## Energy Management Ideas from Detroit Edison

### Heat pump space conditioning can help lower the cost of doing business.

Whether you're an architect/designer or a contractor, you can help your clients lower their cost of doing business by specifying a heat pump space-heating system. You can connect a heat pump to most electric, gas, oil or L.P. forced-air heating systems with no, or minimal, modification.

A heat pump lowers costs because it moves the natural heat, that's always present in the outside air, inside to heat any kind of building. The heating system only has to go to work when the outside temperature is below freezing.

A Detroit Edison Specialist can give you straight answers on heat pump savings and recommend the kind of heat pump that will do the best job for any business. He can also recommend economical and efficient methods to improve interior and security lighting, assist you in selecting waste heat recovery equipment and advise you on maintenance

schedules to keep all machinery operating more efficiently.

Whatever your business, energy management is a lot simpler when you can depend on a reliable power source. And you can in Southeastern Michigan because Detroit Edison provides this area with electricity that's more than 90 percent generated from abundant coal.

So take advantage of Detroit Edison's vast energy experience and set up an appointment with one of our Specialists soon. Call (313) 237-9228 or write Energy Management, Detroit Edison, 348 WCB, 2000 Second Avenue, Detroit, Michigan 48226.
