BUILDING WITH "BUILT-IN BONUSES"

Terminal Building, Columbia Metropolitan Airport, West Columbia, S.C.; Upshur, Riley and Bultman, A.I.A., Columbia, S.C., Architects; Julian Shand, Columbia, S.C., Engineer; Harlee-Quattlebaum Construction Co., Florence, S. C., General Contractors.

The handsome new airport terminal in Columbia, S.C., is a fitting showcase for the use of Solite lightweight masonry units.

Used for interior and exterior walls, as well as foundations, Solite "builds in" a number of important advantages.

Left exposed for interior walls, these units provide sound absorbency (up to 50%); self-insulation (holds down heating and cooling costs) and a beautiful, even texture that is easily painted, holds nails, never "sweats" in damp, humid weather.

In addition, they are lighter in weight— $1/3$ lighter than ordinary masonry units. Which means easier handling, faster construction, savings in time, labor and money. Solite—the masonry units with the built-in bonuses.

SOLITE[®]

Lightweight Masonry Units and Structural Concrete
4425 Randolph Road, Charlotte, North Carolina 28211

Wow!

Most folks just can't get over the fact that we have more than 6000 shapes, sizes, styles and colors of tile on hand.

Here they were thinking we were a little tile company in Lexington, North Carolina

and it turns out we're a big tile company in Lexington, North Carolina.

And a darn good one, too. Just try us. We'll surprise you.

REVIEW OF ARCHITECTURE

A DECADE OF PROGRESS 1958-1968

Many people in other parts of the country, including the nation's capital, still think of South Carolina as a land of magnolias, cotton fields and white-pillared mansions. To help in the constant struggle to dispel this idea and show our state as very much a part of the progressive, growing South, a suggestion came from Senator Strom Thurmond's office that the SCAIA prepare an exhibit of recent architecture and display it in Washington.

This suggestion was accepted by the Chapter, and all of its aspects were thoroughly investigated by the Exhibitions Committee. The final conclusion reached was that an exhibition suited for display in the national capital and national headquarters of the American Institute of Architects would be a time-consuming and expensive venture.

After much deliberation, it was decided to accomplish much the same purpose with a special issue of the Review, combining the last two quarterly issues of this year into a broad coverage of recent work in the state. This special issue would be available for the use of all persons, agencies and organizations—governmental or private—interested in promoting South Carolina.

Shown on these pages are some of the better buildings designed by members of the SCAIA, and built in South Carolina within the past ten years. This coverage is by no means comprehensive because of limitations of space and time. Selections were made by the director of the Chapter's commission on public affairs and the chairmen of the exhibition, public relations and magazine committees. These were chosen from nominations made by architects in all parts of the state and from the award winning buildings in the SCAIA Honor Awards Programs.

All categories of architecture—commercial, industrial, institutional, educational, ecclesiastical, residential—are included, ranging in size from a few thousand square feet to nine acres of floor space. They are grouped according to the time honored geographical divisions of the state: Low Country, Midlands and Up Country.

Craftsmanship in Metal

Whether an aluminum cross for a church—a stairway of stainless steel for a savings and loan—a gold anodized aluminum screen for a State Building—there is dignity and splendor in these and countless other custom made products of architectural metal by Wilkins' craftsmen for more than half a century.

ASPHALT PAVEMENT ASSOCIATION
ARE PROUD TO BE THE PRODUCERS OF THE
HIGH QUALITY HOT-MIX ASPHALT PAVEMENT
ON WHICH
SOUTH CAROLINIANS RIDE, PARK AND PLAY.

*Structurally designed Full-Depth Asphalt pavements
are durable - more economical to build and maintain.*

Built directly on the subgrade, Full-Depth Asphalt pavement can be built one day and used the next day.

Modern Full-Depth Asphalt pavements are versatile. They can be designed for different load carrying capacities.

Asphalt's darker surface ab-

sorbs the harsh glare of sunlight, eases eyestrain.

Another thing, Full-Depth Asphalt pavement can be built in stages. So there's no problem enlarging or strengthening it to accommodate increased traffic.

Markings stand out clearly, so parking is much easier.

"We figured it
FORWARD and BACKWARD...
then selected
flameless electric heating."

Chain store engineer:

"Space was a problem.
Until a study showed me
I could gain more usable
floor space by installing
electric heating."

Building investor:

"I checked costs. Cost of
constructing and maintaining
our office buildings is actually
lower with electric heating."

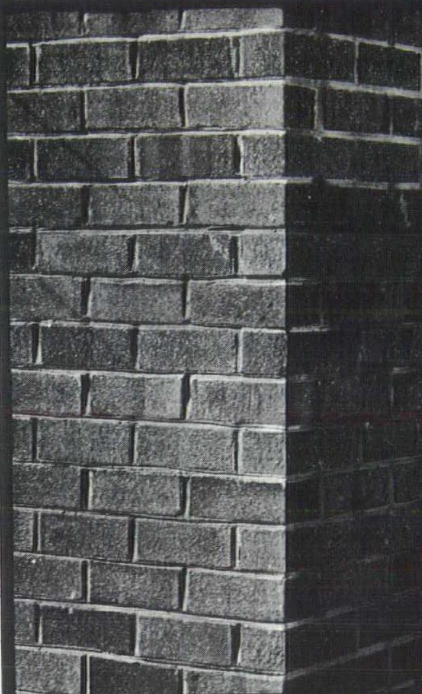

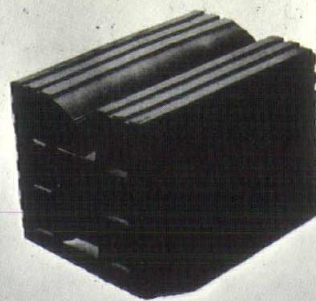

Architect:

"Design flexibility.
That's what an architect lives
for. And with several electric
heating systems to choose from,
that's what I've got."

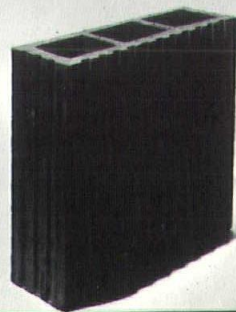

Electric heating—found nationwide
in 175,000 commercial and industrial
buildings . . . in 3 million households. Get the facts.
We'll gladly help you with an evaluation of
flameless electric heating. Just call your
local Duke Power office.

Photography: Russell Maxey.

RUTLEDGE STATE OFFICE BUILDING, Columbia. Architects-Engineers: Lyles, Bissett, Carlisle & Wolff. Contractor: Congaree Construction Company. Date of Completion: November, 1965. Description: Cost—\$2,832,165 for 160,000 sq. ft.; 14 stories plus two basements and penthouse; reinforced concrete structure—columns, beams, pan slabs on a four foot module—columns faced with Alabama white marble with bronze glass and anodized aluminum panels. Award SCAIA Honor Awards Program, 1966 and Marble Institute of America—AIA Awards Program, 1967. Photography: Gordon Schenck.

WOLFF RESIDENCE, Columbia. Architects-Engineers: Lyles, Bissett, Carlisle & Wolff. Superintendent: J. T. Hallman. Date of Completion: February, 1963. Description: Cost— not available; wood frame structure with vertical siding and brown field stone veneer; multi-leveled to follow the natural slope of a site on a suburban lake; sliding glass walls on lake elevations, closed to the road except for entrance foyer. Photography: Gordon Schenck.

GIBBS SCIENCE HALL, ALLEN UNIVERSITY, Columbia. Architect: Mavnard Pearlstine. Consultants: Sam Hunter, structural; Reed, Flemming and Associates, mechanical; Holladay, Coleman and Associates, electrical. Contractor: Congaree Construction Company. Date of Completion: September, 1967. Description: Cost—\$525,000 for 33,000 sq. ft.; reinforced concrete structure with masonry and exposed concrete finishes; additional height given by elevated basement floor. Photography: Russell Maxey.

SOUTH TOWER, UNIVERSITY OF SOUTH CAROLINA, Columbia. Architects-Engineers: Lyles, Bissett, Carlisle & Wolff. Contractor: M. B. Kahn Construction Company. Date of Completion: January, 1966. Description: Cost—\$1,568,200 for 97,032 sq. ft.; construction same as South Dormitory except for metal infill instead of concrete block; houses 400 students on 17 upper floors, lounges and service rooms on two lower floors. Citation, SCAIA Honor Awards Program, 1966.

SOUTH DORMITORY, UNIVERSITY OF SOUTH CAROLINA, Columbia. Architects-Engineers: Lyles, Bissett, Carlisle & Wolff. Contractor: Congaree Construction Company. Date of Completion: August, 1962. Description: Cost—\$1,973,150 for 165,274 sq. ft.; reinforced concrete with concrete block infill below and between the windows; houses 600 women students on nine upper floors, lounges and lobby on the first and a cafeteria in the basement. Photography: Gordon Schenck.

if matches cost more, would people be more careful?

A million dollar match might help. But no amount of money can really buy back a burned out forest.

Prevention is the best answer. Stop accidental burning before it happens—before fire from debris or other burning gets out of hand and costs millions of dollars and thousands of acres.

Only you can stop senseless destruction before it's too late. Only you can prevent forest fires. Simply by being especially careful.

REMEMBER:
EVERY TIME
A FOREST
FIRE STRIKES,
YOU GET BURNED!

Buy Bonds

He does.

Why do our servicemen buy U. S. Savings Bonds? Their reasons are the same as yours and mine: saving for the future, supporting freedom. And because they're fighting for freedom, too, maybe servicemen see the need more clearly than many of us. Buy Bonds. In more than one way, it makes you feel good.

New Freedom Shares

Now, when you join the Payroll Savings Plan or the Bond-a-Month Plan, you are eligible to purchase the new type U. S. Savings Notes—Freedom Shares. Freedom Shares pay 4.74% when held to maturity of just 4½ years (redeemable after one year), are available on a one-for-one basis with Savings Bonds. Get all the facts where you work or bank.

**U.S. Savings Bonds,
new Freedom Shares**

WHEN EVERY
PENNY
SEEMS TO
HAVE A
STRING
ON IT...

That's when it pays to design all-electric. It's the most efficient way to stretch your client's dollar. You'll save space, improve the aesthetic appearance of the building and realize substantial savings both in first cost and long-term operating cost.

One of our sales representatives will be glad to give you more information. Without obligation, of course.

Greenville Little Theatre — Greenville, S. C. — designed with non-combustible Pressure Impregnated Lumber from Cox Wood Preserving.

PROGRESS IN WOODS

This Wood is impregnated with salts which react chemically instead of creating smoke and flame ordinarily associated with wood fires. This lumber has been given a fire hazard classification of 15 or less by the Underwriters Laboratories Inc.

Architect

Builder

Wolmanized

PRESSURE-TREATED LUMBER

You can be sure the home you build is protected against **termite** and decay damage for its lifetime if you insist that Wolmanized pressure-treated lumber is used in the "danger zones". Check the listing to the right. Then be sure the wood used in these areas is Wolmanized lumber. That way you'll know termites and decay won't have a chance to infest your home.

The cost for this complete protection—only pennies more per board foot than untreated wood . . . real economy for the protection assured.

Our 16-mil epoxy wall coating smells like nothing at all.

And no odor is just one advantage you get with Kurfees' new KURAMIC COATING . . . a high build catalized epoxy wall coating. Other good reasons for specifying Kurfees KURAMIC are: simple, two step application; a true 16-mil thickness in one coat; 1/3 the cost of installed ceramic wall tile; and good looks, long wear, high resistance to impact.

Why not get the full story on our Kuramic seamless floor and wall systems. Write J. B. Tabler, Maintenance Coatings Division, Kurfees Paint Company, 201 E. Market, Louisville.
