Take it Outside

WE MAY BE HALFWAY through summer already, but my mind is still focused on the outdoors and play. Perhaps because here in New York City, new recreational gems seem to be sprouting up on an ongoing basis.

In May alone, we saw three new openings: two sections in Brooklyn Bridge Park, a 30-acre site on Governors Island (see "Curb Appeal," page 30), and the three-acre Heritage Park on Staten Island's north shore. At the Heritage Park opening,

Mayor Bill de Blasio referenced

Superstorm Sandy, saying, "Not only will this waterfront site provide Staten Island with stunning new parkland for the community to enjoy but also its innovative features will help Staten Island and the rest of the city be better buttressed from the fury of another storm and flooding."

Therein lies the challenge: How do we design such amenities, particularly those along the waterfront, to be attractive yet discreetly resilient? In this edition's CEU article, "Going With the Flow" (68), we examine five projects—from coast to coast—that deftly address this issue. The focus on parks and recreation continues in the feature story, "Hard at Play" (24), where we highlight outstanding indoor and outdoor designs built to withstand the rough-and-tumble-as well as in the Product Spec sections Site Furniture (30) and Exterior Lighting (32).

Some consider shopping a form of play. If that describes you, read the Case Study "Motor City Goes East Coast" (20), featuring the New York City flagship Shinola store by Rockwell Group. There's also our Q&A (17) with Jeff Kovel, the architect behind an award-winning retail project design in Portland, Oregon.

Whatever floats your boat, relish these final days of summer!

Warm regards,

heila Vin

NEWS BRIEFS

DuPont Helps the 9/11 Museum Go for Gold

BACK IN MAY, the National September 11 Memorial Museum opened in New York City to both praise and debate. But one aspect of its design wasn't hotly contested the goal to make it green. And **DuPont** is a manufacturer contributing to this effort. Designed by **Davis Brody Bond** to attain LEED Gold, the museum incorporates energy-efficient systems and sustainable materials. To this end, DuPont donated 500 square yards of **Mohawk**'s SmartStrand Contract carpet for use in various spaces, such as the auditorium (above) and family room.

SmartStrand is made of DuPont Sorona fibers, which contain 37 % renewable plantbased ingredients. But Sorona's manufacturing is also worth noting: It requires 30% less energy compared to the production of nylon 6 and releases 63 % fewer greenhouse-gas emissions. Together these attributes can earn LEED points in the categories of Rapidly Renewable Materials, Regional Materials, and Indoor Air Quality. It may be some time

DOWN THE DRAIN ZeroDrain, from California Faucets, is the world's first "pop-down" drain with no protruding components. Its stopper utilizes a piston design to create a seal when pressed down. GREEN ACRES DuPont donated 500 yards of carpet constructed of its eco-friendly Sorona fiber.

before the project achieves certification, but visitors can truly breathe easier knowing that they're walking on a product that is sustainable—and CRI Green Label Plus-certified for low-emitting materials. —Sheila Kim

Don't Mind the Gap WITH PROTRUDING STOPPERS, CUMBER-

some lift rods, and the inevitable buildup, typical sink drains haven't improved in design the way that sinks themselves and faucets have. But **California Faucets** is trying to change this with its latest patent-pending design, **ZeroDrain**.

The world's first "pop-down" drain, ZeroDrain is a streamlined unit that **sits flush with the sink** and allows water to pass through a discreet ring-shaped gap around the stopper. Instead of a lift knob, it utilizes a piston that creates a perfect seal when the stopper is pushed down. The stopper can also be easily removed, rinsed, and reinserted. The solid-brass fixture, available in 30 finishes, has a diameter of 27/6 inches (the stopper itself measures 17/6 inches in diameter).

"Pop-up drains are dinosaurs. Anyone who has installed a standard pop-up drain knows how frustrating and time-consuming it can be," says Noah Taft, California Faucets senior vice president of marketing and sales. "We're approaching everyday plumbing in a new and innovative way with products that work better, look better, and are easier to use." —Jasmine Bager

MAIN EVENT

Design Takes the Floor

THE BREADTH OF FLOORING PRODUCTS available today has undoubtedly contributed to innovation in design, and in recognition, flooring giant Shaw Contract Group presented its ninth annual "Design Is..." awards. Architects and interior designers were invited to submit projects incorporating a Shaw brand hard-flooring or carpet product in the categories of Government/Civic, Hospitality, Health Care, Education, Small Office, Mid-Size Office, and Large Office. A panel of 20 judges—distinguished members of the A&D community hailing from Gensler, ZGF Architects, and SmithGroupJJR, among others—reviewed more than 350 entries from 25 countries, ultimately naming 40 projects Market Winners.

"The design showcased in the entries signifies the global reach of our brand and utilization of highperformance, Cradle to Cradle-certified products

(continued)

ON THE RED CARPET RGA, a Mexico City project by Trazo, was a winner in the Small Office Category of Shaw Contract Group's annual "Design Is..." competition.

<u>inbrief</u>

(Shaw continued)

across the globe," says John Stephens, vice president of marketing for Shaw Contract Group. "This year's winners reflect how design profoundly impacts the mission of the space, and its positive effect on the people who use it."

AECOM won in the Large Office category for its DIRECTV project in El Segundo, California. The high-energy environment was emphasized through color and distinct zones for social connection and amenities in addition to work spaces.

A winner in Mid-Size Office, **Design Blitz**'s Square Trade Headquarters in San Francisco featured exposed raw structural elements and ceilings, paired with plank-style flooring that echoes the distressed and industrial vibe as well as complements the rectilinear logo of the client.

And in the Small Office category, architecture firm **Trazo** scored points for its RGA offices in Mexico City. Here, geometric motifs—mostly in the form of Shaw's Hexagon carpet—counterbalance clean lines and minimalist contract furnishings. (View all winners on shawcontractgroup.com.)

But there is more to this competition than honors bestowed upon winning projects and firms: The 40 Market Award winners are entered into a second phase of judging for the program's Global Awards distinction. The Global winners, to be announced in September, will each receive \$2,000 to be donated to a school or organization of their choice. —JB

KNOCK ON GOOD Acrovyn doors from Construction Specialties are the first doors to achieve Cradle to Cradle certification.

And the First C2C Door Is...

THE ACROVYN COLLECTION of impactresistant doors by Construction Specialties recently became the first door to achieve Cradle to Cradle certification. Qualifying at the Bronze level, the interior FSC-certified particleboard and mineral-core doors—offered in 15 wood-grain patterns, 60 solid colors, and two simulated metal finishes—can now be counted toward credit in LEED Version 4.

The manufacturer provides an inventory of the doors' chemical compositions and information on their life cycles, enabling architects specifying them to earn one point for Materials and Resources: Building Product Disclosure and Optimization/Material Ingredients. As part of the continual improvement criteria required for the C2C assessment, Construction Specialties sourced suitable alternatives to certain adhesives and fire retardants used in the doors.

In the Cradle to Cradle certification process, products are evaluated by a third party—**McDonough Braungart Design Chemistry**, based in Charlottesville, Virginia—in five areas: material health, material reutilization, renewable energy and carbon management, water stewardship, and social fairness. The assessment and certification process takes two to six months to complete. Committed to C2C principles, Construction Specialties is no stranger to the procedure, with more than 40 of its products—other than doors—already awarded the designation under earlier versions of the program.

"Cradle to Cradle allows us to fulfill our corporate vision," explains Howard Williams, LEED AP, ID+C, vice president of Construction Specialties, "as its rigorous sustainability protocol encourages us to create products that make buildings better."

Executive general manager of the company Ken Barbour says, "We want to make sure we are still delivering the durability of our doors but with healthier materials in place." The Acrovyn doors contain no chemicals of concern, like persistent bioaccumulative toxins (PBT), and they are free of halogenated fire retardants, which were banned in 2006 by the European Union. For more information, visit c-sgroup.com. —*Lisa Caldwell*

Looking (at) Glass

TRADITIONALLY, a 50th anniversary is marked by gifts of gold. But in the case of **PPG**, which this year is celebrating the semicentennial of one of its marquee products, the material of choice is glass—in a manner of speaking.

Solarban, the groundbreaking and now ubiquitous low-emissivity, heat- and lightreflective glazing, was first fabricated in 1964, when Pittsburgh-based PPG adapted the wetchemical deposition process to produce an

GOLDEN ANNIVERSARY

Among the famous structures featured in an exhibit celebrating 50 years of Solarban glass in the built environment are Colonnade Plaza/Mutual of Omaha Regional Office by Minoru Yamasaki (left) and PPG Place by Philip Johnson and John Burgee Architects (below).

energy-efficient, coated architectural glass.

The manufacturer is commemorating the technological achievement with a photographic survey of case studies spanning five decades of design. The exhibition is traveling to various AEC industry trade shows throughout 2014, but may also be viewed in a digital montage at solarbanglasslegacy.com. To see it is to experience a concise history of highrise structures. Among some of the 50-plus projects featured are Colonnade Plaza, once known as the Mutual of Omaha Regional Office, in Miami (Minoru Yamasaki, 1965), One United Nations Plaza in New York (Kevin Roche John Dinkeloo and Associates. 1975), PPG Place in Pittsburgh (John Burgee Architects and Philip Johnson, 1984), the Salt Lake City Public Library (Moshe Safdie and Associates and VCBO Architecture, 2003), and the Queen Alia International Airport in Jordan (Foster + Partners, 2013). Other noteworthy architects and firms represented are SOM, AC Martin, HOK, Paul Rudolph, I.M. Pei/Pei Cobb Freed & Partners, and Fentress.

Continuing research and proprietary innovation have expanded the Solarban family through today. Magnetron-sputtered vacuum deposition, developed by PPG in 1983, formed the basis of Solarban 70XL—the world's first triple-silver-coated solar-control low-e glass, which was released in 2005. In the exhibit, a timeline charts these and other related advances in energy-efficient glass, translating technical performance data into a user-friendly infographic format. —LC

METLSPAN.COM/THERMALSAFE

ENVIRONTENTALLY

PROFILE INTERVIEW BY ALIA AKKAM

Jeff Kovel: Reimagining Retail

Principal Architect, Skylab Architecture, Portland, Oregon

ELABORATE ON SOME OF YOUR RECENT RETAIL PROJECTS.

Like a music venue

that transforms nightly, the Portland flagship of online retailer **Solestruck** is a flexible, event-based space with a changeable readerboard for the exterior sign. In the shoe cellar, featuring **cork wallpaper by Wolf Gordon**, back stock is visible through a floor-to-ceiling glass wall. For **Sorel** [above], the global retail design **abstracts forms of the Arctic** and detailing found on the products. **Upholstered walls and nesting fiberglass blocks** reminiscent of igloo structures serve as footwear risers. Throughout are **Maharam textured vinyl fabric** walls and epoxy-coated, black-gloss fiberglass arches.

SOLESTRUCK IS WITHIN AN ADAPTIVE REUSE BUILDING. HAVE YOU WORKED ON OTHER PROJECTS OF THIS KIND?

The **Flavor Paper** headquarters [left] is a mixed-use redevelopment of a five-story parking structure in Brooklyn. The fascinating manufacturing process takes place on **6o-foot-long silkscreen tables**. We amplified the artwork by installing a **mirrored soffit and**

exterior canopies over the tables, enabling pedestrian traffic to view the process in an overhead reflection.

WHAT HAVE YOU SPECIFIED RECENTLY?

Watermark plumbing fixtures in the bathrooms of the Snowmass residence, a project under construction in Colorado. At the W Hotel Seattle, we roped together custom handblown, 42-inch-tall glass tubes from Esque Studio to create chandeliers [right].

WHAT MATERIALS AND FINISHES ARE YOU DRAWN TO?

Shou sugi ban, the Japanese technique of curing wood through torch burning. The Solestruck storefront highlights this treatment through laminated curving strips. I also like bronze mirror finishes and mild-finished steel.

.....

Upon graduating from the Cornell University Department of Architecture, **JEFF KOVEL** headed for Portland, Oregon; in 1999 he founded Skylab Architecture there. The firm's projects, which span the retail, hospitality, residential, and commercial realms, include Nike's "Camp Victory" for the 2012 Olympic Track and Field Trials in Eugene, Oregon; the W Seattle; and the Hoke residence, which appeared in the film Twilight.

.....

417

The architect stands inside his retail project, Solestruck, in Portland, Oregon. The curving display platforms are treated with a black DuPont Scuffmaster paint.

SHINOLA FLAGSHIP, NEW YORK CITY

Motor City Goes East Coast

PROBLEM: Create a retail store reflecting a luxury brand identity while preserving elements of a landmarked building.

SOLUTION: Mingle old and new design components and materials to capture the label's historic industrial spirit.

OVER THE LAST few years, Shinola has emerged as the poster child for Detroit's rebirth. Once a shoe polish brand immortalized in a World War II-era colloquialism ("You don't know sh-- from Shinola"), the name was revived by a new company, a Detroit-based manufacturer of high-end timepieces and leather goods. For its New York City flagship, completed last year, the leadership team commissioned Rockwell Group to bring a bit of the Motor City to the Big Apple.

"We wanted to create a space that looked at the mythology of American industrialism: a clean, contemporary showroom and place to explore," says firm founder and president David Rockwell.

Because the 3,400-square-foot store is situated in a landmarked Tribeca district, the design team looked to archival images in restoring the 19th-century facade. The group gutted the interior, whitewashed the walls,

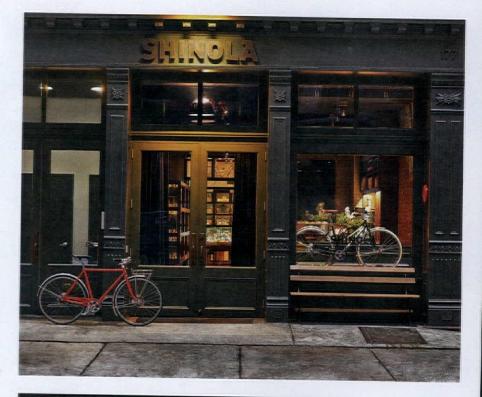

IN THIS PROJECT

and poured and polished a concrete floor, employing a palette of brass, oak, and bronze.

The concept is twofold: To access the sales floor at the rear, visitors must pass through an inviting coffee shop. Beyond the café's custom fire doors (by Capital Doors), a simulated skylight on the back wall of a lofty space draws patrons into the retail zone. Custom displays hold an assortment of wares from shoe polish to bicycles. A white tiered shelving system by Walters Custom Cabinetry doubles as seating for in-store events.

To channel Detroit's industrial past, the team sourced one-off vintage pieces, including a bronze world map—formerly in a Rockefeller Center lobby—and brass junction boxes from naval ships, reborn as café lighting.

Says Rockwell, "[Shinola] gave us a chance to embrace crafting and manufacturing with the same romance that the brand employs with its products."

Hard at Play

Designers explore products that hold up in recreational settings, inside and out.

BY MICHAEL COCKRAM

RAISE THE ROOF

Bushwick Inlet Park (above and right) in Brooklyn, New York, features a sloping green roof that covers the park building and looks out over the playing fields, toward the Manhattan skyline. **NOTHING FIRES UP** the brain like play. So said psychiatrist and researcher Stuart Brown, M.D., in a TED talk in which he extolled the value of play as essential to our development, keeping us mentally fit and balanced throughout our lives. In four recent projects, architects and designers have set the stage for various types of play using materials that support recreation and stand up to wear and tear.

ON THE WATERFRONT

As Brooklyn's East River waterfront makes the transition from industrial to residential use, the area is seeing a wealth of recreational spaces pop up. The recently opened **Bushwick Inlet Park**, whose design team was headed by **Kiss + Cathcart, Architects**, extended the riverside green space by covering the building's sloping roof with natural turf. For the building itself, which houses multipurpose and maintenance facilities, **Efco** storefront windows and **Trespa** phenolic-resin panels were used to give the facade an urban edge. A back entrance cutting into the green roof connects the building to the park and brings in daylight. "The park side walls are foldable **Nanawall** doors," says principal Gregory Kiss, "which offer good thermal performance and can open completely." Artificial turf from **Domo Varioslide Supreme** covers the playing fields. According to Stephen Whitehouse of **Starr Whitehouse Landscape Architects**, natural grass couldn't stand up to the beating that the intensively used fields take.

One project goal was to avoid adding stormwater to the city system and to minimize water flowing into the East River. Beneath the fields is a deep base of crushed gravel, which holds stormwater until it filters into the soil. To absorb runoff, the designers specified permeable pavers by **SF Rima** for the walkways winding through the park. (Read

more about Bushwick Inlet Park's resilient design strategies in the CEU course "Going with the Flow," page 68.)

CARVING OUT SPACE

On a triangular site wedged between a roadway and train tracks, the **Kavel K Youth Center** in the Hague, Netherlands, makes use of every square inch of space. On either side of the recreation building are hardscape play areas: a skate park on one and a soccer and basketball court on the other.

The Amsterdam-based multidisciplinary firm **Carve** fashioned the skate park into a series of three basins; it also incorporated an adjacent concrete-clad building by scooping out an area of the facade so that skaters can essentially roll up the wall.

The low-lying Netherlands is especially mindful of flood prevention and therefore stormwater management. So the designers sought a solution to dealing with on-site water. For the walkways, they used standard permeable paving bricks mixed with patches of exposed earth that are held in place with **Greenbrick**, a high-density polyethylene (HDPE) hollow brick developed by Carve and manufactured by **StruykVerwo**. "Greenbrick is completely permeable and it allows grass to grow in between the street pavement," says Carve founding partner Elger Blitz.

MIXING BUSINESS WITH PLEASURE

According to Brown, even adults are more engaged and productive when their work has a playful element. This notion is embodied in the 40,000-square-foot **Brooklyn Boulders Somerville**, in the latternamed city north of Cambridge, Massachusetts. "We believe that physicality stimulates innovation and creativity," says Brooklyn Boulders

Somerville cofounder Jesse Levin. "Startups working here will go for a climb or capoeira, and they'll get invigorated in a way that they wouldn't [have] in a traditional work environment."

The Active Collaborative Workspace comprises an open coworking space, yoga areas, weight rooms, and—at its heart—a 120-footwide free-climbing wall. The floor at the wall's base, custom made by **Vertical Solutions**, consists of 16-inch-thick high-resilience foam wrapped in ballistic nylon. The birch-plywood surface of the scaling walls is peppered with a variety of holds from such companies as **Habit Climbing**.

These walls benefit from diffuse light that doesn't cast sharp shadows. **Arrowstreet**

DITS (CLOCKWISE FROM TOP): MARLEEN

architects specified standard fluorescent fixtures that are inverted to bounce light off the ceiling in these areas. In zones where stronger downlighting was necessary, they chose high-bay luminaires like **Deco**'s new Orion D910.

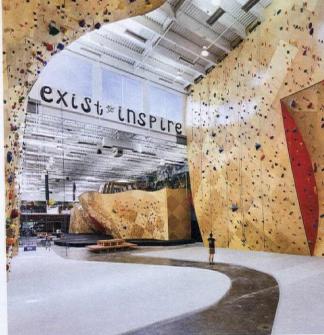

WOODY NOTES

In 2013, **J. Meyer H. and Partner Architects** inserted the **Mobi-Versum** playscape into an existing building that houses a sustainability exhibit in the **Autostadt**, a car-themed visitor's complex in Wolfsburg, Germany. The interactive playscape, reaching up to 47 feet high, utilizes fire-resistant, locally sourced beech plywood supplied by **Hess Timber**. "The tactile quality of wood is unique," says project team member Wilko Hoffman. "It's warm to the touch and a softer play surface than many other materials."

The architects derived the design from the international recycling symbol, which is abstracted into a three-dimensional biomorphic form. Then they integrated slides, climbing nets, and hiding nooks. **LED Linear**'s Phobos TV strip lights illuminate and highlight features. The project also includes workshop spaces, a learning kitchen, and other interactive features that help teach children about sustainability.

ROCKING AND ROLLING Building and skate park are intertwined at the Kavel K Youth Center (top) in the Hague, Netherlands—skaters can roll right up the side of the building's concrete facade. A wood-clad wonderland, the MobiVersum playscape (left) in Wolfsburg, Gemany, encourages play while teaching kids about sustainability. Brooklyn Boulders Somerville (above) provides members with work space and recreational outlets, such as this plywood climbing wall.

Curb Appeal

LANDSCAPE ARCHITECTURE FIRM West 8's awardwinning design for the Park and Public Spaces of Governors Island in New York Harbor is bold in every way. First, to assuage fears about rising waters, the planners elevated most of the island above the flood zone. Second, to enhance the visitor experience, they designed three-plus miles of striking white concrete curb edges that swell up to become benches in spots, ultimately leading parkgoers on a journey through the gently rolling space.

"We made this sinuous path system that pulls the horizons, the sea, and the Statue of Liberty into the forefront," says Jamie Maslyn Larson, principal of West 8. "The pathways draw you into them and make you want to explore. And the white really accentuates that experience."

The precast units were fabricated by Buffalo, New York-based Southside Precast Products using hundreds of custom molds. To add visual interest, West 8 created an organic, circular, low bas-relief of a "fish-eye" pattern for each 4-foot-long, 2-foot-deep section. -Allison Craig

ROAD TRIPS Sinuous paths on Governors Island (above), in New York Harbor, are outlined

with precast-concrete curbs; the public artwork in the foreground is Mark Handforth's Painted Phone. The curbs, which swell to become benches in some spots, are intricately patterned (left).

SNAP BACK: SITE FURNITURE

JORGE ABICH Associate Landscape Architect Office of Cheryl Barton San Francisco

"Site elements are trending toward an increased use of nontoxic materials. Many clients are requesting toxicity information for the products and product components used on their projects. Over the past year, we have investigated paints, sealants, plastics, wood laminates, and many other materials to ensure that specifications meet the clients' requirements. The Pharos database has taken sourcing nontoxic materials a step further by providing an online platform for healthy material selection."

TRISH BECKMAN Principal Field Paoli Architects San Francisco

"There is a cultural shift in how public spaces are viewed and used, which is tied to more integrated technology in personal lives, the attitudes of up-and-coming generations about meeting and socializing, and ideas about doing what is good in the long run (such as preferring sustainable woods and nontoxic products and paying more for fair-trade goods). All these are key to selecting site furnishings."

Think Global/Think Local

THE OBJECTIVE WAS to design a collection of site furniture that would benefit from both the efficiency of mass production and the craftsmanship and customization of local materials and assembly, to cater to local cultural preferences—all while reducing the carbon footprint through flat-pack shipping. The result is the new MultipliCITY line from Landscape Forms, created and developed in partnership with award-winning designer Yves Béhar and his studio fuseproject.

"For several years we have been doing research on efficiently delivering product globally, so the time is right," explains Landscape Forms President, Richard Heriford. "MultipliCITY will be equally at

The minimalist series features seven elements: a backed and backless bench, table, bike rack, path light, and single-sided and double-sided litter receptacles. Standard mass-produced structural parts, such as cast-aluminum frames and brackets, may be combined with locally manufactured parts; for instance, seating and table surfaces can be specified in standard local hardwoods.

Thoughtful details include a standing-height wood surface on the bike rack for resting a phone or keys, and an optional table affixed to the back of a bench for holding a laptop or lunch. —AC

Safe Passage

OUTDOOR PUBLIC SPACES are doing more with less light. Take the University of Pennsylvania's Shoemaker Green commons, which averages a modest 0.4 fc to 1.5 fc yet still provides enough brightness for safe circulation at night and gatherings at athletic events.

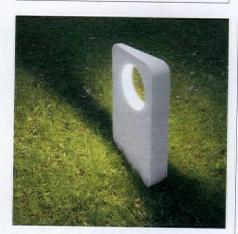

The 3.75-acre green space was illuminated by New York City–based Tillett Lighting Design. Both a pass-through and traditional quad, the commons is bracketed on one side by subtly lit Penn Park and on the other by city streets with glary lanterns. According to firm principal Linnaea Tillett, the challenge was to create a sensitive transition within guidelines while enhancing functionality, aesthetics, and sustainability.

Rather than flooding the site with light, explains senior designer Alexandra Pappas, the firm chose to use varied-height metal halide pole lights to illuminate paths and highlight landscaping and architecture, establishing a sense of place. Sources are shielded and fixtures precisely aimed to reduce glare and minimize light spillage. The latter was of particular concern, as Shoemaker Green is a pilot project for the Sustainability Sites Initiative. —*Alice Liao*

THE EVENING POST At UPenn's Shoemaker Green (with Franklin Field in the background), Tillett Lighting Design opted for varied-height pole lights that provide enough illumination for students' safe circulation while addressing sustainability issues.

FAUZIA KHANANI Principal/Founder

Principal/Founder Föz Design New York City

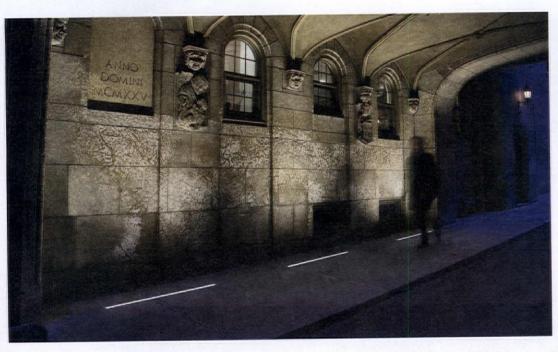

"Today there's a shift in residential outdoor lighting, from being purely utilitarian to setting a mood or enhancing the ambience of an outdoor space. Instead of just providing sightlines, the field is becoming more like interior lighting, where the fixtures themselves are part of the design. Decorative fixtures were never a consideration for outdoor lighting, but now their aesthetics have improved and they're being made out of materials that allow them to be left outside."

DOMINGO GONZALEZ President Domingo Gonzales Associates New York City

"The sustainability movement in this country is concerned with not only making outdoor lighting more energy efficient and environmentally friendly but also understanding aspects of the dark-sky movement. Light that's emitted into the sky is actually wasted energy and money. Simply stated, minimizing the amount of light put into the sky can be money saved."

Designing with Light

ONCE A DISCREET way to uplight building facades or articulate trees, in-grade lighting fixtures are now also being used as decorative elements in outdoor projects. Sleeker and often linear, the fixtures typically appear in multiples to form patterns that extend the life and identity of a public space long after the sun sets.

One such installation, by **Cooper, Robertson & Partners**, is in New York City's Zuccotti Park (previously known as Liberty Plaza Park). The AIA Honor Award–winning design features a walkway leading to the new World Trade Center that is accented with granite benches and a grid of 500 milk-white glass pavers. At sundown the pavers give off a glow thanks to illumination cast from below by custom **B-K Lighting** linear LED fixtures. Color-changing in-grade LED lighting has added a dynamic, contemporary edge to Plaza del Torico, a historic public square in Teruel, Spain. Executed by **B720 Fermín Vázquez Arquitectos** and lighting design firm **Artec3**, the installation scatters more than 1,200 linear fixtures around a fountain in a fluid design inspired by a subterranean reservoir.

For the Robert F. Kennedy Inspiration Park in Los Angeles, lighting design firm **Horton Lees Brogdon** employed fiber optics to re-create the constellations showing on the night of Kennedy's birth. The lighting system, supplied by **Visual Lighting Technologies**, is composed of a 150-watt metal halide illuminator with a twinkle wheel and 175 acrylic tubes embedded in the concrete. —*AL*

DOAFEW MILS REALLY MAKE A DIFFERENCE?

You bet they do. They can mean the difference between taking Center Court and never kissing the trophy. Or the difference between a long lasting roof and one that is less durable. So if you're looking for superior, reliable performance, you want the new Sarnafil Thickness Guarantee.

The roofing industry standard allows membranes to be manufactured up to 10% below the advertised thickness, which means your 60 Mil membrane could really be 54 mils thick! But with our Thickness Guarantee, you get every mil you pay for, guaranteed.

So don't take a chance on your next roof. **Visit www.thicknessguarantee.com or call 800-576-2358** for Sarnafil Thickness Guarantee program details and to see the difference a Sarnafil membrane can make. Because a few mils can mean the difference between failure and a performance that people will talk about for decades to come.

CONCRETE & MASONRY

The Writing's on the Walls

VIEW IT FROM THE STREET, and the curving facade and portico entrance of the stately Neoclassical stone building in Berlin hints at its original use: The 1930s structure, designed by Johann Emil Schaudt, once housed the Royal Danish Embassy. But view it from the rear, where it faces lush Tiergarten park, and it assumes another aesthetic identity altogether—one befitting its current status as the boutique hotel Das Stue.

Dominating the elevation is an angular new wing. Designed by Potsdam-based Axthelm+Rolvien Architekten, it is clad in concrete panels etched with a large-scale floral pattern reminiscent of William Morris's work. Hering Bau, a German company specializing in systematized construction solutions, devised the fabrication process in which a special surface retardant is applied to the panel mold before the cement is poured in. Upon curing, the retardant is washed away, lifting off a thin layer of concrete and creating high-contrast, low-relief images on the surface. —Lisa Caldwell

GREAT RELIEF The stylized floral pattern etched on the concrete walls of Das Stue, a boutique hotel in Berlin, references the nearby public gardens of Tiergarten.

SNAP BACK: CONCRETE & MASONRY

FU-TUNG CHENG

Founder Cheng Design Berkeley

'Concrete is to architecture as cotton is to clothing. It is a ubiquitous material that shape-shifts in function, dimension, form, and texture depending on the molds it is vested into. Today, with the advent of self-compacting cement, ductile concrete, fiber-reinforced concrete, highperformance concretes, Shotcrete, fabric-formed concrete, and myriad form types from CNC-formed Styrofoam molds to polyure than erubber molds, there are endless opportunities to create shapes and textures to fit the contemporary aesthetic."

TOM DIEHL Principal Diehl & Associates Houston

"As an architect in Houston, I have to deal with the consequences of intense sun, heat, and humidity on various building materials. Masonry products, in particular brick, have proven to be the best option for combating the effects of these climate conditions over time in both performance and aesthetics. Masonry also has an added environmental bonus in not only its ability to reduce the heat load on the wall it is a part of but also the natural 'vent wall' quality it possesses when constructed as a veneer."

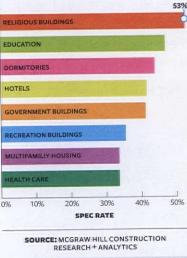

WHITNEY SANDER Principal Sander Architects Venice, California

"It's a pleasure working with exposed concrete. All the great modernist masters appreciated the expressive potential of exposed concrete, whether Brutalist in style (Le Corbusier) or finely surfaced (Tadao Ando). Exposed concrete has recently become a luxury material so its use is rarer. But concrete ties a project immediately to the history of building and is essential to any architectural design practice."

Behind the Scenes

ALTHOUGH PREBUILT, UNIFIED WALL assemblies have been popular in Europe for quite a while, the United States is just now warming up to the idea. Offering code-compliant, warranty-covered, and compatible components in one system affords quick and uncomplicated installation compared to traditional specifying and building methods. What's not to like?

A consortium of proven, reputable manufacturers has developed such a system for steel-stud walls meant to be used with masonry veneer. Called CavityComplete, it incorporates products and materials from Owens Corning (fiberglass and rigid foam insulation), Rodenhouse (fasteners for insulation), Tremco (vaporpermeable air barrier), Heckmann Building Products (masonry anchoring system), and Mortar Net Solutions (sealants and moisture management for masonry cavity walls).

The components have been tested in concert and meet standards for fire containment, air leakage, thermal resistance, and water penetration. Packages that address the performance requirements of specific climate regions are also available.

Particularly compelling is the warranty offered by Cavity-Complete: Pending acceptance of a project profile and submission of a project-completion notice, the company will issue a 10-year limited material and replacement warranty. The masonry veneer, steel studs, and gypsum board are neither included in the system nor covered by the guarantee. -LC

HOW TO FILL A (WALL) CAVITY The CavityComplete wall system combines convenient, all-in-one specifications for increased build speed.

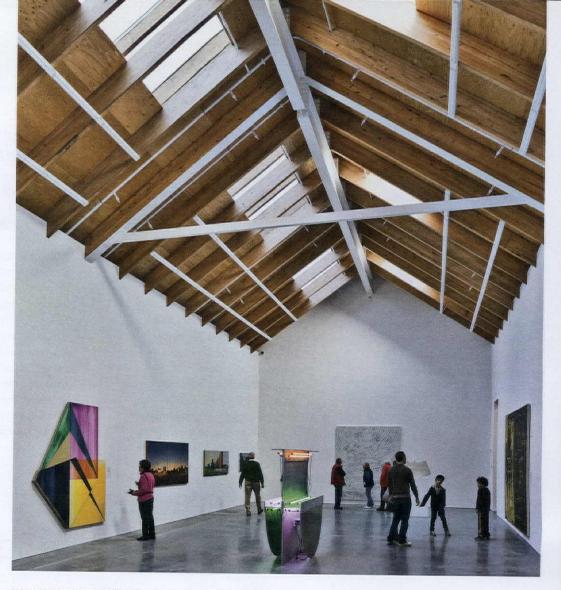

Art, Shown in the Best Possible Light

WHEN DESIGNING THE Parrish Art Museum in Water Mill, New York, architects Herzog & de Meuron and daylighting engineers from ARUP took a clear stand: Art should be viewed in a natural, daylit environment, similar to the lighting in artists' studios. To achieve this objective, they utilized skylights that incorporate Panelite's ClearShade honeycomb glazing.

ClearShade was designed to optimize daylighting, energy efficiency, user comfort, and aesthetic goals in a single product. It accomplishes this by providing up to 70 percent diffuse light transmission while reflecting direct solar rays.

The result, as quantified by the Lighting Research Center (LRC) in Troy, New York, is that artificial light was not needed for approximately 81 percent of the time the museum was open in spring 2013.

The verdict on user comfort and aesthetics? According to the LRC, 73 percent of visitors considered the illumination of the Parrish galleries superior to that of other museums. —*Allison Craig*

THROUGH THE ROOF ClearShade honeycomb glazing from Panelite was integrated into the skylights of the Parrish Art Museum—a project by Herzog & de Meuron in Water Mill, New York—to diffuse natural light into the space.

SNAP BACK: DAYLIGHTING & SUN CONTROL

SARAH MARVEZ Architect Gensler Denver

"We're seeing an emphasis on local control: People want to be able to fine-tune their work space or the light levels in their hotel room, for example. We are also seeing a more nuanced approach to daylighting breaking down daylighting strategies based on facade orientation, adjacent building shading, and possible sources of glare. Daylight is great, but it also comes with glare, heat gain, and other issues. We are trying to mitigate these factors while providing the best possible comfort levels for occupants."

SERGIO COSCIA Principal Coscia Moos Architecture Philadelphia

"There seems to be a convergence between a heightened sensitivity to the environment coupled with the advent of what I would call background technology. This is technology that is easily manipulated by the user and operates in the background, free of interference. This can range from wireless thermostats controlled over the Internet to shading devices and lighting controls that automatically respond to changes in their surroundings. We're excited by the approach that Lutron has taken to daylight autonomy."

"Our go-to products are roller shades with 1 percent to 5 percent openness depending on the exposure. These permit a view outside while cutting down most of the direct sunlight or glare. In addition, we tune the glazing by exposure for visual light transmittance and heat gain. We can also leverage this to get better control of the view and daylight level glazing. These simple strategies add little to no cost to the project and are a functional daylighting baseline."

A System of Tubes

TRICKLE DOWN SkyVault Series Collector (top) and SkyVault Series Amplifier (above) catch and reflect light down into interior spaces.

A TOTALLY TUBULAR device, SkyVault Collector by **Solatube** International debuted at the AIA Convention in Chicago this June, demonstrating natural illumination for larger-volume daylightchallenged spaces: big commercial spaces with lofty ceilings such as airports, convention centers, warehouses, manufacturing facilities, and retail centers.

At the core of the new series is the Solatube M74 DS (daylighting system), boasting a base unit with a 29-inch opening to the sky—nearly two times the aperture and collection capability of previous models. The enlarged aperture allows more light to enter an area for higher daytime illuminance and/or greater spacing between units with fewer roof penetrations. Patented Raybender technology drives the captured light through the dome and down the tube using reflective material, while built-in LightTracker with Cool Tube technology mitigates the solar heat gain by filtering out infrared rays.

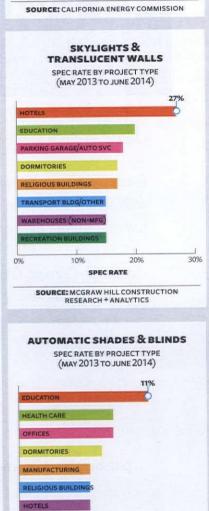

Another safeguard against raised interior temperatures from daylighting is an insulated (R6) and sealed curb cap that minimizes heat gain or loss through the roof opening. A dual-dome option further increases thermal efficiency.

Designed to minimize labor and packaging waste, the SkyVault Series offers preassembled roof and diffuser modules. A proprietary, screw-free Tab-Lock Connection System with Tube Belts eliminates unsightly, labor-intensive seam tape. And nesting the components and shipping them on pallets reduces packaging. —AC

Raising the Car

A NEW TREND is sweeping the face of vertical transportation systems: destination dispatch. Located in the elevator lobby, just like the standard up or down call button, destination dispatch systems require users to select their intended floor prior to boarding. The system then directs the user to an assigned elevator door, facilitating transport.

The main draw is efficiency in terms of speed, resources, and floor plate. Pooling users who are traveling to similar floors results in faster transport than conventional dispatch and helps reduce the number of elevators needed. Fewer elevators in the building translates to gains in rentable square feet. But sweetening the argument for this technology is its sustainability claims: Cutting down on the number of elevators reduces the amount of raw materials needed to build and maintain the cars and associated shafts. Whether keypad, touchscreen, or touchless operation is used, destination dispatch is building transportation optimized. -Laurel Petriello

Climate, Controlled

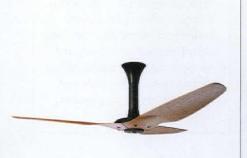

THE SMART THERMOSTAT category is heating up. This summer Honeywell is releasing a device for residential use called Lyric. Its geofencing feature links the unit to a smartphone's locator function, activating the thermostat from a distance of 500 feet to seven miles. Proximity-based responsiveness sets this apart from other thermostats that, while eminently programmable, don't actively anticipate the homeowner's arrival or departure in real time. When the unit is set, a fine-tuning algorithm factors in indoor and outdoor temperatures, humidity levels, and weather conditions to determine the optimal comfort levels.

Honeywell has a powerhouse partner in this venture: Apple. The manufacturer is participating in Apple's HomeKit, a home-automation package controlled, of course, via iPhone. (The stand-alone product is also compatible with Android.) Also involved are Philips Lighting and Kwikset locks, which combined with Apple would make the nightly routine of shutting off lights, locking doors, and lowering the thermostat a one-touch operation. —*Lisa Caldwell*

HOMING INSTINCT In addition to controlling indoor temperatures, the Lyric thermostat displays a 12-hour weather forecast, maintenance alerts, and monthly performance reports.

ROBERT SKOLOZDRA Partner Svigals + Partners Architecture + Art

New Haven

"To optimize value per square foot, we're designing lab and R&D spaces for maximum flexibility and rapid adaptability. At Yale, for example, we retrofitted a lab's existing MEP infrastructure with plug-and-play 'pods' throughout the floor and ceiling. Combined with flexible casework, rolling cabinets, and other preengineered solutions, the renovated space accelerates move-in schedules for new teams. The HVAC systems are highly efficient and have excellent life-cycle benefits. But the strategy also reduces facility adaptation costs."

Cultivating Cool

THE ARTIST-LOFT AESTHETIC, replete with unfinished walls, wood floors, and exposed metal ducts, has predictably found plenty of mainstream architectural adopters. But there's more than an edgy appearance at issue; it's critical that the function of the HVAC system not be impaired.

Under certain circumstances, using spiral ducts can pose some advantages over the traditional rectangular sheet-metal product. Prime among them is enhanced performance and, in turn, reduced energy costs. Because the round format can be fabricated in longer runs than the rectangular one, it has fewer joints and connections, resulting in a more efficient air flow, with less friction loss. Fewer seams also decrease the opportunity for air leakage, which can tax the HVAC system as well as compromise interior air quality.

Noise is another issue to consider when planning an exposed duct system, particularly in a workplace setting. Rectangular ducts, with their tight-turning vanes, can create audible turbulence, as can incorrectly sized spiral ducts. Acoustic duct liners may offset this problem. Fabric ducts available in myriad colors—and fiberglass ducts are alternatives to the sheet-metal variety.

For the Toronto offices of advertising agency JWT, the project's designer **HOK** opted for the industrial-chic vibe that also allows for an efficient HVAC system. Consultant Tony Spina, of **Smith & Andersen**, says of the project: "Air is distributed into the space through a series of linear diffusers located along the perimeter of the building, and through a combination of square plaque, linear slot, and ducted round diffusers within the interior space to suit the various architectural ceiling systems." —*LC*

CURRENTS / July + August 2014

"I tell you, it is easier to build a grand opera or a city center than to build a personal house." -ALVAR AALTO

GreenSourcemag.com

IN THIS ISSUE

Green Design's in the House

When the recession hit in 2007, projects across the country were put on hold or abandoned. Colossal cranes hanging over deserted construction sites became ubiquitous in cities from Boston to Las Vegas. While much of the industry came to a halt during the downturn, the green residential market experienced the most growth. And according to McGraw Hill Construction's most recent study, "Green Multifamily and Single-Family Homes: Growth in a Recovering Market," this trend will likely continue, with more builders, developers, and remodelers of both single and multifamily housing experiencing a substantial rise in green activity, from implementing strategies that enhance water and energy efficiency to improving indoor air quality. The greatest increase in green construction will be from those building single-family houses: of the firms surveyed for this study, 62 percent reported that more than 15 percent of their work is green to some degree, and by 2018, an impressive 84 percent expect to be involved with green building practices.

This steady climb in green construction is driven by myriad factors, such as consumer demand, environmental awareness, and changing building codes. Homeowners are recognizing the cause and effect of green design: energy and water efficiency result in money savings and improved health and comfort. For builders and developers, a mix of government incentives and regulations, advances in green product development and affordability, and energy costs have spurred decisions to adopt green building practices. Those still behind the curve will probably soon realize the advantages of green building. However, predicts Harvey M. Bernstein, VP of Industry Insights and Alliances at McGraw Hill Construction, "the broader the availability of green building products and practices, a more educated consumer and an increase in activity at the regulatory level will also encourage this group of builders to learn green practices over time."

In this issue, we feature two case studies that may be physically small but set out to satisfy ambitious energy-saving objectives. These residential projects demonstrate creative yet diverse approaches to green design. David Baker's Zero Cottage creates an airtight, highly insulated house that goes beyond the usual energy-performance standards, implementing a variety of sustainable strategies to achieve Passive House and the Living Future Institute's Net Zero Energy certifications. Architecture firm Leth & Gori went in a different direction for a project in a Denmark suburb, relying on traditional materials proven to be long lasting and thus sustainable.

With residential and commercial buildings accounting for 40 percent of the nation's total energy consumption in 2013, according to the U.S. Energy Information Administration, it is becoming increasingly important for the design and construction industry to take action to expand its knowledge of sustainable design and reduce its carbon footprint, one house at a time.

The global leader in door opening solution

Sustainable to the Roots

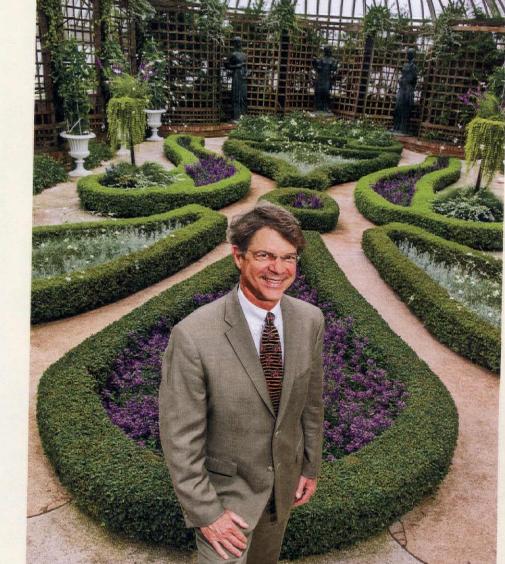

Richard Piacentini is executive director of Phipps Conservatory and Botanical Garden in Pittsburgh. Since joining Phipps in 1994, he has guided the organization through the transition from public to private management and overseen an ambitious expansion program including several state-of-the-art green buildings.

BY JOANN GONCHAR, AIA

GREENSOURCE: Part of the mission of your organization is "to advance sustainability and promote human and environmental well-being through action and research." In some ways, this sounds like an obvious set of goals for a botanical garden. Have they always been part of Phipps's mission?

RICHARD PIACENTINI: That section was added in 2007, as a result of a strategic planning process. Before that, Phipps was primarily a horticultural showcase. For a hundred years, it had been run by the city and its main purpose was organizing flower shows. In 1993, a private nonprofit took over management. It was only then, when we got involved in building green buildings on our campus, that the board and staff got very excited about making sustainability an important part of who we are and what we do.

How did it come about that the green building program preceded the addition of sustainability to Phipps's mission? After we went private, we started to figure out how to make the organization more self-sufficient, attract new audiences, and raise revenues. We wanted to improve visitor amenities and replace some of our dilapidated buildings. One of the architects we interviewed was Bill McDonough. He told us about this new thing called LEED and how buildings are responsible for most of the energy use, most of the pollution that's produced, and most of the water that's used. We said, "Wow! We didn't realize that. We care about the environment—why shouldn't our buildings reflect our values?" So we decided to try and do a LEED building. In 2005, we completed our LEED Silver Welcome Center: the first LEED-certified visitors center in a public garden. The following year, we opened two very efficient production greenhouses and our Tropical Forest Conservatory-at the time, the most energy-efficient conservatory in the world. Eventually we reached the point where we said, "Why stop with the buildings? Let's look at everything we do." We changed over our café, getting rid of all the plastic disposables, started composting, and focused on organic and local foods. In our gift shop, we decided to highlight local, U.S.-made, and fair-trade items. We also examined our horticulture program and went completely organic with all our lawn care.

Richard Piacentini at Pittsburgh's Phipps Conservatory and Botanical Garden.

Phipps's newest building-the Center for Sustainable Landscapes [CSL]-has achieved the highest level of certification possible in both the LEED system and the Sustainable Sites Initiative [SITES]. It has also earned Living Building Challenge [LBC] Net-Zero certification and is aiming for full LBC status in addition to certification under the relatively new Well Building Standard. Do you view the CSL as an educational tool? Oh yes. Even though it is primarily an administrative building, we made a very conscious effort to open as much of its interior to the public as possible. Its green roof and the landscape around the building, which includes a stormwatermanagement lagoon with turtles and native fish, are part of the visitor experience. The whole idea is to invite people to explore.

What message do you hope visitors will take home with them? I hope people will recognize that we have the technology today to do these kinds of buildings and they're really important. I hope we can inspire them to start thinking this should be the norm—that we shouldn't accept anything less than super-high-performance green buildings. It's critical that we do. "When we got involved in building green buildings, the board and staff got very excited about making sustainability an important part of who we are and what we do."

RICHARD PIACENTINI Executive Director, Phipps Conservatory and Botanical Garden

5 Maytag French Door Refrigerator

Maytag Benton Harbor, MI maytag.com

Maytag's new 25 cubicfoot 3-Door French Door Refrigerator provides more space while using less energy. This Energy Starqualified product utilizes energy-efficient BrightLight Series LED lighting and Strongbox door hinges to contain the cold air inside the fridge. (To earn Energy Star qualification, a refrigerator is required to use about 20% less energy than noncertified models.) **SNAP #49**

6 Awaken Kohler

Kohler, WI us.kohler.com

The Awaken showerhead series from Kohler, with EPA-approved WaterSense certification, offers a range of water-saving features, such as an average 30% reduction in water use as compared with other efficient models. The wallmounted version (shown) comes in a polished chrome or slightly darker brushednickel finish. Also available in these finishes, and in a similar minimalist style, are hand showers whose flow rate can be adjusted by pressing a button. SNAP #50

7 Focus 2-Spray HighArc Kitchen Faucet

Hansgrohe USA Alpharetta, GA hansgrohe-usa.com

Hansgrohe's new Focus kitchen-fixture line creates greater flexibility within the sink. It includes the Focus 2-Spray HighArc Kitchen Faucet, which is available in a low-flow 1.75 GPM model. Swivel range varies from 150° to 360°, depending on the model. Whether pull-out or hand spray, the ergonomic handle and variable handle positioning can be installed for right-or left-handed users. **SNAP #51**

8 EverStrand Soft Appeal

Mohawk Calhoun, GA mohawkflooring.com

This soft carpet is also a boon to the environment-Mohawk recycles three billion plastic bottles (more than 25% of all bottles recycled in North America) when manufacturing its own products: the bottles are turned into PET chips that are then extruded into fibers, which are finally woven into the carpet itself. Thankfully, green value doesn't translate to extra cost. EverStrand Soft Appeal comes in a wide spectrum of colors and features proprietary stainresistance countermeasure from Mohawk and Scotchgard. SNAP #52

9 Stealth UHET Dual Flush

Niagara Conservation Charleston, SC niagaracorp.com

The toilet can be one of the largest water consumers in our everyday life, accounting for nearly 27% of indoor water use according to the EPA. Niagara's highly efficient Stealth UHET Dual Flush conserves water by offering two flush options: 0.5 gallons per flush (GPF) and 0.95 GPF. Compared to older models, which use 3.5 gallons per flush, this WaterSense-certified toilet is far from a guzzler, saving more than 15,600 gallons of water a year. SNAP #53

10 Eco by Cosentino

Cosentino Sugar Land, TX ecobycosentino.com

Cosentino polled designers and architects via social media in picking the hues of their environmentally friendly surfacing. Composed of 75% recycled glass and 25% natural stone salvaged from quarries and industrial processes, Eco surfaces are bonded with a proprietary resin that's part corn oil. It represents almost 100% "upcycling" of material that would otherwise sit in a landfill. The new selection of colors highlights earthy hues such as Creamstone, Forest Snow, Grey Moss, and Red Pine. CASE STUDY 01

Zero Tolerance

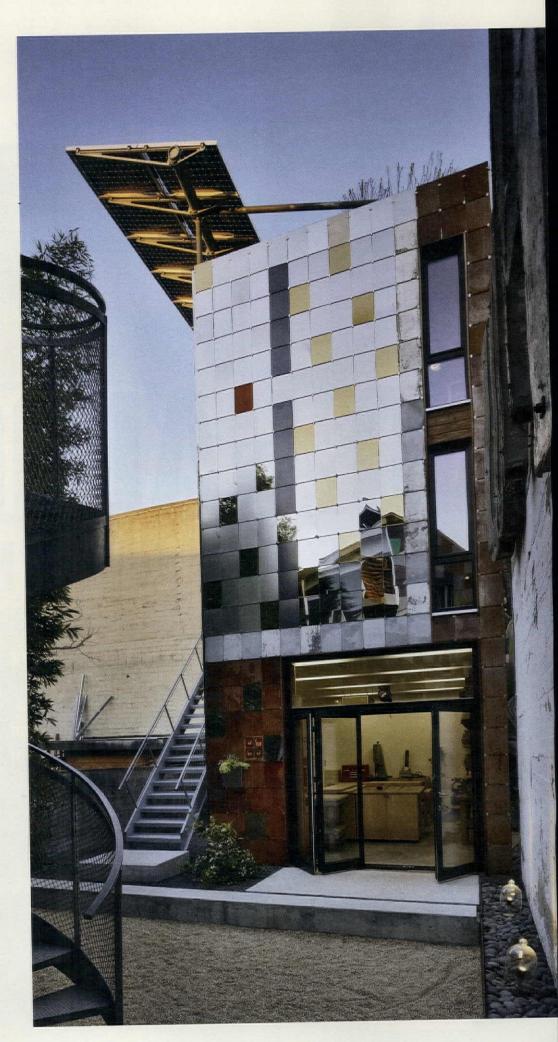

In his experimental home, architect David Baker tackles one of the trickiest aspects of sustainable design: energy consumption.

BY LYDIA LEE

Some people challenge themselves by competing in marathons or triathlons; for others, it's hot-dog eating contests or chili cook-offs. After completing LEED and GreenPoint Rated checklists for 20 buildings in the last 10 years, San Francisco architect David Baker knew what mountain he wanted to summit next: building a structure entirely self-sustaining in its energy use. He planned a freestanding cottage behind his home in the Mission District, confident he would be able to secure GreenPoint Rated and LEED for Homes Platinum certification. The real challenge would be in meeting the additional demands of Passive House and Net Zero Energy (certified by the International Living Future Institute). "It was a learning experience," says Baker. "I wanted to see if it was possible to do net zero in an urban setting instead of on acres of open land."

For Baker, who has promoted urban living through numerous award-winning infill projects, the cottage is a prototype for living well within a small footprint. It is part of a tiny mixed-use development he has created on Shotwell Street, which contains three dwellings in a space the size of a standard San Francisco residential lot. The main house, which he remodeled previously, features living quarters above a rental studio and a commercial space for public exhibitions at the ground level. The new cottage, where the architect and his partner have taken up primary occupancy, is separated from the other structure by a common courtyard. The loft apartment, a modest 712 square feet over a ground-floor 430-square-foot office/workshop, combines both high-tech building science and creative architectural details. Constructed for about \$600 a square foot, the design was not about return on investment but about "doing everything to the extreme," as Baker puts it, to reduce the building's environmental impact.

Of the four building programs, the most challenging for Baker was Passive House, a balancing act that requires an extremely tight, superinsulated structure to minimize supplemental heating and cooling (which typically accounts for more than half a home's energy use). An air/vapor barrier, critical for the house's airtight seal, was installed on the walls, roof, and floor. Then the house was essentially encased in a giant Styrofoam cooler, with a continuous layer of extruded polystyrene over the walls and roof and a layer of expanded polystyrene beneath the concrete floor slab. To address the moisture issues that arise with supertight structures, Baker was careful to put the vapor barrier underneath a sufficient layer of insulation so that warm interior air would never get cold enough to condense within the wall cavity. Triplepane windows help with the inevitable heat loss that occurs through glazing. "It's crazy-tight. If this house were underwater, it would float it's basically a boat," says Baker.

Zero Cottage, a 1,140-square-foot work and living space designed by David Baker, generated surplus energy last year; the photovoltaic system clocked in at 5,500kWh, exceeding expectations by 22 percent.

GreenSource /

The proof is in the blower-door test, which determines airtightness: the Zero Cottage has a 0.43 ACH50, surpassing the Passive House bar of 0.6 ACH50 with ease. For comparison, typical new residential construction has a 7 ACH50 (meaning all the air in the house would be replaced seven times within an hour).

With this impermeable structure in place, the other major component of Passive House comes into play. A heat-recovery ventilator (HRV) allows the house to recapture heat that is typically exhausted and wasted-during hot showers, cooking, even the operation of the refrigerator's cooling coil-and deliver fresh, filtered air. Even in temperate San Francisco, Baker is now a complete convert to HRVs. "I've gone from wanting to have open windows all the time to enjoying fresh filtered air within this quiet sanctuary," he says. "With the windows closed, you can't tell that you are in the middle of a city." He sees HRVs as a potential solution to urban noise and pollution. "People are attracted to the suburbs because of the supposed quiet, but with an HRV you could build near a freeway. I would never build a house anywhere without one," he adds. All appliances are electric, including radiant-heating panels (a supplement to the HRV), a combo washerdryer unit, and an induction stove. Hot water is supplied through a combination solar hot-water system and electric tankless water heater.

After collecting a year's worth of data, Baker was able to confirm he easily outstripped his baseline goal of net-zero energy. Over the course of the year, the house sent 2,636kWh back to the grid out of the roughly 5,500kWh it produced with a 3kW photovoltaic system. Cantilevered off the roof, the PV array captures more energy than traditional flatmounted versions—an example of design restrictions becoming a benefit. Because the small roof had to be clear for fire department access, Baker came up with a structure that features double-sided solar collectors that shade the stairs leading to the front door. San Francisco's mild temperatures are a clear advantage in meeting certification, but the Zero Cottage shows the potential in moderate climates to go well beyond net-zero.

While the dwelling is what Le Corbusier called "a machine for living," it also exudes the warmth that comes with using reclaimed materials. In this house, Baker took the opportunity to debut a rainscreen system of his own design. "You want to go with the triedand-true for clients, but innovation in construction requires a prototyping attitude," he says. The disco-fabulous rainscreen is a mosaic of mirrored, matte, and rusty salvaged metal shingles held in place by clips and caulk tape. The wall by the front door is covered with yet a different cladding, this one made of maple flooring salvaged from one of Baker's multifamily housing projects and then charred, a Japanese technique for finishing wood called shou sugi ban. The blackened slats were then attached to cedar battens for what Baker describes as "a low-tech rainscreen."

The interiors manifest a similar spirit of creative reuse. Life in the Zero Cottage is compact, with a combined kitchen and living area in the main space and a sleeping loft above. The loft has a handsome guardrail and built-in storage made from the framing of the shed that previously occupied the site. More salvaged maple was used for the floors and minimally finished with VOC-free flaxseed oil, while the gypsum-board walls are finished in VOC-free white plaster. The loft is reached via a stair with alternating treads, created for tight industrial spaces. Another staircase provides access to the roof, where a garden of succulents flourishes in planters made of old motorcycle tires. However, to climb through the roof monitor, you have to be rather small, a fact Baker discovered when a guest couldn't fit through. "Next time I'll create better roof access," he says. "There's always something, right?"

The insulated roof, protected by a drainage mat, weed barrier, and gravel, has a small seating area where succulents grow in planters made of old motorcycle tires.

For the custom rainscreen, shingles made from salvaged metal and mirrored glass are held in place with clips and caulk strips.

Brick House Nyborg, Denmark

CASE STUDY 02

Building for the Long Haul

Architects Uffe Leth and Karsten Gori have designed a single-family house with hefty walls and a small environmental footprint.

BY TRACY METZ

The hipped roof's deep overhang creates a veranda on all four sides of the house.

The steep sloping ceiling would allow for the addition of a loft, if the inhabitants desire one.

For Danish architecture firm Leth & Gori, longevity was paramount in the conception of the Brick House. Designed to stand the test of time, the one-story, three-bedroom residence is made to last for roughly 150 years. Ultimately, says partner Karsten Gori, a long life span and an efficient use of materials make a more significant contribution to a building's sustainability than the typical focus on operating energy does. "We wanted to show that it is possible to build a contemporary house with a long life," he says.

The Brick House is one of six Mini-CO2 Houses, a project initiated by the philanthropic foundation Realdania to create affordable dwellings for the middle class on the town of Nyborg's suburban fringe. Each house was designed by a different architect and all employed a different sustainability strategy. Together they are intended as a series of prototypes for low-carbon living. Leth & Gori's approach was to design a long-lasting house that requires minimal maintenance and uses traditional materials.

The distinguishing feature of the 1,400-square-foot house, which costs about \$400,000 to build (a budget the architects say is on par with other housing in the region) is its 22-inch-thick walls of clay blocks and brick. The assembly, which has no insulation or an air or vapor barrier, is intended as an alternative to the common response to energyconscious building codes, says Gori. Walls are usually made of "layers and layers of different materials and insulation that do not last more than 50 years and are so airtight that they cause health problems," he points out. "It is like wrapping a house in a plastic bag."

The architects performed a detailed life-cycle assessment to demonstrate that the Brick House's focus on durable materials and low-tech construction methods would lower its total carbon footprint. Nevertheless, the house is energy-efficient. Its hefty walls provide thermal mass: they store thermal energy and help flatten out interior temperature fluctuations. Moreover, the use of only two materials simplifies the building process and keeps maintenance down.

The building envelope was developed in collaboration with Nini Leimand, a Danish architect with expertise in what Gori calls "homogeneous massive wall construction," along with the contractor and masons. The system includes an inner block wythe and an outer brick wythe, connected by a number of cross-laid interlocking bricks. On the exterior, the bricks have been placed so that some headers protrude and the marks from the production process are visible, providing the facade with texture.

Despite the patterning created by the brick's bond, the house exterior is basic, almost severe, with a hipped tile roof that echoes those of the surrounding houses. Generous overhangs supported by a weathering steel column at each corner protect the walls from the elements and form a narrow veranda on all four sides.

The interior is more expressive, with a tall, sloping ceiling and a rough-and-tumble aesthetic featuring simple finishes reminiscent of artists' studio spaces in industrial buildings: unfinished plywood, unpainted medium-density fiberboard, and the exposed clay blocks. The pinewood floor, equipped with radiant heating, has a traditional Danish soap finish. Daylight flows in from all sides through glass doors that allow access to the surrounding veranda.

This project, Leth & Gori's first finished building since starting their studio seven years ago (three more are nearing completion this year), provides a new take on minimal, simple, and long-lasting materials in a contemporary context. In that sense, it is a prototype—one where workmanship is critical, says Gori. "This is an old-school kind of building that requires craftsmanship on site," he says. "You feel that the Brick House has been touched by human hands."

Tracy Metz is a Netherlands-based journalist who writes about architecture, landscape, and urban issues. She is the author of several books, including *Sweet & Salt: Water and the Dutch*.

The pine flooring has a traditional Danish soap finish.

Going the Green Way

In the Bronx, a LEED Gold-certified development becomes a model for affordable housing.

BY NICOLE ANDERSON

Sitting On a former railyard and brownfield site, the affordable housing development Via Verde stands out from the unremarkable high-rises nearby in the once arson-ravaged Melrose section of the South Bronx. The 222-unit apartment complex for low- and middleincome residents has not only set a precedent for the design of subsidized housing but also implemented an ambitious sustainability program to save energy and enhance the quality of life for its occupants.

This \$70 million project was borne of the city's first-ever juried competition for affordable and sustainable housing, conceived by the local New York chapter of the American Institute for Architects (AIA) and the City of New York Department of Housing Preservation and Development (HPD). The competition called on design teams to submit proposals that met specific criteria beyond just affordability, including LEED certification and the promotion of healthy living by providing amenities such as recreation areas, exercise facilities, and access to fresh food. The jury selected London-based Grimshaw Architects and New York's Dattner Architects, along with development partners Phipps Houses and Jonathan Rose Companies.

Since it opened in 2012, Via Verde, composed of rental and co-op units, has earned LEED Gold certification thanks to a number of green. design strategies, from solar shading devices to a highly thermally efficient prefabricated rainscreen facade. The complex—which steps down from a 20-story tower to three- and four-story townhouses—is topped by green roofs that descend in a series of terraces and eventually end in an outdoor courtyard. The rooftop gardens serve multiple purposes: they provide fresh produce and open space for residents and reduce water consumption by capturing stormwater for irrigation. The plantings also help combat the heat-island effect. With the help of GrowNYC, an environmental organization that builds and supports community gardens, residents share and cultivate the garden plots.

The complex has a 66kW rooftop solar system, which provides the electricity for hallways, elevators, and public spaces. From July 2013 to June 2014, the photovoltaic panels produced 102,634kWh. So far Via Verde is outperforming similar multifamily buildings. Bright Power, a solar and energy-efficiency consulting firm, is tracking the building's energy and water consumption through its EnergyScoreCards tool.

Bright Power compared Via Verde to other multifamily complexes with similar metering, including central, owner-paid heat and hot water, tenant-paid cooling, and direct-metered apartment electricity. It consumed 40,000 Btu per square foot from July 2013 to June 2014 earning an A for energy consumption in the Bright Power system. According to Jonathan Braman, vice president of Portfolio Solutions Group at Bright Power, this means that the complex performs in the top 25 percent of similar buildings in the EnergyScoreCards database.

VIA VERDE COMPARED TO NYC MULTIFAMILY PROPERTIES owner energy index (kbtu/soft/per year)

SOURCE: Bright Power/Jonathan Rose Companies

(Roughly 15,000 multifamily buildings are in the Bright Power database.) It is challenging to gauge total energy use in these types of buildings, however, since there is no access to tenants' electric bills.

Via Verde has set new standards for sustainability and affordable housing, and other city-subsidized developments will likely follow its lead. Since 2011, HPD has required that new affordable housing funded by the city must comply with the standards of the Enterprise Green Communities Certification, a program that outlines green building practices for developers of affordable housing. But more important, Via Verde has demonstrated that sustainable practices can minimize the impact on the environment while improving the well-being of residents. According to Nikolas Dando-Haenisch, an associate principal at Grimshaw, "The building has really changed the way people understand living in the city."

There's a reason that more and more architects specify our flooring underlayments than ever before.

EARTHWATCH

Days after the Deepwater Horizon oil rig erupted in April 2010, Spanish-born environmental photographer Daniel Beltrá, on assignment from Greenpeace, flew to Louisiana, chartered a Cessna, and strapped on his camera. Two thousand feet above the Gulf of Mexico, Beltrá witnessed one of the worst environmental catastrophes in history-the sunken BP rig gushing hundreds of millions of gallons into the ocean.

Beltrá's initial assignment turned into his own monthlong project. In the dozen subsequent flights he took over the Gulf, Beltrá captured some of the most memorable images of the disaster: marble-like slicks of brown, orange, and red (some fluorescent due to chemical dispersants, he suspects); black smoke rising off controlled burning areas; boats with iridescent wakes. The images, in their abstractness, exude a terrifying beauty. "I love images when it's not very clear what is happening; it creates an interaction with a viewer," he says.

An image of oil-drenched pelicans won Beltrá the prestigious Veolia Environnement Wildlife Photographer of the Year award in 2011. Now, after the photographs have toured the globe in several exhibitions, Beltrá is releasing them in a book titled *Spill*. Wary of the abstract images being categorized as fine art, Beltrá doesn't want his work to exist in a vacuum. "I'd rather have the work seen by a lot of people, hoping to inspire a dialogue," he says. Though the spill occurred four years ago, the effects are still being felt. In June, BP began paying medical

Though the spill occurred four years ago, the effects are still being reft. In Julie, or began peying means claims to those sickened by the spill. In July, researchers found lesions on the bodies of fish.

Currently Beltrá is documenting shrinking ice caps in the Arctic Circle, observing the toll of global warming firsthand. He hopes his images will be a wake-up call, adding, "What we do makes a difference."

CRITICAL POINT

GULF OF MEXICO Beltrá spent approximately one month in 2010 photographing the Deepwater Horizon oil spill.

Going With the Flow

From coast to coast, design professionals deploy innovative strategies to manage water and enhance sustainability. BY MICHAEL COCKRAM

Greening the East River

68 | SNAP | JULY/AUGUST 2014 | SWEETS.COM

In New York, two new community parks along the East River serve as case studies in water management and in making coastal areas resilient.

Looking at the Hunter's Point South Waterfront Park in Queens on a sunny day, with children playing on its elliptical sports field and people lounging on its benches or seeking shade under the delicate arcing pavilion that flares toward the Manhattan skyline, one might never suspect it was built with a torrential downpour in mind. But the m-acre park, designed by Balsley's firm and architects Weiss/ Manfredi, incorporates several strategies aimed at helping manage the runoff created during such storms. It includes elements such as permeable paving and bioswales (planted channels that slow, filter, and infiltrate stormwater flows).

The primary goal of this so-called green infrastructure is to keep runoff out of the city's sewer system, explains Gillian Blake, a principal at the engineering firm Arup, the project's prime consultant and its infrastructure designer. This function is critical, because New York has a combined sewer system—one that carries both stormwater and

NORMAL CONDITIONS

FLOOD CONDITIONS

sewage together in the same pipe. Under dry conditions, the contents of the combined sewer are carried to a treatment facility. But heavy rainfall can easily overload the system, and in those instances, the runoff-sewage mix is dumped directly into the city's waterways untreated.

The park also has features that help it weather the effects of the East River's overflowing its banks during a storm surge like the one caused by the 2012 superstorm, Hurricane Sandy. But instead of creating artificial barriers to prevent such incursions, the team decided to let areas like the playing field flood. Since the salt water of the East River (which is actually a tidal strait) can damage vegetation and be corrosive to buildings and infrastructure, it was important to grade the park's terrain so the storm surge would flow easily back to the river rather than to the overburdened sewers. Other areas that would collect water, such as the bioswales, were designed to help it percolate into the ground quickly. They were also planted with hardy native vegetation that can withstand occasional doses of salt water, explains Balsley.

This "catch and release" approach is more akin to the way nature buffers coastal areas and helps protect upland communities, says Marion Weiss, Weiss/Manfredi principal. "We try to bring natural systems and infrastructure closer together," she says.

HUNTER'S POINT SOUTH

An 11-acre park at the water's edge in Queens, New York, includes an elliptical playing field (opposite) and pedestrian gardens that have planting beds interspersed with low gabion walls (top). The playing field floods when the river overflows its banks (above).

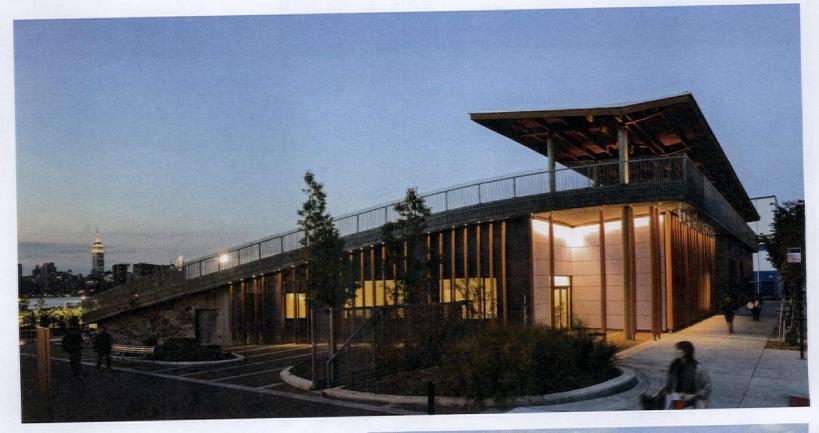

CONTINUING EDUCATION: LANDSCAPE AND RESILIENCE

FROM ARCHITECTURAL RECORD

BUSHWICK INLET

PARK The three-acre park (middle) on the East River waterfront in Brooklyn is designed so no stormwater is sent to the city's sewer system. It was conceived as a blanket of turf that folds up to cover the roof of a wedge-shaped community building (right).

The park at Hunter's Point South, which officially opened in August 2013, was approaching completion when Sandy's surge washed over it and put the design to the test. After the waters receded, there was no significant damage to the park's structures or landscape.

Tough Turf

Just to the south of Queens, Bushwick Inlet Park, designed by Kiss+Cathcart Architects and Starr Whitehouse Landscape Architects, is part of an ongoing transformation of a formerly gritty section of the Brooklyn waterfront. Conceived as a blanket of greenery that folds up to cover the roof of a wedge-shaped community building, the threeacre site includes parkland at the water's edge and a playing field.

Sitting on top of a capped brownfield that was most recently a parking lot, the site's longitudinal section works on a number of levels to manage stormwater and ensure that no runoff is directed to the city's combined sewer system. The building meets the street with a glass and concrete facade, its roof sloping down to converge with the site at the playing field and finally descending to the river. The planted roof absorbs some of the flow of stormwater, and an area of gravel fill under the playing field detains it while it infiltrates the ground. Any surface runoff that reaches the river is first filtered through a swath of native plants at the river's edge.

"Extensive" green roofs—those designed with just a few inches of growing medium and not intended for foot traffic—typically don't demand much maintenance or irrigation. However, Bushwick's "intensive" green roof, which also acts as a grandstand, has a foot of topsoil and requires some irrigation. To that end, a portion of the site's stormwater is captured and used as a resource: along with graywater from a playground fountain, it is stored in a 15,000-gallon tank that supplies the roof's underground drip irrigation system.

And like Hunter's Point South, the nearly complete project was inundated with salt water when Sandy struck. Water came about 80 feet onto the site, then receded with no real damage to the landscape, according to Stephen Whitehouse, Starr Whitehouse principal. Since the building was located away from the water on the street edge, it was well out of harm's way.

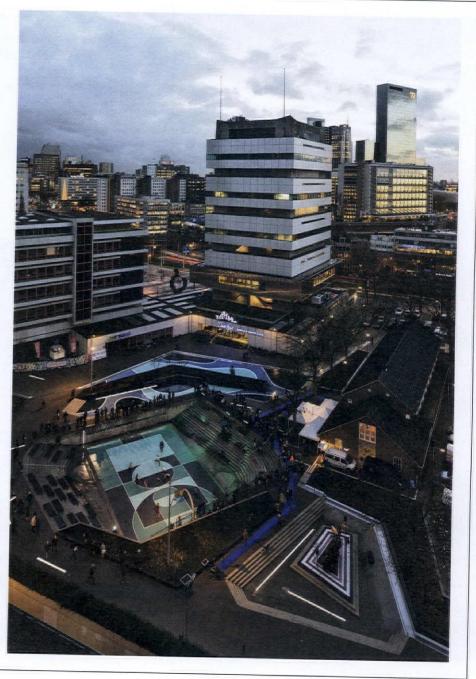

Ponds with a Purpose

Bioswales, vegetated detention ponds, and other devices that mimic natural processes are not the only ways to slow the flow of water into the landscape. The Dutch, who have a long history of managing water systems, are exploring a different approach, especially for intensively used urban spaces that call for hardscape ground surfaces. The Benthemplein Water Plaza, a pilot project in Rotterdam, is one such environment. It is designed to capture stormwater by allowing recessed paved areas for socializing and recreation to flood during heavy rainfall. Since portions of the city have a combined sewer system, just like New York's, one goal of the project is to mitigate the impact of runoff on existing stormwater infrastructure. But the plaza is also designed to celebrate water, says architect Florian Boer, founder of the local firm De Urbanisten. Stainless-steel troughs wind through the plaza and during downpours send water cascading into stepped concrete basins. Because local health regulations stipulate that standing water be drained within 36 hours, the system is designed to send water to smaller basins that gradually filter runoff, through infiltration, into the water table. A larger basin, which collects runoff from the surrounding area, employs pumps to direct water to nearby canals once these waterways have receded sufficiently.

BENTHEMPLEIN WATER PLAZA These stepped plazas in Rotterdam (above and right) have been intentionally designed to flood when it rains heavily. During dry weather, they provide space for recreational activities such as basketball and skateboarding.

Water in the West

Although Arizona's arid Maricopa County gets a mere seven inches of precipitation a year, when the rain does come, it often falls in torrents. In conceiving the George "Doc" Cavalliere Park in Scottsdale, planners envisioned a precedent-setting facility that would help manage this stormwater while relying primarily on green infrastructure elements. Due to these strategies, when the park was completed in 2012, it earned three out of a possible four stars from the Sustainable Sites Initiative (SITES), a LEED-like rating system for landscapes. At the time, it was the highest SITES rating any project had earned.

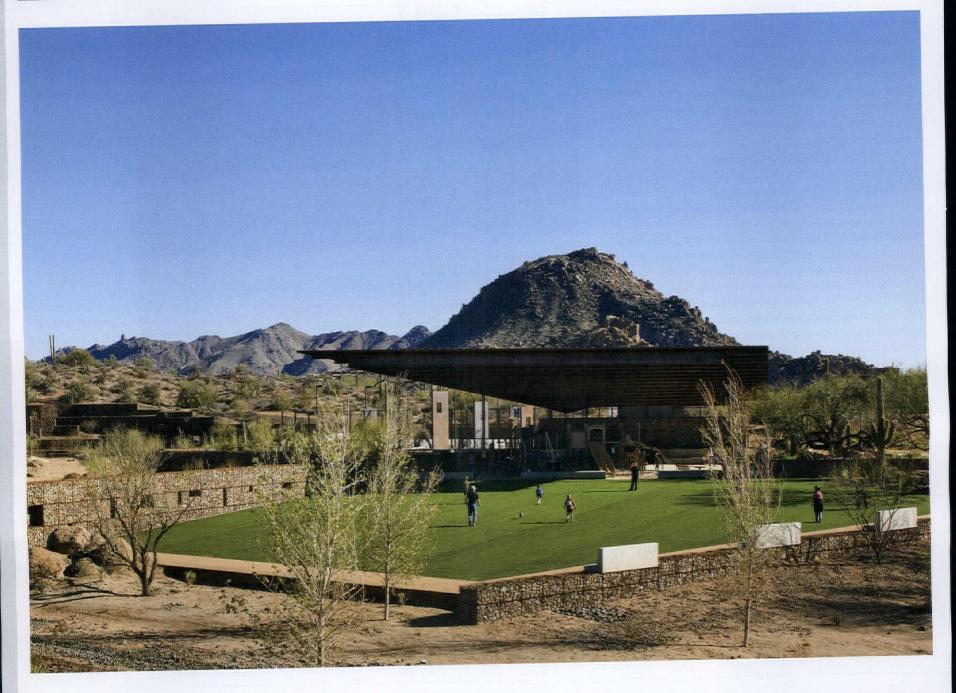

The park's location was a challenging one because it sits at the confluence of two seasonal stormwater "washes." This condition required that designers from the landscape architecture firm Floor Associates integrate detention for a volume of water equal to nearly 50 acre feet into the design (one acre foot is equivalent to an area 66 feet by 660 feet by one foot deep).

They satisfied this requirement by locating playing fields and a pavilion in a natural depression and allowing the area to flood during extreme downpours. This part of the site acts as a detention basin that temporarily holds the water, then releases it to a lower basin and, ultimately, into the area's drainage system. Because local health regulations, similar to those in place in other jurisdictions (see sidebar above), limit how long standing water can be contained, the site and its soils are engineered so that water drains within 36 hours.

The slopes above the basin are laced with staggered gabion walls that slow stormwater sheet flow and form small catchment areas, fostering desert vegetation. A primary advantage of using these native plantings is that, once established, they don't require irrigation and need little maintenance. "Maintenance is an aspect of sustainability that is often overlooked," says Chris Brown, a Floor Associates partner. Similarly, the project's palette of architectural materials weathering steel, local stone, and concrete requires little upkeep.

The project also includes a permeable paving material made from site-salvaged decomposed granite, a granular ground cover that's a common feature of the desert surface. The decomposed granite is stabilized with a liquid copolymer and then compacted but remains permeable to stormwater runoff. It also helps combat the heat island effect. A stabilized-granite parking lot, for example, can feel 20 degrees cooler than an asphaltpaved lot, says Brown. CONTINUING EDUCATION: LANDSCAPE AND RESILIENCE

FROM ARCHITECTURAL RECORD

Water and Power

With its so-called Mediterranean climate distinguished by warm, wet winters and hot, dry summers—the Los Angeles basin gets twice as much rainfall as central Arizona. But because of the enormous population and lack of nearby reservoirs, water management in the Los Angeles region is just as critical.

Since 2008 the utility Burbank Water and Power has been involved in transforming its Magnolia Power Plant into an "ecocampus" highlighting water management. "The idea was to turn an industrial complex into a garden," says Evan Mather, a principal at AHBE: Landscape Architects. The firm's vision included interpreting and restoring a woodland and riparian environment in an industrial context, he notes.

The most recent addition to the campus is the Centennial Courtyard, a decommissioned

substation that AHBE transformed into an outdoor dining area sheltered by a vinecovered trellis. The project received SITES accreditation in 2012.

The centerpiece of the eco-campus stormwater management system is an old utility tunnel that designers converted into a filtration trench. The surface water and that of an adjacent building's green roof is fed into this trench, which is filled with gravel salvaged from the site and topped with plants that harmlessly absorb toxins from the runoff through a process called phytoextraction.

In addition, the designers incorporated tree biofilter boxes. These devices embed a tree's roots in a stormwater catchment basin to help filter pollutants that can accumulate in stormwater from cars, refuse, and other sources. The design team also used pavers supported with a modular rigid frame. The system provides a permeable surface while preventing soil compaction, so that tree roots can spread.

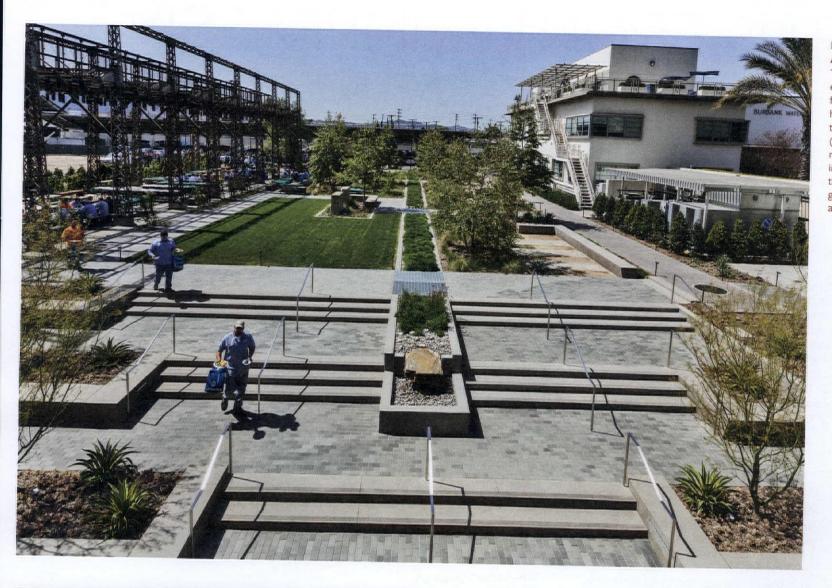

Plantings are mostly native and do not require irrigation. But those that do need irrigation rely on wastewater treated and reclaimed from the power plant's operations, including its generators and its cooling towers. That saves up to 100,000 gallons of potable water a day.

The Burbank Water and Power project and the new parks in Scottsdale and New York demonstrate that green infrastructure can play critical water-management roles in diverse settings and climates. These projects showcase strategies that could help communities become more sustainable and resilient in the face of disaster.

Michael Cockram is a freelance writer and director of Bowerbird Design in Fayetteville, Arkansas.

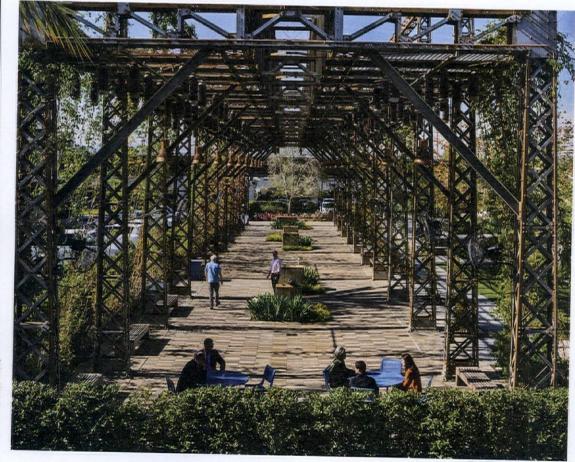

GEORGE "DOC" CAVALLIERE PARK

A playing field in this Scottsdale, Arizona, park is positioned so that it floods during heavy rainstorms and acts as a temporary detention basin.

BURBANK WATER

This California utility's ecocampus includes a former substation that his been turned into a trellis-covered terrace (below). Stormwater management features include an old utility trench now filled with gravel and toxinabsorbing plants (left).

CONTINUING EDUCATION

To earn one AIA learning unit (LU), including one hour of health, safety, and welfare (HSW) credit, read "Going With the Flow" and complete the test at architectural record.com. Upon passing the test, you will receive a certificate of completion, and your credit will be automatically reported to the AIA. Additional information regarding credit-reporting and continuing-education requirements can be found online at ce.construction.com.

Learning Objectives

1 Describe the elements in a combined sewer system and explain why such systems are prone to overflows.

- 2 Identify landscape features that are considered green infrastructure.
- Explain how green infrastructure can help prevent combined sewer overflows and coastal and inland flooding.
- 4 Explain how green infrastructure strategies can be adapted for different climates and regions.
- AIA/CES COURSE #K1406A

FOR CEU CREDIT, READ "GOING WITH THE FLOW" AND TAKE THE QUIZ AT CE.CONSTRUCTION.COM, OR USE OUR FREE ARCHITECTURAL RECORD CONTINUING-EDUCATION APP, AVAILABLE AT THE ITUNES STORE.

THE FRONT IS IMPRESSIVE (now discover the inside story)

0

Our engineered mounting system creates a hidden fastening system that all but eliminates face fastening. Installation is quick & easy and never requires specialty subcontractors.

Drained and Back Ventilated Rainscreen allows water to escape and air to circulate, reducing the risk of mold and water damage inside the building.

Nichiha's unique starter track pulls double-duty. It ensures a fast, level installation and its patented drainage channel directs water out and away from the base of the wall.

Nichiha Architectural Wall Panels are lightweight, easy to handle and available in a virtually endless color palette and a diverse offering of textural finishes. They're also backed with the industry's strongest warranty.

Get the inside story. Buildings clad in Nichiha Fiber Cement have always turned heads, but our obvious good looks are only part of the story. The wide array of finishes, and the nearly limitless color palette with our Illumination Series is liberating, but Nichiha Architectural Wall Panels are beautiful on the inside, too. There are always two sides to the story, and with Nichiha Architectural Wall Panels, both sides are amazing.

Watch our video and get "The Inside Story" www.nichiha.com/insidestory

LIVE & LEARN: CEU LISTINGS

Building for the Common Good

WORKPLACES TODAY ARE getting makeovers to enhance individual comfort, safety, and performance. Stairs, wood products, daylighting, color, and metal flooring all can contribute to how the built environment positively affects its occupants. Specifiers wanting to get up to speed on these material, product, and design trends can check out the following credits on ceu.construction.com.

SNAPSHOT

WOOD WORKS Branson Commons in Ross, California, was designed by Turnbull Griffin Haesloop Architects.

WOOD PRODUCTS AND GREEN BUILDING

Wood products can help projects earn credits in various green building rating sources and are even thought to positively affect stress management and performance in individuals. This course examines 12 of the most prominent green building programs in North America and how wood components factor in each of them. (Sponsored by reThink Wood)

-CREDIT 1.00 HSW; 1 GBCI CE HOUR

FINISHING SCHOOL The Exploration Tower at Cape Canaveral, by GWWO Architects, utilizes Valspar's Kameleon Color paint.

2	TALKING COLOR
	Color has a profound e

Color has a profound effect on the human experience and on users of the built environment. It can inspire, soothe, stimulate, and/or relieve eyestrain and fatigue. American architects, who've mostly used color as an accent, are now recognizing this. The course explores the importance of color, as well as solar reflective pigments and their contribution to sustainable building. (Sponsored by Valspar) —CREDIT 1.00 HSW

MADE IN THE SHADE Exterior shading systems offer enhanced user comfort and reduced energy costs.

3

MANAGING HEAT AND LIGHT THROUGH EXTERIOR SHADING SYSTEMS

KEEP WALKIN² In appropriate design locations, slip-resistant metal can enhance the safety of walkways and stair treads.

METAL SAFETY FLOORING

Safe flooring in workplaces, especially industrial or high-traffic settings, can directly influence the operation and profitability of the business. This course looks at the characteristics of the different, common choices for safety flooring, as well as how walkways and stair treads in particular can be enhanced through the use of slip-resistant metal. (Sponsored by SlipNOT) — CREDIT 1.00 HSW

UPSTAIRS, DOWNSTAIRS The stair profiles of the New School University Center, designed by SOM, are expressed on the exterior.

5

CIRCULATION NOTICE

Vertical circulation is no longer just about connecting floors—it's also about connecting people. Notable New York buildings such as the New York Times, Albert Einstein College of Medicine, and John Jay College of Criminal Justice are demonstrating how their stair designs are fostering spontaneous interaction and community. (Sponsored by the Ornamental Metal Institute of New York) —CREDIT 1.00 HSW

The Sweets Spot

SNAP asks Cherie Matthew, AIA, an architect at Corgan Associates in Dallas, to weigh in on the latest product buzz in her city and the projects she's working on. We share what's trending in her region on sweets.com.

FIRM IN FOCUS: CORGAN ASSOCIATES

CHERIE MATTHEW. AIA

ARCHITECT, CORGAN ASSOCIATES, DALLAS

FIRM TYPE: ARCHITECTURE, INTERIOR DESIGN

YEAR FOUNDED: 1938

MANAGING PRINCIPALS: BOB MORRIS, FAIA; DAVID LIND, FAIA; JON HOLZHEIMER, AIA FIRM LOCATIONS: DALLAS, NEW YORK, PHOENIX, LOS ANGELES, HOUSTON, BEIJING, DUBAI.

FIRM SIZE: 400

WHAT DID YOU SEARCH FOR **RECENTLY ON SWEETS?** Several articles focusing on sustainable materials we can incorporate into our projects to improve public health, as well as strategies to reduce a building's energy and water consumption. SWEETS also provides access to

toshowthe client the product we would like to apply to the design. WHAT ARE SOME PRODUCT TRENDS YOU'RE SEEING IN THE DALLAS AREA? Dallas is aligning efforts for

building and urban parks with natural rock beds and plants native to North Texas. Several buildings located downtown are . The use of is also influencing

building exteriors. We recently constructed Parkland Hospital, near downtown, using a frit. At the micro scale, the frit spells out the names of contributors to the new hospital, and from afar, they appear as large-scale tree graphics.

WHAT HAVE YOU BEEN SPECIFYING FOR RECENT PROJECTS?

at the East Texas Regional Airport. We chose it for the material's durability and ability to self-repair scratches. The zinc will develop a patina over time that adds to its life span and aesthetic. When we begin an airport renovation, we like to modernize it with durable products using . We also used of the terminal to create visible transparency and naturally lit spaces for passenger satisfaction

and intuitive wayfinding. To add to the sustainability of several projects located in Texas, we look to use a regional material such as natural

At Terminal B in Sacramento, we used

fromademolished bridge for the ceiling and ticketing-counter canopies. DOES CORGAN WORK ON **RESILIENT DESIGN?** We have significant experience in hardened facilities. Our datacenter projects and airport terminals are routinely required to

Requirements vary depending upon the geographic location and other factors.

ARE THERE ANY PRODUCTS YOU SEE AS THE NEXT BIG THING? I've noticed sustainability broadening its reach into . Design is expanding to the individual and how people can maintain a healthy

are becoming more the norm, and Corgan recently modified work spaces with adjustable m to suit this

purpose. -Anna Fixsen

YN

TamlynWrap[™] Drainable Housewrap

This innovative product effectively eliminates excess moisture and mitigates the damaging effects of mold and rot. Its unique design removes at least 100 times more bulk water from a wall versus standard housewraps.

This is achieved through the gap created by 1.5 mm spacers bonded to a high performance housewrap. This patented gap design provides a true drainage space between the sheathing and cladding material.

Filaments/spacers also add strength so TamlynWrap[™] holds up better under typical jobsite high winds and avoids cost of re-wrapping, saving thousands of dollars versus other wraps.

For more information visit www.TamlynWrap.com or call us at (800) 334-1676

TF Forming Systems Inc. Manufacturer of Insulated Concrete Forms

THINK OUTSIDE THE "BLOCK".....

ThermoForm – The Vertical ICF

TF Forming Systems, Inc.

3030 Holmgren Way Green Bay, WI 54304 Phone: 800-360-4634 Fax: 920-983-9962 E-mail: info@tfsystem.com Website: www.tfsystem.com "Thinking outside the BLOCK" is how ThermoForm was designed! It's the <u>original</u> and most widely used vertical ICF. Going **VERTICAL** instead of followin the traditional horizontal method, allows the builder/installer more versatility, speed and ease of construction.

- Curved Walls? NO PROBLEM!
- Tall Walls? NO PROBLEM!
- Energy Efficient structure? NO PROBLEM!
- Need Disaster Resistance? NO PROBLEM!

ThermoForm is capable of doing anything you want in the design of your building – residential or commercial.

ThermoForm Offers:

Design Flexibility

- ThermoForm components can be easily configured to achieve almost any design imaginable, including curved and arched walls
- Green Building Materials/LEED Certification
 - > ThermoForm uses recycled materials along with locally produced concrete

Extreme Energy Efficiency

ThermoForm walls provide a minimum of R25 and allow no air infiltration to give you unprecedented energy savings

Severe Weather Security

Poured, reinforced concrete walls can be engineered to withstand practically any weather event including tornadoes and hurricanes

* AND SO MUCH MORE!

Evolution

Thermal and Moisture Protection Roof and Wall Panels

Division 7 Thermal and Moisture Protection Specification Section 07411 - Manufactured Roof Panels

The Overly *Evolution* metal wall and roof system is without raised batten or standing seams and exposed fasteners. The system consists of a hidden drain channel, compression bar, cover cap and cladding sheets. The smooth, contemporary design appears monolithic when viewed from just a short distance. It's an 'Evolution' to all the standard metal wall and roof systems available throughout the history of the industry.

Applications

The Overly Evolution system can be installed on sloped roofs and vertical walls. Panels can be curved and/or tapered for barrel vaults and domes or spherical shapes. The system features hidden fasteners and an internal drainage component which removes any moisture that migrates into the system and skillfully designed joints which allow for expansion and contraction. The system is the exterior exposed assemblies are available ranging from thin to thick as determined by aesthetic preferences or as necessary to meet performance requirements such as thermal, structural and fire ratings.

Materials

- Aluminum Alloy 3003-H14, Standard Thickness
 18 gauge (.040")–16 gauge (.050") available in painted K500 finishes, brushed and mill finishes
- Stainless Steel type 304 and type 316, 24 gauge (.024") – 20 gauge (.036") available in 2B, 2D, #4 and several custom directional and non-directional finishes
- Titanium Grade 1, gauges .018"-.024" available in standard mill or matte finishes
- Zinc, gauge .028" .032" available in natural or pre-weathered finishes
- Recycled content varies upon material selected.
 100% recyclability of all metal components

System Design Data

- Width of Compression Cover: 2.75"
- Mininum/Maximum Spacing between Compression Covers: 12"-48"
- Maximum Length of Panels: 40'
- Compression Extrusion Thickness: .056"
- Channel Extrusion Thickness: .056"
- Test data in accordance with ASTM E 283, ASTM E 330, ASTM E 331 and UL 580 (Class 90 available upon request)

It's more than metal...it's personal.

No machine room. No control room. All you need is a hoistway.

What will you do with the extra room?

Otis is proud to introduce two great new choices for design freedom.

The Gen2 and HydroFit elevator systems require no machine room and no control room. With this extra room, you now have an array of new possibilities for your building.

Both Gen2 and HydroFit are produced in Otis' new Florence, SC facility. These innovative products offer the following benefits:

With a BMP installation, you can have a traditional clay paver hardscape and storm water storage too. StormPave permeable clay pavers have been independently tested to have an infiltration rate of 720 inches per hour. From the base storage, storm water can dissipate back into the soil or be routed to underground tanks to be used for landscape irrigation. Either way, you don't have to give up valuable real estate for a retention pond.

Model 1540-510

DUAL FUNCTION SMART VENT model provides flood protection along with natural air ventilation. Louvers inside the vent door pivot open & closed with temperature. Fully open around 75°F and fully closed around 35°F.

SMART VENT FEATURES FAMILY OF PRODUCTS ICC-ES CERTIFIED FLOOD VENTS

EMAIL INFO@SMARTVENT.COM TO REQUEST A CATALOG

Model 1540-520

INSULATED FLOOD VENT model seals out cool or warm air with a solid door and weather stripping. The 2" Styrofoam core inside of the vent door has an 8.34 R-value.

Both of these Foundation Models are designed to fit into a standard CMU or block size making it an easy retrofit or simple enough to leave a block out for new construction. All Foundation Models install with supplied stainless steel straps. All models are made of Marine Grade 316 Stainless Steel.

IDEAL FOR BREAKAWAY WALLS

Model 1540-570

WOOD WALL FLOOD VENT is designed to fit between wood studs spaced on 16" centers with pre-drilled slots in the four corners on the vent flange for easy installation (stainless steel screws required). Insulated-only, this model is great for a garage.

POUR-IN-PLACE VINYL PVC BUCKS come as a fully assembled unit, ready to install. Available for all models. Ships with protective film and wood bracing. Available in several widths to accommodate most wall thicknesses. Bucks must be ordered with appropriate flood vent models.

OVERHEAD GARAGE DOOR MODELS

retrofit into an existing garage door. Comes standard in white powdercoated stainless steel and provided back plate makes for easy installation. Interior cam holds flood door in place when overhead garage door is open.

STACKER MODELS AND QUAD CONFIGURATIONS are used where adequate wall space is not available. Some assembly required. Available for both Dual-Function and Insulated series flood vents.

Azon Saves Energy

Daylighting systems produced with Azon structural thermal barrier technologies—the **MLP™** or **Dual Cavity**—for aluminum windows and high performance glazing components for insulating glass, will yield a fenestration system capable of upholding the highest efficiency and sustainability standards.

- Polyurethane polymer with superior insulating properties for the best balance of energy efficiency and performance
- NEW: MLP[™] (mechanical lock profile) and dual cavity designs for fenestration products used in the most demanding climates and conditions
- High strength for larger spans—industry's strongest thermal barrier for aluminum storefront, curtain wall and windows
- AZO/Tec[®] technical services with expertise in window design

Extreme cold temperatures of -100°C (-148°F) will not transfer through an aluminum frame with a modern pour and debridge thermal barrier (and *neither will high temperatures in very hot environments*)

Learn about the role of Azon thermal barriers in energy conservation.

TWO INSTALLATION METHODS: SURFACE MOUNT OR CONCEALED

Our Hybrid Bracket can be installed as either a Surface Mount or Concealed (floating) Bracket. Concealed Installation is done by ripping a 2x4 and mounting it to the stud. The bracket is then mounted to the recessed, ripped 2x4. Install the drywall over the 1.5 inch T. This bracket has a tubular vertical arm (1.5 inches by .75 inches) and a 1.5 inch horizontal T.

- · Available with 12", 18" and 24" support arms
- Available in Black or White powder coat
- All sizes packaged 2 pieces per box

HYBRID BRACKETS

THE LARGEST SUSTAINABLE BUILDING EVENT IN THE U.S.

MAXIMIZE YOUR

Greenbuild is the most costeffective way to view highperformance products featuring 750 exhibitors, 23,000 attendees, 160,000 square feet & specialized pavilions.

SEEING IS BELIEVING

Discover innovation applications & technologies – all in one place. New features include a net-zeroelectricity demonstration home on the show floor, a residential pavilion, new education sessions, and a new on-floor interactive area called the product showcase.

IMMERSE YOURSELF

Design your own curriculum with our comprehensive education program, including 200+ educational sessions, LEED workshops, summits, opening & closing keynotes, entertainment tours and special events.

(f) y (in 🛗 🖁

If it's new and innovative, you'll find it at Greenbuild. Join us as the green movement marches into New Orleans this October!

Registration is now open. Visit **www.greenbuildexpo.com** today to register!

HUFCOR'S TIME-TESTED PRODUCTS

OPERABLE PARTITIONS

SNAP 61

Hufcor steel-framed operable partitions set the standard for quality, durability, sound separation, and ease of movement. They are the creative way to add flexibility and functionality to your space. Optional tracks and accessories enable doors to be moved on curves and/or to intersect with other doors to create multiple rooms. Standard or custom finishes allow the partition to match or complement your décor and inset writing surfaces offer additional functionality for schools and offices.

Hufcor 600 Series...56 STC.

Hufcor launches a new, higher STC rated operable partition for occasions where optimal acoustics is key to your flexible space designs. Now, Hufcor offers the tests and proven field performance of the new construction so customers can rest easy when installing these ultra-high acoustically rated operable walls. And that's something we can no longer remain quiet about.

Visit **www.hufcor.com/56STC** to download the actual test report and to learn about Hufcor's new ultra-high STC movable walls.

Earn one LU/HSW with Hufcor's new AIA/CES program. To schedule a "Lunch and Learn" presentation, contact your local Hufcor representative. Go to **www.hufcor.com** and click on Find Your Distributor.

HUFCOR

Or for the on-line version, visit www.thecontinuingarchitect.com.

SUMMIT® VERTICAL LIFT PARTITIONS SNAP 62 With the touch of a button, the panels in this innovative retractable wall system cascade down through a narrow slot in the ceiling, quietly sliding into place, and rise to store above the ceiling when not needed. Optional full-width writing surfaces are available.

HYDRAU-LIFT™ BI-FOLD DOORS SNAP 63 The Hydrau-Lift™ automated bi-fold doors quickly open your restaurant, hotel, bar patio, pool area, sky boxes and even large interior spaces. The special lift system forms a tight weather and sound seal around the door.

NEW DRY ERASE OPTION SNAP Hufcor now offers a trimless, full height dry erase panel face for our operable partition line. The new magnetic steel face coating system can be used for writing or projection.

ACOUSTIC GLASS WALL PARTITIONS SNAP 6 Hufcor's acoustic glass wall achieves up to 44 STC and can be supplied with inset pass doors to allow easy egress and expandable closures to seal them tightly into place.

DATES + EVENTS

EXHIBITIONS

Hans Scharoun: Architect and Visionary

CAMBRIDGE, MASSACHUSETTS Through August 15, 2014

Hans Scharoun (1893-1972) is known today for expressionist architecture of profound humanism. Having gained recognition for his house designs at the German Werkbund exhibitions of 1927 and 1929, his practice before World War II focused on residential projects, the most successful of which were the Siemensstadt Housing Estate in Berlin (1930) and the Schminke House at Löbau in Saxony (1932). This exhibition at the MIT School of Architecture + Planning focuses on Scharoun's graphic art, from his earliest preserved drawings of 1909 to graphics for posthumous projects. For more information, visit mit.edu.

Finland: Designed Environments

MINNEAPOLIS

Through August 17, 2014

The first major U.S. exhibition devoted to contemporary Finnish design since the 1990s, Finland: Designed Environments will present a holistic overview of the past 15 years in Finland, a period of rapid innovation and design breakthroughs. The exhibition, hosted by the Minneapolis Institute of Arts, will pay particular attention to young Finnish architects emerging as major international voices, including K2S Architects, Hol-Imén Reuter Sandman, and Verstas Architects, among others. For more information, visit new.artsmia.org.

Wright Around Chicago and The Pedal Oak Park **Guided Tours**

CHICAGO AND OAK PARK, ILLINOIS

Through August 27 and September 28, 2014

Two popular bus tours allow people to experience the wealth of Frank Lloyd Wright-designed buildings in the Chicago area. The Wright Around Chicago guided bus tour features the best of Frank Lloyd Wright in Chicago and Oak Park, Illinois. The Pedal Oak Park guided bicycle tour stops at 22 Wright-designed structures in the Frank Lloyd Wright-Prairie School of Architecture Historic District in Oak Park through September 28. For more information, visit flwright.org.

Italian Futurism, 1909–1944: Reconstructing the Universe NEW YORK CITY

Through September 1, 2014

The first comprehensive overview in the United States of one of Europe's most important 20th-century avant-garde movements. Italian Futurism features more than 360 works by more than 80 artists, architects, designers, photographers, and writers. This multidisciplinary exhibition at the Solomon R. Guggenheim Museum examines the full historical breadth of the movement, from its 1909 inception with the publication of Filippo Tommaso Marinetti's first Futurist manifesto through its demise at the end of World War II. For more information,

Open to the Public: Civic Space Now NEW YORK CITY

visit guggenheim.org.

Through September 6, 2014

An exhibition exploring why people gravitate to (or avoid) civic spaces-the places between buildings where people can assemble-the exhibition's 20 case studies are divided into three intersecting thematic categories: congregation, contemplation, and circulation. Open to the Public presents the work of contemporary designers, including Snøhetta, Weiss/Manfredi, and James Corner Field Operations along with other almost-unnoticed places where people gather. At the Center for Architecture. For more information, visit cfa.aiany.org.

Palaces for the People: Guastavino and the Art of Structural Tile NEW YORK CITY

Through September 7, 2014

At the Museum of the City of New York, this exhibition showcases the architectural beauty and engineering strength of spaces created by Spanish immigrants Rafael Guastavino and his son, Rafael Jr., who immigrated to New York from Barcelona in the late 19th century. Their legacy can be seen in thin-tile structural vaults hidden in plain sight throughout New York, including Grand Central Terminal, the famous Oyster Bar, the Cathedral of Saint John the Divine, the Ellis Island Registry Hall, the

Elephant House at the Bronx Zoo, the Boathouse, the Tennis Shelter in Prospect Park, and many others. For more information, visit mcny.org.

Architecture to Scale

CHICAGO

Through September 14, 2014

An exhibition at the Art Institute of Chicago, Architecture to Scale demonstrates the complex process and vast range of scales in architectural representation through the work of two ground-breaking architects, in adjacent installations, Stanley Tigerman and Zago Architecture. Stanley Tigerman, a major figure in Chicago's postmodern-architecture movement, is largely known for his intricate and inventive Architoon drawings. Founded by Andrew Zago in 1991, Zago Architecture employs a rigorous practice of research and experimentation in parallel with its architecture projects. For more information, visit artic.edu.

Houghton Hall: Portrait of an English Country House HOUSTON

Through September 22, 2014

For the first time, a collection of paintings, sculptures, and decorative arts from Houghton Hall in England—architect William Kent's 18thcentury masterpiece-travels to the U.S. The exhibition brings together more than 100 objects with furniture, some designed by Kent himself, to evoke the stunning rooms at Houghton Hall. At the Museum of Fine Arts. For more information, visit mfah.org.

Designing Home: Jews and Midcentury Modernism SAN FRANCISCO

Through October 6, 2014

The first major exhibition to explore the role of Jewish architects, designers, and patrons in the formation of a new post-World War II American domestic landscape, Designing Home highlights the essential contributions of well-known designers and architects, among them Anni Albers, George Nelson, and Richard Neutra. With more than 120 objects, Designing Home is organized around five key areas that include furniture, Judaica, and Hollywood films. At the Contemporary Jewish Museum. For more information, visit thecim.org.

NYC Makers: The MAD Biennial

NEW YORK CITY

Through October 12, 2014

This exhibition spotlights the creative communities thriving across the five boroughs of New York. It showcases the work of approximately 100 makers who have been nominated by a pool of more than 300 New York-based cultural leaders, with final participants selected by a jury. From renowned cultural leaders to enfants terribles, every maker selected demonstrates the highest level of skill in his or her respective field, whether architecture, furniture design, fashion, or film. At the Museum of Arts and Design (MAD). For more information, visit madmuseum.org.

Conceptions of Space: Recent Acquisitions in Contemporary Architecture

NEW YORK

Through October 19, 2014

Highlighting recent acquisitions of the Museum of Modern Art's Department of Architecture and Design, this exhibition explores how architecture is still an artistic endeavor: As a response to wider cultural issues, the conception and articulation of space goes beyond functional needs. Included in the survey are 20 international projects by architects and artists that range from large-scale models, drawings, and photographs to videos and a room-sized installation. For more information, visit moma.org.

Unsettled Landscapes

SANTA FE, NEW MEXICO Through January 11, 2015

Unsettled Landscapes will look at the insistent forces, political conditions, and historical narratives that inform the work of contempo-

rary artists across the Americas-from Nunavut to Tierra del Fuego. Through three themes-landscape, territory, and trade-this exhibition at SITE Santa Fe explores the interconnections among representations of the land, movement across the land, and economies and resources derived from the land. For more information, visit sitesantafe.org.

Designing for Disaster

WASHINGTON, D.C.

Through August 2, 2015

From earthquakes to hurricanes, flooding, and rising sea levels, natural disasters can strike anywhere and anytime. In light of this reality, the National Building Museum presents the multimedia exhibition Designing for Disaster, a call to action for preparedness on the part of design professionals, local authorities, homeowners, and school kids. The exhibition explores strategies local leaders are pursuing to reduce risks and build more resilient communities. For more information, visit nbm.org.

LECTURES, CONFERENCES, AND SYMPOSIA

Architectural Record Innovation Conference 2014 NEW YORK CITY

October 9, 2014

Architectural Record's acclaimed Innovation Conference New York covers topics ranging from the merging of landscape and architecture to the integration of contemporary art, technology, and design. Keynote speakers include Doriana and Massimiliano Fuksas and Odile Decq. For more information, visit construction.com/events/2014/innovation-ny.

Greenbuild 2014

NEW ORLEANS

October 22-23, 2014

Greenbuild is the world's largest conference and expo dedicated to green building. The conference features three days of speakers, networking opportunities, industry showcases, LEED workshops and tours of the host city's green buildings. Join thousands of other people who agree that green building is a good idea and good for business. For more information, visit greenbuildexpo.com.

COMPETITIONS

Mud House Design 2014

Registration deadline: August 15, 2014

Nka Foundation invites students to Mud House Design 2014, an international architecture competition to demonstrate that mud architecture can be well-made and durable. Designs should be for a single-family home, and use local materials and labor. The first-place-winning entry will be built in the Ashanti Region of Ghana. For more information, visit nkafoundation.org.

vision42design Competition

Registration deadline: September 8, 2014

The Institute for Rational Urban Mobility is hosting a design competition to imagine an enhanced public environment for 42nd Street in Midtown Manhattan. Participants should transform the street into a world-class boulevard, complete with public spaces and a light-rail tram. Cash prize: \$10,000. For more information, visit vision42.archpaper.com.

Guggenheim Helsinki Design Competition Submission deadline: September 10, 2014

This open international two-stage competition welcomes anonymous submissions from firms and individuals to design a new Guggenheim museum to be built in the Finnish capital. The resulting Guggenheim Helsinki museum will organize and present internationally significant exhibitions of art from the 20th and 21st centuries, and Nordic art and architecture. It will also be distinctive within the Guggenheim constellation of museums by actively including design and architecture in its programming. For more information, visit designguggenheimhelsinki.org.

Breaking New Ground

Registration opens October 2014

Breaking New Ground is an international design and ideas competition that addresses the urgent affordable-housing needs of farmworker and service-worker families in the Coachella Valley in southeastern California. Efforts to improve living conditions suffer from a lack of funding and coordination. The competition seeks to address this by harnessing the power of design to envision new precedents, mechanisms, and policies for affordable-housing implementation and development, with implications for California and the nation. For more information, visit breaknewground.org.

Wall to Wall Bright Idea!

LumiWall Provides Both High VLT and Low U-values

You no longer have to choose between yellowing fiberglass and polycarbonate panels that don't fit your budget. LumiWall polycarbonate panels by Wasco deliver superior light transmission while maintaining low u-values, **all at an affordable price**. With a wide range of color choices, LumiWall becomes a canvas for light, offering architects limitless design possibilities and applications, while providing the substantial physiological and psychological benefits of natural, diffused daylight. You'll never see walls the same again. **NFRC tested and backed with a 10 year warranty**.

- Dry Glaze System No Sealants Required On Panels
- Fully Fabricated, Lightweight Interlocking Wall Panel System with Large Span Capabilities
- Superior U-value, Light Transmission, SHGC, Impact Resistance*
- Standard Subsill for Fast, Trouble Free Installation
- Interlocking Wall Panels Offers High Insulating Values
- No UV Maintenance

* Compared to leading competitor.

TRADE SHOW NEWS

Independence Days

NeoCon 2014's introductions support privacy, comfort, and health as workplace design trends see another paradigm shift.

MARKING ITS 46TH YEAR at the Merchandise Mart in Chicago, the NeoCon World's Trade Fair, held in June, showed a considerable uptick in numbers: General attendance was recorded at 50,000, a 20 percent increase over 2013. The design community had much to do with this as firms sent large teams instead of just a handful of representatives, notes Susan McCullough, senior vice president of Merchandise Mart Properties (MMPI), which manages the show. Uncertainty about the show's future at the Mart (in 2012, MMPI announced that it will host the show there through 2021) and variances in the architectural and interior design billing indices did not affect the general industry opinion that the economy is on a steady rise.

"Our permanent and temporary exhibitors responded to the uptick in the economy with creative solutions for key vertical markets, from office to education, hospitality, and health care," says MMPI associate Byron Morton. "Solutions on display this year focused on employee well-being and productivity."

Permanent showroom and temporary booth exhibitors alike launched products that provide respite—through materiality and motif—for today's knowledge workers. In response to the *de rigeur* open plan, which is favored by corporate real estate for maximizing tenant flexibility, the new solutions support individual comfort and privacy, without changing the floor plate irreparably.

Steelcase embraced private quarters with its Quiet Spaces collection. Developed with Susan Cain—author of *Quiet: The Power* of Introverts in a World That Can't Stop Talking—the collection draws extensively on the 2012 book, along with the manufacturer's own research on work styles and productivity influencers. Cain and Steelcase outlined a set of principles to support the way introverts work, in 28- to 100-square-foot flexible areas that can be closed off. "The spaces offer the psychological safety of being on your own," Cain says, "and knowing that you're not subject to noise or others watching while you're focused on your work."

Borgo and Vitra both presented semiprivate compartmentalized seating. Privee, from Borgo, encircles occupants with an optional felt-wrapped canopy of 5mm steel

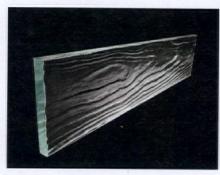

plate and recycled polyurethane composite. An older design by the Bouroullec Brothers, Vitra's Alcove is a sofa enclosed by an upholstered partition to maximize visual and acoustical privacy. For those seeking to erect a transparent conference room or private office, **Haworth** released a demountable glass-wall system with minimal framing for clear sightlines. The manufacturer also previewed its Patricia Urquiola-designed mobile work/lounge collection Openest, which includes versatile privacy screens.

A number of introductions addressed health concerns. The Livello work table from **Teknion** adjusts from seated to standing height via a spring-activated mechanism—no electricity required. **Izzy+** showed Nikko task seating, which promotes better posture. And biophilic designs, including the wood-graininspired Plank glass from **Joel Berman** and Against the Grain modular carpet from **Mannington Commercial**, bring a touch of the outdoors to interiors. —*Emily Hooper*

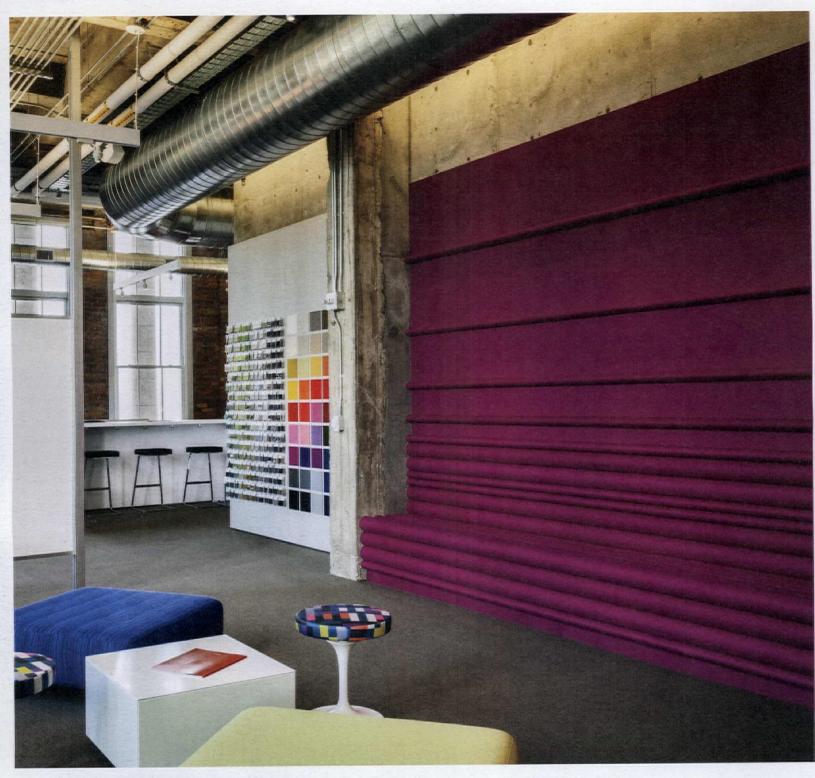

WORK IT

(clockwise from top left) Teknion's Livello table provides a 20inch range of vertical motion. Openest privacy panels by Haworth, made from FDIM fabrics, are available in sets of three, six, and nine. Mannington's Against the Grain carpet references reclaimed wood. Steelcase's Susan Cain Ouiet Spaces collection offers a variety of stress-free work settings. Plank, from Joel Berman, is kilncast glass with a cedar grain pattern.

STEPHEN CASSELL, KIM YAO, AND ADAM YARINSKY

The principals of ARO run the firm much like a design laboratory. Their awardwinning work is in the permanent collections of MoMA and the Cooper-Hewitt.

aro.net

TRACI ROLOFF AND KELLY SMITH

As an architecture intern, Smith fell in love with wool felt and began making home goods and accessories with it. She founded FilzFelt in Boston in 2008 with Roloff, whose background is in interior design.

filzfelt.com

FELT: FROM YURTS AND CLOTHING to auto parts, the material has been used since ancient times, lauded for its durability, flame resistance, renewability, and acoustic and thermal-insulation properties. No wonder, then, that the material is a hot commodity in the contract office market today. Now **FilzFelt** and **Architecture Research Office** (ARO) have collaborated on a modern line of felt solutions, among them wall and ceiling coverings and room dividers for office settings. (ARO had previously designed showrooms for Knoll, the owner of FitzFelt, and that's how the connection was made.) The result of this creative partnership? Two wall coverings—ARO Plank and Shingle—and a ceiling baffle called ARO Baffle, composed of 3mm-thick wool felt vacuum-formed to an acoustic substrate. There's also ARO Array, a hanging room-division panel that offers intriguing geometric patterns. All are conceived as easily installed kits of parts. "The collection takes advantage of felt's many properties and makes them perform at a higher level," says ARO principal Kim Yao. (SNAP #43)

FACADES Inspired by NATURE

616.355.2970 | dri-design.com

WHY DRI-DESIGN?

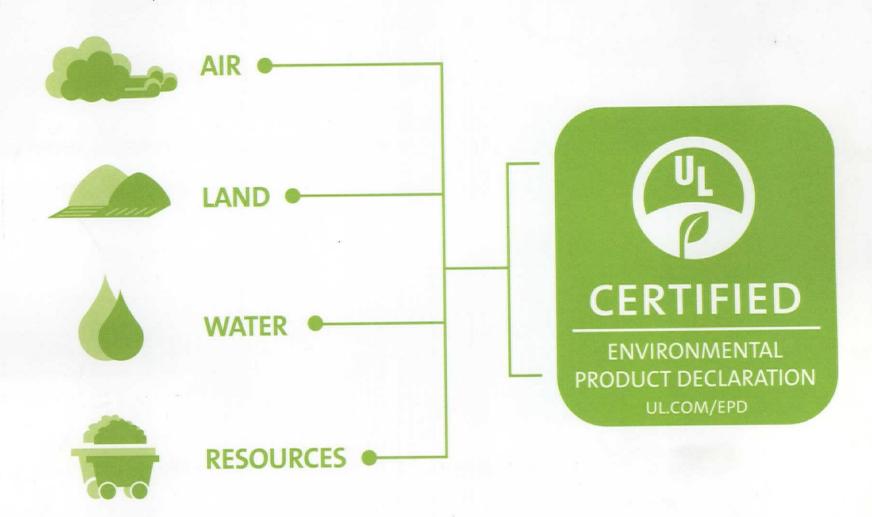

Dri-Design panels made with VMZINC® make it easy to capture the allure of nature. Created from the distinct tones and textures of the earth, our VMZINC® line of exterior panels creates a stunning visual experience that is as beautiful as it is functional.

See us at GREENBUILD in New Orleans -October 22-23, 2014 booth # 3439

- No sealants, gaskets or butyl tape means no streaking and no maintenance for owners.
- Not laminated or a composite material, so panels will never delaminate.
- At Dri-Design, we have a strict policy of recycling and creating products that the world can live with.
- Fully tested to exceed ASTM standards and the latest AAMA 508-07.
- Available in a variety of materials and colors.

Chinguacousy Sports Park - Brampton, Ontario, Canada Architect: MacLennan Jaunkalns Miller Architects Shai Gil Photography

KNOW YOUR IMPACT

WITH TRANSPARENCY YOU CAN TRUST

Reliable transparency empowers purchasers and manufacturers to reduce their impact on environmental health. Certified Environmental Product Declarations (EPDs) provide visibility into how products impact availability of resources and potential effects on air, water, and soil quality. Visit the free online UL Sustainable Product Guide to view North America's largest catalog of EPDs and accompanying Transparency Summaries — which provide key information from each EPD in easy to read two page documents.

Opening Up the Western Front

Manufacturers of building products are on the march in Colorado, Oklahoma, Texas, and Utah.

EVERYTHING MAY BE bigger in Texas, but the size of the economic recovery in Colorado, Oklahoma, and Utah is impressive, too.

Colorado held its own in the Great Recession, though unemployment reached 9.3 percent, due mostly to the home-building slump. Now it's back to 6.3 percent, with a workforce that's high-tech and highly educated.

At Golden, Colorado-based Invisible Structures, which manufactures porous pavers and erosion control products, a debt-free balance sheet helped the company withstand the downturn. "We had no decrease in structure, standing, or employment," says Kevin Wright, president and COO.

In Oklahoma, boom times are back. In 2009 manufacturing jobs numbered 129,300; by 2013 the figure reached 136,500. That growth, along with relocations and rebuilding as a result of tornado damage, is putting upward pressure on housing stock and building materials. "We quarry a lot of rock for commercial and residential construction," points out Don Hackler, deputy director for the Oklahoma Department of Commerce.

Manufacturing in Texas is steadily increasing. "In the Iowa Park and Wichita Falls region, there's a significant amount of growth," says Harry Carner of S-5!, a manufacturer of roofing clamps. S-5! sales may have been flat in 2012 and 2013, he notes, but "we're seeing significant growth—to the tune of 10 percent—in 2014 so far."

There's good news in Utah, too, where unemployment fell below 4 percent. Sales at Studio by 3form, the manufacturer of decorative panels, were at "\$1.3 million in 2010 and over \$3 million last year," according to Azar McMaster, general manager for the Salt Lake City company. At nearby Connor Sport Court International, the residential and civic/education markets helped the company achieve a rise in sales. "It's been fluctuating like a sawtooth but angled upward," says president and CEO Ron Cerny. And upward is good, no matter the pattern.

SNAPSHOTS

COLORADO

The state has seen 31 consecutive months of payroll job gains.

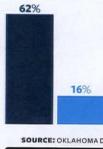

According to a survey of households, the unemployment rate fell 0.2% in May, to 5.8%.

The last time the Colorado unemployment rate was 5.8% or less was in November 2008, when the rate was 5.7%.

SOURCE: COLORADO DEPARTMENT OF LABOR & EMPLOYMENT

OKLAHOMA

Oklahoma added 30,100 jobs in 2013, for an annual growth rate of 1.9%.

Of Oklahoma's jobs, 62% are in the manufacturing sector and 16% are in the oil and gas industry.

SOURCE: OKLAHOMA DEPARTMENT OF COMMERCE

TEXAS

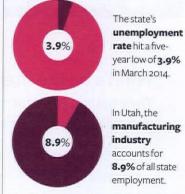

Texas saw a 2.3% increase in employment in 2013, gaining 252,400 seasonally adjusted jobs from December 2012 to December 2013.

In 2013, Texas added more jobs than any other state for the fourth consecutive year, according to data published by the Bureau of Labor Statistics.

In the first quarter of 2014, venture capitalists invested more than \$348.7 million, primarily in the Texas software, medical-devices, biotech, and industrial/energy-services sectors.

SOURCE: STATE OF TEXAS, OFFICE OF THE GOVERNOR

UTAH

rate hit a fiveyear low of 3.9% in March 2014.

In Utah, the manufacturing industry accountsfor 8.9% of all state employment.

Utah's manufacturing sector is currently the third-largest industry in the state for total employment. Presently, manufacturing employs about 113,000 workers and has created an additional 300,000 related jobs statewide. SOURCE: ECONOMIC DEVELOPMENT CORPORATION OF UTAH
