6(14)227).

GRADING, The Dalles-Eightmile Creek Section—Grading 6.7 mi. The Dalles-California Highway southeast of The Dalles, Wasco County; FAP No. F-102(3).

BRIDGE, GRADING, Dry Creek—Constructing 110' reinforced concrete slab span bridge and 0.25 mi. grading on Long Hollow Road (FAS 708) about 2.5 mi. northeast of Dufur, Wasco County; FAP No. DS-407(1).

DM 10-10

★**STATE HIGHWAY PROJECT—** **Salem, Ore.**

Award announced by Oregon State Highway Commission, Salem, for a highway construction project on which bids opened September 11.

PAVING, Sundial-Multnomah Falls Section—Paving 14.3 mi. Columbia River Highway, 15 to 30 mi. east of Portland, Multnomah County; FAIHP I-82-1(11)14 and I-82-2(7)15. AWARD: Rogers Construction Co., 11760 N.E. Glisan St., Portland, $1,699,492.

CA 10-11. Previous report 8-7

★**STATE HIGHWAY PROJECT—Salem, Ore.**

Award announced by Oregon State Highway Commission, Salem, on a highway construction project on which bids were opened August 26.

GRADING, PAVING, North Plains Interchange Section—Grading 1.25 mi., paving 98 mi. on Sunset Highway about 15 mi. west of Portland, Washington County; FAP DF-186(18).

AWARD: Warren Northwest, Inc., Box 5072, Portland, $290,489.

DM 10-15. Previous report 9-11

AIRPORT— **Seaside, Ore.**

Oregon State Board of Aeronautics has approved a plan for construction of a small airport at Seaside, and has given Earl Snyder, director of aeronautics, authority to proceed with engineering plans.

DC 10-14

●**CHANNEL, LEVEE—** **Umatilla County, Ore.**

Bids to be opened 2 p.m., P.S.T., November 6 by Corps of Engineers, Bldg., 602, City County Airport, Walla Walla for construction of channel and levee at Umatilla River, Umatilla County, vicinity of Pendleton, Ore.; CIVENG-45-164-59-19. Plans with Walla Walla office. Bid bond 20%. Completion time 270 calendar days.

Quantitites: 25 acre clearing, grubbing; 11 acre foundation preparation; 14,000 c.y. bank excavation (existing work); 85,000 c.y. bank excavation (new work); 112,000 c.y. channel excavation; 350 c.y. structural excavation, common; 12 c.y. structural excavation, rock; 75,000 c.y. embankment; 6,800 c.y. dumped riprap (existing); 21,700 c.y. dumped riprap (new); 2,600 c.y. gravel blanket; 110 c.y. portland cement concrete; 7,000 lb. steel reinforcing; 58' of 60" corrugated metal pipe culvert, bituminous coated; install 92' of government furnished, 24" corrugated metal culvert pipe. DM 10-11

●**STEEL PIPE—** **Zigzag, Ore.**

Bids will be opened 11 a.m., P.S.T., October 23, by U.S. Forest Service, 729 N.E. Oregon St., room 201, Portland, for steel pipe, valves and fittings for Timberline Lodge water system, fob Zigzag Ranger Station, Zigzag; Inv. No. R6-59-131. Includes 5,150' of standard weight, 4" pipe; 2,600' of extra strong 4" pipe, and 160' of 6" standard weight pipe; valves, fittings, etc.

WB 10-11

WASHINGTON

▲**WATER MAINS—** **Bellevue, Wash.**

Award may be made on October 20 by King County Water District No. 68, Clyde Hill, Bellevue, for furnishing and installing 5,180' of asbestos-cement water mains and 500' of cast iron, mechanical joint pipe, with appurtenances (Sched. 1), or 2,680' of asbestos-cement water mains and 3,000' of cast iron water pipe (Sched. 2), for the water system. Low bid at October 6 bid opening was Harbert Construction Co., 107 S. 3rd W., Longview, $36,931 (Sched. 1), $49,963 (Sched. 2).

OTHER BIDS: Shoreline Construction Co., 12519 15th N.E., Seattle, $38,535, $50,300; Frank Coluccio Construction Co., 7778 Seward Park Ave., Seattle, $39,215, $51,513; Harold E. Olds, 3111 N. 24th, Tacoma, $52,723, $66,422.

PC 10-11. Previous report 10-8

DRAINAGE— **Bellingham, Wash.**

Whatcom County Commissioners, Court-

house, Bellingham, will appoint appraisers to assess maintenance and consolidation costs for Drainage Improvement District 22, 23 and 24. A hearing will be held following the report. The consolidation will improve economy and maintenance of drainage operations according to the commissioners. ET 10-14

BOAT RAMP— Bellingham, Wash.

A committee has been selected by Bellingham Propeller Club to study the launching facilities available in Bellingham Bay. Tom Glenn, Jr., engineer for Port of Bellingham, has promised that port property will be made available for the ramp. ET 10-14

★SANITARY SEWER LINE— Bellingham, Wash.

Award to Bay Enterprises, Inc., 1155 Ellis, Bellingham, $56,851, by City Council, City Hall, Bellingham, for construction of the College-23rd Street sanitary sewer line in Bellingham. CA 10-14. Previous report 9-26

★SANITARY SEWER— Bellingham, Wash.

Award to Walters Construction Co., Mt. Vernon, $191,508, by City Council, City Hall, Bellingham, for installing sanitary trunk and interceptor sewer to intercept existing sewers on five city streets, to provide outlets for the Birchwood District.
ET 10-14. Previous report 10-7

AIRPORT RUNWAYS— Bellingham, Wash.

CAA officials from Los Angeles and Seattle have checked facilities at Bellingham Airport and will issue recommendations for improvements within the month. Port officials in Bellingham ask that the status of seal coating and placing gutter on North-South runway, be determined. ET 10-2

SANITARY SEWER— Bellingham, Wash.
(Estimated cost over $100,000)

The Birchwood District sanitary trunk and interceptor sewer on which bids will be opened 9:30 a.m., October 6 by City Council, City Hall, Bellingham, will intercept existing sewers on five city streets. Plans by city engineer, call for laying 36" reinforced concrete sewer pipe; clearing, grubbing, excavating, backfilling.
ET 10-2. Previous report 9-30

FLOOD CONTROL— Bellingham, Wash.

A cost sharing agreement between Whatcom County and the state flood control division, has been completed, providing for rock riprap protection on Robert Coles property south of Eversson. Cost is estimated at $3,400. ET 10-4

STREET LIGHTING— Bellingham, Wash.

The Board of Port Commissioners, Post Office Drawer 643, Bellingham, has requested the Bellingham City Council to enter into an agreement with Puget Sound Power Co. to extend and revise street lighting along the north face of Squalicum fill, in the area of the planned new float placements. ET 10-4

SEWAGE IMPROVEMENT PROGRAM— Bellingham, Wash.

Consulting engineer, Clyde C. Kennedy, Atlas Bldg., 604 Mission St., San Francisco, Calif., has been retained by City Council, City Hall, Bellingham, to make a survey of sewage problems in the city. The firm will work with W. E. Cameron, city engineer, in determining a sewage improvement program.

A report will be made on 1—the most feasible method of providing sewage treatment for the South Side area, 2—quantity of sewage to be treated at the existing North Side sewage treatment plant, 3—functional flow outlining required enlargements and improvements necessary to be made to the North Side plant to adequately treat the determined design flow, and on approval of this by the city engineer. Construction plans and specifications will be prepared for enlargements and improvements.

Requirements—1—a review of existing South Side-Fairhaven sewer system together with present and future programmed extensions to serve the topographically tributary area; estimates of population and sewage flow to be expected; treatment plant facilities required to provide necessary treatment before discharge into Bellingham Bay; size and general locations of treatment plant site; consideration of an alternate plan of combining the South Side sewage with the North Side Plant flow; preliminary estimate of cost of treatment or trunk line facilities sufficient for a financing budget, 2—planning and direction of the installation of flow measuring facilities, methods of record taking and recording, to determine the flows in the West Holly and East Holly sewer lines to enable rational determination of the design capacity to be provided for the enlarged North Side sewage treatment plant, 3—evaluation of capacity of existing sewage treatment plant, design of modifications and enlargements and preparation of a functional flow diagram showing proposed plant construction. ET 10-4

PIPELINE, DIVERSION DAM— Bellingham, Wash.
(Estimated cost $3,038,000)

City Council ruling on preparation for a $3,000,000 bond sale will be contingent on approval by financial advisors Foster & Marshall, 820 2nd Ave., Seattle, of a water contract with the Puget Sound Pulp mill, combined with Pacific Coast Paper Co., for financing the middle fork, Nooksack River dam and diversion tunnel water supply project. ET 10-4. Previous report 9-12

●STEAM LINE REPAIR— Blaine AFS, Wash.

Bids to be opened 2 p.m., P.S.T., October 30 by U. S. Air Force, base procurement office, Paine Air Force Base for repair of overhead steam lines at Blaine Air Force Station; Inv. No. 600-59-47. Plans with Paine office. Bid bond 20%.

Work consists of repairing existing steam lines by replacing two gate valves with approximate insulation, painting overhead piping system with aluminum paint, cleaning and painting pipe hangars with heavy coat of aluminum paint. HH 10-11

TENNIS COURTS— Bothell, Wash.

Bids will be called again in the Spring of 1959 by Bothell School District No. 46, Julian Kark, superintendent, Box 128, Bothell, for construction of three new tennis courts. Bids were called earlier and rejected.
CA 10-3. Previous report 9-19

▲STEEL PIPE— Bremerton, Wash.

Bids are being held for further study by City Council, Bremerton, on installation of about 1,705' of 20" steel pipe on the Port Washington Narrows Bridge in Bremerton. Bids were opened October 8. BIDS: Pacific Mechanical Constructors, Inc., Lloyd Bldg., Seattle, $48,000; Hoagland-Findlay-Kemper Construction Co., 3330 Beach Drive, Seattle, $53,450; Lent's, Inc., Bremerton, $53,950. The low bid had a 180 day completion, while the others specified less time.
DC 10-14. Previous report 9-26

●DRY DOCK— Bremerton, Wash.
(Estimated cost $34,000,000)

Bids will be received until 2 p.m., December 17, by 13th Naval District, Capt. Stanley P. Zola, Public Works officer, U.S. Naval Station, Seattle, for construction of the first increment of a $30 million dry-dock at the Puget Sound Naval Shipyard at Bremerton. Architectural, engineering and design features were prepared by Moran, Proctor, Mueser & Rutledge, New York, and Carey & Kramer, consulting engineers, 1917 1st Ave., Seattle. Plans with the district, room 107B, Bldg. 250. $400 deposit.

A period of approximately 60 days is being allowed from the bid call to the opening date, to permit contractors to study the 307 pages of plans and drawings.

The dock, the largest in the world, will have inside dimensions of 1,150' length, 188' width, and 61' below yard grade. It will provide 37½' of working space alongside a carrier. Design will permit construction of the dry dock out into Sinclair Inlet.

Quantities: 550,000 c.y. dredging; 1,110,250 c.y. fill and backfill; 5,440 ton sheet pile; 153,255 c.y. concrete; 12,700' prestressed concrete pipe; 8,510 ton reinforcing steel; 866 ton miscellaneous iron and structural steel; 8,400 c.y. riprap; 92,000 c.y. drainage course; 32,500 sq. yd. bituminous concrete pavement; 4,400 sq. ft. concrete masonry.

Project will be divided into four sections—Phase 1: fuel oil tanks and distribution, demolition, dredging, initial backfill. Phase 2: sheet pile cut-off walls, outboard cofferdam, fill-construction dams. Phase 3: site dewatering, trim side slopes, excavation in dry, head end and pumpwell cofferdams. Phase 4: dry dock construction, complete backfill, remove entrance cofferdam, construct Pier 9, utilities, crane tracks, paving, buildings. PD 10-14. Previous report 9-26

FLOOD CONTROL— Colfax, Wash.

A bond issue for a flood control project will be placed on the November 4 election ballot. In a previous election a similar bond issue was rejected by Colfax voters.
MH 10-4. Previous report 3-18

TIDE BOX, REVETMENT— Cowlitz County, Wash.

Bids will be called soon by Corps of Engineers, 620 Pittock Block, Portland, Ore., for removing existing tide box and steel sheet pipe cut-off wall, constructing new four-barrel 72" corrugated metal pipe tide box with automatic drainage gates, pile hold-downs, concrete gate well with circular slide gates, drift sheer boom and trash screens, dumped-stone revetment, excavating inlet and outlet channels, at Cowlitz Consolidated Diking Improvement District No. 2; CIV-ENG-35-026-59-58. Bids will be opened early in November. Completion time March 31, 1959.

Quantities: 27,860 c.y. excavation; 800' of 72" bituminous coated corrugated metal pipe; four 72" automatic drainage gate and pile yoke; 2,210 c.y. structural backfill; 410 sq. ft. steel sheet pile retaining wall; 390 c.y. graded gravel filter; 460 c.y. pervious fitler blanket; 1,140 c.y. dumped stone revetment; 85 c.y. gravel road surface material.
DM 10-14

SEWAGE SYSTEM— Cowiche, Wash.

Construction of a proposed sanitary sewer system in Cowiche, is being contested by residents, who do not want a lagoon type of sewage disposal system. Action on awards of contract for the project is delayed by legal procedure.

Bids were opened July 1 by Town Council, Town Hall for a sanitary sewer system involving trunk laterals and service line (Sched. A), and sewage lagoon (Sched. B). Plans were prepared by Gray & Osborne, consulting engineers, 228 S. 2nd, Yakima.

Low bids at that time were—SCHED. A: DeBlasio Bros., Route 4, Yakima, $14,526; E. M. Gostovich, Sunnyside, $16,795; Nate Kimball, 1019 Pleasant Ave., Yakima, $17,409. SCHED. B: McConnachie Construction Co., Roza Vista Place, Terrace Heights, Yakima, $8,888; H & S Construction Co., Yakima, $10,099; E. M. Gostovich, Sunnyside, $10,152.

▲ CHAIN LINK FENCE— Seattle, Wash.

Five bids ranging from a low of $1,679 by Anchor Fence Division, 4502 14th N.W., Seattle, to a high of $1,947 were submitted to Paul R. Hendricks, city purchasing agent, 511 County City Bldg., Seattle, for furnishing and installing chain link fencing at South Park Playfield, Seattle. Work includes 256' of 10' high and 60' of 6' high chain link fencing, two corner posts, one terminal post, one softball backstop with wing fences. PD 10-15. Previous report 9-27

● BRIDGE— Skamania County, Wash.

Bids to be opened 2 p.m., October 24, by U. S. Forest Service, regional contracting officer, 729 N.E. Oregon St., Portland, Ore., for construction of Trout Lake Creek Bridge on Grand Meadows Road N85, Gifford Pinchot National Forest, Skamania County, Wash.; Bid No. R-6-59-129. Plans with above office or with forest supervisor, 801 W. 8th, Vancouver. Certified check, cashier's or bid bond 5%.

Quantities: 107 c.y. unclassified excavation for structures, backfill; 17.4 c.y. concrete class A (substructure only); 20 units concrete class A (deck slab); 1,600 lb. reinforcing steel (substructure only); 1,600 lb. structural steel; 10 MBM treated timber; 152' beam type safety guard rail. DM 10-11

★ RIPRAP— Snohomish County, Wash.

Award to Maurice Anderson Trucking Co., Route 3, Box 602, Everett, $2,050, by Soil Conservation District, Snohomish, for placing 820 c.y. rock riprap on left bank of Koch's Slough in northwest quarter of Section 12, Township 31, North Range 5, East W.M., on the Husby property; River Maintenance Agreement No. 120-58. Bids opened September 26. CA 10-14. Previous report 9-13

STATE HIGHWAY PROJECT (District Project)— Spokane, Wash.

Bids were rejected by Washington State Highway Commission on highway construction on which bids were opened October 2 by D. E. Stein, district engineer at the district office, N. 2714 Mayfair, Spokane. The low bidder was Standard Asphalt Paving Co., Inc., N. 119 Post, Spokane, $10,960.

SURFACING, PAVING, Riverside State Park Road—Bituminous surface treatment, Class B on 4.22 mi. and bituminous surfacing treatment Class B and plantmix bituminous paving on 9.5 mi. of the sections from Elliott Drive to Nine Mile and Downriver Drive to Seven Mile, in Spokane County; a State Project. DM 10-15. Previous report 10-4

● REGULATING BASIN TEST BORINGS— Tolt River, Wash.

Bids will be opened 2 p.m., October 22, by Board of Public Works, E. G. Henry, secretary, 512 County City Bldg., Seattle, for Tolt River regulating basin test borings; Ord. No. 87468-D.

Plans and specifications available on and after October 13 in room 404 County City Building, Seattle. $10 deposit.

Work involves eight test holes, approximately 1,000' of test hole drilling, 200 drive samples and 10 seamless tube holes. PD 10-10

★ DRILL WELL— Toppenish, Wash.

Award to Midland Drilling Co., Box 637, Walla Walla, $19,923, by City Council, Aleta Bennet, city clerk, City Hall, Toppenish, for drilling and testing deep well. Above company submitted only bid received at October 7 bid opening. IG 10-14. Previous report 9-26

● GLUED LAMINATED STRINGERS— Twisp, Wash.

Bids will be opened 11 a.m., P.S.T., October 21, by U. S. Forest Service, G. L. Mercer, purchasing agent, 729 N.E. Oregon St., room 201, Portland, for furnishing 12.1 MBM prefabricated, treated glu-lam stringers, fob. bridge site, approximately 12 mi. west of Twisp, Okanogan National Forest, Wash.; Inv. No. R6-59-130. WB 10-10

★ RAILROAD SPUR— Vancouver, Wash.

Award to A. D. Ford & Son, 2535 N.W. Upshur St., Portland, $7,075, by Bonneville Power Administration, 1001 N.E. Lloyd Blvd., Portland, for rehabilitation of railroad spur track at East Warehouse, Vancouver Shipyard, Vancouver, Wash.; Inv. No. 8876. WB 10-14. Previous report 10-8

★ SEWER— Walla Walla, Wash.

Award to John M. Keltch, Box 504, Pasco, $40,520, by City Commissioners, City Hall, Walla Walla, for construction of 6,220' of 8" sewer; 4,000' of 4" side sewer; 10,220' of excavation and backfill; 9 manholes between 2nd and 3rd, et al. Bids opened October 1. CA 10-14. Previous report 9-16

▲ GRADING— Wenatchee, Wash.

Four bids ranging from a low of $55,641 by Murphy Bros., E. 3728 Broadway Ave., Spokane, to a high of $67,884, were submitted to Chelan County Public Utility District No. 1, 327 N. Wenatchee Ave., Wenatchee, for performing east bank switchyard grading work for the Rocky Reach Hydroelectric Power Project. Bids opened October 10. CA 10-14. Previous report 9-12

▲ POWER LINE— Yakima, Wash.

Ten bids ranging from $12,523 by Power City Electric, Inc., N. 920 Howard, Spokane, to a high of $23,010, were opened by R. H. Pyle, district engineer of Washington State Highway Commission, district office, Yakima, on October 9, for construction of power line along 3.4 mi. of PSH 3, Squaw Creek to Roza Camp, Kittitas County; a State Project. 2ND LOW: Witzig Construction Co., 223 S. 4th, Corvallis, $12,850; 3RD LOW: Anderson-Burke, Box 4085, Seattle, $12,900. IG 10-11. Previous report 9-23

■ DRAINAGE SYSTEM— Yakima, Wash.

Planholders announced on construction of an underground drainage system on the west boundary of Yakima, inside and outside of the city limits for Drainage Improvement District No. 48. The work is offered in two alternates, 1—concrete pipe, 2—corrugated metal pipe. Bids will be opened 11 a.m., October 22, by Yakima County Commissioners, Courthouse, Yakima. Bids to be taken on one or both alternates. Plans obtainable from Gray & Osborne, consulting engineers, 228 S. 2nd, Yakima. $15 deposit. Certified check or cashier's check 5%.

Planholders: DeBlasio Bros., Route 4, Yakima; E. M. Gostovich, Box 264, Sunnyside; Nat Kimball, 1019 Pleasant Ave., Yakima; W. M. McConnachie, 2 Roza Vista Drive, Yakima; Union Concrete Pipe Co., Parker; Yakima Cement Products, Box 436, Yakima; Ralph Nickerson, Goldendale; Contractors and Excavators, Warden; Armco Drainage and Metal Products, Box 1009, Yardley; Beall Pipe and Tank Co., 12005 N. Burgard, Portland, Ore.; Max Schriner, Box 538, Ontario, Ore.; Cherf Bros., Inc., and Sandkay Contractors, Inc., Box 938, Ephrata; Thorburn & Logozzo, 4608 36th S.W., Seattle; S. S. Mullen, Inc., Box 3886, Terminal Annex, Seattle; Murphy Bros., Box 2193, Spokane; National Construction Co., 153 S. 160th, Seattle; Louis Elterich Co., Box 868, Port Angeles. IG 10-14. Previous report 10-8

● IRRIGATION— Yakima, Wash.

Bids to be opened 2 p.m., October 24, by Ahtanum Irrigation District, 506 Miller Bldg., Yakima, on construction of diversion works, control works and appurtenances. Plans with above office. $20 deposit.

Quantities: 310 c.y. excavation; 55 c.y. concrete; 6,400 lb. reinforcing steel; 2,400 lb. structural steel; two 6'x3' radial gates. DC 10-15

IDAHO

● STATE HIGHWAY PROJECTS— Boise, Idaho

Bids to be opened 2 p.m., October 28, by Idaho Department of Highways, 603 Main St., Boise, for the following construction project.

ROADWAY, Plaza Road — Constructing roadway and select borrow base south of Black Canyon Dam, Gem County; FAP No. DS-3838(2).

Quantities: 115 c.y. structure excavation; 7,000 c.y. unclassified excavation; 100 c.y. borrow; 3,200 ton select borrow class B; 258 Y.U. haul; 325 M gal. watering; 500' small ditch; 492' pipe culvert; 2,000' wire fence; one 18" precast concrete headgate. Completion time September 1, 1959. DM 10-14

● STATE HIGHWAY PROJECTS— Boise, Idaho

Bids to be opened 2 p.m., November 4, by Idaho Department of Highways, 603 Main, Boise, on three highway construction projects. Plans with above office. $5 charge. Proposal guarantee 5%.

CORRUGATED PIPE, St. Maries - Avery Road—Furnishing and placing 144" corrugated plate pipe at Rochat Creek, Benewah County; FAP No. DS-5711(1).

Quantities: 120 c.y. structure excavation; 850 c.y. borrow; 60 Y.U. haul; 670 c.y. mechanical tamping; 80' of 144" corrugated plate pipe, 10 gauge; 65 c.y. special backfill class A. Completion time September 1, 1959.

SURFACING, Rogerson-Cedar Creek Road, Cedar Creek - Salmon Dam — Constructing crushed gravel base on 5.114 mi., Twin Falls County; FAP No. DS-2701(2).

Quantities: 857 M gal. watering; 12,000 c.y. stripping materials deposit; 7,700 ton crushed gravel base course type B, 3/4" max.; 17,200 ton same, 2" max.; two project markers; one 24' cattle guard. Completion September 15, 1959.

SURFACING, DRAINAGE, Council-Hornet Creek—Constructing roadway, drainage

structures, crushed gravel base on 2.231 mi. and roadmix bituminous surfacing on 0.696 mi. of Hornet Creek Road, Adams County; FAP Nos. S-3894(2) and DS-3894(3).

Quantities: 22,300 c.y. unclassified excavation; 270 c.y. structure excavation; 6,800 c.y. borrow; 13,500 ton select borrow class A; 2,930 Y.U. haul; 28 stations of interceptor ditches; 6,800 ton crushed gravel base type B, ¾" max.; 2,098' of 12" to 36" pipe culvert; 1,580 ton crushed gravel surfacing in windrows; 3,850 gal. RC-1 asphaltic road material for prime; 34 ton blotter material; 72 ton MC-3 asphaltic road material for roadmix; 270 ton mix and place bituminous surfacing for approach roads; 2,400 gal. RC-5 asphaltic road material for seal; 120 ton cover coat material. Completion August 1, 1959. DM 10-14

●**EXPLORATORY DRILLING—**
Bruces Eddy Dam, Idaho

Bids will be opened 2 p.m., P.S.T., October 21, by Corps of Engineers, Bldg. 602, City County Airport, Walla Walla, Wash., for exploratory drilling at Bruces Eddy Dam and Reservoir on North Fork Clearwater River, Clearwater County, near Orofino, Idaho; CIVENG-45-164-59-22. Plans with Walla Walla office. Bid bond 20%.

Project involves 980' advancing hole with drive sampling; 400' same without sampling; 3,200' core drilling, vertical NX; 1,200' same, inclined NX; 100' same, vertical BX; 100' same inclined BX; 250' casing left in hole; 700' of observation pipe.

Project is located on shores of North Fork of Clearwater River in vicinity of Ahsahka, Idaho, about 1.9 river mi. upstream from confluence of the North Fork and the Clearwater River. DM 10-11

SEWAGE DISPOSAL SYSTEM—
Genesee, Idaho
(Estimated cost $52,000)

An election will be held in Genesee on November 4 on a $39,000 bond issue that would help finance construction of a sewage disposal plant in Genesee. Plans by Walter Woodward, Empire State Bldg., Spokane, call for a lagoon-type sewage disposal unit with lift station and outfall line. A $13,000 Federal grant is available if bond issue is approved. MH 10-4

SEWAGE TREATMENT PLANT—
Grace, Idaho

Village of Grace has set November 18 as the date for an election on $170,000 bond issue that would provide funds for a complete sewer system and sewage treatment plant for the city. Engineer is Wendell Smith, Preston. GH 10-14

CLEARING, GRADING, DRAINING—
Idaho County, Idaho

A new bid call will be issued on a date as yet undetermined by U.S. Forest Service, 1036 Federal Bldg., Missoula, Mont., on clearing, grading, draining and surfacing 2.537 mi. of roadway, Big Elk Creek Road No. 646 (Section A), Nezperce National Forest, Idaho County, Idaho; Inv. No. 80-59. Bids were rejected following an opening held September 30. At that time the low bid was $149,937 by Forrest Pumnear, 1723 Montana Ave., Coeur d'Alene.
DM 10-15. Previous report 10-8

WASTE DISPOSAL FACILITY—
Idaho Falls, Idaho
(Estimated cost $6,000,000)

Construction has started on a large-scale pilot plant at the Atomic Energy Commission's National Reactor Testing Station, Idaho, for drying and reducing the volume of high-level radioactive liquid waste products.

Excavation work is underway by Fluor Corp., Ltd., Los Angeles, Calif., on the Waste Calcination Facility, as part of a general contract for the design and construction of waste disposal facilities at the Idaho atomic installation. The firm's basic contract was amended to provide $3,391,700 for construction of the plant, the total cost of which is estimated at $6,000,000.

Fluor will construct a waste treatment plant and concrete storage vault for storing solid plant wastes; will install special waste handling equipment for liquids, solids and solid-sampling equipment. Completion is scheduled for January 31, 1960.

Conceptual design was jointly developed by the Commission, Fluor and Phillips Petroleum Co. Fluor performed the engineering and did the detailed drafting. DM 10-14

★**CRUSHED AGGREGATE—Lewiston, Idaho**

Award to Lewiston Pre-Mix Concrete, Inc., 11th and 27th streets, Lewiston, $1.15 (delivered), $0.82 (at crusher), by City Controller, City Hall, Lewiston, for 10,000 tons of crushed aggregate in stockpile. Stockpile site is located on the north side of 16th Ave. and west of 7th St. CA 10-14

★**FENCING— Moscow, Idaho**

Award to Jensen-Byrd Co., Spokane (mailing address c/o University of Idaho) $912 by L. C. Warner, University of Idaho purchasing agent, 203 Administration Bldg., campus, Moscow, for furnishing steel fencing; Inv. FO-3281. Bids opened October 10.
DM 10-14. Previous report 9-30

STREET IMPROVEMENT—
Mountain Home, Idaho

A special election on a $125,000 general obligation bond issue to finance street improvements, has been postponed due to legal difficulties. The City Council, City Hall, Mountain Home, had slated the election for early in October. A new date will be set after the November general election.

The bonds would pay for paving, construction of sidewalks and curbing in various sections of the city.
DC 10-10. Previous report 9-20

▲**SEWAGE PLANT, SEWERS—**
Payette, Idaho

Low bids announced by City Council, City Hall, Payette, for construction and extension of a sewage disposal plant and sewage system. Bids opened October 7. Plans by Wendell H. Smith, consulting engineer, Route 2, Preston. LOW BIDS—Sewer Lines: Intermountain Construction Co., Box 1879, Boise, $273,122. Disposal Plant: Davis Construction Co., no address, Idaho Falls, $198,376. PC 10-11. Previous report 9-20

★**CLEARING, GRADING, DRAINING—**
Shoshone County, Idaho

Award to Rocky Mountain Construction Co., Bitterroot Road, Missoula, $280,160, by U.S. Forest Service, 1036 Federal Bldg., Missoula, for road construction, clearing, grading and draining 6,920 mi. of roadway, Quartz Creek Project No. 339 (Sec. A), St. Joe National Forest, Shoshone County, Idaho; Bid No. 74-59. Six bids received at October 6 bid opening. 2ND LOW: John Paole, 769 N. Main, Kalispell, $318,035.
PD 10-11. Previous report 9-9

MONTANA

●**PAINTING STANDPIPE—Billings, Mont.**

Bids to be opened 5 p.m., October 28, by City Council, City Hall, Billings, for painting and cleaning standpipe at 9th St. W. and Avenue C, Billings. Plans with city clerk. Work will include sandblasting floor, walls, roof and other interior metal surfaces to white metal condition, applying minimum of three coats of painting.
EE 10-14

★**PAVING, CURB, GUTTER—Billings, Mont.**

Award to Barry O'Leary, Inc., 215 N. 16th, Billings, $9,266 (paving alley in SID No. 729) and $2,092 (curb, gutter in SID 730) by

FORT PECK POWERHOUSE

A prebid conference will be held 2 p.m., M.S.T., October 21 by Corps of Engineers in the conference room of the Administration Bldg., Fort Peck Area, Fort Peck, Mont., on all phases of work involved in construction of the powerhouse and switchyard for the second power plant at Fort Peck and Reservoir. Interested bidders should contact chief of the construction division, Corps of Engineers at Fort Peck area, Riverdale, North Dakota.

▲ ASPHALT PLANT— Great Falls, Mont.

Bids received by Cascade County Commissioner, Courthouse, Great Falls, for furnishing one continuous mix, portable, single aggregate asphalt plant containing aggregate dryer, feeder with hopper, elevators and mixer. Entire plant to be powered by two gasoline engines. Bids opened October 7. ONLY BIDS: Normont Equipment Co., 1157 Smelter Ave., $15,670; Western Construction Co., 2322 River Dr., $31,929; Miller Machinery Co., 1610 River Dr., $31,929. All of Great Falls. CA 10-10

● T-VOR FACILITY (Directional Range, Electrical Equipment)— Kalispell, Mont.

Bids will be opened 4 p.m., October 28 by Flathead County Clerk, Courthouse, Kalispell for Sched. 1—construction of VHG Omnidirectional Range (VOR) Station of 50 watts power output rating complete with shelter and ventilation equipment, dual transmitting equipment with automatic changeover equipment, monitor, automatic line voltage, regulator, slotted type antenna with obstruction light, complete equipment for remote control operation including interphone for communication between the station and the remote control position, and Sched. 2—installation and final type-up in compliance with Civil Aeronautics Administration technical standards. The installation will be at the Flathead County Airport. RB 10-11

WATER SYSTEM— Kalispell, Mont.

Several improvements to the municipal water system are being considered by the Kalispell City Council and Mayor Claude Walter. Action on the proposals is expected at a special council meeting October 20. If all the project improvements are approved, an expenditure of about $300,000 would be involved and a bond election would be necessary. As outlined by City Engineer L. B. (Pete) McClintick, the proposals and preliminary cost estimates are as follows: Covers for the two city reservoirs, $100,000 to $125,000; a new 18-inch main from the reservoirs down Meridian road to interconnect with the city distribution system, $150,000; and extensions of the distribution system to the Underhill and Adams additions, $12,785 and $32,500 respectively. The new main on Meridian would be principally a fire safety measure, giving the city an alternate trunk line to the water system in event of a break in the existing single main from the reservoirs. It would also serve new residential areas on the west side. RB 10-15

★ BRIDGE APPROACHES— Noxon Rapids, Mont.

Award to Bud King Construction Co., 1203 Wyoming, Missoula, $52,000, by Washington Water Power Co., W. 825 Trent, Spokane, for construction of bridge approaches in connection with the multi-million dollar highway and railway relocation job made necessary by construction of the Noxon Rapids Dam on the Clark Fork River in Montana.

This is the final project on the highway and railway relocation.

Six and one-half mi. of U.S. 10-A were relocated at a cost of about $3,600,000. This included two railroad overpasses and one bridge crossing the Clark Fork River. Seventeen mi. of the Northern Pacific Railroad's main line were relocated at a cost of about $16,000,000. Relocation of county roads that will be flooded out in the dam's reservoir area, cost about $1,500,000.

The Noxon Rapids hydroelectric project is now about three-quarters complete. When finished, it will represent an investment of $87,000,000. DM 10-15

WATER SUPPLY SYSTEM— Opheim AFS, Mont.

Bids will be called soon and will be opened late in October for installation of well pump, pump pit and supply line to existing reservoir plus related electric power and control work for the water supply system, Well No. 5 at Opheim Air Force Station, Mont.; ENG-45-108-59-19. Bids will be opened by Corps of Engineers, 4735 E. Marginal Way, Seattle. Completion time 120 calendar days. DM 10-14

★ FURNISH PLANKS, STEEL— West Glacier, Mont.

Award announced by Glacier National Park, E. A. Hummel, superintendent, West Glacier, for furnishing 15,000' of bridge planking and structural, channel, square bar and plate steel for the park service. Six bids received at bid opening. AWARDS— PLANKS: F, K & L Lumber Co., Martin City, $937. STEEL: Great Falls Iron Works, 1315 8th Ave. N., Great Falls, $2,344. RB 10-14

ALASKA

★ TELEPHONE CABLE— Anchorage, Alaska

Award to Chisum-Langlais Construction Co., 1576 F St., Anchorage, $109,382, by City Council, Anchorage, for installation of about 96,000' of outside telephone feeder and distribution cable.

THE RATE for Advertisements for Bids is 35 cents per line for the first insertion; 25 cents per line for each insertion thereafter.

STATE HIGHWAY PROJECTS
BIDS CLOSE 9 A.M., OCTOBER 22
Helena, Montana
NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the offices of said Commission in the City of Helena until 9:00 a.m. on October 22, 1958. The proposals will be publicly opened and read immediately thereafter. Your attention is directed to the 9:00 a.m. hour set for the opening of bids in Room 151 of the State Highway Department Building.

The Form for Bid Bond is no longer included in the "Instruction to Bidders" and no Bid Bond will be acceptable. No proposal will be considered unless accompanied by a proposal guaranty, in an amount of at least five (5) per cent of the bid, made unconditionally payable to the State Highway Commission of Montana, which at the bidder's option may be cash, cashier's check, certified check, bank- postal- or express-money order, or bank draft.

1. **F-F 90(4)FH**—Construction of one 949.25' steel and concrete bridge over the Clark Fork near Thompson Falls on the Idaho Line-Plains Road in Sanders County, involving about 1,100 cu. yds. excavation; 34 each floor drains; 1,800 cu. yds. structure excavation; 2,395.1 cu. yds. concrete; 251,108 lbs. reinforcing steel; all lump sum structural steel; all lump sum shoring and cribs; 43,200 lbs. furnishing steel bearing piles; 1,172 lin. ft. driving steel bearing piles; 1,901.5 lin. ft. steel bridge rail; and all lump sum test piles. Project to be completed by July 31, 1960.

2. **F 164(10) and DF 164(12)**—Grade, aggregate surfacing, plant-mix bituminous surfacing, seal-coat oiling, and drain 2.255 miles on the Philipsburg-Anaconda Road in Deer Lodge County, involving about 16.41 acres clearing; 3.96 acres grubbing; 402,762 cu. yds. excavation; 20,684 mi. yds. overhaul; 895 units rolling; 6,080 M gals. watering; 15 hours watering; 39,889 tons crushed aggregate; 353.60 tons penetration asphalt; 63.82 tons cutback asphalt; 46.83 tons emulsified asphalt; 6,428 tons plant mix; 100 lin. ft. relay pipe culverts; 60 cu. yds. gravel backfill; 1,146 lin. ft. reinforced concrete pipe; 5,225 lin. ft. guard rail-concrete posts; 34.78 cu. yds. concrete; 6,091 lbs. reinforcing steel; and other items. Project to be completed in 200 Calendar days.

3. **F 224(8)**—Construction of three semi-traffic actuated signals on First and Second Avenues North in Great Falls in Cascade County. Project to be completed in 45 calender days.

4. **DS (37)4, DS 37(5) and S 37(6)**—Grade, aggregate surfacing, road-mix bituminous surface, seal-coat oil, and drain 6.754 miles on the Heimville-Ovando Road in Powell County, involving about all lump sum clearing and grubbing; 140,563 cu. yds. excavation; 29,054 mi. yds. overhaul; 460 units rolling; 2,934 M gals. watering; 1 hour watering; 43,427 tons crushed aggregate; 75.20 tons cutback asphalt; 11.06 tons emulsified asphalt; 100 lin. ft. relay pipe culverts; 247 cu. yds. gravel backfill; 408 lin. ft. corrugated metal pipe; 260 lin. ft. structural plate pipe; 2,900 lin. ft. reinforced concrete pipe; 0.667 mile processing; 279 sq. yds. pro-

cessing; all lump sum remove existing structure; and other items. Project to be completed in 160 calendar days.

5. S 38(6)—Grade, aggregate surfacing, plant-mix bituminous surfacing, seal-coat oiling; and drain 5.854 miles on the Noxon-Troy Road in Lincoln County, involving about 59.82 acres clearing; 43.75 acres grubbing; 215,483 cu. yds. excavation; 18,894 mi. yds. overhaul; 833 units rolling; 4,961 M gals. watering; 30 hours watering; 89,509 tons crushed aggregate; 609.52 tons asphalt cement; 117.00 tons cutback asphalt; 97.60 tons emulsified aspahlt; 11,084 tons plant mix; 1,818 lin. ft. relay pipe culverts; 123 cu. yds. gravel backfill; 1,867 lin. ft. corrugated metal pipe; and other items. Project to be completed in 130 calendar days.

6. S 107(6)—Aggregate surfacing and drain 8.057 miles on the Ledger-East and West Road in Toole County, involving about 54 cu. yds. excavation; 148 units rolling; 740 M gals. watering; 35,623 tons crushed aggregate; 100 lin. ft. relay pipe culverts; 100 cu. yds. gravel backfill; 176 lin. ft. corrugated metal pipe; 1,966 yd. miles haul binder; 983 cu. yds. binder; and other items. Project to be completed in 90 calendar days.

7. S 185(1)—Grade, aggregate surfacing, and drain 3.909 miles on the Santa Rita-Del Bonita Road in Glacier County, involving about 175,473 cu. yds. excavation; 43,141 mi. yds. overhaul; 484 units rolling; 3,298 M gals. watering; 33,541 tons crushed aggregate; 33 lin. ft. relay pipe culverts; 100 cu. yds. gravel backfill; 1,550 lin. ft. corrugated metal pipe; and other items. Project to be completed in 120 calendar days.

8. S 196(1)—Grade, aggregate surfacing, and drain 10.968 miles on the Albion-Capitol Road in Carter County, involving about 80,-276 cu. yds. excavation; 40,687 mi. yds. overhaul; 371 units rolling; 2,427M gals. watering; 61,932 tons crushed aggregate; 118 lin. ft. relay pipe culverts; 100 cu. yds. gravel backfill; 2,550 lin. ft. corr. metal pipe; 400 lin. ft. guard rail—concrete posts; 3,088 yd. mile haul binder; 178 hours use of motor grader; 354 hours use of scraper; 1,544 cu. yds. binder; and other items. Project to be completed in 150 calendar days.

9. S 236(3)—Grade, aggregate surfacing, and drain 7.056 miles on the Custer-Musselshell Road in Musselshell County, involving about all lump sum clearing & grubbing; 231,740 cu. yds. excavation; 7,362 mi. yds. overhaul; 644 units rolling; 4,374 M gals. watering; 45,-663 tons crushed aggregate; 100 lin. ft. relay pipe culverts; 207 cu. yds. gravel backfill; 124 lin. ft. corrugated metal pipe; 2,512 lin. ft. reinforced concrete pipe; 2,054 mi. yds. overhaul on binder; 1,027 tons binder; all lump sum remove existing structure; and other items. Project to be completed in 150 calendar days.

10. S 248(2)Unit 1—Grade, aggregate surfacing, and drain 12.143 miles on the East of Blackfoot-Northerly Road in Glacier County, involving about 786,171 cu. yds. excavation; 90,374 mi. yds. overhaul; 1,938 units rolling; 13,611 M gals. watering; 91,746 tons crushed aggregate; 40 cu yds. riprap; 100 lin. ft. relay pipe culverts; 224 cu. yds. gravel backfill; 3,608 lin. ft. corrugated metal pipe; 214 lin. ft. structural plate pipe; 3,990 mi. yds. haul binder; 1,995 cu. yds. binder; and other items. Project to be completed in 300 calendar days.

11. S 248(2)Unit 2—Construction of one 19.0', one 38.0', one 50.0' and one 100.0' treated timber bridge on the East of Blackfoot-Northerly Road in Glacier County, involving about 400 cu. yds. excavation; all lump sum remove existing structure and maintain traffic; 3,096 lbs. structural steel; 3,213 MBM untreated timber; 94,257 MBM treated timber; 2,245 lin. ft. treated timber piles; and other items. Project to be completed by June 30, 1959.

12. S 264(2)—Construction of one 410.5' steel and concrete bridge on the East of Van Norman-North Road in Garfield County, involving about 115 cu. yds. riprap; 1,600 lin. ft. precast prestressed concrete beam; 735 cu. yds. structure excavation; 603 cu. yds. concrete; 89,535 lbs. reinforcing steel; 504 lin. ft. furnishing treated timber piles; 480 lin. ft. driving treated timber piles; and 826.46 lin. ft. steel beam bridge rail. Project to be completed by November 30, 1959.

13. SMP 4599—Crushing and stockpiling 164,-500 tons of ⅜" crushed gravel surfacing from 14 crusher setups in Lake, Mineral, Missoula, Powell, Ravalli, and Sanders counties, involving about 164,500 tons ⅜" crushed gravel and 313,700 ton mile haul on stockpiled material. Project to be completed by September 30, 1959.

14. SPP 7512-03—The improvement contemplated consists of the plumbing system and septic tank for latrine at the Lewis and Clark Cavern State Park in Jefferson County, involving the lump sum for the plumbing system and septic tank. Project to be completed by April 15, 1959.

The above-listed quantities are approximate only.

Prequalification of bidders, at least 72 hours prior to the opening of bids, is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission, in Helena, Montana. Plans and specifications for all Federal-aid projects are also on file and may be examined in the offices of the Bureau of Public Roads, Helena, Montana.

Harry L. Burns, Chairman
Fred Quinnell, Jr., State Highway Engineer

GRADING, DRAINING

BIDS CLOSE 11 A.M., P.S.T., NOVEMBER 4

Juneau, Alaska

NOTICE TO CONTRACTORS

October 10, 1958, Department of Commerce, Bureau of Public Roads, Region 10. Sealed bids in single copy for furnishing all labor, equipment and materials and performing all work for Project DS-0975(1), Glacier Highway, Thane Extension, Territory of Alaska, described herein, will be received until 11:00 a.m., PST, November 4, 1958, in room 319, Federal Building, Juneau, Alaska. The project consists of grading and drainage of 0.9 miles of the Glacier Highway, Thane Extension, beginning 0.5 miles southeast of Sheep Creek and Ending at Little Sheep Creek. Principal items of work consist of the following: clearing—9.5 acres; grubbing—6.0 acres; unclassified excavation —33,500 cubic yards; borrow excavation, Case 1—10,500 cubic yards. Plans and specifications may be obtained free of charge by all who have a bonafide need for them for bidding purposes at Room 311, Federal Building, Juneau, Alaska. It is requested that plans be returned to the Division Engineer, Bureau of Public Roads, Juneau, Alaska. A bid guaranty in a minimum amount of 5% of the bid amount and conforming to the requirements of Standard Form 22 shall be required with each bid. If the bidder fails to accompany his bid with the required bid guaranty, his bid will not be read or otherwise considered. Telegraphic notification of execution of a Bid Bond does not meet the above requirement of a bid bond accompanying a bid. E. H. Swick, Regional Engineer.

6323—10-18, 25

STATE HIGHWAYS PROJECTS

BIDS CLOSE 10 A.M., OCTOBER 28

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, October 28, 1958, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

Bid proposals delivered in person will be received only at the Reception Desk located on the first floor of the Transportation Building.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal Funds have been allocated for items Nos. 1 to 5 inclusive.

The improvements for which bids will be received follow:

1. Draining, Grading, Surfacing, Paving with Cement Concrete and Asphaltic Concrete and Signing on 6.501 miles of Primary State Highway No. 2 in Kittitas County, SUNSET LODGE VICINITY AND TOP OF EASTON HILL TO EASTON, FAP Nos. I-90-2(20)55 and I-90-2(10)64 and State Project, involving about 6,820 cubic yards of Common Excavation and Borrow, 2,500 cubic yards of Top Soil from Stockpile, 64,820 tons of Crushed Surfacing and Ballast from Stockpile, 940 cubic yards of Prime Coat Aggregate, 162 tons of Asphalt Cement, 17,910 tons of Asphaltic Concrete, 99,803 square yards of Cement Concrete Pavement, 192 cubic yards of Concrete, 43,120 pounds of Steel Reinforcing Bars, 9,145 linear feet of Cement Concrete Gutter, 4,100 linear feet of Mountable Cement Concrete Curb, 177 linear feet of Concrete Pipe, 840 linear feet of Metal Pipe, 711 linear feet of Galvanized Conduit Pipe, 17,559 linear feet of Beam Guard Rail, a lump sum bid for Signing and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
2. Constructing a Reinforced Concrete Flat Slab Bridge and a Precast Prestressed Concrete Bridge and Installing Illumination on 0.016 mile of Primary State High-

way No. 1 in King County, 14TH AVENUE SOUTH UNDERCROSSING AND CLOVERDALE STREET OVERCROSSING—SEATTLE, FAP No. U-001-3(16), involving about 1,775 linear feet of Prestressed Concrete Girders, 2,615 cubic yards of Concrete, 378,000 pounds of Steel Reinforcing Bars, a lump sum bid for Superstructure (about 1,330 cubic yards of Concrete and 290,000 pounds of Steel Reinforcing Bars), 688 linear feet of Standard Bridge Railing, 21,800 linear feet of Untreated Timber Piling, 10,800 linear feet of Treated Timber Piling, 12,000 linear feet of Concrete Piling, a lump sum bid for Two Illumination Systems and other items.

3. Constructing a Precast Prestressed Concrete Girder Bridge and a Reinforced Concrete Slab Bridge on 0.059 mile of Secondary State Highway No. 7-C in Adams County, N. P. RAILWAY OVERCROSSING AND EAST LOW CANAL BRIDGE, FAS No. S-SG-0972(4), involving about 608 linear feet of Standard Bridge Railing, 112,200 pounds of Steel Reinforcing Bars, a lump sum bid for Superstructure (about 102 cubic yards of Concrete and 44,000 pounds of Steel Reinforcing Bars), 1,239 linear feet of Precast Prestressed Concrete Girders and other items.
4. Constructing Chain Link Fence on 0.783 mile of Primary State Highway No. 18 in Grant County, PELICAN HORN—FENCING, FAP No. I-90-4(21)173, involving about 7,790 linear feet of Chain Link Fence. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
5. Clearing, Draining, Grading and Surfacing on 2.367 miles of an Island County Road, MUTINY BAY-BUSH POINT ROAD, FAS Nos. S-1089(1) and S-1088(1), involving about 20,860 cubic yards of Unclassified Excavation, 4,800 cubic yards of Common Borrow, 9,930 cubic yards of Selected Roadway Borrow, 3,160 cubic yards of Screened Gravel Surfacing, 1,352 linear feet of Metal Pipe, 15 Guide Posts and other items.
6. Draining, Grading, Surfacing, Paving with Cement Concrete and Asphaltic Concrete and Installing Illumination on 0.481 mile of Primary State Highway No. 5 in King County, RENTON VICINITY, a State Project, involving about 3,010 cubic yards of Unclassified Excavation, 3,210 cubic yards of Sand Borrow, 3,200 cubic yards of Selected Roadway Borrow, 1,570 tons of Crushed Surfacing, 190 cubic yards of Prime Coat Aggregate, 25 tons of Asphalt Cement, 4,750 tons of Asphaltic Concrete, 12,940 square yards of Cement Concrete Pavement, 6,450 linear feet of Extruded Traffic Curb, 141 linear feet of Concrete Pipe, 30 linear feet of Galvanized Conduit Pipe, a lump sum bid for Illumination System and other items.
7. Draining, Grading and Surfacing on 22.526 miles of Adams County Roads, BLOCK 46—FEEDER ROADS, a State Project, involving about 22.5 miles of Grading, 46,260 tons of Crushed Surfacing, 1,446 linear feet of Metal Pipe and other items.
8. Redecking Bridge on 0.108 mile of Secondary State Highway No. 9-A in Clallam County, ELWHA RIVER BRIDGE No. 9-A/3, a State Project, involving about 98 MBM of Untreated Timber and Lumber, 0.6 MBM of Treated Timber and Lumber and a lump sum bid for Removing Portions of Existing Structure.

ERNEST J. KETCHAM, Chairman
W. A. BUGGE, Director of Highways

REDECKING BRIDGES

BIDS CLOSE 11 A.M., P.S.T., OCTOBER 28

Juneau, Alaska

NOTICE TO CONTRACTORS

October 7, 1958, Juneau, Alaska. Department of Commerce, Bureau of Public Roads, Region 10. Sealed bids in single copy for furnishing all labor, equipment and materials and performing all work for Projects DF-062-4(8) and DF-062-3(3), Redecking Salcha River and Tanana River Bridges, Territory of Alaska, described herein, will be received until 11:00 a.m., P.S.T., October 28, 1958, in Room 319, Federal Building, Juneau, Alaska. The project consists of redecking and renovating the abutment of the existing Salcha River Bridge, Mile 323 on the Richardson Highway, and redecking the existing Tanana River Bridge, Mile 275 on the Richardson Highway. Principal items of work consist of the following: treated timber, creosote pressure—123,580 MBM; dismantling existing bridge decks; loose riprap—550 cubic yards. Plans and specifications may be obtained free of charge by all who have a bonafide need for them for bidding purposes at Room 311, Federal Building, Juneau, Alaska. It is requested that plans be returned to the Division Engineer, Bureau of Public Roads, Fairbanks, Alaska. A bid guaranty in a minimum amount of 5% of the bid amount and conforming to the requirements of Standard Form 22 shall be required with each bid. If the bidder fails to accompany his bid with the required bid guaranty, his bid will not be read or otherwise considered. Telegraphic notification of execution of a Bid Bond does not meet the above requirement of a bid bond accompanying a bid. E. H. Swick, Regional Engineer.

6319—10-11, 18

GRADING, DRAINING, BITUMINOUS TREATMENT

BIDS CLOSE 11 A.M., P.S.T., OCTOBER 28

Juneau, Alaska

NOTICE TO CONTRACTORS

October 7, 1958, Juneau, Alaska. Department of Commerce, Bureau of Public Roads, Region 10. Sealed bids in single copy for furnishing all labor, equipment and materials and performing all work for Project DS-0510(5), Wasilla-Big Lake Junction Road, Territory of Alaska, described herein, will be received until 11:00 a.m., P.S.T., October 29, 1958, in Room 319, Federal Building, Juneau, Alaska. The project consists of grading, drainage and bituminous treatment of 9.6 miles of the Wasilla-Big Lake Junction Road, Third Judicial Division, Territory of Alaska. Principal items of work consist of the following: unclassified excavation—186,374 cubic yards; borrow excavation, Case 1—49,000 cubic yards; crushed aggregate base, Grading D-1—41,676 tons; aggregate, Desig. AT-50, bituminous surface treatment—3,385 tons; asphalt, Grade RC-3, bituminous surface treatment—264 tons. Plans and specifications may be obtained free of charge by all who have a bonafide need for them for bidding purposes at Room 311, Federal Building, Juneau, Alaska. It is requested that plans be returned to the Division Engineer, Bureau of Public Roads, Anchorage, Alaska. A bid guaranty in a minimum amount of 5% of the bid amount and conforming to the requirements of Standard Form 22 shall be required with each bid. If the bidder fails to accompany his bid with the required bid guaranty, his bid will not be read or otherwise considered. Telegraphic notification of execution of a Bid Bond does not meet the above requirement of a bid bond accompanying a bid. E. H. Swick, Regional Engineer.

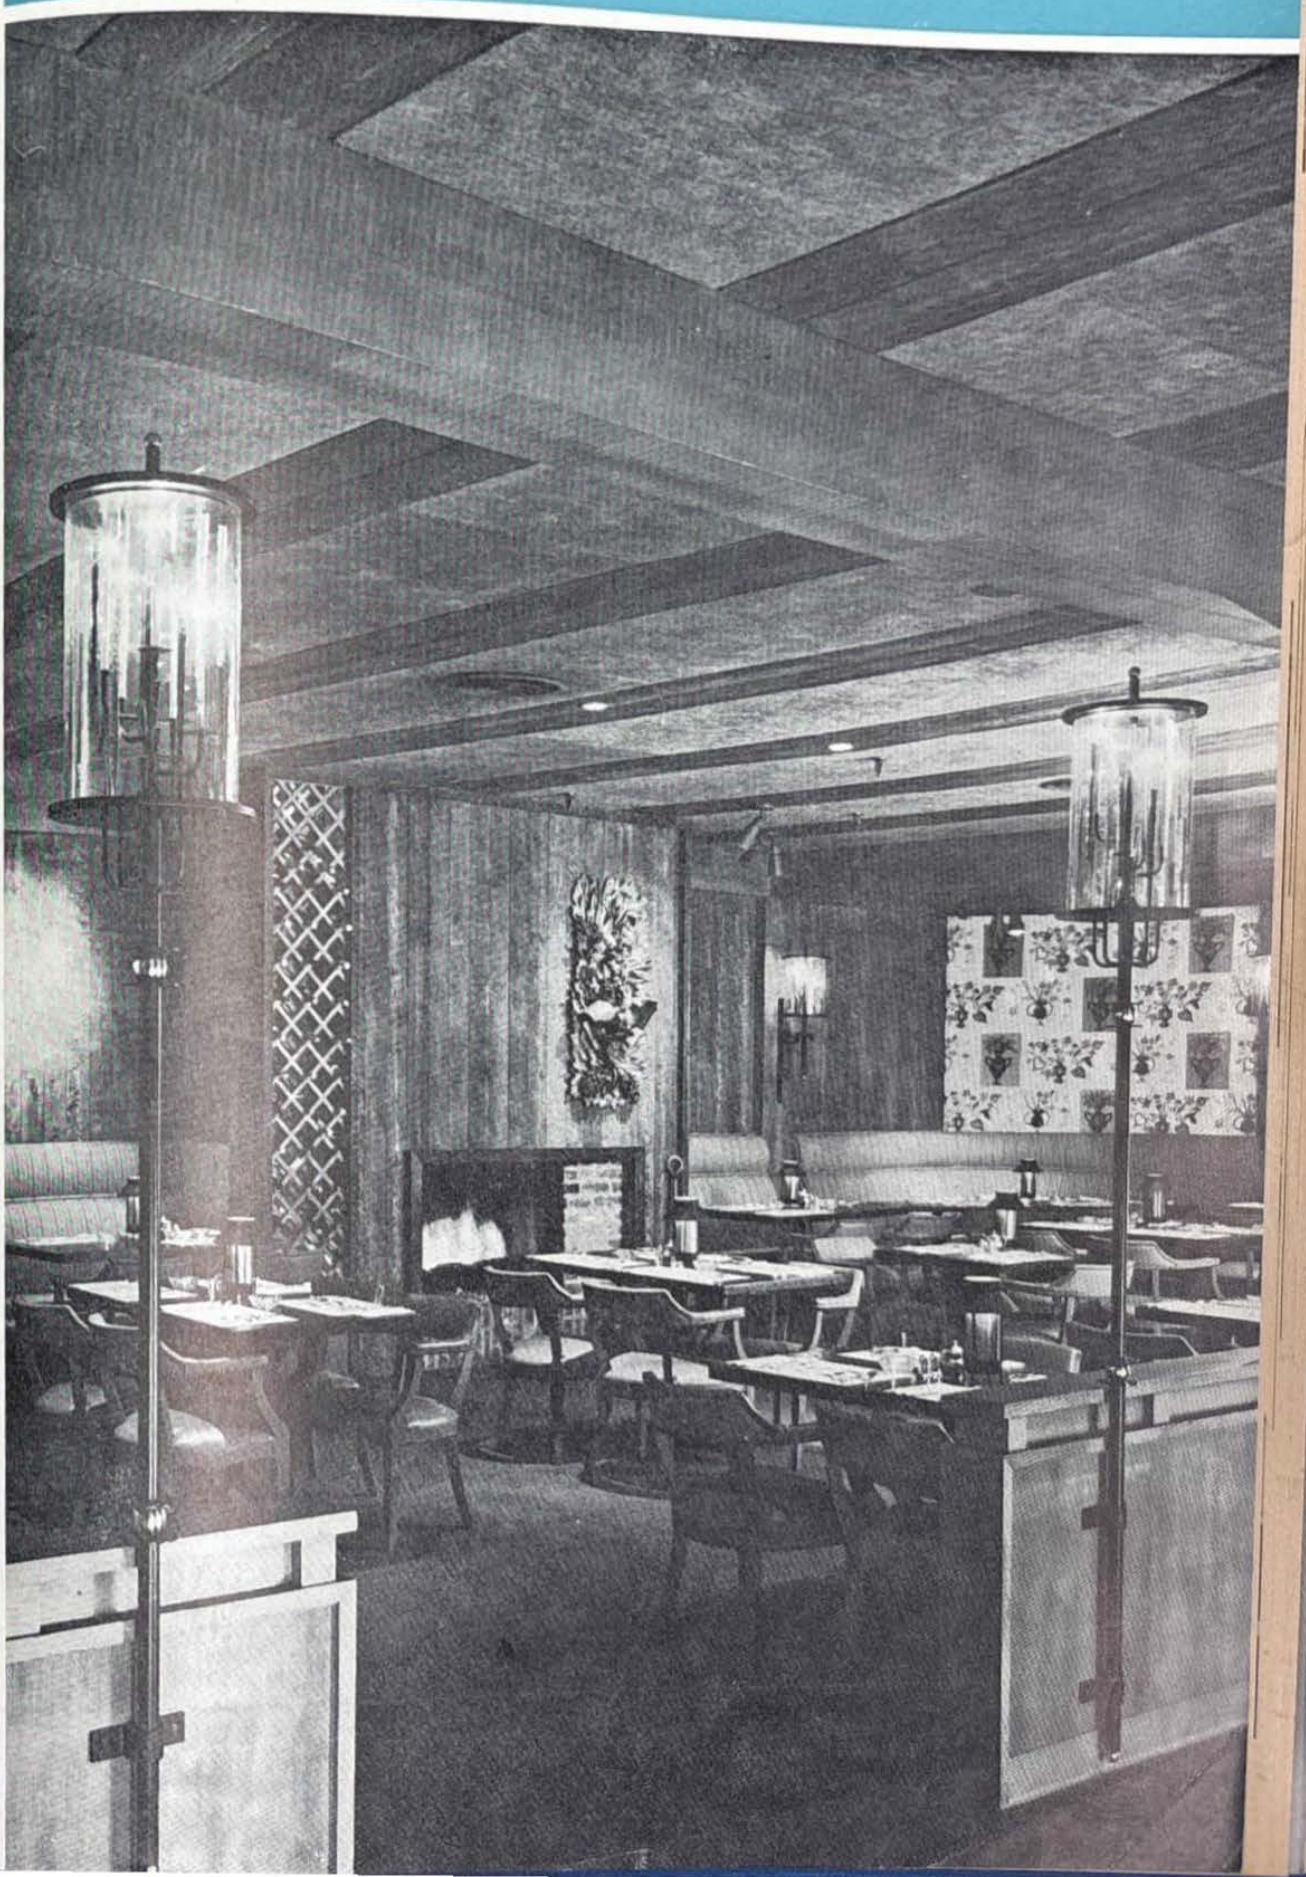
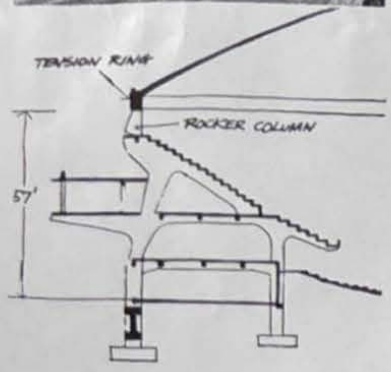
School of Architecture & Allied Arts NOV 19 1958

pacific architect and builder



Championship Material

1,146 WRAPS of prestressing wire on tension ring induced a compressive force of 14,000 lbs. per circumferential foot. Ring rests on rocker columns which absorb internal stresses and force of high velocity winds.



CROSS SECTION shows how monolithic dome and tension ring rest on hinged rocker columns, supported by stadium wall. Outer foundation is a 10' deep continuous ring girder.

Versatile Concrete Scores Victory in Cuba's Magnificent Sports Palace

● Five miles from the heart of Havana, in 65-acre Sports City, stands a monument to Progress as well as Athletics —Cuba's magnificent new Sports Palace.

Boasting the largest concrete dome in the Western Hemisphere—with 286' interior diameter—the building accommodates 18,000 spectators without a single pillar or post to block vision.

To absorb the stresses inherent in the flat shape of the dome (which rises only 40', or a 1:7 height-to-diameter ratio), and to withstand winds of hurricane force, the dome's perimeter connects with a prestressed concrete ring 3' thick and 5' high. This tension ring rests in turn on 24 reinforced concrete rocker columns, hinged top and bottom to absorb both internal and external stresses.

Ranking as one of the world's finest arenas, this project required 32,500 barrels of El Morro Cement, made by Lone Star's Cuban subsidiary, La Compañia Cubana de Cemento Portland. 28-day strength of dome concrete was 4,500 psi.

BUILDING PERMITS

High volume continues in October

Building permits for October again paint a bright picture for the construction industry in the West. For the sixth consecutive month the dollar volume for the five states is higher than the same period last year, this time by nearly $22 million.

Washington leads the way with a $11½ million gain over October 1957. Oregon reports a $6 million increase; California, $4½ million; and Montana, $1 million. Idaho dropped $1 million. The five-state total for October is also up $10¾ million over September 1958 figures.

Dollar volume for the first ten months of 1958 is $2,259,809,332, an increase of $219 million over the same period last year. California has picked up $115½ million; Washington, $51¼ million; Oregon, $46¾ million; Montana, $3½ million; and Idaho, $1¾ million.

Here are the January through October totals:

	Jan.-Oct. 1958	Jan.-Oct. 1957
Calif.	$1,773,730,262	$1,658,041,813
Ore.	151,646,442	104,900,420
Wash.	286,667,601	235,351,393
Mont.	23,945,699	20,399,759
Idaho	23,777,015	21,951,439

ANALYSIS OF TYPICAL AREAS—OCTOBER

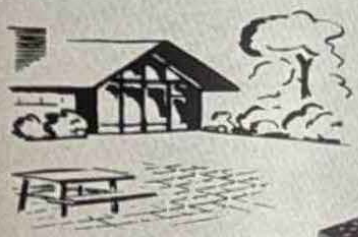
New...Natural Beauty!

BELLO

PRECAST TERRAZZO TILE

FOR LIFETIME USE AND LASTING SATISFACTION

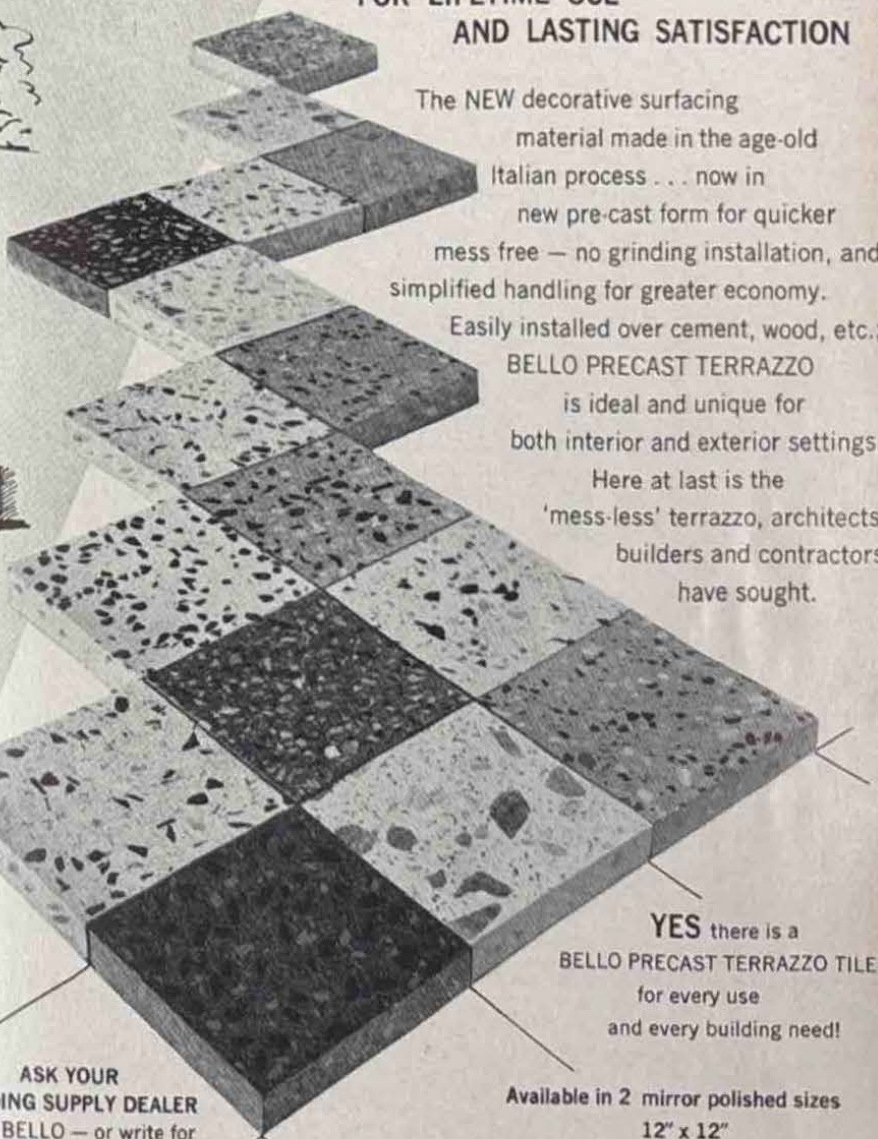
The NEW decorative surfacing material made in the age-old Italian process . . . now in new pre-cast form for quicker mess free — no grinding installation, and simplified handling for greater economy. Easily installed over cement, wood, etc.; BELLO PRECAST TERRAZZO is ideal and unique for both interior and exterior settings. Here at last is the 'mess-less' terrazzo, architects, builders and contractors have sought.



FOR HOMES
PATIO DEN
LIVING ROOM
BATHROOMS

FOR PUBLIC BUILDINGS
HOSPITALS
SCHOOLS
HOTELS

FOR BANKS, THEATRES, CHURCHES



YES there is a BELLO PRECAST TERRAZZO TILE for every use and every building need!

Available in 2 mirror polished sizes
12" x 12"
16" x 16"
in 30 basic colors, or to your specifications.

ASK YOUR BUILDING SUPPLY DEALER about BELLO — or write for TRU-color brochure and specification sheets.

Several choice distributorships are currently available in the Southwest and West. Interested parties are invited to investigate

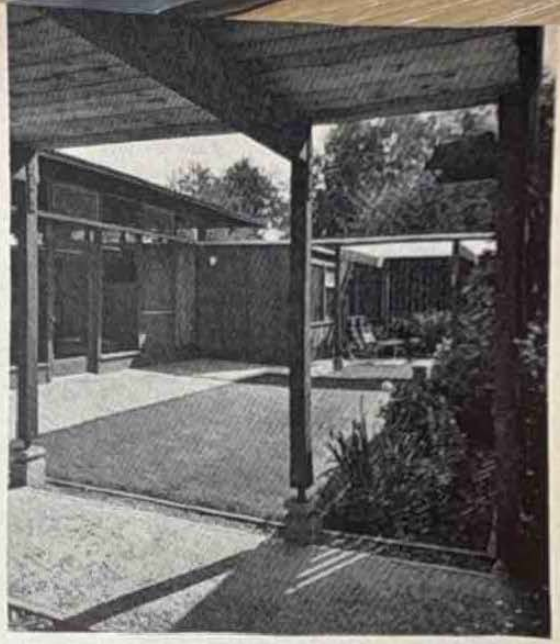
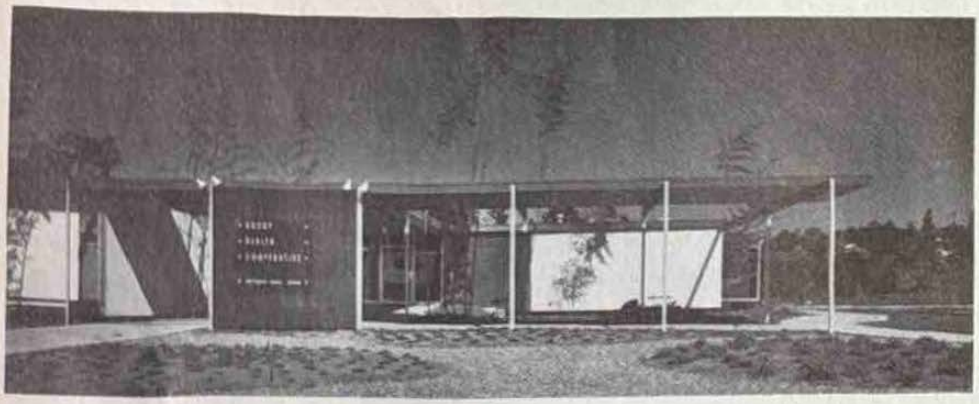
Western Washington honors four projects for design

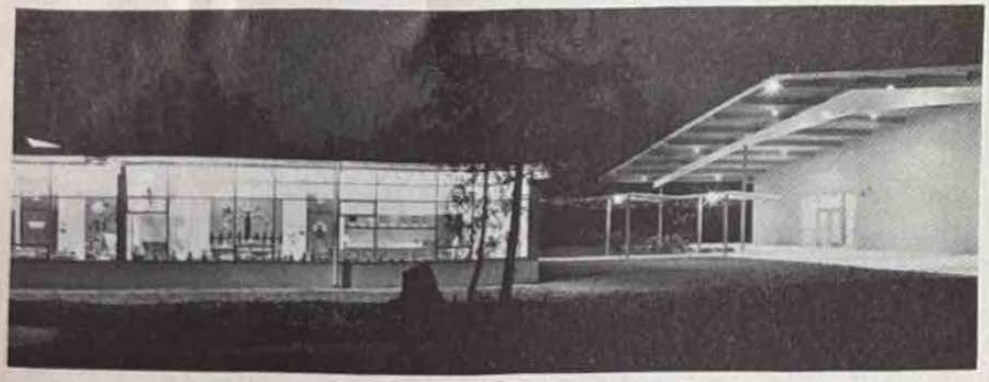
A small residence, clinic, elementary school and shopping center, all in the Seattle area, were cited for design in a competition co-sponsored by the Washington State and Southwest Washington AIA chapters in conjunction with the Northwest conference at Harrison Hot Springs, B.C., last month. An all-architect jury—Louis I. Kahn of Philadelphia, national AIA president John Noble Richards of Toledo and Charles Edward Pratt of Vancouver, B.C.—reviewed 20 entries which had been previously screened from a total of 72, with J. Lister Holmes as competition chairman. Citations were presented to the clients, architects and contractors at a dinner meeting in Seattle November 6.



PAUL W. LANGE RESIDENCE, Mercer Island: A. O. Bumgardner, architect; G.A.N. Co., general contractor.



GROUP HEALTH COOPERATIVE CLINIC, Seattle: Paul Hayden Kirk & Associates, architects; Riley Pleas, Inc., general contractor.



ISLAND PARK ELEMENTARY SCHOOL, Mercer Island: Bassetti & Morse, architects; E. F. Shuck Construction Co., general contractor.

M-B SHOPPING CENTER, Renton: Johnston-Campanella & Associates, architects; Baugh Construction Co., general contractor.

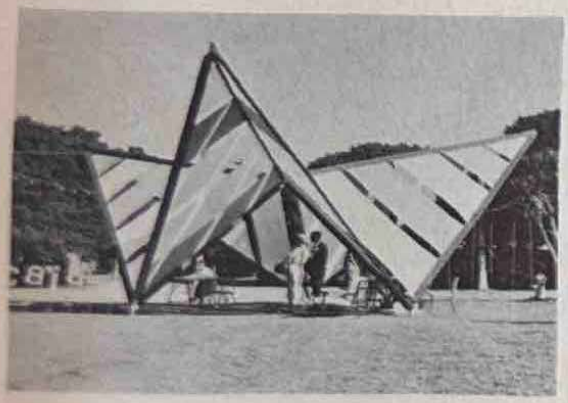
At Monterey: creativity and continuity

• Californians chalk up their finest convention

TOP: Dailey, Lundy, Thiry, Netsch (Southwest Builder and Contractor photo).

LEFT: Severud.

BELOW: Citation winners Balch and Justin.



THEME SETTER erected by students of California State Polytechnic College under direction of George Hasselein, head of architectural engineering department.

From the opening session when a psychologist set out to define "the creative mind" through the closing summary by a Chicago architect, the 13th annual convention of the California Council, American Institute of Architects, displayed an intricate weaving of the theme, "Creativeness in Architecture," into a stimulating and often colorful pattern.

The October 15-18 meeting at the Monterey County Fairgrounds drew a registration of 950, about 350 of whom were architects—a higher proportion than usual and a compliment to the finest professional program ever staged by the Californians. Besides faithfully attending the five sessions (a sixth on the last day was a special seminar for junior associates and students), the registrants viewed the Producers' Council exhibits, enjoyed steak and salmon barbecues at the open air Hunt Club and presented their highest honor, the Distinguished Service Citation, to William Glenn Balch and John C. Austin, both of the Southern California Chapter, at the annual banquet.

It would be difficult to say which of the 16 speakers, including architects and representatives of related professions, made the greatest contribution but surely consulting engineer Fred N. Severud with his refreshing approach to life and architect Victor Lundy with his youthful yet self-assured approach to design were among the most popular.

Make a better world: Severud

The real reason for being creative is to make a better world, said Severud, senior partner in the New York firm of Severud-Elstat-Krueger, consultants on such projects as the Berlin Congress Hall and the Seagram Building.

"Creativity means nothing unless it is working toward a better world," he declared. "We must be convinced that there is a better world first of all; then we must strive to find it."

Architects and engineers can become more creative if they toss aside limiting definitions of titles, Severud said. An architect, for example, should not confine himself only to design but should also know something about engineering and actual construction work. This knowledge gives him more tools to work with in developing his creativity.

Building industry representatives should not be selfish regarding their respective positions but rather think of themselves as "members of a family," he went on. Thus ideas put forth by others in the family can be better considered on their merit alone and good ones will not be lost because of needless jealousy.

"Being creative is the searching for truth," the engineer explained. "There must be a creation in the mind that elevates one, taking him away from the sordidness of the present world and lifting him into a new sphere."

To be completely creative some tools should be put aside, Severud continued. He told his audience that it is often unwise to set ideas down on paper, since these very ideas later can act as chains in preventing the mind from going on to completely different thoughts. This is especially true in the first stages of a problem when the only thing decided on is the problem itself.

Bend a little: Lundy

Leading off a seminar in which three architects explained their individual aproaches to specific buildings, Lundy prefaced his discussion of the Bee Ridge Presbyterian Church in Sarasota and the highly provocative Warm Mineral Springs Inn with some general observations.

"Great architecture must have meaning to man," the 35-year-old Florida architect explained. "Great buildings speak for themselves; they are not precious. Each has its own message and need not be explained."

To Lundy "creative" architecture is a total art which seeks to discover "how Godlike one can design a building in a given set of circumstances. We should quit being soft in creative architecture; we have emerged beyond the Sweet's Catalog concept. When we try to justify everything in our design, we take the fun and adventure out of it."

Noting that overspecialization has become a serious disease, he said that architects may find a solution in a naive, childlike approach and should not be ashamed of an "unusual" building if it is created out of the essence of our culture. "But we are foolish to turn our backs on the lessons of the past," he explained, adding that the brand new is not always the answer.

"Architecture cannot be neutral-

At Harrison: Kahn, Kramer and rain

• Northwest expresses dissatisfaction with Octagon

Philadelphia architect Louis I. Kahn shared the spotlight with Seattle industrial designer Gideon Kramer during the seventh annual conference of the Northwest Region, American Institute of Architects, October 9-12. Other major participants were Melvin M. Rader, professor of philosophy at the University of Washington, and Charles Edward Pratt, architect of Vancouver, B.C.

Joining the conferees from Washington, Oregon, Idaho and Montana for this year's meeting were members of the Architectural Institute of British Columbia, and the 250 registrants (more than half of them architects) found that Harrison Hot Springs can be quite a delightful spot even in four days of continuous rain.

Besides exploring the theme, "Toward a Better Environment," the Northwest delegates took time out to nominate John E. Toohey of Billings as regional director and, in a sense, to censure the national headquarters in the presence of president John Noble Richards of Toledo and Octagon staffers Edwin B. Morris Jr., assistant executive director, and Wolf Von Eckardt, public relations representative.

Kahn and the column

Just what Kahn always meant with his high-level rhetoric was subject to the interpretation of the person who heard it but the Yale University design critic left no doubt that his architectural religion is based on the column ("you must show what it does"). He took issue, for example, with the manner in which Le Corbusier handled this element in Ronchamp.

"You design from a sense of order, then forms emerge," Kahn declared. With a blackboard as his constant companion, both during the principal address and later at a more intimate seminar, he gave forth with a variety of stimulating and often controversial ideas. Some random samplings:

- Architecture is the thoughtful (later changed to "meaningful") making of space.
- "Organic" is a dangerous word. We learn from nature; we should not attempt to imitate her.
- The realization of what is right is the beginning of beauty.
- You are the architect and therefore you should create the environment; instead you let everyone else be the architect (citing as an example the gallery director who forms his own spaces).
- The making of a joint is the beginning of ornament.
- The role of the artist comes out of the architecture; you cannot simply assign a wall to the painter.
- Landscaping is not one thing, architecture another, for both in essence are the making of space.

Asked about the bold splashes of art at the University of Mexico, Kahn said he wished to reserve comment because he had never visited the campus, but he did approve of what he referred to as "making war on space."

Kramer and disorder

Far afield from Kahn was Kramer's humanistic approach to the problem of design. Again and again he emphasized the "sterility of perfection, the stimulus of imperfection," or as he put it another way, "the challenge of disorder."

Explaining that "process" is the most important aspect in design, he deplored the beginning-end orientation which neglects process. "The more alive, the less order; the more creative, the less concerned with order," the industrial design said, commenting that static order does not lead to action.

"We must stop worshiping the unattainable, the one answer," Kramer remarked. "What injustices are created in the name of perfection." Referring to the integration of the old and the new, as in campus developments, he admonished his audience to learn to honor differences, especially when they represent advancements.

"We design not buildings but men," Kramer continued. "Yet we deprive man of participation in his own shelter, of meaningful experiences." He constantly returned to his thesis

Continued on p. 33

The Oregon and Southwest Oregon AIA chapters will join forces to hold an all-day meeting at the Benton Hotel in Corvallis December 13, referred to by general chairman Robert Wilmsen of Eugene as the "first annual Oregon State AIA convention."

Glazed Structural Tile by Kraftile

first aid for ford

What Ford does, Ford does right! Their cheery First Aid Room shown here is only one of many facilities thoughtfully provided in their giant new Milpitas plant. There are first aid rooms, kitchens, cafeterias, shower and locker rooms — all with generous expanses of gleaming, smooth Kraftile glazed structural tile.

In these rooms which do not yield direct profit or production, building and maintenance costs came under extra close scrutiny. Glazed Structural Tile Units are speedily installed as combined wall and finish by only one trade (masonry). A damp cloth cleans it. Glowing, harmonious colors cannot fade. Smooth, marble-hard finish fends off chemicals, acids, grease and steam. Offers no shelter to dirt, vermin, bacteria or rodents. 12 colors plus clear glaze in standardized sizes and shapes. Write for specifications, Graphic Standards and color samples.

Management responsibility and planned obsolescence

by FRED M. HAUSERMAN

WHILE my subject has a definite bearing on your functions as designers, I come to you as a producer. I approach the topic of planned obsolescence from the standpoint of the building industry in particular.

At the start let me make it plain that there are areas where obsolescence is natural, where the replacement of the old by the new affords pleasure and satisfaction. The ladies, bless them, want style changes in clothes from time to time—and time is getting shorter between change. But these add spice and variety.

My quarrel is with the kind of planned obsolescence that depends for its success on a distoration of basic values; that turns its back on honesty, denies the responsibility of today to the future. I think it's pretty important that we ask ourselves whether we are to permit the slums of tomorrow to be planned on the drawing boards of today? Are we as members of the greatest industrial society ever known to leave as our only monuments rusting junk heaps?

These are not academic questions, mere idle topics for speculation. They are directly concerned with basic decisions we will have to make as producers and designers. Even more deeply, these are questions which deal with our faith in our country, our economy and our own role as producers.

You see some of the fundamental concepts of American business at its best are under fire. There are those who would have us turn our backs on quality and product integrity; they tell us that quality is a luxury we can no longer afford. If we follow this advice, our skills, our experience, our creative gifts will all be dedicated to the unheroic task of building new and better junk piles for tomorrow. For obsolescence is the inevitable result of such a philosophy.

There are those who see intentional obsolescence in products as a good thing; there are others who, through ignorance, have no real understanding of what the proper use of materials should be and what value really is. The first group is the cynics, the unbelievers. "Planned Obsolescence" is their ticket. Don't build for tomorrow; build for today. Forget the structure; concentrate on the facade. Let it wear out or go out of style in a hurry. That way we'll sell the same customers again tomorrow.

Of course, we cannot deny that some obsolescence is inevitable. But there is a big difference between planning to make something obsolete or allowing it to become obsolete through faulty craftsmanship and the natural obsolescence that results from change.

Does this mean that we have to close our eyes to style and beauty? Quite the contrary. It means that we have to pay more careful attention to it than we have ever done before. We must take our position with the great designers, architects and builders of today and the past—men who have always insisted that aesthetics is not a matter of superficial ornaments, not a matter of changing tastes and whims. Once we have taken such a position we have slammed the door on those who would

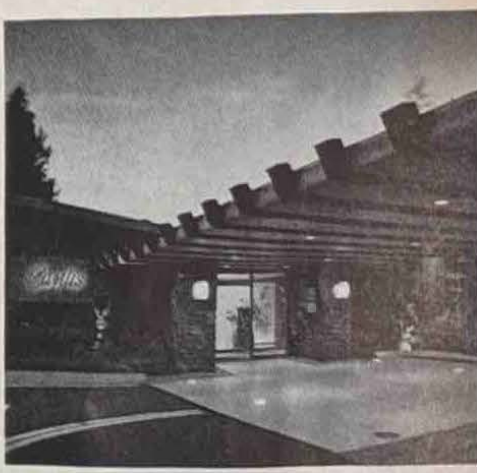
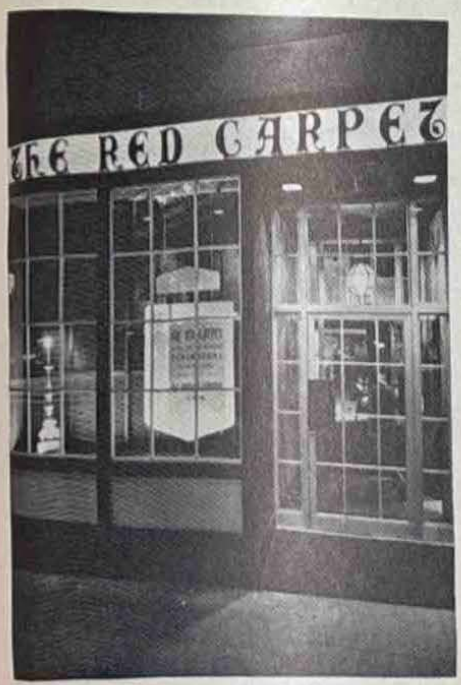
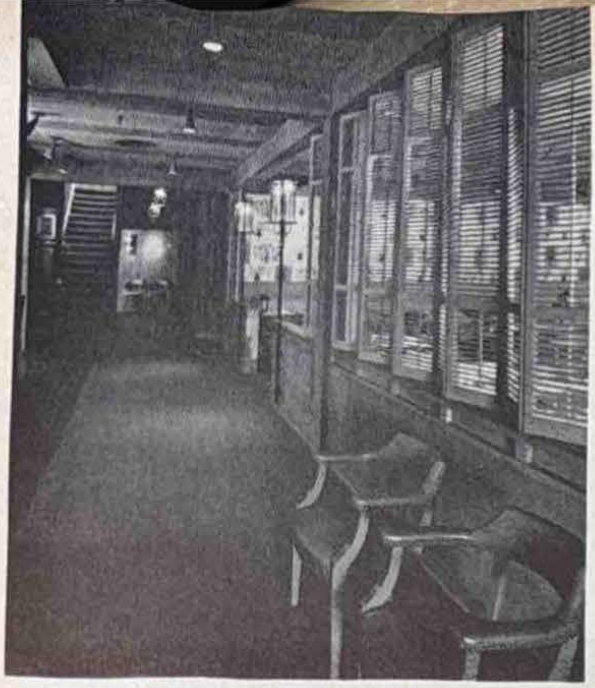
Three restaurants by Terry & Moore





THE TRAVELER who seeks dining adventures on the West Coast will soon discover that the food for the most part surpasses the surroundings in which it is served. He will note the restaurants in southern California which tend to rely on gimmicks and neon lights at the expense of basic design; he will observe a number of satisfying regional expressions, especially in waterfront spots, in the Bay area; and finally, perhaps to his surprise, he will encounter some of the most rewarding establishments—if not in quantity, certainly in quality—in the Pacific Northwest. Among those who have made a significant contribution in this field are Seattleites Roland Terry and Philip A. Moore, who for the past six years have been joining architecture and interior design in happy wedlock. Shown in these seven pages are three of their more recent projects, each presenting its own peculiar problem; each reflecting elegance tempered with restraint, imagination tempered with good taste. In Lakewood Terrace the designers created a new restaurant out of an existing suburban shopping center, Colonial in character; in Canlis' they enlarged and renovated one of the West's most successful operations, which also enjoys a national reputation; and in the Red Carpet they transformed a downtown rush-order coffee shop into a more leisurely dining spot.



Lakewood Terrace
Tacoma, Washington

•

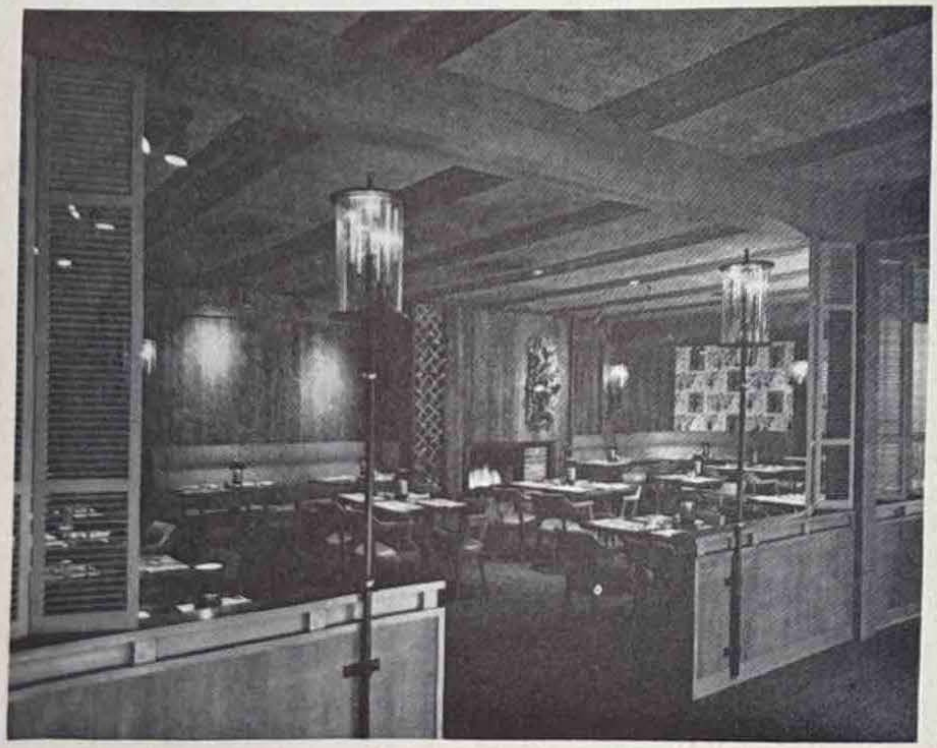
TERRY & MOORE
Architects

KETNER BROS., INC.
General Contractors

THE CLIENT, owner of a long-established suburban shopping center done in a dominantly Colonial style, desired a completely new restaurant created in the same dining space well known to its local, conservative-minded patrons who live a gracious life centering around nearby country club activities. To plan an interior somewhat suggestive of the center's exterior design and compatible with the tastes of the clientele, the architects have made extensive use of driftwood-stained, rough-sawn paneling, beams and louvered shutters and quarry tile floors in main traffic areas.

Since the Northwest climate is akin much of the year to that of Britain, a hint of the English is seen in the warmness of tangerine carpeting and leather club chairs, the open fireplace in the dining room and the charcoal broiler on public view in the foyer. Custom-designed coach lanterns in the dining room and wrought iron wall candelabra of low voltage lamps in wax candles in the lounge further suggest the Colonial. All lighting is dimmer controlled for higher intensity at noon, less in the evening. Banquette seat-back covers are of wool or linen; all materials have been selected for minimum maintenance.

DRIED FLORAL ARRANGEMENT by James Crissey hangs over dining room fireplace.



OUTLINE SPECIFICATIONS

Structure: frame, roof and walls: wood; floors: concrete and wood.

Exterior Finish: cedar bevel siding and brick.

Roof Surfacing: composition with marble chips.

Doors: exterior: glazed metal—Fentron Industries, Inc.; interior: 1¾ in. slab.

Floor Surfacing: quarry tile; carpeting—Bigelow-Sanford Carpet Co., Inc.

Insulation: 4-in rock wool.

Partitions: wood stud and plasterboard.

Interior Finish: stained Alaskan cedar; wallpaper—Piazza Prints, Inc., Wallpapers, Inc.

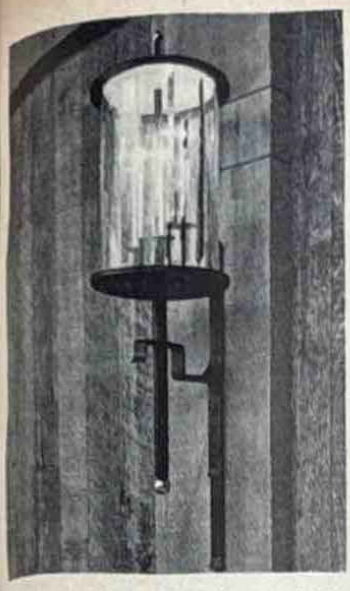
Ceilings: stained cedar boards alternated with acoustical tile—Rockwood Corp.

Lighting Fixtures: custom-designed incandescent.

Special Equipment: shutters—Northwest Millwork Co.; banquette seatback material—Knoll Associates, Schumacher & Co.; chair covering—(Naugahyde) United States Rubber Co., A. Maix's-ing Fabrics, Inc.

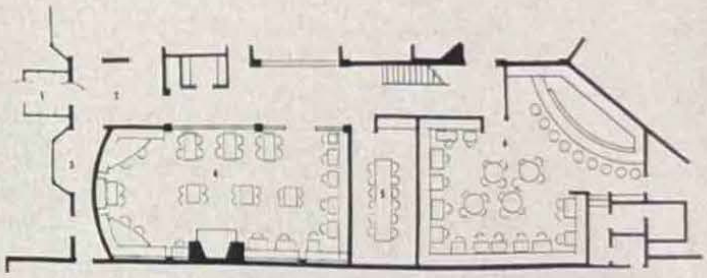
Total Area: main floor (excluding snack bar): 4,278 sq. ft., seating 143; banquet room: 1,736 sq. ft., seating 88.

Date of Completion: November 1957.



CARRIAGE LAMPS in color glass on plexiglass cylinders are custom designed by Irene McGowan (who also did wrought iron wall sconces) in collaboration with architects.

PARTIAL FLOOR PLAN showing (1) vestibule, (2) foyer, (3) waiting room, (4) dining, (5) private dining and (6) lounge. Coffee shop and kitchen-service area are found to north of sections shown.



CONTEMPORARY VERSION of early American floral wallpaper ("Steinberg's Flowers" by Piazza Prints) is used on end walls of dining room to reduce its visual length. Table lamps and place mats are work of Douglas Bennett.

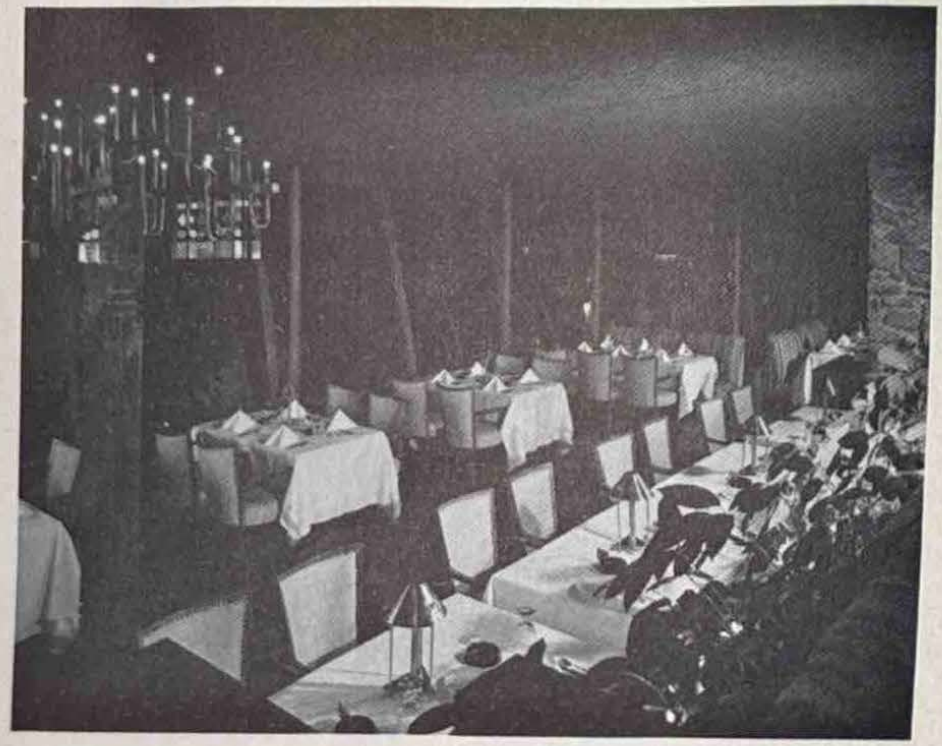
TERRY & MOORE
Architects

AARON NELSON
General Contractor

THE PROBLEM here was to extend considerably and renovate completely existing facilities for both guests and employees, still maintaining the established character of the initial structure (designed in 1949 by Wimberly & Cook, architects; Tucker, Shields & Terry, collaborating architects-interior designers). The result: an intensification of the original plan, emphasizing comfortable dining in an elegant but relaxed atmosphere.

Basic color scheme throughout is a background of dark brown walls of wood, native stone and grass cloth textures, against which are accented many elements of copper and furnishings and carpeting of gold and copper tones. Custom-designed lighting by Irene McGowan, which uses gas lighted and low voltage electric candelabra, is keyed extremely low to produce a candlelight effect. A strong suggestion of the tropics is part of the decor, since the owner has a similar operation in Hawaii, a popular spot with Northwest vacationers. Accessories from the Islands and the Orient are combined with native materials and the work of several major local artists, including a hand-carved door handle by George Tsutakawa and an Italian mosaic tile planter, set off by a Philippine-imported wall of crushed Kappa shells in the foyer, by Philip McCracken.

SLOPING WINDOWS afford spectacular night view of George Washington (Aurora) Bridge across Lake Union, past Capitol Hill and down to mid-town Seattle.



OUTLINE SPECIFICATIONS

Structure: frame and walls: wood; floors: concrete and wood.

Exterior Finish: rough cedar boards and Shuksan stone.

Windows: steel venting section—Fentron Industries, Inc.; sliding aluminum Durell Products, Inc.

Floor Surfacing: carpeting—Mohawk Carpet Mills, Inc., in dining room, Bigelow-Sanford Carpet Co. (architect-designed).

Partitions: wood and plasterboard.

Interior Finish: Philippine-imported Kappa shell wall in foyer; Japanese grass cloth—Wallpapers, Inc.; hand-blocked Japanese gold foil paper—Kelleher-Moffat Associates; mountain tulip veneer — (Flexwood) United States Plywood Corp.

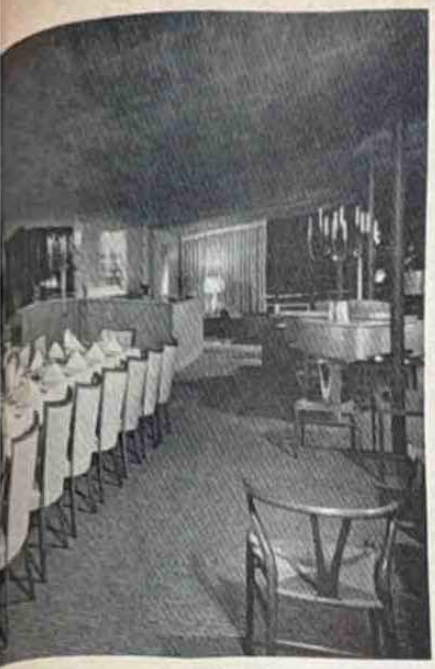
Ceilings: plasterboard covered with grass cloth; acoustical tile—Rockwood Corp.

Lighting Fixtures: custom-designed copper incandescent and carriage lamps.

Special Equipment: gold Venetian mirrors—Parker-Henry Glass Co.; banquette seat-backs — woven by Jack Lenor Larsen; chair covering—vinyl grass cloth and genuine leather—Clark & Burchfield, Inc.

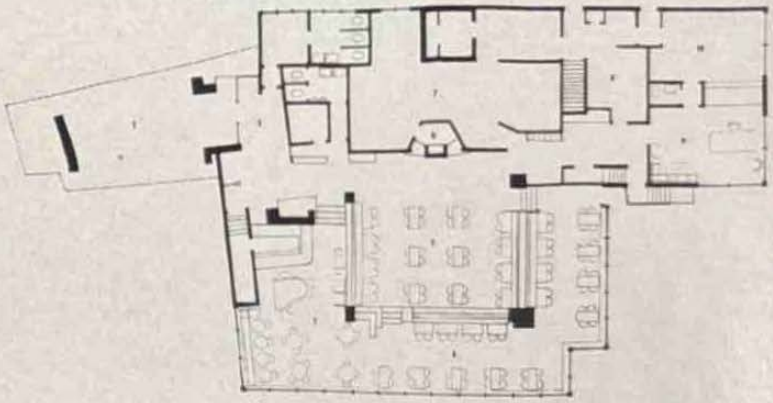
Total Area: main floor: 1,900 sq. ft., seating 98; new mezzanine and private dining room: 1,640 sq. ft. (1,150 sq. ft. remodeled), seating 70; basement, storage, etc.; 1,900 sq. ft.

Date of Completion: April 1958.



PENTHOUSE DINING ROOM can accommodate private parties up to 50 guests. Yellows, beiges and browns predominate, with west wall of gold Venetian mirrors.

MAIN FLOOR PLAN showing (1) porte' cochere, (2) entry, (3) lounge, (4) lower dining, (5) upper dining, (6) broiler, (7) kitchen, (8) storage, (9) office-private dining and (10) secretary. Larger private dining room (photo at left) is on mezzanine.



MAIN DINING AREA has lower level lanai at north end (beyond light fixture). Banquette seat-back material was custom woven by Jack Lenor Larsen.

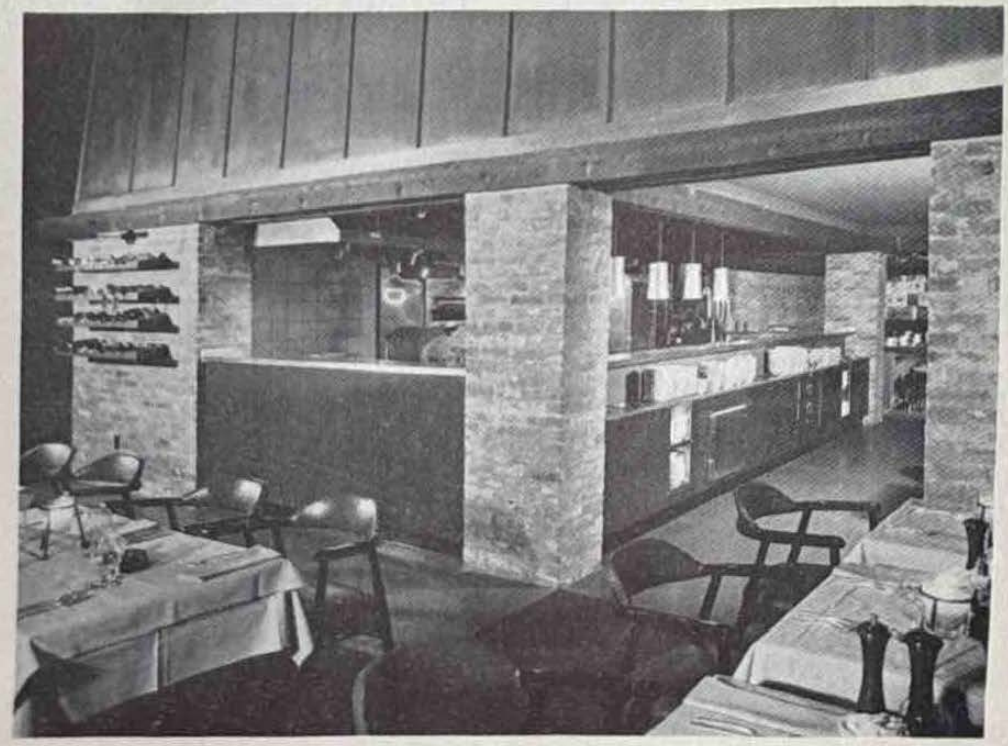
LOCKNESS & ROAN
General Contractors

PLANNED for an owner whose original operation on the same site was a rush-order coffee shop, this new conception affords appropriate background for a clientele interested in more leisurely and refined luncheons and dinners. Principal design effort was to create an atmosphere as a relief to the severe commercial aspects of the restaurant's immediate neighborhood in downtown Seattle.

The charm of the Old World theme is conveyed through used brick walls, dark-stained paneling and shutters, red leather banquettes, oak tables, Japanese striped linen paper in the foyer and continental antique accessories, among them Italian altar candlesticks in the entrance windows to help set the tone. Exterior facade combines charcoal-stained rough timbers with gold anodized aluminum. Hanging heraldic signs of gold leaf and red lacquer by Emery Duquet advertise the establishment's facilities; carved door handles are by George Tsutakawa.

OPEN CHARCOAL BROILER under brass hood where most entrees are prepared makes festivity of food preparation integral part of restaurant's character.



OUTLINE SPECIFICATIONS

Structure: frame: concrete; walls: concrete block and brick; floors: concrete.

Exterior Finish: charcoal-stained rough timbers; gold anodized aluminum—Fentron Industries, Inc.

Doors: exterior: gold anodized aluminum—Fentron Industries, Inc.; interior: hollow core wood.

Floor Surfacing: cupric oxychloride cement—Hubbellite Corp.; carpeting—Mohawk Carpet Mills, Inc.

Partitions: plaster and brick.

Interior Finish: mountain tulip veneer—(Flexwood) United States Plywood Corp.; wallpaper—Wallpapers, Inc.

Ceilings: acoustical plaster.

Lighting Fixtures: custom-designed incandescent; imported antique and hanging lanterns.

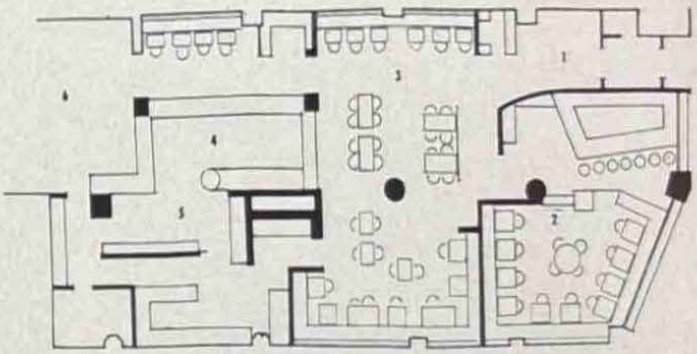
Special Equipment: shutters—Northwest Millwork Co.; banquette seats—A. Maix's-ing Fabrics., Inc.; banquette seat-backs and chair covering—(Boltaflex) Bolta Products Division, General Tire and Rubber Co.

Total Area: 3,750 sq. ft., seating 117.

Date of Completion: September 1956.

ANTIQUE LIGHTING FIXTURES include 16th century Spanish standing lantern (above) and 18th century English coach lamps in lounge, hanging lantern from Versailles in foyer.

PARTIAL FLOOR PLAN showing (1) foyer, (2) lounge, (3) dining, (4) broiler, (5) kitchen and (6) broiler dining, with restrooms beyond.



OWNER'S COLLECTION of American and European menu covers provides major decorative wall accent in dining room. Chandeliers are by Irene McGowan in collaboration with architects.

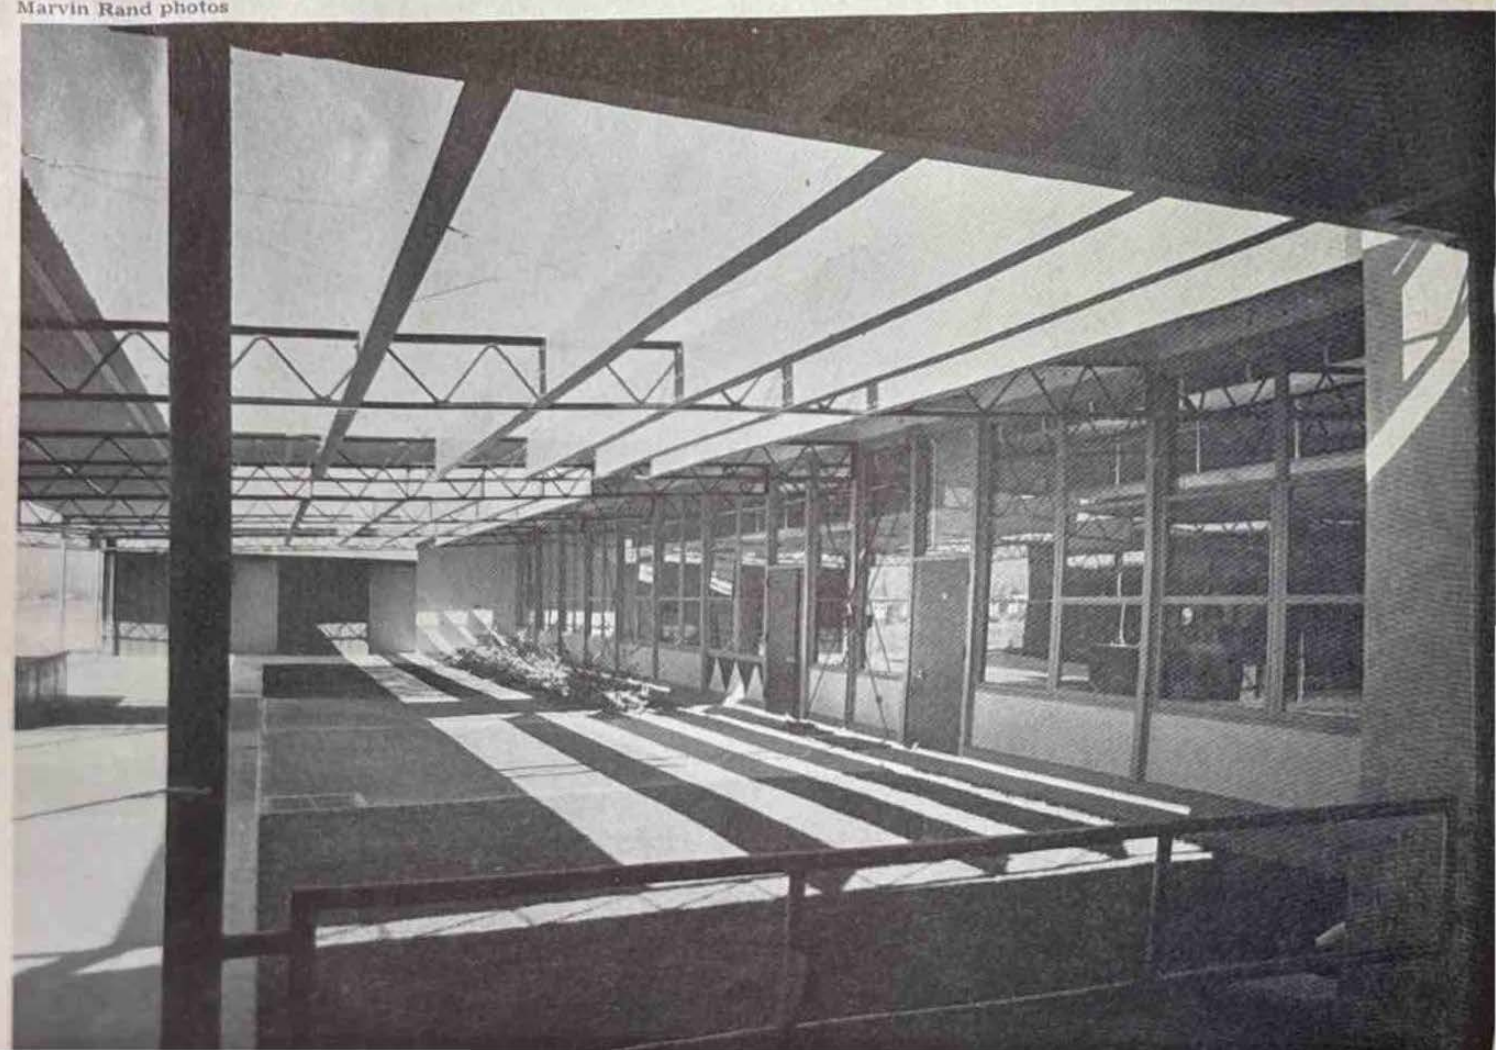
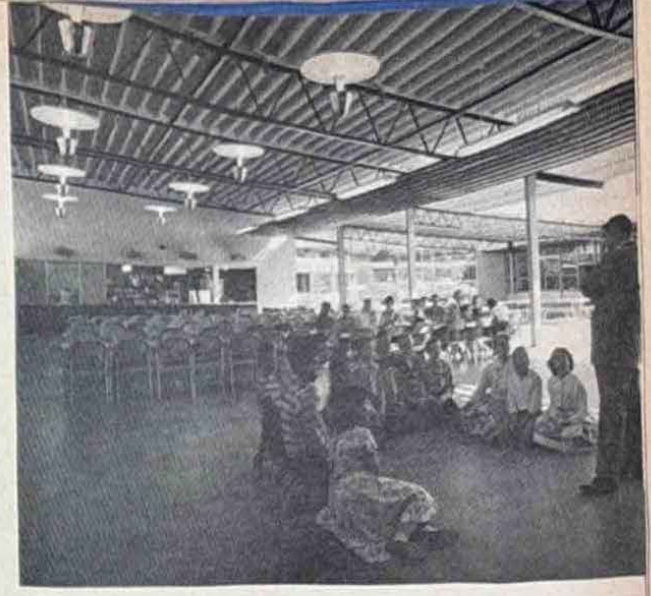
Marvin Rand photos

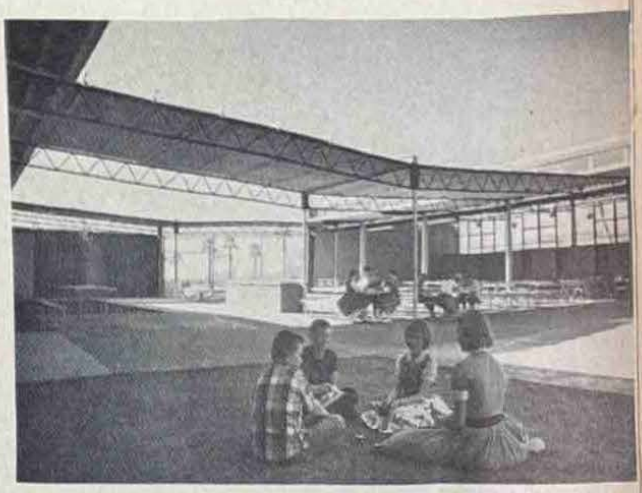


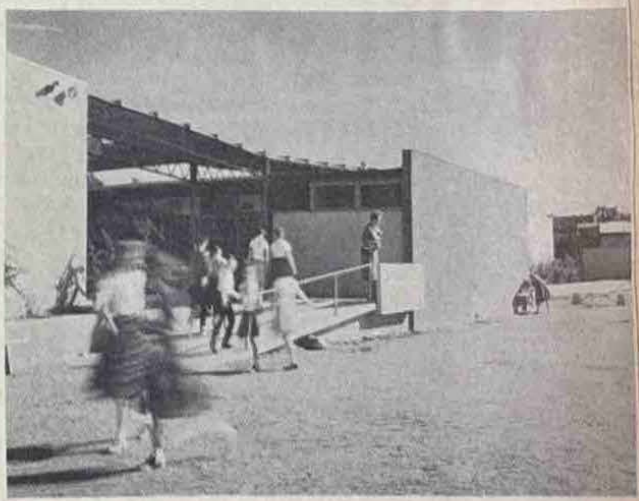
THIS ELEMENTARY SCHOOL, whose present enrollment is 360, appears to be quite unpretentious but it has an unusually workable plan of back-to-back classrooms enlarged by courts. The gently sloping site, rather small in view of future expansion, requires the use of ramps and two separate levels. Buildings are fitted tightly on the upper side to provide maximum playground space, with an odd shaped corner reserved for kindergarteners.

The back-to-back classroom solution offers 1) better site utilization; 2) economies in construction; and 3) pleasant, really usable courts designed for interclass activity or open air eating and spacious enough to minimize distractions. A central utility core facilitates removal of walls when desired; movable cabinets and chalkboards aid teaching flexibility. Sink and storage counters in the courts expedite outdoor instruction, eliminating the need for an installation at each classroom. Fluorescent fixtures supplement daylight and cross ventilation is afforded by a continuous roof unit.

The open, no-glazed side of the multipurpose room creates additional space and the same personnel can supervise both hot and sack lunchers. The area is large enough to accommodate such events as the PTA carnival. Radiant heat allows all-year round use; fenestration and fencing control the wind. Glare and reflection in all courts are reduced by lawn, brick and colored concrete areas as well as overhead louvers and roofs.







OVERHEAD LOUVERS put shadow on otherwise hot ground plant, easing eye strain, creating livability. Center walkway eliminates passing by classroom window wall, acts as glare control; crossover walkways reduce circulation. Ramps connect two levels of gently sloping site.

OUTLINE SPECIFICATIONS

Structure: foundation: reinforced concrete; frame: open-web steel beams; floors: concrete slab.

Exterior Finish: stucco—California Stucco Co.; brick—(Grout-Loc) Davidson Brick Co.

Roof Surfacing: composition and gravel—Pioneer Division-Flintkote.

Windows: steel sash—(Truscon) Republic Steel Corp.

Doors: steel—(Kalamein) Overly Manufacturing Co.

Floor Surfacing: asphalt tile in classrooms—(Matico) Mastic Tile Corporation of America; vinyl tile in kitchen—(Vinyliflex) Hachmeister, Inc.

Partitions: stud and plaster.

Interior Finish: plywood finished shear panels; ceramic tile in toilets—Gladding, McBean & Co.

Ceilings: acoustical tile—Pioneer Division-Flintkote.

Lighting Fixtures: fluorescent; others—Wagner-Woodruff Co.

Heating: gas fired wall heaters—Payne Furnace Co.; electric heaters for smaller rooms—Thermador Electrical Mfg. Co.; gas fired boilers in multipurpose and kindergarten—Bryan Electrical Manufacturing Co.; radiant in administration—Trane Co.; radiant controls—Minneapolis-Honeywell Regulator Co.; exhaust fans—Ilg Electric Ventilating Co.

Plumbing and Sanitary: toilets and lavatories—Crane Co.; drinking fountains—Haws Drinking Faucet Co.

Special Equipment: aluminum louvers—Aetna Steel Products Corp.; porcelain enamel letters—California Metal Enameling Co.; linoleum countertops—Armstrong Cork Co.; laminated plastic tabletops—Formica Co.; folding tables—Son-Nel Products, Inc.; rolling counter doors—Cookson Co.; sinks and drainboards—job-built stainless steel; dishwashing machine—Hobart Manufacturing Co.; garbage disposer—Waste King Corp.; lockers—Worley & Co.; corkboard—Armstrong Cork Co.; chalkboard—(Fibraslate) Son-Nel Products, Inc.

Total Area: 24,425 sq. ft.

Total Cost: $339,483 (entire contract).

Cost per Square Foot: $13.47.

Date of Completion: November 1956.

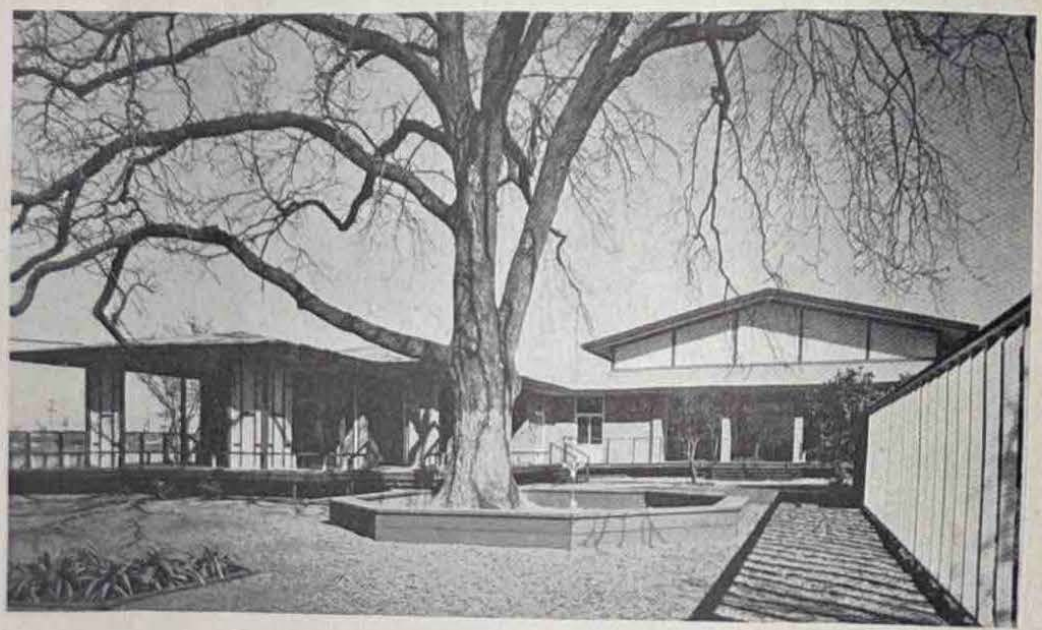
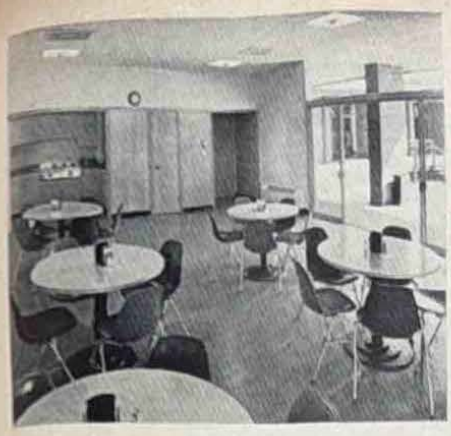
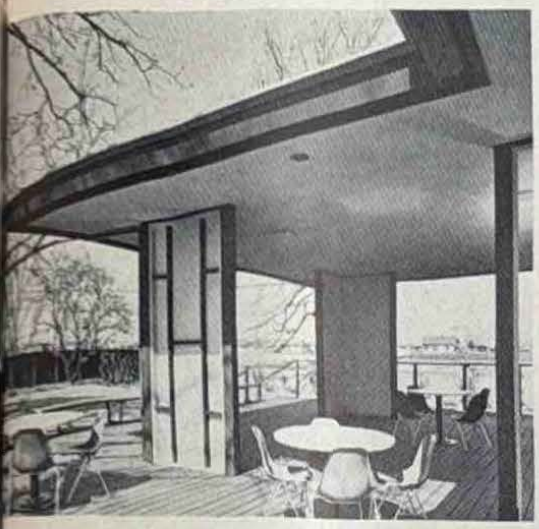
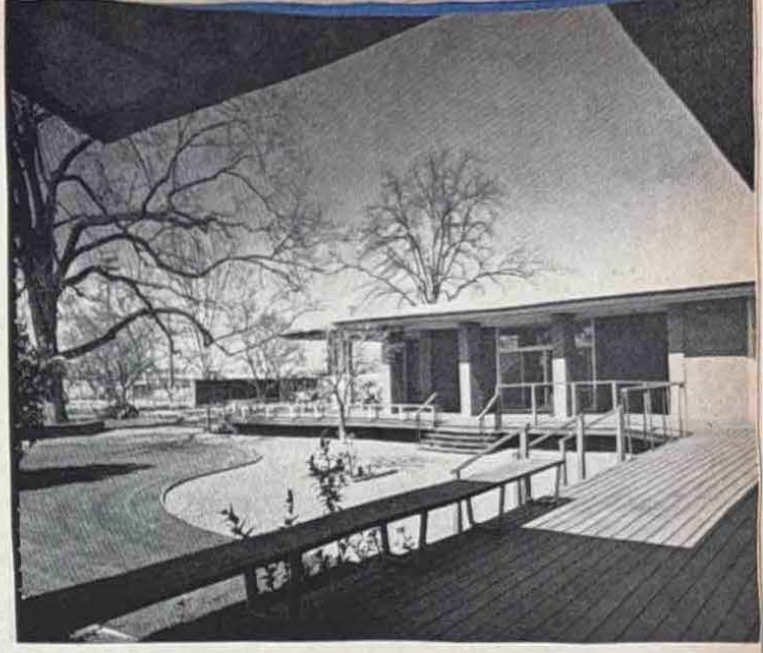
Free from pretense in harmony with the site





LUNCHROOM AND REST FACILITIES are located for best relationship to orchard and separated from working areas. Employees also have library.





THE CLIENT, outgrowing rented space in its Fresno office, selected a site of more than four acres on the city's agricultural fringe because of accessibility and the unspoiled character of the semi-commercial neighborhood. The building is set back considerably from the street to save an existing orchard, including a large, handsome pecan tree with a 100-ft. spread. Parking for claimants is in front and for employees in the rear, in line with the overall separation of external and internal company activities. The large general office is oriented to the north, with claims offices and service facilities to the south for sun control in working areas.

Materials, details and methods of construction have been developed with special regard to the neighborhood and orchard, generally of a comfortable and dignified nature, free from cliches or pretense. Exterior is of local brick, stucco, redwood and glass; interior of plaster, wood paneling, acoustical tile ceilings and plastic floor tile. The wood frame floor, raised for flood safety, also provides space for changes or additions of mechanical or electrical work.

OUTLINE SPECIFICATIONS

Structure: foundation: concrete; frame: wood and steel; roof, walls and floors: wood.

Exterior Finish: brick—Craycroft Brick Co.; stucco, redwood and glass.

Roof Surfacing: built-up with tan gravel—Decorock, Inc.

Windows: steel sash—Soule' Steel Co.

Doors: exterior: steel sliding—Arcadia Metal Products; interior: solid core slab.

Floor Surfacing: plastic, asphalt, vinyl (Custom Corlon) and linoleum (Linotile) tile—Armstrong Cork Co.

Insulation: wool batts—United States Gypsum Co.

Partitions: job-built wood and glass.

Interior Finish: painted plaster; wood paneling.

Ceilings: acoustical tile—(Forestone) Simpson Logging Co.

Lighting Fixtures: fluorescent—(All-Brite) Fluorescent Fixtures of California; incandescent — Prescolite Manufacturing Co. Smoot-Holman Co., Peerless Electric Co., (Marco) Marvin Manufacturing Co.

Heating: boiler—Ajax Boiler and Heater Co.

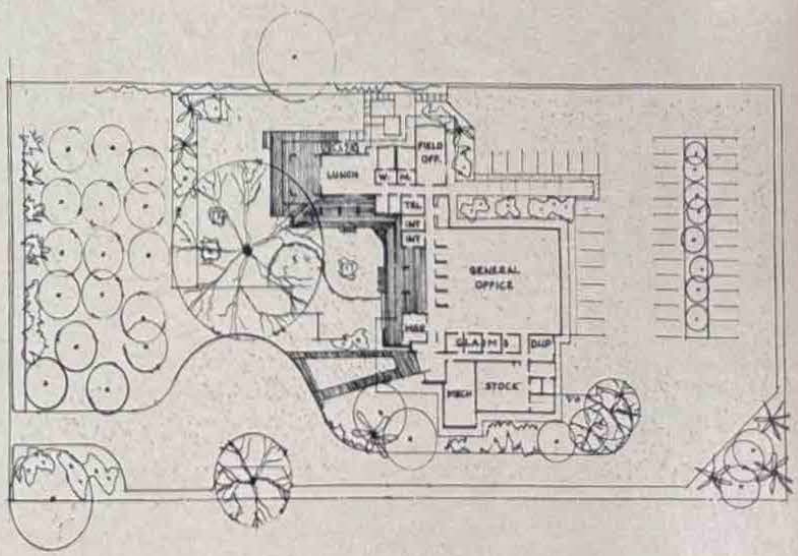
Air Conditioning: air handling equipment, compressor and evaporative condenser—Trane Co.

Plumbing and Sanitary: water closets and lavatories—American Standard; drinking fountains — Westinghouse Electric Corp.

Total Area: enclosed: 11,900 sq. ft.; deck: 3,300 sq. ft.; covered walk: 1,100 sq. ft.

Cost per Square Foot: $18.

Date of Completion: March 1957.



Applications of prestressing in shell structures, lift slab and precast elements

Digests of three papers presented at the 10th regional meeting of the American Concrete Institute in Seattle

LONG-BARREL CONCRETE SHELLS roof auditorium and gymnasium of junior-senior high school in Yakima, Wash., designed by Cowan & Paddock, architects.

Prestressing of Cylindrical Concrete Shell Structures—John B. Skilling and John V. Christiansen, Worthington & Skilling, Seattle.

Both prestressing and thin shell construction have tended to free reinforced concrete from its traditional massiveness and have enabled architects and engineers to realize some of the economic and aesthetic possibilities of concrete structures, especially in long-span roof construction.

Post-tensioning strands may be placed in the shell structure in any of the basic elements of the cylindrical shell: the shell, the longitudinal edge beams, or the transverse end stiffeners. Strands may be placed longitudinally in the shell to good advantage. The prestressed strands may be draped in the shell from near the lower edge at center of span up into the diagonal tensile zone near the ends of the span, thus closely following the lines of principal tensile stress. However, from a practical standpoint this arrangement may be somewhat limited because of the thinness and curvature of the shell and end anchorage in a thin slab may prove difficult.

Prestressed strands may be placed in the edge beams parallel to the axis of the shell. Although the amount of the curvature of the strands is limited by the depth of the beam, this arrangement has the practical advantage of providing a wider section in which to place the strands, limiting the curvature of the strands to one plane, and larger and fewer strands with conventional end anchorage can be used.

Prestressed strands may be placed in the transverse stiffeners at right angles to the axis of the shell. This may be of special value when the arrangement of stiffeners also results in large direct or flexural tension stresses in the stiffener.

Two structures recently completed in Washington illustrate the use of prestressing with cylindrical concrete shell structures. A junior-senior high school in Yakima features long-barrel cylindrical shells with prestressed edge beams over the auditorium and gymnasium. Eleven identical shell units, 16 ft. wide and 2½ in. thick, are used to span 93 ft. clear over the school auditorium. Five similar shell units, 41 ft. wide and 3 in. thick, span 135 ft. over the gymnasium.

The Boeing Airplane hangar roof at Moses Lake, Wash., is an example of cylindrical shells with prestressed transverse stiffeners. The building is 378 ft. wide and 1,076 ft. long. Clear span of the airplane bays is 215x378 ft. with a maximum height of 63 ft., 1½ in. in the center. Fifty-foot wide supporting shop bays are provided between each plane bay. The roof structure consists entirely of 3-in. cylindrical thin shells stiffened by transverse arches and girders and longitudinal edge beams.

Economic Factors in Prestressed Lift Slab Construction—Edward K. Rice, partner, T. Y. Lin & Associates, Los Angeles.

To date, 41 structures involving 2,000,000 sq. ft. of prestressed lift slabs have been constructed. The completed structures range in size and occupancy from 10,000-sq. ft. industrial buildings with roof parking to a six-story office building of 250,000 sq. ft.

A major factor in the success of prestressed concrete and lift slab construction is that the prestressing and the lifting technique complement each other. By prestressing the slabs, troublesome deflections experienced in reinforced slabs can be controlled; by using the lift slab construction method, the elastic and some of the plastic shortening of the slabs can be conveniently allowed for before the connection to the columns is made.

Not all structures can be economically framed of prestressed concrete lift slab construction. To economically achieve satisfactory results with lift slab spans greater than 18 ft., the slabs must generally be prestressed. Solid slabs are economical for spans of 20 to 30 ft. Bays of 30 to 50 sq. ft. are economical in prestressed cord lift slabs. Some of the types of structures which are not readily adaptable to prestressed concrete lift slab construction include structures on hillsides with stepped-grade slabs, structures having a fairly close spacing of concrete walls which may be used as bearing walls and structures of highly irregular shape. From the standpoint of total economy, the building layout and structural framing scheme is more critical in prestressed lift slab construction than in other types of construction.

Design and Construction of a Precast and Prestressed Concrete Building for Boeing Airplane Co. Developmental Center—Alfred T. Waidelich, vice president, The Austin Co., Cleveland, and Arthur R. Anderson, Anderson, Birkeland & Anderson, Tacoma.

The building is a two-story structure, 540x560 ft. The second story is framed on a 40x60 ft. module and the

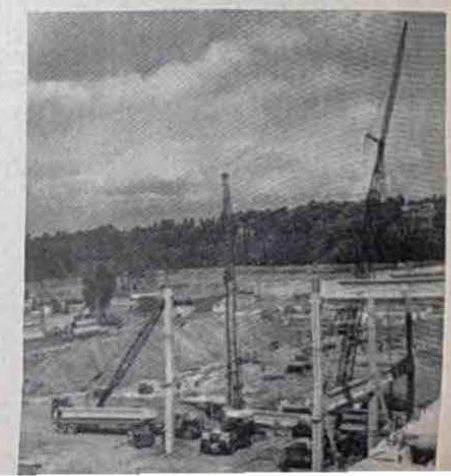
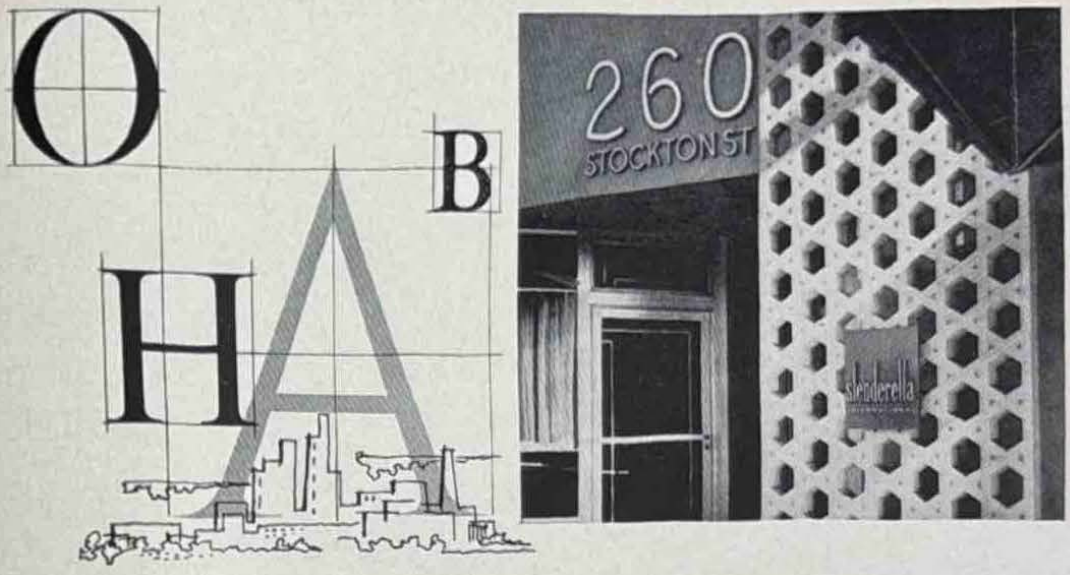
PREFABRICATED CONCRETE MEMBERS are jointed together to achieve continuity of monolithic structure.





Greenberg Plaques and Letters Serve Leading Industry . . .

INDUSTRIAL INDEMNITY

No other type of identification so signifies stability, confidence, quality and leadership than does a plaque or letters of Greenberg Bronze and Aluminum. Truly a permanent installation, Greenberg Bronze Plaques and Aluminum Letters are custom designed to fit the particular specifications of each job. Greenberg's designers work closely with architects and engineers in determining the most distinctive identification. Illustrated here are but two of the many installations M. Greenberg Son's have completed over the past century.

Manufacturers of a complete line of Fire Hydrants and Fire Protection Products, Hose Goods, Industrial and Maritime Bronze Valves and Fittings, Plumbing Specialties, Hardware, Plaques, Tablets and Letters.

ACI Headquarters in Detroit: poetry in concrete

1. Precast folded plate roof units are cast on jobsite. Using three forms, two roof sections are cast daily, weather permitting. Roof unit in foreground is being finished while to left, reinforcement is in place for casting next section. Unit in center rear is being cured under burlap and awaiting lifting from form.

2. After curing, each folded plate roof section is measured and numbered to determine over- and under-width tolerances. An erection sequence is then prepared to avoid cumulative overrun. Roof units are moved into location by crane prior to being lifted into place.

3. Precast folded roof units are erected by crane. One end of each unit rests on corridor wall and other on temporary adjustable scaffolding. Latter is removed after units are connected across corridor and to dowels in corridor wall.

4. When structural unit of roof is established by welding connections across corridor, to dowels in wall and between precast roof units, adjustable shoring is removed to leave roof cantilevering into space. Folded plate roof cantilevers 19 ft. front and rear from center corridor load-bearing walls.

5. Front facade assumes finished look with glazing completed. Textural contrast between first floor precast panels and basement precast grills is noticeable. Light colored exposed aggregate panels are set in sash at base of window wall for first floor. Smooth dense grey concrete is used for heavier precast grills installed to shield basement windows.

6. End view of completed building showing garden wall and rectangular hollow block screen. Diamond pattern of corridor skylights creates varying shadows on fluted walls.

Boeing's prestressed concrete building (Cont'd from p. 22)

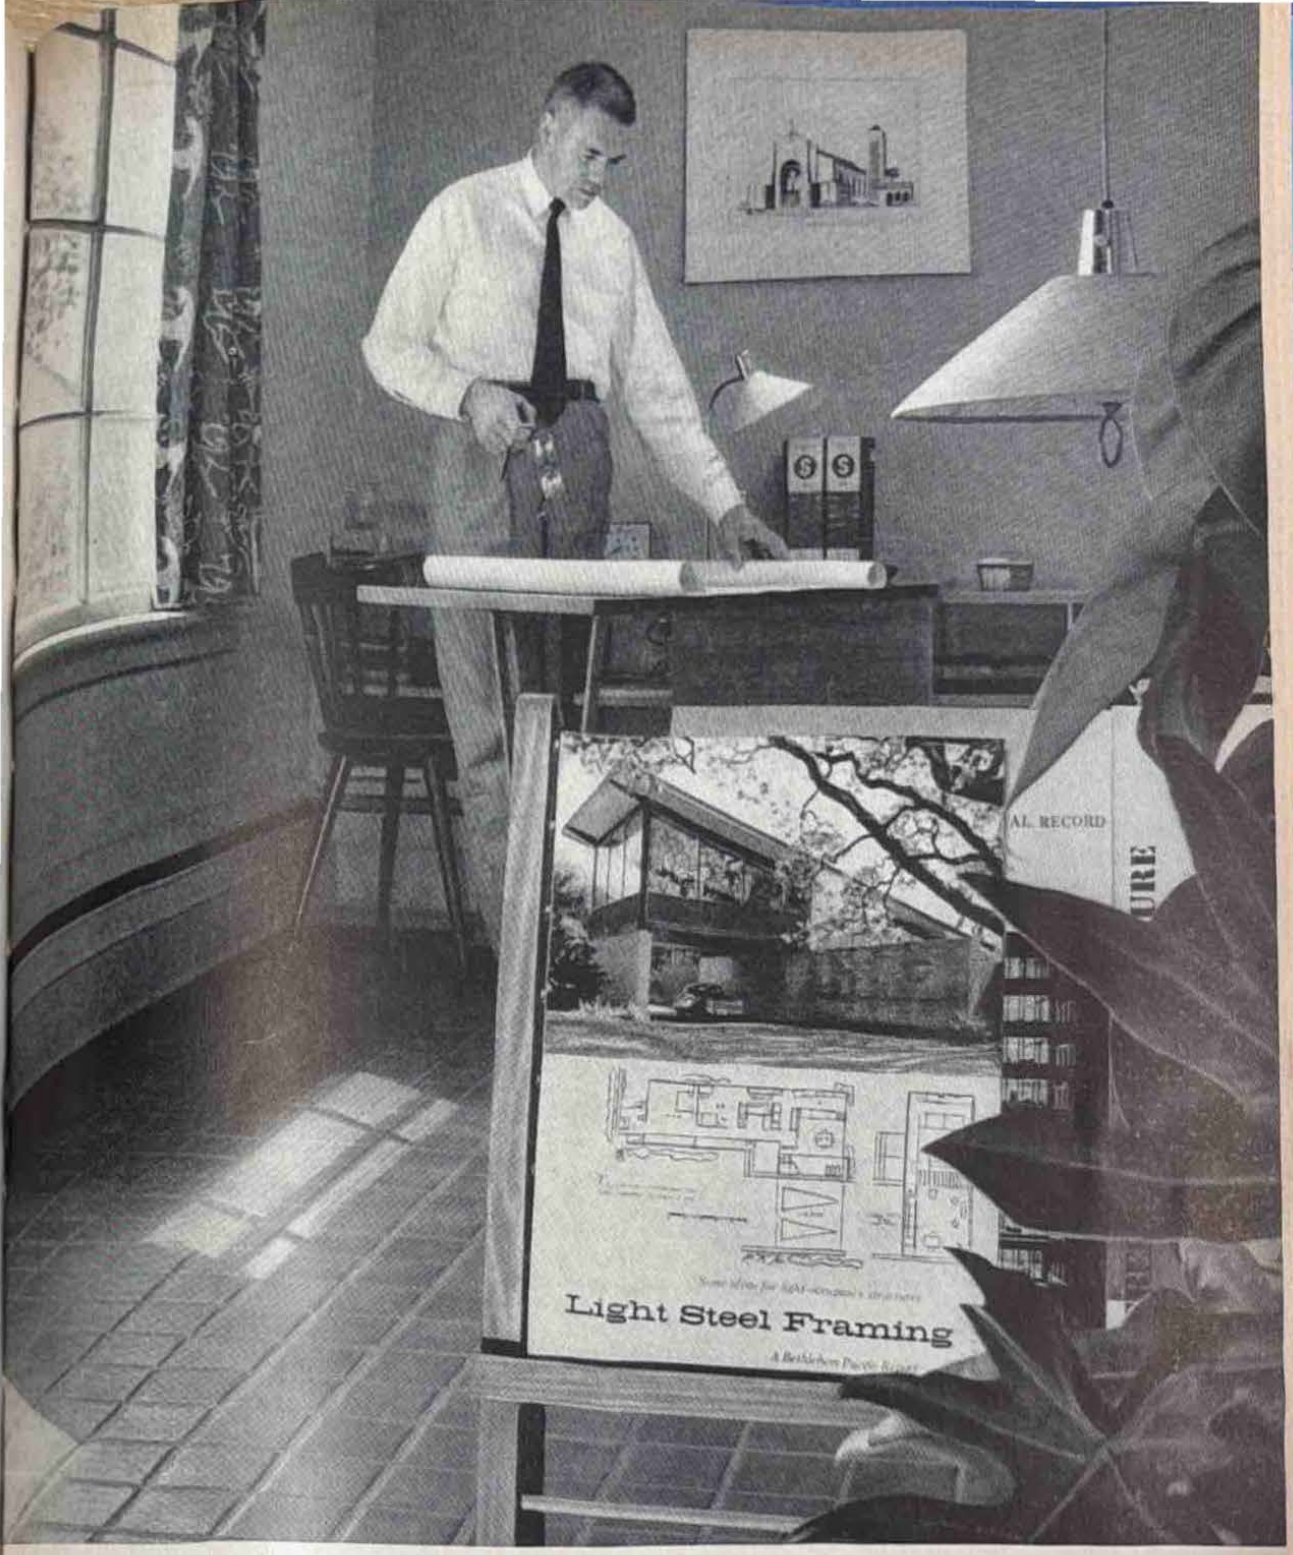
first story on a 30x40 ft. module. The framework consists of precast concrete columns and prestressed concrete beams and girders. The roof deck is of precast lightweight concrete channel slab panels; the exterior walls are prestressed lightweight concrete panels.

The precast and prestressed concrete design was chosen because 1) the material was fireproof; 2) the construction schedule could be met; 3) the deadload was acceptable for the pile foundations; 4) a large paved area adjacent to the building was available for the fabrication of the structural elements; 5) repetition of typical structural members made it feasible to economically mass-produce them of high-strength, prestressed and precast concrete.

The structure, in addition to the service load specified, had the additional requirement of resisting wind and seismic forces by flexure of the beams and columns. Thus the precast elements had to be joined in a manner to develop the equivalent of a monolithic structure, having continuity and rigid joints. In addition, the building was designed to accommodate expansion and contraction by separating the structure with a double row of columns near the building center lines each way and connected together by the expansion joints.

The exterior 5-in. thick walls were designed to carry their own weight from column to column, spanning between 30 and 40 ft. and vary up to 20 ft. high. The panels were of expanded shale concrete with a seven-day compressive strength of 4,000 psi. The 25- and 50-ft. columns were cast from 5,000-psi. concrete. The 60-ft. roof girders and 40-ft. roof purlins were also 5,000-psi. concrete. The second floor beams used 6,000-psi. concrete and consisted of a combination pre-tensioned and post-tensioned design.

Erection of the thousands of precast and prestressed concrete members was completed within a few days of the scheduled time. This project successfully demonstrated the concept of joining pieces of prefabricated concrete together and achieving the continuity of a monolithic structure.



HAVE YOU RECEIVED YOUR COPY?

This 12-page booklet is yours for the asking. It describes a number of outstanding light-occupancy buildings designed with structural steel.

Among the subjects covered: steel bents "lift" living room over carport—church designed with triangles—low-cost framing for apartment building—"umbrella" design for service stations—steel platform supports hillside home—supermarket with vaulted roof—landslide doesn't damage steel-framed home.

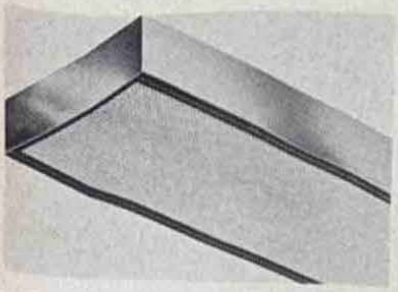
Designers, engineers, and builders will find it interesting and factual. You can obtain yours by calling or writing the nearest Bethlehem Pacific sales office. And, if you haven't seen the previous edition, ask for it at the same time. They will make useful additions to your reference shelf.

Bethlehem Pacific Coast Steel Corporation, General Offices: San Francisco

BETHLEHEM PACIFIC

BETHLEHEM STEEL

PRODUCTS



lighting fixtures

Sunlux lens panels have been added to the Visionaire line, including the surface mounted 6600 series shown here and the recessed 5600. Improved polystyrene panel is reported to resist discoloration at least three times longer in normal use than earlier materials. The 6600 is completely framed and incorporates a continuous hook-on hinge, allowing panel to open or to be removed without the use of tools; the 5600 has full-length piano hinged frame. Both types offer a touch type latch, inconspicuously flush with fixture trim.—Sunbeam Lighting Co.

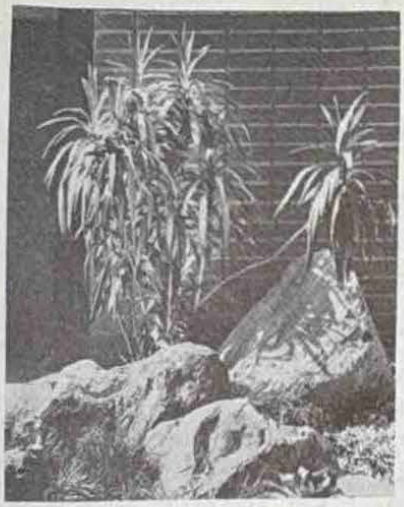
(Item No. 1)

air conditioners

Damper section of Flexazone central station air conditioners for independent/variable zone control has been redesigned with these improvements: 1) more positive, sensitive control; 2) reduction of outlet velocity air noise; 3) lower zone outlet velocity; 4) incorporation of all the features of opposed blade action; 5) elimination of crank arms for each rod. Each model is available in 32 different zone arrangements. Bolt-hole construction allows for rapid field assembly and all units have oversized access doors, thus eliminating removal of panels to bolt sections together.—Drayer-Hanson, Division of National-U. S. Radiator Corp. (Item No. 2)

garden rocks

Created by volcano flows in the Sierra Nevada Mountains thousands of years ago, rock formations being quarried



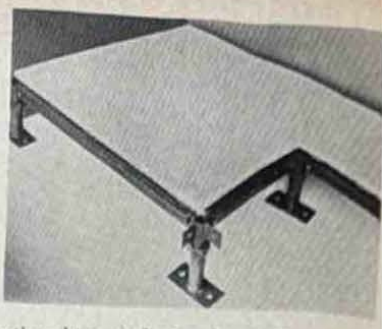
under the name of Featherock may be easily tooled for use as planting receptacles. They display a slight crystalline sheen, frequently have moss spore and lichen growth and range in color from light gray to charcoal. Three husky men with the aid of a rock drill can place on location even the largest boulders reaching 6 ft.—Featherock, Inc., Division of U. S. Pumice Supply Co. (Item No. 3)

reflective coating

Plasticool is a water-emulsion resin coating that reflects 92% of the sun's rays, resulting in drops of inside temperatures by as much as 40 deg. and reducing existing air conditioning loads by as much as 50%. Applied with standard equipment, it is a one-coat application and extremely weather resistant. Reflective efficiency of the four colors available — yellow, blue, buff and green—is close to that of the basic white.—Coating Laboratories, Inc. (Item No. 4)

elevated floors

Armorply flooring panels, with a sheet of rust-resistant metal laminated to each side, have been designed for use with data processing systems and



other heavy electronic equipment requiring underfloor power cables or connectors. Vinyl floor tile may be applied either at the factory or on the site. System on which the panels are laid features telescoping pedestral mounts to provide for leveling. Underflor space can also be used as a conditioned cooling air plenum for servicing machines. — Armorply Division, United States Plywood Corp.

(Item No. 5)

Norwegian furniture

Displayed in showrooms in Los Angeles, San Francisco and Seattle for the first time is a complete line of Norwegian upholstered furniture called the Aalesund group. All pieces are offered in sculptured solid teak frames with linseed oil finish and most can also be had in walnut.—Hagen & Strandgaard, Inc.

(Item No. 6)

spread footing forms

Efco spread footing forms permit concrete footings and foundation walls to be poured at the same time, resulting in important savings in time and labor. Standard height of the all-steel forms is 10 in.; height of footings cast is 8 in. Forms are produced in lengths of 96, 48, 24 and 12 in. and they have hundreds of reuses. Spread corner forms for inside and outside are also available.—Economy Forms Corp.

TECHNICAL PUBLICATIONS

Composite Construction in Steel and Concrete for Bridges and Buildings. By Ivan M. Viest, R. S. Fountain and R. C. Singleton. McGraw-Hill Book Co., 327 W. 41st St., New York 36, N.Y., 1958. 192 pp. $7.50.

Here is an engineering manual on the design of steel beams and concrete slabs for composite construction, showing the advantages of the method and fully covering design procedures and practical applications. The well-rounded treatment gives the basis of composite construction and its advantages, develops design equations and procedures, describes methods of connecting slabs to beams and includes illustrative examples of design procedure and design charts and tables.

Metal Grating Handbook (AIA 14-A-1). Metal Grating Institute, Inc., 1 Gateway Center, Pittsburgh 22, Pa., 1958. 28 pp. $1.

Presents test data, standard design procedures, specifications and code of standard practices in general use by majority of metal grating producers.

Prestressed Concrete Design Handbook for Double Tee Roof Members (Vol. 9). Leap Concrete, Inc., P.O. Box 1053, Lakeland, Fla., 1958. $2.

Contains information on 116 different combinations which will enable an architect or engineer to specify exactly which double tee to use under any given condition.

How to Plan and Build A Better Fireplace. The Majestic Co., Inc., Huntington, Ind. 1958. 72 pp. $1.

Contains data on planning, materials and erection of fireplaces and barbecues directed principally to home owners, but architects and builders will find some helpful tips too. More than 200 illustrations include charts and diagrams covering sizes of openings, placement of parts, etc.

Engineering Consultants. American Institute of Consulting Engineers, 33 W. 39th St., New York 18, N.Y., 1958. $2.50 ($1.50 paper-backed).

Contains list of qualified engineers and their firms, with some biographical data; also classified index for convenience in locating engineers for particular types of problems.

Adhesives and Sealants in Building. Building Research Institute, 2101 Constitution Ave., Washington 25, D.C., 1958. 160 pp. $5.

Contains 22 reports delivered at a recent BRI conference in Washington, D.C. Among the topics: sealing joints in the building exterior (as applied to both traditional materials and metal curtain walls); adhesives for the building interior; adhesives for structural materials and components; the future of adhesives and sealants in building.

Swimming Pool Data and Reference Annual. Compiled by Swimming Pool Age. Hoffman-Harris, Inc., 425 Fourth Ave., New York 16, N.Y., 1958. 450 pp. $5.

Provides source material on every aspect of planning, financing, construction and operation of residential, semipublic and public pools; includes series of photographs and technical details of winning pools in 1957 design competition.

Lighting Handbook. Westinghouse Electric Corp., Bloomfield, N.J., 1958. 250 pp. $3.

Revised, pocket-sized, wire-bound edition offers comprehensive coverage of general field of modern lighting practices, including data on distribution and light measurements, coefficients of utilization and maintenance factors; has footcandle tables.

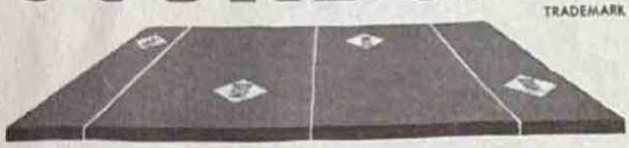
Douglas Fir Use Book. West Coast Lumbermen's Association, Portland 5, Ore., 1958. 300 pp. $5.

A reference handbook on timber design, compiling structural data and design tables, intended primarily for architects, engineers and students. The 8½x11-in. book is bound in a cloth cover and stitched so that it will stay flat when opened.

new perimeter insulation

SCORBORD

TRADEMARK



cuts costs—speeds construction

Scorbord* is a Dow plastic foam insulation specifically designed for use along the edges of foundations. Scorbord substantially reduces building costs—cuts sawing, cutting and fitting time up to 80 per cent. An FHA "materials release" has been issued.

Big 8-foot x 2-foot, easy-to-handle sections of Scorbord are pre-scored and snap quickly to almost any desired width. Lightweight Scorbord lasts a lifetime. It resists moisture, heat, cold and deterioration and will not attract rodents or vermin. It can withstand weights of 2,000 pounds per square foot.

*Scorbord is a trademark of The Dow Chemical Company.

Warehouses in Seattle, Portland, Spokane

T-SQUARE TALK

new partners

Ron R. Campbell and Orville Dawson have become associated in the firm of Campbell & Dawson & Associates, architects-designers, at 11728 Aurora Ave., Seattle.

Joseph H. Dimke and Palmer Putnam have formed an architectural partnership in Lewiston, Idaho.

firm changes, additions

Among five new partners in the architectural-engineering firm of John Graham & Co. are three Seattleites: Manson O. Bennett (senior partner) and Nathan Wilkinson, architects, and Roderick Kirkwood, professional engineer. Seattle associates include James E. Jackson, Alan Gerard, Alfred H. Fast, Alvin B. Harrison, Joseph F. Moodie, Anthony P. Burzenski, Howard Leuschen, Gerald R. Cysewski, John G. Arges, Gilbert E. Tucker and Herbert W. Lunn.

Wilsey & Ham, engineers-planners, of Millbrae, Calif., have embarked on a major expansion program, including the appointment of four division managers: Gordon Hillson, San Mateo; Jack Van Zandt, San Carlos; B. J. Whitlow, San Rafael; and William B. Wright, Millbrae. In another appointment Abraam Krushkhov of San Mateo has been named to head up the newly established planning division.

Daniel S. Defenbacher, former president of the California College of Arts and Crafts in Oakland, has joined the architectural firm of Victor Gruen Associates, in San Francisco, where he is in charge of research and development for northern California.

new addresses

James Keelor, architect, to Room 5, Shepard Square Building, 1240 High St., Auburn, Calif.

Maurice Sullam, architect, to 1826 Broadway, Seattle.

Carver L. Baker, architect, to 4266 Exultant Drive, Portugese Bend, Calif.

Gene G. Westberg, architect, to 711 S.W. Columbia St., Portland.

deaths

Howard W. Higbie, 79, who practiced architecture in San Jose for three decades, died October 6 following a long illness. In 1927 he and his wife, Jane Cambell Higbie, interior decorator, opened an architectural and decorating studio which they operated until 1945, when both retired.

Arch N. Torbitt, retired Seattle architect, died October 22 at the age of 75. A member of the Washington State Chapter, AIA, he formerly was associated with the firm of George Wellington Stoddard and also served as architect for the Alaska Public Works Administration in Juneau.

E. B. Rust, 72, San Gabriel, Calif., architect who designed the original Van de Kamp Bakery windmill and several apartment houses and hotels, died September 27.

appointments

Stuart B. Mockford, Oregon City architect, has been appointed to the Oregon State Hospital Survey and Construction Committee.

Several changes have been made in the personnel of the Oregon State Board of Architect Examiners. Wyman K. Bear of Portland is filling out the term of Walter Gordon, new dean of the School of Architecture and Allied Arts at the University of Oregon, which ends in 1962; Neil R. Kochendoerfer of Portland has been appointed for the term ending in 1963;

and Mrs. Harriet K. Givens is the new administrative secretary, with offices in the Portland Trust Building.

elections

The Billings Architectural Association has elected F. Wayne Gustafson as president; C. D. Hall, vice president; and Ralph Kenyon, secretary-treasurer.

Raymond Brauner of Seattle is the new president of the Washington Society of Landscape Architects.

Mrs. Wallace P. Hagestad is the newly elected president of the Women's Architectural League of Oregon, which meets in Portland. Other officers: Mrs. Joseph H. Rudd, vice president; Mrs. DeWitt Robinson, treasurer; and Mrs. Ejner Nielsen, treasurer.

art notes

William M. McVey, sculptor and head of the Cleveland Institute of Art, will join the previously announced panel of judges to select the design of a bas-relief, mosaic or free-standing sculpture for the lobby of Logan Building now under construction in Seattle (PA&B for Oct. '58). Closing date for entries is November 30 and judging will take place in February.

Joseph L. Young of Los Angeles, who has pioneered contemporary uses of mosaics for architecture, has been elected to fellowship in the International Institute of Arts and Letters.

Architect John S. Bolles has established the Bolles Gallery at 729 Sansome St. in San Francisco's Jackson Square. D. Faralle, who recently returned to the Bay area from Boston where he headed the art department of Ursuline Academy, has been named administrative director and Dr. Grace L. McCann Morley, former director of the San Francisco Museum of Art, will act as consultant. "This gallery," comments the founder and newly elected president of the San Francisco Art Association, "in the heart of the city's business and design center, will offer business executives and corporations opportunities to see, understand, enjoy and buy works of art and to encourage their use in architecture."

new society

Alumni and friends of the University of Southern California have formed a society for "the furtherance of architectural education," according to president Whiting S. Thompson, Los Angeles architect. Inquiries concerning the orginzation, to be known as the Architectural Guild, can be addressed to him at 617 W. Seventh St.

MANUFACTURERS/SUPPLIERS

• **Gladding, McBean & Co.** has announced the retirement of James S. Cole of Seattle, sales manager in the Pacific Northwest, after 50 years of service. He began his career with the firm in 1908 at its Lincoln, Calif., plant, later went to San Francisco, Spokane and Portland, coming to Seattle in 1936 to assume the post he held at his retirement.

• **Leadlight Fixture Co.** of Oakland has named Roger J. Delander, formerly western regional manager for Sylvania Electric Products, Inc., as general sales manager.

• **Flintkote Co.** has elected James D. Moran as line assistant to Wilson Harvey, vice president and general manager of its Pioneer Division, with headquarters in Los Angeles.

• **Modernfold, Inc.,** and **Cole Commercial Co.** have been purchased by E. William Johnsen who has made these changes in the firms: the former has become Modernfold Northwest, Inc., handling Modernfold doors and Ador sliding glass doors; the latter has become Builders Specialties, Inc., handling Sanymetal toilet compartments, shower stalls and hospital cubicles, Bradley showers and other products. Johnsen heads both companies as president.

• **Pabco Industrial Insulations Division,** Fibreboard Paper Products Corp., Los Angeles has entered the industrial insulations contracting field throughout southern California.

• **West Coast Lumbermen's Association** has added Ray L. Todd, recent University of Wisconsin engineering graduate, to its technical staff in Portland.

• **Summerbell Roof Structures Division** of the Fluor Corp., Ltd., has moved into a new $300,000 plant at Santa Rosa, Calif., increasing its capacity to 30,000 bd. ft. of dimensioned lumber a day. King & Benioff & Associates were architects-engineers, with Fluor as contractor.

CORRECTION

Libbey-Owens-Ford Glass Co. should have been credited as the manufacturer of the heat-absorbing glass in the Outline Specifications for Westmoor High School, Daly City, Calif., which appeared in PA&B for October 1958.

NEW PRESIDENT of Pacific Tile & Porcelain Co. is Robert G. Bailey, who has been general manager of Paramount, Calif., firm since 1950. Richard F. Bailey has been named board chairman and T. Kent Davis, secretary-treasurer.

• **Chambers Built-Ins, Inc.,** has appointed Joe Marsalisi Jr. as district manager in California, working out of Woodland Hills.

• **Builders Brick Co.** of Seattle, largest face brick manufacturer in the Pacific Northwest, has a new $1.2 million plant under construction in the Newcastle area, east of Lake Washington. The firm also has been named dealer for Robco structural glazed tile products west of the Cascades and from Lewis and Gray's Harbor counties north to the Canadian border.

• **Touch-Plate Mfg. Corp.** of Paramount, Calif., has begun work on plant additions that will double production space.

• **W. J. Villarreal Co.** has appointed Jerry Weislow of Sepulveda as its representative in southern California to handle Dura-Vent double-wall, gas vent pipe and Peerless gas heating equipment.

Producers' Council elects California officer

Henry E. North, head of Arcadia Metal Products, Fullerton, Calif., was elected second vice president of Producers' Council at its annual meeting in Miami in September. New president is H. Dorn Stewart of the Barrett Division, Allied Chemical Corp., New York.

Other officers: Elmer A. Lundberg, Pittsburgh Plate Glass Co., Pittsburgh; first vice president; T. D. Wakefield, The Wakefield Co., Vermilion, Ohio, secretary; and Harold L. Cramer, Westinghouse Electric Corp., Pittsburgh, treasurer. Among the directors are Don A. Proudfoot of Simpson Timber Co., Seattle.

Speakers at the three-day meeting seemed to agree that the field of distribution offers greater potential for cost savings than do technological developments in manufacturing.

Management and planned obsolescence (Cont'd from p. 10)

intentionally produce for the junk pile. And once we've slammed it, let's pull the bolt.

Don't let anyone tell you that beauty is something you can add after the job is done. Or that beauty is something that changes in a year or two with an artificially created style. You build it in as you go; it stays as long as the product lasts; and it endures as an idea of beauty even after the object itself is no longer existent.

The buildings we remember as great are not memorable merely because they satisfied the sense of beauty of a particular people; they are honored because they were universal statements of aesthetics. Their beauty is timeless.

The men who built the cathedrals and the temples of the past knew this. The great men who conceived the ideas and the other men—the craftsmen who gave these ideas form in stone—were demonstrating more than their genius and their skills. They were performing an act of faith—and the depth of their belief was reflected in the reverent use of their materials.

Maybe you're wondering why all this talk of philosophies, of credos, of aesthetics comes from a man who has the day-to-day, nuts-and-bolts task of running a business, of producing. The fact is that aesthetics must be as important to American business as the materials we use to make our products. It is wedded to production; it cannot be divorced from it.

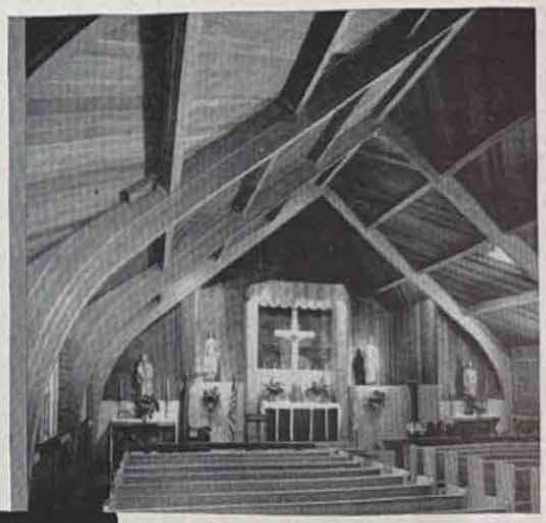
This brings us to the point of asking what we must do—designers and producers alike—to fulfill our role. Well, to begin with, we must be ready to think. We must retain our dedication to quality and to standards and to the kind of integrity to which your organization is already pledged. And we must be prepared to sell our ideas as vigorously as we have ever sold our products.

There are a lot of us who have customers who are susceptible to the blandishments of the apostles of planned obsolescence. Our job is to communicate with these people. We've got to show them where they left the right path of sensible judgment. We will often have to do it tactfully and diplomatically. We cannot afford to say "I told you so," or "serves you right." That isn't salesmanship—and salesmanship is perhaps the best tool we have to do our job in this competitive age.

• • •

I believe in change—useful, constructive change. I believe in improvements. But I do not think that change for its own sake is a good idea. Earlier I posed several questions. I asked whether the slums of tomorrow are on the drawing boards of today, whether our monuments as an industrial civilization will be rusting junk heaps. I am going to answer those questions with a resounding "No!" I have far too much faith in you, in my own fellow producers and in the good sense of the rest of the American business community to accept any such gloomy propositions. Every time I see a machine go to work to dig a new foundation, every time I see a new building rearing up against the sky, every time I see a man at a drawing board, I know how inaccurate the forecasts can be.

For man intends to be around awhile, else he would not be building. As long as he believes, as long as he builds on that belief, there is reason to hope for a better and brighter tomorrow. We here today are privileged to be part of that demonstration of faith. We must be ready to measure up to that privilege and the responsibility.



St. Daniel the Prophet Catholic church, Ouray, Colorado; Contractor: Carl E. Poland and Son, Grand Junction; Rilco Laminated Wood Arches.

"our parishioners are very pleased"

"Our parishioners are very pleased with their new church and feel very happy to have had a part in its erection," writes Reverend Joseph H. Halloran, Saint Daniel's church. "Our register book shows over 4000 visitors; many of them remark about the arches, asking where and how they were made.

"The whole Rilco framework, arches and purlins, was erected in one week. Everyone is happy with the result."

Rilco laminated wood arches, beams and purlins have won approval from congregations everywhere, for these members have the majesty, reverence and symbolism that only wood possesses, with rich warmth that belies their surprisingly modest cost. The beauty and economy lasts for years, for Rilco members resist cracking, warping, require virtually no maintenance.

Also, important is the unique fire-safety of Rilco members. Slow-burning, they resist collapse—allow time to save church and contents.

For more information about Rilco churches contact your nearest Rilco office. No obligation, of course.

Total cost with full basement $63,000. Exterior stonework highlighted with native silver, gold, lead, zinc, and copper ores.

At Monterey: creativity and continuity (Cont'd from p. 8)

ized," he continued. "It must be the product of an individual whether in large or small offices. If you have something to say, say it in your own way." Lundy admitted, however, that he has "learned to bend a little but not in a weak way."

He cautioned his colleagues not to take refuge behind the guise of professional snobbery. "Giants can teach but they can also crush and stifle unconsciously. And they can be wrong sometimes," he concluded, citing a Le Corbusier building for the Salvation Army he visited which has "nothing to do with human scale."

Walter Netsch, formerly chief of design in the San Francisco office of Skidmore, Owings & Merrill and named director of design for the Air Force Academy project in 1954, analyzed the basic program in general and the controversial chapel in particular, which he referred to as "an intellectual and poetic exercise, an attempt to solve religious space in our time."

The program called for three separate churches: Protestant, seating 900; Catholic, 500; Jewish, 100. The objective, Netsch explained, was to impart a distinct character to each church within an envelope which expressed "the strength and lightness inherent in today's technology." The envelope will take the form of a series of steel aluminum tetrahedrons, with light reflected through continuous colored glass panels.

Seattleite Paul Thiry discussed the State Library in Olympia, now under construction. Sited between buildings of classic design—the site selection itself was a disputed issue—, on axis with the domed Capitol, the chief problem was to make the new structure harmonize with its neighbors without compromise of style. "Architecture in our daily life is not for exhibition purposes," he said. "We must think in terms of the total landscape and the total environment."

In introducing his design concept, Thiry pointed out that "the schools tend to pooh-pooh everything in the past, although there is need for continuity." Long active in preservation activities, the architect lamented the fact that we are losing our historic sequence, declaring: "The world will be richer when it leaves the good things and destroys the bad." The problem is how to cope with the bulldozers and superhighways: "the apathetic and irresistible forces of destruction which, strangely enough, move through construction."

Thiry expressed displeasure with much of today's design efforts. "Before modern architecture has a chance to develop, we're in the baroque. It appears that our contemporaries are trying to get it over with." And about planning: "Some of my colleagues say, 'The plan is not the thing; the module is the trick.' But I still believe in planning."

Architect Gardner Dailey of San Francisco, who introduced the three speakers, declared that "there has been no creativeness in architecture, as expressed in materials, since the Gothic."

Probing the creative mind

In setting the stage for the entire conference, Dr. Donald McKinnon, director of the University of California's Institute of Personality Assessment and Research, defined two types of creativity in which 1) the product is the expression of the creator himself, such as the novelist and painter; and 2) the product is unrelated to the creator who acts on some aspect of his environment, such as the research scientist and engineer.

The psychologist also mentioned a third type or middle ground in which the creative product encompasses the other two, placing architects in that category. (They will represent this

"I put built-in telephone outlets in all my homes"

says Larry Rear, President of Lawrence A. Rear, Builder, Chico, California.

"We've found our customers look for the important 'extras' when buying a home—just as they do when buying a car. So we include telephone outlets and concealed wiring in all the busiest rooms. Telephone planning increases the value of every home—and is a persuasive 'plus' when making a sale."

To successful builders like Larry Rear, who are growing with the Pacific West, complete telephone planning is as basic as adequate electrical wiring.

We'll be glad to help you plan built-in telephone facilities. Just call our business office and ask for our free Architects and Builders Service.

Pacific Telephone

It pays to include Telephone Planning in every home you build!

group in an extensive study of creativeness now underway at UC.)

For Dr. McKinnon a product to be really creative must meet at least three requirements: 1) it must be original; 2) it must be appropriate; 3) it must sustain over a long period of time. The word "creativity" has been cheapened in our society, he added, but that it will assume respectability in later years.

Three other California non-architects contributed their views on creativity. Composer Robert Erickson, author of "The Structure of Music," said the creative person is "playful, fanciful and highly individualistic," living out near what he likes to call "the growing edge." Main threat against the creative is the rational point of view that says, "Two and two must make four." On the other hand, the chief aid to creativity is mastery of one's craft. "When you know your craft, you can concentrate on the creative," he explained.

Industrial designer Jo Sinel declared that the really creative art is far beyond the comprehension of the masses and criticized the "pastry cook" approach to creativity by which others' ideas are "spurted from a tube and passed off as original."

Designer Charles Eames, whose work ranges from furniture to buildings, startled his audience a bit when he referred to architects as "professional amateurs." He later clarified his point when he explained that by "amateur" he meant one who does not accept every dogma that comes along.

Continued on p. 37

At Harrison: Kahn, Kramer and rain (Cont'd from p. 9)

that great thoughts and ideas are the products of the individual. "Group creativity may raise the mediocre but it subordinates the self."

Rader and aesthetics

Concerned with the most good for the most people, Rader pointed out that our social technology over the past 50 years has produced more and more bigness in organization on all fronts. This impersonalization has resulted in frustrating man's nature both in his 1) introverted activities (family, privacy, etc.) and 2) extroverted activities (business relations, public entertainment, etc.). Our superorganized society, which expresses itself architecturally through such media as the shopping center, does not enhance what the philosophy professor thinks of as the "meeting of man with man."

Rader, who spent the past year in Mexico writing a book, made reference to town planning, the market place and other elements there which give significance to day-to-day living and which are so sadly absent from the American scene. He was also critical of residential design being done in the United States, particularly the open plan which neutralizes the personal and allows little, if any, private space.

Pratt and a competition

As a member of the five-man jury (three architects, two planners), Pratt discussed the Toronto City Hall competition, which he described as "one of the greatest ever held." He outlined the two stages in which 750 entries, including several from the Northwest, were narrowed down to eight, photographs of which served as the basis for his remarks. He noted the two broad types of solutions—the high-rise approach and the quite modest, low approach.

While Pratt thought the winning design would shake conservative Toronto, he found he was mistaken when a daily newspaper carried a banner headline stating, "It's a Beauty!" But the architect admitted that he heard the ultimate in judgment from a cab driver who declared, "I got her, she's sexy and she's mine."

In summarizing the conference, AIBC executive director Warnett Kennedy said that the program had focused attention on the truism that man must think what he feels and feel what he thinks, but added that "the architect's limited range of feeling divorces him from the layman."

Regional vs. national

Directing some sharp criticism at the Octagon, Robert L. Durham of Seattle wound up the program at the Sunday breakfast with an evaluation of regional conferences, citing the importance of the setting, impact of speakers, unity of spirit, planning and continuity of theme as factors determining the success of any given meeting.

"Regional activities of architects have an importance in the AIA we cannot visualize today," Durham declared. This sentiment was voiced earlier in the busines sessions when delegates unanimously approved the following resolution which he introduced:

WHEREAS: Programs for recent national conventions of the AIA have been of decreasing interest; WHEREAS, The yearly meeting should represent a synthesis of professional concerns and ideas; WHEREAS, The regional conferences have proven of increasing value; and WHEREAS, The host chapter presently has no real part in planning activ-

Operation is unique in that it is sponsored by architects themselves incorporated as legal entity separate from Architectural Institute of British Columbia.

ity; therefore, be it RESOLVED:

That the Board of Directors of the AIA be requested to alter the planning procedure to give greater autonomy to the host chapter in formulating the overall theme and professional program.

Carrying with some dissent was this motion:

WHEREAS, It is deemed essential that increased emphasis be given to chapter and regional activities; WHEREAS, It is becoming mandatory that local chapter and regional organizations be given more autonomy in the direction of all AIA matters; WHEREAS, There is serious complaint as to the ineffectiveness of present national AIA programs and staff; and WHEREAS, There is such increasing member dissatisfaction of the national organization as to seriously affect chapter member attitudes and support, thus discouraging an expanding and vital membership; therefore, be it RESOLVED:

1. That national AIA dues be immediately and substantially reduced.
2. That national programs and staff activities be reduced to the bare essentials such as necessary for clerical requirements in coordinating regional and chapter activities.
3. That this conference inform each member chapter that the intent of this resolution is that chapter dues be increased by a corresponding amount, and the Regional Council be directed to consider means by which an effective increase in regional programs, staff and activities may be made.

The conference also gave the first regional endorsement to a meeting of chapter presidents (proposed Congress of Presidents) previous to the national convention; and recommended that the national AIA Honor Awards program be reviewed, with the intent that screening be done on a regional level, each region submitting its entry to a 12- or 13-man jury.

Another resolution, presented by Durham and unanimously carried, requested that the Institute's Board of Directors assist in carrying to a higher court the case in which judgment was made against the architect when a product failed.

In other official action, the delegates named Earl P. Newberry of Portland to a three-year term on the judiciary committee and Philip E. Keene of Spokane as a one-year alternate.

Spokane in '59

The 1959 conference, set for October 8-11, will be held in Spokane's Davenport Hotel, with Keith Boyington as chairman.

Representing this year's host chapter, Washington State, was a Seattle committee composed of A. O. Bumgardner, chairman, David R. Anderson, Fred Bassetti, L. Jane Hastings, Ibsen A. Nelsen, Victor Steinbreuck, Gordon B. Varey and Lawrence G. Waldron. Canadian committee members were Rand Iredale and Arthur Read.

★RESIDENCE— Ashland, Ore.

Award to Thomas J. Parker, 450 Siskiyou, Ashland, Ore., $15,208, by Bureau of Reclamation, for construction of operator's two-bedroom residence, water system, sewage system, garage and sidewalks; 100 c.y. furnishing, placing driveway and parking apron gravel, including preparation of a smooth subgrade; 3,100 c.y. grading, including drainage ditches, near the Green Springs Power Plants, about 11 mi. in a southeasterly direction from Ashland, Jackson County, Talent Division, Rogue River Basin Project, Ore.; Spec. No. 100C-346.

Bids were opened October 2 by the project engineer for Bureau of Reclamation, at Camp White. Engineer's estimate $18,835.

Work also includes furnishing and installing one 12"x30 and one 6"x10' corrugated metal pipe culvert, complete with necessary excavation, backfill, and compaction of backfill. DM 11-11. Previous report 9-16

★HOSPITAL ADDITION— Burns, Ore.

Award to Bennett & Hickey, Burns, $10,-900, by Harney County Commissioners, Courthouse, Burns, for construction of a wood frame addition, and alterations to Harney County Hospital in Burns. Plans by Roald, Schmeer & Harrington, architects, 1104 Portland Trust Bldg., Portland. Four bids were received October 31.

WB 11-11. Previous report 10-14

HOSPITAL— Central Point, Ore.

Plans have been announced by Medford Osteopathic Hospital, Dr. Paul T. Rutter, owner, 215 E. Jackson Blvd., Medford, for construction in 1959 of a 25-bed hospital at Central Point. A six-acre tract has been purchased. Plans allow for future expansion to 50 beds. DC 11-12

HEATING PLANT ADDITION— Corvallis, Ore.

(Estimated cost $803,500)

Preliminary plans are underway by W. Bruce Morrison, consulting engineer, 918 Cascade Bldg., Portland, for an addition to the central heating plant at Oregon State College, Corvallis. The addition has a high priority on the list of construction projects to be presented to the 1959 Oregon Legislature by the Oregon State Board of Higher Erucation, Dr. John Richards, chancellor, Eugene. Funds have been advanced by the U.S. Housing & Home Finance Agency for planning of the project. WB 11-12

▲ELECTRICAL SERVICE— Corvallis, Ore.

Following is the complete list of bids received November 7 by Oregon State Board of Higher Education, in Administration Council Room, 106 Commerce Bldg., Oregon State College, Corvallis, for installation of electrical work, Phase 1—Primary Distribution System at the college. Plans by W. Bruce Morrison, engineer, 918 Cascade Bldg., Portland. BIDS: L. H. Morris Electric, 944 W. 5th Ave., Eugene, $103,566; Electric Corp., Box 266, Salem, $104,470; Lebanon Electric, Lebanon, $110,921; Steeck Electric, 628 S. Riverside Ave., Medford, $113,300; Ace Electric, 5104 N.E. Oregon, Portland, $113,995; Jaggar-Sroufe Co., 939 S.W. 10th Ave., Portland, $114,800; Marion Electric, 2715 Portland Road, Salem, $115,900; Mayer & Ross Electric, 223 S. 4th, Corvallis, $116,748; Clark Electric, 233 S. 7th, Eugene, $117,987; The Tide Co., 829 N. Russell, Portaind, $126,000; Lord Electric, 1034 S.E. Water, Portland, $132,950. The engineer's estimate is approximately $118,000, and award is expected to be made to low bidder.

WB 11-12. Previous report 11-11

★PARKING GARAGE— Eugene, Ore.

Award to Gale M. Roberts, 338 W. 11th, Eugene, $199,400, by Lane County Commissioners, Courthouse, Eugene, for construction of a parking facility in downtown Eugene. Plans by Wilmsen & Endicott, architects, 863 13th Ave. E., Eugene. Construction will not be started until late in the winter, as the Lane County courthouse now under construction, must be finished, offices located in other buildings moved, and those buildings razed to clear the parking structure site. DM 11-12

★RESIDENCE— Green Springs Power Plant, Ore.

Award to Thomas J. Parker, 450 Siskiyou Blvd., Ashland, $15,208, by Bureau of Reclamation, Medford, for construction of one operator's residence and garage at Green Springs Power Station in Talent Division of the Rogue River Basin Project; Spec. No. 100C-346. Site of the work is about 11 mi. southwest of Ashland in Jackson County.

RM 11-8. Previous report 10-21

●CABINET WORK, SCHOOL EQUIPMENT Gresham, Ore.

Bids will be opened 3 p.m., P.S.T., December 9, by Gresham Union High School District No. U2-30Jt, Multnomah County, Nelda B. Radak, clerk, Superintendent's Office, Gresham, for construction of classroom cabinet work, kitchen equipment and classroom equipment, for the new high school between S.E. 174th Ave. and 182nd Ave., north of Powell Blvd. Plans with Burns, Bear, McNeil & Schneider, architects, 2940 S.E. Belmont St., Portland. Bid bond or certified check 10%.

Separate bids for: (1) Classroom cabinet work, including teachers and student storage cabinets for entire school; (2) Kitchen equipment, including all sinks, work tables, dishwashing equipment, mechanical and electrical equipment, etc., necessary for complete installation; (3) Classroom equipment, including chemistry tables, instructor's desks, and a fume hood. WB 11-11

FIRE STATION— Gresham, Ore.

Rural Fire Protection District No. 9, Multnomah County, Twelve-Mile Corner, Gresham, plans to construct a fire station near S.E. 174th Ave. and Division St. Funds will be obtained through an increase in the district's legal tax base, from $65,000 to $198,685, approved by voters in the November 4 election. The money will also be needed to man the new station, and to man and equip the Orient School area substation. WB 11-12

●CHURCH (Calvary Lutheran)— Hillsboro, Ore.

Bids will be opened 7:30 p.m., November 28, by Calvary Lutheran Church, Faurest L. Anderson, chairman of building committee, Grange Hall, 245 S. 3rd Ave., Hillsboro, for construction of wood frame church (initial unit) on N.W. Jackson School Road. Plans with Wicks & Brown, architects, Astoria, or from Anderson Bros. Jewelers, E. Main St., Hillsboro. $25 deposit. Certified check or bid bond 5%.

Building will have temporary nave seating about 200 plus choir balcony (nave for later use as activities room); 11 classrooms, sacristy, chancel, office, nursery and kitchenette; furnace room below grade. Glued laminated arches and beams supporting 4" cedar deck; built-up and asphalt shingle roofing; redwood and some brick siding; aluminum sash; cathedral glass; plastic skyridge on top of steeply pitched roof to provide natural lighting; concrete slab floor (covering by owner); plaster walls, except Philippine mahogany in chancel; mostly exposed deck ceilings; fluorescent lighting; two gas-fired furnaces supplying hot air through baseboard grills; septic tank.

WB 11-8

APARTMENTS— Klamath Falls, Ore.

Bids will be called early in 1959 by the owners, Arthur Rickbeil & Associates, 700 Main St., Klamath Falls, for construction of 93 apartment units, 25 per cent to be two-story structures, on a four-acre tract, 200' east of Washburn Way, bounded by Shasta Way and Pershing Way in suburban Klamath Falls. Total ground area for the cottage-type apartments is 48,058 sq. ft. In addition, there will be an office building for the apartment manager and a 20'x40' tiled outdoor swimming pool. Plans will be completed in about 80 days by the architects, Morrison & Howard, Williams Bldg., Klam-

ath Falls. Mechanical and electrical engineers to be named.

The project includes 43 two-bedroom units, 25'4"x24'; 32 one-bedroom units, 16'x25'4"; 18 single studio bachelor quarters, 12'x25'4". Plans permit future construction of carports. Pumice block construction; concrete slab floors vinyl floor covering, some carpeting; vaulted plywood roofs.

The contract for clearing, leveling and filling has been let to Ray Kizer Construction Co., Portland. ZZ 10-30

★RESIDENCES, WAREHOUSE— Lane County, Ore.

Award to A. E. Stafford, Hayden Bridge Way, Springfield, $102,461, by U.S. Forest Service, 729 N.E. Oregon St., Portland, for construction of three residences and a warehouse at Oakridge Ranger Station, and two residences at Lowell Ranger Station, Willamette National Forest, Lane County, Ore.; Bid No. R6-59-112.

WB 11-7. Previous report 11-5

CONGREGATIONAL CHURCH— Milwaukie, Ore.

A fund drive for $80,000 is underway by Ardenwald Congregational Church, Rev. Ivan Cleveland, pastor, S.E. 32nd and Van Water, Milwaukie, for construction of a new church at S.E. Logus and 46th, Milwaukie. The church name will be changed to First Congregational Church of Milwaukie.

Plans by Warren Weber, architect, 610 Fenton Bldg., Portland, call for a one-story sanctuary, Sunday school and parking area. Construction of the first unit is scheduled to start next spring. WB 11-4

COLLEGE EXPANSION— Monmouth, Ore.

Plans have been announced for a 10-year expansion program at Oregon College of Education in Monmouth. President Roy E. Lieuallen, Administration Bldg., campus, Monmouth, says that the program calls for a 75-acre campus, five new buildings and additions to two others.

It is hoped that construction can be started next year on a $375,000 heating plant and warehouse and a $975,000 student center and dining commons.

For the 1961-63 biennium, the program lists construction of a women's dormitory with 150 person capacity and additions to the men's physical education building and the library.

The 1963-65 binnium construction includes a 100-student men's dormitory.

During the 1965-67 and the 1967-69 bienniums, the first unit of a major classroom building is planned, including some 20,000 sq. ft. of floor space to be added during each of the above bienniums.

Plans also call for inclusion of three tracts of land involving 13 acres within the campus boundaries. DC 11-11

HEATING PLANT— Monmouth, Ore.
(Estimated cost $286,860)

Preliminary plans are underway by W. Bruce Morrison, consulting engineer, 918 Cascade Bldg., Portland, for a new heating plant and physical plant service building at Oregno College of Education, Monmouth. The building has second priority on the list of construction projects to be presented to the 1959 Oregon Legislature by the Oregon State Board of Higher Education, Dr. John Richards, chancellor, Eugene. Planning funds have been advanced by the U.S. Housing & Home Finance Agency.

★RESTROOMS, BIRD LAKE, PACHYDERM HOUSE— Portland, Ore.

Award to James S. Hickey, 523 S.E. Stark St., Portland, $177,156, by L. W. Rayner, city purchasing agent, 208 City Hall, Portland, for construction of public restrooms and pachyderm house at the Portland Zoological Gardens in Hoyt Park. Plans were prepared by Lawrence, Tucker & Wallmann, architects, 912 Failing Bldg., Portland. Hickey was second low on the basic bid, but low on the combination of basic (restrooms), $51,591, and alternate B (pachyderm house) $126,332, less alternate C, $767. Alternate A for the bird lake was not exercised.

WB 11-7. Previous report 10-24

★SWIMMING POOL— Portland, Ore.

Award to Mason & Robinson, 2004 N.E. 137th Ave., Portland, $124,283 (basic plus alternate for use of aluminum pool edge), by Multnomah County School District No. 7, Robert Sproul, clerk, 20204 N.E. Halsey St., Portland, for construction of a 42'x75' swimming and diving pool in 8,000 sq. ft. concrete block building attached to gym at Reynolds High School Bldg. Plans by Edmundson & Kochendoerfer, architects, and R. Evan Kennedy, engineer, 325 Henry Bldg., Portland.

Supreme Builders, 4232 N. Williams Ave., Portland, was low on the basic bid, but their bid with alternate was $126,389. Third low with the alternate was Walker & Green, Route 3, Box 207, Oregon City, $129,188.

Existing locker and shower rooms will serve the pool; one side of building will open onto future sundeck area. Glued laminated beams supporting cedar roof deck and built-up roof; architectural plastic, bubble-type skylights; stucco exterior; concrete and plaster pool; exposed aggregate concrete deck; aluminum pool edge; diatomaceous filtering system and heating for pool.

WB 11-7. Previous report 10-30

DORMITORY ADDITION (Lounge-Recreation Area)— Portland, Ore.

Preliminary plans are underway by Scott & Payne, architects, 511 Builders Exchange Bldg., Portland, for an addition to the women's dormitory at Concordia College, 2811 N.E. Holman St., Portland. The addition, of steel and brick construction to match the existing building, will include a lounge, a 40'x40' recreation-assembly area, and kitchen facilities to serve the 75-80-girl dormitory. WB 11-8

BUILDING MODERNIZATION— Portland, Ore.

Plans to modernize the Yeon Bldg., a 15-story, half-block structure at 522 S.W. 5th Ave., have been announced by the new owners, Melvin Mark, Melvin Mark Jr. and Richard L. Mark, Morgan Bldg., Portland.

Plans are being prepared by Skidmore, Owings & Merrill, architects, 2040 S.W. Jefferson St., Portland. Harold Hockman, Morgan Bldg., will be managing agent of the building. WB 11-8

AZOO ENTRANCE BUILDING— Portland, Ore.

Four bids ranging from a low of $162,040 by Contractors, Inc., 1101 N.E. 21st Ave., Portland to a high of $216,365 were submitted November 7 to L. W. Rayner, city purchasing agent, 208 City Hall, Portland, for construction of entrance building, Contract Group 17, Portland Zoological Gardens, Hoyt Park, Portland. Plans by Lawrence, Tucker & Wallman, architects, 914 Failing Bldg., Portland.

Other bidders were: Teeples & Thatcher, 8130 S.E. Otty Road, Portland, $174,000; Gene Settergren, 3723 S.E. 21st, Portland, $174,650; Adolfo C. Bardi, 8105 S.E. Duke, Portland, $216,365. WB 11-8. Previous report 10-31

NURSES' HOME ADDITION— Portland, Ore.

A bid call is expected late in November by Emanuel Hospital, Paul Hanson, administrator, 2801 N. Gantenbein Ave., Portland, for construction of three-story, two-wing addition to the nurses' home at the hospital. Plans by Church, Newberry, Roehr & Schuette, architects, 619 Builders Exchange Bldg., Portland, are being cleared by the U. S. Health Service and the Housing & Home Finance Agency.

The wings, each 49'x69', will each have a full basement and provision for addition of a fourth floor; they will be combination dormitory and classroom units for science and the nursing arts. There will be some science laboratories in the classrooms, quarters for three housemothers, and guest rooms. Each floor of student rooms will have its own lounge, shower rooms and toilet rooms. A gymnasium-auditorium is planned for later construction.

Reinforced concrete construction; brick veneer and Indiana limestone facing; double hung steel sash; built-up roof; masonry corridor walls; metal stud partitions; metal lath and plaster on most walls and ceilings; some acoustical plaster and tile; rubber tile flooring; glazed blocks and ceramic tile in shower and toilet rooms; built-in wardrobes, dressers, bookcases, bulletin boards, etc.; natural birch woodwork; one automatic elevator; shaft for future elevator; radiators; mechanical ventilation in some areas. WB 11-11. Previous report 5-1

●**CITY HALL ANNEX ALTERATIONS—** Portland, Ore.

Bids will be opened 10 a.m., P.S.T., November 19 (Tentative) by Leonard W. Rayner, city purchasing agent, 208 City Hall, Portland, for alterations and revision of the two-story, 100'x130' building located on corner of S.W. 4th and S.W. Main, for use as city hall annex. (readvertisement) Plans with purchasing agent. $50 deposit. Plans by H. A. Herzog and D. O. Marks, architects, 410 Henry Bldg., Portland. Certified check or bid bond 10%. Separate bids on general, mechanical and electrical.

Bids were opened October 28 and rejected.

Plans call for wood and plasterboard partitions; acoustical ceiling; asphalt tile flooring; new plumbing and ventilating systems; fluorescent lighting. WB 11-11. Previous report 10-29

★**SHOP BUILDING—** Scappoose, Ore.

Award to Lorentz Bruun Co., 3636 S.E. 20th Ave., Portland, $118,786, by School District No. 4J, Columbia County, Faye Tarbell, clerk, Scappoose Union High School Bldg., Scappoose, for construction of a 12,000 sq. ft. steel and concrete shop building connected by covered walkway to the high school. Architects are Potter & Robinson, 1920 S.W. 57th Ave., Portland.

Building will contain agricultural and woodworking shops, band room, assembly room, toilets, heating plant and accessory rooms. Light steel frame; cement block filler walls; open web joists; wood or concrete board deck; built-up roof; plastic skylights; steel sash; concrete slab floor; some resilient floor covering; some cabinet work; some acoustical tile; incandescent lighting; oil-fired, forced hot water heating plant.

Other bids received October 23 are: Bickford Construction Co., 823 S.E. 28th Ave., Portland, $119,800; Anfelt B. Hansen, 4115 S.E. Ogden, Portland, $119,821; Mason & Robinson, 2004 N.E. 137th Ave., Portland, $121,980; Allen C. Lawson, 2520 S.W. Hamilton Court, $123,480; Barnard & Kinney, 4200 S.W. 103rd Court, Beaverton, $124,593; Serge R. Perrin, 405 Ogden Drive, Oregon City, $124,726; Weston Construction Co., 7415 N.E. Glisan St., Portland, $126,300; Blanchard Construction Co., 2546 S.W. Vista Ave., Portland, $132,000. WB 11-7. Previous report 10-28

At Monterey: creativity and continuity (Cont'd from p. 33)

He singled out specialization as a detriment to the creative flair and warned that "originality for its own sake results only in derivatives."

Using materials as creative tools

In citing plywood as a creative tool, Tacoma architect Robert Billsbrough Price said: "My thesis has been, and is, to endeavor to build with simplicity; to reduce each project to the least common denominator, commensurate with what I believe to be good design. In my office we have practiced this thesis regardless of the medium with which we have chosen to build, be it concrete, steel or wood.

"I have found plywood a stimulating challenge. It has opened new vistas for creative design. The potentials of this material are unlimited; in our efforts to date, we have barely scratched the surface."

The material got a second plug from another Tacoman, David Countryman, research engineer for the Douglas Fir Plywood Association. He noted "how imagination plus research has resulted in the development of the folded plate design technique, a step which considerably increases the freedom of the creative designer" and told the architects that "with the continued use of your imagination, tempered by a realistic knowledge of what is practical in materials and construction, even greater development can be expected in the future."

Steel shared the spotlight with plywood as a creative tool when Elmer Gunnette of Seattle, district engineer for the American Institute of Steel Construction, reviewed a number of structures and how certain designers have used the material to control light and atmosphere. He talked about "its ability to become a bold simple line, in one instance; a weblike, lacy structure in another; or a mass seeming to float in air because its cantilevered arms are so much a part of the architectural expression that the structural function is almost indiscernible."

In summarizing the conference, Harry Weese said that the aim of creativity is to influence modern society toward a lasting order and that today's chaos will only be helped by the architects themselves writing a program. "Architecture is a social art and its individual practitioners must converse with one another," he added, emphasizing the profession's need to pause and reexamine the direction it is taking.

The Chicagoan concluded his remarks by stating that architects must face three basic questions: 1) Are we a molder of a way of life or merely a mirror? 2) Do we have the courage of our own convictions, while respecting each other's aims? 3) Do we regard life as a luau or as a solemn obligation?

Convention advisory committee members were chairman Loy Chamberlain and William S. Gillis (East Bay), Thomas S. Elston (Monterey Bay), George Hasslein (Santa Barbara), Walter S. Stromquist (Coast Valleys), Elisabeth Kendall Thompson and Worley K. Wong (Northern California).

Hawaii will host the '59 conference.

WASHINGTON

●**FLAGPOLE—** Aberdeen, Wash.

Bids will be opened 3 p.m., P.S.T., November 26, by General Services Administration, public buildings service, 909 1st Ave., Seattle, for removing existing roof flagpole and board walk and erecting new metal ground flagpole and concrete sidewalk at the U.S. Post Office in Aberdeen, Proj. No. SEA-1254. Plans with Seattle office. Completion time 45 calendar days. DM 11-7

CHURCH (Congregational)— Aberdeen, Wash.

A master plan for the proposed new First Congregational Church, Rev. Cyrus M. Gonigam, 1601 W. Sixth St., pastor, to be located at Scammel St. and Sumner Ave., Aberdeen, was approved by the congregation in September. Plans were prepared by Durham, Anderson & Freed, architects, 1100 Denny, Seattle. First canvass for funds will be made November 16.

When completed the new church will have seating space for 120, exclusive of the choir, with overflow space for an additional 40 in the adjoining parlor; a fellowship hall seating 150 at tables or 200 in meetings; room for a church school of 300; an administrative office and pastor's study; modern kitchen, storage and mechanical facilities. The first unit, to be constructed as soon as funds are available, will be the fellowship area, consisting of the narthex, the fellowship hall, kitchen, offices and several classrooms for small children.

Plans will be completed about December 10 by Dan F. Miller, architect, 404 Main St., Edmonds, for a 38,000 sq. ft., semi-campus plan, elementary school in the Shasta Park area for Edmonds School District No. 15, Edmonds.

Plans call for one story along the semi-campus plan; concrete footings and foundation. Drawings are in the preliminary stage.

DM 11-5

SCHOOL BUILDINGS— **Edmonds, Wash.**

Voters approved a bond issue for $800,000 placed on the ballot by Edmonds School District No. 15, Edmonds, to finance new school buildings needed during the next biennium. The levy to raise $200,000 was defeated. The next biennium covers 1960 to 1962.

Surveys had indicated that the district will need one new junior high school, two elementary schools in addition to the schools now existing, under construction or in the planning stage.

DM 11-11. Previous report 9-12

SWIMMING POOL— **Edmonds, Wash.**

A $65,000 levy for construction of a swimming pool in Edmonds was defeated at the November election. The levy was placed on the ballot at the request of the Greater Edmonds Area Service Association.

Thomas A. Purton, president of the association, said that group will now look into other means of financing the pool. Planned is a 40'x75', outdoor heated pool with dressing rooms and a filtered water plant.

★RADIO RELAY BUILDINGS— **Ellensburg, Moses Lake, Ritzville, Wash.**

Award to L & S Construction Co., W. 1014 Broadway, Moses Lake, no amount released, by Pacific Telephone and Telegraph Co., 1200 3rd St., Seattle, for construction of three radio relay buildings in the central and eastern sections of the state. Bids from a select list of bidders were opened October 30.

One-story, 44'x61', reinforced concrete, identical buildings near Ellensburg, Moses Lake and Ritzville. Plans also call for a concrete foundation for a tower, to be placed adjacent to each building. Bids on the towers will be called later. Contract for the Ellensburg job includes construction of a one-mile access road from U.S. Highway 10 to the site which is about 16 mi. east of Ellensburg. Completion time, March.

When completed the buildings will contain telephone repeater equipment and powerplants. New buildings and owners are being added at Ritzville, Moses Lake, Kittitas, Cle Elum and Hyak in Snoqualmie Pass, and existing facilities are being expanded at

Sprague and Rattlesnake Lodge near North Bend. The complete long distance, high-frequency radio system, which is expected to be completed late in 1959 or early 1960, will link up at Spokane with a similar system extending to the midwest.

REMODELING HOSPITAL— Ellensburg, Wash.

A proposal to form a hospital district to use and improve the Sorenson Memorial Hospital in Ellensburg and to keep intact the Roslyn-Cle Elum Beneficial Association Hospital in Cle Elum, which appeared on the November 4 ballot, was defeated. Preliminary plans by Doudna-Williams and Phipps, architects, Miller Bldg., Yakima, for remodeling the Sorenson Hospital building. Present estimates on the renovation run to about $74,000 for 45 beds and $145,000 for 90 beds.
IG 11-8. Previous report 9-30

JUNIOR HIGH SCHOOL— Ephrata, Wash.

A bond issue of $490,000 was defeated by a small margin November 4. Absentee votes will determine the issue. If the measure does pass, funds will be used to finance construction of a new junior high school, remodeling and repairing existing buildings, and acquisition of land for Ephrata School District No. 165, Ephrata. Rothe & Rothe, architects, 807 W. Yakima Ave., Yakima, have been retained to prepare plans for the junior high school.

●OFFICE—Hemlock Ranger Station, Wash.

Bids will be opened 2 p.m., P.S.T., December 1, by U.S. Forest Service, regional contracting officer, 729 N.E. Oregon St., Portland, Ore. (Box 4137) for construction of a one-story, 80'x24', frame, dual office at Hemlock Ranger Station on Gifford Pinchot National Forest, Skamania County, Wash. Plans with above office or with forest supervisor, 801 W. 8th, Vancouver, Wash.

A show-me trip has been arranged to afford prospective bidders an opportunity to view the site and discuss conditions with Forest Service representatives on the ground. The tour will start from the Hemlock Ranger Station at 10:30 a.m., P.S.T., November 18. Prospective bidders are encouraged to take advantage of this opportunity to get pre-bid information. DM 11-8

▲HOUSING IMPROVEMENTS— Larson AFB, Wash.

Bids were opened November 5 by the base procurement office at Larson Air Force Base, near Moses Lake, for remodeling and constructing additions to the 800 units of Wherry Housing at the base. Plans by Cowan & Paddock, architects, Larson Bldg., Yakima.

Four bids were submitted as follows: Lewis A. Hopkins Co., 221 S. 3rd St., Pasco, $1,628,232; Yager Construction Co., Inc., 1st Ave. and A St. S.E., Ephrata, and Fairbanks Construction Co., 308 Gumwood, Moses Lake, a joint venture, $1,705,027; Jensen-Rasmussen & Co., Box 89, Sunnyside, $1,968,788; Wright-Lease, 1501 N. 35th, Seattle, a joint venture, $2,098,056.

Award will be made late in November.

Plans call for 28 items of work, which include: structural repairs and alterations; repairs to roofing, sash, and mechanical and electrical facilities including replacement of electrical service panels, installation of storm windows and screens; installation of kitchen cabinets, and construction of additions to some units. Sixteen alternate items call for additions to more units, additional kitchen cabinets, sidewalks, repair of driveways, and 60,000 sq. yds. of repair of streets. DM 11-7. Previous report 11-1

SWIMMING POOL— Longview, Wash.
(Estimated cost $280,000)

Bids will be called early in 1959 on construction of 120 foot square building with an L-shaped, 90'x120' pool, by Longview School District No. 122, Scott Milligan, superintendent, 28th and Lilac, Longview. Preliminary plans have been completed by McGuire & Muri, architects, 231 Broadway, Tacoma.

The indoor-outdoor swimming pool building will be located west of the Mark Morris High School gymnasium and will be equipped on the southern end with sliding glass doors. Plans also call for a concrete outdoor area. Spectator stands are tentatively planned on the north side of the pool.

HIGH SCHOOL (Kent-Meridian)— **Kent, Wash.**

An $850,000 bond issue for the building fund for Kent-Meridian School District No. 415, Kent, was approved November 4. Two other levies, one for $150,000 for the building fund and the other, $75,000 for general fund, were defeated but will come up for vote again either in the spring or fall next year.

It was planned that the $850,000 bond issue plus the $150,000 levy would be used to finance three additions, totaling 40,000 sq. ft., and alterations to two existing rooms at Kent-Meridian High School, in Kent School District No. 415. The additions will house a cafeteria-auditorium, classrooms, dramatics and music rooms, girls' shower facilities and a central kitchen. Plans will be completed soon by Mallis & DeHart, architects, Lyon Bldg., Seattle.

HOTEL (Sea-Tac Airport)— Seattle, Wash.
(Estimated cost $3,000,000)

Plans will be completed late in November by Rolland Denny Lamping, architect, 1314 E. John St., Seattle, for a vari-level, 140-unit hotel to be constructed on a nine-acre tract adjoining the Seattle-Tacoma Airport and facing the intersection of Highway 99 and S. 188th St., between Seattle and Tacoma. Sponsor of the hotel, which will be named Sweptwing Inn, is Cosmopolitan Builders of Seattle. President is H. W. I. Johnston. Other associates are L. G. Justice, realtor, Seattle; Dorsey Prater, Burien; Ray Torbenson, attorney, Seattle. Financing by National Mortgage Co., Inc., 224 Dexter, Seattle.

Plans call for two wings extending from the main lobby of the hotel; a swimming pool, recreation areas. Ramps will connect with the various levels, linking living units to shopping galleries, restaurants and other facilities.

Present plans call for construction of 140 units. Eventually, there will be 300 units.
DM 11-12

CHURCH (Bethel Lutheran)—Seattle, Wash.
(Estimated cost $200,000)

Plans will be completed early in the year and bids called late January or early February on a one-story and basement church for Bethel Lutheran Church of Shoreline. The new structure will be built at 8th Ave. N.E. and E. 175th St. Architect is Durham, Anderson & Freed, 1100 Denny Way.

The existing church will be used for administrative offices and Sunday school classes. The new building will seat 500 persons. Pastor is the Rev. Dr. Carl O. Pederson. DM 11-12. Previous report 4-12

★ROOFING— Seattle, Wash.

Award to C & R Builders, Inc., 1619 8th N., Seattle, by General Services Administration, 1619 8th N., Seattle, for installing new roofing and remodeling offices of the U.S. Courthouse, 5th Ave. and Madison, Seattle; SEA-1164.
DM 11-12. Previous report 11-6

▲RESIDENCE— Seattle, Wash.

Bids received November 7 by Stanley Paris, owner, for construction of a 50'x30' split-level residence at 5220 Juneau St., Seattle, were rejected as too high. A new bid call will be issued soon. Plans were prepared by George W. Lucker, architect, 7915 Rainier Ave., Seattle.

Two-story and basement; 1,450 sq. ft.; frame joist, built-up roof; blanket insulation between roof joists; cedar siding, cement-asbestos panels, mediterranean brick; glass stopped in wood, aluminum Z-bar sash; dry-wall partitions; rockwool ceilings; resilient tile, flooring, carpeting; wood cabinets; laminated plastic counter tops; hot water heating. Approximately 600' of outside wood decks planned.

SKI RESORT (Crystal Mountain)—
Snoqualmie National Forest, Wash.

A ski resort, to be called Crystal Mountain Winter Sports Area, is planned in the Silver Creek area, 32 mi. southeast of Enumclaw and 75 mi. from Seattle and Tacoma in Snoqualmie National Forest. A conditional permit has been granted by the U.S. Forest Service to Crystal Mountain, Inc.

The area is located at the center of a series of ski bowls at the head of Silver Creek, six mi. east of Silver Creek Resort. Initial resort improvements include a double chair lift 6,400' long from the lodge and parking area to the top of Crystal Mountain at 6,800' elevation; a poma lift 1,840' long; four rope tows; parking for 1,000 cars; warming hut with lunchroom; public rest rooms; ski shops; a six mi. access road from Highway 410.
DC 11-12

● POSTOFFICE ANNEX— Spokane, Wash.

Bids will be opened 2 p.m., January 20, in Post Office headquarters in Washington, D.C., for construction of a terminal annex facility for the post office department in Spokane. Plans with regional real estate office, Main Post Office Bldg., Box 3703, Portland, Ore.

The building will be constructed and financed by private interests who will then lease the quarters to the government.

Post office terminal will have one story and partial two stories; partial basement; 125,000 sq. ft. Garage facilities will have 4,100 sq. ft. with adequate platform and parking area.
DC 11-12

APARTMENT (Belmont Terrace)—
Tacoma, Wash.

Plans are underway by Louis Pedersen, architect, 915½ Pacific, Tacoma, for a 24-unit apartment for the Home Apartments Co., Inc., on a site at the corner of Tacoma Ave., Division and Broadway in Tacoma. The corporation, formed by Dr. Charles Larson, realtor Leo Seiwerath, and Jardeen Bros. Building Contractors, 2140 S. Sprague, Tacoma, will sell the apartments to tenants.

Each apartment in the building (to be called Belmont Terrace) will contain two bedrooms, living room, kitchen and a bath and a half. Off-street parking will be provided in the lower portion of the building.
DC 11-4

● OFFICE, WAREHOUSE—
Toppenish, Wash.

Bids will be opened 4 p.m., November 21 in the office of the architects, Don Gochneur and Edward Marble, Miller Bldg., Yakima, for construction of a service center, warehouse and office building for Pacific Power and Light Co. in Toppenish. Plans with architect. $25 deposit.

Concrete block; built-up roofing; glued laminated beams; masonry columns and partitions; concrete floors; some plaster walls.

●INCINERATOR— Sweetgrass, Mont.

Bids will be opened 3 p.m., P.S.T., November 25, by General Services Administration, public buildings service, 909 1st Ave., Seattle, Wash., for installation of incinerator in the U.S. Border Station at Sweetgrass, Mont.; Proj. No. SEA-1184. Plans with Seattle office. Completion time 45 calendar days. DM 11-7

ALASKA

■BUILDING ADDITION— Eielson AFB, Alaska

A second list of planholders has been issued on construction of an addition to Team 202 Bldg., at Eielson Air Force Base; ENG-95-507-59-25. Bids will be opened 2 p.m., A.S.T., November 18, by Corps of Engineers, Box 7002, Anchorage.

Planholders: W. D. Burk, Box 1618, Anchorage; Spero Electric, 20500 St. Clair Ave., Cleveland, Ohio; Consolidated Construction, Inc., Box 1583, Fairbanks; Nordin Construction Co., Box 1771, Fairbanks; Harold S. Smith & Son, 1831 Columbia Road N.W., Washington, D.C.; Home Industrial Sheet Metal Works, Box 4565, Anchorage; Morrison-Knudsen Co., Inc., Box 320, Anchorage; Chisum-Langlais, 2200 C St., Anchorage; Alaska Plumbing and Heating, Box 2119, Anchorage; Arctic Builders, Box 305, Fairbanks.

Moore & Mosley Construction Co., Box 1011, Fairbanks; Fleshman-Vehmeir, Box 1383, Fairbanks; Gordon R. Johnson Plumbing, Box 1558, Fairbanks; Northern Supply, Inc., Box 439, Anchorage; Whitney Bros. Plumbing and Heating, Box 926, Fairbanks; City Electric Service, Box 1367, Fairbanks; Burgess Construction Co., Box 1410, Fairbanks; Fairbanks Builders, Inc., 1446 Turner St., Fairbanks; Marinell & Campbell, Box 763, Fairbanks; Hodson Sheet Metal Co., 911 Cushman, Fairbanks; Arctic Insulation, Inc., Box 1757, Fairbanks; Chandler Plumbing and Heating, Inc., Box 534, Fairbanks; Leonard Shaunce Plumbing and Heating, Inc., Box 632, Fairbanks; Hall Electric Co., Inc., Box 1062, Fairbanks; Urban Plumbing and Heating, 2904 S.W. 1st, Portland, Ore.

S. S. Mullen, Inc., 3886 Terminal Annex, Seattle, Wash.; U.S. Associates, 524 White-Henry-Stuart Bldg., Seattle; Builders Hardware and Supply, 227 9th Ave. N., Seattle; Refrigeration Engineering Co., 1718 Broadway, Seattle; Grinnell Co., 3101 Elliott Ave., Seattle; Square D Co., Box 3745, Seattle; Alaskan Plumbing Supply Co., 907 Arctic Bldg., Seattle.

BUILDING ADDITION—40'x50', reinforced concrete addition connected by a common wall to existing structure; electrical work; fire alarm system; heating and air conditioning; fire protection; built-up roofing; connections to existing water, steam, electrical cold water and compressed air systems.

MISCELLANEOUS—Minor revisions to air conditioning system in existing building; asphaltic concrete paving.

▲PAINTING, FLOORING— Elmendorf AFB, Alaska

Bids were opened November 3 by base procurement office, Bldg. T22-057, Elmendorf Air Force Base for cleaning, painting, decorating and floor finishing in 220 family apartments at the base; IFB-65-501-59-44. BIDS: Warren Painting Co., 321 2nd, Anchorage, $70,801; Clark's Painting and Decorating, 720 Gambell, Anchorage, $83,039; Northwest Painting, 1418 I St., Anchorage, $88,775; J. W. Ryan, Chicago, Ill., $99,681. Government estimate $52,000.

AL 11-8. Previous report 10-15

▲OFFICE ADDITION— Elmendorf AFB, Alaska

Twelve bids ranging from a low of $384,211 by Chris Barg, Inc., 2730 Westlake Ave. N., Seattle, to a high of $470,000, were submitted November 7 to Corps of Engineers, Box 7002, Anchorage, for office structure modification at Elmendorf AFB involving architectural, mechanical and electrical construction to convert a 500-man barracks and heating plant into office space; ENG-95-507-50-2.

Other bids follow: W. R. Grasle Co., Box 143, Anchorage, $385,796; Patti-MacDonald Construction Co., Box 7-1634, Anchorage, $394,000; City Electric of Anchorage, Box 3698, Anchorage, $399,275; J. B. Warrack Co., Box 2080, Anchorage, $408,900; Western Construction Co., Inc., Box 2274, Anchorage, $412,600; Raber-Kief, Inc., 5934 4th S., Seattle, $439,850; Modern Electric, Inc., Spenard, $449,176; Allen Electric, Anchorage, $449,976; H. E. Mills Electric, Bellingham, Wash., $461,000 and an identical bid by The Tide Company of Tacoma, Tacoma, $461,000; Inlet Construction Co., Anchorage, $470,000. Engineer's estimate $752,627.

Completion time 240 days. Work includes conversion of barracks and heating plant to provide room partitions, air conditioning and electrical lighting, distribution and generating systems. The air conditioning system requires six 20-ton liquid chillers, three condensers, eight air conditioners, associated pumps, piping and duct work.

The electrical system, indoor and aerial will distribute three-phase power to 14 panelboards, five transfer switches and motor control center. Two 350 kva diesel generators, switchgear and mechanical auxiliaries will replace the existing equipment. A 300 kva pole-mounted transformer substation will feed power to the heating plant. Approximately 1,000' of expanded metal cable tray are to be installed in the converted barracks.

DM 11-11. Previous report 11-5

●HOSPITAL— Kotzebue, Alaska

Bids will be opened 2 p.m., M.S.T., January 8, in the office of the Bureau of Indian Affairs, Geology Bldg., University of New Mexico, Albuquerque, New Mexico, for construction of a 50-bed general hospital at Kotzebue, Alaska; Proj. No. ABU-PH-7. Plans may be obtained from Virgil R. Farrell, Seattle liaison office, Bureau of Indian Affairs, 107 Federal Office Bldg., 909 1st Ave., Seattle, Wash. Drawings and specifications must be returned to the B.I.A. Terminal, Pier 39, Seattle, after opening of bids. Certified or cashier's check 5%.

Plans are on file for examination at area office, Box 741, Anchorage; area office, Room 603, Lincoln Bldg., 208 S.W. 5th, Portland, Ore., and branch of plant design and construction, B.I.A., 3005 Central N.E., Albuquerque, New Mexico.

Description of Work—Total floor area of approximately 56,200 sq. ft., which will include a one-story hospital building with two penthouses; a one-story service wing; a two-story hospital building with two penthouses; a one-story service wing; a one-stroy duplex apartment with full basement; a two-story, 20-unit apartment building with full basement.

General Construction — Hospital, steel frame with insulated metal roof deck, reinforced concrete floors, wood studs, plasterboard partitions, cement-asbestos wall covering over insulated exterior walls, hot water heat. Hospital operating room and delivery room, air conditioned; forced ventilation main kitchen and dishwashing; gravity ventilation elsewhere. Duplex apartment, frame construction. 20-unit apartment building similar to hospital except main floor and second floor, wood over steel bar joists. Concrete walks, gravel drives, and all utilities included. DM 11-12

▲ALUMINUM DOOR— Wrangell, Alaska

Robert F. Greene, Box 189, York, Neb., $2,650, submitted only bid received on November 5 by General Services Administration, 909 1st Ave., Seattle, Wash., for installing aluminum entrance door and frame (with transom) and replacing the wood sill in the north window in Room 203 of U.S. Post Office and Customs House in Wrangell, Alaska; SEA-1212.

★RIVER RUN GRAVEL— Portland, Ore.

Award to Pacific Building Materials Co., 3510 S.W. Bond St., Portland, at unit prices quoted, by City Purchasing Agent, 208 City Hall, Portland, for furnishing river run gravel for all departments and bureaus for the calendar year 1959. Bids opened October 27. WB 11-12. Previous report 10-10

★REINFORCING STEEL— Portland, Ore.

Award to Mercer Steel Co., Inc., 2636 N.W. 26th Ave., Portland, at unit prices quoted, for furnishing reinforcing steel for the calendar year 1959. Award by City Purchasing Agent, 208 City Hall, Portland. Bids opened October 27. WB 11-12. Previous report 10-10

★PAVING ASPHALT, ASPHALTIC ROAD OILS— Portland, Ore.

Award to Union Oil Co. of California, Yeon Bldg., Portland, at unit prices quoted, by City Purchasing Agent, 208 City Hall, Portland, for paving asphalt and asphaltic road oils for calendar year 1959. Bids opened October 17. WB 11-12. Previous report 10-4

●POWER AND AUTOTRANSFORMERS (BPA)— Portland, Ore.

Bids will be opened 2 p.m., P.S.T., December 5 by Bonneville Power Administration, 1001 N.E. Lloyd Blvd., Portland, for furnishing and delivering one power transformer and five autotransformers to various locations; Inv. No. 8903. Specifications with above office. DM 11-12

CAPITAL IMPROVEMENTS—Portland, Ore.

Voters of the City of Portland, Terry Schrunk, mayor, Portland, defeated a $39,555,000 capital improvements program at the November 4 election. Funds would have been derived from a ten-year tax levy for $25,250,000, and a bond issue for $16,530,000.

The program included sewer repair, sewage disposal, parks, traffic controls, street lighting, equipment, Civil Defense, land acquisition, overpasses and interchanges, and buildings.

It is expected that a special election will be held in May to seek approval of the sewage disposal portion of the program. The City has been ordered by the State Sanitary Authority to abate pollution in the Willamette and Columbia rivers by sewage wastes.

●TRACTOR— Talent, Ore.

Bids will be opened 2 p.m., M.S.T., November 21 by Bureau of Reclamation, Bldg. 53, Denver Federal Center, Denver, Colo., for furnishing crawler tractor and auxiliary equipment, fob Talent, Ore.; Inv. No. (d) 20,029-A. Specifications with Denver office. DM 11-11

▲CHANNEL, LEVEE—Umatilla County, Ore.

Bids were opened November 6 by Corps of Engineers, Bldg. 602, City County Airport, Walla Walla, Wash., for construction of channel and levee at Umatilla River, Umatilla County, vicinity of Pendleton, Ore.; CIVENG-45-164-59-19. Completion time 270 calendar days.

Quantities: 25 acre clearing, grubbing; 11 acre foundation preparation; 14,000 c.y. bank excavation (existing work); 85,000 c.y. bank excavation (new work); 112,000 c.y. channel excavation; 350 c.y. structural excavation, common; 12 c.y. structural excavation, rock; 75,000 c.y. embankment; 6,800 c.y. dumped riprap (existing); 21,700 c.y. dumped riprap (new); 2,600 c.y. gravel blanket; 110 c.y. portland cement concrete; 7,000 lb. steel reinforcing; 58' of 60" corrugated metal pipe culvert, bituminous coated; install 92' of government furnished, 24" corrugated metal culvert pipe.

LOW BIDS: K. C. Dack Construction Co., Box 642, Pendleton, Ore., $174,412; Harbart Bros., Estacada, Ore., $220,148; John L. Jersey Co., Portland, Ore., $242,573. HI: Floyd R. Grubb, Salem, Ore., $560,856. Government estimate $345,627.

DM 11-7. Previous report 10-29

WASHINGTON

AIRPORT (Seal Coat, Drainage)— Bellingham, Wash.

Construction is expected to be underway next spring and summer on two Bellingham airport jobs, 1—applying seal coat to the runway and 2—rebuilding drainage gutters along the runways. About $42,850 in funds from the port and Federal government will finance the work.

Application for Federal matching funds for the two projects was made to the Civil Aeronautics Administration last spring. The CAA approved the money to aid in applying the seal coat (a mixture of molten asphalt and sand) to the runways, but the application for rebuilding the gutters had been denied, but more recently granted. ET 11-5

DIVERSION TUNNEL— Bellingham, Wash.

A bid call is expected by early December by John W. Cunningham & Associates, consulting engineers, 1112 Portland Trust Bldg., Portland, for a 9,000' horseshoe section tunnel, 8½'x8½', from the site of the future diversion dam on the Middle Fork of the Nooksack River, to Mosquito Lake flats. The tunnel will be constructed through Bowman Mountain, and will be concrete lined approximately one-fourth of the distance. Bids will be called by the Bellingham Water Board, City Hall, Bellingham.

Bids on the dam will be called after the tunnel construction is underway. The project also includes a 9½-mile pipe line to Mirror Lake. WB 11-11. Previous report 10-4
(Pipeline, Diversion Dam)

BOAT RAMPS— Bellingham, Wash.

Four port, county and city-operated pleasure boat launching ramps from Blaine to Bellingham's Yacht Club, were suggested during a recent meeting of the Bellingham Propeller Club. Port-financed ramps would be in Blaine and at Squalicum Fill. The city might finance one at the foot of Cornwall Avenue, near the Yacht Club, and the county might finance one on Hales Passage, the club committee suggested.

President Al Brazas asked for more study and details on the proposals, particularly cost, and urged that a definite recommendation be outlined at the November meeting. Again he noted the need for such launching facilities in this pleasure-boating area, pointing out that only one ramp had been considered when the committee study was appointed. ET 11-11

PUMPING PLANT— Beverly, Wash.

Bids will be called soon by Bureau of Reclamation on construction of the Sand Hollow pumping plant northeast of Beverly.

Project involves construction of an 81.5'x 27' building with concrete sub-structure and structural steel superstructure; installation of four motor-driven pumping units, three with 51 cfs capacities and one with 25 cfs capacity with total heads of 65'; electrical control equipment; about 700' of 66" inside-diameter concrete discharge pipe and concrete outlet transition. DM 11-6

★FURNISH PUMPING UNITS— Beverly, Wash.

Award to Allis-Chalmers Manufacturing Co., Denver, Colo., $69,415, by Bureau of Reclamation, Bldg. 53, Denver Federal Center, Denver, Colo., for furnishing and delivering three motor-driven, horizontal, centrifugal type, pumping units for Sand Hollow Pumping Plant, Columbia Basin Project; DS-5095. The original delivery was stated for Beverly, but changed in an addendum to Oothello, Wash.

▲GRADING— Chelan County, Wash.

Listed below are the sixteen bids received November 5 by Bureau of Public Roads, 824 Morgan Bldg., Portland, for grading 2.889 mi. on Sunset Highway, Wenatchee National Forest, Chelan County, Wash.; FHP 9-A13. BIDS: Goodfellow Bros., Inc., Box 598, Wenatchee, $589,327; P. J. Anderson & Sons, 12501 Aurora Ave., and Stoen Construction Co., 2210 E. 95th, both Seattle, (joint venture), $608,100; Commercial Iron Works, Inc., 3020 S.E. Grand Ave., Portland, $626,360; Strong & Macdonald, 4045 Ruston Way, Tacoma, $704,662; Herman Kathman and Einar Carlson, Box 555, Kenmore, $709,701; Miller & Hutchins, 100 Grant Smith Road, Roseburg, $758,307; C. E. Oneal, Inc., Ellensburg, $767,063; Max J. Kuney Co., N. 120 Ralph, Spokane, $829,769; S. S. Mullen, Inc., Box 3886, Terminal Annex, Seattle, $831,484; Charles T. Parker Construction Co., 219 Builders Exchange Bldg., Portland, $890,917; Erickson Paving Co., 14446 Sunset Highway, Bellevue, $917,900; Erland & Blickle, 2865 N. Borthwick, Portland, $934,596; Osberg Construction Co., 1132 N. 128th St., Seattle, $957,700; J. W. Hardison Co., Box 48, Yakima, $1,030,333; S. W. Groesbeck, Box 646, Eugene, Ore., $1,059,439; Morrison-Knudsen Co., Inc., 603 Hoge Bldg., Seattle, $1,147,362. Engineer's estimate, $699,302.

★GRADING— Chelan County, Wash.

Award to Goodfellow Bros., Inc., Box 598, Wenatchee, $591,847, by Bureau of Public Roads, 824 Morgan Bldg., Portland, Ore., for grading 2.889 mi. on Sunset Highway, Wenatchee National Forest, Chelan County, Wash.; FAP 9-A13. (The figure previously reported for Goodfellow Bros. was that read at the bid opening. The above is the corrected total.) WB 11-8. Previous report 11-6

FLOOD CONTROL— Colfax, Wash.

A bond issue of $100,000 for preliminary work on a flood control project near Colfax apparently was defeated by a narrow margin on November 4. Absentee ballots could affect the outcome. The preliminary work was expected to result in the U.S. Corps of Engineers possibly going ahead with a multi-million dollar job of flood control work on the Palouse River to safeguard Colfax. The proposed work involves concreting the channels of both North and South Forks of the Palouse through most of the city of Colfax and channeling Spring Creek flat in the south end of the city.

This is the second time this year that voters have rejected the proposal.
MH 11-7. Previous report 10-4

★SEWER— Coupeville, Wash.

Award to Snelson Plumbing and Heating Co. 506 W. State, Sedro-Woolley, $51,898 by Town Council, Town Hall, Coupeville, for construction of lateral sewers, sewage force main and sewage pump station in Prairie Center LID. Plans by Hill & Ingman, consulting engineers, 3104 Western Ave., Seattle.

Eight bids were received at the November 3 bid opening.

The sewers will become an integral part of the town's sanitary sewer system. Quantities: 4,050' of 8" pipe sewer; 3,415' of 4" sewer force main; 16 standard manholes; one sewage lift station.

■TIDE BOX, REVETMENT—
Cowlitz County, Wash.

Additional planholders announced for removing existing tide box and steel sheet pipe cut-off wall, constructing new four-barrel 72" corrugated metal pipe tide box with automatic drainage gates, pile holddowns, concrete gate well with circular slide gates, drift sheer boom and trash screens, dumped stone revetment, excavating inlet and outlet channels, at Cowlitz Consolidated Diking Improvement District No. 1; CIVENG-35-026-59-58. Bids will be opened 2 p.m., P.S.T., November 13, by Corps of Engineers, 628 Pittock Block, Portland.

Additional planholders: Gabriel Boiler & Fabrication Co., 1428 N.W. 14th, Portland; Teeples & Thatcher, 8850 S.E. Otty Road, Portland; General Construction, Box 3845, Seattle; J. D. Dutton, Route 6, Box 327-D, Olympia; Smith Bros., 3801 4th Plain, Vancouver; John Havlik, Scappoose, Ore.; Parker Construction Co., Route 7, 1100 N.E. 134th St., Vancouver; H. & F. Construction, 410 S. 23rd Ave., Yakima.

▲SPRINKLER SYSTEM—
Deep Creek AFS, Wash.

Bids were opened November 6 by Corps of Engineers, 1519 S. Alaskan Way, Seattle, for installation of sprinkler system containing about 52 sprinkler heads in Structure S, installation of water supply line and post indicator at Deep Creek Air Force Station, Wash.; ENG-45-108-59-20. Completion time 90 calendar days.

ONLY BIDS: Grinnel Co. of Pacific, Spokane, $4,565; Senna Service, Inc., Spokane, $3,491. Government estimate, $7,310.
DM 11-7. Previous report 10-28

LATERAL MODIFICATIONS—Eltopia, Wash.

Bids will be called in the near future by Bureau of Reclamation on earthwork and structures for about 2,000' of lateral extension in Block 16, construction and modification of structures and raising about 2,300' of lateral bank in Blocks 15 and 19 near Eltopia.
DM 11-7

PUMPING PLANT, TRANSMISSION LINES— Ephrata, Wash.

Bids will be called soon by Bureau of Reclamation for construction of indoor-type Radar pumping plant and a 115kv tap line, south of Othello, Columbia Basin Project, Wash.

Work will involve construction of the pumping plant with a reinforced concrete substructure, a superstructure of structural steel frame with insulated metal panel siding; a crane runway for a 15-ton traveling crane; installation of five electrically-driven, horizontal pumping units of 146cfs total capacity, making provision for a future installation of four electrically-driven horizontal pumping units of 241cfs total capacity; construction of a 115 kv tap line from the Bonneville Power Administration Scooteney-Eagle Lake 115 kv line about 2.5 mi. to the pumping plant.
DM 11-6

★PARKING AREA— Ephrata, Wash.

Award to Knapton & Yearout, Mounted Route, Moses Lake, $10,422, by Bureau of Reclamation, Division Ave. and C St. N.W., Ephrata, for construction of additional parking area for project headquarters office building in Ephrata; Spec. No. 117C-520.

Work involves removing existing buildings, filling excavations, grading, placing 4" base course, asphaltic paving, concrete sidewalks; drains and railing.
DM 11-11. Previous report 10-17

★EARTH LINING— Ephrata, Wash.

Award to L. D. Shilling Co., Inc., Box 1637, Moses Lake, $71,287, by Bureau of Reclamation, Division and C St. N.W., Ephrata, for construction of 2.3 mi. of compacted blended earth lining in the existing EL 85 and EL 85CC1 laterals, Block 18; Spec. No. 117-518.

Quantities: 88,080 c.y. excavation; 54,000 mi. cu. yd. overhaul; 53,000 c.y. compacted blended earth lining; 7,200 c.y. refill above lining; 90 c.y. excavation and refill inspection trenches; 120 c.y. riprap; 40 c.y. sand and gravel bedding for riprap; 30 c.y. coarse gravel protection; 9 c.y. concrete; 14 bbl. cement.
DM 11-11. Previous report 10-15

●ROCK RIPRAP— Everett, Wash.

Bids will be opened 10 a.m., November 17, by Snohomish County Commissioners, Courthouse, Everett, for placing 2,000 c.y. rock riprap on left bank of North Pass, Stillaguamish River and 2,200 c.y. on right bank; 2,375 c.y. dirt fill in Sections 25 and 26, Township 31, North, Range 3 East W.M. on Leque Island and the Ovenell - Wheeler Project. The work is under River Maintenance Agreements No. 156-58 and 158-58. Specifications with Soil Conservation district office in Snohomish. $2 deposit. Certified check 5%.
HH 11-8

● CONCRETE HEADWALLS—Everett, Wash.

Bids will be opened 3 p.m., P.S.T., December 16, by Bureau of Indian Affairs, Portland Area Office, Land Operations Branch, 1001 N.E. Lloyd Blvd., (Box 4097), Portland, for construction of concrete headwalls for sea gates through Lummi Dike, Lummi Dike Project, Western Washington Indian Agency, Everett, Wash.; Inv. LO 59-41-12-16. Plans available after November 25 from Portland office.

Main items of work are two reinforced concrete headwall (approximately 50 c.y.), and one 6'x8' flap gate.
WB 11-12

AIRPORT PAVING—Fairchild AFB, Wash.

Bids will be called soon for opening early in December by Corps of Engineers, 1519 S. Alaskan Way, Seattle, for strengthening (rigid paving) runway access taxiway at Fairchild Air Force Base; ENG-45-108-59-28. Plans with Seattle office. Bid bond 20%. Completion time 270 calendar days.

Work consists of removal of about 212,000 sq. yd. of asphaltic concrete pavement and about 1,300 sq. yd. of portland concrete pavement; excavation of approximately 255,000 c.y. common material; construction of fills and base course; construction of approximately 60,000 c.y. portland cement concrete pavement and approximately 25,000 ton asphaltic concrete pavement; construction of incidental storm drain system; alteration of underground steam lines; modification of fuel lines; installation of water lines; modification of sanitary sewer system; construction of approximately 4,300' of concrete encased duct banks; installation of underground electrical cables and incidental work.
DM 10-30

AIRPORT PAVING, LIGHTING—
Fairchild AFB, Wash.

Bids will be called soon for opening early in December by Corps of Engineers, 1519 S. Alaskan Way, Seattle, for construction of two airfield runway overruns approximately 1,000' long and 300' wide, and for installation of airfield lighting at Fairchild Air Force Base; ENG-45-108-59-30. Plans with Seattle office. Completion time 240 calendar days.

Quantities: 20,000 sq. yd. bituminous and portland cement paving; 300,000 c.y. excavation; 59,000 c.y. placement of select fill; 23,000 c.y. subbase and base course materials; 3,200 c.y. portland cement concrete pavement; 1,300 ton asphaltic concrete pavement; 1,300 ton double bituminous surfacing; 9,000' storm drain lines involving pipe sizes from 6" to 72"; installation of overrun threshold airfield lighting for each overrun.
DM 11-4

★STREET SWEEPER— Ferndale, Wash.

Award to Feenaughty Machinery Co., Inc., 1028 6th S., Seattle, $1,550, by City Council, City Hall, Ferndale, for furnishing the city with a used street sweeper. Bids were opened November 5.
ET 11-11

WHITE SALMON RIVER HYDROELECTRIC PROJECT— Goldendale, Wash.

(Estimated cost $48,500,000)

Funds in amount of $225,000 have been received by Klickitat County Public Utility District No. 1, Goldendale, from the Community Facilities Administration, to expedite planning for a proposed hydroelectric project on the White Salmon River.

Preliminary plans call for two storage dams in the upper river basin at the foot of Mt. Adams with a total of 83,000 acre feet. This storage of flood waters would be the key to a series of five downstream power houses and one power house between the two reservoirs. Six power houses would range in capacity from 13,000 to 48,000 kw of installed capacity and could develop 625,000,000 KWH of firm energy annually in a minimum water year.

The PUD would propose to negotiate with Pacific Power and Light Co. for the Condit power plant which was built in 1912, at the lower end of the river, and reconstruct this plant to fit the increased potential of the river.

The river would be developed in two stages with an estimated total cost of $48,500,000 to be financed by sale of revenue bonds.

President of Public Utility District No. 1 of Klickitat County is L. E. Darland, Goldendale.

The project would be located specifically in Klickitat County, principally, with a small part of the drainage basin and site of one of the storage dams and one powerhouse in Skamania County; on the White Salmon River which is not navigable above the backwater from the Bonneville Dam on the Columbia River which is below the lowest unit of the project; in the region of the cities and towns of White Salmon, Bingen, Husum and Trout Lake in Washington and Hood River in Oregon.

In general the plans provide storage at Ninefoot Creek, Trout Lake and storage for peaking requirements at Condit Dam; total installed capacity 177,000 kw. On the assumption that 83,000 acre feet of storage would be available at Ninefoot and Trout Lake dams, the development would produce 625,000 KWH of firm energy annually. An outline follows—NINEFOOT CREEK, 5½ mi. above Trout Lake, 160' high dam, 10,000 acre foot storage, 22,000 kw installed power; TROUT LAKE, dam at River Mile 27, 104' high, 73,000 acre foot storage and a powerhouse at River Mile 21, 13,000 kw installed power; GILMER, diversion from the river at Trout Lake Powerhouse tailrace, 40' high dam at River Mile 21, no storage, a powerhouse at River Mile 16, 48,000 kw installed power; HUSUM, diversion from the river at Gilmer power house tailrace, 40' dam at River Mile 16, no storage, and a powerhouse at River Mile 10 with 39,000 kw installed power; BUCK CREEK, diversion from the river to Husum power house tailrace, 40' high dam at River Mile 10, no storage, and a powerhouse at River Mile 6 with 15,000 kw installed power; CONDIT, reconstruction of the old PP&L Co. dam and powerhouse involving raising and reconstructing the present dam at River Mile 2.7 and constructing new powerhouse at River Mile 2.0 with 40,000 kw installed power.

The proposed initial development which would cost approximately $26,000,000 would involve: 1—storage and regulation dam at Trout Lake, 2—diversion dam and powerhouse at Gilmer, 3—powerhouse at Husum with one-half of installed power capacity, 4—acquirement and reconstruction of Condit Dam, 5—acquisition of Condit powerhouse and construction of new plant with one-half the installed power capacity.
DC 11-12. Previous report 3-27

■ **DAM— Howard A. Hanson Dam, Wash.**

A third list of planholders has been issued on construction of the Howard A. Hanson Dam and appurtenances on the Green River about 30 mi. southeast of Seattle and seven mi. upstream from Kanasket at Eagle Gorge; CIVENG-45-108-59-6. Bids will be opened 2 p.m., November 21 by Corps of Engineers, 1519 S. Alaskan Way, Seattle.

Planholders: Berger Engineering Co., 3236 16th S.W., Seattle; Butler Construction and Engineering Co., 3419 13th S.W. Seattle; Green Construction Co., 928 Securities Bldg., Seattle; J. A. Jones Construction Co., 432 Medical Arts Bldg., Seattle; Morrison-Knudsen Co., Inc., 603 Hoge Bldg., Seattle; S. S. Mullen, Inc., 9th Ave. and Holgate, Seattle; Osberg Construction Co., 1132 N. 128th, Seattle; Scheumann & Johnson, 1014 Lloyd Bldg., Seattle; Wayne Construction Co., 3810 Stone Way, Seattle; Guy F. Atkinson Co., 10 W. Orange Ave., South San Francisco, Calif.; A. H. Barbour & Son, 2828 N.E. Alberta, Portland, Ore.; Cherf Bros. Inc. and Sandkay Contractors, Inc., Box 938, Ephrata; George Chicha Co., E. 2917 Sharpe, Spokane; Concrete Constructin Co., 2015 Center St., Tacoma.

Condon-Cunningham Co., 4229 Lafayette Ave., Omaha, Nebr.; J. N. Conley, 4332 N. E. Royal Court, Portland, Ore.; Donald M. Drake Co., 1600 N.W. Savier Ave., Portland; Gibbons & Reed Co., Box 2429, Salt Lake City, Utah; Carl M. Halvorson, Box 1449, Portland; Henry J. Kaiser Co., 1924 Broadway, Oakland, Calif.; W. E. Kier Construction Co., Box 147, El Segundo, Calif.; Peter Kiewit Sons' Co., 1024 Omaha National Bank Bldg., Omaha, Nebr.; Macco Corp., 14409 S. Paramont Blvd., Paramount, Calif.; Ray L. Martin, Box 486, Portland; McLaughlin, Inc., Box 1824, Great Falls, Mont.; P. Perini Corp., 1504 Russ Bldg., San Francisco, Calif.; Strong & MacDonald, Inc., 4045 Ruston Way, Tacoma; Tecon Corp., 202 Davis Bldg., Dallas, Tex.; Vinnell Co., Inc., 1145 Westminister Ave., Alhambra, Calif.

Western Contracting Corp., 400 Benson Bldg., Sioux City, Iowa; Winston Bros. Co., Box 411, Monrovia, Calif.; Anderson Construction Co., 243 Central Bldg., Seattle; A. J. Cheff Construction Co., 10054 W. Marginal Way, Seattle; Pieler Construction Co., 300 Spokane St., Seattle; Amis Construction Co., Box 1971, Oklahoma City, Okla.; Curtis Construction Co., Box 106, Spokane; L. E. Dixon Co., 409 S. California, San Gabriel, Calif.; Gibson & Roberts, Inc., Box 200, Yardley; Goodfellow Bros. Inc., Box 598, Wenatchee; Hartwell Dam Contractors, 662 Russ Bldg., San Francisco, Calif.; A. S. Horner Construction Co., 118 S. Pecos, Denver, Colo.

The Hunkin Conkey Construction Co., 1740 E. 12th St., Cleveland, Ohio; Isbell Construction Co., Box 2351, Reno, Nev.; Guy H. James Construction Co., Box 9575, Oklahoma City, Okla.; Kathman Construction Co., Box 555, Kenmore, Wash.; Key Construction Co., 1601 Taylor Way, Tacoma; Meller & Hutchins, Contractors, Inc., 100 Grant Smith Road, Roseburg, Ore.; Paragon Construction Co., Box 4816 Redford Station, Detroit, Mich.; Trinity Dam Constructors, Box 248, Lewiston, Calif.; United Construction Co., Box 1000, South San Francisco, Calif.; The Arundel Corp., 501 St. Paul Place, Baltimore, Md.

Approximate quantities: 220,000 c.y. unclassified excavation; 370,000 c.y. common excavation; 630,000 c.y. rock excavation; 21,000 c.y. tunnel excavation; 760,000 c.y. rock fill; 530,000 c.y. sand and gravel core; 180,000 c.y. random fill; 40,000 c.y. concrete; 1,000,00 lb. steel reinforcement; 50,000 lb. structural steel exclusive of regulating and emergency gates which will be Government-furnished and installed by contractor.

The rock at the site was described by Al Cary, chief of the foundations section of the Seattle District, as volcanic, mainly andesite and basalt. A rock slide some years ago changed the course of the Green River at the point where the dam is to be constructed.

The dam will be rockfill with an impervious core. Two methods in constructing the rockfill portion may be employed by the contractor, Alt. 1—rock may be dumped and sluiced or Alt. 2—rock may be placed and compacted with 50-ton rollers.

Plans call for a balance between cut and fill. It is expected that there will be enough rock, sand and gravel at the site to build the embankment.

The successful contractor will be expected to coordinate his operations with the Northern Pacific Railroad, the Tacoma Water Department and the Weyerhaeuser Timber Co. DM 11-11. Previous report 10-23

★**SWITCHGEAR— Ice Harbor Lock and Dam, Wash.**

Award to Westinghouse Electric Co., 309 S.W. 6th, Portland, Ore., $85,221, by Corps of Engineers, Bldg. 602, City County Airport, Walla Walla, for furnishing and delivering one 4,160-volt switchgear, fob south shore Ice Harbor Lock and Dam, Powerhouse Station Service, Ice Harbor Lock and Dam, Wash.; CIVENG-45-164-59-10.

DM 11-11. Previous report 9-23

● **RAILROAD RELOCATION (Shoofly)— John Day Lock and Dam, Wash.**

(Estimated cost $1,000,000)

Bids from a select list of bidders will be opened November 17 by Spokane, Portland and Seattle Railway, American Bank Bldg., Portland, on construction of railroad shoofly on the north or Washington shore in connection with road and rail relocation made necessary by John Day Lock and Dam. Design of the shoofly was made by the railway engineers. Length of the temporary line is 1.6 miles.

Permanent relocation work along the Washington shore will be handled largely by contracts with the State Highway Department, with the railroads concerned and with private engineering organizations. The Seattle District of the Corps of Engineers is doing the planning on the permanent relocation work on the north shore. DM 11-7

▲**CANAL— Kennewick, Wash.**

Bids were opened November 6 by Bureau of Reclamation in office of Kennewick Irrigation District, Kennewick for supplemental construction on the Kennewick main canal, about 21 mi. west to seven mi. southeast of Kennewick, Benton County, Kennewick Division of Yakima Project, Wash.; Spec. No. 100C-350. Completion time April 10, 1959. LOW BIDS: L. B. Shilling, Moses Lake, $118,709; Cherf Bros. Inc. and Sandkay Contractors, Inc., Ephrata, $130,663; Lewis Hopkins Co., Pasco, $151,330.

Quantities: 12,800 c.y. canal excavation; 15,000 c.y. borrow excavation; 80 c.y. structure excavation; 25 c.y. trench excavation; 61 c.y. compacted backfill about structures; 14,400 c.y. compacted earth; 8,300 c.y. compacted blended earth lining; 10,000 mi. c.y. overhaul; 1,300 c.y. gravel blanket; 115 c.y. riprap; 60 c.y. gravel bedding for riprap; 100 c.y. coarse gravel protection; 27,500 sq. yd. trimming foundation for concrete lining; 114 c.y. concrete in structures; 1,782 c.y. concrete in canal lining; 2,844 bbl. furnish, handle cement; 8,340 lb. furnish, place reinforcement bars; 2 drain pipe extensions; 2.1 MBM furnish, install timber walk plants; 2,350 lb. furnish, install miscellaneous metalwork.

■ **PIER (Repairs)— Keyport, Wash.**

(Estimated cost $25,000 to $100,000)

Planholders announced on repairs to the North Approach Pier No. 1 at U.S. Naval Torpedo Station, Keyport; Spec. No. 183888/-58. Bids will be opened 2 p.m., P.S.T., November 21, by 13th Naval District, Room 107B, Bldg. 250, U.S. Naval Station, Seattle. Plans with Seattle office. Bid guarantee 20%.

Planholders: Willar Construction Co., 9709 Greenwood, Seattle; Larson Construction Co., Colman Bldg., Seattle; Cotton Engineering and Shipbuilding Corp., 126 Madison Port Townsend; Butler Construction and Engineering Co., 3419 13th Ave. S.W., Seattle; General Construction Co., 3840 Iowa, Seattle; Arthur Fralick Co., 3008 E. 57th St., Seattle; Dale M. Madden, 3010 E. 163rd, Seattle; American Pile Driving Co., Inc., Pier 2, Everett; Puget Sound Bridge and Dredging Co., 2929 16th S.W., Seattle; Einar Johnson Construction Co., Box 466, Puyallup.

Winterburn Construction Co., Box 202, Port Townsend; Western Tru Products, Inc., Box 100, Tacoma; Hart Construction Co., 3536 E. 11th, Tacoma; Sentry Automatic Sprinkler Co., 2716 A St., Tacoma; O. I. Hall Co., 605 13th Ave., Seattle; Hopper Co., 1200 Westlake Ave. N., Seattle; Del Guzzi, Inc., 1029 Front St., Port Angeles; Owens Bros. Engineer and Construction Co., Railroad and Oak, Port Angeles; Manson Construction and Engineering Co., 5209 E. Marginal Way, Seattle; MacRae Bros., 5900 2nd Ave., Seattle; Gillis & Co., 844 E. 91st St., Seattle.

Work involves demolition and/or removal of superstructure of North Approach approximately 370' long and 20' wide. The superstructure shall be replaced with treated timbers and lumber and laminated lumber decking with asphatlic concrete pavement on top. Project also includes providing felt flashings over timbers, treatment of pile heads and replacement of bracings.

DM 11-11. Previous report 11-1

★**CRUSHED STONE (Furnish)— King County, Wash.**

Award to J. Arlie Bryant, Inc., and Clarence Braden, S. 3716 Skiview Drive, Spokane, $36,600 (Maury Island) and R. H. Sussex, 2850 State Highway 2A, Bellevue, $37,600 (Redondo) by King County Commissioners, 402 County City Bldg., Seattle, for furnishing crushed stone surfacing in stockpile from two locations, Maury Island (30,000 c.y.) and Redondo (40,000 c.y.).

Quantities—Maury Island in Section 21, T. 22, N.R. 3, E.W.M., King County: 10,000 c.y. of 1½" crushed stone surfacing base course in stockpile; 10,000 c.y. of ¾" minus crushed stone surfacing maintenance rock in stockpile; 10,000 c.y. of ¾" minus crushed stone surfacing top course in stockpile.

Quantities — Redondo, approximately 0.2 mi. westerly of Pacific Highway S. (P.S.H. No. 1) on S.S.H. 1-V (Dash Point Road) in Section 5, 21 N.R., 4 E.W.M., King County: 20,000 c.y. 1½" minus crushed stone surfacing base course in stockpile; 20,000 c.y. ¾" crushed stone surfacing top course in stockpile. DM 11-12. Previous report 11-4

ROAD SURFACING— Mesa, Wash.

Bids will be called in the near future by Bureau of Reclamation on gravel surfacing about 10.3 mi. of operating roads in Block 20 west of Mesa, Columbia Basin Project, Wash. DM 11-7

DRAINS— Mesa, Wash.

Bids will be called in the near future by Bureau of Reclamation on earthwork and structures for about 2,500' of DPE38.9B closed pipe drain and about three mi. of DPE38.9B1, DPE40 and DPE40A open ditch drains in Blocks 14 and 19, west of Mesa, Columbia Basin Project, Wash. DM 11-7

LATERALS— Mesa, Wash.

Bids will be called in the near future by Bureau of Reclamation, on construction of about one mi. of earthwork and structures, about eight mi. of unlined laterals, one pumping plant and one siphon in Block 201 near Mesa, Columbia Basin Project, Wash.

Plans call for earthwork and structures for about one mi. of three-foot bottom width concrete-lined lateral; about eight mi. of unlined laterals with bottom widths varying from 6' to 2'; construction of two small outdoor-type pumping plants; one 36" precast concrete pipe siphon about 2,300' long. DM 11-7

★**DRAINAGE CORRECTION— Okanogan County, Wash.**

Award to Excavators, Inc., 5756 29th N.E., Seattle, $14,766, by Bureau of Public Roads, 824 Morgan Bldg., Portland, for drainage correction on Loup Loup Highway, Okanogan National Forest, Okanogan County, Wash.; FHP 28-D7.

WB 11-7. Previous report 10-23

■ **STATE HIGHWAY PROJECTS— Olympia, Wash.**

Planholders announced on state highway construction projects on which bids will be opened 10 a.m., November 18 by Washington State Highway Commission, Transportation Bldg., Olympia.

PAVING, GRADING, SSH No. 5-K Interchange and Jct. PSH No. 1 to Klaus—Clearing, draining, grading, surfacing, constructing bituminous surface treatment and cement treated base, paving with asphaltic concrete, signing, installing illumination and fencing on 2.282 mi. State Highway No. 1 and 5-K, Lewis County; FAP No. I-5-2(35)68.

Planholders: Northwest Construction Co., 3550 6th Ave. N.W., Seattle; Pacific Sand and Gravel Co., Box 628, Centralia; Charles T. Parker Construction Co., 219 Builders Exchange Bldg., Portland, Ore.; Pieler Construction Co., Inc., 300 Spokane St., Seattle; Charles R. Watts Co., 4121 6th Ave. N.W., Seattle; Interstate Asphalt Co., Inc., Box 1218, Aberdeen; Lockyear & White, Inc., Box 687, Longview; Rex C. Ayers Construction Co., 7305 N.E. 20th, Portland; Sutherlan Fixture Co., 4540 S. Adams, Tacoma.

The Harrison Bros. Co., 225 Wakefield Drive, Tacoma; Line Materials Industries, 125th and Madison S. Milwaukee Wis.; Peter Kiewit Sons' Co. Box 1777, Vancouver; G. S. Electric Co., 3010 67th S.E. Mercer Island; Erickson Paving Co., 14446 Sunset Highway, Bellevue; J. N. Conley, 4332 N.E. Royal Court, Portland; Bocek Bros., Box 666, Hoquiam; C. W. Bignold, Box 126, Elma; The United Contracting Co., Box 5075, Portland; S. D. Spencer & Son, 4614 N.E. 72nd, Vancouver; J. D. Shotwell Co., 3113 S. Pine, Tacoma; Hardisty Construction Co., Inc., 219 Medical Arts Bldg., Vancouver; W. B. Graham & Sons, 984 North St., Chehalis; James Crick & Sons, Box 102, Yardley; Beuter & O'Neil and G. W. Thomas & Son, 2301 Snively, Chehalis.

PAVING, Kincaid St. to Division St. in Mount Vernon—Draining, grading, surfacing, constructing bituminous surface treatment, paving with asphaltic concrete and cement concrete on 0.31 mi. PSH No. 1, Skagit County; a State Project.

Planholders: Associated Sand and Gravel Co., Box 914, Everett; Wilder Construction Co., Inc., 1840 State St., Bellingham; Fowler Asphalt Paving Co., 711 2nd, Mount Vernon; R. L. Moss & Co., Box 37, Zenith; American Bitumuls and Asphalt Co., Box 4062, Portland.

GRADING, SURFACING, Block 85 Feeder Roads—Draining, grading, surfacing on 24.533 mi. Grant County roads; a State Project.

Quantities: 25 mi. grading; 26,640 ton crushed surfacing; 2,352' of concrete pipe; 1,788' metal pipe; 15,402' standard right-of-way fence. DM 10-31

Planholders: Frank G. Baulne, Inc., Box 94, Yardley; James Crick & Sons, Box 102, Yardley; F. H. DeAtley & Co., Box 648, Lewiston, Idaho; Leo J. Laving, Coulee City, Wash.; Russell-Gillett Co., Box G., Cle Elum; J. N. Conley, 4332 N.E. Royal Court, Portland; Maurice Gredvig, Box 301, Yakima; J. W. Hardison Co., Box 38, Yakima; C. J. Painter, Box 51, Pasco; W. R. Sutherland, Box 22, Wilbur; Murphy Bros., Inc., E. 3728 Broadway, Spokane. DM 11-11. Previous report 10-31

GATES— Othello, Wash.

Bids will be called in the near future by Bureau of Reclamation for furnishing and installing eight automatic slide gates on the West canal, fifth section, northwest of Othello, Columbia Basin Project, Wash. DM 11-7

LATERALS— Othello, Wash.

Bids will be called in the near future by Bureau of Reclamation on earthwork and structures for about 3,000' of the EL82D, EL82D1 and EL82G1 laterals in Block 46 near Othello. DM 11-7

LATERAL MODIFICATIONS— Othello, Wash.

Bids will be called in the near future by Bureau of Reclamation for furnishing and installing an automatic slide gate and controls, earth lining about 100' of lateral, construction of culvert, modification of structures, raising lateral banks in Block 45 near Othello. DM 11-7

STORM SEWERS— Pasco, Wash.

Voters defeated an $800,000 bond issue for construction of storm sewers in Pasco at the November 4 election. The city engineering department had been preparing plans for the proposed sewer project. RM 11-12. Previous report 9-10

SANITARY FILL— Pullman, Wash.

(Estimated cost $12,000)

A bond issue of $12,000 was passed by Pullman voters at the November 4 election to finance a new sanitary fill at the Pullman city dump. MH 11-7. Previous report 9-19 (City Improvements)

●WATER SYSTEM— Quinault Ranger Station, Wash.

Bids will be opened 2 p.m., P.S.T., December 2 by U. S. Forest Service, regional contracting office, 729 N.E. Oregon St., Portland, Ore. (Box 4137) for installation of domestic water system at Quinault Ranger Station, Olympic National Forest, Wash. Plans with above office or with forest supervisor, Post Office Bldg., Olympia.

Bids will be taken on furnishing materials and labor for complete installation of domestic water system, including pump. DM 11-11

BRIDGE— Renton, Wash.

Two bond issues to finance bridge construction were defeated by Renton voters on November 4. Plans called for expenditure of $140,000 to replace the Houser Way bridge and $110,000 to replace the Wells St. bridge, both over the Cedar River. Consulting engineer is Cecil C. Arnold, Arctic Bldg., Seattle. RC 11-12. Previous report 8-26

▲PLUTONIUM TEST REACTOR (Phase 3)— Richland, Wash.

Complete list of bidders follows for construction of Phase 3, plutonium test reactor facilities at Hanford Works; AT (45-1)-1410. Bids were opened November 5 by Atomic Energy Commission, Hanford Operations Office, Box 550, Richland.

LOW BID: Shaw & Estes, Inc., P. O. Box 2399, Dallas, Tex., $1,587,000. OTHER BIDS: Hoffman Construction Co., 715 S.W. Columbia, Portland, Ore., $1,804,000; B. D. Bohna and Co., Inc., and Cerro Construction Corp., San Francisco, $2,294,500 (joint venture); The Bay Co., 1512 Center, Tacoma, $2,643,650; Procon, Inc., Des Plaines, Ill., $3,008,000; ENCON, Burbank, Wash., $6,357,500. Government estimate $2,873,000.

Work consists of 1—construction of reactor vessel about 11' in diameter, 10' high, fabricated of ¼" aluminum plate with black iron shielding plates about 6" thick surrounding the vessel and a concrete shielding around the vessel about 6' thick, 2—process solution storage tank about 15' in diameter, 9' high; two removable shields, about 40" thick, 11" in diameter; stainless steel primary coolant system including three 350 hp pumps; moderator coolant system; reflector cooling system including two 20 hp pumps; secondary coolant system including three 125 hp pumps; helium gas system with three high pressure storage tanks, two heat exchangers, four intermediate pressure storage tanks, electrical control equipment; other supporting equipment; ventilation system; process water treatment system. RM 11-7. Previous report 11-6

ROAD SURFACING— Royal, Wash.

Bids will be called in the near future by Bureau of Reclamation on gravel surfacing about 40 mi. of operating roads in Block 85, near Royal, Columbia Basin Project, Wash. DM 11-7

SEWERS— Seattle, Wash.

Eight sewage disposal items estimated at $18,000,000 are listed in the ordinance that has been introduced in the City Council, Seattle. The ordinance authorizes the sale of $7,000,000 in bonds. These are the first drawn on the new sewer utility which up to this time has been financed directly from sewerage service charges.

Listed below are construction projects only, included in the new ordinance. Other items in the ordinance include site acquisition, surveys, tests, and cost payments. 1—Construction of Seaview Ave. interceptor, the West Seattle interceptor and treatment plant and the rehabilitation of the North Trunk Sewer on Ravenna Blvd., 2—Construction of Lake Union and Portage Bay pumping station and interceptor, 3—Construction of combined or separate storm and sanitary sewers where needed to relieve overloads on the existing sewerage system, 4—Construction of sewage treatment facilities at Carkeek Park together with necessary interceptors, 5—Construction of parallel trunk sewers and holding tanks where needed at various locations along the shore of Lake Washington. DC 11-7

▲GASOLINE DISPENSING FACILITY, RAMPS— Seattle, Wash.

A low bid of $3,456 was submitted by Red-e Construction Co., 6056 37th N.E., Seattle, to General Services Administration, Public Buildings Service, 909 1st Ave., Seattle, for construction of gasoline dispensing facility and ramp revision at the Federal Office Bldg., 1st Ave. and Madison, Seattle; SEA-1235. Bids opened November 6. OTHER BIDS: Willar Construction Co., 9709 Greenwood, $3,594; Livers Bros., 3223 E. 123rd, $3,893; Dale M. Madden Construction, 3010 E. 163rd, $4,129; Reeb & Sheets Equipment Co., 1060 N. 34th, $4,236; Noble W. White Construction Co., 4142 W. Marginal Way, $7,372. All of Seattle. RM 11-8. Previous report 10-23

▲TRACTOR— Seattle, Wash.

A low bid of $24,412 was submitted by N C Machinery Co., Division of Northern Commercial Co., 4233 W. Marginal Way, Seattle, to Paul R. Hendricks, city purchasing agent, 511 County City Bldg., Seattle, for furnishing one crawler type tractor, min. 125 h.p., with bulldozer and winch. Bids were opened November 6. ONLY OTHER BID: Pacific Hoist and Derrick Co., 3200 4th S., Seattle, $28,500. RM 11-8. Previous report 10-23

★WATER DISTRIBUTION SYSTEM— Seattle, Wash.

Award to Superior Construction Co., 4610 37th S.W., Seattle, $11,119 (ULID No. 5), $9,348 (ULID No. 6) by King County Water District No. 61, 10402 16th Ave. S.W., Seattle, for construction of water distribution system. Plans by Hill & Ingman, consulting engineers, 3104 Western Ave., Seattle.

Project involves furnishing and installing about 5,500' of 6" and 4" cast iron water mains, fire hydrants, fittings and appurtenances. DM 11-11. Previous report 10-4

▲SITE IMPROVEMENT— Seattle, Wash.

Five bids ranging from a low of $1,668 by Washington Asphalt Co., 309 W. 39th, Seattle, to a high of $4,073 were submitted November 10 to Paul R. Hendricks, city purchasing agent, 511 County City Bldg., Seattle, for improvement of Pioneer Place at 1st Ave. and Yesley Way, Seattle; Contract No. 624.

Other bids: Meridian Pavers, 10301 Aurora, $2,594; Stillwell Construction Co., 919 Horton, $2,738; Harry S. Olsen Construction Co., 16166 41st N.E., $2,999; Dale M. Madden, 3010 E. 163rd, $4,073. A bid on one item only was submitted by North West Asphalt Co., 7343 E. Marginal Way. All of Seattle. DM 11-11. Previous report 10-22

●ROCK, CONCRETE, PIPE, PAINT— Seattle, Wash.

Bids will be opened 9:30 a.m., December 8 by King County Commissioners, 402 County City Bldg., Seattle, for furnishing rock, plantmix, pipe and paint for county requirements for 1959. Specifications obtainable at 606 County City Bldg.

ROCK—About 3,000 ton M/L large rock, 165# to the cu. ft. with a max. volume of 5 cu. ft. and a min. of 2 cu. ft.; 7,000 ton M/L quary waste rock. Certified check or bid bond for not less than $500.

CONCRETE, PLANTMIX—Asphaltic concrete and bituminous plantmix for the year. Certified check or bid bond for not less than $100.

PIPE—Concrete pipe and fittings, concrete building block, concrete manhole blocks

for the year. Certified check or bid bond for not less than $100.

PAINT—12,000 gal. white traffic paint; 1,000 gal. yellow traffic paint; 1,400 gal. thinner for above; 1,500 gal. beaded white traffic paint. Certified check or bid bond for not less than $100. DM 11-11

■ **GRADING, DRAINING, SURFACING— Seattle, Wash.**

Planholders announced on grading, draining and surfacing for four separate construction projects. Bids will be opened 9:30 a.m., November 24, by King County Commissioners, 402 County City Bldg., Seattle. Plans with D. L. Evans, county road engineer, 905 County City Bldg., Seattle. $10 deposit. Certified check, cashier's check or bid bond 5%. Separate bids on each project.

DRAINING, GRADING, SURFACING, Shadow Lake Road—Draining, grading, surfacing 2.31 mi. from Wax Road to Sweeney Road, King County.

Quantities: lump sum for clearing and grubbing; 25,930 c.y. common excavation, including haul; 75 c.y. common ditch excavation, including haul; 1,000 c.y. unsuitable foundation excavation, including haul; 257 c.y. structure excavation; 115 M gal. water; 100 hours rolling; 39 c.y. gravel backfill for foundations; 8,200 ton selected roadway borrow; 3,100 ton crushed surfacing top course; 5,130 ton crushed surfacing base course; 393' of 12" concrete culvert pipe; 363' of 18" standard reinforced concrete culvert pipe; one standard concrete catch basin; 68 guide posts; 11 sq. yd. remove existing concrete driveway; 45' of 24" standard reinforced concrete culvert pipe.

Planholders: Bass Construction Co., 1256 Aurora, Seattle; Anderson & Johnson Excavating Co., 11037 Roosevelt Way, Seattle; Thomas Scalzo Co., 3211 Airport Way, Seattle; Lake City Gravel and Materials, Inc., 10728 Bothell Way, Seattle; J. J. Welcome Construction Co., Cleveland and Leary, Redmond; Pacific Construction Co., 3625 Colorado, Seattle; J. E. Work & Co., 14217 Lake Hills Blvd., Bellevue.

CLEARING, SURFACING, GRADING, Arrowhead Point Road, Juanita Drive Intersection—Clearing, grading, surfacing at intersection.

Quantities: lump sum for clearing and grubbing; 2,855 c.y. common excavation, including haul; 137 c.y. structure excavation; 30 M gal. water; 50 hour rolling; 975 ton selected roadway borrow; 855 ton crushed stone surfacing top course; 750 ton crushed stone surfacing base course; 4 ton asphalt cement prime coat MC-3; 740 ton asphaltic concrete pavement class B 89 precast traffic buttons; 380' of 12" plain concrete culvert pipe; 14' of 24" standard reinforced concrete culvert pipe; four catch basins; 41 c.y. beam guard rail; 37 guide posts; 52' remove existing guard rail; 12 reset existing guide posts.

Planholders: Stanley S. Martin, Exchange Bldg., Seattle; Lake City Gravel and Materials, Inc., 10728 Bothell Way, Seattle; Seattle Contracting Co., 101 Nickerson, Seattle; Washington Asphalt Co., 309 W. 39th, Seattle; Pacific Construction Co., 3002 16th S., Seattle; J. E. Work & Co., 14217 Lake Hills Blvd., Bellevue.

DRAINING, GRADING, SURFACING, N.E. 8th St.—One mi. of grading, draining, surfacing from 148th Ave. N.E. to 164th Ave. N.E., King County.

Quantities: lump sum for clearing, grubbing; 14,940 c.y. common excavation, including haul; 3,400 c.y. unsuitable foundation excavation, including haul; 135 c.y. structure excavation; 50 M gal. water; 48 hours rolling; 62 c.y. gravel backfill for foundations; 9,040 ton selected roadway borrow; 1,300 ton crushed stone surfacing base course; 54' of 12" plain concrete culvert pipe; 366' of 18" standard reinforced concrete culvert pipe; 60' of 24" same; 48' of 48" same; 21 guide posts.

Planholders: Bass Construction Co., 1256 Aurora, Seattle; Anderson & Johnson Excavating Co., 11037 Roosevelt Way, Seattle; Thomas Scalzo Co., 3211 Airport Way, Seattle; J. J. Welcome Construction Co., Cleveland and Leary, Redmond; Pacific Construction Co., 3625 Colorado, Seattle; J. E. Work & Co., 14217 Lake Hills Blvd., Bellevue.

DRAINAGE, N. 175th St.—Drainage from 6th Ave. N.W. to Dayton Ave., King County.

Quantities: lump sum for clearing, grubbing; 2,785 c.y. structure excavation; 165 c.y. gravel backfill for foundations; 15 ton crushed stone surfacing top course; 7 ton asphaltic concrete class B; 850' asphaltic concrete lined ditch; 80' asphaltic concrete spillway; 5 c.y. concrete class C; 1,977' of 24" plain concrete culvert pipe; 84' of 24" standard reinforced concrete culvert pipe; 188' of 12" relay plain concrete culvert pipe; two standard manholes, 10' to 12' depth; five special catch basins; reset one catch basin.

Planholders: Superior Construction Co., 4610 37th S.W., Seattle; Frank Coluccio Construction Co., Inc., 7778 Seward Park, Seattle; Pacific Construction Co., 3625 Colorado, Seattle; J. E. Work & Co., 14217 Lake Hills Blvd., Bellevue; John Schade Construction Co., 151 N. 78th, Seattle.

DM 11-11. Previous report 10-23

● **DEEP WELL (Drilling and Testing)— Union Gap, Wash.**

Bids will be opened 8 p.m., November 17, by Town Council, Town Hall, Union Gap, Yakima County, for drilling and testing a deep well. Specs with town clerk Irene Hunter, Town Hall, or with the engineers, Gray & Osborne, 228 S. Second St., Yakima. $10 deposit. IG 11-7

★ **SEWERS, DRAINAGE FACILITIES— Vancouver, Wash.**

Award to Dahnco, Inc., 9053 N.E. Halsey St., Portland, $4,880, by Vancouver Housing Authority, Fred Senechal, executive director, 809 MacArthur Bldg., Vancouver, for construction of sanitary sewer and surface drainage facilities in Southcliff 5 area of McLoughlin Heights, Vancouver. Ten bids received November 5 ranging to a high of $9,950.

OTHER BIDS: Paul Ferneding, Vancouver, $5,360; James G. Robertson, Clackamas, Ore., $5,861; Riverside Construction Co., Portland, $6,120; Don Thornton, Vancouver, $6,268; Olin Pepper, Oswego, $6,270; R. & R. Excavating Co., Vancouver, $7,172; George W. Lind, Portland, 7,747; John Luyben & Son, Portland, $8,000; Harold E. Olds, Tacoma, $9,950. WB 11-7. Previous report 10-24

SEWAGE IMPROVEMENTS— Vancouver, Wash.

R. W. Beck & Associates, consulting engineers, Tower Bldg., Seattle, have been retained by Hazel Dell Sewer District, George Van Biber, commission chairman, 7511 N.E. Highway 99-N, Vancouver, to prepare a preliminary sewage improvement plan with cost estimates. The district was formed last summer. The study is being financed through a Federal Housing & Home Finance Agency loan. WB 11-11

BRIDGES— Yakima, Wash.

Preliminary surveys have been completed and money provided in the 1959 budget by Yakima County Commissioners, Courthouse, Yakima, for construction of six reinforced concrete bridges at various locations in the county. Plans by Harold Sweet, county engineer, Old Courthouse, Yakima, call for the

following: 1—Noye Road Bridge on Noy Road near east line over the North Fork of Cowich Creek, approximately 32' long, estimated cost $8,000, 2—Morton Road Bridge, about 24' long, $5,400, 3—Lateral B Road Bridge over Marion Drain, about 65' long, $13,000, 4—South Harrah Road Bridge over a drain on the South Harrah Road, about 35' long, $10,500, 5—South Harrah Road Bridge over Marion Drain, about 60' long, $12,000, 6—Marble Road Bridge over Indian Service Canal, about 32' long, $8,000.

Construction is planned for late fall or early spring while water is out of the canals and drains. IG 11-5

BITUMINOUS SURFACING— Yakima, Wash.

Preliminary surveys have been completed by Harold Sweet, Yakima County engineer, Old Courthouse, Yakima, and working drawings are underway for grading, draining, ballasting and surfacing with light bituminous treatment, several county roads. These roads are provided for in the 1959 budget and bids will be called late January or early February.

1—Wenas Road, five mi., beginning at Maley road then southwesterly about five mi., estimated cost $117,500; 2—about three mi. on Selah Loop Road, $7,050, 3—about 0.5 mi. on Goodlander Road beginning at Selah Loop Road thence westerly about 0.5 mi., $11,750, 4—about 1.25 mi. on Section One Road, $29,375, 5—about 0.44 mi. on Noyes Road beginning at Dilley Road then south to intersection of French Road, $10,340, 6—0.75 mi. of Rench Road westerly to Noyes Road, $17,625. IG 11-4

OVERPASS, SURFACING— Yakima, Wash.

A bond issue for $1,200,000 was defeated in the November 4 election by Yakima voters. The money would have financed construction of two reinforced concrete overpasses, one to be constructed at Lenox Ave. and the other on C St. in Yakima, and also to widen and surface with asphaltic concrete various streets in Yakima.

The various streets which were to have been widened and surfaced include: West Lenox from the overpass to 16th Ave.; E. Lenox from overpass to 6t St.; "C" St. and Lincoln from C St. overpass to 16th Ave.; E C St. and 9th St. from C St. overpass to Yakima Ave.; E. Yakima Ave. and Naches Ave. to 9th St.; E. Chestnut and 9th St. from 6th St. to Yakima Ave.; W. Walnut from 6th Ave. to 10th Ave.; W. Yakima Ave. from 11th Ave. to 16th Ave.

IG 11-7. Previous report 9-20

▲STATE HIGHWAY PROJECTS—
(District Office)— Yakima, Wash.

Bids were opened November 6 by R. H. Pyle, district engineer for Washington State Highway Commission at the Yakima office, for two construction projects.

BITUMINOUS SURFACING, ILLUMINATION, Dodge Junction—Clearing, draining, surfacing, constructing bituminous surface treatment, installing illumination on 0.218 mi. PSH No. 3, Garfield County; a State Project.

BIDS: J. F. Konen Construction Co., 715 D St., Lewiston, Idaho, $10,711; Morrison Construction Co., Walla Walla, $15,667; Murphy Bros., E. 3728 Broadway, Spokane, $19,428.

GRADING, Rattlesnake Creek Switchbacks—Widening roadway cuts on 0.237 mi. PSH No. 3, Asotin County; a State Project. Involves about 6,610 c.y. solid rock excavation.

BIDS: Bigson & Roberts, Inc., Yardley, $11,701; J. F. Konen Construction Co., Lewiston, Idaho, $12,030; J. W. Hardison, 4910 Richey Road, Yakima, $14,742; Morrison & Co., Walla Walla, $15,667; Murphy Bros., Inc., Spokane,, $24,987.

IG 11-8. Previous report 10-21

POWER LINE— Yakima, Wash.

Bids were rejected by Washington State Highway Commission, for construction of power line along 3.4 mi. of PSH 3, Squaw Creek to Roza Camp, Kittitas County, a State Project. The low bidder at the October 9 bid opening in the district office in Yakima, was Power City Electric, Inc., N. 920 Howard, Spokane, $12,523. Bids will be readvertised later.

●STATE HIGHWAY PROJECT— Boise, Idaho

Bids will be opened 2 p.m., December 2 by Idaho Department of Highways, 603 Main St., Boise, for the following project.

PLANTMIX SURFACING, Sage Junction—Constructing road, plantmix bituminous surfacing, drainage structures and three concrete underpasses on 7.813 mi. of U.S. Interstate Highway No. 15, Sage Junction-Hamer section and seal coating 7.341 mi. Roberts-Sage Junction, Jefferson County; FAP No. I-15-3(8)142.

Quantities: 135,000 c.y. unclassified excavation Sched. 1; 141,500 c.y. same Sched. 2; 970 c.y. structure excavation Sched. 1; 2,500 c.y. same Sched. 2; 54,500 c.y. select borrow, class A; 152,000 Y. U. haul; 305 units foundation compaction; 32,600 M gal. watering; 77,000 ton crushed gravel base course; 58,900 ton select base course; 91,500 gal. MC-1 asphaltic road material for prime; 1,525 ton blotter material class C; 9,200 gal. MC-1 asphaltic road material for type B bituminous surface treatment; 7,900 gal. MC-5 same; 400 ton cover coat material class 3; 2,635 ton 120-150 penetration asphaltic road material for plantmix; 31,850 ton platmix bituminous surfacing class B; 19,000 ton same class E; 24,500 gal. 120-150 penetration asphaltic road material for seal coat; 1,225 ton cover coat material class 3; 2,500 ton same in stockpile; 240 c.y. concrete class AA; 1,125 c.y. concrete class A cast in place; 103 c.y. concrete class A precast stringers; 10 c.y. concrete class C; 203,600 lb. metal reinforcing; 6,570 lb. structural steel; 1,325' structural steel handrail; 4,210' of 12" to 24" pipe culvert; 1,305' concrete pipe siphon; 96,500' of wire fence. DM 11-11

★STATE HIGHWAY PROJECTS— Boise, Idaho

Award announced by Idaho Department of Highways, 603 Main St., Boise, on a highway construction project on which bids opened October 21.

AWARD: James Crick & Sons, Yardley, $88,663.

SURFACING, Genesee - Lenville Road—Constructing roadway, crushed rock base on 2.545 mi., Latah County; FAP Nos. DS 4792(2), S-4792(3).

Completion time September 15, 1959.

CA 11-12. Previous report 11-5

★EXPLORATORY DRILLING— Bruces Eddy Dam, Idaho

Award to Continental Drilling Co., 2810 N. Figueroa St., Los Angeles, Calif., $79,230, by Corps of Engineers, Bldg. 602, City County Airport, Walla Walla for exploratory drilling at Bruces Eddy Dam and Reservoir on North Fork Clearwater River, Clearwater County, near Orofino, Idaho; CIVENG-45-164-59-22.

Project involves 980' advancing hole with drive sampling; 400' same without sampling; 5,200' core drilling, vertical NX; 1,200' same, inclined NX; 100' same, vertical BX; 100' same inclined BX; 250' casing left in hole; 700' of observation pipe.

Project is located on shores of North Fork of Clearwater River in vicinity of Ahsahka, Idaho, about 1.9 river mi. upstream from confluence of the North Fork and the Clearwater River. DM 11-7. Previous report 10-23

●GRADING— Boise, Idaho

Bids will be opened 2 p.m., November 24, by Bureau of Public Roads, 914 W. Jefferson St., Boise, Idaho (Box 1559) for 2.273 mi. grading on Dixie Road, Nezperce National Forest, Idaho County; FDRP Nezperce 222-B. Plans with above office. Bid guarantee 5%.

Quantities: 21 acre clearing, grubbing; 68,000 c.y. excavation; 9,000 c.y. selected borrow, topping; 900' culvert pipe. DM 11-8

▲TUNNEL— Ft. Hall, Idaho

Only one bid, that of Armco Drainage & Metal Products, Boise, $30,981, was submitted November 6, to Bureau of Indian Affairs, 1001 N.E. Lloyd Blvd., Portland, for the south main canal railroad tunnel crossing, Michaud Project, Fort Hall Indian Reservation, Idaho. Government estimate was $25,000.

Quantities: 500 c.y. tunnel excavation; 75' furnishing and installing steel lining.

WB 11-8

★OFF-SITE UTILITIES— Mountain Home AFB, Idaho

Award to Watkins Construction Co., Box 1789, Boise, $44,492, by U.S. Air Force, procurement office, Mountain Home Air Force Base, for off-site utilities for 270-unit Capehart housing area, near the base; IFB-10-603-59-19. Watkins was low of two bidders when proposals were opened October 24.

DM 11-12. Previous report 10-30

STREETS— Nampa, Idaho
(Estimated cost $100,000)

Methods of financing were discussed by City Council, City Hall, Nampa, and the Chamber of Commerce, on the proposed road from the junction of Central Ave. and 11th Ave. north of Nampa's industrial site, providing an interchange for the proposed interstate highway system. The state highway department has proposed construction of two interchanges or cloverleafs, one near the Nampa sugar factory and the other at the intersection of the proposed super highway and Highway 30 east of the city at Eagle Heights.

The Chamber of Commerce favors an additional cloverleaf at the industrial site, along with a road that would lead into Nampa via 11th Ave. N. City engineer Sumner Johnson has estimated that cost of the road would be about $100,000.
DC 11-12

★**SEWAGE PLANT, SEWERS—** **Payette, Idaho**

Award to Intermountain Construction Co., Box 1879, Boise, $273,122, for sewer lines and to Davis Construction Co., Idaho Falls, $198,376, for sewage treatment plant, by City Council, City Hall, Payette. Consulting engineer was Wendell H. Smith, Route 2, Preston. DC 11-11. Previous report 10-11

MONTANA

● **SEWER—** **Billings, Mont.**

Bids will be received until 5 p.m., November 25 by City Council, City Hall, Billings, for installing sanitary sewer in SID No. 723, Blocks 2 and 4, Centerview subdivision, Billings. Plans with city engineer, City Hall. Certified check 10%. EE 11-11

★**PAINTING STANDPIPE— Billings, Mont.**

Award to Northwest Bridge and Tank Co., Sheridan, Wyo., $13,000, by City Council, City Hall, Billings, for painting and cleaning standpipe at 9th St. W. and Avenue C, Billings. EE 11-12. Previous report 10-14

● **WATER WELL (Drilling)—Boulder, Mont.**

Bids will be opened 10 a.m., December 11, by State Board of Examiners, State Capitol Bldg., Helena, for drilling a well to supply water to the State Training School (for deaf and blind) at Boulder. Plans with above office. Superintendent of the school is Dr. Westwell, Boulder. LS 11-11

WATER SYSTEM— Columbia Falls, Mont.

Columbia Falls voters approved the $165,000 bond issue at the November 4 election to finance improvements to the municipal water system, Columbia Falls. Plans call for replacement of existing wooden mains and laying of a new 10" main to the Columfalls High School. Completion time September, 1959. RB 11-7. Previous report 10-8

● **SUBSTATION— Fort Peck, Mont.**

Complete list of quantities is listed below on construction of Stage 01 additions to Dawson County substation at the Fort Peck Project near Glendive, Dawson County, Mont.; Spec. No. DC-5116. Bids will be opened 10 a.m., M.S.T., December 4, by Bureau of Reclamation, F. E. Goehring, construction engineer, Box 866, Glendive. Plans with above office and with Grant Bloodgood, chief engineer, Bldg. 53, Denver Federal Center, Denver, Colo., and F. M. Clinton, regional director, Box 2553, Billings. Completion time 670 days.

Features of work include 1—earthwork for substation addition, 2—construction of a 12' long addition to existing substation service building, 3—constructing concrete foundations, duct banks and cable trenches, 4—furnishing and erecting steel structures, 5—removing six existing bus poles, 5—removing portions of existing fencing and re-erecting and furnishing and erecting new fencing, 6—furnishing and placing gravel surfacing and furnishing and applying surface treatment, 7—installing and modifying electrical equipment, grounding system, buses, conduit and wiring.

Quantities: 15,000 c.y. excavation for addition; 660' excavation for auger-type foundations; 1,100 c.y. structure excavation except for above; 1,000 c.y. backfill; 1,000 c.y. compacting backfill; 11,000 c.y. compacting embankments; 600' sand backfill and timber protection for buried insulated electrical cables; 110 c.y. furnishing, placing gravel for gravel fills; 1,700 c.y. gravel surfacing; 10 c.y. riprap; 15,000 sq. yd. treating areas with sterilization chemicals; 170' furnishing, laying 8", No. 16 gauge, corrugated metal pipe culverts; 425' furnishing, laying 4" clay lines tile drain; 720 bbl. furnishing, handling cement; 45,000 lb. furnishing, placing reinforcement bars and fabric; 505 c.y. concrete; 700 insulating intersections of reinforcement bars; lump sum for addition to service building; 160,000 lb. furnishing, erecting steel structures; 5,100 lb. aluminum covers; 900 lb. miscellaneous metalwork; 89 signs; 14 single and double-switch-operating platforms; erecting 1,400' chain link fencing; 28,200 gal. filtering insulating oil; 4,300' bare copper cable for grounding; 940' electrical rigid metal conduit; assemblies, Detail C; 24,360', 600-volt insulated wires, cables; three autotransformers; six reactors; six breakers; two transformers; switches; traps; arresters; panelboard; 95' removing, cutting 4" wrought iron tubular bus; remove, reinstall three terminals; 1,730' aluminum bus; 3,900' aluminum cable strain buses; 25' copper cable strain buses; 525' steel cable for overhead ground wires; fixtures. DM 11-1. Previous report 10-30

▲**BRIDGES, SURFACING—** **Gallatin County, Mont.**

Listed below are the thirteen bids received November 4 by Bureau of Public Roads, Scott Hart Annex, State Highway Bldg., 8th Ave. and Roberts St., Helena, for 8.878 mi. grading, surfacing and constructing two bridges 105' and 122' in length on West Gallatin Highway, Gallatin National Forest, Gallatin County, Mont.; FHP 42-K2,L3.

BIDS: Naranche & Konda, 2801 S. Montana, Butte, $428,728; Union Construction Co., Missoula, $443,510; McLaughlin, Inc., Ford Bldg., Great Falls, $446,109; Billings Construction Co., Inc., Billings, $453,600; Kiely Construction Co., Butte, $456,359; Dillsworth Construction Co. and Maronick Construction Co., Helena, $488,549; Zook Bros. Construction Co., Helena, $532,965; Albert LaLonde Co., Sidney, $535,130; S. S. Mullen, Inc., Seattle, $537,135; Holland Construction Co., Bozeman, $543,163; Peter Kiewit Sons' Co., Billings, $545,187; S. Birch, Inc., and S. Birch and Sons, Great Falls, $563,960; Nilson-Smith Construction Co., Great Falls, $599,294.
WB 11-12. Prevoius report 11-5

■ **STORM DRAIN— Great Falls, Mont.**

Planholders announced for construction of 430' of 12" storm drain and installation of two standard storm inlets in Gibson Park, Great Falls. Bids will be opened 7:30 p.m., November 19 by Fred L. Hill, secretary of park board, Civic Center, Great Falls. Plans with city engineer, $10 deposit. Certified check 10%.

Planholders: Robertson & Cave, Inc., Box 1448, Great Falls; Utility Builders, Box 1154, Great Falls; Joe Fagenston, 1701 Smelter Ave., Black Eagle; Falls Construction Co., 25th and River Road, Great Falls.
DM 11-7. Previous report 10-29

● **PAVING— Helena, Mont.**

Bids will be opened 2 p.m., November 25, by Bureau of Public Roads, W. B. Huffine, division engineer, State Highway Bldg., Helena, Mont., (Box Capitol 277) for construction of 13.960 mi. of bituminous paving on U.S. Highway 93 between Fortine and Olney, Lincoln and Flathead counties, Mont.; FHP 12-A4, B3, C2. Plans with above office.

Construction will begin at Olney and extend northwesterly toward Fortine, terminating near Stryker.

Quantities: 20,000 gal. emulsified asphalt, RS-1; 50,000 gal. asphalt NC-5 seal; 405,000 gal. asphalt cement, 120-150; 2,200 c.y. cover aggregate; 30,000 ton plantmix. DM 11-8

★**STATE HIGHWAY PROJECTS—** **Helena, Mont.**

Awards announced by Montana State Highway Department, 1511 State Highway Department Bldg., Helena on three highway construction projects on which bids were opened November 6.

BRIDGE, Clark Fork—One 949.25' steel and concrete bridge on Idaho Line-Plains Road, Sanders County; F-F 90(4)FH.

Award: Peter Kiewit Sons' Co., 501 St. Johns Ave., Billings, $554,931.

PLANTMIX BITUMINOUS SURFACING, Philipsburg-Anaconda Road—Grading, aggregate surfacing, plantmix bituminous surfacing, seal coat oiling, draining 2.255 mi., Deer Lodge County; F 164(10) and DF 164(12).

AWARD: Kiely Construction Co., Box 246, Butte, $432,660.

SURFACING, East of Blackfoot—Grading, aggregate surfacing, draining 12.143 mi. on Northerly Road, Glacier County; S 348(2) Unit 1.

AWARD: Zook Bros., Big Fork, $287,546.
LS 11-11. Previous report 11-7

▲**TRANSMISSION LINE— Huntley, Mont.**

Other bidders were Line Builders Inc., west of Billings, $149,469; Van Daveer & Co., 1250 Princeton Ave., Billings, $146,847; Lewis Construction Co., 925 10th N., Great Falls, $153,033; Swain & Morris Construction Co., 2553 Wyoming Ave., Billings, $146,353; Main Electric, Inc., Minot, N.D., $149,626. EE 11-11

★**COPPER TUBING— Kalispell, Mont.**

Award to Consolidated Supply Co., W. 1121 Gardner, Spokane, Wash., by City Council, City Hall, Kalispell, for furnishing copper tubing for the city water department on its low bids of 36.48 cents per ft. for ¾", 45.12 cents for 1", and $1.0757 for 2".
RB 11-7

★**TRUCK— Kalispell, Mont.**

Award to Flathead Motor Sales, First Ave. E. and First St., Kalispell, $2,635, by City Council, City Hall, Kalispell, for furnishing a new one-ton truck for the municipal water department. RB 11-7

MUNICIPAL WATER SYSTEM— **Kalispell, Mont.**

A resolution was passed November 3 by City Council, City Hall, Kalispell, to create a special improvement district in the Underhill and Adams addition at the northwestern edge of the city. The resolution provides for issuing 10-year bonds to raise an estimated $44,000 for a municipal water distribution system in these areas recently annexed to the city. RB 11-7

●**WATER TREATMENT PLANT—** **Lewistown, Mont.**

Bid opening has been extended from November 13 to 2:15 p.m., P.S.T., November 18 on construction of water treatment plant at TM site 178, cantonment area in Lewistown, Mont.; ENG-45-108-59-27. Bids will be opened by Corps of Engineers, 1519 S. Alaskan Way, Seattle, Wash. Plans with Seattle office. Bid bond 20%. Completion time February 15, 1959.

Work consists of construction of a concrete masonry building of approximately 330 sq. ft., adjoining an existing pumphouse, installation of aerator, pressure and filter, zeolite water softener, chemical solution feeder, four electric motor driven pumps, related piping and electrical work. Completion time February 15.
DM 11-11. Previous report 11-1

VALVES— Milk River, Mont.

Bids will be called in the near future by Bureau of Reclamation on furnishing two 4'x5' high-pressure gate valves and hydraulic hoists for Sherburn Lake Dam, Milk River Project, Mont. Estimated weight is 63,000 lb.
DM 11-7

★**WATER SUPPLY SYSTEM—** **Opheim AFS, Mont.**

Award to J. R. Bullmayer & Sons, Hogeland, Mont., $14,392 by Corps of Engineers, 1519 S. Alaskan Way, Seattle, Wash., for installation of well pump, pump pit and supply line to existing reservoir plus related electrical power and control work for the water supply system, Well No. 5 at Opheim Air Force Station, Mont.; ENG-45-108-59-19. Bids were opened October 30. Government estimate was $10,994.
DM 11-12. Previous report 10-31

POWER CIRCUIT BREAKER—Shelby, Mont.

Bids will be called in the near future by Bureau of Reclamation on furnishing one

three-phase, 115kv power circuit breaker for Shelby Substation, Missouri River Basin Project, Mont. DM 11-7

★WATER MAIN— Whitefish, Mont.

Award to Ole's Plumbing and Heating Co., Whitefish, $1,425, by State Board of Examiners, State Capitol Bldg., Helena, for installation of 2" water supply line into the armory building at Whitefish.

Other bidders at the November 6 bid opening were: Birch Plumbing and Heating Co., Kalispell, $1,500; Kalispell Plumbing and Heating Co., Kalispell, $1,523; Walbon Plumbing and Heating Co., Kalispell, $1,930. LS 11-12

ALASKA

▲TURBINES, GOVERNORS— Cooper Lake, Alaska

Four bids were received November 5 by Chugach Electric Association, 8th and Gambell, Anchorage, for two 10,500 hp. Francis turbines with governors and appurtenances for the Cooper Lake Hydroelectric Project on the Kenai Peninsula. Specifications prepared by North Pacific Consultants, consulting engineers, 220 S.W. Alder St., Portland, Ore. BIDS: American Elin Corp., New York City, N. Y., $237,640; James Leffel & Co., Springfield, Ohio, $279,790; The Pelton Co., San Francisco, Calif., $309,750; S. Morgan Smith Co., Portland, Ore., $325,745. AL 11-7. Previous report 10-4

▲BRIDGES— Juneau, Alaska

Bids were opened November 7 by Bureau of Public Roads, 319 Federal Bldg., Juneau, for construction of Wadleigh Creek Bridge DF-095-4(7), Switzer Creek Bridge DF-095-4(8) and Montana Creek Bridge DS-9668(2), Alaska. LOW BIDS: Cole & Paddock, Box 616, Juneau, $153,695; Keil & Peterman, Box 770, Juneau, $169,893; United General Constructors, Box 397, Seattle, Wash., $174,864.

Project consists of redecking Wadleigh Creek Bridge, Mile 12.8 Glacier Highway; constructing Switzer Creek Bridge, Mile 6.3 Glacier Highway; constructing Montana Creek Bridge, Mendenhall Loop Road; all near Juneau.

Quantities: 6,450 c.y. borrow excavation, Case 2; 1,288' concrete piles cast in steel shells; 368.6 c.y. class A concrete; 63,790 lb. reinforcement steel, intermediate grade; 29,418 MBM treated timber, creosote preservative. JU 11-8. Previous report 10-21

★GRADING, DRAINING— Juneau, Alaska

Award to Patti-MacDonald Construction Co., Pouch 5, Anchorage, $157,046 by Bureau of Public Roads, 319 Federal Bldg., Juneau for grading and draining 0.9 mi. of Glacier Highway, Thane Extension, beginning 0.5 mi. southeast of Sheep Creek, Alaska; Proj. DS-0975(1). AL 11-11. Previous report 11-5

▲MODIFY TANK SYSTEM— King Salmon AFB, Alaska

Three bids were opened November 5 by U.S. Air Force, base procurement office, Bldg., T22-057, Elmendorf Air Force Base for modification of POL tanks system at King Salmon Air Force Station, Alaska; IFB 65-501-59-38. BIDS: Alaska Plumbing and Heating Co., 621 E. 5th Ave., Anchorage, $86,980; C. R. Lewis Co., 525 E. 4th, Anchorage, $115,329; S. S. Mullen Co., 646 Holgate, Seattle, $135,000. Government estimate $40,000. AL 11-11. Previous report 10-7

NORTHERN CALIFORNIA

●DRAINAGE IMPROVEMENTS— Almaden AFS, Calif.

Bid opening extended from November 6 to 11 a.m., November 20, by Corps of Engineers, room 300, 180 New Montgomery St., San Francisco, for drainage improvements, Almaden Air Force Station, Santa Clara County, Calif.; ENG-04-203-59-16. Work includes construction of reinforced concrete inlet, corrugated metal inlets, corrugated metal aprons with embankment protectors, lined and unlined ditches, clearing and grubbing, excavation, access road, and relay three existing storm drains. Specs with above address. Bid bond 20%. Completion time 60 calendar days. RM 11-15. Previous report 11-1

▲PLANTMIX PAVING, SEWERS— Belmont, Calif.

Bids received by City Council, City Hall, Belmont, for grading, plantmix surfacing, roll type and vertical curbs and gutters, sewers, storm drains, Middle Road et al. Improvement District, Belmont, Calif. Engineers: Murphy and Hastings, 650 El Camino Real, Redwood City. BIDS: The Lowrie Paving Co., Inc., 174 San Bruno Rd., South San Francisco, $64,717; Bragato Paving Co., 500 Bragato Rd., Belmont, $73,327; L. C. Smith Co., 225 19th Ave., San Mateo, $75,610. 6348—11-11

STATE HIGHWAY PROJECT

BIDS TO BE CALLED LATER

Olympia, Washington

NOTICE TO CONTRACTORS

It is the intention of the Department of Highways to advertise for bids for the following project at a later date when snow may cover the ground.

1. Clearing, Draining, Grading and Surfacing with Selected Roadway Borrow on 1.100 miles of a Chelan County Road, SOUTH LAKESHORE ROAD.

Contractors interested in bidding on this work are urged to secure informational plans and view the proposed work on the ground at this time since snow can be expected to make this inspection uncertain and difficult in the near future.

Informational plans giving approximate quantities for use on this inspection may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such informational plans as a rental for the use of them. At such time as the project is advertised for bids, those holding informational plans, if prequalified in sufficient amount in the proper class of work, will be furnished with the bidding proposal, page one of the special provisions and all revised sheets.

Informational plans are on file in the office of the County Engineer of the County in which the work is situated, the chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

ERNEST J. KETCHAM, Chairman
W. A. BUGGE, Director of Highways

STATE HIGHWAY PROJECTS

BIDS CLOSE 9 A.M., NOVEMBER 19

Helena, Montana

NOTICE TO CONTRACTORS

Sealed bids on the following projects will be received by the Montana Highway Commission at the offices of said Commission in the City of Helena until 9:00 a.m. on November 19, 1958. The proposals will be publicly opened and read immediately thereafter. Your attention is directed to the 9:00 a.m. hour set for the opening of bids in Room 151 of the State Highway Department Building.

The **Form for Bid Bond** is no longer included in the "Instruction to Bidders" and no Bid Bond will be acceptable. No proposal will be considered unless accompanied by a proposal guaranty, in an amount of at least five (5) per cent of the bid, made unconditionally payable to the State Highway Commission of Montana, which at the bidder's option may be cash, cashier's check, certified check, bank, postal or express money order, or bank draft.

1. **I-15-5(9)275 Unit 1**—Grade, aggregate surfacing, plant-mix bituminous surfacing, seal-coat oiling, and drain 8.337 miles on the Sun River-Great Falls Road in Cascade County, involving about 2,860,399 cu. yds. excavation; 912,745 mi. yds. overhaul; 9,077 units rolling; 58,009 M gals. watering; 147 hours watering; 334,562 tons crushed aggregate; 427.452 tons uncrushed aggregate; 4,218.77 tons penetration asphalt; 568.84 tons cutback asphalt; 474.80 tons emulsified asphalt; 76,627 tons plant mix; 876 lin. ft. remove concrete curb; 100 lin. ft. relay pipe culverts; 604 cu. yds. gravel backfill; 431 lin. ft. structural plate pipe; 5,548 lin. ft. reinforced concrete pipe; 5,779 rods metal posts wire fence; 162 each metal fence panels; 33,850 lin. ft. guard rail-concrete posts; 293.4 sq. yds. concrete pavement; 988 lin. ft. concrete median curb; 21 each inlet covers; all lump sum weigh station; all lump sum conduit system; 249 lin. ft. jiggle bars; and other items. Project to be completed in 380 calendar days.

2. **I 15-5(9)275 Unit 2**—The construction of one 108.0' dual and one 218.9' single concrete structure, and three 17.25' concrete junior-grade separations on the Sun River-Great Falls Road in Cascade County, involving about 1,260 lin. ft. precast prestressed concrete beam; 1,935 cu. yds. structure excavation; 1,929.8 cu. yds. concrete; 219,064 lbs. reinforcing steel; all lump sum structural steel; all lump sum treated timber test piles; 11,350 lin. ft. furnishing treated timber piles; 10,958 lin. ft. driving treated timber piles; 550.42 lin. ft. steel beam bridge rail; 440 lin. ft. steel bridge rail; and all lump sum conduit system. Project to be completed by October 31, 1959.

3. **FG 95(11) Unit 2**—Construction of one 311.5' steel and concrete highway overpass over the Great Northern Railway, approximately 3.5 miles west of the City of Havre on the Gildford-Havre East Road in Hill County, involving about 555 lin. ft. precast prestressed concrete beam; 415 cu. yds. structure excavation; 559.5 cu. yds. concrete; 77,697 lbs. reinforcing steel; all lump sum structural steel; all lump sum treated timber test piles; 7,700 lin. ft. furnishing treated timber piles; 7,623 lin. ft. driving treated timber piles; 620.5 lin. ft. steel bridge rail. Project to be completed by November 30, 1959.

4. **DF 333(21) & F 333(22)**—Soil cement stabilized base course, plant-mix bituminous surfacing, and seal-coat oiling 12.936 miles on the Grass Range-Malta Road in Fergus County, involving about 165 units rolling; 2,300 M gals. watering; 125 hours watering; 2,499 tons crushed aggregate; 1,807.97 tons asphalt cement; 189.89 tons cutback asphalt; 239.83 tons emulsified asphalt; 32,870 tons plant-mix bituminous surfacing, Type II ¾"; 130 hours use of motor grader; 21,421 bbls. Portland cement; 233,133 sq. yds. processing soil cement 7"; 55,597 cu. yds. soil aggregate; and 1,673 tons blotter material. Project to be completed in 100 calendar days.

5. **S 260(1)**—Grade, aggregate surfacing, and drain 11.412 miles on the Lodge Grass-St. Xavier Road in Big Horn County, involving about all lump sum clearing and grubbing; 600,361 cu. yds. excavation; 48,579 mi. yds. overhaul; 1,609 units rolling; 11,014 M gals. watering; 100,987 tons crushed aggregate; 1,020 lin. ft. relay pipe culverts; 355 cu. yds. gravel backfill; 6,828 lin. ft. corrugated metal pipe; 382 lin. ft. structural plate pipe; 22 lin. ft. reinforced concrete pipe; 4,392 yds. mile-haul binder; 2,196 cu. yds. binder; and 29 each metal headgates. Project to be completed in 250 calendar days.

6. **S 274(2)**—Grade, aggregate surfacing, and drain 3.368 miles on the Red Lodge—West Road in Carbon County, involving about 29.80 acres clearing and grubbing; 325,519 cu. yds. excavation; 73,567 mi. yds. overhaul; 161 units rolling; 5,682 M gals. watering; 40,332 tons crushed aggregate; 100 lin. ft. relay pipe culverts; 100 cu. yds. gravel backfill; 2,442 lin. ft. corrugated metal pipe; 902 yds. mile-haul binder; 451 cu. yds. binder; and other items. Project to be completed in 120 calendar days.

7. **SMP 2199**—Crushing and stockpiling crushed aggregate on various roads in Blaine, Hill, Glacier, and Pondera counties, involving about 455,250 tons mi. haul of Type "A" top surfacing and cover material; 111,750 tons stockpiled Type "A" top surfacing, ⅝"; and 21,000 tons stockpiled cover material. Project to be completed by July 31, 1959.

8. **SPP 7512-05**—The improvement contemplated consists of the plumbing system and the septic tank for the latrine at the Lewis & Clark Cavern State Park in Jefferson County, involving the lump sum for the plumbing system and septic tank. Project to be completed by April 15, 1959.

Federal funds have been allocated to all Federal-aid projects.

Insofar as practicable, labor employed for all projects shall be obtained from the agencies designated by the Montana State Employment Service.

Should the successful bidder fail to enter into his contract and furnish a satisfactory performance bond within the time stated in his proposal, the bid deposit shall be forfeited to the State Highway Commission of Montana.

Prequalification of bidders, at least 72 hours prior to the opening of bids, is required.

Plans, specifications, forms of contract and bond, proposal blanks, and full instructions are on file for examination and may be obtained at the offices of the State Highway Commission in Helena, Montana. Plans and specifications for all Federal-aid projects are also on file and may be examined in the offices of the Bureau of Public Roads at Helena, Montana.

GRADING, DRAINING, PAVING

BIDS CLOSE 11 A.M., NOVEMBER 21

Anchorage, Alaska

NOTICE TO CONTRACTORS

October 29, 1958, Department of Commerce, Bureau of Public Roads, Region 10. Sealed bids in single copy for furnishing all labor, equipment, materials and performing all work for Project DS-DUS-0546(2), East Fifth Avenue, Anchorage, Territory of Alaska, described herein, will be received until 11:00 a.m., P.S.T., November 21, 1958, in Room 319, Federal Building, Juneau, Alaska. The project consists of grading, drainage and paving 1.7 miles of East Fifth Avenue, Anchorage, beginning at Gambell Street and ending 215 miles north of the Glenn Highway and Airport Heights Road intersection. Principal items of work consist of the following: unclassified excavation—76,140 cubic yards; crushed aggregate base, grading D-1—15,900 tons; hot bituminous concrete pavement—6,800 tons; asphalt cement, 120-150 penetration—410 tons; concrete curb and gutter, 6" depth—15,350 lineal feet. Plans and specifications may be obtained free of charge by all who have a bonafide need for them for bidding purposes at Room 311, Federal Building, Juneau, Alaska. It is requested that plans be returned to the Division Engineer, Bureau of Public Roads, Fairbanks, Alaska. A bid guaranty in a minimum amount of 5% of the bid amount and con-

Bids will be opened . . .

PLANS HAVE BEEN COMPLETED
BIDS ARE WANTED for Construction
Equipment
Supplies
Materials

You want— The lowest possible bid consistent with responsible workmanship.

You need— To publish a bid call where it will reach every major contractor, subcontractor and supplier in your territory.

When you advertise in Pacific Builder & Engineer publications, you reach directly more contractors, subcontractors and suppliers than would see your ad in dozens of newspaper type publications. You are advertisting in construction trade journals that cover thoroughly all of Oregon, Washington, Northern California, Idaho, Montana and Alaska, both in editorial content and circulation.

Pacific Builder & Engineer publications are the only true business journals devoted entirely to *construction* published in this territory. They penetrate every branch of the industry. They are the only business papers specializing in construction news that furnish their advertisers audited circulation statements.

Advertisements for bids are placed in PB&E columns by state highway departments, cities, counties, school districts, PUD's, state agencies, federal bureaus—and by architects and consulting engineers.

If the purpose of your advertisement is to GET BIDS, advertise in a CONSTRUCTION paper.

GYMNASIUM AND AUDITORIUM ADDITIONS

BIDS CLOSE 10 A.M., P.S.T., NOVEMBER 26

Juneau, Alaska

NOTICE TO CONTRACTORS

Project Aaa. 50-A-238. Gymnasium & Auditorium Additions, Juneau, Alaska, October 1, 1958. Name and Location of Project, JUNEAU - DOUGLAS GYMNASIUM and AUDITORIUM, Project Aaa. 50-A-238, Juneau, Alaska. Department or Agency, Alaska Public Works, Office of Territiores, Department of the Interior, by (Issuing office) Thomas G. Mooney, Director, Alaska Public Works, Office of Territories, Department of the Interior, Post Office Box 1811, Juneau, Alaska. **Sealed bids** in single copy for furnishing all labor, equipment, and materials and performing all work for the project described herein will be received until 10:00 A.M. Pacific Standard Time November 26, 1958 in the mailroom of the Office of the Director, Alaska Public Works, Office of Territories, Department of the Interior, 123 West Third Street, P. O. Box 1181 Juneau, Alaska, and then publicly opened and read aloud. **Information regarding bidding material, bid guarantee, and bonds** follows: Plans and specifications and other proposed contract documents are open for public inspection at the Director's office, Juneau, Alaska; at Room 6070 Interior Bldg., Washington 25, D.C.; and Associated General Contractors of America, offices as follows: Seattle Chapter, Construction Center, 215 West Harrison St., Seattle, Wash.; Mountain Chapter, 220 West Harrison St., Seattle, Wash.; Tacoma Chapter, 1605 Center St., Tacoma 3, Wash.; Portland Chapter, 129 S.W. Third Avenue, Portland, Oregon; and the Alaska Chapter, Anchorage, Alaska; at the Plan Bureau, 2413 Western Ave., Seattle, Wash.; and Builders Exchange Cooperative, 317 Builders Exchange Bldg., Portland, Oregon. A set of such documents may be procured from the office of the Director at Juneau, Alaska upon deposit of $25.00, all of which will be refunded upon the return of the plans and specifications in good condition **within twenty (20) days** from date of bid opening. Each bid must be accompanied by a satisfactory bid security (certified check or bid bond) in an amount not less than 5 per cent of the total bid in dollars and cents. No bid will be withdrawn until thirty days after the scheduled closing date for the receipt of bids. The successful bidder will be required to furnish a performance bond and payment bond, each in the amount of 100 per cent of the contract price. The Government reserves the right to award a contract for the project on the basis of the acceptance of any or all of the alternates, whichever course is in the best interest of the Government. DESCRIPTION: GYMNASIUM & AUDITORIUM ADDITIONS, Project Aaa. 50-A-238, Juneau, Alaska. **Contract "A"**—The construction of a reinforced concrete and steel auditorium addition. An opportunity will be given in the bid documents of this project to permit a reduction in the base bids should both contracts be awarded to the same bidder. Information regarding liquidated damages (if any), payments, etc., is attached or made a part of the specifications. Bids shall be submitted on the forms furnished or copies thereof.

STATE HIGHWAY PROJECTS

BIDS CLOSE 10 A.M., NOVEMBER 18

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, November 18, 1958, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

Bid proposals delivered in person will be received only at the Reception Desk located on the first floor of the Transportation Building.

All bid proposals shall be accompanied by a bid proposal in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal deposit shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from the office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal Funds have been allocated for item No. 1.

The improvements for which bids will be received follow:

1. Clearing, Draining, Grading, Surfacing, Constructing Bituminous Surface Treatment and Cement Treated Base, Paving with Asphaltic Concrete, Signing, Installing Illumination and Fencing on 2.282 miles of State Highways Nos. 1 and 5-K in Lewis County, SSH No. 5-K INTERCHANGE AND JCT. PSH No. 1 TO KLAUS, FAP No. I-5-2(35)68 and FAS No. S-0257(3), involving about 40 acres of Clearing, 168,520 cubic yards of Common Excavation and Borrow, 2,000 cubic yards of Top Soil, 5,940 cubic yards of yards of Top Soil, 5,940 cubic yards of Unsuitable Foundation Excavation, 11,300 tons of Crushed Surfacing, 43,000 tons of Selected Roadway Borrow, 2,100 tons of Crushed Cover Stone, 520 cubic yards of Prime Coat Aggregate, 161 tons of Asphalt Cement, 7,700 tons of Asphaltic Concrete, 2,700 barrels of Portland Cement, 10,500 tons of Cement Treated Base, 4,575 linear feet of Cement Concrete Gutter, 1,060 linear feet of Mountable Cement Concrete Curb, 218 cubic yards of Concrete, 35,960 pounds of Steel Reinforcing Bars, 2,814 linear feet of Concrete Pipe, 1,140 linear feet of Metal Pipe, 62 linear feet of Metal Pipe Arch, 1,400 linear feet of Beam Guard Rail, 262 Guide Posts, 2 lump sum bids for Signing, a lump sum bid for Illumination System, 4,330 linear feet of Wire Fence and other items. Minimum Wage Rates for this project have been predetermined by law and are set forth in the bid proposal.
2. Draining, Grading, Surfacing, Constructing Bituminous Surface Treatment and Paving with Asphaltic Concrete and Cement Concrete on 0.310 mile of Primary State Highway No. 1 in Skagit County, KINCAID STREET TO DIVISION STREET IN MOUNT VERNON, a State Project, involving about 880 cubic yards of Unclassified Excavation, 1,100 cubic yards of Selected Roadway Borrow, 305 cubic yards of Crushed Surfacing, Crushed Cover Stone and Prime Coat Aggregate, 8 tons of Asphalt Cement, 920 tons of Asphaltic Concrete, 150 linear feet of Asphaltic Concrete Curb, 123 square yards of Cement Concrete Pavement and Driveway, 60 square yards of Cement Concrete Sidewalk, 382 linear feet of Cement Concrete Curb and Gutter, 80 linear feet of Concrete Pipe and other items.
3. Draining, Grading and Surfacing on 24.533 miles of Grant County Roads, BLOCK 85 FEEDER ROADS, a State Project, involving about 25 miles of Grading, 26,640 tons of Crushed Surfacing, 2,352 linear feet of Concrete Pipe, 1,788 linear feet of Metal Pipe, 15,402 linear feet of Standard Right of Way Fence and other items.

Bank on Lone Star Masonry

SAVE *money—*

LEND *beauty—*

CHECK *efflorescence—*

get **DIVIDENDS** *in durability—*

and take **CREDIT** *for quality!*

● When bankers are builders, they build for keeps. And you can be sure that this handsome branch of the Seattle First National Bank is as durable as it is handsome, and as economical as it is efficient.

For enduring beauty at minimum labor cost, the masonry cement used was Lone Star. Since it already contains the properties formerly provided by two or more materials, it was mixed only with sand and water on the job. That meant less work, less risk of mixing error, and a uniformly high mortar quality that eliminates worry and uncertainty about final results.

Lone Star masonry mortar has the smooth, buttery consistency that makes for fast work and neat appearance. Its inherent water repellency and low absorption *make the addition of any waterproofing material unnecessary.*

To assure owner satisfaction . . . to make the most of the mason's skill . . . to produce fine work at the least final cost . . . be sure to specify Lone Star Masonry Cement!

BUILDING PERMITS

November tally tops year ago

Building activity in the West continues to ride the crest of the upturn which began several months ago. November dollar volume for the five states is $167,903,596, marking both an increase of $18¾ million over the corresponding period last year and the seventh straight month when the total has surpassed 1957 figures.

All states share in the increase, although by widely varied degrees. California is up $11½ million; Oregon, $2½ million; Montana, $2¼ million; Idaho, $1¾ million; and Washington, $½ million. The November total is considerably below October, normal procedure for this time of year.

By the end of November, tabulation shows a cumulative total of $2,428,434,675, a good $238½ million higher than the first 11 months of 1957. As the January through November figures below show, the increase ranges from $3½ million in Idaho to $127¼ million in California.

	Jan.-Nov. 1958	Jan.-Nov. 1957
Calif.	$1,906,337,718	$1,779,061,431
Oregon	160,050,511	110,671,686
Wash.	307,185,236	254,698,017
Mont.	27,317,596	21,508,877
Idaho	27,543,614	23,899,367

ANALYSIS OF TYPICAL AREAS — NOVEMBER

(Number of permits is followed by total dollar volume)

	Dwelling		Commercial & Industrial		Public

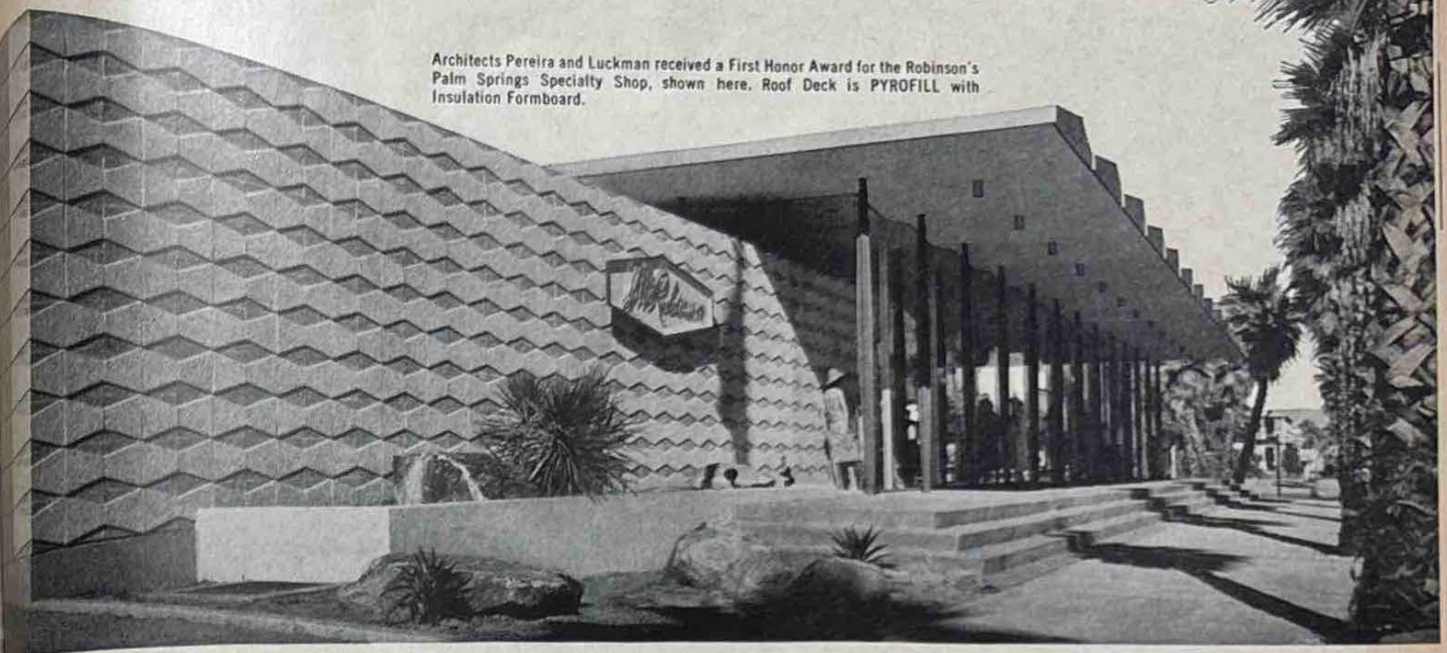
Southern California buildings win A.I.A. 1958 Awards



Architects Pereira and Luckman received a First Honor Award for the Robinson's Palm Springs Specialty Shop, shown here. Roof Deck is PYROFILL with Insulation Formboard.

PYROFILL* used on three award winners

GYPSUM ROOF DECKS

PYROFILL Gypsum Roof Decks can solve a variety of design problems, as shown by these three A.I.A. award-winning buildings. Requirements for appearance, acoustical treatment, and insulation can be met at minimum expense and with maximum ease of installation. In addition, building fire insurance costs are often reduced as much as 30 per cent.

NEW HIGHER SHEAR VALUES

The Research Committee of the International Conference of Building officials recently recommended allowable shear values as high as 982 pounds per lineal foot for PYROFILL Diaphragms specifically designed for high seismic resistance. These higher shear values are now accepted by the County of Los Angeles and by many of the 1,000 cities using the Uniform Building Code. For more information write to United States Gypsum, 2322 West Third Street, Los Angeles 54. *T. M. Reg. U. S. Pat. Off.

Architects Smith and Williams received an Award of Merit for the Union Service ... Roof Deck is PYROFILL with Acoustical Formboard.

Architects Pereira and Luckman received an Award of Merit for the industrial plant shown below. Roof Deck for the assembly and shop buildings is PYROFILL with Insulation Formboard.

OFFICE BUILDING for U. S. Consulate General in downtown Singapore, designed by Jones & Emmons, will meet street on three sides while fourth will overlook adjoining property of Armenian Church, local landmark built in 1835.

Singapore consulate designed by Los Angeles firm

Plans for the new office building for the U.S. Consulate General in Singapore by Los Angeles architects A. Quincy Jones and Frederick E. Emmons call for a blending of traditional local style with a hint of American. A vertical louver screen of teak, most common lumber in that country, will run through the three upper floors on all sides of the structure to keep glass areas continually in shade. Sheltered arcades will protect all entrances from intermittent heavy rainfall.

Exterior wall surfaces have been designed to resist mildew by the use of unpainted plaster mixed with granite chips to furnish color. All yard areas will be completely air conditioned but not heated. In accordance with local construction practice, it will have a reinforced concrete frame with brick filler walls supported on concrete piles.

Besides normal consular activities, the cultural and educational services of the U. S. Information Service will be housed in this building. A theaterette, film and reference libraries are the facilities which will be open to the public and will be accessible outside of consular office hours.

James W. Ferrie of Singapore is the associate architect on the site; construction, to get underway during the first quarter of 1959, will be done by a local contractor.

CUBAN INSTITUTE OF ARCHITECTS AWARDS LATEST GOLD MEDAL

to residence designed by Los Angeles architect Richard Neutra for Alfred de Schulthess in Havana. Spacious reinforced concrete structure is long stretched, partly on two levels, to take advantage of northeast breeze and view of Caribbean Sea. Raul Alvarez was supervising architect; Roberto Burle Marx, landscape architect.

Landscape architects back highway beautification

The California Council of Landscape Architects took action recently to urge that the state's new 12,500-mile freeway program be so planned as to preserve the natural beauty and provide a scenic showcase for visitors. Meeting in Palm Springs October 16-19, the delegates resolved to support the new California Roadside Council "Beautiful Highways" program which includes the landscaping of freeways, control of billboards on the new interstate highway system and a statewide anti-litter campaign.

In the principal address Dr. Robert Fenton Craig of the University of Southern California warned against a tendency in some public agencies for "empire builders" to bypass the services of landscape architects and contractors and conduct their own landscaping programs on a "green thumb" basis, resulting in poor planning and waste of taxpayers' money.

Raymond E. Page Sr. of Beverly Hills, member of the California State Board of Landscape Architects, cautioned the group that its legal responsibilities required written contracts with clients and close study of local and state building codes.

The landscape architects elected Courtland P. Paul, Pasadena, president; Theodore Osmundson Jr., San Francisco, vice president; and Lynn M. F. Harriss, Oakland, executive secretary.

Earthquake behavior is studied by engineers

It does not seem economically justifiable that in a seismically active region all buildings should be designed to survive the strongest possible ground motion without any damage, a California engineering professor told the American Society of Civil Engineers at its New York convention in October.

"It is more reasonable to take the point of view that the design should be such that the structures will survive the more frequent, moderate ground motions with damage," declared G. W. Housner of the California Institute of Technology, "but in the more rare event of very strong ground motion, damage would be tolerated so long as it was not a hazard to life and limb."

Studies during earthquakes by so-called response spectrum curves give the answers to much of the puzzling behavior of structures in earthquake areas, Professor Housner told the engi-

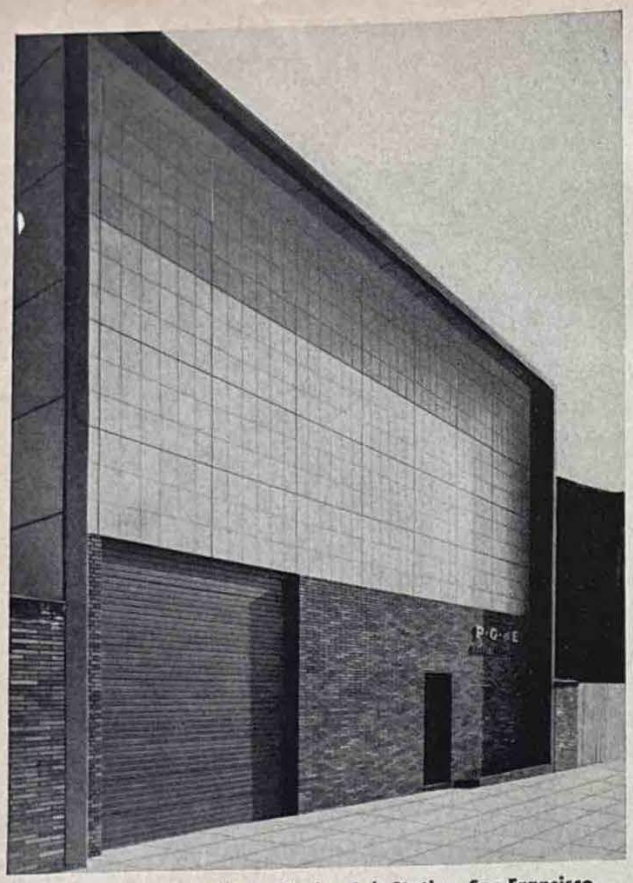
YOU SPECIFY THE THERMAL VALUE

KAISER FIR-TEX
TAILORS THE ROOF INSULATION

Kaiser is the West's specialist in rigid roof insulation, whatever the job requirements. Kaiser Fir-Tex can deliver a complete line of standard or special boards to meet the thermal value architects specify. Call or write for technical bulletins incorporating latest thermal values. And remember, always look to Kaiser Fir-Tex for exciting new quality, performance and economy achievements in roof insulation, accoustical and other insulating products.

KAISER GYPSUM

KAISER GYPSUM COMPANY, INC. Kaiser Building—1924 Broadway, Oakland, California



Pacific Gas & Electric Co. Marina Sub-Station, San Francisco
Kraftile Veneer gives acceptability to industrial buildings adjacent to residential sections.

LOW-COST DISTINCTION FOR INDUSTRIAL BUILDINGS

Whether you're planning an industrial, commercial or public service building, you'll find that Kraftile Veneer offers lasting beauty, cleanliness and lower-cost installation for exterior or interior application. Especially adaptable to the enhancement of non-residential structures located in residential areas, Kraftile Veneer is easily installed over wood, steel or concrete, on new construction or modernization projects.

KRAFTILE VENEER SAVES 60% ON SPACE AND WEIGHT

Kraftile glazed ceramic veneer panels of 3/8" thickness weigh only 4 lbs. per square foot, require less structural support than heavier facings, can be cut on the job for faster handling. Select range of Kraftone colors available. Ask for Free Fact File of shapes, specifications, installation examples.

neers. For example, after almost every [illegible] earthquake it is observed that a few old and apparently weak buildings survived even though their known strength was relatively low.

This, he said, can be explained as the result of two factors. First, the true ultimate strength of the structure is often much larger than the nominal design strength. Second, such old, loose-jointed buildings may absorb large amounts of energy during only moderate vibrations and, as seen from the spectrum curves, such a structure could survive strong motion without actually being subjected to high stresses.

It is also not uncommon to observe that the same ground motion that apparently did no damage to an old, weak building damaged a relatively strong building. This is explained by the fact that in such strong structures the vibrations resulting from strong ground motion becomes worse and then some member of the structure shows distress.

After the Mexico City earthquake in 1957, the epicenter or focus of which was 220 miles away, it was observed that in the same district old masonry buildings came through the earthquake on the whole better than modern steel and concrete buildings that had greater lateral strength.

Professor Housner stated that this can be explained as resulting from the long distance of the epicenter from the city. The old masonry buildings were mostly low structures with short periods of vibration, whereas the modern ones were largely multistoried, long-vibration period buildings, so that in effect the old experienced a much weaker ground motion than did the new.

He also noted that after almost every destructive earthquake, some buildings are observed to be in such a badly damaged condition that, from the design point of view, it seems a miracle that they did not collapse.

If the damage to a structure is looked at as a process for absorbing energy, he said, the survival of these structures is not so mysterious. In these cases it is not so much a matter of strength as it is a question of whether the structure can continue to absorb appreciable energy during its vibrations. In badly damaged buildings which show interior and exterior cracked walls, it is evident that a large amount of energy has been dissipated and that further vibrations will continue to dissipate energy.

Building briefs

• California Council, AIA, has moved to 916 Kearny St., San Francisco 11. Telephone number (YUkon 6-5347) remains the same.

• Building Research Institute will open a year of expanded technical program activity with a conference on noise control in buildings January 14-15 at the Hotel New Yorker, New York City.

• National Association of Home Builders will hold its annual convention and exposition in Chicago January 18-22, with the Hilton Hotel as headquarters. Among the seminars: new design ideas for better building.

• Building Center in Los Angeles will celebrate its first anniversary December 23 with an open house honoring the architects, decorators, landscape architects and manufacturers who are participants in the exhibit.

• Hillside building development—economics and hazards—will be discussed at a January 30-31 conference in the Chemistry-Geology Building on the UCLA campus.

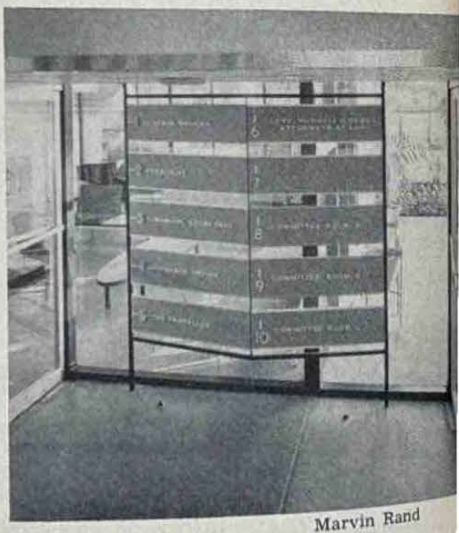
INSIDE BUFFER ZONE, interior elements extend beyond major plane of glass walls to gain greater sense of total environment unity. Entry directional sign indicates scope of activities housed under one roof. Lobby is at left, stairway to second floor at bottom of photo.



Marvin Rand

GREAT ENCLOSURE of free space to house a long list of union activities was created in a limited area, within a rigid budget, on one of the busiest industrial traffic arteries in Los Angeles. Secret of the low-cost construction—$11.20 per square foot—lies in the utilization of space framing with steel combined with a climatic buffer zone.

The result is a tremendous amount of protected interior area in which inexpensive, easily relocated partitioning and flooring elements can be arranged and rearranged according to necessity — what the building's designers call "a kind of architecture nearly as manipulative as a chest of drawers." Even the wood-framed mezzanine is essentially a separate structure within the larger, its purpose being mainly to support a catwalk and office floors of the second story. All exterior plastered panels are merely enclosures and bear no weights; the same is true of interior partitions. All roof loads are carried by the steel columns.

Design of the 50-ft. open web trusses has a lacy quality of its own, capable of remaining undisguised, which permits the ceiling to read at the top rather than at the bottom of the cross pieces. Since no suspended ceiling was needed to camouflage beams, a saving of about 2 ft. in the height of the building resulted. If code restrictions had been more realistic in regard to structural stress tolerances, the architects point out, further savings would have been possible by using fewer posts and truss elements. (This would have been the case if the project had been constructed in county territory directly across the street.)

The building is opened visually to the outside by large stretches of fixed glass, which in turn introduced a set of problems. A buffer zone running the two lengths of the structure was devised, composed of a planted strip of garden sandwiched between the glass walls and the porcelain-enameled sun screen. Planting acts to precool outside air before it reaches glass surfaces and, along with the screen,

tempers heat and glare reflected from surrounding pavements. The twisted perforation in the expanded metal throws out of focus the gaze of passersby to insure sufficient privacy for the interior without sacrificing light. For good measure, the climatic buffer reduced the air conditioning load by about 10 tons and the sun screen eliminates the need for blinds and drapes.

An entry-concourse bisects the structure (photo on p. 9): business functions housed on two floors in one half of the building, a large auditorium with a recreational lanai along one side in the other. The concourse serves as a pleasant plaza for conversation and holds overflow crowds from the adjoining auditorium. Two folding partitions divide this area into three separate halls and retract into compartments integrated with chair storage cabinets on one wall. A movable stage is on rubber-tired casters. Since union officials stipulated that the building was to be a community facility—a service center—, the lanai provides space in which this program can develop. There is a kitchenette for coffee and snacks; tables and chairs are handy for quiet games; and the area becomes an extension of the auditorium for receptions and the like.

Spanning the lobby, the catwalk leads from the stairwell to the second floor hallway. The stairwell itself is a series of transparent planes enlivened by stained glass insets. Overhead, the zigzag reinforcement pattern continues uninterrupted throughout the building as a strong element of continuity.

Marvin Rand

Julius Shulman

Marvin Rand

BUILDING'S QUALITIES are appropriate for union membership, mainly aircraft metal workers concerned with lightness and air, fabrication of metal for flight and end products of beauty. Combination of openness and privacy is achieved principally through interpenetration of special areas, such as in president's office (above) where buffer zone planting becomes intimate garden. Dues payment counter divides lobby (top) from business office. Lounge (left) with trophy display is opposite lobby.

Marvin Rand

METAL SCREEN beyond glass walls helps to filter out objectionable aspects of site, leaves interior quiet and cool.

UNION SERVICE CENTER

OUTLINE SPECIFICATIONS

Structure: foundation: concrete caissons; frame: steel columns and trusses—(V-Lok) Macomber, Inc.; roof: gypsum acoustical formboard—(Pyrofill) United States Gypsum Co.; floors: concrete slab on first and wood on second.

Exterior Finish: glass curtain walls—Republic Glass Co.; stucco integrally colored coat blown on gunited plaster.

Roof Surfacing: built-up composition and coal tar pitch finished with light gravel.

Doors: exterior: sliding glass—Panaview Co.; swinging glass in vestibule—Rebco, Inc.; interior: sliding steel-clad to close off auditorium from concourse—Richard Wilcox.

Floor Surfacing: asphalt tile—(Matico) Mastic Tile Corporation of America; lithochrome concrete in lobby; plain concrete with asphaltic concrete insets in concourse and lanai.

Partitions: drywall on wood studs; modular brick at mechanical room—Davidson Brick Co.

Interior Finish: stucco integrally colored coat blown on gunited plaster; dust-pressed tile in toilets—Mosaic Tile Co.

Ceilings: gypsum slotted acoustical formboard (undersurface of roof).

Lighting Fixtures: incandescent—Prescolite Manufacturing Corp.; fluorescent—Ruby Lighting Corp.; lamp in stairwell—Howard Miller.

Heating and Air Conditioning: 40-hp. central compressor—Chrysler Corp., Airtemp Division; evaporative condensor—Recold Corp.; distributing fans—Bush Manufacturing Co.: furnaces—Reznor Manufacturing Co.; registers and grills—Titus Manufacturing Corp., Inc.; exhaust fans—Pryne & Co., Inc.

Plumbing and Sanitary: water closets and lavatories—American-Standard; drinking fountains—Larco, Inc.

Special Equipment: sun screens: expanded metal—(Armorweave) United States Gypsum Co.; porcelain enamel finish—California Metal Enameling Co.; stairway: milled oak handrails and floating steps; stained glass—Judson Studios; sign: bronze letters and enamel filling—A. J. Bayer Co.

Total Area: 18,300 sq. ft.

Total Cost: $204,900.

Cost per Square Foot: $11.20.

Date of Completion: November 1957.

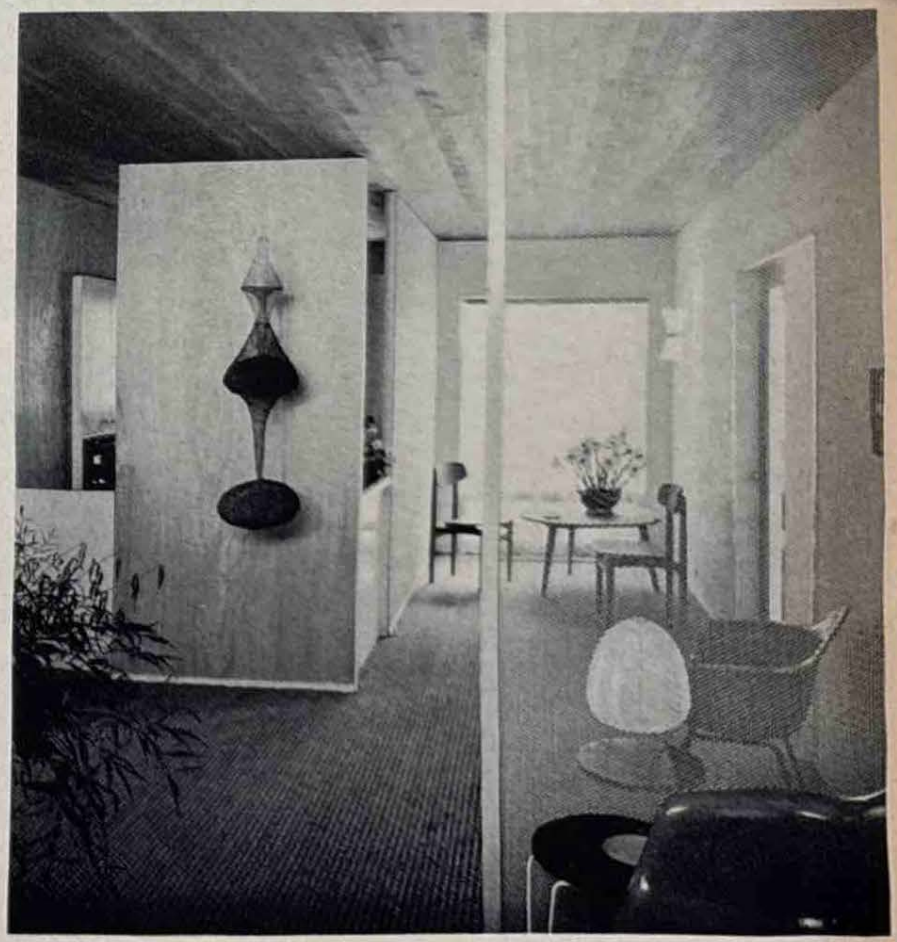
Integrated design serves six psychiatrists

INTEGRATION of spaces with materials, finishes, colors, lighting and furniture, all selected by the architect down to the last detail, has converted a small residence into a very satisfactory office building for six psychiatrists engaged in individual practices. Although the interiors were done on a limited budget, each item was chosen for its fine design and workmanship. Remodeling was accomplished with a minimum of structural changes; soundproofing by doubling the partitions between rooms with an insulating blanket core.

Waiting room seats 12 persons and serves as a monthly meeting room for the doctor-owners. Lowered ceiling in the reception area is finished with fir boarding, continuing the plane of the exterior roof over the entrance steps. Remainder of the ceilings and walls are an off-white plaster, which exploit the ash-paneled partitions, teak woods, woven matting patterns and black pottery. Thus the rooms appear more spacious than they are and convey a feeling of repose so necessary to a practice of this nature.



SCREEN separating entrance door from waiting room is aluminum honeycomb ceullular construction, 4x8 ft., held in wood frame. Hanging wire sculpture is by Ruth Asawa.

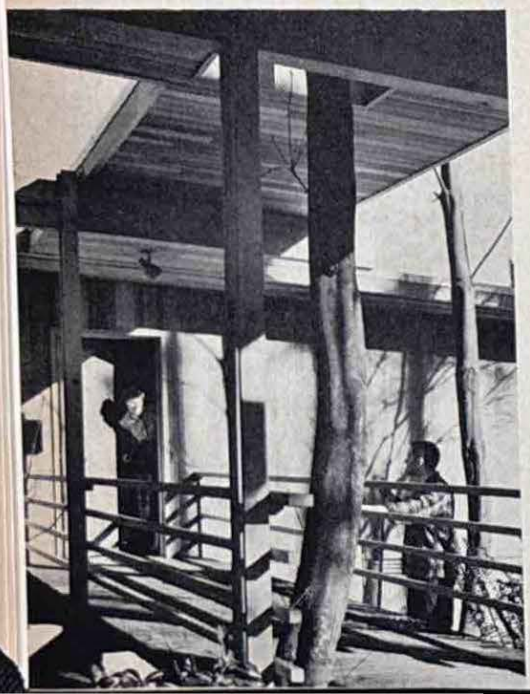
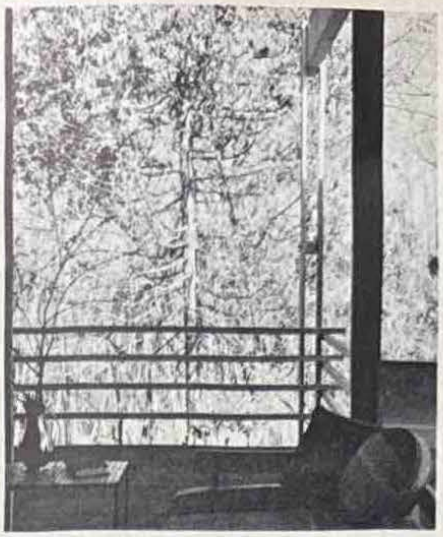
Cedar house is at home in wooded ravine

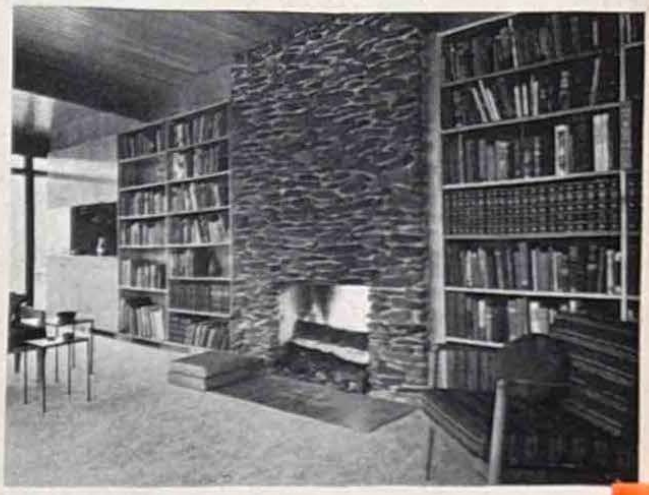


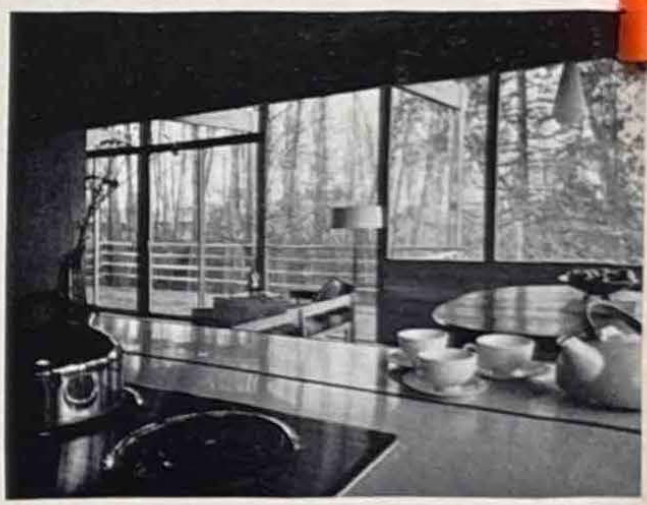
IN DESIGNING this house for a young couple of moderate means who are sympathetic to natural native surroundings, the architects developed a studio-like compactness in plan which was necessitated by budget limitations. The owners, both former school teachers, specifically requested three bedrooms, with maximum free living space. Although the completed portion of the house is basically small—1,310 sq. ft.—, carport, entry bridge, decks and trellis have been employed as continuations of the house, making it appear much larger inside and out. It is sited at the terminus of a ravine, which permitted a minimum of excavation and grading for the unfinished lower level, whose areas are roughed in only (see floor plan).

Birch cabinetwork is used extensively as partitions and the entire core of the house has the quality of one continuous unit, forming an island which contains bathroom, kitchen and stairway. Ceilings repeat the cedar of the exterior siding and soffits. Living and dining areas on the north look out on the wooded ravine; bedrooms on the south are screened by latticework and a hemlock tree hedge.

ENTRY BRIDGE leads to carport. Structural framing members are stained medium dark brown; exterior cedar siding has clear stain finish to retain natural value of wood.







LIVING ROOM opens through sliding doors to balcony deck; continuous wall of bookshelves and storage cabinets flanks fireplace of mountain native stone, hand picked by owners; dining room and kitchen also open through sliding doors to terrace and level portion of property containing garden, fruit trees and tennis court (part of former estate).

OUTLINE SPECIFICATIONS

Structure: foundation: continuous concrete; frame: post and beam; roof and floors: wood.

Exterior Finish: 1x4 western red cedar; stain—(Benite) Daly's, Inc.

Roof Surfacing: smooth surface asphalt—Johns-Manville Corp.

Doors: natural finish birch; sliding aluminum—Arcadia Metal Products.

Floor Surfacing: asphalt tile (Corktone) Kentile, Inc.; subflooring—United States Plywood Corp.

Insulation: fiberglass batts and aluminum jacket.

Partitions: birch cabinetwork.

Interior Finish: ½-in. gypsum board—United States Gypsum Co.

Ceilings: 1x4 t&g cedar; stain (Benite)—Daly's, Inc.

Heating: forced warm air—Rossoe Manufacturing Co.; controls—Minneapolis-Honeywell Regulator Co.

Ventilation: exhaust fans in kitchen and bathrooms—NuTone, Inc.

Plumbing Fixtures: lavatory, water closet and bathtub—Crane Co.

Total Area: 1,310 sq. ft., each floor (basic house).

Cost per square Foot: $13.40 (basic construction only).

Date of Completion: December 1957.

'Home of the Month' spells

Winning project in the 1957 "Home of the Month" competition—the Carsten Lien residence designed by Bystrom & Greco—is featured on the two preceding pages. Shown here, without comment, are sketches of last year's 11 other entries as they appeared in the Sunday Seattle Times.

ARCHITECTS frequently are asked to give professional advice without payment, a condition which subconsciously may lead to insecurity and frustrations, a Northwest group of practitioners were told by a psychiatrist just the other day.

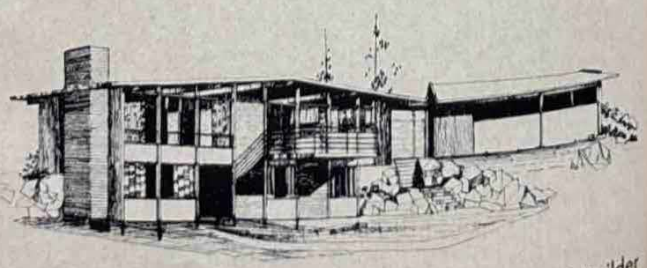
A contributing factor, the doctor suggested, is a lack of public relations to sell the public on the full service rendered by a professional. The architects, of course, had heard this many times before but the truth of the matter is that neither the profession as a whole nor the individual practitioner has done very much to help the situation.

One step in the direction of educating the public that the complete service of the architect makes toward a better building, or in this particular case a residence, is Seattle's "Home of the Month" competition. Co-sponsored by the Washington State Chapter, American Institute of Architects, and the Seattle Times, it is perhaps the most successful promotion of its type, not only on the West Coast but in the entire nation, and certainly is unique if only for its longevity, now winding up the fifth year of continuous operation.

Each month an AIA chapter committee set up to handle the program selects a house from among its members (corporates and associates) to be featured in the Sunday Times with sketches and floor plan prepared by the architect and text prepared by the newspaper's architectural writer, Margery Phillips. That same day, in a stage just previous to completion and occupancy, the house is open to the public. As many as 1,500 to 3,500 persons have toured a project in a single day.

As the grand finale each year an all-architect jury is named to choose the best design, scored on plan, general appearance, use of materials and site development. Owner of the winning house receives a $500 check from the Times, the architect is presented a sculptured award and the contractor also is honored, as are the clients, designers and builders of each of the year's 11 other entries, at an an-

ARCHITECT: Ronald R. Campbell



public relations in Seattle

nual dinner. In addition to the regular press publicity and the open house itself, by-products of the competition include a display of the photographic panels in leading department stores and an exhibit of the sculpture and winning panel at the Seattle Art Museum.

Surely the program is simple enough but several problems do arise in its execution and it must be admitted that some architects, although they represent a minority, do not concur in its value as a public relations medium. This leads to the first and most important obstacle: selling the architects themselves on the merits of the competition. While younger practitioners ordinarily are eager to get the publicity—and an occasional residential commission which might result—, a number of better established architects have not participated in the program. And there have been times when the committee has been fortunate to have even one house to show for a particular month.

The architect may have to sell his client on the idea of hundreds of people filing through the house. The majority of owners, however, who employ architects tend to be sympathetic toward the program and often comment later that it has been a most gratifying experience. Contractors too for the most part cooperate to the fullest extent, in some cases even having done a very modest amount of redecorating at their own expense.

What then about the overall success of the program? One could cite the average number of persons who visit an open house or the inches of publicity devoted to it by the Times and other press media. But its true value is more intangible and if an architect-conscious climate is being created in the Greater Seattle area, certainly the "Home of the Month" program has made its contribution. A home marketing specialist from Pittsburgh, for example, on a recent visit pointed out that more Seattle builders use architects than anywhere in the country.

As a past chairman told chapter members, "If it has fallen short of your expectations, perhaps it's because you haven't participated. It follows that the architect who understands the validity of the program has clients who will want to participate." Thus it will continue into its sixth year to emphasize the importance of continuous cooperation between architect, owner, builder and landscape architect in producing livable, tailor-made residential designs.

RECENT ENTRANT in residential field are corrugated void boxes shown in place to provide lightweight, sturdy concrete foundation on swampy land.

Unique application for void boxes

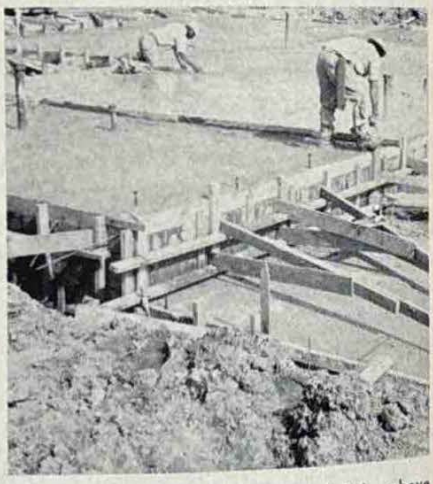
CORRUGATED void boxes designed for poured concrete foundations and flooring entered the field of residential construction recently when they were used in the "floating" foundation of a house built on fill land adjacent to the Belvedere Lagoon on San Francisco Bay.

Employed on this job were Fibrforms, made at the Antioch, Calif., plant of Fibreboard Paper Products Corp., with the interior reinforced with an egg crate of crossed, interlocked sections of paperboard. A water-resistant adhesive was used in the forming of the void boxes, providing further protection against distortion from moisture. They withstood more than 10 in. of rainfall without damage between their initial placement at the building site and the pouring of the concrete foundation.

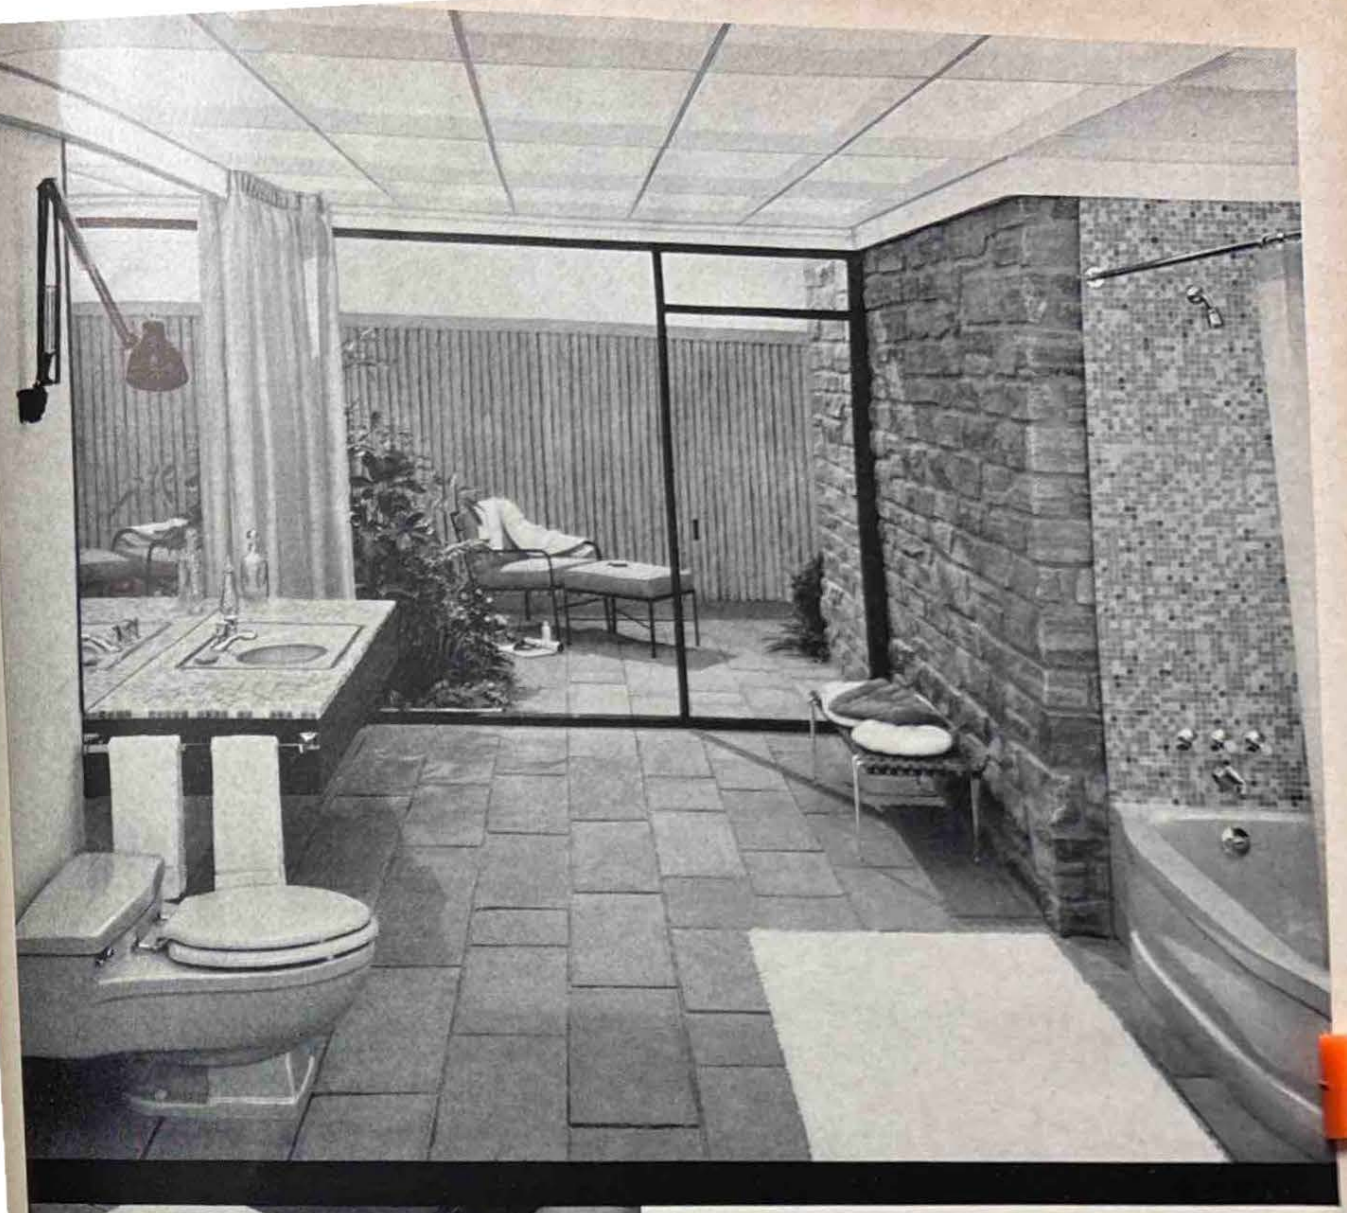
Void boxes were spaced 3 in. apart on a thin graded bed of sand; ½-in. reinforcement steel was placed between the boxes and slightly above the level of the sand. Additional slab reinforcement consisting of 6-in. wire mesh was placed over the boxes before the concrete was poured, to a depth of 3 in. above the Fibrform tops.

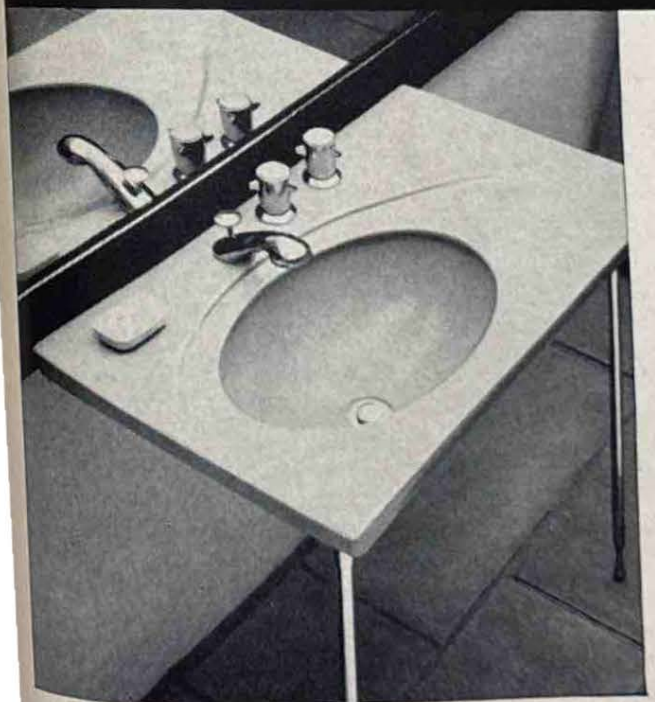
In the design of this foundation, architect Joseph Esherick minimized future settling by removing an amount of earth under the house equal in weight to that of the structure itself. The air-filled voids, created in the slab by the paperboard boxes, produced a foundation of more than 18 in. in depth but of minimum weight. Depth of the slab combined with the reinforcement grid within it produced a foundation of strength; the voids assured its proper functioning as a floating foundation.

August E. Waegemann was the engineer; Brown & Elkin Construction & Engineering Co., contractor.



CONCRETE is poured to depth of 3 in. above tops of boxes.





NEW! This vitreous china lavatory with revolutionary new fitting arrangement, featuring spray spout, may be built into a vanity or installed on a cabinet or legs.

Briggs ideas that help sell more homes

A unique bathroom featuring the ultramodern, wide-shelf Chaucer lavatory

Simplicity that spells personal luxury . . . contemporary textures that delight . . . accented by the compatible color of handsome Briggs Beautyware in such harmonizing tones as Coral, Autumn Yellow, Sea Green, Sky Blue, Pearl Gray and Sandstone. Here's a bathroom filled with translatable ideas for your homes, including the enviable luxury of Briggs' new, wide-shelf lavatory. For striking bathrooms that will make every home "stand out" against competition, build with Briggs Beautyware—America's smartest plumbing fixtures.

Architect reviews masonry schools

A combination of precast reinforced concrete structural elements and the use of grout filled masonry unit walls offer great possibilities for economy in the design and construction of quality schools. San Francisco architect Donald Powers Smith gave this view at a dinner meeting of the Masonry Joint Industry Board of the Northern California Coast Counties earlier this year.

In his review of block masonry construction in school building, Smith pointed out that "it is significant that many important masonry structures located in the heart of the 1906 San Francisco earthquake zone remained undamaged from the quake.

"The result of California's experience with earthquakes," he said, describing the evolution of the state's Uniform Building Code, "seemed to be a quick substitution of light wooden frame structures for the more imposing masonry buildings. The stimulus to the building industry from the emergency of frame construction was healthy in that it did open up a flexibility of planning that had not been inherent in the usual school building prior to the Santa Barbara-Long Beach earthquakes.

"This stimulus also sent the clay building products industry scurrying to researchers to develop new and practical ways and means of constructing economical and functional masonry buildings which could meet the demand for earthquake resistance."

Opinions expressed by officials administering California's state aid program relating to new construction "seemed to indicate a belief that masonry buildings" could not come within cost allowances. "My office," Smith declared, "has been committed to a policy of providing masonry school buildings and I can produce documented records showing that our reinforced concrete and masonry buildings cost no more than our similarly planned and equipped wood frame buildings.

"Department of Finance authorization to go to bids on one project contained the statement that the reinforced concrete construction involved 'may' cause the construction costs to exceed the approved estimates."

On this particular project, the architect pointed out, the reverse actually happened and the actual bids permitted the state allocations to be reduced by 13% and subsequent projects produced savings under the state aid allowance of 13.7%, 15%, 1.1% on a small project and similar under-cost figures.

"These projects are not austerity type schools by any means. They incorporate panel or central space heating, tri-lateral natural lighting and fluorescent luminous ceilings in at least two of the projects, aluminum sash with glare-eliminating glass, etc.

"The essential virtue of reinforced concrete precast is that it permits great flexibility and permeability of the exterior walls which may be entirely of glass or masonry panels. Interior bearing partitions are completely eliminated.

"These precast frames are generally made flat on the ground on a cheap throw-away concrete slab setting bed and the frames cast using the same plywood forms, one upon the other, then lifted by mobile cranes into their final position.

"This method of casting flat on the ground reduces concrete pouring costs and formwork costs and produces a better concrete in the structure."

Although Smith has used this type of construction widely in his school design, his office has also "made extensive use of it in somewhat more imaginative ways in building churches."

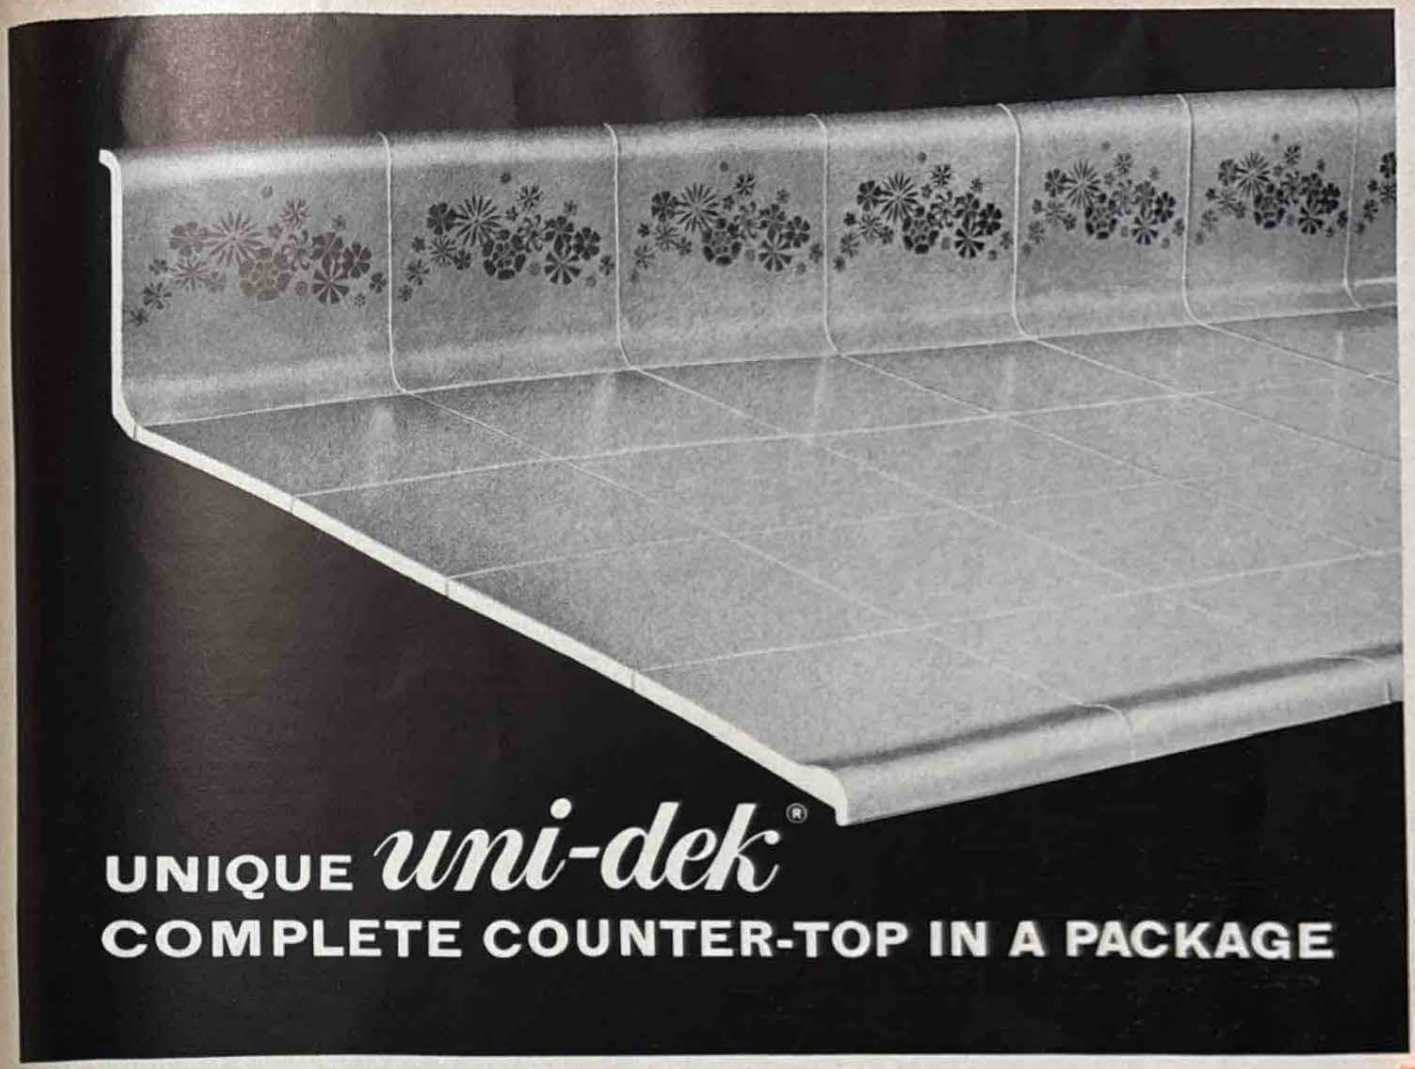
He declared that the masonry industry "in order to regain its position of eminence in the building industry" must face head-on several major problems which include the waterproofing of masonry walls and the failure to eliminate efflorescence "both of which have lost to the industry many, many projects."

One of the developments in masonry construction to which Smith, as an architect, has made a considerable contribution is the use of "high-lift" masonry grouting as contrasted to the so-called "low-lift" masonry grouting which is much preferred by many masonry contractors.

"In low-lift construction," he said, "we have had cores cut from the bottom of the walls with the masonry face falling away from the grout even before the core could be cut out. On our high-lift construction I defy anyone to detach the masonry face from the grout.

"We have had walls poured in this manner which actually exuded the concrete through the face of the lower block; and the resultant structure was infinitely better."

Smith said his office specifies high-lift grouting with the use of vibrators on the last 3 ft. of the lift in the cells in which the steel does not occur. Not only does the use of vibrating equipment virtually eliminate the need for rodding, he asserted, "but it also gives the contractor a better job and saves on all-around labor costs."



UNIQUE *uni-dek*®
COMPLETE COUNTER-TOP IN A PACKAGE

THE NEW CERAMIC TILE COUNTER-TOP

This complete ceramic tile installation offers exclusive appearance. Fewer pieces to set. Greater economy because you can set same area for less cost. Adds value to any home. Great consumer appeal. Handsome, neat appearance. Only counter-top with exclusive Ceratile patterns on back-splash. Fewer grout joints make for easier cleaning.

Uni-Dek has one piece stretchers and angles—all in standard 6″ X 6″ size. Available in all RAMONA colors. Harmonizes with fixtures and appliances. Back-splash available in plain colors or patterns.

Free descriptive literature. Write or contact us.

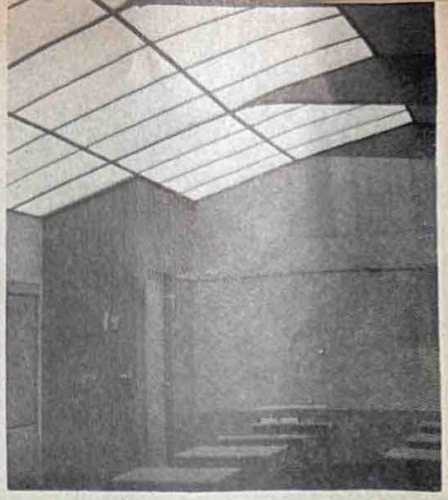
PRODUCTS IN ACTION

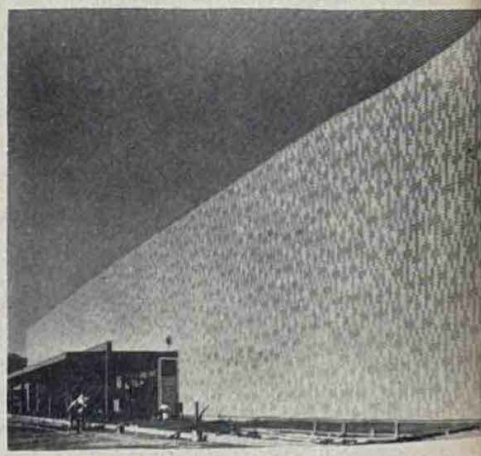


TOPLIGHTING SYSTEM

is specifically designed by Architectural Plastics Corp. as basic part of roof structure of Nyssa Primary School in Nyssa, Ore. Integral flat sheet tension skylight, 40x180 ft., is constructed of 49x120x⅛-in. reinforced plastic sheets. Skylight comprises over 50% of classroom roof area. Secondary relights of 4 ft. by 8 ft. by 1/16th in. are used in rooms, corridors.

CIRCULAR PHONE BOOTHS

in which sound is trapped by perforated hardboard panels backed with Fiberglas so no doors are needed are found in lobby of new Ford Motor Co. central office building in Dearborn, Mich. When four booths were erected, Masonite ⅛-in. Peg-Board panels were secured to framework, Fiberglas was applied on outside and light coat of enamel sprayed into holes in perforated hardboard to "set" insulating material. Formica then was applied to outside of framework. Three pole legs hold booths 2 ft. off floor; height of each is 7 ft. Booth designer: Skidmore, Owings & Merrill.

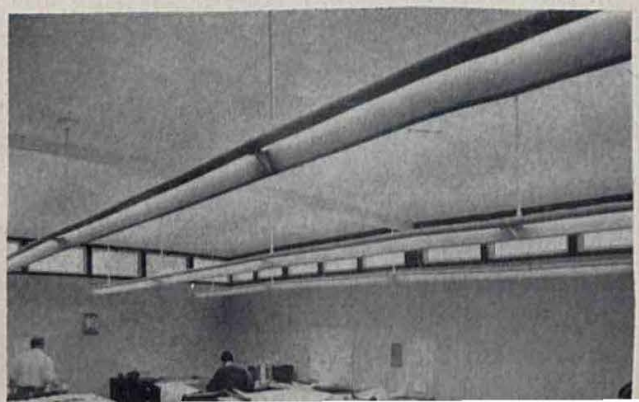


LARGEST TILE SURFACE

in Hawaii features 30,000 sq. ft. of Hermosa tile on exterior of 300-ft. long Liberty House department store in Honolulu. Tiles are 3x6 in. and 6x6 in. in special colors of blue and green. Architects: Victor Gruen Associates.

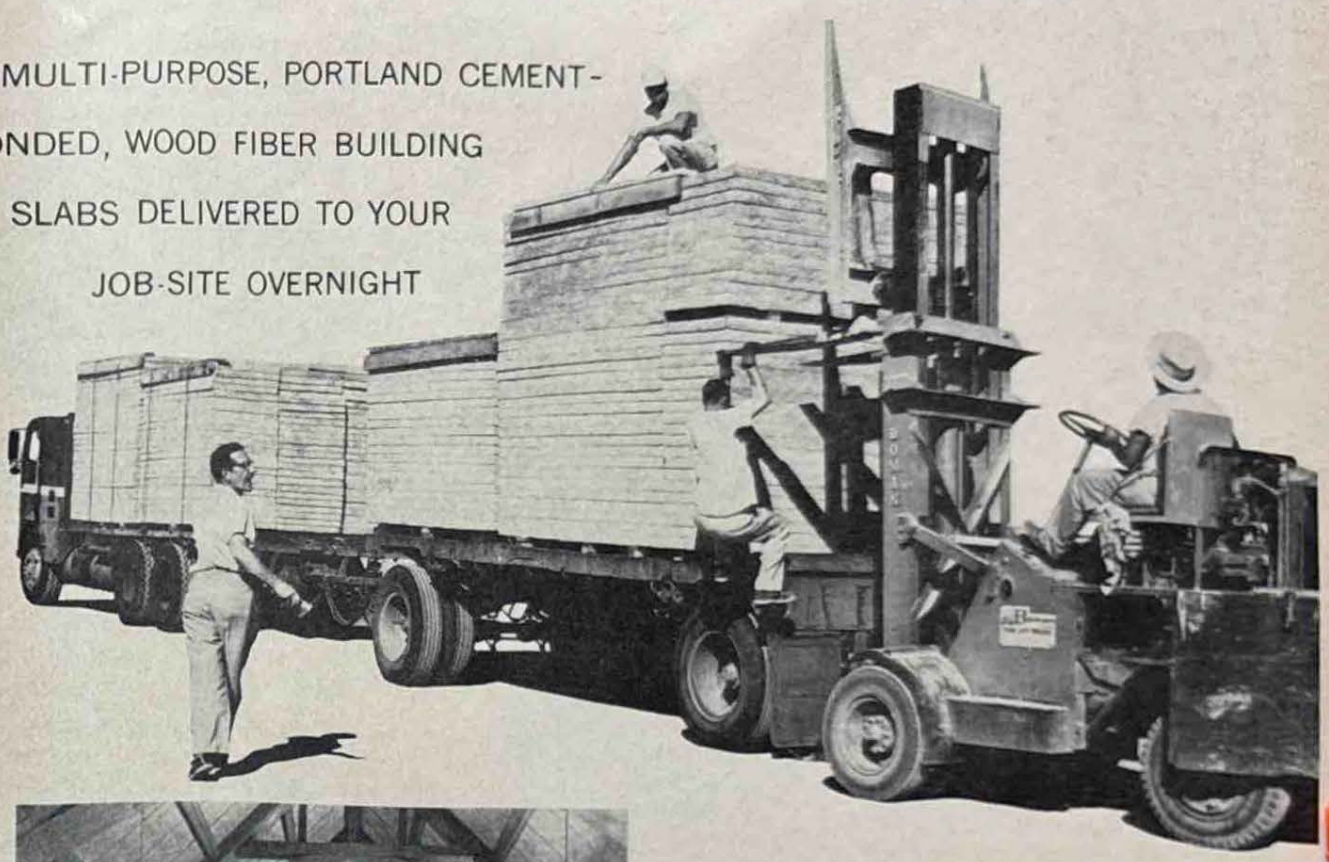
EFFECTIVE LIGHTING INSTALLATION

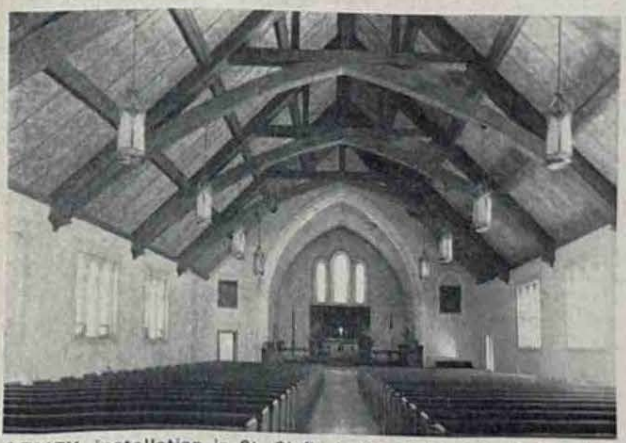
is achieved with Peerless Phi/Bete fixtures joined in rows in drafting room of Herrick Iron Works in Hayward, Calif. Reflector coated fluorescent lamps direct 75% of light upward, 25% downward. Upper portion of light is completely shielded, downward portion is softly diffused through lamp coating. Average of 100 footcandles is maintained. Architect: John C. Warnecke; engineers: Wayha, Weir & Finato.



Now we're speeding Cemex to Western builders!

MULTI-PURPOSE, PORTLAND CEMENT-BONDED, WOOD FIBER BUILDING SLABS DELIVERED TO YOUR JOB-SITE OVERNIGHT





CEMEX installation in St. Olaf's Lutheran Church, Fort Dodge, Iowa. Architect, Frank W. Griffith; contractor, Glenn Walker & Co. Slabs were left exposed to take advantage of their decorative and acoustical qualities.

In the past 12 years CEMEX has proved itself in nearly 1300 commercial, industrial and educational structures. Its *acoustical* qualities hush noise; its *insulation* ability protects against temperature extremes; its *structural* strength can even support load-bearing walls! CEMEX is ideal for roof decks, exterior walls, interior wall linings, ceilings and partition walls. CEMEX is easily installed by any competent contractor.

Now from its new Arizona plant, CEMEX can be delivered to nearly every Western point within 24 hours. If CEMEX is new to *you*, call or write for facts!

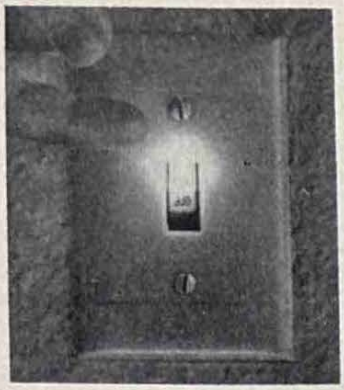
PRODUCTS

glow-in-dark toggle

To end fumbling for a light switch in dark or dimly lit areas, the Sierralite has a toggle which emits a soft



glow whenever it is in the off position. Operating indefinitely at a cost of less than one cent annually, the mercury switch may be wired either from the top or back for ease of installation and comes in both single-pole and three-way models.—Sierra Electric Corp.

(Item No. 1)

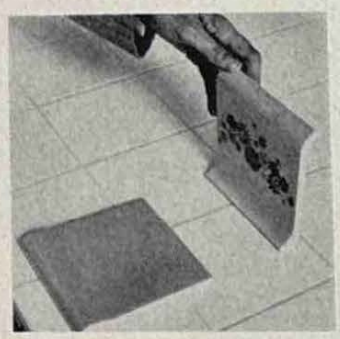
floor-ceiling system

Revolving about Mahon's Cel-beam decking, a combination floor-ceiling system can be employed simultaneously to distribute air, contain recessed light fixtures, house a sprinkler system, provide electrical and telephone raceways in the structural subfloor,

furnish acoustical control and maintain ceiling height by eliminating extra space for conventional air conditioning ducts. System not only offers a neat looking installation but has sound-absorbing properties. Decking also can be used in remodeling where use of bar joists and conventional ductwork for aid conditioning would cause a loss of head room or in lining up floor levels of a new multistory addition with those of an existing structure.—R. C. Mahon Co. (Item No. 2)

ceramic tile package

One-piece stretchers and angles in standard 6x6-in. size are the key features in Pacific Tile's complete cer-

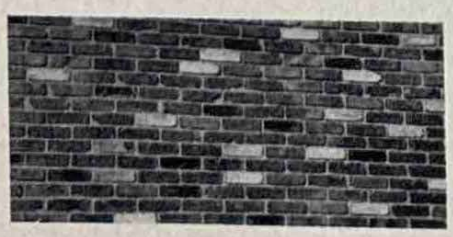


amic tile countertop in a package. Called Uni-Dek, the installation permits the setting of greater areas with less materials and time and is easier to clean because of fewer grout joints. The package is offered in all Ramona colors to harmonize with fixtures and appliances; back splash comes in plain colors or in the Ceratile patterns.—Pacific Tile and Porcelain Co.

(Item No. 3)

decorative masonry

PanelStone, a decorative masonry produced from inorganic materials and glass fibers permanently bonded with vibrin polyester resins, can be applied both inside and out for use in residential and commercial construction. Its absorption rate is about 1/100 of

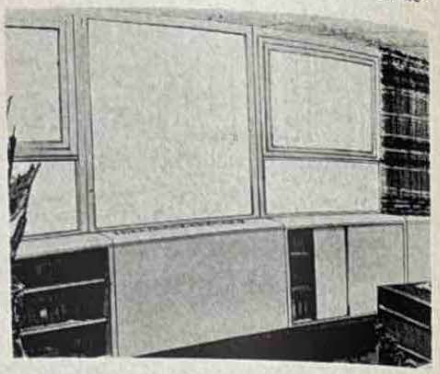


that of ordinary masonry and it is not affected by normal exposure to sun, extreme heat or freezing temperature. Panels are 4x8 ft., varying in thickness from ⅝ to ¾ in., and come in Palos Verdes, split roman and Arizona reproductions, in addition to the used brick shown here.—PanelStone.

(Item No. 4)

curtain wall panels

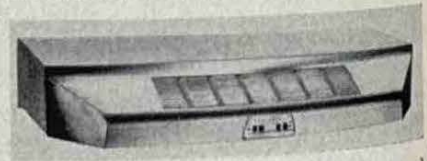
Intended particularly for true perimeter buildings such as motels, hotels, apartment houses and office struc-



tures, Lupton panels now have air conditioning units built in as an integral part of the curtain wall. From a construction standpoint, the panels eliminate cooling towers or bulky ductwork and plumbing connections; from the users' standpoint, they allow each occupant to tailor the temperature of his own area and also remove smoke and odors through their exhausts. Two types of interchangeable conditioners are available: a heavy duty unit to serve several people and a lighter model to serve only one or two—Michael Flynn Manufacturing Co. (Item No. 5)

no-duct range hood

A self-contained hood for gas and electric ranges which eliminates the need for vents, ducts and outside louvers



makes use of an activated charcoal filter to remove by absorption cooking fumes, odors, grease and smoke. The Nautilus can be installed easily in old houses or new ones; the fan requires no cabinet or shelf space. It is available in three models for installation on the wall, under cabinets and over ranges in peninsular arrangements. Sizes range from 24 to 28 in. in length; finishes include electroplated brushed antique and hammered copper, stainless steel and porcelain enamel in eight colors. (Item No. 6)

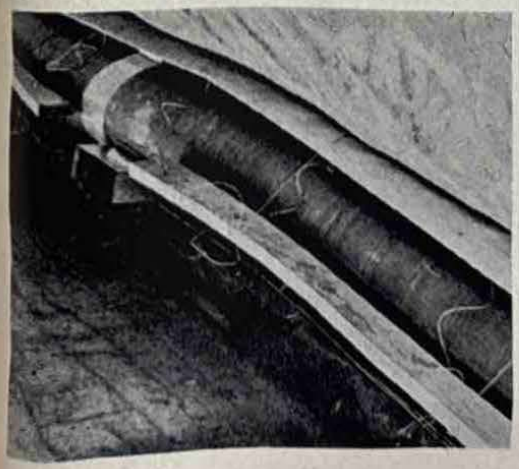
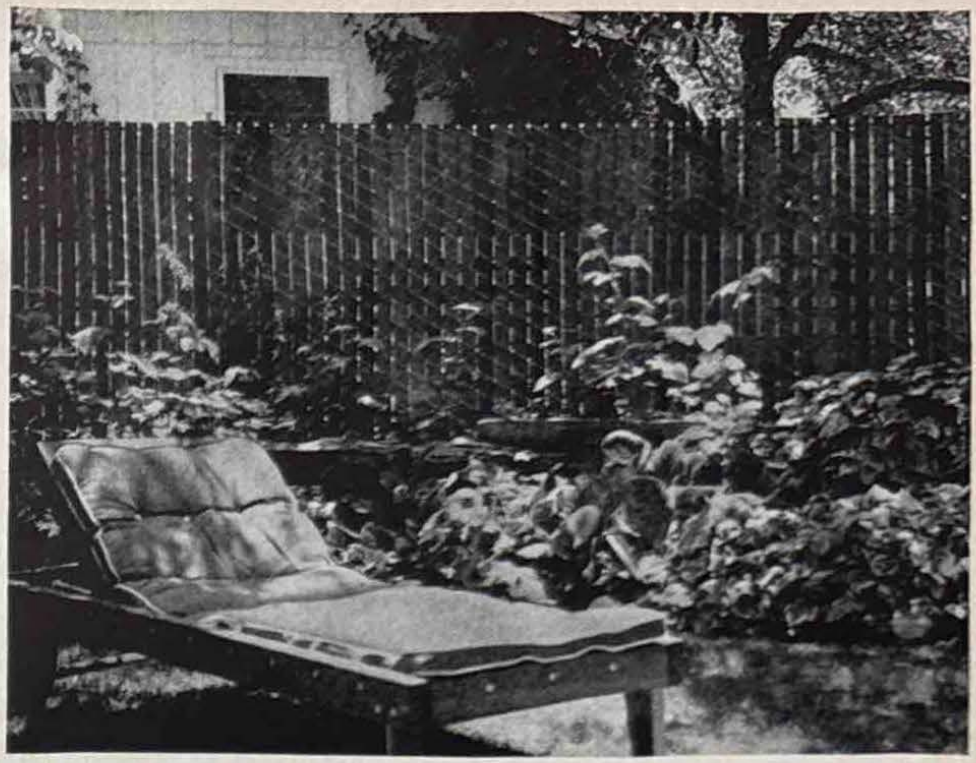
hole-sizing fasteners

A new concept in fastening, automatic sizing of drilled holes during fastener installation, has been developed by Huck, with two prototypes—displayed during several recent symposiums on the West Coast—expected to be put into production in 1959. One is a broaching fastener which automatically sizes the drilled holes with a four-step progressive broach that is integral with the fastener pin. Hole is sized during installation to produce an interference fit between hole and pin shank within the most strigent tolerances. Second hole-sizing lockbolt is an extruding fastener which is provided with an integral extruding land to bring the drilled hole to size during installation. This design produces the same results as the broaching fastener in the matter of controlled interference fit tolerances but does not permit as great an increase in drilled hole diameter.—Huck Manufacturing Co. **(Item No. 7)**

floor slab forms

Savings up to 50% in the amount of concrete used are reported with Sav-Crete forms for laying ducts for floor slab perimeter heating. Introduced in the Northwest and now being marketed nationally, the forms insure complete encasing of the duct to a predetermined thickness, prevent floating or shifting of the duct while concrete is being poured, keep dirt out of the concrete and permit accurate specification of the quantity of concrete needed for a given job. Only special materials required are the Sav-Crete spreader spring which is wrapped around the duct at intervals as a spacer and the Sav-Crete ply which is wrapped around the springs. Concrete poured into the top of the form flows freely between the springs and around the duct but cannot be spread into the trench. Sav-Crete can be used on ducts 4 to 36 in. in diameter, allowing either 2- or 3-in. thickness of concrete.—Eward Associates. **(Item No. 8)**





Designing a new home for a client?
Plan for the outdoor living area with

USS **Cyclone Rustake Fence**

Thanks to Cyclone Rustake Fence you can give your clients the outdoor privacy they want. Cyclone Rustake Fence consists of slender strips of native redwood inserted into wide mesh Cyclone Chain Link Fence. It's strong, sturdy. All parts which come into contact with corrosive ground conditions are rust-resistant steel. But it has the general appearance of redwood picket.

USS Cyclone Rustake Fence gives a finished look to undeveloped yards. It protects and makes an attractive background for young plants and trees. Cyclone Rustake Fence is an economical buy for your clients. It assures years of service with a minimum of maintenance, never needs painting or refinishing.

Be in a position to supply your clients with complete information on this attractive Cyclone Rustake Fencing by sending today for our free literature—use the convenient coupon below.

USS, Cyclone and Rustake are trademarks

TECHNICAL PUBLICATIONS

Catalog of Built-in Wood Cabinets (AIA 19). Southern California Association of Cabinet Manufacturers, 9126 S. Western Ave., Los Angeles 47, Calif., 1957. 40 pp. $2.

Technical manual of the principles of cabinet design and manufacture, including a discussion of wood and comparative merits of each type for cabinetmaking; has construction details for a variety of cabinets and list of association's specifications.

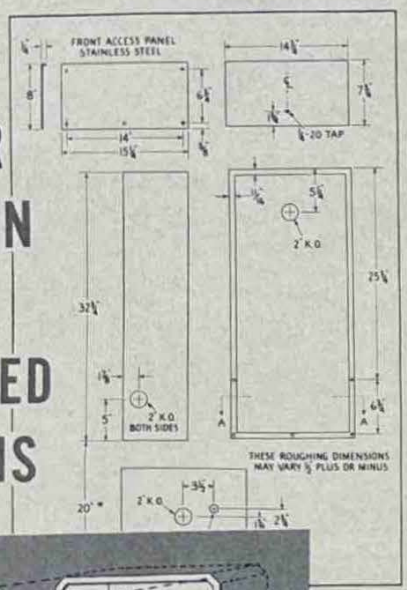
Specifications for Post-Tensioned Prestressed Concrete. Prestressed Concrete Institute, 425 N.E. Fifth St., Boca Raton, Fla., 1958. 4 pp. 35c each; $2.40 per dozen.

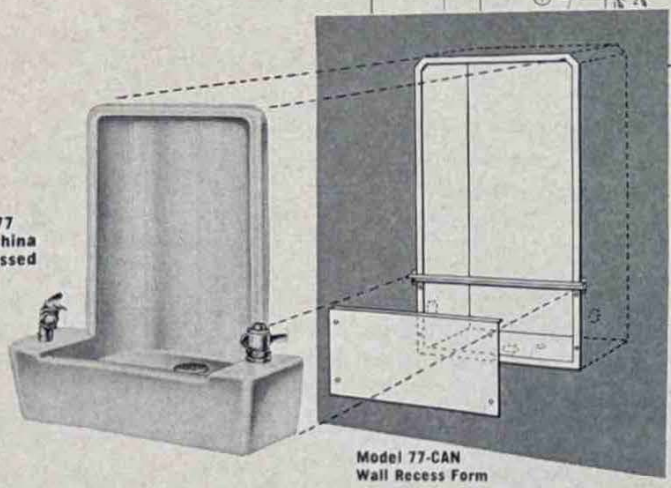
These tentative specifications cover definitions, materials, design stresses, design details and construction.

Proceedings: World Conference on Prestressed Concrete. World Conference on Prestressed Concrete, Inc., Room 216, 417 Market St., San Francisco 5, Calif., 1958. 600 pp. $10.

Contains 64 papers presented at the conference which drew 1,200 delegates from all over the world to San Francisco last year.

NOW...IT'S EASIER THAN EVER TO GAIN THE LUXURIOUS BEAUTY OF RECESSED DRINKING FOUNTAINS





Model 77

Semi-Recessed

Model 77-CAN
Wall Recess Form

WALL RECESS METAL FORMS for Haws Fountains...provide the exact required opening, access panels, knock-out holes, etc., for simple, efficient, economical installation. Install HAWS special metal "CAN" form in the unfinished wall, and the recessed fountain fits snugly and securely. Write for detailed specs on all HAWS recessed models, with special metal forms. Write today.

See HAWS Catalog in Sweets Architectural File

HAWS DRINKING FAUCET COMPANY
1441 FOURTH STREET • BERKELEY 10, CALIFORNIA

Proceedings: 13th Conference of Reinforced Plastics Division (2 volumes). Society of the Plastics Industry, Inc., 250 Park Ave., New York 17, N.Y., 1958. $7.

Of special interest to architects and builders are papers on reinforced polyester acrylic panels and quality control, structural sandwich panels, building codes as applied to reinforced plastics building materials, plastics in the U.S. Pavilion at the Brussels World's Fair and reinforced plastics in architectural applications.

Manual of Accident Prevention in Construction. Associated General Contractors of America, Inc., 20th and E Sts. N.W., Washington 6, D.C., 1958. $3.25.

Fifth revised edition includes substantial alterations necessary because of developments in the past six years which have had a major effect on construction technology.

Tentative Specifications for Porcelain Enamel on Aluminum as Used for Signs and Architectural Applications. Porcelain Enamel Institute, 1145 19th St. N.W., Washington 6, D.C., 1958. $10 per 100 copies.

Specifications cover use on architectural panels, siding, framing, trim, signs and similar products designed for outdoor exposure, along with requirements for base metal, finish and thicknesses of coatings.

Drawing for Good Reproduction. National Association of Blueprint and Diazotype Coaters, 1757 K St. N.W., Washington 6, D.C., 1958. 32 pp. $1.

Written by Arthur H. Rau, drafting consultant of General Electric, the manual suggests techniques for improving reproductions; intended for use in mechanical drawing classes and reproduction departments.

Proceedings: Second Congress of the International Prestressing Federation. Federation Internationale de la Precontrainte, Terminal House, Grosvenor Gardens, London, S.W. 1, England, 1958. 990 pp. $15.

Treats new developments in prestressed concrete since First Congress in 1953; printed in three languages—English, French and German.

Building Exits Code. National Fire Protection Association, 60 Batterymarch St., Boston, Mass., 1958. 256 pp. $1.50.

Contains a number of amendments based on action taken at a recent annual meeting in Chicago, notably provisions on exits from private dwellings.

Building Codes: Compilation of Standards. American Society for Testing Materials, 1916 Race St., Philadelphia 3, Pa., 1958. 1060 pp. $8.

Contains over 200 standards in their latest forms, including 18 not included in the original 1953 edition or its 1956 supplement.

Land Planning Manual. National Association of Home Builders, 1625 L St. N.W., Washington 6, D.C., 1958. 264 pp. $5.

Second revised edition covers site considerations, utility systems, lot planning, shopping centers, proper methods of paving, layout of streets and lots to take maximum advantage of natural terrain.

University Technilog on Loudspeakers. University Loudspeakers, Inc., 80 S. Kensico Ave., White Plains, N.Y., 1958. 64 pp. $1.

Called "the sound planning handbook for architects and engineers," it is packed with technical and product information, charts, tables, etc.

Plastics in Building Illumination. Building Research Institute, 2101 Constitution Ave., Washington 6, D.C., 1958. 99 pp. $3.

First comprehensive treatment of plastics and their uses in building illumination, through daylight or electric sources.

Course in Making Mosaics. By Joseph L. Young. Reinhold Publishing Corp., 430 Park Ave., New York 22, N.Y., 1957. 60 pp. $3.50.

One of the few European trained mosaic muralists now executing major commissions for civic buildings, religious structures, medical centers and schools in the U.S., the Los Angeles author reveals the technique of this ancient art in a do-it-yourself book.

MOVIES

Door Control. Glynn-Johnson Corp., 4422 N. Ravenswood Ave., Chicago 40, Ill. 16mm sound, 20 min.

Dramatizes need for appropriate door control mechanisms as protection against costly damage to doors, jambs, hinges and locks.

Roof Decks Unlimited—with Perlite. Perlite Institute, 45 W. 45th St., New York 36, N.Y., 16mm sound, color, 20 min.

Features examples of perlite concete roof decks in contemporary architecture; shows construction details in application over formboard systems, steel decking, paper-backed wire mesh and metal lath.

Who Buys Built-in Refrigeration and Why. Revco, Inc., Deerfield, Mich. Slide film.

Results of a series of six owner surveys over a period of the last three years to determine buyer motivation and influences leading to the sale, along with opinions, preferences and "gripes."

An End to Color Confusion. Bestwall Certain-teed Sales Corp., 120 Lancaster Ave., Ardmore, Pa. 16mm sound, color, 15 min.

Shows development of Color-Tuned line of asphalt roofing and siding shingles, including five pastel blends, two dark blends and three solid colors.

Moving Sidewalks. Hewitt-Robins Inc., Stamford, Conn. 16mm sound, black and white, 15 min.

Shows how passenger conveyors can be used to move people in and around air terminals, shopping centers, stadiums, etc., with special attention given to six conveyors built for new airport at Dallas.

Penny a Pound. Calaveras Cement Co., 315 Montgomery St., San Francisco 4, Calif. 16-mm sound, color, 20 min.

Beginning with a 100,000-ton blast in one of the company's quarries at San Andreas, Calif., the film follows the cement manufacturing process all the way through to the finished product and its ultimate use.

Half-Second Butyrate—a Protective Coating for Exterior Aluminum Surfaces. Eastman Chemical Products, Inc., 260 Madison Ave., New York 16, N.Y. 16mm sound, color, 15 min.

Discusses laboratory and field tests made to determine effectiveness of coatings; describes in complete detail how exterior aluminum surface of a large industrial plant built in 1953 recently was restored and protected against further deterioration.

"Telephone planning boosts our sales — and our reputation!"

says **Robert Vient**, President, Robert Vient Corp., Glendale, Calif.

"Discriminating buyers today look for those important 'extras' that spell the difference between a quality home — and 'just another house.' That's why we include built-in telephone outlets with concealed wiring in all the busiest rooms. This complete telephone planning insures a home that will grow in value over the years — along with our reputation!"

In today's competitive market, Bob Vient, like many other trend-minded builders, recognizes concealed telephone wiring as an indispensable modern sales feature.

We'll be glad to help you plan built-in telephone facilities. Just call our business office and ask for our free Architects and Builders Service.

Pacific Telephone

It pays to include Telephone Planning in every home you build!

T-SQUARE TALK

new offices, firms

Edward J. LaBelle has opened an office for the practice of architecture in the J. S. Ditty Building, Bellevue, Wash. A graduate of the University of Washington, he has been associated with the Corps of Engineers and more recently with several architectural firms in the Seattle area.

Carl B. Troedsoon, architect-planner and author of several books, including "The City, the Automobile and Man" published last year, has opened an office at 501 S. Boylston St., Los Angeles. Born in Sweden, he is a graduate of Columbia University and the Royal Institute of Technology in Stockholm, taught at the University of Southern California and most recently was associated with Victor Gruen Associates.

Krano, Wilson & Ziegler have begun a general practice of architecture at 2715 Center St., Tacoma.

Theron E. Smith has established an architectural office in the Denny Building, Walla Walla, Wash., under the name of Theron E. Smith & Associates. The Idaho State College graduate has been associated with several architectural and engineering firms in eastern Washington and Idaho.

Columbia-Cascade Corp. has been organized to coordinate programming, financing, design, land development and construction in the Northwest, with offices in the Fourth Avenue Building, Seattle. Officers are Robert J. Block, investor, president; John B. Skilling, principal of Worthington & Skilling, structural and civil engineers, and Perry Johanson, partner in Naramore, Bain, Brady & Johanson, architects, vice presidents; John L. Nordmark, executive vice president of Puget Planners, Inc., secretary; and James W. Cawdrey, of the firm of Cawdrey & Vemo, Inc., general contractors, treasurer.

Edwin G. Osness, architect in Billings for many years, has moved to Glendive, Mont., to establish offices in the Douglas Mead Building.

new associates

Harry M. Nakata has joined the Fresno, Calif., architectural office of Allen Y. Lew as an associate.

new addresses

Jensen & Gilham, architects, to 1962 N.W. Kearney St., Portland.

deaths

Roland R. Wilcken, 57, an architect for John Graham & Co. of Seattle, died November 12 following a heart attack. A graduate of the University of Minnesota, he came to Seattle in 1942 from Aberdeen, S.D.

elections

Southern California Chapter, AIA, has elected these officers: Maynard Lyndon, president; A. Quincy Jones, vice president; Howard Morgridge, secretary; Henry Silvestri, treasurer; and Arthur B. Gallion, director, three years.

Southern California Chapter, Construction Specifications Institute, has named George F. Lamb, specification writer, as president, succeeding Redmond Coghlan Jr., architect.

CORRECTION

John W. Maloney and John H. Whitney should have been credited as architects for the Junior-Senior High School in Yakima, Wash., a photo of which appeared in PA&B for November.

1959 Edition

GUIDE SPECIFICATIONS

For General Building Construction

New divisions for dry-wall finish in fire-resistive buildings, and for curtain walls. 20 divisions & sections completely re-written. Most other divisions revised and improved.

Frank Stanton, A.I.A.
Room 314, 1400 Hubbell Place
Seattle 1, Wn.

You may send me the 1959 Guide specifications on approval. I shall return them to you, or send you $25 in full payment, within 10 days after they are received.

_____

NATIONAL AWARD

for achievement in interior design for addition to Canlis' Charcoal Broiler Restaurant in Seattle is received by architects Roland Terry and Philip A. Moore from Mrs. Jule Wilkinson, food editor of Institutions magazine. Project, along with two others designed by Seattle architectural firm, was featured in PA&B for November.

Partnership is dissolved by Pereira and Luckman

One of the nation's largest architectural partnerships, which has been responsible for planning more than $1 billion in construction since 1950, was dissolved last month when William L. Pereira sold his shares of stock and other interests in Pereira & Luckman to Charles Luckman. The firm has been changed to Charles Luckman Associates, while Pereira has resumed his own practice as William L. Pereira & Associates, with offices in the new Union Oil Center in downtown Los Angeles.

The transaction, according to Luckman, included the basic conditions that Charles Luckman Associates 1) retain the staff, office personnel and facilities in Los Angeles and New York and 2) accept the responsibility of all existing client contracts.

Pereira organized the firm in January 1950 with Luckman, who had returned to architectural practice after serving as president of Lever Brothers. Luckman assumed the presidency and Pereira became chairman of the board in charge of planning and design. The partners studied architecture at the University of Illinois, from which both received degrees—Pereira in 1930, Luckman in '31.

In explaining his reasons for withdrawing from the firm, Pereira, who was advanced to fellowship for design in the AIA last spring, said: "This was a long and carefully considered decision. It is my conviction that I should limit the number of projects which my associates and I hope to undertake to those to which we can contribute the most and which we can follow through personally from beginning to end."

The firm received two citations for design in the 1958 national AIA competition.

MANUFACTURERS/SUPPLIERS

• **The Celotex Corp.** has appointed two new distributors on the West Coast: Intermountain Sales Co. of Pasco, Wash., and Ben E. Finley Co. of San Lorenzo, Calif.

• **Permanente Cement Co.** has expanded its Pacific Northwest sales division, headed by manager Ed Kendall. Leo McNett has been promoted to sales supervisor of the division's newly created Washington district and Douglas S. Ashton to a similar post in the Oregon district. Coordinating sales between the districts is Gordon K. Wilson, assistant division sales manager.

• **Trade-Wind Motorfans, Inc.,** of Pico Rivera, Calif., has been purchased by Robbins & Myers, Inc., of Springfield, Ohio, electric motor manufacturer. Trade Wind's sales force will remain intact but will be directed from the purchaser's Hunter Division in Memphis.

• **Architectural Plastics Corp.** has reopened its Seattle office at 3516 E. 115th St., with James B. Dobson as representative.

• **Radio Corporation of America** has named J. F. Ottmar Co. of Spokane as distributor of all types of sound and intercom systems.

• **Colt Ventilation of America, Inc.,** of Los Angeles has appointed Jack Janofsky, a specialist in microclimatology and former manufacturer's representative for the Kilbury blower type heater in southern California, to the firm's expanding technical consultant staff; and Reliable Steel Supply Co. of Los Angeles as distributor in southern California.

• **Graystone of Seattle, Inc.,** held an open house in October for 250 architects, contractors and structural engineers who toured the new block plant, completed at a cost of more than $300,000 and described by company engineers as "the most advanced-design installation of its type on the West Coast."

• **L. E. Carpenter & Co., Inc.,** has a new southern California distributor, Vicrtex Sales Corp. of Hollywood, with C. V. Roff as manager.

• **Armstrong Cork Co.** has established a new Seattle office, comprised of Oregon and Washington territories now operating out of San Francisco and portions of Washington, Idaho, Wyoming and all of Montana from the present Denver district office. Paul H. Hershey, who has been serving as an architectural specialist in the San Francisco Bay area since 1953, will manage the new office, beginning the first of the year.

• **Columbus Coated Fabrics Corp.** has appointed Wallpapers, Inc., of Portland and Seattle as its wall covering distributor in Oregon, Washington and Idaho.

• **Keasbey & Mattison Co.** has named John L. Prechek of Bellevue, Wash., former salesman in its asbestos-cement pipe division, as assistant manager of the San Francisco district.

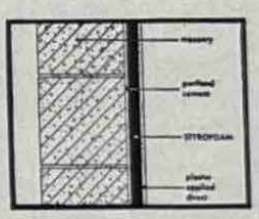
• **Bethlehem Pacific Coast Steel Corp.** has begun operating its 32-in. blooming mill, one of the major new facilities in the company's $25 million expansion and modernization program in Seattle.

• **Kaiser Gypsum Co.** has named Deane W. Rockwell, previously architectural sales representative in southern California, to the post of technical

new construction method with

STYROFOAM®

cuts building costs!



Styrofoam*, a Dow plastic foam insulation, is now available for a completely new construction method. Fully insulated masonry homes with plaster interiors can now be built without the usual furring and lathing. And the finished plaster wall is warm and dry.

Styrofoam is clean, lightweight, easy to handle insulation that does not lose its effectiveness. It resists moisture, heat, cold and deterioration; assures lower fuel bills. And it's easy to cut and shape Styrofoam, even around pipes, windows and electrical outlets.

*Styrofoam is a registered trademark of The Dow Chemical Company

sales engineer in the company's Oakland headquarters.

• **Weber Showcase & Fixture Co., Inc.,** of Los Angeles has reorganized its sales organization into two separate sections—retail and wholesale—with vice president J. L. Kaufhold heading the former, including Weber-Wall partitions.

• **Kaiser Manufacturing, Inc.,** has named Hal M. Blackburn Jr. as western division manager, with offices and plant in Los Angeles, as part of a five-district national network for the distribution of Crest tile setting products.

• **Carlon Products Corp.** has appointed Earl E. Eckstrom & Associates of Seattle as distributor for its line of plastic pipe and fittings.

• **Ador Corp.,** of Fullerton, Calif., has doubled the size of its sliding glass door plant in its latest expansion move.

• **Kaiser Steel Corp.** has appointed Kendall R. Peck as general sales manager for its fabricating division plant at Montebello, Calif.; and has put into operation at its Fontana, Calif., plant a new plate mill which will roll wider plate than has ever been produced in the Far West.

• **Mutual Plywood Corp.** of Eureka, Calif., has been purchased by United States Plywood Corp. for $7.5 million.

For Permanence and Economy

Pressure-treated forest products by McCormick & Baxter provide long, maintenance-free life and maximum protection against insects and decay. Immediate shipment from modern treating plants in Portland, Ore. and Stockton, Calif.

• **Radford Supply Co.,** of Santa Maria, Calif., is completing a $125,000 addition to provide more manufacturing and warehouse facilities for its standard aluminum windows as well as a new type engineered for concrete block construction. The firm also has appointed Paul (Doc) Wright as representative in southern California.

• **The Payne Co.** of La Puente, Calif., has appointed William F. Steiner as sales manager.

• **Tom Benson Glass Co.** of Portland, wholsale firm operated by Tom and Adele Benson as a partnership since 1926, has been sold to Tom Benson Glass Co., Inc., for more than $250,000. Chet Patton of Portland, manager of the Oregon-Washington Plywood Corp. for the past six years, is president of the new corporation; Alan Green Jr. and Tom Benson are vice presidents; and Jerry Clancy remains as general manager.

• **American Blower Division,** American Standard, has appointed D. J. Kerby as Pacific Coast regional merchandise manager, with headquarters in Los Angeles.

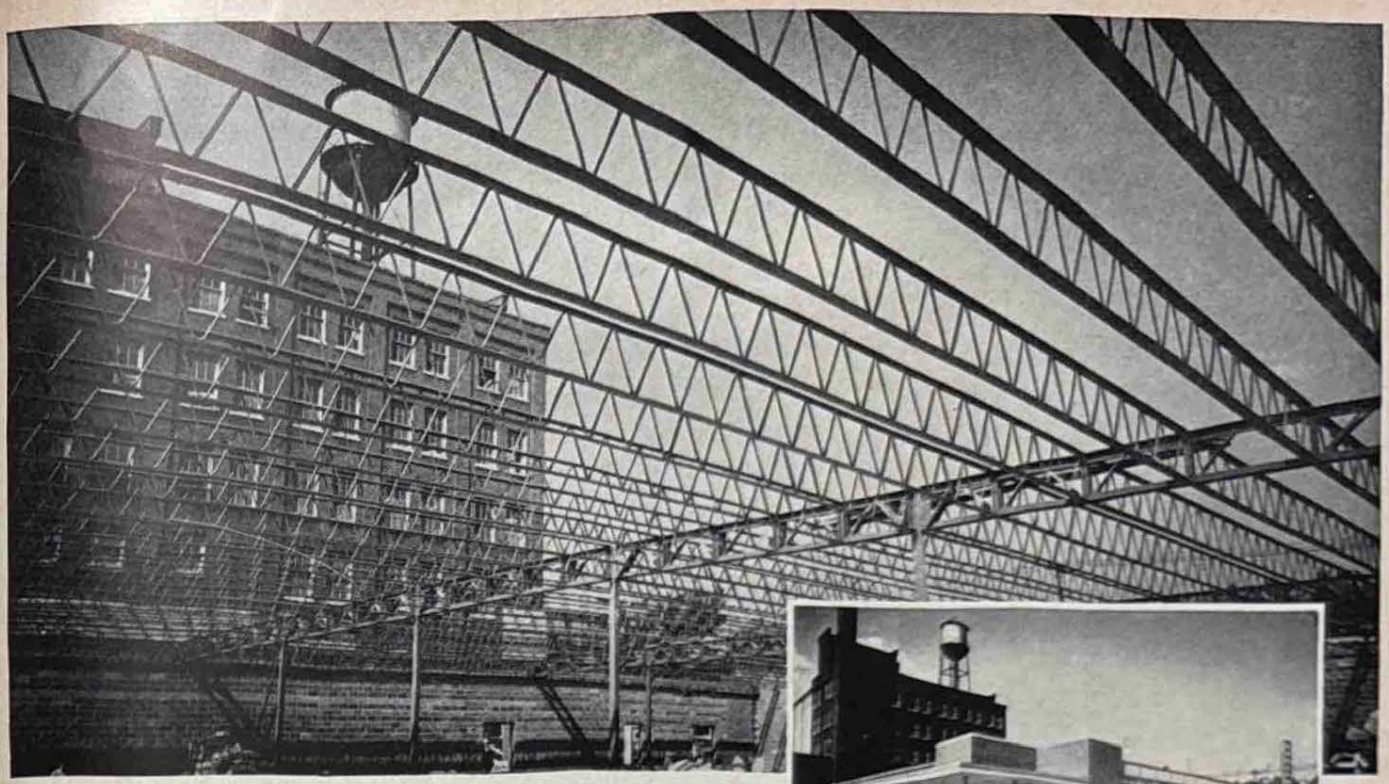
• **California Redwood Association** has elected Howard A. Libbey, president and general manager of Arcata Redwood Co., Arcata, to head a slate of officers which includes Philip T. Farnsworth, executive vice president, and Selwyn J. Sharp, secretary-treasurer (both reelected), and Willard E. Pratt, assistant secretary-treasurer (a new post).

• **Pacific Curtainwall, Inc.,** of Long Beach, Calif., has sold its controlling interest to Globe Hoist Co. of Philadelphia. General manager Douglas B. McFarland will continue overall management of Pacific Curtainwall, formed in 1956 to produce prefabricated sections of walls and windows.

• **Spanall of the Americas, Inc.,** has named R. L. Castendyk Co. of Honolulu as Hawaiian distributor for its horizontal shoring and related construction equipment.

• **The Siegler Corp.** of Los Angeles has two new vice presidents: Dan W. Burns and Robert T. Campion.

• **K S M Products, Inc.,** manufacturer of stud welding equipment and accessories, has established a new warehouse and sales office at 656 Folsom St., San Francisco; has appointed John T. Rayner as regional sales manager for the Pacific Coast; and has named F. Leonard Hultquist as sales manager



Kroger Supermarket, Charleston, W. Va. 145 x 140 foot wall bearing V-LOK frame. Upper photo shows framing completed—only 5 days after delivery of steel.

MACOMBER

CANTON 1, OHIO

in Los Angeles, where a new office has been opened at 1238 Atlantic Blvd.

• **Latrobe Steel Co.** has begun construction of a warehouse and office, costing $250,000, at 2919 Tanager Ave., Los Angeles.

• **A. M. Byers Co.** has named Robert B. McQuarrie of Seattle as Northwest Coast field service engineer.

• **Western Sound,** a southern California audio specialty house, has opened new headquarters at 17544 Ventura Blvd., Encino, working primarily through architects and builders.

• **Drywall Contractors Association** (Southern California) has elected Reuben L. Casey of Garden Grove as president.

• **Tubesales** of Los Angeles has appointed William C. Tagmeyer to the newly established position of manager of sales for its steel tubular products.

• **Holly - General Division,** Siegler Corp., of Pasadena has named Robert K. Miller, former General Electric Co. executive, as president.

• **Shale-lite Corp.** has opened a shale aggregate plant near Chino, Calif.

NATIONAL ASSOCIATIONS

• **Portland Cement Association** has named Hugh D. Barnes, manager of the western regional office in Los Angeles since 1956, to the new position of supervisor of field promotion. Cris Dobbins of Ideal Cement Co., Denver, has been elected chairman of the board of directors, which includes Richard A. Grant of California Portland Cement Co., Los Angeles.

• **American Institute of Steel Construction** has elected H. Buckley Dietrich of Brothers, Inc., Baltimore, as president. Among directors from the West Coast are J. J. Carlson, Kaiser Steel Corp., Los Angeles; J. Philip Murphy, Judson Pacific - Murphy Corp., Oakland; and S. G. Herrick, Herrick Iron Works, Hayward, Calif.

• **Lumber Dealers Research Council,** celebrating its 10th anniversary in Chicago last month, noted that more than 75,000 homes have been built with its system of modular, preassembled wood components.

• **Aluminum Window Manufacturers Association** has a new acting administrative secretary, John W. Bailey, succeeding Edward F. Kelly who died following a brief illness in May.

• **Asphalt Institute** has opened new headquarters for its Pacific Coast division at 810 University Ave., Berkeley, Calif.

• **Portland Cement Association** has opened its three-story structural laboratory, constructed above ground entirely of precast concrete building units, at Skokie, Ill.

• **Modular Building Standards Association** has employed its first executive director, Byron C. Bloomfield, formerly secretary for professional development with the AIA. MBSA was formed in 1957, with headquarters at 2029 K St. N.W., Washington, D.C.

• **National Association of Plastic Fabricators** has elected Henry M. Snyder of Sani-Top, Inc., Los Angeles, a director.

• **Illuminating Engineering Society** has elected George J. Taylor of Day-Brite Lighting, Inc., New York, as president. Among the regional vice presidents are James E. Barnes of San Francisco and Beverly A. Travis of Seattle.

Puts the Air Itself to Work for You!

COLT NATURAL VENTILATION

Cools Your Plant Without Motors

This triumph of aerodynamic design actually creates an unfailing circulation of air without any mechanical aids of any kind! You must see an installation to believe it!

Recent installation of Colt CO/2046 Clear-opening Adjustable Louver Ventilators at BINER-ELLISON MACHINERY CO., LOS ANGELES.

40,000 INSTALLATIONS AROUND THE WORLD PROVE COLT BREAKS THE "HEAT BARRIER"

No matter what the climate, COLT's practical application of exact scientific principles vents heated process air with efficiency equal to mechanical systems, but with no motors or running costs. COLT is a profitable morale-booster that can be installed quickly without structural changes in your plant. Write for estimate TODAY.

COLT "CO/2046" CLEAR-OPENING VENTILATORS

- 7 times lighter than comparable galvanized units! Just 23 pounds each, can be installed in any type of factory roof
- Gives unrestricted passage to air, immediate release of concentrated process heat
- Removes heat from source before it can spread throughout plant
- Permits loss to atmosphere of building and body heat where this radiant heat, being of low frequency, could not normally pass through walls and roof
- Built-in hand-operated control . . . no power required
- Full, clear opening gives maximum extraction
- Unique top and side drain channels on louvers guard against rain
- Adjustable louvers 100% rainproof when closed
- Strongly built of anti-corrosive aluminum

Wide Range of ventilators to suit Every need — in stock Now

- ■ Planholders—Prospective Bidders

OREGON

★SCHOOL ADDITION (Walker Elementary) Ashland, Ore.

Award to Loren S. Ritchie, 912 S. Oakdale Ave., Medford, Ore., $93,604, by Jackson County School District No. 5, Courthouse, Medford, for construction of an addition to the Walker Elementary School in Ashland. Plans by James L. Payne, architect, 611½ E. Jackson St., Medford.

Basic Bid — Construct six-classroom addition, install partition in office area of existing building. Alternate Bids: 1—addition of seventh classroom, 2—teachers' room, 3—remodel existing kitchen, 4—create new classroom in basement of present area, 5—substitute vinyl asbestos for vinyl tile floor covering.

One-story; frame on slab; cedar siding; 2" roof deck under 1½" fiberglass insulation; built-up roof; aluminum sash; acoustical tile on stripping; plywood on 5/6" gypsum board in corridors; unit ventilators hooked into existing heating system; fluorescent lighting. AM 12-17. Previous report 11-22

●CHURCH (Tower and Veneer Work)— Astoria, Ore.

Bids will be opened 7:30 p.m., December 30, by Zion Evangelical Lutheran Church, 565 12th Ave., Astoria, for 1—construction of a concrete tower, and 2—placing brick veneer on existing church. Plans may be obtained from Wicks & Brown, architects, 1129 Commercial St., Astoria. $10 deposit. Certified check, cashier's check or bid bond 5%.

Tower—There is an existing foundation on piling that was previously built for the proposed tower. The tower will be 80' high, concrete with brick veneer; open grillwork of redwood on two sides; aluminum openwork behind.

Church—The present church, which was left unfinished at time of construction ten years ago, will be covered with brick veneer. Cornices will be placed and the outside woodwork painted. AC 12-13

★RESIDENCE, GAS-OIL HOUSE— Brookings, Ore.

Award to Milton L. Powell, Creswell, $21,761, by U.S. Forest Service, administrative services section, 729 N.E. Oregon St., Portland (Box 4137), for construction of a one-story, wood frame, 57'x40' residence and a gas and oil house at the Brookings Ranger Station, Siskiyou National Forest, Curry County, Ore.; Bid No. R6-59-161.

WB 12-13. Previous report 12-9

CITY HALL— Central Point, Ore.

Tentative plans for construction of a new city hall are being made by the City Council, 148 E. Pine, Central Point. AC 12-12

▲HOUSING PROJECT—Condon AFS, Ore.

Bids were opened December 16 by U.S. Air Force, base procurement office, Geiger Air Force Base, near Spokane, Wash., for construction of 18 houses at Condon Air Force Station, Gilliam County, Ore.; Inv. No. 59-34.

Apparent low bids on first four items: Allied Construction Co., Inc., Box 124, Parkwater Station, Spokane, Wash., $265,600; Levage Construction Co., Box 2355, Parkland, Wash., $270,788; Harney Homes, Inc., Box 429, Burns, Ore., $281,900.

The single units are bidder-design. Included are one four-bedroom officer's house; five three-bedroom officers' houses; 12 three-bedroom airmen houses; utilities and site improvements; 18 attached garages.

DM 12-17. Previous report 12-13

★STORAGE BUILDING—Grant County, Ore.

Award to Nelson Bros. Construction Co., Bend, $4,816, by U.S. Forest Service, administrative services section, 729 N.E. Oregon St., Portland (Box 4137), for construction of a one-story, 60'x30', wood frame equipment storage building at Prairie City Ranger Station, Malheur National Forest, Grant County, Ore.; Bid No. R6-59-158.

WB 12-13. Previous report 12-6

▲ELEMENTARY SCHOOL, GYMNASIUM— Helix, Ore.

Bids were rejected on construction of a six-classroom elementary school and a gymnasium at Helix. Bids were opened December 9 by School District No. 1, Umatilla County, Helix. Plans were prepared by Wesley V. Korman, architect, Raley Bldg., Pendleton.

Four firms submitted figures: The Timber Co., Hermiston, $390,900; McCormack Construction Co., Pendleton, $395,240; Bechtel Bros., LaGrande, $397,637; Jensen Rasmussen Co., Sunnyside, $409,500; Edward Mardis, Pasco, $413,337.

School approximately 12,000 sq. ft.; gymnasium about 15,000 sq. ft. Both buildings one story, no basement. Frame walls in school, block in gymnasium; concrete slab floors for both; timber beams in school, steel rigid frame in gymnasium roof; flat roof; frame partitions in school, masonry in gym; aluminum windows; brick exterior wall finish; drywall interior wall finish; drywall interior partitions in school and exposed masonry in gym; maple flooring in gym, vinyl tile elsewhere; acoustical, exposed t&g ceilings; wood interior and aluminum exterior doors; wood cabinets; plastic panels; walk-in refrigeration in kitchen; fluorescent lighting in school, incandescent in gym; steam boiler oil-fired; heating and ventilating units, exhaust fans.

DM 12-13. Previous report 11-26

●ROCKET ASSEMBLY BUILDING (Modify)— Kingsley Field, Ore.

Bids will be opened 11 a.m., December 29, by Harry F. Keating, base procurement officer, 408th Fighter Group, Kingsley Field, for modifying the Rocket Assembly Bldg. on the field; IFB 59-19. Work involves replacing the concrete block wall between receiving room and missile assembly and test room in the buildings.

The site may be viewed between 9 a.m. and 3 p.m., Monday through Friday, by contacting the installation engineer, above address. ZZ 12-16

VORTAC FACILITIES (Building, Roads, Cable)— Klamath Falls, Ore.

Bids will be called soon by Civil Aeronautics Administration, procurement branch, 5651 W. Manchester Ave., Los Angeles, Calif. (Box 90007), for construction of standard Vortac Facility at Klamath Falls, Ore. (Sched. 1); Stockton, Calif. (Sched. 2); and Peters, Calif. (Sched. 3); Proposals No. 4-39-1025. Project involves erection of a prefabricated building on concrete slab; road construction, fencing; installation of underground cable and associated work. DM 12-13

HOSPITAL— Pendleton, Ore.

Plans to be held in abeyance until spring, for St. Anthony's Hospital, S.E. Court Place, Pendleton. Preliminary drawings have been completed by John W. Maloney, archit... 754 Central Bldg., Seattle.

PD 12-17. Previous report 1...

★WAREHOUSE-OFFICE BUILDING (Marsh)— Portland, O...

Contract negotiated with Reimers & Jollvette, 435 Builders Exchange Bldg., Portland, by Murray B. Marsh Co., 1810 S.W. Harbor Drive, Portland, for construction of a 100'x 171', two-level concrete warehouse-office building at 3934 S.W. Macadam Ave. Plans by Wolff & Zimmer, architects, Pearson Fourth Avenue Building, Portland.

The lower level will be used as warehouse, and upper level, office and display space for the company, a distributor for carpets and resilient floor coverings. Tilt-up concrete construction; reinforced floors; glued laminated beam roof; built-up roofing; upper floor will have porcelain metal panels on portion of exterior, industrial cork on some walls, suspended ceiling in some areas, skydomes and gas-fired, forced air heating system; wood overhead doors in warehouse.

WB 12-12

★SHOP ALTERATIONS— Portland, Ore.

Award to Russ Todd, 8333 S.W. Fir Grove Lane, Portland, $7,964 (basic less alternate), by 337th Fighter Group, Procurement Office, Portland International Airport, Portland, for modification of a shop addition to Bldg. T-736 at Portland International Airport; Inv. IFB-59-24.

WB 12-13. Previous report 11-20

★BUILDINGS REPAIRS (Roof)— Portland, Ore.

Award to A.B.C. Roofing Co., 8705 S.E. Foster Road, Portland, $20,642, by 337th Fighter Group, Procurement Office, Portland International Airport, Portland, for roof repairs on 24 buildings at the airport;

▲ELEMENTARY SCHOOL, GYMNASIUM— Helix, Ore.

Bids were rejected on construction of a six-classroom elementary school and a gymnasium at Helix. Bids were opened December 9 by School District No. 1, Umatilla County, Helix. Plans were prepared by Wesley V. Korman, architect, Raley Bldg., Pendleton.

Four firms submitted figures: The Timber Co., Hermiston, $390,900; McCormack Construction Co., Pendleton, $395,240; Bechtel Bros., LaGrande, $397,637; Jensen Rasmussen Co., Sunnyside, $409,500; Edward Mardis, Pasco, $413,337.

School approximately 12,000 sq. ft.; gymnasium about 15,000 sq. ft. Both buildings one story, no basement. Frame walls in school, block in gymnasium; concrete slab floors for both; timber beams in school, steel rigid frame in gymnasium roof; flat roof; frame partitions in school, masonry in gym; aluminum windows; brick exterior wall finish; drywall interior wall finish; drywall interior partitions in school and exposed masonry in gym; maple flooring in gym, vinyl tile elsewhere; acoustical, exposed t&g ceilings; wood interior and aluminum exterior doors; wood cabinets; plastic panels; walk-in refrigeration in kitchen; fluorescent lighting in school, incandescent in gym; steam boiler oil-fired; heating and ventilating units, exhaust fans. DM 12-13. Previous report 11-26

●ROCKET ASSEMBLY BUILDING (Modify)— Kingsley Field, Ore.

Bids will be opened 11 a.m., December 29, by Harry F. Keating, base procurement officer, 408th Fighter Group, Kingsley Field, for modifying the Rocket Assembly Bldg. on the field; IFB 59-19. Work involves replacing the concrete block wall between receiving room and missile assembly and test room in the buildings.

The site may be viewed between 9 a.m. and 3 p.m., Monday through Friday, by contacting the installation engineer, above address. ZZ 12-16

VORTAC FACILITIES (Building, Roads, Cable)— Klamath Falls, Ore.

Bids will be called soon by Civil Aeronautics Administration, procurement branch, 5651 W. Manchester Ave., Los Angeles, Calif. (Box 90007), for construction of standard Vortac Facility at Klamath Falls, Ore. (Sched. 1); Stockton, Calif. (Sched. 2); and Peters, Calif. (Sched. 3); Proposals No. 4-59-1025. Project involves erection of a prefabricated building on concrete slab; road construction, fencing; installation of underground cable and associated work. DM 12-13

HOSPITAL— Pendleton, Ore.

Plans to be held in abeyance until spring, for St. Anthony's Hospital, S.E. Court Place, Pendleton. Preliminary drawings have been completed by John W. Maloney, archit[illegible] 754 Central Bldg., Seattle. PD 12-17. Previous report 1[illegible]

★WAREHOUSE-OFFICE BUILDING (Marsh)— Portland, O[illegible]

Contract negotiated with Reimers & Jollivette, 435 Builders Exchange Bldg., Portland, by Murray B. Marsh Co., 1810 S.W. Harbor Drive, Portland, for construction of a 100'x 171', two-level concrete warehouse-office building at 3934 S.W. Macadam Ave. Plans by Wolff & Zimmer, architects, Pearson Fourth Avenue Building, Portland.

The lower level will be used as warehouse, and upper level, office and display space for the company, a distributor for carpets and resilient floor coverings. Tilt-up concrete construction; reinforced floors; glued laminated beam roof; built-up roofing; upper floor will have porcelain metal panels on portion of exterior, industrial cork on some walls, suspended ceiling in some areas, skydomes and gas-fired, forced air heating system; wood overhead doors in warehouse. WB 12-12

★SHOP ALTERATIONS— Portland, Ore.

Award to Russ Todd, 9335 S.W. Fir Grove Lane, Portland, $7,964 (basic less alternate), by 337th Fighter Group, Procurement Office, Portland International Airport, Portland, for modification of a shop addition to Bldg. T-736 at Portland International Airport; Inv. IFB-59-24. WB 12-13. Previous report 11-20

★BUILDINGS REPAIRS (Roof)— Portland, Ore.

Award to A.B.C. Roofing Co., 8705 S.E. Foster Road, Portland, $20,842, by 337th Fighter Group, Procurement Office, Portland International Airport, Portland, for roof repairs on 24 buildings at the airport;

Inv. IFB-59-27. Three additional bids were received December 10.

APARTMENT HOUSE (King Ave.)— Portland, Ore.
(Estimated cost $265,000)

Construction starting by owner-builder, Hebb & Narodick, 232 4th N., Seattle, on a five-story, 44-unit, concrete apartment house at S.W. King Ave. and Yamhill St., Portland. Plans by Detlie & Peck, architects, Securities Bldg., Seattle, and James G. Pierson, structural engineer, Portland.

Building will have outside balcony corridors, and space for swimming pool on ground floor; roof sun deck; off-street parking; 38 one-bedroom and five two-bedroom apartments; one efficiency unit. Reinforced concrete frame; concrete slab floors; concrete block bearing walls; some stone veneer; aluminum sash; non-burning, dry wall partitions; kitchenette units; electric heat; elevator. WB 12-13

HOTEL REMODELING— Roseburg, Ore.
(Estimated cost $100,000)

Remodeling is underway at the Umpqua Hotel, Emil Ramberg, proprietor, 612 S.E. Jackson, Roseburg, and will be completed in 1959. Improvements consist of furniture, conversion of adjoining rooms to two-room suites, remodeling the lobby, replacing the Jackston Street entrance structure, and installing tile showers and baths. Coen Supply Co., 427 S.E. Flood, Roseburg, will supply bathroom fixtures. KC 12-13

●BANK (U. S. National)— Salem, Ore.

Bids will be opened December 23 by the University Branch of the U. S. National Bank, 1310 State St., Salem, for construction of a one-story, 5,000 sq. ft. bank building across the street from the present office. Plans with John Grimmer Groom, architect, 2390 S. 12th, Salem.

Site for the new structure is 82'x166' on the northeast corner of State and 13th St. The building will be contemporary with wood, glass and fieldstone front and will feature floor to ceiling glass. It is hoped that construction can be completed by June. DC 12-17

★GRADE SCHOOL ADDITION—Tigard, Ore.

Award to Walker & Green, Route 3, Box 207, Oregon City, $107,535, by School District No. 23, Washington County, 13125 S.W. Washington, Tigard, for construction of an eight-classroom, concrete addition to Phil Lewis School. Plans by Annand, Boone & Lei, architects, 1530 S.W. Taylor St., Portland.

Second low bid was submitted by Barnard & Kinney, 4200 S.W. 103rd Court, Beaverton, $109,645; the high bid was by D-Diamond Corp., 2939 S.W. 2nd Ave., Portland, $126,735. Eleven bids were received December 11.

Addition to contain eight classrooms, each with individual toilet, storage room with toilet, control pit, and covered porch. Concrete slab floors; reinforced concrete shell with open web steel joists; frame partitions; lath and plaster walls; acoustical tile ceilings; asphalt tile flooring; extension of existing steam heating system; incandescent lighting; extension of sewage drainage field; some grading.

▲THEATER— Fort Lewis, Wash.

Bids received December 16 by Corps of Engineers, 1519 S. Alaskan Way, Seattle, for construction of a 14,681 sq. ft. concrete frame theater building and outside facilities at Fort Lewis; ENG-45-108-59-22.

LOW BIDS: A. G. Homan, Box 38, Lacey, $301,300; H. Halvorson, Inc., 20054 Pacific Highway, Seattle, $305,500; G. Kirkebo & Son, Tacoma, $310,700. Engineer's estimate $313,764. There were seven bidders.

THEATER—Concrete masonry unit filler walls and partitions; steel roof trusses; insulated built-up roof; steam heating; ventilation system; theater seats.

OUTSIDE UTILITIES—Clearing, grading, sanitary sewer, storm sewer, water lines, electrical service, steam distribution lines from existing distribution system, portland cement concrete walks, asphaltic concrete drives and parking areas, seeding and planting.

AM 12-17. Previous report 12-10

●HOUSING (Capehart)—Fort Lewis, Wash. (Estimated cost $12,000,000)

A tentative bid opening date of January 29 has been set by Corps of Engineers, 1519 S. Alaskan Way, Seattle, for construction of 856 units of Capehart family housing, including utilities at Fort Lewis; ENG-45-108-59-40.

Basis of award will be 1—to separate bidders on all three projects. 2—to separate bidders on Project 3 and to separate bidders on Projects 4 and 5, 3—to one bidder on all three projects.

Completion time 480 calendar days for any individual project, 510 days for two projects and 540 days for all three projects.

Plans for Project 3 were prepared by Jones, Lovegren, Helms & Jones, architects, 706 Republic Bldg., Seattle; plans for Projects 4 and 5 by Miller & Ahlson, architects, 1410 Hubbell Place, Seattle. Associated with the architects were Roy L. Gardner, civil engineer, Arctic Bldg., Seattle; Johnson & Duncan, electrical engineer, 233 Eastlake, Seattle; and James B. Notkin & Associates, mechanical engineer, 233 Eastlake, Seattle.

Project 3—A total of 274 units consisting of 132 two-bedroom units and 142 three-bedroom units. Structures will be erected in the following locations: in a wooded area near the officer's club at American Lake, adjacent to the 375 unit Capehart housing project now under construction, adjacent to Madigan Hospital and on Davis Hill in Fort Lewis.

Projects 4 and 5—A total of 308 units, including 136 two-bedroom and 172 three-bedroom dwellings, for Project 4. A total of 274 units, including 136 two-bedroom and 138 three-bedroom for Project 5. To be located on four sites within Fort Lewis grounds; north and northeast of Miller Hill and south of Stryker Ave. and east of S. 7th St.

Work will include rough grading for roads as well as buildings, construction of water, sanitary sewer, storm sewer, electric power and telephone system, asphaltic concrete paving for roads and driveways, concrete walks and topsoiling and seeding.

All except 16 N.C.O. units are one-story buildings to be built as duplexes with carports separating the houses. Officer units at American Lake and near the hospital are one-story houses. Plans for these 638 units call for concrete foundations and floor slab-on-grade; wood frame walls; trussed rafters; cedar siding; aluminum windows; asphalt shingles; drywall interior finish; asphalt and vinyl asbestos tile floor covering; wood or metal kitchen cabinets; flush panel fir doors and fir trim; hot air heating with down draft furnace and under floor ducts; oil burner and oil storage tank with each unit; copper tubing for water piping.

Two-bedroom NCO units will have one bath, and three-bedroom NCO units 1½ baths. Officer units have 1½ and two baths for two- and three-bedroom units. There is partial brick veneer on Field Grade houses. Units are designed for prefabrication with modular dimensions (contractor may use own methods).

Officer units in Projects 4 and 5 are two-story duplex structures; wood frame on concrete foundations with first floor slab and other features similar to one-story units.

Alternate bids will be taken for substituting three-bedroom units for all two-bedroom units; copper for galvanized iron or aluminum sheet metal work; plaster or two thicknesses of gypsum wallboard for one thickness of wallboard; outside clothes dryer; concrete patios; brick fireplaces; planter boxes.

Exterior finishes will use three types of cedar siding; a hardpressed fiberboard with wood battens. Interiors will have panels of plastic surfaced plywood.

Bids will be opened 3 p.m., P.S.T., December 30, by Bonneville Power Administration, 1001 N.E. Lloyd Blvd., Portland, for furnishing 135,000' of galvanized steel wire strand, fob Eavan Spur, Vancouver, Wash., or bidder's shipping point; Inv. No. 8912. Plans with Portland office.

ANNUAL FORECAST ISSUED FOR BUREC CONSTRUCTION
10 PNW Jobs Scheduled for Bid Call Through June

The Bureau of Reclamation, Denver Federal Center, Denver, Colo. has issued its annual forecast of construction invitations that will be issued by the chief engineer, Grant Bloodgood, during the balance of the fiscal year, February through June, 1959. Ten major jobs are listed for the Pacific Northwest.

DIVERSION DAM, CANAL HEADWORKS, Crooked River (A-6)—Crooked River Project, Ore. Located on the Crooked River south of Prineville, Ore. Work involves constructing a concrete diversion dam with a 100' long uncontrolled overflow crest and canal headworks.

Invitations will be issued about May.

DIVERSION STRUCTURES, Phoenix Canal (A-7)—Rogue River Basin Project, Ore. Located northeast of Talent, Ore. Work involves constructing a reinforced concrete overflow weir across Bear Creek, a reinforced concrete headworks structure with radial gate for the canal, and a rotating drum-type fish screen structure.

Invitations will be issued about May.

OUTLET WORKS MODIFICATION, Sherburne Lake Dam (A-12)—Milk River Project, Mont. Located 45 mi. northwest of Browning, Mont. Work involves modifying outlet works intake structure and replacing ringgate with two 4'x5' high pressure slide gates.

Invitations will be issued about April.

SIPHONS, East Lateral (A-17) — Rogue River Basin Project, Ore. Located between Medford and Ashland, Ore. Work involves constructing 10 small precast concrete pipe siphons, a bench flume, and two wasteways.

Invitations will be issued about April.

LATERALS, Blocks 21 and 48 (A-21)—Columbia Basin Project, Wash. Located near Taunton, Wash. Work involves earthwork and structures for about 11.5 mi. of concrete lined laterals with bottom widths varying from 8' to 2'.

Invitations will be issued about February.

CANAL, Diversion (A-22)—Crooked River Project, Ore. Located near Prineville, Ore. Work involves constructing about 6 mi. of canal which will include 3,000' of concrete lined canal with a 9' bottom width for unlined section and 6' bottom width for lined section.

Invitations will be issued about June.

CANALS, South Fork and Daley Collection (A-23)—Rogue River Basin Project, Ore. Located east of Medford, Ore. Work involves earthwork and structures for about 9 mi. of 65-cfs capacity unlined canal and about 1.5 mi. of 130-cfs capacity unlined canal.

Invitations will be issued about April.

CANAL, Distribution (A-26) — Crooked River Project, Ore. Located near Prineville, Ore. Work involves earthwork and structures for about 15 mi. of unlined canal with bottom widths varying from 9' to 2'.

Invitations will be issued about June.

CANAL ENLARGEMENT, Potholes East (A-27)—Columbia Basin Project, Wash. Located near Othello, Wash. Work involves earthwork and structures for enlarging about 3 mi. of canal.

Invitations will be issued about June.

WASTEWAY, WB10, No. 1 (A-32)—Columbia Basin Project, Wash. Located northwest of Mesa, Wash. Work involves earthwork and structures for about 3,000' of 14' bottom width wasteway.

Invitations will be issued about February.

Quantities: 75,000' of 3/8", 7-wire high strength; 50,000' of 5/8' 19-wire high strength; 10,000' of 5/8", 19-wire extra high strength, galvanized steel wire strand on reels.

Co., 351½ E. Broadway, Eugene, $564,500 upon right-of-way acquistion and approval of Bureau of Public Roads.

STRUCTURE, Klamath Falls — Construct 474.5' reinforced concrete deck girder and prestressed concrete beam structure to carry The Dalles-California Highway over California Ave., Klamath County; FAP No. DU-205(8).

AWARD: Tom Lillebo Construction Co., Reedsport, $199,720.

PARK EXTENSION, Jessie M. Honeyman State Park—Construct 12 trailer sites, 58 camp sites, access roads, utility building, latrine, and water, sewer and electrical systems, on Oregon Coast Highway about 2.5 mi. south of Florence, Lane County; a State Project.

AWARD: Eugene Gardens, Eugene, $55,-054.

PARK EXTENSION, Beverly Beach Park—Construct 22 trailer sites, 60 campsites, access roads, utility building, latrine and water, sewer and electrical systems on Oregon Coast Highway about six mi. north of Newport, Lincoln County; a State Project.

AWARD: Eugene Gardens, Eugene, $82,-523.

DRAINAGE STRUCTURES, on Relocated Pacific Highway—Construct five drainage structures approximately 14 mi. to 17 mi. south of Albany, Linn County; FAIP No. I-5-4(28)217. Involves four reinforced concrete deck girder structures and one slab structure.

AWARD: Tom Lillebo Construction Co., Reedsport, $312,193.

BUILDING, State Highway Department Sign Department—Construct 60'x310' reinforced concrete and masonry block building with some structural roof trussing and with built-up roof in Salem, Marion County; a State Project.

AWARD: Monson & Sivers, 5000 E. 25th, Portland, $96,954.

UNDERCROSSING, Porter Street—Construct 642', 11-span reinforced concrete deck girder bridge with a 118', 2-span off-ramp to carry arterial traffic over Pacific Highway (Baldock Freeway) near S.W. Porter St. in Portland, Multnomah County; FAIP No. I-5-6(12)300.

AWARD: Lord Bros., Contractors, 9233 N. Calvert, Portland, $289,493.

PAVING, S.W. 11th Ave.-Tigard Interchange Unit, Harbor Drive - Washington County Line Section—Asphaltic concrete paving 2.97 mi. on Pacific Highway (Baldock Freeway), in Portland, Multnomah County; FAIP No. I-5-6(13)295.

AWARD: Peter Kiewit Sons' Co., Box 1777, Vancouver, Wash., $1,161,017.

GRADING, OILING, BRIDGE, E. Birch Creek Bridge-Pearson Creek Road Section—Grading and oiling 5.8 mi. and constructing 24' reinforced concrete bridge on E. Birch Creek Road about 3.5 mi. south of Pilot Rock, Umatilla County; FAP No. S-409(1).

AWARD: K. C. Dack Construction Co., Pendleton, $224,994.

GRADING, Rowena - Chenoweth Creek Section—Grading 5.55 mi. Columbia River Highway about seven mi. east of Mosier, Wasco County; FAIP No. I-80N-3(7)74.

Award recommended to Rogers Construction Co., Inc., 11760 N.E. Glisan, Portland, $293,184, upon right-of-way acquistion and approval of Bureau of Public Roads.

GRADING, OILING, Pioneer Creek-Service Creek Section—Grading, oiling 7.94 mi. John Day Highway north from town of Service Creek and about 12 mi. south of Fossil, Wheeler County; FAP No. F-64(3).

Award recommended to Earl L. McNutt Co., Eugene, $521,803, upon acquistion of right-of-way and approval of Bureau of Public Roads.

▲DRAINS, LATERALS (BuRec)— Ephrata, Wash.

Bids were opened December 16 by Bureau of Reclamation, Division Ave. and C St., N.W. (Box 368) Ephrata, for construction of drains and laterals in Blocks 13, 14, 15, 16, south and west of Mesa, Franklin County, Columbia Basin Project, Wash.; Spec. No. 117C-530.

BIDS: Kenneth Beck, Box 518, Moses Lake, $26,070; Knapton-Yearout, Star Route, Moses Lake, $29,155; Floyd Grubb, 434 Union Ave., Salem, Ore., $32,406; John M. Keltch, Box 504, Pasco, $33,087; Paul E. Hughes, 3023 W. Hood Ave., Kennewick, $32,806. Government estimate $32,680.

Features of Work—Earthwork for about 0.5 mi. of open drains and lateral with 2' bottom width; earthwork for and construction of about 2,080' of 18" concrete pipe chute; earthwork for and construction of structures along the drains and laterals including pipe drain outlet, manhole, road, lateral and ditch crossings, pipe inlet structure, division box, constant head orifices, steel pipeline crossing supports, drain inlet; alterations of an existing division box.

Quantities: 10,200 c.y. drain, lateral excavation; 3,000 c.y. borrow excavation; 300 mi. c.y. overhaul; 1,500 c.y. compacting embankments; 37 M gal. water; 420 c.y. structure excavation; 370 c.y. backfill about structures; 400 c.y. compacting backfill about structures; 300 c.y. puddling backfill about structures; 2,610 c.y. excavation and backfill of pipe chute trench; 10 c.y. riprap; 5 c.y. sand and gravel or crushed rockbedding or

riprap; 25 c.y. coarse gravel protection; 14 c.y. concrete in structures; 21 bbl. cement; 1,300 lb. reinforcement bars; 0.15 MBM timber in structures; 20' of 15", 1,430' of 18" standard strength reinforced concrete culvert pipe with type B joints; 1,076' of 18" same with A joints; 30' of 15", 14' of 24" corrugated metal pipe; 218' of 24" asbestos bonded corrugated metal pipe; 21' of 6" concrete irrigation pipe for pipe vents; 3 cast iron slide gates and lifts; 3 steel slide gates and lifts; 280 lb. miscellaneous metalwork; one manhole; alter existing division box. DM 12-17. Previous report 11-25

●FENDER PILING— Everett, Wash.

Bids will be opened 8 p.m., January 6, by Port of Everett, Pier 1, Everett, for furnishing and installing 75 creosote treated fender piling at 14th St. dock, Everett. Plans and specifications with above office, or with James H. Reid & Associates, consulting engineers, 324 Main, Edmonds. $10 deposit. PD 12-16

●CEMENT-MORTAR LINING— Everett, Wash.

Bids will be opened 10 a.m., January 14, by John L. Sugars, city clerk, City Hall, for cement mortar lining certain portions of Pipe Line No. 2 across the Snohomish River flat. Plans with city clerk or with John W. Cunningham & Associates, consulting engineer, 714 Portland Trust Bldg., Portland, Ore. $5 deposit. Certified check 5%.

The work involves cement mortar lining three separate sections (1,400', 4,350' and 450' long), 48" buried steel pipe. HH 12-16

▲CLEARING, GRADING (Sultan River Pipeline)— Everett, Wash.

Bids were opened December 11 by City Council, City Hall, Everett, for clearing, grubbing and rough grading approximately 28,200' of right-of-way for the Sulton River water transmission pipeline. Consulting engineers are John W. Cunningham & Associates, 714 Portland Trust Bldg., Portland.

LOW BIDS: Carlson & Wahto, Inc., Skykomish, $4,970; Dale Speed, Route 3, and Ingvard Nerland, Route 2, (joint venture) Arlington, $5,983; C. W. Simmons, 1725 112th, Everett, $6,406. Twelve bids were received.

The project is Sultan River Project No. 4 and work will be performed in Unit 3 of the Sultan River transmission pipeline and will extend from the Panther Creek Screening Plant to pipeline Station 907, which is about 1,670' east of Cavalero's Corner. The total distance is 28,200' some of which is already cleared. Work will include clearing and grubbing and rough grading of the southerly right-of-way strip preparatory to excavation and installation of pipe to be installed under another contract.

This is the third phase of construction on the city's water system rehabilitation and construction program initiated in 1957. The supply end it at Lake Chaplain.

DC 12-12. Previous report 12-5

POWER TRANSMISSION— Everett, Wash.
(Budget estimate $2,854,932)

Snohomish County Public Utility District No. 1, 2320 California St., Everett, has announced its construction budget for 1959. Projects listed are as follows: 1—expansion of Everett substation, $265,000, 2—addition to waterfront substation, $75,000; 3—expansion of old lines and construction of new, $255,000; 4—construction of substations in Silver Lake and Five Corners area, $130,000 and $185,000 respectively; 5—expansion of several existing substations, $66,000; 6—extension of 55 kv line at Sultan, $90,000; 7—construction of 300,000 gal. storage tank for Lake Stevens water system, $88,000; 8—installation of meters, transformers, additional lines, $1,505,000. HH 12-17

ROADS— Franklin County,, Wash.

Road construction budget of $682,000 has been approved by the Franklin County Commissioners, Courthouse, Pasco, for 1959. Largest expenditure for construction is $460,000 for road building in Columbia Basin Project's Block 20. Other construction projects from the Spokane bypass highway includes $66,000 to resurface and widen

THREE FIRMS SELECTED BY AEC FOR NUCLEAR STUDY
Reports on First Phase To Be Made By March 1959

The Atomic Energy Commission has selected as a basis for contract negotiation, proposals by three architect-engineering firms for the performance of design and engineering studies of nuclear power reactor concepts. Each firm will make surveys and studies with a subcontractor.

The firms selected are Stone & Webster Engineering Corp., who have a local office in Lloyd Bldg., Seattle, Wash., for study of pressurized water; Ebasco Services, Inc., Equitable Bldg., Portland, Ore., for boiling water study; Bechtel Corp., 612 S. Flower, Los Angeles, Calif., for organic cooled study.

Eighty-six proposals from 32 architect-engineering firms were evaluated before the commission made the above selections. The proposals were received in response to an invitation issued by the commission in September.

The purpose of the three studies is to determine the design which would lead to the most economical nuclear power station for each of the three concepts. Consideration will be given to the present status of nuclear technology for these three types, projected power requirements, the characteristics of available generating equipment and the possibility of the start of construction on the first unit of each type by a private or public organization in the United States or abroad by July, 1960.

Reports on the first phases of work under each contract must be submitted to the commission by March 23, 1959. The commission, in turn, will submit a report on the initial results to the Joint Committee on Atomic Energy of the Congress by May 1, 1959.

DM 12-17

Court St. for 2½ mi. to Road 68; $6,000 to widen Sylvester St. from the bypass to Road 60; $72,000 to straighten and widen Kahlotus Hill on the Kahlotus Road.

Bids may be called in January for the construction of roads in Columbia Basin Project Block 20. AC 12-17

▲EMBANKMENT PROTECTION— Ice Harbor Lock and Dam, Wash.

Bids were opened December 11 by Corps of Engineers, Bldg. 602, City County Airport, Walla Walla, for embankment protection along the S.P.& S. Railway, Ice Harbor Lock and Dam, reservoir area, Snake River, Franklin County, Wash.; CIVENG-45-164-59-15.

LOW BIDS: R. A. Heintz Construction Co., 211 N.E. Columbia Blvd., Portland, $2,242,215; S. S. Mullen, Inc., 646 Holgate, Seattle, $2,358,956; Stoen Construction Co., 2210 E. 95th and P. J. Anderson & Sons, 13501 Aurora, Seattle, joint venture, $2,262,216.

OTHER BIDS: J. N. Conley and G. D. Dennis & Sons, Portland joint venture, $2,803,741; Montag-Halvorson-Austin & Associates, Pasco, $2,839,500; James Crick & Sons, N. A. Degerstrom, Murphy Bros. and Hobson & Roberts, Spokane, joint venture, $2,848,343; Charles C. Parker Construction Co., Portland, $2,956,321; Cherf Bros., Inc., and Sandkay Contractors, Inc., Ephrata, $2,971,144; William A. Smith Contracting Co., Kansas City, $3,067,920; Fred H. Slate and E. C. Hall, Portland, joint venture, $3,173,022; Gibbons & Reed, Salt Lake City, Utah, $3,227,989; Peter Kiewit Sons' Co., Vancouver, $3,323,712; J. A. Jones Construction Co., Seattle, $3,488,950; Guy H. James Construction Co., Oklahoma City, $4,016,532; Morrison-Knudsen Co., Inc., Seattle, $4,348,198; Green Construction Co. and Winston Bros., Seattle, $4,473,984. Engineer's estimate, $3,247,208.

Quantities: 82,000 c.y. excavation; 2,862,000 c.y. granular embankment; 92,000 c.y. rock embankment; 1,000 hours rolling; 1,900 c.y. rock fill in culverts; 49,000 c.y. random embankment; 80,000 c.y. riprap class A; 24,000 c.y. riprap, class B; 10,000 c.y. riprap in quarry; 30,000 c.y. ballast in stockpile; 598' of 96" tunnel liner; 284" of 84" tunnel liner; 416' of 48" tunnel liner; 66' of 60" corrugated metal pipe; 406' of 48" same; 796' of 36" same; 70 of 30" same; 65' of 24" same; various size elbows for corrugated metal pipe culverts; 220 rod fence, type A; 51 brace panels type A; 13 corner panels, type A; two end panels, type A; 360 rod fence, type B; 1,720 rod remove existing fence.

Spokane, Seattle; Navarre Plumbing and Heating Co., Inc., 3839 Stone Way, Seattle.

This contract involves construction of steel superstructure with concrete roadways. The steel superstructure will be approximately 2,300' long and will extend from about 350' south of intersection of Eastlake Ave. and Harvard Ave. N., across Eastlake Ave. and the Ship Canal north to the intersection of E. 40th St. and 6th Ave. The bridge will have two decks, the top deck being 116' wide providing for two roadways, each 56' wide with a 4' median strip; and the lower deck 60' wide. The bridge provides for eight lanes of traffic on the top deck and four lanes on the bottom deck.

Quantities: 9,650 c.y. concrete; 2,330,000 lb. steel reinforcing bars; 11,436' aluminum bridge railing; two lump sum bids for structural steel (about 22,492,000 lbs.); lump sum bid for cast steel (about 378,000 lbs.) lump sum for electrical equipment.

Work will begin about three weeks after the contract is awarded and will be completed within 410 working days after starting.

A future contract will provide for construction of reinforced concrete approaches at each end of the bridge. Contract for the seven main reinforced concrete piers is now underway by Scheumann & Johnson, Seattle. The firm received the award on a low bid of $964,291 in August.

▲STATE HIGHWAY PROJECTS—
Olympia, Wash.

Bids were opened December 16 by Washington State Highway Commission, Olympia, on three highway construction projects.

BRIDGES, CLEARING, GRADING, Auburn to Soos Creek — Clearing, draining, grading, constructing two precast prestressed concrete girder bridges, constructing a concrete flat slab bridge and a reinforced concrete girder bridge and fencing on 6.606 mi. of PSH No. 2, King County; FAP No. F-FG-046-1(10).

Eleven bidders. LOW BIDS: Scarsella Bros., Inc., 2207 S. 146th, Seattle, $1,175,350; Erickson Paving Co., 14446 Sunset Highway, Bellevue, $1,219,087; J. J. Welcome Construction Co., Box 641, Redmond, $1,280,993.

BRIDGE, West Approach, Puyallup River—Draining, grading, surfacing, paving with cement concrete and constructing reinforced concrete retaining walls on 0.042 mi. of SSH No. 1-V in Pierce County; FAP No. US-0236(2).

Four bidders, a LOW BIDS: Woodworth & Co., Inc., 1200 E. D St., Tacoma, $81,741; Concrete Construction Co., 2015 Center, Tacoma, $84,427; MacRae Bros., 5900 2nd Ave. S., Seattle, $89,355.

HOOD CANAL BRIDGE, Unit 2, Approach Structures—Construct approach structures for Hood Canal floating bridge, in Kitsap and Jefferson counties, a State Project, under jurisdiction of Washington State Toll Bridge Authority. Contract for the first unit of the project which involved construction of a reinforced concrete floating bridge, was held by Morrison-Knudsen Co., Inc., Hoge Bldg., Seattle; Henry J. Kaiser Co., Oakland, Calif.; Puget Sound Bridge and Dredging Co., 2929 16th S.W., Seattle; General Construction Co., 3840 Iowa, Seattle, a joint venture, $14,226,690.

Eleven bidders. LOW BIDS: General Construction Co., 2840 Iowa, Seattle, $508,855; Paul Jarvis, Inc., 1070 W. Ewing, Seattle, $515,959; Manson Construction and Engineering Co., 5209 E. Marginal Way, Seattle, $516,719. DE 12-17. Previous report 11-28

▲FENCE, SIDEWALKS, DRAINAGE—
Paine AFB, Wash.

Four bids ranging from a low of $9,113 by Sanford Wright, 2929½ Wetmore, Everett, to a high of $13,897, were submitted to the U.S. Air Force, base procurement office, Paine Air Force Base for 1—replacing deteriorated fence, 2—replacing deteriorated steps and sidewalks, 3—replacing area for proper drainage, 4—removing weeds and dead shrubs and replant with shrubs, in the 700 area at the base; Inv. No. 45-602-59-56. Bid opening December 11.

Other bidders were: Lindbrook Construction Co., 11738 36th N.E., Seattle, $9,292; Metropolitan Construction Co., 1008 Broadway, Everett, $10,980; Sprague, Inc., Box 117, Lynnwood, $13,897. Government estimate, $8,700. HH 12-13. Previous report 11-18

▲PAVING— Paine AFB, Wash.

One bid, that of Associated Sand & Gravel Co., 6300 Glenwood, Everett, $7,607, was received by U.S. Air Force, base procurement office, Paine Air Force Base, for repairing Cascade Drive, Nike Circle and Convair St. at the base; Inv. No. 45-602-58-60. Bid opening December 11. Government estimate $6,500.

Work involves patching, reducing crown and correcting profile of old surfaces, application of surface treatments to old and new pavements; preparing subgrade and disposing of unsuitable materials, performing necessary maintenance to existing drainage facilities, installing new catch basin inlet with storm sewer connection, installing new

culvert pipe, painting pedestrian crosswalk markings. HH 12-13. Previous report 11-26

★SIDEWALKS— Paine AFB, Wash.

Contract has been conditionally awarded to Metropolitan Construction Co., 1008 Broadway, Everett, $2,725, by U.S. Air Force, base procurement office, Paine Air Force Base, for preparing subgrade and placing portland cement concrete sidewalk along Commando Road for a distance of about 1,200'; Inv. No. 45-6002-59-58. Bid opening December 2. The order to proceed will not be issued until funds have been received.

●REACTOR, RESIDUE HANDLING FACILITY (AEC)— Idaho Falls, Idaho

(Estimated cost $65,000)

Bids will be opened 3 p.m., M.S.T., December 30, by Atomic Energy Commission, Idaho Operations Office, 550 2nd St., Idaho Falls, for construction of fast source reactor facility at ERB I area and for residue handling building at OMRE area, at the National Reactor Testing Station in Idaho; Inv. No. AT(10-1)-1003. Plans with above office. Bid guarantee 10%. Completion time 120 calendar days.

The fast source reactor facility includes a prefabricated metal building about 32'x35' in size with an eave height of 20'. Features include concrete floor slab and foundation;

high-density concrete reactor shield; three-ton bridge crane; oil-fired furnace with 1,000 gal. storage tank; exhaust system; electrical lighting and power services.

The residue handling building includes a prefabricated metal building addition (lean to) 12'x20', with an eave height of approximately 10'. Work includes construction of concrete footings for building addition round an existing floor slab.

Technical inquiries should be directed to Tom L. Ashton, Idaho operations office, Box 1221, Idaho Falls.

Planholders—Watkins Construction Co., Box 1786, Boise; Teller Construction Co., Box 2282, Idaho Falls; AEC Engineering and Construction Co., Box 1005, Idaho Falls; Shaw & Estes, Inc., Box 2399, Dallas, Tex.; Technical Constructors, Inc., Box 2488, Dallas, Tex.; Arrington Construction Co., Inc., Box 881, Idaho Falls; Wadsworth Construction Co., Inc., 804 Saturn Ave., Idaho Falls; Technicon, Inc., Box 776, Davenport, Iowa; Wallace Process Piping Co., Inc., Box 4027, S. Broadway Station, Denver, Colo.; Ets-Hokin & Galvan, 218 N. Avalon Blvd., Wilmington, Calif.; W. R. Cahoon Construction Co., Box 149, Pocatello.

STATE HIGHWAY PROJECT

BIDS CLOSE 10 A.M., DECEMBER 23

Olympia, Washington

NOTICE TO CONTRACTORS

Sealed bids will be received by the Washington State Highway Commission at Olympia, Washington, on Tuesday, December 23, 1958, until 10:00 A.M. and will then and there be opened and publicly read for the construction of the improvements listed below.

Bid proposals delivered in person will be received only at the Reception Desk located on the first floor of the Transportation Building.

All bid proposals shall be accompanied by a bid proposal deposit in cash, certified check, cashier's check or surety bond in an amount equal to five per cent (5%) of the amount of such bid proposal. Should the successful bidder fail to enter into such contract and furnish satisfactory performance bond within the time stated in the specifications, the bid proposal shall be forfeited to the State of Washington.

Prequalification of bidders is required. Maps, plans and specifications may be obtained from this office upon written request therefor and payment to the Director of Highways by cash, certified check, cashier's check or money order in the sum of two dollars ($2.00) for each copy of such maps, plans and specifications as a rental for the use of them. Plans will be forwarded by First Class Mail.

Informational copies of maps, plans and specifications are on file in the office of the County Engineer of the County in which the work is situated, the Chapter offices of the Associated General Contractors of America in Seattle, Spokane, Tacoma and Portland and the offices of the District Engineers of the Department of Highways where they may be inspected.

Federal Funds have been allocated for item No. 1a.

The improvements for which bids will be received follow:

1a. Constructing Concrete Box Culverts, Concrete Siphon Boxes, Siphons and Irrigation Lines on 1.830 miles of Primary State Highway No. 5 in Yakima County, JACOBSON TO FRUITVALE BOULEVARD, FAP No. U-018-2(3), involving about 475 cubic yards of Concrete, 93,930 pounds of Steel Reinforcing Bars, 884 linear feet of Concrete Pipe and other items.

ERNEST J. KETCHAM, Chairman
W. A. BUGGE, Director of Highways

6363—12-6, 13

WATER TOWER DEMOLITION

BIDS CLOSE 10 A.M., JANUARY 7

Bremerton, Washington

NOTICE TO CONTRACTORS

SEALED PROPOSALS will be received by the City Clerk, City Hall, Bremerton, Washington, up to, but not later than 10:00 A.M., January 7, 1959, for the demolition of a wooden water tower located in Bremerton. Specifications and detailed requirements are available to any interested bidder and may be obtained from the City Clerk, Bremerton.

E. H. T. McGowan
City Clerk

PLANS HAVE BEEN COMPLETED
BIDS ARE WANTED for Construction
Equipment
Supplies
Materials

You want— The lowest possible bid consistent with responsible workmanship.

You need— To publish a bid call where it will reach every major contractor, subcontractor and supplier in your territory.

When you advertise in Pacific Builder & Engineer publications, you reach directly more contractors, subcontractors and suppliers than would see your ad in dozens of newspaper type publications. You are advertisting in construction trade journals that cover thoroughly all of Oregon, Washington, Northern California, Idaho, Montana and Alaska, both in editorial content and circulation.

Pacific Builder & Engineer publications are the only true business journals devoted entirely to *construction* published in this territory. They penetrate every branch of the industry. They are the only business papers specializing in construction news that furnish their advertisers audited circulation statements.

Advertisements for bids are placed in PB&E columns by state highway departments, cities, counties, school districts, PUD's, state agencies, federal bureaus—and by architects and consulting engineers.

If the purpose of your advertisement is to GET BIDS, advertise in a CONSTRUCTION paper.

BUREAU OF RECLAMATION LISTS EQUIPMENT ITEMS
Bids Will Be Called During Next Three Months

The Bureau of Reclamation, Denver Federal Center, Denver, Colo. has announced major equipment and machinery items on which bids will be called during the next three months. Further information may be obtained by writing to the assistant commissioner and chief engineer, Bldg. 53, Denver Federal Center, Denver, Colo., referring to the title and number of the item as described below. Among the items listed are valves, transformers, gate, ventilating system.

VALVES, Little Wood River and Prineville Dams (12-2)—Little Wood River Project, Idaho and Crooked River Project, Ore. Description: Six 4'x6' high-pressure gate valves with hydraulic hoists, two for Little Wood River Dam and four for Prineville Dam. Total estimated weight is 216,000 lb.
Delivery date is 180 days.
Bids will be called late in December.

VALVES, Foss and Emigrant Dams (12-3)—Washita Basin Project, Oklahoma and Rogue River Basin Project, Ore. Description: Eight high-pressure gate valves with hydraulic hoists as follows—four 2'9"x2,9" for Foss Dam; one 3'6"x3'6", two 2'9"x2'9", and one 2'3"x2'3" for Emigrant Dam enlargement. Total estimated weight is 137,300 lb.
Delivery time is 180 days.
Bids will be called late in December.

VALVES, Sherburne Lake Dam (12-4)—Milk River Project, Mont. Description: two 4'x5' high-pressure gate valves and hydraulic hoists. Estimated weight is 63,000 lb.
Delivery is 180 days.
Bids will be called soon.

GATE, Trinity Dam (12-6)—Central Valley Project, Calif. Description: one 10'x20' fixed-wheel gate. Estimated weight is 214,000 lb.
Delivery is 360 days.
Bids will be called late in December.

VENTILATING SYSTEM, Trinity Dam (12-7)—Central Valley Project, Calif. Description: Blowers, motors and 32" diameter No. 10 gauge and 30", 12" and 9" diameter No. 20 gauge piping about 1,500' long. Estimated weight is 32,000 lb.
Delivery is 180 days.
Bids will be called soon.

TRANSFORMER, Radar Switchyard (21-9)—Columbia Basin Project, Wash. Description: one three-phase, 8,000/10,000 kva, 115 kv to 4.16 kv power transformer.
Delivery date in April, 1960.
Bids will be called soon.
