Jupiter

METAL
ANGLE BEAD
PROTECTS
PLASTER CORNERS

More and more architects now rely on JUPITER Metal Angle Bead to protect window reveals, lintels and chimney breasts.

Easy to fix, it simply keys in with the rendercoat; there's no shrinkage; and it gives permanent protection against unsightly, chipped plaster corners.

TEL: NEWARK 95

This is no BULL

Uni-Bond

Bonds anything to anything

TRIED TESTED PROVED AND SPECIFIED BY LEADING ARCHITECTS
CONTRACTORS AND GOVERNMENT AUTHORITIES.

NOW IN ITS FIFTH YEAR ON THE MARKET

Ample supplies of Uni-bond are available. It grips and holds two surfaces together—for good. There are a 1,001 uses for Uni-bond on building sites, in factories, offices, stores and around the home... inside and out.

- ★ Ready for use. No mixing—no heating.
- ★ Dries clear. No mess—no waste!
- ★ Waterproof, weatherproof, mouldproof.
- ★ Resists petrol and oil—is non-brittle.
- ★ Does not crack, craze or deteriorate.
- ★ Backed by money-back GUARANTEE.

For the PLASTERER—Bonding Plaster. Will bond plaster without keying to existing smooth plaster, cement, painted surfaces, timber, painted anaglypta walls and ceilings, hardboard, glazed tiled surfaces—and each to one another. In fact any surface.

For the CEMENT WORKER, CONCRETOR, BRICKLAYER, CEMENT BONDINGS. Will bond cement mixes to Plaster, Asbestos, Old Cement, Timber, Steel, Hardboard, Chipboard, Bricks, Quarry Tiles, Glazed Tiles, Slates, Flags, in fact any surface. A masterpiece for screeding.

For the FLOORING TRADE, TILE or BLOCK LAYER or IN-SITU LAYER. Unsurpassed for the fixing of all wood blocks, lino or rubber, plastic tiles, and making plastic levelling screeds that will lay from paper thickness up to 2in. over any base. For fixing without keying all types of composition floorings, such as Magnesite etc. A lasting floor seal against dusting surface.

For the CARPENTER and JOINER—Bonding Timber. For joinery use, it being possible to make grain end bonds that are almost impossible to break. Fixing pelmets, shelves, pads, etc.

The GLAZE TILER. A Uni-Bond cement/sand slurry will fix a tile for keeps, no bedding required. Tile over any level surface plaster, hardboard, painted surfaces, existing glazed tiles.

For PAINTER and DECORATOR—MAKING PLASTIC PAINT, FILLERS, PRIMERS. For priming timber, asbestos and all surfaces with suction. Sealing off efflorescence on plaster and brickwork. Making a permanent stopping. Making a Plastic paint from cheap distempers.

The architect's choice for QUALITY

The contractor's choice for PRICE

Everybody's choice for VALUE

Celmac moulded plastic toilet seats offer the best value in up-to-date design and appearance. They are extremely durable, hardwearing and absolutely hygienic. Made in a variety of attractive pastel shades which make them very pleasing to the eye. There is also a full range of wood seats, unpolished, polished, standard or special design. Celmac toilet seats are by far the best value obtainable—and of course the prices are right!

McArd's extensive range of cellulosed bathroom cabinets is manufactured to the same high standard. Prices on request.

IS THIS PROTECTIVE COATINGS GUIDE ON YOUR DESK?

**...IT'S YOURS
FOR THE ASKING**

Here is an invaluable guide to the correct choice of paint systems for specific surfaces and conditions. The specifications in this handbook deal with a wide variety of corrosion problems encountered in industry. Also, several sheets are concerned with the protection of building surfaces and a section is included dealing with the selection of appropriate coatings for use under radio-active conditions.

Copies of this guide to up-to-date protective painting practice will gladly be sent to practising architects.

VECTAIR-FLOORLINE

HEATING

A convection heater which replaces the usual wooden skirting board. That is "Vectair—Floorline" heating. A heating element concealed within the attractive casing ensures a steady flow of warm air, which is distributed evenly throughout the room. A finger-tip controlled damper which provides flexibility of distribution is an added feature. With only three basic units, installation is simple, quick—and cheap. Suitable for use with accelerated two-pipe or series flow hot-water and low pressure steam systems.

*We've done it
again!*

FIRST FORMED IN
1952

FEB (Great Britain) Ltd., invented Febmix Admix, the first resin based liquid mortar plasticiser.

IN
1955

FEB invented Febspeed Plus, the first plasticising frost and waterproofer for concrete and cement work.

THEN IN
1956

FEB invented Febtone, the first plasticising colours for cement.

NOW

IN **1958**

FEB are first
again with a
resin based

plasticiser for mortar in powder form.

Febmix Dehydrated is not a substitute for our well-known Febmix Admix mortar plasticiser but is an alternative for those who prefer a mortar plasticiser in powder form. Supplied in 1 lb., 5 lb., 45 lb., and 200 lb. kegs with containers free and non-returnable, it is the cheapest mortar plasticiser available on the market today. As with our Febmix Admix liquid-type plasticiser, its use eliminates lime and allows a reduction in cement content, thus reducing mortar material cost, while labour costs are also reduced by the improved workability of the mortar.

Had his construction kept pace with the times he might be in business today

Ichthyosaurus Tenuirostris belonged to a very old family whose members varied happily from one to thirty feet long. They failed to keep pace with changing conditions and another old family became extinct. This introduces the subject of Prestressed Precast Concrete—a development as progressive as the *Ichthyosauri* were static. Production is controlled in detail at all stages by experienced engineers and trained staff. The units are manufactured to agreed schedules, stored on our site when required, to ensure delivery to sites by road or rail *when they are scheduled to be received*. This enables site erection schedules to be maintained, work on site, i.e., shuttering, steel placing, concreting, being reduced to the minimum, thereby reducing waste and delays due to inclement weather.

Order your requirements in Prestressed and Precast Structural Units from Concrete Development Company and reduce building costs and construction time. Our units are made to measure to your design or those of our Design Department. In either case our engineers will be glad to collaborate with you.

STEEL . . . *the logical structural medium for this* SILO BUILDING *at WANDSWORTH*

Due to the low bearing value of the ground, Messrs. J. Bibby & Sons Ltd. were faced with high foundation costs, and the need to keep down the weight of the superstructure. They chose steel because it was the lightest in weight, cheapest in cost, and provided the cubic content they wanted with a structure of smaller overall dimensions.

**For top quality
controllably silent AC switches—the
'THAMES' RANGE**

Typical 'Thames' heavy duty switch units. Ideal for public buildings etc.

The action of the 'Thames' switch is of outstanding quality for long life, and utmost reliability.

THE 'THAMES' RANGE is a series of superlative quality flush AC switches and flush and surface switch assemblies. They are designed for heavy duty and are controllably silent in operation and enduring in service.

A valuable feature is the large flange locking ring which can be locked as a protection against unauthorised removal or tampering.

The 'Thames' range is ideal for schools, hospitals and other public buildings. One and two-way types are available, 5 amps, 250 volts.

Send for your copy of the MEM-Tucker-Kerson catalogue—Britain's most complete accessories list.

NOVOTAN

does half the paint job for you

Now you can cut labour and material costs on every paint job with Novotan. Novotan is a three-ply laminate with smooth matt ready-to-paint surfaces that eliminate the need for costly and time consuming priming, filling and sanding. Manufactured from resin bonded wood particles into the strongest and most durable board form it can be screwed, rebated and mortised like ordinary wood. Available with single- or double-faced 'built-on' surfaces.

- Needs no priming, filling or sanding.
- Perfect ready-to-paint surfaces ensure a first class finish.
- Cuts labour and material costs.
- Will not warp.
- Exceptional stability and flatness.
- Light in weight.
- Works readily with normal tools.
- 9ft. by 6ft. by $\frac{1}{2}$ in., $\frac{3}{4}$ in., $1\frac{1}{4}$ in. thick panels reduce waste and offcuts.
- High sound and thermal insulation qualities.
- Treated to resist insect attack.
- Fire resistant tested in accordance with B.S.S. 76, 1953, Class 3.
- Good nail and screw-holding properties.

rent-free space

With Dexion Slotted Angle you can often
double or treble storage space

without renting or building new premises

This Dexion-built overhead storage at Parfumerie Delafine Ltd., London, W.C.1, provides 142 Sq. ft. of extra space with a loading capacity of 23,000 lb. Built in just 6 man days. Cost only £110.

With Dexion you can expand storage or production at very little cost. Dexion builds anything—from work benches to factory extensions—builds it fast and builds it permanently strong. Yet a Dexion structure can be easily altered to meet changing needs. Dexion is more than a Slotted Angle, it is progressive, flexible planning at its best. Delivery is fast—Dexion can be delivered at the works within a few hours.

there isn't
another
roof deck
on the
market
with
advantages
like **Q-DECK**

Prove it to yourself by insisting on these features in the next roof deck you specify. You will get them in no other roof —they are exclusive to

ROBERTSON Q-DECK

LONG SPANS: Lengths up to 22 feet available.

BUILT-IN CEILINGS: Decks are available with a flat, smooth soffit, requiring no sub-ceiling.

TOP SPEED FIXING: Strong, speedy and neat in appearance, 'Top-speed' is used in all Q-DECK roofs.

SINGLE LAYER WEATHERPROOFING: This technique, proved by research and test, completely eliminates 'blistering' of the felt.

FIRE RISK MINIMISED: Flanged and bolted side joints of units prevent independent deflection. Robertson weatherproofing systems require a minimum of bitumen.

ELECTRICAL DUCTING: Cables for ceiling lighting can be run in the cells of the deck; resulting in greater economy and improved appearance.

ACOUSTICAL TREATMENT: Applied treatments are unnecessary — 'sound-conditioning' can be provided integral with the deck.

DAYLIGHTING: Double-glazed Decklights, having good thermal insulation.

VENTILATORS: Natural or Fan-assisted, like Decklights require no supporting framework.

Who dreamed this up?

Sorry old chap, we did. From where you stand it may look weird, but in fact it's a particular kind of roofing: TRINASCO Built-up Felt Roofing by Limmer & Trinidad, specially designed for the lightweight buildings so much in fashion today, but completely suitable too for buildings of all kinds. Because this roofing is light in weight *and* extremely durable and decorative at the same time. You can adapt TRINASCO Built-up Roofing to most styles of roof construction, and it can be laid to any specification you require. And all along the line our technical staff are there to help you, and to advise you as to the system of insulation you may need. It's just part of the Limmer & Trinidad Roofing Service. If you'd like further details a descriptive leaflet is yours for the writing.

**TAKE MY ADVICE—
SEE THOSE CRITTALL CHAPS
ABOUT USING ELECTRIC HEATING!**

My colleagues started it. They told me that electric heating systems have to be chosen carefully and that it's best to consult a specialist firm. "Take Richard Crittall" they said "now they have close on 75 years' experience in handling the design and installation of all types of heating systems using COAL, OIL, GAS or ELECTRICITY. If you want unbiased advice on heating problems, they are the chaps." I found they can do the complete job whatever the fuel, and when it is electricity, that means all the wiring! So take my advice—if you want similar attention to your problems 'phone MUSEum 3366 right away!

Beautiful...

The clean, fresh beauty of "Standard" Sanitary Appliances made of Vitreous China is a joy to behold. A brilliant, practical beauty. A modern beauty that has been achieved by years of planning, styling, shaping and re-shaping. And below the surface there is the beauty of a superb craftsmanship. Inside and out, this Vitreous China ware is really beautiful.

Hygienic...

Fired at a much higher temperature than ordinary ware, Vitreous China is a dense and non-absorbent material which remains steadfastly hygienic.* And it does not depend on its glaze to make it watertight. It is non-porous and non-crazing. Germs cannot lodge and breed in it.

"Standard" Sanitary Ware made of Vitreous China guarantees hygiene for the lifetime of whatever building it serves.

Vitreous

** In many countries it is officially required that Sanitary Appliances be made of Vitreous China. Many British architects, doctors, and Public Health Authorities would like to see similar legislation in Britain and so, not unnaturally, would the makers of "Standard" Sanitary Appliances.*

Durable....

Vitreous China has given 'durable' a new meaning, and because all "Standard" Sanitary Appliances are made of Vitreous China, it takes a lifetime to discover just how durable they are. With Vitreous China comes a higher resistance to harsh treatment than with ordinary ware. Much higher. And because "Standard" Sanitary Ware lasts and lasts, its cost for each year of service is much lower.

eous China

Beauty. Hygiene. Durability. Economy. These are the characteristics of "STANDARD" SANITARY APPLIANCES made of VITREOUS CHINA which appeal to the house owner and builder no less than to the doctor and the architect.

MELAMINE SURFACE PLASTIC

DECORATIVE-DURABLE

with endless possibilities for surface application

CUTS COSTS

PANAX, while being more heat resistant, more flexible than otherwise comparable laminates, is highly competitive in cost.

PANAX is ivory-hard, micro-smooth, non-absorbent, and of high dimensional stability. It is proof against heat up to 320° F.; resistant to oil, water, mild acids and alkalis; stain resistant and easily kept bright and clean.

Satin finish in a wide range of colours and attractive designs, including wood grains.

EASY TO FIX

with impact adhesives. An adhesive suitable for any surface and conditions under consideration will gladly be recommended.

THE UPOVER

Door Craft by **KING** craftsmen

For sheer versatility and dependability, the KING range of doors and door gear is unbeatable. It is the result of 40 years experience in the design and construction of doors of every type, from simple domestic to remote controlled power-operated giants. We can't hope to tell you all about it here, so why not tell us your problems? Our representative will call to advise you, *anywhere*, without obligation.

Neat...efficient...unobtrusive... ARENS WINDOW CONTROLS

Today's functional, 'unfussy' architecture calls for neat and unobtrusive window controls. Fit ARENS remote controls, the result of more than 26 years of specialisation in one study. Made for light or heavy duty, for single or multiple operation, ARENS Window Controls are simple and efficient in design and can either be run beneath the plaster or painted to match the walls.

This house cost nothing to build

It is possible to build an extra house in every
sixty or so—by using Finlock Gutters. Reason :

- ★ It is cheaper to convey rainwater at eaves
lev l than underground.
- ★ By fixing the whole of the eaves with one simple unit,
five expensive items are redundant.

Why not send us your Site Layout so that we can make
specific recommendations.

Electronic Thermostats

An electronic thermostat—
one of 257 supplied by Honeywell—in *The Room* at Lloyd's new building.
Acknowledgments to T. E. Heysham, F.R.I.B.A.—Architect
Oscar Faber & Partners—Consulting Engineers
G. N. Haden & Sons Ltd.—Contractors.

underwrite comfort in Lloyd's new building

Signals from Honeywell room, outdoor, and duct thermostats are co-ordinated by electronic control panels to maintain desired temperatures and humidities throughout Lloyd's new building. **Centralised comfort-control** is made possible by a 'graphic' panel: master controls, mounted on a diagram of the entire heating and air conditioning plant, permit centralized control of the plant.

Records of temperatures and humidities in all main areas are continuously plotted on the strip charts of ElectroniK recorders situated in the control room, adjacent to the graphic panel. An

ElectroniK Precision Indicator spot checks conditions in areas not covered by the recorders. **Their extreme sensitivity** partly explains why Honeywell controls were chosen for Lloyd's. Other major reasons were the ease of selection permitted by standardized components and the reduction of maintenance needs owing to the absence of moving parts.

Write for further information on Honeywell controls to: Honeywell-Brown Limited, 1 Wadsworth Road, Perivale, Middlesex. PER 5691. Offices in the principal cities of the U.K. and throughout the world.

new insulation, light and strong

with Isocyanates

These simple-to-mix components give strong, light-weight rigid foams of special interest to the building trade.

Their high thermal resistance commends them, for example, as heat insulation in walls and ceilings.

The components are easily mixed on site and foaming takes place in the cavities to be filled. As this happens, a bond is formed with the material in contact with the foam, thus adding rigidity and strength to the structure.

A range of foams of varying densities can easily be produced.

and POLYESTERS by

IMPERIAL CHEMICAL INDUSTRIES LIMITED LONDON SW1 ENGLAND

Born Yesterday . . . and already the talk of the town

THERE
ARE THREE
TYPES OF
WALLSTRIP

Type C—Recommended for most domestic applications, providing mainly convected heat.

Type R—Institutional model of heavy construction, but shallower from wall to front than Type C, providing mainly radiant heat. Smooth surfaces, free of dust-traps, especially suitable for hospitals and other places where hygiene and cleanliness are vital.

Type RC—Again, an institutional model of heavy construction, similar to Type R but providing a combination of radiant and convected heat.

Copperad WALLSTRIP is a skirting-board that heats. Which means that it places the heat where it is most needed—all along the outside walls at the normal source of loss.

It also means that windows can reach to within 12" of the floorline.

WALLSTRIP allows you the maximum freedom in aesthetic design. No ungainly, heavy equipment is involved. There is nothing to detract from its flowing lines.

For a new building—home, office, school, hall, hospital or institution—WALLSTRIP costs no more than conventional central heating. The cost of skirting-board is, of course, eliminated. Moreover, no special equipment is required; it can be installed with the ordinary tools of a heating engineer.

If you require further information about WALLSTRIP, we shall be happy to advise you.

what do you look for in roof lighting?

The need for adequate **natural** light at working level, free from dangerous shadows, is of the greatest importance in industrial buildings.

2 | light without shadows ... naturally

Light transmission and light diffusion are the two major considerations.

Corroglaze is clearly the best of all forms of roof lighting sheet. It is **100%** pure glass corrugated and reinforced with 1 in. square wire mesh. Corroglaze not only lets more light through but, thanks to the scientifically designed prismatic-type ribbing on its underside, diffuses light evenly over the whole floor, thus eliminating harsh lights or dull areas. It is non-porous and maintains its light transmission characteristics under the most adverse atmospheric conditions and is unaffected by fumes. Designed for use with corrugated asbestos cement, aluminium or galvanised iron sheets, panel-spaced Corroglaze is economical too. Compared with patent glazing laid in runs it gives greater light distribution and saves over 30% costs. It is of course **100%** non-combustible and is approved for all industrial applications without reservation.

BRICKS AND DOMESTIC ARCHITECTURE

FLETTONS AND FOUNDATIONS

BELOW D.P.C.

In this country where frost rarely penetrates more than a few inches below ground and subsoil moisture conditions remain comparatively uniform the use of 'Phorpres' Fletttons for footings is long established practice. Although bricks in footings may be wet they are not subjected to long spells of frost.

Whilst calcium sulphate and magnesium sulphate are present in some soils and other soils are naturally slightly acid, these salts and acids have no effect whatsoever on properly burnt clay bricks. They can and do attack Portland Cement and some limes used in mortar and concrete. For this reason it is good practice in heavily contaminated soils to use sulphate resisting cement to avoid disruption of the mortar.

'Phorpres' Fletttons being laid in foundations of the Birmingham Corporation Housing Development at Laurel Road, Handsworth, Birmingham

BETWEEN D.P.C. AND GROUND LEVEL

Practical experience has shown that 'Phorpres' Fletttons are entirely suitable for use between D.P.C. and ground level.

Although conditions might in theory seem more severe the building above D.P.C. undoubtedly affords some protection and the conditions obtaining are hardly those of 'extreme exposure' as defined by the Building Research Station.

No case of failure has ever been reported and 'Phorpres' Fletttons are specified for foundations by many leading architects and over 400 principal authorities engaged in domestic architecture.

Lamp and Lighting Co Ltd

Fluorescent Fittings light this new ICI office

Eight hundred FX1234 Perspex Diffuser Fittings, suspended from nearly three miles of 'Invertrunking', light this new office block for ICI (Metals Division) at the Kynock Works, Witton, Birmingham.

The office walls and partitions run from floor to ceiling and are held in position by a jacking arrangement—a system that allows the interior layout to be rapidly altered to suit any changes in office planning.

'Invertrunking' was therefore especially suited to this building; since with this system, the lighting fittings can easily be moved around or changed to fit any new arrangement.

The electrical contractors were
Lee Beesley & Co. (Birmingham) Ltd.

The 'family' range of fittings—of which the FX1234 is a member—offers complete flexibility for all kinds of lighting installations, particularly when used with a trunking system. Write for fully illustrated literature.

Have you visited

THE PARTITIONING CENTRE

Since opening The Partitioning Centre last October many architects (and their clients) have come along to see it for themselves. And all of them have paid us the compliment of saying that their visit was time well spent.

It is a permanent centre where you can see a wide range of Compactom demountable partitioning and false ceiling schemes under everyday working conditions. No two rooms are the same; each has its individual method of construction and finish; each its individual decor, fittings and other special features. In addition, our design studio and drawing office are immediately available and at your service to discuss specific points in connection with your projects.

The Partitioning Centre is open Mondays to Fridays from 9 a.m. to 5.30 p.m.; no appointment is necessary. If you would prefer to come along at some other time, we will be pleased to make special arrangements for the Centre to remain open. We will also, if you wish, arrange transport. If you cannot get along to see for yourself may we send you full details of the Compactom service?

BILSTON ATLANTA

No matter how many homes are involved, standard specification of the Bilston Atlanta ensures constant satisfaction. Its brilliant enamel finish remains unimpaired year after year! The Bilston range includes the exact colour required for any decorative scheme. Specify the Atlanta — it costs no more than an ordinary bath.

*Bilston Baths
for lasting beauty*

Atlanta •
Magna •
Cresta •
Marina •
Mermaid •
Bermuda •

THE VERSATILE ATLANTA

The Atlanta can be specified for any bathroom, large or small! As well as the 66", the Atlanta comes in 54", 60", 61" (available in two widths), and 72" lengths.

The Atlanta 54, 60 and 61 must be preferred to any other baths of these sizes because they are exact replicas of the full size bath, scaled down to small proportions.

Atlanta flat bottom helps to prevent slipping . . . ensures comfort.

Atlanta shallow step is safe for young and old. The Atlanta can be fitted to give an overall height of only 16".

With the Atlanta, taps can be fitted in three different positions to meet all possible requirements.

Corner tap mounting facilitates installation and maintenance.

The Atlanta is supplied with or without overflow . . . with or without handgrip.

Lighting as you like it

Sieline Continuous Lighting Trunking is permanent—until you want to change it. Plan it as a whole, then alter it piecemeal to suit your changing needs. Reposition and adjust your lighting as often as you like. It is widely used in rented factories where the standard lighting power and distribution do not meet the requirements of the tenant, and it has already been supplied for installations costing from £20 to £20,000.

The trunking is delivered in an advanced state of assembly for easy erection. Control gear and lighting units can be spaced at any intervals. A complete range of suspensions (specimens illustrated) provides for erection under any type of roof. If you would like complete information about Sieline Continuous Lighting Trunking, write for leaflet F.22 or get in touch with your local Siemens Ediswan lighting engineer for advice—no obligation.

Something's

changing the
face of Britain

giving a lift
to the looks and the life
of new projects
and conversions
all over the country

First plastic emulsion paint suitable
for outside use, Pamastic vastly increases the
potentialities of exterior colour in architecture. For pointing good features and disguising
the bad, for achieving new effect of proportion and uniquely interesting colour schemes,
Pamastic's range of 25 intermixable colours is an unexcelled design medium.

NO COMPLICATIONS

Pamastic is probably the simplest kind of wall paint ever devised. No undercoat or primer; will not peel or flake; for use on brick, plaster, stucco, cement, concrete, pebbledash, asbestos and cement paint—provided the surface is sound. Perfect, in fact, for *outside* as well as *inside* uses.

TROPICALLY TESTED

Pamastic has proved it remains unaffected by humidity, rain or industrial fumes. It is distinguished for its low dirt retention, great adhesion and fastness to light. Its effective life is far longer than that of conventional outside wall paints. Over the years, it is certainly the most economical kind of exterior wall paint.

PAMMASTIC

the world's best Emulsion Paint

Announcing a new edition of **HILLS DOOR CATALOGUE** a valuable work of reference

Architects, builders, public authorities and all others concerned with building construction will find the new and much enlarged edition of Hills Door Catalogue a very helpful work to have at hand. It is, in fact, almost indispensable as a work of reference and is an invaluable guide to buyers. The Catalogue is in two colours with convenient loose-leaf binding. It provides a full description and complete specification of every pattern in an extensive range of doors of all categories. While quality and workmanship are well up to the high standards that are characteristic of Hills, the latest prices are exceptionally competitive.

**You are invited to write for

Once again, skirting heating by Crane

Just built at St. Joseph's Hospice, Hackney, E.8 is this new extension for incurables. Its extremely modern design calls for a heating system that will be as unobtrusive as possible. The need for complete freedom in the placing of beds demands all-over heating with no isolated units and no 'cold spots'. Ease of daily ward cleaning is another important factor. For these reasons Crane Skirting Heating Types R and RC have been chosen. Type RC panels are 9-inches high. **Type R, as well as being made in the 6-inch size, has lately been made available in the 9-inch size for situations requiring additional heating surface.** Both types are in two-foot lengths and half sections. Crane is the perfect modern way of heating any building.

ELLARD

SLIDING DOOR GEAR

ESTATE FOR THE HOUSE

The illustration on left shows yet another example of ELLARD "Estate" Sliding Door Gear in the modern dwelling-house. See how simple it is to convert a spacious room to one of cosy and intimate atmosphere. Elegant appearance, ease of operation and long service are the main selling features of this attractive ELLARD Door Gear. The obvious choice for both council estates and private houses is ELLARD Door Gear.

FOR THE RADIAL GARAGE

The illustration on right shows ELLARD "Radial" Sliding Door Gear fitted to a private garage. Valuable working space is offered at the entrance to the garage. ELLARD Door Gear provides easy access to and from the garage by a personal entry door. ELLARD "Radial" Sliding Door Gear is low in price and gives long service without maintenance. This gear is also suitable for the larger openings of commercial and industrial garages.

OVERDOR FOR THE GARAGE

ELLARD "Overdor" Gear, illustrated on left, represents the best method of operating an overhead-type door, and it requires the minimum space, fixing time and maintenance. An entirely clear threshold is achieved, and both side walls are available for windows and shelves. ELLARD "Overdor" Gear is designed for doors from 6ft. to 7ft. 3in. high and up to 200lbs in weight. The door is safely balanced and can be opened and closed with ease.

Fully descriptive literature will be gladly sent on request.

**Now and for the future—
Key Underfloor Duct
solves wiring problems economically**

A triple Key Underfloor Duct installation. The junction box covers are recessed to receive the floor finish, and can later be adjusted to give correct overall height.

Electric power and telephone outlets can be installed and added as necessary when Key Fibre Underfloor Duct is used. On a materials plus labour basis the cost of installations is lower than any metal system. Because of their light weight and ease of cutting and fitting, Key ducts can be quickly laid. Since there is no necessity to pre-position outlets, the architect can install an underfloor duct scheme, and later fit outlets to suit the occupant's requirements. The fitting of these outlets is a quick and simple matter and the most complete range of fittings is available for lighting and telephone systems.

**easy to lay—low cost
completely adaptable**

KEY UNDERFLOOR DUCT
conforms with B.S. 815 and is the original Underfloor Duct System. Key have the widest experience of Underfloor Duct Systems in the U.K.

Speed the job—cut the cost with the

A new look for interiors

Wherever *vertical* or ceiling surfacings must be moisture resisting, durable and easily cleaned, new colourful **WARERITE** Wallboard is the obvious and economical choice. Bathrooms and kitchens, partitions, cupboard fronts and flush doors are typical applications. **WARERITE** Wallboard can be screwed or pinned, or fitted into extruded sections.

THE NEW BALANCED BOARD FOR VERTICAL SURFACES AND CEILINGS

- Melamine-surfaced both sides
- No warping
- Resistant to steam and moisture
- Core of high density fibre board
- Easier construction at lower cost
- 16 attractive colours and patterns
- Standard boards 3 ft. x 8 ft.

WARERITE Specialist Service

WARERITE Specialists are located in 150 cities and towns throughout the country and supply WARERITE Wallboard from stock. Write for literature, samples and name of your nearest WARERITE Specialist.

"To a chap like me –
and I'm proud of my work – my pencil's
my living.
The pencils I use have to stand up to fast
hard work, their grading's got to
be absolutely spot on – not almost
or nearly but bang on the dot every
time.
The leads must hold their points
and flow smoothly throughout a long line –
no crumbling or 'clinkers' mark you! –
and if I erase a line it must go cleanly –
there's no 'furrow' left in my paper
so you won't find ghost lines in prints
made off my drawings. As a matter of
fact you can tell from a print when it is
my drawing – the print's always first class."

"What pencils do I use?"

"Venus drawing pencils of course, the
ones with the crackle finish! – how else do
you think I keep up my high standard?"

*VENUS Drawing pencils are made in 17 accurate
grades from 9H to 6B.

Money is dear but... today **BEECHAM BUILDINGS** cost less

Beecham Buildings construct high-quality commercial and industrial buildings—from office blocks and small factories to large industrial layouts covering many acres—at prices which, over the past twelve months, have actually fallen. We accomplish it in these days of 6% by working quickly and eliminating waste.

A complete organisation speeds planning

We in Beechams have the *complete* building organisation. Our staffs of architects, surveyors, builders, civil engineers and reinforced concrete experts control mobile teams of specialists on every contract. We are accustomed and happy to work with clients' consultant architects, offering them either the service of our entire organisation, or acting as general or specialist contractors, so that they may employ whichever of our specialised facilities they need. By knowing what is involved in every contract, we can quote firm prices as soon as sketch designs are agreed and so move on to a site months earlier than would otherwise be the case.

Modern methods rationalise building

Because we employ advanced techniques, we are able without sacrificing quality, to put up a factory faster, perhaps in only half the time it would be built by older methods. With capital tied up at 6%, this saving in time is a heavy saving in money. Every contract is kept under one control so that every operation can be accurately timed to eliminate site delay. Highly mechanised casting shops produce large and varied types of structural units under ideal conditions, and our specially equipped transport fleet enables us to integrate production with erection. We also incorporate traditional construction where this is desired.

Using the finest materials, we provide an enduring structure, requiring little maintenance, and which affords a high degree of natural light and thermal insulation. Beecham Buildings lend themselves to designs which are functionally appropriate and have an individual dignity.

for a high degree of **THERMAL INSULATION**
Use Dry Construction

It is generally agreed that significant savings in fuel costs can be achieved by insulating a building. But, of the many methods of insulation available, which should you select? Common sense suggests that the most efficient is likely to be the most economical in the long run.

'Paramount'
INSULATING PLASTERBOARD

is the ideal material for lining all roofs and ceilings because it offers a fourfold return for your outlay. It provides maximum thermal insulation *plus* high fire resistance *plus* economical cost (less than a penny per sq. ft. extra) *plus* the advantages of easy, speedy Dry Construction. Your modest initial investment is soon recovered by considerable permanent economies in fuel.

Other Blue Hawk Dry Construction Materials:

'Paramount' DRY PARTITION

for interior walls and linings.

'Paramount' PLASTERBOARD

for greater fire protection.

'Paramount' COVE

for eliminating unsightly cracks.

DRY CONSTRUCTION is an important part of modern technique. Get details of its advantages from

Attractively designed 'Middlesex' Prefabricated Timber Buildings are fast achieving a name for dependability and economy. The architect-designed 'Middlesex' System uses the minimum number of basic components, yet is sufficiently flexible to meet most requirements. Shown here is a typical 'Middlesex' Office Block consisting of two 60ft. by 16ft. wings connected by a 24ft. entrance link.

'Middlesex' Prefabricated Buildings are the complete answer to problems involving temporary or semi-permanent accommodation suitable for tropical or temperate climates. Delivery is prompt, erection rapid and simple, and modifications and extensions can easily be incorporated after erection. Supplied in a variety of interior and exterior finishes, the 'Middlesex' System can provide accommodation for a whole community, including even cinemas and churches.

'Superform' switchboards for all industrial distribution schemes

One of seventeen composite 'Superform' switchboards installed at the Velindre Works of the Steel Company of Wales to the specification of McLellan and Partners, Consulting Engineers.

Composite boards can be supplied covering all the requirements of modern M.V. systems, the range of equipment including:—

- ★ Air circuit-breakers up to 3000 amps.
- ★ Off-load isolators up to 3000 amps.
- ★ Fuse-switches up to 750 amps.
- ★ Contactor gear for motor starting or other duty
- ★ Distribution fuseboards
- ★ Instruments, meters and relays of all types

- ★ Modern styling and pleasing appearance
- ★ Unique design features giving increased safety to operating personnel
- ★ Easy access for cabling and maintenance
- ★ Fault making capacities up to 50 MVA at 440 volts
- ★ Complete short-circuit protection

GYPROC WALLBOARD

Gyproc Wallboard is a gypsum plaster-board manufactured to B.S. 1230. It possesses Class I surfaces conforming to B.S. 476—"Surfaces of very low flame spread" and has an incombustible gypsum core. Light in weight and easily fixed, Gyproc wallboard provides an excellent base for direct decoration in all types of building. The standard sizes are 6 ft. up to 12 ft. long, 2 ft., 3 ft. and 4 ft. wide and $\frac{3}{4}$ in. and $\frac{1}{2}$ in. thick with square and tapered edges.

It would be well worth your while to have further information about the advantages and the potentialities of

Gyproc Wallboard.

WHEN planning lighting installations that are high up and difficult to reach, an important consideration is the method by which they are to be serviced.

For convenience and from an economic point of view L.E.F. Raising and Lowering Gear is the obvious answer. Lights can be quickly brought down to ground level, serviced at ease, and raised again. The make and break of electrical contact is an automatic part of the raising and lowering action.

Bankside Power Station of the Central Electricity Authority is one of several of the most modern Power Stations in which L.E.F. Raising and Lowering Gear has been installed. Other L.E.F. installations will be found in all types of buildings and in public and private street lighting systems.

Send for full information or let us demonstrate L.E.F. Gear to you in our works

LONDON ELECTRIC FIRM LTD., Brighton Road, South Croydon. Telephone: Uplands 4871

BLOW !

**Wind generates natural ventilation.
Ventilators must be sited at the highest point
—the peak of the roof—to develop peak efficiency.**

Natural ventilation induced by warm air rising within a building is simple.

Yet only if the wind from any quarter blows horizontally across the ventilator can consistent extraction be guaranteed. Ventilators mounted along the peak of the roof, and nowhere else, satisfy this requirement. Mounted on the slope they will, under certain conditions, drive hot air and fumes downwards. Robertson Ventilators are always installed along the ridge—the one logical and correct position. Round, ridge, or fan ventilators, Robertson's supply them all, and offer advisory service on a regional scale, without obligation. Please write for your free copy of the Robertson Ventilation Data Book.

May we give you a practical demonstration of the principles of natural ventilation with our portable demonstration unit? Ask our nearest Branch Office.

call in **ROBERTSON'S**

for natural ventilation at its best

ROBERTSON THAIN LIMITED • ELLESMERE PORT • WIRRAL • CHESHIRE

Telephone: ELLESMERE PORT 3622

Technical Advisory Service at: Belfast • Birmingham • Cardiff • Exmouth • Glasgow • Liverpool • London • Manchester • Newcastle • Sheffield

IT'S AS SIMPLE AS A.B.C.!

For maximum efficiency, natural ventilators must be sited as high, intakes as low as possible.

When the wind is in certain directions a natural ventilator lying on the side of a roof will probably backdraught.

A ventilator mounted on the ridge, as shown, with its outlet horizontal will give maximum, positive exhaust under all conditions of wind.

SPUR

ADJUSTABLE SHELF SUPPORT

*for good looks
and functional efficiency*

Here is a scientifically-designed shelf support which has the strength required for industrial applications, yet is attractive enough for use in showrooms, libraries and the home. SPUR is scientifically-designed, simple in principle, easy to install and flexible in arrangement. There are only two main components — slotted V-channel uprights, and flanged brackets which key into the slots.

FOR INDUSTRIAL STORES, HOMES, OFFICES, LIBRARIES, SHOPS, LABORATORIES, EXHIBITION STANDS

Shelve those problems of support on

SPUR

Write for further details to

SAVAGE AND PARSONS LIMITED • WATFORD • HERTFORDSHIRE • WATFORD BD7

TGA 51

FLEXIBILITY OF ARRANGEMENT

The height of SPUR brackets can be altered without the use of tools whenever storage needs change. Alignment is automatic. Both right-angled and slanting brackets are available.

UNOBSTRUCTED ACCESS

No upright supports at front or side are needed with SPUR. This means a more pleasing design as well as easier access to shelves.

PRE-DETERMINED STRENGTH

Uprights are available in lengths up to 94 in., and brackets are supplied in seven standard sizes up to a maximum of 18½ in. Loadings have been calculated for each size, and the largest will support 1½ cwt.

WALL FIXING OR FREE STANDING

The uprights are easily screwed to walls, but where free standing units are required with shelves both sides—in libraries or storerooms for example—double-sided uprights can be used. Special collars are available for fixing uprights to the floor and ceiling.

ATTRACTIVE FINISH

SPUR uprights and brackets are attractively finished in four standard colours: Willow Grey, Terra Cotta, Frost White and Jet Black. Alternatively they can be nickel or chromium plated, zinc sprayed or galvanised when required for special service.

RANGE OF FITTINGS

A full range of accessories such as shelf straps and book supports give the SPUR system added flexibility.

SMITHS

new service for the ARCHITECT & DESIGNER

Smiths Clocks and Watches Ltd. and English Clock Systems have combined to give a complete service to both Architect and Designer. All Wall Clocks in the new extensive Smiths and E.C.S. ranges together with 'specials' can now be ordered through the Architects' Service Department of English Clock Systems. Clocks can be either 'Sectric' or fitted with impulse movements for operation from E.C.S. Pendulum Master Clock.

Also available: the larger interior/ exterior clocks, advertising clocks, time recorders, bell signal clocks, watchman's clocks, time switches and process timers etc. In fact, the new Architects' Service Department can supply the complete range of timekeeping equipment required for factory, school or office.

'SPECIALS' SERVICE

In case there is not a suitable clock for the particular requirements from the wide range available we can now produce to Architects' own specification from 6" Wall Clocks to the largest Tower Clock.

Double-sided Clocks can be supplied corresponding in design to any of the following E.C.S. range of wall clocks: MAYFAIR, (illus.) MONARCH, MEDWAY, MELTON, or MOSTYN. Cases of spun aluminium, hinged at the base for easy access to movement. Standard finish bronze, but any colour available at small extra cost. Matching suspension ($\frac{3}{4}$ " metal tubing, standard length 12" for both models). Also ball and socket fitting for connection to standard small round B.S. junction box.

Dimensions: Dia. of face 9", 12". Overall dia: 11 $\frac{1}{8}$ ", 14 $\frac{1}{8}$ ". Depth 5 $\frac{1}{2}$ ".

Reproduced by kind permission of John Harrison, A.R.I.B.A., County Architect for Surrey

For many years Hall's have been helping Education Authorities to meet the urgent need for extra school accommodation. Working with County Architects and Education Committees, Hall's developed basic designs which have resulted in the latest Hall's Demountable Building.

Clad in Cedarwood, which needs no painting or preservative treatment, these buildings are as durable as permanent buildings yet they are prefabricated to such a degree that they can be demounted and re-erected without disturbing even the wall or ceiling linings.

Sitework, foundation and labour costs are reduced to a minimum; unskilled labour can be used.

These same buildings are now available for industry and Hall's expert staff are ready to discuss detailed modifications to fit the buildings to any particular need.

Write now for full specifications or ask one of Hall's advisory staff to call.

Putting in the Daylight

at Pitcorthie Primary School, Dunfermline

Architect R. S. Lawrie

A.R.I.B.A., A.M.T.P.I., A.R.I.A.S.

From dull dark brown abodes of unhappy learning, schools have over the years become cheerful places of enlightenment. In this transformation, Standard Maclean of Hamilton have contributed over the past decade to many of the most interesting up to date buildings. Standard Maclean Metal Windows capture every minute of natural light. The frames are simplicity itself, with the characteristic appeal of good workmanship.

After manufacture Standard Maclean windows are electro-galvanised in what is probably the largest electro-galvanising plant in Europe. This special process plus two coats of paint, each stoved on separately, ensures a metal window which completely withstands the wear of wind, rain, snow and sun.

Architects, Contractors and their staffs are welcome to visit the factory. In addition to metal windows, light steel fabrications, fire escapes, door frames, roof lights, balconies, cat ladders and all types of hand railings are produced.

ACCOTILE ★ ACCOFLEX ★ CORK TILE ★ LINOLEUM

Paris huh?

On the go the whole time old boy. Champs Elysees, Notre Dame, Romanoffs, Rue de la Paix . . . marvellous trip.

Mildred enjoy herself?

Like a two-year-old. Full of energy. Insisted on draggin' me out to Versailles and showin' me the Hall of Mirrors.

Hall of Mirrors? Newcastle 28383?
Reed Millican eh?*

Can't see how it could be. Feller can't be as old as all that. Guide said it was done for some Frenchwoman by the name of Marie Antoinette.

Hmph! Old flame of Millican's most likely.

Wouldn't put it past him.

NOT QUITE ARCHITECTURE

A NEW MYSTIQUE

Management is the new o.k. word in building circles. Prominent builders plead for it at annual meetings, the technical press is invited to films about it, building research men and the architects who associate with them say that the profession may decline without it. But no one knows exactly what it is.

*

If you say to a management man "Ah, yes, time and motion study!" you are told that this is only one of the *tools* of management and anyway it is a term no longer used. The really important thing is the *philosophy* of management and if you ask what this is, you hear sonorous phrases like "capacity for leadership," "moral integrity," "clear thinking," and so on. This seems a little ambitious so you ask what field management covers, and you are given a long list: general management, financial management, design management, marketing management, production management . . . and so on. The list is so comprehensive there seems little left for anyone else to deal with. Indeed it soon becomes evident that *everyone* is a manager of some sort—company director, housewife, ganger; and that every task—the use of a screwdriver, the channels of promotion in BOAC, the way in which the office boy is asked to empty the wastepaper basket, qualifies for the critical scrutiny of the management expert. There is no escape.

*

But what can this scrutiny do for us? It can improve output, reduce frustration, increase harmony and bring about an enhanced sense of purpose. Fewer men can do more work more happily and be paid more justly and promptly for it, etc. . . . It is at this point one begins to suspect that something has gone wrong.

*

The idea of, say, planning in advance the manner in which a particular job is to be done appeals both to commonsense and to the need for order. But the idea of trying to bring about a joyful, dedicated, integrated clockwork smoothness throughout a whole industry induces only a rather numb cynicism. One gets the feeling that, before anyone could do anything about it, a few valu-

Neutral Nets or Emasculated Eclecticism?

This year's architectural room at the Royal Academy exhibition shows an even greater diversity of architectural standards than in previous years, as readers can see for themselves on pages 682-686. More numerous than usual, as a building type, are designs for blocks of offices, of which a selection are shown here. The most conspicuous feature, and a welcome one, is the use of the glazed curtain

wall as a neutral net to form an unaggressive background to the urban scene. How much more preferable is such an approach for buildings in central areas (which, through high site costs, are bound to be multi-storeyed) than to attempt a watered-down neo-classical design such as the proposal, left, for offices on the old Carlton Club site in Pall Mall, which can only sit uneasily out of scale beside its neighbours. Owned by the City Acre Property Investment Trust and to be occupied by the Hawker Siddeley group (another example of the indifference to contemporary design of an influential group of manufacturers) this building has had its exterior designed by Donald H. McMorran, A.R.A., but the architect for the whole is Armstrong Smith, staff architect to the investment trust, with Messrs. Dale & Simpson and Messrs. Fitzroy Robinson & Partners acting as consultants. Top, design for the redevelopment of Berwick Street, Soho, by Leonard C. Holbrook. Above, left to right: City office building by Alan D. Knapton; office development on Route 11, Moorfields, by Lewis Solomon, Kaye & Partners; and redevelopment in Berners Street, W.1, by Slater & Uren.

able new techniques have become blown up into a vast mystique. Such happenings are not unknown. When the early psychoanalysts revealed the existence of subconscious motives they began to speak as if they had uncovered the only *real* motives. Nearer home, the modern architects of the 1920's and 30's sometimes wrote (and spoke) as if functionalism was the solution to social and economic as well as to architectural problems. All new discoveries save the world.

*

It is not difficult to see how management expertise got out of hand. If you start to reorganize one task, this is bound to reveal the inadequate organization of the other tasks connected with it, so you extend your attention to the whole complex of tasks. But you can't stop there, for in re-considering the manner in which tasks are performed you are compelled sooner or later to study the people who do them. This leads to education. The boundaries of your field are constantly extending and the aspects of your field constantly multiplying, so you cannot conscientiously stop to draw breath until you reach religion.

*

The aim all along has been worthy enough—to recognize that everything is connected with everything else—but if you have ended up by including pretty well the whole of human endeavour, knowledge and motive under the title "management" then something is wrong somewhere.

*

Management experts are generally likeable fellows. They have done wonders for bandage-packing, the galvanizing of storage tanks and the calculation of bonus rates, but one is always a little apprehensive of their "philosophy." Not only because it appears to lack spiritual insight, but because it obscures the value of the analytical and creative techniques which are "merely the tools" of management.

*

Perhaps the way management "philosophy" appears to us architects is rather like the way our mystiques appear to the layman. Indeed I have seen the same baffled scepticism on architects' faces listening to management men as on clients' faces listening to architects. Clients may appreciate our skill in contriving a compact plan, but not our aim to "reveal organic structure" (or whatever it may be). Just as we might appreciate the management expert's skill with our filing systems or drawing office programme but not his efforts to persuade us into "correct management attitudes" (or whatever it may be).

*

Everyone needs to belong to a mystique and the essence of a mystique is that it remains mysterious. Perhaps the truth is that, unknown to themselves even, the management experts don't want us to penetrate the mysteries of management "philosophy." And for that matter, perhaps the most disconcerting client of all might be the one who *did* have an inkling about "organic structure." I have no moral to offer.

EDUCATION: PRODUCERS AND CONSUMERS IN ACTION

THE Oxford Conference may well go down in British architectural history as an event which presaged a turning point in the quality of architecture several years later: for it is on the standard of education that any profession ultimately depends for the contribution it makes to the civilization of its time. Many of the more thoughtful minds in the profession have been increasingly concerned with the condition of architectural education, and in a leading article which appeared on the day before the Conference began we pointed out what a very important contribution it could make at this time. Although we suggested that the educational needs of the building industry as a whole required examination so that architectural education could be more fully integrated with the associated disciplines in the industry, we did set out a number of proposals which could form a crash programme for immediate improvement.

It is very heartening to be able to report, from comments we have heard, that all these proposals were actually discussed at a mature and reasoned level, and that recommendations are to be made along the lines we suggested, which will propose that the standard of entry be raised, the External Examination be abolished, that the Schools should be either in Universities or institutions of University standard, that all courses should be full time, or at most alternating with office experience, that some form of intermediate standard might be desirable for those not intending to become fully qualified architects, and that post-graduate work is most important both for teaching and practice.

We hope very strongly that the profession will endorse these important and very necessary recommendations.

It is a happy coincidence that the students have also been having a conference, and that the representatives of 22 schools, having expressed concern about the present condition of architectural education, should have decided to set up BASA (the British Architectural Students Association), a report on which appears on another page.

The sense of responsibility which the students showed is most impressive, and they should be given every encouragement and assistance by the profession.

GOOD KNIGHTS SLEEP?

Sir Hugh Casson, judging from his spirited reply to the JOURNAL Editors in last week's issue, is convinced that there is no background group of "architect knights and the semi-retired" (to use the JOURNAL's phrase) "perfunctorily controlling" the RIBA. Other members of the RIBA Council think that there are, or at any rate were. Anyway, it is pretty obvious that the running of the RIBA cannot depend on an executive committee, despite its name, which consists of 15 men with very dissimilar viewpoints who meet comparatively infrequently. The only alternative to a "background caucus" is no caucus at all—which is, perhaps, an even worse situation.

BREUER EVEN COYER

When Marcel Breuer gave a talk on the new UNESCO building the other

evening, the TUC hall was filled with an audience of the kind that is usually described as large and distinguished. ASTRAGAL wondered if some of the large and distinguished people present remembered how Breuer was treated when he was here 20 years ago. There is no complete work left from the small commissions he was given at that time. Yet surely no other emigré architect appealed so much to designers in England. The great charm and elegance of his work was very different from the crude manifestations of our own modern movement.

In his talk Breuer gave much too modest an account of how the UNESCO project was carried out. It is a pity he did not tell us how he coped with all the difficult committees concerned. However, Jack Pritchard, in proposing the vote of thanks, said that Breuer was a magnificent collaborator, which must account greatly for the success of the operation.

A pleasant, if somewhat nostalgic, evening—particularly as we shall see even less of Breuer now that his commuting between the Rotterdam store, Paris and New York is nearly at an end.

LEAD-ING KINDLY LIGHT

"Why worry" said a pale yellow brochure, as it plopped into my in-tray. As a matter of fact I was not, but I have been ever since. "Your house is shabby?" it went on: "Ring London's lead-ing service" (their hyphen—not mine). It seems that these people will transform your windows, and give your home a "new look" with the charm and beauty of leaded lights. Just what "new look" means here is only one of the disturbing questions raised by this document. And what is this statement that leaded

windows give "maximum" privacy, while admitting more light than "out-of-date net curtains?" A little objective testing at BRS, or somewhere is called for.

The really worrying thing is that this product has the *Good Housekeeping* Seal. There is no doubt that consumer research organizations can only

The gilded effigy of Richard II at Westminster Abbey, made in 1395: one of the new series of picture postcards referred to in ASTRAGAL's note. "Wish you were Here".

protect consumers against sharp practice on the part of manufacturers, and not against dull practice on the part of those responsible for their visual education. If a man wants to cover a picture window with leading—and examples of this have been seen—all that any research body can do is ensure that he is making a fool of himself with reliable equipment.

There is just one encouraging thing. "Guaranteed for 15 years," says the pamphlet. "They will last a lifetime." So perhaps the whole sad business is intended only for fogies with a 15-year lease of life.

WISH YOU WERE HERE

Architects who return from Abroad with pockets full of magnificent postcards often feel ashamed, and rightly so. ASTRAGAL, who doesn't mean what you mean, can never understand how British picture postcards manage to be quite so dreary. Even in a place as

The fact that so many voting members of the RIBA Council are not elected by the membership makes it all the more necessary that those who are elected are the best possible men for the job. The best candidates are not necessarily those with the best-known names, and to enable every candidate to state where he stands, and why he stands, the JOURNAL once again invites candidates for the RIBA Council to send us short election addresses, no longer than 200 words, for publication in our issue of May 22. The deadline for receiving copy is Wednesday, May 14. Those who think, rightly or wrongly, that the electorate should know what they look like are asked to send recent, untouched, photographs as well. Soon, we hope, the RIBA Council will realize that it is their duty to publish the views of candidates for office. Until then we shall attempt to do their duty for them, in the interests of democracy.

famous architecturally as Bath you cannot find many good local views, and the meagre selection of pictures you can buy in Westminster Abbey gives no indication that the building contains some of the best mediæval sculpture anywhere.

*

But things are looking up. Thanks to Edward Carter, previously of the RIBA library and UNESCO, the Gordon Fraser Gallery has now issued postcards of Cambridge, Bath, Gloucester, St. Paul's, Westminster Abbey and Hampstead (an attempt to capture the intimate atmosphere of a locality that cannot claim as much tourist value as the others). Each of these has a series of cards; so has the Royal Festival Hall. (What other modern building would qualify for such treatment?)

*

Most of the photographs—particularly the close-ups—are very good (photographers include famous names like Eric de Maré and Helmut Gernsheim). There is a splendid series of details of the Westminster Abbey monuments. Inevitably, general views of, for example, St. Paul's look fairly like other general views of St. Paul's. Reproduction is not up to the best Continental standards, but it is far better than we usually get in this country. ASTRAGAL is sure that these cards will sell—at sixpence a time—in large numbers.

PPRA FOR MGM?

Architects really *are* men of distinction. There can be no further doubt about it after the *affaire* Greffi. You hadn't heard of this *affaire*? But if you made the mistake of re-reading *A Farewell to Arms* before seeing the recent film of it, you will have at least suspected that something was going on, from the way the part of Count Greffi had been suppressed from the film. Now that Mr. Selznick's memoranda on the subject have been published, we know that no actor was sufficiently distinguished to play the part, and that among those men of distinction, like Bertrand Russell, who were approached, but declined to try, was Frank Lloyd Wright, who even went so far as to read the script before declining.

*

There's glory for you. But don't rush out and ring up you-know-where just because you have a long, tatty, knitted

waistcoat and have heard that Rex Harrison will be leaving the part after a year.

ASTRAGAL

Marcel Breuer (right) who "spoke to AA members last week on his Unesco building, met an old friend at the reception beforehand in Crofton Gane (left), who gave him his first job in England in 1936. This was for an exhibition house (jointly with F. R. S. Torke) at the Bristol Royal Agricultural Show in which Gane, a furniture manufacturer, displayed his products. See "Breuer even Coyer."

Two designs for this year's Royal Academy exhibition showing the catholic taste of the selectors who chose, left, a neo-classic building too trivial for its important surroundings, and below, commonplace modernity. Plan For Education

SIR,—Now is the time to stop deploring or defending the faults or merits of architectural education and to state and examine the alternatives. Here is an immediate remedy for the schools.

Abolish those grandiose programmes which encourage impressive but superficial designs without allowing time for full consideration. Two complete building designs with full working drawings, specification, cost study and site programme in five years is ample to show a student's ability. Let the rest of the time be concentrated on short, strictly limited programmes of the more detailed aspects of construction, function or aesthetics. Short programmes of great variety linked to current lectures and with plenty of time in between for criticism, discussion and experiment will bring enthusiasm to the students. Stop marking. It only makes the student over-cautious and timid. Replace it by a simple indication of satisfactory or unsatisfactory progress. The lecture syllabus must be continually revised and all subjects correlated.

More radical changes will require a complete alteration of the whole educational system. We must define the end product, ascertain the most suitable raw material and then evolve a production process.

The end product is the architect, either as an individual thoroughly and patiently considering all aspects of his designs and therefore limited by time in ambition and quantity, or as a member of a team in a government or private office specializing in a part of the design process. The schools must produce these architects, not frustrated geniuses or permanent assistants.

The GCE and similar examinations are not designed for the selection of architects. The potential architect should be selected by a

series of special tests. The suitability of these tests will be proved by using qualified architects, successful and failed students as guinea-pigs. These tests should be very thorough for they should be the last. Let the student then prove his value at the drawing board, in discussion and on the site.

The making of an architect should not be limited in time. The studies should be clearly defined and liberally criticized, and some should be organized by the students. The only compulsion should be the students' enthusiasm. There must be no demarcation into years, rather the whole school should be vitally aware of itself and its relationship to other fields of study. Each should be a centre of architectural theory, development and experiment. Specialization by the advanced students should be encouraged. The staff should direct, not discipline. The students should be expected to do practical work either on their own account or with architects, engineers, builders and manufacturers. The student should apply for his qualification when advised to do so by his tutors, personally submitting his own selection of his work, first to the staff of his school and then, to ensure uniformity, at an interview with independent examiners. Degrees of qualification should take the form of recommendations to specialize.

On this framework can be built the future of architecture in this country.

ERIC HEAF.

Sheffield.

"Resignation"

SIR,—I agree with the statement in the letter from Cleeve Barr and Anthony Cox (AJ, May 1) that resignations from the RIBA will do little good in the present crisis. I regret, therefore, that the publication of their letter coincided with the unimportant announcement of my own resignation. In fact, that resignation is more apparent than real. I am reverting from the status of Fellow to that of Associate and my "resignation" is effective only between one RIBA Council meeting and the next. This, so far as I am concerned, is an economy rather than a protest, the advantage of Fellowship over Associateship being apparently nil. I am sorry to bore your readers with a small and personal matter. I don't quite know why the RIBA ever asked you to make the announcement; it would have been simpler to wait a few weeks and then, if they must, announce my reversion to Associateship. As it is, a false impression has been given which I wish to correct.

R. FURNEAUX JORDAN.

London.

Truscon Plate System

SIR,—I have read your article on the Millpool Flats (AJ, April 17) and was very disturbed at your cost comments on page 589—I quote: "It is perhaps interesting to compare the concrete frame elements in this scheme at 14s. 9½d. per sq. ft. with the flatted factory for the same authority (AJ, February 20) at 13s. 9½d. per sq. ft. The latter was also an 8-storey block, but with differing beam spans and without the concrete lift walls and balconies. The approach to these two schemes has been different, but the ultimate costs are similar overall."

My Company designed and built the Millpool r.c. structure on the Truscon Plate System, which we know is economic, nevertheless, we have had several approaches from outsiders who have read the article. They say in effect, "We thought the Plate System was economic, but apparently one can build a flatted factory with heavy floor loadings at 1s. less per sq. ft."

The cost comments I have no doubt are incorrect, and indeed harmful, for the following reasons:

1. The flatted factory price is calculated on a total floor area, whereas, the Millpool

flats have been taken on the net habitable area only.

2. The flatted factory price does not include consulting engineers' fees. Millpool does include design costs.

3. Reinforced concrete lift walls are not in the flatted factory price but are included for Millpool.

4. The preliminaries in the flatted factory analysis are much higher than Millpool—this appears to be so, because the Millpool r.c. frame figures include costs of r.c. specialist preliminaries, such as tower cranes, portaislo, mixers, etc.

If proper adjustments are made for these points, we have the following comparisons:

(a) The flatted factory		s.	d.
Price quoted	...	13	9½
Add design costs, say	...	10	
Add part preliminaries, say	...	6	
		15	1½
(b) The multi-storey flats		s.	d.
Price quoted	...	14	9½
Deduct: For adjustment to total floor area	... 2 5		
Reinforced concrete lift walls	... 10		
		3	3
		11	6½

Thus we have 11s. 6½d. against 15s. 1½d., which is a very different matter from 14s. 9½d. to 13s. 9½d.

Frankly I do not think that a proper comparison can be made with two such diverse buildings, but if such an attempt is made, the above figures are more realistic.

R. LUCAS.

London.

The Editors reply: We are sorry that the cost comments have caused misunderstanding. Far from implying that there was little to choose between the two jobs, the comment was intended to point out that although the price figures were similar, they should not be compared directly because of differences between the jobs, e.g., lift walls, etc. We agree that the comment might more usefully have drawn attention to different floor areas taken in each case, although it is common practice to use net areas for flats and this is noted in the published analysis. We would not expect architects or surveyors in preparing target figures for cost planning to take published, or any other cost information "cold" without adjustments for items such as preliminaries and design costs, although this might sometimes be difficult because specialist sub-contractors do not usually give such information in detail.

Cost Analysis

SIR,—I was very interested to read your correspondence regarding the merits of approximate estimating by the foot cube and foot super methods. There is no doubt that both have their advantages and disadvantages, but it has been most interesting for the last year or two studying the comparisons published in your JOURNAL.

It would be of very great value if in your Summaries at the end of each weekly Cost Analysis a figure could be given of the approximate cost per foot cube. In this way one is provided with an interesting comparison between the two methods of approximate estimating.

C. S. COLBECK.

Bristol.

The Editors reply: We use the floor area unit to express costs because it is a more sensitive measure of accommodation than volume. For example, of two houses with the same floor area, one might be 11,000 and the other 14,000 cubic feet—thus cubic foot estimates for one based on the cost of the other might be more misleading than

foot super estimates. Further comparisons of cube and super prices which suggest the unreliability of the former can be found in MCE Building Bulletin.

ASEE Exhibition

SIR.—I have read with interest and a degree of disappointment your review of the Annual Exhibition of the ASEE, on pages 572 *et seq.* in the April 17 issue of the ARCHITECTS' JOURNAL. Disappointment because I feel the review is not quite up to the usual high standard of your journal.

To start with—ASEE stands for the Association of Supervising Electrical Engineers and not Associated Society of Electrical Engineers. There are one or two more indications of laxity as to facts which I should have thought could have been avoided.

Referring to the lighting side, I am surprised that the new development of modular ceilings which was offered by three or four firms, and which to my certain knowledge created a very considerable amount of interest amongst architects, should have been dealt with in three lines on page 575, whereas the major part of the article was devoted to fittings ranges which have been on the market for a very considerable time.

The advantage to the wholesaler of being able to make up a large number of fittings out of a small number of component parts is cancelled out to a great extent by the need to handle four or more parcels to fulfil a single order and, in our experience, one has to guard against giving the contractor too much assembly work to do, otherwise the installation costs will go up substantially. This is the reason why the Atlas Atlantic range of fittings is offered as complete fittings although in the process of production the fullest advantage is taken of rationalization—it is by no means half-hearted as stated by your contributor.

Finally, I feel I must comment on the footnote. The battery of Strand Electric Spotlights in the entrance foyer were not intended as an exhibit of spotlights but were part and parcel of what was considered a successful lighting design for the entrance foyer which used diffuser panels in parts and coloured shadows—from these spotlights—on abstract shapes in others. The acknowledgment in the catalogue was to the lighting design and not to the manufacturer of the equipment.

London.

H. H. BALLIN.

"Iniquitous Habit"

SIR.—In your issue of April 24, you ask if readers agree with Brian Whateley's criticisms of the JOURNAL. Having been a reader for nigh on 30 years, I must on the whole agree with him, particularly regarding his comments on the ratio of advertising/reading matter. I fully appreciate that it is the advertisements which pay for the magazine, but the present preponderance is, to say the least, most monotonous, and I wonder how many readers so much as glance at them.

There are two further criticisms I would add to Mr. Whateley's list. One is the iniquitous habit of charging double for "Special" issues, all of which appear to contain at least twice as many advertisements as usual and only about 25 per cent. more reading matter. Surely, the additional advertising more than pays for the extra news items. My other complaint concerns the so-called "Working Details." A more blatant misnomer for these sheets would be hard to find. The photograph usually depicts quite an interesting subject, but after examining the example of precise engineer's draughtsmanship on the back, one is invariably still wondering how the thing is

made. Hardly one of these detail drawings can be considered complete, and if such a drawing were issued to a Contractor as a "working detail," I dread to think of the number of queries which would be received

A. L. GRAY.

London.

The Editors reply. As Mr. Gray is aware, the number of advertisements we publish enable us to keep the price of the JOURNAL low, and in fact only one special issue—the New Year Number—is charged at double price, and then only to non-subscribers. Mr. Gray can be assured that large numbers of readers study our advertising pages from the fact that enquiries about advertisements now average 2,500 a week. It has never been intended that Working Details could be issued to a contractor. We agree that often some information is missing, but we include (when the architect is able to provide the information) all that can be presented within the limits of a drawing 7½ in. by 10½ in.

Timber Housing

SIR.—The schemes submitted to the BCLMA are certainly, with two or three exceptions, in a class above the usual run of speculative buildings, but the plans are, nevertheless, conspicuously lacking in subtlety, and often in any consideration of how people are to live in them. There are doors which are too near the first or last tread of a stair; open galleries encroaching on privacy; w.c.s opposite the stair head; drying cupboards opening in the bathroom; coal bins far from the house; in one case the entrance hall, hall, kitchen and dining room are linked by doors which are immediately opposite each other; in another case all movement to and from bathroom and w.c. involves passing the front door; in short, a total lack of feeling for what Frank Lloyd calls the fourth dimension. Your criticism picks out No. 101—the Barefoot plan—as the best, but in this case any praise is really due to Mr. John Voelcker, as can be seen from a glance at the AJ of September 19, 1957, when his plan with bedroom spine which he did for CIAM was published.

Suffolk.

"FOURTH DIMENSION."

Architectural Records

SIR.—I am certain that members of the Society of Architectural Historians, Great Britain, will warmly welcome the foundation of a Victorian Society recently announced in the JOURNAL (April 10). Such a body has a valuable function to perform and in its work it can rely on the whole-hearted support of the Society of Architectural Historians.

Your readers may be interested to learn that at the first meeting of the latter society held in Durham in 1956, it was resolved to establish an index and drawings collection relating to buildings carried out between 1860 and 1939. As Secretary to the Society, I should be pleased to receive a note of any building of architectural merit belonging to this period which may be in danger of demolition to add to our records. Information should include the address of the building, its architect(s), the date of its erection and, if possible, a photograph (or photographs). Some of the material, which will eventually be available to architects and *bona fide* scholars and catalogued in the Society's annual publication, *Architectural History*, might well be of interest to members of the Victorian Society to whom we should be pleased to supply duplicates of the relevant records.

Manchester.

FRANK I. JENKINS.

STUDENTS

National Organization Is Formed

The British Architectural Students' Association held a most successful first general meeting at Brentwood, Essex, on April 24-25, 22 schools being represented by 40 delegates. There are about 1,000 students in the schools represented, which were: Architectural Association, Aberdeen, Bartlett, Belfast, Birmingham, Brighton, Cambridge, Cardiff, Cheltenham, Durham, Hammer-smith, Kingston, Leicester, Liverpool, Northern Polytechnic, North Staffordshire, Nottingham, Oxford, Plymouth, Portsmouth, Regent Street Polytechnic, Southend.

The following were elected office bearers: President: Jeremy Mackay Lewis (Liverpool); Hon. Secretary, John W. Crosby (Liverpool); Hon. Assistant Secretary, Philip Allison (Northern Polytechnic); Hon. Treasurer, Jeremy Hodgson (Brighton); Hon. Editor, George Kassaboff (AA); Hon. Publicity Secretary, Paul Power (Regent Street Polytechnic). These officers form the Executive, together with Hector McDonald (Aberdeen), Frank Johnson (North Staffordshire, co-opted representative of Allied Societies) and Charles Gaskin (Leicester, immediate past-president, of the provisional organization).

The meeting, in the course of a day and a half, got through a great deal of organizational work, and made preparations for the work that has to be done to bring all architectural students in the country into the association. A constitution was adopted, according to which membership is open to individual architectural students, and to architects as associate members. But the basis of the Association is the existence in each school of architecture of a representative student body. The Association will be governed by a Council consisting of delegates from the constituent student bodies, with an executive.

The meeting also endorsed the aims adopted by the preliminary conference held in September 1957 (at which only eight schools were represented), of which the most important are the representation of architectural students, the promotion of their educational interests, presenting their views, securing recognition by architectural bodies, and correlating the interests of the various students' societies.

The preliminary conference had already attributed the failure of past student bodies to organisational weaknesses, and one of the primary aims of the BASA is to employ a permanent secretary to ensure continuity in the work. This, in its turn, depends upon securing a full membership, a continuing income and some initial capital. The executive is expected to reach

Two photographs of the inaugural Conference of the British Architectural Students' Association: one serious, one less so. Report, page 679.

early decisions on a money-raising campaign. It is intended, however, to achieve the maximum of publicity for the association by means that do not involve spending money, and to make its financial policy one of "restraint and modesty."

Members of the Executive are going to contact Allied Societies and schools; it is intended to hold Council meetings at places outside London for a start, and preferably in towns where the school is not affiliated to BASA. Special efforts will be made to enlist part-time as well as full time students. Information about the BASA can be got from the Hon. Secretary, J. W. Crosby, 5, Mossley Hill Drive, Liverpool 17.

FLATS FOR AGED

Ministry Booklet

Mr. Henry Brooke, Minister of Housing and Local Government, has asked housing authorities in a circular to tell him their plans to provide more flatlets for old people, along lines suggested in a new Ministry handbook *Flatlets for Old People* (HMSO 2s.). The types and groupings shown in the handbook have been specially designed to show how flatlets providing a good standard of comfort and convenience can be built at relatively low cost. "This is important," says the circular, "because the problem of local authorities is to provide suitable accommodation for elderly people which is also within their means."

The Minister believes that the handbook will be "of immediate practical value" from this point of view, as well as in helping authorities to make their resources go further. He also points out the scope for experiment, welcomes collaboration between authorities and the Ministry in trying out new ideas, and hopes that further examples will be published as experience grows.

The widespread need for dwellings in which elderly people can live and look after themselves is emphasized, says the handbook, by the fact that nearly one-eighth of the population is over 65 years of age. The handbook illustrates the type of flatlet (bed-sitting room, kitchen and shared bathroom and w.c.) which the Ministry considers particularly suited to this demand, and estimates the cost per unit at from £830 to £925, according to the type of scheme adopted.

ILA

Pylons and Landscape

In a talk on "Transmission Lines and the Landscape," at the Institute of Landscape Architecture on April 17, Brian Hackett, while discussing the disease of "pylonitis," said it was also necessary to respect the views of those who were able to catch exciting moments in the pylon landscape. At another meeting a member of the audience had pointed out that there was something

rather fine about transmission lines traversing the barren Northumberland moors in seven league boots.

In his view the local electricity supply pole feeding isolated farms or individual houses was more often a landscape problem than the cross country pylon. If they did not fall closely into the patterning of the agricultural landscape, as by and large telephone poles did, they irritated anyone with landscape sensitivity. At this small scale a matter of a few feet might make all the difference between the obtrusive and the unobtrusive, and Mr. Hackett urged that the line of the poles should be fixed, not entirely by the line engineer, but on the advice of someone with an eye for what looks right. He wondered, too, how serious to the profit and loss account would be the planting of 50 trees in a "special character" village. It would be better still if lines could run with the hedgerows, in which case tree planting would be unnecessary.

The cross country transmission line, being away above the scale of the humanized landscape, could not be expected to follow the man-made pattern, but it should follow the large-scale pattern set by nature, following round hills instead of crossing diagonally over them. A lot of the difficulties with pylon lines had arisen, he thought, because the Electricity Authorities had not consulted and collaborated from the very beginning with other specialists.

SPEC. HOUSING

Maintenance Schemes

The value to the architect of organizing joint maintenance schemes for privately developed housing was stressed by G. Paulson Townsend, a director of Span Developments Ltd., in a recent talk at the Housing Centre. Joint maintenance schemes for the buildings and the open spaces, freed the architect to produce schemes which included common parts and common gardens.

In the joint maintenance schemes of Span Developments Ltd., flats are sold to individual purchasers on long leases. The joint maintenance scheme had to provide for maintenance, cleaning and lighting of the common parts of the buildings, the upkeep of the gardens and grounds, if any, and for the upkeep of the structure, apart from the interior of each flat which is usually the sole responsibility of the individual flat owner. In addition, fire insurance and insurance against third party risks should be brought into the scheme, and such items as heating of entrance halls, window cleaning, communal television aerial systems and portage, etc., may be included.

These schemes had to start with the creation of some sort of agency which will collect the members' subscriptions and carry out the work of maintenance. In the case of Span Developments' schemes this took

the form of a Residents Society to which all the flat owners must belong, and which could be a private or public limited liability Company, or it can be formed as a Society under the Industrial and Provident Societies Acts. In the case of the private Company the individual membership was limited to 50; there might be some minor disadvantages in using a public company, but in fact they themselves have schemes running on each basis. They had found that the Income Tax Inspectors accepted the fact that these companies were non-profit making, but usually after a tussle. This was very important as the annual subscriptions were geared to build up reserves for decoration and structural maintenance, and in the years where expenditure on these items is not incurred, there was a profit.

To enable the Residents Society, in whichever form constituted, to carry out its functions, and as far as possible, to make sure that it did so, the Residents Society had to be tied in with the lease of the property. The lessee also agrees not to sublet the flat furnished for longer than six months and not to let it unfurnished. The Society agreed to keep the buildings in structural repair, to carry out repainting externally every three years, clean, light and possibly heat the entrance halls, maintain the gardens and external fences and walls in good order, to keep the buildings insured against fire, and to keep the lessor the society and each of its members insured against all third party risks. The lessee agreed to pay the society the agreed annual contribution, which in the case of their developments usually worked out about £40 per annum, but could of course be changed in an upward direction by an appropriate vote at a general meeting of the Society. The lessee also undertook not to dispose of the flat to anyone unless the purchaser became the registered holder of the appropriate share in the society, usually of £10.

COMPETITION RESULT

R.c. Factory Building

The results of the competition organized by the Cement Marketing Co. Ltd. for the design of a reinforced concrete factory building have been announced as follows:

First prize (£1,000): Joseph Mendleson and John Henry Charles Lamb, of Joseph Mendleson and Partners, London, in association with Z. L. J. Woloszczuk and R. Wilcox, of Chamberlain and Partners, consulting engineers.

Second prize (£500): E. H. Eames, P. G. Frome, P. Drew, P. H. Saunders and J. D. Morris, also in association with Chamberlain and Partners, consulting engineers.

Third prize (£250): Cyril John Bromley, Paul Sutherland Buckhurst, Gary Valentine Hansen, and John Richard Peverley (students); K. Szmidt, consulting engineer.

The assessor was Edward D. Mills, assisted by Ove Arup and Partners and Leslie W. Clark. It is hoped to publish the winning designs and the assessor's report in the issue of May 22.

SCHOOL COSTS

London Conference

The adoption of the team approach—already tried and proved in Britain—in the building of new schools in British territories overseas won general approval at a study conference of education and building experts which has just concluded in London.

The conference—on school building programmes overseas—was organized by the MOE and the Colonial Office, and was attended by administrative and technical officers from the colonies working in this field, as well as three representatives of the Federation of Malaya and a visitor from

Turkey, making 32 participants in all. The other overseas territories represented were: Antigua, Barbados, British Honduras, Brunei, Hong Kong, Jamaica, Kenya, Mauritius, Federation of Nigeria, Northern Nigeria, North Borneo, Northern Rhodesia, Nyasaland, Sarawak, Sierra Leone, Somaliland, Trinidad and Tobago, Uganda, Windward Islands and Zanzibar.

The object of the conference was to study how, by careful analysis of educational needs and use, the cost of building schools and of their maintenance can be reduced and considerable saving of space can be achieved; how school buildings should reflect the functional needs of the students; and how the best results can be realized by the "team" approach—collaboration of administrator, architect, quantity surveyor and builder from the very inception of a building scheme.

Some 20 lecturers, all experts in the field, addressed the conference and led the discussions.

Points which came out during the conference were:

(i) The value of the "development group" approach (administrators, architects, quantity surveyors, etc.) as adopted by the MOE in the UK. The objects of these development groups are to try out new forms of design based on changes in teaching requirements; to develop, with manufacturers and others, building methods, components and techniques; and to study the application to school building of knowledge resulting from research into buildings and materials.

(ii) The emphasis, in many schools today, is laid on practical activities; the class is often broken down into smaller working

groups. This calls for additional small work-spaces, new teaching materials, aids and equipment. The school is no longer a machine for giving lessons but a social unit concerned with all-round development.

(iii) The early planning of building programmes, which indicate the number and kinds of schools to be built, enables professional and technical skills to concentrate on the two main factors which determine whether or not value for money is obtained—the amount of space needed to provide a workable building and the amount of money needed for each unit of space to ensure an adequate quality of building.

(iv) The better utilization of space can effect considerable savings, e.g., a corridor can be both a circulation area and an additional teaching space, an entrance hall can be also a gym. In several cases the total area per child in primary and secondary schools in the United Kingdom has been cut by 40 per cent, but the amount of teaching space has been maintained or even slightly increased.

(v) The study of cost analysis has shown where the money goes and enabled a far greater control to be exercised than hitherto. By application of design and cost standards the MOE had at 1956 reduced the money cost per place in secondary schools by 20 per cent compared with 1949—although building costs had risen 50 per cent.

(vi) Although many overseas territories lacked the expertise available in the UK, the method of attacking school building programmes adopted by the MOE Architects' and Building Branch was thought to be relevant to their problems also.

wants to put up something (whatever the style) that is of much poorer quality, than the neighbouring property.

If you will grant these arguments of mine that a case exists for retaining this element of control over the external appearance of buildings, the next question is, how do we exercise it? We want to make it serve and not frustrate the interests of good design. Equally we have to administer it in a fair and liberal way. We must allow scope for personal choice; we cannot use it to impose too rigorous a conception of good design.

I have no wish to set myself up as a dogmatic arbiter of taste. But I see no escape from the problem of defining the border line between the really bad and the not so bad as to matter. So far we have found it quite impossible to formulate any guiding standards of taste and design, so we have to work at it from another angle.

Our first principle is to let the individual have what he wants, unless there is a very good reason to stop him. We do not encourage the apparently prejudiced or over-fussy planning authority. I hope that Ministers' decisions on planning appeals over the years have made it quite clear that this is our policy; and the tendency has been towards greater freedom rather than less.

Secondly, however, successive Ministers have made it plain in appeal decisions that a planning authority is quite justified in rejecting a design which is blatantly out of keeping with neighbouring buildings, where those are worth protecting, or with the landscape—we still get cases where a developer wants to plonk off-the-peg suburban penny plain in the middle of the countryside.

Thirdly, though we have to be very careful here, the local authority may be justified in refusing permission when it has tried to be constructive and helpful to a developer with a poor design and has met with no practical response at all.

Fourthly, I am always reluctant to dismiss an appeal on the grounds of design where that was not one of the issues raised by either side at the inquiry. Very occasionally I must do so, but only where the design is so poor and mean that I think house purchasers ought to be protected from exploitation by a developer totally indifferent to his responsibilities.

Of course you may be gentle with me and say that you do not complain against me but against the whole system as it operates through the length and breadth of the country. It is a very difficult task for local authorities, however well advised they may be by their professional staff. But the years have taught me to have confidence in local government and in the general good sense and fair-mindedness of local authority members, whatever exceptions there may be. At the present stage of things, new ideas among developers are almost totally outside the experience of local authorities in many parts of the country. No wonder they are a bit taken aback when a really novel design lands like a sort of flying saucer on their laps.

AESTHETIC PLANNING CONTROL

Minister's Statement to RIBA Symposium

We print below a statement made by Henry Brooke, the Minister of Housing and Local Government, at the RIBA Symposium, "Design Pays." A report of the conference will appear next week.

I am grateful for your invitation to open this symposium. I call it a friendly gesture, for I suspect that lurking in all your minds today is the question "Is the Minister on our side?" So I had better say at once that I am in favour of good design! Perhaps my recent decision on a famous cowshed has shown that I am even in favour of eccentricity. It was Frank Lloyd Wright who said that there are only two constants in architecture: the law of gravitation and the eccentricity of the client.

Of course I am in favour of good design; and I hope my Department has been of some assistance in raising the standard of local authority building since the war to a level which is generally competent and which does quite frequently rise now to a lively style with distinctive character. But the key issue, I know, and the reason perhaps why I have been pushed first into this morning's line of battle, is this contentious question of planning control. In plain language, can design pay when it may lead to difficulty with a local planning authority who are unfamiliar with anything but the stock plans of the speculative builder? What you want to know is, are my Department and I prepared to back good design and allow scope for experiment and fresh ideas, or are we ready to see them stifled by heavy-handed planning control?

There is no doubt that under the Planning Acts local planning authorities have power to withhold consent from the design of houses and other buildings—or, what is perhaps even more exasperating for the

architect and his client, to insist on alterations to them. The crucial question is, does this do more harm than good? Does it hopelessly impede progress in design, or can it be made to serve the interests of good design, by preventing the shoddy and the plain ugly, and the endless repetition of catch-penny gimmicks from a builder's pre-war pattern book?

Believe me, I have no special love for the labour which planning control brings to my Department and me. But I am certain that there are solid benefits to the nation by the use of these planning powers. A good and sensible planning officer, who is often an architect himself, can help the average speculative builder by suggesting better layouts and other improvements. But a planning officer, and the committee to which he is responsible, ought to be very chary of forcing their ideas on to an unwilling architect and client in cases where they really have nothing to support their views except personal prejudice.

The other advantage in this planning machinery is the protection it gives to good neighbourliness. There is a positive duty, I say, to protect places where the existing buildings blend well together. In those places a radical departure can look quite awful. It works both ways; it throws the existing scene into confusion, and it can give the new buildings an isolated and rather forlorn look; not many modern houses look their best amidst an overwhelming company of neighbours in an older tradition. Even more so is there a case for aesthetic control where a developer

BUILDINGS IN THE NEWS AT THE ROYAL ACADEMY

The Royal Academy is still such an extraordinary mixture of the good and the bad, of buildings of national importance and of none, that it is difficult to present them in any logical arrangement. This is not surprising, as there does not seem to be any consistency or any standard in the selection of drawings or models. But on this page we are illustrating a number of projects that are important in themselves, for whatever reason.

Above: the Golden Lane housing estate in the City, by Chamberlin, Powell and Bon, is the only distinguished housing in the exhibition; most of the blocks are well known, but this shot shows the west block that will complete the scheme. Left, proposed rebuilding of Chelsea Barracks, by Tripe and Wakeham. Below, Frederick Gibberd's Civic Centre at Harlow illustrates very well the need for plans to accompany the perspective.

AL ACADEMY'S EXHIBITION

Above left, Basil Spence's revised design for Queen's College, Cambridge, has lost two storeys. Above, Kenneth Browne's sketch of Easton and Robertson's Medical School for Middlesex Hospital. Left, Frederick Gibberd's atomic power station at Hinkley Point. Below a design for a controversial site: Trehearne, Norman and Preston's College of General Practitioners, Lincoln's Inn Fields.

Left above, food factory at Wigan, by E. D. Jefferiss Mathews and Partners, is one of the few industrial buildings shown. Left, Lewis Solomon, Kaye and Partners' design for an office block to replace the Stoll Theatre. In the absence of a plan one cannot tell whether it includes a new theatre or not. Above, the BBC extension, Portland Place, by Fitzroy Robinson and Partners, architects; Sir Howard Robertson, consulting architect.

SCHOOLS AND UNIVERSITY BUILDINGS AT TH

Recently there has been a heightened interest in the quality of University architecture. The samples on view at the Academy are, however, still rather a mixed bag, good, bad and indifferent. Architects' Co-partnership are welcome newcomers to the Academy, with their new building for St. John's, Oxford, which has been illustrated previously, as have some of the other designs shown, including Hugh Casson's Birmingham project. Comparatively few schools are shown; the one above is the Gravesend Gordon (Westcourt) Secondary School for Girls: by Elie Mayorcas. Left, extension to Kingsley Hall, Dagenham, Essex: Edward D. Mills. Below, model of Basil Spence's proposed development at Southampton University.

AT THE ROYAL ACADEMY'S EXHIBITION

Above, County Complement to St. Marylebone Grammar School: Leonard Manasseh and Partners. Below, Institute of Mathematics, Liverpool University: Westwood, Sons and Partners. Right, new buildings, Nottingham University: Donald H. McMorran, A.R.A.

The eclecticism of Sir Howard Robertson manifests itself in the Physics Department, Reading University (centre right) and the Library, University College of North Staffordshire (below) which does not look as if it is by the same hand. Right, the Oriental Institute at Oxford, also by Sir Howard Robertson.

WORK BY THE ACADEMICIANS AT THE R.A. EXHIBITION

DESIGN FOR THE
The QU

The curious character of the Royal Academy is very largely due to the fact that R.A.s and A.R.A.s are entitled to hang pictures or designs without having to pass the hanging committee. This page contains a sample of work contributed mainly by architectural Academicians and Associates. Other Academicians, it should be remembered, include Basil Spence and Sir Howard Robertson. We wished also to publish Sir Albert Richardson's designs for a new distillery and village in Morayshire, but he refused permission. Above left, the Chapel, County Grammar School for Boys, Lewes: Sir Edward Maufe, R.A. Above, rebuilding of St. Andrew by the Wardrobe after war damage: Marshall Sisson, A.R.A. Left, Kensington Central Library: E. Vincent Harris, R.A. Below left, Church of Our Lady of Mount Carmel and St. Simon Stock, Kensington, and below Wilkinson House, Peckham Rye, for London Homes for the elderly both by Sir G. Gilbert Scott, R.A., Son and Partner.

Above and left, Raymond Erith's design for the Provost's Lodgings at Queen's College, Oxford. Raymond Erith is not a member of the Royal Academy, but is, perhaps, more entitled to be one than many of the R.A.s because of the expert scholarly, academic quality of his work. Unique, in that he is probably the only architect alive who works entirely within the design idiom of the eighteenth and early nineteenth centuries, his designs are preferable, in the eyes of the modern architect, to the eclecticism of the Royal Academicians.

CRITICISM

The designer and a client reply

The Editors regret that they are unable to publish replies, which they had asked for, from the Central Office of Information, or from the architects for the British Pavilions at the Brussels Exhibition, to the criticism by J. M. Richards published last week. Charles Hadfield, Controller (Overseas) of the COI, has informed us that there are difficulties about "co-ordinating" a reply between the many people involved in the time available, adding that the COI does not consider any reply to be called for at this stage. Howard V. Lobb and Partners, architects for the Government Pavilion, associate themselves with this statement. Edward D. Mills and Partners point out that the criticisms of the British Industry Pavilion mainly concerned policy matters outside their control as architects. We are therefore publishing the replies received from James Gardner (left), chief designer of the Government Pavilion and co-ordinating designer for the whole site (expressing, also, the views of John Lansdell, display designer of the British Industry Pavilion), and from W. P. N. Edwards, a director of the FBI.

James Gardner writes :

While many of the points raised in J. M. Richards's article last week concern matters of policy rather than design, John Lansdell and I think that his criticisms as a whole were based on a very common misconception of the proper design approach to exhibition and exhibition architecture. This is a subject that deserves more discussion and we therefore welcome this opportunity to put forward our point of view.

It seemed to me that the article considered the British Pavilions solely in terms of exhibition building and then proceeded to criticize them, contents and all, in terms of contemporary architectural taste. To my mind this is neither valid nor illuminating except in a very restricted sense. Frankly, architecture is only one aspect of the business of exhibition. For every intelligent architect or engineer who can be fascinated by

steel cantilevers and prestressed concrete beams there must be a thousand ordinary people with tired feet who want to be amused, informed and, above all, interested by the exhibits on display—and these include, I suspect, even architectural journalists on their off duty days. I feel personally that exhibitions and exhibition architecture cannot be discussed, designed or ultimately much fun unless the needs and interests of this audience are considered the final justification and first concern of the whole show.

This does not mean that design must be scaled down to some vulgar level; rather it is a matter of painstaking consideration of boring practical details such as lighting, eye level, and circulation, and, of course, making sure that visitors look at the exhibits which are the only reason for having an exhibition in the first place. Where the elegance or daring of a structure becomes an end in itself the result is invariably fabric without function—unless architectural swank can be considered a valid function in its own right; and when this happens the exhibition ground is merely a mausoleum for great stranded whales of buildings. This may look interesting enough in the pages of glossy magazines but is frankly arid and boring to the general public.

To come back to Brussels, it is true enough that with the money at our disposal we could not have attempted a building in the style, say, of the technically impressive German Pavilion next door. Our problem was to design a simple and economical structure that would house our exhibits in varied settings and also look sufficiently curious to entice people inside to look at them. But, emphatically, even if we were to start all over again with unlimited funds I should still recommend the same approach, and merely hope to do it better.

Suppose for the moment that we had decided in principle to emulate the Yugoslavs or the Germans or the Austrians and make our pavilion a smart glass-walled box leaping over fountains and flower beds. To begin with it is interesting to speculate whether the British could in fact produce a pavilion in this international style and to comparable standards of refined detailing and finish while retaining a national character of its own. Even if this were possible it is still doubtful whether it would have any advantages: there seems no point in doing what a lot of other people are doing unless either (a) one feels there is no alternative, or (b) one is confident that one can do it slightly better, which in this case I don't. Finally, I am still to be convinced that a glass box or a series of glass boxes or a plastic drum is in fact a good way of housing varied exhibits. There is always the danger that the formal shape will arbitrarily determine the lighting and layout of the exhibits rather than the other way round. It is difficult to avoid dull arrangements in boxes or chaotic arrangements in drums. Controlled circulation and lighting is generally impossible. The tempting conclusion is that one should throw in one's hand and fill the pavilion with the familiar space frames, enlarged photographs, low display tables, abstract forms and silhouetted glass objects that it so clearly demands as its logical complement.

This is why, quite independent of money considera-

tions, we chose to go right ahead in the other direction and rely on dramatic lighting, colour, animation, sound and a frankly eccentric building shape for our effects. Richards said in his article that "to remind himself of how effective a technique based on absolute simplicity can be, a visitor need only look at the German and Yugoslav Pavilions nearby." This is quite instructive. Both these particular pavilions are excellent in their workmanship and finish, and coherent and dignified in their general design: and yet, somehow, they give an effect that is cold, inhuman and frankly rather uninviting. One look through the beautifully proportioned glass walls and a glimpse of the carefully selected objects arranged in space on tasteful stands, and the visitor passes on.

The British Industry Pavilion has been criticized for its overcrowding, narrow gangways and two-storied stands (criticisms which, incidentally, take no account of the obvious economic situation); it has also been criticized for its lack of coordination (again ignoring the fact that it had to house 5,000 sq. ft. of atomic power in close proximity to 150 sq. ft. of Bovril or bicycles). It is interesting to note, therefore, that this "jungle" in contrast with other pavilions gives an impression of vigour and excitement which does in fact attract and hold the interest of the public. In the British Government Pavilion the conventional clinical approach to exhibition design was purposely abandoned in favour of something unconventional and experimental, basing everything on the conviction that the Pavilion's first job was to interest the public in the exhibits, and above all the science exhibits, rather than in fashionable architectural or display techniques. Having seen people going through the pavilions during their first week I believe that this approach has paid off.

W. P. N. Edwards writes :

It is hard to understand why Mr. Richards is so opposed to commercial firms taking part individually in the British exhibit at Brussels. If the £2½ million which industry has spent altogether could have been made available in advance, the FBI's task in organizing the British industrial section would have been much easier. As it was, the FBI had to take a very bold decision and assume a considerable risk when it decided two years ago, at the request of the Government, to take on the job of building the British Industry Pavilion and then having to recoup itself by selling the space inside.

But what matters is the final result, and, above all, the impact it makes upon visitors to the exhibition. On this, our experience of the first two weeks is sufficient to show that the fine quality of the products shown in the British Industry Pavilion and the ingenuity which has gone into their display is making a profound impression upon overseas visitors. I am reliably informed that the Russians have told the Belgian authorities that, in their view, the British have put on the best display of industrial progress in the whole exhibition.

We regret to announce that the Architect's Department of the LCC does not intend to reply to the criticism by J. M. Richards published on April 17.

NEW WINDOWLESS

Unlike our BIF, the German Industries Fair at Hanover has grown steadily since it started in 1950. It is the equivalent of our radio, electrical, office equipment, mechanical handling and building exhibitions rolled into one and the impact of such a comprehensive display is considerable. The indoor exhibition area is just under three million square feet, and there is an additional one and a half million square feet of open-air exhibits. The buildings are all permanent. The earlier buildings are of light, factory construction. The new buildings are unusual in being windowless. The most important, shown on the right, is Hall 12. It is 165 ft. high, with five exhibition floors, and a restaurant which is the only part glazed. Clad with metal panels, this hall was built and occupied in about three months. It will be further illustrated in a

EXHIBITION HALL AT HANOVER FAIR

vertical feature could. In the open-air section mechanical excavators and grabs are displayed at work. A group of these, working like playful prehistoric monsters making mud pies is a sight to be remembered. The general grouping of exhibitors is good and this makes comparisons easy, which greatly simplifies the task of the busy visitor. The representatives on the stands were able to answer questions efficiently and courteously and no stand visited failed to produce someone who spoke English. The same cannot, unfortunately, be said of exhibitions in this country. The atmosphere at the Hanover Fair is a mixture of excitement and efficiency—an atmosphere created by a powerful industry that knows what it wants to do and intends to do it.

JOHN REID

future issue of the JOURNAL. This hall, with new single and two-storey buildings alongside, is occupied by the electrical industry who have taken a ten-year contract so that their stands are permanent. These buildings are used for only ten days in the year. Apparently, the saving in stand fitting costs for the exhibition over a ten-year period makes this economically possible. The stand design at the Fair is sensible and furnished with meticulous care. There is an absence of gimmicks and it is easy to see what is displayed at first sight. Left, a sculptural effect is achieved by a manufacturer of steel tubes. In the background is the A.E.G. observation tower with an external lift. Built of concrete, it has a cog-wheel shaped balcony which, if not visually pleasing, is practical because it provides a large perimeter length for sightseers. Visitors, travelling to the Fair along four-lane roads organized into an excellent one-way system which varies with the time of day to suit the greatest traffic flow, first see the high Hall 12 block from miles away across the plain, and then a forest of tall building cranes, right, which make a far more exciting display than any

NEW DUCTAIR 20

for the cosiest (but not the costliest)

little house you ever designed!

Take an average 3-bedroom house or bungalow selling at around £3,000. The Ductair 20 will provide full warm-air heating for the entire ground floor (outlets in both living rooms and in the hall) and background heating for the bedrooms and landing. To say nothing of warm-air drying for the weekly wash! Ductair heating is neat and unobtrusive. Clean, warm air flows from skirting-level grilles and spreads evenly over each room. No draughts, no stuffiness, no danger of stained walls or ceilings. And the temperature is controlled simply by adjusting a wall thermostat.

CONSTANT HOT WATER There's a choice of three fully automatic smokeless heating units—gas, oil or solid fuel—which work in conjunction with a water-to-air heat exchanger and an air circulating fan. The units supply constant hot water for all domestic needs—and enough to heat a towel rail, too. Running costs? There's nothing cheaper that offers anything like this standard of heating. We've been making warm air systems for the home far longer than anyone else in this country—so we should know!

Radiation DUCTAIR 20

Like to know more? Then post this coupon to the address below and we'll send you full technical details of the new Ductair 20 and of Ductair heating for larger houses.

NEW BUILDINGS FOR VAUXHALL MOTORS AT LUTON, BEDS.

Vauxhall Motors have now virtually completed a £36 1½ million expansion programme for their factories at Luton, with the press shop in the foreground, and the assembly lines and Dunstable, started in 1954 with the objective of roughly doubling their potential output. This has included £1½ million on site development, and £13 million on buildings, the architects being Howard, Souster and Fairbairn. Shown above is a general view of the new

1½ million sq. ft. production building at Luton, with the press shop in the foreground, and the assembly lines beyond. Multi-storey planning has been adopted for the latter, mainly because of the restricted nature of the site, but this has also facilitated production flow. Below is a close-up view of the boiler house, with 140-ft. high chimney stacks.

THE INDUSTRY

From the industry this week Brian Grant describes a new range of switches, refrigerated shelving and some new oil-fired boilers.

Switch assemblies

Crabtree have just announced a "Closegang" range of switches, to which a brief reference was made in the JOURNAL of April 17. The BS flush box is at present available only in one size but, in common with other manufacturers, Crabtrees have for some years produced a two-gang box, and the new range provides a further development of these standard fixing centres; in addition to the one- and two-gang boxes it will include what might be described as four- and six-gang boxes. The small size of the switches makes it possible to double the capacity of the standard boxes, which can thus accommodate four, eight or 12 switches. These may be one, two way intermediate or push switches in 5 amp. ratings, or one and two way 15 amps. With a limited number of components it is therefore possible to build up a control panel to meet almost any requirements in either domestic or commercial installations. The photograph shows a protected type surface assembly in which the plates are deeply recessed to the depth of the switch dolly. The one- and four-gang switches were shown at the recent ASEE Exhibition, and the six- to 12-gang units will be available within a week or two. (J. A. Crabtree & Co. Ltd., Lincoln Works, Walsall, Staffs.)

Refrigerated shelving

The illustration on the right shows the GVE refrigerated shelf which will cool 114 half-pint bottles. The shelf unit can be fitted to any existing bar shelf not more than 1½ in. thick, the refrigerated unit being bolted underneath and needing only 11 in. clearance. The whole assembly is very easy to install and the temperature may be set anywhere between 30 and 60 deg. F. Price is £87 10s. (G.V.E. Ltd., 231, Strand, London, W.C.2.)

Oil-fired boilers

The photograph on the right shows the smallest of the new range of Kayenco oil-fired boilers, which are made in 11 sizes with outputs varying from 65,000 to 500,000 B.t.u. per hour at prices from £158 to £392. The smallest size should provide adequate space heating and hot water for a four-bedroom house. These new models are a development of the firm's previous Hikon range, but are considerably neater and are supplied with all controls completely wired up. (Frederick Kay (Engineering) Ltd., Nashleigh Works, Chesham, Bucks.)

Accelerator pumps

When considering central heating boilers it is always worth bearing in mind the current habit of using small diameter pipes for the radiator circuits in conjunction with an electrically-driven accelerator pump. These pumps are almost completely silent in opera-

Left, one of new "Closegang" range of switches by J. A. Crabtree & Co., Ltd., with a protected type of surface assembly. Above, a Kayenco oil-fired boiler, by Frederick Kay (Engineering) Ltd., with an output of 65,000 B.t.u. per hour; the price is £158. Below, the GVE refrigerated shelf unit, which will cool 114 half-pint bottles.

Ibstock Facing Bricks

... add the charm of colour to every building

MARKEATON CREMATORIUM, DERBY

For the County Borough of Derby.

Borough Architect: THOS. W. EAST, F.R.I.B.A.

Bricks: 2½" BUFF MULTI-RUSTICS.

*Contractors: Messrs. FORD & WESTON Ltd.,
Osmaston Road, Derby.*

This modern building is faced with Buff Multi-Rustic facing bricks. Supplied in a number of attractive colours, Ibstock facing bricks are being specified by Architects everywhere.

Handmade bricks are booked a long way ahead — but most machine made bricks, especially in 2½" size, are readily available.

THE COST OF FLATS

RICS Cost Research Panel (The Chartered Surveyor, March, 1958).

In the March issue of *The Chartered Surveyor*, the Cost Research Panel of the Institution publishes a lengthy paper on "Factors affecting the relative cost of multi-storey housing"—reprints of which can be obtained from the RICS, 12, Great George Street, S.W.1. The paper is one of a series published as a background to the forthcoming report on the same subject related to the cost of 2-storey housing. The quantity surveyors have been increasingly active in cost investigation since 1955, and this, with previous papers on similar subjects, is to be welcomed as evidence of their determination to make up for lost time and equip themselves as cost advisors.

This study takes three different sizes of balcony access and staircase access flats in slab blocks and applies to them relative cost indices based on cost records of the MOHLG. The indices are broken down into four element groups—foundations, superstructure, finishings and fittings, lifts. Various tables and graphs show how the costs of each type and size of flat varies according to the number of storeys, from 3 to 12. Actual costs are not given, one particular flat is set at 100 and all others are related to this. The designs are theoretical, not actual ones, in order, it is stated, that the cost comparisons made shall

not be confused by the variables that attend actual buildings.

Unfortunately, the welcome extended to this work must be qualified. The two main criticisms are that the problem which this investigation was intended to throw light upon, is nowhere clearly explained and that the text explaining and interpreting the figures is confusing. To clarify the latter we have attempted in our own words a brief summary:

Floor area

Balcony access: As you increase the floor area of a flat, the cost per flat of substructure, superstructure and lifts increases proportionately to the increase of floor area. But in finishings and fittings, the cost increases at a smaller rate than the increase in floor area.

Staircase access: As you increase the floor area of a flat, the cost per flat of substructure, superstructure, finishings and fittings increases at a smaller rate than the increase of floor area, but the cost of lifts remains constant.

Number of storeys

Balcony access: As you increase the number of storeys, the difference in cost per flat, between large and small flats becomes more marked.

Staircase access: The above difference becomes less marked. As you increase the number of storeys the cost per flat increases rapidly up to the 6th floor (where the increase is greatest), after which it flattens out. To add another floor to a 5-storey block would cost only 2 per cent. more than building a separate 3-storey block (with three times the accommodation). Above 12 storeys, the average cost per flat of adding another storey might be less than the average cost per flat of the 12-storey block. The same is true for balcony access flats but you would have to add a greater number of storeys to reach the same result.

Cost distribution

Differences between balcony and staircase access flats in the way cost is distributed among the element groups are greater for 3-storey than for higher blocks. Lifts take a bigger share of the total money in small staircase access flats at 6 storeys than in any other size or type of flat or number of storeys.

These are some of the conclusions culled from the text. Other inferences can, of course, be drawn from a direct study of the tables and graphs. Throughout the paper, the cost of lifts is repeatedly emphasized as a major addition to the total—they enter at 6 storeys, rendering that height an exceptionally expensive one to use. Indeed, looking at the graphs, one's feeling is that we should build up to 4 or 5 storeys and above 11 or 12, but never in between—an interesting parallel to conclusions that have been drawn from sociological-aesthetic studies of residential development.

There is a warning in the paper that since

the study is a theoretical one its findings should be applied with "great caution." This warning could be reinforced by comparison of this paper with that on the same subject by C. N. Craig of BRS in the *RIBA Journal* for April 1956. The RICS paper shows broadly that the higher the block of flats, the more costly they are, but Craig's figures (of actual schemes) showed that some 6 storey blocks cost more than some 12 storey ones—a wide scatter that is also true of individual element groups, especially lifts. At all storey heights lifts varied from £50 to over £150 per dwelling and the number of dwellings served per lift varied from 14 to 62. We quote these figures, not to suggest that the RICS study is misleading—it follows a well respected method of throwing light on a problem—but to suggest that much more explanation should have been given of the cost data used. We are only told that the cost indices "have been set at a level at which a variety of alternatives of reasonable standard can be found." The alarmingly wide scatter of actual costs implies that the setting of reasonable standards is complicated and involves judgments of quality that should have been explained.

A second criticism is that although cost per sq. ft. and cost per dwelling are both used as units of comparison throughout the paper, the relation of these two units to each other is not made clear.

A third criticism is that services (excluding central heating) are put into the element group: finishings and fittings. Cost analyses of tall blocks have shown that services installations probably change in cost with change in number of storeys from causes rather different from those affecting finishing and fittings. But more important than this, many architects experienced in flat design think that there is greater scope for future economies in the cost of services than in any other element group, for services have yet to be scrutinized in the light of the functionalist approach. It may be that the cost data of the MOHLG did not allow services to be separated, but it is unfortunate that we cannot see what happens to services costs, when for example, number of storeys is increased or plan arrangement varied, etc.

These criticisms betoken a danger signal that the *JOURNAL* has sounded before—that the RICS Cost Research Panel should not go too far with its work without architect-guidance. Architects can make more effective use of new cost information than anyone else connected with building, not only because they are the designers but because they have to relate technical and cost decisions with questions of function, quality and purpose. It is perhaps only a slight simplification to suggest that in cost research the architect's job is to say *what* he wants to know, and *how* the knowledge should be presented; that the scientist's and surveyor's job is to provide the answers. In practice of course, the two stages would not and should not be so clear cut as this—collaboration is the real way.

BARCLAYS BANK LIMITED

The front and interior of these new banking premises in Birmingham were carried out by our organisation to the designs and under the direction of R. J. A. Gazzard A.R.I.B.A., M.T.P.I., Barclays Bank Limited Architectural Representative in the Midlands.

COST INDICES

Indices of Building Costs: Multi-storey and traditional housing (RICS Journal, April, 1958).

This paper, third in the series sponsored by the Cost Research Panel of the RICS, presents a method of adjusting costs for housing according to changes in labour and material prices. Hitherto, the only indices available were for building as a whole, and if applied to one particular building type would give a misleading answer because the proportion of labour to material costs in any one trade or any one element vary from building to building. A more precise and particularised index has long been needed and the Cost Research Panel are to be congratulated on their painstaking attempt to provide one.

A basic theoretical design of flats was assumed, the amounts of material in each trade were calculated and priced. Labour costs were calculated by deducting material prices from unit rates in a sample priced bill of quantities and were weighted according to the varying labour content of different operations performed with each material. For sub-contractors work which normally appears in bills of quantities as an indigestible lump sum and attendance item specialist firms gave information.

Prices were worked out for each quarter of the years between 1950 and 1957, taking account of tool money, holidays with pay and other additions to basic hourly wages. Costs of plant, says the report, were ignored "as this involved prohibitive difficulties" yet changes in output per man hour which partly depend on the use of plant were accounted for. This, if I have understood it, seems a risky omission.

A table is shown giving proportions of material and labour per trade, e.g., for flats, Painter and Glazier take 4.9 per cent of the total, of which 3.0 is labour, 0.8 is glass and 1.1 is paint. A second table gives trade price changes from 1950 to 1957 and a third puts side by side the proportions of total cost taken by each trade out of a total which is 100 for 1950 and 143.2 (flats) and 138.8 (houses) for 1957.

Comments in the paper on all these figures are that the cost differences between two and multi-storey housing have remained fairly constant over the years, that work requiring steel has risen more sharply than other work; that fluctuations of lead and copper prices show in plumbing costs; that trades which use a small number of materials show the most erratic price changes. On labour, the report says that improvement in productivity (26 per cent since 1950) has more than offset the fact that the wage curve is steeper than the building cost curve.

A table at the end of the report shows that for flats, the cost of Electrics, Painting and Plastering have risen least in the last seven years, and Lifts, Floor finishes, Windows and Heating have risen most (electrics 24 per cent; lifts 72 per cent). This table is headed "Design Component Cost Indices"—the

"components" being such things as plastering; joinery; windows; doors and balustrades, etc., which implies the quaint notions quantity surveyors cherish as to the architects' mode of thinking when he designs. Although this paper is to help with price-time adjustments, some of the information has a wider significance. The table showing distribution of labour and material separately, among trades, could help the designer's search for labour economy. For example, we can now see that Services—which in flats compete with Frame for the lions share of total cost and which so far have been sheltered from penetration by the functionalist design approach has a labour to materials ratio of about 1:2. Of materials, tanks, sanitary fittings and electrical materials take by far the largest share (6.5 per cent out of 11.4 per cent). Of labour, heating and plumbing together and electrics and gas together take about equal shares (5.5 per cent). That this is hardly the finding one would expect, proves the value of having it.

Three criticisms of the paper must be made. One that since the figures are broken down into trades it would have been useful to have some guidance on how to use them to adjust element prices in cost analyses. Secondly that the paper is not as easy to understand as it might be. Some explanations are so wordy that one loses the thread; others are so cryptic (e.g. "costs of plant were ignored") as to leave one groping. Does this mean literally what it says or are plant costs included in the figures in some indirect way?

The third criticism is that although the report recognizes the need to explain how the figures were arrived at, the explanations given are not wholly clear. Materials prices are explained at some length but labour and productivity—which affect building prices so much more, are dealt with too summarily. One can infer from the report that productivity factors have been obtained by dividing the total materials used, by the labour force employed in a certain period—a measure which can show a more economical use of material as a drop in productivity. These criticisms do not, however, detract from the great value of this work by the Cost Research Panel. This third paper in their series preparing the way for their main report, is the best that the Panel has so far published.

7.66 practice
COST PLANNING

Building Economics: Cost Planning. (BRS Digest 109, HMSO. 3d.)

This digest discusses *Initial Costs* (planning economy and structural economy) and *Annual Costs* (maintenance service, heating and lighting). It is more in the nature of a brisk and rather breathless chat on the subject, than of a diligent research paper; indeed it hardly comes up to even the cynical definition of BRS as a body which gives you all the information short of an answer. The section on "Initial Costs" mentions ratios of external wall to floor; of circula-

tion to gross floor area and of lift prices per dwelling; suggesting reasonable target figures for design. Following paragraphs say that design should fully exploit the characteristics of materials, should not use them wastefully or without considering fluctuating market prices. It tells us that r.c. is cheaper than steel, that shuttering should be simple and repetitive and that we should design for plant to work continuously at a steady rate. The last paragraph in this section quotes ranges of factory costs (highest roof cost 2½ times the lowest, etc.) to suggest that the cost of the clients' stated planning needs should be compared with the advantages they offer.

The section on "Annual Costs" on the other hand, plunges straight into what, for the architect, will be relatively unknown territory: running costs. It begins by suggesting that selection of materials in design should be on the basis that it is worth spending up to £1 initially to save 1s. a year in annual costs on a 60-year life building. For example, hardwood instead of softwood to save painting costs. It points out that a roof covering which took 2.5 per cent. of its initial cost every year for repairs, and had to be renewed after 14 years' life, would be more expensive than a permanent covering costing 25 per cent. more initially and costing twice as much in annual upkeep.

Similar considerations apply to building staff wages. It is worth spending £10,000 more initially to save one liftman—at £9 12s. per week; grass in the long run is twice as expensive as concrete paving; the savings on narrower estate roads may be offset by the extra cost of longer walks for dustmen, grocery boys and hand as opposed to mechanical road sweeping, etc. It is at this point that we begin to see how out of touch with architectural practice BRS has become in the last few years.

The next paragraphs show a table of factory costs, broken down into element groups—the figures combine annual charges with construction costs (converted into their annual equivalents) and show "functional" costs of heating and lighting. Finally, there is a page headed "The interests of owners, users and the community," which mentions that taxation favours high running costs, that expensive land implies high building for the private developer, but not for the local authorities, whose land cost is subsidized; and that although electrical floor heating is cheap to install it costs the community more in the long run.

This is a curious Digest, its aim being more to convert than to inform. It presents an approach to architectural design that is all too rare—and for lack of which the profession forfeits a large measure of public confidence. Better architectural design awaits the provision of more comprehensive and precise criteria for the choice of plan, method, material and detail. This Digest attempts to put the less widely recognized of these criteria before the architect. But while the intention of the document is admirable its method of putting the message across is deplorable. It is a re-

Our South Coast test farm provides extreme conditions.

A house on the Hampshire coast.

Proved in field tests... On residential property... On industrial buildings

The Ore Preparation Plant at the Margam Works of the Steel Company of Wales.

GAYMEL *enamel* *proves best*

Gay's new, brilliant gloss finish, GAYMEL is the product of many years' planned research. Selected from hundreds of formulations tested in Gay's South Coast proving station, Gaymel was then given practical trials on residential and industrial property.

Alongside standard, accepted materials, Gaymel proves best. In city smoke as on exposed coastal sites Gaymel reveals outstanding tenacity in gloss and colour retention, year after year.

technical section

current characteristic of documents from those who have become engrossed in their own specialization and have lost sight of the complex of which they are part, that they intersperse unexceptionable banalities with remote obscurities. It is ineffective to tell us that materials should not be used wastefully—but we do need to have the capitalization of annual costs explained. It is not sufficient merely to inform those you are trying to teach that it is worth adding £10,000 to capital expenditure to omit one boiler stoker; or that the omission of glazing from a factory roof would save £600 annual costs. Architects will be irritated by laborious descriptions of the obvious; baffled by cryptic references to the unfamiliar. A "child's guide" would have been far more effective: explanation of the unfamiliar by means of comparative hypothetical case histories and much more expressive use of graphs and diagrams. How, for example, can the average architect know whether his design allows a concreting team or a gang of electricians to work continuously at optimum output? How is he to calculate the effect of fluctuating copper prices on plumbing costs?

Let us hope that BRS will soon change its cold shoulder attitude to the architectural profession—and begin to publish *information* on matters of this kind for the guidance of those who probably have in their hands a greater control over building costs than builders, specialists, engineers, or clients. The aim, as I have said, is admirable. Let following Digests make good the aim by leading the architect by the hand through the steps that to him will be new.

10.165 design: building types THEATRES AND CINEMAS

Architetture per lo Spettacolo. Roberto Aloï (Ulrico Hoepli, Milan. L.12,000). This handsome book is one of a series devoted to different building types illustrated by examples drawn from all over the world and commented upon in four languages (one of which is English). "Lo spettacolo" is interpreted in the widest possible sense, to cover such outlying types as open air theatres, radio and television studio theatres, and the assembly halls of civic centres and of high schools. This wide casting of the net is at first sight disconcerting; but on reflection seems justified as it corresponds to the varied fortunes which the theatre has undergone in the last 20 years. No other building type has suffered so much by the uncertainty begotten by violent and continual technical change. We have seen the legitimate theatre overtaken by the cinema, the cinema by television; and, as a result of the economic instability this has bred, we have seen every kind of experiment in theatre ownership: governments, universities, municipalities, schools and even large commercial firms have all come forward to offer their broad shoulders for carrying what is recognized to be an essential social function.

This book begins with a long and splen-

didly illustrated essay on the development of theatre design from the Greeks to Gropius' Total Theatre (1927) and Luigi Vietti's Mega Teatro Project (1935), and then proceeds to give coverage—photographs, plans, occasional detail drawings and (always) the basic data—of virtually all the important entertainment buildings which have been built since about 1930, including among them important projects like the Gropius team's auditorium in the Civic Centre at Tallahassee and van der Rohe's National Theatre project for Mannheim. Though the serious architect reader with a theatre to build will find himself wanting more technical information (reverberation times are nearly always missing), the total effect of the book is very impressive. The examples are nearly always well chosen, the photographs are splendid (there are among them some in colour which take your breath away) and they give the impression that those who commission buildings in this class have a good idea of what they want from modern building and usually get it. It is not easy to pick out specific examples. New to your reviewer and particularly deserving of study were Milan's three experimental theatres: the San Erasmo (1952) by Carminati and De Carli, the Piccolo Teatro (1952) by BBPR and Zanuso, and the Alle Maschere (1955) by Canera, Grilletto and Lattuada. Perhaps it was their example which encouraged the publishers (who are also Milanese) to give us this interesting book. It will be the best reference for many years to come.

18.196 construction: theory REINFORCED CONCRETE COLUMNS

Safe loads and properties for square tied columns to C.P. 114 (1957). A. d'O. Smith. (Obtainable from the Author, 17, Grosvenor Road, Richmond, Surrey. 3s. 9d.)

The safe load and properties of section are tabulated for square columns with mild steel or Tentor bars, the columns ranging from 12-in. square to 24-in. square, and the reinforcement from 0.8 per cent to about 4 per cent. In each case a safe axial load is given for 1:2:4, 1:1½:3 and 1:1:2 concrete, the equivalent area, and section modulus for 2-in. and 1½-in. cover. This involves about 400 cases with mild steel and 150 with Tentor Steel and will guide the inexperienced designer to the answer fairly quickly. Further tables dealing with rectangular columns and eccentrically loaded columns are to be published.

19.214 construction: details FACTORY ROOFS

Condensation in Sheeted Roofs. A. W. Pratt. (National Building Studies Research Paper No. 23. HMSO 3s. 6d.)

Though a "Research Paper" and therefore intended "mainly for those engaged on research or development work" this is of interest to architects, particularly as it goes to the trouble of giving practical recommendations. The paper presents the results of

tests lasting three winters on the behaviour of 14 northlight roofs. The tests were carried out at BRS by the author with the assistance of the Metal Fixing Association. The results tend to confirm current practice. They concern four points. The first is the need to supply a vapour barrier on the warm side of the insulation. This should have a diffusance of not less than 0.005 lb./ft.² h atm and can be supplied either by (i) a good coat of paint (which should be brushed, not sprayed), preceded by the sealing of the joints with a good adhesive or sealing compound; or (ii) by spraying with a plastic film—a method which seals both surfaces and joints together; or (iii) by lining with aluminium foil. On this last it was pointed out that the current practice of using foil-backed insulated plasterboard fixed so that the foil is on the cold side of the lining is incorrect since the moisture merely penetrates the plasterboard and condenses against the foil. If this method is used it can be corrected by laying 1-in. thick glass wool quilt on the top side of the foil. The second point is the value of ventilating the cavity. It was suggested that this might be done by spacing the roof sheets at the overlap by about ¼ in. This has little effect on the U value of the roof but may permit snow to enter the cavity and is in any case not so effective as a vapour barrier. The third point concerns over-roof insulation. This achieves its purpose by preventing the excessive cooling of the cladding and is a useful remedy for an existing roof as it causes no disturbance to work going on below. In this case, the cladding itself normally provides the "vapour barrier"; but it is important that the holes punctured in it for fixing the insulation should themselves be vapour proof. In the experiments ½-in. fibreboard was sandwiched between corrugated metal sheet and a protective layer of roofing felt and bitumen and was found to be only partly successful. It is suggested that the amount of insulation should be double. The last point concerns exposed metal surfaces on the underside of the roof. These should be brushed with anti-condensation paint or sprayed with asbestos fibre. Where the latter is used (it should not be used where sterile conditions are required) the surface should be well ventilated.

DRI-SIL silicone masonry treatments

- * Keep buildings dry
- * Prevent damp and deterioration caused by weathering
- * Keep buildings clean
- * Prevent staining and streaking
- * Do not block the pores of building materials, thus do not inhibit "breathing"
- * Maintain thermal insulation of buildings by preventing the absorption of moisture by the walls
- * Are effective for many years, thus reducing maintenance costs
- * Are easy to apply by brush or spray

For new buildings

building illustrated

College of Further Education in William Street, Slough, Bucks.

COLLEGE OF FURTHER EDUCATION

in WILLIAM STREET, SLOUGH, BUCKS; designed by F. B. POOLEY, county architect; J. C. BARKER, deputy county architect; A. R. WALKER, assistant county architect; T. J. RIDLEY, assistant in charge; consulting engineers (services) A. H. BARKER and PARTNERS; quantity surveyors D. R. NOLANS and CO.

The buildings illustrated here form, with some earlier buildings adjoining, the first two stages of a three-stage scheme for a College of Further Education. Phase II, cost analysed this week, consists of a single-storey workshop block for heat engines, and a six-storey teaching and laboratory block.

Viewpoint 1: the 6-storey science block from the south-west. The single-storey building on the left is the staffroom.

building illustrated

Left, block plan, showing the Phase I and II buildings already completed and the existing Technical School which occupies the rest of the site, in relation to the centre of Slough.

A perspective sketch showing the character of the scheme when completed; the viewpoint is taken from the future main road.

Below, site plan, showing the complete scheme and the projected main road on to which the Phase II 6-storey block, administration block and assembly hall will face. Phase III will include two further 6-storey blocks, similar in character to that already completed. The arrows indicate the photographic viewpoints.

analysis

The science block has a steel frame with three rows of columns; a row immediately inside the timber curtain walls which form the east and west faces, and another down the centre of the building giving two equal spans. East-facing and west-facing rooms are therefore generally of equal width, a fact which surprisingly is belied by the end elevations, where the proportions of brick and stone facings give an impression of wide rooms facing east and narrow rooms facing west. The arbitrary articulation of these end walls is further brought out when it is realized that, although at the south end the "flash-gap" contains genuine windows and corrugated aluminium panels (viewpoint 3, above), that at the north end consists of rendered panels (viewpoint 2, below). Here there are three facing materials—brick, rendering and stone slabs—in three different planes, all backed up by the same brick inner skin to give a normal plastered plane surface to the room behind. The organization of the external faces of the building into a number of simple planes is however successful in giving character to what would otherwise be a rather squat block of building; one only wishes it could have been achieved without this deception.

CLIENT'S BRIEF

These buildings form the second instalment of the College of Further Education and, with the first instalment, provide for nearly all the needs of the Engineering, Building and Science Departments of the College. The first phase consisted of a single-storey workshop block: the second phase comprises a small single-storey workshop block and a six-storey block containing laboratories, drawing offices and classrooms.

SITE

The site, in the centre of Slough, is within the triangle formed by the Bath Road, William Street, and the main railway line to the west of England. Much of the site is occupied by the existing College buildings, which are gradually being replaced by new development. Access to the site is at present via College Road from William Street, but since a new main road is proposed, which will link the Bath Road and William Street and form the southern boundary, access will later be from this road.

PLAN

The buildings erected to date form only part of the final College, and their layout has of course been determined by the master plan for the whole College, as well as by the presence of existing buildings and the required departmental breakdown of accommodation. Ultimately the College will consist of three six-storey blocks linked by either single- or two-storey buildings.

MAIN CONSTRUCTION

The single-storey heat engines block has load-bearing walls, and the wood-wool roof is supported on r.s. beams, to which are bolted steel frames for the monitor rooflights. A steel frame has been employed throughout the multi-storey block: the floors are of prestressed units bearing on the main steel beams, with woodwool spanning between the units to act as shuttering for the structural concrete topping, which has been given a trowelled finish so that it was possible to omit the conventional screed floor finish. Concrete casing to beams and stanchions has been omitted and the one hour fire resistance required achieved by encasing the stanchions with an asbestos based board, the same board being used for suspended ceilings. This suspended ceiling construction allows the removal of any panel at any time, so that access to services within the ceiling void can be had easily when required.

The north and south walls are of cavity construction, the inner leaf being brickwork and the outer leaf either facing brick or artificial stone slabs.

The east and west elevations of the block are formed by timber curtain walling, each facade being approximately 90 ft. long $\times$ 80 ft. high. The steel frame is on a 10-ft. bay and storey heights are 12 ft. 6 in., and the curtain wall is built up with timber frames 10 ft. wide $\times$ 12 ft. 6 in. high. These frames are bolted to each other and to rustproofed steel tees, running vertically at 10-ft. centres, which are fixed to the structural steel frame. The frame units are sub-divided by mullions on a 3-ft. 4-in. module (this was determined by planning requirements) and by transoms. The "dead" glazed and opening light sections of the frames are sized and divided to provide the necessary degree of ventilation, to reduce all glass sizes to 32-oz. sheet, and to allow the windows to be cleaned from inside the building.

At each floor level a hollow pot fire stop sill wall is provided inside the curtain wall: this and the suspended ceiling are concealed behind a coloured glass infill panel.

building illustrated

The hardwood-framed curtain walling to the east and west elevations is designed on a 3-ft. 4-in. module, and consists of completely framed-up units measuring 10 ft. wide by 12 ft. high, bolted together at column centres (viewpoint 4, above). Fixed lights are glazed directly into the framing with hardwood beads, opening lights consist of independent aluminium windows let into the framing, and apron panels are of coloured cast glass backed up with a hollow-pot fire-stop wall.

The low brick wall at the base of the curtain walling is set forward to accommodate a wide gutter which catches rainwater running down the face (viewpoint 5, left).

single-storey block, $\frac{0.89}{1}$

multi-storey block, $\frac{0.33}{1}$

Frame or load-bearing element				
Single-storey block: load-bearing brickwork and r.s. beams with 40-ft. span.	5	3 1/2		
Multi-storey block: steel frame. R.s. stanchions and beams with bolted connections. Beam span, 23 ft. 4 in.			9	2 1/2

Upper floor construction			3	6 1/2
Patent prestressed concrete floor with integral screed floor finish. Prestressed units at 2-ft. 4-in. centres with woodwool spanning between, covered with concrete topping.				

Staircases			4	0 1/2
Two staircases of in-situ reinforced concrete, with hardwood treads with non-slip nosings. Height from floor to floor: 12 ft. 6 in. Width between landings: 7 ft. 11 in. Width of stairs: 3 ft. 6 in. between hand-rails. Total rise: 75 ft.				

Roof construction				
Single-storey block: steel purlins and wood-wool slabs finished with 3-layer felt, and chippings to flats, mineralized finish to monitor roofs.	4	11 1/2		
Multi-storey block: timber purlins and compressed straw slabs, finished 3-layer felt and chippings.			1	0

building illustrated

The entrance hall is in the form of a single-storey glazed link between the 6-storey block and the Phase I workshop. Above is the interior of the entrance hall with its large and clear board giving the whereabouts of each department. The floor is of terrazzo tiles.

The short corridor on each of the upper floors is served by two staircases and a lift; the stairs are separated from the corridor by smoke-stop glazed screens, one of which may be seen above. The dark panels on either side of the lift recess are access panels to vertical service ducts. These ducts, and others at the ends of the building, link up with a horizontal duct running along the north-south axis, concealed by the suspended ceiling in the corridors and boxed out in the laboratories and classrooms as shown below.

The arrangement of services in horizontal spine ducts has allowed considerable freedom in the layout of laboratories, where almost every piece of equipment is linked with services. Above, a chemistry laboratory. Below, some typical benches in the foreground and fume cupboards against rear wall below the service duct.

The waste of space which often occurs when columns are planned a short distance inside exterior walls has been largely overcome by placing benches under the windows (below).

Roof lights

Monitor type roof lights to single-storey block, bolted to timber frames. Timber, painted, lights glazed with Georgian wired glass.

Number of roof lights: two rows.

Total area: 770 sq. ft.

Windows

Single-storey block: steel windows and opening lights.

$$\text{Ratio: } \frac{\text{windows}}{\text{floor area}} = \frac{0.39}{1}$$

Multi-storey block: timber curtain wall. Hardwood frame units, finished 3 coats of boat varnish. Anodized aluminium opening lights. Cost includes external doors.

$$\text{Ratio: } \frac{\text{windows}}{\text{floor area}} = \frac{0.30}{1}$$

External doors

Single-storey block: sliding folding doors of 2-in. softwood, ledged, framed, braced and battened, finished prime and 3 coats of paint. And some glazed and panelled doors with 2-in. hardwood frames, fully glazed.

$$\text{Ratio: } \frac{\text{doors}}{\text{floor area}} = \frac{0.05}{1}$$

Multi-storey block: cost given under "Windows" above. Glazed and panelled doors with 2-in. hardwood frames, fully glazed.

$$\text{Ratio: } \frac{\text{doors}}{\text{floor area}} = \frac{0.002}{1}$$

Glazing

$\frac{1}{4}$ -in. polished plate in large windows in south elevation and foyers.

32-oz. sheet for curtain wall.

$\frac{1}{4}$ -in. Georgian wired polished plate for smoke stop screens and fully glazed doors.

PARTITIONING

Internal partitions

4-in. hollow clay pots generally.

$4\frac{1}{2}$ -in. and 9-in. brickwork for services core, staircases, lift shaft, etc. Both $\frac{3}{8}$ -in. plastered.

Screens

Hardwood smoke stop screens to staircases, oiled and waxed, in multi-storey block. Glazed steel screens in single-storey block.

W.c. doors and partitions

Blockboard in hardwood frames, blockboard finished prime and 2 coats of paint; hardwood, oiled and waxed.

Internal doors

Semi-solid core flush plywood-faced doors, and half-glazed doors throughout. Timber finished prime and 3 coats of paint.

Lavatory basins	1	18
Laboratory sinks	3	33 (sinks and receivers)
W.c.s (high-level cisterns)	—	10
Slab urinals (each 6-ft. long)	—	3
Cleaners' sinks	—	6
Drinking fountains	—	5

Heating installation	9	3	7	5½
----------------------	---	---	---	----

Cost includes costs of boiler and hot and cold water installation.				
Low pressure hot water system. Plant in boiler room, calorifier in multi-storey block.				
Criteria temperatures: 62 deg. F. in main rooms, 60 deg. F. in corridors.				
"U" values of walls and roof: 0.25 throughout.				
The cast iron sectional, oil-fired boiler also serves Phase I building; rated at 1,302,000 B.Th.U.s per hour.				
Ventilation system: natural ventilation, except in metrology laboratory, where there is a temperature control plenum.				

Drainage system	1	0½	1	0½
Separate system. Surface water taken into soakaways. Surface water drain not available—good draining capacity of sub-soil.				
Salt-glazed ware generally, cast iron under buildings.				

analysis

Gas installation

Cost included in heat installation, above.
Main supply to points in laboratories.

Electrical installation

Tungsten in classrooms, fluorescent in drawing offices and laboratories. Fittings chosen to comply with MOE regulations. Illumination level: labs. and classrooms, 15 f.c.; other rooms, 10 f.c.; corridors, 3-6 f.c.

	Single-storey	Multi-storey
Tungsten	21	142
Fluorescent	26	158

Wiring and switching types

Main distribution: v.i.r. in trunking throughout.

Sub-main distribution, sheathed with p.v.c.

Plastic flush wall switches.

Power supply type

415/240 v. 3-phase.

Lifts

One passenger lift in multi-storey block. Capacity, 3,000 lb., 20 persons. Speed, 200 ft./min. Motor room on 6th floor.

Total cost per sq. ft.:

Single-storey block $\frac{\pounds 13,923}{3,760 \text{ sq. ft.}} = 74 \text{ } 0\frac{1}{2}$

Multi-storey block $\frac{\pounds 118,561}{27,815 \text{ sq. ft.}} = 85 \text{ } 3$

Paved areas

Concrete roads and parking areas round buildings, of concrete on hardcore.
Other paved areas of concrete paving slabs, cobbles and gravel.

FIRE PRECAUTIONS

Structural: Steel frame clad with asbestos board casings and ceiling panels, giving 1 hour's resistance.
Hose reels; alarm bell system; foam, soda, acid and CO₂ extinguishers, as applicable. Internal fire stop wall to sill height inside curtain wall.

Planning: All round access for fighting. Two staircases with separate exits provide means of escape.

SUMMARY

Floor area: Single-storey block, 3,760 sq. ft.; multi-storey block, 27,815 sq. ft.
Date of tender: October, 1955.
Date of completion: April, 1957.
Net cost: $\pounds 132,484$.
External works: $\pounds 2,924$.
Gross cost: $\pounds 135,408$.
Accommodation: general and practical classrooms, 76.23 per cent., staff rooms and circulation, etc., 23.77 per cent.

Single-storey block	Multi-storey block
s d	s d

11 5 7 1

COST COMMENTS

It might appear that these two analyses would provide a comparison of single- and multi-storey work, but their differing functions result in differing cost targets.
Workshop block: It would appear that local industry dictates the service requirements for teaching workshops (e.g. printing, aeronautical, electrical, etc.) Hence the architect is left with very little money to spend on elements other than services (which take 23s. 6½d. out of a total cost of 74s. 0½d. per square foot). For example, "External walls and facings" at 6s. 10d. per sq. ft. of floor area, with a ratio of 0.89, can be calculated at $\frac{6s. 10d.}{0.89} = 7s. 8d. \text{ per sq. ft.}$

ft. of wall, which is very economical. Finishings have also been kept to a minimum, e.g. fair face brickwork. It should be noted that "Internal Partitions" contains walls which are load bearing. "Preliminaries" are roughly the same for workshop and laboratory blocks, no doubt because the priced bill showed a lump sum. But actual apportionment might well be different because of the effect of height on plant, insurance costs, etc.

Science block: It has been found possible to afford a much better external finish and the cost per sq. ft. of wall of the solid walling can be calculated at 18s. 2d., compared with the workshop's 7s. 8d. The curtain walling at 10s. 10d. per sq. ft. of floor area represents the surprisingly high unit cost of 36s. 2d. per sq. ft. without glazing. (As this analysis is taken from a priced bill, not a final account, it may be that this represents a P.C. sum for work not fully detailed at tender stage.) "Staircases" and "Lift" costs indicate that almost 10 per cent. of the cost goes on vertical circulation. The upper floor construction with its integral screed finish seems to have been an economical proposition, although one might have doubts regarding the floor layer's attitude to the loss of his traditional screed and the question of sub-floor protection before the arrival of the floor layer.

SITE ORGANIZATION

Site labour and equipment: Labour was organized on the site by a general foreman, trades foremen, key personnel and local labour.

2-tool mobile compressors were used for breaking out old concrete in air-raid shelters and concrete floors of existing buildings. 10 RB excavator was used for six weeks, and a ¾ y.c. linear dumper for five months. 1 Junior Vibrosail compactor. 10/15 cwt. 2-barrow platform hoist with 90-ft. mast, for six months. 1 Saga hoist. 1 Fix Rammer PSN size 1A gun for shooting bolts into brickwork and fixing cramps into steel stanchions. 14/10 Diesel Mixer, 5/3 mixer. Scaffolding, approx. 20,000 tubes, 5,000 fittings.

Sub-letting: Glazing; cast-iron drainage; painting; plastering and granolithic floors; asphalt tanking.

Eva and Nils Koppel, architects (material supplied by John Whalley)

The unusual proportions of this facade are due to the fact that behind the painted asbestos fascia board there is a deep (but thin) r.c. beam. The facade represents, therefore, a translation into reinforced concrete of a design which in England would have been carried out in timber alone.

Nairn 'quality' linoleum made in two thicknesses

LINTILE 6.70 mm BATTLESHIP 4.50 mm

In the entrance hall of Ellerman Lines' new

City offices, Nairn Lintile Linoleum in black and greystone

forms a floor which is both attractive and hard wearing.

Plain or marbled Lintile and Battleship linoleums are made in a

wide range of colours from which architecturally designed

floors can be built. Nairn Linoleum is chosen throughout the

world for quality...fine marblings...colour...hard wear

MODERNISE ...

WITH LINOLEUM

From the vast range of patterns and colours available, the interior decorator has a medium in Linoleum which gives him the widest scope for creative enterprise in the modern furnishing idiom. Any member of the Linoleum Manufacturers' Association will gladly help him to develop his ideas. Linoleum is quiet to the tread and is resilient; it resists abrasion. Linoleum is the long-life floor covering that is supremely easy to clean and maintain.

DEPARTMENT STORE AT SOUTHAMPTON

The new Bourne & Hollingsworth store at Bargate, Southampton, designed by W. H. Saunders & Son is entirely an in-situ concrete structure, with external facings of Portland Stone (to conform with local authority requirements) and panel infilling of polished blue-black Welsh slate. The vertical features, shop windows and canopy fascia are in satin-finished stainless steel and shop fronts are of Napoleon and beige marble. The flower boxes shown in the photograph were temporarily placed in position for the opening. The building was erected in 9½ months, including all shopfitting. General contractors: Gilbert-Ash Ltd.

Announcements PROFESSIONAL

F. Hamer Crossley, DIP. ARCH. (L'PL), F.R.I.B.A., would like all further correspondence addressed to the County Architect, County Offices, Matlock, Derbyshire.

M. W. Smith, A.R.I.B.A., A.A.DIPL., M.T.P.I., has now moved to 21, Moreton Avenue, Harpenden, Herts, and is working for the Borough Architect's Department at Luton.

Davis, Belfield and Everest, Chartered Quantity Surveyors, have now opened an office at 13, St. John's Street, Cambridge (telephone: Cambridge 51198). The office will be under the personal supervision of V. Bugg, A.R.I.C.S., and trade catalogues would be welcomed.

D. George Porter, B.Arch., A.R.I.B.A., A.N.Z.I.A., A.M.T.P.I., and Lewis E. Martin, A.A.DIPL. (HONS.), A.R.I.B.A., A.N.Z.I.A., have taken into partnership, Bruce H. Falconer, PH.D., B.E., D.I.C., A.M.I.C.E., A.M.N.Z.I.E., A.M.A.S.C.E. They will continue in the meantime to use the title of Porter and Martin but will describe themselves as Registered Architects, Civil Engineers and Planning Consultants, practising, as before, at 219, Lambton Quay, Wellington, C.I, New Zealand.

TRADE

Under a scheme of reorganization Carter & Co. Ltd. will now function simply as a holding company owning and controlling the subsidiary companies of the Carter Group. To make this fully effective, the tile-making side of the business carried on at the White Works and Architectural Potteries at Hamworthy will become a new subsidiary company known as Carter Tiles Ltd.

ANOEL VILLENEUVE DESIGN

Pestcure Ltd., specialists in dry rot and woodworm eradication, have moved to larger offices at 1a, Cavendish Square, W.1, from their previous premises at 30, Cavendish Square.

F. Hills & Sons Ltd., Norton Road, Stockton-on-Tees, have appointed a further new distributor of Duramel, the plastic-faced plywood—Bristow & Copley & Co. (Coventry) Ltd., 106/112, Foleshill Road, Coventry.

The Association for Consumer Research Ltd. has now moved to 7, Great James Street, London, W.C.1, and Caspar Brook has been appointed full-time director of the Association from June 1.

From April 21, the address of the Hull Branch Office of British Insulated Callender's Cables Ltd., will be 49, Mytongate, Hull (telephone: 16470 and 16367).

John Macaulay, a Glasgow sales representative of Turners Asbestos Cement Co. Ltd., left on April 9 for East Africa. He will be travelling in Kenya, Uganda, Tanganyika for a month surveying the market for pressure pipes. Mr. Macaulay is well known to water engineers all over Scotland, having been a Scottish representative of Turners Asbestos Cement Co. Ltd., Pressure Pipe Department, for 25 years.

BX Plastics Limited have pleasure in announcing that they are extending the manufacture of Expandable Polystyrene at their Brantham Works. This material will be marketed solely by British Resin Products Limited, Devonshire House, Piccadilly, W.1, and Expanded Plastics, Limited, Mitcham Road, Croydon (a subsidiary of Expanded Rubber Co. Ltd.) under the trade name "Polyzote."

J. A. Crabtree & Co. Ltd., are holding an exhibition of their products at the Griffin Hotel, Leeds 1, from May 5 to 9. They will be exhibiting particularly their Type B-15 and B-26 air break contactor gear and Type D-6 manual starters together with auxiliary equipment and limit switches.

The Guild of Public Pharmacists has arranged for an open discussion on "The Planning and Management of the Pharmaceutical Department," to be held at 5.30 p.m. on Wednesday, May 7, in the Conference Hall at Olympia during the week of the International Hospital Equipment and Medical Services Exhibition.

Sherwoods Paints Ltd. have opened a new depot at Edgecumbe Place, Plymouth, to assist stockists with prompt deliveries and service.

J. A. Hewetson & Co. Ltd., Marfleet, Hull, and their associate company—Horsley, Smith & Co. Ltd., of Hayes, Middlesex, have established a Woodworm & Dry Rot Eradication Service by the Protim process covering the whole of England and Wales. R. H. Morfitt, A.R.I.B.A., and R. M. Harris, A.F.S. (ENG.), have been appointed as their specialist consultants in this field.

Due to a new policy of concentration of sales effort by the Domestic Appliance Department of Ferranti Ltd., in promoting the all-electric house, the Company will relinquish the manufacture, marketing and servicing of some models in their present range of Domestic Heating Appliances. These appliances are to be manufactured in future by E. K. Cole Ltd. The change will take effect from June 1. Ferranti will continue to make the Fridge-Heater and Electric Panel Fires, but E. K. Cole Ltd. will manufacture, market and service under their own name the Firestreak wall fire, mistral convector, Flamera coal fire, Victor range of lightweight portables and bathroom fires.

Henley's Engineering Sales Department have now moved to 59/62, High Holborn, London, W.C.1, due to re-allocation of office accommodation at their Head Office.

Bernard John Hewlett, Sales Director of Fisher's Foils Ltd. of Wembley, died on April 3, at the age of 49. Mr. Hewlett joined the staff of Fisher's Foils in 1929. During his service with the Company he rose from a junior clerk to Sales Director.

Correction

The name of the curtain wall manufacturers for the secondary school at Balls Park, Hertford (AJ, April 24) was omitted from the list of contractors. They were Quicktho (1928) Ltd., who also supplied the opening windows.

26.E1 REFERENCE BACK

Readers are asked to note that on the reverse of the Sheet, heading "Sizes," piles now vary in length from 10 ft. to 100 ft. The last entry in the table under "Max. load subject to length" should be amended to "100 tons." Heading "Methods of Driving," sub-heading "Large contracts," delete "Pile frame—Steam hammer." The telephone number of the Head Office is now Skyport 5222.

IS YOUR OFFICE ARCHITECT DESIGNED?

Is the furniture sufficiently flexible to enable you to take on more staff for a new job without crowding out the office or renting a new one? Whether you have a one man practice or a hundred on your staff: The Magpie System, as well as "looking right" will enable you to replan your layout, making correct use of every inch of awkward space.

★ The maximum amount of light is admitted for a given aperture due to either the total absence, or the minimum number, of glazing bars.

★ These roof-lights are easily and quickly fixed to either metal, wood or concrete curbs. They can, if required, be fitted on standard forms of metal ventilating units.

★ A pleasing, clean appearance is obtained from the interior of the building.

★ They are easily cleaned both inside and out, and are resistant to atmosphere and sulphur fumes.

★ As compared with all other translucent materials they have a high degree of fire resistance.

GLASS BENDERS FOR OVER A CENTURY

The annual post-free subscription rate payable in advance is £3.3.0. sterling; in U.S.A. and Canada \$10.50; elsewhere abroad £3.10.0.

THE ARCHITECTURAL REVIEW
9-13 Queen Anne's Gate, Westminster, S.W.1.
Whitehall 0611

Please send me the ARCHITECTURAL REVIEW until further notice:
name _____
address _____

The index for the Architectural Review for the half-year ending December, 1957 has just been published; it is reproduced as a supplement to the April issue and is not normally issued separately.

The Architectural Review's new standard binding, with alternate years bound in black and white, and alternate volumes initialled A and B, makes easier the identification of individual volumes, and their proper replacement on the shelf. The binding is buckram, and the price of binding per volume is 25s. Copies to be bound should be addressed, with the appropriate index, direct to the Architectural Press warehouse, Abbey House, 8, Victoria St, London, SW1

APRIL

Triangular wooden church at Les Grés, France, by Rome Prize Winner Michel Marot; from Peter Hammond's article *A Liturgical Brief*, [calling for a new functional approach to church design.

Another church from *A Liturgical Brief*, Klarenbach Lutheran, Düsseldorf, by Wilhelm Konigter.

House in the Isle of Wight, by James Stirling and James Gowan.

MAY

Ove Arup's house in Highgate, by the Danish architect Erhard Lorenz.

Street side clutter, such as will be imposed on any architect's ideal vision if it is built in a town; from Kenneth Browne's article *Streetscape with Furniture*, the street in this case being replanned Notting Hill Gate.

Great Gothic space-frame; Queen Hughes' magnificent model to illustrate his article on roof of York Chapter House.

JUNE

Town centre of Vallingby, above, and the market place of Harlow New Town, right; contrasts in animation from *Hubs Without Wheels*, a survey of two important new town centres.

Building development in Victoria Street near the Abbey, touch off again the future of Westminster Precinct. This enfilade of the spires of Westminster highlights Gordon Cullen's proposals in *Westminster Revisited*.

The flexibility of **Lead** short connections

Lead short connections for baths, wash basins and sinks on the L.C.C. Estate of 928 flats at Loughborough Road, S.W.

Architect to the London County Council: Hubert Bennett, F.R.I.B.A.
Contractors: Tersons Ltd. Plumbing Contractors: Z. D. Berry & Sons Ltd.

- saves time in installation
- minimises risk of damage to appliances caused by excessive rigidity
- reduces costs particularly when the new lighter weights of lead pipe permitted under B.S.602 and 1085: 1956 are utilised

LEAD *h* LASTS

The Lead Technical Information Bureau will gladly help with problems on the use of Lead Sheet and Pipe in building work. Details of the main uses are given in a series of Information Sheets and Bulletins, which can be obtained by applying to the Association.

SEAPORCEL

These 'BEFORE-AND-AFTER' pictures, taken twenty-two years ago, show how effectively SEAPORCEL PANELS can be used to modernize old-fashioned frontages without demolishing existing masonry.

Transformed in 1936 from a piano store to Cunard Shipping Offices, the premises still stand like this today—sheathed in SEAPORCEL porcelain enamel.

PORCELAIN ENAMELLED PANELS transformed this Boston building in

1936

There need be nothing stereotyped about SEAPORCEL frontages. The panels for each separate job are designed and enamelled in pattern, style and colour to the architect's specification.

SEAPORCEL panels are also being used to add colourful emphasis and appeal to new structures, while SEAPORCLAD panels are laminated-insulated infill panels for direct curtain wall construction.

Full particulars of SEAPORCEL and SEAPORCLAD panels are now available from the sole U.K. manufacturers:

Stage 1

2" C.R.F. is the code symbol by which we describe our 2" Channel Reinforced Wood Wool Roofing Slab. Developed from the 2" heavy duty slab the 2" C.R.F. is used for roofing where the expected humidity within the building is low to normal, and where maximum economy is essential. The 16 gauge steel channel reinforcing enables spans up to 7ft. to be undertaken without intermediate support. This is a good all-round slab. When covered with a $\frac{1}{2}$ " screed and felt finish it has a calculated overall "U" value of 0.23 B.T.U. and a sound absorption factor of 0.85 at 500 c.p.s.

The fire resistance properties of this slab are excellent, rate of flame spread being grade 1. It is particularly useful for electrically or centrally heated factories, stores, school classrooms and many other types of building.

Please write for full particulars to—

THERMACOUST LTD

ROOFING SLABS

20 ALBERT EMBANKMENT · LONDON S.E.11
TEL: RELiance 7281

When used in conjunction with inverted "T" purlins no special fixing arrangements are necessary. Type 1 site fixing clips can be used with R.S.J. or flat topped purlins.

The slab may also be provided with any of the exclusive range of Thermacoast Pre-clips for fixing copper, SNAPRIB aluminium, slates, tiles, or false ceilings.

The colour of things to come

The architecture of today and tomorrow has its needs well provided for by John Hall & Sons of Bristol, makers of a complete range of paint finishes headed by the famous Brolac and Murac P.E.P. For these paints are the paints of today and tomorrow. New techniques of manufacture keep them ahead of all new developments, so that Brolac Gloss Enamel Finish still has no equal as a hard-wearing, weatherproof finish of exceptional beauty, while Murac P.E.P. plastic emulsion paint and Murac Matt Oil Finish are used for high quality wall and ceiling decoration throughout the country. The question of colour ranges is constantly under review to keep abreast of architectural progress, and architects have at their command a highly skilled Technical and Colour Advisory Service by simply contacting John Hall & Sons (Bristol & London) Ltd., Hengrove, Bristol 4.

Fit NEW sun-aire blinds

for 3 good reasons

SMOOTH POSITIVE ACTION! They raise, lower, open and close at a touch, and lock with a reliable, positive action. The Sun-aire exclusive S-shaped slat provides a light-tight fit when closed and greater reflection when open.

QUICK-EFFICIENT FITTING! Sun-aire's new ribbed headpiece clips *instantly* into position. The bottom rail, too, is ribbed for greater strength and rigidity.

EASY-ROLLING PULLEYS! Corrosion, wear and vibration are eliminated with Sun-aire's nylon wheels and pulleys.

More good reasons: Sun-aire blinds are available in bright colours and pastel shades with matching or contrasting tapes. Cotton tapes are standard but plastic-coated tapes are also available. Please write for literature.

**IS A DRIVER
BETTER**

**THAN A
PUTTER?**

The answer, of course, depends on whether you happen to be on the tee or on the green.

Similarly with air filters; no single air filter is capable of meeting every need. That is why the Air Control service is particularly helpful. We make all types of air filter and we are able to offer the filter that gives you the efficiency you need plus the maintenance characteristics you want, i.e., the right tool for every job.

Our approach to dust and fume control is the same. From our very wide range of equipment we can offer the type best suited to each specific problem. May we send you copies of our comprehensive literature and design data?

A wide choice of fine colours!

As is well known, "Rosemary" Clay Roof Tiles are made in a wide range of colours. These colours, be it noted, are *fadeless*—unaffected by the scorching suns of summer and the rains and frosts of winter. Whatever the colour you require, you can be sure it is in the "Rosemary" range. This includes lovely brindles, browns, reds, and multitone. This beauty of colour is matched by the sterling quality of these tiles.

STANDARD STEEL FRAMED BUILDINGS FOR INDUSTRY OR AGRICULTURE

We supply and erect steel framed structures,
also sheeting and glazing for cladding the
frame.

Our advice is freely offered upon receipt of
general details of your requirements, backed
up by a very long experience of problems
met with in supplying and erecting steel
framed structures of all kinds.

Foundations, flooring, and builder's work
are carried out by the appointed General
Contractors.

A TONIC FOR ARCHITECTS

WHO SUFFER FROM GLAZING TROUBLES

Reputations are safeguarded, including our own, because "Ferramastic" glazing is covered by work inspections as part of the specification service. By technical visits at the glazing stage, we can advise upon fixing techniques, inspect work in progress and, in particular, report back upon the glazing job. "Ferramastic" specifications can bring this kind of co-operation into being without extra cost. We do recommend early consultation with us, to gain full benefit from the service. Suggested glazing procedures can be supplied on request

Time-tested rust-resistance

Like the famous Iron Bridge at Coalbrookdale - dating from 1779 and still "remarkably free from corrosion" - Baldwin Butt Hinges are craftsman-made of cast iron. The solid drilled knuckles which give larger bearing surfaces and cannot unwrap - plus the graphite content of cast iron - make Baldwin Butt Hinges smooth, silent and enduring.

TYPROD MATS USED BY BRITISH TRANSPORT COMMISSION

Photograph illustrates the Typrod Wiper Mat at the entrance to Liverpool Street Station Buffet.

TYPROD
WIPER MATS

Following a thorough and exacting test by British Transport Commission officials, the Typrod Wiper Mat is to be used in Station Buffets and Restaurants. The new wiper link assembly proved most effective for cleaning dirty, muddy shoes at entrances, thus keeping floors cleaner and safer; carpets are protected too. Typrod Mats are also ideal for both inside and outside use, in Municipal Buildings, Hotels, Restaurants, Factories or Offices.

Stop that water waste!

with Prestex non-concussive spring taps

Thousands of gallons of water may trickle away in large public buildings, factories, schools, hotels and ships from taps not turned off completely. Hot water, especially, is expensive.

Prestex non-concussive spring taps are a sure answer to this costly irresponsibility, a big problem *particularly* shown in its true light in times of drought. Models available include:

876B

(with the NEW '3D' style button top) 3/4" Pillarcock. 3" nose and tail.

- Non-concussive self-closing action
- Light pressure only required to operate
- Strong black non-heating button top (with '3D' style red and blue inserts for "Hot" and "Cold") making it difficult to tie down or wedge open the valve
- Self-regulating to any pressure up to 100 lb. per sq. in. Each tap fully tested on water pressure.
- As easy to re-washer as an ordinary tap
- Chromium finish on a heavy nickel base

880B
1/2" and 1/2" Bibcock.

884B
1/2" Stopcock.

884W
1/2" Shower control Stopcock — also 884C for ceiling fixing.

Approved by all the large Water Authorities.

BOROUGH OF WILLESDEN
BOROUGH ENGINEER & SURVEYOR'S
DEPARTMENT

Applications are invited from suitably qualified and experienced persons for the following permanent appointments:

- (a) ASSISTANT ARCHITECTS, Special Grade (£750-£1,030 p.a.).
- (b) ASSISTANT ARCHITECTS, Grade A.P.T. II (£725-£845 p.a.).
- (c) ASSISTANT ARCHITECT, Grade A.P.T. I (£575-£725 p.a.).

London weighting, maximum £30 p.a., is payable in addition to the above salaries. Vacancies should be advertised by first post on Friday morning for inclusion in the following Thursday's paper.

The Council is unable to assist with housing accommodation. Forms of application and conditions of appointment may be obtained from the Borough Engineer and Surveyor, Town Hall, Dyne Road, Kilburn, N.W.6. Applications to be returned to the undersigned not later than 9 a.m. on Monday, 19th May, 1958.

When writing for application forms candidates must state for which appointment they wish to apply.

R. S. FORSTER,
Town Clerk.
9325

CITY OF SHEFFIELD
CITY ENGINEER & SURVEYOR'S
DEPARTMENT

SENIOR PLANNING ASSISTANT

Special Classes Grade

Applications are invited for the position of Senior Planning Assistant, on the Staff of the City Engineer and Surveyor and Town Planning Officer (H. Foster, M.A., M.I.C.E., M.I.Mun.E.). The post is established in the Special Classes Grade (£750-£1,030 p.a.).

Qualifications: A.M.T.P.I., A.R.I.B.A. or A.R.I.C.S. preference will be given to candidates with Planning and Architectural experience. Consideration will be given to making housing accommodation available to a suitable applicant. Superannuable post, N.J.C. conditions of service, medical examination.

Applications, stating age, education and training, qualifications, experience, present and past appointments (with dates and salaries) and quoting the names of two referees, should be submitted to the undersigned by the 26th May, 1958.

JOHN HEYS,
Town Clerk.
9324

Town Hall,
Sheffield, 1.

EAST KILBRIDE DEVELOPMENT
CORPORATION

Applications are invited for the following posts:-

(1) SENIOR ARCHITECT (Grade I). Salary scale £1,225 per annum, rising by annual increments of £57 to £1,568 per annum. This appointment is in connection with the development of the New Town at East Kilbride, Lanarkshire; applicants should be fully qualified and experienced architects capable of directing and supervising a section of the building work of the Corporation; they should have experience of design and construction of residential areas, industrial and commercial works, and the handling of large contracts.

(2) ARCHITECTS. Salary scale £844-£1,146 per annum. Applicants must be A.R.I.B.A., with at least two years' qualified experience.

(3) ASSISTANT ARCHITECTS. Salary scale £679-£811 per annum. Applicants should at least have passed the Intermediate Examination of the R.I.B.A.

The commencing salary will be in accordance with qualifications, experience, etc.; the appointment is subject to the Corporation's Conditions of Service and Superannuation Agreement; medical examination of a house or flat will be made available if required. Application forms from the General Manager, Torrance House, East Kilbride, to whom they should be returned not later than 19th May, 1958. Canvassing, directly or indirectly, of the members of the Corporation will constitute an absolute disqualification. 9365

STEENEY M.B.C. require TEMPORARY ARCHITECTURAL ASSISTANTS at the following grades:-

A.P.T. I (£575-£725).

A.P.T. II (£725-£845).

Special Grade (£750-£1,030).

All plus London weighting allowance. Commencing grade and salary fixed according to qualifications and experience.

Applicants should possess suitable architectural qualifications, and for the senior grades be experienced in design, construction, and in the administration of large building contracts.

Applications should be made in writing direct to the Borough Engineer and Surveyor at Nos. 227/233, Commercial Road, E.1. 9392

BOROUGH OF HESTON AND ISLEWORTH
APPOINTMENT OF DRAUGHTSMAN

Applications are invited for the appointment of a Draughtsman in the Architect's Section of the Borough Engineer and Surveyor's Department. Salary grade A.P.T. I (£575-£725 p.a.) plus London weighting.

Candidates must be capable and expeditious draughtsmen and preference will be given to those with architectural experience.

The Council are unable to assist the successful candidate with housing accommodation.

Applications, on forms to be obtained from the Borough Engineer and Surveyor, 88, Lampton Road, Hounslow, must be returned to him not later than noon on 19th May, 1958.

D. MATHIESON,
Town Clerk.

Town Hall,
Hounslow. 9326

House available for let if required. Apply, giving details of training and experience, with copies of three references, to Burgh Architect, 64A, Bank Street, Kilmarnock, within 10 days.

W. L. WALKER,

Town Clerk.

Council Chambers, Kilmarnock. 9359

SURREY COUNTY COUNCIL

Applications invited for appointment of ASSISTANT ARCHITECT, Special Grade, £750-£1,030 p.a., plus £30 p.a. London allowance. Must be A.R.I.B.A.

Full details, present salary, and 3 copy testimonials, to County Architect, County Hall, Kingston, as soon as possible. 9378

COUNTY COUNCIL OF THE WEST RIDING
OF YORKSHIRE

OFFICE OF THE COUNTY ARCHITECT

Applications are invited for appointments in the grades shown below, the salary ranges of which are:-

Senior Grade	£1,240-£1,380.
A.P.T. V	£1,175-£1,325.
A.P.T. IV	£1,025-£1,175.
Special	£750-£1,030.
A.P.T. III	£845-£1,025.
A.P.T. II	£725-£845.
A.P.T. I	£575-£725.
Higher General Division	£230-£560.

(a) ARCHITECTS:-
Senior Grade (£1,240-£1,380). Two vacancies.

A.P.T. V. Two vacancies.
Applicants should be Registered Architects and Associates of the Royal Institute of British Architects, and must possess in an ample degree the professional and administrative ability to undertake responsibility and have had good training and experience in the design and construction of modern buildings.

(b) ARCHITECTS-for appointments in the Divisional Office at Doncaster:

A.P.T. V. One vacancy.

Special. Several vacancies.

A.P.T. II. Several vacancies.
Applicants for the post in Grade A.P.T. V should have experience in connection with educational buildings, and should be Associates of the Royal Institute of British Architects, and must possess in an ample degree professional and administrative ability as the candidate appointed will be responsible for taking charge of the Divisional Office in the absence of the Divisional Architect.

(c) QUANTITY SURVEYORS:-

Senior Grade (£1,240-£1,380). One vacancy.

Special or A.P.T. II, according to experience. Several vacancies.

Applicants for Special Grade should be Associate Members of the Royal Institution of Chartered Surveyors and have had experience in the preparation of Bills of Quantities, measuring for and adjustment of final accounts.

(d) TRAINEE SURVEYING ASSISTANTS:-

Higher General Division.

Applicants will be considered from age 16 upwards, providing they have the General Certificate of Education in English (or English language), Mathematics or a Science, and one other paper at ordinary level. Older candidates will be considered for Grade A.P.T. I where their experience warrants.

(e) HEATING ENGINEERS:-

A.P.T. V. One vacancy.

A.P.T. IV. One vacancy.

Applicants must be Associate Members of the Institution of Heating and Ventilating Engineers, and be capable of carrying out the design and detailing of heating, hot water and ventilating installations and preparing the necessary drawings and specifications for schools and other public buildings.

The appointments are subject to the provisions of the Local Government Superannuation Acts, and the successful candidates will be required to pass a medical examination. All appointments will be to the Central Office at Wakefield except those in (b) above.

Applications, on forms obtainable from this office, must be delivered not later than the first post on Tuesday, 3rd June, 1958.

A. W. GLOVER, F.R.I.B.A.,
County Architect.

Bishopgarth, Westfield Road, Wakefield. 9358

IMPROVEMENT TRUST, SINGAPORE

The Singapore Improvement Trust requires a PLANNER in the Planning Department on initial contract for 3 years for duties in connection with development control on Singapore Island.

Applicants must be Associate Members of the Town Planning Institute, and either A.R.I.B.A., A.M.I.C.E., A.M.I.Mun.E., or A.R.I.C.S., or equivalent qualification. Applicants should have had experience in development control in a public authority.

Commencing inclusive salary between \$1,390 and \$1,940 per month (equivalent to £1,946 and £2,716 per annum), according to qualifications and experience. (\$ Malayan = 2s. 4d. approx.) Increments payable after each completed year of service. No other allowances payable, except duty transport. Strict medical examination. Air passages provided.

Officers appointed will be required to join the Singapore Government's Central Provident Fund. Quarters with heavy furniture provided, if available, at moderate fixed rental. 12 weeks' full pay leave on completion of contract. 10 days' local leave annually.

Applications in duplicate, stating date and place of birth, with details of education, qualifications, training and experience, accompanied by copies of testimonials, to Messrs. Allen & Williams, 8, Clarges Street, London, W.1, by Tuesday, 20th May, 1958. 9376

BOROUGH OF OLDBURY
BOROUGH SURVEYOR'S DEPT.-

ARCHITECTS' SECTION

Applications are invited for the following appointments in the Architect's Section of the Borough Surveyor's Department:-

(a) TWO ARCHITECTURAL ASSISTANTS.

A.P.T. Grade I (£575-£830-£725 per annum).

(b) ONE ARCHITECTURAL ASSISTANT.

A.P.T. Grade II (£725-£830-£845 per annum).

Candidates for appointment (b) should preferably have passed the Intermediate Examination of the R.I.B.A. and be capable of preparing working and detail drawings and specifications for work normally undertaken by a Local Authority, mainly housing and education work, and supervising the work on the site.

Candidates for appointment (a) should be competent draughtsmen with practical experience, under supervision, in the preparation of working and detail drawings.

The appointments will be superannuable, subject to the National Conditions of Service and to the selected candidates passing a medical examination.

Applications, giving particulars of age, qualifications and experience, and giving the names of two referees, should be delivered to the undersigned not later than Thursday, 22nd May, 1958.

KENNETH PEARCE,
Town Clerk.

**BOROUGH OF SOLIHULL
QUANTITY SURVEYING ASSISTANT,
A.P.T. GRADE II (£725-£845)**

Applications are invited for the appointment of a Quantity Surveying Assistant, A.P.T. Grade II, on the Architectural staff of the Borough Engineer and Surveyor. Applicants should have passed the R.I.C.S. Intermediate examination or its equivalent. The appointment is subject to the provisions of the Local Government Superannuation Acts, the National Scheme of Conditions of Service and one month's notice on either side. Half the reasonable cost of removal expenses will be paid at the end of six months' service and, where applicable, housing accommodation will be provided. Applications giving the names and addresses of two referees should be forwarded to the Borough Engineer & Surveyor, 90, Station Road, Solihull, Warwickshire, not later than Friday, 23rd May, 1958. W. MAURICE MELL, Town Clerk. The Council House, Solihull. 29th April, 1958. 9410

**COUNTY BOROUGH OF SOUTHEAST-ON-SEA
BOROUGH ARCHITECT'S DEPARTMENT**
Applications are invited for the post of **ASSISTANT ARCHITECT**. Salary scale £750, by annual increments of £40 to £1,030. Candidates must be suitably qualified and experienced. The appointments will be subject to the provisions of the Local Government Superannuation Acts and the National Joint Council's Scheme of Conditions of Service as far as adopted by the Council. Medical examination. Applications, stating age, qualifications and experience, with the names of two referees, should be submitted to the Borough Architect, 30, Alexandra Street, Southend-on-Sea, forthwith. Canvassing will disqualify. Any candidate who is related to member or officer of the Council is required to disclose the fact. ARCHIBALD GLEN, Town Clerk. 9394

**HAMPSHIRE COUNTY COUNCIL
SENIOR PLANNING ASSISTANT** required in the South-West Area Planning Office at Lyndhurst, Special Grade (£750-£1,030). Candidates should have passed the final examination of the Town Planning Institute or a related professional institution, and have had planning experience with a Local Authority. An architectural qualification would be an advantage. The appointment is pensionable and subject to a satisfactory medical report. In approved cases the County Council assist with removal and other expenses. Applications, stating age, education, qualifications and experience, together with a copy of one testimonial and the names of two referees, should reach the Clerk of the County Council, The Castle, Winchester, by 23rd May. 9391

COUNTY BOROUGH OF GATESHEAD
Applications are invited for the following posts in the Borough Surveyor's Department, to work under the Chief Architect, upon an interesting programme of educational, housing and multi-storey flats and public buildings:—

- (a) **ASSISTANT ARCHITECTS**, Special Grade (£750-£1,030).
- (b) **JUNIOR ARCHITECTURAL ASSISTANTS**, A.P.T. I (£575-£725).

Applicants for post (a) must be Registered Architects and preferably Members of the Royal Institute of British Architects. Applicants for post (b) must be of Intermediate R.I.B.A. standard, preferably with some office experience. For posts (a) in suitable cases housing accommodation will be made available at an economic rent. Starting salaries would depend on the qualifications and experience of the applicants. The posts are pensionable, subject to N.J.C. conditions, medical examination, and one month's notice on either side. Applications on forms available from the Borough Surveyor, Swinburne Street, Gateshead, 8, must be returned to him within 14 days of this advertisement. C. D. JACKSON, Town Clerk. Town Hall, Gateshead, 8. 30th April, 1958. 9396

**CANNOCK URBAN DISTRICT COUNCIL
APPOINTMENT OF ARCHITECTURAL ASSISTANT**
Applications are invited for this vacancy in the Architect's Department at a salary within Grade A.P.T. II (£725-£845) per annum, the commencing point to be fixed according to qualifications and experience. Housing accommodation available for married applicants. Further particulars and forms of application are available from the undersigned. Closing date, 26th May, 1958. H. C. ALLEN, Clerk of the Council. Council House, Cannock, Staffs. 1st May, 1958. 9409

**CITY OF OXFORD.
ARCHITECTURAL ASSISTANT** required in City Architect and Planning Officer's Department. Salary within range £750-£1,030 per annum, according to qualifications (minimum required A.R.I.B.A.) and experience. Housing accommodation provided. For further details and application form (to be returned by 17th May) apply City Architect and Planning Officer, Town Hall, Oxford. HARRY PLOWMAN, Town Clerk. Town Hall, Oxford. 9356

**ISLE OF ELY COUNTY COUNCIL
PLANNING STAFF**
Vacancies for (a) **SENIOR PLANNING ASSISTANT** (salary Special Grade (£750-£1,030)). Duties: mainly work on preparation of Town Maps, etc. Applicants must be A.M.T.P.I. or equivalent. The Care of a CRAFTSMAN

These Szerelmey Craftsmen are fixing a new stone fascia to replace one cracked by rust expansion of the R.S.J. behind.

When problems of Restoration, Cleaning or Preservation arise, Architects can safely entrust them to this oldest-established Company. Many of the largest and best known buildings throughout the British Isles have been in their care.

FOR THE WATER SUPPLY

..install a Beresford submersible pump...

it's out of sight, cannot be
heard and needs no
pumphouse...

There's no dirt, there are no fumes, no unsightly buildings or gear, just a grating over a well or borehole, a rising main and electric cable to the submerged pump/motor unit and a modern, efficient water supply plant for the home, school, hotel, factory or even a town. The Beresford submersible pump is ideal for automatic installation, is simple and inexpensive to install and needs no attention. If you are planning an installation specify these pumps—they're best in the long run. Please ask for publication PA.300.
