

# Wisconsin Architect

POST-CONVENTION ● JUNE 1982

# We've made energy communications a function of telephone communications.

If you think the telephone is only for helping *people* communicate, you haven't heard about Wisconsin Telephone's Dimension\* PBX phone system with Energy Communications Service (ECS).

This Bell System development combines internal telephone service and energy control into a single, integrated system.

**One communications system is cheaper than two.** Dimension/ECS is a major construction cost saver. Since ECS utilizes internal Dimension system phone lines to communicate between its central Energy Console and typical energy-consuming devices, construction costs are substantially reduced. ECS is a part of the telecommunications system, so the total cost is only a fraction of having a separate energy management system.

**Savings on fuel and utility costs.** Construction costs are only part of the savings of Dimension/ECS. The system can also be counted on to reduce fuel and utility bills by 10 to 20 percent over the life of a building. In some

retrofit applications, the system has actually paid for itself in less than one year.

**Complete energy control.** Dimension/ECS gives building managers control over typical energy-consuming equipment: air handling units, water heaters, elevators, generators, lights, refrigeration equipment, fans and more. It can be programmed to meet the specific needs and energy saving strategies of a building through on-off patterns, cycling, temperature and speed control and peak load reductions.

**Advanced phone communications as well.** Dimension/ECS also provides some important phone communications advantages: Speed Calling, automatic callback, guard reporting, paging . . . and many other features that can be tailored to the type of building being considered.

The Bell System Dimension/ECS. It's proving that telephone communications is a lot more than meets the ear. For details, call Richard Kaul, Wisconsin Telephone Account Executive for architects and engineers. Call toll-free at 1-800-242-6252.

## Energy Management Ideas from Detroit Edison

### Heat pump space conditioning can help lower the cost of doing business.

Whether you're an architect/designer or a contractor, you can help your clients lower their cost of doing business by specifying a heat pump space-heating system. You can connect a heat pump to most electric, gas, oil or L.P. forced-air heating systems with no, or minimal, modification.

A heat pump lowers costs because it moves the natural heat, that's always present in the outside air, inside to heat any kind of building. The heating system only has to go to work when the outside temperature is below freezing.

A Detroit Edison Specialist can give you straight answers on heat pump savings and recommend the kind of heat pump that will do the best job for any business. He can also recommend economical and efficient methods to improve interior and security lighting, assist you in selecting waste heat recovery equipment and advise you on maintenance

schedules to keep all machinery operating more efficiently.

Whatever your business, energy management is a lot simpler when you can depend on a reliable power source. And you can in Southeastern Michigan because Detroit Edison provides this area with electricity that's more than 90 percent generated from abundant coal.

So take advantage of Detroit Edison's vast energy experience and set up an appointment with one of our Specialists soon. Call (313) 237-9228 or write Energy Management, Detroit Edison, 348 WCB, 2000 Second Avenue, Detroit, Michigan 48226.
