NEW STRATEGIES IN A CHANGING ECONOMY

The national American Institute of Architects responded quickly to the economic downturn by launching its Managing Rapid Change program in the summer of 1990.

Roundtable discussions with design clients and bankers, a survey of 3,000 architects and several workshops resulted in some hard-hitting advice for architectural firms seeking stability and new strategies in hard times. As *Architecture* magazine reported, "Get your firm's financial house in order, analyze your skills and the marketplace for them, and recognize potential new markets."

The bright spot, according to one participant, is that "The economy is not going to hell in a handbasket." In other words, there may be a slowdown, existing markets may have dwindled, but opportunities still abound. In fact, firms that were already specializing in education, healthcare and prisons have continued to stay busy.

Architects participating in the survey, on the other hand — in spite of the savings and loan crisis, the growing federal deficit, high vacancies in office buildings as well as condos and upscale homes, and a grim view of the recession — predicted their firms would actually grow over the next three years.

How does this translate to Charlotte-area architects? Changes — and most for the better. Comments from the national AIA's roundtable quickly summarize what has occurred here as well: Architects can no longer think of themselves as just designers. They must now focus equally on marketing, on developing new opportunities, and on "the business of architecture."

This is echoed by a recent survey in *Architecture* magazine that asked AIA members what it takes today to become a successful architect? Their response: marketing skills 37.5%, business acumen 37.5%, design skills 17%, technical skills 8%. And over half believed that economic issues would be the challenge of the 90s.

The economic downturn, in one sense, has been a positive force. And when construction picks up, architects will be even better positioned for growth.

news

Since Architecture Charlotte 1990, numerous projects by Charlotte-area architects have received design acclaim. The following recognitions were submitted by either the individual firms or the sponsoring organizations.

Competing against more than 100 international projects, **Jenkins-Peer Architects'** design for the 40,000 s.f. WCNC-TV 36 Corporate Headquarters was awarded third place overall in Sigma Design's 1991 International ARRIS/CADD Design Competition. "The new WCNC-TV design represents the elite category of architects who combine artistic vision and technological wizardry" stated Sigma Design. General contractor was **McDevitt & Street**, Charlotte.

Tribute to Murray Whisnant on his Selection as 1991 AIA Fellow:

"For 30 years, he has been a model for the region's architects and students who understand that architecture is an art and may be practiced fully and completely with all the details of building, landscape, signage, and furnishings integrated into a single expression of place and purpose."

— comments by the 1991 AIA

Fellow distinguished jury

"At a time when modernism for some is a discredited movement, [Murray Whisnant] embraces it with gusto.... 'I think the reluctance to say, "Yes, I'm a modernist," stems from the popular conception that to say that means you like austerity and boredom. That's not what I mean. I like richness and surprise.'"

— from *Southern Accents*, October 1991, by Richard Maschal

PHOTO: GORDON SCHENCK

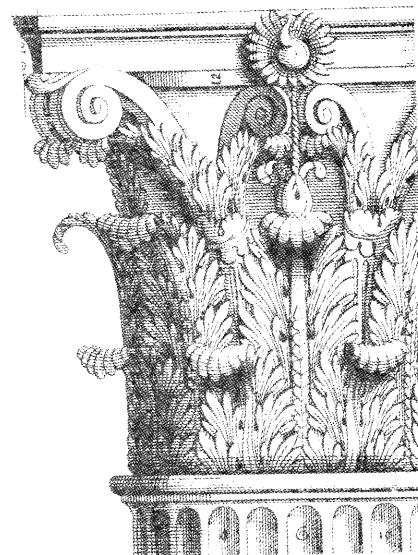

Murray Whisnant, FAIA, joins a distinguished college of fellows within the Charlotte AIA, which includes Robert P. Burns, Marley P. Carroll, S. Scott Ferebee, Beverly L. Freeman, Harvey B. Gantt, James C. Hemphill, Jr., Donald R. Lee, Gerald Li, Norman Pease, Jr., Philip Shive, James K. Stenhouse and Charles H. Wheatley.

▲
The Charlotte-Mecklenburg Government Center's stone-and-glass curtainwall system resulted in the Building Stone Institutes' prestigious 1990 Tucker Award for **J. N. Pease Associates** and an in-depth feature article in the February 1991 issue of *Architecture* magazine. General contractor was **Algernon Blair, Inc.** of Montgomery, Alabama.

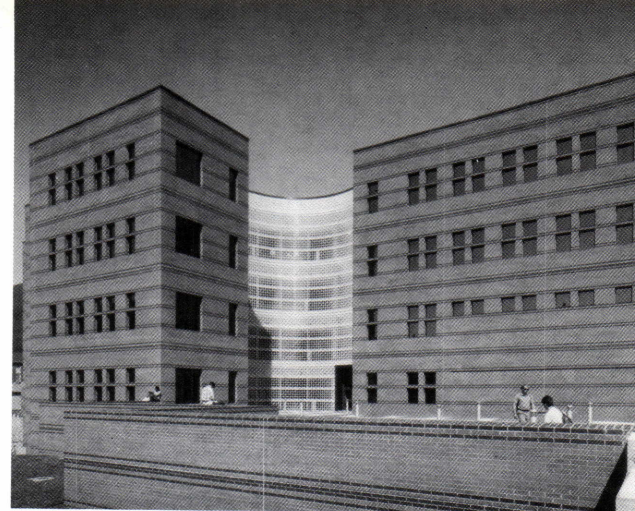

▲
There were two prestigious distinctions in 1991 granted to **The FWA Groups's** Jacksonville Golf & Country Club design in Jacksonville, Fla. — a national AIA Award for Excellence and Aurora Award from the Southeast Builders Conference.

▲
Out of 74 entries in the North Carolina AIA 1991 Design Awards competition, **David Furman Architecture** won a Merit Award for Old Buckingham Station in Midlothian, Vir.

▲
CWA Architects received an Award for Excellence from the Maryland Home Builders Association for English County Manor Condominiums in Belair, Md.

Annually the Brick Association of North Carolina sponsors its Brick in Architecture Awards. Four Charlotte architectural firms took five of the six awards for 1990, with **J.N. Pease Associates** additionally winning the President's Award of \$2,000, which was directed by the firm to be awarded equally between NCSU's School of Design and the School of Architecture at UNC-Charlotte. One of two 1990 Honor Awards went to **J.N. Pease** for College of Business Building at Appalachian State. Merit Awards went to **Gantt Huberman Architects'** Administration Building at Elizabeth City State University and to **Hepler + Hall Architects** for Trolleys End in Charlotte. Honorable mention went to **Martin Boal Anthony & Johnson, Architects** for Hibriten High School Theater in Caldwell County and to **Gantt Huberman Architects** for C.G. O'Kelly Library addition/renovation at Winston-Salem State University.

KNOX REALTY BUILDING,
MOORESVILLE, N.C.
ARCHITECT: YELVERTON ARCHITECTS
PHOTO: JOE CIARLANTE

Knox Realty contracted **Yelverton Architects** to renovate a 1914 brick Renaissance Revival-style building in Mooresville. The project received a 1991 Gertrude S. Carraway Award of Merit for outstanding commitment to promotion of historic preservation in North Carolina. General contractor was **Guy C. Bostain Construction**, Davidson.

Additionally, the 1982 New Hanover County Courthouse in Wilmington received a 1990 Honor Award from the South Atlantic Region of the AIA, as well as the 1990 Gold Award from the Carolina's Chapter of the Institute of Business Designers for **Yelverton Architects**. And the firm's restoration of a Springs Mills' 1870 Empire/Italianate-style home in Fort Mill, S.C. as Corporate Guest Quarters received a 1990 Bronze Award from the Institute of Business Designers, Carolinas Chapter. General contractors were **Security Building, Co.**, of Chapel Hill and **Andrew Roby, Inc.** of Charlotte, respectively.

▲
*Outstanding architect and firm for 1991, as selected by the Charlotte Chapter of the American Subcontractors Association of the Carolinas was **Randy McMillan**, principal of **Middleton, McMillan Architects**, who received the coveted gold hard hat. The 1990 recipient firm was **Little & Associates Architects**.*

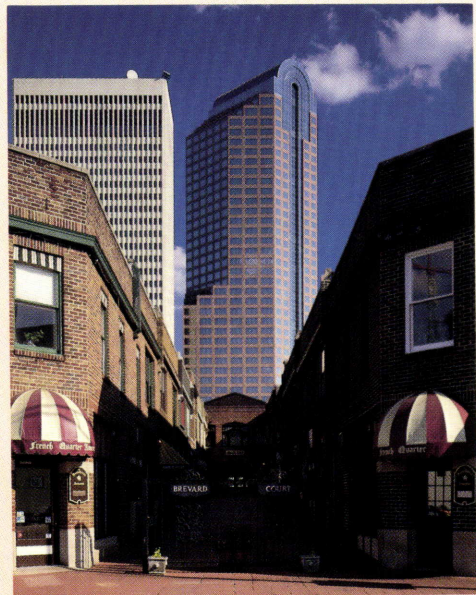

▲
*In the past six years, **Odell Associates** has received nine noteworthy awards for its NCNB Florida Headquarters project in Tampa, including a 1991 Design Award for Excellence from the Florida AIA. The 32-story cylindrical tower was an architectural association with Wolf Associates for the joint venture of **NCNB** and **Faison Associates** of Charlotte. Closer to home, the well recognized Charlotte Coliseum earned a 1991 first place for excellence in concrete masonry from the Carolinas Concrete Masonry Association. General contractor was **Turner/F.N. Thompson**, Charlotte.*

▲
In Mecklenburg County, the Charlotte Clean City Committee annually bestows its Business Beautification Awards. The winners for 1990: In Building Design were **Middleton, McMillan Architects**, grand prize for Cogentrix Corporate Headquarters; **Little & Associates Architects**, second place for Bank of Mecklenburg; and **Gerald Abrams Architects**, third place for Winchester Surgical Supply Company. In Renovation/Restoration were **Middleton, McMillan**, grand prize for Spirit Square Center for the Arts; **Hepler + Hall Architects**, second place for Trolley's End; and **Middleton, McMillan**, third place for Charlotte-Mecklenburg Public Library. In addition, **Lee Nichols Architecture** won recognition for the Richter Wrenn Office Building.

1ST PLACE ▲

Brevard Court
Joe Ciarlante

"It's one of those rare shots I did for myself," said Joe Ciarlante, who happened to be on Church Street shooting another building for a client when he saw this unique photo opportunity. "It's a view of Charlotte that a lot of people don't really get to see."

And it's that unique perspective that differentiates one photographer and one photograph from all others. Ciarlante specializes in architectural photography because he is driven by the same kind of relentless determination that motivates an architect to take a project that extra step. "I like the idea of picking the view, working on it and refining it until it's perfect."

Originally from Vineland, New Jersey, Ciarlante holds a bachelor of fine arts degree from Temple University's Tyler School of Art in Philadelphia, a master of fine arts degree from The Art Institute of Chicago and has studied architectural photography at Harvard University's Graduate School of Design.

"Living in Philadelphia and Chicago, you get a sense of history from its architecture," Ciarlante explained. "That's one of the things I like about the Brevard Court shot. It ties the old and the new of Charlotte together."

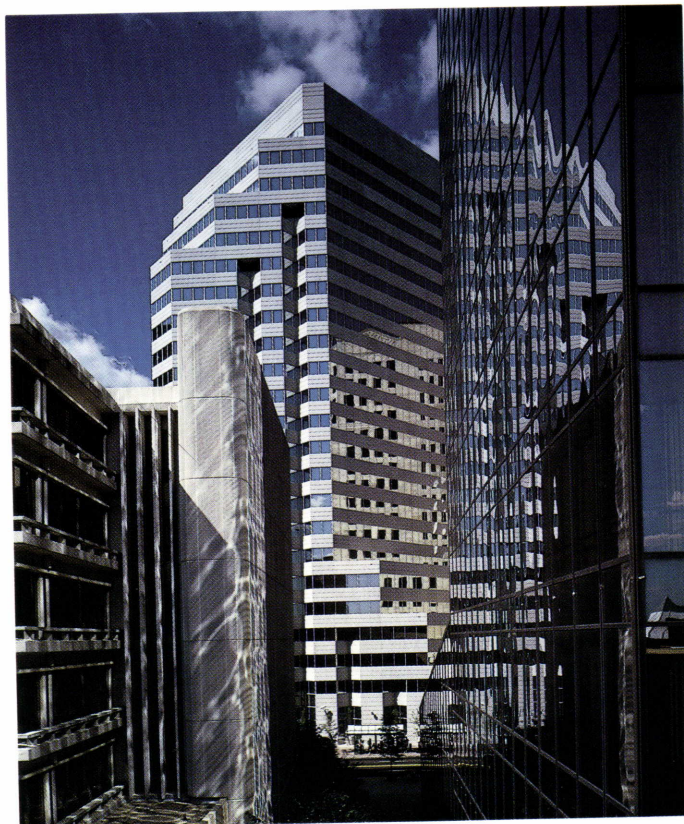

Winners of the second annual Architectural Images photo competition were judged by the publication's editorial and design staff. In addition to making distinctive architectural statements, these photographs of local architecture exemplify excellence in technical quality, originality of subject matter and overall composition.

2ND PLACE ▼

First Citizens Bank
Paul Epley

Paul Epley's image of Charlotte's First Citizens Bank from a Tryon Street view, achieved with a polarizing filter, is currently being used by FUJI film in an ad for its film products. Vice president of the North Carolina Chapter of The American Society of Magazine Photographers, Epley is inspired by architectural photography as a result of his extensive ties in the construction industry.

"I know," said Epley, "that a batter board isn't for cookies. My first job at sixteen was as a rigger on a steel crew. I understand what it takes to build a great building because I've done it. I understand what it takes to photograph a great building because I feel it."

3RD PLACE ►

*Shops at University Place
Stanley Capps*

By avoiding direct sunlight, waiting for low shadows and using a polarizing filter, Stanley Capps was able to capture the Shops at University Place at the best possible moment in this shot for Jenkins-Peer Architects. Capps, a Charlotte native, has a bachelor of arts degree from the Brooks Institute of Photography in Santa Barbara and he is currently in California working towards a master's degree. He plans to return to his home town to continue his career in architectural photography.

Interview by Angela Prince

In an interview with *Architecture Charlotte*, Harvey Gantt was again looking down the road to greater opportunities for the architect in shaping the community. These comments as follow-up to those made by Gantt at the national AIA's Vision 2000 Conference echo the concerns and challenges of a profession in changing times.

"I have often [been concerned]...about the lack of involvement of our profession in the real world of decision making. We have become, in essence, the cosmetic applicators for the major things that are

Harvey B. Gantt, FAIA:

On Changing Roles, Challenges Facing The Design Profession

Harvey Gantt is a man of incredible vision. He's an architect dedicated to the politics of creating a better quality of life for others.

It's important to him that he understands the needs of the community and its people and that his solutions work. Harvey Gantt also knows nothing about limitations. He was Clemson University's first black student in 1963, Charlotte's first black mayor for two terms (1983-87), and was the first black ever nominated for the U.S. Senate by the Democratic Party in any state (1990). Had he won, not only would he have been the second black in this century to serve in the U.S. Senate, but the first architect since Thomas Jefferson.

happening around us. Others make the important decisions on our environment. When I served as mayor of Charlotte, and something significant was about to happen in the built environment, caused by sociological or economic factors or whatever, the architect was usually not in the room....The architect would come along later and make sure the building fit the building code, that technical issues of building were satisfied, and that it met the budget. But the budgets were determined by other people, and necessarily so...we architects are no longer the master builders." (National AIA Vision 2000 Conference, 1990)

"Architects need to be involved in politics because they are trained to, first of

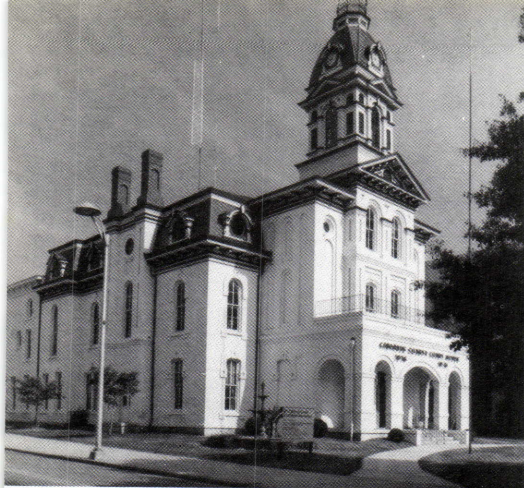

all, put together lots of different materials and elements to make something whole. They have to also have the ability to see the broad vision and its implications, and to put together a concept. It is said that we will be building more in the next 25 years than we have in the last 1,000 years. If so, then, architects have the potential for a much larger role beyond that of being mere technicians."

"We are losing ground. We know that we are. The industrial revolution brought about this major change in how we approach the building [and] the resulting new production process for building housing has eliminated the need for the architect. We don't influence housing construction or the environment that we live in today."

"Very, very, very rarely will you find people who live in an architect-designed house...Few people live on streets laid out by an architect. Most sub-divisions are laid out by civil engineers. But more important than that, the decision about where the houses are going to be built [is made by] a combination of land owner, developer, zoning administrator, and/or a city government. Even when architects

MECKLENBURG COUNTY CRIMINAL
COURTS BUILDING,
CHARLOTTE
ARCHITECT: J.N. PEASE ASSOCIATES
PHOTO: GORDON SCHENCK

are commissioned, the decision about what, when, how is made by someone else. If we are brought in, it's usually at the end of the process."

"As a group, we need to be aggressive about what's happening. We need to be much more concerned about the broader physical environment. If architects have been too restrictive and narrowly focused, it is because of the way we are trained in America, as compared to Europe where buildings tend to blend and fit in as opposed to every building having to be a Taj Mahal. In school, we were trained to design a building and fit that building to the site and the immediate things around that site. Very, very rarely did we ask the larger question of how this building fitted into a larger context of community."

"The client is always surprised at how much he gets out of the architect. I suspect that people who have come into contact with us appreciate what we ultimately offer. But, we need to do a better job in public relations as a profession."

"We need to take our training as designers into local government, and find effective ways to influence public policy; and if we can do that, maybe we can manage to bring our profession more clout and respect in the decision-making process."

"Architects have not sought out the political arena....We have just not been inclined to do that. [Yet], the environment is shaped by social, economic factors that manifest themselves in the physical things. So if we understand the social and economic factors, we can help better shape the physical community."

"It always comes back to the question: 'What do we do as a profession?' What should architects consider?' Part is to try to introduce those real world conditions

early on to young architects. So that with individual maturity, it will become second nature to ask the right questions. When you've got a commission to design public housing in a middle-income neighborhood, it's more than the materials and the massing of the structure. There are often other tough questions that will come when an architect faces the community."

"By serving on city council in Charlotte, I think my background helped the city to modify the whole selection process of architects...I had something to do with that, primarily, because I sat as a council member and talked about the architect not being [selected] on the basis of fee, but on levels of qualification. I also talked about how architects ought to relate to the client, in this case, the City, and how early on they should be involved in the process."

"Architects taking on a visible role in the community...I just hope more and more will do that. Serving on planning commissions, getting on zoning boards, running for city council, running for mayor. Because I'm not sure that we are hurt as badly as some of us think we are by getting involved."

[Editor's Note: In the interview, Harvey Gantt praised the work of several Charlotte AIA architects who have made recent contributions to public service, Joddy Peer, principal of Jenkins-Peer Architects, former chairperson of the Retail Task Force/Central Charlotte Association; Ken Andrews, Kenneth Andrews Architecture, County Commissioner; and John Tabor, principal of Middleton, McMillan Architects, member of the Charlotte-Mecklenburg Planning Commission.]

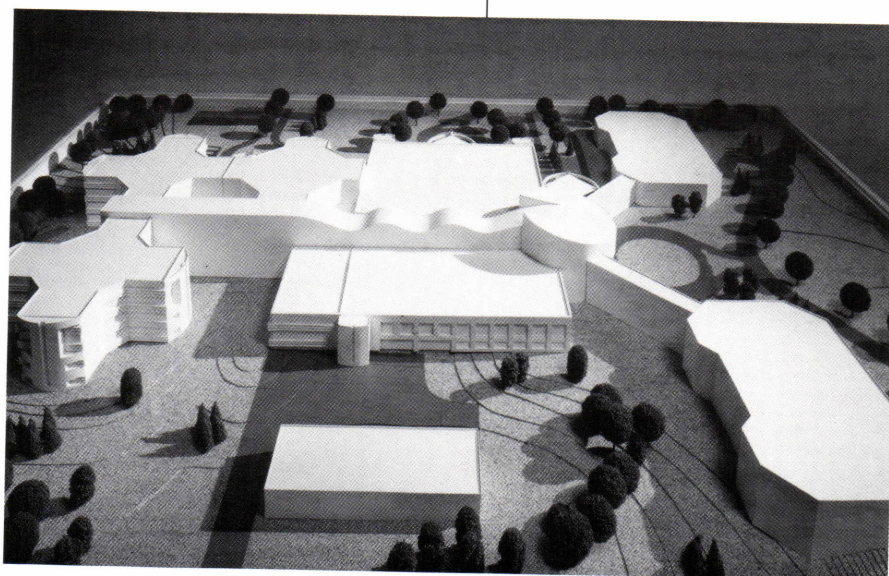

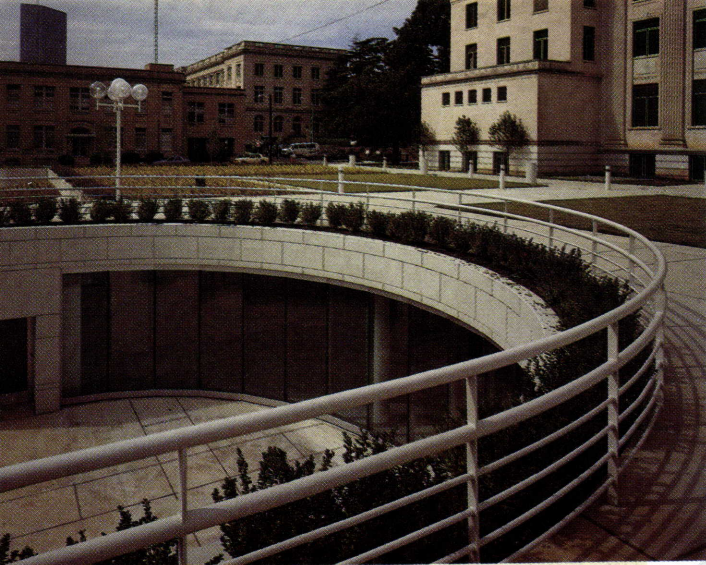

Design projects represented in this article demonstrate strong community involvement by Charlotte-area architectural firms in the areas of county government, education and medical care.

Charlotte architects survive economic downturn...

The Charlotte architectural community has never before seen a year like 1991. It was a year marked by uncertainty in the economy which produced a year of reorganization, restructuring and unemployment within the architectural community.

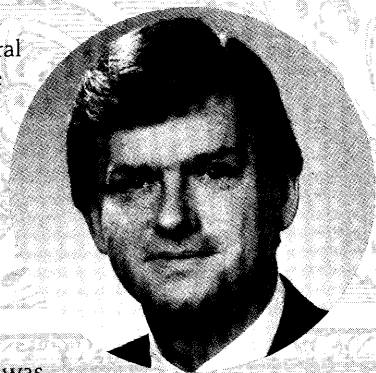

As the year began, many firms felt that the recession was almost over and plans had begun for refocusing on the future and reorganizing firms for growth. However, the economy continued to suffer throughout 1991, and there has been no increase in the workload for the architectural community as a whole.

Firms that have specialized in public work, consisting of colleges, schools and institutional work such as prisons and hospitals, remained intact throughout the year. Other firms found themselves laying off staff and merging with other firms to survive. The private sector work has been the most sporadic with some firms reporting an increase in business; however, most firms report a dramatic decrease in business.

In the Charlotte market, we are blessed in view of what is happening in other communities. We have received word that approximately 50% of the architects in the Boston and New York areas are unemployed and that the northeast is in a much severer recession than we could possibly imagine in Charlotte. We are also blessed with the announcements of the NCNB Sovran merger which along with First Union's expansion has placed Charlotte on the map as a major banking center. This has attracted other organizations to begin looking at our area, including the recent relocation of the Hearst publishing accounting group. In addition, several large corporations such as AT&T are targeting Charlotte as a major distribution center.

Many architects are refocusing into new areas of business development. Industrial and distribution markets are promising, and competition for work has become intense. We hope through this time frame that all firms will present a face of professionalism at all times and support one another as much as possible.

We do see a market for architects outside the traditional

architectural world. This will have to be faced by many persons currently unemployed. Career opportunities exist in real estate development, corporate architectural positions, corporate real estate asset holding groups, public service both in the planning sectors and as special assignments with city and county governments as well as with school boards, and various enterprises into design-build activities. Many younger architects have returned to graduate school to complete their professional degrees during this time of uncertainty.

The Charlotte Section of the American Institute of Architects has assisted the architectural community whenever possible. We have focused on establishing qualification base selection rather than a fee selection process. This is in keeping with the Mini Brooks bill, a law on the North Carolina books which allows for competitive fee selection basis only in times of emergency or for special projects. Hopefully, we have educated the various public agencies in our area concerning this qualification-base selection process which in the future will assist our members. We have also attempted to convey an urgency in the planning process for Charlotte's future growth through educational seminars and speakers. These have been well attended not only by architects, but also by city agencies and government leaders.

Charlotte's future growth needs to be studied carefully, and planning is a key to providing proper services for our community to keep it viable and unique.

The future, however, remains optimistic. The City of Charlotte and all the surrounding communities are growing as confirmed in the recent census. This growth will lead to a need for new construction and, therefore, will lead to work for architects.

We have survived as an architectural community through this difficult year. We look ahead to a year of stabilization in 1992 and even to a year of growth by the end of 1992.

William G. Monroe, III, AIA
President, Charlotte AIA

Sculptured Rock is your natural choice for a permanent and beautiful landscape.

KEYSTONE
• RETAINING WALL SYSTEMS •

KeyStone® retaining walls are designed to function beautifully for a lifetime, providing long term savings compared to timbers which will deteriorate.

There are no metal members in **KeyStone** to rust away, such as found in timbers.

No cumbersome tools, mortars, cutting or preservative treatments are required with **KeyStone**, and the wall goes up in half the time of old methods.

Build it to last!

- Individual concrete units locked together with fiberglass dowels.
- Available in 8" or 4" high mini-units.
- Choice of face, color and texture.
- Strong, permanent and maintenance free.
- Quick and easy installation reduces labor.

KEYSTONE

ARCHITECTURE

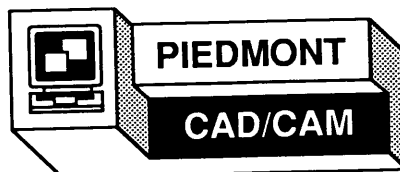

A successful architectural
 firm must have the necessary
 technology to secure their share
 of today's highly competitive
 business.

Utilizing sophisticated
 hardware and software
 systems, the deadline-oriented
 design firm can effectively
 automate design routines,
 produce 3D models and
 renderings, and generate
 reports, schedules, and cost
 estimations.

Piedmont CAD/CAM
 is committed to architects in the
 pursuit of excellence by
 providing a selection of CAD
 systems, comprehensive
 training and implemen-tation,
 and on-going application
 support and hardware
 maintenance.

METROMONT ADDS ARCHITECTURAL SOPHISTICATION TO ONE OF THE CAROLINAS' LARGEST PRESTRESSED CONCRETE PROJECTS.

Stanley Capps, Photographer

The 2,700-car parking structure at Douglas International Airport in Charlotte, North Carolina was one of the region's largest precast/prestressed concrete projects in recent years. Metromont Materials rose to the challenge, supplying 3,142 pieces (approximately 21,000 cubic yards of concrete) for the job. The new parking structure is a compelling argument for the versatility and architectural sophistication of precast/prestressed concrete.

The pieces were fabricated at Metromont's Greenville, South Carolina plant under the quality assurance program established and monitored by the Prestressed Concrete Institute. The supported structure encompasses an area of 700,000 square feet. The

floor system utilized 10-foot-wide by 26-inch-deep factory-topped double tees. The largest pieces fabricated were 60-foot-long planters, each weighing 40 tons.

If you're interested in the design possibilities of concrete, call Metromont. With offices in South Carolina, North Carolina and Georgia, plus manufacturing plants in Atlanta and Greenville, we're ready to add architectural sophistication to precast/prestressed projects throughout the Southeast.

Owner: City of Charlotte, NC

Architects & Engineers: Odell Associates, Inc.

Construction Managers: Day & Zimmerman, Inc.

General Contractor: Metric Constructors, Inc.
